License Restrictions

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or de-compilation of this software, unless required by law for interoperability, is prohibited.

Warranty Disclaimer

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

Restricted Rights Notice

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

Hazardous Applications Notice

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Trademark Notice

Oracle, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

Third Party Content, Products, and Services Disclaimer

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Chapter 11: Division..... 1047

Division.....	1048
---------------	------

Division - Main.....	1050
Division - Access Groups.....	1051
Division - Price Items.....	1052
Division - Price Lists.....	1052
Division - Languages.....	1053
Division - Invoice Currencies.....	1053
Division - Person Identifier Types.....	1054
Division - Algorithms.....	1054
Division - Characteristics.....	1054
Division - Bill Messages.....	1055
Division - Party Char Types.....	1055
Division - Bill Cycles.....	1056
Division - Account Identifier Types.....	1056
Division - Price Item Characteristics.....	1057
Searching for a Division.....	1057
Defining a Division.....	1058
Associating an Access Group with a Division.....	1062
Associating a Price Item or Price Item Bundle with a Division.....	1063
Associating a Price List with a Division.....	1065
Associating a Language with a Division.....	1066
Associating an Invoice Currency with a Division.....	1067
Associating a Person Identifier Type with a Division.....	1068
Associating an Algorithm with a Division.....	1069
Defining a Characteristic for a Division.....	1075
Associating a Bill Message with a Division.....	1076
Associating a Party Characteristic Type with a Division.....	1078
Associating a Bill Cycle with a Division.....	1079
Associating an Account Identifier Type with a Division.....	1080
Defining a Division-Specific Characteristic for a Price Item.....	1081
Associating a To Do Type and To Do Role with a Division.....	1082
Division Group.....	1084

Chapter 12: Approval Workflow..... 1085

Most Commonly Used Terms.....	1087
Approval Workflow Process.....	1087
Prerequisites.....	1089
Approval Transaction.....	1091
Search Approval Transaction.....	1091
Approval Transaction Log.....	1095
Searching for an Approval Transaction.....	1096
Viewing the Log of an Approval Transaction.....	1096
Comparison: New versus Existing.....	1097
Approving an Approval Transaction.....	1097
Rejecting an Approval Transaction.....	1098
Canceling an Approval Transaction.....	1099
Modifying an Approval Transaction.....	1100
Withdrawing an Approval Transaction.....	1101
Resolving an Approval Transaction.....	1101
Approve Price Assignment.....	1102
Search.....	1102
List of Price Assignments.....	1105
Approve Price Assignment - Comparison: New versus Existing.....	1106
Approval Transaction Log.....	1108
Approving a Price Assignment for an Account.....	1109
Approving a Price Assignment for a Person.....	1110

Approving a Price Assignment for a Price List.....	1111
Rejecting a Price Assignment for an Account.....	1112
Rejecting a Price Assignment for a Person.....	1113
Rejecting a Price Assignment for a Price List.....	1115
Canceling a Price Assignment for an Account.....	1116
Canceling a Price Assignment for a Person.....	1117
Canceling a Price Assignment for a Price List.....	1119
Modify Price Assignment.....	1120
Search.....	1120
List of Price Assignments.....	1124
Modifying a Price Assignment for an Account.....	1125
Modifying a Price Assignment for a Person.....	1126
Modifying a Price Assignment for a Price List.....	1127
Withdrawing a Price Assignment for an Account.....	1127
Withdrawing a Price Assignment for a Person.....	1128
Withdrawing a Price Assignment for a Price List.....	1129
Viewing the Log of an Approval Transaction.....	1130
Resolve Price Assignment.....	1131
Search.....	1131
List of Price Assignments.....	1135
Resolving a Price Assignment for an Account.....	1136
Resolving a Price Assignment for a Person.....	1137
Resolving a Price Assignment for a Price List.....	1138
Withdrawing a Price Assignment for an Account.....	1138
Withdrawing a Price Assignment for a Person.....	1139
Withdrawing a Price Assignment for a Price List.....	1140
Viewing the Log of an Approval Transaction.....	1141
Approval Workflow Group (Used for Searching).....	1142
Search Approval Workflow Group.....	1142
Searching for an Approval Workflow Group.....	1143
Viewing the Approval Workflow Group Details.....	1144
Defining an Approval Workflow Group.....	1144
Adding a Business Object.....	1148
Defining a Group BO Relation.....	1150
Approval Workflow Group (Used for Viewing).....	1151
Approval Workflow Group.....	1152
Editing an Approval Workflow Group.....	1154
Deleting an Approval Workflow Group.....	1154
Editing a Business Object.....	1155
Deleting a Business Object.....	1157
Editing a Group BO Relation.....	1157
Deleting a Group BO Relation.....	1159
Approval Workflow Chain (Used for Searching).....	1159
Search Approval Workflow Chain.....	1159
Searching for an Approval Workflow Chain.....	1160
Viewing the Approval Workflow Chain Details.....	1161
Defining an Approval Workflow Chain.....	1161
Defining Approval Levels for an Approval Workflow Chain.....	1162
Approval Workflow Chain (Used for Viewing).....	1163
Approval Workflow Chain.....	1163
Editing an Approval Workflow Chain.....	1164
Deleting an Approval Workflow Chain.....	1165
Approval Workflow Criterion Type (Used for Searching).....	1166
Search Approval Workflow Criterion Type.....	1166
Searching for an Approval Workflow Criterion Type.....	1166
Viewing the Approval Workflow Criterion Type Details.....	1167

Defining an Approval Workflow Criterion Type.....	1167
Approval Workflow Criterion Type (Used for Viewing).....	1169
Approval Workflow Criterion Type.....	1169
Editing an Approval Workflow Criterion Type.....	1170
Deleting an Approval Workflow Criterion Type.....	1172
Approval Workflow Group Chain Linkage (Used for Searching).....	1172
Search Approval Workflow Group Chain Linkage.....	1172
Searching for an Approval Workflow Group Chain Linkage.....	1173
Viewing the Approval Workflow Group Chain Linkage Details.....	1174
Defining an Approval Workflow Group Chain Linkage.....	1174
Defining Group Chain Linkage Criteria for an Approval Workflow.....	1176
Defining a Field Approval Rule.....	1176
Approval Workflow Group Chain Linkage (Used for Viewing).....	1178
Approval Workflow Group Chain Linkage.....	1179
Editing an Approval Workflow Group Chain Linkage.....	1181
Deleting an Approval Workflow Group Chain Linkage.....	1182
Approval Workflow Setting (Used for Searching).....	1182
Search Approval Workflow Group.....	1182
Searching for an Approval Workflow Group.....	1183
Viewing the Approval Workflow Setting Details.....	1184
Defining Approval Workflow Group Settings.....	1184
Approval Workflow Setting (Used for Viewing).....	1186
Approval Workflow Group Settings.....	1186
Editing Approval Workflow Group Settings.....	1188
Deleting Approval Workflow Group Settings.....	1188
Regenerating Input and Display UI Maps.....	1189
Approval Workflow Reason (Used for Searching).....	1189
Approval Workflow Reason List.....	1189
Filtering the Approval Workflow Reasons.....	1190
Viewing the Approval Workflow Reason Details.....	1191
Defining an Approval Workflow Reason.....	1191
Approval Workflow Reason (Used for Viewing).....	1192
Approval Workflow Reason.....	1192
Editing an Approval Workflow Reason.....	1193
Deleting an Approval Workflow Reason.....	1194

Chapter 13: Rules Engine..... 1195

Rule Type (Used for Searching).....	1197
Search Rule Type.....	1197
Searching for a Rule Type.....	1198
Defining a Rule Type.....	1199
Defining Input and Output Parameters for a Rule Type.....	1201
Associating a Characteristic Entity with a Rule Type.....	1203
Associating an Algorithm with a Rule Type.....	1204
Editing a Rule Type.....	1205
Deleting a Rule Type.....	1208
Copying a Rule Type.....	1208
Rule Type (Used for Viewing).....	1210
Rule Type.....	1211
Viewing the Rule Type Details.....	1212
Editing a Rule Type.....	1213
Rule.....	1215
Search Rule.....	1215
Searching for a Rule.....	1216
Viewing the Rule Details.....	1217

Defining a Rule.....	1217
Editing a Rule.....	1223
Deleting a Rule.....	1229
Copying a Rule.....	1230
Rule.....	1236
Rule Information.....	1236
Viewing the Rule Details.....	1238
Rule Check.....	1238
Rule Check.....	1240

Chapter 14: Alternate Sequential Bill Numbers.....1243

Alternate Sequential Bill Number Generation Algorithms.....	1244
C1_ALTBLLSYS.....	1244
C1_ALTBLSYS1.....	1244
C1_ALTBLDV.....	1247
C1_ALTBLDIV1.....	1247
Enabling the Alternate Sequential Bill Numbers Feature.....	1250

Chapter 15: Transaction Feed Management..... 1253

Prerequisites.....	1254
Transaction Rating Before Billing.....	1254
Transaction Aggregation.....	1263
Header Validation.....	1264
Transaction Validation and Initial Price Item Determination (Specific to Health Insurance Domain).....	1266
Price Item Pricing Verification.....	1277
Aggregation.....	1282
Clean Up.....	1286
Transaction Aggregation Batch Processing.....	1288
Transaction Disaggregation.....	1291
Transaction Disaggregation Batch Processing.....	1298
Reseeding (Specific to Health Insurance Domain).....	1299
Transaction Cancellation.....	1302
Transaction Cancellation Batch Processing.....	1305
Transaction Rollback.....	1306
Feed Status Transition.....	1308
Transaction Status Transition.....	1309
Transaction Leg Status Transition.....	1310
Transaction Data File.....	1318
Error List.....	1321
Alert Notification for Transaction Feed Management.....	1357
Feed Management Dashboard.....	1357
Search.....	1358
Division Level Information.....	1364
Transaction Level Information.....	1365
Transaction Leg Information.....	1366
Transaction Leg Service Quantity.....	1368
Transaction Leg Calculation Lines.....	1368
Transaction Leg Calc Line Characteristics.....	1369
Searching for a Transaction Feed.....	1370
Viewing Division Level Details of a Transaction Feed.....	1371
Viewing Transactions that Belong to a Division.....	1371
Viewing Legs of a Transaction.....	1372
Viewing the SQLs Calculated for a Transaction Leg.....	1372

Viewing the Calculation Lines of a Transaction Leg.....	1373
Viewing Characteristics of a Calculation Line.....	1373
Transaction Details.....	1374
Search.....	1374
Transaction Legs.....	1378
Transaction Error Messages.....	1381
Searching for a Transaction.....	1382
Viewing the Transaction Legs.....	1382
Viewing Error Messages.....	1383
Viewing the Transaction Details.....	1383
Adding a Transaction.....	1384
Copying a Transaction.....	1386
Transaction Source.....	1389
Search Transaction Source.....	1389
Searching for a Transaction Source.....	1390
Defining a Transaction Source.....	1390
Editing a Transaction Source.....	1391
Deleting a Transaction Source.....	1392
Copying a Transaction Source.....	1392
Transaction Record Type.....	1393
Search Transaction Record Type.....	1394
Searching for a Transaction Record Type.....	1395
Defining a Transaction Record Type.....	1395
Editing a Transaction Record Type.....	1401
Deleting a Transaction Record Type.....	1407
Copying a Transaction Record Type.....	1408
Transaction Aggregation Rule.....	1413
Transaction Aggregation Rules.....	1413
Defining Transaction Aggregation Rule for an SQL.....	1414
Editing Transaction Aggregation Rule of an SQL.....	1415
Deleting Transaction Aggregation Rule of an SQL.....	1416
Schedule.....	1417
Search Schedule.....	1417
Searching for a Schedule.....	1418
Viewing the Schedule Details.....	1418
Defining a Schedule.....	1419
Editing a Schedule.....	1420
Deleting a Schedule.....	1421
Disaggregation Request.....	1422
Disaggregation Request from User Interface.....	1422
Disaggregation Request through the C1-DISTG Batch.....	1422
Disaggregation Request through Audit Event.....	1422
Disaggregation Request.....	1423
Search Disaggregation Request.....	1423
Searching for a Disaggregation Request.....	1429
Creating a Disaggregation Request for a Person.....	1429
Creating a Disaggregation Request for an Account.....	1436
Creating a Disaggregation Request for a Price item.....	1442
Creating a Disaggregation Request for a Price Assignment.....	1448
Creating a Disaggregation Request for a Billable Charge.....	1452
Creating a Reseeding Request for a Parent Accumulation Group (Specific to Health Insurance Domain).....	1456
Deleting a Disaggregation Request.....	1459

Chapter 16: Upload Validated Payment Data..... 1461

Payment Upload Process.....	1462
Upload Payment Records in the Pre-Staging Area.....	1462
Move Payment Records to the Staging Area.....	1463
Create Payment Events and Payments.....	1463
Prerequisites.....	1464
CSV File Format.....	1465
Sample CSV.....	1467
Payment Data File Status Transition.....	1467
Payment Record Status Transition.....	1468
Error Messages.....	1470
Payment Upload.....	1474
Search Payment Data File.....	1474
Payment Data Records.....	1477
Payment Staging Records.....	1479
Payment Data File Log.....	1479
Searching for a Payment Data File.....	1480
Uploading a Payment Data File.....	1480
Replacing an Existing File.....	1482
Cancelling a Payment Data File.....	1483
Moving the Payment Records to the Staging Area.....	1484
Editing a Payment Staging Record.....	1484
Viewing the Records of a Payment Data File.....	1485
Viewing the Staging Records of a Payment Data Record.....	1486
Viewing the Log of a Payment Data File.....	1486
Viewing the Errors of a Payment Data Record.....	1486

Chapter 17: Freeze Payments on Notification..... 1489

Freeze Payments on Notification Process.....	1491
Creating Automatic Payments and Refunds.....	1491
Generating a Flat File.....	1491
Uploading Response from Auto Clearing House (ACH).....	1491
Retry Automatic Payment.....	1492
Freezing or Canceling Automatic Payments.....	1493
Voiding Refund Requests and Canceling Refund Adjustments.....	1493
Generating To Do Entries.....	1494
Creating Tender Controls.....	1494
Prerequisites.....	1494
Automatic Payment or Refund Clearing Staging Record Status Transition.....	1495
EDI 824 File Format.....	1496
Sample EDI 824 File Format.....	1497
Automatic Payment and Refund Upload Reason.....	1497
Upload Reasons.....	1498
Defining an Upload Reason.....	1498
Editing an Upload Reason.....	1500
Deleting an Upload Reason.....	1502
Automatic Payment and Refund Clearing Staging.....	1503
Search Clearing Record.....	1503
Associated Clearing Staging Records.....	1505
Clearing Staging Upload Reasons.....	1506
Clearing Staging Characteristics.....	1507
Searching for a Clearing Record.....	1507
Viewing the Clearing Staging Records Associated to a Clearing Record.....	1508
Viewing the Upload Reason Specified in the Clearing Staging Record.....	1508
Viewing the Characteristics of the Clearing Staging Record.....	1509
Editing a Clearing Staging Record.....	1509

Defining a Characteristic for a Clearing Staging Record.....	1511
Deleting a Clearing Staging Record.....	1512

Chapter 18: Trial Billing.....1515

Prerequisites.....	1517
Trial Bill (Used for Searching).....	1517
Search Trial Bill	1517
Searching for a Trial Bill.....	1519
Viewing the Trial Bill Details.....	1519
Trial Bill (Used for Viewing).....	1520
Trial Bill.....	1520
Trial Bill Segments.....	1522
Trial Bill Segment Calc Lines.....	1523
Trial Bill Segment SQ Details.....	1524
Trial Bill Segment Financial Details.....	1525
Policy Details.....	1525
Printing a Trial Bill in the PDF Format.....	1526
Viewing the Segments of a Trial Bill.....	1526
Filtering the Trial Bill Segments.....	1527
Viewing the Calc Lines of a Trial Bill Segment.....	1527
Viewing the SQ Details of a Trial Bill Segment.....	1528
Viewing the Financial Details of a Trial Bill Segment.....	1528
Viewing the Policy Details of a Trial Bill Segment.....	1529

Chapter 19: GL Account Validation..... 1531

Static GL Account Validation.....	1532
Dynamic GL Account Validation.....	1532

Chapter 20: Upload Validated Adjustment Data..... 1533

Prerequisites.....	1535
CSV File Format.....	1535
Adjustment Upload Request (Without Approval) Status Transition.....	1537
Adjustment Upload Request (With Approval) Status Transition.....	1538
Algorithms Used in C1-ADJUPLD.....	1539
Upload Request Type.....	1542
Upload Request Type List.....	1543
Upload Request Type.....	1544
Defining an Upload Request Type.....	1547
Defining a Characteristic for an Upload Request Type.....	1552
Editing an Upload Request Type.....	1553
Copying an Upload Request Type.....	1557
Mapping an Upload Request Type.....	1561
Deleting an Upload Request Type.....	1562
Viewing the Upload Request Type Details.....	1563
Adjustment Upload Request (Used for Searching).....	1564
Search Adjustment Upload Request.....	1564
Searching for an Adjustment Upload Request.....	1566
Uploading an Adjustment Data File.....	1566
Replacing an Adjustment Data File.....	1569
Viewing the Adjustment Upload Request Details.....	1571
Viewing All Records of an Adjustment Data File.....	1572
Adjustment Upload Request (Used for Viewing).....	1572
Adjustment Upload Request - Main.....	1573

Adjustment Upload Request.....	1573
Adjustment Data Records.....	1575
Adjustment Upload Request - Log.....	1576
Adjustment Upload Request Log.....	1576
Cancelling an Adjustment Data File.....	1577
Creating Adjustments for an Adjustment Data File.....	1578
Submitting an Adjustment Data File for Approval.....	1579
Approving an Adjustment Data File.....	1580
Rejecting an Adjustment Data File.....	1581
Viewing the Log of an Adjustment Upload Request.....	1582
Adding a Log Entry for an Adjustment Upload Request.....	1583

Chapter 21: Payment Request.....1585

Prerequisites.....	1587
Payment Creation Request (Without Approval) Status Transition.....	1588
Payment Creation Request (With Approval) Status Transition.....	1589
Payment Transfer Request (Without Approval) Status Transition.....	1590
Payment Transfer Request (With Approval) Status Transition.....	1593
Algorithms Used in C1-PaymentRequest.....	1595
C1-PAYRQ-INF.....	1596
C1-PAYREQPOS.....	1597
C1-PAYREQVAL.....	1597
C1-PAY-DFT.....	1597
C1-PAYDFTEXT.....	1597
C1-PAY-PFA.....	1597
C1-PAYPFAEXT.....	1597

C1-PAY-V-FRZ.....	1601
C1-PAY-FRZ.....	1601
C1-PAY-RJT.....	1602
C1-ISFREEZE.....	1602
Payment Request Type.....	1602

Payment Request Type List.....	1602
Payment Request Type.....	1603
Defining a Payment Request Type.....	1605
Defining a Characteristic for a Payment Request Type.....	1609
Editing a Payment Request Type.....	1610
Copying a Payment Request Type.....	1613
Deleting a Payment Request Type.....	1616
Viewing the Payment Request Type Details.....	1617
Payment Request (Used for Searching).....	1617
Search Payment Request.....	1617
Searching for a Payment Request.....	1620
Viewing the Payment Request Details.....	1621
Payment Request (Used for Viewing).....	1622
Payment Request - Main.....	1622
Payment Request.....	1622
Payment Details.....	1628
Payment Distribution.....	1628
Payment Request - Log.....	1631
Payment Request Log.....	1631
Creating a Payment Creation Request.....	1632
Defining a Characteristic for a Payment Tender.....	1639
Editing the Payment Amount.....	1639
Editing a Payment Creation Request.....	1641
Deleting a Payment Creation or Transfer Request.....	1647
Distributing the Tender or Payment Amount.....	1647
Distributing and Freezing the Tender or Payment Amount.....	1649
Redistributing the Tender or Payment Amount.....	1650
Editing the Payment Segment Amount.....	1650
Freezing Payments Created Through a Payment Request.....	1652
Submitting a Payment Creation or Transfer Request for Approval.....	1653
Approving a Payment Creation or Transfer Request.....	1654
Rejecting a Payment Creation or Transfer Request.....	1655
Discarding a Payment Creation or Transfer Request.....	1657
Viewing the Log of a Payment Creation or Transfer Request.....	1657
Adding a Log Entry for a Payment Creation or Transfer Request.....	1658
Payment Event Summary.....	1659
Search Payment Event.....	1660
Payments.....	1662
Payment Segments.....	1664
Searching for a Payment Event.....	1664
Creating a Payment Transfer Request.....	1665
Editing a Payment Transfer Request.....	1669
Cancelling a Payment Tender.....	1672
Deleting a Payment Event.....	1673
Viewing Payments Created Through a Payment Event.....	1674
Cancelling a Payment.....	1674
Deleting a Payment.....	1675
Creating a Refund Request for a Payment.....	1676
Viewing the Payment Segments of a Payment.....	1676
Updating the Transfer Amount in a Payment Transfer Request.....	1676
Updating the Tender Details in a Payment Transfer Request.....	1677

Chapter 22: Account Receivable Central..... 1681

Single Offset.....	1682
Mass Offset.....	1682

Cross Currency Offset.....	1683
Hold.....	1683
Refund.....	1684
Write Off.....	1684
Dispute.....	1684
Account Receivable Central.....	1684
Search Bill	1684
Bill Information.....	1688
Offset Details.....	1688
Hold Details.....	1688
Garnishment Details.....	1689
Bill Line Items.....	1689
Searching for a Bill.....	1689
Viewing the Bill Details.....	1690

Chapter 23: Offset Request..... 1691

Single Offset.....	1693
Mass Offset.....	1694
Cross Currency Offset.....	1697
Prerequisites.....	1699
Offset Request (Without Approval) Status Transition.....	1700
Offset Request (With Approval) Status Transition.....	1701
Bill Line Items Level Offset.....	1703
Internal Offsetting of Zero Balance Bill.....	1704
Automatic Offset of Debit and Credit Bill Line Items.....	1704
Algorithms Used in C1-OffsetRequest.....	1707
C1-OFFST-INF.....	1708
F1-TODOCOMPL.....	1709
C1-OFFSUBENT.....	1709
C1-OFFAPPENT.....	1709
C1-OFFAPPEXT.....	1709
C1-OFSAPRENT.....	1709
F1-AT-RQJ.....	1709
C1-OFST-DIST.....	1710
C1-UPD-HOLD.....	1711
C1-UPD-FUND.....	1711
C1-DFRUNAPLY.....	1711
C1-UNAPOFST.....	1711
C1-UPDT-FUND.....	1711
C1-WTBS-CRBL.....	1711
Additional Algorithms Used in Offset Request.....	1712
C1-OFST-AMT.....	1712
C1-WTBS-CRBL.....	1712
Offset Request Type.....	1712
Offset Request Type List.....	1713
Offset Request Type.....	1713
Defining an Offset Request Type.....	1716
Defining a Characteristic for an Offset Request Type.....	1722
Editing an Offset Request Type.....	1723
Deleting an Offset Request Type.....	1728
Copying an Offset Request Type.....	1728
Viewing the Offset Request Type Details.....	1734
Offset Request (Used for Searching).....	1734
Search Offset Request.....	1734
Searching for an Offset Request.....	1738

Creating an Offset Request.....	1738
Viewing the Offset Request Details.....	1741
Offset Request (Used for Viewing).....	1741
Offset Request - Main.....	1742
Offset Request.....	1742
Selected Bills.....	1744
Search Bill.....	1746
Offset Request Adjustments.....	1750
Auto Maintenance Financial Transactions.....	1751
Adjustment.....	1752
Offset Request - Log.....	1752
Offset Request Log.....	1752
Viewing the Debit and Credit Bills Added to an Offset Request.....	1753
Viewing the Adjustments Created Through an Offset Request.....	1753
Viewing the Advance Deposit Adjustment created through a Delinquency Process.....	1754
Adding a Debit or Credit Bill to an Offset Request.....	1754
Editing an Offset Request.....	1756
Defining a Characteristic for an Offset Request.....	1757
Editing the Offset Amount of a Debit or Credit Bill.....	1758
Removing a Debit or Credit Bill from an Offset Request.....	1760
Deleting an Offset Request.....	1760
Submitting an Offset Request.....	1761
Approving an Offset Request.....	1763
Rejecting an Offset Request.....	1765
Unapplying an Offset Request.....	1767
Viewing the Log of an Offset Request.....	1768
Adding a Log Entry for an Offset Request.....	1768

Chapter 24: Funding Request..... 1771

Prerequisites.....	1774
Funding Request (Without Approval) Status Transition.....	1774
Funding Request (With Approval) Status Transition.....	1775
Algorithms Used in C1-FundingReq.....	1776
C1-FUNDINFO.....	1777
C1-FUNDSUBMT.....	1777
C1-FUNDAPP.....	1778
C1-FUNDAPRVD.....	1778
F1-TODOCOMPL.....	1778
F1-AT-RQJ.....	1778
C1-FNDRESUBM.....	1779
C1-FUNDVAL.....	1779
C1-FUNDAPAY.....	1779
C1-FUNDADJCR.....	1779
C1-FUNDCANCL.....	1780
Funding Request Type.....	1780
Funding Request Type List.....	1780
Funding Request Type.....	1781
Defining a Funding Request Type.....	1784
Defining a Characteristic for a Funding Request Type.....	1791
Editing a Funding Request Type.....	1792
Deleting a Funding Request Type.....	1799
Copying a Funding Request Type.....	1800
Viewing the Funding Request Type Details.....	1807
Funding Request (Used for Searching).....	1808
Search Funding Request.....	1808

Searching for a Funding Request.....	1811
Creating a Funding Request.....	1812
Viewing the Funding Request Details.....	1812
Funding Request (Used for Viewing).....	1813
Funding Request - Main.....	1813
Funding Request.....	1814
Search Bill.....	1817
Funding Request - Bills.....	1821
Currency Statistics.....	1821
Selected Bills.....	1821
Funding Payment Details.....	1824
Funding Adjustments.....	1825
Funding Request - Log.....	1825
Funding Request Log.....	1825
Adding a Debit or Credit Bill to a Funding Request.....	1826
Deleting a Debit or Credit Bill from a Funding Request.....	1827
Excluding a Bill from a Funding Request.....	1827
Editing a Funding Request.....	1829
Defining a Characteristic for a Funding Request.....	1831
Deleting a Funding Request.....	1832
Cancelling a Funding Request.....	1833
Submitting a Funding Request.....	1834
Approving a Funding Request.....	1836
Rejecting a Funding Request.....	1838
Requesting to Resubmit a Funding Request.....	1840
Withdrawing a Funding Request.....	1841
Transferring the Funding Amount of a Credit Bill to a Garnishment Contract.....	1842
Viewing the Garnishment Details of a Credit Bill.....	1843
Viewing the Payments Created Through a Funding Request.....	1844
Viewing the Adjustments Created Through a Funding Request.....	1845
Viewing the Log of a Funding Request.....	1845
Adding a Log Entry for a Funding Request.....	1846

Chapter 25: Refund/Write Off Request..... 1847

Prerequisites.....	1849
Refund Request (Without Approval) Status Transition.....	1849
Refund Request (With Approval) Status Transition.....	1850
Write Off Request (Without Approval) Status Transition.....	1851
Write Off Request (With Approval) Status Transition.....	1852
Account Level Refund/Write Off.....	1853
Refund/Write Off Adjustment at Bill Level.....	1855
Algorithms Used in C1-RefundReq.....	1856
Algorithms Used in C1-WORequest.....	1860
Refund/Write Off Request Type.....	1864
Refund/Write Off Request Type List.....	1867
Refund/Write Off Request Type.....	1868
Defining a Refund or Write Off Request Type.....	1870
Defining a Characteristic for a Refund or Write Off Request Type.....	1874
Editing a Refund or Write Off Request Type.....	1875
Copying a Refund or Write Off Request Type.....	1878
Deleting a Refund or Write Off Request Type.....	1882
Viewing the Refund or Write Off Request Type Details.....	1882
Refund/Write Off Request.....	1883
Search Refund/Write Off Request.....	1883
Searching for a Refund or Write Off Request.....	1888

Creating a Refund Request.....	1888
Creating a Write Off Request.....	1891
Viewing the Refund Request Details.....	1894
Viewing the Write Off Request Details.....	1894
Refund Request.....	1895
Refund Request - Main.....	1896
Refund Request.....	1896
Refund Details.....	1898
Bill Line Items.....	1899
Refund Request - Bills.....	1900
Search Bills.....	1900

Refund Request - Payments.....	1902
Search Payment Event.....	1903
Payments.....	1904
Refund Request - Log.....	1904
Refund Request Log.....	1905
Creating a Refund Request.....	1905
Defining a Characteristic for a Refund Request.....	1908
Adding a Payment Event to the Refund Request.....	1909
Adding a Payment to the Refund Request.....	1910
Adding a Credit Bill to the Refund Request.....	1911
Adding a Credit Bill Line Item to the Refund Request.....	1912
Editing a Refund Request.....	1913
Editing the Refund Details.....	1916
Deleting a Refund Request.....	1918
Deleting a Bill from the Refund Request.....	1918
Deleting a Bill Line Item from the Refund Request.....	1919
Submitting a Refund Request.....	1919
Approving a Refund Request.....	1922
Rejecting a Refund Request.....	1924
Viewing the Log of a Refund Request.....	1925
Adding a Log Entry for a Refund Request.....	1926
Voiding a Refund Request.....	1927
Write Off Request.....	1928
Write Off Request - Main.....	1929
Write Off Request.....	1929
Write Off Details.....	1931
Bill Line Items.....	1932
Write Off Request - Bills.....	1933
Search Bills.....	1933
Bill Line Items.....	1934
Write Off Request - Log.....	1935
Write Off Request Log.....	1935
Creating a Write Off Request.....	1936
Defining a Characteristic for a Write Off Request.....	1938
Adding a Debit Bill to the Write Off Request.....	1939
Adding a Debit Bill Line Item to the Write Off Request.....	1941
Editing a Write Off Request.....	1942
Editing the Write Off Details.....	1944
Deleting a Write Off Request.....	1946
Deleting a Bill from the Write Off Request.....	1946
Deleting a Bill Line Item from the Write Off Request.....	1947
Submitting a Write Off Request.....	1947
Approving a Write Off Request.....	1949
Rejecting a Write Off Request.....	1951

Viewing the Log of a Write Off Request.....	1952
Adding a Log Entry for a Write Off Request.....	1953
Cancelling a Write Off Request.....	1954

Chapter 26: Hold Request..... 1957

Hold Request (Without Approval) Status Transition.....	1959
Hold Request (With Approval) Status Transition.....	1959
Algorithms Used in C1-HoldRequest.....	1960
Prerequisites.....	1966
Approval Process for Hold Request Release.....	1966
Hold Refund.....	1967
Hold Mass Accounts Using Selection Criteria.....	1968
Hold Request Type.....	1968
Hold Request Type List.....	1969
Hold Request Type.....	1969
Defining a Hold Request Type.....	1971
Defining a Characteristic for a Hold Request Type.....	1974
Editing a Hold Request Type.....	1975
Deleting a Hold Request Type.....	1977
Copying a Hold Request Type.....	1978
Viewing the Hold Request Type Details.....	1981
Hold Request (Used for Searching).....	1982
Search Hold Request.....	1982
Searching for a Hold Request.....	1985
Creating a Hold Request.....	1986
Viewing the Hold Request Details.....	1989
Hold Request (Used for Viewing).....	1989
Hold Request - Main.....	1990
Hold Request.....	1991
Hold Entities.....	1992
Search Account.....	1994
Search Bill.....	1998
Search Person.....	2000
Hold Request - Log.....	2002
Hold Request Log.....	2002
Searching Persons.....	2002
Searching Accounts.....	2003
Searching Bills.....	2004
Adding Persons in a Hold Request.....	2004
Adding Accounts in a Hold Request.....	2005
Adding Bills in a Hold Request.....	2005
Defining an Entity for a Hold Request.....	2006
Defining a Process for a Hold Request.....	2007
Defining a Characteristic for a Hold Request.....	2008
Editing a Hold Request.....	2009
Editing Hold Request Entities.....	2012
Deleting Hold Request Entities.....	2013
Deleting a Hold Request.....	2014
Submitting a Hold Request.....	2014
Approving a Hold Request.....	2015
Releasing a Hold Request.....	2017
Rejecting a Hold Request.....	2017
Resubmitting a Hold Request.....	2019
Viewing the Log of a Hold Request.....	2020
Adding a Log Entry for a Hold Request.....	2021

Chapter 27: Delinquency Central..... 2023

Prerequisites.....	2024
Delinquency Central (Used for Viewing).....	2024
Search Overdue Process.....	2024
Overdue Events.....	2029
Searching for an Overdue Process.....	2030
Viewing Events of an Overdue Process.....	2030
Viewing the Overdue Process Details.....	2031
Overdue Process Information for Account: {Account ID}.....	2031
Person Information.....	2032
Account Information.....	2032
Customer Contact Details.....	2032
Promise To Pay.....	2032
Hold Details.....	2033
Overdue Bills.....	2033
Payment Arrangement.....	2034
Search Bill.....	2034
Searching for a Bill.....	2035
Adding the Customer Contact Details.....	2036
Creating a Hold Request for an Overdue Process.....	2036
Creating a Payment Arrangement for an Overdue Process.....	2037
Defining a Promise To Pay for an Overdue Process.....	2037

Chapter 28: Upload Request..... 2039

Prerequisites.....	2042
Upload Request (Without Approval) Status Transition.....	2043
Upload Request (With Approval) Status Transition.....	2044
Defer Upload Request Validation.....	2045
Algorithms Used in C1-BillCycleUpdateUplReq.....	2046
Algorithms Used in C1-ContractRiderUpdateUplReq.....	2052
Algorithms Used in C1-HoldUploadRequest.....	2057
Algorithms Used in C1-RefundUploadRequest.....	2064
Algorithms Used in C1-WriteOffUploadRequest.....	2068
Algorithms Used in C1-BillableChargeUploadRequest.....	2072
Algorithms Used in C1-ReinstatementUploadRequest.....	2076

Search Upload Request.....	2125
Searching for an Upload Request.....	2126
Viewing the Upload Request Details.....	2127
Creating an Upload Request.....	2127
Defining a Characteristic for an Upload Request.....	2130
Upload Request (Used for Viewing).....	2131
Upload Request - Main.....	2131
Upload Request.....	2131
Data Records.....	2134
Upload Request - Log.....	2135
Upload Request Log.....	2135
Editing an Upload Request.....	2136
Deleting an Upload Request.....	2137
Validating an Upload Request.....	2138
Cancelling an Upload Request.....	2138
Submitting an Upload Request.....	2139
Approving an Upload Request.....	2143
Rejecting an Upload Request.....	2146
Viewing the Data Record Details.....	2147
Viewing the Log of an Upload Request.....	2148
Adding a Log Entry for an Upload Request.....	2149

Chapter 29: General Ledger (GL) Accounting Template..... 2151

GL Accounting Template (Without Approval) Status Transition.....	2156
GL Accounting Template (With Approval) Status Transition.....	2156
Algorithms Used in C1- GLAT.....	2157
Prerequisites.....	2159
GL Accounting Template (Used for Searching).....	2159
Search GL Accounting Template.....	2160
GL Accounting Template Lines.....	2161
Searching for a GL Accounting Template.....	2162

Creating a GL Accounting Template.....	2162
Viewing the GL Accounting Template Details.....	2164
Viewing the GL Accounting Template Lines Details.....	2165
GL Accounting Template (Used for Viewing).....	2165
GL Accounting Template - Main.....	2165
GL Accounting Template.....	2165
GL Accounting Template - Log.....	2167
GL Accounting Template Log.....	2167
Editing a GL Accounting Template.....	2168
Deleting a GL Accounting Template.....	2169
Submitting a GL Accounting Template.....	2170
Approving a GL Accounting Template.....	2171
Rejecting a GL Accounting Template.....	2172
Deactivating a GL Accounting Template.....	2174
Viewing the Log of a GL Accounting Template.....	2175
Adding a Log Entry for a GL Accounting Template.....	2175

Chapter 30: Payment Agreement Request.....2177

Payment Agreement Request (Without Approval) Status Transition.....	2180
Payment Agreement Request (With Approval) Status Transition.....	2180
Prerequisites.....	2181
Algorithms Used in C1-PaymentAgreementRequest.....	2182
C1-PA-INFO.....	2182
C1-PA-PRE.....	2183
C1-PA-SUBMIT.....	2183
C1-PA-APPENT.....	2183
C1-PA-APPEXT.....	2183
C1-PA-RESUB.....	2183

Payment Agreement Request Type.....	2183
Payment Agreement Request Type List.....	2183
Payment Agreement Request Type.....	2184
Defining a Payment Agreement Request Type.....	2187
Defining a Characteristic for a Payment Agreement Request Type.....	2189
Editing a Payment Agreement Request Type.....	2190
Copying a Payment Agreement Request Type.....	2193
Deleting a Payment Agreement Request Type.....	2195
Viewing the Payment Agreement Request Type Details.....	2196
Payment Agreement Request (Used for Searching).....	2196
Search Payment Agreement Request.....	2197
Bill Details.....	2200
Searching for a Payment Agreement Request.....	2200
Creating a Payment Agreement Request.....	2201
Defining a Characteristic for a Payment Agreement Request.....	2202
Defining Payment Schedule for a Payment Agreement Request.....	2203
Viewing the Bills Added in the Payment Agreement Request.....	2204
Viewing the Payment Agreement Request Details.....	2205
Payment Agreement Request (Used for Viewing).....	2205
Payment Agreement Request - Main.....	2206
Payment Agreement Request.....	2206
Bill Details.....	2208
Payment Schedule.....	2209
Payment Agreement Request - Bills.....	2209
Search Bills.....	2209

Payment Agreement Request - Log.....	2210
Payment Agreement Request Log.....	2211
Editing a Payment Agreement Request.....	2211
Deleting a Payment Agreement Request.....	2214
Submitting a Payment Agreement Request.....	2214
Removing an Overdue Bill from a Payment Agreement Request.....	2215
Approving a Payment Agreement Request.....	2216
Rejecting a Payment Agreement Request.....	2217
Resubmitting a Payment Agreement Request.....	2219
Filtering Overdue Bills of an Account.....	2220
Adding an Overdue Bill in a Payment Agreement Request.....	2221
Viewing the Log of a Payment Agreement Request.....	2221
Adding a Log Entry for a Payment Agreement Request.....	2222

Chapter 31: Inbound Message.....2225

Health Care Inbound Message.....	2226
Prerequisites.....	2235
Health Care Inbound Message Status Transition through User Interface.....	2237
Health Care Inbound Message Status Transition through a Batch Process.....	2238
Algorithms Used in C1-HCInboundMessage.....	2239
C1-AT-RQJ.....	2240
F1-AT-RQJ.....	2240
C1-HCINVAL.....	2240
C1-HCINPROC.....	2241
C1-TODORETRY.....	2241
C1-TDCRINMSG.....	2242
Health Care Inbound Message XML Format.....	2242
Health Care Inbound Message Schema.....	2298
Sample Health Care Inbound Message for Fully-Insured Group Customer Setup.....	2306
Sample Health Care Inbound Message for Self-Funded Customer Setup.....	2351
Sample Health Care Inbound Message for Pricing Rules.....	2377
Sample Health Care Inbound Message for Group Membership (Without Benefit).....	2396
Sample Health Care Inbound Message for Individual Membership (With Benefit).....	2414
Sample Health Care Inbound Message for Group Membership (With Benefit).....	2429
Sample Health Care Inbound Message for Advance Deposit at Parent Customer Level.....	2449
Sample Health Care Inbound Message for Advance Deposit at Policy Level.....	2464
Sample Health Care Inbound Message for Fully-Insured Group Policy Renewal.....	2478
Sample Health Care Inbound Message for Fully-Insured Group Policy Reinstatement.....	2482
Sample Health Care Inbound Message for Fully-Insured Group Policy Termination.....	2486
Sample Health Care Inbound Message for Fully-Insured Individual Membership Renewal.....	2490
Sample Health Care Inbound Message for Fully-Insured Individual Membership Renewal of a Dependent Person.....	2493
Sample Health Care Inbound Message for Fully-Insured Individual Membership Termination.....	2499
Health Product and Plan Inbound Message.....	2502
Prerequisites.....	2503
Health Product and Plan Inbound Message Status Transition through User Interface.....	2503
Health Product and Plan Inbound Message Status Transition through a Batch Process.....	2504
Algorithms Used in C1-HCProdHlthPlnInbound.....	2505
C1-AT-RQJ.....	2506
F1-AT-RQJ.....	2506
C1-HLTPRDVAL.....	2506
C1-HCPRPROC.....	2507
C1-TODORETRY.....	2508

C1-TDCRINMSG.....	2508
Health Product and Plan Inbound Message XML Format.....	2508
Health Product and Plan Inbound Message Schema.....	2526
Sample Health Product and Plan Inbound Message for Health Product Setup.....	2528
Sample Health Product and Plan Inbound Message for Health Plan Setup.....	2528
Sample Health Product and Plan Inbound Message for Health Plan Pricing Rules Setup..	2530
Inbound Message Type.....	2535
Inbound Message Type List.....	2536
Inbound Message Type.....	2537
Viewing the Inbound Message Type Details.....	2540
Defining an Inbound Message Type.....	2540
Defining a Characteristic for an Inbound Message Type.....	2544
Editing an Inbound Message Type.....	2545
Copying an Inbound Message Type.....	2549
Deleting an Inbound Message Type.....	2553
Inbound Message (Used for Searching).....	2553
Search Inbound Message.....	2553
Searching for an Inbound Message.....	2557
Creating an Inbound Message.....	2557
C1-HCInboundMessage.....	2558
C1-HCProdHlthPlnInboundMessage.....	2558
C1-HCProdHlthPlnInboundMes.....	2559
Viewing the Inbound Message Details.....	2559
Inbound Message (Used for Viewing).....	2559
Inbound Message - Main.....	2560
Inbound Message.....	2560
Inbound Message - Message.....	2562
Inbound Message Content.....	2562
Inbound Message - Log.....	2563
Inbound Message Log.....	2563
Editing an Inbound Message.....	2563
Defining a Characteristic for an Inbound Message.....	2564
Deleting an Inbound Message.....	2565
Processing an Inbound Message.....	2566
Using the Retry Option for an Inbound Message.....	2568
Voiding an Inbound Message.....	2568
Viewing the Content of an Inbound Message.....	2569
Viewing the Log of an Inbound Message.....	2569
Adding a Log Entry for an Inbound Message.....	2570
Statement Construct Preference.....	2570
Searching for a Statement Construct Preference.....	2571
Viewing the Statement Construct Preference Details.....	2572
Defining a Statement Construct Preference.....	2572
Editing a Statement Construct Preference.....	2577
Copying a Statement Construct Preference.....	2581
Deleting a Statement Construct Preference.....	2585

Chapter 32: Upload Lockbox Payment and Remittance Advices..... 2587

Prerequisites.....	2589
EDI 820 Flat File Description.....	2589
Sample EDI 820 Flat File.....	2591
Upload EDI 820 Files in ORMB.....	2592

Chapter 33: Deferred Revenue Recognition..... 2595

Prerequisites.....	2597
Deferred Revenue Recognition Status Transition.....	2597
Algorithms Used in Deferred Revenue Recognition.....	2599
Deferred Revenue Recognition Template (Used for Searching).....	2604
Search Deferred Revenue Recognition Template.....	2604
Searching for a Deferred Revenue Recognition Template.....	2605
Defining a Deferred Revenue Recognition Template.....	2606
Associating Algorithms with a Deferred Revenue Recognition Template.....	2608
Associating Deferred Revenue Recognition Template With A Division.....	2609
Defining a Characteristic for a Deferred Revenue Recognition Template.....	2610
Viewing the Deferred Revenue Recognition Template Details.....	2611
Deferred Revenue Recognition Template (Used for Viewing).....	2612
Deferred Revenue Recognition Template.....	2612
Editing a Deferred Revenue Recognition Template.....	2614
Deleting a Deferred Revenue Recognition Template.....	2615
Viewing the Deferred Revenue Recognition Template Details.....	2615
Deferred Revenue Recognition (Used for Searching).....	2616
Search Deferred Revenue Recognition.....	2616
Searching for a Deferred Revenue Recognition.....	2620
Viewing the Deferred Revenue Recognition Details.....	2621
Deferred Revenue Recognition (Used for Viewing).....	2622
Deferred Revenue Recognition - Main.....	2622
Deferred Revenue Recognition.....	2622
Associated Deferred Revenue Recognitions.....	2624
Recognition Schedule.....	2624
Revenue Recognition Items.....	2625
Deferred Revenue Recognition - Log.....	2625
Deferred Revenue Recognition Log.....	2625
Editing a Deferred Revenue Recognition.....	2626
Creating the Deferred Revenue Recognition Schedule.....	2626
Defining a Characteristic for a Deferred Revenue Recognition.....	2627
Adding Related Deferred Revenue Recognitions.....	2628
Editing the Deferred Revenue Recognition Schedule Details.....	2629
Viewing the Log of a Deferred Revenue Recognition.....	2630
Adding a Log Entry for a Deferred Revenue Recognition.....	2631

Chapter 34: Reconciliation.....2633

Pre-requisites.....	2636
Reconciliation of Individual Health Insurance Subsidy Payments.....	2636
Reconciliation Discrepancy Report of Individual Health Insurance Subsidy Payments.....	2639
Deferred Processing Mode for Discrepancy Report Creation.....	2639
Reconciliation Status Transition.....	2640
Pay Instruction Status Transition.....	2641
Discrepancy Report Status Transition.....	2643
EDI 820 File Format For Reconciliation.....	2643
Sample EDI 820 File Format.....	2644
Algorithms Used in C1-MemberReconType.....	2645
C1-REOCNPEP.....	2645
Algorithms Used in C1-MemberReconciliation.....	2646
C1-RECONINFO.....	2647
C1-MRECONVAL.....	2647
F1-AT-RQJ.....	2647
F1-TDCREATE.....	2648
C1-VALPAYINS.....	2648
F1-TODOCOMPL.....	2648

C1-MRECONVAL.....	2649

Pricing Rule Type List.....	2809
Pricing Rule Type.....	2813

Claim Pricing.....	2823
Defining a Claim Pricing Rule Type.....	2825
Adding Related Pricing Rule Types in a Primary Pricing Rule Type.....	2827
Defining Transaction Field Mapping in a Primary Pricing Rule Type.....	2829
Associating Algorithms with a Pricing Rule Type.....	2835
Defining Additional Data for a Pricing Rule Type.....	2837
Adding Price Items in a Pricing Rule Type.....	2839
Adding a Price Item Parameter in a Pricing Rule Type.....	2842
Defining a Characteristic for a Pricing Rule Type.....	2844
Adding Claim Templates in a Claim Pricing Rule Type.....	2846
Adding the Claim-Specific Data in a Pricing Rule Type.....	2847
Adding Claim Handling Fees Indicator in a Claim Pricing Rule Type.....	2848
Editing a Claim Pricing Rule Type.....	2850
Deleting a Claim Pricing Rule Type.....	2852
Viewing the Claim Pricing Rule Type Details.....	2853
Defining a Claim Pricing Rule for a Parent Customer.....	2853
Defining the Claim Handling Fees For Line Items in a Claim Pricing Rule.....	2856
Defining the Markup or Markdown Values For Line Items in a Claim Pricing Rule.....	2857
Defining the Markup or Markdown Values for Line Items for Each Rule in a Claim Pricing Rule.....	2858
Defining the Line Items in a Claim Pricing Rule.....	2860
Defining a Characteristic for a Claim Pricing Rule.....	2862
Editing a Claim Pricing Rule of a Parent Customer.....	2864
Viewing a Claim Pricing Rule of a Parent Customer.....	2866
Deleting a Claim Pricing Rule of a Parent Customer.....	2866
Defining a Claim Pricing Rule for a Bill Group.....	2867
Defining a Claim Pricing Rule for a Bill Group Using a Pricing Group.....	2870
Editing a Claim Pricing Rule of a Bill Group.....	2873
Viewing a Claim Pricing Rule of a Bill Group.....	2875
Deleting a Claim Pricing Rule of a Bill Group.....	2876
Specific Stop-Loss (SSL) Pricing.....	2876
Defining a Specific Stop-Loss (SSL) Pricing Rule Type.....	2879
Adding the SSL-Specific Data in a Pricing Rule Type.....	2882
Editing a Specific Stop-Loss (SSL) Pricing Rule Type.....	2884
Deleting a Specific Stop-Loss (SSL) Pricing Rule Type.....	2887
Viewing the Specific Stop-Loss (SSL) Pricing Rule Type Details.....	2887
Defining a Specific Stop-Loss Pricing Rule for a Parent Customer.....	2888
Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule.....	2891
Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule.....	2893
Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule.....	2894
Defining a Characteristic for a Specific Stop-Loss Pricing Rule.....	2895
Editing a Specific Stop-Loss Pricing Rule of a Parent Customer.....	2896
Viewing a Specific Stop-Loss Pricing Rule of a Parent Customer.....	2899
Deleting a Specific Stop-Loss Pricing Rule of a Parent Customer.....	2900
Defining a Specific Stop-Loss Pricing Rule for a Bill Group.....	2900
Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule.....	2903
Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule.....	2906
Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group.....	2908
Editing a Specific Stop-Loss Pricing Rule of a Bill Group.....	2911
Viewing a Specific Stop-Loss Pricing Rule of a Bill Group.....	2912
Deleting a Specific Stop-Loss Pricing Rule of a Bill Group.....	2913
Aggregate Stop-Loss (ASL) Pricing.....	2914
Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type.....	2917
Adding the ASL-Specific Data in a Pricing Rule Type.....	2919
Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type.....	2922
Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type.....	2924

Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details.....	2925
Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer.....	2925
Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule.....	2928
Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule.....	2931
Defining a Characteristic for an Aggregate Stop-Loss Pricing Rule.....	2933
Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	2934
Viewing an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	2936
Deleting an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	2937
Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group.....	2938
Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule.....	2940
Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule.....	2943
Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group...	2945
Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2948
Viewing an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2949
Deleting an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2950
Retention Type Claim Based Pricing.....	2951
Defining a Retention Type Claim Based Pricing Rule Type.....	2952
Adding Claim Based Disposition Details in a Pricing Rule Type.....	2955
Editing a Retention Type Claim Based Pricing Rule Type.....	2956
Deleting a Retention Type Claim Based Pricing Rule Type.....	2958
Viewing the Retention Type Claim Based Pricing Rule Type Details.....	2959
Defining a Retention Type Claim Based Pricing Rule for a Parent Customer.....	2960
Defining a Characteristic for a Retention Type Claim Based Pricing Rule.....	2963
Editing a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2964
Deleting a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2967
Defining a Retention Type Claim Based Pricing Rule for a Bill Group.....	2968
Defining a Characteristic for a Retention Type Claim Based Pricing Rule.....	2970
Editing a Retention Type Claim Based Pricing Rule of a Bill Group.....	2971
Deleting a Retention Type Claim Based Pricing Rule of a Bill Group.....	2974
Defining a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group.....	2974
Defining a Characteristic for a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group.....	2977
Viewing a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2978
Viewing a Retention Type Claim Based Pricing Rule of a Bill Group.....	2979
Retention Type Enrollment Based Pricing.....	2980
Defining a Retention Type Enrollment Based Pricing Rule Type.....	2981
Adding the Enrollment Specific Data in a Pricing Rule Type.....	2984
Editing a Retention Type Enrollment Based Pricing Rule Type.....	2985
Deleting a Retention Type Enrollment Based Pricing Rule Type.....	2987
Viewing the Retention Type Enrollment Based Pricing Rule Type Details.....	2988
Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer.....	2988
Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule.....	2991
Editing a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	2992
Deleting a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	2995
Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group.....	2995
Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule.....	2998
Editing a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	2999
Deleting a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	3002
Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.....	3003
Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.....	3006
Viewing a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	3007
Viewing a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	3008
Flat Fee Pricing.....	3008

Defining a One-Time Flat Fee Pricing Rule Type.....	3010
Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type.....	3013
Editing a One-Time Flat Fee Pricing Rule Type.....	3014
Deleting a One-Time Flat Fee Pricing Rule Type.....	3017
Viewing the One-Time Flat Fee Pricing Rule Type Details.....	3018
Defining a One-Time Flat Fee Pricing Rule for a Bill Group.....	3018
Defining a Characteristic for a One-Time Flat Fee Pricing Rule.....	3021
Editing a One-Time Flat Fee Pricing Rule of a Bill Group.....	3022
Viewing a One-Time Flat Fee Pricing Rule of a Bill Group.....	3023
Deleting a One-Time Flat Fee Pricing Rule of a Bill Group.....	3024
Defining a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	3025
Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type.....	3028
Editing a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	3029
Deleting a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	3032
Viewing the Bill Period Based Recurring Flat Fee Pricing Rule Type Details.....	3033
Defining a Bill Period Based Recurring Flat Fee Pricing Rule for a Bill Group.....	3033
Defining a Characteristic for a Bill Period Based Recurring Flat Fee Pricing Rule.....	3036
Editing a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	3037
Viewing a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	3038
Deleting a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	3039
Defining a Frequency Based Recurring Flat Fee Pricing Rule Type.....	3040
Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type.....	3043
Editing a Frequency Based Recurring Flat Fee Pricing Rule Type.....	3044
Deleting a Frequency Based Recurring Flat Fee Pricing Rule Type.....	3047
Viewing the Frequency Based Recurring Flat Fee Pricing Rule Type Details.....	3047
Defining a Frequency Based Recurring Flat Fee Pricing Rule for a Bill Group.....	3048
Defining a Characteristic for a Frequency Based Recurring Flat Fee Pricing Rule.....	3050
Editing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	3051
Viewing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	3053
Deleting a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	3054
Ancillary Pricing.....	3054
Defining an Ancillary Pricing Rule Type.....	3057
Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type.....	3062
Mapping the Transaction Field in an Ancillary Pricing Rule Type.....	3064
Associating an Algorithm with an Ancillary Pricing Rule Type.....	3068
Defining Additional Data in an Ancillary Pricing Rule Type.....	3071
Adding a Price Item in an Ancillary Pricing Rule Type.....	3074
Adding a Price Item Parameter in an Ancillary Pricing Rule Type.....	3077
Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type.....	3078
Defining Pricing Arrangements in an Ancillary Pricing Rule Type.....	3080
Defining a Characteristic for a Ancillary Pricing Rule Type.....	3081
Editing an Ancillary Pricing Rule Type.....	3082
Deleting an Ancillary Pricing Rule Type.....	3086
Viewing the Ancillary Pricing Rule Type Details.....	3087
Defining an Ancillary Pricing Rule for a Parent Customer.....	3087
Viewing an Ancillary Pricing Rule of a Parent Customer.....	3090
Defining a Characteristic for an Ancillary Pricing Rule.....	3091
Editing an Ancillary Pricing Rule of a Parent Customer.....	3092
Deleting an Ancillary Pricing Rule of a Parent Customer.....	3095
Defining an Ancillary Pricing Rule for a Bill Group.....	3096
Viewing an Ancillary Pricing Rule of a Bill Group.....	3099

------------------------	------

Chapter 37: Self-Funded Billing..... 3205

Pre-requisites.....	3207
Bill Group Derivation and Pricing Parameters.....	3208
Related Pricing Rule Type Eligibility.....	3210
Price Item Eligibility.....	3212
Self-Funded Billing Process.....	3213
Transaction Aggregation.....	3213
Stop Loss Calculation.....	3218
Bill Generation.....	3218
Bill Group Derivation.....	3219
Account and Price Item Derivation (for the Claim Pricing Rule Type Category).....	3222
Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories).....	3227
Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category).....	3240
Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category).....	3252
Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category).....	3262
Bill After Date Determination.....	3270
Advance Billing for Claim Fund Charge.....	3272
SSL Accumulation across Bill Groups.....	3273

Chapter 38: Fully-Insured Pricing.....3275

Age Based Pricing.....	3276
Defining an Age Based Pricing Rule Type.....	3279
Adding the Related Pricing Rule Types in an Age Based Pricing Rule Type.....	3281
Associating an Algorithm with an Age Based Pricing Rule Type.....	3283
Adding a Price Item in an Age Based Pricing Rule Type.....	3285
Adding a Price Item Parameter in an Age Based Pricing Rule Type.....	3288
Defining a Characteristic for an Age Based Pricing Rule Type.....	3289
Adding Elements for Audit in an Age Based Pricing Rule Type.....	3290
Defining an Age Based Specific Additional Data in an Age Based Pricing Rule Type.....	3291
Mapping Characteristic Attributes in an Age Based Pricing Rule Type.....	3292
Editing an Age Based Pricing Rule Type.....	3293
Deleting an Age Based Pricing Rule Type.....	3296
Viewing the Age Based Pricing Rule Type Details.....	3296
Tier Based Pricing.....	3297
Defining a Tier Based Pricing Rule Type.....	3299
Adding the Related Pricing Rule Types in a Tier Based Pricing Rule Type.....	3302
Associating an Algorithm with a Tier Based Pricing Rule Type.....	3303
Adding a Price Item in a Tier Based Pricing Rule Type.....	3305
Adding a Price Item Parameter in a Tier Based Pricing Rule Type.....	3308
Defining a Characteristic for a Tier Based Pricing Rule Type.....	3309
Adding Elements for Audit in a Tier Based Pricing Rule Type.....	3310
Editing a Tier Based Pricing Rule Type.....	3311
Deleting a Tier Based Pricing Rule Type.....	3313
Viewing the Tier Based Pricing Rule Type Details.....	3314
Pass-Through Billable Charge.....	3314
Defining a Pass-Through Billable Charge Pricing Rule Type.....	3315
Associating an Algorithm with a Pass-Through Billable Charge Pricing Rule Type.....	3317
Adding a Price Item in a Pass-Through Billable Charge Pricing Rule Type.....	3319
Adding a Price Item Parameter in a Pass-Through Billable Charge Pricing Rule Type.....	3322

Defining a Characteristic for a Pass-Through Billable Charge Pricing Rule Type.....	3322
Editing a Pass-Through Billable Charge Pricing Rule Type.....	3323
Deleting a Pass-Through Billable Charge Pricing Rule Type.....	3325
Viewing the Pass-Through Billable Charge Pricing Rule Type Details.....	3326
Additional Fee Pricing for COBRA Membership.....	3327
Defining an Additional Fee Pricing Rule Type.....	3329
Associating an Algorithm with an Additional Fee Pricing Rule Type.....	3331
Adding a Price Item in an Additional Fee Pricing Rule Type.....	3333
Adding a Price Item Parameter in an Additional Fee Pricing Rule Type.....	3336
Defining a Characteristic for an Additional Fee Pricing Rule Type.....	3337
Adding Elements for Audit in an Additional Fee Pricing Rule Type.....	3338
Editing an Additional Fee Pricing Rule Type.....	3339
Deleting an Additional Fee Pricing Rule Type.....	3341
Viewing the Additional Fee Pricing Rule Type Details.....	3342
Membership Benefit Pricing.....	3342
Defining a Benefit Pricing Rule Type.....	3343
Associating Algorithms with a Benefit Pricing Rule Type.....	3346
Adding a Price Item in a Benefit Pricing Rule Type.....	3347
Defining a Characteristic for a Benefit Pricing Rule Type.....	3350
Adding Elements for Audit in a Benefit Pricing Rule Type.....	3351
Editing a Benefit Pricing Rule Type.....	3354
Deleting a Benefit Pricing Rule Type.....	3355
Viewing the Benefit Pricing Rule Type Details.....	3356
Medicare Part A, Part B, and Part D Pricing.....	3357
Discount Charge Pricing for Retiree Membership.....	3357
Prerequisites.....	3358
Defining a Discount Charge Pricing Rule Type.....	3359
Associating an Algorithm with a Discount Charge Pricing Rule Type.....	3361
Adding a Price Item in a Discount Charge Pricing Rule Type.....	3363
Adding a Price Item Parameter in a Discount Charge Pricing Rule Type.....	3366
Defining a Characteristic for a Discount Charge Pricing Rule Type.....	3367
Adding Elements for Audit in a Discount Charge Pricing Rule Type.....	3368
Editing a Discount Charge Pricing Rule Type.....	3369
Deleting a Discount Charge Pricing Rule Type.....	3371
Viewing the Discount Charge Pricing Rule Type Details.....	3372
Viewing the Discount Charge Pricing Rule Details.....	3373
Pricing Rule Inactivation.....	3374

Chapter 39: Fully-Insured Billing.....3375

Audit Framework for Fully-Insured Billing.....	3377
Age Based and Tier Based Pricing Rules Audit Process.....	3378
Membership Audit Process.....	3379
Person Audit Process.....	3385
Membership Benefit Audit Process.....	3387
Bill Group Derivation and Pricing Parameters Audit Process.....	3388
Premium Proration Rules.....	3391
Age Monitoring.....	3393
State of Issue.....	3395
Membership Premium Calculation.....	3396
Bill Group Derivation for Membership.....	3401
Account and Price Item Derivation for Membership.....	3403
Bill Cycle and Bill Period Derivation.....	3404
Bill Period Timeline.....	3404
9/10 Billing (Skip Months).....	3405
Repricing.....	3406

Fully-Insured Billable Charge Creation.....	3407
New Born Credit Waiver.....	3409
Membership Benefit Billing.....	3410
Repricing Request.....	3411
Search Repricing Entity Detail Record.....	3411
Repricing Requests.....	3414
Timeline and Billable Charge Details.....	3415
Pricing Calculation Details.....	3415
Searching for a Repricing Entity Detail Record.....	3416
Viewing the Repricing Requests Created for a Repricing Entity Detail Record.....	3417
Viewing the Billable Charge Timeline Details of a Repricing Request.....	3417
Viewing the Pricing Calculation Details of a Timeline.....	3418
Membership Premium Calculation Through Inbound Web Service.....	3418
Prerequisites.....	3418
C1-MembershipRepricing Business Service.....	3420
C1-MembRepricing Business Service Schema.....	3421
Membership Premium Calculation Request and Response - Tags in XML Format.....	3425
Sample Individual Membership Creation Request and Response in XML Format.....	3451
Sample Group Membership Creation Request and Response in XML Format.....	3456
Sample Group Membership Read Request and Response in XML Format.....	3461
Sample Individual Membership Read Request and Response in XML Format.....	3466
Sample Member Person Creation Read Request and Response in XML Format.....	3471
Sample Individual Membership Premium Simulation Request and Response in XML Format.....	3476
Sample Group Membership Premium Simulation Request and Response in XML Format.....	3481
Sample Account Balance Read Request and Response in XML Format.....	3486
Sample Maintaining Advance Deposit at Parent Customer Level in XML Format.....	3490

Chapter 40: Off-Process Request..... 3497

Prerequisites.....	3500
Off-Process Request (Without Approval) Status Transition.....	3500
Off-Process Request (With Approval) Status Transition.....	3500
Algorithms Used in C1-OffProcessRequest.....	3501
Off-Process Request Type.....	3501
Off-Process Request Type List.....	3502
Off-Process Request Type.....	3502
Defining an Off-Process Request Type.....	3505
Adding the Accumulation Amendment Details in an Off-Process Request Type.....	3507
Defining a Characteristic for an Off-Process Request Type.....	3509
Editing an Off-Process Request Type.....	3510
Deleting an Off-Process Request Type.....	3512
Copying an Off-Process Request Type.....	3513
Viewing the Off-Process Request Type Details.....	3516
Off-Process Request (Used for Searching).....	3516
Search Off-Process Request.....	3516
Searching for an Off-Process Request.....	3519
Defining an Off-Process Request.....	3519
Viewing the Off-Process Request Details of an Off-Process Request.....	3521
Off-Process Request (Used for Viewing).....	3522
Off-Process Request - Main.....	3522
Off-Process Request.....	3522
Off-Process Request Details.....	3524
Off-Process Request Error Message.....	3526
Off-Process Request - Log.....	3526

Off-Process Request Log.....	3526
Viewing the Error Message of an Off-Process Request.....	3527
Adding the Off-Process Request Details in an Off-Process Request.....	3528
Defining a Characteristic for an Off-Process Request.....	3531
Editing an Off-Process Request.....	3531
Deleting an Off-Process Request.....	3532
Submitting an Off-Process Request.....	3533
Approving an Off-Process Request.....	3534
Rejecting an Off-Process Request.....	3535
Viewing the Log of an Off-Process Request.....	3537
Adding a Log Entry for an Off-Process Request.....	3537

Chapter 41: Individual Health Insurance Pricing.....3539

Business Rules.....	3541
Binder Payment Business Rules.....	3543
Fully-Insured Pricing Business Rules.....	3543
New Born Business Rules.....	3544
Rate Guarantee Business Rules.....	3545
Refund/Write Off Business Rules.....	3545
Delinquency Grace Period Business Rule.....	3546
Delinquency Events Attribute Business Rule.....	3547
Delinquency Termination Date Rule Business Rule.....	3548
Delinquency Miscellaneous Options Business Rule.....	3550
Business Rule Type.....	3552
Search Business Rule Type.....	3552
Business Rule Type.....	3555
Business Rule Criteria.....	3556
Searching for a Business Rule Type.....	3557
Viewing the Business Rule Type Details.....	3558
Defining a Business Rule Type.....	3558
Associating a Parameter with a Business Rule Type.....	3559
Defining a Characteristic for a Business Rule Type.....	3560
Editing a Business Rule Type.....	3561
Deleting a Business Rule Type.....	3562
Defining a Business Rule Criteria for a Business Rule Type.....	3563
Editing the Business Rule Criteria of a Business Rule Type.....	3564
Deleting the Business Rule Criteria of a Business Rule Type.....	3565
Business Rule (Used for Searching).....	3566
Search Business Rule.....	3566
Business Rule Log.....	3574
Searching for a Business Rule.....	3574
Defining a Binder Payment Business Rule.....	3575
Defining a Fully-Insured Pricing Business Rule.....	3577
Defining a New Born Business Rule.....	3580
Defining a Rate Guarantee Business Rule.....	3582
Defining a Refund/Write Off Business Rule.....	3583
Defining a Delinquency Grace Period Business Rule.....	3585
Defining a Delinquency Event Attribute Business Rule.....	3587
Defining a Delinquency Termination Date Rule Business Rule.....	3589
Defining a Delinquency Miscellaneous Options Business Rule.....	3591
Editing a Binder Payment Business Rule.....	3595
Editing a Fully-Insured Pricing Business Rule.....	3597
Editing a New Born Business Rule.....	3599
Editing a Rate Guarantee Business Rule.....	3600
Editing a Refund/Write Off Business Rule.....	3601

Editing a Delinquency Grace Period Business Rule.....	3603
Editing a Delinquency Event Attribute Business Rule.....	3604
Editing a Delinquency Termination Date Rule Business Rule.....	3606
Editing a Delinquency Miscellaneous Options Business Rule.....	3607
Deleting a Business Rule.....	3610
Viewing the Log of a Business Rule.....	3611
Young Adult Coverage in an Individual Membership.....	3611

Chapter 42: Individual Health Insurance Billing.....3613

Chapter 43: Entity Audit..... 3615

Audit Event Status Transition.....	3616
Prerequisites.....	3616
Entity Audit Process.....	3617
Audit Event Creation.....	3617
Audit Event Processing.....	3618
Algorithms Used in the Entity Audit Process.....	3618
C1-REAUDEVNT.....	3618
C1-AUDEVMPR.....	3619
Audit Event Type.....	3619
Audit Event Type List.....	3621
Audit Event Type.....	3622
Defining an Audit Event Type.....	3624
Associating an Algorithm with an Audit Event Type.....	3627
Adding an Element for Auditing in an Audit Event Type.....	3628
Defining a Characteristic for an Audit Event Type.....	3631
Editing an Audit Event Type.....	3632
Copying an Audit Event Type.....	3634
Deleting an Audit Event Type.....	3637
Viewing the Audit Event Type Details.....	3637
Audit Event (Used for Searching).....	3638
Search Audit Event.....	3638
Searching for an Audit Event.....	3641
Viewing the Audit Event Details.....	3642
Audit Event (Used for Viewing).....	3642
Audit Event - Main.....	3643
Audit Event.....	3643
Audit Event - Log.....	3644
Audit Event Log.....	3644
Canceling an Audit Event.....	3645
Viewing the Log of an Audit Event.....	3646

Chapter 44: Invoice Request for Health Insurance Business..... 3647

Invoice Request for Group Health Insurance Billing.....	3648
Types of Invoice Request for Fully-Insured Group Business.....	3650
Manual Regular Bill Generation Invoice Request.....	3650
Manual Trial Bill Generation Invoice Request.....	3651
Automatic Regular Bill Generation Invoice Request.....	3651
Invoice Request for Individual Health Insurance Billing.....	3652
Types of Invoice Request for Fully-Insured Individual Business.....	3654
Manual Regular Bill Generation Invoice Request.....	3654
Manual Trial Bill Generation Invoice Request.....	3655
Automatic Regular Bill Generation Invoice Request.....	3655

Prerequisites.....	3660
Invoice Request Manual Trial Bill Generation (Without Approval) Status Transition.....	3661
Invoice Request Manual Regular Bill Generation (Without Approval) Status Transition.....	3665
Invoice Request Manual Regular Bill Generation (With Approval) Status Transition.....	3671
Invoice Request Automatic Regular Bill Generation (Without Approval) Status Transition.....	3676
Invoice Request Type.....	3679
Invoice Request Type List.....	3679
Invoice Request Type.....	3680
Defining an Invoice Request Type.....	3683
Defining a Characteristic for an Invoice Request Type.....	3688
Editing an Invoice Request Type.....	3689
Deleting an Invoice Request Type.....	3693
Copying an Invoice Request Type.....	3694
Viewing the Invoice Request Type Details.....	3698
Invoice Request (Used for Searching).....	3699
Search Invoice Request.....	3699
Searching for an Invoice Request.....	3703
Manually Creating an Invoice Request.....	3704
Viewing the Invoice Request Details.....	3706
Invoice Request (Used for Viewing).....	3706
Invoice Request - Main.....	3706
Invoice Request.....	3707
Invoice Request Details/Account List.....	3710
Excluded Accounts.....	3711
Invoice Request - Log.....	3711
Invoice Request Log.....	3711
Editing an Invoice Request.....	3712
Defining a Characteristic for an Invoice Request.....	3714
Deleting an Invoice Request.....	3715
Canceling an Invoice Request.....	3716
Submitting an Invoice Request.....	3717
Approving an Invoice Request.....	3718
Rejecting an Invoice Request.....	3719
Requesting to Resubmit an Invoice Request.....	3720
Viewing the Log of an Invoice Request.....	3722
Adding a Log Entry for an Invoice Request.....	3722

Chapter 45: Hold Request Creation, Modification, Release, and View

Through Inbound Web Service..... 3725

Prerequisites.....	3726
C1-CreateHoldRequest Business Service.....	3727
Hold Request Creation Request in the XML Format.....	3728
Hold Request Creation Response in the XML Format.....	3729
Hold Request Creation Request and Response - Tags in XML Format.....	3730
Hold Request Creation Request in the JSON Format.....	3733
Hold Request Creation Response in the JSON Format.....	3734
Hold Request Creation Request and Response - Attribute/Value Pairs in JSON Format.....	3735
Sample Hold Request Creation Request and Response in the XML Format.....	3739
Sample Hold Request Creation Request and Response in the JSON Format.....	3741
C1-GetHoldRequestHistory Business Service.....	3743
Hold Request View Request in the XML Format.....	3744
Hold Request View Response in the XML Format.....	3745
Hold Request View Request and Response - Tags in XML Format.....	3745
Hold Request View Request in the JSON Format.....	3748
Hold Request View Response in the JSON Format.....	3748

Hold Request View Request and Response - Attribute/Value Pairs in JSON Format.....	3749
Sample Hold Request View Request and Response in the XML Format.....	3752
Sample Hold Request View Request and Response in the JSON Format.....	3753
C1-ReleaseHoldRequest Business Service.....	3755
Hold Request Release Request in the XML Format.....	3756
Hold Request Release Response in the XML Format.....	3757
Hold Request Release Request and Response - Tags in XML Format.....	3757
Hold Request Release Request in the JSON Format.....	3759
Hold Request Release Response in the JSON Format.....	3760
Hold Request Release Request and Response - Tags in JSON Format.....	3760
Sample Hold Request Release Request and Response in the XML Format.....	3762
Sample Hold Request Release Request and Response in the JSON Format.....	3763
C1-UpdateHoldRequest Business Service.....	3764
Hold Request Update Request in the XML Format.....	3765
Hold Request Update Response in the XML Format.....	3766
Hold Request Update Request and Response - Tags in XML Format.....	3766
Hold Request Update Request in the JSON Format.....	3770
Hold Request Update Response in the JSON Format.....	3770
Hold Request Update Request and Response - Tags in JSON Format.....	3771
Sample Hold Request Update Request and Response in the XML Format.....	3775
Sample Hold Request Update Request and Response in the JSON Format.....	3776

Chapter 46: Hold Direct Debit Instruction.....3779

Prerequisites.....	3781
Algorithms Used in C1-AutoPayRequest.....	3781
C1-APAYRQINF.....	3781
F1-TODOCOMPL.....	3782
C1-APAYSUB.....	3782
C1-APAYAPP.....	3782
C1-UPDAPAY.....	3782
C1-APAYAPRVD.....	3782
C1-APAYRESUB.....	3783
Auto Pay Request Status Transition without Approval.....	3783
Auto Pay Request Status Transition with Approval.....	3783
Auto Pay Request Type.....	3784
Auto Pay Request Type List.....	3784
Auto Pay Request Type.....	3785
Defining an Auto Pay Request Type.....	3787
Defining a Characteristic for an Auto Pay Request Type.....	3790
Editing an Auto Pay Request Type.....	3791
Copying an Auto Pay Request Type.....	3794
Deleting an Auto Pay Request Type.....	3796
Viewing the Auto Pay Request Type Details.....	3797
Auto Pay Request (Used for Searching).....	3797
Search Auto Pay Request.....	3797
Searching for an Auto Pay Request.....	3801
Creating an Auto Pay Request.....	3801
Viewing the Auto Pay Request Details.....	3802
Auto Pay Request (Used for Viewing).....	3803
Auto Pay Request - Main.....	3803
Auto Pay Request.....	3803
Auto Pay Details.....	3805
Auto Pay Request - Bills.....	3806
Search Bills.....	3806
Auto Pay Line Items.....	3808

Auto Pay Request - Log.....	3808
Auto Pay Request Log.....	3808
Defining a Characteristic for an Auto Pay Request.....	3809
Editing the Auto Pay Request Details.....	3810
Deleting an Auto Pay Request.....	3811
Submitting an Auto Pay Request.....	3811
Approving an Auto Pay Request.....	3812
Rejecting an Auto Pay Request.....	3813
Resubmitting an Auto Pay Request for Approval.....	3813
Searching for a Bill.....	3814
Adding an Auto Pay Line Item in an Auto Pay Request.....	3815
Deleting an Auto Pay Line Item from an Auto Pay Request.....	3815
Editing the Auto Pay Line Item Details in an Auto Pay Request.....	3816
Viewing the Log of an Auto Pay Request.....	3817
Adding a Log Entry for an Auto Pay Request.....	3818
Chapter 47: Garbling Customer Information.....	3819
Chapter 48: Deleting Inactive Customer or Closed Account Information.....	3821
Chapter 49: Automatic Refund.....	3823
Chapter 50: Payment Distribution.....	3825
Account Level Payment Distribution.....	3826
Statement Level Payment Distribution.....	3827
Chapter 51: Mass Payment Transfer.....	3829
Full Payment Transfer.....	3830
Partial Payment Transfer.....	3832
Mass Payment Transfer Process.....	3837
Defining a File Request Type for Payment Transfer.....	3837
Uploading a Payment Transfer File.....	3838
Transferring Payments.....	3839
CSV File Format for Mass Payment Transfer.....	3839
Sample CSV File for Mass Payment Transfer.....	3840
Chapter 52: Reporting.....	3843
Report Creation Using Apache FOP Framework.....	3844
Prerequisites.....	3844
PDF Generation Using Apache FOP.....	3844
Excel (XLS) Generation Using XSL Transformation.....	3844
Sample XML Format for FOP Reporting.....	3844
Sample XSL Format for FOP Reporting.....	3845
Create XSL Template for an FOP Report.....	3846
XSL Templates shipped with ORMB.....	3846
Create an Algorithm for an FOP Report.....	3849
Creating a Message for an FOP Report.....	3852
Calling the ORMB FOP Reporting API.....	3853

Setting Master Configuration for Email Notification.....	3853
Creating a Custom Algorithm for FOP Reports.....	3854
Configuring the Custom Algorithm from the User Interface.....	3855
Report Creation.....	3857
Report Search.....	3857
Searching for an FOP Report.....	3858
Defining an FOP Report.....	3859
Editing an FOP Report.....	3862
Deleting an FOP Report.....	3866
Viewing the FOP Report Details.....	3866
Report Audit.....	3867
Report Generation List.....	3867
Downloading an FOP Report.....	3868
Report Generation.....	3869
Generating an FOP Report.....	3869
FOP Reports.....	3869
Adjustment Detail Report.....	3870
Aggregate Stop-Loss Report.....	3870
Entity Hold Detail Report.....	3871
Invoice Aging Report.....	3871
Payment Detail Report for Fully-Insured Individual Business.....	3871
Payment Detail Report for Self-funded and Fully-Insured Group Business.....	3872
Payment Summary Report for Fully-Insured Individual Business.....	3872
Payment Summary Report for Self-funded and Fully-Insured Group Business.....	3873
Specific Stop-Loss Report.....	3873
To Do Report.....	3874
User Access Report.....	3874
Automatic Payment Response Report.....	3874
Binder Payment Report.....	3875
Quick Response Code Generation.....	3875

Chapter 53: Automatic Refund/Write Off..... 3877

Refund/Write Off Business Rules.....	3878
Automatic Refund/Write Off on Terminating a Group Policy or Individual Membership.....	3878
Identify Refund/Write Off Eligibility (C1-RFWO1).....	3879
Automatic Creation of Refund/Write Off (C1-RFWO2).....	3880
Rollback Automatic Refund/Write Off on Reinstating a Group Policy or Individual Membership.....	3881
Automatic Refund/Write Off Preference.....	3883
Searching for an Automatic Refund/Write Off Preference.....	3883
Viewing the Automatic Refund/Write Off Preference Details.....	3884
Defining an Automatic Refund/Write Off Preference.....	3884
Editing an Automatic Refund/Write Off Preference.....	3891
Copying an Automatic Refund/Write Off Preference.....	3896
Deleting an Automatic Refund/Write Off Preference.....	3901
Refund/Write Off Instruction.....	3901
Search Refund/Write Off Instruction.....	3901
Searching for a Refund/Write off Instruction.....	3904

Chapter 54: Delinquency Management..... 3907

Individual Delinquency.....	3908
Prerequisites.....	3908
Delinquency Event (Automated Process) Status Transition.....	3910
Delinquency Event (Manual Process) Status Transition.....	3912

Delinquency Process Status Transition.....	3915
Algorithms Used in Delinquency Event Type.....	3920
C1-DLQCRTODO.....	3921
C1-DETERMDT.....	3921
C1-DLQSENDCC.....	3922
C1-RCLTRGDMD.....	3922
C1-TRNTERTRG.....	3922
Algorithms Used in Delinquency Process Type.....	3923
C1-CUAOAB.....	3924
C1-CANDELPRC.....	3924
C1-CANDPAPTC.....	3925
C1-MEMBDLQ.....	3926

On Demand Billing.....	4059
Search.....	4059
Group Files.....	4061
Searching for a File Group.....	4062
Defining a File Group.....	4063
Editing a File Group.....	4064
Deleting a File Group.....	4066
Closing a File Group.....	4066
Generating Adhoc Bills for a File Group.....	4067
Freezing All Bills of a File Group.....	4068
Freezing Selected Bills of a File Group.....	4069
Viewing All Bills Generated for a File Group.....	4070
Viewing Usage Data Files of a File Group.....	4072
Usage Data Processing.....	4072
Search.....	4073
Searching for a Usage Data File.....	4076
Uploading a Usage Data File.....	4076
Replacing an Existing File.....	4079
Viewing All Records of a Usage Data File.....	4082
Viewing Valid Records of a Usage Data File.....	4086
Viewing Invalid Records of a Usage Data File.....	4090
Viewing Submitted Records of a Usage Data File.....	4093
Viewing Processed Records of a Usage Data File.....	4097
Viewing Cancelled Records of a Usage Data File.....	4100
Viewing Rejected Records of a Usage Data File.....	4104
Viewing Billed Records of a Usage Data File.....	4107
Viewing Unbilled Records of a Usage Data File.....	4111
Submitting a Valid Record.....	4114
Approving a Valid Record.....	4116
Rejecting a Valid Record.....	4118
Cancelling a Usage Data File.....	4120
Revalidating a Usage Data File.....	4121
Editing a Valid, Invalid, or Rejected Usage Record.....	4122
Exporting Usage Data into CSV file.....	4123
Filtering Usage Records.....	4123
Chapter 56: Cloud Service Features.....	4125
User Status Synchronization.....	4126
Appendix A: Most Commonly Used Tasks.....	4127
Changing the Layout.....	4128
Adding a Column to the Zone.....	4128
Rearranging Columns in the Zone.....	4128
Removing a Column from the Zone.....	4128
Appendix B: Administration.....	4131
UI Maps.....	4132
Creating Display UI Map for an Approval Workflow Group.....	4132
Creating Input UI Map for an Approval Workflow Group.....	4133
Feature Configurations.....	4134
Setting the C1_ACCTINFO Feature Configuration.....	4134
Setting the C1-ASOBLLNG Feature Configuration.....	4136

Setting the C1_AXENTITY Feature Configuration.....	4155
Setting the C1-BILLADJSQ Feature Configuration.....	4157
Setting the C1_CMO Feature Configuration.....	4159
Setting the C1_DIVFUNCT Feature Configuration.....	4161
Setting the DELINPROC Feature Configuration.....	4162
Setting the C1-EHRCONFIG Feature Configuration.....	4163
Setting the C1_EXCHRATE Feature Configuration.....	4165
Setting the C1_EXP_OVRD Feature Configuration.....	4166
Setting the C1_FINTRANOP Feature Configuration.....	4166
Setting the C1_FM Feature Configuration.....	4172
Setting the C1-OFFSETREQ Feature Configuration.....	4177
Setting the C1-PAYPORTAL Feature Configuration.....	4179
Setting the C1_PER_REL Feature Configuration.....	4180
Setting the C1_PERSTYPE Feature Configuration.....	4181
Setting the C1_PPARAM_FLG Feature Configuration.....	4183
Setting the C1_PR_REC Feature Configuration.....	4184
Setting the C1_PRASNORDR Feature Configuration.....	4185
Setting the C1_PRICING Feature Configuration.....	4186
Setting the C1-PYREQSRT Feature Configuration.....	4188
Setting the C1_RLENG Feature Configuration.....	4189
Setting the C1-TXNDMYID Feature Configuration.....	4190
Setting the C1-HOLDSRCH Feature Configuration.....	4191
Setting the C1_REFWO Feature Configuration.....	4193
Setting the C1-PAYFLUPLD Feature Configuration.....	4194
Setting the C1-CFS Feature Configuration.....	4196
Setting the C1-FLUPLD Feature Configuration.....	4198
Setting the C1-REPORTVW Feature Configuration.....	4202

About this Document

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in the health insurance domain. It describes all screens related to these features and explains how to perform various tasks through these screens.

Intended Audience

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

Organization of the Document

Each insurance feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Fully-Insured Group Customer Management	Explains how to create customers and accounts for billing the fully-insured group health plans.
Chapter 2	Self-Funded Customer Management	Explains how to create customers and accounts for billing the self-funded plans.
Chapter 3	Health Insurance Business Management	Describes how to setup the pricing and billing engines for the following three lines of health insurance business — Fully-Insured Group Health Insurance, Self-Funded Group Health Insurance, and Individual Health Insurance.
Chapter 4	Fully-Insured Group Health Insurance	Explains how to design the pricing and billing models for the fully-insured group health insurance business in ORMB. It also explains how to create policies, plans, and memberships for the fully-insured group health insurance.
Chapter 5	Self-Funded Group Health Insurance	Explains how to design the pricing and billing models for the self-funded group health insurance business in ORMB. It also explains how to create policies for the self-funded group health insurance.
Chapter 6	Individual Health Insurance	Explains how to design the pricing and billing models for the individual health insurance business in ORMB. It also explains how to create health products, plans, and memberships for the individual health insurance.
Chapter 7	Customer Registration	Describes how to create a person, account, policy, and policy plan through a customer registration object.

Chapter Number	Chapter Name	Chapter Description
Chapter 8	Customer 360° View	Explains how to view in-depth information about the person, account, or policy in the Customer 360° View screen. It explains how to create sort records for bill groups and derivation and pricing parameters for bill groups. It explains how to view the pricing rules of a parent customer and the pricing rules defined for a policy of a bill group. It also explains how to define, edit, and delete the different types of pricing rules of a parent customer and bill group. In addition, it explains how to view the detailed information about the bill.
Chapter 9	Health Product 360° View	Explains how to view in-depth information about the health product or health plan in the Health Product 360° View screen.
Chapter 10	Pricing Management (Health Insurance Business)	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, and tiering criterion. It also explains how to define pricing for a price item, how to assign a price item to a price list, and how to assign a price list to a person or account.
Chapter 11	Division	Describes the different types of division. It also explains how to define a division.
Chapter 12	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 13	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 14	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 15	Transaction Management Feed	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 16	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 17	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund adjustments when the review comments are received from the auto clearing house.

Chapter Number	Chapter Name	Chapter Description
Chapter 18	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.
Chapter 19	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.
Chapter 20	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 21	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 22	Account Receivable Central	Explains how to use the Account Receivable Central screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 23	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 24	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.
Chapter 25	Refund/Write Off Request	Describes how to refund a payment or credit bill or bill line item and write off a debit bill or bill line item through a refund or write off request, respectively. It explains how to create the refund or write off request types and refund or write off requests in the system.
Chapter 26	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 27	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the Delinquency Central screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.
Chapter 28	Upload Request	Explains how to do the following through an upload request: <ul style="list-style-type: none"> • Update bill cycle of accounts • Update contract riders in contracts • Create hold requests, refund requests, write off requests, or billable charges • Reinstate the policies • Create sort records for bill groups • Create derivation and pricing parameters for bill groups

Chapter Number	Chapter Name	Chapter Description
Chapter 29	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the GL Accounting Template feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 30	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 31	Inbound Message	Explains how to create the customer and membership inbound messages through the web services. It explains the XML format in which the customer and membership data should be available while calling the respective web service. It also explains how to create the inbound message types and how to process the inbound messages in the system.
Chapter 32	Upload Lockbox Payment and Remittance Advices	Explains how to upload lockbox payment and remittance advices received in the Electronic Data Exchange (EDI) 820 format. It also explains the format in which EDI 820 flat file should be uploaded in the system.
Chapter 33	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 34	Reconciliation	Describes how to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. It explains the CSV and EDI 820 file formats in which you can upload the pay instructions. It also explains how to create reconciliation types, reconciliations, discrepancy report types, and discrepancy reports in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 35	Self-Funded Pricing	Explains how to create the following in the system: <ul style="list-style-type: none"> • Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, One-Time Flat Fees, Bill Period Based Recurring Flat Fees, Frequency Based Recurring Flat Fees, Ancillary, Discount, and Level-Funded pricing rule types • Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Ancillary, and Level-Funded pricing rules for the parent customers and the policies of the bill groups • One-Time Flat Fees, Bill Period Based Recurring Flat Fees, and Frequency Based Recurring Flat Fees pricing rules for the policies of the bill groups • Discount pricing rules for the parent customers
Chapter 36	Stop-Loss	Explains how to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them.
Chapter 37	Self-Funded Billing	Explains the billing process for the self-funded plans.
Chapter 38	Fully-Insured Pricing	Explains how to create the following in the system: <ul style="list-style-type: none"> • Age Based, Tier Based, and Pass-Through Billable Charge pricing rule types • Age Based and Tier Based pricing rules for the fully-insured group policy plans
Chapter 39	Fully-Insured Group Billing	Explains how the system creates the fully-insured pass-through billable charges.
Chapter 40	Off-Process Request	Describes how to amend the agreed limits, funds, or calculated amounts of the accumulation products within the policy period through an off-process request. It explains how to create the off-process request types and off-process requests in the system.
Chapter 41	Individual Health Insurance Pricing	Explains how to define the pricing for different services offered in a health plan.
Chapter 42	Individual Health Insurance Billing	Explains how the system calculates premium for an individual using the fully-insured pricing and new born business rules.
Chapter 43	Entity Audit	Explains how to use the entity audit framework to track various actions, such as add, update, and delete for an entity.
Chapter 44	Invoice Request for Health Insurance Business	Describes how to create adhoc regular and trial bills for an account through an invoice request for the fully-insured group and fully-insured individual business. It explains how to create the invoice request types and invoice requests in the system.
Chapter 45	Hold Request Creation, Modification, Release, and View Through Inbound Web Service	Lists various business services using which you can create, edit, and release a hold request and view the details of a hold request.

Chapter Number	Chapter Name	Chapter Description
Chapter 46	Hold Direct Debit Instruction	Describes how to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer. It explains how to create the auto pay request types and auto pay requests in the system.
Chapter 47	Garbling Customer Information	Explains how to garble the personal information of a customer, such as the customer name, address, email ID, social security number or any other identifier, birth date, gender, and so on, on receiving the data erasure request from the customer.
Chapter 48	Deleting Inactive Customer or Closed Account Information	Explains how to delete all records of a person or account from the system.
Chapter 49	Automatic Refund Process	Explains how the automatic refunds are created in the system.
Chapter 50	Payment Distribution	Explains how the system distributes payments against the unpaid bills of the account or statement.
Chapter 51	Mass Payment Transfer	Explains how the system facilitates mass payment transfer using the File Upload Interface utility.
Chapter 52	FOP Reports	Lists various FOP reports using which you can extract data from the system in the PDF format.
Chapter 53	Automatic Refund/Write Off	Explains how to automatically refund/write off for an account when a fully-insured group policy or individual membership is terminated.
Chapter 54	Delinquency Management	Explains how to manage delinquency for the individual health care business.
Chapter 55	On Demand Billing	Explains how to generate adhoc bills using the on demand billing process. It explains how to create a file type and file group, how to upload a usage data file, how to generate adhoc bills for a file group, and how to freeze the adhoc bills of a file group.
Chapter 56	Cloud Service Features	Lists various features which are offered specifically for Oracle Revenue Management and Billing Cloud Service and Oracle Revenue Management and Billing Cloud Service Premium Edition.
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

Conventions

The following conventions are used across this document:

Convention	Meaning
boldface	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.

Convention	Meaning
<i>italic</i>	Italic indicates a document or book title.
Monospace	Monospace indicates information that an end-user needs to enter in the application.

Chapter 1

Fully-Insured Group Customer Management

Topics:

- [Fully-Insured Entities](#)

A fully-insured group health plan is the traditional way to structure an employer-sponsored health plan. In the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year, based on the number of employees enrolled in the plan each month. The monthly premium changes during the year when the number of enrolled employees in the plan changes. The insurance carrier collects the premiums and pays the health insurance claims based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

The system enables you to create customers and accounts for the fully-insured group health insurance business. This chapter explains how to create different entities involved in the fully-insured group health insurance business.

Pricing Rule Types	Pricing Rule Types on page 73
Pricing Rules	Pricing Rules on page 73
Price Assignments	Price Assignments on page 73

Parent Customer

The fully-insured employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer through a customer registration object or a health care inbound message.

Bill Groups

The system allows you to define one or more bill groups for a parent customer. The membership premium of the employees are billed to a bill group. Each bill group will handle the membership premium of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the membership premium should be billed in the system. You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. fully-insured employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration. You can create a bill group through a customer registration object or a health care inbound message.

Related Topics

For more information on...	See...
Bill Group Derivation and Pricing Parameters	Bill Group Derivation and Pricing Parameters on page 3208
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 4136

Bill Group's Account

The membership premium of employees are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group through a customer registration object or a health care inbound message.

Depending on the employer's preference, the charges for one or more membership and price item combinations can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, MEDCARE1 and MEDCARE2) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

Note: At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type. Let us understand this with the help of an example.

The following table illustrates the accounts to which the P1 and P2 price items should be billed based on the given priority:

Price Item	Priority	Invoice Type	Account
P1	10	MEDCARE1	A1
	20	MEDCARE2	A2
P2	10	MEDCARE2	A2
	20	MEDCARE1	A1

Now, when the effective pricing rule is derived for P1 on the policy plan, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE1** exists for the bill group. If so, it considers the

account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE1** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE2** exists for the bill group. If so, it considers the account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE2** does not exist for the bill group, the status of the record in the **CI_REPRC_ENTITY_DTL** table is set to **Error (E)**.

Similarly, when the effective pricing rule is derived for P2 on the policy plan, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration is set to **C1INVTYP**.

Related Topics

For more information on...	See...
How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 4136

Fully-Insured Group Policy

You can create a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group**. You can create a fully-insured group policy through a customer registration object or a health care inbound message. If the fully-insured group policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

However, if the fully-insured group policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

Note: At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

Policy Plans

A fully-insured group policy may cover various plans for medical, dental, or disability benefits. You can subscribe a person for one or more policy plans within or across policies. The system creates one membership for each person who is subscribed to the policy plan. You can then add dependent members in each membership whenever required.

While creating a policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received in an inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can only associate a pricing rule type where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**. If you associate an age based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the membership premium is calculated for eligible members. If you associate a tier based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the premium is calculated for membership. However, if you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information, the system directly creates the SQI based billable charge for the

pre-calculated premium and does not refer the pass-through billable charge pricing rule type which is associated with the policy plan.

Price Items

Each service offered in the fully-insured group health plan should be defined as a price item in the system. You can define a price item from the user interface. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the fully-insured group health plan through a health care inbound message:

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Age Based	Age Based	AGE_BASED
Tier Based	Tier Based	TIER_BASED
Pass-Through Billable Charge	Pass-Through Billable Charge	FL_PASSTBC

Note: You cannot define a pricing rule using a pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**.

Pricing Rules

The fully-insured group health plan may offer various services to the employer, such as medical insurance, dental insurance, vision care, life insurance, short-term and long-term disability benefits, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the fully-insured group health plan.

The following table lists the pricing rules which you can define for the following services offered in the fully-insured group health plan:

Service	Pricing Rule	Created for....
Medical Insurance, Dental Insurance, Vision Care, Life Insurance, Short-Term and Long-Term Disability Benefits, etc.	Age Based	Fully-Insured Group Policy Plan
	Tier Based	Fully-Insured Group Policy Plan

You can create the above mentioned pricing rules for the fully-insured group policy plans through a health care inbound message and not from the user interface. The system creates a price assignment for each pricing rule. In the age based pricing rules, you can define different premium fee for employees who belong different age band. You can also offer different premium fee for the employees with the same age band, but with the different set of attributes. The system also enables you to charge additional fee for the eligible member based on certain modifiers. For example, you can charge additional fee when the eligible member is alcoholic and/or consumes tobacco. However, in the tier based pricing rules, you can define different premium fee for employees who belong to different membership tier, such as Employee (E), Employee + Spouse (ES), Employee + Spouse + Children (F), and so on.

The system searches for the pricing rule of a price item (i.e. service) on the policy plan to which the membership belongs. If the effective pricing rule for a price item is not available on the policy plan, the system does not consider the respective price item for billing.

Price Assignments

The system creates a price assignment for each fully-insured pricing rule. If different premium fee is defined for employees with different set of employee attributes, then the system creates a separate price component for each set of employee attributes. If the modifiers are used in the age based pricing rule, the system creates a price component for

each modifier. In the price component, the age band or tier band parameter, the employee attributes, and modifiers are used to define the pricing eligibility criteria. Once the age based or tier based pricing rule is defined for a policy plan, the system creates a price item pricing and price list, and then assigns the price item pricing to the price list.

Chapter 2

Self-Funded Customer Management

Topics:

- [Self-Funded Entities](#)

Self-funded health insurance, also known as Administrative Services Only (ASO), is a self insurance arrangement whereby an employer provides health or disability benefits to employees using the company's own funds. In self-funded health plan, employers operate their own health plan. However, in the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured group health plan. However, self-insuring exposes the company to much larger risk in the event that more claims than expected must be paid.

Oracle Revenue Management and Billing (ORMB) supports the following types of self-funding approach:

- **Fully Self-Funded** - In the fully self-funded approach, the employer retains all the risk and bears the claim costs irrespective of any limit.
- **Partially Self-Funded** - In the partially self-funded approach, the employer purchases reinsurance or stop loss coverage to pass the risk to insurance company.

The system enables you to create customers and accounts for the self-funded health insurance business. This chapter explains how to create different entities involved in the self-funded health insurance business.

For more information on...	See...
Self-Funded Entities	Self-Funded Entities on page 76

Self-Funded Entities

The following figure graphically represents the different entities involved in the self-funded health insurance business:

For more information on...	See...

Pricing Rule Types	Pricing Rule Types on page 78
Pricing Rules	Pricing Rules on page 79
Price Assignments	Price Assignments on page 80

Parent Customer

The self-funded employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer through a customer registration object or a health care inbound message.

Bill Groups

The system allows you to define one or more bill groups for a parent customer. The claim, enrollment, and ancillary transactions of the employees are billed to a bill group. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the claim, enrollment, and ancillary charges should be billed in the system. The derived bill group is also used for billing the claim based fees, specific stop-loss credits, aggregate stop-loss credits, discount, and level funding charges.

You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. self-funded employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration. You can create a bill group through a customer registration object or a health care inbound message.

How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 4136

Bill Group's Account

The claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level funding charges are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group through a customer registration object or a health care inbound message.

Depending on the employer's preference, the claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level funding charges can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, standard and retention) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

Note: At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type.

For example, the following table illustrates the accounts of different types to which the charges of P1 and P2 should be billed based on the given priority:

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2

Price Item	Priority	Invoice Type	Account
P2	10	Retention	A2
	20	Standard	A1

Now, when a claim transaction is mapped to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, when a claim transaction is mapped to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLNG** feature configuration is set to **C1INVTYP**.

How to setup the C1-ASOBLNG feature configuration	Setting the C1-ASOBLNG Feature Configuration on page 4136

Self-Funded Policy

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. You can create a self-funded policy through a customer registration object or a health care inbound message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

Price Items

Each service offered in the self-funded plan should be defined as a price item in the system. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

You can define a price item and associate the required parameters with the price item from the user interface. You can use the price item parameters for defining multi parameter based pricing or for aggregating the transactions.

Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the self-funded plan from the user interface:

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Claim	Claim	CLAIM
Retention Type Claim Based	Retention Type Claim Based	RETCLMBSD

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Discount Share	Discount Arrangement	DISSHARE
Discount Guarantee	Discount Arrangement	DISGUAR
One-Time Flat Fees	Flat Fees	ONETIMEFLATFEES
Bill Period Based Recurring Flat Fees	Flat Fees	RECFLATFEES_BP
Frequency Based Recurring Flat Fees	Flat Fees	RECFLATFEES_FREQ
Retention Type Enrollment Based	Retention Type Enrollment Based	RETENRLBSD
Ancillary	Ancillary	ANCILLARY
Specific Stop-Loss	Specific Stop-Loss	SSL
Aggregate Stop-Loss	Aggregate Stop-Loss	ASL
Enrollment Based Premium	Level Funded	LVLENRLPRE
Flat Rate Based Premium	Level Funded	LVLFLATPRE

Pricing Rules

The self-funded plan may offer various services to the employer, such as claim administration, reinsurance or stop-loss, discount or level funding arrangement, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the self-funded plan. The below table lists the pricing rules which you can define for the following services offered in the self-funded plan:

Service	Pricing Rule	Created for....
Claim Administration	Claim	Parent Customer
Claim Administration	Claim	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Retention Type Claim Based	Parent Customer
Claim Administration	Retention Type Claim Based	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Discount Share	Parent Customer
Claim Administration	Discount Guarantee	Parent Customer
Claim Administration	One-Time Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Bill Period Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Frequency Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Enrollment	Retention Type Enrollment Based	Parent Customer
Enrollment	Retention Type Enrollment Based	Bill Group's Policy where the Parent Customer is the Policy Holder

Service	Pricing Rule	Created for....
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Parent Customer
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Specific Stop-Loss	Parent Customer
Stop-Loss	Specific Stop-Loss	Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Aggregate Stop-Loss	Parent Customer
Stop-Loss	Aggregate Stop-Loss	Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Enrollment Based Premium	Parent Customer
Level Funding Arrangement	Enrollment Based Premium	Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Flat Rate Based Premium	Parent Customer
Level Funding Arrangement	Flat Rate Based Premium	Bill Group's Policy where the Parent Customer is the Policy Holder

You can create the above mentioned self-funded pricing rules for a parent customer or for the policy of the bill group from the user interface and not through a health care inbound message.

The system creates a price assignment for each pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system first searches for the pricing rule of a price item (i.e. service) at the bill group level. If the effective pricing rule for a price item is available at the bill group level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group level, the system searches for the pricing rule of a price item at the parent customer level. If the effective pricing rule for a price item is available at the parent customer level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group or parent customer level, the system does not consider the respective price item for billing.

Price Assignments

The system creates a price assignment for each self-funded pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system automatically creates a price assignment whenever you create a self-funded pricing rule. The system creates the price assignment in a price list and assigns the price list to the parent customer or bill group. The system creates multiple price assignments when you define a pricing rule for a policy of a bill group using a pricing group.

Chapter 3

Health Insurance Business Management

Topics:

- [Policy Type](#)
- [Policy Person Role](#)
- [Contract Relationship Type](#)
- [Source System Extendable Lookup](#)
- [Extendable Lookup \(Source System\)](#)
- [Membership Identifier Type](#)
- [Pricing Parameters](#)
- [Geographic Rating Area](#)
- [Member Relationship Pricing Parameter](#)
- [Subscription Tier Pricing Parameter](#)
- [Membership Benefits](#)
- [Geographic Rating Area Preference](#)
- [Member Relationship and Subscription Tier Preference](#)

Health insurance is a type of insurance coverage that typically pays for medical, surgical, prescription drug and sometimes dental expenses incurred by the insured. Health insurance can reimburse the insured for expenses incurred from illness or injury, or pay the care provider directly. It is often included in employer benefit packages as a means of enticing quality employees, with premiums partially covered by the employer but often also deducted from employee paychecks.

Oracle Revenue Management and Billing has extended its pricing and billing engines to meet the requirements of the following three lines of health insurance business:

- [Fully-Insured Group Health Insurance](#) on page 263
- [Self-Funded Group Health Insurance](#) on page 413
- [Individual Health Insurance](#) on page 461

To use the pricing and billing engines for the above three lines of health insurance business, you need to set the respective prerequisites:

Line of Business	Prerequisites
Fully-Insured Group Health Insurance	Refer to the Pre-requisites on page 265 section.
Self-Funded Group Health Insurance	Refer to the Pre-requisites on page 415 section.
Individual Health Insurance	Refer to the Pre-requisites section.

Policy Type

Oracle Revenue Management and Billing enables you to define a policy type using which you can create a policy. The policy type helps the system to determine:

- **Policy Category** - The category implies the line of business in the health insurance domain for which the policy should be created using the policy type. The valid values are:
 - Fully-Insured Group
 - Fully-Insured Individual
 - Self-Funded

Note: At present, the **Fully-Insured Individual** policy category is not supported in the system.

- **Policy Business Object** - The business object using which the policy should be created in the system. You can specify the **C1-POLICY** or **C1-ASOPolicy** business object depending on whether you want to create the policy type for the fully-insured group or self-funded health insurance business.

The **Policy Type** screen allows you to define, edit, copy, and delete a policy type. It contains the following zones:

- [Policy Type List](#) on page 82
- [Policy Type](#) on page 83

Policy Type List

The **Policy Type List** zone lists the policy types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Policy Type	Displays the policy type.
Description	Displays the description of the policy type.
Policy Category	Indicates the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> • Self-Funded • Fully-Insured Group • Fully-Insured Individual
Edit	On clicking the Edit () icon, the Policy Type screen appears where you can edit the details of the policy type.
Duplicate	On clicking the Duplicate () icon, the Policy Type screen appears where you can define a new policy type using an existing policy type.
Delete	On clicking the Delete () icon, you can delete the policy type. <p>Note: You can delete a policy type when a policy is not created using the policy type.</p>

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a policy type, the **Policy Type** zone appears with the details of the respective policy type.

You can filter the list using the **Policy Category** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Policy Type

The **Policy Type** zone displays the details of the policy type. It contains the following sections:

- **Main** - Displays basic information about the policy type. It contains the following fields:

Field Name	Field Description
Policy Type	Displays the policy type.
Policy Business Object	Indicates the business object using which the policy should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the policy type.
Status	Indicates the status of the policy type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Policy Category	Indicates the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> • Self-Funded • Fully-Insured Group • Fully-Insured Individual
Detailed Description	Displays additional information about the policy type.

- **Characteristics** - Lists the characteristics defined for the policy type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy type.

Button Name	Button Description
Delete	Used to delete the policy type.
	Note: You can delete a policy type when a policy is not created using the policy type.
Duplicate	Used to create a new policy type using an existing policy type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the policy type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Policy Type** zone does not appear in the **Policy Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the policy type in the **Policy Type List** zone.

Defining a Policy Type

Prerequisites

To define a policy type, you should have:

- Required policy business object defined in the application

Note: The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To define a policy type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
A sub-menu appears.
3. Click the **Add** option from the **Policy Type** sub-menu.

The **Policy Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the policy type.

- **Characteristics** - Used to define the characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> • Fully-Insured Group • Fully-Insured Individual • Self-Funded 	Yes
	Note: At present, the Fully-Insured Individual policy category is not supported in the system.	
Detailed Description	Used to specify additional information about the policy type.	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy Type** screen.

4. Enter the required details in the **Main** section.

Note: If you want to create a policy type for the fully-insured group health insurance business, select the **C1-POLICY** business object from the **Policy Business Object** list and the **Fully-Insured Group** option from the **Policy Category** list. However, if you want to create a policy type for the self-funded health insurance business, select the **C1-ASOPolicy** business object from the **Policy Business Object** list and the **Self-Funded** option from the **Policy Category** list.

5. Define the characteristics for the policy type, if required.
6. Click **Save**.

The policy type is defined.

Defining a Characteristic for a Policy Type

Prerequisites

To define a characteristic for a policy type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Type**).

Procedure

To define a characteristic for a policy type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a policy type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to the Policy Type .	Note: This field is required when you are defining a characteristic for the policy type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the policy type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the policy type, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing a Policy Type

Prerequisites

To edit a policy type, you should have:

- Required policy business object defined in the application

Note: The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To edit a policy type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the policy type whose details you want to edit.

The **Policy Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the policy type.
- **Characteristics** - Used to define the characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Displays the policy type.	Not applicable
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> • Fully-Insured Group • Fully-Insured Individual • Self-Funded 	Yes
	Note: At present, the Fully-Insured Individual policy category is not supported in the system.	

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the policy type.	No

Tip: Alternatively, you can edit the details of a policy type by clicking the **Edit** button in the **Policy Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the policy type, if required.
7. Click **Save**.

The changes made to the policy type are saved.

Copying a Policy Type

Instead of creating a policy type from scratch, you can create a new policy type using an existing policy type. This is possible through copying a policy type. On copying a policy type, the details including the characteristics are copied to the new policy type. You can then edit the details, if required.

Prerequisites

To copy a policy type, you should have:

- Policy type (whose copy you want to create) defined in the application
- Required policy business object defined in the application

Note: The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To copy a policy type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the policy type whose copy you want to create.

The **Policy Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the policy type.
- **Characteristics** - Used to define the characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: <ul style="list-style-type: none"> • Fully-Insured Group • Fully-Insured Individual • Self-Funded 	Yes
	Note: At present, the Fully-Insured Individual policy category is not supported in the system.	
Detailed Description	Used to specify additional information about the policy type.	No

Tip: Alternatively, you can copy a policy type by clicking the **Duplicate** button in the **Policy Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the policy type, if required.
7. Click **Save**.

The new policy type is defined.

Deleting a Policy Type

Procedure

To delete a policy type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the policy type that you want to delete.
A message appears confirming whether you want to delete the policy type.

Note: You can delete a policy type when a policy is not created using the policy type.

Tip: Alternatively, you can delete a policy type by clicking the **Delete** button in the **Policy Type** zone.

5. Click **OK**.
The policy type is deleted.

Contract Relationship Type

Oracle Revenue Management and Billing enables you to define various relationship types using which you can relate main subscriber and other dependent persons in a membership. The **Contract Relationship Type** screen allows you to define, edit, and delete such relationship types. It also allows you to filter the contract relationship types using various search criteria.

Filtering the Contract Relationship Types

Prerequisites

To filter the contract relationship types, you should have:

- Contract relationship types defined in the application

Procedure

To filter the contract relationship types:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

The **Contract Relationship Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Used to search a particular contract relationship type.	Yes

- Enter the search criteria in the **Relationship Type** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

The search results are filtered based on the specified criteria.

Defining a Contract Relationship Type

Procedure

To define a contract relationship type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

The **Contract Relationship Type** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Used to specify the contract relationship type.	Yes
Description	Used to specify the description for the contract relationship type.	Yes

- Enter the required details in the **Contract Relationship Type** screen.
- If you want to define more than one contract relationship type, click the **Add (+)** icon and then repeat step 3.

Note: However, if you want to remove a contract relationship type, click the **Delete (🗑)** icon corresponding to the contract relationship type.

- Click **Save**.

The contract relationship type is defined.

Editing a Contract Relationship Type

Procedure

To edit a contract relationship type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

The **Contract Relationship Type** screen appears.

3. If required, you can filter the list in the **Contract Relationship Type** screen.

A list of contract relationship types that meet the search criteria appears in the search results. The **Search Results** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Displays the contract relationship type.	Not applicable
Description	Used to specify the description for the contract relationship type.	Yes

4. Modify the required details in the **Contract Relationship Type** screen.
5. Click **Save**.

The changes made to the contract relationship type are saved.

Deleting a Contract Relationship Type

Procedure

To delete a contract relationship type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

The **Contract Relationship Type** screen appears.

3. If required, you can filter the list in the **Contract Relationship Type** screen.

A list of contract relationship types that meet the search criteria appears in the **Search Results** section.

4. Click the **Delete** (🗑) icon corresponding to the contract relationship type that you want to delete.

Note: You can delete a contract relationship type when it is not yet used in the system.

5. Click **Save**.

The contract relationship type is deleted.

Source System Extendable Lookup

Oracle Revenue Management and Billing enables you to track the external system from where the fully-insured group or self-funded policies are received for billing. Each external system must be defined in the system using the **Source System (C1-SourceSystemLookup)** extendable lookup.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 96

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective extendable lookup.

Searching for the Source System Extendable Lookup

Procedure

To search for the **Source System** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-SourceSystemLookup** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Source System** extendable lookup business object appears in the **Search Results** section.

Extendable Lookup (Source System)

The **Extendable Lookup** screen allows you to view the values of the **Source System (C1-SourceSystemLookup)** extendable lookup. It also allows you to define, edit, copy, and delete a source system. It contains the following zones:

- [Extendable Lookup Value List](#) on page 98
- [Extendable Lookup Value](#) on page 99

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Source System** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the source system.
Description	Displays the description of the source system.
Owner	Indicates who has created the source system. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification
Edit	On clicking the Edit (✎) icon, the Extendable Lookup screen appears where you can edit the details of the source system.
Duplicate	On clicking the Duplicate (📄) icon, the Extendable Lookup screen appears where you can define a new source system using an existing source system.
Delete	On clicking the Delete (🗑) icon, you can delete the source system.
	Note: You can delete a source system when it is not yet used in the system.
Detailed Description	Displays additional information about the source system.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a source system, the **Extendable Lookup Value** zone appears with the details of the respective source system.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the source system. It contains the following sections:

- **Main** – Displays basic information about the source system. It contains the following fields:

Field Name	Field Description
Source System	Displays the source system.
Description	Displays the description of the source system.
Override Description	Displays the overridden description of the source system.
Detailed Description	Displays additional information about the source system.
Status	Indicates the status of the source system. The valid values are: <ul style="list-style-type: none"> • Active • Inactive

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the source system.
Delete	Used to delete the source system.
	Note: You can delete a source system when it is not yet used in the system.
Duplicate	Used to create a source system using an existing source system.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the source system is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the source system. The valid values are: <ul style="list-style-type: none"> • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** () icon corresponding to the source system in the **Extendable Lookup Value List** zone.

Copying a Source System

Instead of creating a source system from scratch, you can create a new source system using an existing source system. This is possible through copying a source system. On copying a source system, the details of the source system are copied to the new source system. You can then edit the details, if required.

Prerequisites

To copy a source system, you should have:

- Source system (whose copy you want to create) defined in the application

Procedure

To copy a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the source system whose copy you want to create.

The **Extendable Lookup** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the source system.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to specify the external system from where the policies are received for billing.	Yes
Description	Used to specify the description for the source system.	Yes
Override Description	Used when you want to override the description of the source system.	No
Detailed Description	Used to specify additional information about the source system.	No
Status	Used to indicate the status of the source system. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Tip: Alternatively, you can copy a source system by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Click **Save**.

The new source system is added in the **C1-SourceSystemLookup** extendable lookup.

Deleting a Source System**Procedure**

To delete a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the source system that you want to delete.

A message appears confirming whether you want to delete the source system.

Note: You can delete a source system when it is not yet used in the system.

Tip: Alternatively, you can delete a source system by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The source system is deleted from the **C1-SourceSystemLookup** extendable lookup.

Membership Identifier Type

Oracle Revenue Management and Billing enables you to define an identifier for the group and individual memberships using a membership identifier type. The **Membership Identifier Type** screen allows you to create, edit, delete, and copy a membership identifier type. It contains the following zones:

- [Membership Identifier Type List](#) on page 104
- [Membership Identifier Type](#) on page 105

When you create or edit a group or individual membership through a health care inbound message or through the membership repricing inbound web service, you can define various identifiers (for example, beneficiary ID, exchange subscriber ID, and so on) associated with the membership using the membership identifier type.

Defining a Membership Identifier Type

Prerequisites

To define a membership identifier type, you should have:

- Validation algorithm defined in the application (in case you want to use it)

Note: No validation algorithm type for membership identifier type is shipped with the product. However, the **Membership Identifier Type - Validation** algorithm entity is available in the application. You can create the required custom validation algorithms for the **Membership Identifier Type - Validation** algorithm entity.

Procedure

To define a membership identifier type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Membership Identifier Type**.
A sub-menu appears.
3. Click the **Add** option from the **Membership Identifier Type** sub-menu.

The **Membership Identifier Type** screen appears. It contains the following section:

- **Main** - Used to specify the basic details of the membership identifier type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Identifier Type	Used to specify the membership identifier type.	Yes
Description	Used to specify the description for the membership identifier type.	Yes
Validation Algorithm	Used to indicate the algorithm using which you want to validate the value of the membership identifier type. It is triggered when you define an identifier for a membership using the membership identifier type. Note: The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.	No
Detailed Description	Used to specify additional information about the membership identifier type.	No

Tip: Alternatively, you can access the **Membership Identifier Type** screen by clicking the **Add** button in the **Page Title** area of the **Membership Identifier Type** screen.

4. Enter the required details in the **Main** section.
5. Click **Save**.

The membership identifier type is defined.

A message appears confirming whether you want to delete the membership identifier type.

Note: You can delete a membership identifier type when it is not yet used in the system.

Tip: Alternatively, you can delete a membership identifier type by clicking the **Delete** button in the **Membership Identifier Type** zone.

- Click **OK**.
The membership identifier type is deleted.

Viewing the Membership Identifier Type Details

Procedure

To view the details of a membership identifier type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Membership Identifier Type**.
A sub-menu appears.
3. Click the **Search** option from the **Membership Identifier Type** sub-menu.
The **Membership Identifier Type** screen appears.
4. In the **Membership Identifier Type List** zone, click the **Broadcast** () icon corresponding to the membership identifier type whose details you want to view.
The **Membership Identifier Type** zone appears.
5. View the details of the membership identifier type in the **Membership Identifier Type** zone.

Pricing Parameters

Oracle Revenue Management and Billing enables you to create new set of pricing parameters, such as, Geographic Rating Area, Member Relationship, and Subscription Tier for a fully-insured group and individual customers.

To create a geographic rating area pricing parameter the ORMB system uses the policy plan and geographical details (of a member person) to retrieve the appropriate rating area. This rating area is further used to obtain the rate information defined on the pricing rule that is eventually based on a particular geographical rating area. To create a member relationship pricing parameter, the ORMB system retrieves the appropriate member relationship through the post processing algorithm and stamps the retrieved member relationship on the member person belonging to a particular membership. However, to create a subscription tier pricing parameter, the ORMB system retrieves the subscription tier information through the post processing algorithm and stamps the tier information on the desired membership.

For more information on how to setup the **Pricing Parameters** feature, see [Prerequisites](#) on page 112

Geographic Rating Area	Geographic Rating Area on page 114
Member Relationship Pricing Parameter	Member Relationship Pricing Parameter on page 129

For more information on...	See...
Subscription Tier Pricing Parameter	Subscription Tier Pricing Parameter on page 144

Prerequisites

The following table lists the prerequisites for the pricing parameters feature:

If you want to...	Then...
Create a geographic rating area parameter	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Ensure that the upstream system contains the geographic rating area details in CSV file. • Ensure that the CSV file is available at the desired path on the server, before the file upload batch is triggered. • Set the C1-GeoRatingArea business object validation soft parameter (Include Plan Value Details) to either include or exclude plan details (Y/N) before the file is uploaded. • Include the C1GEO_RATING_ARCSVUPLD file request type for file upload purposes. • Ensure that C1_GEO_RATING_AREA and C1_GEO_RATING_AREA_REL_OBJ tables are populated before any memberships are created in the system for derivation purposes. • Configure the pricing parameter with the geographic rating area on the pricing rule. • Define the required Address Source (C1-ADSRC) and Address Type (C1-ADTYP) characteristic types in the system. Values for these characteristics can be defined either on the policy or plan characteristics level. The address source and address type can also be defined on the state of issue of the policy or plan. • Define the parent policy role in the C1-ASOBLNG feature configuration. • Define the following billing preferences in the Field Mapping screen: <ul style="list-style-type: none"> • Default Address Source • Default Address Type • Use Plan Details • Address Source Value for Policy Holder • Address Source Value for Main Subscriber • Geographic Rating Area Characteristic Type • Address Source Characteristic Type • Address Type Characteristic Type • Define the default value for Geographic Rating Area Characteristic Type in the Premium Billing Preference screen.

If you want to...	Then...
Create a member role parameter	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Define the pricing parameter with the member role. • The Admin user must define different types of member role structures for step or party, where all the member roles must be defined in the Member Relationship/Subscription Tier Structure screen. These member roles must also exist in the C1-ASOBLLNG feature configuration. • Define the required characteristic types, such as, Member Role Structure (C1-MRLST), Member Role - Derivation Date Basis (C1-MRddb), and Age Calculation Date Basis (C1-AGCAL) on the policy plan. • Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined: <ul style="list-style-type: none"> • Max Age of Dependent • Max Number of Dependents • Order Priority • Young Adult Max Age Limit • Young Adult Inclusion Applicability • The above characteristic types along with the Member Role (C1-MEMRL) characteristic type would be stamped on member person, must be specified in the Premium Billing Preferences screen.
Create a subscription tier parameter	<p>You need to do the following:</p> <ul style="list-style-type: none"> • Define the pricing parameter with the subscription tier. • The Admin user must define different types of subscription tiers, where all the tiers must be defined in the Member Relationship/Subscription Tier Structure screen. These subscription tiers must also exist in the C1-ASOBLLNG feature configuration. • Define the required characteristic types, such as, Subscription Tier Structure (C1-STRST) and Age Calculation Date Basis (C1-AGCAL) on the policy plan. • Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined: <ul style="list-style-type: none"> • Max Age of Dependent • Max Number of Dependents • Order Priority • Young Adult Max Age Limit • Young Adult Inclusion Applicability • The above characteristic types along with the Subscription (C1-SUBST) characteristic type would be stamped on member person, must be specified in the Field Mapping screen.

Geographic Rating Area

Oracle Revenue Management and Billing enables you to use the geographic rating area as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different geographic rating area.

The system enables you to add and edit a geographic rating area from the user interface. You can also add or edit a set of geographic rating areas at once using the **File Upload Interface** utility. However, note that while editing a geographic rating area, you can only change the end date to a far future date and the status from **Active** to **Inactive**.

While maintaining a geographic rating area in the system, you can also list the policy plans available in the geographic rating area. You can add the policy plan information for a geographic rating area from the user interface or through the **File Upload Interface** utility. But, you cannot edit the policy plan information of a geographic rating area through the **File Upload Interface** utility.

You can upload the geographic rating areas from the CSV file using the **C1GEORATINGARCSVUPLD** file request type through the **File Transformation and Upload (C1-FTRAN)** batch.

Note: You need to set the **Include Plan Or Product Details** parameter in the **C1-GEORAVALD** algorithm to Y or N. If the value for this parameter is set to Y, the system identifies the record using the State, Zip From, Zip Plus4 From, Zip To, Zip Plus4 To, Start Date, Policy Number, Plan Number, and Source System combination. However, if the value for this parameter is set to N, the system identifies the record using the State, Zip From, Zip Plus4 From, Zip To, Zip Plus4 To, and Start Date combination.

Once you define a geographic rating area, the system can derive the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. The system supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

On adding a membership to a policy plan, the system first derives the characteristic types from the **Address Source Characteristic Type** and **Address Type Characteristic Type** attributes of a geographic rating area preference. The system considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLNG** feature configuration. Then, the system searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, the system derives the default address source and address type from the geographic rating area preference.

Note: By default, the **Address Source (C1-ADSRC)** and **Address Type (C1-ADTYP)** characteristic types are shipped with the product. You need to set these characteristic types in the respective attribute of the geographic rating area preference.

If the address source is set to **Policy Holder**, the system fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration. The system then derives the person who is associated

with the policy using the parent customer policy person role. Once the address source and address type are derived, the system fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is set to **Person Mailing**, the system fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, the system checks whether the zip code is a 9-digit code. If not, the system appends zeros to make it a 9-digit zip code. The system then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to **Y**, the system then derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to **N**, the system then derives a geographic rating area for the state and zip code combination. If the system could not derive the geographic rating area, the system derives the default geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, the system stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

The geographic rating area of the membership must be changed when the address of the policy holder or main subscriber is updated. Therefore, when an address of a person is change, the system identifies the following:

- Memberships of policies where the person is the policy holder
- Memberships where the person is the main customer

For each membership, the system searches for the **Address Source** and **Address Type** characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, the system derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, the system fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration. The system then derives the person who is associated with the policy using the parent customer policy person role.

Once the address source and address type are derived, the system fetches the state and zip code from the address type of the address source. The system then derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination or for the state and zip code combination depending on the value defined for the **Use Plan Details** attribute. If the system could not derive the geographic rating area, the system derives the default geographic rating area from the geographic rating area preference. If the geographic rating area is different, the system creates a new characteristic to store the geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

To use the geographic rating area as a pricing parameter, you need to define the Geographic Rating Area parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Geographic Rating Area parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on geographic rating area to which the membership belongs.

A new screen named **Geographic Rating Area** is introduced in this release. It enables you to add, edit, and inactivate a geographic rating area.

Prerequisites

To create a geographic rating area pricing parameter, you need to do the following:

- Ensure that the upstream system contains the geographic rating area details in **CSV** file.
- Ensure that the **CSV** file is available at the desired path on the server, before the file upload batch is triggered.
- Set the **C1-GeoRatingArea** business object validation soft parameter (**Include Plan Value Details**) to either include or exclude plan details (**Y/N**) before the file is uploaded.
- Include the **C1GEORATINGARCSVUPLD** file request type for file upload purposes.
- Ensure that **C1_GEO_RATING_AREA** and **C1_GEO_RATING_AREA_REL_OBJ** tables are populated before any memberships are created in the system for derivation purposes.
- Configure the pricing parameter with the geographic rating area on the pricing rule.
- Define the required **Address Source (C1-ADSRC)** and **Address Type (C1-ADTYP)** characteristic types in the system. Values for these characteristics can be defined either on the policy or plan characteristics level. The address source and address type can also be defined on the state of issue of the policy or plan.
- Define the parent policy role in the **C1-ASOBLNG** feature configuration.
- Define the following billing preferences in the **Field Mapping** screen:
 - Default Address Source
 - Default Address Type
 - Use Plan Details
 - Address Source Value for Policy Holder
 - Address Source Value for Main Subscriber
 - Geographic Rating Area Characteristic Type
 - Address Source Characteristic Type
 - Address Type Characteristic Type
- Define the default value for **Geographic Rating Area Characteristic Type** in the **Field Mapping** screen.
- Define the required health plan in the system.

Uploading a Geographic Rating Area File in the CSV Format

To upload a geographic rating area file in the CSV format using the **File Upload Interface** utility, you need to do the following:

- Define a file request type for uploading geographic rating area in the CSV format. To define a file request type:
 1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **File Request Type**.

A sub-menu appears.

- Click the **Add** option from the **File Request Type** sub-menu.

The **File Request Type** screen appears.

- Enter the file request type and description in the respective fields.

- Select the **Data Transformation Required** option.

The **File Format** field is enabled.

- Select the **Comma Separated Values** option from the **File Format** list.

- Select the Upload and Process File Simultaneously option.

- Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.

- In the **Services** section, enter the required sequence number.

- Select the **Business Object** option from the **Service Type** list.

- Enter the **C1-GeoRatingArea** business object or custom price item business object in the **Service Name** field.

- Select the **Add** or **Update** option from the **Operation** list depending on whether you want to create new geographic rating area details or edit the existing geographic rating area details using the file request type.

- In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes
Default Value	Used to specify the default value for the field.	No

- Click **Save**.

The file request type is defined for uploading the geographic rating area in the CSV format.

CSV File Format for Uploading Geographic Rating Areas

Before uploading a geographic rating area file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
GEO_RATING_AREA	Used to specify the geographic rating area.	Yes
STATE	Used to specify the state code which belongs to the geographical rating area.	Yes
ZIP_FROM	Used to specify the zip code from where the geographic rating area begins.	Yes
ZIP_PLUS4_FROM	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
ZIP_TO	Used to specify the zip code till where the geographic rating area ends.	Yes
ZIP_PLUS4_TO	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
START_DT	Used to specify the date from when the geographic rating area is effective.	Yes
END_DT	Used to specify the date till when the geographic rating area is effective.	Yes
PLAN_NBR	Used to specify the plan number belonging to a particular geographical rating area.	No
HEALTH_PLAN_CD	Used to specify the health plan belonging to a particular geographical rating area.	No
POLICY_NBR	Used to specify the policy number belonging to a particular geographical rating area.	No
SOURCE_SYSTEM	Used to specify the source system from where the policy is originated.	No
STATUS	Used to indicate the status for the geographic rating area. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Sample CSV Format for Uploading Geographic Rating Areas

Let us assume that a file request type with the below field transformation details is used for uploading the geographic rating area information in the system.

The following table illustrates the field transformation details used for uploading the geographic rating area information:

Sequence	Field Name	Map Field XPath
1	GEO_RATING_AREA	C1-GeoRatingArea/geoRatingArea
2	STATE	C1-GeoRatingArea/state
3	ZIP_FROM	C1-GeoRatingArea/zipFrom
4	ZIP_PLUS4_FROM	C1-GeoRatingArea/zipPlus4From
5	ZIP_TO	C1-GeoRatingArea/zipTo
6	ZIP_PLUS4_TO	C1-GeoRatingArea/zipPlus4To
7	START_DT	C1-GeoRatingArea/startDate
8	END_DT	C1-GeoRatingArea/endDate
9	PLAN_NBR	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/ planNumber
10	HEALTH_PLAN_CD	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/ healthPlanCode
11	POLICY_NBR	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/ policyNumber
12	SOURCE_SYSTEM_CD	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/ sourceSystem
13	STATUS	C1-GeoRatingArea/boStatus

In such case, you need to ensure that the sample CSV file contains records with comma-separated values in the sequence as mentioned in the above table.

Sample CSV

```
100,AR,15000,0,15000,10,02/02/2019,02/02/2030,45675767565,MED_PLN_01,7.87E
+11,SOURCE,ACTIVE
```

Geographic Rating Area (Used for Searching)

The **Geographic Rating Area** screen allows you to search for a geographic rating area using various search criteria. It also allows you to create a geographic rating area. This screen consists of the following zone:

- [Search Geographic Rating Area](#) on page 120

Search Geographic Rating Area

The **Search Geographic Rating Area** zone allows you to search for geographic rating area using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a geographic rating area detail record using the geographic rating area details or through policy or plan details. The valid values are: <ul style="list-style-type: none"> • Geographic Rating Area Details • Policy or Plan Details • Health Plan Details 	No
	Note: By default, the Geographic Rating Area Details option is selected.	
State Code	Used to search the geographic rating area details belonging to a particular state code.	No
	Note: You must specify a state code which is already defined in the system.	
Geographic Rating Area	Used to search the geographic rating area details based on a geographic rating area.	No
Zip Code From	Used to search the geographic rating area details which are effective from a particular zip code.	No
Zip Code To	Used to search the geographic rating area details which are effective till a particular zip code.	No
Start Date	Used to search the geographic rating area details which are effective from a particular date.	No
	Note: The geographic rating area start date cannot be later than the geographic rating area end date.	
End Date	Used to search the geographic rating area details which are effective till a particular date.	No
	Note: The geographic rating area end date cannot be earlier than the geographic rating area start date	

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search the geographic rating area details based on a particular status. The valid values are: <ul style="list-style-type: none"> Active Inactive 	No
Policy Number	Used to search the geographic rating area details with a particular policy number.	No
Plan Number	Used to search the geographic rating area details with a particular plan number.	No
Health Plan	Used to search the geographic rating area details which are associated with a health plan.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Health Plan Search window appears.</p> <p>This field appears when the Health Plan Details option is selected from the Search By list.</p>	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Geographic Rating Area	Displays the geographic rating area.
State Code	Displays the state code to which the geographic rating area belongs.
Zip Code From	Displays the zip code from where the geographic rating area is effective.
Zip Code Plus 4 From	Displays the zip code plus four additional digits which identify from where the geographic rating area is effective.
Zip Code To	Displays the zip code till where the geographic rating area is effective.
Zip Code Plus 4 To	Displays the zip code plus four additional digits which identify till where the geographic rating area is effective.
Start Date	Displays the date from when the geographic rating area is effective.
End Date	Displays the date till when the geographic rating area is effective.
Status	Indicates the status of the geographic rating area. The valid values are: <ul style="list-style-type: none"> Active Inactive

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **State Code**, **Geographic Rating Area**, **Zip Code From**, **Zip Code To**, **Start Date**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (🔍) icon in the upper right corner of this zone.

Geographic Rating Area

The **Geographic Rating Area** zone displays the details of the geographic rating area. It contains the following sections:

- **Main** - Displays basic information about the geographic rating area. It contains the following fields:

Field Name	Field Description
Geographic Rating Area	Displays information about the geographic rating area.
State Code	Displays the state code to which the geographic rating area belongs.
Zip Code From	Displays the zip code from where the geographic rating area is effective.
Zip Code Plus 4 From	Displays the zip code plus four additional digits which identify from where the geographic rating area is effective.
Zip Code To	Displays the zip code till where the geographic rating area is effective.
Zip Code Plus 4 To	Displays the zip code plus four additional digits which identify till where the geographic rating area is effective.
Start Date	Displays the date from when the geographic rating area is effective.
End Date	Displays the date till when the geographic rating area is effective.
Status	Displays the status of the geographic rating area. The valid values are: <ul style="list-style-type: none"> • Active • Inactive

- **Plan Details** - Lists the plan information of the geographic rating area. It contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number which is associated with the geographic rating area.
Plan Number	Displays the plan number of the policy.

Column Name	Column Description
Health Plan	Indicates the health plan to which the geographic rating area is associated.
	Note: The data in this column appears only when the geographic rating area is specified for fully-insured individual.
Source System	Displays the name of the external system from where the policy is originated.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the geographic rating area.
	Note: The Edit button appears when the geographic rating area is in the Active status.
Inactive	Used to change the status of the geographic rating area.
	Note: The Inactive button appears when the geographic rating area is in the Active status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the geographic rating area is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the geographic rating area status is updated.
Creation Date/Time	Displays the date and time when the geographic rating area is created.

Searching for a Geographic Rating Area

Prerequisites

To search for a geographic rating area, you should have:

- Geographic rating area defined in the application.
- Policy and plan defined in the application.

Procedure

To search for a geographic rating area:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **G** and then click **Geographic Rating Area**.
The **Geographic Rating Area** screen appears.
3. Enter the search criteria in the **Search Geographic Rating Area** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of geographic rating area that meet the search criteria appears in the **Search Results** section.

Defining a Geographic Rating Area

Procedure

To define a geographic rating area

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **G** and then click **Geographic Rating Area**.
The **Geographic Rating Area** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Geographic Rating Area** screen.
The **Geographic Rating Area** screen appears. It contains the following sections:
 - **Main** - Used to specify basic details about the geographic rating area.
 - **Plan Details** - Used to specify the plan details for the geographic rating area.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Geographic Rating Area	Used to specify the geographic rating area.	Yes
State Code	Used to specify the state code which belongs to the geographical rating area. Note: You must specify a state code which is already defined in the system.	Yes
Zip Code From	Used to specify the zip code from where the geographic rating area begins.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Zip Code Plus 4 From	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
Zip Code To	Used to specify the zip code till where the geographic rating area ends.	Yes
Zip Code Plus 4 To	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
Start Date	Used to specify the date from when the geographic rating area is effective.	Yes
	Note: The geographic rating area start date cannot be later than the geographic rating area end date.	
End Date	Used to specify the date till when the geographic rating area is effective.	No
	Note: The geographic rating area end date cannot be earlier than the geographic rating area start date	
Status	Used to indicate the status for the geographic rating area. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot assign an Inactive status to the geographic rating area record while you are defining a geographic rating area.	

4. Enter the required details in the **Main** section.
5. Add the plan details for the geographic rating area, if required.
6. Click **Save**.

The geographic rating area is defined in the **Active** status.

Adding the Plan Details for a Geographic Rating Area

Prerequisites

To add plan details for a geographic rating area, you should have:

- Policy and plan defined in the application.
- Source system defined in the application.
- Health plan defined in the application.

Procedure

To add plan details for a geographic rating area:

1. Ensure that the **Plan Details** section is expanded when you are defining or editing the geographic rating area information.

Note: If you want to use the geographic rating area for a fully-insured group and individual businesses, you need to specify policy number, plan number, and source system fields. You can specify the health plan only when you want to use the geographic rating area for a fully-insured individual membership.

The **Plan Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Policy Number	Used to specify the policy number which is associated with the geographic rating area.	No
Plan Number	Used to specify the plan number of the policy.	No
Health Plan	Used to specify the health plan which is associated with the geographic rating area.	No
	Note: You need to specify the health plan, if you want to use the geographic rating area for a fully-insured individual membership.	
Source System	Used to specify the name of the external system from where the policy is originated.	No

2. Enter the required details in the **Plan Details** section.
3. If you want to define more than one plan information for the geographic rating area, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a plan information from the geographic rating area, click the **Delete (🗑)** icon corresponding to the policy number column.

How to edit a geographic rating area	Editing a Geographic Rating Area on page 126

Editing a Geographic Rating Area**Procedure**

To edit a geographic rating area

1. Search for the geographic rating area in the **Geographic Rating Area** screen.
2. In the **Search Results** section, click the **Broadcast (📡)** icon corresponding to the geographic rating area column whose details you want to view.
The **Geographic Rating Area** zone appears.
3. Click the **Edit** button in the **Geographic Rating Area** screen.

The **Geographic Rating Area** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the geographic rating area.

- **Plan Details** - Used to specify the plan details for the geographic rating area.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Geographic Rating Area	Used to specify the geographic rating area.	Yes
State Code	Used to specify the state code which belongs to the geographical rating area.	Yes
	Note: You must specify a state code which is already defined in the system.	
Zip Code From	Used to specify the zip code from where the geographic rating area begins.	Yes
Zip Code Plus 4 From	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
Zip Code To	Used to specify the zip code till where the geographic rating area ends.	Yes
Zip Code Plus 4 To	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
Start Date	Used to specify the date from when the geographic rating area is effective.	Yes
	Note: The geographic rating area start date cannot be later than the geographic rating area end date.	
End Date	Used to specify the date till when the geographic rating area is effective.	No
	Note: The geographic rating area end date cannot be earlier than the geographic rating area start date	
Status	Used to indicate the status for the geographic rating area. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot assign an Inactive status to the geographic rating area record while you are defining a geographic rating area.	

4. Modify the geographic rating area details, if required.
5. Define, edit, or remove plan details for the geographic rating area, if required.
6. Click **Save**.

The changes made to the geographic rating area are saved.

Inactivating a Geographic Rating Area

Procedure

To inactivate a geographic rating area:

1. Search for the geographic rating area in the **Geographic Rating Area** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the geographic rating area column whose details you want to view.
The **Geographic Rating Area** zone appears.
3. Click the **Inactive** button in the **Geographic Rating Area** zone.
The status of the geographic rating area is changed to **Inactive**.

Note: The **Inactive** button appears when the geographic rating area is in the **Active** status.

Member Relationship Pricing Parameter

Oracle Revenue Management and Billing enables you to use the member relationship (i.e. how a member is related to the main subscriber of the membership) as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different member relationship.

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, the system automatically derives member relationship for each member person of the membership from a member relationship structure. You can define a member relationship structure through a characteristic on the policy plan. While defining a member relationship structure for a policy plan, you must use the characteristic type specified in the **Member Relationship Structure Characteristic Type** attribute of a member relationship and subscription tier preference. The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLNG** feature configuration.

The system enables you to define two types of member relationship structure:

- **Step Member Relationship Structure** - A step member relationship structure helps the system to determine how each member person is related to the main subscriber of the membership. You can specify a list of member relationships in a step member relationship structure. A member relationship is derived for a member person depending on the following:
 - Whether the member person is a self, spouse, or dependent
 - Number of spouses, dependents, and young adults in the membership

A relationship matrix indicates whether a member person with a particular relationship type should be considered as self, spouse, or dependent while deriving the member relationship. In a step member relationship structure, a spouse is never considered as a dependent. Only children are considered as dependents.

For example, you can create a step member relationship structure named STEPEX1 as shown below:

Member Relationship	Self	Number of Spouses	Number of Dependents	Number of Young Adults
Self	1	0	0	0
Spouse 1	1	1	0	0
Spouse 2	1	2	0	0
Child 1	1	1	1	0
Young Adult 1	1	1	0	1
CD1 and YA1	1	1	1	1
Child 2	1	1	2	0
Young Adult 2	1	1	0	2
CD2 and YA2	1	1	2	2
Additional Dependent	1	3	3	3

Note: You can only define one member relationship in a step member relationship structure where the sum of self, number of spouses, number of dependents, and number of young adults exceeds the maximum member count specified in the step member relationship structure.

In addition, you can create a relationship matrix in the STEPEX1 member relationship structure as shown below:

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Spouse
Spouse	Spouse	Spouse

- **Party Member Relationship Structure** - A party member relationship structure helps the system to determine how each member person is related to the main subscriber of the membership. You can specify a list of member relationships in a party member relationship structure. A member relationship is derived for a member person depending on the following:
 - Whether the member person is a self or dependent
 - Number of dependents in the membership

A relationship matrix indicates whether a member person with a particular relationship type should be considered as self or dependent while deriving the member relationship. In a party member relationship structure, a spouse is always considered as a dependent. Also, children are not categorized as young adults.

For example, you can create a party member relationship structure named PARTYEX1 as shown below:

Member Relationship	Self	Number of Spouses	Number of Dependents	Number of Young Adults
Self	1	0	0	0
Dependent 1	1	0	1	0
Dependent 2	1	0	2	0
Dependent 3	1	0	3	0
Additional Dependents	1	0	9	0

Note: You can only define one member relationship in a party member relationship structure where the sum of self and number of dependents exceeds the maximum member count specified in the party member relationship structure.

In addition, you can create a relationship matrix in the PARTYEX1 member relationship structure as shown below:

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Dependent
Spouse	Spouse	Dependent

Once the member relationship structure is derived from the policy plan, the system determines the member relationship for each member person in the membership. While determining the member relationship for a member person, the system derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis
- Max Age Limit for Max Dependent Count
- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- Member Relationship Derivation Date
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

The system then derives these characteristics from the policy plan. If the **Member Relationship Derivation Date** characteristic type is set to **Enrollment Date**, the system derives the member relationship for each member person of the membership in order of the member start date. However, if the Member Relationship Derivation Date characteristic type is set to Date of Birth, the system derives the member relationship for each member person of the membership in order of the date of birth. For example, if a membership with the following member persons is added to a policy plan:

Member Start Date	Member End Date	Person Name	Main Subscriber	Relationship Type	Member	Date of Birth
1-Jan-18	31-Dec-20	Mark	Yes	Self	Yes	15-Jan-68
1-Jan-18	31-Dec-20	Nancy	No	Wife	Yes	20-Apr-72
1-Jan-18	31-Dec-20	Roger	No	Child	Yes	15-May-01
1-Jan-18	31-Dec-20	Tom	No	Child	Yes	16-May-04

Now, if the following characteristics are defined on the policy plan:

- Member Relationship Structure - STEPEX1
- Member Relationship Derivation Date – Date of Birth
- Age Calculation Date Basis – Enrollment Date
- Maximum Number of Dependents – 3
- Max Number of Dependents Order Priority - YOUNGEST

The system will consider the STEPEX1 member relationship structure and derives the member relationship for each member person as shown below:

Member Person	Effective Date	Characteristic Type	Characteristic Value
Mark	1-Jan-18	Member Relationship	Self
Nancy	1-Jan-18	Member Relationship	Spouse 1
Tom	1-Jan-18	Member Relationship	Child 1
Roger	1-Jan-18	Member Relationship	Child 2

Note that the member relationship of Tom is derived before Roger because he is youngest of all dependents. Now, assume if one more member person named Harry with the date of birth as 05-11-08 and relationship type as Child is added to the membership on 05-Jan-18, then the system derives the member relationship for each member person of the membership as shown below:

Effective Date	Member	Member Characteristics	Person	Value
1-Jan-18	Mark	Member Relationship		Self
1-Jan-18	Nancy	Member Relationship		Spouse 1
5-Jan-18	Harry	Member Relationship		Child 1
5-Jan-18	Tom	Member Relationship		Child 2
5-Jan-18	Roger	Member Relationship		Additional Dependent

The member relationship for Harry, Tom, and Roger is derived in the order of their age which is calculated from the enrollment date. Because the member relationship derived for Tom and Roger is different, the system creates a new characteristic to store the member relationship for Tom and Roger. Here, the effective date of the characteristics is set to the new member person's start date.

If a new born is added to the membership, the effective date of the new born's member relationship characteristic is calculated considering the gift days if applicable. If a member person is end dated, the system derives the member relationship of all other member persons once again. If the member relationship for a member person is different, the system creates a new characteristic to store the member relationship for the member person. The effective date of the new characteristic is set to member person's end date + 1. However, if a member person is inactivated, the system derives the member relationship of all other member persons once again. If the member relationship for a member person is different, the system updates the existing member relationship characteristic of the member person.

To use the member relationship as a pricing parameter, you need to define the Member Relationship parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership Person**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Member Relationship Characteristic Type** attribute of the member relationship and subscription tier preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Member Relationship parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on the member relationship.

A new screen named **Member Relationship/Subscription Tier Structure** is introduced in this release. It enables you to add, edit, copy, and delete the member relationship and subscription tier structures.

Prerequisites

To create a member relationship pricing parameter, you need to do the following:

- Define the pricing parameter with the member relationship.
- The **Admin** user must define different types of member relationship structures for step or party, where all the member relationships must be defined in the **Member Relationship/Subscription Tier Structure** screen. These member relationships must also exist in the **C1-ASOBLLNG** feature configuration.
- Define the required characteristic types, such as, **Member Relationship Structure (C1-MRLST)**, **Member Relationship - Derivation Date Basis (C1-MRDDDB)**, and **Age Calculation Date Basis (C1-AGCAL)** on the policy plan.
- Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined:

- Max Age of Dependent
 - Max Number of Dependents
 - Order Priority
 - Young Adult Max Age Limit
 - Young Adult Inclusion Applicability
- The above characteristic types along with the **Member Relationship (C1-MEMRL)** characteristic type would be stamped on the member person, must be specified in the **Field Mapping** screen.

Member Relationship/Subscription Tier Structure (Used for Searching)

The **Member Relationship/Subscription Tier Structure** screen allows you to search for a member relationship/subscription tier using various search criteria. It also allows you to create a member relationship/subscription tier. Through this screen, you can navigate to the following screen. It contains the following zone:

This screen consists of the following zone:

- [Member Relationship/Subscription Tier Structure List](#) on page 133
- [Member Relationship/Subscription Tier Structure](#) on page 134

Member Relationship/Subscription Tier Structure List

The **Member Relationship/Subscription Tier Structure List** zone displays the member relationship or subscription tier structure information. It contains the following columns:

Column Name	Column Description
Structure	Used to specify the structure code for the structure.
Description	Used to specify the description for the structure.
Edit	On clicking the Edit () icon, the Member Relationship/Subscription Tier Structure screen appears where you can edit the structural details of the member relationship or subscription tier.
Duplicate	On clicking the Duplicate () icon, the Member Relationship/Subscription Tier Structure screen appears where you can define a new member relationship or subscription tier using an existing member relationship or subscription tier.
Delete	On clicking the Delete () icon, you can delete the member relationship or subscription tier structure.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Structure** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (🔍) icon in the upper right corner of this zone.

Member Relationship/Subscription Tier Structure

The **Member Relationship/Subscription Tier Structure** zone displays the details of the member relationship or subscription tier structure. It contains the following sections:

- **Main** - Displays basic information about the member relationship or subscription tier structure. It contains the following fields:

Field Name	Field Description
Structure	Displays the type of structure.
Description	Displays the description of the structure.
Detailed Description	Displays additional information about the structure.
Maximum Member Count	Displays the maximum count of the members allowed in the structure.

- **Member Relationship/Subscription Tier Criteria** - Lists the criteria details of the member relationship or subscription tier. It contains the following columns:

Column Name	Column Description
Member Relationship/Subscription Tier	Displays the criteria code for the member relationship or subscription tier.
Self	Displays the main subscriber who meets the member relationship or subscription tier criteria. Note: The total count in the Self column cannot exceed more than one.
Number of Spouses	Displays the total number of spouses in the membership who meet the member person relationship criteria.
Number of Dependents	Displays the total number of dependents in the membership who meet the member person relationship criteria.
Number of Young Adults	Displays the total number of young adults in the membership who meet the member person relationship criteria.

- **Relationship Matrix** - Lists the relationship matrix details defined for the member relationship or subscription tier structure. It contains the following columns:

Column Name	Column Description
Relation	Indicates an entity defined in the relationship matrix.
Relationship Type	Indicates how a member person is associated with the main subscriber using a relationship type.
Relationship	Indicates how a member person is associated with the relationship type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the structural details of the member relationship or subscription tier.
Delete	Used to delete the member relationship or subscription tier structure.
Duplicate	Used to create a new member relationship or subscription tier structure using an existing structure.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the member relationship or subscription tier structure is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Defining a Member Relationship Structure

Procedure

To define a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
A sub-menu appears.
3. Click the **Add** option from the **Member Relationship/Subscription Tier Structure** sub-menu.

The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure.	Yes
	Note: You must specify a unique code name for the structure.	
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure.	No
	Note: If you do not specify the value, by default, it is set to zero (0).	

- **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/Subscription Tier	Used to specify a code name for the criteria.	No
	Note: You must specify a unique code name for the member relationship/subscription criteria.	
Self	Used to specify the main subscriber for the member relationship.	No
	Note: The value for this field must be a positive integer.	
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	

Field Name	Field Description	Mandatory (Yes or No)
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	

Note: You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Member Relationship/Subscription Tier Structure** screen.

- Enter the required details in the **Main** section.
- Define a criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
- If you want to define more than one criteria for the member relationship structure, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑️) icon corresponding to the **Member Relationship/Subscription Tier** field.

- Define the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
- If you want to define more than one relationship matrix for the member relationship structure, click the **Add (+)** icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete** (🗑️) icon corresponding to the **Relation** field.

- Click **Save**.

The member relationship structure is defined.

Editing a Member Relationship Structure

Procedure

To edit a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
The **Member Relationship/Subscription Tier Structure** screen appears.
3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Edit**  icon in the **Edit** column corresponding to the member relationship structure whose details you want to edit.

The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Displays the member relationship structure name.	Not applicable
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure.	No
	Note: If you do not specify the value, by default, it is set to zero (0).	

- **Member Relationship/Subscription Tier Criteria** - Used to define a criteria for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/Subscription Tier	Used to specify a code name for the criteria.	No
	Note: You must specify a unique code name for the member relationship/subscription criteria.	
Self	Used to specify the main subscriber for the member relationship.	No
	Note: The value for this field must be a positive integer.	

Field Name	Field Description	Mandatory (Yes or No)
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	

Note:

You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to define a relationship matrix for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can edit the details of a member relationship structure by clicking the **Edit** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Modify the details in the **Main** section.
5. Define, edit, or remove the criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the member relationship structure, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑️) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the member relationship structure, click the **Add (+)** icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete (🗑)** icon corresponding to the **Relation** field.

9. Click **Save**.

The changes made to the member relationship structure are saved.

Copying a Member Relationship Structure

Procedure

To copy a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
The **Member Relationship/Subscription Tier Structure** screen appears.
3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Duplicate (📄)** icon in the **Duplicate** column corresponding to the member relationship structure whose copy you want to create.

The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure.	Not applicable
	Note: You must specify a unique code name for the structure.	
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No

Field Name	Field Description	Mandatory (Yes or No)
Maximum Member Count	Used to specify the maximum number of members allowed in the structure.	No
	Note: If you do not specify the value, by default, it is set to zero (0).	

- **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/Subscription Tier	Used to specify a code name for the criteria.	No
	Note: You must specify a unique code name for the member relationship/subscription criteria.	
Self	Used to specify the main subscriber for the member relationship.	No
	Note: The value for this field must be a positive integer.	
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria.	No
	Note: The value for this field must be a positive integer.	

Note:

You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can copy a member relationship structure by clicking the **Duplicate** button in the **Member Relationship/Subscription Tier Structure** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove a criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
- If you want to define more than one criteria for the member relationship structure, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑️) icon corresponding to the **Member Relationship/Subscription Tier** field.

- Define, edit, or remove the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
- If you want to define more than one relationship matrix for the member relationship structure, click the **Add (+)** icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete** (🗑️) icon corresponding to the **Relation** field.

- Click **Save**.

The new member relationship structure is created.

Deleting a Member Relationship Structure

Procedure

To delete a member relationship structure:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.

A sub-menu appears.

- Click the **Search** option from the **Member Relationship/Subscription Tier Structure** sub-menu.

The **Member Relationship/Subscription Tier Structure** screen appears.

- In the **Member Relationship/Subscription Tier Structure List** section, click the **Delete** () icon in the **Delete** column corresponding to the member relationship structure that you want to delete.

A message appears confirming whether you want to delete the member relationship structure.

Tip: Alternatively, you can click the **Delete** button in the **Member Relationship/Subscription Tier Structure** zone to delete the member relationship structure.

- Click **OK**.

The member relationship structure is deleted.

Viewing the Member Relationship Structure Details

Procedure

To view the details of the member relationship structure:

- Click the **Admin** link in the **Application** toolbar.
- A list appears.
- From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.

A sub-menu appears.

- Click the **Search** option from the **Member Relationship/Subscription Tier Structure** sub-menu.

The **Member Relationship/Subscription Tier Structure** screen appears.

- In the **Member Relationship/Subscription Tier Structure List** zone, click the **Broadcast** () icon corresponding to the structure column whose details you want to view.

The **Member Relationship/Subscription Tier Structure** zone appears.

- View the details of the member relationship structure in the **Member Relationship/Subscription Tier Structure** zone.

Subscription Tier Pricing Parameter

Oracle Revenue Management and Billing enables you to use the subscription tier as a pricing parameter while defining the tier based pricing rules. This feature facilitates you to offer different rates for a price item based on different subscription tier.

On creating the bill period timelines, the system executes the **Derive Subscription Tier for Membership (C1-DERSUBTR)** algorithm attached to the **Account and Price Item Derivation Post-Processing** system event in the respective tier based pricing rule type. This algorithm determines the subscription tier of the membership for each bill period timeline. While determining the subscription tier for a membership, the system derives subscription tier for the membership from a subscription tier structure. Note that while deriving the subscription tier of a membership for a bill period timeline, the system refers the proration rules defined on the respective policy plan and accordingly derives the subscription tier for the membership. The system invokes the **C1-DERSUBTR** algorithm in the **C1-REPC1** batch.

You can define a subscription tier structure through a characteristic on the policy plan. While defining a subscription tier structure for a policy plan, you must use the characteristic type specified in the **Subscription Tier Structure Characteristic Type** attribute of a member relationship and subscription tier preference. The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLNG** feature configuration.

A subscription tier structure helps the system to determine the subscription tier to which the membership belongs. You can specify a list of subscription tiers in a subscription tier structure. A subscription tier is derived for a membership depending on the following:

- Whether the member person is a self, spouse, or dependent
- Number of spouses, dependents, and young adults in the membership in the respective bill period timeline

A relationship matrix indicates whether a member person with a particular relationship type should be considered as self, spouse, or dependent while deriving the subscription tier. In a subscription tier structure, a spouse is never considered as a dependent. Only children are considered as dependents.

Let us understand this with the help of an example.

The following table illustrates the structure of a subscription tier named **STEX1**:

Subscription Tier	Self	Number of Spouses	Number of Dependents	Number of Young Adults
E	1	0	0	0
ES	1	1	0	0
ESC1	1	1	1	0
ESC2	1	1	2	0
EC1	1	0	1	0
EC2	1	0	2	0
EC3	1	0	3	0

Subscription Tier	Self	Number of Spouses	Number of Dependents	Number of Young Adults
F	1	9	9	9

Note: You can only define one subscription tier in a subscription tier structure where the sum of self, number of spouses, number of dependents, and number of young adults exceeds the maximum member count specified in the subscription tier structure.

In addition, you can create a relationship matrix for a subscription tier. Let us understand this with the help of an example.

The following table illustrates the relationship matrix defined for the STEX1 subscription tier:

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Spouse
Spouse	Spouse	Spouse

Once the subscription tier structure is derived from the policy plan, the system determines the subscription tier of the membership for the bill period timeline. While determining the subscription tier of a membership for the bill period timeline, the system derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis
- Max Age Limit for Max Dependent Count
- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

The system then derives these characteristics from the policy plan. Let us understand this with the help of an example.

The following table illustrates different member persons included in a membership that is defined for a policy plan:

Member Start Date	Member End Date	Person Name	Main Subscriber	Relationship Type	Member	Date of Birth
1-Jan-20	31-Dec-20	Mark	Yes	Self	Yes	15-Jan-68
1-Jan-20	31-Dec-20	Nancy	No	Wife	Yes	20-Apr-72
1-Jan-20	31-Dec-20	Roger	No	Child	Yes	15-May-01
1-Jan-20	31-Dec-20	Tom	No	Child	Yes	16-May-04

Now, if the following characteristics are defined on the policy plan:

- Subscription Tier Structure - STEX1
- Age Calculation Date Basis – Enrollment Date
- Maximum Number of Dependents – 3
- Max Number of Dependents Order Priority - ELDEST
- Max Age Limit for Max Dependent Count – 21
- New Born Gift Days - 30
- New Born Gift Days Applicability - Y
- Young Adult Max Age Limit - 25
- Young Adult Max Age Limit Applicability - Y

The system considers the STEX1 subscription tier structure and derives the subscription tier of the membership for each bill period timeline. Let us understand this with the help of an example.

The following table illustrates the subscription tier derived for the respective bill period timeline:

Bill Period Timeline	Characteristic Type	Characteristic Value
1-Jan-20 to 31-Jan-20	Subscription Tier	ESC2
1-Feb-20 to 29-Feb-20	Subscription Tier	ESC2
1-Mar-20 to 31-Mar-20	Subscription Tier	ESC2
1-Apr-20 to 30-Apr-20	Subscription Tier	ESC2
1-May-20 to 31-May-20	Subscription Tier	ESC2
1-Jun-20 to 30-Jun-20	Subscription Tier	ESC2
1-Jul-20 to 31-Jul-20	Subscription Tier	ESC2
1-Aug-20 to 31-Aug-20	Subscription Tier	ESC2
1-Sep-20 to 30-Sep-20	Subscription Tier	ESC2
1-Oct-20 to 31-Oct-20	Subscription Tier	ESC2
1-Nov-20 to 30-Nov-20	Subscription Tier	ESC2
1-Dec-20 to 31-Dec-20	Subscription Tier	ESC2

Because the characteristic value is same across all bill period timelines, the system will create one subscription tier characteristic with the effective date as 01-Jan-2020. Now, assume if one more member person named Harry with the date of birth as 05-11-08 and relationship type as Child is added to the membership on 05-Mar-20, then the system derives the subscription tier of the membership for each bill period timeline. Let us understand this with the help of an example.

The following table illustrates the subscription tier derived for the respective bill period timeline:

Bill Period Timeline	Characteristic Type	Characteristic Value
5-Mar-20 to 31-Mar-20	Subscription Tier	F
1-Apr-20 to 30-Apr-20	Subscription Tier	F

Bill Period Timeline	Characteristic Type	Characteristic Value
1-May-20 to 31-May-20	Subscription Tier	F
1-Jun-20 to 30-Jun-20	Subscription Tier	F
1-Jul-20 to 31-Jul-20	Subscription Tier	F
1-Aug-20 to 31-Aug-20	Subscription Tier	F
1-Sep-20 to 30-Sep-20	Subscription Tier	F
1-Oct-20 to 31-Oct-20	Subscription Tier	F
1-Nov-20 to 30-Nov-20	Subscription Tier	F
1-Dec-20 to 31-Dec-20	Subscription Tier	F

In this case, the system will have two subscription tier characteristics for the membership – one with the effective date as 01-Jan-2020 where the characteristic value is set to **ESC2** and another with the effective date as 05-Mar-2020 where the characteristic value is set to **F**.

If a new born is added to the membership, the effective date of the new subscription tier characteristic is calculated considering the gift days if applicable. If a member person is end dated, the system derives the subscription tier of the membership once again. If the subscription tier for the membership is different, the system creates a new characteristic to store the subscription tier for the membership. The effective date of the new characteristic is set according to the proration rule defined for the termination event. If a member person is inactivated, the system derives the subscription tier of the membership once again. In this case, if the subscription tier for the membership is different, the system updates the existing subscription tier characteristic of the membership.

To use the subscription tier as a pricing parameter, you need to define the Subscription Tier parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Subscription Tier Characteristic Type** attribute of the member relationship and subscription tier preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Subscription Tier parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on the subscription tier.

A new screen named **Member Relationship/Subscription Tier Structure** is introduced in this release. It enables you to add, edit, copy, and delete the member relationship and subscription tier structures.

Prerequisites

To create a subscription tier pricing parameter, you need to do the following:

- Define the pricing parameter with the subscription tier.
- The **Admin** user must define different types of subscription tiers, where all the tiers must be defined in the **Member Relationship/Subscription Tier Structure** screen. These subscription tiers must also exist in the **C1-ASOBLNG** feature configuration.
- Define the required characteristic types, such as, **Subscription Tier Structure (C1-STRST)** and **Age Calculation Date Basis (C1-AGCAL)** on the policy plan.

- Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined:
 - Max Age of Dependent
 - Max Number of Dependents
 - Order Priority
 - Young Adult Max Age Limit
 - Young Adult Inclusion Applicability
- The above characteristic types along with the **Subscription (C1-SUBST)** characteristic type would be stamped on member person, must be specified in the **Field Mapping** screen.

Member Relationship/Subscription Tier Structure (Used for Searching)

The **Member Relationship/Subscription Tier Structure** screen allows you to search for a member relationship/subscription tier using various search criteria. It also allows you to create a member relationship/subscription tier. Through this screen, you can navigate to the following screen. It contains the following zone:

This screen consists of the following zone:

- [Member Relationship/Subscription Tier Structure List](#) on page 133
- [Member Relationship/Subscription Tier Structure](#) on page 134

Member Relationship/Subscription Tier Structure List

The **Member Relationship/Subscription Tier Structure List** zone displays the member relationship or subscription tier structure information. It contains the following columns:

Column Name	Column Description
Structure	Used to specify the structure code for the structure.
Description	Used to specify the description for the structure.
Edit	On clicking the Edit () icon, the Member Relationship/Subscription Tier Structure screen appears where you can edit the structural details of the member relationship or subscription tier.
Duplicate	On clicking the Duplicate () icon, the Member Relationship/Subscription Tier Structure screen appears where you can define a new member relationship or subscription tier using an existing member relationship or subscription tier.
Delete	On clicking the Delete () icon, you can delete the member relationship or subscription tier structure.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Structure** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (🔍) icon in the upper right corner of this zone.

Member Relationship/Subscription Tier Structure

The **Member Relationship/Subscription Tier Structure** zone displays the details of the member relationship or subscription tier structure. It contains the following sections:

- **Main** - Displays basic information about the member relationship or subscription tier structure. It contains the following fields:

Field Name	Field Description
Structure	Displays the type of structure.
Description	Displays the description of the structure.
Detailed Description	Displays additional information about the structure.
Maximum Member Count	Displays the maximum count of the members allowed in the structure.

- **Member Relationship/Subscription Tier Criteria** - Lists the criteria details of the member relationship or subscription tier. It contains the following columns:

Column Name	Column Description
Member Relationship/Subscription Tier	Displays the criteria code for the member relationship or subscription tier.
Self	Displays the main subscriber who meets the member relationship or subscription tier criteria. Note: The total count in the Self column cannot exceed more than one.
Number of Spouses	Displays the total number of spouses in the membership who meet the member person relationship criteria.
Number of Dependents	Displays the total number of dependents in the membership who meet the member person relationship criteria.
Number of Young Adults	Displays the total number of young adults in the membership who meet the member person relationship criteria.

- **Relationship Matrix** - Lists the relationship matrix details defined for the member relationship or subscription tier structure. It contains the following columns:

Column Name	Column Description
Relation	Indicates an entity defined in the relationship matrix.
Relationship Type	Indicates how a member person is associated with the main subscriber using a relationship type.
Relationship	Indicates how a member person is associated with the relationship type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the structural details of the member relationship or subscription tier.
Delete	Used to delete the member relationship or subscription tier structure.
Duplicate	Used to create a new member relationship or subscription tier structure using an existing structure.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the member relationship or subscription tier structure is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Defining a Subscription Tier Structure

Procedure

To define a subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
A sub-menu appears.
3. Click the **Add** option from the **Member Relationship/Subscription Tier Structure** sub-menu.

The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure.	Yes
	Note: You must specify a unique code name for the structure.	
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure.	No
	Note: If you do not specify the value, by default, it is set to zero (0).	

- **Member Relationship/Subscription Tier Criteria** - Used to specify a criteria for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/Subscription Tier	Used to specify a code name for the criteria.	No
	Note: You must specify a unique code name for the subscription tier criteria.	
Self	Used to specify the main subscriber for the subscription tier.	No
	Note: The value for this field must be a positive integer.	
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria.	No
	Note: The value for this field must be a positive integer.	

Note: You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Member Relationship/Subscription Tier Structure** screen.

- Enter the required details in the **Main** section.
- Define a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.
- If you want to define more than one criteria for the subscription tier structure, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a criteria from the subscription tier structure, click the **Delete (🗑)** icon corresponding to the **Member Relationship/Subscription Tier** field.

- Define a relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
- If you want to define more than one relationship matrix for the subscription tier structure, click the **Add (+)** icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete (🗑)** icon corresponding to the **Relation** field.

- Click **Save**.

The subscription tier structure is defined.

Editing a Subscription Tier Structure

Procedure

To edit a subscription tier structure:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.

The **Member Relationship/Subscription Tier Structure** screen appears.

- In the **Member Relationship/Subscription Tier Structure List** zone, click the **Edit**  icon in the **Edit** column corresponding to the subscription tier structure whose details you want to edit.

The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Displays the subscription tier structure name.	Not applicable
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. Note: If you do not specify the value, by default, it is set to zero (0).	No

- Member Relationship/Subscription Tier Criteria** - Used to specify a criteria for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/Subscription Tier	Used to specify a code name for the criteria. Note: You must specify a unique code name for the criteria.	No
Self	Used to specify the main subscriber for the subscription tier. Note: The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria. Note: The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria. Note: The value for this field must be a positive integer.	No

Field Name	Field Description	Mandatory (Yes or No)
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria.	No
	Note: The value for this field must be a positive integer.	

Note:

You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify a relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix.	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can edit the details of a member relationship structure by clicking the **Edit** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Modify the details in the **Main** section.
5. Define, edit, or remove a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the subscription tier structure, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a criteria from the subscription tier structure, click the **Delete** (🗑️) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove a relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the subscription tier structure, click the **Add (+)** icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete** (🗑️) icon corresponding to the **Relation** field.

9. Click **Save**.

The changes made to the subscription tier structure are saved.

Copying a Subscription Tier Structure

Procedure

To copy a subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
The **Member Relationship/Subscription Tier Structure** screen appears.

3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Duplicate** (📄) icon in the **Duplicate** column corresponding to the subscription tier structure whose copy you want to create.

The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure.	Not applicable
	Note: You must specify a unique code name for the structure.	
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure.	No
	Note: If you do not specify the value, by default, it is set to zero (0).	

- **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/Subscription Tier	Used to specify a code name for the criteria.	No
	Note: You must specify a unique code name for the member relationship/subscription criteria.	

Field Name	Field Description	Mandatory (Yes or No)
Self	Used to specify the main subscriber for the subscription tier.	No
	Note: The value for this field must be a positive integer.	
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria.	No
	Note: The value for this field must be a positive integer.	
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria.	No
	Note: The value for this field must be a positive integer.	

Note:

You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can copy a member relationship structure by clicking the **Duplicate** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Enter the required details in the **Main** section.
5. Define, edit, or remove a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.

- If you want to define more than one criteria for the subscription tier structure, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a criteria from the subscription tier structure, click the **Delete** (🗑️) icon corresponding to the **Member Relationship/Subscription Tier** field.

- Define, edit, or remove the relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
- If you want to define more than one relationship matrix for the subscription tier structure, click the **Add (+)** icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete** (🗑️) icon corresponding to the **Relation** field.

- Click **Save**.

The new subscription tier structure is created.

Deleting a Subscription Tier Structure

Procedure

To delete a subscription tier structure:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
A sub-menu appears.
- Click the **Search** option from the **Member Relationship/Subscription Tier Structure** sub-menu.
The **Member Relationship/Subscription Tier Structure** screen appears.
- In the **Member Relationship/Subscription Tier Structure List** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the subscription tier structure that you want to delete.
A message appears confirming whether you want to delete the subscription tier structure.

Tip: Alternatively, you can click the **Delete** button in the **Member Relationship/Subscription Tier Structure** zone to delete the subscription tier structure.

- Click **OK**.

The subscription tier structure is deleted.

Membership Benefits

Oracle Revenue Management and Billing enables you to maintain the following types of membership benefits for the fully-insured group and individual businesses:

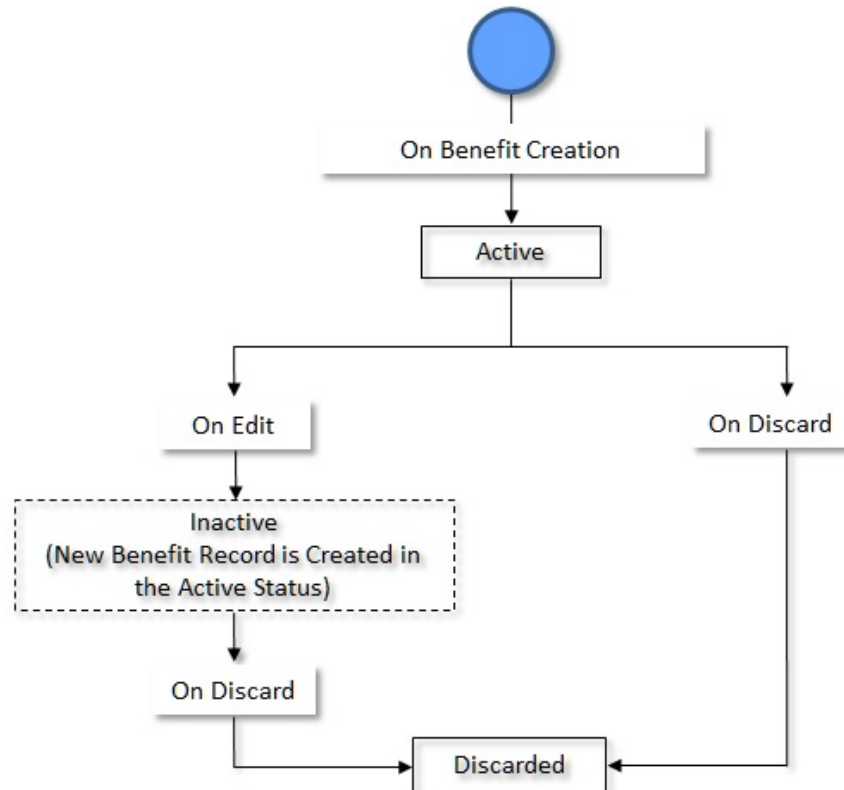

- Medicare benefits, such as, Part A, Part B, Part D for which premium is calculated using the age-based or tier-based pricing rules
- Medicare benefits, such as Medicare Part D Low-Income Subsidy (LIS) and Medicare Part D Late Enrollment Penalty (LEP) for which charges are calculated using the benefit pricing rule type
- Advance Premium Tax Credit (APTC) benefits for which charges are calculated using the benefit pricing rule type

The system enables you to define a benefit at the membership level and not at the member person level. This is because the system assumes the following:

- There will be only one member person in the Medicare membership who will avail the Membership benefit.
- The other benefits such as APTC would be availed by all member persons of the group or individual membership.

Benefit Status Transition

The following figure graphically indicates how a membership benefit moves from one status to another in its lifecycle:

Membership Benefits (Such as Medicare, APTC, and Others)

The system enables you to define and edit the membership benefits from the user interface (i.e. through the **Benefit** screen), through a health care inbound message, or through the membership repricing inbound web service. While defining a membership benefit, you need to specify the following details:

- The date range for which the benefit is availed for the membership.
- The source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are:
 - Centers for Medicare and Medicaid Services
 - State
- The type of benefit availed for the membership. The valid values are:

- Commercial
- Medicare Affiliated
- The benefit sub type that indicates whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
- The Medicare plan benefit package (i.e. 800 series plan) which is applicable for Medicare Part A, Part B, or Part D membership benefit.

Note: You can define an Employer Group Waiver Plan (EGWP) (i.e. 800 series plan) as a Medicare plan benefit package in the system. While defining a Medicare Part A, Part B, or Part D membership benefit, you need to indicate the Medicare plan benefit package which is applicable for the membership benefit. You can then use the Medicare plan benefit package as a pricing parameter in the age-based or tier-based pricing rules using which the Medicare Part A, Part B, or Part D membership premium is calculated. In this way, the system enables you to offer different pricing for different EGWPs (i.e. 800 series plans).

The system enables you to define, edit, delete, and copy a Medicare plan benefit package through the **Field Mapping** screen. For more information, refer to [Medicare Plan Benefit Package](#) on page 205.

- The pass-through amount for Medicare Part D LIS, Medicare Part D LEP or other benefits such as APTC.

Once the membership benefit is created, the status of the benefit is set to **Active**. You can also edit a membership benefit from the user interface (i.e. through the **Benefit** screen), through a health care inbound message, or through the membership repricing inbound web service. On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system also enables you to discard an active or inactive membership benefit from the user interface by clicking the **Discard** button or by changing its status through a health care inbound message or through the membership repricing inbound web service.

For more information on how to maintain the membership benefits through the **Benefit** screen, refer to [Benefit \(Used for Searching\)](#) on page 180. For more information on how to maintain the membership benefits through a health care inbound message, refer to [Health Care Inbound Message](#) on page 2226. For more information on how to maintain the membership benefits through the membership repricing inbound web service, refer to [CI-MembershipRepricing Business Service](#) on page 3420.

Membership Benefit Sub Type

You can create a membership benefit using the respective benefit sub type. Therefore, you need to create an appropriate benefit sub type for the following:

- **Medicare Part A, Part B, or Part D** – While creating a benefit sub type for Medicare Part A, Part B, or Part D membership benefits, you need to set the value type to **Not applicable**.
- **Medicare Part D LIS** - While creating a benefit sub type for Medicare Part D LIS, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is selected.
- **Medicare Part D LEP** - While creating a benefit sub type for Medicare Part D LEP, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is not selected.
- **APTC or Any Other Benefits** - While creating a benefit sub type for APTC or any other benefits, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is selected.

The **Charge Negatively** option indicates that you want to create a negative charge for the benefit amount. The system will then accordingly deduct the negative charge from the membership premium while billing.

The system also enables you to create the reverse membership benefit charges on the benefit sponsor account (i.e. for the health benefit exchange; for example, CMS or State account who has offered the membership benefit). If you want to create the reverse membership benefit charges on the benefit sponsor account, you need to select the **Charge Benefit Sponsor** option and specify the benefit sponsor account while defining the benefit sub type. The system will

then create a reverse charge on the membership benefit sponsor account. The reverse charge can then be used by the health insurance payer for reconciliation.

In the individual health insurance business, the benefit sponsor account for the membership benefits varies depending on the health benefit exchange through which the benefit is availed. Therefore, there arises a need to derive the benefit sponsor account for each individual membership. The system also provides the ability to derive the benefit sponsor account for the respective health benefit exchange. You can attach an algorithm to the **Sponsor Account Derivation Algorithm** field which will derive the benefit sponsor account for the respective health benefit exchange. The system will then create a reverse charge on the derived membership benefit sponsor account.

A new algorithm type named **C1-SPONSAC** is shipped with the product. You can create an algorithm using the **C1-SPONSAC** algorithm type and attach it to the **Sponsor Account Derivation Algorithm** field while defining a benefit sub type. This algorithm contains the following parameter:

- **Account Identifier Type** – Used to indicate that account identifier type that you want to use while deriving the benefit sponsor account.

The **C1-SPONSAC** algorithm validates the account identifier type and derives the membership exchange ID from the respective individual membership. It considers the membership exchange ID as the account identifier and derives the account using the account identifier type and membership exchange ID.

Note: If the **Charge Benefit Sponsor** option is selected while defining or editing a benefit sub type, you must either specify the benefit sponsor account or sponsor account derivation algorithm in the benefit sub type.

Algorithms Used in C1-Benefits

The following table lists the algorithms which are attached to the **C1-Benefits** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-FIAUDEV	C1-FIAUDEV	Refer to C1-FIAUDEV on page 161.
Post Processing	C1-BENP	C1-BENP	Refer to C1-BENP on page 162
Validation	C1-BENVAL	C1-BENVAL	Refer to C1-BENVAL on page 162

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership (C1-Membership)**, **Individual Membership (C1-IndMembership)**, **Benefit (C1-Benefits)**, and **Person (C1_PERSON_BO)** business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-BENP

This algorithm creates a log entry whenever the benefit amount or benefit end date of a membership benefit is updated. The log entry stores the old and new values of the benefit amount and the benefit end date (whichever is updated).

C1-BENVAL

This algorithm validates a membership benefit. It checks the following:

- Whether the membership benefit end date is not earlier than the membership benefit start date.
- Whether the membership details are specified while defining a membership benefit.
- Whether the benefit amount is specified in the membership benefit when the value type is set to **FLAT** in the respective benefit sub type.
- Whether the Medicare plan benefit package is specified in the membership benefit when the value type is set to **Not applicable** in the respective benefit sub type.

While editing a membership benefit, this algorithm only allows you to edit the following information:

- Benefit Amount
- Benefit End Date
- Benefit Status
- Benefit Characteristics

Benefit Sub Type

The **Benefit Sub Type** screen enables you to create, edit, delete, and copy a benefit sub type. It contains the following zones:

- [Benefit Sub Type List](#) on page 163
- [Benefit Sub Type](#) on page 164

Benefit Sub Type List

The **Benefit Sub Type List** zone lists the benefit sub types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Benefit Sub Type	Displays the benefit sub type.
Description	Displays the description of the benefit sub type.
Status	Indicates the status of the benefit sub type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Value Type	Indicates the type of value that you want to store in the benefit sub type. The valid values are: <ul style="list-style-type: none"> • Flat • NA
Edit	On clicking the Edit () icon, the Benefit Sub Type screen appears where you can edit the details of the benefit sub type. <p>Note: The Edit icon appears only when the benefit sub type is not yet used.</p>

Column Name	Column Description
Duplicate	On clicking the Duplicate (📄) icon, the Benefit Sub Type screen appears where you can define a benefit sub type using an existing benefit sub type.
Delete	On clicking the Delete (🗑️) icon, you can delete a benefit sub type.

You can filter the list using various search criteria (such as **Benefit Sub Type**, **Status**, **Description**, **Value Type**, **Reconciliation Required**, **Price**, and **Validate**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filter** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to the benefit sub type, the **Benefit Sub Type** zone appears with the details of the respective benefit sub type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Benefit Sub Type

The **Benefit Sub Type** zone displays the details of the benefit sub type. It contains the following sections:

- **Main** - Displays the basic information about the benefit sub type. It contains the following fields:

Field Name	Field Description
Benefit Sub Type	Displays the benefit sub type.
Description	Displays the description of the benefit sub type.
Status	Indicates the status of the benefit sub type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Value Type	Indicates whether the benefit amount should be a flat or calculated amount. The valid values are: <ul style="list-style-type: none"> • Flat - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • Not Applicable - Used when you want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.

Field Name	Field Description
Externally Priced	Indicates whether the benefit amount is calculated in the enrollment system.
	Note: This field appears when Flat option is selected from the Value Type list.
Validate External Price	Indicates that you want to validate whether the externally calculated benefit amount is within the threshold range.
	Note: This field appears when the Externally Priced option is selected.
Validate Price Item	Indicates the price item using which you want to create the membership benefit charge for validation.
	<p>Note:</p> <p>It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.</p> <p>This field appears when the Validate External Price option is selected.</p>
Charge Negatively	Indicates whether you want to create a negative charge for the benefit amount.
	Note: This field appears when the Flat option is selected from the Value Type list and the Externally Priced option is not selected.
Benefit SQI	Indicates the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the Proration SQI option type of the C1-ASOBLNG feature configuration.
	Note: This field appears when the Flat option is selected from the Value Type list and the Externally Priced option is not selected.
Charge Benefit Sponsor	Indicates whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation.
	Note: This field appears when Flat option is selected from the Value Type list and the Externally Priced option is not selected.
Benefit Sponsor Account	Indicates the account of sponsor on which you want to create the reverse charge.
	Note: This field appears when the Charge Benefit Sponsor option is selected.
Sponsor Account Derivation Algorithm	Indicates an algorithm using which the system can derive the sponsor account for the individual membership. The C1-SPONSAC algorithm is shipped with the product. For more information about the algorithm, refer to Membership Benefit Sub Type on page 160.
	<p>Note:</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>

Field Name	Field Description
Benefit Sponsor Price Item	Indicates the price item using which you want to create the reverse charge.
	Note: This field appears when the Charge Benefit Sponsor option is selected.
Benefit Sponsor SQI	Indicates the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the Proration SQI option type of the C1-ASOBLNG feature configuration.
	Note: This field appears when the Charge Benefit Sponsor option is selected.

- **Characteristics** - Lists the characteristics defined for the benefit sub type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the benefit sub type.
	Note: The Edit button appears only when the benefit sub type is not yet used.
Delete	Used to delete the benefit sub type.
Duplicate	Used to create a new benefit sub type using an existing benefit sub type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the benefit sub type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Benefit Sub Type** zone does not appear in the **Benefit Sub Type** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to a benefit sub type in the **Benefit Sub Type List** zone.

Defining a Benefit Sub Type

Prerequisites

To define a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLNG** feature configuration.
- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

To define a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
A sub-menu appears.
3. Click the **Add** option from the **Benefit Sub Type** sub-menu.

The **Benefit Sub Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the benefit sub type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sub Type	Used to specify the benefit sub type.	Yes
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. <ul style="list-style-type: none"> • Active • Inactive 	Yes
Value Type	Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are: <ul style="list-style-type: none"> • Flat - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • Not Applicable - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit. 	Yes
Externally Priced	Used to indicate whether the benefit amount is calculated in the enrollment system.	No
	Note: This field appears when Flat option is selected from the Value Type list.	

Field Name	Field Description	Mandatory (Yes or No)
Validate External Price	Used when you want to validate whether the externally calculated benefit amount is within the threshold range.	No
	Note: This field appears when the Externally Priced option is selected.	
Validate Price Item	Used to indicate the price item using which you want to create the membership benefit charge for validation.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to the Validate Price Item field. On clicking the Search icon, the Search window appears. This field appears when the Validate External Price option is selected.	
Charge Negatively	Used to indicate whether you want to create a negative charge for the benefit amount.	No
	Note: This field appears when the Flat option is selected from the Value Type list and the Externally Priced option is not selected.	
Benefit SQI	Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the Proration SQI option type of the C1-ASOBLNG feature configuration.	No
	Note: This field appears when the Flat option is selected from the Value Type list and the Externally Priced option is not selected.	
Charge Benefit Sponsor	Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation.	No
	Note: This field appears when Flat option is selected from the Value Type list and the Externally Priced option is not selected.	

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sponsor Account	<p>Used to indicate the account of sponsor on which you want to create the reverse charge.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Benefit Sponsor Account field. On clicking the Search icon, the Search window appears.</p> <p>On specifying the benefit sponsor amount, the description of the benefit sponsor amount appears corresponding to the Benefit Sponsor Account field.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Charge Benefit Sponsor option is selected and the value is not specified in the Sponsor Account Derivation Algorithm field.</p>
Sponsor Account Derivation Algorithm	<p>Used to attach an algorithm using which the system can derive the sponsor account for the individual membership. The C1-SPONSAC algorithm is shipped with the product. For more information about the algorithm, refer to <i>Membership Benefit Sub Type</i> on page 160.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Sponsor Account Derivation Algorithm field. On clicking the Search icon, the Search window appears.</p> <p>On specifying the sponsor account derivation algorithm, the description of the sponsor account derivation algorithm appears corresponding to the Sponsor Account Derivation Algorithm field.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Charge Benefit Sponsor option is selected.</p>
Benefit Sponsor Price Item	<p>Used to indicate the price item using which you want to create the reverse charge.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Benefit Sponsor Price Item field. On clicking the Search icon, the Search window appears.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Charge Benefit Sponsor option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the Proration SQI option type of the C1-ASOBLNG feature configuration.	No
	Note: This field appears when the Charge Benefit Sponsor option is selected.	

Note: If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

Tip: Alternatively, you can access the **Benefit Sub Type** screen by clicking the **Add** button in the **Page Title** area of the **Benefit Sub Type** screen.

- Enter the required details in the **Main** section.
- Click **Save**.

The benefit sub type is defined.

Benefit Sub Type screen	Benefit Sub Type on page 163
How to define a characteristic for a benefit sub type	Defining a Characteristic for a Benefit Sub Type on page 170

Defining a Characteristic for a Benefit Sub Type

To define a characteristic for a benefit sub type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Benefit Sub Type**)

Procedure

To define a characteristic for a benefit sub type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a benefit sub type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Benefit Sub Type .	Note: This field is required when you are defining the characteristics for a benefit sub type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining the characteristics for a benefit sub type.

- Enter the required characteristic in the **Characteristics** section.
- If you want to define more than one characteristic for the benefit sub type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the benefit sub type, click the **Delete (🗑)** icon corresponding to the characteristic

- Click **Save**.

The characteristic is defined for the benefit sub type.

Editing a Benefit Sub Type

Prerequisites

To edit a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLNG** feature configuration.
- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

To edit a benefit sub type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
A sub-menu appears.
- Click the **Search** option from the **Benefit Sub Type** sub-menu.
The **Benefit Sub Type** screen appears.
- In the **Search Results** section, click the **Edit (✎)** icon in the **Edit** column corresponding to the benefit sub type whose details you want to edit.

Note: The Edit icon appears only when a benefit is not defined using the benefit sub type.

The **Benefit Sub Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the benefit sub type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sub Type	Displays the benefit sub type.	Not applicable
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. <ul style="list-style-type: none"> • Active • Inactive 	Yes
Value Type	Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are: <ul style="list-style-type: none"> • Flat - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • Not Applicable - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit. 	Yes
Externally Priced	Used to indicate whether the benefit amount is calculated in the enrollment system. Note: This field appears when Flat option is selected from the Value Type list.	No
Validate External Price	Used when you want to validate whether the externally calculated benefit amount is within the threshold range. Note: This field appears when the Externally Priced option is selected.	No
Validate Price Item	Used to indicate the price item using which you want to create the membership benefit charge for validation. Note: The Search (🔍) icon appears corresponding to the Validate Price Item field. On clicking the Search icon, the Search window appears. This field appears when the Validate External Price option is selected.	Yes (Conditional) Note: This field is required when the Validate External Price option is selected.
Charge Negatively	Used to indicate whether you want to create a negative charge for the benefit amount. Note: This field appears when the Flat option is selected from the Value Type list and the Externally Priced option is not selected.	No

Field Name	Field Description	Mandatory (Yes or No)
Benefit SQI	<p>Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the Proration SQI option type of the C1-ASOBLNG feature configuration.</p> <p>Note: This field appears when the Flat option is selected from the Value Type list and the Externally Priced check box is not selected.</p>	No
Charge Benefit Sponsor	<p>Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation.</p> <p>Note: This field appears when Flat option is selected from the Value Type list and the Externally Priced option is not selected.</p>	No
Benefit Sponsor Account	<p>Used to indicate the account of sponsor on which you want to create the reverse charge.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Benefit Sponsor Account field. On clicking the Search icon, the Search window appears.</p> <p>On specifying the benefit sponsor amount, the description of the benefit sponsor amount appears corresponding to the Benefit Sponsor Account field.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Charge Benefit Sponsor option is selected and the value is not specified in the Sponsor Account Derivation Algorithm field.</p>

Field Name	Field Description	Mandatory (Yes or No)
Sponsor Account Derivation Algorithm	Used to attach an algorithm using which the system can derive the sponsor account for the individual membership. The C1-SPONSAC algorithm is shipped with the product. For more information about the algorithm, refer to <i>Membership Benefit Sub Type</i> on page 160.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Sponsor Account Derivation Algorithm field. On clicking the Search icon, the Search window appears.</p> <p>On specifying the sponsor account derivation algorithm, the description of the sponsor account derivation algorithm appears corresponding to the Sponsor Account Derivation Algorithm field.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Note: This field is required when the Charge Benefit Sponsor option is selected.</p>
Benefit Sponsor Price Item	Used to indicate the price item using which you want to create the reverse charge.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Benefit Sponsor Price Item field. On clicking the Search icon, the Search window appears.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Note: This field is required when the Charge Benefit Sponsor option is selected.</p>
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the Proration SQI option type of the C1-ASOBLLNG feature configuration.	No
	<p>Note: This field appears when the Charge Benefit Sponsor option is selected.</p>	

Note: If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

Tip: Alternatively, you can edit the details of a benefit sub type by clicking the **Edit** button in the **Benefit Sub Type** zone.

5. Modify the required details in the **Main** section, if required.
6. Define, edit, or remove characteristics of the benefit sub type, if required
7. Click **Save**.

The changes made to the benefit sub type are saved.

How to define a characteristic for a benefit sub type	Defining a Characteristic for a Benefit Sub Type on page 170

Copying a Benefit Sub Type

Instead of creating a benefit sub type from scratch, you can create a new benefit sub type using an existing benefit sub type. This is possible through copying a benefit sub type. On copying a benefit sub type, the details are copied to the new benefit sub type. You can then edit the details, if required.

Prerequisites

To define a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLLNG** feature configuration.
- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

To copy a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
A sub-menu appears.
3. Click the **Search** option from the **Benefit Sub Type** sub-menu.
The **Benefit Sub Type** screen appears.
4. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the benefit sub type whose details you want to edit.

The **Benefit Sub Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the benefit sub type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sub Type	Used to specify the benefit sub type.	Yes
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Value Type	<p>Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are:</p> <ul style="list-style-type: none"> • Flat - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • Not Applicable - Used when you want the system to calculate the benefit amount for the available Medicare Part A, Part B, or Part D membership benefit. 	Yes
Externally Priced	<p>Used to indicate whether the benefit amount is calculated in the enrollment system.</p> <p>Note: This field appears when Flat option is selected from the Value Type list.</p>	No
Validate External Price	<p>Used when you want to validate whether the externally calculated benefit amount is within the threshold range.</p> <p>Note: This field appears when the Externally Priced option is selected.</p>	No
Validate Price Item	<p>Used to indicate the price item using which you want to create the membership benefit charge for validation.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Validate Price Item field. On clicking the Search icon, the Search window appears.</p> <p>This field appears when the Validate External Price option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Validate External Price option is selected.</p>
Charge Negatively	<p>Used to indicate whether you want to create a negative charge for the benefit amount.</p> <p>Note: This field appears when the Flat option is selected from the Value Type list and the Externally Priced option is not selected.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Benefit SQI	<p>Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the Proration SQI option type of the C1-ASOBLNG feature configuration.</p> <p>Note: This field appears when the Flat option is selected from the Value Type list and the Externally Priced check box is not selected.</p>	No
Charge Benefit Sponsor	<p>Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation.</p> <p>Note: This field appears when Flat option is selected from the Value Type list and the Externally Priced option is not selected.</p>	No
Benefit Sponsor Account	<p>Used to indicate the account of sponsor on which you want to create the reverse charge.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Benefit Sponsor Account field. On clicking the Search icon, the Search window appears.</p> <p>On specifying the benefit sponsor amount, the description of the benefit sponsor amount appears corresponding to the Benefit Sponsor Account field.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Charge Benefit Sponsor option is selected and the value is not specified in the Sponsor Account Derivation Algorithm field.</p>

Field Name	Field Description	Mandatory (Yes or No)
Sponsor Account Derivation Algorithm	Used to attach an algorithm using which the system can derive the sponsor account for the individual membership. The C1-SPONSAC algorithm is shipped with the product. For more information about the algorithm, refer to <i>Membership Benefit Sub Type</i> on page 160.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Sponsor Account Derivation Algorithm field. On clicking the Search icon, the Search window appears.</p> <p>On specifying the sponsor account derivation algorithm, the description of the sponsor account derivation algorithm appears corresponding to the Sponsor Account Derivation Algorithm field.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Note: This field is required when the Charge Benefit Sponsor option is selected.</p>
Benefit Sponsor Price Item	Used to indicate the price item using which you want to create the reverse charge.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Benefit Sponsor Price Item field. On clicking the Search icon, the Search window appears.</p> <p>This field appears when the Charge Benefit Sponsor option is selected.</p>	<p>Note: This field is required when the Charge Benefit Sponsor option is selected.</p>
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the Proration SQI option type of the C1-ASOBLNG feature configuration.	No
	<p>Note: This field appears when the Charge Benefit Sponsor option is selected.</p>	

Note: If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

Tip: Alternatively, you can copy a benefit sub type by clicking the **Duplicate** button in the **Benefit Sub Type** zone.

- Define, edit or remove the required details in the **Main** section, if required.
- Click **Save**.

The new benefit sub type is saved.

Deleting a Benefit Sub Type**Procedure**

To delete a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
A sub-menu appears.
3. Click the **Search** option from the **Benefit Sub Type** sub-menu.
The **Benefit Sub Type** screen appears.
4. In the **Benefit Sub Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the benefit sub type that you want to delete.
A message appears confirming whether you want to delete the benefit sub type.
5. Click **OK**.
The benefit sub type is deleted.

Note: You can delete a benefit sub type only when a benefit is not defined using the benefit sub type.

Tip: Alternatively, you can delete a benefit sub type by clicking the **Delete** button in the **Benefit Sub Type** zone.

Searching for a Membership Benefit

Prerequisites

To search for a membership benefit, you should have:

- Required benefit sub types defined in the application

Procedure

To search for a membership benefit:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Benefit**.
The **Benefit** screen appears.
3. Enter the search criteria in the **Search Benefit** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of membership benefits that meet the search criteria appears in the **Search Results** section.

Defining a Membership Benefit

Prerequisites

To define a membership benefit, you should have:

- Required benefit sub types defined in the application
- Required Medicare plan benefit package defined in the application

Procedure

To define a membership benefit:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Benefit**.
A sub-menu appears.
3. Click the **Add** option from the **Benefit** sub-menu.

The **Benefit** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the membership benefit.
- **Characteristics** - Used to define the characteristics for the membership benefit.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	<p>Used to indicate the membership for which the benefit is availed.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Membership ID field. On clicking the Search icon, the Membership Search window appears.</p> <p>On specifying the membership information, the membership details appears corresponding to the Membership Information field.</p>	Yes
Benefit Source	<p>Used to indicate the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are:</p> <ul style="list-style-type: none"> • Centers for Medicare and Medicaid Services • State <p>Note: The list includes the values which are defined in the BENEFIT_SRC_FLG lookup field.</p>	Yes
Benefit Type	<p>Used to indicate the type of benefit availed for the membership. The valid value is:</p> <ul style="list-style-type: none"> • Commercial • Medicare Affiliated <p>Note: The list includes the values which are defined in the BENEFIT_TYPE_FLG lookup field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sub Type	Used to indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.	Yes
	Note: The list includes only those benefit types which are defined through the Benefit Sub Type screen.	
Medicare Plan Benefit Package	Used to indicate the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit.	Yes (Conditional)
	Note: The list includes those Medicare plan benefit packages which are defined using the Medicare Plan Benefit preference category through the Field Mapping screen. This field appears only when the value type in the benefit sub type is set to Not Applicable .	
Start Date	Used to specify the date from when the benefit is availed for the membership.	Yes
	Note: The start date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit start date cannot be later than the membership benefit end date.	
End Date	Used to specify the date till when the benefit is availed for the membership.	No
	Note: The end date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit end date cannot be earlier than the membership benefit start date.	
Benefit Amount	Used to specify the pass-through amount for the availed membership benefit.	Yes (Conditional)
	Note: This field appears only when the value type in the benefit sub type is set to Flat .	
		Note: This field is required while creating the Medicare Part D LIS, Medicare Part D LEP, APTC, or other membership benefits.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Benefit** screen.

4. Enter the required details in the **Main** section.
5. Define characteristics for the membership benefit, if required.
6. Click **Save**.

The membership benefit is defined for the member person in the **Active** status.

Note: You cannot define more than one membership benefit for the same membership, member person, benefit source, benefit type, and benefit sub type combination.

Defining a Characteristic for a Membership Benefit

Prerequisites

To define a characteristic for a membership benefit, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Benefits**)

Procedure

To define a characteristic for a membership benefit:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a membership benefit.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the membership benefit.	Yes (Conditional)
		Note: This field is required while defining a characteristic for a membership benefit.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required while defining a characteristic for a membership benefit.
	Note: The list includes only those characteristic types where the characteristic entity is set to Benefits .	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required while defining a characteristic for a membership benefit.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the membership benefit, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic of the membership benefit, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the membership benefit.

Benefit Characteristics

The **Benefit Characteristics** zone lists the characteristics of the membership benefit. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the membership benefit.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to Predefined Value .

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Benefit - Log

The **Log** tab contains the following zone:

- [Benefit Log](#) on page 192

Benefit Log

The **Benefit Log** zone lists the complete trail of actions performed on the membership benefit. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the membership benefit.
Details	Displays the details about the action performed on the membership benefit.
User	Indicates the user who has performed the action on the membership benefit.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the membership benefit.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the membership benefit is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the membership benefit by clicking the **Add Log Entry** link in the upper right corner of the **Benefit Log** zone.

Editing a Membership Benefit

You can only edit the characteristics of a membership benefit from the user interface. On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

Procedure

To edit a membership benefit:

1. Search for the membership benefit in the **Benefit** screen.
2. In the **Search Results** section, click the link in the **Benefit Information** column corresponding to the membership benefit whose details you want to edit.

The **Benefit** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Benefit** zone.

The **Benefit** screen appears. It contains the following sections:

- **Main** - Displays basic details of the membership benefit.
- **Characteristics** - Used to define the characteristics for the membership benefit.

The **Main** section contains the following fields:

Field Name	Field Description
Benefit Information	Displays information about the membership benefit.
Membership Information	Indicates the membership for which the benefit is availed.
Benefit Source	Indicates the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: <ul style="list-style-type: none"> • Centers for Medicare and Medicaid Services • State
Benefit Type	Indicates the type of benefit availed for the membership. The valid values are: <ul style="list-style-type: none"> • Commercial • Medicare Affiliated
Benefit Sub Type	Indicates whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.

Field Name	Field Description
Medicare Plan Benefit Package	Indicates the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit. Note: This field appears only when the value type in the benefit sub type is set to Not Applicable .
Start Date	Displays the date from when the benefit is availed for the membership.
End Date	Displays the date till when the benefit is availed for the membership. Note: The system enables you to edit the end date of a membership benefit through a health care inbound message or through the membership repricing inbound web service.
Benefit Amount	Displays the pass-through amount for the availed membership benefit. Note: This field appears only when the value type in the benefit sub type is set to Flat . The system enables you to edit the amount of a membership benefit through a health care inbound message or through the membership repricing inbound web service.

Note: The **Edit** button appears when the membership benefit is in the **Active** status.

- Define, edit, or remove characteristics of the membership benefit, if required.
- Click **Save**.

The changes made to the membership benefit are saved.

Discarding a Membership Benefit

Procedure

To discard a membership benefit:

- Search for the membership benefit in the **Benefit** screen.
- In the **Search Results** section, click the link in the **Benefit Information** column corresponding to the membership benefit that you want to discard.

The **Benefit** screen appears.

- Ensure that the **Main** tab is selected.

- Click the **Discard** button in the **Benefit** zone.

The status of the membership benefit is changed to **Discarded**.

Note: The **Discard** button appears when the membership benefit is in **Active** or **Inactive** status.

Medicare Preference

The Medicare preference enables you to set the attributes which are used while creating charges for Medicare Part D Low Income Subsidy (LIS) and Late Enrollment Penalty (LEP). While deriving the LIS and LEP details, the system uses the following attributes from the medicare preference:

- Late Enrollment Penalty
- Low Income Subsidy
- Medicare Prescription Drug Coverage

For more information about these attributes, see [Defining a Medicare Preference](#) on page 197.

The system considers the medicare preference which is specified in the **Medicare** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a medicare preference through the **Field Mapping** screen.

Searching for a Medicare Preference

Prerequisites

To search for a medicare preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a medicare preference:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Field Mapping**.

A sub-menu appears.

- Click the **Search** option from the **Field Mapping** sub-menu.

The **Field Mapping** screen appears.

- Select the **Medicare** option from the **Preference Category** list.
- Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of medicare preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Medicare Preference Details

Procedure

To view the details of a medicare preference:

- Search for the medicare preference in the **Field Mapping** screen.
- In the **Search Results** section, click the **Broadcast** () icon corresponding to the medicare preference whose details you want to view.
The **Field Mapping** zone appears.
- View the details of the medicare preference in the **Field Mapping** zone.

Defining a Medicare Preference

Prerequisites

To define a medicare preference, you should have:

- Values defined in the **MAP_ENTITY_FLG** lookup field
- Value defined for the **Medicare** option type in the **C1-ASOBLNG** feature configuration.

Procedure

To define a medicare preference:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.

- Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the billing preference. The valid values are: <ul style="list-style-type: none"> Field Mapping Medicare Plan Benefit Package Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

- Select the **Field Mapping** option from the **Field Mapping Business Object** list.
- Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- Main** - Used to specify basic details of the billing preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the billing preference.	Yes
Description	Used to specify the description for the billing preference.	Yes
Detailed Description	Used to specify additional information about the billing preference.	No
Status	Used to indicate the status of the billing preference. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

- Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> Billing Binder Payment Geographic Rating Area Individual Membership Medicare Medicare Plan Benefit Member Reconciliation Member Relationship and Subscription Tier Membership Status Reason Statement Construct 	Yes

- **Preference Settings** - Used to set the attributes in the billing preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the medicare preference. The valid values are: <ul style="list-style-type: none"> Late Enrollment Penalty - Used when you want to indicate the benefit sub type for Medicare Part D LEP in the medicare preference. Low Income Subsidy - Used when you want to indicate the benefit sub type for Medicare Part D LIS in the medicare preference. Medicare Prescription Drug Coverage - Used when you want to indicate the benefit sub type for Medicare Part D in the medicare preference. 	Yes (Conditional)
		Note: This field is required while setting an attribute in the medicare preference.

Field Name	Field Description	Mandatory (Yes or No)								
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the billing preference:	Yes (Conditional)								
	<table border="1"> <thead> <tr> <th>If the attribute is set to...</th> <th>Then, this field is...</th> </tr> </thead> <tbody> <tr> <td>Late Enrollment Penalty</td> <td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP.</td> </tr> <tr> <td>Low Income Subsidy</td> <td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS.</td> </tr> <tr> <td>Medicare Prescription Drug Coverage</td> <td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D.</td> </tr> </tbody> </table>	If the attribute is set to...	Then, this field is...	Late Enrollment Penalty	Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP.	Low Income Subsidy	Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS.	Medicare Prescription Drug Coverage	Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D.	Note: This field is required while setting an attribute in the medicare preference.
	If the attribute is set to...	Then, this field is...								
	Late Enrollment Penalty	Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP.								
	Low Income Subsidy	Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS.								
Medicare Prescription Drug Coverage	Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D.									
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> • Account • Billable Charge 	No								
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.									

Note: While defining a medicare preference, you must set at least one attribute in the billing preference.

6. Select the **Medicare** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the medicare preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the medicare preference, click the **Delete** (🗑️) icon corresponding to the attribute.

10. Click **Save**.

The medicare preference is defined.

Editing a Medicare Preference

Prerequisites

To edit a medicare preference, you should have:

- Values defined in the **MAP_ENTITY_FLG** lookup field
- Value defined for the **Medicare** option type in the **C1-ASOBLNG** feature configuration.

Procedure

To edit a medicare preference:

1. Search for the medicare preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the medicare preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the medicare preference.	Not applicable
Description	Used to specify the description for the medicare preference.	Yes
Detailed Description	Used to specify additional information about the medicare preference.	No
Status	Used to indicate the status of the medicare preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Medicare 	Not applicable

- **Preference Settings** - Used to set the attributes in the medicare preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)								
Attribute	<p>Used to indicate the attribute which you want to set in the medicare preference. Copying a Medicare Preference

Instead of creating a medicare preference from scratch, you can create a new medicare preference using an existing medicare preference. This is possible through copying a medicare preference. On copying a medicare preference, the details including the attributes are copied to the new medicare preference. You can then edit the details, if required.

Prerequisites

To copy a medicare preference, you should have:

- Medicare preference (whose copy you want to create) defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field
- Value defined for the **Medicare** option type in the **C1-ASOBLNG** feature configuration.

Procedure

To copy a medicare preference:

1. Search for the medicare preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the medicare preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the medicare preference.	Yes
Description	Used to specify the description for the medicare preference.	Yes
Detailed Description	Used to specify additional information about the medicare preference.	No
Status	Used to indicate the status of the medicare preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> • Medicare 	Not applicable

- **Preference Settings** - Used to set the attributes in the medicare preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)								
Attribute	<p>Used to indicate the attribute which you want to set in the medicare preference. The valid values are:</p> <ul style="list-style-type: none"> • Late Enrollment Penalty - Used when you want to indicate the benefit sub type for Medicare Part D LEP in the medicare preference. • Low Income Subsidy - Used when you want to indicate the benefit sub type for Medicare Part D LIS in the medicare preference. • Medicare Prescription Drug Coverage - Used when you want to indicate the benefit sub type for Medicare Part D in the medicare preference. 	<p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the medicare preference.</p>

Medicare Plan Benefit Package

You can define an Employer Group Waiver Plan (EGWP) (i.e. 800 series plan) as a Medicare plan benefit package in the system. While defining a Membership benefit of a member person for Medicare Part A, Part B, and Part D, you need to indicate the Medicare plan benefit package which is applicable for the Membership benefit. You can then use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. In this way, the system enables you to offer different pricing for different EGWPs (i.e. 800 series plans).

The system enables you to define, edit, delete, and copy a Medicare plan benefit package through the **Field Mapping** screen.

Searching for a Medicare Plan Benefit Package

Prerequisites

To search for a Medicare plan benefit package, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a Medicare plan benefit package:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Medicare Plan Benefit** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
A list of Medicare plan benefit packages that meet the search criteria appears in the **Search Results** section.

Viewing the Medicare Plan Benefit Package Details

Procedure

To view the details of a Medicare plan benefit package:

1. Search for the Medicare plan benefit package in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the Medicare plan benefit package whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the Medicare plan benefit package in the **Field Mapping** zone.

Defining a Medicare Plan Benefit Package

Procedure

To define a Medicare plan benefit package:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the Medicare plan benefit package. The valid values are: <ul style="list-style-type: none"> Field Mapping Medicare Plan Benefit Package Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

- Select the **Medicare Plan Benefit Package** option from the **Field Mapping Business Object** list.
- Click **OK**.

The **Medicare Plan Benefit Package** screen appears. It contains the following section:

- Main** - Used to specify basic details of the Medicare plan benefit package. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Medicare Plan Benefit Package	Used to specify the Medicare plan benefit package (i.e. 800 series plan).	Yes
Description	Used to specify the description for the Medicare plan benefit package.	Yes

- Enter the required details in the **Main** section.
- Click **Save**.

The Medicare plan benefit package is defined.

Editing a Medicare Plan Benefit Package

Procedure

To edit a Medicare plan benefit package:

- Search for the Medicare plan benefit package in the **Field Mapping** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the Medicare plan benefit package whose details you want to edit.

The **Medicare Plan Benefit Package** screen appears. It contains the following section:

- Main** - Used to specify basic details of the Medicare plan benefit package. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)

Procedure

To delete a Medicare plan benefit package:

1. Search for the Medicare plan benefit package in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the Medicare plan benefit package that you want to delete.

A message appears confirming whether you want to delete the Medicare plan benefit package.

Tip: Alternatively, you can delete a Medicare plan benefit package by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The Medicare plan benefit package is deleted.

Geographic Rating Area Preference

Oracle Revenue Management and Billing enables you to use the geographic rating area as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different geographic rating area.

Once you define a geographic rating area, the system can derive the geographic rating area for a membership. While deriving the geographic rating area for a membership, the system uses the following attributes from the geographic rating area preference:

- Address Source Characteristic Type
- Address Type Characteristic Type
- Default Address Source
- Default Address Type
- Default Geographic Rating Area
- Geographic Rating Area Characteristic Type
- Use Plan Details

For more information about these attributes, see [Defining a Geographic Rating Area Preference](#) on page 211.

The system considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLNG** feature configuration. You can define, edit, delete, and copy a geographic rating area preference through the **Field Mapping** screen.

Searching for a Geographic Rating Area Preference

Prerequisites

To search for a geographic rating area preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a geographic rating area preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Geographic Rating Area** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of geographic rating area preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Geographic Rating Area Preference Details

Procedure

To view the details of a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the geographic rating area preference whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the geographic rating area preference in the **Field Mapping** zone.

Defining a Geographic Rating Area Preference

Prerequisites

To define a geographic rating area preference, you should have:

- Values defined in the **ADDRESS_SRC_FLG**, **ADDRESS_TYPE_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Geographic rating areas defined in the application

Procedure

To define a geographic rating area preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the geographic rating area preference. The valid values are: <ul style="list-style-type: none"> • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the geographic rating area preference.	Yes
Description	Used to specify the description for the geographic rating area preference.	Yes
Detailed Description	Used to specify additional information about the geographic rating area preference.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the geographic rating area preference. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

- **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> Billing Binder Payment Geographic Rating Area Individual Membership Medicare Medicare Plan Benefit Member Reconciliation Member Relationship and Subscription Tier Membership Status Reason Statement Construct 	Yes

- **Preference Settings** - Used to set the attributes in the geographic rating area preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the geographic rating area preference. The valid values are:</p> <ul style="list-style-type: none"> • Address Source Characteristic Type - Used when the system derives the geographic rating area for a membership. • Address Type Characteristic Type - Used when the system derives the geographic rating area for a membership. • Default Address Source - Used when the address source characteristic is not defined for any of the following entities: <ul style="list-style-type: none"> • Policy Plan • State where the Policy Plan is Issued • Policy • State where the Policy is Issued • Default Address Type - Used when the address type characteristic is not defined for any of the following entities: <ul style="list-style-type: none"> • Policy Plan • State where the Policy Plan is Issued • Policy • State where the Policy is Issued • Default Geographic Rating Area - Used when the system is unable to derive the geographic rating area for the following combination: <ul style="list-style-type: none"> • State and zip code (this combination is considered when the Use Plan Details attribute is set to No) • State, zip code, policy number, plan number, and source system (this combination is considered when the Use Plan Details attribute is set to Yes) • Geographic Rating Area Characteristic Type - Used when the system stores the geographic rating area for a membership. • Use Plan Details - Used to indicate whether the policy number, plan number, and source system should be considered while deriving the geographic rating area for a membership. 	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is required while setting an attribute in the geographic rating area preference.</p> </div>

The valid values are:</p> <ul style="list-style-type: none"> • Yes - Used when you want to derive the geographic rating area using the state, zip code, policy number, plan number, and source system combination. • No - Used when you want to derive the geographic rating area using the state and zip code combination. 	

Field Name	Field Description	Mandatory (Yes or No)
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> Account Billable Charge 	No
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.	

Note: While defining a geographic rating area preference, you must set at least one attribute in the geographic rating area preference.

6. Select the **Geographic Rating Area** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the geographic rating area preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the geographic rating area preference, click the **Delete** (🗑️) icon corresponding to the attribute.

10. Click **Save**.

The geographic rating area preference is defined.

Editing a Geographic Rating Area Preference

Prerequisites

To edit a geographic rating area preference, you should have:

- Values defined in the **ADDRESS_SRC_FLG**, **ADDRESS_TYPE_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Geographic rating areas defined in the application

Procedure

To edit a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the geographical rating area preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the geographic rating area preference.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the geographic rating area preference.	Yes
Detailed Description	Used to specify additional information about the geographic rating area preference.	No
Status	Used to indicate the status of the geographic rating area preference. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> Geographic Rating Area 	Not applicable

- **Preference Settings** - Used to set the attributes in the geographic rating area preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)

Copying a Geographic Rating Area Preference

Instead of creating a geographic rating area preference from scratch, you can create a new geographic rating area preference using an existing geographic rating area preference. This is possible through copying a geographic rating area preference. On copying a geographic rating area preference, the details including the attributes are copied to the new geographic rating area preference. You can then edit the details, if required.

Prerequisites

To copy a geographic rating area preference, you should have:

- Geographic rating area preference (whose copy you want to create) defined in the application
- Values defined in the **ADDRESS_SRC_FLG**, **ADDRESS_TYPE_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Geographic rating areas defined in the application

Procedure

To copy a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the geographical rating area preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the geographic rating area preference.	Yes
Description	Used to specify the description for the geographic rating area preference.	Yes
Detailed Description	Used to specify additional information about the geographic rating area preference.	No
Status	Used to indicate the status of the geographic rating area preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Geographic Rating Area 	Not applicable

- **Preference Settings** - Used to set the attributes in the geographic rating area preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the geographic rating area preference. The valid values are:</p> <ul style="list-style-type: none"> • Address Source Characteristic Type - Used when the system derives the geographic rating area for a membership. 	<p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the geographic rating area preference.</p>
	<ul style="list-style-type: none"> • Address Type Characteristic Type - Used when the system derives the geographic rating area for a membership. • Default Address Source - Used when the address source characteristic is not defined for any of the following entities: <ul style="list-style-type: none"> • Policy Plan • State where the Policy Plan is Issued • Policy • State where the Policy is Issued • Default Address Type - Used when the address type characteristic is not defined for any of the following entities: <ul style="list-style-type: none"> • Policy Plan • State where the Policy Plan is Issued • Policy • State where the Policy is Issued • Default Geographic Rating Area - Used when the system is unable to derive the geographic rating area for the following combination: <ul style="list-style-type: none"> • State and zip code (this combination is considered when the Use Plan Details attribute is set to No) • State, zip code, policy number, plan number, and source system (this combination is considered when the Use Plan Details attribute is set to Yes) • Geographic Rating Area Characteristic Type - Used when the system stores the geographic rating area for a membership. • Use Plan Details - Used to indicate whether the policy number, plan number, and source system should be considered while deriving the geographic rating area for a membership.

	Default Address Type	<p>Used to specify the address type. The valid values are:</p> <ul style="list-style-type: none"> • Person Mailing • Person Seasonal • Account Override <p>Note: The list includes only those values which are defined in the ADDRESS_TYPE_FLG lookup field.</p>	
	Default Geographic Rating Area	<p>Used to specify the geographic rating area.</p> <p>Note: Here, you can specify a geographic rating area which is already defined in the system.</p>	

Field Name	Field Description		Mandatory (Yes or No)
	Geographic Rating Area Characteristic Type	<p>Used to specify the characteristic type where you can store the geographic rating area. This type of characteristic is defined for the membership. Here, you must specify a characteristic type where the characteristic entity is set to Membership.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: The C1-GEORT characteristic type is shipped with the product.</p> </div>	
	Use Plan Details	<p>Used to indicate whether the policy plan details should be considered while deriving the geographic rating area for a membership. The valid values are:</p> <ul style="list-style-type: none"> • Yes - Used when you want to derive the geographic rating area using the state, zip code, policy number, plan number, and source system combination. • No - Used when you want to derive the geographic rating area using the state and zip code combination. 	

Field Name	Field Description	Mandatory (Yes or No)
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> Account Billable Charge 	No
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.	

Note: While defining a geographic rating area preference, you must set at least one attribute in the geographic rating area preference.

Tip: Alternatively, you can copy a geographic rating area preference by clicking the **Duplicate** button in the **Field Mapping** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove the attribute from the geographic rating area preference, if required.
- Click **Save**.

The new geographic rating area preference is defined.

Deleting a Geographic Rating Area Preference

Procedure

To delete a geographic rating area preference:

- Search for the geographic rating area preference in the **Field Mapping** screen.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the geographic rating area preference that you want to delete.

A message appears confirming whether you want to delete the geographic rating area preference.

Tip: Alternatively, you can delete a geographic rating area preference by clicking the **Delete** button in the **Field Mapping** zone.

- Click **OK**.

The geographic rating area preference is deleted.

Member Relationship and Subscription Tier Preference

Oracle Revenue Management and Billing enables you to use the member relationship (i.e. how a member is related to the main subscriber of the membership) as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different member relationship.

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, the system automatically derives the member relationship for each member person of the membership from a member relationship structure. While deriving the member relationship for a member person, the system uses the following attributes from the member relationship and subscription tier preference:

- Age Calculation Date Basis Characteristic Type
- Max Age Limit for Max Dependent Count Characteristic Type
- Max Number of Dependents Order Priority Characteristic Type
- Member Relationship Characteristic Type
- Maximum Number of Dependents Characteristic Type
- Member Relationship Derivation Date Characteristic Type
- Member Relationship Structure Characteristic Type
- New Born Gift Days Characteristic Type
- New Born Gift Days Applicability Characteristic Type
- Young Adult Max Age Limit Characteristic Type
- Young Adult Max Age Limit Applicability Characteristic Type

For more information about these attributes, see [Defining a Member Relationship and Subscription Tier Preference](#) on page 231.

Similarly, the system enables you to use the membership subscription tier as a pricing parameter while defining the tier based pricing rules. This feature facilitates you to offer different rates for a price item based on different membership subscription tier.

While determining the subscription tier for a membership, the system derives the subscription tier for the membership from a subscription tier structure. While deriving the subscription tier for a membership, the system uses the following attributes from the member relationship and subscription tier preference:

- Age Calculation Date Basis Characteristic Type
- Max Age Limit for Max Dependent Count Characteristic Type
- Max Number of Dependents Order Priority Characteristic Type
- Maximum Number of Dependents Characteristic Type
- New Born Gift Days Characteristic Type
- New Born Gift Days Applicability Characteristic Type
- Subscription Tier Structure Characteristic Type
- Subscription Tier Characteristic Type
- Young Adult Max Age Limit Characteristic Type

- Young Adult Max Age Limit Applicability Characteristic Type

For more information about these attributes, see [Defining a Member Relationship and Subscription Tier Preference](#) on page 231.

The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a member relationship and subscription tier preference through the **Field Mapping** screen.

Searching for a Member Relationship and Subscription Tier Preference

Prerequisites

To search for a member relationship and subscription tier preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a member relationship and subscription tier preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Member Relationship and Subscription Tier Preferences** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of member relationship and subscription tier preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Member Relationship and Subscription Tier Preference Details

Procedure

To view the details of a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.

2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the member relationship and subscription tier preference whose details you want to view. The **Field Mapping** zone appears.
3. View the details of the member relationship and subscription tier preference in the **Field Mapping** zone.

Defining a Member Relationship and Subscription Tier Preference

Prerequisites

To define a member relationship and subscription tier preference, you should have:

- Required characteristic types defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To define a member relationship and subscription tier preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the member relationship and subscription tier preference. The valid values are: <ul style="list-style-type: none"> • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member relationship and subscription tier preference.	Yes
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

- **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> Billing Binder Payment Geographic Rating Area Individual Membership Medicare Medicare Plan Benefit Member Reconciliation Member Relationship and Subscription Tier Membership Status Reason Statement Construct 	Yes

- **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are:</p> <ul style="list-style-type: none"> • Age Calculation Date Basis Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Max Age Limit for Max Dependent Count Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Max Number of Dependents Order Priority Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. 	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: This field is required while setting an attribute in the member relationship and subscription tier preference.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • Member Relationship Characteristic Type - Used when the system stores the member relationship for a member person. • Maximum Number of Dependents Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Member Relationship Derivation Date Characteristic Type - Used when the system derives the member relationship for a member person. • Member Relationship Structure Characteristic Type - Used when the system derives the member relationship for a member person. • New Born Gift Days Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • New Born Gift Days Applicability Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Subscription Tier Structure Characteristic Type - Used when the system derives the subscription tier for a membership. • Subscription Tier Characteristic Type - Used when the system stores the subscription tier for a membership. • Young Adult Max Age Limit Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Young Adult Max Age Limit Applicability Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership.

Entity Type	<p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> • Account • Billable Charge <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No		

Note: While defining a member relationship and subscription tier preference, you must set at least one attribute in the member relationship and subscription tier preference.

6. Select the **Member Relationship and Subscription Tier Preferences** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the member relationship and subscription tier preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the member relationship and subscription tier preference, click the **Delete (🗑)** icon corresponding to the attribute.

10. Click **Save**.

The member relationship and subscription tier preference is defined.

Editing a Member Relationship and Subscription Tier Preference

Prerequisites

To edit a member relationship and subscription tier preference, you should have:

- Required characteristic types defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To edit a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the member relationship and subscription tier preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the member relationship and subscription tier preference.	Not applicable
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Member Relationship and Subscription Tier 	Not applicable

- **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are:</p> <ul style="list-style-type: none"> • Age Calculation Date Basis Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Max Age Limit for Max Dependent Count Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Max Number of Dependents Order Priority Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. 	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is required while setting an attribute in the member relationship and subscription tier preference.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • Member Relationship Characteristic Type - Used when the system stores the member relationship for a member person. • Maximum Number of Dependents Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Member Relationship Derivation Date Characteristic Type - Used when the system derives the member relationship for a member person. • Member Relationship Structure Characteristic Type - Used when the system derives the member relationship for a member person. • New Born Gift Days Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • New Born Gift Days Applicability Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Subscription Tier Structure Characteristic Type - Used when the system derives the subscription tier for a membership. • Subscription Tier Characteristic Type - Used when the system stores the subscription tier for a membership. • Young Adult Max Age Limit Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Young Adult Max Age Limit Applicability Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership.

Entity Type	<p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> • Account • Billable Charge <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No		

Tip: Alternatively, you can edit the details of a member relationship and subscription tier preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the member relationship and subscription tier preference, if required.

Note: You must set at least one attribute in a member relationship and subscription tier preference.

5. Click **Save**.

The changes made to the member relationship and subscription tier preference are saved.

Copying a Member Relationship and Subscription Tier Preference

Instead of creating a member relationship and subscription tier preference from scratch, you can create a new member relationship and subscription tier preference using an existing member relationship and subscription tier preference. This is possible through copying a member relationship and subscription tier preference. On copying a member relationship and subscription tier preference, the details including the attributes are copied to the new member relationship and subscription tier preference. You can then edit the details, if required.

Prerequisites

To copy a member relationship and subscription tier preference, you should have:

- Member relationship and subscription tier preference (whose copy you want to create) defined in the application
- Required characteristic types defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To copy a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the member relationship and subscription tier preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member relationship and subscription tier preference.	Yes
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Member Relationship and Subscription Tier 	Not applicable

- **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are:</p> <ul style="list-style-type: none"> • Age Calculation Date Basis Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Max Age Limit for Max Dependent Count Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Max Number of Dependents Order Priority Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Member Relationship Characteristic Type - Used when the system stores the member relationship for a member person. • Maximum Number of Dependents Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • Member Relationship Derivation Date Characteristic Type - Used when the system derives the member relationship for a member person. • Member Relationship Structure Characteristic Type - Used when the system derives the member relationship for a member person. • New Born Gift Days Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • New Born Gift Days Applicability Characteristic Type - Used when the system derives the member relationship for a member person and the subscription tier for a membership. 	<p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the member relationship and subscription tier preference.</p>

If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No		

Note: While defining a member relationship and subscription tier preference, you must set at least one attribute in the member relationship and subscription tier preference.

Tip: Alternatively, you can copy a member relationship and subscription tier preference by clicking the **Duplicate** button in the **Field Mapping** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove the attribute from the member relationship and subscription tier preference, if required.
- Click **Save**.

The new member relationship and subscription tier preference is defined.

Deleting a Member Relationship and Subscription Tier Preference

Procedure

To delete a member relationship and subscription tier preference:

- Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the member relationship and subscription tier preference that you want to delete.

A message appears confirming whether you want to delete the member relationship and subscription tier preference.

Tip: Alternatively, you can delete a member relationship and subscription tier preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The member relationship and subscription tier preference is deleted.

Group insurance health plans provide coverage to a group of members, usually comprised of company employees or members of an organization. Among all types of group insurance health plans, the fully-insured plan is one of the traditional ways to structure an employer-sponsored health plan. It is also commonly known as fully-insured employee health insurance.

In the fully-insured group health plan, the employer contracts an insurance company to cover the employees and their dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year based on the number of employees which are enrolled in the plan. The monthly premium changes during the year when the number of enrolled employees change in the plan. The insurance carrier collects the premium from the employer and pays the health insurance claims to the employees based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

Oracle Revenue Management and Billing (ORMB) provides specialized methodologies for calculating premium for the employees and their dependents and then bill the total premium to the employer (known as the parent customer in ORMB) or to its logical designed billing entities (known as the bill groups in ORMB). The system enables you to offer different rates for a covered service depending on the following:

- Age of the employee or dependent
- How dependent person is related to the main subscriber
- Membership subscription tier
- Geographic rating area
- Membership or member person attributes

Oracle Revenue Management and Billing (ORMB) enables you to use the pricing methodologies and the billing engine for the fully-insured group health insurance business. To design the pricing and billing models for the fully-insured group health insurance business, you need to create the following entities in ORMB:

- Parent Customer
- Bill Groups
- Bill Group's Account
- Fully-Insured Group Policy
- Policy Plans
- Price Items (for each covered service in the policy)

- Pricing Rule Types
- Pricing Rules

Pre-requisites

To set the billing system for a fully-insured group customer, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the status reasons for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the status reasons for the **Reinstated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the required price items in the system.
- Define the required age based, tier based, pass-through billable charge, additional fee, and/or benefit pricing rule types.
- Define the required characteristic types where the characteristic entity is set to **Policy Plan**.
- Define the required contract relationship types in the system.
- Define the required characteristic types where the characteristic entity is set to **Membership**.
- Define the required characteristic types where the characteristic entity is set to **Membership Person**.
- Define the required characteristic types where the characteristic entity is set to **Benefits**.
- Define the required contracts (which you want to associate with a membership) in the system.
- Define the values for the **BILL_TO_TYPE_FLG**, **BENEFIT_TYPE_FLG**, **BENEFIT_SUB_TYPE_FLG**, and **BENEFIT_SRC_FLG** lookup fields
- Define the required parameter values in the following algorithm which is attached to the **C1-POLICY** business object:
 - C1-POLBOVAL
- Define the required parameter values in the following algorithms which are used in the lifecycle of the **C1-POLICY** business object:
 - C1-EVCSTSTAT
 - C1-PLCYTRMRQ
 - C1-POLCYTERM
 - C1-DELTRMLTR
 - C1-PLCYREIRQ
 - C1-POLCYREIN
 - C1-CCPOLRE1
- Define a predefined characteristic type named **Active Employee Coverage Billing Arrangement** with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing

You must set the characteristic entity of the **Active Employee Coverage Billing Arrangement** characteristic type to **Person**.

- Define a predefined characteristic type named **Benefit Billing Arrangement** with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing

You must set the characteristic entity of the **Benefit Billing Arrangement** characteristic type to **Person, Policy, and Policy Plan**.

- Define a predefined characteristic type named **COBRA Billing Arrangement** with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing
TPA	TPA Billing

You must set the characteristic entity of the **COBRA Billing Arrangement** characteristic type to **Person, Policy, and Policy Plan**.

- Define the required person relationship types and account relationship types in the system.
- Define the required geographic rating areas in the system.
- Define the required member relationship/subscription tier structures in the system.
- Define the required geographic rating area preference and member relationship and subscription tier preference through the **Field Mapping** screen.
- Define the required Medicare plan benefit packages in the system.
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
 - Bill Group Person Type
 - Parent Person Type
 - TPA Person Type
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
 - Membership ID Characteristic for Billable Charge
 - Parent Customer Policy Person Role
 - Bill Group Policy Person Role
 - Membership Inactive Status
 - Membership Person Inactive Status
 - Rating Area Field Mapping for Group

- Relation Structure Code Field Mapping
- Billing Arrangement
- Benefit Billing Arrangement
- Cobra Billing Arrangement
- TPA Person Relationship Type
- TPA Account Relationship Type
- TPA Policy Person Role

Fully-Insured Group Policy

You can create a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. The policy type indicates the business object using which the fully-insured group policy should be created in the system.

Note: At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

As per the fully-insured group health insurance business, the system enables you to create a fully-insured group policy for the following:

- A parent customer (where a bill group is not associated)
- A bill group (where the parent customer is the policy holder)

You can create or edit a fully-insured group policy from the **Policy** screen. In addition, you can create or edit a fully-insured group policy through a customer registration object or a health care inbound message. If the fully-insured group policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

However, if the fully-insured group policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

A fully-insured group policy encapsulates the following information:

- **Policy Persons** – While creating a fully-insured group policy, you need to associate the person who is the main customer of the policy. While associating a person with a fully-insured group policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a fully-insured group policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Plans** – You can define different types of plans in a fully-insured group policy. For more information, refer to [Types of Policy Plan](#) on page 303.
- **Memberships** – You can define different types of memberships for a fully-insured group policy plan. For more information, refer to [Types of Membership](#) on page 304.
- **Member Persons** – While adding a person to a membership, you need to specify whether the person is the main subscriber of the membership, whether the person is financially responsible for the membership, and how the person is related to the main subscriber. At a time, only one person can be the main subscriber of the membership. You cannot remove a member person, who is the main subscriber, from the membership. You can inactivate a member person whenever required. If you inactivate a member person who is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership.
- **Membership Contracts** – You can associate one or more contracts with a membership. At present, the system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. The system does not use the membership contracts for billing the membership premium.
- **Policy Plan Contracts** – The system creates or updates contracts of a policy plan when you do either of the following:
 - Create or Edit a Policy Plan from the User Interface or through an Inbound Message
 - Create or Edit an Account from the User Interface or through an Inbound Message

The system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. For more information, refer to [Single Contract Creation Across Fully-Insured Group Policies and Plans](#) on page 270 and [Policy Plan Specific Contract Creation](#) on page 289.

On defining a fully-insured group policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a fully-insured group policy is activated, you can terminate, reinstate, or renew the policy whenever required.

Fully-Insured Group Policy Activation

You can activate a fully-insured group policy by clicking the **Activate** button in the **Policy** screen. On activating a fully-insured group policy, the status of the policy is set to **In Force/Active**.

Note: If a fully-insured group policy is created through a customer registration object or a health care inbound message, the status of the policy is directly set to **In Force/Active**

Once a fully-insured group policy is activated, you can terminate, reinstate, or renew the policy whenever required.

Fully-Insured Group Policy Termination

The system enables you to terminate a fully-insured group policy whenever required. There are two ways in which you can terminate a fully-insured group policy:

- **Initiate Policy Termination Process** – In this method, you can initiate the policy termination process from the user interface. To initiate the termination process, you need to specify the termination date and termination reason. On initiating the termination process, the status of the policy is changed to **Pending Termination**. In addition, the

system creates an outbound message which request for confirmation whether the policy should be terminated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Terminated**.

- **Terminate Policy** – In this method, you can directly terminate a fully-insured group policy. To terminate a fully-insured group policy, you need to specify the termination reason. You can directly terminate the policy from the user interface or through a health care inbound message. On clicking the **Terminate** button, the system will terminate the fully-insured group policy on the system date. However, when you terminate a fully-insured group policy through a health care inbound message, the policy is terminated when the health care inbound message is processed in the system. On terminating a fully-insured group policy, the status of the policy is changed to **Terminated**.

Once the status of the policy is changed to **Terminated**, the system sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)

Note: The system does not consider those persons associated with policy whose start date is later than the termination date or whose end date is earlier than the termination date.

- Policy Plan (when the termination date falls within the date range of the policy plan)

Note: The system does not consider those policy plans whose start date is later than the termination date or whose end date is earlier than the termination date.

- Membership (when the termination date falls within the date range of the membership)

Note: The system does not consider those memberships whose start date is later than the termination date or whose end date is earlier than the termination date.

- Member Person (when the termination date falls within the date range in which the person is associated with the membership)

Note: The system does not consider those member persons whose start date is later than the termination date or whose end date is earlier than the termination date.

- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

Note: The system does not consider those contracts whose start date is later than the termination date or whose end date is earlier than the termination date.

The system also changes the status of all memberships to **Terminated** irrespective of whether it is effective on the termination date or not. On terminating a membership, the system creates an audit event for the membership. For each audit event, the system identifies the policy plan to which the membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. An entry for each membership, pricing rule type, and effective date combination is created in the **Pending (P)** status in the **CI_REPRC_ENTITY_DTL** table. For more information, see [Audit Framework for Fully-Insured Billing](#) on page 3377.

Fully-Insured Group Policy Reinstatement

The system enables you to reinstate the terminated policy whenever required. There are two ways in which you can reinstate a fully-insured group policy:

- **Initiate Policy Reinstatement Process** – In this method, you can initiate the policy reinstatement process from the user interface. To initiate the reinstatement process, you need to specify the reinstatement reason. On initiating

the reinstatement process, the status of the policy is changed to **Pending Reinstatement**. In addition, the system creates an outbound message which request for confirmation whether the policy should be reinstated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Reinstated**.

- **Reinstate Policy** – In this method, you can directly reinstate a fully-insured group policy. To reinstate a fully-insured group policy, you need to specify the reinstatement reason. You can directly reinstate the policy from the user interface or through a health care inbound message. On clicking the **Reinstate** button, the system will reinstate the fully-insured group policy on the system date. However, when you reinstate a fully-insured group policy through a health care inbound message, the policy is reinstated when the health care inbound message is processed in the system. On reinstating a fully-insured group policy, the status of the policy is changed to **Reinstated**.

Once the status of the policy is changed to **Reinstated**, the system updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

Note:

The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

Finally, the system automatically transitions the fully-insured group policy from **Reinstated** to **In Force/Active**.

Fully-Insured Group Policy Renewal

You can renew a fully-insured group policy only through a health care inbound message and not from the user interface. If you want to renew a fully-insured group policy, you must sent the renewal date along with the new policy end date through a health care inbound message. On processing the health care inbound message, the fully-insured group policy is renewed. The renewal date is stamped on the fully-insured group policy. The policy end date is extended as mentioned in the health care inbound message. The policy plan and membership information for the renewed period must be sent in the subsequent health care inbound messages.

Note: You can renew a fully-insured group policy when it is in the **In Force/Active** status.

Single Contract Creation Across Fully-Insured Group Policies and Plans

The system automatically creates a contract for a fully-insured group policy plan on the parent customer and/or bill group accounts. The system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** – The system creates a contract in either of the following ways:
 - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.

- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans — PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items – PI1, PI2, and PI3, and PRT2 contains three price items – PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with different price items, and if these price items are added on different pricing rule types, and if these pricing rule types are associated with different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Example 1 — Contract Creation for a Parent Customer

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one contract using each contract type on each account of the parent customer and bill groups. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with two plans – PP1 and PP2 - is created for PC1 (where none of the bill groups are associated)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1, A2, A3, and A4 accounts in the above stated scenario:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
A1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
		PRT2	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
		PRT3	PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A1C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
			PI6	CT6	A1C6	PP2 (03-01-2019)	03-01-2019
A2	PP1	PRT1	PI1	CT1	A2C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI2	CT2	A2C2	PP1 (01-01-2019)	01-01-2019
		PRT2	PI1	CT1	A2C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

The following figure graphically illustrates the example 1:

Example 2 — Contract Creation for a Bill Group

If a policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one contract using each contract type on each account of the parent customer and the bill group. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with three plans – PP1, PP2, and PP3 – is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1 and A2 accounts in the above stated scenario:

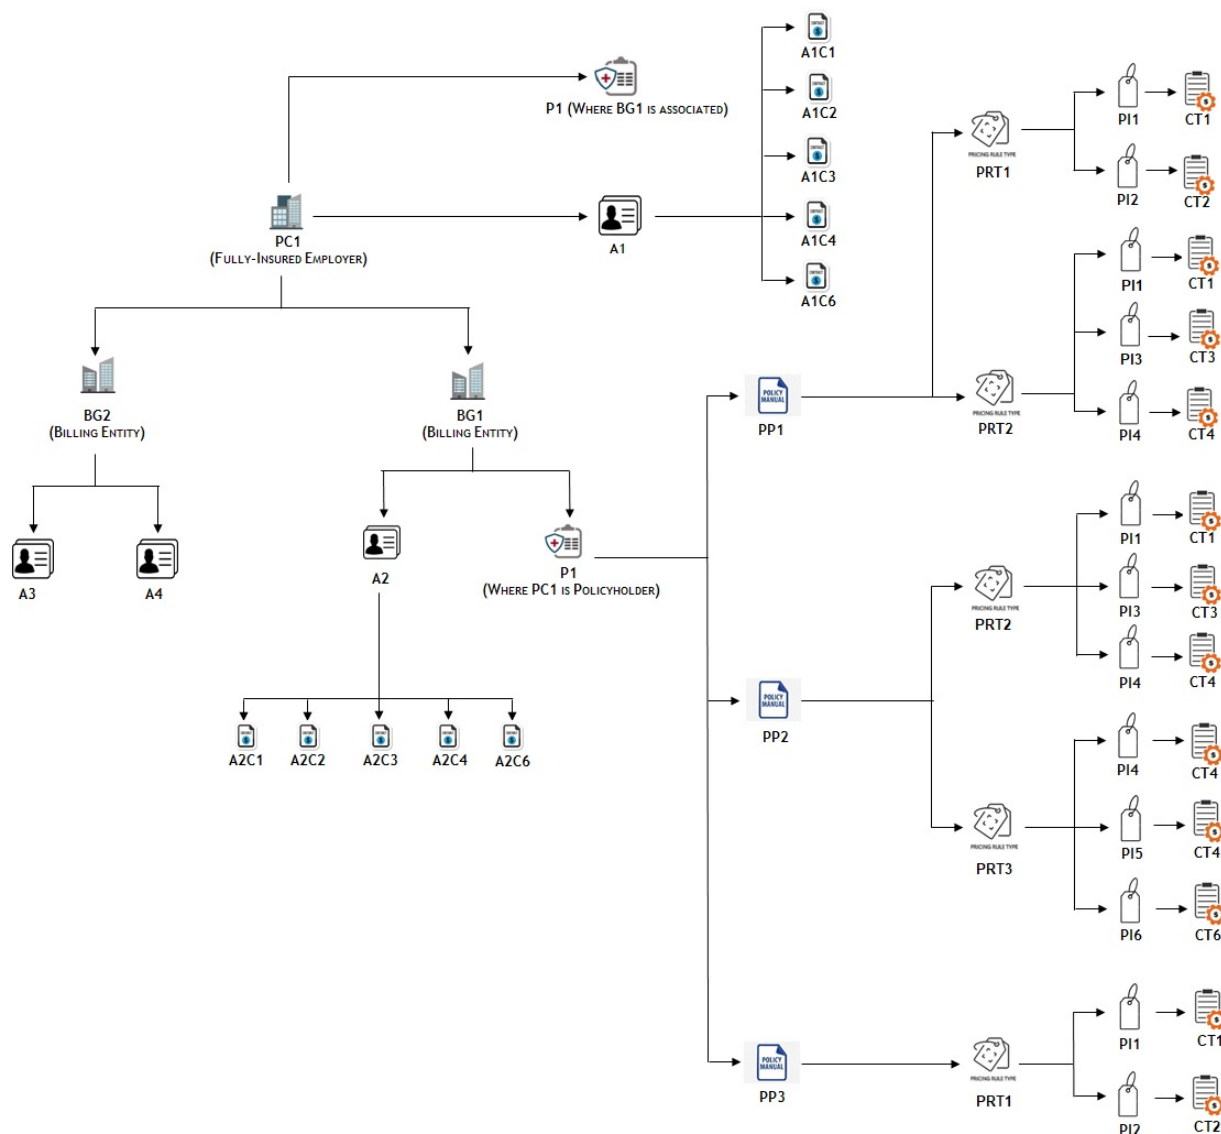

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
A1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
		PRT2	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
		PRT3	PI4	CT4	A1C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A1C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))
			PI6	CT6	A1C6	PP2 (03-01-2019)	03-01-2019
	PP3	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
	A2	PP1	PRT1	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)
PI2				CT2	A2C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
PRT2			PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
	PP2	PRT2	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI3	CT3	A2C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
		PRT3	PI4	CT4	A2C4	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI5	CT4	A2C4	PP2 (03-01-2019)	01-01-2019 (because PI4 and PI5 are associated with the same contract type (i.e. CT4))
			PI6	CT6	A2C6	PP2 (03-01-2019)	03-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
	PP3	PRT1	PI1	CT1	A2C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A2C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019

The following figure graphically illustrates the example 2:

**Note:**

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

- **Create or Edit an Account from the User Interface or through an Inbound Message** – The system creates a contract when either of the following condition is met:
 - The main customer of the account is a parent customer and holds a policy (where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
 - The main customer of the account is a parent customer and holds a policy (where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
 - The main customer of the account is a bill group and holds a policy (where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

The system creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans — PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items – PI1, PI2, and PI3, and PRT2 contains three price items – PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with different price items, and if these price items are added on different pricing rule types, and if these pricing rule types are associated with different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Example 3 — Contract Creation for an Account of a Parent Customer

If you create an account for a parent customer who holds policies (where a bill group may or may not be associated), the system will create one contract using each contract type for all parent customer's policies on the account. Let us assume...

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – a policy named P1 (where a bill group is not associated) and a policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder
- An account named A1 is added for PC1
- P1 has two plans – PP1 and PP2
- P2 has two plans – PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI4
- PRT3 contains two price items – PI1 and PI5
- PRT4 contains two price items – PI6 and PI7

- PRT111 contains two price items – PI11 and PI12
- PRT112 contains two price items – PI1 and PI5
- PRT113 contains two price items – PI13 and PI14
- PRT114 contains two price items – PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type, PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

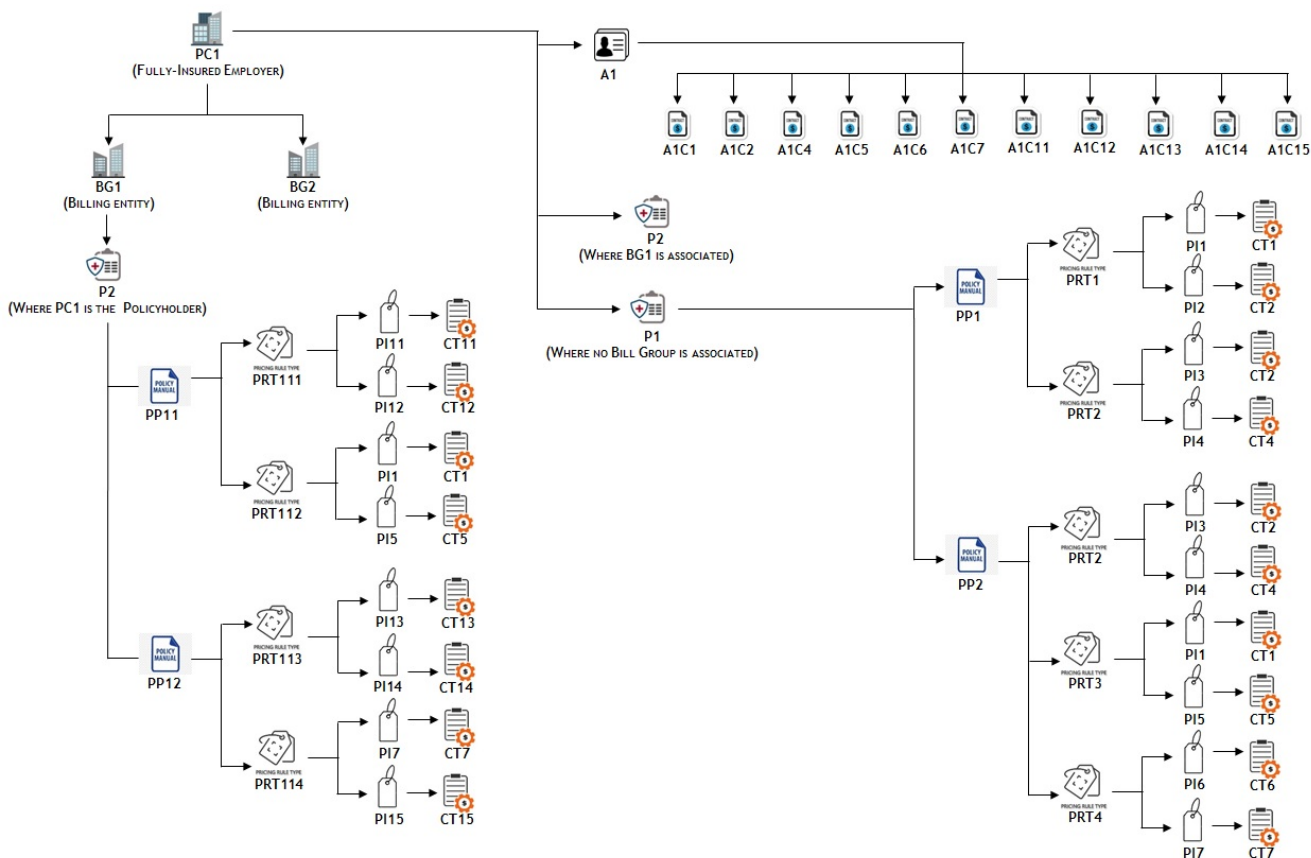

The following table indicates the distinct contracts that would be created across policy plans on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
A1	P1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (06-01-2019), and PP11 (05-01-2019)	01-01-2019

The following figure graphically illustrates the example 3:

Example 4 — Contract Creation for an Account of a Bill Group

If you create an account for a bill group who holds policies and its parent customer holds policies (where a bill group may or may not be associated), the system will create one contract using each contract type for the bill group’s polices and parent customer’s polices (where a bill group is not associated) on the account. Let us assume...

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – a policy named P2 (where a bill group is not associated) and a policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans – PP11 and PP12

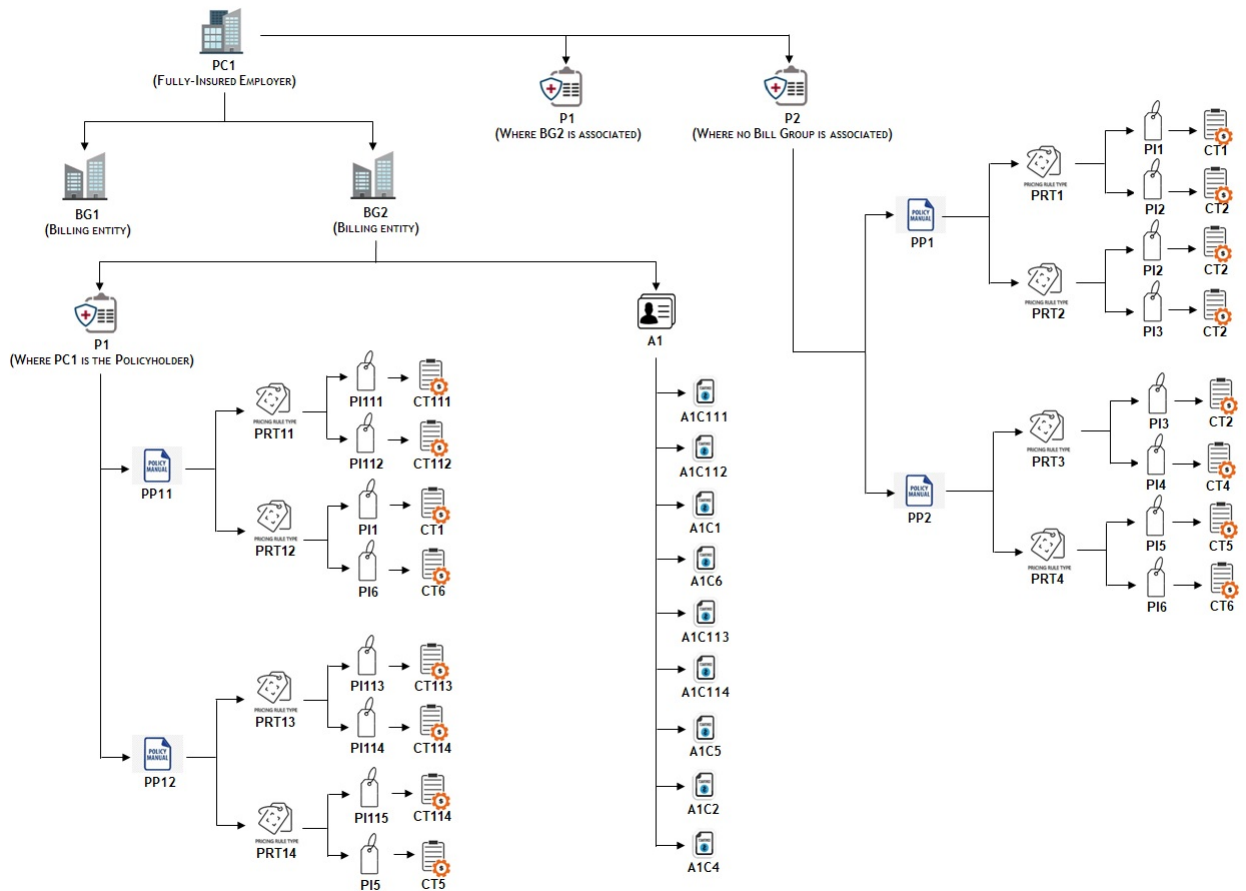

- P2 has two plans – PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI2
- PRT3 contains two price items – PI3 and PI4
- PRT4 contains two price items – PI5 and PI6
- PRT11 contains two price items – PI111 and PI112
- PRT12 contains two price items – PI1 and PI6
- PRT13 contains two price items – PI113 and PI114
- PRT14 contains two price items – PI115 and PI5
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)
A1	P1	PP11	PRT11	PI111	CT111	A1C111	PP11 (07-01-2019)	07-01-2019
				PI112	CT112	A1C112	PP11 (07-01-2019)	07-01-2019
			PRT12	PI1	CT1	A1C1	PP1 (01-01-2019) and PP11 (07-01-2019)	01-01-2019
				PI6	CT6	A1C6	PP2 (04-01-2019) and PP11 (07-01-2019)	04-01-2019
		PP12	PRT13	PI113	CT113	A1C113	PP12 (11-01-2019)	11-01-2019
				PI114	CT114	A1C114	PP12 (11-01-2019)	11-01-2019

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created...	Contract Start Date (i.e. Earliest Plan Date)	
			PRT14	PI115	CT114	A1C114	PP12 (11-01-2019)	11-01-2019	
				PI5	CT5	A1C5	PP2 (04-01-2019) and PP12 (11-01-2019)	04-01-2019	
	P2	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019) and PP11 (07-01-2019)	01-01-2019	
				PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019	
			PRT2	PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019	
				PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (04-01-2019)	01-01-2019	
			PP2	PRT3	PI3	CT2	A1C2	PP1 (01-01-2019) and PP2 (04-01-2019)	01-01-2019
					PI4	CT4	A1C4	PP2 (04-01-2019)	04-01-2019
				PRT4	PI5	CT5	A1C5	PP2 (04-01-2019) and PP12 (11-01-2019)	04-01-2019
					PI6	CT6	A1C6	PP2 (04-01-2019) and PP11 (07-01-2019)	04-01-2019

The following figure graphically illustrates the example 4:

Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

Policy Plan Specific Contract Creation

In the *Single Contract Creation Across Fully-Insured Group Policies and Plans* on page 270 section, we have seen how the system creates one contract across fully-insured group policies and plans on the parent customer and/or bill group accounts. Alternatively, the system enables you to create a plan-specific contract (i.e. a contract using a contract type for each plan) on the parent customer and/or bill group accounts. You can opt for the plan-specific contract creation feature when you want to implement plan-specific business rules. For example, different payment priorities for your medical and dental plans. Under such conditions, you can create different contract types for different plans, say Medical and Dental and enable creation of different contracts using these contract types for billing different plans.

You can configure the plan-specific contract creation feature for the fully-insured group health insurance business by setting the following option types in the **C1-ASOBLNG** feature configuration:

- **Plan ID Characteristic Type** – Used to specify the characteristic type where you want to store the plan for which the contract is created. During the plan-specific contract creation, this characteristic is defined on the contract. Here, you must specify a characteristic type where the characteristic entity is set to **Contract**.
- **Plan Based Contract Creation Eligibility** – Used to indicate whether the system should create plan-specific contract on the account. The valid value is **Yes**.

Alternatively, you can also configure the plan-specific contract creation feature for specific persons (i.e. main customers of the policy) based on the business requirement. This is possible by setting the following option types in the **C1-ASOBLLNG** feature configuration:

- **Plan Based Contract Characteristic Type** – Used to specify the characteristic type which helps the system to determine whether plan-specific contracts should be created on the account. This characteristic must be defined on the person for whom you want to create plan-specific contracts on the accounts. Here, you must specify a characteristic type where the characteristic entity is set to **Person**.
- **Plan Based Contract Characteristic Value** – Used to specify the characteristic value which indicates that the system should create plan-specific contracts on the accounts.
- **Plan ID Characteristic Type** – Used to specify the characteristic type where you want to store the plan for which the contract is created. During the plan-specific contract creation, this characteristic is defined on the contract. Here, you must specify a characteristic type where the characteristic entity is set to **Contract**.

Here, the system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** – The system creates a contract in either of the following ways:
 - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
 - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans — PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items – PI1, PI2, and PI3, and PRT2 contains three price items – PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create six contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, C3PP1 using CT3 for PP1, C4PP2 using CT4 for PP2, and C5PP2 using CT5 for PP2. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create four contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, and C2PP2 using CT2 for PP2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date. The characteristic type, which is specified in the **Plan ID Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration, is defined for each contract. It stores the plan ID which indicates the plan for which the contract is created.

Example 1 — Plan-Specific Contract Creation for a Parent Customer

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one plan-specific contract using each contract type on each account of the parent customer and bill groups. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts

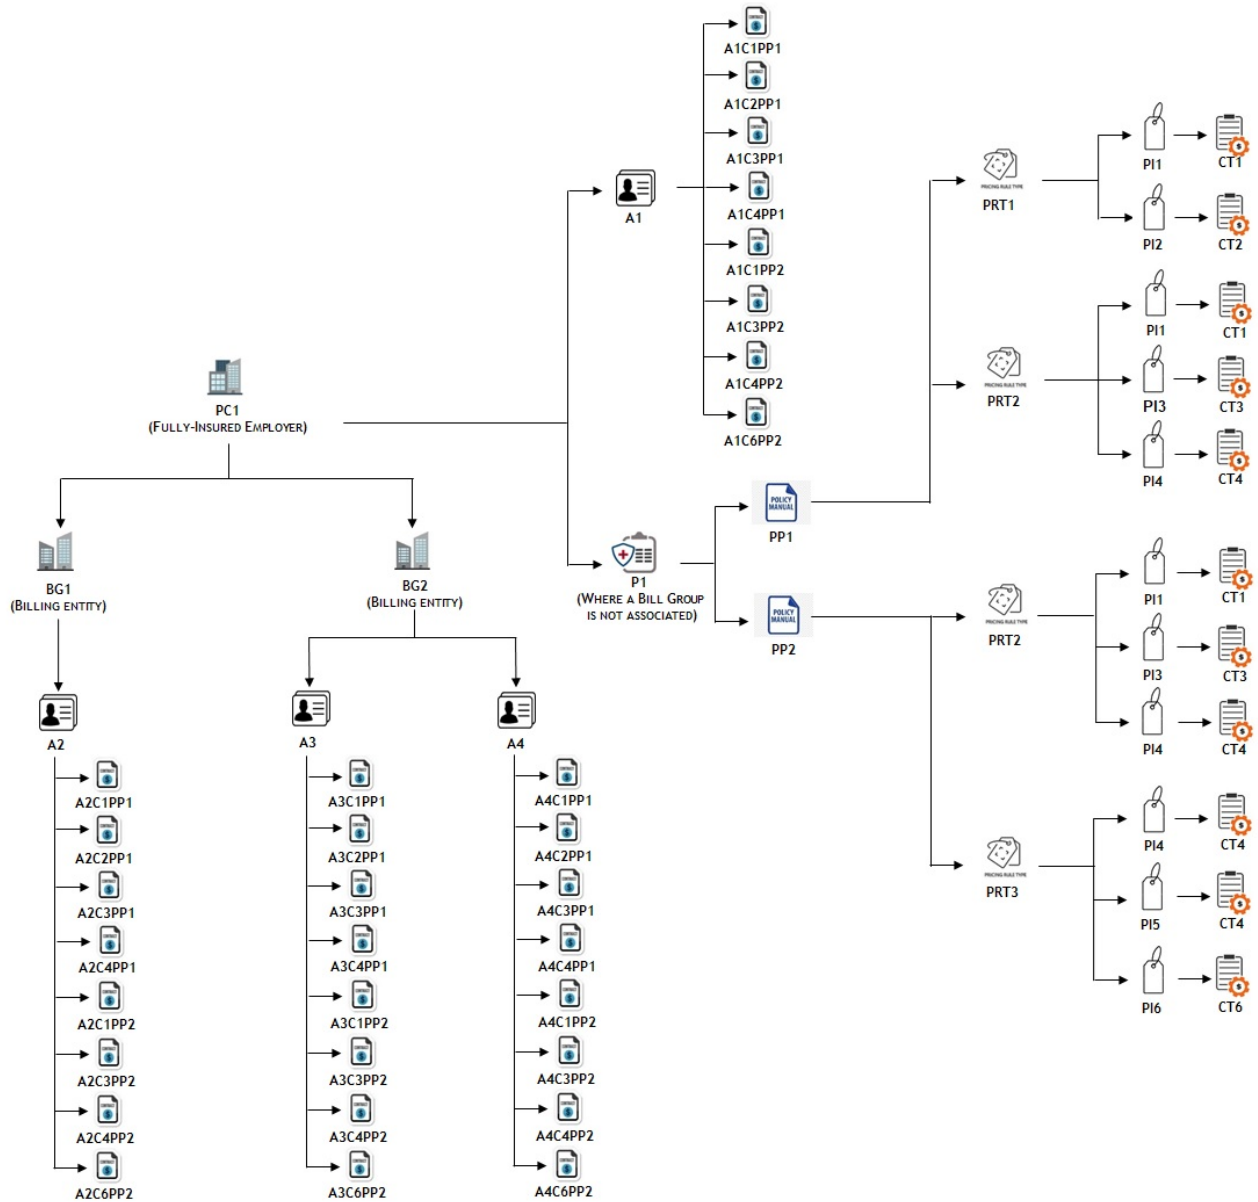

- A policy named P1 with two plans – PP1 and PP2 - is created for PC1 (where none of the bill groups are associated)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1, A2, A3, and A4 accounts in the above stated scenario:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
			PI2	CT2	A1C2PP1	01-01-2019
		PRT2	PI1	CT1	A1C1PP1	01-01-2019
			PI3	CT3	A1C3PP1	01-01-2019
			PI4	CT4	A1C4PP1	01-01-2019

			PI6	CT6	A4C6PP2	03-01-2019

The following figure graphically illustrates the example 1:

Example 2 — Plan-Specific Contract Creation for a Bill Group

If the policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one plan-specific contract using each contract type on each account of the parent customer and the bill group. Let us assume that...

- PC1 has two bill groups – BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with three plans – PP1, PP2, and PP3 – is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1

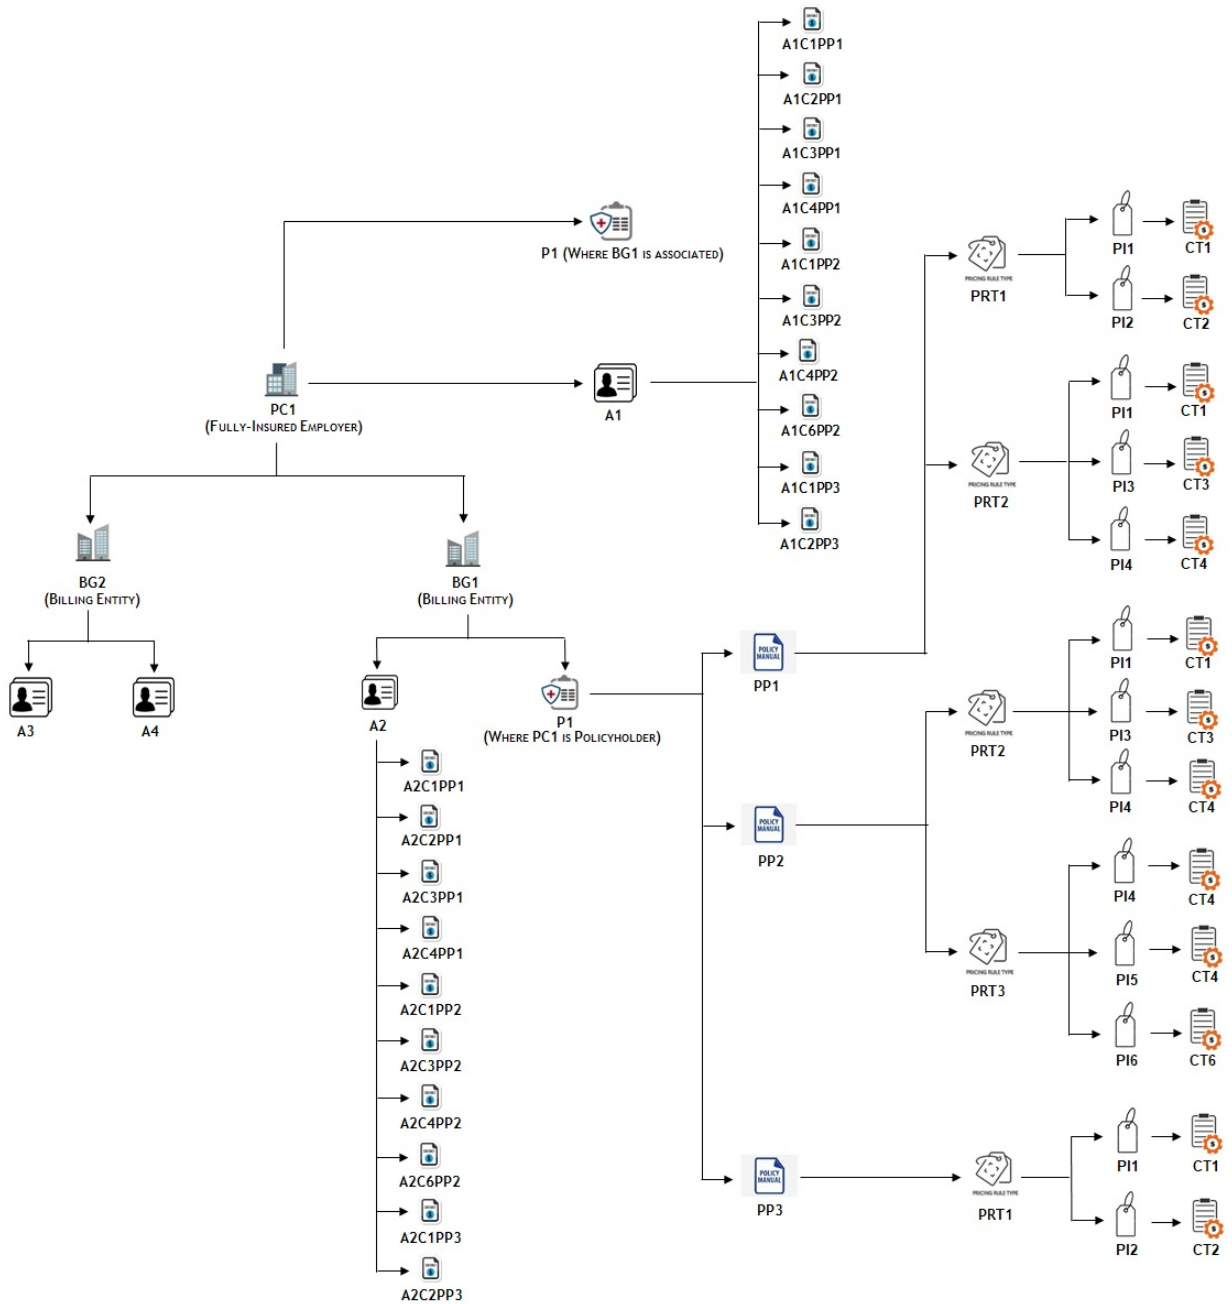

- PRT1 contains two price items – PI1 and PI2
- PRT2 contains three price items – PI1, PI3, and PI4
- PRT3 contains three price items – PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 and A2 accounts in the above stated scenario:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date	
A1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019	
			PI2	CT2	A1C2PP1	01-01-2019	
		PRT2	PI1	CT1	A1C1PP1	01-01-2019	
			PI3	CT3	A1C3PP1	01-01-2019	
			PI4	CT4	A1C4PP1	01-01-2019	
		PP2	PRT2	PI1	CT1	A1C1PP2	03-01-2019
	PI3			CT3	A1C3PP2	03-01-2019	
	PI4			CT4	A1C4PP2	03-01-2019	
	PRT3		PI4	CT4	A1C4PP2	03-01-2019	
			PI5	CT4	A1C4PP2	03-01-2019	
			PI6	CT6	A1C6PP2	03-01-2019	
	PP3	PRT1	PI1	CT1	A1C1PP3	06-01-2019	
			PI2	CT2	A1C2PP3	06-01-2019	
	A2	PP1	PRT1	PI1	CT1	A2C1PP1	01-01-2019
				PI2	CT2	A2C2PP1	01-01-2019
PRT2			PI1	CT1	A2C1PP1	01-01-2019	
			PI3	CT3	A2C3PP1	01-01-2019	
			PI4	CT4	A2C4PP1	01-01-2019	
PP2			PRT2	PI1	CT1	A2C1PP2	03-01-2019
		PI3		CT3	A2C3PP2	03-01-2019	
		PI4		CT4	A2C4PP2	03-01-2019	
		PRT3	PI4	CT4	A2C4PP2	03-01-2019	

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
			PI5	CT4	A2C4PP2	03-01-2019
			PI6	CT6	A2C6PP2	03-01-2019
	PP3	PRT1	PI1	CT1	A2C1PP3	06-01-2019
			PI2	CT2	A2C2PP3	06-01-2019

The following figure graphically illustrates the example 2:

Note: The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

- **Create or Edit an Account from the User Interface or through an Inbound Message** – The system creates a contract when either of the following condition is met:
 - The main customer of the account is a parent customer and holds a policy (where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
 - The main customer of the account is a parent customer and holds a policy (where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
 - The main customer of the account is a bill group and holds a policy (where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

The system creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans — PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items – PI1, PI2, and PI3, and PRT2 contains three price items – PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create six contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, C3PP1 using CT3 for PP1, C4PP2 using CT4 for PP2, and C5PP2 using CT5 for PP2. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create four contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, and C2PP2 using CT2 for PP2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date. The characteristic type, which is specified in the **Plan ID Characteristic Type** option type of the **C1-ASOBLNG** feature configuration, is defined for each contract. It stores the plan ID which indicates the plan for which the contract is created.

Example 3 — Plan-Specific Contract Creation for an Account of a Parent Customer

If you create an account for a parent customer who holds policies (where a bill group may or may not be associated), the system will create one plan-specific contract using each contract type for all parent customer's policies on the account. Let us assume...

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – a policy named P1 (where a bill group is not associated) and a policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder

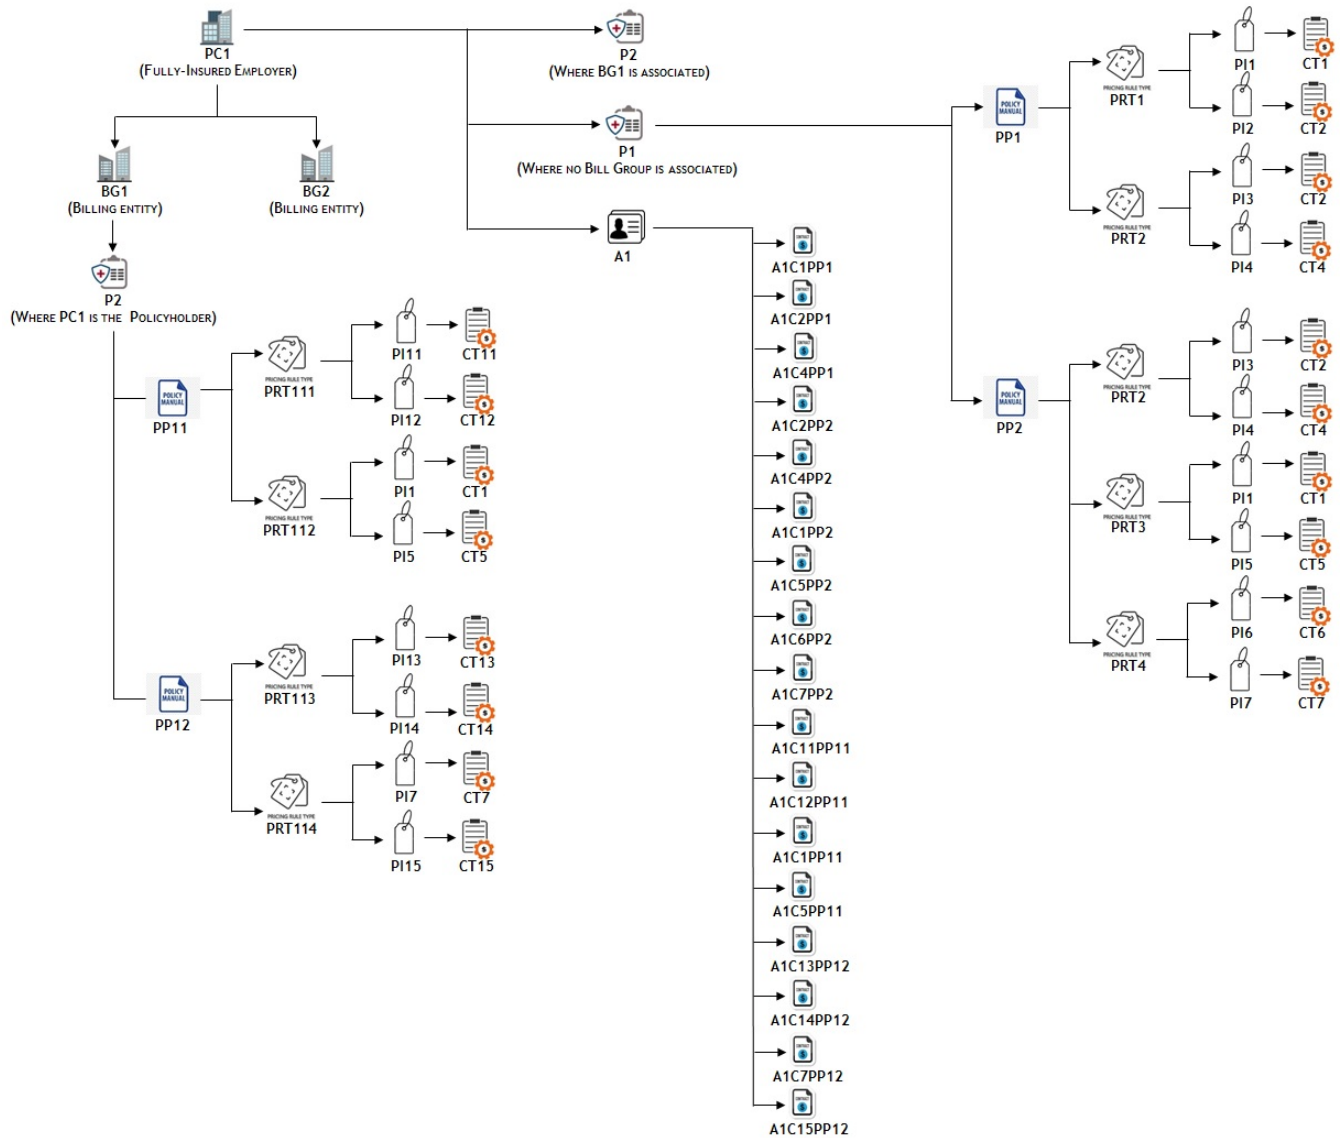

- An account named A1 is added for PC1
- P1 has two plans – PP1 and PP2
- P2 has two plans – PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI4
- PRT3 contains two price items – PI1 and PI5
- PRT4 contains two price items – PI6 and PI7
- PRT111 contains two price items – PI11 and PI12
- PRT112 contains two price items – PI1 and PI5
- PRT113 contains two price items – PI13 and PI14
- PRT114 contains two price items – PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type, PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date	
A1	P1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019	
				PI2	CT2	A1C2PP1	01-01-2019	
			PRT2	PI3	CT2	A1C2PP1	01-01-2019	
				PI4	CT4	A1C4PP1	01-01-2019	
		PP2	PRT2	PI3	CT2	A1C2PP2	06-01-2019	
				PI4	CT4	A1C4PP2	06-01-2019	
			PRT3	PI1	CT1	A1C1PP2	06-01-2019	
				PI5	CT5	A1C5PP2	06-01-2019	
			PRT4	PI6	CT6	A1C6PP2	06-01-2019	
				PI7	CT7	A1C7PP2	06-01-2019	
		P2	PP11	PRT111	PI11	CT11	A1C11PP11	05-01-2019

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
				PI12	CT12	A1C12PP11	05-01-2019
			PRT112	PI1	CT1	A1C1PP11	05-01-2019
				PI5	CT5	A1C5PP11	05-01-2019
		PP12	PRT113	PI13	CT13	A1C13PP12	09-01-2019
				PI14	CT14	A1C14PP12	09-01-2019
			PRT114	PI7	CT7	A1C7PP12	09-01-2019
				PI15	CT15	A1C15PP12	09-01-2019

The following figure graphically illustrates the example 3:

Example 4 — Plan-Specific Contract Creation for an Account of a Bill Group

If you create an account for a bill group who holds policies and its parent customer holds policies (where a bill group may or may not be associated), the system will create one plan-specific contract using each contract type for the bill group’s polices and parent customer’s polices (where a bill group is not associated) on the account. Let us assume...

- PC1 has two bill groups – BG1 and BG2
- PC1 has two policies – a policy named P2 (where a bill group is not associated) and a policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans – PP11 and PP12
- P2 has two plans – PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2

- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items – PI1 and PI2
- PRT2 contains two price items – PI3 and PI2
- PRT3 contains two price items – PI3 and PI4
- PRT4 contains two price items – PI5 and PI6
- PRT11 contains two price items – PI111 and PI112
- PRT12 contains two price items – PI1 and PI6
- PRT13 contains two price items – PI113 and PI114
- PRT14 contains two price items – PI115 and PI5
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date	
A1	P1	PP11	PRT11	PI111	CT111	A1C111PP11	07-01-2019	
				PI112	CT112	A1C112PP11	07-01-2019	
			PRT12	PI1	CT1	A1C1PP11	07-01-2019	
				PI6	CT6	A1C6PP11	07-01-2019	
		PP12	PRT13	PI113	CT113	A1C113PP12	11-01-2019	
				PI114	CT114	A1C114PP12	11-01-2019	
			PRT14	PI115	CT114	A1C114PP12	11-01-2019	
				PI5	CT5	A1C5PP12	11-01-2019	
		P2	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
					PI2	CT2	A1C2PP1	01-01-2019
	PRT2			PI2	CT2	A1C2PP1	01-01-2019	
				PI3	CT2	A1C2PP1	01-01-2019	
PP2	PRT3		PI3	CT2	A1C2PP2	04-01-2019		
			PI4	CT4	A1C4PP2	04-01-2019		

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
			PRT4	PI5	CT5	A1C5PP2	04-01-2019
				PI6	CT6	A1C6PP2	04-01-2019

The following figure graphically illustrates the example 4:

Note: The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

Fully-Insured Group Policy Status Transition

The following figure graphically indicates how a fully-insured group policy moves from one status to another in its lifecycle:

Membership Status Transition

The following figure graphically indicates how a membership moves from one status to another in its lifecycle:

Types of Policy Plan

Oracle Revenue Management and Billing enables you to create different types of plan for a fully-insured group policy:

- [Commercial Plans](#) on page 303
- [Medicare Affiliated Plans](#) on page 304

Commercial Plans

A commercial plan is a health insurance plan which is offered and administered by non-governmental entities (i.e. insurance companies). It can cover medical or dental expenses and disability income for the insured. Two of the most popular types of commercial health insurance plans are:

- **Preferred Provider Organization (PPO)** - A Preferred Provider Organization (PPO) is a medical care arrangement in which medical professionals and facilities provide services to subscribed clients at reduced rates.
- **Health Maintenance Organization (HMO)** - A Health Maintenance Organization (HMO) is an insurance structure that provides coverage through a network of physicians at a fixed annual fee.

A commercial health insurance plan can be offered to the individual or group customers. Usually, the insurance companies design special commercial health plans for fully-insured group customers and provide cost-effective health coverage for the employees and their family members (at an additional cost).

The system enables you to create and edit a policy plan from the user interface or through a health care inbound message. While creating a Commercial policy plan, you must set the benefit type to **Commercial**. While defining a Commercial policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received through a health care inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can associate the age based, tier based, pass-through billable charge, and/or additional fee pricing rule types with a Commercial policy plan. If you associate an age based pricing rule type with the policy plan, the system calculates the active employee coverage or COBRA membership premium for eligible members using the age based pricing rule type. If you associate a tier based pricing rule type with the policy plan, the system calculates the active employee coverage or COBRA membership premium using the tier based pricing rule type. The active employee coverage and COBRA membership premium are then charged through the SQI based billable charges. In case of an active employee coverage membership, the charge is billed to the bill group of the fully-insured group customer. However, in case of a COBRA membership, the charge is billed to either of the following depending on the billing arrangement which is defined for the COBRA membership:

- Bill Group of the Fully-Insured Group Customer
- TPA Person
- Financially Responsible Member Person

If you associate an additional fee pricing rule type (which is a related pricing rule type) with the policy plan, the system derives the flat or percentage based additional fee for the COBRA membership using the additional fee pricing rule type. This additional fee is charged along with the COBRA membership premium through an SQI based billable charge

If you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information of a health care inbound message, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer to the pass-through billable charge pricing rule type which is associated with the policy plan.

The system enables you to prorate the membership premium using the proration rules defined for the fully-insured group policy plan. A proration rule indicates how you want to prorate the membership premium on various events, such as enrollment, termination, etc. For more information, refer to [Premium Proration Rules](#) on page 3391.

Medicare Affiliated Plans

A Group Medicare Advantage plan, also known as Employer Group Waiver Plan (EGWP), is a type of Medicare Advantage plan offered by some employers to their retired or retiring employees. It may offer more benefits than traditional Medicare Advantage plans. EGWP are provided by private insurance companies who manage fully-insured large group customer's retiree Membership benefits. The different parts of Medicare that EGWPs cover are:

- **Part A** - Medicare Part A insurance is the portion that pays for hospital costs, such as inpatient hospital care or rehabilitation facility care related to illness or injury.
- **Part B** - Medicare Part B is the Medicare portion that pays for doctor visits and related medical costs, including emergency care when you are not admitted.
- **Part D** - Medicare Part D is the prescription drug coverage portion of Medicare. Most prescription drug coverage plans involve different "tiers" of medications where you may pay little to no costs for generic medications and a greater portion of costs for name-brand medicines.

The system enables you to create and edit a policy plan from the user interface or through a health care inbound message. While creating a Medicare Affiliated policy plan, you must set the benefit type to **Medicare Affiliated**. While defining a Medicare Affiliated policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received through a health care inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can associate the age based, tier based, pass-through billable charge, and/or benefit pricing rule types with a Medicare Affiliated policy plan. If you associate an age based pricing rule type with the policy plan, the system calculates the Medicare premium for Part A, Part B, and/or Part D for eligible members using the age based pricing rule type. If you associate a tier based pricing rule type with the policy plan, the system calculates the Medicare membership premium for Part A, Part B, and Part D using the tier based pricing rule type. This membership premium is then charged through the SQI based billable charge. The charge is billed to either of the following depending on the billing arrangement which is defined for the Medicare membership:

- Bill Group of the Fully-Insured Group Customer
- Financially Responsible Member Person

The system considers the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium. If you associate a benefit pricing rule type with the policy plan, the system determines the price items through which LIS and LEP should be charged.

If you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information of a health care inbound message, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer to the pass-through billable charge pricing rule type which is associated with the policy plan.

The system enables you to prorate the Medicare premium using the proration rules defined for the fully-insured group policy plan. A proration rule indicates how you want to prorate the membership premium on various events, such as enrollment, termination, etc. For more information, refer to [Premium Proration Rules](#) on page 3391.

Types of Membership

Oracle Revenue Management and Billing enables you to create different types of membership for a fully-insured individual membership:

- [Medicare Membership](#) on page 306

- [Retiree Membership](#) on page 310

Active Employee Coverage Membership

Oracle Revenue Management and Billing enables you to maintain an active employee coverage membership for the group insurance health plans and charge age based or tier based premium for the active employee coverage membership. An active employee coverage membership includes the employee or member of the organization who is covered under the group health insurance plan. Here, the covered employee or member is known as the main subscriber of the membership.

If the health insurance coverage is extended to the immediate family and/or other dependents of group members for an extra cost, the active employee coverage membership may include dependents who are related to the main subscriber. The system enables you to define various relationship types using which you can relate main subscriber and other dependent persons in a membership. You can define and edit relationship types through the **Contract Relationship Type** screen. The dependents can be members or non-members in an active employee coverage membership. The system calculates age based premium for both eligible members and non-members in an active employee coverage membership. If you select the **Skip Non-Members** option in the age based pricing rule type, the system will only consider the eligible members and not non-members of the active employee coverage membership during age based premium calculation.

The system enables you to create and edit an active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating an active employee coverage membership, you must not set the membership type of the membership (i.e. leave the **Membership Type** field blank). Ideally, you must define an active employee coverage membership on a Commercial policy plan. However, at present, the system does not validate whether an active employee coverage membership is defined only on a Commercial policy plan and not on a Medicare Affiliated policy plan.

You can create an active employee coverage membership when you specify the main subscriber of the membership. Ideally, the main subscriber and dependent persons should exist as persons in the system before creating the active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber, dependent persons, and active employee coverage membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person records for the main subscriber and dependent persons and then create the active employee coverage membership.

On creating an active employee coverage membership, the status of the membership and main subscriber is set to **Active**. On adding a dependent person to a membership, the status of the dependent person is set to **Active**. You can inactivate an active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating the main subscriber of an active employee coverage membership, the system automatically inactivates the membership and all other member persons which are included in the membership. The status of the active employee coverage membership, main subscriber, and other member persons (if any) is set to **Inactive**. In addition, the system does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

You can also inactivate a member person, who is not the main subscriber of an active employee coverage membership, from the user interface, through a health care inbound message, or through the membership repricing inbound web service. On inactivating the member person, the status of the member person is set to **Inactive**.

On terminating a fully-insured group policy, the status of all active employee coverage memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all active employee coverage memberships on the respective policy plans is set to **Active**.

The system requires the following information to create charges for an active employee coverage membership:

- Whom to bill the active employee coverage membership charges
- Age based or tier based pricing rules using which the premium should be calculated for the active employee coverage membership
- Respective age based or tier based pricing rule type associated with the respective policy plan

The system supports the following billing arrangements for an active employee coverage membership:

- **Group Billing** – Here, an active employee coverage membership is billed to a bill group which is derived for the active employee coverage membership.
- **Direct Billing** – Here, an active employee coverage membership is billed to the member who is financially responsible for the active employee coverage membership.

You can indicate the billing arrangement for the active employee coverage memberships by defining a characteristic on the bill group or parent customer. The system searches for the characteristic which is specified in the **Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Bill Group
2. Parent Customer

Note: If the billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the active employee coverage membership premium to the bill group.

The system requires the bill group and its account to bill the active employee coverage memberships when the billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the active employee coverage membership when the billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the active employee coverage membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Medicare Membership

Oracle Revenue Management and Billing enables you to maintain an employer sponsored group medicare membership (800 series plans) for a fully-insured large group customer and create age based or tier based premium charges for the Medicare Part A, Part B, and Part D. A Medicare beneficiary may qualify for a low income subsidy (LIS) for Medicare Part D or may incur late enrollment penalty (LEP) for Medicare Part D. In such case, the system enables you to consider the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium.

The system enables you to create and edit a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a Medicare membership, you must set the membership type to **Medicare**. Ideally, you must define a Medicare membership on a Medicare Affiliated policy plan. However, at present, the system does not validate whether a Medicare membership is defined only on a Medicare Affiliated policy plan and not on a Commercial policy plan.

You can create a Medicare membership when you specify the main subscriber of the membership. A Medicare membership should have only one member person who is covered for Medicare and who is financially responsible for the membership. Ideally, the main subscriber should exist as a person in the system before creating the Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber and Medicare membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person record for the main subscriber and then create the Medicare membership.

On creating a Medicare membership, the status of the membership and main subscriber is set to **Active**. You can inactivate a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating a Medicare membership, the system does the following:

- Set the status of the membership and main subscriber to **Inactive**
- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

On terminating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Active**.

The system enables you to maintain the Membership benefits (such as, Part A, Part B, Part D, Part D LIS, and Part D LEP) of a member person through the **Benefit** screen. The system enables you to define and edit the Membership benefits from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While defining a Membership benefit of a member person for Part A, Part B, and Part D, you need to specify a Medicare plan benefit package (i.e. 800 series plan) which is applicable for the Membership benefit. The system enables you to define and edit a Medicare plan benefit package through the **Field Mapping** screen. You can use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. While defining a Membership benefit of a member person for Part D LIS and Part D LEP, you need to specify the benefit amount (i.e. subsidy or penalty amount).

While editing a Membership benefit of a member person from the user interface, you can only edit the characteristics of the Membership benefit. However, while editing a Membership benefit of a member person through a health care inbound message or through the membership repricing inbound web service, you can edit the end date, benefit amount, and characteristics of the Membership benefit. On editing a Membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system enables you to discard an active or inactive Membership benefit from the user interface by clicking the **Discard** button. You can also discard an active or inactive Membership benefit through a health care inbound message or through the membership repricing inbound web service by changing its status to **Discarded**.

The system requires the following information to create charges for a Medicare membership:

- Whom to bill the Medicare membership (i.e. billing arrangement details)

- Age based or tier based pricing rules using which the premium should be calculated for the Medicare Part A, Part B, and Part D.
- Respective age based, tier based, and benefit pricing rule types associated with the respective policy plan

The system supports the following billing arrangements for a Medicare membership:

- **Group Billing** – Here, a Membership benefit is billed to a bill group which is derived for the Medicare membership.
- **Direct Billing** – Here, a Membership benefit is billed to a member person who is financially responsible for the Medicare membership.

You can indicate the billing arrangement for the Medicare memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Benefit Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Note: If the benefit billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the Medicare membership premium to the bill group.

The system requires the bill group and its account to bill the Medicare memberships when the benefit billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the Medicare membership when the benefit billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the Medicare membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

COBRA Membership

Oracle Revenue Management and Billing enables you to maintain a COBRA membership and charge age based or tier based premium and administration fee for the COBRA membership. In COBRA membership, an employer provides temporary continuation of group health coverage in certain situations where it would otherwise be terminated. This may include situations, such as:

- Death of the covered employee
- Reduction in the hours or termination of the covered employee's employment
- Covered employee becoming entitled for Medicare
- Divorce or legal separation from the covered employee
- A dependent child ceasing to be a dependent in an active employee coverage membership

The system enables you to create and edit a COBRA membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a COBRA membership, you must set the membership type to **COBRA**. Ideally, you must define a COBRA membership on a Commercial policy plan. However, at present, the system does not validate whether a COBRA membership is defined only on a Commercial policy plan and not on a Medicare Affiliated policy plan.

Through a health care inbound message, the system must receive the end date of the active employee coverage membership along with the details of the COBRA membership. You can create a COBRA membership when you specify the main subscriber of the membership. Here, the main subscriber can be an employee or member of the organization

or a family member who is covered through the COBRA membership. In a COBRA membership, you need to specify the member person who is financially responsible for the COBRA membership. Note that, at a time, only one member person can be financially responsible for the COBRA membership.

On creating a COBRA membership, the status of the membership and main subscriber is set to **Active**. On adding a dependent person to a membership, the status of the dependent person is set to **Active**. You can inactivate a COBRA membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating the main subscriber of a COBRA membership, the system automatically inactivates the membership and all other member persons which are included in the membership. The status of the COBRA membership, main subscriber, and other member persons (if any) is set to **Inactive**. In addition, the system does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

You can also inactivate a member person, who is not the main subscriber of a COBRA membership, from the user interface, through a health care inbound message, or through the membership repricing inbound web service. On inactivating a member person, the status of the member person is set to **Inactive**.

On terminating a fully-insured group policy, the status of all COBRA memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all COBRA memberships on the respective policy plans is set to **Active**.

The system requires the following information to create charges for a COBRA membership:

- Whom to bill the COBRA membership (i.e. billing arrangement details)
- Age based or tier based pricing rules using which the premium should be calculated for the COBRA membership
- Respective age based or tier based pricing rule type associated with the respective policy plan
- Additional fee pricing rule using which the administration fee should be calculated for the COBRA membership
- Respective additional fee pricing rule type associated with the respective policy plan

The system supports the following billing arrangements for a COBRA membership:

- **Group Billing** – Here, a COBRA membership is billed to a bill group which is derived for the COBRA membership.
- **TPA Billing** – Here, a COBRA membership is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** – Here, a COBRA membership is billed to the member who is financially responsible for the COBRA membership.

You can indicate the billing arrangement for the COBRA memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Cobra Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy

3. Parent Customer

Note: If the Cobra billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the COBRA membership premium to the bill group.

The system requires the bill group and its account to bill the COBRA memberships when the COBRA billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the third party administrator (i.e. TPA person) and its account to bill the COBRA memberships when the COBRA billing arrangement is set to **TPA Billing**. You can create a third party administrator (i.e. TPA person) and its accounts through a health care inbound message. While sending the details of a TPA person through an inbound message, you must specify the parent of the TPA person and its account details. The system associates the parent customer with the TPA person using the relationship type which is specified in the **TPA Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. If the person type specified in the health care inbound message matches the person type specified in the **TPA Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the TPA person and its account through a customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **TPA Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the TPA person and its accounts directly and not through a customer registration object.

The system associates the TPA person with the TPA account using the relationship type which is specified in the **TPA Account Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. On creating an account for a TPA person, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the COBRA membership when the COBRA billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the COBRA membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Retiree Membership

An employer may offer a retirement health plan coverage to its retired employees through a fully-insured group policy or an individual can independently opt for a government sponsored retirement health plan coverage. Oracle Revenue Management and Billing enables you to maintain a retiree membership for both the fully-insured group and individual business. The system enables you to maintain a flat or percentage based contribution of employer or sponsor for a retiree membership.

The system enables you to create and edit a retiree membership through a health care inbound message or through membership repricing inbound web service. While creating a retiree membership, the membership type must be set to **Retiree**. The system requires the following information to create charges for a retiree membership:

- Whom to bill the premium for the retiree membership (i.e. retiree billing arrangement details)
- Whom to bill the employer or sponsor contribution (i.e. sponsor billing arrangement details)
- Age based or tier based pricing rule using which the premium should be calculated for the retiree membership
- Discount charge pricing rule using which the employer or sponsor contribution should be calculated for the retiree membership

In case of the fully-insured individual business, the premium for a retiree membership is billed to the member who is financially responsible for the retiree membership. However, in case of the fully-insured group business, the system supports the following billing arrangements for the retiree membership:

- **Group Billing** – Here, the premium is billed to a bill group which is derived for the retiree membership.
- **TPA Billing** – Here, the premium is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** – Here, the premium is billed to the member who is financially responsible for the retiree membership.

You can indicate the billing arrangement for a retiree membership in the fully-insured group business by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Retiree Billing Arrangement** option type of the **C1-ASOBLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

The system enables you to maintain a flat or percentage based contribution of employer or sponsor through a discount charge pricing rule. A field named **Sponsored** is available in the **Price Items** section while defining or editing a discount charge pricing rule type. If the **Sponsored** option is selected for a price item, the system creates and bills the charge for the price item as per the sponsor billing arrangement. The system searches for the characteristic which is specified in the **Sponsors Billing Arrangement** option type of the **C1-ASOBLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

In the fully-insured group and individual business, the system supports the following sponsor billing arrangements for the retiree membership:

- **Group Billing** – Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **TPA Billing** – Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **Direct Billing** – Here, the system creates a memo only charge for the employer or sponsor contribution against the beneficiary account. A bill message code is derived from the **Retiree Bill Message Code** option type of the **C1-ASOBLNG** feature configuration and stamped against the beneficiary account.

In case of the group and TPA billing, the system derives the characteristic types which are specified in the **Sponsor Account Identifier Type Char Type** and **Sponsor Account Identifier Value Char Type** option types of the **C1-ASOBLNG** feature configuration. The system then checks whether these characteristics are defined on any of the following entity in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

If these characteristics are defined on any of the above entity, the system derives the sponsor account for the bill group. The system then bills the employer or sponsor contribution charges to the sponsor account.

However, if the **Sponsored** option is not selected for a price item in a discount charge pricing rule type, the system creates and bills the charge for the price item as per the retiree billing arrangement.

Algorithms Used in C1-POLICY

The following table lists the algorithms which are attached to the **C1-POLICY** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1- REAUDEVNT	C1-REAUDEVNT	Refer to C1-REAUDEVNT on page 312.
Validation	C1- POLBOVAL	C1-POLBOVAL	Refer to C1-POLBOVAL on page 313.

The following table lists the algorithms which are used in the lifecycle of the **C1-POLICY** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-TRNDFLSYS	C1-TRNDFLSYS	Refer to C1-TRNDFLSYS on page 314.
Activate	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1709.
In Force/ Active	Enter	C1-EVCSTSTAT	C1-EVCSTSTAT	Refer to C1-EVCSTSTAT on page 314.
Pending Termination	Enter	C1-PLCYTRMRQ	C1-PLCYTRMRQ	Refer to C1-PLCYTRMRQ on page 314.
Terminated	Enter	C1-POLCYTERM	C1-POLCYTERM	Refer to C1-POLCYTERM on page 315.
	Enter	C1-DELTRMLTR	C1-CRTCUSCNT	Refer to C1-DELTRMLTR on page 315.
	Enter	C1-EVCSTSTAT	C1-EVCSTSTAT	Refer to C1-EVCSTSTAT on page 314.
Pending Reinstatement	Enter	C1-PLCYREIRQ	C1-PLCYREIRQ	Refer to C1-PLCYREIRQ on page 316.
Reinstated	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1709.
	Enter	C1-POLCYREIN	C1-POLCYREIN	Refer to C1-POLCYREIN on page 316.
	Enter	C1-CCPOLRE1	C1-CRTCUSCNT	Refer to C1-CCPOLRE1 on page 317.
Renewed	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1709.
Pending Cancellation	-	-	-	-
Canceled	-	-	-	-

C1-REAUDEVNT

If this algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type.
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section.
- Deleting an entity when the **Delete Action** option is selected in the audit event type.

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event

At present, this algorithm is designed to work with the business objects of the following maintenance objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

In case, you want to create audit event for any other maintenance objects, you need to create a custom algorithm type.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-POLBOVAL

This algorithm validates a fully-insured group policy throughout its lifecycle. It checks the following:

- Whether the policy end date is not earlier than the policy start date.
- Whether the policy person end date is not earlier than the policy person start date.
- Whether the policy person start date is not earlier than the policy start date or later than policy end date.
- Whether the policy person end date is not earlier than the policy start date or later than policy end date.

Note: The above validation is done when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter to **TERMINATED**, the system will not perform the above validation when the status of the policy is changed to **Terminated**.

- Whether the person who is the main customer is associated with the policy.
- Whether the policy person role is specified while associating a person with the policy.

It contains the following parameter:

- **Skip Status for Policy Person End Date Validation** – Used to specify the policy status in which you do not want to validate the policy person end date. You can specify comma-separated values for this parameter.

C1-TRNDFLSYS

This algorithm checks whether the fully-insured group policy is created from the user interface or through an inbound message. If a fully-insured group policy is created through an inbound message, the system will automatically transition the fully-insured group policy to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-EVCSTSTAT

This algorithm updates the **Customer Status** characteristic of the main customer of the policy. This characteristic indicates whether the customer is active or inactive. If the customer owns at least one active policy, the customer status is set to **Active**. However, if the customer does not own any active policy, the customer status is set to **Inactive**.

It is invoked while activating or terminating a fully-insured group policy. It contains the following parameters:

- **Customer Status Characteristic Type** – Used to specify the characteristic type whose value should be updated whenever the policy is activated or terminated. You must specify a characteristic type where the characteristic entity is set to **Person**.
- **Active Customer Status Characteristic Value** – Used to specify the characteristic value which should be used when the main customer owns at least one active policy.
- **Inactive Customer Status Characteristic Value** – Used to specify the characteristic value which should be used when the main customer does not own any active policy (in other words, when all policies of the main customer are terminated).
- **Policy Active Status** – Used to specify the status in which at least one policy should exist to indicate that the main customer is active.

All the above parameters are mandatory.

C1-PLCYTRMRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy termination process from the user interface. While creating the outbound message, the system identifies the account using the characteristic type specified in the **Main Customer Characteristic Type** parameter. The system checks whether this characteristic type is set to the main customer's ID on any account. If so, the system considers the account and then fetches the value of the account identifier type specified in the **Account Identifier Type** parameter.

In addition, it stores the details of the outbound message (which is created) in the log of the policy. It contains the following parameters:

- **Outbound Message Type** – Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** – Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.

- **Account Identifier Type** – Used to specify the account identifier type whose value you want to use in the outbound message. You must specify an account identifier type which is already defined in the system.
- **Main Customer Characteristic Type** – Used to specify the characteristic type using which you want to identify the account of the main customer. You must specify a characteristic type where the characteristic entity is set to **Person**.

All the above parameters are mandatory.

C1-POLCYTERM

This algorithm sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)
- Policy Plan (when the termination date falls within the date range of the policy plan)
- Membership (when the termination date falls within the date range of the membership)
- Member Person (when the termination date falls within the date range in which the person is added to the membership)
- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

It contains the following parameters:

- **Membership Old Status** – Used to specify the status from which you want to transition the membership when the policy is terminated.
- **Membership New Status** – Used to specify the status to which you want to transition the membership when the policy is terminated.

C1-DELTRMLTR

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **TERMINATED** status, it creates a customer contact whenever the policy is terminated. You can create a customer contact while terminating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while terminating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** – Used when you want to create a customer contact when the policy is terminated for a particular reason. The valid values are:
 - **Y** – Used to indicate that the system should create a customer contact when a particular status reason is specified while terminating a policy.
 - **N** – Used to indicate that the system should create a customer contact while terminating a policy irrespective of the status reason.
- **Policy Status Reason Codes** – Used to specify the status reason defined for the **TERMINATED** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** – Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** – Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.

- **Consolidate Customer Contact** – Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
 - **Y** – If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
 - **N** – If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

Note: If you do not specify the value for this parameter, by default, it is set to **N**.

- **Policy ID Characteristic Type** – Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** – Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.
- **Status To Skip Process** – Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

C1-PLCYREIRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy reinstatement process from the user interface. In addition, it stores the details of the outbound message (which is created) in the log of the policy.

It contains the following parameters:

- **Outbound Message Type** – Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** – Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.

All the above parameters are mandatory.

C1-POLCYREIN

This algorithm updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

Note: The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

It contains the following parameters:

- **Membership Old Status** – Used to specify the status from which you want to transition the membership when the policy is reinstated.
- **Membership New Status** - Used to specify the status to which you want to transition the membership when the policy is reinstated. This field is mandatory.

C1-CCPOLRE1

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **REINSTATE** status, it creates a customer contact whenever the policy is reinstated. You can create a customer contact while reinstating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while reinstating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** – Used when you want to create a customer contact when the policy is reinstated for a particular reason. The valid values are:
 - **Y** – Used to indicate that the system should create a customer contact when a particular status reason is specified while reinstating a policy.
 - **N** – Used to indicate that the system should create a customer contact while reinstating a policy irrespective of the status reason.
- **Policy Status Reason Codes** – Used to specify the status reason defined for the **REINSTATE** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** – Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** – Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** – Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
 - **Y** – If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
 - **N** – If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

Note: If you do not specify the value for this parameter, by default, it is set to **N**.

- **Policy ID Characteristic Type** – Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** – Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.
- **Status To Skip Process** – Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

Algorithms Used in C1-PolicyPlan

The following table lists the algorithms which are attached to the **C1-PolicyPlan** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-PPCONCRE	C1-PPCONCRE	Refer to C1-PPCONCRE on page 318.
Validation	C1-VALPPBO	C1-VALPPBO	Refer to C1-VALPPBO on page 318.

C1-PPCONCRE

This algorithm is invoked when you create or edit a policy plan from the user interface or through an inbound message. It creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

Let us assume that PRT1 is associated with the policy plan and it contains three price items – P1, P2, and P3. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, and P3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the P1 and P3 are associated with the CT1 contract type and P2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one contract using each contract type on each account of the parent customer and bill groups. If a policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one contract using each contract type on each account of the parent customer and the bill group.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans on different policies, the contract start date is set to the start date of the earliest plan across policies.

C1-VALPPBO

This algorithm validates a policy plan. It checks the following:

- Whether the policy plan end date is not earlier than the policy plan start date.
- Whether the policy plan start date is not earlier than the policy start date or later than policy end date.

- Whether the policy plan end date is not earlier than the policy start date or later than policy end date.
- Whether the price item or at least one pricing rule type is associated with the policy plan.

Algorithms Used in C1-Membership

The following table lists the algorithms which are attached to the **C1-Membership** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-FIAUDEV	C1-FIAUDEV	Refer to C1-FIAUDEV on page 161.
Post-Processing	C1-RTAREAMEM	C1-RTAREAMEM	Refer to C1-RTAREAMEM on page 320
Post-Processing	C1-MEMRLSUBT	C1-MEMRLSUBT	Refer to C1-MEMRLSUBT on page 321
Post-Processing	C1-MPCONCREA	C1-MPCONCREA	Refer to C1-MPCONCREA on page 322
Pre-Processing	C1-MEMSTPRE	C1-MEMSTPRE	Refer to C1-MEMSTPRE on page 322.
Validation	C1-VALMEMBO	C1-VALMEMBO	Refer to C1-VALMEMBO on page 323.

The following table lists the algorithms which are used in the lifecycle of the **C1-Membership** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Active	-	-	-	-
Inactive	Enter	C1-MEMINACT	C1-MEMINACT	Refer to C1-MEMINACT on page 323.
Terminated	-	-	-	-

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership (C1-Membership)**, **Individual Membership (C1-IndMembership)**, **Benefit (C1-Benefits)**, and **Person (C1_PERSON_BO)** business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-RTAREAMEM

This algorithm derives the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. It supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

On adding a membership to a policy plan, this algorithm derives the characteristic types from the **Address Source** **Characteristic Type** and **Address Type** **Characteristic Type** attributes of a geographic rating area preference. This algorithm considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLNG** feature configuration. Then, it searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy

4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, this algorithm derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, this algorithm fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. It then derives the person who is associated with the policy using the parent customer policy person role. Once the address source and address type are derived, this algorithm fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is set to **Person Mailing**, this algorithm fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, this algorithm checks whether the zip code is a 9-digit code. If not, it appends zeros to make it a 9-digit zip code. It then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to **Y**, this algorithm derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to **N**, this algorithm derives a geographic rating area for the state and zip code combination. If the geographic rating area is not derived for the specified combination, this algorithm derives the default geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, this algorithm stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

C1-MEMRLSUBT

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, this algorithm derives the member relationship for each member person of the membership from a member relationship structure. It considers the member relationship structure which is defined as a characteristic for the policy plan. While deriving the member relationship structure of the policy plan, it considers the characteristic which is defined using a characteristic type specified in the **Member Relationship Structure Characteristic Type** attribute of a member relationship and subscription tier preference. It considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

The member relationship structure helps to determine how each member person is related to the main subscriber of the membership. A member relationship is derived for a member person depending on the following:

- Whether the member person is a self, spouse, or dependent
- Number of spouses, dependents, and young adults in the membership

While determining the member relationship for a member person, this algorithm derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis
- Max Age Limit for Max Dependent Count
- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- Member Relationship Derivation Date
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

It then derives these characteristics from the policy plan. Based on these characteristics defined for the policy plan, it derives the member relationship for each member person from the member relationship structure. If the **Member Relationship Derivation Date** characteristic type is set to **Enrollment Date**, this algorithm derives the member relationship for each member person of the membership in order of the member start date. However, if the **Member Relationship Derivation Date** characteristic type is set to **Date of Birth**, this algorithm derives the member relationship for each member person of the membership in order of the date of birth.

Once the member relationship is derived for a member person, this algorithm stores the member relationship for the member person. The characteristic type specified in the **Member Relationship Characteristic Type** attribute of the member relationship and subscription tier preference is used to store member relationship for the member person. On adding a membership to a policy plan or on adding a member person to a membership, the effective date of the member relationship characteristic is set to the member person's start date. If a new born is added to the membership, the effective date of the new born's member relationship characteristic is calculated considering the gift days if applicable.

If a member person is end dated, this algorithm derives the member relationship of all other member persons once again. If the member relationship for a member person is different, it creates a new characteristic to store the member relationship for the member person. The effective date of the new characteristic is set to the member person's end date + 1. For example, if the end date of a member person is set to 06-30-2021, then the effective date of the new characteristic for the remaining member persons is set to 07-01-2021. Similarly, if a member person is inactivated, this algorithm derives the member relationship of all other member persons once again. In this case, if the member relationship for a member person is different, it updates the existing member relationship characteristic of the member person and does not create a new member relationship characteristic for the member person.

C1-MPCONCREA

This algorithm is invoked when the following conditions are met:

- A member person who is financially responsible for the membership is added to the membership
- One or more accounts already exist for the member person in the system

If the above conditions are met, this algorithm derives the membership in which the member person is added. It then derives the policy plan to which the membership belongs. It creates contracts for each account of the member person in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

Let us assume that PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, this algorithm will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, this algorithm will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

C1-MEMSTPRE

Once the status of the main subscriber is changed to **Inactive**, this algorithm changes the status of the membership to the value specified in the **Membership Inactive Status** option type of the **C1-ASOBLNG** feature configuration. In addition, it does not allow you to add a member person in the **Inactive** status to a membership.

C1-VALMEMBO

This algorithm validates a membership. It checks the following:

- Whether the membership end date is not earlier than the membership start date.
- Whether the membership start date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the membership end date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the policy plan for which you want to define the membership is specified.
- Whether the person who is the main subscriber is added to the membership.
- Whether the relationship type is specified while adding a person to the membership.

C1-MEMINACT

This algorithm changes the status of the member person to the value specified in the **Membership Person Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

Late Setup Notification

Oracle Revenue Management and Billing enables you to create a To Do notification when the details to include a member person in a group or individual membership is received in ORMB beyond the late setup threshold days from the member person start date. This notification can help the billing analyst to take appropriate actions, such as giving premium waiver to the member person if required.

To enable this feature, you need to set the following option types in the **C1-ASOBLLNG** feature configuration:

- **Monitor Late Setup** – Used to indicate whether you want to enable the late setup notification feature. The valid values are – **Y** and **N**. By default, the value is set to **N**.
- **Late Setup Threshold in Days** – Used to indicate the number of threshold days for late setup notification. This option type is required when the **Monitor Late Setup** option type is set to **Y**. The value must be greater than zero.

For example, if the system receives the information to add a member person with the start date as **01-15-2021** to an individual membership on **02-15-2021** and the late setup threshold days in the **C1-ASOBLLNG** feature configuration is set to **15**. In this case, the number of days between the member person start date and member person creation date is greater than late setup threshold days, and therefore a To Do is created using the To Do type which is specified in the **C1-LATESET** algorithm attached to the group or individual membership business object, respectively.

To implement this business requirement, the system stores the member person creation date (which was not done in the previous releases) while adding a member person to a group or individual membership. A new batch named **C1-LSUB** is introduced in this release. It derives the creation date for all member persons in the existing group and individual memberships and stamps it against the corresponding record in the **CRE_DTTM** column of the **CI_MEMBERSHIP_PER** table. This batch must be executed only once after upgrading to Oracle Revenue Management and Billing Version 3.1.0.0.0. For more information, refer to *Oracle Revenue Management and Billing Version 3.1.0.0.0 Upgrade Guide*.

Policy (Used for Searching)

The **Policy** screen allows you to search for a policy using various search criteria. It also allows you to define a policy. It contains the following zone:

- [Search Policy](#) on page 324

Through this screen, you can navigate to the following screen:

- [Policy \(Used for Viewing\)](#) on page 335

Search Policy

The **Search Policy** zone allows you to search for a policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a policy using the policy or person details. The valid values are: <ul style="list-style-type: none"> • Policy Date/Policy Type/Status • Source System/Policy Number/Description • Person Name/Person Identifier • Policy Characteristics 	Yes
	Note: By default, the Policy Date/Policy Type/Status option is selected.	
Policy Type	Used to search policies which are created using a particular policy type.	No
	Note: This field appears when the Policy Date/Policy Type/Status option is selected from the Search By list.	
Start Date	Used to search policies which are effective from a particular date.	No
	Note: This field appears when the Policy Date/Policy Type/Status option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search policies with a particular status. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated 	No
	Note: This field appears when the Policy Date/Policy Type/Status option is selected from the Search By list.	
End Date	Used to search policies which are effective till a particular date.	No
	Note: This field appears when the Policy Date/Policy Type/Status option is selected from the Search By list.	
Source System	Used to search policies which originated from a particular external system.	No
	Note: This field appears when the Source System/Policy Number/Description option is selected from the Search By list.	
Policy Number	Used to search a policy with a particular policy number.	No
	Note: This field appears when the Source System/Policy Number/Description option is selected from the Search By list.	
Description	Used to search policies with a particular description.	No
	Note: This field appears when the Source System/Policy Number/Description option is selected from the Search By list.	
Person Name	Used to search policies to which a particular person is associated.	No
	Note: This field appears when the Person Name/Person Identifier option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional)
	Note: This field appears when the Person Name/Person Identifier option is selected from the Search By list.	Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search policies to which a person is associated.	Yes (Conditional)
	Note: This field appears when the Person Name/Person Identifier option is selected from the Search By list.	Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Characteristic Type	Used to search policies for which a particular characteristic type is defined.	Yes (Conditional)
	Note: This field appears when the Policy Characteristics option is selected from the Search By list. The list includes only those characteristic types where the characteristic entity is set to Policy .	Note: This field is required when you are searching for a policy using a characteristic.
Characteristic Value	Used to search policies with a particular characteristic value.	Yes (Conditional)
	Note: This field appears when the characteristic type is selected. If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are searching for a policy using a characteristic.

Note: You must specify at least one search criterion while searching for a policy.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.

Column Name	Column Description
Policy Information	Displays additional information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.
Source System	Indicates the external system from where the policy is originated.
Description	Displays the description of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Status	<p>Indicates the status of the policy. If the policy is created using the C1-POLICY business object, the valid values are:</p> <ul style="list-style-type: none"> • Pending • In Force/Active • Pending Cancellation • Canceled • Pending Reinstatement • Reinstated • Pending Termination • Terminated <p>However, if the policy is created using the C1-ASOPolicy business object, the valid values are:</p> <ul style="list-style-type: none"> • Pending • In Force/Active • Runout • Post Runout

Column Name	Column Description

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and person identifier types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
A sub-menu appears.
3. Click the **Search** option from the **Policy** sub-menu.
The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the Policy Details

Procedure

To view the details of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to view.
The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the policy in the **Policy** zone.

Defining a Policy

Oracle Revenue Management and Billing enables you to define a policy for the fully-insured and self-funded health insurance business. You can define a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, you can define a self-funded policy using a policy type where the policy category is set to **Self-Funded**.

Note: At present, the **Fully-Insured Individual** policy category is not supported in the system.

Prerequisites

To define a policy, you should have:

- Policy types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Note: This prerequisite is applicable only when you want to define a fully-insured group policy.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field

Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To define a policy:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
A sub-menu appears.
3. Click the **Add** option from the **Policy** sub-menu.

The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to create a policy. Note: If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual . However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to Self-Funded .	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy** screen.

4. Select the required policy type from the respective field.

5. Click **OK**.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define the characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated.	Yes
	Note: This field appears when you are defining a policy using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual .	
Start Date	Used to specify the date from when the policy is effective.	Yes
	Note: The policy start date cannot be later than the policy end date.	
End Date	Used to specify the date till when the policy is effective.	Yes
	Note: The policy end date cannot be earlier than the policy start date.	
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends.	No
	Note: The runout end date cannot be earlier than or equal to the policy end date. This field appears when you are defining a policy using a policy type where the policy category is set to Self-Funded .	

Field Name	Field Description	Mandatory (Yes or No)
Runout Administration Fees	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> • None • Percentage of Claim <p>Note:</p> <p>At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p> <p>This field appears when you are defining a policy using a policy type where the policy category is set to Self-Funded.</p>	No
Advance Level Funding Eligibility	<p>Indicates whether the self-funded policy is eligible for advance billing feature of level funding.</p> <p>Note:</p> <p>This is a read-only field. By default, the value is set to No. You can edit the advance level funding eligibility only through a health care inbound message.</p> <p>This field appears when you are defining a policy using a policy type where the policy category is set to Self-Funded.</p>	Not applicable

6. Enter the required details in the **Main** section.
7. Associate the required persons with the policy.

Note: While defining a policy, you must associate a person who is the main customer of the policy.

8. Define the characteristics for the policy, if required.
9. Click **Save**.

The policy is defined and its status is set to **Pending**.

Associating a Person with a Policy

Prerequisites

To associate a person with a policy, you should have:

- Required persons defined in the application
- Required policy person roles defined in the application

Procedure

To associate a person with a policy:

1. Ensure that the **Persons** section is expanded when you are defining or editing a policy.

The **Persons** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person	Used to indicate the person that you want to associate with the policy.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p> <p>On specifying the person ID, the person name appears corresponding to the Person field.</p>	
Sequence	Used to specify the sequence number for the associated person.	Yes
Policy Person Role	Used to indicate the role of a person in the policy.	Yes
Main Customer	Used to indicate whether the person is the main customer of the policy.	Yes (Conditional)
	<p>Note: At a time, only one person can be the main customer of the policy.</p>	
Start Date	Used to specify the date from when the person is associated with the policy.	Yes
	<p>Note:</p> <p>The start date cannot be later than the end date.</p> <p>The start date cannot be earlier than the policy start date and later than the policy end date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when the person is associated with the policy. Note: The end date cannot be earlier than the start date. The end date cannot be earlier than the policy start date and later than the policy end date. This validation is done when the policy is transition to the status which is not specified in the Skip Status for Policy Person End Date Validation parameter of the C1-POLBOVAL algorithm. For example, if you set the Skip Status for Policy Person End Date Validation parameter of the C1-POLBOVAL algorithm to TERMINATED , the system will not perform this validation when the status of the policy is changed to Terminated .	No

- Enter the required details in the **Persons** section.

Note: While associating the persons with a policy, you must always ensure that one person is the main customer of the policy.

- If you want to associate more than one person with the policy, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to dissociate a person from the policy, click the **Delete (🗑)** icon corresponding to the person.

- Click **Save**.

The persons are associated with the policy.

Defining a Characteristic for a Policy

Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a characteristic for a policy:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a policy.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy.	Yes (Conditional)
	Note: The effective date cannot be earlier than the policy start date and later than the policy end date.	Note: This field is required when you are defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Policy .	Note: This field is required when you are defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	Note: This field is required when you are defining a characteristic for the policy.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the policy, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the policy, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the policy.

Policy (Used for Viewing)

The **Policy** screen allows you to:

- View the details of a fully-insured group or self-funded policy
- Edit the details of a fully-insured group or self-funded policy
- Activate a fully-insured group or self-funded policy
- Add or edit plans in a fully-insured group policy

- Add memberships to a fully-insured group policy plan
- Initiate the termination process for a fully-insured group policy
- Terminate a fully-insured group policy
- Initiate the cancellation process for a fully-insured group policy
- Cancel a fully-insured group policy
- Initiate the reinstatement process for a fully-insured group policy
- Reinststate a fully-insured group policy
- View the log of a fully-insured group or self-funded policy
- Add a log entry for a fully-insured group or self-funded policy

It consists of the following tabs:

- [Policy - Main](#) on page 336
- [Policy - Plan](#) on page 343
- [Policy - Log](#) on page 345

Policy - Main

The **Main** tab displays information about the policy. It contains the following zones:

- [Policy](#) on page 336
- [Policy Characteristics](#) on page 342

Policy

The **Policy** zone displays the details of the fully-insured group or self-funded policy. It contains the following sections:

- **Main** - Displays basic information about the policy. It contains the following fields:

Field Name	Field Description
Base Policy Information	Displays information about the base policy.
	Note: This field appears when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to Self-Funded .
Policy Information	Displays information about the policy.
Policy Type	Indicates the policy type using which the policy is created.
	Note: It has a link. On clicking the link, the Policy Type screen appears where you can view the details of the respective policy type.

Field Name	Field Description
Status	<p>Indicates the status of the policy. If the policy is created using the C1-POLICY business object, the valid values are:</p> <ul style="list-style-type: none"> • Pending • In Force/Active • Pending Cancellation • Canceled • Pending Reinstatement • Reinstated • Pending Termination • Terminated <p>However, if the policy is created using the C1-ASOPolicy business object, the valid values are:</p> <ul style="list-style-type: none"> • Pending • In Force/Active • Runout • Post Runout
Status Reason	<p>Indicates the reason why the policy is terminated.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective termination reason.</p> <p>This field appears when you are viewing the details of a terminated or reinstated policy which is created using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual.</p>
Policy Number	Displays the policy number.
Description	Displays the description of the policy.
Source System	Indicates the external system from where the policy is originated.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Renewal Date	<p>Displays the date when the policy is renewed.</p> <p>Note: This field appears when you are viewing the details of a policy which is renewed.</p>

Field Name	Field Description																														
Paid Through Date	Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.																														
	<p>Note:</p> <p>This field appears when the following conditions are met:</p> <ul style="list-style-type: none"> When you are viewing the details of a policy which is created using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual. When the paid through date is calculated at the policy level. 																														
	The paid through date is calculated while freezing or canceling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:

Field Name	Field Description
Runout End Date	Displays the date when the runout period of the self-funded policy ends.
	Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded .
Runout Administration Fees	Indicates whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> • None • Percentage of Claim
	Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded .
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for advance billing feature of level funding.
	Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded .

- **Persons** - Lists the persons which are associated with the policy. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Sequence	Displays the sequence number of the associated person.
Policy Person Role	Indicates the role of the person in the policy.
Main Customer	Indicates whether the person is the main customer of the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description						
Edit	Used to edit the details of the fully-insured group or self-funded policy.

	Policy Category	Status					
Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> • Pending • Pending Termination 						
Self-Funded	<ul style="list-style-type: none"> • Pending 						
Initiate Cancellation	Used to initiate the cancellation process for the fully-insured group policy.						
Cancel	<p>Note: The Initiate Cancellation button appears when the fully-insured group policy is in the In Force/Active status.</p>						
	<p>Used to cancel the fully-insured group policy.</p> <p>Note: The Cancel button appears when the fully-insured group policy is in the Pending Cancellation status.</p>						

Button Name	Button Description
Initiate Termination	Used to initiate the termination process for the fully-insured group policy.
	Note: The Initiate Termination button appears when the fully-insured group policy is in the In Force/Active status.
Terminate	Used to terminate the fully-insured group policy.
	Note: The Terminate button appears when the fully-insured group policy is in the In Force/Active, Pending Reinstatement, or Pending Termination status.
Initiate Reinstatement	Used to initiate the reinstatement process for the terminated policy.
	Note: The Initiate Reinstatement button appears when the fully-insured group policy is in the Terminated status.
Reinstate	Used to reinstate the terminated policy.
	Note: The Reinstate button appears when the fully-insured group policy is in the Pending Reinstatement or Terminated status.
Runout	Used to transition the self-funded policy to the Runout status.
	<p>Note:</p> <p>The Runout button appears when the self-funded policy is in the In Force/Active status. You cannot transition a self-funded policy to the Runout status when:</p> <ul style="list-style-type: none"> • The self-funded policy is renewed. • The runout end date is not specified. • The policy end date is earlier than the system date.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the policy status is updated.
Create Date/Time	Displays the date and time when the policy is created.

- **Termination Information** - Displays the termination details of the fully-insured group policy. It appears when the policy is in the **Pending Termination** status. It contains the following fields:

Field Name	Field Description
Terminate Date	Displays the date when you want to terminate the policy.

Field Name	Field Description
Terminate Reason	Indicates the reason why the termination process is initiated for the policy. Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective termination reason.

- **Reinstate Information** - Displays the reinstatement details of the terminated policy. It appears when the policy is in the **Pending Reinstatement** status. It contains the following fields:

Field Name	Field Description
Reinstate Reason	Indicates the reason why you want to reinstate the fully-insured group policy. Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective reinstatement reason.

Policy Characteristics

The **Policy Characteristics** zone lists the characteristics of the fully-insured group or self-funded policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Column Name	Column Description
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to Predefined Value .

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Policy - Plan

The **Plan** tab lists the plans defined for the policy and memberships defined for each policy plan. It contains the following zones:

- [Plans](#) on page 343
- [Memberships](#) on page 344

Plans

The **Plans** zone lists the plans which are defined in the policy. It contains the following columns:

Column Name	Column Description
Plan Information	Displays information about the policy plan. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan.
Price Item Information	Indicates the price item to which the policy plan is directly associated.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Benefit Type	Indicates the type of health insurance plan. The valid values are: <ul style="list-style-type: none"> • Commercial • Medicare Affiliated
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Edit	On clicking the Edit () icon, the Plan screen appears where you can edit the details of the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new policy plan by clicking the **Add** link in the upper-right corner of this zone. On clicking the **Broadcast** () icon corresponding to a policy plan, the **Memberships** zone appears.

Note: Ideally, you define plans in a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.

You can filter the list using various search criteria (such as, **Price Item**, **Plan Number**, and **Effective From**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper-right corner of this zone.

Memberships

The **Memberships** zone lists the memberships which are defined for the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Information	Displays information about the membership. Note: It has a link. On clicking the link, the Membership screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Terminated
Membership Type	Indicates the type of membership. The valid values are: <ul style="list-style-type: none"> • COBRA • Medicare • Retiree

Column Name	Column Description
Benefits	<p>On clicking the Benefits () icon, the Benefit screen appears where you can view the Membership benefits of the member persons who belong to the membership.</p> <p>Note: The Benefits icon appears when a Membership benefit is defined for a member person who belongs to the membership.</p>
Membership ID	Displays the membership ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears when you click the **Broadcast** () icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4128

Editing a Policy

Prerequisites

To edit a policy, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Note: This prerequisite is applicable only when you want to define a fully-insured group policy.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field

Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To edit a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to edit.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Policy** zone.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define the characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable
Policy Type	Indicates the policy type using which the policy is defined.	Not applicable
Status	Indicates the status of the policy. The valid values are: <ul style="list-style-type: none"> • Pending • In Force/Active • Runout • Post Runout 	Not applicable
	Note: This field appears when you are editing a policy which is created using a policy type where the policy category is set to Self-Funded .	
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated.	Yes
	Note: This field appears when you are editing a policy which is created using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual .	

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the policy is effective.	Yes
	<p>Note:</p> <p>The policy start date cannot be later than the policy end date.</p> <p>You cannot change the start date of a self-funded policy when it is in the In Force/Active, Runout, or Post Runout status.</p>	
End Date	Used to specify the date till when the policy is effective.	Yes
	<p>Note:</p> <p>The policy end date cannot be earlier than the policy start date.</p> <p>You cannot change the end date when the self-funded policy is in the Runout status.</p> <p>You cannot set the end date of a self-funded policy to a date which is later than or equal to the start date of a pricing rule which is defined for the Runout status.</p> <p>You cannot change the end date when the policy is renewed.</p>	
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends.	No
	<p>Note:</p> <p>This field appears when you are editing a policy which is created using a policy type where the policy category is set to Self-Funded.</p> <p>The runout end date cannot be earlier than or equal to the policy end date.</p> <p>The runout end date cannot be earlier than or equal to the system date when the policy is in the Runout status.</p> <p>You cannot remove the runout end date when the policy is in the Runout or Post Runout status.</p> <p>You cannot set the runout end date to a date which is later than or equal to the start date of a pricing rule which is defined for the Post Runout status.</p> <p>You cannot set the runout end date to a date which is earlier than the end date of a pricing rule which is defined for the Runout status.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Runout Administration Fees	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> • None • Percentage of Claim <p>Note:</p> <p>At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p> <p>This field appears when you are editing a policy which is created using a policy type where the policy category is set to Self-Funded.</p>	No

Note:

The **Edit** button appears when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	<ul style="list-style-type: none"> • In Force/Active • Pending • Runout

5. Modify the required details in the **Main** section.
6. Associate the persons with the policy, if required.

Note: While editing a policy, you must ensure that one person is associated as the main customer of the policy.

7. Define, edit, or remove characteristics of the policy, if required.
8. Click **Save**.

The changes made to the policy are saved.

Viewing the Membership Details of a Fully-Insured Group Policy Plan

Procedure

To view the details of a membership in a fully-insured group policy plan:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to view.
The **Policy** screen appears.
3. Click the **Plan** tab.
The **Plan** tab appears.
4. In the **Plans** zone, click the **Broadcast** () icon corresponding to the fully-insured group policy plan whose membership details you want to view.
The **Memberships** zone appears.
5. In the **Memberships** zone, click the link in the **Membership Information** column corresponding to the membership whose details you want to view.
The **Membership** screen appears.
6. Ensure that the **Main** tab is selected.
7. View the basic details of the membership in the **Membership** zone.
8. View the characteristics of the membership in the **Membership Characteristics** zone.
9. View the persons who are added to the membership in the **Member Persons** zone.
10. View the characteristics of the member person in the **Member Person Characteristics** zone.
11. View the additional memberships of the main subscriber in the **Other Plans of Main Subscriber** zone.

Defining a Plan for a Fully-Insured Group Policy

Prerequisites

To define a plan for a fully-insured group policy, you should have:

- Policy plan business objects defined in the application
- Price items defined in the application

Procedure

To define a plan for a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for which you want to define a plan.

The **Policy** screen appears.

3. Click the **Plan** tab.

The **Plan** tab appears.

4. Click the **Add** link in the upper right corner of the **Plans** zone.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	Used to indicate the business object using which you want to create a plan for a fully-insured group policy.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** link in the upper right corner of the **Policy Plan** zone in the **Policy Plan** screen.

Note: The **Select Business Object** screen appears when there are multiple policy plan business objects defined in the application. If there is only one policy plan business object defined in the application, the **Plan** screen appears.

5. Select the required policy plan business object from the respective field.
6. Click **OK**.

The **Policy Plan** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy plan.
- **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
- **Proration Rules** - Used to define the proration rules for the policy plan.
- **Characteristics** - Used to define the characteristics for the policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Indicates the fully-insured group policy for which you want to create the policy plan.	Not applicable
Price Item	Used to indicate the price item which you want to directly associate with the policy plan.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On specifying the price item, the description of the price item appears corresponding to the Price Item field.</p>	<p>Note: You must either specify the price item or associate at least one pricing rule type with the policy plan.</p>
Plan Number	Used to specify the plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Benefit Type	Used to indicate the type of health insurance plan. The valid values are: <ul style="list-style-type: none"> • Commercial • Medicare Affiliated 	No
Start Date	Used to specify the date from when the policy plan is effective.	Yes
	<p>Note:</p> <p>The policy plan start date cannot be earlier than the policy start date and later than the policy end date.</p> <p>The policy plan start date cannot be later than the policy plan end date.</p>	
End Date	Used to specify the date till when the policy plan is effective.	No
	<p>Note:</p> <p>The policy plan end date cannot be earlier than the policy start date and later than the policy end date.</p> <p>The policy plan end date cannot be earlier than the policy plan start date.</p>	

7. Enter the required details in the **Main** section.
8. Associate the pricing rule types with the fully-insured group policy plan, if required.

Note: You must associate at least one pricing rule type with the policy plan when the price item is not specified in the fully-insured group policy plan.

9. Define the proration rules for the fully-insured group policy plan, if required.
10. Define the characteristics for the fully-insured group policy plan, if required.

11. Click Save.

The plan is defined for the fully-insured group policy.

Defining a Proration Rule for a Fully-Insured Group Policy Plan**Procedure**

To define a proration rule for a fully-insured group policy plan:

1. Ensure that the **Proration Rules** section is expanded when you are defining or editing a fully-insured group policy plan.

The **Proration Rules** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the proration rule is effective for the policy plan.	Yes (Conditional)
	<p>Note:</p> <p>The system considers the latest proration rule and not the effective proration rule while prorating the membership premium.</p> <p>The effective date cannot be earlier than the plan start date and later than the plan end date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Proration Event Type	<p>Used to indicate the event when you want to prorate the membership premium. The valid values are:</p> <ul style="list-style-type: none"> • Enrollment – Used when you want to prorate the membership premium on enrolling a member person. • Termination - Used when you want to prorate the membership premium on terminating a member person. • New Born - Used when you want to prorate the membership premium on enrolling a new born. • Same Month Enrollment and Termination - Used when you want to prorate the membership premium on enrolling and terminating a member person in the same month. 	<p>Yes (Conditional)</p> <p>Note: This field is required when you are defining a proration rule for the policy plan.</p>
Proration Type	<p>Used to indicate how you want to prorate the membership premium. The valid values are:</p> <ul style="list-style-type: none"> • Daily – Used when you want to prorate the membership premium from the day the proration event has occurred. • Mid-Month – Used when you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula: $\text{Bill Period Start Date} + \text{Specified Number of Days}$ <p>For example, if the bill period start date is 1st of every month and number of days is 15, then the proration date would be 15th of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person is terminated from the membership before the proration date, the system will not charge the premium for the member person.</p> • Full Month – Used when the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person. 	<p>Yes (Conditional)</p> <p>Note: This field is required when you are defining a proration rule for the policy plan.</p>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • Waiver – Used when the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership. • Coverage Days – Used when you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person. <p>Note: You can use this proration type when the proration event is set to Same Month Enrollment and Termination.</p>	
	<ul style="list-style-type: none"> • Enrollment – Used when you want to prorate the premium for a member person using the proration type of the enrollment event. <p>Note: You can use this proration type when the proration event is set to Same Month Enrollment and Termination.</p> <ul style="list-style-type: none"> • Termination – Used when you want to prorate the premium for a member person using the proration type of the termination event. <p>Note: You can use this proration type only when the proration event is set to Same Month Enrollment and Termination.</p>	
Number of Days	Used to specify the number of days to determine the cutoff date.	Yes (Conditional) Note: This field is required when the proration type is set to Mid-Month or Coverage Days .

2. Enter the required details in the **Proration Rules** section.
3. If you want to define more than one proration rule for the fully-insured group policy plan, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a proration rule of the fully-insured group policy plan, click the **Delete** (🗑️) icon corresponding to the proration rule.

4. Click **Save**.

The proration rules are defined for the fully-insured group policy plan.

Associating a Pricing Rule Type with a Fully-Insured Group Policy Plan

You can define a pricing rule using a pricing rule type for a fully-insured group policy plan when the pricing rule type is associated with the fully-insured group policy plan. You can associate a pricing rule type with a fully-insured group policy plan either from the user interface or through a health care inbound message.

Prerequisites

To associate a pricing rule type with a fully-insured group policy plan, you should have:

- Pricing rule types defined in the application (where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**)

Procedure

To associate a pricing rule type with a fully-insured group policy plan:

1. Ensure that the **Pricing Rule Types** section is expanded when you are defining or editing a fully-insured group policy plan.

The **Pricing Rule Types** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type that you want to associate with the fully-insured group policy plan.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field.</p> <p>Here, you can only specify a pricing rule type where the pricing rule type category is set to Age Based, Tier Based, or Pass-Through Billable Charge.</p>	<p>Note: You must either specify the price item or associate at least one pricing rule type with the policy plan.</p>

2. Enter the required details in the **Pricing Rule Types** section.
3. If you want to associate more than one pricing rule type with the fully-insured group policy plan, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to dissociate a pricing rule type from the fully-insured group policy plan, click the **Delete** (🗑️) icon corresponding to the pricing rule type.

4. Click **Save**.

The pricing rule types are associated with the fully-insured group policy plan.

Defining a Characteristic for a Fully-Insured Group Policy Plan**Prerequisites**

To define a characteristic for a fully-insured group policy plan, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**).

Procedure

To define a characteristic for a fully-insured group policy plan:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a fully-insured group policy plan.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the fully-insured group policy plan.	Yes (Conditional)
	Note: The effective date cannot be earlier than the policy plan start date and later than the policy plan end date.	Note: This field is required when you are defining a characteristic for the fully-insured group policy plan.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Policy Plan .	Note: This field is required when you are defining a characteristic for the fully-insured group policy plan.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the fully-insured group policy plan.

2. Enter the required details in the **Characteristics** section.

- If you want to define more than one characteristic for the fully-insured group policy plan, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the fully-insured group policy plan, click the **Delete (🗑)** icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the fully-insured group policy plan.

Editing a Plan of a Fully-Insured Group Policy

Prerequisites

To edit a plan of a fully-insured group policy, you should have:

- Price items defined in the application

Procedure

To edit a plan of a fully-insured group policy:

- Search for the fully-insured group policy in the **Policy** screen.
- In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to edit.

The **Policy** screen appears.

- Click the **Plan** tab.

The **Plan** tab appears.

- In the **Plans** zone, click the **Edit (✎)** icon in the **Edit** column corresponding to the policy plan whose details you want to edit.

The **Policy Plan** screen appears. It contains the following sections:

- Main** - Used to specify the basic details about the fully-insured group policy plan.
- Pricing Rule Types** - Used to associate the pricing rule types with the fully-insured group policy plan.
- Proration Rules** - Used to define the proration rules for the fully-insured group policy plan.
- Characteristics** - Used to define the characteristics for the fully-insured group policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Plan Information	Displays information about the fully-insured group policy plan.	Not applicable
Policy Information	Indicates the fully-insured group policy for which the policy plan is created.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to directly associate with the fully-insured group policy plan.	Yes (Conditional) Note: You must either specify the price item or associate at least one pricing rule type with the policy plan.
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears. On specifying the price item, the description of the price item appears corresponding to the Price Item field.	
Plan Number	Used to specify the plan number.	Yes
Plan Name	Used to specify the description for the fully-insured group policy plan.	No
Benefit Type	Used to indicate the type of health insurance plan. The valid values are: <ul style="list-style-type: none"> • Commercial • Medicare Affiliated 	No
Start Date	Used to specify the date from when the fully-insured group policy plan is effective.	Yes
	Note: The fully-insured group policy plan start date cannot be earlier than the policy start date and later than the policy end date. The fully-insured group policy plan start date cannot be later than the policy plan end date.	
End Date	Used to specify the date till when the fully-insured group policy plan is effective.	No
	Note: The fully-insured group policy plan end date cannot be earlier than the policy start date and later than the policy end date. The fully-insured group policy plan end date cannot be earlier than the policy plan start date.	

Tip: Alternatively, you can edit the details of a fully-insured group policy plan by clicking the **Edit** button in the **Policy Plan** zone of the **Policy Plan** screen.

5. Modify the required details in the **Main** section.
6. Associate the pricing rule types with the fully-insured group policy plan, if required.

Note: You must associate at least one pricing rule type with the policy plan when the price item is not specified in the fully-insured group policy plan.

7. Define, edit, or remove the proration rules of the fully-insured group policy plan, if required.

8. Define, edit, or remove characteristics of the fully-insured group policy plan, if required.
9. Click **Save**.

The changes made to the fully-insured group policy plan are saved.

Searching for a Membership

Prerequisites

To search for a membership, you should have:

- Membership types, membership identifier, and membership identifier types defined in the application
- Health plan defined in the application

Note: You must define a health plan only when you want to search individual memberships.

- Benefit types and benefit sub types defined in the application
- Person, person identifier, and person identifier types defined in the application
- Price item, policy, and policy plan defined in the application
- Contract relationship types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Membership**)

Procedure

To search for a membership:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Membership**.
A sub-menu appears.
3. Click the **Search** option from the **Membership** sub-menu
The **Membership** screen appears.
4. Enter the search criteria in the **Search Membership** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of memberships that meet the search criteria appears in the **Search Results** section.

Viewing the Membership Details

Procedure

To view the details of a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership whose details you want to view.
The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the membership in the **Membership** zone.

Defining a Membership for a Fully-Insured Group Policy Plan**Prerequisites**

To define a membership for a fully-insured group policy plan, you should have:

- Plans defined in the policy
- Persons defined in the application
- Contract relationship types defined in the application

Procedure

To define a membership for a fully-insured group policy plan:

1. Do either of the following:

If you want to...	Then...
Define a membership for a fully-insured group policy plan from the Policy screen	<ol style="list-style-type: none"> 1. Search for the fully-insured group policy in the Policy screen. 2. In the Search Results section, click the link in the Policy Information column corresponding to the policy whose details you want to edit. The Policy screen appears. 3. Click the Plan tab. The Plan tab appears. 4. In the Plans zone, click the Broadcast (📡) icon corresponding to the policy plan for which you want to define a membership. The Memberships zone appears. 5. Click the Add link in the upper right corner of the Memberships zone.
Define a membership for a fully-insured group policy plan from the Membership screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Customer Management and then click Membership. A sub menu appears. 3. Click the Add option from the Membership sub-menu.

The **Membership** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the membership.
- **Characteristics** - Used to define the characteristics for the membership.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Plan ID	<p>Used to indicate the policy plan for which you want to define the membership.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Policy Plan Search window appears.</p> <p>On specifying the policy plan, the description of the policy plan appears corresponding to the Plan field.</p> <p>If you navigate to the Membership screen from the Policy screen, the data automatically appears in this field. You can change the plan, if required.</p>	Yes
Start Date	<p>Used to specify the date from when the membership is effective for a fully-insured group policy plan.</p> <p>Note:</p> <p>The membership start date cannot be later than the membership end date.</p> <p>The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.</p>	Yes
End Date	<p>Used to specify the date till when the membership is effective for a fully-insured group policy plan.</p> <p>Note:</p> <p>The membership end date cannot be earlier than the membership start date.</p> <p>The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.</p>	Yes
Membership Type	<p>Used to indicate the type of membership. The valid values are:</p> <ul style="list-style-type: none"> • COBRA • Medicare <p>Note: If you want to define an active employee coverage membership, you must leave this field blank.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Main Subscriber	Used to indicate the person who is the main subscriber of the membership.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears. On specifying the person, the description of the person appears corresponding to the Main Subscriber field.	
Relationship Type	Used to indicate how the main subscriber is related to the membership.	Yes
External Membership ID	Used to specify the external membership ID.	No
	Note: Here, you need to specify a membership ID which is maintained in the external source system.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Membership** screen.

2. Enter the required details in the **Main** section.
3. Define characteristics for the membership, if required.
4. Click **Save**.

The membership is defined for the fully-insured group policy plan. The status of the membership and the main subscriber is set to **Active**.

Defining a Characteristic for a Membership

Prerequisites

To define a characteristic for a membership, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Membership**)

Procedure

To define a characteristic for a membership:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a membership.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the membership.	Yes (Conditional)
	Note: The effective date cannot be earlier than the membership start date and later than the membership end date.	Note: This field is required when you are defining a characteristic for the membership.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Membership	Note: This field is required when you are defining a characteristic for the membership.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the membership.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the membership, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the membership, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the membership.

Membership (Used for Viewing)

The **Membership** screen allows you to:

- View the details of a membership
- Edit the details of a membership
- Inactivate a membership
- Inactivate a member person
- Add or remove a person from a membership
- View the other plans of the main subscriber
- Associate or disassociate a contract from a membership
- View the billable charges created for a membership
- View the bill segments generated for a membership billable charge
- View the timeline details of a membership billable charge
- Viewing the pricing calculation details of a timeline
- View the log of a membership
- Add a log entry for a membership

It consists of the following tabs:

- [Membership - Main](#) on page 383
- [Membership - Contracts and Charges](#) on page 389
- [Membership - Log](#) on page 395

Membership - Main

The **Main** tab displays information about the membership. It also lists the persons which are included in the membership and other plans (within or across policies) where the main subscriber is associated. It contains the following zones:

- [Membership](#) on page 383
- [Membership Characteristics](#) on page 386
- [Member Persons](#) on page 386
- [Member Person Characteristics](#) on page 388
- [Other Plans of Main Subscriber](#) on page 388

Membership

The **Membership** zone displays the details of the membership. It contains the following sections:

- **Main** - Displays basic information about the membership. It contains the following fields:

Field Name	Field Description
Membership Information	Displays information about the membership.

Field Name	Field Description
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Plan Information	Indicates the policy plan for which the membership is defined.
	Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan.
Status	Indicates the status of the membership. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Terminated
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Type	Indicates the type of membership. The valid values are: <ul style="list-style-type: none"> • COBRA • Medicare
External Membership ID	Displays the corresponding membership ID which is maintained in the external source system.

Pricing Calculation Details

The **Pricing Calculation Details** zone indicates how the amount is calculated for the timeline. If the age based pricing is used during the membership premium calculation, this zone lists the premium calculated for each eligible member of

the membership. It also displays the base fee and modifier fee which are applicable for each eligible member. However, if the tier based pricing is used during the membership premium calculation, this zone lists the premium calculated at the membership level. It contains the following columns:

Column Name	Column Description
Entity Information	If the age based pricing is used during the membership premium calculation, this column indicates the eligible member for whom the premium amount is calculated. However, if the tier based pricing is used during the membership premium calculation, this column indicates the main subscriber of the membership.
Description on Bill	Displays the description of the rate component for which the price component is created in the age based or tier based pricing.
Pricing Parameter	Indicates the pricing eligibility criteria which is satisfied while deriving the base fee.
Amount	Displays the base fee or applicable modifier fee.
Proration Factor	Indicates the proration factor which is derived using the proration rules defined for the fully-insured group policy plan. Note: The data appears in this column when the proration rule for the respective event is defined for the fully-insured group policy plan.
Distributed Amount	Displays the premium amount which is calculated for the non-skip billing periods. Note: The data appears in this column when the 9/10 Billing (Skip Months) feature is enabled for the account. If the age based pricing is used during the membership premium calculation, this column displays the distributed amount for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the distributed amount for the membership.
No. of Billing Periods	Indicates the number of the non-skip billing periods of the account. Note: The data appears in this column when the 9/10 Billing (Skip Months) feature is enabled for the account.
Total Contract Period Amount	Displays the premium which should be paid for the entire contract period (in other words, total premium for the skip and non-skip billing periods). Note: The data appears in this column when the 9/10 Billing (Skip Months) feature is enabled for the account. If the age based pricing is used during the membership premium calculation, this column displays the total contract period amount for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the total contract period amount for the membership.
Total Amount	If the age based pricing is used during the membership premium calculation, this column displays the sum total of the base fee and modifier fee (if any) for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the base fee applicable for the membership.

By default, the **Pricing Calculation Details** zone does not appear in the **Contracts and Charges** tab of the **Membership** screen. It appears when you click the **Broadcast** () icon corresponding to a timeline in the **Billable Charge Timeline Details** zone.

Membership - Log

The **Log** tab contains the following zone:

- [Membership Log](#) on page 395

Membership Log

The **Membership Log** zone lists the complete trail of actions performed on the membership. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the membership.
Details	Displays the details about the action performed on the membership.
User	Indicates the user who has performed the action on the membership.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the membership.
	Note: It contains a link. On clicking the link, the screen appears where you can view the details of the respective related object.
Status Reason	Indicates the reason why the status of the membership is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the membership by clicking the **Add Log Entry** link in the upper right corner of the **Membership Log** zone.

Editing a Membership of a Fully-Insured Group Policy Plan

Procedure

To edit a membership of a fully-insured group policy plan:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership whose details you want to edit.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Membership** zone.

The **Membership** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the membership.
- **Characteristics** - Used to define the characteristics for the membership.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Displays information about the membership.	Not applicable
Plan Information	Indicates the policy plan for which the membership is defined.	Not applicable
Start Date	Used to specify the date from when the membership is effective for a fully-insured group policy plan. Note: The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
End Date	Used to specify the date till when the membership is effective for a fully-insured group policy plan. Note: The membership end date cannot be earlier than the membership start date. The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
Membership Type	Used to indicate the type of membership. The valid values are: <ul style="list-style-type: none">• COBRA• Medicare	No

Field Name	Field Description	Mandatory (Yes or No)
External Membership ID	Used to specify the external membership ID.	No
	Note: Here, you need to specify a membership ID which is maintained in the external source system.	

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the membership, if required.
7. Click **Save**.

The changes made to the membership are saved.

Adding a Person to a Membership

The system enables you to add a member person to a membership when the membership is in the **Active** status. However, you can only add a member person in the **Active** status and not in the **Inactive** status.

Prerequisites

To add a person to a membership, you should have:

- Required persons defined in the application
- Contract relationship types defined in the application

Procedure

To add a person to a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership to which you want to add a person.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Add Person** link in the upper right corner of the **Member Persons** zone.

The **Member Person** screen appears. It contains the following sections:

- **Main** - Used to specify the basic membership details of the person.
- **Characteristics** - Used to define the characteristics for the member person.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to add a person.	Not applicable
Person ID	Used to indicate the person whom you want to add to the membership. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.	Yes
Relationship Type	Used to indicate how the person is related to the main subscriber. Note: The list includes only those contract relationship types which are already defined in the system.	Yes
Financially Responsible	Used to indicate whether the person is financially responsible for the membership.	No
Main Subscriber	Used to indicate whether the person is the main subscriber of the membership.	No
Member	Used to indicate whether the person is a member or a non-member in the membership.	No
Start Date	Used to specify the date from when you want to add the person to the membership. Note: The member person start date cannot be later than the member person end date. The member person start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to add the person to the membership. Note: The member person end date cannot be earlier than the member person start date. The member person end date cannot be earlier than the membership start date or later than the membership end date.	No
External Medicare Beneficiary ID	Used to specify the Medicare beneficiary identifier of the person who has availed the Medicare benefit.	No

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: By default, the Active option is selected.	

- Enter the required details in the **Main** section.
- Define the characteristics for the member person, if required.
- Click **Save**.

The person is added to the membership.

Defining a Characteristic for a Member Person

Prerequisites

To define a characteristic for a member person, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Membership Person**)

Procedure

To define a characteristic for a member person:

- Ensure that the **Characteristics** section is expanded when you are adding a person to a membership or editing the membership details of a person.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the characteristic is effective for the member person.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the member person.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Membership Person .	Note: This field is required when you are defining a characteristic for the member person.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the member person.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the member person, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the member person, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the member person.

Inactivating a Membership

There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

Procedure

To inactivate a membership:

- Search for the membership in the **Membership** screen.
- In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership that you want to inactivate.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Inactivate** button in the **Membership** zone.

The status of the membership is changed to **Inactive**.

Inactivating a Member Person

The system enables you to inactivate a member person of a membership. If the member person is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

Procedure

To inactivate a member person of a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership whose details you want to edit.

The **Membership** screen appears.

3. Ensure that the **Main** tab is selected.
4. In the **Member Persons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the member person whom you want to inactivate.

The **Add/Edit Member Person** screen appears.

5. Select the **Inactive** option from the **Membership Person Status** list.

The status of the member person is changed to **Inactive**.

Removing a Person from a Membership

Procedure

To remove a person from a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership from which you want to remove a person.
The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. In the **Member Persons** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the person that you want to remove from the membership.

A message appears confirming whether you want to remove the person from the membership.

Note: You cannot remove the member person who is the main subscriber of the membership.

5. Click **OK**.

The person is removed from the membership.

Associating a Contract with a Membership

Prerequisites

To associate a contract with a membership, you should have:

- Contracts defined in the application
- Values defined for the **BILL_TO_TYPE_FLG** lookup field

Procedure

To associate a contract with a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership to which you want to associate a contract.
The **Membership** screen appears.
3. Click the **Contracts and Charges** tab.

The **Contracts and Charges** tab appears.

- Click the **Add Contract** link in the upper right corner of the **Membership Contracts** zone.

The **Associate Contract with Membership** screen appears. It contains the following section:

- Main** - Used to associate a contract with the membership. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to associate a contract.	Not applicable
Contract ID	Used to indicate the contract that you want to associate with the membership. Note: The Search (🔍) icon appears corresponding to the Contract ID field. On clicking the Search icon, the Contract Search window appears.	Yes
Bill To	Used to indicate the entity against whom the corresponding charges should be billed. The valid values are: <ul style="list-style-type: none"> Federal State Group Individual Note: You cannot associate multiple contracts with the membership using the same bill to option. For example, you cannot associate C1 and C2 with M1 by selecting the Group option from the Bill To field.	Yes
Start Date	Used to specify the date from when you want to associate the contract with the membership. Note: The start date cannot be later than end date. The start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to associate the contract with the membership. Note: The end date cannot be earlier than the start date. The end date cannot be earlier than the membership start date or later than the membership end date.	No

- Enter the required details in the **Main** section.
- Click **Save**.

The contract is associated with the membership.

Disassociating a Contract from a Membership

Procedure

To disassociate a contract from a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership from which you want to disassociate the contract.

The **Membership** screen appears.

3. Click the **Contract & Charges** tab.

The **Contract & Charges** tab appears.

4. In the **Membership Contracts** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the contract that you want to disassociate from the membership.

A message appears confirming whether you want to disassociate the contract from the membership.

5. Click **OK**.

The contract is disassociated from the membership.

Editing the Contract Association Details of a Membership

Prerequisites

To edit the contract association details of a membership, you should have:

- Contracts defined in the application
- Values defined for the **BILL_TO_TYPE_FLG** lookup field

Procedure

To edit the contract association details of a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the membership whose contract details you want to edit.

The **Membership** screen appears.

3. Click **Contracts and Charges** tab.

The **Contracts and Charges** tab appears.

4. In the **Membership Contracts** zone, click the **Edit**  icon in the **Edit** column corresponding to the contract whose association details you want to edit.

The **Associate Contract with Membership** screen appears. It contains the following section:

- **Main** - Used to associate a contract with the membership. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to associate a contract.	Not applicable
Contract ID	Used to indicate the contract that you want to associate with the membership. Note: The Search  icon appears corresponding to the Contract ID field. On clicking the Search icon, the Contract Search window appears.	Yes
Bill To	Used to indicate the entity against whom the corresponding charges should be billed. The valid values are: <ul style="list-style-type: none"> • Federal • State • Group • Individual Note: You cannot associate multiple contracts with the membership using the same bill to option. For example, you cannot associate C1 and C2 with M1 by selecting the Group option from the Bill To field.	Yes
Start Date	Used to specify the date from when you want to associate the contract with the membership. Note: The start date cannot be later than end date. The start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to associate the contract with the membership. Note: The end date cannot be earlier than the start date. The end date cannot be earlier than the membership start date or later than the membership end date.	No

5. Modify the required details in the **Main** section.
6. Click **Save**.

The changes made to the membership are saved.

Self-Funded Group Health Insurance

Topics:

- [Pre-requisites](#)
- [Self-Funded Policy](#)
- [Self-Funded Policy Status Transition](#)
- [Algorithms Used in C1-ASOPolicy](#)
- [Policy \(Used for Searching\)](#)
- [Policy \(Used for Viewing\)](#)

Self-funded group health insurance, also known as Administrative Services Only (ASO), is a self insurance arrangement whereby an employer provides health or disability benefits to employees using the company's own funds. A self-insured employer will set up a special trust fund to earmark money (corporate and employee contributions) to pay incurred claims. It is also commonly known as self-funded employee health insurance.

In the self-funded group health plan, employers operate their own health plan. However, in the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured group health plan. However, self-insuring exposes the company to much larger risk when more claims than expected must be paid.

Oracle Revenue Management and Billing (ORMB) supports the following types of self-funding approach:

- **Fully Self-Funded** - In the fully self-funded approach, the employer retains all the risk and bears the claim costs irrespective of any limit.
- **Partially Self-Funded** - In the partially self-funded approach, the employer purchases reinsurance or stop loss coverage to pass the risk to insurance company.

Oracle Revenue Management and Billing (ORMB) provides specialized methodologies for calculating claim amount with or without markups, enrollment fees, claim fees, specific stop-loss credits, aggregate stop-loss credits, non-recurring or recurring flat fees for covered services, network discounts, and fixed or enrollment based premium funds. Once the charges are calculated, the system bills the amount to the employer (known as the parent customer in ORMB) or to its logical designed billing entities (known as the bill groups in ORMB).

Oracle Revenue Management and Billing (ORMB) enables you to use the pricing methodologies and the billing engine for the self-funded group health insurance business. To design the pricing and billing models for the self-funded group health insurance business, you need to create the following entities in ORMB:

- Parent Customer
- Bill Groups
- Bill Group's Account
- Self-Funded Policy
- Price Items (for each covered service in the policy)

- Pricing Rule Types
- Pricing Rules

Pre-requisites

To set the billing system for a self-funded group customer, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **RUNOUT_ADM_OPT_FLG** lookup field.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the required parameter values in the following algorithm which is attached to the **C1-ASOPolicy** business object:
 - C1-ASOBOPOSP
- Define the required parameter values in the following algorithm which is used in the lifecycle of the **C1-ASOPolicy** business object:
 - C1-ASOPOLMOA
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
 - Parent Customer Policy Person Role
 - Bill Group Policy Person Role
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
 - Bill Group Person Type
 - Parent Person Type
- Set the batch control type of the **Policy Periodic Monitor (C1-POLPR)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Related Topics

For more information on...	See...
How to setup the C1-ASOBLLNG feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4136

Self-Funded Policy

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. The policy type indicates the business object using which the self-funded policy should be created in the system.

As per the self-funded health insurance business, the system enables you to create a self-funded policy for a bill group where the parent customer is the policy holder. You can create or edit a self-funded policy from the **Policy** screen. In addition, you can create or edit a self-funded policy through a customer registration object or a health care inbound

message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration

A self-funded policy encapsulates the following information:

- **Policy Persons** – While creating a self-funded policy, you need to associate the person who is the main customer of the policy. While associating a person with a self-funded policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a self-funded policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Contracts** – The system creates a contract for a self-funded policy when the policy is created either from the user interface or through an inbound message. For more information, refer to [Self-Funded Policy Contract Creation](#) on page 419.

On defining a self-funded policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a self-funded policy is activated, you can renew the policy whenever required.

Note: If a self-funded policy is created through a customer registration object or a health care inbound message, the status of the policy is set to **Pending**.

In a self-funded policy, you can specify the policy period as well as the runout period. Here, the policy period means the period between the policy start and end dates when the policy is active. And, the runout period means the period between the runout start and end dates when the policy is no more active. Note that the system sets the runout start date to the policy end date + 1 Day when you specify the runout end date.

The system enables you to create a self-funded policy for the following contract types which are used in the self-funded health insurance business:

Contract Type	Policy (Example)	Policy Period (i.e. Period when Policy will be in the Active Status)	Runout Period (i.e. Period when Policy will be in the Runout Status)	Comments
12/12 (Claims Incurred and Paid During the Policy Period)	P1	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-funded policy (i.e. P1).
12/15 (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P2	01-01-2019 to 12-31-2019	01-01-2020 to 03-31-2020	Here, the runout period is derived when you set the runout end date of the self-funded policy (i.e. P2) to 03-31-2020.

Contract Type	Policy (Example)	Policy Period (i.e. Period when Policy will be in the Active Status)	Runout Period (i.e. Period when Policy will be in the Runout Status)	Comments
12/18 (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P3	01-01-2019 to 12-31-2019	01-01-2020 to 06-30-2020	Here, the runout period is derived when you set the runout end date of the self-funded policy (i.e. P3) to 06-30-2020.
15/12 (Claims Incurred Three Months Prior to the Policy Start Date and During the Policy Period and Paid During the Policy Period)	P4	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-funded policy (i.e. P4).

The system enables you to offer different pricing for different policy periods, such as active, runout, and post runout.

Self-Funded Policy Activation

A self-funded policy can be activated manually from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can activate a self-funded policy by clicking the **Activate** button in the **Policy** screen. On clicking the **Activate** button, the system checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Note: The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Active** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment Based
- Ancillary
- Flat Fees
- Level Funded

Transition of Self-Funded Policy to Runout Status

A self-funded policy can be transitioned to the **Runout** status from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can transition a self-funded policy to the **Runout** status by clicking the **Runout** button in the **Policy** screen. On clicking the **Runout** button, the system checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

Note: The status of the policy is not changed from **In Force/Active** to **Runout** when either of the following condition is met:

- The runout end date is not specified.
- The system date is earlier than or equal to the policy end date.
- The policy is renewed.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Ancillary
- Flat Fees
- Level Funded

Transition of Self-Funded Policy to Post Runout Status

A self-funded policy can be transitioned to the **Post Runout** status only through the **Policy Periodic Monitor (C1-POLPR)** batch. On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Post Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss

- Retention Type Claim Based
- Ancillary

Self-Funded Policy Renewal

You can renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy only when it is in the **In Force/Active** status and which is not yet renewed. You can renew a self-funded policy only from the user interface and not through a health care inbound message.

On renewing a self-funded policy, a new policy is created in the **Pending** status. The renewal date is stamped in the base policy. The information from the base policy is copied to the renewed policy. The start date of the renewed policy is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.

While renewing a self-funded policy, you cannot disassociate persons (from the renewed policy) who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.

While renewing a self-funded policy, the system enables you to copy the following pricing rules of the base policy and thereby create new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

Once a policy is renewed, you cannot edit the base policy's end date or manually change the status of the base policy to **Runout**. The system automatically changes the status of the base policy to **Runout** when the status of the latest renewed policy is changed to **Runout**.

Self-Funded Policy Contract Creation

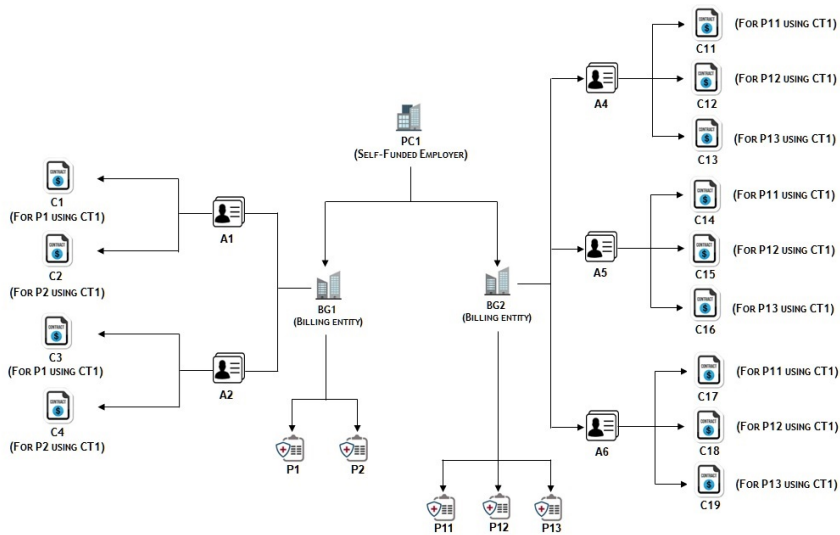

The system automatically creates contracts when a self-funded policy is created either from the user interface or through a health care inbound message. It creates a contract for a self-funded policy on each account of the bill group. It creates a contract using the contract type which is specified in the **Contract Type** parameter of an algorithm which is created using the **C1-ASOBOPOSP** algorithm type. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to CT1. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11, P12, and P13 for BG2 through a health care inbound message, the system will create a set of contracts on the respective accounts as mentioned below.

The following table indicates the number of contracts that are created for a self-funded policy on each account of a bill group:

Bill Group	Account	Contract
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P2 using the CT1 contract type)
	A2	C3 (for P1 using the CT1 contract type)
		C4 (for P2 using the CT1 contract type)

Bill Group	Account	Contract
BG2	A4	C11 (for P11 using the CT1 contract type)
		C12 (for P12 using the CT1 contract type)
		C13 (for P13 using the CT1 contract type)
	A5	C14 (for P11 using the CT1 contract type)
		C15 (for P12 using the CT1 contract type)
		C16 (for P13 using the CT1 contract type)
	A6	C17 (for P11 using the CT1 contract type)
		C18 (for P12 using the CT1 contract type)
		C19 (for P13 using the CT1 contract type)

The following figure graphically represents the above example:

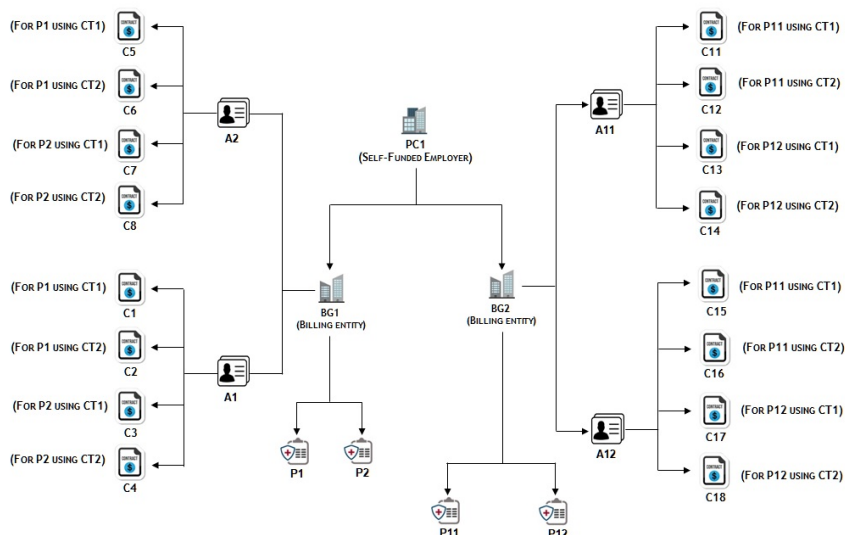

You can also specify comma-separated values for the **Contract Type** parameter. The system will then create a contract using each contract type for each self-funded policy on each account of the bill group. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to **CT1**, **CT2**. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11 and P12 for BG2 through a health care inbound message, the system will create a set of contracts on the respective accounts as mentioned below.

The following table indicates the number of contracts that are created for a self-funded policy on each account of a bill group:

Bill Group	Account	Contract
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P1 using the CT2 contract type)

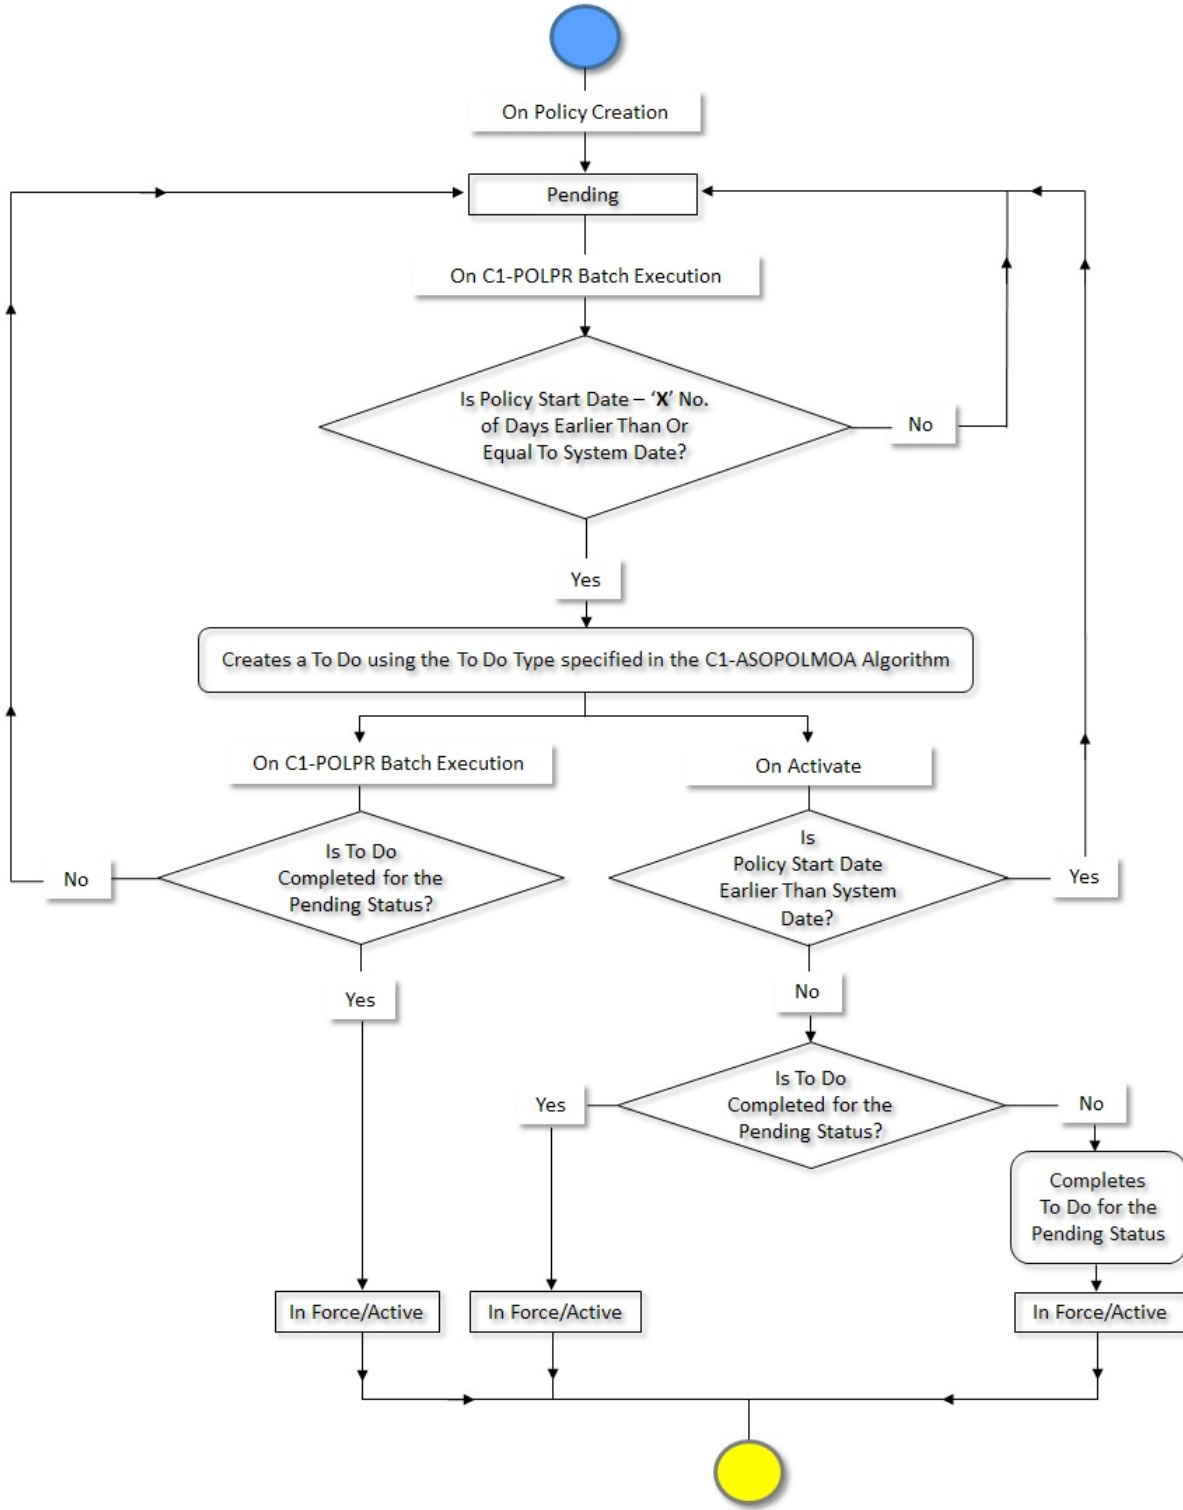

Bill Group	Account	Contract		
		C3 (for P2 using the CT1 contract type)		
		C4 (for P2 using the CT2 contract type)		
		A2	C5 (for P1 using the CT1 contract type)	
		C6 (for P1 using the CT2 contract type)		
			C7 (for P2 using the CT1 contract type)	
			C8 (for P2 using the CT2 contract type)	
		BG2	A11	C11 (for P11 using the CT1 contract type)
		C12 (for P11 using the CT2 contract type)		
		C13 (for P12 using the CT1 contract type)		
		C14 (for P12 using the CT2 contract type)		
		A12	C15 (for P11 using the CT1 contract type)	
		C16 (for P11 using the CT2 contract type)		
			C18 (for P12 using the CT1 contract type)	
			C19 (for P12 using the CT2 contract type)	

The following figure graphically represents the above example:

Self-Funded Policy Status Transition

The following figure graphically indicates how a self-funded policy moves from one status to another in its lifecycle:

Algorithms Used in C1-ASOPolicy

The following table lists the algorithms which are attached to the **C1-ASOPolicy** business object:

System Event	Algorithm	Algorithm Type	Description
Validation	C1-ASOPOLVAL	C1-ASOPOLVAL	Refer to <i>C1-ASOPOLVAL</i> on page 425.
Post-Processing	C1-ASOBOPOSP	C1-ASOPOLPOS	Refer to <i>C1-ASOBOPOSP</i> on page 426.

System Event	Algorithm	Algorithm Type	Description
	C1-ASOPRUCPY	C1-ASOPRUCPY	Refer to C1-ASOPRUCPY on page 426.

The following table lists the algorithms which are used in the lifecycle of the **C1-ASOPolicy** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to C1-ASOPOLMOA on page 426.
	Enter	C1-ASOPOLREN	C1-ASOPOLREN	Refer to C1-ASOPOLREN on page 427.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to C1-ASOPCKTD on page 427.
In Force/ Active	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to C1-ASOPOLMOA on page 426.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to C1-ASOPCKTD on page 427.
Runout	Monitor	C1-ASOPOLMOA	C1-ASOPOLMOA	Refer to C1-ASOPOLMOA on page 426.
	Exit	C1-ASOPCKTD	C1-ASOPCKTD	Refer to C1-ASOPCKTD on page 427.
Post Runout	-	-	-	-

C1-ASOPOLVAL

This algorithm validates a self-funded policy throughout its lifecycle. It checks the following:

- The policy end date is not earlier than the policy start date.
- The runout end date is later than the policy end date.
- The runout end date is later than the system date while editing the policy which is in the **Runout** status.
- The runout end date is not removed when the policy is in the **Runout** or **Post Runout** status.
- The policy end date is not modified when the policy is in the **Runout** status.
- The policy end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status.
- The runout end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status.
- The runout end date is not set to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.
- The policy is not edited when it is in the **Post Runout** status.
- The policy start date is not modified when the policy is in the **In Force/Active**, **Runout**, or **Post Runout** status.
- The policy person end date is not earlier than the policy person start date.

- The policy person role is specified while associating a person with the policy.
- One of the policy persons is set as the main customer of the policy.
- The policy end date is not changed when the policy is renewed.

C1-ASOBOPOSP

This algorithm is invoked when you create a self-funded policy either from the user interface or through an inbound message. It creates a contract of the specified contract type for the self-funded policy on each account of the bill group. For example, if you create a self-funded policy named P1 for a bill group who has two accounts - A1 and A2, the system will create two contracts for P1 - one on the A1 account and another on the A2 account.

It contains the following parameter:

- **Contract Type** - Used to indicate the contract type whose contract you want to create for the self-funded policy on each account of the bill group. You can also specify comma-separated values for this parameter. It will then create a contract of each contract type for the self-funded policy on each account of the bill group.

C1-ASOPRUCPY

This algorithm is invoked when the **Copy Pricing Rules** option is selected while renewing a self-funded policy. It copies the following pricing rules of the base policy and creates new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

C1-ASOPOLMOA

This algorithm is invoked when the **Policy Periodic Monitor (C1-POLPR)** batch is executed. It does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter.
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.
- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter.
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.
- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter.

- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

It contains the following parameters:

- **To Do Type for Pending Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy start date.
- **To Do Type for Active Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy end date.
- **To Do Type for Runout Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the runout end date.
- **X Days** - Used to specify the number of days prior to which you want to create a To Do for the self-funded policy.

All these parameters are mandatory.

C1-ASOPOLREN

This algorithm is invoked when you renew a self-funded policy. Once the new policy is created in the **Pending** status, it stamps the renewal date on the base policy.

C1-ASOPCKTD

This algorithm is invoked when you click the **Activate** and **Runout** buttons in the **Policy** screen. On clicking the **Activate** button, it checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Similarly, on clicking the **Runout** button, it checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

It also validates the following:

- The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.
- The status of the policy is not changed from **In Force/Active** to **Runout** when the runout end date is not specified.
- The status of the policy is not changed from **In Force/Active** to **Runout** until the system date is later than the policy end date.
- The status of the policy is not changed to **Runout** if it is renewed.

In addition, it also changes the status of the base policies to **Runout** when the status of the latest renewed policy is changed to **Runout**.

Policy (Used for Searching)

The **Policy** screen allows you to search for a policy using various search criteria. It also allows you to define a policy. It contains the following zone:

- [Search Policy](#) on page 324

Through this screen, you can navigate to the following screen:

- [Policy \(Used for Viewing\)](#) on page 335

Search Policy

The **Search Policy** zone allows you to search for a policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a policy using the policy or person details. The valid values are: <ul style="list-style-type: none"> • Policy Date/Policy Type/Status • Source System/Policy Number/Description • Person Name/Person Identifier • Policy Characteristics 	Yes
	Note: By default, the Policy Date/Policy Type/Status option is selected.	
Policy Type	Used to search policies which are created using a particular policy type.	No
	Note: This field appears when the Policy Date/Policy Type/Status option is selected from the Search By list.	
Start Date	Used to search policies which are effective from a particular date.	No
	Note: This field appears when the Policy Date/Policy Type/Status option is selected from the Search By list.	
Status	Used to search policies with a particular status. The valid values are: <ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated 	No
	Note: This field appears when the Policy Date/Policy Type/Status option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to search policies which are effective till a particular date.	No
	Note: This field appears when the Policy Date/Policy Type/Status option is selected from the Search By list.	
Source System	Used to search policies which originated from a particular external system.	No
	Note: This field appears when the Source System/Policy Number/Description option is selected from the Search By list.	
Policy Number	Used to search a policy with a particular policy number.	No
	Note: This field appears when the Source System/Policy Number/Description option is selected from the Search By list.	
Description	Used to search policies with a particular description.	No
	Note: This field appears when the Source System/Policy Number/Description option is selected from the Search By list.	
Person Name	Used to search policies to which a particular person is associated.	No
	Note: This field appears when the Person Name/Person Identifier option is selected from the Search By list.	
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional)
	Note: This field appears when the Person Name/Person Identifier option is selected from the Search By list.	Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search policies to which a person is associated.	Yes (Conditional)
	Note: This field appears when the Person Name/Person Identifier option is selected from the Search By list.	Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search policies for which a particular characteristic type is defined.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Policy Characteristics option is selected from the Search By list.</p> <p>The list includes only those characteristic types where the characteristic entity is set to Policy.</p>	<p>Note: This field is required when you are searching for a policy using a characteristic.</p>
Characteristic Value	Used to search policies with a particular characteristic value.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the characteristic type is selected.</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are searching for a policy using a characteristic.</p>

Note: You must specify at least one search criterion while searching for a policy.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Policy Information	Displays additional information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.
Source System	Indicates the external system from where the policy is originated.
Description	Displays the description of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Column Name	Column Description						
Status	<p>Indicates the status of the policy. If the policy is created using the C1-POLICY business object, the valid values are:</p> <ul style="list-style-type: none"> • Pending • In Force/Active • Pending Cancellation • Canceled • Pending Reinstatement • Reinstated • Pending Termination • Terminated <p>However, if the policy is created using the C1-ASOPolicy business object, the valid values are:</p> <ul style="list-style-type: none"> • Pending • In Force/Active • Runout • Post Runout 						
Main Customer	<p>This column displays different data depending on whether you search for a policy using the policy or person details. The following table describes this column:</p> <table border="1" data-bbox="574 1037 1463 1717"> <thead> <tr> <th data-bbox="574 1037 1019 1089">If you search for a policy using...</th> <th data-bbox="1019 1037 1463 1089">Then...</th> </tr> </thead> <tbody> <tr> <td data-bbox="574 1089 1019 1472"> <p>The Policy Date/Policy Type/Status, Source System/Policy Number/Description, or Policy Characteristics option</p> </td> <td data-bbox="1019 1089 1463 1472"> <p>The Main Customer column displays the name of the person who is the main customer of the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div data-bbox="1024 1304 1458 1451" style="border: 1px solid black; padding: 5px;"> <p>Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> </div> </td> </tr> <tr> <td data-bbox="574 1472 1019 1717"> <p>The Person Name/Person Identifier option</p> </td> <td data-bbox="1019 1472 1463 1717"> <p>The Main Customer column indicates whether the person is the main customer of the policy. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No </td> </tr> </tbody> </table>	If you search for a policy using...	Then...	<p>The Policy Date/Policy Type/Status, Source System/Policy Number/Description, or Policy Characteristics option</p>	<p>The Main Customer column displays the name of the person who is the main customer of the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div data-bbox="1024 1304 1458 1451" style="border: 1px solid black; padding: 5px;"> <p>Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> </div>	<p>The Person Name/Person Identifier option</p>	<p>The Main Customer column indicates whether the person is the main customer of the policy. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No
If you search for a policy using...	Then...						
<p>The Policy Date/Policy Type/Status, Source System/Policy Number/Description, or Policy Characteristics option</p>	<p>The Main Customer column displays the name of the person who is the main customer of the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <div data-bbox="1024 1304 1458 1451" style="border: 1px solid black; padding: 5px;"> <p>Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> </div>						
<p>The Person Name/Person Identifier option</p>	<p>The Main Customer column indicates whether the person is the main customer of the policy. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No 						

Column Name	Column Description
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>This column appears when the Person Name/Person Identifier option is selected from the Search By list.</p>
Policy Person Role	Indicates the role using which the person is associated with the policy.
	<p>Note: This column appears when the Person Name/Person Identifier option is selected from the Search By list.</p>

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and person identifier types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
A sub-menu appears.
3. Click the **Search** option from the **Policy** sub-menu.
The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the Policy Details

Procedure

To view the details of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to view.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the policy in the **Policy** zone.

Defining a Policy

Oracle Revenue Management and Billing enables you to define a policy for the fully-insured and self-funded health insurance business. You can define a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, you can define a self-funded policy using a policy type where the policy category is set to **Self-Funded**.

Note: At present, the **Fully-Insured Individual** policy category is not supported in the system.

Prerequisites

To define a policy, you should have:

- Policy types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Note: This prerequisite is applicable only when you want to define a fully-insured group policy.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field

Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To define a policy:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
A sub-menu appears.
3. Click the **Add** option from the **Policy** sub-menu.

The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to create a policy. Note: If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual . However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to Self-Funded .	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy** screen.

4. Select the required policy type from the respective field.
5. Click **OK**.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define the characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the policy is originated.	Yes
	Note: This field appears when you are defining a policy using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual .	
Start Date	Used to specify the date from when the policy is effective.	Yes
	Note: The policy start date cannot be later than the policy end date.	
End Date	Used to specify the date till when the policy is effective.	Yes
	Note: The policy end date cannot be earlier than the policy start date.	
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends.	No
	Note: The runout end date cannot be earlier than or equal to the policy end date. This field appears when you are defining a policy using a policy type where the policy category is set to Self-Funded .	
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> • None • Percentage of Claim 	No
	Note: At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are defining a policy using a policy type where the policy category is set to Self-Funded .	

Field Name	Field Description	Mandatory (Yes or No)
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for advance billing feature of level funding.	Not applicable
	<p>Note:</p> <p>This is a read-only field. By default, the value is set to No. You can edit the advance level funding eligibility only through a health care inbound message.</p> <p>This field appears when you are defining a policy using a policy type where the policy category is set to Self-Funded.</p>	

6. Enter the required details in the **Main** section.
7. Associate the required persons with the policy.

Note: While defining a policy, you must associate a person who is the main customer of the policy.

8. Define the characteristics for the policy, if required.
9. Click **Save**.

The policy is defined and its status is set to **Pending**.

Policy screen	Policy (Used for Viewing) on page 335
How to associate a person with a policy	Associating a Person with a Policy on page 333
How to define a characteristic for a policy	Defining a Characteristic for a Policy on page 334

Associating a Person with a Policy

Prerequisites

To associate a person with a policy, you should have:

- Required persons defined in the application
- Required policy person roles defined in the application

Procedure

To associate a person with a policy:

1. Ensure that the **Persons** section is expanded when you are defining or editing a policy.

The **Persons** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person	Used to indicate the person that you want to associate with the policy.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p> <p>On specifying the person ID, the person name appears corresponding to the Person field.</p>	
Sequence	Used to specify the sequence number for the associated person.	Yes
Policy Person Role	Used to indicate the role of a person in the policy.	Yes
Main Customer	Used to indicate whether the person is the main customer of the policy.	Yes (Conditional)
	<p>Note: At a time, only one person can be the main customer of the policy.</p>	
Start Date	Used to specify the date from when the person is associated with the policy.	Yes
	<p>Note:</p> <p>The start date cannot be later than the end date.</p> <p>The start date cannot be earlier than the policy start date and later than the policy end date.</p>	
End Date	Used to specify the date till when the person is associated with the policy.	No
	<p>Note:</p> <p>The end date cannot be earlier than the start date.</p> <p>The end date cannot be earlier than the policy start date and later than the policy end date. This validation is done when the policy is transition to the status which is not specified in the Skip Status for Policy Person End Date Validation parameter of the C1-POLBOVAL algorithm. For example, if you set the Skip Status for Policy Person End Date Validation parameter of the C1-POLBOVAL algorithm to TERMINATED, the system will not perform this validation when the status of the policy is changed to Terminated.</p>	

2. Enter the required details in the **Persons** section.

Note: While associating the persons with a policy, you must always ensure that one person is the main customer of the policy.

- If you want to associate more than one person with the policy, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to dissociate a person from the policy, click the **Delete (🗑)** icon corresponding to the person.

- Click **Save**.

The persons are associated with the policy.

Defining a Characteristic for a Policy

Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a characteristic for a policy:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a policy.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy.	Yes (Conditional)
	Note: The effective date cannot be earlier than the policy start date and later than the policy end date.	Note: This field is required when you are defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Policy .	Note: This field is required when you are defining a characteristic for the policy.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the policy.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the policy, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the policy, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the policy.

Policy (Used for Viewing)

The **Policy** screen allows you to:

- View the details of a fully-insured group or self-funded policy
- Edit the details of a fully-insured group or self-funded policy
- Activate a fully-insured group or self-funded policy
- Add or edit plans in a fully-insured group policy
- Add memberships to a fully-insured group policy plan
- Initiate the termination process for a fully-insured group policy
- Terminate a fully-insured group policy
- Initiate the cancellation process for a fully-insured group policy
- Cancel a fully-insured group policy
- Initiate the reinstatement process for a fully-insured group policy
- Reinstatement a fully-insured group policy
- View the log of a fully-insured group or self-funded policy

- Add a log entry for a fully-insured group or self-funded policy

It consists of the following tabs:

- [Policy - Main](#) on page 336
- [Policy - Plan](#) on page 343
- [Policy - Log](#) on page 345

Policy - Main

The **Main** tab displays information about the policy. It contains the following zones:

- [Policy](#) on page 336
- [Policy Characteristics](#) on page 342

Policy

The **Policy** zone displays the details of the fully-insured group or self-funded policy. It contains the following sections:

- **Main** - Displays basic information about the policy. It contains the following fields:

Field Name	Field Description
Base Policy Information	Displays information about the base policy.
	Note: This field appears when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to Self-Funded .
Policy Information	Displays information about the policy.
Policy Type	Indicates the policy type using which the policy is created.
	Note: It has a link. On clicking the link, the Policy Type screen appears where you can view the details of the respective policy type.
Status	<p>Indicates the status of the policy. If the policy is created using the C1-POLICY business object, the valid values are:</p> <ul style="list-style-type: none"> • Pending • In Force/Active • Pending Cancellation • Canceled • Pending Reinstatement • Reinstated • Pending Termination • Terminated <p>However, if the policy is created using the C1-ASOPolicy business object, the valid values are:</p> <ul style="list-style-type: none"> • Pending • In Force/Active • Runout • Post Runout

Field Name	Field Description
Status Reason	Indicates the reason why the policy is terminated.
	<p>Note:</p> <p>It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective termination reason.</p> <p>This field appears when you are viewing the details of a terminated or reinstated policy which is created using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual.</p>
Policy Number	Displays the policy number.
Description	Displays the description of the policy.
Source System	Indicates the external system from where the policy is originated.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Renewal Date	Displays the date when the policy is renewed.
	Note: This field appears when you are viewing the details of a policy which is renewed.

Field Name	Field Description																														
Paid Through Date	Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.																														
	<p>Note:</p> <p>This field appears when the following conditions are met:</p> <ul style="list-style-type: none"> When you are viewing the details of a policy which is created using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual. When the paid through date is calculated at the policy level. 																														
	The paid through date is calculated while freezing or canceling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:																														
	<table border="1"> <thead> <tr> <th>Entity</th> <th>System Event</th> <th>Algorithm</th> </tr> </thead> <tbody> <tr> <td>Customer Class</td> <td>Payment Freeze</td> <td>C1-PSPTDCAL</td> </tr> <tr> <td>Customer Class</td> <td>Payment Cancellation</td> <td>C1-PXPTDCAL</td> </tr> <tr> <td>Adjustment Type</td> <td>Adjustment Freeze</td> <td>C1-ADPTDCAL</td> </tr> <tr> <td>Adjustment Type</td> <td>Adjustment Cancellation</td> <td>C1-AXPTDCAL</td> </tr> </tbody> </table>	Entity	System Event	Algorithm	Customer Class	Payment Freeze	C1-PSPTDCAL	Customer Class	Payment Cancellation	C1-PXPTDCAL	Adjustment Type	Adjustment Freeze	C1-ADPTDCAL	Adjustment Type	Adjustment Cancellation	C1-AXPTDCAL															
	Entity	System Event	Algorithm																												
Customer Class	Payment Freeze	C1-PSPTDCAL																													
Customer Class	Payment Cancellation	C1-PXPTDCAL																													
Adjustment Type	Adjustment Freeze	C1-ADPTDCAL

Field Name	Field Description
Runout End Date	Displays the date when the runout period of the self-funded policy ends.
	Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded .
Runout Administration Fees	Indicates whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> • None • Percentage of Claim
	Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded .
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for advance billing feature of level funding.
	Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded .

- **Persons** - Lists the persons which are associated with the policy. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Sequence	Displays the sequence number of the associated person.
Policy Person Role	Indicates the role of the person in the policy.
Main Customer	Indicates whether the person is the main customer of the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description						
Edit	Used to edit the details of the fully-insured group or self-funded policy.						
	<p>Note:</p> <p>The Edit button appears only when a policy of the respective category is in either of the following status:</p>						
	<table border="1"> <thead> <tr> <th data-bbox="521 405 907 455">Policy Category</th> <th data-bbox="907 405 1461 455">Status</th> </tr> </thead> <tbody> <tr> <td data-bbox="521 455 907 804">Fully-Insured Group or Fully-Insured Individual</td> <td data-bbox="907 455 1461 804"> <ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated </td> </tr> <tr> <td data-bbox="521 804 907 955">Self-Funded</td> <td data-bbox="907 804 1461 955"> <ul style="list-style-type: none"> • In Force/Active • Pending • Runout </td> </tr> </tbody> </table>	Policy Category	Status	Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated 	Self-Funded	<ul style="list-style-type: none"> • In Force/Active • Pending • Runout

Self-Funded	<ul style="list-style-type: none"> • In Force/Active • Pending • Runout 						
Activate	Used to activate the fully-insured group or self-funded policy.						
	<p>Note:</p> <p>The Activate button appears when a policy of the respective category is in either of the following status:</p>						
	<table border="1"> <thead> <tr> <th data-bbox="521 1215 953 1266">Policy Category</th> <th data-bbox="953 1215 1461 1266">Status</th> </tr> </thead> <tbody> <tr> <td data-bbox="521 1266 953 1375">Fully-Insured Group or Fully-Insured Individual</td> <td data-bbox="953 1266 1461 1375"> <ul style="list-style-type: none"> • Pending • Pending Termination </td> </tr> <tr> <td data-bbox="521 1375 953 1442">Self-Funded</td> <td data-bbox="953 1375 1461 1442"> <ul style="list-style-type: none"> • Pending </td> </tr> </tbody> </table>	Policy Category	Status	Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> • Pending • Pending Termination 	Self-Funded	<ul style="list-style-type: none"> • Pending
	Policy Category	Status					
Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> • Pending • Pending Termination 						
Self-Funded	<ul style="list-style-type: none"> • Pending 						
Initiate Cancellation	Used to initiate the cancellation process for the fully-insured group policy.						
Cancel	<p>Note: The Initiate Cancellation button appears when the fully-insured group policy is in the In Force/Active status.</p>						
	<p>Used to cancel the fully-insured group policy.</p> <p>Note: The Cancel button appears when the fully-insured group policy is in the Pending Cancellation status.</p>						

Button Name	Button Description
Initiate Termination	Used to initiate the termination process for the fully-insured group policy.
	Note: The Initiate Termination button appears when the fully-insured group policy is in the In Force/Active status.
Terminate	Used to terminate the fully-insured group policy.
	Note: The Terminate button appears when the fully-insured group policy is in the In Force/Active, Pending Reinstatement, or Pending Termination status.
Initiate Reinstatement	Used to initiate the reinstatement process for the terminated policy.
	Note: The Initiate Reinstatement button appears when the fully-insured group policy is in the Terminated status.
Reinstate	Used to reinstate the terminated policy.
	Note: The Reinstate button appears when the fully-insured group policy is in the Pending Reinstatement or Terminated status.
Runout	Used to transition the self-funded policy to the Runout status.
	<p>Note:</p> <p>The Runout button appears when the self-funded policy is in the In Force/Active status. You cannot transition a self-funded policy to the Runout status when:</p> <ul style="list-style-type: none"> • The self-funded policy is renewed. • The runout end date is not specified. • The policy end date is earlier than the system date.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the policy status is updated.
Create Date/Time	Displays the date and time when the policy is created.

- **Termination Information** - Displays the termination details of the fully-insured group policy. It appears when the policy is in the **Pending Termination** status. It contains the following fields:

Field Name	Field Description
Terminate Date	Displays the date when you want to terminate the policy.

Field Name	Field Description
Terminate Reason	Indicates the reason why the termination process is initiated for the policy. Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective termination reason.

- **Reinstate Information** - Displays the reinstatement details of the terminated policy. It appears when the policy is in the **Pending Reinstatement** status. It contains the following fields:

Field Name	Field Description
Reinstate Reason	Indicates the reason why you want to reinstate the fully-insured group policy. Note: It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective reinstatement reason.

Policy Characteristics

The **Policy Characteristics** zone lists the characteristics of the fully-insured group or self-funded policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Column Name	Column Description
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to Predefined Value .

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Policy - Plan

The **Plan** tab lists the plans defined for the policy and memberships defined for each policy plan. It contains the following zones:

- [Plans](#) on page 343
- [Memberships](#) on page 344

Plans

The **Plans** zone lists the plans which are defined in the policy. It contains the following columns:

Column Name	Column Description
Plan Information	Displays information about the policy plan. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan.
Price Item Information	Indicates the price item to which the policy plan is directly associated.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Benefit Type	Indicates the type of health insurance plan. The valid values are: <ul style="list-style-type: none"> • Commercial • Medicare Affiliated
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Edit	On clicking the Edit () icon, the Plan screen appears where you can edit the details of the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new policy plan by clicking the **Add** link in the upper-right corner of this zone. On clicking the **Broadcast** () icon corresponding to a policy plan, the **Memberships** zone appears.

Note: Ideally, you define plans in a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.

You can filter the list using various search criteria (such as, **Price Item**, **Plan Number**, and **Effective From**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper-right corner of this zone.

Memberships

The **Memberships** zone lists the memberships which are defined for the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Information	Displays information about the membership. Note: It has a link. On clicking the link, the Membership screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Terminated
Membership Type	Indicates the type of membership. The valid values are: <ul style="list-style-type: none"> • COBRA • Medicare • Retiree

Column Name	Column Description
Benefits	<p>On clicking the Benefits () icon, the Benefit screen appears where you can view the Membership benefits of the member persons who belong to the membership.</p> <p>Note: The Benefits icon appears when a Membership benefit is defined for a member person who belongs to the membership.</p>
Membership ID	Displays the membership ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears when you click the **Broadcast** () icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4128

Activating a Policy

Procedure

To activate a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to activate.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Activate** button in the **Policy** zone.

The status of the policy is changed to **In Force/Active**.

Note:

The **Activate** button appears only when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> • Pending • Pending Termination
Self-Funded	<ul style="list-style-type: none"> • Pending

Editing a Policy

Prerequisites

To edit a policy, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Note: This prerequisite is applicable only when you want to define a fully-insured group policy.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field

Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To edit a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to edit.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Policy** zone.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define the characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable
Policy Type	Indicates the policy type using which the policy is defined.	Not applicable
Status	Indicates the status of the policy. The valid values are: <ul style="list-style-type: none"> • Pending • In Force/Active • Runout • Post Runout 	Not applicable
	Note: This field appears when you are editing a policy which is created using a policy type where the policy category is set to Self-Funded .	
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated.	Yes
	Note: This field appears when you are editing a policy which is created using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual .	

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the policy is effective.	Yes
	<p>Note:</p> <p>The policy start date cannot be later than the policy end date.</p> <p>You cannot change the start date of a self-funded policy when it is in the In Force/Active, Runout, or Post Runout status.</p>	
End Date	Used to specify the date till when the policy is effective.	Yes
	<p>Note:</p> <p>The policy end date cannot be earlier than the policy start date.</p> <p>You cannot change the end date when the self-funded policy is in the Runout status.</p> <p>You cannot set the end date of a self-funded policy to a date which is later than or equal to the start date of a pricing rule which is defined for the Runout status.</p> <p>You cannot change the end date when the policy is renewed.</p>	
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends.	No
	<p>Note:</p> <p>This field appears when you are editing a policy which is created using a policy type where the policy category is set to Self-Funded.</p> <p>The runout end date cannot be earlier than or equal to the policy end date.</p> <p>The runout end date cannot be earlier than or equal to the system date when the policy is in the Runout status.</p> <p>You cannot remove the runout end date when the policy is in the Runout or Post Runout status.</p> <p>You cannot set the runout end date to a date which is later than or equal to the start date of a pricing rule which is defined for the Post Runout status.</p> <p>You cannot set the runout end date to a date which is earlier than the end date of a pricing rule which is defined for the Runout status.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Runout Administration Fees	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> • None • Percentage of Claim <p>Note:</p> <p>At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p> <p>This field appears when you are editing a policy which is created using a policy type where the policy category is set to Self-Funded.</p>	No

Note:	
The Edit button appears when a policy of the respective category is in either of the following status:	
Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	<ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	<ul style="list-style-type: none"> • In Force/Active • Pending • Runout

5. Modify the required details in the **Main** section.
6. Associate the persons with the policy, if required.

Note: While editing a policy, you must ensure that one person is associated as the main customer of the policy.

7. Define, edit, or remove characteristics of the policy, if required.
8. Click **Save**.

The changes made to the policy are saved.

Manually Changing the Status of a Self-Funded Policy to Runout

Prerequisites

To manually change the status of a self-funded policy to **Runout**, you should have:

- Runout end date specified in the self-funded policy.

Procedure

To manually change the status of a self-funded policy to **Runout**:

1. Search for the self-funded policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the self-funded policy whose status you want to change.

The **Policy** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Runout** button in the **Policy** zone.

The status of the self-funded policy is changed to **Runout**.

Note:

The **Runout** button appears when the self-funded policy is in the **In Force/Active** status.

You cannot transition a self-funded policy to the **Runout** status when:

- The self-funded policy is renewed.
- The runout end date is not specified.
- The policy end date is earlier than the system date.

Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy when it is in the **In Force/Active** status and is not yet renewed. For more information, see [Self-Funded Policy Renewal](#) on page 419.

Procedure

To renew a self-funded policy of a bill group:

1. Search for the bill group who is associated with the self-funded policy (which you want to renew) in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

4. In the **Bill Group Self-Funded Policy Information** zone, click the **Renew** () icon in the **Renew** column corresponding to the self-funded policy which you want to renew.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the renewed policy.
- **Persons** - Used to associate or disassociate persons from the renewed policy.

Note: You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration.

- **Characteristics** - Used to define the characteristics for the renewed policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Start Date	<p>Used to specify the date from when the renewed policy is effective.</p> <p>Note:</p> <p>By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.</p> <p>The start date cannot be later than the end date.</p> <p>The start date cannot be earlier than or equal to the base policy's end date.</p>	Yes
End Date	<p>Used to specify the date till when the renewed policy is effective.</p> <p>Note: The end date cannot be earlier than the start date.</p>	Yes
Runout End Date	<p>Used to specify the date when the runout period of the renewed policy ends.</p> <p>Note: The runout end date cannot be earlier than or equal to the renewed policy's end date.</p>	No
Runout Administration Fees	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> • None • Percentage of Claim <p>Note: At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Copy Pricing Rules	<p>Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the Copy Pricing Rules option, the system copies the following pricing rules of the base policy:</p> <ul style="list-style-type: none"> • Claim • Retention Type Claim Based • Retention Type Enrollment Based • Recurring Flat Fees • Ancillary <p>Note:</p> <p>While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively.</p> <p>If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.</p>	No
Copy Advance Level Funding Eligibility	<p>Used to indicate whether you want to copy the advance level funding eligibility value of the base policy to the renewed policy.</p> <p>Note:</p> <p>If the Copy Advance Level Funding Eligibility option is set to Y in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date.</p> <p>This field appears only when you want to renew a self-funded policy.</p>	No

Note: The **Renew** icon appears when the policy is in the **In Force/Active** status and it is not yet renewed.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.
7. Define, edit, or remove characteristics of the renewed policy, if required.
8. Click **Save**.

The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group Self-Funded Policy Information** zone.

Viewing the Log of a Policy

Procedure

To view the log of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to view.

The **Policy** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the policy in the **Policy Log** zone.

Adding a Log Entry for a Policy

Procedure

To add a log entry for a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for which you want to add a log entry.

The **Policy** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Policy Log** zone.

The **Add Policy Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable
Log Details	Used to specify additional comments for the policy.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Policy Log** zone.

Individual Health Insurance

Topics:

- [Individual Membership](#)
- [Individual Membership Termination](#)
- [Individual Membership Renewal](#)
- [Automatic Contract Creation for Individual Membership](#)
- [Rate Guarantee for Individual Membership](#)
- [Late Setup Notification](#)
- [Young Adult Coverage in an Individual Membership](#)
- [Individual Membership Preference](#)
- [Binder Payment for Individual Membership](#)
- [Membership Status Reason Preference](#)

Individual health insurance is a coverage that an individual purchase on its own, on an individual or family basis, as opposed to obtaining through an employer. An individual can buy a generic, Medicare, Medicaid, or CHIP health insurance plan from a health insurance payer or from an insurance exchange.

A health insurance payer and insurance exchange sells different plans from the health products to an individual. A health product is a discrete package of health insurance coverage benefits that are offered using a particular product network type (such as health maintenance organization, preferred provider organization, exclusive provider organization, point of service, or indemnity) within a service area.

A health product can include multiple health benefit plans which may cover medical expenses, hospitalization, doctor and hospital visits, prescription drugs, wellness care, etc. A health benefit plan can be a primary or add-on plan. A primary health benefit plan is a standalone plan, which is sold directly. For example, Medical Insurance is a primary health insurance plan.

An add-on plan is also known as supplemental plan. An add-on plan can be an ancillary or rider plan. An add-on plan is not a standalone plan and hence it is not sold directly. For example, the Dental, Vision, Accidental Death, Disability, Critical Illness, Long-Term Care, and Life Insurance plans can be sold as add-on health insurance plans.

Oracle Revenue Management and Billing enables you to create and edit the following entities for a fully-insured individual business:

- Health Products
- Health Plans
- Individual Memberships
- Member Persons
- Medicare or Other Benefits
- Accounts
- Contracts
- Price Items (offered as services)
- Pricing Rule Types
- Pricing Rules
- Price Assignments
- Billable Charges

Two new business objects named **C1-HealthcareProduct** and **C1-HealthPlan** are introduced in this release. The **C1-HealthcareProduct** business object

enables you to create a health product. You can define and edit a health product through a health product and plan inbound message. While defining a health product, you need to specify the following details – product type, product sub type, product category, product LOB, product LOB category, start date, end date, status, etc. A health product can be a bundled or non-bundled product. A bundled product means it includes one or more health products. You can define characteristics for a health product. A health product should be associated with a division (i.e. service area). You can associate a health product to one or more divisions and one division can have one or more health products.

The **C1-HealthPlan** business object enables you to create a health plan for a health product. You can define and edit a health plan through a health product and plan inbound message. While defining a health plan, you need to specify the following details – health product, start date, end date, status, etc. In addition, you need to indicate whether the health plan is a charitable plan, standard plan, grandfather plan, qualified from exchange, ancillary plan, rider plan, add-on plan, etc. You can define characteristics for a health plan.

A health product can have one or more health plans. On inactivating a health product, the system will not automatically inactivate the respective health plans. An individual can subscribe for one or more health plans. The system creates an individual membership for each subscribed health plan. An individual membership can have one or more member persons. One member person in an individual membership must be the main subscriber. You can add one or more dependent persons in the individual membership. One member person in an individual membership should be financially responsible for the individual membership. For more information, see the [Individual Membership](#) on page 463 section.

If an individual subscribe for an add-on health plan along with a primary health plan, the system enables you to indirectly link a primary health plan with an add-on health plan by associating the primary individual membership with the add-on individual membership. At present, you can associate only one add-on individual membership with the primary individual membership. The system creates the billable charges for both primary and add-on individual memberships independently.

On terminating the primary individual membership, the system provides a facility to automatically terminate the individual membership on the add-on health plan. For more information, see the [Individual Membership Termination](#) on page 480 section. However, on canceling, reinstating, or renewing a primary individual membership, the system does not automatically cancel, reinstate, or renew the individual membership on the add-on health plan. To cancel, reinstate, or renew an individual membership on the add-on health plan, the system must receive the required information for the individual membership from the enrollment system.

Individual Membership

Oracle Revenue Management and Billing enables you to create and edit individual memberships from the user interface and through a health care inbound message or membership repricing inbound web service. Note that the user interface for adding and editing individual memberships is not yet well-designed and should only be used by the presales and sales teams for learning and demo purposes and not by the customers.

A new business object for individual membership named **C1-IndMembership** is introduced in this release. While creating an individual membership through a health care inbound message, you need to specify the following details:

- **Health Plan** - Used to indicate the health plan for which the main subscriber has enrolled.
- **Member Person Status** - Used to indicate the main subscriber or dependent person's status.
- **Status Reason** - Used to indicate the reason why you want to change the status of the main subscriber or dependent person.
- **Auto Renew** - Used to indicate whether the individual membership should be automatically renewed.
- **Contract Period** - Used to indicate the period (in months) for which the individual membership should be automatically renewed.
- **Membership Renewal Date** - Used to indicate the date when the individual membership should be renewed. It is required for manual renewal of the individual membership. In case of automatic renewal, the membership renewal date is calculated by the system.
- **Associated Membership Details** - Used to associate the individual membership with another individual membership which is created for the add-on health insurance plan.
- **Member Identifiers** - Used to specify one or more identifiers for the individual membership.
- **Exchange Details** - Used to indicate whether the individual membership is purchased from the exchange. If the individual membership is purchased from the exchange, you need to specify the exchange ID.
- **Binder Payment Details** - Used to indicate whether the binder payment is required for the individual membership. If so, you need to specify the following details:
 - Grace Days
 - Binder Liability Amount (if required)
 - Threshold Percentage (if required)
 - Hold Billing

For more information about the binder payments, see the [Binder Payment for Individual Membership](#) on page 493 section.

Note: On creating an individual membership for a health plan, the membership category is set to **INDV**. However, on creating a group membership for a policy plan, the membership category is set to **GRUP**.

The following table lists the statuses introduced in the lifecycle of the **C1-IndMembership** business object:

Individual Status	Membership	Description
Draft		An individual membership is created in the Draft status and then transitioned to either the Pending Effectuation or Active status as mentioned in the health care inbound message or membership repricing incoming message.

Individual Membership Status	Description
Pending Effectuation	<p>If the main subscriber status is set to Pending Effectuation, the system sets the status of the individual membership to Pending Effectuation. The system determines the individual membership status reason using the membership status reason preference which is specified in the Status Reason Mapping option type of the C1-ASOBLNG feature configuration.</p> <p>The system monitors whether the binder payments (if required) are received for the individual membership in the Pending Effectuation status. If the binder payments are received, the status of the individual membership is not automatically transitioned to Active. The status of the individual membership is changed from Pending Effectuation to Active only when the main subscriber status update information is received through a health care inbound message or membership repricing inbound web service.</p>
Active	<p>If the main subscriber status is set to Active, the system sets the status of the individual membership to Active. The system determines the individual membership status reason using the membership status reason preference which is specified in the Status Reason Mapping option type of the C1-ASOBLNG feature configuration.</p> <p>If the binder payments are not required for the individual membership, you can directly set the status of main subscriber to Active. In addition, if you want to reinstate the individual membership, you must set the status of main subscriber to Active. The system will then change the status of the individual membership from Terminated to Active. In case of reinstatement of the individual membership, the status of the dependent persons is not changed automatically from Inactive to Active unless the dependent person status update information is received through a health care inbound message or membership repricing inbound web service.</p>
Terminated	<p>If the main subscriber status is set to Inactive, the system sets the status of the individual membership to Terminated. The system determines the individual membership status reason using the membership status reason preference which is specified in the Status Reason Mapping option type of the C1-ASOBLNG feature configuration.</p> <p>Once the status of the individual membership is set to Terminated, the system automatically changes the status of the dependent persons to Inactive. Note that while inactivating the dependent persons, the system only considers the dependent persons who are in the Active status. The system determines the dependent person status reason using the membership status reason preference. The system also updates the end date of the individual membership, main subscriber, and dependent persons. For more information, see the Individual Membership Termination on page 480 section.</p>

Individual Status	Membership	Description
Canceled		<p>If the main subscriber status is set to Canceled, the system sets the status of the individual membership to Canceled. The system determines the individual membership status reason using the membership status reason preference which is specified in the Status Reason Mapping option type of the C1-ASOBLNG feature configuration.</p> <p>Once the status of the individual membership is set to Canceled, the system automatically changes the status of the dependent persons to Canceled. The system determines the dependent person status reason using the membership status reason preference.</p> <p>The system will also cancel the billable charges and bill segment (if any) created for the individual membership or financially responsible member person account.</p>

The system also enables you to change the status of a dependent person in the individual membership through a health care inbound message or membership repricing inbound web service. On changing the status of a member person to **Pending Effectuated** or **Active**, the system considers the member person during premium calculation.

On changing the status of the individual membership and member person, the system creates an audit event to trigger the repricing feature. The **C1-IndMembership** business object is configured for the entity audit framework. However, the repricing is triggered only when an active audit event type for the **C1-IndMembership** business object is created in the system.

The system creates appropriate log entries during the individual membership and member person status transition. You can view the status transition logs of individual membership in the **Log** tab of the **Membership (Used for Viewing)** screen. A new zone named **Member Person Log** is introduced in the **Main** tab of the **Membership (Used for Viewing)** screen. It enables you to view the log entries generated on the member person status transition.

You can define individual membership status reasons through the **Status Reason** screen. A new lookup field named **MEMB_PERS_STAT_RSN_FLG** is introduced in this release. Here, you can add the status reasons for the member person.

Types of Membership

Oracle Revenue Management and Billing enables you to create different types of membership for a fully-insured individual membership:

- [Medicare Membership](#) on page 306
- [Retiree Membership](#) on page 310

Medicare Membership

Oracle Revenue Management and Billing enables you to maintain an employer sponsored group medicare membership (800 series plans) for a fully-insured large group customer and create age based or tier based premium charges for the Medicare Part A, Part B, and Part D. A Medicare beneficiary may qualify for a low income subsidy (LIS) for Medicare Part D or may incur late enrollment penalty (LEP) for Medicare Part D. In such case, the system enables you to consider the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium.

The system enables you to create and edit a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a Medicare membership, you must set the membership type to **Medicare**. Ideally, you must define a Medicare membership on a Medicare Affiliated policy plan. However, at present, the system does not validate whether a Medicare membership is defined only on a Medicare Affiliated policy plan and not on a Commercial policy plan.

You can create a Medicare membership when you specify the main subscriber of the membership. A Medicare membership should have only one member person who is covered for Medicare and who is financially responsible for the membership. Ideally, the main subscriber should exist as a person in the system before creating the Medicare

membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber and Medicare membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person record for the main subscriber and then create the Medicare membership.

On creating a Medicare membership, the status of the membership and main subscriber is set to **Active**. You can inactivate a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating a Medicare membership, the system does the following:

- Set the status of the membership and main subscriber to **Inactive**
- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **CI_AUDIT_EVENT**, **CI_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

On terminating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Active**.

The system enables you to maintain the Membership benefits (such as, Part A, Part B, Part D, Part D LIS, and Part D LEP) of a member person through the **Benefit** screen. The system enables you to define and edit the Membership benefits from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While defining a Membership benefit of a member person for Part A, Part B, and Part D, you need to specify a Medicare plan benefit package (i.e. 800 series plan) which is applicable for the Membership benefit. The system enables you to define and edit a Medicare plan benefit package through the **Field Mapping** screen. You can use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. While defining a Membership benefit of a member person for Part D LIS and Part D LEP, you need to specify the benefit amount (i.e. subsidy or penalty amount).

While editing a Membership benefit of a member person from the user interface, you can only edit the characteristics of the Membership benefit. However, while editing a Membership benefit of a member person through a health care inbound message or through the membership repricing inbound web service, you can edit the end date, benefit amount, and characteristics of the Membership benefit. On editing a Membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system enables you to discard an active or inactive Membership benefit from the user interface by clicking the **Discard** button. You can also discard an active or inactive Membership benefit through a health care inbound message or through the membership repricing inbound web service by changing its status to **Discarded**.

The system requires the following information to create charges for a Medicare membership:

- Whom to bill the Medicare membership (i.e. billing arrangement details)
- Age based or tier based pricing rules using which the premium should be calculated for the Medicare Part A, Part B, and Part D.
- Respective age based, tier based, and benefit pricing rule types associated with the respective policy plan

The system supports the following billing arrangements for a Medicare membership:

- **Group Billing** – Here, a Membership benefit is billed to a bill group which is derived for the Medicare membership.
- **Direct Billing** – Here, a Membership benefit is billed to a member person who is financially responsible for the Medicare membership.

You can indicate the billing arrangement for the Medicare memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Benefit Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Note: If the benefit billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the Medicare membership premium to the bill group.

The system requires the bill group and its account to bill the Medicare memberships when the benefit billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the Medicare membership when the benefit billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the Medicare membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Retiree Membership

An employer may offer a retirement health plan coverage to its retired employees through a fully-insured group policy or an individual can independently opt for a government sponsored retirement health plan coverage. Oracle Revenue Management and Billing enables you to maintain a retiree membership for both the fully-insured group and individual business. The system enables you to maintain a flat or percentage based contribution of employer or sponsor for a retiree membership.

The system enables you to create and edit a retiree membership through a health care inbound message or through membership repricing inbound web service. While creating a retiree membership, the membership type must be set to **Retiree**. The system requires the following information to create charges for a retiree membership:

- Whom to bill the premium for the retiree membership (i.e. retiree billing arrangement details)
- Whom to bill the employer or sponsor contribution (i.e. sponsor billing arrangement details)
- Age based or tier based pricing rule using which the premium should be calculated for the retiree membership
- Discount charge pricing rule using which the employer or sponsor contribution should be calculated for the retiree membership

In case of the fully-insured individual business, the premium for a retiree membership is billed to the member who is financially responsible for the retiree membership. However, in case of the fully-insured group business, the system supports the following billing arrangements for the retiree membership:

- **Group Billing** – Here, the premium is billed to a bill group which is derived for the retiree membership.
- **TPA Billing** – Here, the premium is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** – Here, the premium is billed to the member who is financially responsible for the retiree membership.

You can indicate the billing arrangement for a retiree membership in the fully-insured group business by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Retiree Billing Arrangement** option type of the **C1-ASOBLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

The system enables you to maintain a flat or percentage based contribution of employer or sponsor through a discount charge pricing rule. A field named **Sponsored** is available in the **Price Items** section while defining or editing a discount charge pricing rule type. If the **Sponsored** option is selected for a price item, the system creates and bills the charge for the price item as per the sponsor billing arrangement. The system searches for the characteristic which is specified in the **Sponsors Billing Arrangement** option type of the **C1-ASOBLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

In the fully-insured group and individual business, the system supports the following sponsor billing arrangements for the retiree membership:

- **Group Billing** – Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **TPA Billing** – Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **Direct Billing** – Here, the system creates a memo only charge for the employer or sponsor contribution against the beneficiary account. A bill message code is derived from the **Retiree Bill Message Code** option type of the **C1-ASOBLNG** feature configuration and stamped against the beneficiary account.

In case of the group and TPA billing, the system derives the characteristic types which are specified in the **Sponsor Account Identifier Type Char Type** and **Sponsor Account Identifier Value Char Type** option types of the **C1-ASOBLNG** feature configuration. The system then checks whether these characteristics are defined on any of the following entity in the specified sequence:

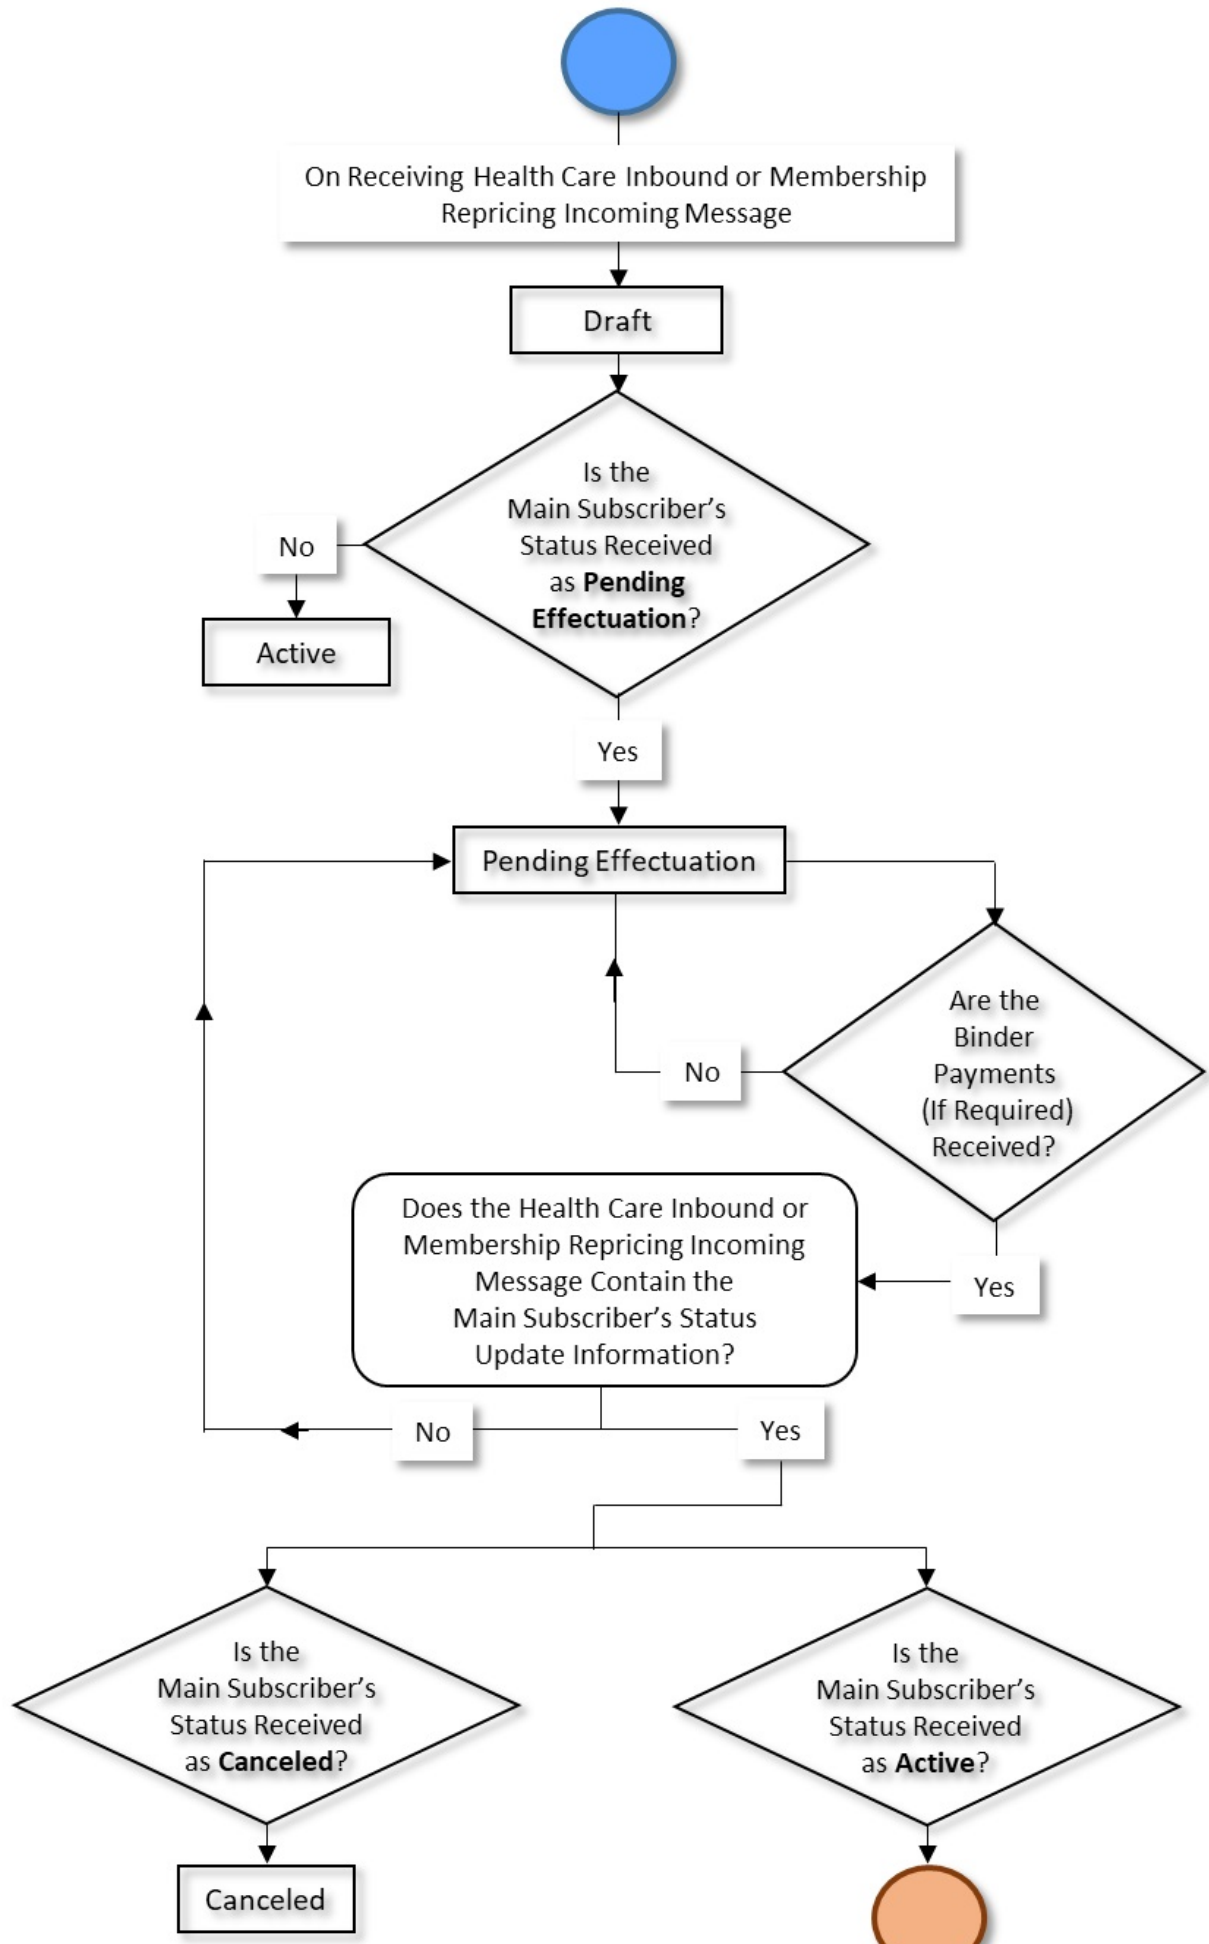

1. Policy Plan
2. Policy
3. Parent Customer

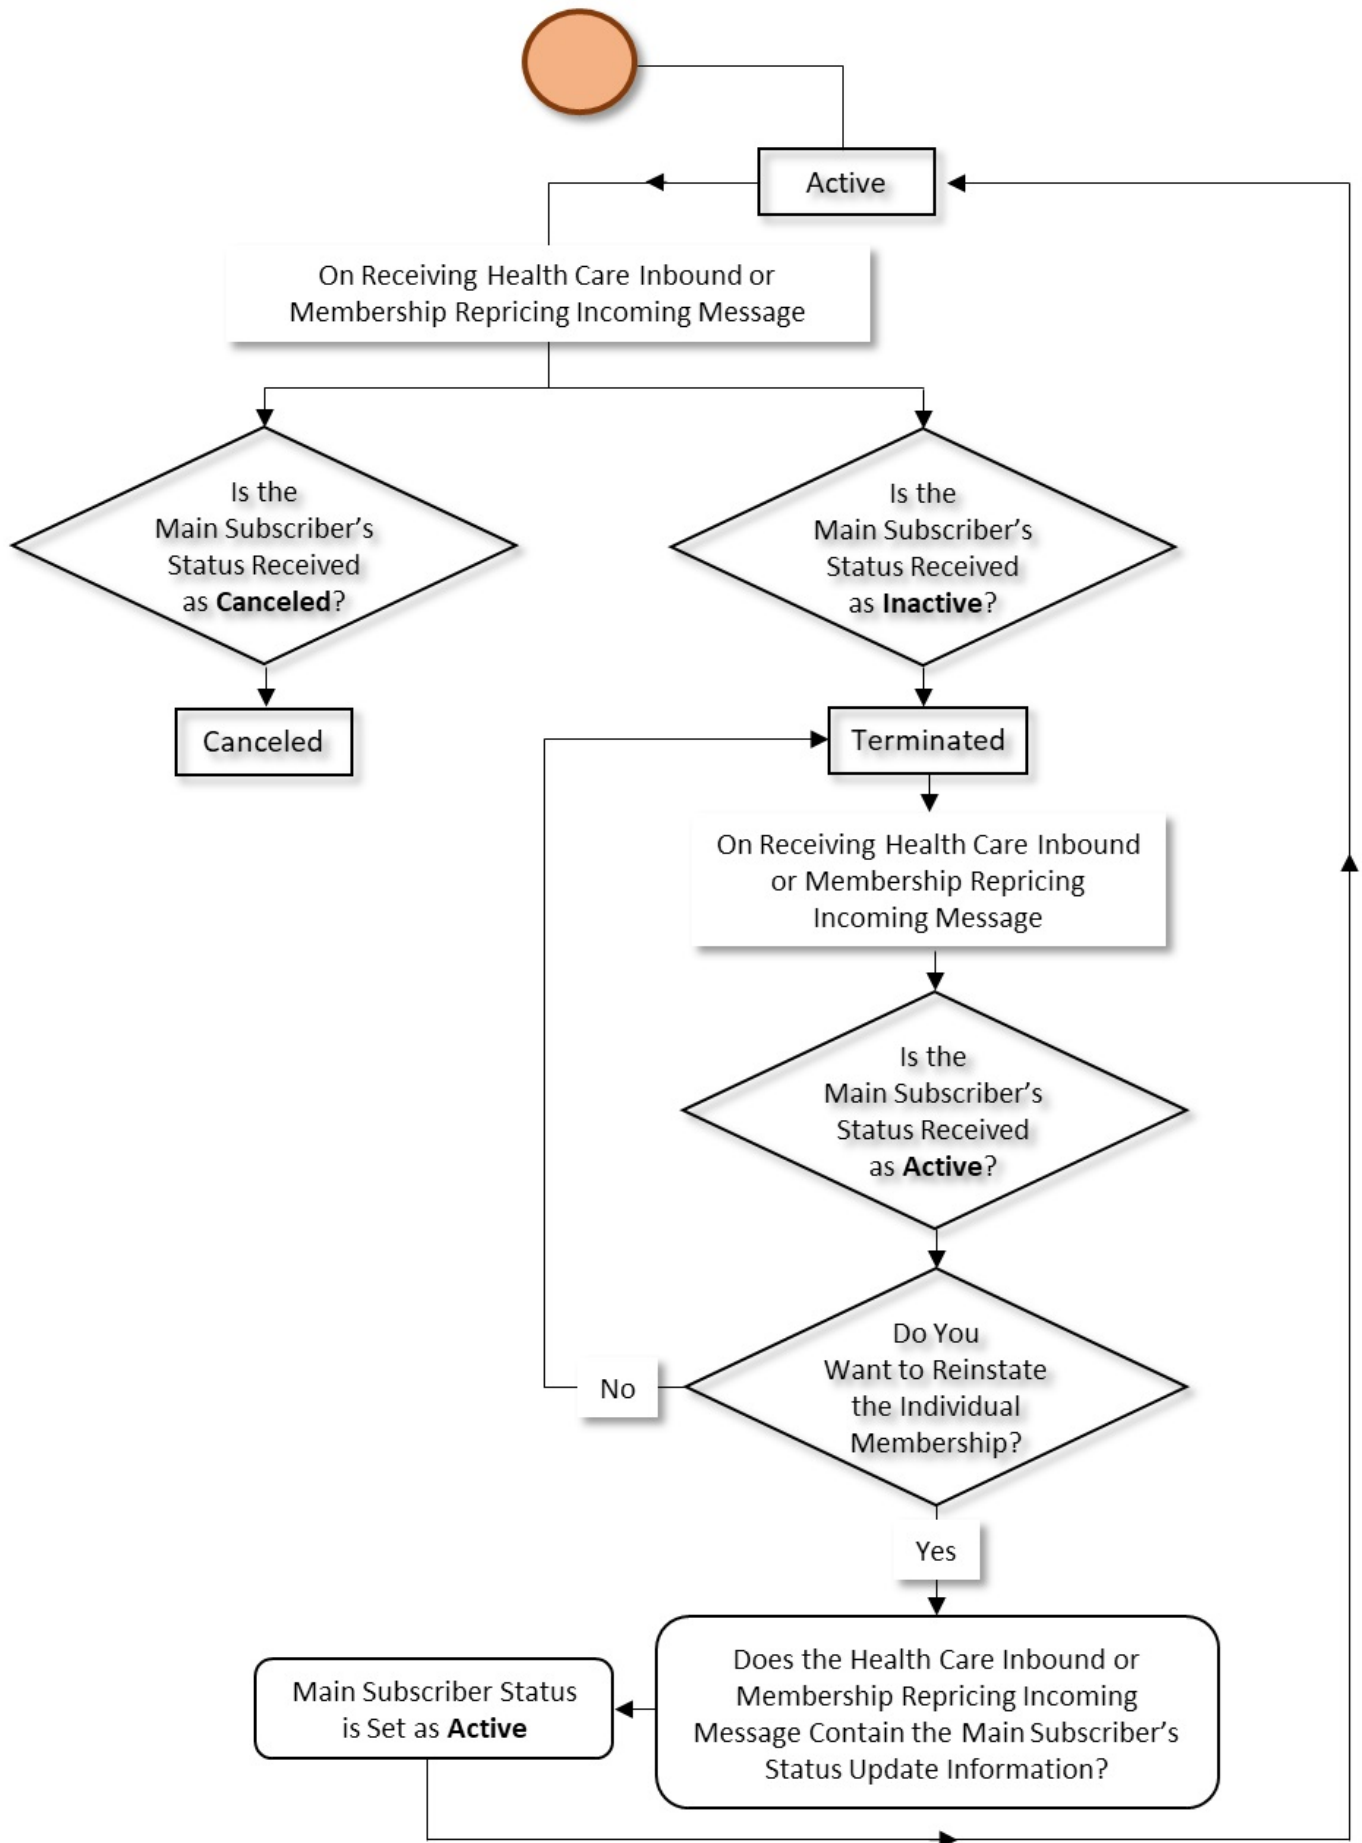

If these characteristics are defined on any of the above entity, the system derives the sponsor account for the bill group. The system then bills the employer or sponsor contribution charges to the sponsor account.

However, if the **Sponsored** option is not selected for a price item in a discount charge pricing rule type, the system creates and bills the charge for the price item as per the retiree billing arrangement.

Individual Membership Status Transition

The following figure graphically indicates how an individual membership goes through various statuses in its lifecycle:

Algorithms Used in C1-IndMembership

The following table lists the algorithms which are attached to the **C1-IndMembership** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-FIAUDEV	C1-FIAUDEV	Refer to C1-FIAUDEV on page 161
Audit	C1-MEMRLAUD	C1-MEMRLAUD	Refer to C1-MEMRLAUD on page 474

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership (C1-Membership)**, **Individual Membership (C1-IndMembership)**, **Benefit (C1-Benefits)**, and **Person (C1_PERSON_BO)** business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** – Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** – Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** – Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-MEMRLAUD

This algorithm defines an eligible member role for each and every member person involved in the membership. It derives the **Member Role Structure** attribute defined in the policy plan in a group membership or from the health plan in an individual membership. This attribute is used to identify the member person details that are to be stamped based on the member person relationship. A member person relationship is derived from the member person depending on whether the member person is:

- Self
- Spouse
- Children
- Dependents

This algorithm derives the member person relationship through the **Member Person Relationship** table, as a common reference. Once the member person relationship is derived, in case of a group membership, the algorithm derives

the characteristics, which are mapped on the policy plan, for member role mapping purposes. Whereas in case of an individual membership, the algorithm derives the characteristics, which are defined in the business rules, for member role mapping purposes.

C1-DTCAGEIM

This algorithm would be used for the calculation of a date that is further used for age-based calculations of the members in the fully-insured Individual Membership when the specific conditions are present.

- This algorithm is plugged-in in the system event Audit present in the Algorithms Tab of the BO Individual Membership
- It gets invoked whenever there is an update in the Individual Membership entity to perform date calculation and store the calculated date in the BO_DATA_AREA of this individual membership.

The essential pre-requisite for this algorithm to work as intended is as follows:

- If an individual has continuous coverage on different Medical Health Plans with the same first 5-digit of HIOS (legal entity) within the same plan year window, then age at the time of enrolment into the first plan is used throughout the plan year.
- The business rule category - 'Fully-Insured Pricing Rules' for this individual membership will have the criteria:

```
AGE CALCULATION DATE = Member Enrollment Date
and
AGE RECALCULATION DATE = Membership Renewal Date
```

When the above conditions are configured in the system, the algorithm works as follows:

- It lists out the enrollment start date of all memberships having the same main subscriber person and same account for the identified plan year window.
- It then determines the oldest date among the enrollment start date such that there is continuous coverage between the consecutive memberships.
- The calculated date is then stored in the BO_DATA_AREA column in the Membership table in the format:

```
<calculatedDateMemberAgeContCoverage>YYYY-MM-DD</
calculatedDateMemberAgeContCoverage>
```

The corresponding algorithms responsible for member age calculation, that are present in the pricing rule type of the health plan for this membership entity, will fetch the value of the calculated date available in the BO_DATA_AREA column and determine the age for the member-person in the membership.

Parameter:

- **Healthcare Coverage Class** - This parameter is mandatory where the value indicates the valid value for Medical present in lookup Product Healthcare Category.
- **Plan Year Start Month** - This parameter is mandatory where the numeric value represents the month in a calendar year. For example, 1-Jan, 3-March, 6-June, etc.

C1-MPCONCREA

This algorithm is invoked when the following conditions are met:

- A member person who is financially responsible for the membership is added to the membership
- One or more accounts already exist for the member person in the system

If the above conditions are met, this algorithm derives the membership in which the member person is added. It then derives the policy plan to which the membership belongs. It creates contracts for each account of the member person in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.

- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

Let us assume that PRT1 is associated with the policy plan and it contains three price items – PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, this algorithm will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, this algorithm will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

C1-THRSHDAMT

This algorithm works when the individual Membership Status is Pending Effectuation and status reason is Awaiting Binder Payment (configurable on field mapping).

- If Binder Applicability is not available at the membership level, it invokes Business Rule service to fetch Binder Payment Business Rule.
- If Binder Payment Business Rule is not available, then it updates membership status reason as per configured value and creates a TO DO.
- If the Binder Applicability switch is 'Y', it calculates the binder payment threshold amount based on the binder liability amount and the binder payment threshold percentage.
- It also holds / releases the billable charges based on the 'Hold billing' configuration.

C1-RTAREAMEM

This algorithm derives the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. It supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

On adding a membership to a policy plan, this algorithm derives the characteristic types from the **Address Source Characteristic Type** and **Address Type Characteristic Type** attributes of a geographic rating area preference. This algorithm considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLNG** feature configuration. Then, it searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, this algorithm derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, this algorithm fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration. It then derives the person who is associated with the policy using the parent customer policy person role. Once the address source and address type are derived, this algorithm fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is

set to **Person Mailing**, this algorithm fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, this algorithm checks whether the zip code is a 9-digit code. If not, it appends zeros to make it a 9-digit zip code. It then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to **Y**, this algorithm derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to **N**, this algorithm derives a geographic rating area for the state and zip code combination. If the geographic rating area is not derived for the specified combination, this algorithm derives the default geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, this algorithm stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

C1-MEMSTSUP

This Algorithm cascades the status, status-reason and end-date of the dependent member-person in the membership for any change in status of the main member person.

Logs are created for dependent member person status changes.

When Termination request is sent for a membership, Its associated membership (if it is in Active status) for add-on plan will also get terminated.

Soft Parameter:

- Valid values for Cascade Associate Membership should be Y or N.
- This flag will indicate whether to cascade the changes to associate membership.

C1-LATESET

This algorithm is used to send Late Setup Notification when difference between member person start date and creation data is greater than or equal to 'Late Setup Threshold'.

Parameter:

- To Do Type: Notification will be created using this To Do Type
- To Do Role: If It's not blank then this To Do Role will be used in To Do Type Notification otherwise default will be used.

C1-MEMRTGRNT

This algorithm check rate guarantee details are receive at membership level, If not then it invoke Business Rule service by providing Business Rule Category as Rate Guarantee, Membership Id, and Effective date as Membership Start Date to derive rate guarantee from business rule if any rate guarantee business rule applicable.

If data is not available then it will add the Rate guarantee details into CI_MEMBERSHIP_RATE_GRNT and C1_ENT_BUS_RULE table else it will update existing records.

C1-VALMEMBO

This algorithm validates a membership. It checks the following:

- Whether the membership end date is not earlier than the membership start date.
- Whether the membership start date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the membership end date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the policy plan for which you want to define the membership is specified.
- Whether the person who is the main subscriber is added to the membership.
- Whether the relationship type is specified while adding a person to the membership.

C1-BNDRH

This algorithm is invoked during the membership activation process. It checks whether the binder payment is received for the membership. If the binder payment is received, the membership status is changed from **Pending Effectuation** to **Active**.

Note: At present, this algorithm is invoked only during the membership enrollment and not for membership reinstatement, where the membership status is changed from **Terminated** to **Active**.

This algorithm is invoked using the following scenario:

If...	Then...
<p>The membership is in the Active status and the binder payment attributes like the Consider Binder Liability Amount Flag is configured as N along with the Membership Status Reason when Binder Payment Received is configured as Binder Payment Received in the Field Mapping screen</p>	<p>The system checks whether the hold billing switch in the CI_MEMBERSHIP table contains any value. If any value exists, the system releases the billable charges which are kept on hold for the membership. In addition, the system performs the following operations:</p> <ul style="list-style-type: none"> • Retrieves the account (of the financial responsible person) for the membership. • Retrieves the non-binder payment contracts for the accounts from the CI_SA table. • Retrieves the billable charges present on the non-binder payment contracts where the membership ID is stamped as a characteristic. • Checks whether the bill after date of each billable charge contains a future date. If the bill after date contains a future date then it is changed to the system date minus one.

C1-IMRI-INS

The algorithm will update instruction record for Refund/Write-off Instruction on individual membership reinstatement

C1-INVRQIMEN

This algorithm would be configured on full-insured Individual Membership enrolment process.

It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type Value) mentioned in the Individual Membership Characteristic section on its enrollment.

If the newly enrolled Individual Membership has the account details for the main subscriber and is financially responsible person of the Individual Membership as well as the Membership Characteristics section has the characteristic 'Eligible For Invoice Request Creation = Yes', then it will create the invoice request for the specific account for new enrollment. Else, for the events of reinstatement of the individual membership, the system will validate that this membership Id already exists and check if the previous status of the Membership is 'Terminated' to process the invoice request creation on individual Membership reinstatement. Also, if the parameter 'Termination Reason' is provided along with the parameter 'Invoice Request Type for Individual Membership Reinstatement', then the algorithm will evaluate to create the invoice request based on the list of values against the membership status reason provided for previous status ='Terminated'.

Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

Parameters:

- Invoice Request Type for Individual Membership New Enrollment - This is a mandatory parameter to fetch configurations related to invoice Request creation for event of Individual Membership New Enrollment.
- Invoice Request Type for Individual Membership Reinstatement - This is an optional parameter to fetch configurations related to invoice Request creation for event of Individual Membership Reinstatement
- Termination Reason - This is an optional parameter to determine whether invoice request needs to be created for event of Individual Membership Reinstatement and for the list of the status reasons mapped to the previous status event 'Terminated'. The size of the list is maximum 5 comma-separated values.

C1-INDACCT

This algorithm evaluates the individual membership to determine the account to associate it with. If the membership is already associated with an account, no further action is required. If the membership is not yet associated with an account, new account creation rules are assessed and if met, a new account is created for the main subscriber and linked to the membership. Otherwise, the account linked to the prior membership of the individual for the same health coverage class is used.

A new account is created for an individual's first enrollment to a health coverage class. If the individual subsequently changes plans within a health coverage class, a new account is created if there is a gap in coverage from the prior enrollment or one of the configurable health plan characteristic criteria is met, that is:

1. If a health plan char type is provided as a parameter and the old and new values are also provided, a new account is created if the health plan char value from the prior membership = old value and the health plan char value from the current membership = new value.
2. If a health plan char type is provided as a parameter and the old and new values are not provided, a new account is created if the health plan char value from the prior membership <> health plan char value from the current membership.

C1-IMTR-INS

C1-INVRQIMTM

This algorithm would be configured on full-insured Individual Membership termination process. It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type Value) mentioned in the Individual Membership Characteristic section on its termination. If the terminated Individual Membership has the account details for the main subscriber and is financially responsible person of the Individual Membership, then it will create the invoice request for the specific account. Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

C1-MEMINACT

This algorithm changes the status of the member person to the value specified in the **Membership Person Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

C1-INVRQIMCN

This algorithm would be configured on full-insured Individual Membership cancelation process. It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type

Value) mentioned in the Individual Membership Characteristic section on its cancellation. If the canceled Individual Membership has the account details for the main subscriber (and is financially responsible person) present in the Individual Membership Characteristics section, then it will create the invoice request for the specific account. Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

Individual Membership Termination

To terminate an individual membership, you need to change the status of the main subscriber to **Inactive** through a health care inbound message or membership repricing inbound web service. Along with the main subscriber status, you need to specify the status reason and end date for the main subscriber. If the end date is earlier than or equal to the inbound processing date, the system updates the status, status reason, and end date of the main subscriber and then changes the status of the individual membership to **Terminated**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLNG** feature configuration.

Once the status of the individual membership is set to **Terminated**, the system automatically changes the status of the dependent persons to **Inactive**. Note that while inactivating the dependent persons, the system only considers the dependent persons who are in the **Active** status. The system determines the dependent person status reason using the membership status reason preference.

If the main subscriber end date is later than the inbound processing date, the system creates a record in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. The system stores the following information in the record:

- Membership ID
- Member Person ID
- Whether the member person is a main subscriber
- Processing date (it is set to future dated end date of the member person)
- Required action (is set to **Terminate**)

A new batch named **C1-MEPRC** is introduced in this release. On the **C1-MEPRC** batch execution, the system checks whether there are any records in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. If so, the system checks whether the processing date of the record is earlier than or equal to the system date. If so, the system determines the required action to be taken for the individual membership from the record. If the **MEMB_PROCESS_FLG** column of the record is set to **Terminate** and the **MAIN_CUST_SW** column is set to **N**, the system changes the status of the dependent person to **Inactive** and updates the end date of the dependent person.

However, if the **MEMB_PROCESS_FLG** column of the record is set to **Terminate** and the **MAIN_CUST_SW** column is set to **Y**, the system updates the status and end date of the main subscriber and then changes the status of the individual membership to **Terminated**. Once the status of the individual membership is set to **Terminated**, the system automatically changes the status of the dependent persons to **Inactive**. The system also updates the end date of the individual membership and dependent persons.

The system enables you to configure whether the individual membership on the add-on health insurance plan should be automatically terminated when the primary individual membership is terminated. If the **Cascade Associate Membership** parameter in the **C1-MEMSTSUP** algorithm is set to **Y**, the system changes the status of the associated individual membership to **Terminated**. Once the status of the associated individual membership is set to **Terminated**, the system automatically changes the status of its main subscriber and dependent persons to **Inactive**. The system also updates the end date of the associated individual membership, its main subscriber and its dependent persons.

Once the required action is completed for the record in the **CI_MEMBERSHIP_PROCESS** table, the system changes the status of the record to **Complete**. However, if the system receives a reinstatement request for an individual membership before processing the termination request, the system changes the status of the record in the **CI_MEMBERSHIP_PROCESS** table to **Canceled**.

Individual Membership Renewal

Oracle Revenue Management and Billing enables you to renew an individual membership in the following two ways:

- Manually
- Automatically

While creating or editing an individual membership through a health care inbound message or membership repricing inbound web service, you must set the **Auto Renew** option for the individual membership to either **Y** or **N**.

If the **Auto Renew** option for an individual membership is set to **N**, you need to specify the following details in a health care inbound message or membership repricing incoming message:

- Membership renewal date
- Status, status reason, and end date of the main subscriber
- Status, status reason, and end date of the dependent person

The enrollment system can send the renewal information either during the enrollment period or after the enrollment period. Irrespective of when the renewal information is received, the membership renewal date must be set to the membership end date + 1. For example, if the enrollment period is from 01-01-2021 to 12-31-2021, then the system must receive the membership renewal date as 01-01-2022. On renewing an individual membership, the dependent person in the individual membership is not automatically activated unless the activation information is received for the dependent person from the enrollment system. The associated membership for an add-on health insurance plan is not automatically renewed unless the renewal information is received for the respective membership from the enrollment system.

If the **Auto Renew** option for an individual membership is set to **Y**, you need to specify the contract period for which the individual membership should be automatically renewed. The system then creates a record in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. The system stores the following information in the record:

- Membership ID
- Main Subscriber ID
- Whether the member person is a main subscriber
- Processing date (it is set to the membership end date)
- Required action (is set to **Renew**)

On the **C1-MEPRC** batch execution, the system checks whether there are any records in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. If so, the system checks whether the processing date of the record is earlier than or equal to the system date. If so, the system determines the required action to be taken for the individual membership from the record. If the **MEMB_PROCESS_FLG** column of the record is set to **Renew** and the **MAIN_CUST_SW** column is set to **Y**, the system calculates the renewal date and new end date for the individual membership.

The renewal date for the individual membership is set to membership end date + 1. For example, if the enrollment period is from 01-01-2021 to 12-31-2021, the system sets the renewal date to 01-01-2022 (i.e. 12-31-2021 + 1). The new membership end date is calculated using the renewal date and contract period. For example, if the renewal date is 01-01-2022 and contract period is 12 months, the system sets the end date of membership, main subscriber, and dependent persons to 12-31-2022. The associated membership for an add-on health insurance plan is not automatically renewed during the individual membership renewal.

The automatic renewal request for an individual membership must be received during the enrollment period. If the automatic renewal request for an individual membership is received after the enrollment period, the system will not renew the individual membership automatically.

Once the membership end date is changed, the system will trigger the repricing feature and accordingly create or extend the billable charge for the renewed period.

Automatic Contract Creation for Individual Membership

Oracle Revenue Management and Billing automatically creates contracts for each account of the financially responsible member person when:

- Person is added to an individual membership
- Account is added for a financially responsible member person
- Health plan is added or edited in the system

In the former two scenarios, the system derives the individual membership where the person is financially responsible for the membership. Once the individual membership is derived, the system derives the health plan for which the individual membership is enrolled.

Once the health plan is derived, the system checks whether the pricing rule types are associated with the health plan. If a pricing rule type is associated with the health plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item. Let us assume that PRT1 is associated with the health plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the health plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item of each pricing rule type.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective individual membership. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different health plans, the contract start date is set to the start date of the earliest health plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

Rate Guarantee for Individual Membership

At times, the insurance carriers provide rate guarantee health plans to a fully-insured individual wherein the insurance rate does not change for the rate guarantee period (i.e. lock-in period). Oracle Revenue Management and Billing enables you to configure guaranteed rate for one or more health insurance services offered to an individual person. Unless, there are some qualifying life events (QLE), the system will calculate the premium on the same rate for the next coverage period until the rate guarantee period is over.

The system enables you to maintain the rate guarantee details for each individual membership through a health care inbound message or through membership repricing inbound web service. It enables you to capture the following details:

- **Rate Guarantee Start Date** – Used to specify the date from when the rate guarantee is available for the individual membership.
- **Rate Guarantee End Date** – Used to specify the date till when the rate guarantee is available for the individual membership.

- **Rate Guarantee Status** – Used to indicate the status of the rate guarantee period. The valid values are - **Active** and **Inactive**.

You can send the rate guarantee details for an individual membership during enrollment (i.e. on membership creation), during coverage period, or during membership renewal. While sending the rate guarantee details of an individual membership, ensure that the active rate guarantee records do not have overlapping date range.

The system enables you to define the rate guarantee business rules. If the rate guarantee details are not specified for an individual membership during enrollment, the system derives the rate guarantee details for the individual membership through a rate guarantee business rule. The rate guarantee business rule indicates the following:

- **Rate Guarantee Applicability** – Used to indicate whether the rate guarantee is available for the individual membership.
- **Rate Guarantee Period** – Used to derive the rate guarantee start and end dates. The system sets the rate guarantee start date to the membership start date and the rate guarantee end date to the rate guarantee start date + rate guarantee period.

There might be situations wherein the rate guarantee details are received for an individual membership later during the coverage period or during membership renewal through a health care inbound message. In such scenarios, the system will then give precedence to the rate guarantee details which are received through a health care inbound message and will not derive the rate guarantee details from the rate guarantee business rule which is stamped against the individual membership.

A new column named **Rate Guarantee** is available in the **Price Items** section while defining or editing an age based or tier based pricing rule type. While creating a charge for an individual membership, the system checks whether the **Rate Guarantee** option is selected for the price item in the respective pricing rule type and whether the billable charge timeline falls within the rate guarantee period. If so, the system derives the rate guarantee pricing rule for the price items where the **Rate Guarantee** option is selected.

The system stores the pricing rule which is effective for such price items on the rate guarantee start date as the rate guarantee pricing rule. Until the rate guarantee period is over, the system considers the rate guarantee pricing rule for the individual membership during premium calculation. This ensures that the same rate is charged for a health insurance service even when the rate has increased for the health insurance service in the system.

The Entity Audit framework is configured for the Rate Guarantee feature. The system will create audit events when the rate guarantee records are added or updated for an individual membership.

Late Setup Notification

Oracle Revenue Management and Billing enables you to create a To Do notification when the details to include a member person in a group or individual membership is received in ORMB beyond the late setup threshold days from the member person start date. This notification can help the billing analyst to take appropriate actions, such as giving premium waiver to the member person if required.

To enable this feature, you need to set the following option types in the **C1-ASOBLLNG** feature configuration:

- **Monitor Late Setup** – Used to indicate whether you want to enable the late setup notification feature. The valid values are – **Y** and **N**. By default, the value is set to **N**.
- **Late Setup Threshold in Days** – Used to indicate the number of threshold days for late setup notification. This option type is required when the **Monitor Late Setup** option type is set to **Y**. The value must be greater than zero.

For example, if the system receives the information to add a member person with the start date as **01-15-2021** to an individual membership on **02-15-2021** and the late setup threshold days in the **C1-ASOBLLNG** feature configuration is set to **15**. In this case, the number of days between the member person start date and member person creation date is greater than late setup threshold days, and therefore a To Do is created using the To Do type which is specified in the **C1-LATESET** algorithm attached to the group or individual membership business object, respectively.

To implement this business requirement, the system stores the member person creation date (which was not done in the previous releases) while adding a member person to a group or individual membership. A new batch named **C1-LSUB** is introduced in this release. It derives the creation date for all member persons in the existing

group and individual memberships and stamps it against the corresponding record in the **CRE_DTTM** column of the **CI_MEMBERSHIP_PER** table. This batch must be executed only once after upgrading to Oracle Revenue Management and Billing Version 3.1.0.0.0. For more information, refer to *Oracle Revenue Management and Billing Version 3.1.0.0.0 Upgrade Guide*.

Young Adult Coverage in an Individual Membership

Oracle Revenue Management and Billing enables you to calculate premium for the young adults who are covered in an individual membership. While creating or editing an individual membership, or while adding, editing, or inactivating a member person in an individual membership through a health care inbound message or through membership repricing inbound web service, the system derives the fully-insured pricing business rule for the individual membership. The system enables you to define the following young adult related output parameters in the fully-insured pricing business rules:

- **Young Adult Applicability** - Used to indicate whether you want to consider the young adults during the premium calculation. The valid values are - **Yes** and **No**.
- **Young Adult Max Age Limit** - Used to indicate the maximum age limit for young adults who are eligible for premium calculation. This output parameter is mandatory when the **Young Adult Applicability** parameter is set to **Yes**.

While deriving member relationship for each member person of the individual membership from a member relationship structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Similarly, while deriving subscription tier for the individual membership from a subscription tier structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Thus, while calculating the premium for an individual membership using an age based or tier based pricing rule, the system considers the young adult for the premium calculation based on the above two parameters set in the fully-insured pricing business rule.

Individual Membership Preference

The Individual Membership Preference enables you to set the attributes which are used during the creation of an individual membership. While deriving the details for an individual membership, the system uses the following attributes from the individual membership preference:

- Health Plan Characteristics

You can define, edit, delete, and copy an individual membership preference through the **Field Mapping** screen.

Searching for an Individual Membership Preference

Prerequisites

To search for an individual membership preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for an individual membership preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Individual Membership** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
A list of individual membership preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Individual Membership Preference Details

Procedure

To view the details of an individual membership preference:

1. Search for the individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the individual membership preference whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the individual membership preference in the **Field Mapping** zone.

Defining an Individual Membership Preference

Prerequisites

To define an individual membership preference, you should have:

- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup fields
- Required characteristic type defined for the health plan in the application.

Procedure

To define an individual membership preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.

A sub-menu appears.

- Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the billing preference. The valid values are: <ul style="list-style-type: none"> Field Mapping Medicare Plan Benefit Package Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

- Select the **Field Mapping** option from the **Field Mapping Business Object** list.
- Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- Main** - Used to specify basic details of the billing preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the individual membership preference.	Yes
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the billing preference. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

- Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct 	Yes

- **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: <ul style="list-style-type: none"> • Health Plan Characteristics - Used when you want to derive the health plan ID for an individual membership. 	Yes (Conditional)
		Note: This field is required while setting an attribute in the individual membership preference.

Field Name	Field Description	Mandatory (Yes or No)				
Value	<p>Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the billing preference:</p> <table border="1"> <thead> <tr> <th>If the attribute is set to...</th> <th>Then, this field is...</th> </tr> </thead> <tbody> <tr> <td>Health Plan Characteristics</td> <td> <p>Used to specify the characteristic type which indicates the plan ID of the health plan. This characteristic type is defined for a health plan. The system uses this plan ID to create a health plan specific contract. The system then uses this characteristic type to determine the account of the financial responsible person for whom the billable charges should be generated.</p> <p>Note: The list includes only those characteristics which are already defined in the system.</p> </td> </tr> </tbody> </table>	If the attribute is set to...	Then, this field is...	Health Plan Characteristics	<p>Used to specify the characteristic type which indicates the plan ID of the health plan. This characteristic type is defined for a health plan. The system uses this plan ID to create a health plan specific contract. The system then uses this characteristic type to determine the account of the financial responsible person for whom the billable charges should be generated.</p> <p>Note: The list includes only those characteristics which are already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while setting an attribute in the individual membership preference.</p>
If the attribute is set to...	Then, this field is...					
Health Plan Characteristics	<p>Used to specify the characteristic type which indicates the plan ID of the health plan. This characteristic type is defined for a health plan. The system uses this plan ID to create a health plan specific contract. The system then uses this characteristic type to determine the account of the financial responsible person for whom the billable charges should be generated.</p> <p>Note: The list includes only those characteristics which are already defined in the system.</p>					
Entity Type	<p>Used to indicate the type of entity for which the attribute is applicable. The valid values are:</p> <ul style="list-style-type: none"> Account Billable Charge <p>Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</p>	No				

Note: While defining an individual membership preference, you must set at least one attribute in the individual membership preference.

6. Select the **Individual Membership** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the individual membership preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the individual membership preference, click the **Delete** (🗑️) icon corresponding to the attribute.

10. Click Save.

The individual membership preference is defined.

Editing an Individual Membership Preference

Prerequisites

To edit an individual membership preference, you should have:

- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup fields
- Required characteristic type defined for the health plan in the application.

Procedure

To edit an individual membership preference:

1. Search for an individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the individual membership preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the individual membership preference.	Not applicable
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the individual membership preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: <ul style="list-style-type: none"> • Individual Membership 	Not applicable

- **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: <ul style="list-style-type: none"> Health Plan Characteristics - Used when you want to derive the additional information of a health plan for an individual membership. 	Yes (Conditional) Note: This field is required while setting an attribute in the individual membership preference.				
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the individual membership preference: <table border="1" data-bbox="639 646 1182 982"> <thead> <tr> <th>If the attribute is set to...</th> <th>Then, this field is...</th> </tr> </thead> <tbody> <tr> <td>Health Plan Characteristics</td> <td>Used to specify the health plan characteristics. Note: The list includes only those characteristics which are already defined in the system.</td> </tr> </tbody> </table>	If the attribute is set to...	Then, this field is...	Health Plan Characteristics	Used to specify the health plan characteristics. Note: The list includes only those characteristics which are already defined in the system.	Yes (Conditional) Note: This field is required while setting an attribute in the individual membership preference.
If the attribute is set to...	Then, this field is...					
Health Plan Characteristics	Used to specify the health plan characteristics. Note: The list includes only those characteristics which are already defined in the system.					
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> Account Billable Charge Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.	No				

Note: Alternatively, you can edit the details of an individual membership by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the individual membership, if required.

Note: You must set at least one attribute in an individual membership preference.

5. Click **Save**.

The changes made to the individual membership are saved.

Copying an Individual Membership Preference

Instead of creating an individual membership preference from scratch, you can create a new individual membership preference using an existing individual membership preference. This is possible through copying an individual membership preference. On copying an individual membership preference, the details including the attributes are copied to the new individual membership preference. You can then edit the details, if required.

Prerequisites

To copy an individual membership preference, you should have:

- Individual membership preference (whose copy you want to create) defined in the application
- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup fields
- Required characteristic type defined for the health plan in the application.

Procedure

To copy an individual membership preference:

1. Search for the individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the individual membership preference whose copy you want to create.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the individual membership preference.	Yes
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the billing preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> • Individual Membership 	Not applicable

- **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)				
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: <ul style="list-style-type: none"> Health Plan Characteristics - Used when you want to derive the additional information of a health plan for an individual membership. 	Yes (Conditional) Note: This field is required while setting an attribute in the individual membership preference.				
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the billing preference: <table border="1" data-bbox="639 611 1182 951"> <thead> <tr> <th>If the attribute is set to...</th> <th>Then, this field is...</th> </tr> </thead> <tbody> <tr> <td>Health Plan Characteristics</td> <td>Used to specify the health plan characteristics. Note: The list includes only those characteristics which are already defined in the system.</td> </tr> </tbody> </table>	If the attribute is set to...	Then, this field is...	Health Plan Characteristics	Used to specify the health plan characteristics. Note: The list includes only those characteristics which are already defined in the system.	Yes (Conditional) Note: This field is required while setting an attribute in the individual membership preference.
If the attribute is set to...	Then, this field is...					
Health Plan Characteristics	Used to specify the health plan characteristics. Note: The list includes only those characteristics which are already defined in the system.					
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: <ul style="list-style-type: none"> Account Billable Charge Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.	No				

Note: While defining an individual membership preference, you must set at least one attribute in the individual membership preference.

- Enter the required details in the **Main** section.
- Define, edit, or remove the attribute from the individual membership preference, if required.
- Click **Save**.

The new individual membership preference is defined.

Deleting an Individual Membership Preference

Procedure

To delete an individual membership preference:

1. Search for the individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the individual membership preference that you want to delete.

A message appears confirming whether you want to delete the individual membership preference.

Tip: Alternatively, you can delete an individual membership preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The individual membership preference is deleted.

Binder Payment for Individual Membership

On enrolling for an individual health insurance plan, the financial responsible member person needs to pay first month's premium often called as binder payment to complete the enrollment process. The individual membership enrollment is effectuated when the binder payment is received. The binder payment should be received by the billing system and not by the enrollment system. The binder payment is not required during individual membership renewal and reinstatement.

Few health insurance payers send bills to collect the binder payment, whereas few do not send bills to collect the binder payment. In other words, the bill generation process for individual membership is kept on hold by some health insurance payers until the binder payment is received.

Oracle Revenue Management and Billing enables you to create binder payments for an individual membership. For more information on how to create a binder payment, see the [Binder Payment Creation](#) on page 505 section. While creating an individual membership through a health care inbound message or through a membership repricing inbound web service, you must set the **Binder Payment Applicability** option for the individual membership to either **Y** or **N**. You can set the **Binder Payment Applicability** option to **Y** only when the following conditions are met:

- Individual membership status is set to the value specified in the **Membership Status Code for Pending Effectuation** attribute of the binder payment preference.
- Membership status reason is set to the value specified in the **Membership Status Reason when Awaiting Binder Payment** attribute of the binder payment preference.

The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

If the **Binder Payment Applicability** option is set to **Y** for an individual membership, it means that the system should monitor whether the binder payment is received before activating the individual membership. On receiving the binder payment for the individual membership, the system only changes the membership and its member persons' status reason and not the membership and its member person' status. The membership and its member persons' status is changed only when the system receives the main subscriber's status update information from the enrollment system through a health care inbound message. However, if the **Binder Payment Applicability** option is set to **N** for an individual membership,

it means that binder payment is not required for activating the individual membership. For more information about the binder payment monitor process, see the [Binder Payment Monitoring](#) on page 506 section.

If the **Binder Payment Applicability** option is set to **Y** for an individual membership, you need to specify the following binder payment details through a health care inbound message:

- **Grace Days** – Used to calculate the grace date for the individual membership.
- **Binder Liability Amount** – Used to specify the binder liability amount. This data is required when the **Consider Binder Liability Amount** attribute is set to **Y** in the binder payment preference.
- **Threshold Percentage** – Used to specify the threshold percentage using which the threshold amount should be calculated.
- **Hold Billing** – Used to indicate whether you want to hold the bill generation process for the individual membership until the binder payment is received.

The system facilitates you to validate binder payment against the threshold amount. If the **Consider Binder Liability Amount** attribute is set to **Y** in the binder payment preference, the system calculates the threshold amount for the binder payment using the binder liability amount and threshold percentage. For example, if the binder liability amount is set to 50 and threshold percentage is set to 20, the system sets the threshold amount to 10 (i.e. $(50*20)/100$). The system can receive one or more binder payments for an individual membership. If the **Consider Binder Liability Amount** attribute is set to **Y**, the system must receive the binder payments whose sum is equal to or greater than the threshold amount. However, if the **Consider Binder Liability Amount** attribute is set to **N**, the system does not calculate the threshold amount for the binder payment. In such case, the system must receive a binder payment with the amount greater than zero.

On editing the binder liability amount and threshold percentage for an individual membership, the system recalculates the threshold amount for the binder payment. On creating a billable charge for an individual membership where the **Hold Billing** option is set to **Y**, the system will set the bill after date in the billable charge to a far future date (i.e. 12-31-2099).

Prerequisites

To setup the binder payment process, you need to do the following:

- Define the binder payment identification characteristic type for the payment in the system.
- Define the required status reason for the membership in the system.
- Define the required configurations for the following binder payment fields in the system.
 - Binder Payment Applicability
 - Hold Billing
 - Threshold Percentage
 - Grace Days
- Define the binder payment field mapping preference in the system.
- Values defined for binder payment in the **FIELD_CAT_FLG** lookup field
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
 - Binder Payment Field Mapping
- Attach an algorithm of the **C1-THRSHDAMT** algorithm type to the **Post-Processing** system event of the **C1-IndMembership** business object.
- Attach an algorithm of the **C1-BNDRH** algorithm type to the **Enter** system event of the **C1-IndMembership** business object where the status is **Active**.
- Attach an algorithm of the **C1-FICRETBC** algorithm type to the **Billable Charge Creation Post Processing** system event of the **Fully Insured Age Based** and **Fully Insured Tier Based** pricing rule type.

- Attach an algorithm of the **C1-BNFTODO** algorithm type and attach it as a soft parameter in the **C1-BPMNT** batch.
- Define the values in the parameter of the **C1-CCPYTSADS** algorithm.
- Lockbox tender types defined in the **C1_LBX_TENDER_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1_LBX_820_RECORD_TYPE**, **C1_LBX_REF_IDQ_LKP**, and **C1_LBX_RMR_ID_TYPE** lookup fields respectively.

To Do Notification on Binder Payment Cancellation

Oracle Revenue Management and Billing enables you to generate a To Do notification when a binder payment for an individual membership is canceled. To generate the To Do notification when a binder payment is canceled, you need to do the following setup:

- Add the following value in the **MEMB_PERS_STAT_RSN_FLG** lookup field:
 - Binder Payment Canceled
- Add the following status reason for the **Active** status of the **C1-IndMembership** business object:
 - Membership is active but binder payment is canceled
- Add the following the status reason mapping in the preference which is defined using the **Membership Status Reason Mapping (C1-MemStatusReasonMapping)** business object:

Member Person Status	Member Person Status Reason	Membership Status Reason
Active	Binder Payment Canceled	Membership is active but binder payment is canceled

- Define the following attributes in the preference which is defined using the **C1-FieldMapping (C1-FieldMapping)** business object and where the preference category is set to **Binder Payment**:

Attribute	Value	Entity Type
Membership Status Reason when Binder Payment Cancelled	Membership Status Reason Code (of the Membership is active but binder payment is canceled status)	Membership
To Do Type for Binder Payment Cancelled	C1-BPCNC	Membership

A new To Do type named **C1-BPCNC** and algorithm type named **C1-BNDPYNCL** are introduced in this release. To generate the To Do notification during binder payment cancellation, you need to attach an algorithm created using the **C1-BNDPYNCL** algorithm type to the **Payment Cancellation** system event of the required customer class. If the **C1-BNDPYNCL** algorithm is attached on the customer class, the system checks whether the cancel reason specified while canceling a payment is listed as a value of the **Binder Payment Cancel Reason List** parameter in the algorithm. If so, the system then validates whether the payment is a binder payment using the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference. If the payment is a binder payment, the system then determines the individual membership whose binder payment is canceled.

Note:

If a payment contains a membership identifier value characteristic that is specified in the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference, the system considers the payment as a binder payment.

The system derives the individual membership using the membership identifier value characteristic on the binder payment and the **Binder Payment Identification ID Type** attribute of the binder payment preference.

Once the individual membership is derived, the system fetches the binder payment applicability flag for the individual membership. If the binder payment applicability flag of the individual membership is set to **No**, the system will not generate the To Do notification when the binder payment is canceled.

However, if the binder payment applicability flag of the individual membership is set to **Yes**, the system will derive the binder payment threshold amount for the respective membership. If the binder payment threshold amount is equal to zero, the system will not generate the To Do notification when the binder payment is canceled.

If the binder payment threshold amount is greater than zero, the system will calculate the grace date (Membership Start Date + (Binder Payment Grace Days -1)) and the total binder payment amount until the grace date. If the **Consider Binder Liability Amount** attribute in the binder payment preference is set to **Y**, the system checks whether the total binder payment amount until the grace date is less than the threshold amount. If the total binder payment amount until the grace date is less than the threshold amount, the system does the following:

- Updates the member person status reason to **Binder Payment Canceled** and the membership status reason to **Membership is active but binder payment is canceled**
- A To Do using the **C1-BPCNC** To Do type is created

However, if the total binder payment amount until the grace date is greater than or equal to the threshold amount, the system neither changes the member person and membership status reasons nor creates a To Do notification when the binder payment is canceled.

If the **Consider Binder Liability Amount** attribute in the binder payment preference is set to **N**, the system checks whether the total binder payment amount until the grace date is equal to zero. If the total binder payment amount until the grace date is equal to zero, the system does the following:

- Updates the member person status reason to **Binder Payment Canceled** and the membership status reason to **Membership is active but binder payment is canceled**
- A To Do using the **C1-BPCNC** To Do type is created

However, if the total binder payment amount until the grace date is greater than zero, the system neither changes the member person and membership status reasons nor creates a To Do notification when the binder payment is canceled.

This algorithm contains the following parameters:

- **Membership Business Object** – Used to specify the individual membership business object. The system will then consider only those individual memberships which are created using the specified business object. Here, you must set the value to **C1-IndMembership**.
- **Algorithm for TO DO Creation** – Used to specify the algorithm using which you want to create a To Do notification during binder payment cancellation. Here, you must set the value to an algorithm which is created using the **C1-BNDTODO** algorithm type.
- **Binder Payment Cancel Reason List** – Used to specify a comma-separated list of payment cancel reasons that the system should consider while To Do generation on payment cancellation. You can specify maximum five comma-separated values for this parameter. Here, you must specify a payment cancel reason which is already defined in the system.

All the above parameters are mandatory.

Note that the system will update the membership status to **Pending Effectuation** only when the inbound message is received to change the membership status to **Pending Effectuation**. Until then, the member person and membership statuses will not change even if the respective binder payment is canceled.

Transfer Binder Payment from General Suspense Account to Individual Membership Account

Usually, in a fully insured individual business, the binder payments received before the individual membership enrollment are parked in the general suspense account. Oracle Revenue Management and Billing enables you to transfer the binder payments of an individual membership from the general suspense account to the individual member's account after the individual membership enrollment information is received through an inbound message.

To transfer the binder payment from general suspense account to individual membership account, you need to set the value for the following option type in the **C1_CMO** feature configuration:

- **Suspense Contract Type** – Used to indicate the suspense contract type whose suspense contracts' payments you want to transfer to the individual membership account.

A new batch control named **C1-PYTRS** is introduced in this release. It fetches the suspense contracts of the contract type which is specified in the **Suspense Contract Type** option type of the **C1_CMO** feature configuration. Once all suspense contracts are derived, the batch fetches the unmatched frozen payments which are made against the suspense contracts. The batch then checks whether the characteristic type specified in the **Payment Identifier Characteristic Type** parameter is defined on the payment. If the specified characteristic type is defined on the payment, the system considers the payment as the binder payment. If the specified characteristic type is not defined on the payment, the system does not consider the payment as the binder payment.

The batch then derives the individual membership for which the binder payment is made. While deriving the individual membership, the batch uses the membership identifier value characteristic defined on the binder payment and the value specified in the **Membership Identifier Type** parameter. You can specify a comma-separated list of membership identifier types in the **Membership Identifier Type** parameter. The batch then checks whether an individual membership exists with either of the membership identifier type and value combination in the system. Once the individual membership is derived, the batch fetches the individual member's account using the account identifier type and value characteristics which are defined on the individual membership.

Note:

While deriving the account identifier type and value characteristics, the system considers the characteristic types which are specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLNG** feature configuration.

If multiple individual memberships are derived with the membership identifier type and value combination, the system will not consider the binder payment for transfer and will accordingly add an appropriate log entry to such binder payments.

Once the individual member's account is derived, the batch transfers the binder payment from the suspense contract to either the unpaid bills or on account contract of the account depending on the following:

- If the match type is specified in the **Bill Match Type** parameter, the batch will transfer the binder payment from the suspense contract against the unpaid bills of the account. While transferring the binder payment against the unpaid bills of the account, the system will do either of the following:
 - If the **C1-MD-ACCT** manual distribution algorithm is attached to the match type, the system will distribute the binder payment against the unpaid bills of the account in the ascending order of the due date. If there are multiple bills with the same due date, the system will consider the unpaid bill in the ascending order of the unpaid amount. However, if there are multiple bills with the same due date and amount, the system will randomly consider the unpaid bill for payment. If there is any excess credit, the system will apply the excess credit amount on the on account contract of the individual member's account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.
 - If a manual distribution algorithm is not attached to the match type, the system will distribute the binder payment against the unpaid bills of the account in the ascending order of the due date. If there is any excess credit, the system will apply the excess credit amount on the on account contract of the individual member's

account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.

- If the match type is not specified in the **Bill Match Type** parameter, the batch will transfer the binder payment from the suspense contract to the on account contract of the individual member's account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.

While transferring the binder payment from the suspense contract to either the unpaid bills or on account contract, the system cancels the old payment on the suspense contract and creates a new payment against the unpaid bills or on account contract of the individual member's account. While canceling the old payment, the system uses the cancel reason specified in the **Payment Cancel Reason for Transfer** parameter. While creating a new binder payment, the system copies all characteristics from the old payment before changing its status to **Frozen**.

This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. This batch contains the following parameters:

Parameter Name	Mandatory (Yes or No)	Description
Payment Identifier Characteristic Type	Yes	Used to specify the characteristic type which stores the membership identifier value. The system then considers a payment as a binder payment if the specified characteristic type is defined on the payment. Note: You must specify the characteristic type where the characteristic entity is set to Payment .
Membership Identifier Type	Yes	Used to indicate the membership identifier type using which you want to derive the individual membership. If you specify multiple membership identifier types separated by comma, the system will derive the individual membership using either of the membership identifier type and value combinations. Note: You must specify a membership identifier type which is already defined in the system. You can specify maximum twenty comma-separated values for this parameter.
Bill Match Type	No	Used to indicate the match type using which you want to transfer the binder payment from the suspense contract to the unpaid bills of the individual member's account. Note: You must specify a match type where the entity type is set to Account .
On Account Match Type	Yes	Used to indicate the match type using which you want to transfer the binder payment from the suspense contract to the on account contract of the individual member's account.

Parameter Name	Mandatory (Yes or No)	Description
Payment Cancel Reason for Transfer	Yes	Used to indicate the payment cancel reason that you want to use while canceling the binder payment on the suspense contract.
		Note: You must specify a payment cancel reason which is already defined in the system.
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch.

Once the binder payment is transferred from the suspense contract to either the unpaid bills or on account contract of the individual membership's account, the payor account details on the tender is updated to the individual membership's account. Let us understand this with the help of an example.

The following table lists the details of a binder payment which is made against the general suspense account:

Payment Event ID	Account	Payment Amount	Payment Char Type	Payment Char Value	Payment Date	Account Type
PAY_ID1	SUS ACT 1	300	Payment Reference ID	M001	01-Nov-2023	General Suspense Account

Now, when you execute the **C1-PYTRS** batch after the individual membership inbound is received in ORMB, the system derives the individual membership for which binder payment is made and transfers the binder payment from the general suspense account to the individual membership's account. The following table illustrates two payments – one on the general suspense account and another on the individual membership account.

Payment Event ID	Payment ID	Account	Payment Amount	Payment Char Type	Payment Char Value	Payment Date	Payment Match Entity	Status
PAY_ID1	P1	SUS ACT 1	300	Payment Reference ID	M001	01-Nov-2023	General Suspense Account	CANCELLED
PAY_ID1	P2	ACT 1	300	Payment Reference ID	M001	01-Nov-2023	Member Account	FROZEN

Once the payment is created on the individual membership's account, the system updates the payor account on the tender from SUS ACT 1 to ACT 1.

Algorithms Used in Binder Payment

The following table lists the algorithms which are used in the binder payment:

Algorithm	Algorithm Type	Description
C1-THRSHDAMT	C1-THRSHDAMT	Refer to C1-THRSHDAMT on page 505
C1-BNDRH	C1-BNDRH	Refer to C1-BNDRH on page 478
C1-FICRETBC	C1-FICRETBC	Refer to C1-FICRETBC on page 503
C1-CCPYTSADS	C1-CCPYTSADS	Refer to C1-CCPYTSADS on page 501
C1-BNFTODO	C1-BNFTODO	Refer to C1-BNFTODO on page 500

C1-BNDRH

This algorithm is invoked during the membership activation process. It checks whether the binder payment is received for the membership. If the binder payment is received, the membership status is changed from **Pending Effectuation** to **Active**.

Note: At present, this algorithm is invoked only during the membership enrollment and not for membership reinstatement, where the membership status is changed from **Terminated** to **Active**.

This algorithm is invoked using the following scenario:

If...	Then...
<p>The membership is in the Active status and the binder payment attributes like the Consider Binder Liability Amount Flag is configured as N along with the Membership Status Reason when Binder Payment Received is configured as Binder Payment Received in the Field Mapping screen</p>	<p>The system checks whether the hold billing switch in the CI_MEMBERSHIP table contains any value. If any value exists, the system releases the billable charges which are kept on hold for the membership. In addition, the system performs the following operations:</p> <ul style="list-style-type: none"> • Retrieves the account (of the financial responsible person) for the membership. • Retrieves the non-binder payment contracts for the accounts from the CI_SA table. • Retrieves the billable charges present on the non-binder payment contracts where the membership ID is stamped as a characteristic. • Checks whether the bill after date of each billable charge contains a future date. If the bill after date contains a future date then it is changed to the system date minus one.

C1-BNFTODO

This algorithm is invoked from the **C1-BNDMNTR** binder payment monitoring batch, specifically for creating a To Do. This algorithm considers the following scenarios:

Scenario	System Behavior
<p>The binder payment is received within the grace days</p>	<p>The algorithm creates a To Do and updates either the membership or corresponding member's status reason to Binder Payment Received.</p>
<p>The binder payment is not received within the grace days</p>	<p>The algorithm creates a To Do and updates either the membership or corresponding member's status reason to Binder Payment not Received.</p>
<p>The Consider Binder Liability Amount Flag attribute is set to Y and the binder payment amount is received.</p>	<p>The algorithm retrieves the value of the To Do Type for Binder Payment Received attribute from the Field Mapping screen and creates the To Do with the message, Binder Payment of Amount [%1] Received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]</p>
<p>The Consider Binder Liability Amount Flag attribute is set to N and at least a single binder payment is received.</p>	<p>The algorithm retrieves the value of the To Do Type for Binder Payment Received attribute from the Field Mapping screen and creates the To Do with the message, Binder Payment of Amount [%1] Received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]</p>

Scenario	System Behavior
The Consider Binder Liability Amount Flag attribute is set to Y and the binder payment is not received.	The algorithm retrieves the value of the To Do Type for Binder Payment Not Received attribute from the Field Mapping screen and creates the To Do with the message, Binder Payment of expected amount [%1] not received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]
The Consider Binder Liability Amount Flag attribute is set to N and not even a single binder payment is received.	The algorithm retrieves the value of the To Do Type for Binder Payment Not Received attribute from the Field Mapping screen and creates the To Do with the message, Binder Payment is not received for Membership with Binder Payment Identifier [%1] and Health Plan [%2]

Note:

- [%1] refers to the total payment amount, comprising of all the payments made till date.
- [%2] refers to the binder payment identifier.
- [%3] refers to the specific health plan.

The **Consider Binder Liability Amount Flag** attribute is configured in the **Field Mapping** screen whereas the **To Do Creation** process happens when the **C1-BNFTODO** algorithm is attached as a soft parameter on the **C1-BNDMNTR** batch.

C1-CCPYTSADS

This algorithm is invoked when it is attached to the **Payment Tender Staging Distribution** system event of the customer class to which the account belongs. In addition, it checks whether the payment received is the first payment for the account. If the payment happens to be the first payment for the account, the payment is applied against the binder contract, which is created using the contract type specified in the payment distribution algorithm of the **Binder Payment** match type.

This algorithm introduces the following new parameters which are used for individual binder payment functionality:

- **Check Binder Payment For Individual** - Used when you want to transfer the payment to the binder contract. The valid values are:
 - **Y**
 - **N**
- **Membership Status Reason** - Used to notify the status reason of the binder payment for the membership. The valid value is:
 - **Awaiting Binder Payment**
- **Exchange Assigned Subscriber Number Characteristic** - Used while creating payment staging characteristic.
- **Exchange Assigned Subscriber Number Id Type** - Used when you want to identify the membership from the membership identifier (**CI_MEMBERSHIP_IDENTIFIER**) table.

This algorithm considers the following scenarios:

If...	Then...
The Check Promise To Pay parameter is set to Y	The algorithm checks whether there is an active promise to pay for the account. If an active promise to pay exists, the payment is applied against the contract which is created using the contract type specified in the payment distribution algorithm of the On Account match type.

If...	Then...
The Check Payment Agreement Request parameter is set to Y	The algorithm checks whether there is an active payment agreement request for the account. If an active payment agreement exists, the payment is applied against the contract which is created using the contract type specified in the payment distribution algorithm of the On Account match type.
The Check Promise To Pay and Check Payment Agreement Request parameters are set to N	The payment is applied to the account's unpaid bills in the order of the due date. If the payment amount is greater than the sum total of the account's billed balance plus the overpayment threshold amount, the entire payment amount is applied against the excess credit contract of the account.
The payment amount is greater than the account's billed balance, but less than the sum total of the account's billed balance plus the overpayment threshold amount	The payment is first applied against the unpaid bills of the account and the overpayment amount is then applied against the excess credit contract of the account.
The Check Binder Payment for Individual parameter is set to Y	The algorithm retrieves the membership by using the binder payment identification value which is received in the payment characteristics from the EDI 820 file.
The Membership Status Code for Pending Effectuation attribute is set to Pending Effectuation and the Membership Status Reason Hold / Awaiting Binder Payment attribute is set to Awaiting Binder Payment in the Field Mapping screen	<p>The algorithm performs the following steps:</p> <ol style="list-style-type: none"> 1. Retrieves the Binder Contract Type attribute and its value from the Field Mapping screen. 2. If the contract information is not found in the Binder Contract Type attribute then a new contract Id of the type Binder Contract is created on the account. If the contract information is found, the contract Id of the account is retrieved using the Binder Contract Type attribute. 3. Creates a payment staging record using the Binder Payment Match Type soft parameter and the value as the binder contract Id of the account, retrieved using the Binder Contract Type attribute. 4. Stores the binder payment identification value as a characteristic on the payment.
If the Membership Status Code for Pending Effectuation attribute is not Pending Effectuation and the Membership Status Reason Hold / Awaiting Binder Payment attribute is not Awaiting Binder Payment in the Field Mapping screen	<p>The algorithm performs the following steps:</p> <ol style="list-style-type: none"> 1. The payment is applied against the bill. 2. The binder payment identification value is added as a characteristic on the payment when the payment is received from the EDI 820 file against the bill Id. 3. The already existing soft parameters related to binder payment are removed and the binder related parameters are retrieved from the Field Mapping screen.

It contains the following parameters:

- **Check Binder Payment** - Used when you want to check whether the payment is the first payment for the account and the tender used for the payment is not an automatic payment. The valid values are:

- Y
- N
- **Check Promise To Pay** - Used when you want to check whether there is an active promise to pay for the account. The valid values are:
 - Y
 - N
- **Check Payment Agreement Request** - Used when you want to check whether there is an active payment agreement request for the account. The valid values are:
 - Y
 - N
- **Overpayment Threshold Amount** - Used to specify the overpayment threshold amount.
- **Bill Match Type** - Used to specify the match type using which you want to apply the payment against the unpaid bills of the account.
- **Binder Payment Match Type** - Used to specify the match type using which you want to apply the first non-automatic payment against the contract of the account.
- **On Account Match Type** - Used to specify the match type using which you want to apply the payment against the contract of the account.
- **Payment Review Reason Characteristic Type** - Used to specify the characteristic type which you want to use to store the payment reason.
- **Payment Review Reason for Active Promise To Pay** - Used to specify the characteristic value that must be specified when there is an active promise to pay for the account.
- **Payment Review Reason for Active Payment Agreement Request** - Used to specify the characteristic value that must be specified when there is an active payment agreement request for the account.
- **Payment Review Reason for Overpayment** - Used to specify the characteristic value that must be specified when the payment amount is greater than the sum total of account's billed balance plus overpayment threshold amount.
- **Excess Credit Contract Type** - Used to specify the contract type using which the excess credit contract should be created if it does not exist for the account.

C1-FICRETBC

Prerequisites

- Define the values for the option types **CTME (Characteristic Type For Membership Id)** and **PRSQ (Proration SQI)** in the **C1-ASOBLLNG** feature configuration.
- Define the price item which is passed (as a billable charge data) through a health care inbound message.
- Define the pass-through billable charge pricing rule type on the policy plan.

This algorithm is invoked to create SQI (Service Quantity Identifier) based billable charges for fully-insured services. This algorithm creates the following set of SQI based billable charges:

- **Pre-calculated Premium Amount** - SQI based billable charges which are created for pre-calculated premium amount received through a healthcare inbound message.
- **Calculated Premium Amount** - Price items for which the SQI based billable charges are created using the pricing rules defined on the policy plan level.

This algorithm also performs the following operations:

- Creation of the new billable charges.
- Cancellation of the existing billable charges.

- End Date modification of the existing billable charges.

This algorithm is invoked in the following scenarios:

If...	Then...
A billable charge exists for a specific date range where the Billable Charge Status field is set to Billable option which is yet to be processed with the same start date, price item, and membership information	The algorithm modifies only the end date information of that specific billable charge.
The membership is in the Pending Effectuation status and the status reason is Awaiting Binder Payment , where the status reason is mapped with the attribute value of the Membership Status Reason Hold / Awaiting Binder Payment attribute field in Field Mapping screen	The algorithm retrieves the values of the binder payment applicability and hold billing switch from the CI_MEMBERSHIP table. If the binder payment applicability and the hold billing switch is set to Y , the algorithm updates the bill after date information on the billable charge to 31-Dec-2099 .
The billable charge for a particular price item and membership appear in the proposed date range and either of them have a different start date or amount	The algorithm cancels the billable charge.

Note:

Billable charges which are created or updated for calculated charges, are updated accordingly in the **PriceCalculationDetail** entity in the **CI_PRCE_CALC** table. Further, those billable charge entries are marked as **Completed**. The Pricing rule type corresponding to the price item (during the processing of the inbound billable charge information) is fetched from the **PricingRuleTypePriceitem** entity in the **CI_PRC_RULE_TYPE_PRICEITEM** table on the first found basis.

The inbound billable charge information is processed as per the latest billable charge data. Once the inbound message is invoked, the algorithm assumes the following conditions:

- The billable charge line characteristics are not available.
- Every billable charge line has the same currency code.

In the case of modification or cancellation of the existing billable charges, its corresponding bill segments go through the following conditions:

- If the billable charge end date is updated, the algorithm checks for all the bill segments where the date range exceeds the billable charge end date. If the date range exceeds the billable charge end date, then only those billable charges are either canceled or deleted based on the status of the bill segment.
- If the billable charge is canceled, then all the bill segments within that billable charge are either canceled or deleted based on the status of the bill segment.

Finally, the billable charges are stamped with the following information:

- Price Item
- SQI (derived from the **C1-ASOBLLNG** feature configuration)
- Pass-through billable charge entries in the **MEMO ONLY** state.
- Aggregated amount is stamped as service quantity.
- Additional information, if any...

It contains the following parameter:

- **Bill To Type Flag** - This flag is used when the **Contract ID** is added in the **MEMBERSHIP_SA** table.

C1-THRSHDAMT

This algorithm is invoked when the membership is in the **Pending Effectuation** status and the status reason is **Awaiting Binder Payment**, as per the binder payment preference configuration done in the **Field Mapping** screen. It monitors or checks the memberships from whom the binder payment is yet to be received.

This algorithm's behavior is shown as follows:

Scenario	System Behavior
If the BINDER_PAY_APPL_SW field (also known as the Binder Payment Applicability flag) from the CI_MEMBERSHIP table is set to Y	The algorithm retrieves the BINDER_LIABILITY_AMT from the CI_MEMBERSHIP table.
If the Consider Binder Liability Amount Flag is set to Y , and the Binder Liability Amount is blank or the Binder Liability Amount is less than zero	The algorithm generates an error, Binder Liability Amount can't be blank or less than zero if the Consider Liability Amount is Y .
If the BINDER_LIABILITY_AMT field from the CI_MEMBERSHIP table is not blank and greater than zero	<p>The algorithm calculates the threshold amount using the following formula,</p> $\text{CI_MEMBERSHIP.THRESHOLD_AMT} = \frac{\text{CI_MEMBERSHIP.BINDER_LIABILITY_AMT}}{(\text{CI_MEMBERSHIP.BINDER_PAY_THRES \%})}$ <p>For example, Let's assume that the binder liability amount is \$100 and binder payment threshold percentage is 90%. The algorithm uses the above formula to derive the threshold amount which is $\\$100 * 90\% = 90$. The calculated threshold amount is added in the CI_MEMBERSHIP.THRESHOLD_AMT field for the membership which is in Pending Effectuation status where the status reason is Awaiting Binder Payment.</p>

Note: The threshold amount is updated whenever the binder liability amount or binder threshold percentage value changes for the membership which is in the **Pending Effectuation** status.

Binder Payment Creation

Oracle Revenue Management and Billing considers a payment as a binder payment when a characteristic is defined for the payment using the characteristic type specified in the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference. The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLNG** feature configuration. This type of characteristic must be defined when the binder payment is created. It stores the membership identifier to indicate the individual membership for which the binder payment is received.

You can create a binder payment through the following features or interfaces:

- Payment Web Service
- Payment Upload
- Payment Upload Staging
- Payment Request
- Payment Event
- EDI 820 File Upload

While creating a payment through any of the above mechanism except the latter one, you need to ensure that the binder payment identification characteristic is defined for the payment. However, in case of EDI 820 File Upload, the system will extract the data stored in the NM1 tag and store it in the payment characteristics staging table. This is done when the **C1-PUPSG** batch is executed.

You can view the binder payments received for the membership or financial responsible member person's account through the **Payment Event Summary** and **Customer 360° Information** screens.

Binder Payment Monitoring

A new batch named **C1-BPMNT** is introduced to monitor the binder payments for the individual memberships. It checks whether there are any individual memberships where:

- Individual membership status is set to the value specified in the **Membership Status Code for Pending Effectuation** attribute of the binder payment preference.
- Membership status reason is set to the value specified in the **Membership Status Reason when Awaiting Binder Payment** attribute of the binder payment preference.

Note: The batch considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

If so, the batch checks whether the **Binder Payment Applicability** option is set to **Y** for the individual membership. If so, the system calculates grace date using the membership start date and grace days. If the grace date is equal to or earlier than system date, the batch derives the account for the individual membership. While deriving the account for the individual membership, the system checks whether the characteristic types specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration are defined for the individual membership. If so, the system derives the account using these characteristics defined for the individual membership. If these characteristics are not defined for the individual membership, the system derives the account of financially responsible member person. The system checks whether a payment with the binder payment identification characteristic exists against any contract of the account. If so, the system derives the value from the **Binder Payment Identification ID Type** attribute of the binder payment preference. The system then checks whether the binder payments are received for the individual membership using the values from the following:

- Binder Payment Identification Characteristic
- Binder Payment Identification ID Type attribute of the binder payment preference

If the binder payments are received for the individual membership, the system does the following:

If the Consider Binder Liability Amount set to...	Then...
Y	<p>The system validates whether the sum of binder payments is equal to or greater than the threshold amount. If so, the system does the following:</p> <ul style="list-style-type: none"> • Creates a To Do using the To Do type which is specified in the To Do Type for Binder Payment Received attribute of the binder payment preference. • Updates the membership status reason to the value specified in the Membership Status Reason when Binder Payment Received attribute of the binder payment preference. • Updates the member person status reason using the membership status reason preference which is specified in the Status Reason Mapping option type of the C1-ASOBLLNG feature configuration. • Changes the bill after date of the billable charges when the Hold Billing option for the individual membership is set to Y.

If the Consider Binder Liability Amount set to...	Then...
N	<p>The system does not validate the binder payment against the threshold amount. If the binder payment amount is greater than zero, the system does the following:</p> <ul style="list-style-type: none"> • Creates a To Do using the To Do type which is specified in the To Do Type for Binder Payment Received attribute of the binder payment preference. • Updates the membership status reason to the value specified in the Membership Status Reason when Binder Payment Received attribute of the binder payment preference. • Updates the member person status reason using the membership status reason preference which is specified in the Status Reason Mapping option type of the C1-ASOBLLNG feature configuration. <p>Note: In this case, the system does not update the bill after date of the billable charges when the Hold Billing option for the individual membership is set to Y. The system updates the bill after date of the billable charges when the status of the individual membership is changed to Active through a health care inbound message.</p>

If the grace date is later than the system date, the batch does the following irrespective of whether the **Consider Binder Liability Amount** attribute is set to **Y** or **N**:

- Creates a To Do using the To Do type which is specified in the **To Do Type for Binder Payment Not Received** attribute of the binder payment preference.
- Updates the membership status reason to the value specified in the **Membership Status Reason when Binder Payment Not Received** attribute of the binder payment preference.
- Updates the member person status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.

Binder Payment Preference

The Binder Payment Preference enables you to set the attributes which are used during binder payment creation and monitoring. While deriving the binder payment details for a membership, the system uses the following attributes from the binder payment preference:

- Binder Contract Type
- Binder Payment Identification Characteristics Type
- Binder Payment Identification ID Type
- Consider Binder Liability Amount
- Membership Status Code for Active
- Membership Status Code for Pending Effectuation
- Membership Status Reason on Activating Membership
- Membership Status Reason when Awaiting Binder Payment
- Membership Status Reason when Binder Payment Not Received
- Membership Status Reason when Binder Payment Received
- To Do Type for Binder Payment Not Received

- To Do Type for Binder Payment Received

For more information about these attributes, see [Defining a Binder Payment Preference](#) on page 509.

The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLNG** feature configuration. You can define, edit, delete, and copy a binder payment preference through the **Field Mapping** screen.

Searching for a Binder Payment Preference

Prerequisites

To search for a binder payment preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a binder payment preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Binder Payment** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of binder payment preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Binder Payment Preference Details

Procedure

To view the details of a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the binder payment preference whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the binder payment preference in the **Field Mapping** zone.

Defining a Binder Payment Preference**Prerequisites**

To define a binder payment preference, you should have:

- Values defined for the **Binder Payment Field Mapping** option type in the **C1-ASOBLLNG** feature configuration.
- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To define a binder payment preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create a binder payment preference. The valid values are: <ul style="list-style-type: none"> • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the binder payment preference.	Yes
Description	Used to specify the description for the binder payment preference.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the binder payment preference.	No
Status	Used to indicate the status of the binder payment preference. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

- **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: <ul style="list-style-type: none"> Billing Binder Payment Geographic Rating Area Individual Membership Medicare Medicare Plan Benefit Member Reconciliation Member Relationship and Subscription Tier Member Status Reason Preferences Statement Construct 	Yes
	Note: You must select Binder Payment option as the preference category while creating a binder payment preference.	

- **Preference Settings** - Used to set the attributes in the binder payment preference.

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the binder payment preference. The valid values are:</p> <ul style="list-style-type: none"> • Binder Contract Type - Used when you want to identify the binder contract in the binder payment preference. • Consider Binder Liability Amount Flag - Used when you want to set the consider binder liability amount flag once the binder payment is received in the binder payment preference. • Binder Payment Identification Characteristics Type - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • Binder Payment Identification ID Type - Used when you want to identify the membership type in the binder payment preference. • Membership Status Code for Active - Used when you want to define the status code when the membership is in the Active status in the binder payment preference. • Membership Status Code for Pending Effectuation - Used when you want to define the status code when the membership is in the Pending Effectuation status in the binder payment preference. • Membership Status Reason on Activating Membership - Used when you want to define the status reason code once the binder payment is received and the membership status is changed to Active for the binder payment preference. 	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is required while defining the settings for a binder payment preference.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)

Note: While defining a binder payment preference, you must set at least one attribute in the binder payment preference.

6. Select the **Binder Payment** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.

9. If you want to set more than one attribute in the binder payment preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove an attribute from the binder payment preference, click the **Delete** (🗑️) icon corresponding to the attribute.

10. Click **Save**.

The binder payment preference is defined.

Editing a Binder Payment Preference

Prerequisites

To edit a binder payment preference, you should have:

- Values defined for **Binder Payment Field Mapping** option type in the **C1-ASOBLNG** feature configuration.
- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To edit a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the binder payment preference whose details you want to edit.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the binder payment preference.	Not applicable
Description	Used to specify the description for the binder payment preference.	Yes
Detailed Description	Used to specify additional information about the preference.	No
Status	Used to indicate the status of the binder payment preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the feature for which the preference is designed. The valid value is: <ul style="list-style-type: none"> • Binder Payment 	Not applicable

- **Preference Settings** - Used to define the settings for the member reconciliation preference.

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the binder payment preference. The valid values are:</p> <ul style="list-style-type: none"> • Binder Contract Type - Used when you want to identify the binder contract in the binder payment preference. • Consider Binder Liability Amount Flag - Used when you want to set the consider binder liability amount flag once the binder payment is received in the binder payment preference. • Binder Payment Identification Characteristics Type - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • Binder Payment Identification ID Type - Used when you want to identify the membership type in the binder payment preference. • Membership Status Code for Active - Used when you want to define the status code when the membership is in the Active status in the binder payment preference. • Membership Status Code for Pending Effectuation - Used when you want to define the status code when the membership is in the Pending Effectuation status in the binder payment preference. • Membership Status Reason on Activating Membership - Used when you want to define the status reason code once the binder payment is received and the membership status is changed to Active for the binder payment preference. • Membership Status Reason Hold/Awaiting Binder Payment - Used when you want to define the status reason code as Hold/Awaiting Binder Payment when the binder payment is not yet received for the membership in the binder payment preference. 	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This field is required while editing the settings for a binder payment preference.</p> </div>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • Membership Status Reason when Binder Payment Not Received - Used when you want to define the status reason code as Binder Payment Not Received when the binder payment is not received for the membership in the binder payment preference. • Membership Status Reason when Binder Payment Received - Used when you want to define the status reason code as Binder Payment Received when the binder payment is received for the membership in the binder payment preference. • To Do Type for Binder Payment Not Received - Used when you want to specify a To Do type when the binder payment is not received for the membership in the binder payment preference. • To Do Type for Binder Payment Received - Used when you want to specify a To Do type when the binder payment is received for the membership in the binder payment preference.

Copying a Binder Payment Preference

Instead of creating a binder payment preference from scratch, you can create a new binder payment preference using an existing binder payment preference. This is possible through copying a binder payment preference. On copying a binder payment preference, the details including the attributes are copied to the new binder payment preference. You can then edit the details, if required.

Prerequisites

To copy a binder payment preference, you should have:

- Binder Payment preference (whose copy you want to create) defined in the application
- Values defined for **Binder Payment Field Mapping** option type in the **C1-ASOBLLNG** feature configuration.
- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To copy a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** () icon in the **Duplicate** column corresponding to the binder payment preference whose copy you want to create.
3. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the binder payment preference.	Yes
Description	Used to specify the description for the binder payment preference.	Yes
Detailed Description	Used to specify additional information about the binder payment preference.	No
Status	Used to indicate the status of the binder payment preference. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Preference Category	Indicates the feature for which the preference is designed. The valid values is: <ul style="list-style-type: none"> • Binder Payment 	Not applicable

- **Preference Settings** - Used to set the attributes in the binder payment preference.

Field Name	Field Description	Mandatory (Yes or No)
Attribute	<p>Used to indicate the attribute which you want to set in the binder payment preference. The valid values are:</p> <ul style="list-style-type: none"> • Binder Contract Type - Used when you want to identify the binder contract in the binder payment preference. • Consider Binder Liability Amount Flag - Used when you want to set the consider binder liability amount flag once the binder payment is received in the binder payment preference. • Binder Payment Identification Characteristics Type - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • Binder Payment Identification ID Type - Used when you want to identify the membership type in the binder payment preference. • Membership Status Code for Active - Used when you want to define the status code when the membership is in the Active status in the binder payment preference. • Membership Status Code for Pending Effectuation - Used when you want to define the status code when the membership is in the Pending Effectuation status in the binder payment preference. • Membership Status Reason on Activating Membership - Used when you want to define the status reason code once the binder payment is received and the membership status is changed to Active for the binder payment preference. • Membership Status Reason Hold/Awaiting Binder Payment - Used when you want to define the status reason code as Hold/Awaiting Binder Payment when the binder payment is not yet received for the membership in the binder payment preference. 	<p>Yes (Conditional)</p> <p>Note: This field is required while defining the settings for a binder payment preference.</p>

Deleting a Binder Payment Preference

Procedure

To delete a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the binder payment preference that you want to delete.

A message appears confirming whether you want to delete the binder payment preference.

Tip: Alternatively, you can delete a binder payment preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The binder payment preference is deleted.

Membership Status Reason Preference

The Membership Status Reason preference enables you to map a member person status and status reason with an individual membership status reason. This mapping is used during:

- **Membership Status Transition** - When the member person status and status reason are received through a health care inbound message or membership repricing inbound web service
- **Member Person Status Transition** - When the binder payment is monitored for the individual membership

The system enables you to define, edit, delete, and copy a membership status reason preference through the **Field Mapping** screen. You can derive the member person status and member person status reason mapping attributes from the values specified in the **MEMBER_PER_STATUS_FLG** and **MEMB_PERS_STAT_RSN_FLG** lookup fields, where as the mapping attributes of the membership status reason can be derived from the **Status Reason** screen.

The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLNG** feature configuration.

Searching for a Membership Status Reason Preference

Prerequisites

To search for a membership status reason preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a membership status reason preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
The **Field Mapping** screen appears.
4. Select the **Membership Status Reason** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
A list of membership status reason preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Membership Status Reason Preference Details

Procedure

To view the details of a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the membership status reason whose details you want to view.
The **Field Mapping** zone appears.
3. View the details of the membership status reason in the **Field Mapping** zone.

Defining a Membership Status Reason Preference

Prerequisites

To define a membership status reason preference, you should have:

- Values defined in the **MEMBER_PER_STATUS_FLG** and **MEMB_PERS_STAT_RSN_FLG** lookup field
- Membership status reason defined in the application.

Procedure

To define a membership status reason preference:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.

- From the **Admin** menu, select **F** and then click **Field Mapping**.

A sub-menu appears.

- Click the **Add** option from the **Field Mapping** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the billing preference. The valid values are: <ul style="list-style-type: none"> Field Mapping Medicare Plan Benefit Package Membership Status Reason Mapping 	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

- Select the **Membership Status Reason Mapping** option from the **Field Mapping Business Object** list.
- Click **OK**.

The **Membership Status Reason Mapping** screen appears. It contains the following sections:

- Main** - Used to specify basic details of the membership status reason preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the membership status reason preference.	Yes
Description	Used to specify the description for the membership status reason preference.	Yes

- Status Reason Mapping** - Used to create the mappings in the membership status reason preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: <ul style="list-style-type: none"> Active Canceled Inactive Pending Effectuation 	Yes (Conditional)
	<p>Note: This list includes only those statuses which are defined in the MEMBER_PER_STATUS_FLG lookup field.</p>	<p>Note: This field is required while creating a mapping in the membership status reason preference.</p>

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status Reason	<p>Used to indicate the reason why the status of the member person is changed. The valid values are:</p> <ul style="list-style-type: none"> • Awaiting Binder Payment • Binder Payment Not Received • Binder Payment Received • Binder payment notification send to upstream • Member is added by mistake • Employee Left organization • New Enrollment • Membership is re-instated • Spouse legally separated • Membership is Terminated <p>Note: This list includes only those status reasons which are defined in the MEMB_PERS_STAT_RSN_FLG lookup field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while creating a mapping in the membership status reason preference.</p>
Membership Status Reason	<p>Used to indicate the reason why the status of the membership is changed.</p> <p>Note: You must specify a membership status reason which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while creating a mapping in the membership status reason preference.</p>

Note: While defining a membership status reason preference, you must create at least one mapping in the membership status reason preference.

- Enter the required details in the **Main** section.
- Select the required status reason mapping from the respective fields.
- If you want to set more than one status reason mapping in the membership status reason preference, click the **Add (+)** icon and then repeat step 8.

Note: However, if you want to remove a status reason mapping from the membership status reason preference, click the **Delete (🗑)** icon corresponding to the status reason mapping.

- Click **Save**.

The membership status reason preference is defined.

Editing a Membership Status Reason Preference

Prerequisites

To edit a membership status reason preference, you should have:

- Values defined in the **MEMBER_PER_STATUS_FLG** and **MEMB_PERS_STAT_RSN_FLG** lookup field
- Membership status reason defined in the application.

Procedure

To edit a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the membership status reason preference whose details you want to edit.

The **Membership Status Reason Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the membership status reason preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the membership status reason preference.	Not applicable
Description	Used to specify the description for the membership status reason preference.	Yes

- **Status Reason Mapping** - Used to create or edit the mappings in the membership status reason preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: <ul style="list-style-type: none"> • Active • Canceled • Inactive • Pending Effectuation 	Yes (Conditional)
	<p>Note: This list includes only those statuses which are defined in the MEMBER_PER_STATUS_FLG lookup field.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status Reason	<p>Used to indicate the reason why the status of the member person is changed. The valid values are:</p> <ul style="list-style-type: none"> • Awaiting Binder Payment • Binder Payment Not Received • Binder Payment Received • Binder payment notification send to upstream • Member is added by mistake • Employee Left organization • New Enrollment • Membership is re-instated • Spouse legally separated • Membership is Terminated <p>Note: This list includes only those status reasons which are defined in the MEMB_PERS_STAT_RSN_FLG lookup field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while editing a mapping in the membership status reason preference.</p>
Membership Status Reason	<p>Used to indicate the reason why the status of the membership is changed.</p> <p>Note: You must specify a membership status reason which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while editing a mapping in the membership status reason preference.</p>

Tip: Alternatively, you can edit the details of a membership status reason preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the status reason mapping from the membership status reason preference, if required.

Note: You must create at least one status reason mapping in a membership status reason preference.

5. Click **Save**.

The changes made to the membership status reason preference are saved.

Copying a Membership Status Reason Preference

Instead of creating a membership status reason preference from scratch, you can create a new membership status reason preference using an existing membership status reason preference. This is possible through copying a membership status reason preference. On copying a membership status reason preference, the details including the attributes are copied to the new membership status reason preference. You can then edit the details, if required.

Prerequisites

To copy a membership status reason preference, you should have:

- Membership status reason preference (whose copy you want to create) defined in the application
- Values defined in the **MEMBER_PER_STATUS_FLG** and **MEMB_PERS_STAT_RSN_FLG** lookup field
- Membership status reason defined in the application.

Procedure

To copy a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the membership status reason preference whose copy you want to create.

The **Membership Status Reason Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the membership status reason preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the membership status reason preference.	Yes
Description	Used to specify the description for the membership status reason preference.	Yes

- **Status Reason Mapping** - Used to create the mappings in the membership status reason preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: <ul style="list-style-type: none"> • Active • Canceled • Inactive • Pending Effectuation 	Yes (Conditional)
	<p>Note: This list includes only those statuses which are defined in the MEMBER_PER_STATUS_FLG lookup field.</p>	<p>Note: This field is required while creating a mapping in the membership status reason preference.</p>

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status Reason	<p>Used to indicate the reason why the status of the member person is changed. The valid values are:</p> <ul style="list-style-type: none"> • Awaiting Binder Payment • Binder Payment Not Received • Binder Payment Received • Binder payment notification send to upstream • Member is added by mistake • Employee Left organization • New Enrollment • Membership is re-instated • Spouse legally separated • Membership is Terminated <p>Note: This list includes only those status reasons which are defined in the MEMB_PERS_STAT_RSN_FLG lookup field.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while creating a mapping in the membership status reason preference.</p>
Membership Status Reason	<p>Used to indicate the reason why the status of the membership is changed.</p> <p>Note: You must specify a membership status reason which is already defined in the system.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required while creating a mapping in the membership status reason preference.</p>

Note: While defining a membership status reason preference, you must create at least one mapping in the membership status reason preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the mapping from the membership status reason preference, if required.
5. Click **Save**.

The new membership status reason preference is defined.

How to search for a membership status reason preference	Searching for a Membership Status Reason Preference on page 522

Deleting a Membership Status Reason Preference

Procedure

To delete a membership status reason preference:

1. Search for the membership status reason in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the membership status reason preference that you want to delete.

A message appears confirming whether you want to delete the membership status reason preference.

Tip: Alternatively, you can delete a membership status reason preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.

The membership status reason preference is deleted.

Chapter 7

Customer Registration

Topics:

- [Customer Registration \(Without Approval\) Status Transition](#)
- [Customer Registration \(With Approval\) Status Transition](#)
- [Customer Registration Template](#)
- [Customer Registration Type](#)
- [Customer Registration \(Used for Searching\)](#)
- [Customer Registration \(Used for Viewing\)](#)

Until now, you were able to create person, account, policy, and policy plan from the different screens. Now, ORMB provides the ability to create a person, multiple accounts for the person, multiple policies for the person, and multiple policy plans for the policy from the same user interface. A new object named **Customer Registration** is introduced in this release. Through a customer registration object, you can create person, accounts, policies, and policy plans at the same time from the same interface. Before creating a customer registration object, you need to create the following:

- Customer Registration Template
- Customer Registration Type

While creating a customer registration object, you need to specify the following:

- A customer registration type using which the customer registration object should be created
- A source system from the customer information is received
- A type of person that you want to create through the customer registration object

Once you specify the above details, the **Customer Registration** screen appears with a set of pages and sections which are added in the respective person template. The default values for the fields, characteristic types, identifier types, and phone types are shown as specified in the person template. In addition, the field values, characteristic types, characteristic values, identifier types, identifier values, phone types, and phone numbers are disabled as specified in the person template. On the Accounts page, you can view one row for each account template which is added in the customer registration type. You can then edit the row and thereby create an account for the person. You can create multiple accounts for the person using the same or different template.

Note:

You cannot create sort records and derivation and pricing parameters for the bill group from the **Customer Registration** screen. You can only create these from the **Customer 360° Information** screen or using the health care inbound message.

The system creates effective dated address using the address business object which is specified in the customer registration type. By default, the account override address is effective from the date when the customer registration object is created in the system.

On the **Policies** page, you can view one row for each policy template which is added in the customer registration type. You can then edit the row and thereby

create a policy for the person. You can create multiple policies for the person using the same or different template. On clicking the **Add** icon corresponding to the policy row, you can view one row for each policy plan template which is added in the customer registration type. You can then edit the row and thereby create a policy plan for the policy.

On clicking the **View/Edit** icon or the **Add New Account** button in the **Accounts** page, the **Customer Registration - Add Account** screen appears with a set of pages and sections which are added in the respective account template. The default values for the fields, characteristic types, and identifier types are shown as specified in the account template. In addition, the field values, characteristic types, characteristic values, identifier types, and identifier values are disabled as specified in the account template.

On clicking the **View/Edit** icon or the **Add New Policy** button in the **Policies** page, you need to specify a policy type. The policy type indicates the category to which the policy belongs (i.e. whether it is Self Funded, Fully-Insured Group, or Fully-Insured Individual) and the policy business object using which the policy should be created. Once you specify a policy type, the **Policy** screen appears with a set of sections which are added in the respective policy template. The default values for the fields and characteristic types are shown as specified in the policy template. In addition, the field values, characteristic types, and characteristic values are disabled as specified in the policy template. You can create one or more policies for the person using the same or different policy type.

On clicking the **View/Edit** icon or the **Add New Plan** button corresponding to a policy plan row in the **Policies** page, the **Plan** screen appears with a set of sections which are added in the respective policy plan template. The default values for the fields and characteristic types are shown as specified in the policy plan template. In addition, the field values, characteristic types, and characteristic values are disabled as specified in the policy plan template.

You can save the person, account, policy, and policy plan details as and when you are entering the data by clicking the **Save as Draft** button. On clicking the **Save as Draft** button, the system creates a customer registration object in the Draft status. The status of the policies which are created through the customer registration object is set to Pending. Once the person, account, policy, and policy plan details are specified, you can click the **Validate and Save** button. The system then validates the information. You can edit, delete, or submit a customer registration object when it is in the **Draft** status. On submitting a customer registration object, the person, accounts, policies, and policy plans are created in the system. Finally, the status of the customer registration object is changed to the following depending on the type of person:

Person Type	Status
Parent Customer	Parent Customer Approved
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

You can optionally configure the approval process for the customer registration. If the **Approval Required** option is selected in the customer registration type, the status of the customer registration object is changed to **Approval In Progress** on submitting it. A To Do using the approval To Do type is created and assigned to the users with the approval To Do role. The approver can

then review the customer registration object and accordingly approve, reject, or request the submitter to resubmit the customer registration object for approval. On approving a customer registration object, the person, accounts, policies, and policy plans are created in the system. Finally, the status of the customer registration object is changed to the following depending on the type of person:

Person Type	Status
Parent Customer	Parent Customer Approved
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

If the approver rejects a customer registration object due to some reason, the status of the customer registration object is changed to **Rejected**. However, if the approver requests the submitter to resubmit a customer registration object for approval after making the required changes, the status of the customer registration object is changed to **Draft**. The submitter can then make the required changes and resubmit the customer registration object for approval.

The system provides the following two options while defining a customer registration type:

- Manual Billing Hierarchy and Pricing**- Used when you want to inform the user to create the billing hierarchy and pricing for the parent customer manually. In other words, you want the user to create the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters. If this option is selected, a To Do is created using the **Billing Hierarchy and Pricing To Do** type and assigned to the users with the **Billing Hierarchy and Pricing To Do** role. This feature can be used only for customer registration objects where the person type is set to **Parent Customer**. Once the billing hierarchy and pricing is created for the parent customer, the user must complete the corresponding To Do which is created using the **Billing Hierarchy and Pricing To Do** type. On executing the **Customer Registration Monitor (C1-CUSRG)** batch, the system considers all customer registration objects which are in the **Parent Customer Approved** or **Pending Pricing Correction** status. It checks whether the corresponding To Do (if any) created using the **Billing Hierarchy and Pricing To Do** type is completed. If so, it changes the status of the customer registration object to the following depending on whether the **Final Approval Required** option is selected:

Final Approval Required (Yes or No)	Status
Yes	Pending Final Approval
No	Complete

- Final Approval Required**- Used to indicate whether the final approval is required once the approver at the first level approves the customer registration object. Ideally, the final approval is required when the **Manual Billing Hierarchy and Pricing** option is selected. This ensures that the information related to the following entities is created and verified before the customer registration object moves to the **Complete** status:
 - Bill Group

- Bill Group's Accounts
- Bill Group's Sorting Records
- Bill Group's Derivation and Pricing Parameters
- Pricing Rules for the Policy Plans

If this option is selected, a To Do is created using the **Final Approval To Do** type and assigned to the users with the **Final Approval To Do** role. This feature can be used only for customer registration objects where the person type is set to **Parent Customer**. Once the user with the **Final Approval To Do** role approves the customer registration object, the status of the customer registration object is changed to **Complete**.

If the approver requests the submitter to resubmit a customer registration object for approval, the status of the customer registration object is changed to **Pending Pricing Correction**.

Note: The system enables you to create maximum 10 accounts and 5 policies for a person and maximum 10 policy plans for a policy through a customer registration object from the user interface.

Once the status of a customer registration object is changed to **Complete** or **Bill Group Approved**, the system changes the status of the policies created through the customer registration object to **In Force/Active**. In addition, the status of the pricing rules which are created for such policies' policy plans is set to **Active**.

You can also create a customer registration object using the **File Upload Interface** utility through an inbound message. On creating an inbound message using the **File Upload Interface** utility, the status of the inbound message is set to **Pending**. Once the inbound message is processed, a customer registration object is created in the following status depending on the person type:

Person Type	Status
Parent Customer	Complete
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

Note: The above status transition is mentioned based on the assumption that the data uploaded through the **File Upload Interface** utility will be pre-approved and does not require any approval in the system.

At present, only the XML format is supported for creating a customer registration object using the File Upload Interface utility through an inbound message. To implement the Customer Registration feature, the following new screens are introduced in this release:

- Customer Registration Template
- Customer Registration Type
- Customer Registration

Customer Registration (Without Approval) Status Transition

The following figure graphically indicates how a customer registration object moves from one status to another when the approval process is not configured in the customer registration type:

Customer Registration (With Approval) Status Transition

The following figure graphically indicates how a customer registration object moves from one status to another when the approval process is configured in the customer registration type:

Customer Registration Template

A customer registration template encapsulates the following information:

- List of pages that should appear when you create a person, account, policy, or policy plan using the respective customer registration template
- List of sections that should appear in each page
- Field or characteristic attributes, such as:
 - Default value for a field or characteristic type
 - Default value for a person or account identifier type or phone type
 - Primary identifier type for a person or account
 - Mandatory field in each section
 - Enable or disable the field value, identifier type, identifier value, characteristic type, characteristic value, phone type, or phone number

You can create multiple customer registration templates for person, account, policy and policy plan. Depending on whether you are creating a customer registration template for person, account, policy or policy plan, you can include the following pages and define field or characteristic attributes for the following sections:

The following table lists the pages and sections that are available in the respective template category:

Template Category	Template Page	Template Section
Person	Main	Person Main
		Person Names
		Person Identifiers
		Person Phones
	Contact Information	Person Address
		Person Email
	Accounts	-
	Person Hierarchy	Person Hierarchy – Main
		Person Hierarchy – Characteristics
	Person Characteristics	Person Characteristics
	Policies	Policies
		Parent Policies
	Registration Characteristics	Customer Registration Characteristics
Account	Main	Account Information

Template Category	Template Page	Template Section
		Account Identifiers
	Auto Pay	Account Autopay
	Persons	Main
		Account Address Override Information
	Bill Routing	
Account Characteristics	Account Characteristics	
Policy	Policy – Main	Policy Main
		Policy Persons
		Policy Characteristics
Policy Plan	Plan	Plan - Main
		Plan - Characteristics

Search Customer Registration Template

The **Search Customer Registration Template** zone allows you to search for a customer registration template using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for customer registration templates using the banking template or the healthcare template details. The valid values are:</p> <ul style="list-style-type: none"> • Banking Template - Used to indicate whether you want to search for customer registration templates created using the C1-CustomerRegistrationTmplBK business object. • Healthcare Template - Used to indicate whether you want to search for customer registration templates created using the C1-CustomerRegistrationTmplHC business object. <p>Note: By default, the Banking Template option is selected.</p>	Yes
Template	Used to search for a particular template.	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search for customer registration templates having a particular description.	No
Template Category	Used to search for customer registration templates which belong to a particular category. The valid values are: <ul style="list-style-type: none"> Account Person Policy Policy Plan 	No
	Note: The Policy and Policy Plan options appear when you select the Healthcare Template option from the Search By list.	

Note: You must specify at least one search criterion while searching for a customer registration template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Template	Displays the customer registration template.
Description	Displays the description of the customer registration template.
Template Category	Displays the category to which the customer registration template belongs. The valid values are: <ul style="list-style-type: none"> Account Person Policy Policy Plan
Edit	On clicking the Edit (✎) icon, the Customer Registration Template screen appears where you can edit the details of the customer registration template.
Duplicate	On clicking the Duplicate (📄) icon, the Customer Registration Template screen appears where you can define a new customer registration template using an existing customer registration template.
Delete	On clicking the Delete (🗑) icon, you can delete the customer registration template. <p>Note: You can delete a customer registration template when a customer registration is not yet defined using the customer registration template.</p>

On clicking the **Broadcast** (📡) icon corresponding to a customer registration template, the **Customer Registration Template** zone appears with the details of the respective customer registration template.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Customer Registration Template

The **Customer Registration Template** zone displays the details of the customer registration template. It also allows you to edit, copy, and delete the customer registration template. It contains the following sections

- **Main** - Displays the basic information about the customer registration template. It contains the following fields:

Field Name	Field Description
Template	Displays the customer registration template.
Template Category	Indicates the category for which the customer registration template is created in the system. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan <p>Note: The Policy and Policy Plan template categories appear when the customer registration template is created using the C1-CustomerRegistrationTmplHC business object.</p>
Description	Displays the description of the customer registration template.
Detailed Description	Displays additional information about the customer registration template.

- **Template Pages** - The **Template Pages** section lists the template pages, template sections added for a particular template category in a customer registration template. It contains the following columns:

Column Name	Column Description
Template Page	Indicates the template page which is added for the template category.
Template Section	Indicates the template section which is defined for the template page.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration template.
Delete	Used to delete the customer registration template. <p>Note: You can delete a customer registration template when a customer registration is not yet created using the customer registration template.</p>

Button Name	Button Description
Duplicate	Used to create a new customer registration template using an existing customer registration template.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration template is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Customer Registration Template** zone does not appear in the **Customer Registration Template** screen. It appears when you click the **Broadcast** () icon corresponding to the customer registration template in the **Search Customer Registration Template** zone.

Searching for a Customer Registration Template

Prerequisites

To search for a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Customer registration templates defined in the application
- Customer registration templates associated with the template categories

Procedure

To search for a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Template** sub-menu.

The **Customer Registration Template** screen appears.

4. Enter the search criteria in the **Search Customer Registration Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of customer registration templates that meet the search criteria appears in the **Search Results** section.

Viewing the Customer Registration Template Details

Procedure

To view the details of a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the customer registration template whose details you want to view.

The **Customer Registration Template** zone appears.

3. View the details of the customer registration template in the **Customer Registration Template** zone.

Defining a Customer Registration Template

Prerequisites

To define a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **C** and then click **Customer Registration Template**.

A sub-menu appears.

- Click the **Add** option from the **Customer Registration Template** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Template Business Object	Used to indicate the business object using which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> Customer Registration Template - Banking - Used to indicate that you want to define a customer registration template using the C1-CustomerRegistrationTmplBK business object. Customer Registration Template - Health Care - Used to indicate that you want to define a customer registration template using the C1-CustomerRegistrationTmplHC business object. 	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Template** screen.

- Select the required customer registration template business object from the respective field.
- Click **OK**.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the selected business object. It contains the following sections:

- Main** - Used to specify basic details about the customer registration template.
- Template Pages** - Used to add template pages and its related sections for the customer registration template.
- Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear when you are defining a customer registration template using the CI-CustomerRegistrationTmplHC business object.	
Business Object	Indicates the business object using which you want to define the customer registration template.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

- Enter the required details in the **Main** section.
- Add the template pages and template sections for the customer registration template in the **Template Pages** section.
- Set the field attributes for the template sections in the **Template Pages** section.
- Click **Save**.

The customer registration template is defined.

Adding the Pages and Sections in a Customer Registration Template

Prerequisites

To add a page and its related sections in a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer registration template.

The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)						
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.						
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. Note: On clicking the Add (+) icon, the following columns appear: <table border="1" data-bbox="609 913 1104 1344"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Template Section</td> <td>Used to indicate the section for a particular page.</td> </tr> <tr> <td>Field Attributes</td> <td>Used to define the field attributes of a section. Note: On clicking the Add (+) icon, you can define the field attributes for the section.</td> </tr> </tbody> </table>	Column Name	Column Description	Template Section	Used to indicate the section for a particular page.	Field Attributes	Used to define the field attributes of a section. Note: On clicking the Add (+) icon, you can define the field attributes for the section.	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.
Column Name	Column Description							
Template Section	Used to indicate the section for a particular page.							
Field Attributes	Used to define the field attributes of a section. Note: On clicking the Add (+) icon, you can define the field attributes for the section.							

The following table lists the various pages and sections that you can include in a customer registration template:

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
Account	Auto Pay	No	Account Autopay	No
	Account Characteristics	No	Account Characteristics	No

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
	Credit Ratings	No	Credit Rating	No
	<div style="border: 1px solid black; padding: 5px;"> <p>Note: This template page appears when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplBK business object.</p> </div>			
	Main	Yes	Account Identifiers	Yes
			Account Information	Yes
	Persons	Yes	Account Address Override Information	No
			Bill Routing	Yes
			Main	Yes
Person	Accounts	No	-	-
	Contact Information	No	Person Address	No
			Person Email	No

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
	Deal Information Note: This template page appears when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplBK business object.	No	Deal-Main	No
	Main	Yes	Person Identifiers	Yes
			Person Main	Yes
			Person Names	Yes
			Person Phones	No
	Person Characteristics	No	Person Characteristics	No
	Person Hierarchy	No	Person Hierarchy-Characteristics	No
			Person Hierarchy-Main	No

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
	Policies	No	Parent Policy	No
	Note: This template page appears only when you are defining, editing, or copying a customer registration template which is created using the C1-Customer Registration TmplHC business object.		Policies	No
	Registration Characteristics	No	Customer Registration Characteristics	No
Policy	Policy-Main	Yes	Policy Characteristics	No
			Policy-Main	Yes
			Policy Persons	No
Note: This template category appears only when you are defining, editing, or copying a customer registration template which is created using the C1-CustomerRegistration TmplHC business object.				

Template Category	Template Pages		Template Sections	
	Template Page	Mandatory (Yes or No)	Template Section	Mandatory (Yes or No)
Policy Plan Note: This template category appears when you are defining, editing, or copying a customer registration template which is created using the C1-CustomerRegistration TmplHC business object.	Plan	Yes	Plan-Characteristics	No
			Plan-Main	Yes

- Enter the required details in the **Template Pages** section.
- Set the field attributes for the template section, if required.
- If you want to add more than one page or section for the customer registration template, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a page or section from the customer registration template, click the **Delete** (🗑️) icon corresponding to the page or section.

- Click **Save**.

The pages and sections are added in the customer registration template.

Note:

You can add all the template pages available for a particular template category by clicking the **Select All** check box in the upper left corner of the **Template Pages** section.

You cannot edit or delete a template page or section if a customer registration is already defined using the customer registration template.

Setting the Field Attributes for a Template Section

Prerequisites

To set the field attributes for a template section, you should have:

- Template pages and sections associated with the template category
- Fields for the sections defined in the application

Procedure

To set the field attributes for a template section:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer registration template.

The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)						
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) Note: This field is required while adding pages and sections in a customer registration template.						
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. Editing a Customer Registration Template

Prerequisites

To edit a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To edit a customer registration template:

- Search for the customer registration template in the **Customer Registration Template** screen.
- In the **Search Results** section, click the **Edit (✎)** icon in the **Edit** column corresponding to the customer registration template whose details you want to edit.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template is defined. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration template.
- **Template Pages** - Used to add template pages and its related sections for the customer registration template.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Displays the customer registration template.	Not applicable
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> • Account • Person • Policy • Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear when you are defining a customer registration template using the C1-CustomerRegistrationTmplHC business object.	
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can edit the details of a customer registration template by clicking the **Edit** button in the **Customer Registration Template** zone.

3. Modify the details in the **Main** section, if required.
4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.

The changes made to the customer registration template are saved.

Note: You can edit a customer registration template only when a customer registration it is not yet defined using the customer registration template.

Copying a Customer Registration Template

Instead of creating a customer registration template from scratch, you can create a new customer registration template using an existing customer registration template. This is possible through copying a customer registration template. On copying a customer registration template, the details including the template pages, template sections, and field attributes for the template sections are copied to the new customer registration template. You can then edit the details, if required.

Prerequisites

To copy a customer registration template, you should have:

- Customer registration template (whose copy you want to create) defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To copy a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Duplicate** () icon in the **Duplicate** column corresponding to the customer registration template whose copy you want to create.

The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template whose copy you want to create is defined. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration template.
- **Template Pages** - Used to add template pages and its related sections for the customer registration template.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: <ul style="list-style-type: none"> Account Person Policy Policy Plan 	Yes
	Note: The Policy and Policy Plan options appear when you are defining a customer registration template using the CI-CustomerRegistrationTmplHC business object.	
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can copy a customer registration template by clicking the **Duplicate** button in the **Customer Registration Template** zone.

- Enter the required details in the **Main** section.
- Add, edit, or remove the template pages and template sections from the customer registration template, if required.
- Add, edit, or remove the field attributes from the template section, if required.
- Click **Save**.

The new customer registration template is defined.

Deleting a Customer Registration Template

Procedure

To delete a Customer Registration Template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the customer registration template that you want to delete.

A message appears confirming whether you want to delete the customer registration template.

3. Click **OK**.

The customer registration template is deleted.

Note: You can delete a customer registration template when a customer registration is not yet created using the customer registration template.

Tip: Alternatively, you can delete a customer registration template by clicking the **Delete** button in the **Customer Registration Template** zone.

Customer Registration Type

A customer registration type encapsulates the following information:

- Users with a particular access group can only create a customer registration object using the customer registration type
- Whether the customer registration type can be used to create a customer registration object from the user interface, through the inbound message, or through the **File Upload Interface** utility
- Whether the approval is required when you create, edit, or delete a customer registration object
- Whether the final level approval is required once the approver at the first level approves the customer registration object
- Whether a To Do should be created indicating that the users have to manually create the billing hierarchy and pricing for the parent customer.
- The business objects using which the person, account, policy plan, membership, and address should be created when a customer registration object is created using the customer registration type
- A customer registration template which indicates the pages and sections that should appear when you are creating a customer registration object using the customer registration type. You can specify one customer registration template for person and one or more customer registration templates for account, policy, and policy plan.
- Information, such as person names, person identifiers, person phones, person characteristics, person addresses, person hierarchy, accounts, account identifiers, account characteristics, account auto pay information, account persons, account bill routing information, policies, policy plans, policy characteristics, or policy plan characteristics, which should be copied when you create a copy of a customer registration object which is created using the customer registration type.

Customer Registration Type List

The **Customer Registration Type List** zone lists the customer registration types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Customer Registration Type	Displays the customer registration type.
Description	Displays the description of the customer registration type.
Edit	On clicking the Edit (✎) icon, the Customer Registration Type screen appears where you can edit the details of the customer registration type.
Duplicate	On clicking the Duplicate (📄) icon, the Customer Registration Type screen appears where you can define a new customer registration type using an existing customer registration type.
Delete	On clicking the Delete (🗑) icon, you can delete the customer registration type.
	Note: You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.

You can filter the list using various search criteria (such as, **Customer Registration Type** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📢) icon corresponding to a customer registration type, the **Customer Registration Type** zone appears with the details of the respective customer registration type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Customer Registration Type

Prerequisites

To search for a customer registration type, you should have:

- Customer registration types defined in the application

Procedure

To search for a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Type** sub-menu.

The **Customer Registration Type** screen appears with a list of customer registration types in the **Customer Registration Type List** zone.

4. Click the **Filters** (🔍) icon in the title bar of the **Customer Registration Type List** zone.

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to search for a particular customer registration type.	No
Description	Used to search for customer registration types having a particular description.	No

- Enter the search criteria in the **Customer Registration Type List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of customer registration types that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration Type

Prerequisites

To define a customer registration type, you should have:

- Customer registration type business objects defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To define a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type Business Object	Used to indicate the business object using which you want to create the customer registration type. The valid values are: <ul style="list-style-type: none"> • Customer Registration Type - Banking • Customer Registration Type - Healthcare 	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Type** screen.

Note: The **Select Business Object** screen appears when there are multiple customer registration type business objects defined in the application. If there is only one customer registration type business object defined in the application, the **Customer Registration Type** screen appears.

4. Select the required customer registration business object from the respective field.
5. Click **OK**.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> Active Inactive 	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p>	
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: <ul style="list-style-type: none"> File Upload Inbound Message Manual 	Yes

- Enter the required details in the **Main** section.
- Define additional information about the customer registration type in the **Additional Data** section.
- Define a list of characteristics for the customer registration type in the **Characteristics** section.
- Associate customer registration templates with the customer registration type in the **Customer Registration Templates** section
- Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section.
- Click **Save**.

The customer registration type is defined.

Defining Additional Data for a Customer Registration Type

Prerequisites

To define additional data for a customer registration type, you should have:

- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are defining, editing, or copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are defining, editing, or copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

Procedure

To define additional data for a customer registration type:

1. Ensure that the **Additional Data** section is expanded when you are defining, editing, or copying a customer registration type.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required while creating the customer registration using the customer registration type.	Yes (Conditional)
		Note: This field is required for approving the customer registration which is created using the customer registration type.

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate the To Do entry of the specified To Do type is created when you submit the customer registration for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Approval To Do Type field.</p> <p>This field appears when the Approval Required check box is selected.</p>	<p>Note: This field is required for approving the customer registration which is created using the customer registration type.</p>
Approval To Do Role	Used to indicate the users with the specified To Do role can approve, reject, or resubmit the customer registration for approval.	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Approval Required check box is selected.</p>	<p>Note: This field is required for approving the customer registration which is created using the customer registration type.</p>
Submitter To Do Type	Used to indicate the To Do entry of the specified To Do type is created when the customer registration is resubmitted by the approver.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Submitter To Do Type field.</p>	<p>Note: This field is required for resubmitting the customer registration for approval.</p>
Submitter To Do Role	Used to indicate the users with the specified To Do role for whom the To Do task is created when the customer registration is resubmitted by the approver.	Yes (Conditional)
		<p>Note: This field is required for resubmitting the customer registration for approval.</p>

Field Name	Field Description	Mandatory (Yes or No)
Final Approval Required	<p>Used to indicate whether final approval is required once the approver at the first level approves the customer registration.</p> <p>Note:</p> <p>This field appears when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p> <p>The final approval is required when the Manual Billing Hierarchy and Pricing option check box is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for approving the customer registration which is created using the customer registration type.</p>
Final Approval To Do Type	<p>Used to indicate the To Do entry of the specified To Do type is created when you submit the customer registration for final approval.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Final Approval To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Final Approval To Do Type field.</p> <p>This field appears when the Final Approval Required check box is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for final approval of the customer registration.</p>
Final Approval To Do Role	<p>Used to indicate the users with the specified To Do role can only approve or resubmit the customer registration for final approval.</p> <p>Note: This field appears when the Final Approval Required check box is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for final approval of the customer registration.</p>
Manual Billing Hierarchy and Pricing	<p>Used to indicate whether the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters are created manually by the user while defining the customer registration.</p> <p>Note:</p> <p>The Manual Billing Hierarchy and Pricing option can be used only for customer registrations where the person type is set to Parent Customer.</p> <p>This field appears when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required for creating the billing hierarchy and pricing for the parent customer manually.</p>

Field Name	Field Description	Mandatory (Yes or No)
Billing Hierarchy and Pricing To Do Type	Used to indicate the To Do entry of the specified To Do type is created for the user to define or edit the billing hierarchy and pricing for the parent customer manually.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Billing Hierarchy and Pricing To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Billing Hierarchy and Pricing To Do Type field.</p> <p>This field appears when the Manual Billing Hierarchy and Pricing check box is selected.</p>	<p>Note: This field is required for creating the billing hierarchy and pricing for the parent customer manually.</p>
Billing Hierarchy and Pricing To Do Role	Used to indicate the users with the specified To Do role can only define or edit the billing hierarchy and pricing for the parent customer manually.	Yes (Conditional)
	<p>Note: This field appears when the Manual Billing Hierarchy and Pricing check box is selected.</p>	<p>Note: This field is required for creating the billing hierarchy and pricing for the parent customer manually.</p>
Person Business Object	Used to indicate the business object using which the customer registration for a person is created using the customer registration type.	Yes
Account Business Object	Used to indicate the business object using which the customer registration for an account is created using the customer registration type.	Yes
Policy Plan Business Object	Used to indicate the business object using which the customer registration for a policy plan is created using the customer registration type.	Yes
	<p>Note: This field appears when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Membership Business Object	Used to indicate the business object using which the customer registration for a membership is created using the customer registration type. Note: The Membership Business Object is required for creating customer registrations through an Inbound Message . This field appears when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.	Yes
Benefits Business Object	Used to indicate the business object using which the customer registration for a benefit is created using the customer registration type.	No
Address Business Object	Used to indicate the business object using which the customer registration for an address is created using the customer registration type.	Yes
Statement Construct Business Object	Used to indicate the business object using which the customer registration for a statement construct is created using the customer registration type.	Yes

- Enter the required details in the **Additional Data** section.
- Click **Save**.

The additional data for the customer registration type is defined.

Defining a Characteristic for a Customer Registration Type

Prerequisites

To define a characteristic for a customer registration type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration Type**)

Procedure

To define a characteristic for a customer registration type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a customer registration type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Customer Registration Type .	Note: This field is required when you are defining a characteristic for the customer registration type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the customer registration type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the customer registration type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the customer registration type, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the customer registration type.

Associating a Customer Registration Template with a Customer Registration Type

Prerequisites

To associate a customer registration template with a customer registration type, you should have:

- Template categories defined in the application
- Customer registration templates associated to the template categories

Procedure

To associate a customer registration template with a customer registration type:

1. Ensure that the **Customer Registration Templates** section is expanded when you are defining, editing, or copying a customer registration type.

The **Customer Registration Templates** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence for the customer registration template.	Yes (Conditional) Note: This field is required when you are associating a customer registration template with a customer registration type.
Template Category	Used to indicate the category to which the customer registration template belongs. The valid values are: <ul style="list-style-type: none"> • Person • Account • Policy • Policy Plan Note: The Policy and Policy Plan template categories appear when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object. You can associate only one person template category and multiple account, policy, and policy plan template categories with the customer registration type.	Yes (Conditional) Note: This field is required when you are associating a customer registration template with a customer registration type.
Template	Used to specify the customer registration template which you want to associate with the customer registration type. Note: The Search (🔍) icon appears corresponding to the Template field. On clicking the Search icon, the Customer Registration Template Search window appears. On specifying the template, the description of the template appears corresponding to the Template field.	Yes (Conditional) Note: This field is required when you are associating a customer registration template with a customer registration type.

2. Enter the required details in the **Customer Registration Templates** section.
3. If you want to define more than one template for the customer registration type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a template from the customer registration type, click the **Delete** (🗑️) icon corresponding to the customer registration template.

4. Click **Save**.

The customer registration template is associated with the customer registration type.

Setting Attributes to Define a Customer Registration Using the Existing Customer Registration

Prerequisites

To set an attribute for defining a customer registration using the existing customer registration, you should have:

- **Person** attributes defined in the application
- **Account** attributes defined in the application
- **Policy** attributes defined in the application

Note: The **Policy** attributes are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- **Policy Plan** attributes defined in the application

Note: The **Policy Plan** attributes are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

Procedure

To set an attribute for defining a customer registration using the existing customer registration:

1. Ensure that the **Copy Customer Registration Details** section is expanded when you are defining, editing, or copying a customer registration type.

The **Copy Customer Registration Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Names	Used to indicate whether you want to copy the person details while copying a customer registration.	No
Accounts	Used to indicate whether you want to copy the account details while copying a customer registration.	No
Person Identifiers	Used to indicate whether you want to copy the person identifier details while copying a customer registration.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifiers	Used to indicate whether you want to copy the account identifier details while copying a customer registration.	No
	Note: The check box of this field is enabled when the Accounts check box is selected in the Copy Customer Registration Details section.	
Person Phones	Used to indicate whether you want to copy the phone details of the person while copying a customer registration.	No
Account Characteristics	Used to indicate whether you want to copy the characteristic details of the account while copying a customer registration.	No
	Note: The check box of this field is enabled when the Accounts check box is selected in the Copy Customer Registration Details section.	
Person Characteristics	Used to indicate whether you want to copy the characteristic details of the person while copying a customer registration.	No
Account Auto pay Information	Used to indicate whether you want to copy the automatic payment details of the account while copying a customer registration.	No
	Note: The check box of this field is enabled when the Accounts check box is selected in the Copy Customer Registration Details section.	
Person Addresses	Used to indicate whether you want to copy the address details of the person while copying a customer registration.	No
Account Persons	Used to indicate whether you want to copy the details of the persons related to the account while copying a customer registration.	No
	Note: The check box of this field is enabled when the Accounts check box is selected in the Copy Customer Registration Details section.	
Person Hierarchy	Used to indicate whether you want to copy the person hierarchy details while copying a customer registration.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Override Address	Used to indicate whether you want to copy the account override address details while copying a customer registration.	No
	Note: The check box of this field is enabled when the Accounts check box is selected in the Copy Customer Registration Details section.	
Bill Routing Information	Used to indicate whether you want to copy the bill routing details of the account while copying a customer registration.	No
	Note: The check box of this field is enabled when the Accounts check box is selected in the Copy Customer Registration Details section.	
Credit Rating History	Used to indicate whether you want to copy the credit rating history details while copying a customer registration.	No
	Note: The check box of this field is enabled when the Accounts check box is selected in the Copy Customer Registration Details section.	
Policies	Used to indicate whether you want to copy the policy details while copying a customer registration.	No
	Note: This field appears only when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.	
Policy Plans	Used to indicate whether you want to copy the policy plan details while copying a customer registration.	No
	<p>Note:</p> <p>This field appears when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p> <p>The check box of this field is enabled only when the Policies check box is selected in the Copy Customer Registration Details section.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Policy Characteristics	Used to indicate whether you want to copy the policy characteristic details while copying a customer registration.	No
	<p>Note:</p> <p>This field appears when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p> <p>The check box of this field is enabled only when the Policies check box is selected in the Copy Customer Registration Details section.</p>	
Policy Plan Characteristics	Used to indicate whether you want to copy the policy plan characteristic details while copying a customer registration.	No
	<p>Note:</p> <p>This field appears when you are defining, editing, or copying a Customer Registration Type using the C1-CustRegTypeHealthCare business object.</p> <p>The check box of this field is enabled when the Policy Plans check box is selected in the Copy Customer Registration Details section.</p>	

2. Select the required attributes in the **Copy Customer Registration Details** section.
3. Click **Save**.

The attributes are set for defining a customer registration using the existing customer registration.

Editing a Customer Registration Type

Prerequisites

To edit a customer registration type, you should have:

- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application

- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To edit a customer registration type:

1. Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the customer registration type whose details you want to edit.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Displays the customer registration type.	Not applicable
Business Object	Indicates the business object using which the customer registration type is created in the system.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> Active Inactive 	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type.	Yes
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p>	
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: <ul style="list-style-type: none"> File Upload Inbound Message Manual 	Yes

Tip: Alternatively, you can edit the details of a customer registration type by clicking the **Edit** button in the **Customer Registration Type** zone.

- Modify the required details in the **Main** section, if required.
- Modify additional information about the customer registration type in the **Additional Data** section, if required.
- Define, edit, or remove characteristics of the customer registration type in the **Characteristics** section, if required.
- Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section, if required.
- Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section, if required.
- Click **Save**.

The changes made to the customer registration type are saved.

Copying a Customer Registration Type

Instead of creating a customer registration type from scratch, you can create a new customer registration type using an existing customer registration type. This is possible through copying a customer registration type. On copying a customer registration type, the details including the additional data, characteristics, customer registration templates, and attributes set to define a customer registration from the existing customer registration are copied to the new customer registration type. You can then edit the details, if required.

Prerequisites

To copy a customer registration type, you should have:

- Customer registration type (whose copy you want to create) defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

Note: The policy plan and membership business objects are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

Note: The billing hierarchy and pricing To Do types and To Do roles are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To copy a customer registration type:

1. Search for a customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Duplicate**  icon in the **Duplicate** column corresponding to the customer registration type whose copy you want to create.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.
- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. <ul style="list-style-type: none"> • Active • Inactive 	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.</p> <p>On specifying the access group, the description of the access group appears corresponding to the Access Group field.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: <ul style="list-style-type: none"> File Upload Inbound Message Manual 	Yes

Tip: Alternatively, you can copy a customer registration type by clicking the **Duplicate** button in the **Customer Registration Type** zone.

- Enter the required details in the **Main** section.
- Enter additional information about the customer registration type in the **Additional Data** section.
- Define, edit, or remove characteristics of the customer registration type in the **Characteristics** section.
- Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section.
- Specify the type of information you want to copy while defining a customer registration using an existing customer registration in the **Copy Customer Registration Details** section.
- Click **Save**.

The new customer registration type is defined.

Inbound Message ID	Used to search for a customer registration which was created through a particular inbound message.	Yes (Conditional)
	<p>Note: This field appears only when the Inbound Message Details option is selected from the Search By list.</p>	<p>Note: This field is required for searching customer registrations using the inbound message details.</p>
Source System	Used to search customer registrations whose information is received from a particular external system.	Yes (Conditional)
	<p>Note: This field appears when the Inbound Message Details option is selected from the Search By list.</p>	<p>Note: This field is required for searching customer registrations using the inbound message details.</p>

Field Name	Field Description	Mandatory (Yes or No)
External Source ID	Used to search for a customer registrations whose information is received from a particular external source system.	Yes (Conditional)
	Note: This field appears when the Inbound Message Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the inbound message details.
External Transaction ID	Used to search for a customer registration which is created as a result of a particular transaction in the external source system.	Yes (Conditional)
	Note: This field appears when the Inbound Message Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the inbound message details.
External Batch ID	Used to search customer registrations which are created through an external batch job.	Yes (Conditional)
	Note: This field appears when the Inbound Message Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the inbound message details.
Inbound Message Type	Used to search customer registrations which are created using a particular inbound message type.	Yes (Conditional)
	Note: This field appears when the Inbound Message Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the inbound message details.
Request Id	Used to search customer registrations which are created from a particular file uploaded through the File Upload Interface utility.	Yes (Conditional)
	Note: This field appears when the File Upload Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the file upload details.
File Name	Used to search customer registrations created from uploading a file with a particular name.	Yes (Conditional)
	Note: This field appears when the File Upload Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the file upload details.

Field Name	Field Description	Mandatory (Yes or No)
File Status	Used to search customer registrations created from the uploaded files having a particular status. The valid values are: <ul style="list-style-type: none"> Approval Pending Completed Error Pending Rejected 	Yes (Conditional)
	Note: This field appears when the File Upload Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the file upload details.
File Request Type	Used to search customer registrations which are created from the uploaded files with a particular file request type.	Yes (Conditional)
	Note: This field appears when the File Upload Details option is selected from the Search By list.	Note: This field is required for searching customer registrations using the file upload details.

Note: You must specify at least one search criterion while searching for a customer registration. One more search criterion is required when you are searching for a customer registration using the division and/or person type.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the customer registration is created in the system.
Customer Registration Information	Displays the concatenated string of information about the customer registration. Note: It has a link. On clicking the link, the Customer Registration screen appears where you can view the details of the respective customer registration.

Column Name	Column Description
Status	<p>Indicates the status of the customer registration. The valid values are:</p> <ul style="list-style-type: none"> • Approval In Progress • Bill Group Approved • Complete • Draft • Draft for Update • Parent Customer Approved • Pending Final Approval • Pending Pricing Correction • Rejected
	<p>Note: The values listed above appear when the Registration Details option is selected from the Search By list.</p>
	<ul style="list-style-type: none"> • Pending • Processed • Rejected • Voided
	<p>Note: These values listed above appear when the Inbound Message Details option is selected from the Search By list.</p>
	<p>Note: This column appears only when the Registration Details, Person Details, or Inbound Message Details options are selected from the Search By list.</p>
Request Id	<p>Displays the request Id generated while uploading a file through the File Upload Interface utility for creating the customer registration object.</p>
	<p>Note: This column appears when the File Upload Details option is selected from the Search By list.</p>
Created By	<p>Displays the user who has created the customer registration.</p>
	<p>Note: This column appears when the Registration Details, Person Details, or Inbound Message Details options are selected from the Search By list.</p>
Inbound Message Information	<p>Displays the concatenated string of information about the inbound message.</p>
	<p>Note:</p> <p>It has a link. On clicking the link, the Inbound Message screen appears where you can view the details of the respective inbound message.</p> <p>This column appears when the Inbound Message Details option is selected from the Search By list.</p>

Column Name	Column Description
File ID	Displays the file which is uploaded for creating the customer registration through the File Upload Interface utility.
	Note: This column appears when the File Upload Details option is selected from the Search By list.
Copy	On clicking the Copy (📄) icon, the Customer Registration screen appears where you can define a new customer registration using an existing customer registration.
	Note: This column appears when the Registration Details option is selected from the Search By list.
Person Name	Displays the name of the person for whom the customer registration is defined in the system.
	Note: This column appears when the Person Details option is selected from the Search By list.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created in the system.
	Note: This column appears when the Inbound Message Details option is selected from the Search By list.
File Name	Displays the name of the file which is uploaded for creating the customer registration through the File Upload Interface utility.
	Note: This column appears when the File Upload Details option is selected from the Search By list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person.
	Note: This column appears when the Person Details option is selected from the Search By list.
Source System	Indicates the source system from where the inbound message is received for creating the customer registration.
	Note: This column appears when the Inbound Message Details option is selected from the Search By list.
Request Type	Indicates the request type using which the file is uploaded through the File Upload Interface utility for creating the customer registration.
	Note: This column appears only when the File Upload Details option is selected from the Search By list.
Primary Person Identifier	Displays the primary person identifier.
	Note: This column appears when the Person Details option is selected from the Search By list.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Customer Registration

Prerequisites

To search for a customer registration, you should have:

- Customer registration business objects defined in the application
- Customer registration statuses and customer registration types defined in the application
- Divisions associated with the access group to which the user belongs
- Person types and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Inbound message statuses, inbound message types, and source systems defined in the application.
- File statuses and file request types defined in the application.

Procedure

To search for a customer registration:

- 1.** Click the **Menu** link in the **Application** toolbar.
A list appears.
- 2.** From the **Main** menu, select **Customer Management** and then click **Customer Registration**.
A sub-menu appears.
- 3.** Click the **Search** option from the **Customer Registration** sub-menu.
The **Customer Registration** screen appears.
- 4.** Enter the search criteria in the **Search Customer Registration** zone.

Note:

You must specify at least one search criterion while searching for a customer registration object. One more search criterion is required when you are searching for a customer registration using the division and/or person type.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify the division when you are searching for a customer registration of a person using the city.

You must specify division and/or any other criteria in the second group when you are searching for a customer registration using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the customer registration using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **Search Customer Registration** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of customer registrations that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration

Prerequisites

To define a customer registration, you should have:

- Customer registration types, source systems, and person types defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

Note: These prerequisites are required when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

Procedure

To define a customer registration:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Customer Registration**.
A sub-menu appears.
3. Click the **Add** option from the **Customer Registration** sub-menu.

The **Add Customer Registration** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to define the customer registration.	Yes
Source System	Used to indicate the external system from where the customer registration information is received.	No
Person Type	Used to indicate the type of person for whom you want to define the customer registration.	Yes

Tip: Alternatively, you can access the **Add Customer Registration** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration** screen.

4. Select the required **Customer Registration Type** from the respective field.
5. Select the required **Source System** from the respective field, if required.

6. Select the required **Person Type** from the respective field.
7. Click **OK**.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Policies** - Used to specify the policy details of the person.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs. Note: You can view only those divisions to which you have access in the Division list.	Yes
Person Since Date	Used to specify the date from when the person is the main customer.	Yes
Customer Segment	Used to indicate the customer segment to which the person belongs. Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs.	Yes
	Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	
Access Group	Used to indicate the user group that can access the customer registration.	Yes
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	

8. Enter the required details in the **Main** section.
9. Add the names of the person in the **Person Names** section.
10. Add the phone details for the person in the **Person Phones** section.
11. Add the identifier details for the person in the **Person IDs** section.
12. Define the addresses of the person in the **Contact** page, if required.
13. Define a list of characteristics for the person in the **Person Characteristics** page, if required.
14. Define the person to person relationship for the person in the **Hierarchy** page, if required.
15. Add the account details of the person in the **Accounts** page, if required.
16. Add the policy details of the person in the **Policies** page, if required.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

17. Define a list of characteristics for the customer registration in the **Registration Characteristics** page, if required.
18. Click **Validate and Save**.

The customer registration is defined.

Adding the Names of a Person

Prerequisites

To add the names of a person, you should have:

- Name types defined in the application.

Procedure

To add the names of a person:

1. Ensure that the **Person Names** section is expanded in the **Main** page when you are defining, editing, or copying a customer registration.

The **Person Names** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Name Type	Used to indicate the type of name which you want to add for the customer registration.	Yes (Conditional)
	Note: The list includes only those name types where the name type entity is set to Customer Registration .	Note: This field is required when you are adding a name for customer registration.
Name	Used to specify the name of the person.	Yes (Conditional)
		Note: This field is required when you are adding a name for customer registration.

2. Enter the required details in the **Person Names** section.
3. If you want to add more than one person name for the customer registration, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a person name from the customer registration, click the **Delete** (🗑️) icon corresponding to the person name.

4. Click **Validate and Save**.

The names are added for the person.

Adding an Account for a Person

Prerequisites

To add the account for a person, you should have:

- Customer class, divisions, currencies, account categories, access groups, accrual cycles, and bill cycles defined in the application
- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To add an account for a person:

1. Ensure that the **Accounts** section is expanded in the **Accounts** page when you are adding, editing, or removing an account of a person.

The **Accounts** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the account.	Not applicable
Template	Displays the account template using which the account is added for the person.	Not applicable
Customer Class	Indicates the customer class to which the account belongs.	Not applicable
Division	Indicates the division to which the account belongs.	Not applicable
Primary Identifier Type	Indicates the primary identifier type using which the account is added for the person.	Not applicable
Identifier Value	Displays the value of the primary identifier type.	Not applicable
Account Information	Displays the concatenated string of information about the account that is added for the person.	Not applicable
View / Edit	On clicking the View / Edit (✎) icon, you can view or edit the details of the account.	Not applicable

Note: No information appears in the above columns if an account is not yet added for the person.

2. Click the **Add New Account** button in the **Accounts** section.

The **Customer Registration - Add Account** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the account.
- **Auto Pay** - Used to add the automatic payment details of the account.
- **Persons** - Used to associate a person to the account.
- **Account Characteristics** - Used to define a list of characteristics for the account.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the account.
- **Account Identifiers** - Used to add the identifier details for the account.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	

Field Name	Field Description	Mandatory (Yes or No)
Set Up Date	Used to specify the date from when the account is configured for the person.	Yes
	Note: By default, the current date appears in this field.	
Invoice Currency	Used to indicate the currency which you want to use for generating the invoice of the account.	Yes
	Note: The list includes only those currencies which are defined in the system.	
Account Category	Used to indicate the category to which the account belongs. The valid values are: <ul style="list-style-type: none"> • Invoice Account • Settlement Account • Usage Account 	Yes
	Note: The list includes only those values which are present in the ACCT_USAGE_FLG lookup field.	
Access Group	Used to indicate the user group that can access the account for the person.	Yes
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	
Exclude Accrual	Used to indicate whether the account is eligible for accrual.	No
	Note: By default, the account is eligible for accrual if the division to which the account belongs is eligible for accrual. If you do not want the account to be eligible for accrual, you must select the Exclude Accrual check box. On selecting the Exclude Accrual check box, the Accrual Cycle field is disabled.	

Field Name	Field Description	Mandatory (Yes or No)
Accrual Cycle	Used to indicate the accrual cycle of the account in the division.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Accrual Cycle field. On clicking the Search icon, the Accrual Cycle Search for Cust Reg window appears.</p> <p>On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the Accrual Cycle field.</p> <p>This field is disabled when you click the Exclude Accrual check box.</p>	
Product	Used to indicate the product for which the account is enrolled.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Search Product window appears.</p>	
Eligible for Repricing	Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed.	No
	<p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>	
Bill Cycle	Used to indicate the bill cycle for the account.	No
Bill Lead Days	Used to specify the number of days which is used to derive the cut-off date for advance billing.	Yes
	<p>Note: In case you don't want to bill the account in advance, you must specify 0 in this field.</p>	
Comments	Used to specify additional information about the account.	No

3. Enter the required details in the **Main** section.

4. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
5. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
6. Associate or disassociate persons from the account in the **Persons** page, if required.
7. Define, edit, or remove characteristics of the account in the **Account Characteristics** page, if required.
8. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
9. Click **Validate and Save**.

The account is added for the person.

Defining a Characteristic for an Account

Prerequisites

To define a characteristic for an account, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To define a characteristic for an account:

1. Ensure that the **Characteristics** section is expanded in the **Account Characteristics** page when you are adding or editing the account of a person.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the account.	Yes (Conditional)
		Note: This field is required while defining a characteristic for an account.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Account .
		Note: This field is required while defining a characteristic for an account.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required while defining a characteristic for an account.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the account, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the account, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Validate and Save**.

The characteristic is defined for the account.

Defining a Policy

Prerequisites

To define a policy, you should have:

- Policy types defined in the application.
- Source systems defined in the application.
- Policy person roles defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a policy:

1. Ensure that the **Policies & Plans** section is expanded in the **Policies** page when you are defining, editing, or removing a policy from the person.

The **Policies & Plans** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy.	Not applicable
Template	Indicates the policy template using which the policy is defined for the person.	Not applicable
Policy Type	Indicates the policy type using which the policy is defined for the person.	Not applicable
Policy Number	Displays the policy number.	Not applicable
View / Edit	On clicking the View / Edit (✎) icon, you can view or edit the details of the policy.	Not applicable
Policy Plans	On clicking the Add (+) icon, you can add policy plans for the policy.	Not applicable

Note: No information appears in the above columns if a policy is not yet defined for the person.

2. Click the **Add New Policy** button in the **Policies & Plans** section.

The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to define a policy. Note: If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual . However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to Self-Funded .	Yes

3. Select the required policy type from the **Policy Type** field.
4. Click **OK**.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define the characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated.	Yes
	Note: This field is enabled when you are defining a policy using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual .	
Start Date	Used to specify the date from when the policy is effective.	Yes
	Note: The policy start date cannot be later than the policy end date.	
End Date	Used to specify the date till when the policy is effective.	Yes
	Note: The policy end date cannot be earlier than the policy start date.	
Policy Person Role	Used to indicate the role of the person for whom you are defining the policy.	Yes

Note: The **Policies** page appears when you are defining, editing, or copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

5. Enter the required details in the **Main** section.
6. Define characteristics for the policy in the **Characteristics** section, if required.
7. Associate persons to the policy in the **Persons** section, if required.
8. Click **Validate and Save**.

The policy is defined for the person.

Adding a Plan in a Policy

Prerequisites

To add a plan in a policy, you should have:

- Policy plan templates defined in the application.
- Policy plan business objects defined in the application.
- Pricing rule types defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**)

Procedure

To add a plan in a policy:

1. Ensure that the **Policies & Plans** section is expanded in the **Policies** page when you are adding, editing, or removing a policy plan from a policy.
2. Click the **Add**  icon in the **Policy Plans** column corresponding to the policy in which you want to add a policy plan.

The following columns appear in the **Policies & Plans** section:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy plan.	Not applicable
Template	Indicates the policy plan template using which the policy plan is added in the policy.	Not applicable
Plan Number	Displays the policy plan number.	Not applicable
Price Item	Displays the price item that is associated with the policy plan.	Not applicable
View / Edit	On clicking the View / Edit  icon, you can view or edit the details of the policy plan.	Not applicable

Note: No information appears in the above columns if a plan is not yet added in the policy.

3. Click the **Add New Plan** button in the **Policies & Plans** section.

The **Select Policy Plan Template** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template using which you want to define the policy plan for the policy.	Yes
	Note: By default, the Policy Plan - Healthcare option is selected.	
Business Object	Used to indicate the business object using which you want to define the policy plan for the policy.	Yes
	Note: By default, the Policy Plan option is selected.	

4. Select the required template and business object from the respective fields.
5. Click **OK**.

The **Plan** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy plan.
- **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
- **Characteristics** - Used to define the characteristics for the policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	<p>Used to indicate the price item which you want to directly associate with the policy plan.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p> <p>On the specifying the price item, the concatenated string of information about the price item appears corresponding to the Price Item field separated by a comma (,).</p>	Yes
Plan Number	Used to specify the policy plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Start Date	<p>Used to specify the date from when the policy plan is effective for the policy.</p> <p>Note:</p> <p>The policy plan start date cannot be earlier than the policy start date and later than the policy end date.</p> <p>The policy plan start date cannot be later than the policy plan end date.</p>	Yes
End Date	<p>Used to specify the date till when the policy plan is effective for the policy.</p> <p>Note:</p> <p>The policy plan end date cannot be earlier than the policy start date and later than the policy end date.</p> <p>The policy plan end date cannot be earlier than the policy plan start date.</p>	No

6. Enter the required details in the **Main** section.

7. Associate the pricing rule types with the policy plan in the **Pricing Rule Types** section, if required.
8. Define the characteristics for the policy plan in the **Characteristics** section, if required.
9. Click **Validate and Save**.

The policy plan is added in the policy.

Associating a Pricing Rule Type with a Policy Plan

Prerequisites

To associate a pricing rule type with a policy plan, you should have:

- Pricing rule types defined in the application.

Procedure

To associate a pricing rule type with a policy plan:

1. Ensure that the **Pricing Rule Types** section is expanded in the **Plan** screen when you are adding or editing a policy plan of a policy.

The **Pricing Rule Types** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type that you want to associate with the policy plan.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Pricing Rule Type field. On clicking the Search icon, the Pricing Rule Type Search window appears.</p> <p>On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the Pricing Rule Type field.</p>	<p>Note: This field is required while associating a pricing rule type with the policy plan.</p>

2. Enter the required details in the **Pricing Rule Types** section.
3. If you want to associate more than one pricing rule type with the policy plan, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a pricing rule type from the policy plan, click the **Delete** (🗑️) icon corresponding to the pricing rule type.

4. Click **Validate and Save**.

The pricing rule type is associated with the policy plan.

Editing the Account Details of a Person

Prerequisites

To edit the account details of a person, you should have:

- Customer class, divisions, currencies, access groups, accrual cycles, and bill cycles defined in the application

- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To edit the account details of a person:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose account details you want to edit.

The **Main** tab appears in the **Customer Registration** screen.

3. Click the **Edit** button in the **Customer Registration** zone.

The **Main** page appears in the **Customer Registration** screen.

4. Ensure that the **Accounts** section is expanded in the **Accounts** page.

5. Click the **Edit**() icon in the **View / Edit** column corresponding to the account whose details you want to edit.

The **Customer Registration - Add Account** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the account.
- **Auto Pay** - Used to add the automatic payment details of the account.
- **Persons** - Used to associate a person to the account.
- **Account Characteristics** - Used to define a list of characteristics for the account.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the account.
- **Account Identifiers** - Used to add the identifier details for the account.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs. Note: You can only view those divisions to which you have access in the Division list.	Yes
Set Up Date	Displays the date from when the account is configured for the person.	Not applicable
Invoice Currency	Used to indicate the currency which you want to use for generating the invoice of the account. Note: The list includes only those currencies which are defined in the system.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Category	Displays the category to which the account belongs. The valid values are: <ul style="list-style-type: none"> • Invoice Account • Settlement Account • Usage Account 	Not applicable
	Note: The list includes only those values which are present in the ACCT_USAGE_FLG lookup field.	
Access Group	Used to indicate the user group that can access the account for the person.	Yes
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	
Exclude Accrual	Used to indicate whether the account is eligible for accrual.	No
	Note: By default, the account is eligible for accrual if the division to which the account belongs is eligible for accrual. If you do not want the account to be eligible for accrual, you must select the Exclude Accrual check box. On selecting the Exclude Accrual check box, the Accrual Cycle field is disabled.	
Accrual Cycle	Used to indicate the accrual cycle of the account in the division.	No
	Note: The Search (🔍) icon appears corresponding to the Accrual Cycle field. On clicking the Search icon, the Accrual Cycle Search for Cust Reg window appears. On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the Accrual Cycle field. This field is disabled when you click the Exclude Accrual check box.	

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to indicate the product for which the account is enrolled.	Yes (Conditional)
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Product field. On clicking the Search icon, the Search Product window appears.</p>	<p>Note: This field is required while enrolling an account for a product.</p>
Eligible for Repricing	Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed.	No
	<p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>	
Bill Cycle	Used to indicate the bill cycle for the account.	No
Bill Lead Days	Used to specify the number of days which is used to derive the cut-off date for advance billing.	Yes
	<p>Note: In case you don't want to bill the account in advance, you must specify 0 in this field.</p>	
Comments	Used to specify additional information about the account.	No

6. Modify the required details of the account in the **Main** page.
7. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
8. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
9. Associate or disassociate persons from the account in the **Persons** page, if required.
10. Define, edit, or remove characteristics of the account in the **Account Characteristics** page, if required.
11. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
12. Click **Validate and Save**.

The changes made to the account are saved.

Copying a Customer Registration

Instead of creating a customer registration from scratch, you can create a new customer registration using an existing customer registration. This is possible through copying a customer registration. On copying a customer registration, the details including the characteristics are copied to the new customer registration. You can then edit the details, if required.

Prerequisites

To copy a customer registration, you should have:

- Customer registration (whose copy you want to create) defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic Types defined in the application
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

Note: These prerequisites are required when you are copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

Procedure

To copy a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. Click the **Copy**  icon in the **Copy** column corresponding to the customer registration whose copy you want to create.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Policies** - Used to specify the policy details of the person.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	No
Division	Used to indicate the division to which the person belongs.	Not applicable
Person Since Date	Used to specify the date from when the person is the main customer.	No
Customer Segment	Used to indicate the customer segment to which the person belongs. Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	No
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs. Note: This field appears when you are defining a customer registration using the C1-CustomerRegistrationBanking business object.	No
Access Group	Used to indicate the user group that can access the customer registration. Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears.	No

3. Enter the required details in the **Main** section.

4. Add or remove the names of the person in the **Person Names** section.
5. Add or remove the phone details for the person in the **Person Phones** section.
6. Add, edit, or remove the identifier details for the person in the **Person IDs** section.
7. Define, edit, or remove the addresses of the person in the **Contact** page, if required.
8. Define, edit, or remove characteristics of the person in the **Person Characteristics** page, if required.
9. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
10. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
11. Add, edit, or remove the policy details of the person in the **Policies** page, if required.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

12. Define, edit, or remove characteristics of the customer registration in the **Registration Characteristics** page, if required.
13. Click **Validate and Save**.

The new customer registration is defined.

Editing the Policy Details

Prerequisites

To edit the policy details, you should have:

- Source systems defined in the application.
- Policy person roles defined in the application.

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To edit the policy details:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose policy details you want to edit.

The **Main** tab appears in the **Customer Registration** screen.

3. Click the **Edit** button in the **Customer Registration** zone.

The **Main** page appears in the **Customer Registration** screen.

4. Ensure that the **Policies & Plans** section is expanded in the **Policies** page.

5. Click the **Edit**() icon in the **View / Edit** column corresponding to the policy whose details you want to edit.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy.
- **Persons** - Used to associate persons with the policy.
- **Characteristics** - Used to define the characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which the policy is defined in the system.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. Note: This field is enabled when you are defining a policy using a policy type where the policy category is set to Fully-Insured Group or Fully-Insured Individual .	Yes
Start Date	Used to specify the date from when the policy is effective. Note: The policy start date cannot be later than the policy end date.	Yes
End Date	Used to specify the date till when the policy is effective. Note: The policy end date cannot be earlier than the policy start date.	Yes
Policy Person Role	Used to indicate the role of the person for whom you are defining the policy.	Yes

Note: The **Policies** page appears when you are defining, editing, or copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

6. Modify the required details in the **Main** section.
7. Define, edit, or remove characteristics of the policy in the **Characteristics** section, if required.
8. Associate or disassociate persons from the policy in the **Persons** section, if required.
9. Click **Validate and Save**.

The changes made to the policy are saved.

Editing the Customer Registration Details

Prerequisites

To define a customer registration, you should have:

- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

Note: These prerequisites are required when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

Procedure

To edit a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose details you want to edit.

The **Main** tab appears in the **Customer Registration** screen.

3. Click the **Edit** button in the **Customer Registration** zone.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Policies** - Used to specify the policy details of the person.

Note: This page appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs.	Yes
	Note: You can view only those divisions to which you have access in the Division list.	
Person Since Date	Used to specify the date from when the person is the main customer.	Yes
Customer Segment	Used to indicate the customer segment to which the person belongs.	Yes
	Note: This field appears when you are editing a customer registration which is created using the C1-CustomerRegistrationBanking business object.	
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs.	Yes
	Note: This field appears when you are editing a customer registration which is created using the C1-CustomerRegistrationBanking business object.	
Access Group	Used to indicate the user group that can access the customer registration.	Yes
	Note: The Search (🔍) icon appears corresponding to the Access Group field. On clicking the Search icon, the Access Group Search window appears. On specifying the access group, the description of the access group appears corresponding to the Access Group field.	

4. Modify the required details in the **Main** section.
5. Add, edit, or remove the names of the person in the **Person Names** section.
6. Add, edit, or remove the phone details of the person in the **Person Phones** section.

7. Add or remove the identifier details of the person in the **Person IDs** section.
8. Define, edit, or remove the address of the person in the **Contact** page, if required.
9. Define, edit, or remove characteristics of the person in the **Person Characteristics** page, if required.
10. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
11. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
12. Add, edit, or remove the policy details of the person in the **Policies** page, if required.

Note: This page appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

13. Define, edit, or remove characteristics of the customer registration in the **Registration Characteristics** page, if required.
14. Click **Validate and Save**.

The changes made to the customer registration are saved.

Adding a Log Entry for a Customer Registration

Procedure

To add a log entry for a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration for which you want to add a log entry.

The **Main** tab appears in the **Customer Registration** screen.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Customer Registration Log** zone.

The **Add Request Log** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays the concatenated string of information about the customer registration separated by a comma (,).	Not applicable
Log Details	Used to specify the reason for adding a log entry for the customer registration.	Yes

5. Enter the required details in the **Log Details** field.
6. Click **Save**.

The log entry is added for the **Customer Registration Log** zone.

Chapter 8

Customer 360° View

Topics:

- [Prerequisites](#)
- [Customer 360° View](#)
- [Customer 360° Information](#)
- [Bill Information](#)
- [Pricing Rule \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides a new screen named **Customer 360° View** which enables you to quickly view in-depth information about the person. This screen can be used to view the 360° information of a person who is associated with the fully-insured group or self-funded policy. It provides the following information:

- Basic details, characteristics, child persons, person hierarchy, person billing hierarchy, and the customer contacts of the person.
- Customer registration objects through which the bill groups are created for a parent customer.
- List of accounts to which the parent customer and its bill groups are associated.
- Basic details, characteristics, administrative contracts, automatic payment options, billing and adjustment summary, financial and collections summary, and unpaid bills of the person's account.
- Consolidated view of the transactions (such as, billing, payment, payment cancellation, adjustment, adjustment cancellation, automatic payments sent to the auto clearing house for review, refund, write off, excess credit, and reconciliation) which are carried out for the person's account.
- List of policies to which the parent customer or bill group is associated. The system lists those policies where the policy category is set to **Self-Funded** and **Fully Insured Group**.
- Basic details, related persons, and policy plans in the person's policy.
- Basic and in-depth details of the pricing rules which are defined for a parent customer who is associated with the fully-insured group or self-funded policy.
- Basic and in-depth details of the pricing rules which are defined for a self-funded policy of a bill group.
- Basic details of the pricing groups which are defined for a bill group who is associated with the self-funded policy.
- Basic and in-depth details of the pricing rules which are defined for a fully-insured group policy.
- Basic and in-depth details of the pricing rules which are defined for a fully-insured group policy plan.
- Basic and in-depth details of the pricing rules which are defined for the states where the fully-insured group policy and its plans and memberships are issued.

- Basic details of the approval transactions which are created while defining, editing, and deleting the pricing rules for the self-funded or fully-insured group business.
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, write off, or transfer) through which the bill is settled, high-level summary and details of the bill segments which are included in the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill-down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

Prerequisites

To setup the **Customer 360° View** feature, you need to do the following:

- Define the required divisions, customer classes, person types, person identifier types, account identifier types, policy types, and policy person roles in the system
- Define values for the **C1-SourceSystemLookup** extendable lookup
- Define the required characteristic types where the characteristic entity is set to **Person**
- Define the required characteristic types where the characteristic entity is set to **Account**
- Define the required characteristic types where the characteristic entity is set to **Policy**
- Define values for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1_CMO** feature configuration

Note: This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

- Define values for **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

Note: This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

- Define value for the **Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration

Customer 360° View

The **Customer 360° View** screen allows you to search for a person, its accounts, and policies using various search criteria. It contains the following zone:

- [360° Search](#) on page 679

360° Search

The **360° Search** zone allows you to search for a person, account, and policy using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person, account, or policy. The valid values are: <ul style="list-style-type: none"> • Policy • Person • Account 	Yes
	Note: By default, the Policy option is selected.	
Policy Type	Used to search policies which are created using a particular policy type.	No
	Note: This field appears when the Policy option is selected from the Search By list.	
Source System	Used to search policies which were created in a particular external system.	No
	Note: This field appears when the Policy option is selected from the Search By list.	
Policy Number	Used to search a policy with a particular policy number.	No
	Note: This field appears when the Policy option is selected from the Search By list.	
Policy ID	Used to search a particular policy.	No
	Note: This field appears when the Policy option is selected from the Search By list.	
Policy Person Role	Used to search policies where a person is assigned a particular person role.	No
	Note: This field appears when the Policy option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Name	<p>Used to search a particular person using its primary or secondary name. If you specify the person name while searching for an account, the system searches all accounts where the person is the main customer. However, if you specify the person name while searching for a policy, the system searches all policies where the person is the main customer.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when you are searching for a policy using the policy person role.</p>
	<p>Note:</p> <p>This field appears when:</p> <ul style="list-style-type: none"> • The Policy or Person option is selected from the Search By list. • The Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked. 	
Status	<p>Used to search policies with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated 	No
	<p>Note: This field appears when the Policy option is selected from the Search By list.</p>	
Start Date	<p>Used to search policies which are effective from a particular date.</p>	No
	<p>Note: This field appears when the Policy option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.</p>	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to search policies which are effective till a particular date.	No
	Note: This field appears when the Policy option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	
Characteristic Type	Used to search persons, accounts, or policies with a particular type of characteristic.	No
	Note: This field appears when the Advanced Search link available in the right side of the 360° Search zone is clicked.	
Characteristic Value	Used to search persons, accounts, or policies with a particular characteristic.	Yes (Conditional)
	Note: This field appears when you are searching for a person, account, or policy using the characteristic type. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	
Division	Used to search persons or accounts which belong to a particular division.	No
	Note: This field appears when the Person or Account option is selected from the Search By list.	
Customer Class	Used to search accounts or persons' whose accounts belong to a particular customer class.	No
	Note: This field appears when the Person or Account option is selected from the Search By list.	
Person ID	Used to search a particular person.	No
	Note: This field appears when the Person option is selected from the Search By list.	
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person.	Yes (Conditional)
	Note: This field appears when the Person option is selected from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier	Used to search a person with a particular identifier.	Yes (Conditional)
	Note: This field appears when the Person option is selected from the Search By list.	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Person Type	Used to search persons of a particular type. The valid values are: <ul style="list-style-type: none"> • Business • Bill Group • Group • Broker • Person • Parent Customer 	No
	Note: This field appears when the Person option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	
Address	Used to search persons with a particular address or accounts' whose main customer has a particular address.	No
	Note: This field appears when the Person or Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	
City	Used to search persons who belong to a particular city or accounts' whose main customer belongs to a particular city.	No
	Note: This field appears when the Person or Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.	

Field Name	Field Description	Mandatory (Yes or No)
Skip Months	Used to search accounts for which the skip months are defined through a billing preference.	No
	<p>Note:</p> <p>You can set the billing preference for an account through a characteristic type which is specified in the Bill Cycle Rule Code option type of the C1-ASOBLNG feature configuration. The system enables you to define, edit, delete, and copy a billing preference through the Field Mapping screen. For more information, see Defining a Billing Preference.</p> <p>This field appears when the Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.</p>	
Phone Number	Used to search a person with a particular phone number or accounts' whose main customer has a particular phone number.	No
	<p>Note: This field appears when the Person or Account option is selected from the Search By list and the Advanced Search link available in the right side of the 360° Search zone is clicked.</p>	
Account ID	Used to search a particular account.	No
	<p>Note: This field appears when the Account option is selected from the Search By list.</p>	
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.	Yes (Conditional)
	<p>Note: This field appears when the Account option is selected from the Search By list.</p>	
Account Identifier	Used to search an account with a particular identifier.	Yes (Conditional)
	<p>Note: This field appears when the Account option is selected from the Search By list.</p>	

Note:

You must specify at least one search criterion while searching for a person, account, or policy. One more search criterion is required when you are searching for a person or account using the division and/or customer class. Similarly, one more search criterion is required when you are searching for a policy using the policy type and/or source system.

If you have specified any other search criterion along with the person ID, account ID, or policy ID, the system ignores the additional search criterion and searches using the person ID, account ID, or policy ID, respectively.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Information	Displays information about the policy.
	<p>Note:</p> <p>It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.</p> <p>This column appears when the Policy option is selected from the Search By list.</p>
Main Customer	Indicates the main customer of the policy or account.
	<p>Note: This column appears when the Policy or Account option is selected from the Search By list.</p>
Source System	Displays the name of the external system in which the policy was created.
	<p>Note: This column appears when the Policy option is selected from the Search By list.</p>
Policy Number	Displays the policy number.
	<p>Note: This column appears when the Policy option is selected from the Search By list.</p>
Start Date	Displays the date from when the policy is effective.
	<p>Note: This column appears when the Policy option is selected from the Search By list.</p>
End Date	Displays the date till when the policy is effective.
	<p>Note: This column appears when the Policy option is selected from the Search By list.</p>

Column Name	Column Description
Status	<p>Indicates the status of the policy. The valid values are:</p> <ul style="list-style-type: none"> • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated
	<p>Note: This column appears when the Policy option is selected from the Search By list.</p>
Person Information	<p>Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.</p>
	<p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>This column appears when the Person option is selected from the Search By list.</p>
Person Name	<p>Displays the name of the person.</p>
	<p>Note: This column appears when the Person option is selected from the Search By list.</p>
Person Type	<p>Indicates the type of the person. The valid values are:</p> <ul style="list-style-type: none"> • Business • Bill Group • Group • Broker • Person • Parent Customer
	<p>Note: This column appears when the Person option is selected from the Search By list.</p>
Primary Person Identifier Type	<p>Indicates the primary identifier type associated with the person.</p>
	<p>Note: This column appears when the Person option is selected from the Search By list.</p>

Column Name	Column Description
Primary Person Identifier	Displays the primary person identifier.
	Note: This column appears when the Person option is selected from the Search By list.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This column appears when the Account option is selected from the Search By list.
Division	Indicates the division to which the account belongs.
	Note: This column appears when the Account option is selected from the Search By list.
Customer Class	Indicates the customer class to which the account belongs.
	Note: This column appears when the Account option is selected from the Search By list.
Primary Account Identifier Type	Indicates the primary identifier type associated with the account.
	Note: This column appears when the Account option is selected from the Search By list.
Primary Account Identifier	Displays the primary account identifier.
	Note: This column appears when the Account option is selected from the Search By list.
Current Balance	Displays the total amount of funds in the account.
	Note: This column appears when the Account option is selected from the Search By list.
Also Known As	Displays the non-primary names of the person separated by semi-colon (;).
	Note: This column appears when the Person option is selected from the Search By list.

Note:

You can view the 360° information of the person, account, or policy by clicking the **View** () icon corresponding to the record in the **Search Results** section.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Person

Prerequisites

To search for a person, you should have:

- Divisions, customer classes, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify division and/or customer class when you are searching for a person using the city.

You must specify division, customer class, or any other criteria in the second group when you are searching for a person using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

Searching for an Account

Prerequisites

To search for an account, you should have:

- Divisions, customer classes, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.

- Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the fourth criteria group) and account identifier (in the third criteria group), the system searches using the account identifier instead of the person name.

You must specify division and/or customer class when you are searching for an account using the city.

If you have specified any other search criterion along with the account ID, the system ignores the additional search criterion and searches for the account using the account ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

Searching for a Policy**Prerequisites**

To search for a policy, you should have:

- Policy types and policy person roles defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
The **Customer 360° View** screen appears.
- Select the **Policy** option from the **Search By** list to indicate that you want to search for a policy.

- Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for a policy. One more search criterion is required when you are searching for a policy using the policy type and/or source system.

If you have specified any other search criterion along with the policy ID, the system ignores the additional search criterion and searches for the policy using the policy ID.

You must specify the person name when you are searching for a policy using the policy person role.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- Click **Search**.

A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the 360° Information of a Person**Prerequisites**

To view the 360° information of a person, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

Procedure

To view the 360° information of a person:

- Search for the person in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen. It contains the following zones:

- [Person Information](#) on page 705
- [Additional Attributes](#) on page 707
- [Child Persons](#) on page 707
- [Person Hierarchy](#) on page 708

Note: The **Person Hierarchy** zone does not appear when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Person Billing Hierarchy](#) on page 709

Note: The **Person Billing Hierarchy** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Derivation and Pricing Parameters](#) on page 712

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Sorting](#) on page 714

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Customer Contacts](#) on page 715
- [Bill Groups Created Via Customer Registration](#) on page 716

Note: The **Bill Groups Created Via Customer Registration** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

3. View the basic details of the person in the **Person Information** zone.
4. View the characteristics of the person in the **Person Characteristics** zone.
5. View the child persons included in the person's hierarchy in the **Child Persons** zone.
6. View the accounts and policies where the person is the main customer and memberships where the person is the main subscriber in the **Person Hierarchy** zone.
7. View the parent customer's accounts and policies and its bill groups' accounts and policies in the **Person Billing Hierarchy** zone.
8. View the derivation and pricing parameters defined for the bill group and sort ID combinations in the **Bill Group Derivation and Pricing Parameters** zone.
9. View the sort IDs defined for the bill groups in the **Bill Group Sorting** zone.
10. View how and when the person was contacted in the **Customer Contacts** zone.
11. View the customer registration objects through which the bill groups are created for the parent customer in the **Bill Groups Created Via Customer Registration** zone.
12. If required, you can view the details of the account to which the person is associated in the **Account** tab.

Note:

If you are viewing the 360° information of a parent customer, the following zones appear in the **Account** tab when you click the **Broadcast** () icon corresponding to the account in the [Account List](#) on page 717 zone:

- [Account Information](#) on page 718
- [Auto Pay Details](#) on page 721
- [Account Characteristics](#) on page 720
- [Account Financial and Collections Summary](#) on page 722
- [Open Bills](#) on page 723
- [Billed Vs Paid](#) on page 725
- [Timeline](#) on page 727
- [Trial Bills](#) on page 731

13. If required, you can view the details of the policy to which the person is associated in the **Policy** tab.

14. If required, you can view the pricing information of the parent customer or its bill groups in the **Pricing Information** tab.

Viewing the 360° Information of an Account

Prerequisites

To view the 360° information of an account, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration
- Values defined for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1_CMO** feature configuration
- Values defined for the **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

Note: The latter two prerequisites are not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

Procedure

To view the 360° information of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account whose details you want to view.

The **Account** tab appears in the **Customer 360° Information** screen. It contains the following zones:

- [Account List](#) on page 717

Note: The **Account List** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Account Information](#) on page 718

- [Auto Pay Details](#) on page 721
- [Account Characteristics](#) on page 720
- [Administrative Contracts](#) on page 721

Note: The **Administrative Contracts** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.

- [Account Financial and Collections Summary](#) on page 722
- [Billing and Adjustment Summary](#) on page 722

Note: The **Billing and Adjustment Summary** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.

- [Open Bills](#) on page 723
 - [Billed Vs Paid](#) on page 725
 - [Timeline](#) on page 727
 - [Trial Bills](#) on page 731
3. View the accounts of the parent customer and its bill groups in the **Account List** zone.
 4. View the basic details of the account in the **Account Information** zone.
 5. View the automatic payment options defined for the account in the **Auto Pay Details** zone.
 6. View the characteristics of the account in the **Account Characteristics** zone.
 7. View the account's contracts which should be monitored closely for various administrative reasons in the **Administrative Contracts** zone.
 8. View the financial and collection details of the account in the **Account Financial and Collections Summary** zone.
 9. View the billing and adjustment summary of the account in the **Billing and Adjustment Summary** zone.
 10. View the unpaid bills of the account in the **Open Bills** zone.
 11. View various transactions of the account, such as bills, payments, adjustments, reconciliations, and so on, in the **Billed Vs Paid** zone.
 12. View the number of customer contacts, bills, and payments created for the account in a particular month in the **Timeline** zone.
 13. View the trial bills which are created for the account in the **Trial Bills** zone.

Person Information

The **Person Information** zone displays the details of the person. It contains the following sections:

- **Main** - Displays the basic information about the person. It contains the following fields:

Field Name	Field Description
Person Information	Displays information about the person. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the person.
Person Type	Indicates the type of the person. The valid values are: <ul style="list-style-type: none"> • Business • Bill Group • Group • Broker • Person • Parent Customer
Date of Birth	Displays the date when the person was born. Note: This field appears when the respective data is available for the person.

- **Person Names** - Lists the primary and non-primary names of the person. It contains the following columns:

Column Name	Column Description
Name Type	Indicates the type of the name.
Person Name	Displays the name of the person.

- **Person Identifiers** - Lists various types of identification associated with the person. It contains the following columns:

Column Name	Column Description
Person Identifier Type	Indicates the person identifier type.
Person Identifier	Displays the value of the person identifier type.

- **Contact Information** - Displays the contact details of the person. It contains the following fields:

Field Name	Field Description
Country	Indicates the country where the person is located.

Field Name	Field Description
Address 1	Displays the first line of the person's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the person's address. It may contain details, such as street name.
Address 3	Displays the third line of the person's address. It may contain the landmark details.
Address 4	Displays the fourth line of the person's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the person resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
City	Displays the city where the person is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the person is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.
Email ID	Displays the e-mail ID of the person.

Note: The above mentioned fields appear in the **Contact Information** section when the respective data is available for the person.

- **Phone Details** – Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone number.
Phone Number	Displays the phone number of the person.
Extension	Displays the telephone extension number (if any).

- **Person Collection** – Lists the person's collection and advance deposit details. It contains the following fields:

Field Name	Field Description
Collection Class	Displays the separate delinquency process created for the accounts belonging to the collection class.
Last Credit Review Date	Indicates the date when the account's debt was last reviewed.
Drag Days	Displays the additional grace days offered at the account level.

Field Name	Field Description
Advance Deposit Amount	Displays the advance deposit amount which is specified when the advance deposit level is set to PG .
	Note: This field appears only when the advance deposit level for a parent customer is set to PG .
Advance Deposit Grace Days	Displays the advance deposit grace days which are specified when the advance deposit applicability is set to Y .
	Note: This field appears only when the advance deposit level for a parent customer is set to PG .
Advance Deposit Level	Indicates whether you want to park the advance deposit received from the group customer at the parent customer or policy level. The valid values are: <ul style="list-style-type: none"> PG POLI

Note: The fields in the **Person Collection** section appear only when the data is available.

Additional Attributes

The **Additional Attributes** zone lists the characteristics of the person. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to Predefined Value or Foreign Key Value .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

Child Persons

The **Child Persons** zone lists the child persons included in the person's hierarchy. It contains the following columns:

Column Name	Column Description
Child Person Information	Displays information about the child person.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the child person.
Relationship Type	Indicates how the child person is related to the parent person.
Start Date	Displays the date from when the child person is related to the parent person.
End Date	Displays the date till when the child person is related to the parent person.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a child person by clicking the **View** () icon corresponding to the child person in this zone.

You can create a new child person through the **Customer Registration** feature by clicking the **Add** link in the upper right corner of this zone. While adding a child person to a parent person, the child person is related to the parent person using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration.

You can filter the list using the **Person Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Bill Group Derivation and Pricing Parameters

An employer may have different bill groups. Each bill group will handle the claim and enrollment transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group and sort ID combination. These parameters are used to derive the bill group against which the claim and enrollment transactions should be billed in the system. For example, if you want bill group 1 to handle claim and enrollment transactions of employees who reside in the western location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 1 where the source system is set to X, parameter 1 is set to Western, and parameter 2 is set to Grade A. Similarly, if you want bill group 2 to handle claim and enrollment transactions of employees who reside in the eastern location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 2 where the source system is set to X, parameter 1 is set to Eastern, and parameter 2 is set to Grade A.

Note: In the above examples, the bill group is derived based on the specified attributes when the source system, parameter 1, and parameter 2 are mapped to the appropriate transaction fields in the pricing rule type using which the pricing rules are defined for the bill group.

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4. If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group.

The **Bill Group Derivation and Pricing Parameters** zone lists the derivation and pricing parameters defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define and edit the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination through this zone. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for a bill group and sort ID combination either from this zone or from the **Upload Request** screen. While creating an upload request for the derivation and pricing parameters, you need to specify the parent customer whose bill groups' derivation and pricing parameters you want to upload. Once the upload request is processed, the derivation and pricing parameters are defined for the bill group and sort ID combination in the system.

This zone contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the derivation and pricing parameters are defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Source System	Indicates the source system from where the claim and enrollment transactions are received.
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.

Column Name	Column Description
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.
Sort ID	Indicates the sort ID of the bill group.
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.
Status	Indicates the status of the derivation and pricing parameters defined for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> Active Inactive

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the derivation and pricing parameters of a bill group and sort ID combination.

If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header in this zone, and then click the **Edit** button. However, if you want to edit the derivation and pricing parameters of one or more bill group and sort ID combination, you need to select the check box corresponding to the bill group and sort ID combination, and then click the **Edit** button.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing.

You can define the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination by clicking the **Add** link in the upper right corner of this zone. You can also upload the derivation and pricing parameters for one or more bill group (who is effective child person of the parent customer) and sort ID combinations by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using various search criteria (such as, **Parameter 1, Parameter 2, Parameter 3, Parameter 4, Bill Group ID, Sort ID, Status, and Bill Group Name**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4128.

Bill Group Sorting

Oracle Revenue Management and Billing allows you to define unique sort IDs for a bill group in a given date range. In future, the sort ID will be used to club transactions based on certain parameters and present them in the bill in the ascending or descending order. It may also be used to sort data while generating various reports.

The **Bill Group Sorting** zone lists the sort IDs defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define, edit, and delete a sort ID of a bill group (who is effective child person of the parent customer) through this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) at the same time using the **Upload Request** feature. You can upload the sort IDs for bill groups either from this zone or from the **Upload Request** screen. While creating an upload request for bill group sort IDs, you need to specify the parent customer whose bill groups' sort IDs you want to upload. Once the upload request is processed, the sort ID is defined for the respective bill group in the system.

This zone contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the sort ID is defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Sort ID	Displays the sort ID.
Description	Displays the description of the sort ID.
Start Date	Displays the date from when the sort ID is effective for the bill group.
End Date	Displays the date till when the sort ID is effective for the bill group.

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of a bill group's sort ID.
Delete	Used to delete a bill group's sort ID. Note: You can delete a bill group's sort ID when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

If you want to edit or delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header in this zone, and then accordingly click the **Edit** or **Delete** button. However, if you want to edit or delete

one or more sort IDs of effective bill groups, you need to select the check box corresponding to the bill group and sort ID combination, and then accordingly click the **Edit** or **Delete** button.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing or deleting.

You can define a sort ID for a bill group (who is effective child person of the parent customer) by clicking the **Add** link in the upper right corner of this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using the **Bill Group Name** field available in the **Filter** area. By default, the **Filter** area is hidden.

You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4128.

Customer Contacts

The **Customer Contacts** zone displays information about how and when the person was contacted. It contains the following columns:

Column Name	Column Description
Contact Date	Displays the date when the person was contacted.
Customer Contact Information	Displays information about the customer contact. Note: It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the customer contact.
Contact Type	Indicates how the person was contacted.
Comments	Displays additional information about the customer contact.

You can filter the list using various search criteria (such as, **On or Before Contact Date**, **Contact Class**, **Contact Type**, and **Show Open Contacts Only**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

Bill Groups Created Via Customer Registration

The **Bill Groups Created Via Customer Registration** zone lists the customer registration objects through which the parent customer's bill groups are created in the system. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**. It contains the following columns:

Column Name	Column Description
Customer Registration Information	Indicates the customer registration object through which the bill group is created.
	Note: It has a link. On clicking the link, the Customer Registration screen appears where you can view the details of the respective customer registration object.
Person Name	Displays the name of the bill group.
Person Relationship Type	Indicates how the bill group is related to the parent customer.
Status	Indicates the status of the customer registration object. The valid value is: <ul style="list-style-type: none"> Bill Group Approved

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Person Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Customer 360° Information - Account

The following table provides information about the **Account** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded or fully-insured group policy	<p>The Account tab displays the following:</p> <ul style="list-style-type: none"> List of the parent customer's and bill groups' accounts. Note that the system lists the accounts of all effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration. Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the parent customer's or bill group's account.
A bill group who is associated with the fully-insured group or self-funded policy	<p>The Account tab displays the basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account.</p> <p>Note: If the bill group has multiple accounts, the system, by default, picks and displays the details of any one of its account.</p>

If you are viewing the 360° information of...	Then...
A person whose person type is neither Parent Customer nor Bill Group	<p>The Account tab displays the basic details, characteristics, automatic payment options, administrative contracts, financial and collections summary, billing and adjustment summary, and unpaid bills of the person's account.</p> <p>Note: If the person has multiple accounts, the system, by default, picks and displays the details of any one of its account.</p>

It contains the following zones:

- [Account List](#) on page 717

Account Information

The **Account Information** zone displays the details of the account. It contains the following sections:

- **Main** – Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Management Group	Indicates the account management group to which the account belongs.
	Note: It has a link. On clicking the link, the Account Management Group screen appears where you can view the details of the respective account management group. This field appears when the respective data is available for the account.

- **Contact Information** – Displays the contact details of the account’s main customer. It contains the following fields:

Field Name	Field Description
Address Source	Indicates which address should be used to route the account’s bills and/or quotes via the postal service.
Country	Indicates the country where the main customer is located.
Address 1	Displays the first line of the main customer’s address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the main customer’s address. It may contain details, such as street name.
Address 3	Displays the third line of the main customer’s address. It may contain the landmark details.
Address 4	Displays the fourth line of the main customer’s address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the main customer resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
City	Displays the city where the main customer is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the main customer is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.

Note: The above mentioned fields except **Address Source** appear in the **Contact Information** section when the address source of the main customer is set to **Account Override** and the respective data is available for the account.

- **Account Identifiers** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

- **Billing** – Displays the billing information of the account. It contains the following fields:

Field Name	Field Description
Bill Cycle	Indicates the bill cycle of the account.
	<p>Note:</p> <p>It has a link. On clicking the link, the Bill Cycle screen appears where you can view the details of the respective bill cycle.</p> <p>This field appears when the respective data is available for the account.</p>
Bill After Date	Displays the date when the billing should be resumed for the account.
	<p>Note: This field appears when the respective data is available for the account.</p>
Skip Months	Indicates the months separated by comma for which billing should be skipped for the account.
	<p>Note: The system derives the skip months for an account using the billing preference. You can set the billing preference for an account through a characteristic type which is specified in the Bill Cycle Rule Code option type of the C1-ASOBLLNG feature configuration. The system enables you to define, edit, delete, and copy a billing preference through the Field Mapping screen. For more information, see Defining a Billing Preference.</p>

Account Characteristics

The **Account Characteristics** zone lists the characteristics of the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	<p>Note: The data appears in this column when the type of characteristic value is set to Predefined Value or Foreign Key Value.</p>

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

Administrative Contracts

The **Administrative Contracts** zone lists the account's contracts which should be monitored closely for various administrative reasons. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following columns:

Column Name	Column Description
Contract ID	Displays the contract ID.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Contract Type	Indicates the type of the contract.
Currency	Indicates the currency in which the contract balance is maintained.
Current Balance	Displays the current balance on the contract.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The data appears in this zone when you have defined the value for the **Administrative Contract Type** option type in the **C1_CMO** feature configuration.

Auto Pay Details

The **Auto Pay Details** zone lists the automatic payment options defined for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card.
	Note: The data appears in this column when the external type of the auto pay source code's tender type is set to Credit Card Withdrawal .
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Account Financial and Collections Summary

The **Account Financial and Collections Summary** zone displays the financial and collection details of the account. It contains the following fields:

Field Name	Field Description
Collection Class	Indicates the collection class to which the account belongs.
Current Credit Rating	Indicates the account's credit rating which is effective on the current date.
Last Credit Review Date	Displays the date when the account's debt was last reviewed.
Last Payment Date	Displays the date when the last payment was made for the account.
	Note: The system considers the last payment which is in the Frozen status.
Last Payment Amount	Displays the amount of the last payment.
	Note: The system considers the last payment which is in the Frozen status.
Current Balance	Displays the current balance of the account.
Payoff Balance	Displays the payoff balance of the account.
Account on Hold	Indicates whether the account is on hold or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Account on Promise to Pay	Indicates whether any promise to pay is scheduled for the account on the current or future date. The valid values are: <ul style="list-style-type: none"> • Yes • No
Account on Payment Arrangement	Indicates whether any payment arrangement exists for the account. The valid values are: <ul style="list-style-type: none"> • Yes • No
Account on Payment Agreement	Indicates whether any active payment agreement request exists for the account. The valid values are: <ul style="list-style-type: none"> • Yes • No

Billing and Adjustment Summary

The **Billing and Adjustment Summary** zone displays the billing and adjustment summary of the account. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following sections:

- **Quote Billed Balance** – Displays information about the account's billed balance. It contains the following fields:

Field Name	Field Description
Past Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a past due date.
Future Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a future due date.
Quote Billed Balance	Displays the sum of past due billed balance and future due billed balance.

- **Future Adjustments and Retroactivity** – Displays information about the account’s future adjustments and retro activities. It contains the following fields:

Field Name	Field Description
Future Adjustments	Displays the sum of adjustment financial transactions of the account which are swept onto the next bill.
Future Retro Terms (Credits)	Displays the sum of canceled bill segment financial transactions of the account which are presented on the next bill.
Future Retro Adds (Debits)	Displays the sum of membership premium billable charges which are not yet billed to the account. Note: The data appears in this field when the values are defined for the Premium Amount SQI and Coverage End Date SQI option types in the C1-BILLADJSQ feature configuration.
Future Balance with Adjustments & Debits/Credits	Displays the sum of quote billed balance, future adjustments, future retro terms (credits), and future retro adds (debits).

Open Bills

The **Open Bills** zone lists the unpaid bills of the account. By default, the bills where the unpaid amount is greater than zero are listed in this zone. It contains the following columns:

Column Name	Column Description										
Bill Date	<p>Displays the date when the bill was generated.</p> <p>Note: The data in this column is presented in a different color depending on the age bucket in which the bill's days past due falls. The following table lists the color used for presentation in various age buckets:</p> <table border="1"> <thead> <tr> <th>Age Bucket</th> <th>Color</th> </tr> </thead> <tbody> <tr> <td>Age 0 to 30 DPD</td> <td>Black</td> </tr> <tr> <td>Age 31 to 60 DPD</td> <td>Green</td> </tr> <tr> <td>Age 61 to 90 DPD</td> <td>Orange</td> </tr> <tr> <td>Age > 90 DPD</td> <td>Red</td> </tr> </tbody> </table>	Age Bucket	Color	Age 0 to 30 DPD	Black	Age 31 to 60 DPD	Green	Age 61 to 90 DPD	Orange	Age > 90 DPD	Red
Age Bucket	Color										
Age 0 to 30 DPD	Black										
Age 31 to 60 DPD	Green										
Age 61 to 90 DPD	Orange										
Age > 90 DPD	Red										
Bill ID	<p>Displays the bill ID.</p> <p>Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</p>										
Due Date	Displays the date when the bill is due for payment.										
Bill Amount	Displays the bill amount.										
Bill Status	<p>Indicates the status of the bill. The valid values are:</p> <ul style="list-style-type: none"> • Pending • Complete 										
Unpaid Amount	Displays the unpaid amount of the bill.										
Age Bucket	<p>Indicates the age bucket in which the bill's days past due falls. The valid values are:</p> <ul style="list-style-type: none"> • Age 0 to 30 DPD • Age 31 to 60 DPD • Age 61 to 90 DPD • Age > 90 DPD 										
Days Past Due	Displays the number of days past after the due date.										
Overdue Process Information	<p>Indicates the overdue process which is initiated for the bill and is currently in the Active status. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the respective overdue process.</p>										
Delinquency Information	<p>Process</p> <p>Indicates the information of a delinquency process created for an overdue bill of the account.</p> <p>Note: It has a link. On clicking the link, the Delinquency Process screen appears where you can view the details of the respective delinquency process.</p>										

Column Name	Column Description
Payment Agreement Request Information	Indicates the active payment agreement request in which the bill is included. Note: It has a link. On clicking the link, the Payment Agreement Request screen appears where you can view the details of the respective payment agreement request.

You can view additional information about the bill by clicking the **View** () icon corresponding to the bill in the **Open Bills** zone.

You can filter the list using various search criteria (such as, **On or Before Bill Date** and **Show All Bills**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Note: If you select the **Show All Bills** option, the system lists all bills where the unpaid amount is greater than or equal to zero.

Billed Vs Paid

The **Billed Vs Paid** zone lists the following transactions of the account:

- Bills which are created for the account

Note: The system lists the bills which are created for the account either manually from the user interface or automatically through the batches. It also lists the bills which are created for the account through a manual or automatic invoice request.

- Any excess credit which is made for the account
- Payments which are created or canceled for the account
- Adjustments which are created or canceled for the account
- Refund or Write Off adjustments which are created or canceled for the account
- Payment transfer to the reconciliation contract of the account
- Payment transfer from the reconciliation contract to the payor account's contract
- Reconciliations through which the account's bill segments are reconciled
- Automatic payments sent to the auto clearing house for review before freezing them

Note: The excess credit information for the account appears when you have defined the value for the **On Account Contract Type** option type in the **C1_CMO** feature configuration. Accordingly, the excess credit information (if any) on the respective contracts is listed in this zone.

It contains the following columns:

Column Name	Column Description
Due Date	Displays the date when the bill is due for payment. Note: The data appears in this column when the transaction type is set to Bill .

Column Name	Column Description																						
Bill ID	<p>Displays the bill ID.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</p> <p>The data appears in this column when the transaction type is set to Bill.</p>

Timeline

The **Timeline** zone displays the following information in a graphical form:

- Number of customer contacts which are created for the account's main customer in a particular month
- Number of bills which are created for the account in a particular month
- Number of payments which are created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information.	Yes
	Note: By default, the current month appears in this field.	
Year	Used to indicate the year till when you want to display the above stated information.	Yes
	Note: By default, the current year appears in this field.	

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** (🔍) icon.

You can use the **Previous 12 Months** (⏮), **Previous Month** (⏪), **Go To Today** (🕒), **Next Month** (⏩), and **Next 12 Months** (⏭) icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description						
Customer Contacts	<p>A small icon appears for each customer contact which is created for the account's main customer in the respective month. For example, if two customer contacts are created for the main customer in the month of Jan 2017 and one customer contact is created in the month of Feb 2017, then two icons appear in the Jan 2017 column and one icon appear in the Feb 2017 column. A text indicating the day of the month when the customer contact was created appears on the icon. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1"> <thead> <tr> <th>If the contact action on the customer contact type is...</th> <th>Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td>Set to Send Letter</td> <td>Red</td> </tr> <tr> <td>Set to Action Algorithm</td> <td>Yellow</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding customer contact information appears at the bottom of this zone. It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer contact.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-CC-EVT algorithm.</p>	If the contact action on the customer contact type is...	Then the icon appears in...	Set to Send Letter	Red	Set to Action Algorithm	Yellow
If the contact action on the customer contact type is...	Then the icon appears in...						
Set to Send Letter	Red						
Set to Action Algorithm	Yellow						

Row Name	Row Description										
Bills	<p data-bbox="467 212 1463 457">A small icon appears for each bill which is created for the account in the respective month. For example, if three bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month when the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. Incomplete	Yellow												

Hold Details

The **Hold Details** zone lists the active hold requests due to which the bills of the respective account are kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	<p>Displays information about the hold request.</p> <p>Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request.</p>
Status	<p>Indicates the status of the hold request. The valid values are:</p> <ul style="list-style-type: none"> Active Approval in Progress Deferred Processing Draft Rejected Released
Entity	<p>Indicates the type of the entity for which the hold request is created in the system. The valid value is:</p> <ul style="list-style-type: none"> Account
Hold Reason	Displays the reason for which the hold request is created for the account.
Hold Process	Indicates the process that is kept on hold for the account.

Column Name	Column Description
Start Date	Displays the date from when the hold request is effective for the account.
End Date	Displays the date till when the hold request is effective for the account.

Trial Bills

The **Trial Bills** zone lists the trial bills which are created for the account. It contains the following columns:

Column Name	Column Description
Creation Date	Displays the date when the trial bill is created.
Trial Bill Information	Displays information about the trial bill. Note: It has a link. On clicking the link, the Trial Bill screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.

Customer 360° Information - Policy

The following table provides information about the **Policy** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of self-funded policies to which the parent customer's bill groups are associated. <p>Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder.</p> <ul style="list-style-type: none"> Basic details and policy persons of a self-funded policy where the parent customer is the policy holder.
A parent customer who is associated with the fully-insured group policy	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of fully-insured group policies to which the parent customer or its bill groups are associated. <p>Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder.</p> <ul style="list-style-type: none"> Basic details, policy persons, and policy plans of a fully-insured group policy to which the parent customer or its bill group is associated.
A bill group who is associated with the self-funded policy	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of self-funded policies to which the bill group is associated. Basic details and policy persons of a self-funded policy.

If you are viewing the 360° information of...	Then...
A bill group who is associated with the fully-insured group policy	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of fully-insured group policies to which the bill group is associated. Basic details, policy persons, and policy plans of a fully-insured group policy.
A person whose person type is neither Parent Customer nor Bill Group	<p>The Policy tab displays the following:</p> <ul style="list-style-type: none"> List of fully-insured group or self-funded policies to which the person is associated. Basic details, policy persons, and policy plans of a self-funded or fully-insured group policy.

It contains the following zones:

- [Policy List](#) on page 732

Note: The **Policy List** zone appears when there is more than one policy associated with the person.

- [Policy Information](#) on page 733
- [Policy Persons](#) on page 734
- [Policy Plans](#) on page 735

Note: The **Policy Plans** zone appears when you are viewing the 360° information of a person who is associated with the fully-insured group policy.

Policy List

If you are viewing 360° information of a parent customer, the **Policy List** zone lists the policies to which the parent customer and its bill groups are associated. Note that the system lists the policies of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.

Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder.

If you are viewing 360° information of a bill group, the **Policy List** zone lists the policies to which the bill group is associated. If you are viewing 360° information of a person who is neither a parent customer nor a bill group, the **Policy List** zone lists the policies to which the person is associated. This zone appears when there is more than one policy associated with the person. It contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.

Column Name	Column Description
Policy Type	Indicates the type of the policy.
Status	Indicates the status of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a policy, the following zones appear in the **Policy** tab:

- Policy Information
- Policy Persons
- Policy Plans

You can filter the list using various search criteria (such as, **Policy Number**, **Start Date**, **Policy Type**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Policy Information

The **Policy Information** zone displays the details of the policy. It contains the following sections:

- **Main** – Displays the basic information about the policy. It contains the following fields:

Field Name	Field Description
Policy Information	Displays information about the policy. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.
Source System	Displays the name of the external system in which the policy is created.
Policy Number	Displays the policy number.
Status	Indicates the status of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Field Name	Field Description
Runout End Date	Displays the date when the runout period of the policy ends. Note: This field appears when you are viewing the 360° information of a person who is associated with a self-funded policy.
Runout Administration Fees	Indicates whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> • None • Percentage of Claim Note: This field appears when you are viewing the 360° information of a person who is associated with a self-funded policy. At present, this field is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.
Advance Deposit Applicability	Indicates whether the advance deposit is applicable for the policy. The valid values are: <ul style="list-style-type: none"> • Y • N
Advance Deposit Amount	Displays the advance deposit amount.
Advance Deposit Grace Days	Displays the grace days which is used to derive the grace period within which the advance deposit should be received from the group customer for the policy.
Advance Deposit Account	Displays the advance deposit account linked with the policy. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

- **Characteristics** – Lists the characteristics defined for the policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Policy Persons

The **Policy Persons** zone lists the persons associated with the policy. It contains the following columns:

Column Name	Column Description
Person Name	Indicates the person who is associated with the policy.
Policy Person Role	Indicates the role of the person with respect to the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a policy person by clicking the **View** () icon corresponding to the person in the **Policy Persons** zone.

Policy Plans

The **Policy Plans** zone lists the plans defined in the policy. It appears when you are viewing the 360° information of a person who is associated with the fully-insured group policy. It contains the following columns:

Column Name	Column Description
Policy Plan Information	Displays information about the policy plan. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Plan Name	Indicates the plan to which the policy belongs.
Benefit Type	Indicates the benefit type of the policy plan. The valid values are: <ul style="list-style-type: none"> • Commercial • Medicare Affiliated
No. of Subscribers	Indicates the number of main subscribers in the policy plan.
No. of Members	Indicates the number of members in the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Plan Start Date** and **Plan End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Customer 360° Information - Pricing Information

The following table provides information about the **Pricing Information** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	<p>The Pricing Information tab displays the following:</p> <ul style="list-style-type: none"> • Basic details of the pricing rules which are defined for the parent customer. • Summarized tree view listing each bill group of the parent customer and the bill groups' self-funded policies and pricing rules. • Basic details of the self-funded policies which are associated with each bill group of the parent customer. • Basic details of the pricing rules which are defined for the self-funded policies of each bill group. • Basic details of the active pricing groups which are defined for each bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.
A bill group who is associated with the self-funded policy	<p>The Pricing Information tab displays the following:</p> <ul style="list-style-type: none"> • Summarized tree view listing the parent customer and pricing rules which are defined for the parent customer. • Basic details of the self-funded policies which are associated with the bill group. • Basic details of the pricing rules which are defined for the self-funded policies of the bill group. • Basic details of the active pricing groups which are defined for the bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.
A parent customer who is associated with the fully-insured group policy	<p>The Pricing Information tab displays the following:</p> <ul style="list-style-type: none"> • Basic details of the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue). • Summarized tree view listing the pricing rules which are defined for the parent customer, fully-insured group policies, and policy plans. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules for different entities.

Bill Group Self-Funded Policy Information

The **Bill Group Self-Funded Policy Information** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy. If you are viewing the 360° information of a parent customer, the **Bill Group Self-Funded Policy Information** zone lists the policies to which each bill group of the parent customer is associated. However, if you are viewing the 360° information of a bill group, the **Bill Group Self-Funded Policy Information** zone lists the policies to which the bill group is associated. It contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the bill group to which the policy is associated.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective bill group (i.e. person).
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.
Renew	On clicking the Renew  icon, the Policy screen appears where you can renew the policy.
	Note: The Renew icon appears when the policy is in the In Force/Active status and it is not yet renewed.

Column Name	Column Description
Policy Number	Displays the policy number.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Status	Indicates the status of the policy. The valid values are: <ul style="list-style-type: none"> • Pending • In Force/Active • Runout • Post Runout
Runout End Date	Displays the date when the runout period of the policy ends.
Renewal Date	Displays the date when the policy is renewed.
	Note: The data appears in this column when the policy is renewed.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a bill group and policy combination, the **Bill Group Self-Funded Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

You can filter the list using various search criteria (such as, **Bill Group Name**, **Policy Start Date**, and **Policy End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Bill Group Pricing Groups

The **Bill Group Pricing Groups** zone lists the pricing groups which are defined for the bill group. By default, the active pricing groups are listed in this zone. It appears when you are viewing 360° information of a bill group who is associated with the self-funded policy. It contains the following columns:

Column Name	Column Description
Pricing Group	Indicates the pricing group which is created for the bill group.
Status	Indicates the status of the pricing group. The valid values are: <ul style="list-style-type: none"> Active Inactive
Edit	On clicking the Edit () icon, the Pricing Group screen appears where you can edit the details of the pricing group.
Delete	On clicking the Delete () icon, you can delete the pricing group. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: You can delete a pricing group when it is not yet used while defining a pricing rule for the bill group.</p> </div>
Duplicate	On clicking the Duplicate () icon, the Pricing Group screen appears where you can define a new pricing group using an existing pricing group.
Associated Price Items	Indicates the price items whose pricing is defined using the pricing group.
Rules	Indicates the number of rules defined in the respective pricing group.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Group Pricing Groups** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears when you click the **Broadcast** () icon corresponding to a bill group in the **Bill Group Self-Funded Policy Information** zone.

You can define a new pricing group for the bill group by clicking the **Add** link in the upper right corner of this zone.

You can filter the list using the **Show All** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Note: If you select the **Yes** option from the **Show All** list, the system lists both the active and inactive pricing groups in the **Bill Group Pricing Groups** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4128.

Fully-Insured Pricing Rules

The **Fully-Insured Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the fully-insured group policy. If you are viewing the 360° information of a parent customer, the **Fully-Insured Pricing Rules** zone lists:

- Age based or tier based pricing rules defined for the parent customer's or its bill groups' fully-insured group policy plans
- Additional fee pricing rules defined for the parent customer
- Additional fee pricing rules defined for the fully-insured group policies and policy plans of the parent customer and its bill groups
- Additional fee pricing rules defined for the states where the fully-insured group policy, its policy plans, and memberships are issued

However, if you are viewing the 360° information of a bill group, the **Fully-Insured Pricing Rules** zone lists:

- Age based or tier based pricing rules defined for the bill group's fully-insured group policy plans
- Additional fee pricing rules defined for the parent customer
- Additional fee pricing rules defined for the fully-insured group policies and policy plans of the parent customer and the bill group
- Additional fee pricing rules defined for the states where the fully-insured group policy, its policy plans, and memberships are issued

It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created. Note: It has a link. On clicking the link, the Pricing Rule Type screen appears where you can view the details of the respective pricing rule type.
Pricing Rule Information	Displays information about the pricing rule. Note: It has a link. On clicking the link, the Pricing Rule screen appears where you can view the details of the respective pricing rule.

Column Name	Column Description
Price Item Information	Indicates the price item for which the pricing rule is created.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Pricing Level	Indicates the level at which the pricing rule is defined. The valid values are: <ul style="list-style-type: none"> • Parent Customer • Plan • Policy • State
Entity Information	Indicates the fully-insured group policy, policy plan, parent customer, or state for which the pricing rule is defined.
Start Date	Displays the date from when the pricing rule is effective.
End Date	Displays the date till when the pricing rule is effective.
Price List Information	Indicates the price list that contains the price item pricing which is created through the pricing rule.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Price Item**, **Start Date**, **Pricing Rule Type**, **End Date**, **Status**, and **Pricing Level**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Pricing Rule Summary

The **Pricing Rule Summary** zone lists the following in a tree structure:

- Information string of the parent customer
- Information string of the pricing rule defined for the parent customer
- Information string of each fully-insured group policy where the parent customer is associated

- Information string of the pricing rule defined for the fully-insured group policy of the parent customer
- Information string of each plan defined for the fully-insured group policy of the parent customer
- Information string of the pricing rule defined for the fully-insured group policy plans

It appears when you are viewing 360° information of a parent customer who is associated with the fully-insured group policy. It contains the following column:

Column Name	Column Description
Hierarchy	Displays information about the parent customer, fully-insured group policies, policy plans, and pricing rules in a tree structure.

Pricing Rule Approval Transactions

The **Pricing Rule Approval Transactions** zone lists the following information:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	The Pricing Rule Approval Transactions zone lists the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.
A bill group who is associated with the self-funded policy	The Pricing Rule Approval Transactions zone lists the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.
A parent customer who is associated with the fully-insured group policy	The Pricing Rule Approval Transactions zone lists the approval transactions which are created while defining, editing, and deleting the pricing rules of different entities (such as parent customer, fully-insured group policy, policy plans, and state of issue).
A bill group who is associated with the fully-insured group policy	The Pricing Rule Approval Transactions zone lists the approval transactions which are created while defining, editing, and deleting the pricing rules of different entities (such as parent customer, fully-insured group policy, policy plans, and state of issue).

It contains the following columns:

Column Name	Column Description
Submitted On	Displays the date and time when the approval transaction is created by the submitter.
Approval Transaction ID	Displays the approval transaction ID. Note: It has a link. On clicking the link, the Comparison: New versus Existing screen appears where you can review and accordingly approve, reject, or revert the changes.
Pricing Level	Indicates whether the approval transaction is created for a pricing rule which is defined at the parent customer or bill group level. The valid values are: <ul style="list-style-type: none"> • Parent Customer • Bill Group
Person Name	Indicates the person for whom the pricing rule is created.
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created.

Column Name	Column Description
Price Item Information	Indicates the price item for which the pricing rule is created.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the pricing rule is effective.
End Date	Displays the date till when the pricing rule is effective.
Approval Status	Indicates the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Deleted • Inprocess • Pending • Rejected
Action	Indicates the type of action performed by the submitter on the pricing rule. The valid values are: <ul style="list-style-type: none"> • Add • Update • Delete
Submitted By	Indicates the user who has performed the action on the pricing rule.
Assigned To	Indicates the user to whom the approval transaction is manually assigned for review.
Approved/Rejected By	Indicates the user who has approved or rejected the approval transaction.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status**, **Assigned To**, and **Price Item**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

Defining a Sort ID for a Bill Group

Prerequisites

To define a sort ID for a bill group, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration

Procedure

To define a sort ID for a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- Click the **Add** link in the upper right corner of the **Bill Group Sorting** zone.

The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Used to indicate the bill group for whom you want to define the sort ID.	Yes
	Note: The values appear in this list when there are effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type parameter of the C1-ASOBLNG feature configuration.	
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Used to specify the sort ID.	Yes
Start Date	Used to specify the date from when the sort ID is effective for the bill group.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the sort ID is effective for the bill group.	No
	Note: The end date cannot be earlier than the start date.	

- Enter the required details in the grid.
- If you want to define more than one sort ID for a bill group, click the **Add**  icon and then repeat step 5.

Note: However, if you want to remove a sort ID of a bill group, click the **Delete**  icon corresponding to the bill group and sort ID combination.

- Click **Save**.

A sort ID is defined for the bill group.

Editing a Sort ID of a Bill Group

Procedure

To edit a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination whose details you want to edit.

Note: If you want to edit all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to edit.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group whose sort ID you want to edit.	Not applicable
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Displays the sort ID.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the sort ID is effective for the bill group.	Yes
	Note: The start date cannot be later than the end date. The start date cannot be later than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	
End Date	Used to specify the date till when the sort ID is effective for the bill group.	No
	Note: The end date cannot be earlier than the start date. The end date cannot be earlier than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	

6. Modify the details of a bill group's sort ID, if required.

7. Click **Save**.

The changes made to the bill group's sort ID are saved.

Deleting a Sort ID of a Bill Group

Procedure

To delete a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination that you want to delete.

Note: If you want to delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for deleting.

- Click **Delete**.

A message appears confirming whether you want to delete the bill group's sort ID.

Note: You can delete a bill group's sort ID when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

- Click **OK**.

The bill group's sort ID is deleted.

Creating a Bill Group Sorting Upload Request

Procedure

To create a bill group sorting upload request:

- Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- Click the **Upload** link in the upper right corner of the **Bill Group Sorting** zone.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request.	Yes
	Note: The list includes only those upload request types where the upload request business object with the Upload Type option type set to BG is selected.	

Note: The **Select Upload Request Type** screen appears when there are multiple upload request types where the upload request business object with the **Upload Type** option type set to **BG** is selected. If there is only one such upload request type defined in the application, the **Bill Group Sorting Upload Request** screen appears.

5. Select the required upload request type from the respective field.
6. Click **OK**.

The **Bill Group Sorting Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define the characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the bill group sorting upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting upload request.	Yes
	<p>Note:</p> <p>By default, the parent customer's ID appears in this field. You can change the person, if required.</p> <p>The system allows you to create a bill group sorting upload request for a person whose person type is set to Parent Customer.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name and path of the file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.
- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
- Define characteristics for the upload request, if required.
- Click **Save**.

A message appears indicating the number of records which are successfully uploaded. Then, a bill group sorting upload request is created in the **Draft** status. If the bill group ID is available in the record, the status of the record is set to **Pending**. However, if the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination when the bill group ID is not specified in the record, the status of the record is set to **Invalid**.

Defining the Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

Prerequisites

To define the derivation and pricing parameters for a bill group and sort ID combination, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration
- Sort ID defined for the bill group
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To define the derivation and pricing parameters for a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Add** link in the upper right corner of the **Bill Group Derivation and Pricing Parameters** zone.

The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' derivation and pricing parameters you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the source system from where the claim and enrollment transactions are received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in this field.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in this field.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group.	No
	Note: You must not specify the ampersand (&) character in this field.	
Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Yes
	Note: The effective date must be within the date range of the sort ID defined for the bill group.	
Status	Indicates the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Not applicable
	Note: By default, the value is set to Active .	
Bill Group Information	Used to indicate the bill group for whom you want to define the derivation and pricing parameters.	Yes
	Note: The values appear in this list when there are effective child persons whose person type is set to Bill Group and who are related to the parent customer using a relationship type which is specified in the Person Relationship Type parameter of the C1-ASOBLNG feature configuration.	
Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Sort ID Search window appears.	

- Enter the required details in the grid.
- If you want to define the derivation and pricing parameters for more than one bill group and sort ID combination, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove the derivation and pricing parameters of a bill group and sort ID combination, click the **Delete** (🗑) icon corresponding to the bill group and sort ID combination.

- Click **Save**.

The derivation and pricing parameters are defined for the bill group and sort ID combination.

Editing the Derivation and Pricing Parameters of a Bill Group and Sort ID Combination

Procedure

To edit the derivation and pricing parameters of a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Derivation and Pricing Parameters** zone, select the check box corresponding to the bill group and sort ID combination whose details you want to edit.

Note: If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' derivation and pricing parameters you want to edit.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Indicates the source system from where the claim and enrollment transactions are received.	Not applicable
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Not applicable
Status	Used to indicate the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Bill Group Information	Indicates the bill group for whom the derivation and pricing parameters are defined.	Not applicable
Sort ID	Indicates the sort ID of the bill group for which the derivation and pricing parameters are defined.	Not applicable

- If required, you can inactivate the derivation and pricing parameters of a bill group and sort ID combination.
- Click **Save**.

The changes made to the derivation and pricing parameters of a bill group and sort ID combination are saved.

Creating a Bill Group Derivation and Pricing Parameters Upload Request

Procedure

To create a bill group derivation and pricing parameters upload request:

- Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** (🔍) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Expand the **Bill Group Derivation and Pricing Parameters** zone.

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- Click the **Upload** link in the upper right corner of the **Bill Group Derivation and Pricing Parameters** zone.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request. Note: The list includes only those upload request types where the upload request business object with the Upload Type option type set to BL is selected.	Yes

Note: The **Select Upload Request Type** screen appears when there are multiple upload request types where the upload request business object with the **Upload Type** option type set to **BL** is selected. If there is only one such upload request type defined in the application, the **Bill Group Derivation and Pricing Parameters Upload Request** screen appears.

5. Select the required upload request type from the respective field.
6. Click **OK**.

The **Bill Group Derivation and Pricing Parameters Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define the characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the bill group derivation and pricing parameters upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group derivation and pricing parameters upload request. Note: By default, the parent customer's ID appears in this field. You can change the person, if required. The system allows you to create a bill group derivation and pricing parameters upload request for a person whose person type is set to Parent Customer . The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name and path of the file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.
- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
- Define characteristics for the upload request, if required.
- Click **Save**.

A message appears indicating the number of records which are successfully uploaded. Then, a bill group derivation and pricing parameters upload request is created in the **Draft** status. If the bill group ID is available in the record, the status of the record is set to **Pending**. However, if the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination when the bill group ID is not specified in the record, the status of the record is set to **Invalid**.

Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy when it is in the **In Force/Active** status and is not yet renewed. For more information, see [Self-Funded Policy Renewal](#) on page 419.

Procedure

To renew a self-funded policy of a bill group:

1. Search for the bill group who is associated with the self-funded policy (which you want to renew) in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the bill group whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing Information** tab.

The **Pricing Information** tab appears.

4. In the **Bill Group Self-Funded Policy Information** zone, click the **Renew**  icon in the **Renew** column corresponding to the self-funded policy which you want to renew.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the renewed policy.
- **Persons** - Used to associate or disassociate persons from the renewed policy.

Note: You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration.

- **Characteristics** - Used to define the characteristics for the renewed policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	Yes
Start Date	Used to specify the date from when the renewed policy is effective. Note: By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019. The start date cannot be later than the end date. The start date cannot be earlier than or equal to the base policy's end date.	Yes
End Date	Used to specify the date till when the renewed policy is effective. Note: The end date cannot be earlier than the start date.	Yes
Runout End Date	Used to specify the date when the runout period of the renewed policy ends. Note: The runout end date cannot be earlier than or equal to the renewed policy's end date.	No

Field Name	Field Description	Mandatory (Yes or No)
Runout Administration Fees	<p>Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> • None • Percentage of Claim <p>Note: At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p>	No
Copy Pricing Rules	<p>Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the Copy Pricing Rules option, the system copies the following pricing rules of the base policy:</p> <ul style="list-style-type: none"> • Claim • Retention Type Claim Based • Retention Type Enrollment Based • Recurring Flat Fees • Ancillary <p>Note:</p> <p>While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively.</p> <p>If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.</p>	No
Copy Advance Level Funding Eligibility	<p>Used to indicate whether you want to copy the advance level funding eligibility value of the base policy to the renewed policy.</p> <p>Note:</p> <p>If the Copy Advance Level Funding Eligibility option is set to Y in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date.</p> <p>This field appears only when you want to renew a self-funded policy.</p>	No

Note: The **Renew** icon appears when the policy is in the **In Force/Active** status and it is not yet renewed.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.

7. Define, edit, or remove characteristics of the renewed policy, if required.
8. Click **Save**.

The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group Self-Funded Policy Information** zone.

Viewing the Bill Details

Procedure

To view the details of a bill:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account whose details you want to view.
The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Open Bills** zone, click the **View** () icon corresponding to the bill whose details you want to view.
The **Bill Information** screen appears.
4. View the basic details of the bill in the **Bill Information** zone.
5. View the adjustments which are swept onto the bill in the **Adjustments** zone.
6. View the activities, such as payment, transfer, offset, refund, or write off through which the bill is settled, in the **Settlement Activities** zone.
7. View the bill segment information, which is summarized based on the date range and price item combination, in the **Bill Segment Summary** zone.
8. View the details of the bill segments in the **Bill Segment Details** zone.
9. View the SQ details of the bill segment in the **SQ Details** zone.
10. View the calculation lines of the bill segment in the **Bill Segment Calculation Lines** zone.
11. View the transactions whose charges are billed through the bill segment in the **Transaction Details** zone.
12. View the calculation lines of all transaction legs (which are rated before billing) in the **Transaction Leg Calculation Lines** zone.
13. View the active hold requests due to which the bill is kept on hold in the **Hold Details** zone.

14. View the offset requests through which the bill is offset against another bill in the **Offset Details** zone.
15. View the refund and write off requests through which the bill or its bill segment is either refunded or written off in the **Refund and Write Off Details** zone.

Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** - Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	Displays information about the bill. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Alternate Bill ID	Displays the alternate bill ID. Note: This field appears only when the respective data is available for the bill.
Account Information	Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Adjustments

The **Adjustments** zone lists the adjustments which are swept onto the bill. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustment.
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.
Contract Information	Indicates the contract against which the adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.

Settlement Activities

You may settle a bill or its bill segment by making a payment, offsetting, refunding, writing off, or by reconciling against pay instructions. The **Settlement Activities** zone lists the activities related to the bill or its bill segment settlement. It contains the following columns:

Column Name	Column Description
Activity Date	Displays the date when the settlement activity was performed in the system.
Activity Type	Indicates the type of the settlement activity. The valid values are: <ul style="list-style-type: none"> • Payment • Offset • Refund • Write Off • Transfer
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the settlement activity.
Related Object ID	Indicates the payment, offset request, refund request, write off request, or reconciliation adjustment which is created during settlement.
	Note: It has a link. On clicking the link, the Payment, Offset Request, Refund Request, Write Off Request, or Adjustment screen appears where you can view the details of the respective activity.

Bill Segment Summary

The system groups the bill segments with the same date range and price item combination and then provides the summarized information for each combination in the **Bill Segment Summary** zone. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segments.
End Date	Displays the end date of the bill segments.
Policy Number	Indicates the policy for which the bill segments are generated.
Price Item Description	Indicates the price item for which the bill segments are generated.

Column Name	Column Description
Amount	Displays the sum of the bill segment amount.
Unpaid Amount	Displays the sum of the unpaid amount of the bill segments.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Bill Segment Details

The **Bill Segment Details** zone displays the details of the bill segments which are included in the bill. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Policy Number	Indicates the policy for which the bill segment is generated.
Price Item Description	Displays the description of the price item.
Price Item	Indicates the price item for which the bill segment is generated.
Status	Indicates the status of the bill segment. The valid values are: <ul style="list-style-type: none"> • Incomplete • Error • Freezable • Pending Cancel • Frozen • Canceled
Amount	Displays the bill segment amount.
Billable Charge ID	Indicates the billable charge for which the bill segment is generated. <p>Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge.</p>
Unpaid Amount	Displays the unpaid amount of the bill segment.
Price Item Parameters	Displays the concatenated string consisting of a list of parameters and their values based on which the price item pricing is defined.
External Membership ID	Indicates the membership for which the bill segment is generated.
Member's Primary Identifier	Displays the concatenated string consisting of member's primary identifier type and its value which are separated by a colon (:).
Member Name	Indicates the member for whom the bill segment is generated.
Plan Information	Indicates the plan to which the membership belongs. <p>Note: It has a link. On clicking the link, the Policy Plan screen appears where you can view the details of the respective policy plan.</p>

Column Name	Column Description
Auto Pay ID	Indicates the auto pay instruction through the automatic payment is created for the bill segment. Note: It has a link. On clicking the link, the Auto Pay Instruction screen appears where you can view the details of the respective auto pay instruction.
Bill Segment ID	Displays the bill segment ID. Note: It has a link. On clicking the link, the Bill Segment screen appears where you can view the details of the respective bill segment.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **View** () icon corresponding to a bill segment, the **Bill Segment** screen appears where you can view the additional details of the respective bill segment.

On clicking the **Broadcast** () icon corresponding to a bill segment, the **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

Note:

The **SQ Details** zone appears when the bill segment is generated for an SQI based billable charge.

The **Transaction Details** zone appears only when the bill segment is generated for a billable charge which is created through the transaction aggregation process.

You can filter the list using various search criteria (such as, **Start Date** and **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

SQ Details

The **SQ Details** zone lists the service quantity identifiers (SQIs) used in the bill segment calculation. It appears when the bill segment is generated for an SQI based billable charge. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Billed Service Quantity	Displays the service quantity used by the rates engine for calculation. This amount differs from the initial service quantity when the rate's SQ rules manipulate the service quantity.

By default, the **SQ Details** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

Bill Segment Calculation Lines

The **Bill Segment Calculation Lines** zone lists the calculation lines of the bill segment. It contains the following columns:

Column Name	Column Description
Header Sequence	Indicates the sequence in which the calculation line is generated.
Sequence	Ideally, the sequence would be 1 unless multiple versions of the rate were effective during the bill period. If there is more than one effective rate version, there will be a separate set of calculation lines for each version applied. The lines that apply to the first part of the bill period would have a Sequence of 1, the lines for the next part of the bill period would have a Sequence of 2 and so on.
Description on Bill	Displays the summarized information about the charge that will be printed on the bill.
Amount	Displays the charge amount.
Distribution Code	Displays the distribution code which indicates the GL account to which the charge must be posted.
Service Quantity	Indicates the service quantity which is used for calculation.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Segment Calculation Lines** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

Transaction Details

The **Transaction Details** zone lists the transactions whose charges are billed through the bill segment. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the respective transaction.
Transaction Date	Displays the date and time when the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Transaction Currency	Displays the currency in which the transaction was performed.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Initial Price Item	Indicates the price item to which the transaction is mapped.

Column Name	Column Description
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the respective rule.
Transaction Information	Displays information about the transaction.
	Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the respective transaction.

By default, the **Transaction Details** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

On clicking the **Broadcast** (📡) icon corresponding to a transaction, the **Transaction Leg Calculation Lines** zone appears with the details of the respective transaction.

How to view the calculation lines of all legs of a transaction	Viewing the Calculation Lines of All Legs of a Transaction on page 785

Transaction Leg Calculation Lines

The **Transaction Leg Calculation Lines** zone lists the calculation lines of all legs of the transaction which are rated before billing. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate	Indicates the rate which is used for the calculation.
SQI	Indicates the service quantity identifier (SQI) which is used in the calculation.
Billable Service Quantity	Indicates the service quantities used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off (i.e. amount in precision). For example, 100. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount which is not rounded off (i.e. amount with precision and scale). For example, 98.67. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount which is not rounded off (i.e. amount with precision and scale). For example, 98.67. This amount appears in the pricing currency.

Column Name	Column Description
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> • Y • N
Description on Bill	Displays the summarized information about the charge that will be printed on the bill.
Distribution Code	Displays the distribution code which indicates the GL account to which the charge must be posted.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction legs are aggregated during calculation.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** () icon corresponding to a transaction in the **Transaction Details** zone.

Hold Details

The **Hold Details** zone lists the active hold requests due to which the bills of the respective account are kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request. <p>Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request.</p>
Status	Indicates the status of the hold request. The valid values are: <ul style="list-style-type: none"> • Active • Approval in Progress • Deferred Processing • Draft • Rejected • Released
Entity	Indicates the type of the entity for which the hold request is created in the system. The valid value is: <ul style="list-style-type: none"> • Account
Hold Reason	Displays the reason for which the hold request is created for the account.
Hold Process	Indicates the process that is kept on hold for the account.

Column Name	Column Description
Start Date	Displays the date from when the hold request is effective for the account.
End Date	Displays the date till when the hold request is effective for the account.

Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays information about the offset request.
	Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request.
Offset Amount	Indicates the bill amount which is offset against another bill.
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request.
	Note: It has a link. On clicking the link, the Refund Request or Write Off Request screen appears depending on whether the request is created for refund or write off.
Refund/Write Off Amount	Displays the total refund or write off amount.
Status	Indicates the status of the refund or write off request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Cancelled • Deferred Processing • Draft • Processed • Rejected • Voided

Column Name	Column Description
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> • Refund • Write Off
Account Information	Indicates the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Created By	Indicates the user who has created the refund or write off request.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Viewing the SQ Details of a Bill Segment

Procedure

To view the SQ details of a bill segment:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account whose details you want to view.

The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Open Bills** zone, click the **View** () icon corresponding to the bill whose details you want to view.

The **Bill Information** screen appears.
4. In the **Bill Segment Details** zone, click the **Broadcast** () icon corresponding to the bill segment whose details you want to view.

The **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

Note:

The **SQ Details** zone appears when the bill segment is generated for an SQI based billable charge.

The **Transaction Details** zone appears when the bill segment is generated for a billable charge which is created through the transaction aggregation process.

5. View the SQ details of the bill segment in the **SQ Details** zone.

Claim

The **Claim** zone displays the details of the claim pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the claim pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.</p> <p>This field appears only when the claim pricing rule is viewed for parent customer.</p>
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.</p> <p>This field appears when the claim pricing rule is viewed for bill group.</p>
Policy Information	Displays the policy information.
	<p>Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	<p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Pricing Start Date	Displays the claim pricing rule start date.
Pricing End Date	Displays the claim pricing rule end date.
Rate Option	Indicates the rate option of the claim pricing rule for the price item.
Claim Template	Indicates the claim template of the claim pricing rule.
Pricing Group	Displays the pricing group of the claim pricing rule.
	<p>Note: This field appears when the claim pricing rule is viewed for pricing group.</p>

- **Claim Handling Fees** – Lists the claim handling fees for line items in a claim pricing rule. It contains the following columns:

Column Name	Column Description
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee for the line items.
Fee Significance	Indicates the purpose of the imposing the additional fees on the line items.

Column Name	Column Description						
Fee Applicability	Displays the fee applicability on which the claim handling fees are defined. <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Line Item</td> <td>Indicates the line item that you want to use while defining additional fees for the claim pricing rule.</td> </tr> </tbody> </table>	Column Name	Column Description	Line Item	Indicates the line item that you want to use while defining additional fees for the claim pricing rule.		
Column Name	Column Description						
Line Item	Indicates the line item that you want to use while defining additional fees for the claim pricing rule.						
Rating Information	Displays the rating information that you want to use while defining the rate for the line items. <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the additional fees for the line items.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the additional fees for the line items. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div> </td> </tr> </tbody> </table>	Column Name	Column Description	Rate Type	Indicates the rate type that you want to use while defining the additional fees for the line items.	Rate	Used to specify the rate that you want to use while defining the additional fees for the line items. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>
Column Name	Column Description						
Rate Type	Indicates the rate type that you want to use while defining the additional fees for the line items.						
Rate	Used to specify the rate that you want to use while defining the additional fees for the line items. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>						

- **Markup or Markdown Values** – Lists the markup or markdown values for line items in a claim pricing rule. It contains the following columns:

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None
Markup or Markdown Type	Indicates the markup or markdown value type for claim pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount.
Rate Type	Displays minimum and maximum markup or markdown defined using the rate type.
Rate	Displays the value for minimum and maximum markup or markdown defined using the rate type.

- **Line Items** – This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.

Field Name	Field Description						
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible • User Defined (Default Yes) • User Defined (Default No) 						
User Defined Billing Option	Displays whether the billing option is user defined, eligible or not eligible.						
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible 						
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.						
Rating Information	Displays the rating information that you want to use while defining the rate for the line items. <table border="1" data-bbox="586 926 1463 1310"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Rate Type</td> <td>Indicates the rate type that you want to use while defining the rate for the line items.</td> </tr> <tr> <td>Rate</td> <td>Used to specify the rate that you want to use while defining the rate for the line items. <div data-bbox="841 1150 1458 1289" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div> </td> </tr> </tbody> </table>	Column Name	Column Description	Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.	Rate	Used to specify the rate that you want to use while defining the rate for the line items. <div data-bbox="841 1150 1458 1289" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>
Column Name	Column Description						
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.						
Rate	Used to specify the rate that you want to use while defining the rate for the line items. <div data-bbox="841 1150 1458 1289" style="border: 1px solid black; padding: 5px;"> <p>Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</p> </div>						

- **Characteristics** – Lists the characteristics defined for the claim pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the claim pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Aggregate Stop-Loss

The **Aggregate Stop-Loss** zone displays the details of the aggregate stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.</p> <p>This field appears only when the aggregate stop-loss pricing rule is viewed for parent customer.</p>
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.</p> <p>This field appears when the aggregate stop-loss pricing rule is viewed for bill group.</p>
Policy Information	Displays the policy information.
	<p>Note:</p> <p>It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.</p> <p>This field appears when the aggregate stop-loss pricing rule is viewed for bill group.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	<p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Parent Customer's SSL or ASL Pricing Rules	Displays the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.
Pricing Start Date	Displays the pricing rule start date.
Pricing End Date	Displays the pricing rule end date.
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.

Field Name	Field Description
Settlement Frequency	Indicates the settlement frequency that helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately • Manually (At Required Intervals) • Monthly • Yearly
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for parent customer.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for parent customer.
Pricing Group	Displays the pricing group of the aggregate stop-loss pricing rule.
	Note: This field appears when the aggregate stop-loss pricing rule is viewed for pricing group.

- **Accumulation Parameters** – Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..
ASL Credit Account	Indicates the account in which the aggregate stop-loss amount is credited.

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
ASL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.

Column Name	Column Description
ASL Limit (During Policy Period)	Indicates the aggregate stop-loss limit that was set during the policy period. The valid values are: <ul style="list-style-type: none"> • Policy Based Limit • Enrollment Based Limit • Percentage of Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)
ASL Limit (During Settlement Period)	Indicates the aggregate stop-loss limit that was set during the settlement period. The valid values are: <ul style="list-style-type: none"> • Policy Based Limit • Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)
Minimum ASL Limit	Displays the minimum ASL limit. Note: This field displays value when the Enrollment Based or Minimum ASL Limit (Whichever is Greater) option appears for the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field.
Percentage of Enrollment Based Limit	Displays the percentage of enrollment based limit. Note: This field displays value when the Percentage of Enrollment Based Limit option appears for the ASL Limit (During Policy Period) field.
Policy Based Limit	Displays the policy based limit. Note: This field displays value when the Policy Based Limit option appears for the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field.

Note: This section appears when the aggregate stop loss is created for parent customer.

- **Accumulation Criteria** – This section contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a aggregate stop-loss.
Price Item Information	Displays the price item information. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.

Column Name	Column Description						
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="574 262 1183 714"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
Column Name	Column Description						
Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.						
Parameter Value	Displays the value of the parameter.						

Note:

This section appears when the aggregate stop-loss is created for a bill group.

Accumulation criteria for each rule appears when the aggregate stop-loss is created for a bill group using a pricing group.

- **Pricing Information** – This section contains the following sub-section:
 - **Claim Pricing Rule** – This sub-section contains the following field:

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** – Displays the domestic provider claim while calculating aggregate stop-loss. This section contains the following field:

Field Name	Field Description
Exclude ASL (Percentage)	Displays the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** – Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None

Field Name	Field Description
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> Flat Amount Percentage
Markup or Markdown Amount	Displays the markup or markdown amount. Note: This field displays amount when Markup or Markdown Type field is Flat Amount .

- **Line Items** – Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Eligible for Aggregate Stop-Loss	Displays whether the line item is eligible or not eligible for aggregate stop-loss.
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> Eligible Not Eligible
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

Note:

This section appears when the aggregate stop-loss is created for a bill group.

Claim line items for each rule appears when the aggregate stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** – This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing
Accumulation Group ID	Displays the accumulation group ID that is generated when the accumulation parameter values were defined for an aggregate stop-loss.
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the aggregate stop-loss. Note: This field displays value when the checkbox for the Run-In field is selected.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the aggregate stop-loss. Note: This field displays value when the checkbox for the Run-In field is selected.

Column Name	Column Description
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the aggregate stop-loss.
	Note: This field displays value when the checkbox for the Run-In field is selected.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the aggregate stop-loss.
	Note: This field displays value when the checkbox for the Run-In field is selected.
Run-In Maximum Limit	Displays the maximum limit of the run-in parameters.
	Note: This field displays value when the checkbox for the Run-In field is selected.

Note: This section appears when the specific stop loss is created for parent customer.

- **Characteristics** – Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the aggregate stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Specific Stop-Loss

The **Specific Stop-Loss** zone displays the details of the specific stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the specific stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.</p> <p>This field appears only when the specific stop-loss pricing rule is viewed for parent customer.</p>
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.</p> <p>This field appears when the specific stop-loss pricing rule is viewed for bill group.</p>
Policy Information	Displays the policy information.
	<p>Note:</p> <p>It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.</p> <p>This field appears when the specific stop-loss pricing rule is viewed for parent customer.</p>
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	<p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Parent Customer's SSL Pricing Rule	Displays the pricing date range derived from the parent customer's specific stop-loss pricing rule.
	<p>Note: This field appears when the specific stop-loss pricing rule is viewed for bill group.</p>
Pricing Start Date	Displays the specific stop-loss pricing rule start date.
Pricing End Date	Displays the specific stop-loss pricing rule end date.
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.

Field Name	Field Description
Pricing Rule Usage	Indicates whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Accumulation Level	Indicate whether the specific stop-loss is accumulated at the member or main subscriber level. The valid values are: <ul style="list-style-type: none"> • Member • Main Subscriber
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Settlement Frequency	Indicates the settlement frequency that helps to determine the bill after date. The valid values are: <ul style="list-style-type: none"> • Immediately • Manually (At Required Intervals) • Never • Yearly
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Pricing Group	Displays the pricing group of the specific stop-loss pricing rule.
	Note: This field appears when the specific stop-loss pricing rule is viewed for pricing group.

- **Accumulation Parameters** – Lists the accumulation parameters in a specific stop-loss pricing rule. It contains the following field:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
SSL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.
Compute Aggregate SSL (ASL)	Indicates whether the aggregate specific stop-loss (ASSL) is calculated or not during the C1-BCSSL batch run for each bill group. The valid values are: <ul style="list-style-type: none"> • Yes • No
ASSL Credit Account	Indicates that the aggregate specific stop-loss amount beyond the ASSL limit paid by the insurance company to the ASSL credit account.
ASSL Limit	

Note: This section appears when the specific stop loss is created for parent customer.

- **Accumulation Criteria** – This section contains the following columns:

Column Name	Column Description						
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a specific stop-loss.						
Run-In Maximum Limit	Displays the maximum specific stop-loss limit defined for the member when the claim transactions were received in the run-in period of the policy.						
SSL Limit	Displays whether the SSL limit indicating the specific stop-loss amount beyond this limit is paid by the insurance company.						
Price Item Information	Displays the price item information. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.						
Price Item Parameters	This field contains the following columns: <table border="1" data-bbox="576 1514 1461 1837"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
Column Name	Column Description						
Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.						
Parameter Value	Displays the value of the parameter.						

Note:

This section appears when the specific stop-loss is created for a bill group.

Accumulation criteria for each rule appears when the specific stop-loss is created for a bill group using a pricing group.

- **Pricing Information** – This section contains the following sub-section:
 - **Claim Pricing Rule** – This sub-section contains the following field:

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** – Displays the domestic provider claim while calculating specific stop-loss. This section contains the following field:

Field Name	Field Description
Exclude SSL (Percentage)	Displays the domestic provider claim billable charge line excluding the specific stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** – Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: <ul style="list-style-type: none"> • Markdown • Markup • None
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: <ul style="list-style-type: none"> • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount. Note: This field displays amount when Markup or Markdown Type field is Flat Amount .

- **Line Items** – Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Eligible for Specific Stop-Loss	Displays whether the line item is eligible or not eligible for specific stop-loss.

Field Name	Field Description
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: <ul style="list-style-type: none"> • Eligible • Not Eligible
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

Note:

This section appears when the specific stop-loss is created for a bill group.

Claim line items for each rule appears when the specific stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** – This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the specific stop-loss.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the specific stop-loss.
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the specific stop-loss.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the specific stop-loss.

Note: This section appears when the specific stop loss is created for parent customer.

- **Lasering and Exclusion** – Lists the lasering and exclusion information in a specific stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation parameter values were defined for the specific stop-loss.
Level Identifier	Displays the lasering or exclusion level identifier.
Lasering or Exclusion Level	Indicates the lasering or exclusion level of the specific stop-loss. The valid values are: <ul style="list-style-type: none"> • Main Subscriber • Member • Provider
Exception Type	Indicates the exception type. The valid values are: <ul style="list-style-type: none"> • Lasering • Exclusion

Column Name	Column Description
Comments	Displays the comments.
Lasered Amount	Displays the lasered amount.

Note: This section appears when the specific stop loss is created for parent customer.

- **Characteristics** – Lists the characteristics defined for the specific stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the specific stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Retention Type Claim Based

The **Retention Type Claim Based** zone displays the details of the Retention Type Claim Based Pricing Rule. This zone contains the following sections:

- **Main** – This section provides basic information about the retention type claim based pricing rule type. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the parent customer. This field appears when the retention type claim based pricing rule is viewed for parent customer.</p>
Pricing Rule Type	Displays the pricing rule type.
Price Item Information	<p>Displays the price item.</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Rate Option	Displays the rate option of the retention type claim based pricing rule.

Field Name	Field Description
Pricing Start Date	Displays the date from when the pricing is effective for retention type claim based pricing rule.
Pricing End Date	Displays the date till when the pricing is effective for retention type claim based pricing rule.

- **Parameters** – This section lists the parameters which are defined for retention type claim based pricing rule. It contains the following columns:

Column Name	Column Description										
Price Item Parameters	Displays the parameter item information for retention type claim based pricing rule.										
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameters</td> <td>Displays multiple parameters based on which you have determined the price item utilization.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.	Parameter Description	Displays the description of the parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
Column Name	Column Description										
Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.										
Parameter Description	Displays the description of the parameter.										
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Fee	Displays the fee that is applicable for which price item parameters are defined.										

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

Retention Type Enrollment Based

The **Retention Type Enrollment Based** zone displays the details of the Retention Type Enrollment Based Pricing Rule. This zone contains the following sections:

- **Main** – This section provides basic information about the retention type claim based pricing rule type. It contains the following fields:

Field Name	Field Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the parent customer.</p> <p>This field appears when the retention type enrollment based pricing rule is viewed for parent customer.</p>
Pricing Rule Type	Displays the pricing rule type.
Price Item Information	<p>Displays the price item.</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Rate Option	Displays the rate option of the retention type enrollment based pricing rule.
Pricing Start Date	Displays the date from when the pricing is effective for retention type enrollment based pricing rule.
Pricing End Date	Displays the date till when the pricing is effective for retention type enrollment based pricing rule.
Exempt Retro Transactions	Indicates whether retro transactions should be a part of retention type enrollment based pricing rule.

- **Parameters** – This section lists the parameters which are defined for retention type enrollment based pricing rule. It contains the following columns:

Column Name	Column Description										
Price Item Parameters	<p>Displays the parameter item information for retention type enrollment based pricing rule.</p> <table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameters</td> <td>Displays multiple parameters based on which you have determined the price item utilization.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.	Parameter Description	Displays the description of the parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
Column Name	Column Description										
Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.										
Parameter Description	Displays the description of the parameter.										
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Fee	Displays the fee that is applicable for which price item parameters are defined.										

- **Characteristics** – This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective.
Characteristic Type	Displays the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value for the characteristic type.

Flat Fee

The **Flat Fee** zone displays the details of the one-time, bill period, and frequency based recurring flat fee pricing rule for bill group. It contains the following sections:

- **Main** – Displays basic details of the one-time, bill period, and frequency based recurring flat fee pricing rule. It contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.
Policy Information	Displays the policy information.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Price Item Information	Indicates the price item information.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Charge Date	Displays the flat fee charge date.
	Note: This field appears only for the one-time flat fee pricing rule for bill group.
Charge Start Date	Displays the flat fee charge start date.
	Note: This field appears only for both bill period and frequency based recurring flat fee pricing rule for bill group.
Charge End Date	Displays the flat fee charge end date.
	Note: This field appears only for both bill period and frequency based recurring flat fee pricing rule for bill group.

Field Name	Field Description
Bill To Account Override	Displays the account to which the bill is override. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the account.
Billable Charge Line Type	Displays the billable charge line type.
Fee	Displays the amount of flat fee.
	Note: This field appears when a value is displayed in the Billable Charge Line Type field.
Bill Period	Indicates the bill period for flat fee.
	Note: This field appears only for the bill period based recurring flat fee pricing rule for bill group.
Frequency	Indicates the frequency for flat fee.
	Note: This field appears only for the frequency based recurring flat fee pricing rule for bill group.
Billable Charge Information	Displays the billable charge information.
	Note: It has a link. On clicking the link, the Bill Charge ID screen appears where you can view the details of the billable charge.

- **Characteristics** – Lists the characteristics defined for the one-time, bill period, and frequency based recurring flat fee pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the one-time, bill period, and frequency based recurring flat fee pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Ancillary

The **Ancillary** zone displays the details of the ancillary pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the ancillary pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.	Not applicable
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.	
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.	Not applicable
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.	
Policy Information	Displays the policy information.	Not applicable
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.	
Pricing Rule Type	Indicates the type of the pricing rule.	Not applicable
Status	Indicates the status of the pricing rule.	Not applicable
Price Item Information	Indicates the price item information.	Not applicable
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.	
Pricing Start Date	Displays the date from when the pricing rule is effective.	Not applicable
Pricing End Date	Displays the date till when the pricing rule is effective.	Not applicable
Rate Option	Indicates the rate option of the ancillary pricing rule for the price item.	Not applicable
Pass Through without Markup or Markdown	Indicates that markup or markdown should not be calculated for the ancillary charge.	Not applicable

- **Ancillary Charges** – Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Indicates the billable charge line type using which the ancillary pricing rule type is created.	Not applicable
	Note: It has a link. On clicking the link, the Billable Charge Line Type screen appears where you can view the details of the billable charge line type.	
Billable	Indicates whether the ancillary billable charge is eligible for billing or not.	Not applicable
Rate Based	Indicates whether the ancillary charge is calculated using a particular rate or not.	Not applicable
Rate	Indicates the rate for calculating the ancillary charge.	Not applicable
Pricing Strategy	Indicates the price calculation strategy that is applied while defining the ancillary pricing rule.	Not applicable
Markup or Markdown Type	Indicates the type of charge that is applied while defining the ancillary pricing rule.	Not applicable
Amount / Percentage	Displays the actual proportion of the charge that is applied while defining the ancillary pricing rule.	Not applicable

- **Characteristics** – Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the ancillary pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Discount Arrangement

The **Discount Arrangement** zone displays the details of the discount arrangement pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.	Not applicable
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.	
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.	Not applicable
	Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.	
Policy Information	Displays the policy information.	Not applicable
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.	
Pricing Rule Type	Indicates the type of the pricing rule.	Not applicable
Status	Indicates the status of the pricing rule.	Not applicable
Price Item Information	Indicates the price item for which the pricing rule is created.	Not applicable
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.	
Rate Option	Indicates the rate option of the discount arrangement pricing rule for the price item.	Not applicable
Pricing Start Date	Displays the date from when the pricing rule is effective.	Not applicable
Pricing End Date	Displays the date till when the pricing rule is effective.	Not applicable
Settlement Frequency	Indicates the settlement frequency which helps to determine the bill after date.	Not applicable

- **Discount Details** – Displays the eligibility criteria for a discount percentage and maximum discount amount that is allowed per claim. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Displays the parameter using which an eligibility criteria is defined for a discount percentage and maximum amount that is allowed per claim.	Not applicable
Parameter Information	Indicates the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Not applicable
Parameter Value	Indicates the value of the parameter.	Not applicable
Parameter Value Description	Displays the description of the value, defined as a parameter.	Not applicable
Discount Percentage	Displays the discount share or discount guarantee percentage.	Not applicable
Maximum Discount Per Claim	Displays maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer.	Not applicable

- **Discount Limits** – Displays the minimum and maximum discount limit defined on the contract. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
No Limit	Indicates the type of discount limit (minimum or maximum) on the contract.	Not applicable
Discount Credit Account	Indicates the account to which the discount is credited, when the minimum or maximum discount limit is defined on the contract.	Not applicable
Settlement Days	Indicates the number of days which help in calculating the final settlement date.	Not applicable

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Type of Discount	Displays the type of discount.	Not applicable
Select	Indicates the type of discount that is applied on the contract.	Not applicable
Limit Type	Indicates the type of limit defined in the discount arrangement pricing rule.	Not applicable
Amount Limit	Indicates the amount limit (flat minimum or maximum discount) on the contract.	Not applicable

- **Exclusion** – Displays the entity (network or provider) which is excluded in the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Exclusion Level	Indicates the entity (network hospitals or providers) that are excluded during the discount share or discount guarantee calculation.	Not applicable
Level Identifier	Displays the network or provider ID.	Not applicable

- **Characteristics** – Displays the characteristics defined for the discount arrangement pricing rule. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Displays the date from when the characteristic is effective for the discount arrangement pricing rule.	Not applicable
Characteristic Type	Indicates the characteristic type.	Not applicable
Characteristic Value	Displays the value of the characteristic type.	Not applicable

Level Funded

The **Level Funded** zone displays the details of the level funded pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** – Displays basic details of the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Parent Customer Information	<p>Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the parent customer.</p>
Bill Group Information	<p>Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Person, Account or Policy screen appears where you can view the details of the bill group.</p>

Column Name	Column Description
Policy Information	Displays the policy information.
	Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Status	Indicates the status of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Parent Customer's Pricing Rule	Displays the pricing rule of the parent customer.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option of the level funded pricing rule for the price item.
Settlement Frequency	Indicates the settlement frequency which helps to determine the bill after date.
Settlement Fund Price Item	Indicates the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type.
	Note: The settlement fund price item appears when the level funded pricing rule is created for a bill group.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off.

- **Accumulation Parameters** – Displays the accumulation parameters for a parent customer in the level funded pricing rule. It contains the following fields:

Column Name	Column Description
Accumulation Group ID	Displays an accumulation group ID which is generated when accumulation parameter values are defined for a level funded pricing rule.
Settlement Account ID	Indicates the account ID to whom the settlement amount is credited.
Incurred Start Date	Displays the incurred start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Incurred End Date	Displays the incurred end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Paid Start Date	Displays the paid start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Paid End Date	Displays the paid end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Settlement Days	Indicates the number of days as the settlement days which help in calculating the settlement date.

Note:

The above section appears when the level funded pricing rule is created for a parent customer.

- **Accumulation Criteria** – Displays the accumulation criteria for a bill group in the level funded pricing rule. It contains the following columns:

Column Name	Column Description								
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a level funding pricing rule type.								
Price Item Information	Displays the price item information.								
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.								
Price Item Parameters	This field contains the following columns:								
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the multiple parameters based on which you have determined the price item utilization.</td> </tr> <tr> <td></td> <td>Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.		Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.	Parameter Value	Displays the value of the parameter.
	Column Name	Column Description							
	Price Item Parameter	Displays the multiple parameters based on which you have determined the price item utilization.							
	Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the parameter.								
Parameter Value	Displays the value of the parameter.								

Note:

The above section appears when the level funded pricing rule is created for a bill group.

The accumulation criteria for each rule appears when the level funded pricing rule is created for a bill group using a pricing group.

- The **Pricing Information for rule type category : Claim** zone contains the following sections:
 - The **Claim Pricing Rule** section contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the claim pricing rule type effective for the level funded pricing.
Derive Using	Indicates the method through which the claim pricing rule information is derived.
Effective Claim Pricing Rule	Displays the claim pricing rule effective for pricing.

- The **Domestic Provider Claims** section contains the following columns:

Column Name	Column Description
Exclude LF (Percentage)	Displays the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.

- The **Markup or Markdown Values** section contains the following columns:

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy for the claim line items.
Markup or Markdown Type	Indicates the markup or markdown value type for the claim line items.
Markup or Markdown Amount	Displays the markup or markdown amount for the claim line items.
	Note: This field displays amount when Markup or Markdown Type field is set as Flat Amount .
Markup / Markdown Included in Settlement?	Displays whether the markup or markdown amount should be included in the level funding settlement. The valid values are:

- The **Line Items** section contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Include in Settlement	Indicates whether the line item should be included in the level funded claim pricing settlement.
Markup or Markdown Included in Settlement	Indicates whether markup or markdown should be included in the level funded claim settlement.
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible or not eligible for markup or markdown percentage.
Markup or Markdown Percentage	Indicates the percentage for markup or markdown value.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Ancillary** zone contains the following sections:
 - The **Ancillary Pricing Rule** section contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the ancillary pricing rule type effective for level funded pricing.
Derive Using	Indicates the method through which the ancillary pricing rule information is derived.
Effective Ancillary Pricing Rule	Displays the ancillary pricing rule effective for pricing.

- The **Billable Charge Line Types** section contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Billable Charge Line Type	Indicates the billable charge line type using which you want to create the calculation line for the charge (i.e. line item)

Column Name	Column Description
Include in Settlement	Indicates whether the billable charge line item should be included in the level funded ancillary pricing settlement.
Rate Based	Indicates that the billable charge line type is rate based.
Rate	Displays the rate for the billable charge line type.
Markup / Markdown Included in Settlement?	Indicates that markup or markdown amount must be included in the level funding settlement.
Pricing Strategy	Displays the pricing strategy for the billable charge line items.
Markup or Markdown Type	Indicates the markup or markdown type for the billable charge line items.
Amount/Percentage	Displays the amount or percentage which is specified as the markup or markdown value.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Discount** zone contains the following section:

Column Name	Column Description
Pricing Rule Type	Indicates the discount arrangement pricing rule type which is effective for level funding.
Derive Using	Indicates the method through which the discount arrangement pricing rule information is derived.

- Discount Pricing Rule** - Indicates the discount arrangement pricing rule. It contains the following columns:

Column Name	Column Description
Discount Pricing Rule	Indicates the discount arrangement pricing rule which is effective for level funding.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Retention** zone contains the following section:

Column Name	Column Description
Retention Rule Type	Indicates the retention type claim based and/or retention type enrollment based pricing rule type for the level funded pricing rule. Note: It has a link. On clicking the link, Pricing Rule Type screen appears where you can view the details of the rule type.
Price Item	Indicates the price item for the level funded pricing rule. Note: It has a link. On clicking the link, Price Item screen appears where you can view the details of the price item.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- **Final Settlement Rules** – Displays the final settlement rules when the customer renews or cancels the contract. It contains the following columns:

Column Name	Column Description
Final Settlement Mode	Displays the final settlement mode when the customer renews the level funded agreement
Final Settlement Option	Indicates the final settlement option when the customer renews the level funded agreement.
Flat/Percentage	Indicates the final settlement payment type when the customer renews the level funded agreement.
Percentage Retained	Displays the percentage retained by the ASO provider when the customer renews the level funded agreement.
Flat Effective Payout	Displays the actual amount which should be retained by the ASO provider or offered as a discount, when the customer renews the level funded agreement.

The **Renewal Decision** sub-section contains the following columns:

Column Name	Column Description
Renewal Decision	Indicates the upcoming status of the level funded contract.

- **Characteristics** – Displays the characteristics defined for the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the level funded pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Age Based Pricing Rule

The **Age Based Pricing Rule** zone displays the details of the age based pricing rule for the fully-insured group and individual customers (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** – Displays basic details about the fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.

Column Name	Column Description
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective.
Plan End Date	Displays the date till when the plan rule is effective.
Policy Information	Displays the policy information. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.
Modifier Applicability	Indicates modifier based on which additional fee or discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.

- **Pricing Parameters** – Displays the pricing parameter information for a fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description											
Pricing Parameters	Displays the pricing and parameter details for a fully-insured age based pricing rule. It contains the following columns: <table border="1" data-bbox="578 1312 1463 1661"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the parameter using which an age based eligibility criteria is defined.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the price item parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Description</td> <td>Value</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.	Parameter Description	Displays the description of the price item parameter.	Parameter Value	Displays the value of the parameter.	Parameter Description	Value	Displays the description of the value, defined as a parameter.
Column Name	Column Description											
Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.											
Parameter Description	Displays the description of the price item parameter.											
Parameter Value	Displays the value of the parameter.											
Parameter Description	Value	Displays the description of the value, defined as a parameter.										
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.											

- **Modifier Information** – Displays the modifiers based on which additional charges or discount is offered to an eligible member in a fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to charge additional or offer discount to an eligible member.
Modifier Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.
Modifier Description	Displays the description of the modifier value.
Modifier Fee	Displays the amount charged or discount offered to an eligible member.

- **Characteristics** – Lists the characteristics defined for the fully-insured age based pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for a fully-insured age based pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Tier Based Pricing Rule

The **Tier Based Pricing Rule** zone displays the details of the tier based pricing rule for the fully-insured group and individual customers (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** – Displays basic details about the fully-insured tier based pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective.
Plan End Date	Displays the date till when the plan rule is effective.
Policy Information	Displays the policy information. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.

Column Name	Column Description
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.

- **Pricing Parameters** – Displays the pricing information defined for the fully-insured tier based pricing rule. It contains the following fields:

Column Name	Column Description										
Pricing Parameters	Displays the pricing parameter details for the fully-insured tier based pricing rule. It contains the following columns: <table border="1" data-bbox="565 548 1463 863"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the parameter using which the membership tier level based criteria is defined.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the price item parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the parameter using which the membership tier level based criteria is defined.	Parameter Description	Displays the description of the price item parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
Column Name	Column Description										
Price Item Parameter	Displays the parameter using which the membership tier level based criteria is defined.										
Parameter Description	Displays the description of the price item parameter.										
Parameter Value	Displays the value of the parameter.										
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Fee	Displays the fee applicable on the membership tier level and employee attributes of an eligible member.										

- **Characteristics** – Lists the characteristics defined for the fully-insured tier based pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Additional Fee Pricing Rule

The **Additional Fee Pricing Rule** zone displays the details of the additional fee pricing rule for the fully-insured group customer (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** – Displays basic details about the additional fee pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective for the additional fee pricing rule.
Plan End Date	Displays the date till when the plan rule is effective for the additional fee pricing rule.

Column Name	Column Description
Policy Information	Displays information about the policy.
	<p>Note:</p> <p>It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.</p>
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the additional fee pricing rule is created.
	<p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.</p>
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.
Modifier Applicability	Indicates modifier based on which additional fee or discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.
Pricing Type	Indicates the type of pricing defined for the additional fee pricing rule. The valid values are: <ul style="list-style-type: none"> Flat Percentage
	<p>Note: This field appears when the Pricing Type option is selected.</p>

- **Pricing Parameters** – Displays the pricing parameter information for an additional fee pricing rule. It contains the following fields:

Column Name	Column Description										
Pricing Parameters	Displays the pricing and parameter details for an additional fee pricing rule. It contains the following columns:										
	<table border="1"> <thead> <tr> <th>Column Name</th> <th>Column Description</th> </tr> </thead> <tbody> <tr> <td>Price Item Parameter</td> <td>Displays the parameter using which an age based eligibility criteria is defined.</td> </tr> <tr> <td>Parameter Description</td> <td>Displays the description of the price item parameter.</td> </tr> <tr> <td>Parameter Value</td> <td>Displays the value of the parameter.</td> </tr> <tr> <td>Parameter Value Description</td> <td>Displays the description of the value, defined as a parameter.</td> </tr> </tbody> </table>	Column Name	Column Description	Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.	Parameter Description	Displays the description of the price item parameter.	Parameter Value	Displays the value of the parameter.	Parameter Value Description	Displays the description of the value, defined as a parameter.
	Column Name	Column Description									
	Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.									
	Parameter Description	Displays the description of the price item parameter.									
	Parameter Value	Displays the value of the parameter.									
Parameter Value Description	Displays the description of the value, defined as a parameter.										
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.										

- **Modifier Information** – Displays the modifiers based on which additional fee or discount is offered to an eligible member in an additional fee pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to charge additional or offer discount to an eligible member.
Modifier Type Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.
Modifier Value Description	Displays the description of the modifier value.
Modifier Fee	Displays the amount charged or discount offered to an eligible member.

- **Characteristics** – Lists the characteristics defined for the an additional fee pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for a fully-insured age based pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Discount Charge Pricing Rule

The **Discount Charge Pricing Rule** zone displays the details of the discount charge pricing rule for the fully-insured individual or group customer (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** – Displays basic details about the discount charge pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective for the additional fee pricing rule.
Plan End Date	Displays the date till when the plan rule is effective for the additional fee pricing rule.
Policy Information	Displays information about the policy. Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the policy.
Health Plan	Displays the health plan. Note: This field appears only when you are viewing the discount charge pricing rule of a fully-insured individual.
Health Product	Displays the health product. Note: This field appears only when you are viewing the discount charge pricing rule of a fully-insured individual.

Column Name	Column Description
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the discount charge pricing rule is created.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.
Modifier Applicability	Indicates modifier based on which discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.
Pricing Type	Indicates the type of pricing defined for the discount charge pricing rule. The valid values are: <ul style="list-style-type: none"> • Flat • Percentage
	Note: This field appears when the Pricing Type option is selected.

- **Pricing Parameters** – Displays the pricing parameter information for a discount charge pricing rule. It contains the following fields:

Column Name	Column Description	
Pricing Parameters	Displays the pricing and parameter details for an additional charge pricing rule. It contains the following columns:	
	Column Name	Column Description
	Price Item Parameter	Displays the parameter using which an age based eligibility criteria is defined.
	Parameter Description	Displays the description of the price item parameter.
	Parameter Value	Displays the value of the parameter.
	Parameter Value Description	Displays the description of the value, defined as a parameter.
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.	

- **Modifier Information** – Displays the modifiers based on which discount is offered to an eligible member in an discount charge pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to offer discount to an eligible member.
Modifier Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.

Column Name	Column Description
Modifier Value Description	Displays the description of the modifier value.
Modifier Fee	Displays the discount offered to an eligible member.

- **Characteristics** – Lists the characteristics defined for the discount charge pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the discount charge pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Chapter 9

Health Product 360° View

Topics:

- [Prerequisites](#)
- [Health Product 360° View \(Used for Searching\)](#)
- [Health Product 360° Information \(Used for Viewing\)](#)
- [Health Plan 360° Information \(Used for Viewing\)](#)

Until now, you were able to add and edit the health products and health plans through a health product and plan inbound message. But, you were not able to view the details of a health product and health plan from the user interface. Now, Oracle Revenue Management and Billing provides the ability to view the details of a health product and health plan from the user interface. A new screen named **Health Product 360° View** is introduced in this release. It enables you to search for a health product or health plan using the respective details. You can navigate to the **Health Product 360° View** screen from the **Pricing Management** menu. Through the **Health Product 360° View** screen, you can navigate to the following new screens:

- **Health Product 360° Information** – Enables you to view the details of the health product including its characteristics and health plans.
- **Health Plan 360° Information** – Enables you to view the details of the health plan including its characteristics and pricing rules.

Prerequisites

To setup the **Health Product 360° View** feature, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to **Health Product**
- Define the required characteristic types where the characteristic entity is set to **Health Plan**
- Define the values for the **PRODUCT_HC_CAT_FLG** lookup field
- Define the values for the **PRODUCT_LOB_FLG** lookup field
- Define the values for the **PRODUCT_TYPE_FLG** lookup field
- Define the values for the **PRODUCT_LOB_CAT_FLG** lookup field
- Define the values for the **PRODUCT_SUB_TYPE_FLG** lookup field

Health Product 360° View (Used for Searching)

The **Health Product 360° View** screen allows you to search for a health product and health plan using various search criteria. It contains the following zone:

- [360° Search](#) on page 826

Through this screen, you can navigate to the following screen:

- [Health Product 360° Information \(Used for Viewing\)](#) on page 839

Searching for a Health Product

Prerequisites

To search for a health product, you should have:

- Values defined for the **PRODUCT_TYPE_FLG** lookup.
- Values defined for the **PRODUCT_HC_CAT_FLG** lookup.
- Values defined for the **PRODUCT_LOB_FLG** lookup.

- Characteristic types defined in the application (where the characteristic entity is set to **Health Product**)

Procedure

To search for a health product:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Pricing Management** and then click **Health Product 360° View**.
The **Health Product 360° View** screen appears.
3. Select the **Health Product Details** option from the **Search By** list to indicate that you want to search for a health product.
4. Enter the required search criteria in the **360° Search** zone.

Note:

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

You must specify at least one search criterion while searching for a health product.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of health products that meet the search criteria appears in the **Search Results** section.

Searching for a Health Plan

Prerequisites

To search for a health plan, you should have:

- Values defined for the **PRODUCT_SUB_TYPE_FLG** lookup.
- Values defined for the **PRODUCT_HC_CAT_FLG** lookup.
- Values defined for the **PRODUCT_LOB_FLG** lookup.
- Characteristic types defined in the application (where the characteristic entity is set to **Health Plan**)

Procedure

To search for a health plan:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.

- From the **Main** menu, click **Pricing Management** and then click **Health Product 360° View..**
The **Health Product 360° View** screen appears.
- Select the **Health Plan Details** option from the **Search By** list to indicate that you want to search for a health plan.
- Enter the required search criteria in the **360° Search** zone.

Note:

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

You must specify at least one search criterion while searching for a health plan.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- Click **Search**.

A list of health plans that meet the search criteria appears in the **Search Results** section.

Field Name	Field Description
Product Health Category	Indicates the health care category to which the health product belongs.
Product Type	Indicates how the health product can be classified based on the provider network.
Product Sub Type	Indicates the type of medical accounts that are linked to the health product.
Start Date	Displays the date from when the health product is effective.
End Date	Displays the date till when the health product is effective.
Product LOB	Indicates the line of business to which the health product belongs.
Product LOB Category	Indicates the line of business category to which the health product belongs.
Product Administration	Displays the name of the agency which administers the health product.
Bundled Product Flag	Indicates whether the health product is a bundled product.
Bundled Products	Displays the health products which are included in the bundled product.

Product Characteristics

The **Product Characteristics** zone lists the characteristics of the health product. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the health product.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to Predefined Value .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4128.

Health Plans

The **Health Plans** zone displays the details of the health plan. It contains the following columns:

Column Name	Column Description
Health Plan	Displays information about the health plan.
	Note: It has a link. On clicking the link, the Health Plan 360° Information screen appears where you can view the details of the health plan.
Description	Displays the description of the health plan.
Add-On Plan	Indicates whether the health plan is an add-on health plan.

Column Name	Column Description
Start Date	Displays the date from when the health plan is effective.
End Date	Displays the date till when the health plan is effective.
Status	Indicates the status of the health plan. The valid legends are: <ul style="list-style-type: none"> ● - Indicates the status of the health product as Active. ● - Indicates the status of the health product as Inactive.

You can filter the list using various search criteria (such as **Plan Description** and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (∨) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4128.

Health Plan 360° Information (Used for Viewing)

The **Health Product 360° Information** screen allows you to:

- View the details of the health product and health plan.
- View the characteristics of the health plan.
- View the pricing rules associated with the health plan.

It contains the following zones:

- [Plan Information](#) on page 841
- [Product Information](#) on page 839
- [Plan Characteristics](#) on page 842
- [Pricing Rules](#) on page 843

Related Topics

How to view 360° information of the health plan	Viewing the Details of a Health Plan on page 838

Plan Information

The **Plan Information** zone displays the details of the health plan. It contains the following fields:

Field Name	Field Description
Health Plan	Displays information about the health plan. In addition, a legend appears corresponding to this field which indicates the status of the health plan. <div style="background-color: #f2f2f2; padding: 5px; margin-top: 5px;"> <p>Note:</p> <ul style="list-style-type: none"> ● - Indicates that the health plan is Active. ● - Indicates that the health plan is Inactive. </div>
Add-On Plan	indicate whether the health plan is an add-on health plan.

Field Name	Field Description
Start date	Displays the date from when the health plan is effective.
End Date	Displays the date till when the health plan is effective.
Charitable Plan	Indicates whether the health plan provides subsidized health insurance coverage.
Standard Plan	Indicates the standard plan in the health plan.
ACA Qualified	Indicates whether the health plan provides standard health insurance coverage.
Grandfather Plan	Indicates whether the health plan is a grandfathered health plan.
Ancillary Benefits	Indicates whether the health plan provides ancillary benefits.
Rider Benefits	Indicates whether the health plan provides rider benefits.

Product Information

The **Product Information** zone displays the details of the health product. It contains the following fields:

Field Name	Field Description
Health Product	<p>Displays information about the health product. In addition, a legend appears corresponding to this field which indicates the status of the health product.</p> <p>Note:</p> <ul style="list-style-type: none"> •  - Indicates that the health product is Active. •  - Indicates that the health product is Inactive.
Product Health Category	Indicates the health care category to which the health product belongs.
Product Type	Indicates how the health product can be classified based on the provider network.
Product Sub Type	Indicates the type of medical accounts that are linked to the health product.
Start Date	Displays the date from when the health product is effective.
End Date	Displays the date till when the health product is effective.
Product LOB	Indicates the line of business to which the health product belongs.
Product LOB Category	Indicates the line of business category to which the health product belongs.
Product Administration	Displays the name of the agency which administers the health product.
Bundled Product Flag	Indicates whether the health product is a bundled product.
Bundled Products	Displays the health products which are included in the bundled product.

Plan Characteristics

The **Plan Characteristics** zone lists the characteristics of the health plan. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the health plan.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Column Name	Column Description
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to Predefined Value .

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 4128.

Pricing Rules

The **Pricing Rules** zone lists the pricing rules of the health plan. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays the price item or price item bundle code.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Pricing Rule Type Information	Displays the pricing rule type using which the pricing rule is created.
	Note: It has a link. On clicking the link, the Pricing Rule Type screen appears where you can view the details of the pricing rule type.
Start Date	Displays the date from when the pricing rule is effective.
End Date	Displays the date till when the pricing rule is effective.
Eligibility Parameters	On Clicking the Eligibility Parameters (👤) icon, the Eligibility Parameters screen appears where you can view the eligible parameters of the pricing rule.
Rate Information	On Clicking the Rate Information (📄) icon, the Rate Information screen appears where you can view the rate information details of a pricing rule.
Status	Indicates the status of the pricing rule. The valid legends are: <ul style="list-style-type: none"> ● - Indicates that the pricing rule is Active. ● - Indicates that the pricing rule is Inactive.

Note:

You can view the 360° information of the pricing rule, by clicking the **View** () icon corresponding to the record in the **Pricing Rule** zone.

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status**, **Price Item**, **Start Date**, **End Date** and **Pricing Information**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Chapter 10

Pricing Management (Health Insurance Business)

Topics:

- [Prerequisites \(Health Insurance Business\)](#)
- [Pricing Methodologies and Pricing Variation Based on Parameters \(Health Insurance Business\)](#)
- [Parameter](#)
- [Price Item \(Health Insurance Business\)](#)
- [Price List](#)
- [Rate Definition](#)
- [Tiering Criterion](#)

Oracle Revenue Management and Billing allows you to define prices for premiums, various fees, credits, discounts, and taxes that are defined as price items. Price for the price item may vary based on various attributes, which are defined as parameters in the system. Parameter values are derived either from transaction attributes (for example, for calculating claim based fees for a self-funded customer, pricing may vary based on claim transaction's health coverage class) or based on a field or characteristic of entities (for example, for calculating premium, pricing may vary based on member person's characteristic; whether a smoker or non-smoker). The system also supports deriving the pricing parameter through an algorithm, thereby enabling the custom derivation based on requirements.

Based on the line of business and the type of charge, you can define standard pricing which is common for multiple customers (for example, pricing defined for a health plan is applicable for all the subscribers subscribing to the health plan) or customer-specific pricing (for example, for fully-insured group customer, the pricing is specific to the group and you can define the policy plan level pricing in the system to achieve this. For more information about the fully-insured pricing, see [Fully-Insured Pricing](#) on page 3275.

The system enables you to define pricing at various levels in a customer hierarchy (for example, for a self-funded group customer, the pricing can be defined at the bill group level as well as at the parent customer level). If pricing is defined at multiple levels for a customer, the precedence is given to the pricing based on the level while searching for the pricing. For example, if pricing is defined for a price item at the bill group level as well as the parent customer level, the bill group level pricing takes precedence over the parent customer level pricing. Also, the parent customer level pricing is inherited by all the bill groups.

The pricing is triggered based on the transactions to calculate various charges or credit amounts eligible for a transaction. For example, for a self-funded customer, claim amounts with additional fees and markups, claim based fees, stop loss is calculated for claim transactions, enrollment based retention fees are calculated based on enrollment transactions, and ancillary fees are calculated based on ancillary transactions. For more information about the self-funded pricing, see [Self-Funded Pricing](#) on page 2729.

Transaction Based Pricing is invoked using the **Transaction Feed Management** module which processes different types of transactions (for example, claim, capitation, ancillary, enrollment, etc.) using the configurable validation and mapping rules to invoke the eligible pricing rules. For more information about the transaction feed management, see [Transaction Feed Management](#) on page 1253.

Pricing can also be triggered **based on qualifying life events** (for example, premium is calculated when a new membership is added, or a new member

is added to an existing membership, or every time the plan pricing is revised, etc.). The entity audit framework enables you to define various events for which pricing should be revised. For example, **addition of a new membership, addition of a new member, updates to the plan pricing, or the membership attributes which you want to monitor for premium change, etc.** The system enables you to define the algorithms to price the eligible events by invoking pricing rules. For more information about the entity audit framework, see [Entity Audit](#) on page 3615.

Prerequisites (Health Insurance Business)

To setup the pricing management feature, you need to do the following:

- Define the required SQIs and divisions in the system.
- Define the required parameters in the system.
- Define the tiering setup for rate components in the system.
- Define the required price items in the system.

Pricing Methodologies and Pricing Variation Based on Parameters (Health Insurance Business)

The specialized pricing methodologies are required for pricing the fully-insured and self-funded customers. Therefore, an out of box pricing solution is provided to the fully-insured and self-funded customers through distinct pricing rule types.

Fully-Insured Pricing

Age Banded Premium Pricing

Age banded premium pricing is one of the methodologies for premium calculation. In this methodology, Premium calculation is done **by determining the premium of each member separately mainly based on the age band in which the member falls, and then aggregating** these to derive the overall premium amount for a membership.

Apart from member's age, premium of age banded plans can vary based upon **different parameters; be it member's attribute or plan level attribute or LOB specific attributes**. For example, pricing can vary by different population segment characteristics such as Employee Type (Retiree, COBRA and Active) and/or by different regions, Employee Status (Permanent/contractual) etc. Age-banded pricing may also vary by different modifiers such as Tobacco usage, Gender etc.

ORMB provides Out of Box Pricing Rule Type 'Age Banded'. Using the same you can define pricing rule to define age-banded plan pricing. Pricing variation can be defined based on the pricing eligibility parameters where the source can be defined as Membership characteristics or Member characteristics or Plan characteristics. User can set **base fee** for set of parameters and can also set the **percentage or flat amount to be added over the base fee for each modifiers**.

Age-banded premium calculation algorithm which is configured in Age-banded pricing rule type process the premium pricing for each membership, derive the premium amount for each member and then aggregates the amount to derive the overall premium amount for a membership. **Maximum number of eligible dependents and the order of selection of the dependents like oldest first or youngest first is also configurable at Plan or State level.**

Age Banded Example:

Demo Corporation has a fully-insured group policy for the employees and its monthly premium is calculated through an age based pricing rule.

The following table lists the base premium for different age groups and locations or rating areas defined in an age based pricing rule:

Age Band	Location/Rating Area	Base Premium
Up to 15 Years	North California	\$200
	South California	\$210
16 to 18 Years	North California	\$210

Age Band	Location/Rating Area	Base Premium
	South California	\$220
18 to 40 Years	North California	\$220
	South California	\$240
40 to 60 Years	North California	\$250
	South California	\$260
60+ Years	North California	\$280
	South California	\$290

On Top of the base premium, additional 2% premium will be charged if the member is smoker

State of California is configured with the following pricing rules :

Max. No of Eligible Dependents = 2

Order of Dependent Selection = Oldest first

New Born Gift Days = 30

Proration Rule Defined for the account : Mid Month i.e. Member joining before 15th will be charged the premium for the entire month

Example 1:

North California Based Employee John Doe, a 45 years old smoker who enrolled himself with his spouse Mary Doe (Age 40) and daughter Elsa Doe aged 13, son Bob Doe aged 10 and daughter Laura Doe aged 8.

The following table illustrates how the premium is calculated for different members using an age based pricing rule:

Member	Reason	Premium Contribution
John Doe	Base Premium	\$250
	Smoker	\$5
Mary Doe	Base Premium	\$250
Elsa Doe	Base Premium	\$200
Bob Doe	Base Premium	\$200
Total Premium		\$905

Example 2 :

North California Based Employee John Doe a California based Employee is enrolled in to the plan along with his spouse Mary Doe, John enrolls his new born daughter Laura born on 3rd of July on 20th of July.

The following table illustrates how the premium is calculated for different members prior to new born enrollment using an age based pricing rule:

Member	Reason	Premium Contribution
John Doe	Base Premium	\$250
Mary Doe	Base Premium	\$250

Member	Reason	Premium Contribution
Total Premium		\$500

With the new enrollment in the month of July, The premium for July and the following months will be recalculated, As the state of California has New Born Gift days = 30 days, the premium will be calculated as follows:

For the Month of July:

The following table illustrates how the premium is calculated and waived off for the new born using an age based pricing rule:

Member	Reason	Premium Contribution
John Doe	Base Premium	\$250
Mary Doe	Base Premium	\$250
Laura Doe	Base Premium	\$200
	New Born Waiver	-\$200
Total Premium		\$500

For Month of August:

The following table illustrates how the premium is calculated for different members including the new born using an age based pricing rule:

Member	Reason	Premium Contribution
John Doe	Base Premium	\$250
Mary Doe	Base Premium	\$250
Laura Doe	Base Premium	\$200
Total Premium		\$700

Tiered Premium Pricing

Tiered based premium pricing is another methodology for premium calculation. In this methodology, Premium calculation is done by determining the **subscription tier** level for the membership directly to derive the premium amount for that membership.

Standard tier based pricing structure contains different tiers such as Employee only (E), Employee+ Spouse (ES), Family (F), Employee + Children (EC). A member can subscribe his/her dependents to a plan and fall into one of the tier. Tier-based premium varies based upon **membership tier level and different parameters**; parameters can be member's attribute or Plan level attribute or LOB specific attributes. For example, for a particular tier, pricing can vary by different population segment characteristics such as Employee Type (Retiree, COBRA and Active) and/or by different regions, Employee Status (Permanent/contractual) etc.

Like age-based pricing, tier-based pricing can be defined using pricing rule with tier-based pricing rule type You can set premium fee for set of parameters and tier level. Tier-based premium calculation algorithm which is configured in tier-based pricing rule type process the premium pricing for each membership based on the applicable rate for the parameters and tier value for that membership which is defined as membership characteristic.

Tier Based Pricing Example

The following table lists the premium for different customer tiers and locations or rating areas defined in a tier based pricing rule:

Tier	Location/Rating Area	Premium
Employee Only	N. California	\$200
	S. California	\$210
Employee + Spouse	N. California	\$300
	S. California	\$310
Family	N. California	\$450
	S. California	\$500

Example : North California Based Employee John Doe, a 45 years old smoker who enrolled himself with his spouse Mary Doe (Age 40) and daughter Elsa Doe aged 13 the premium charged will be \$450 per month.

State Level Configurations

Various state specific rules are defined in ORMB using state specific characteristics e.g. Gift Days to provide no additional premium when New Born is enrolled into the plan or various rules such as maximum dependents to be covered etc. The state and state characteristics can be defined state specific parameters. These parameters which define business rules may have overridden values at Plan or Membership levels. ORMB pricing calculation always checks for the parameters at membership and plan level first, if not found then the state level parameters are considered for the price calculations.

Premium Holiday and Proration

ORMB provides several options for correctly handling of proration; when a rate changes in middle of a billing period or when new Membership is added or terminated during the bill period. Configurable Proration Rule allows to define various options such as; mid-month proration where full premium is applicable if the membership starts before mid-coverage or proration based on covered days etc.

A configuration option can be set to handle special cases where proration is not to be applied even during a long or short bill period (e.g. when a flat charge is to be applied in full; even though the billing period is half of the standard period).

ORMB allows configuring or uploading the period for which premium holiday or waive off of premium needs to be given to the membership, based on which the premium is waived off, the rate configurations allow you to provide these details on the bill lines providing the required transparency to the customer.

Self-funded Pricing

ORMB provides you with a complete solution in terms of pricing, billing and revenue management to support ASO plans and also to provide risk coverage of offering self-funded plans through the stop loss or re-insurance services.

Claim Amount Processing

ORMB provides capability to calculate the final claim amount to be charged to the customer by summing up all the claim line items configured as billable for the customer. It also provides a facility to mark up or markdown these line items amounts as per customer specific pricing. You can also define the capping amounts per claim.

In order to support new **'Payments Integrity model'** ORMB enables you to define **the additional fees i.e. recovery fees / savings amounts** to be calculated as **flat or percentage based** on the claim charges and charge the same to the customers along with **Max / Min capping amounts**

ORMB allows you to define pricing rules, having different pricing strategy based on policy status e.g. **during the active policy period various chargeable items** like consumer driven health insurance charges, traditional health insurance charges, **are charged to the customer** whereas during **post runoff period the entire claim amount will be written off.**

To enable easy configurations ORMB provides you a capability to define **claim templates** and with definition of multiple add-on fees and its usage with default pricing. Using a file upload utility or other custom process the claim transactions can be uploaded to ORMB.

Claim transactions contain information about the membership and details of various claim line items such as **ASO service provider charges, fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor**, and so on.

ORMB allows the ASO service provider to bill employers for claim amount and various additional fees based on the pricing defined. Claim pricing rules can be defined at the parent customer and bill group levels. Claim pricing rule enables you to define whether a particular claim line item should be billable to the customer or should be written off. Eligibility for billing can be defined based on rules using the transaction attributes.

Retention fee – Claim based

Retention fee is based upon claim amount either the percentage of claim or flat amount per claim transaction can also be calculated. ORMB provides you an ability to select the Claim line items eligible for claim based fees calculations. Claim based fees pricing can **vary based on either membership attributes or based on the claim transaction attributes** e.g. different claim based fees can be charged for claim with health coverage class as ‘Medical’ than that of the ‘Dental’

Retention fee – Enrollment based

In order to calculate fees / premium amount / various limits (e.g. ASL Limit based on the enrollments), ORMB provides out of box pricing rule type – retention fee – enrollment based. Enrollment based pricing rules can be defined at both customer or bill group level where, enrollment fees are defined as per member or per subscriber charges where **pricing variation can be provided based on parameters e.g. coverage tier or health coverage class(HCC) etc.** It also calculates the retention fee based upon enrollment count.

Flat and Recurring Fees

Ad-hoc one time fees (e.g. one time admin fees), recurring premium fees / charges e.g. charge the stop loss premium can be defined in ORMB using the flat and recurring fees pricing rule type. These types of charges are independent of no. of enrollments or claims and are charged as a flat fee per month over a period of time. ORMB provides flexibility to set up pricing rules for charging flat / one time fees or flat recurring fees with configurable recurring frequencies e.g. claim funds.

Ancillary fees

Ancillary service charges are basically an adjustments charge which are either pre-calculated charges which need to be included into the bill or to be calculated based on the utilization of the ancillary services Ancillary pricing rule can be defined at the parent customer and bill group levels. The ancillary in ORMB enables you to create an ancillary charge in either of the following ways:

- As **pass through charge without markup or markdown** (i.e. flat charge)
- As **pass through charge** where ORMB adds a **flat or percentage based markup or markdown** to charge the customer
- Or by creating a **rate based charge** using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge

Specific Stop Loss (SSL)

SSL is the form of excess risk coverage that provides protection for the **employer against a high claim on any one individual**. ORMB provides a pricing rule type – specific stop loss to support SSL calculations. SSL pricing rules are defined at two levels – parent level defines all the accumulation specific details which are common for all the bill groups and bill group – policy level pricing to define the limits and also **information about which charges are to be re-insured against SSL**. ORMB provides **complete flexibility** to define the **accumulation criteria** e.g. you can choose to calculate SSL only on the medical claims, out of network claim, etc. based on configurations. Ability to calculate and invoice the specific stop loss based on per subscriber or per member basis with a **facility to laser or excludes the subscribers / members**. ORMB’s flexible accumulation criteria definitions allow you to define SSL pricing for various types of policies -12/12 or 15/12 or 12/15 with ease. With ORMB you can choose the settlement frequency for the SSL

ORMB enables you to setup **SSL retrospectively** or **allow pricing updates by reprocessing**

Aggregated Stop Loss (ASL)

ORMB enables you to provide a **ceiling on the dollar amount of eligible expenses** that an employer would pay, **in total for all members or subscribers**, during a contract period. **ASL limit** can be configured as **either flat limit or based on the PSPM (Per subscriber per month) basis or enrollment based**. Similar to SSL, ASL pricing rules **enables to define eligibility rules for the transactions and claim line items** for the calculations of ASL. With ORMB you can choose the settlement frequency for the ASL. ORMB enables you to setup **ASL retrospectively or allow pricing updates by reprocessing**

Discount Arrangements Fees

ORMB discount arrangement pricing rule type enables to calculate and bill the discounts using two different methods – i.e: **discount share Fees** where discount amount to be charged to customer is calculated as percentage of the total discount savings amount per claim and **discount guarantee Fees** where discount amount calculated based **on discount savings amount and guaranteed percentage of the covered amount**.

Pricing Rule type allows you to define maximum discount amount that can be charged per claim transaction and/or allow to configure the **minimum and maximum discount limit on the contract level**. It also allows defining the **rule based eligibility criteria to apply discount** and exclude few transactions based upon the parameters.

Level Funding Arrangements

ORMB level funding pricing rule type allows defining the required setup for monthly contribution mechanism which can be a **fixed monthly amount** or amount based upon enrollment **count**. ORMB enables you to collect the funds during **active policy period** to settle not only the claims and other fees during active period but also to take care of the **terminal liability** or the **claims and other fees during runout period**. ORMB also provides configurable setup to define the charges to be considered for settlement with specific criteria. ORMB enables to setup pricing rules for level funding products where the **claims, ancillary, retention based fees, discounts** can be settled against the level funded amounts.

ORMB has two variations of level funding based on the method to calculate premium fund. The portal enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level funding. If the price items are eligible for level funding, you can then include them in the level funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some **surplus or deficit** in funds at the time of settlement which is ideally at the end of year. In such case, the system enables to configure whether **a flat amount or percentage of surplus should be retained** by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer. It allows you for different settlement options – **Close out – where the final settlement is done**. In case the customer is continuing for the next cycle with the payer you can provide an option to **Roll Forward the surplus funds to the next years funds**.

Level Funding Arrangements

ORMB level funding pricing rule type allows defining the required setup for monthly contribution mechanism which can be a **fixed monthly amount** or amount based upon enrollment **count**. ORMB enables you to collect the funds during **active policy period** to settle not only the claims and other fees during active period but also to take care of the **terminal liability** or the **claims and other fees during runout period**. ORMB also provides configurable setup to define the charges to be considered for settlement with specific criteria. ORMB enables to setup pricing rules for level funding products where the **claims, ancillary, retention based fees, discounts** can be settled against the level funded amounts.

ORMB has two variations of level funding based on the method to calculate premium fund. The portal enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level funding. If the price items are eligible for level funding, you can then include them in the level funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some **surplus or deficit** in funds at the time of settlement which is ideally at the end of year. In such case, the system enables to configure whether **a flat amount or percentage of surplus should be retained** by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer. It allows you for different settlement options – **Close out – where the final settlement is done**. In case the customer is continuing for the next cycle with the payer you can provide an option to **Roll Forward the surplus funds to the next years funds**.

Parameter

The pricing for a price item may differ depending upon various transaction, person, account, or product attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. In addition, you can define the pricing, price list, and product eligibility criteria using one or more parameters.

Each parameter must be mapped to the following:

- **Source Entity** - Indicates the entity from where the parameter value is derived. A source entity can be account, person, product, transaction, service quantity identifier, or an algorithm.
- **Source Type** - Indicates the type of source from where the parameter value is derived. A source type can be field, characteristic, usage amount, or usage counter.
- **Source Type Code** - Indicates the source (such as, field, characteristic, usage amount, usage counter, SQI, or algorithm) from where the parameter value is derived.

The system allows you to define the following types of parameters:

- **Adhoc** - Used to store an adhoc value.
- **Predefined** - Used to store a predefined value. For example, you can create a parameter named **Country** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
AUT	Austria
AUS	Australia
CAN	Canada
CHN	China

In such case, while defining the pricing for a price item using the **Country** parameter, you can use any one of the above mentioned parameter values.

Another example, you can create a parameter named **Health Coverage Class** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
MEDICAL	Medical
DENTAL	Dental
VISION	Vision

In such case, while defining the pricing for a price item using the **Health Coverage Class** parameter, you can use any one of the above mentioned parameter values.

- **Reference** - Used to store a value which is already present in a table. For example, you can create a parameter named **Country** where the value type is set to **Reference** and the reference entity is set to **CI_COUNTRY_L** (i.e. where the description of all countries is stored). In such case, while defining the pricing for a price item using the **Country** parameter, you can specify a country which is present in the **CI_COUNTRY_L** table in the parameter value.

Parameter (Used for Searching)

The **Parameter** screen allows you to define, view, edit, delete, and copy a parameter. It contains the following zone:

- [Search Parameter](#) on page 854

Search Parameter

The **Search Parameter** zone allows you to search for a parameter using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search a particular parameter.	No
Value Type	Used to search parameters in which a particular type of value is stored. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	No
Source Entity	Used to search parameters whose value is derived from a particular entity. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan • Health Product • Membership • Membership Person • Person • Policy • Policy Plan • Product • Service Quantity Identifier • State • Transaction 	No
Source Type	Used to search parameters whose value is derived from a particular type of source. The valid values are: <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter 	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search parameters having a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parameter	Displays the parameter.
Description	Displays the description of the parameter.
Value Type	Indicates the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan • Health Product • Membership • Membership Person • Person • Policy • Policy Plan • Product • Service Quantity Identifier • State • Transaction

Column Name	Column Description
Source Type	Indicates the type of source from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter
View	On clicking the View () icon corresponding to a parameter, the Parameter screen appears where you can view the details of the respective parameter.
Edit	On clicking the Edit () icon corresponding to a parameter, the Parameter screen appears where you can edit the details of the parameter.
Delete	On clicking the Delete () icon corresponding to a parameter, you can delete the parameter. <p>Note:</p> You can delete a parameter when the following conditions are met: <ul style="list-style-type: none"> • It is not yet associated to any price item or price item bundle. • It is not yet used while defining the pricing, price list, or pricing eligibility criteria.
Copy	On clicking the Copy () icon corresponding to a parameter, the Parameter screen appears where you can define a new parameter using an existing parameter.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Parameter**, **Value Type**, **Source Entity**, **Source Type**, and **Description**) available in the **Filter** area. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Searching for a Parameter

Procedure

To search for a parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.
The **Parameter** screen appears.
3. Enter the search criteria in the **Search Parameter** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of parameters that meet the search criteria appears in the **Search Results** section.

Defining a Parameter

Prerequisites

To define a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To define a parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.
The **Parameter** screen appears.
3. Click the **Add** button available in the **Page Title** area of the **Parameter** screen.
The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	
Source Entity	<p>Used to indicate the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Health Product <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Membership <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Membership Person <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Person • Policy • Policy Plan <p>Note: This option is not applicable for the banking business.</p> <ul style="list-style-type: none"> • Product <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> • Service Quantity Identifier • State • Transaction 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the parameter.	Yes
Source Type	<p>Used to indicate the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note:</p> <p>This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>This is a read-only field. By default, the Field option is selected when the Customer Class, Delinquency Event Type, and Division option is selected from the list.</p>	Yes
Value Type	<p>Used to indicate the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Yes
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p>	Yes

Policy Plan	Characteristic	Lists all characteristics where the characteristic entity is set to Plan . <div data-bbox="946 993 1222 1108" style="border: 1px solid black; padding: 2px;"> <p>Note: This option is not applicable for the banking business.</p> </div>																					
Policy Plan	Field	Lists all fields of the CI_POLICY_PLAN table. <div data-bbox="946 1245 1222 1360" style="border: 1px solid black; padding: 2px;"> <p>Note: This option is not applicable for the banking business.</p> </div>																					
Product	Characteristic	Lists all characteristics where the characteristic entity is set to Product . <div data-bbox="946 1497 1222 1612" style="border: 1px solid black; padding: 2px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div>																					
Product	Field	Lists all fields of the C1_PRODUCT table. <div data-bbox="946 1728 1222 1843" style="border: 1px solid black; padding: 2px;"> <p>Note: This option is not applicable for the health insurance business.</p> </div>																					

Field Name	Field Description	Mandatory (Yes or No)												
	<p>Note:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Service Quantity Identifier</td> <td>—</td> <td>Lists all service quantity identifiers available in the CI_SQI table.</td> </tr> <tr> <td>State</td> <td>Characteristic</td> <td>Lists all characteristics where the characteristic entity is set to State.</td> </tr> <tr> <td>State</td> <td>Field</td> <td>Lists all fields of the CI_STATE table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.	State	Characteristic	Lists all characteristics where the characteristic entity is set to State .	State	Field	Lists all fields of the CI_STATE table.	
Source Entity	Source Type	Source Type Code												
Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.												
State	Characteristic	Lists all characteristics where the characteristic entity is set to State .												
State	Field	Lists all fields of the CI_STATE table.												
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note:</p> <p>This field appears when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Validation Algorithm field.</p>	No												
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note:</p> <p>This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears where you can search for the required table.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes												

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Note: This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete (🗑)** icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the Algorithm , Health Product , or the Service Quantity Identifier option is selected from the Source Entity list.	Note: This option is required while associating the parameter with a price item.
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a pricing eligibility criteria using the parameter.

Option Name	Option Description	Mandatory (Yes or No)
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based pricing eligibility criteria.
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a business rule criteria.	Yes (Conditional)
	Note: This option appears only when the Account, Customer Class, Delinquency Event Type, Division, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a product eligibility criteria using the parameter.
Rule Eligibility Criteria	Used to indicate whether the parameter is used while defining the parameter based rule type.	Yes (Conditional)
	Note: This option does not appear when the Health Product, Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

4. Enter the required details in the **Parameter** screen.
5. Click **Save**.

The parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Editing a Parameter

Prerequisites

To edit a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To edit a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the parameter whose details you want to edit.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Displays the parameter.	Not applicable
	Note: This is a read-only field.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	<p>Used to indicate the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Health Product <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership Person <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Person • Policy • Policy Plan <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Product <div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Note: This option is not applicable for the health insurance business.</div> <ul style="list-style-type: none"> • Service Quantity Identifier • State • Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source Type	<p>Used to indicate the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note:</p> <p>This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>This is a read-only field. By default, the Field option is selected when the Customer Class, Delinquency Event Type, and Division option is selected from the list.</p>	Yes
Value Type	<p>Displays the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Not applicable
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQL, or algorithm, from where the parameter value is derived.</p> <p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)												
	<p>Note:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Service Quantity Identifier</td> <td>—</td> <td>Lists all service quantity identifiers available in the CI_SQI table.</td> </tr> <tr> <td>State</td> <td>Characteristic</td> <td>Lists all characteristics where the characteristic entity is set to State.</td> </tr> <tr> <td>State</td> <td>Field</td> <td>Lists all fields of the CI_STATE table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.	State	Characteristic	Lists all characteristics where the characteristic entity is set to State .	State	Field	Lists all fields of the CI_STATE table.	
Source Entity	Source Type	Source Type Code												
Service Quantity Identifier	—	Lists all service quantity identifiers available in the CI_SQI table.												
State	Characteristic	Lists all characteristics where the characteristic entity is set to State .												
State	Field	Lists all fields of the CI_STATE table.												
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note:</p> <p>This field appears when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Validation Algorithm field.</p>	No												
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note:</p> <p>This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears where you can search for the required table.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes												

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Note: This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete (🗑)** icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Health Product, or the Service Quantity Identifier option is selected from the Source Entity list.	Note: This option is required while associating the parameter with a price item.
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a pricing eligibility criteria using the parameter.

Option Name	Option Description	Mandatory (Yes or No)
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based pricing eligibility criteria.
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a business rule criteria.	Yes (Conditional)
	Note: This option appears only when the Account, Customer Class, Delinquency Event Type, Division, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a product eligibility criteria using the parameter.
Rule Eligibility Criteria	Used to indicate whether the parameter can be used while defining the parameter based rule type.	Yes (Conditional)
	Note: This option does not appear when the Health Product, Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.

The changes made to the parameter are saved.

How to search for a parameter	Searching for a Parameter on page 856
Parameter screen	Parameter (Used for Searching) on page 853

Deleting a Parameter**Procedure**

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the parameter that you want to delete.

A message appears confirming whether you want to delete the parameter.

3. Click **OK**.

The parameter is deleted.

Note:

You can delete a parameter only when:

- It is not yet associated to any price item or price item bundle.
- It is not yet used while defining the pricing, business rule, price list, product eligibility, or rule eligibility criteria.

Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with the parameter usage details. You can then edit the details, if required.

Note: You cannot change the value type that is stored in the new parameter (which is created using an existing parameter).

Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To copy a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the parameter whose copy you want to create.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	<p>Used to indicate the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Health Product <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Membership Person <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Person • Policy • Policy Plan <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the banking business.</div> <ul style="list-style-type: none"> • Product <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: This option is not applicable for the health insurance business.</div> <ul style="list-style-type: none"> • Service Quantity Identifier • State • Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Source Type	<p>Used to indicate the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note:</p> <p>This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>This is a read-only field. By default, the Field option is selected when the Customer Class, Delinquency Event Type, and Division option is selected from the list.</p>	Yes
Value Type	<p>Used to indicate the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Not applicable
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQL, or algorithm, from where the parameter value is derived.</p> <p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p>	Yes

Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note:</p> <p>This field appears when the Adhoc option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears where you can search for the required algorithm.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Validation Algorithm field.</p>	No												
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note:</p> <p>This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search (🔍) icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears where you can search for the required table.</p> <p>On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes												

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Note: This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add (+)** icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete (🗑)** icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the Algorithm , Health Product , or the Service Quantity Identifier option is selected from the Source Entity list.	Note: This option is required while associating the parameter with a price item.

Option Name	Option Description	Mandatory (Yes or No)
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a pricing eligibility criteria using the parameter.
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based pricing eligibility criteria.
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based business eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the Health Plan, Health Product, Membership, or the Membership Person option is selected from the Source Entity list.	Note: This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a product eligibility criteria using the parameter.

Option Name	Option Description	Mandatory (Yes or No)
Rule Eligibility Criteria	Used to indicate whether the parameter can be used while defining the parameter based rule type.	Yes (Conditional)
	Note: This option does not appear when the Health Product, Product, Service Quantity Identifier , or the Transaction option is selected from the Source Entity list.	Note: This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen.
- Click **Save**.

The new parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Viewing the Parameter Details

Procedure

To view the details of a parameter:

- Search for the parameter in the **Parameter** screen.
- In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the parameter whose details you want to view.

The **Parameter** screen appears.

- View the details of the parameter in the **Parameter** zone.

Field Name	Field Description
Source Type	<p>Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note:</p> <p>This field appears when the Account, Person, Benefit, Health Plan, Health Product, Membership, Membership Person, Person, Policy Plan, Product, or State option is selected from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Benefit, Health Plan, Health Product, Membership, Membership Person, Policy, Policy Plan, Product, or State option is selected from the Source Entity list.</p>
Source Type Code	<p>Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <p>Note: This field does not appear when the Transaction option is selected from the Source Entity list.</p>

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns:

Column Name	Column Description
Parameter Value	Displays the value of the parameter.
Description	Displays the description of the parameter value.

Note: The **Parameter Values** section appears when the **Predefined** option is selected from the **Value Type** list.

- **Parameter Usage** – Indicates where you can use the parameter in the system. It contains the following options:

Option Name	Option Description
Price Item	<p>Indicates whether the parameter is associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <p>Note: This option does not appear when the Algorithm, Health Product, or the Service Quantity Identifier option is selected from the Source Entity list.</p>
Pricing Eligibility Criteria	<p>Indicates whether the parameter is used for defining the pricing eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>

Option Name	Option Description
Pricing Rule Eligibility Criteria	Indicates whether the parameter is used for defining a rule based pricing eligibility criteria. Note: This option appears only when the Membership or the Membership Person option is selected from the Source Entity list.
Business Rule Eligibility Criteria	Indicates whether the parameter is used for defining a rule based business eligibility criteria. Note: This option appears only when the Health Plan, Health Product, Membership, or the Membership Person option is selected from the Source Entity list.
Price List Eligibility Criteria	Indicates whether the parameter is used for defining the price list eligibility criteria. Note: This option does not appear when the Health Product or the Transaction option is selected from the Source Entity list.
Product Eligibility Criteria	Indicates whether the parameter is used for defining the product eligibility criteria. Note: This option does not appear when the Algorithm, Health Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.
Rule Eligibility Criteria	Indicates whether the parameter is used while defining the parameter based rule type. Note: This option does not appear when the Health Product, Product, Service Quantity Identifier, or the Transaction option is selected from the Source Entity list.

Parameter screen	Parameter (Used for Viewing) on page 888

Price Item (Health Insurance Business)

The various charges that are to be charged to the customer (for example, premium or optional administration fees to a fully-insured group customer and claim based fees or enrollment based fees to a self-funded customer) are defined as price items in the system. Similarly, various charges credited to the customer are also defined as price items. Stop-loss arrangements for a self-funded customer (for example, specific stop-loss that is calculated and credited to customer) is represented using a price item in the system.

Once you define a price item, you can also define the pricing for the price item at various levels using pricing rules based on the requirements. For a fully-insured group customer, the pricing is defined at the policy plan level. Whereas, for a self-funded customer, the pricing can be defined either at the bill group policy level or at the parent customer level. For more information about the fully-insured pricing, see [Fully-Insured Pricing](#) on page 3275. And, for more information about the self-funded pricing, see [Self-Funded Pricing](#) on page 2729.

The system enables you to create price items which can be used for pricing and billing. It means that pricing can be defined for the price item and charges can be created against it in the system. The system enables you to create the following type of price items:

- **Fees Based Price Items** - The fees based services would include services on which fees is charged to the customers either annually or at regular intervals (for example, for the administrative services offered to the self-funded customer, the admin fees will be charged). You can create fees based price items which can be used for pricing and billing in the system.

You need to associate a contract type with a price item. The system allows you to create a charge (i.e. billable charge) for a price item on an account when a contract of the contract type which is associated with the price item is already present on the account.

You can create price items which can be assigned to any price list except global price list or which can assigned to only global price lists. For more information about global price list, see [Price List](#) on page 955.

You can associate one or more parameters where the parameter usage is set to **Price Item** with a price item. These parameters can then be used for:

- Aggregating transactions which are mapped to the price item
- Defining multi parameter based pricing for the price item

If the parameter usage is set to **Aggregation** while associating a parameter with a price item, the parameter is only used for aggregating transactions which are mapped to the price item. However, if the parameter usage is set to **Pricing** while associating a parameter with a price item, the parameter is used for aggregating transactions as well as for defining multi parameter based pricing for the price item.

You can associate a price item to one or more divisions. In addition, you can do the following when a price item is associated to a division:

- Associate the Service Quantity Identifiers (SQIs) with the Price Item for the Division
- Define the Division-Specific Characteristics for the Price Item

Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It also allows you to create and copy a price item or price item bundle. It contains the following zone:

- [Search Price Item](#) on page 893

Through this screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 937
- [Price Item Relationship](#)
- [Price Item Assignments](#)

Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: <ul style="list-style-type: none"> • Price Item Details 	Yes
	Note: By default, the Price Item Details option is selected.	
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
Division	Used to search price items or price item bundles which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price Item Usage	Used to search price items or price item bundles which is available for pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	No
	Note: By default, the Pricing and Billing option is selected.	
Bundle	Used to indicate whether you want to search a price item bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price Item Type	Used to search a particular type of price items or price item bundles. The valid values are: <ul style="list-style-type: none"> • Fees • Rate 	No
	Note: This field appears when the Pricing option is selected from the Price Item Usage list.	

Note: You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Bundle Type	<p>Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are:</p> <ul style="list-style-type: none"> • Phantom • Ratio • Regular <p>However, if the price item bundle is available for pricing and its price item type is set to Fees, the valid value is:</p> <ul style="list-style-type: none"> • Regular
Price Item Type	<p>Indicates the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate • Fees
Price Item Usage	<p>Indicates whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • Pricing • Pricing and Billing
Duplicate	On clicking the Duplicate () icon, the Price Item screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle.
Price Item Assigned To	On clicking the View () icon in the Price Item Assigned To column, the Price Item Assignments screen appears where you can view the persons, accounts, and active price lists to which the price item or price item bundle is assigned.
Price Item Relationship	On clicking the View () icon in the Price Item Relationship column, the Price Item Relationship screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Price Item or Price Item Bundle

Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.
The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a price item or price item bundle.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

Defining a Price Item or Price Item Bundle

Prerequisites

To define a price item or price item bundle, you should have:

- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To define a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Add** option from the **Price Item** sub-menu.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
 - Associate the service quantity identifiers (SQIs) with the price item or price item bundle for a division
 - Define the accrual type criteria of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division

Note: This step is not applicable for the health insurance business.

- Define the cost of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the average price floor and ceil limits of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the negotiability floor and ceil values of the price item or price item bundle for a division

Note: This step is not applicable for the health insurance business.

- Define the division-specific characteristics for the price item or price item bundle
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> Pricing - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. <p>Note: This option is not applicable for the health insurance business.</p> <ul style="list-style-type: none"> Pricing and Billing - Used when you want to define pricing and create charges for the price item or price item bundle in the system. <p>Note: By default, the Pricing and Billing option is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Rate - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This option is not applicable for the health insurance business.</p> </div> <ul style="list-style-type: none"> • Fees - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This field appears when the Pricing option is selected from the Price Item Usage list. By default, the Fees option is selected. You cannot create a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to Fees. Therefore, this field does not appear when the Pricing and Billing option is selected from the Price Item Usage list.</p> </div>	Yes
Bundle	<p>Used to indicate whether you want to create a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: By default, the No option is selected. This field is not applicable for the health insurance business.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	<p>Used to indicate the type of the price item bundle. If the Pricing and Billing option is selected from the Price Item Usage list, the valid values are:</p> <ul style="list-style-type: none"> • <i>Regular Bundle</i> • <i>Phantom Bundle</i> • <i>Ratio Bundle</i> <p>However, if the Pricing option is selected from the Price Item Usage list and the Fees option is selected from the Price Item Type list, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular.</p>	Yes (Conditional)
	<p>Note:</p> <p>This field appears when the Yes option is selected from the Bundle list.</p> <p>This field is enabled when the Pricing and Billing option is selected from the Price Item Usage list and the Yes option is selected from the Bundle list.</p> <p>You cannot define a price item bundle when the Pricing option is selected from the Price Item Usage list and Rate option is selected from the Price Item Type list.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Note: This field is required when you are creating a price item bundle.</p>
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No <p>Note: By default, the No option is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	<p>Used to indicate the contract type that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>This field appears when the Pricing and Billing option is selected from the Price Item Usage list.</p> <p>The Search (🔍) icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	Yes
Price Item Manager To Do Type	<p>Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the Send Price Items for Approval button) to approve the average price for the price item or price item bundle offered in a deal.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Price Item Manager To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the To Do type, the description of the To Do type appears corresponding to the Price Item Manager To Do Type field.</p> <p>This field is not applicable for the health insurance business.</p>	No
Price Item Manager To Do Role	<p>Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits defined for the To Do role.</p> <p>Note:</p> <p>The list appears when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type.</p> <p>This field is not applicable for the health insurance business.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the price item manager To Do type is specified for the price item or price item bundle.</p>

Field Name	Field Description	Mandatory (Yes or No)
Average Price Floor and Ceil Type	<p>Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is:</p> <ul style="list-style-type: none"> • Absolute Value Range - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10\$ to 15\$. • Spread Amount - Used when you want to define the average floor and ceil limits based on the spread amount. • Spread Percentage – Used when you want to define the average floor and ceil limits based on the spread percentage. 	Yes (Conditional)
	<p>Note:</p> <ul style="list-style-type: none"> • In case of Spread Amount and Spread Percentage options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage, the average floor and ceil limits are derived. • This field is not applicable for the health insurance business. 	<p>Note: This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.</p>
Sort Sequence	Used to specify the sequence in which the price item should appear in the price item hierarchy of the deal pricing management module.	No

Field Name	Field Description	Mandatory (Yes or No)
Variable Price	Used to indicate whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal pricing management module.	No
	<p>Note:</p> <p>If the Variable Price option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system.</p> <p>However, if the Variable Price option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.</p>	

Tip: Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

4. Enter the required details in the **Main** section.
5. Associate the parameters with the price item or price item bundle, if required.

Note: For each predefined parameter which is associated with the price item or price item bundle, you can define a set of valid predefined parameter values for the price item or price item bundle, if required.

6. Associate the price item or price item bundle with the required divisions.
7. Associate the SQIs with the price item or price item bundle for the required divisions.
8. Define the accrual type criteria of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

9. Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the required divisions.

Note: This step is not applicable for the health insurance business.

10. Define the cost of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

11. Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

12. Define the negotiability floor and ceil values of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

13. Define the division-specific characteristics for the price item or price item bundle. if required.

14. Define the characteristics for the price item or price item bundle, if required.

15. Click **Save**.

The price item is defined.

Note: While creating a price item or price item bundle which is available for pricing, the contract type specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration is automatically associated to the price item or price item bundle.

Associating a Parameter with a Price Item or Price Item Bundle

You can define multi parameter based pricing for a price item or price item bundle when the parameters using which you want to define the price item pricing are associated with the respective price item or price item bundle during the pricing date range. Let us understand this with the help of an example from the financial institution domain.

The following table illustrates how a financial institution can offer different price for a price item based on the return codes:

Service	Price Item	Parameter	Parameter Value	Price
SEPA Direct Debit Return	SEPADDR	Return Code (RTURNCD)	AC01	0.1\$

Service	Price Item	Parameter	Parameter Value	Price
			AC04	0.2\$
			AC06	0.3\$
			AG01	0.10\$

In such case, you need to first define a predefined parameter named Return Code where the parameter usage is set to **Price Item**). In the Return Code parameter, you must specify the above listed return codes (i.e. AC01, AC04, AC06, and AG01) as the predefined values. Then, in order to define multi parameter based pricing for the SEPADDR price item using the Return Code parameter, you must associate the Return Code parameter with the SEPADDR price item using the following specifications:

Parameter	Display Order	Mandatory (Yes or No)	Optional Priority
Return Code	10	Yes	-

Let us understand this with the help of another example from the health insurance domain.

The following table illustrates how a self-funded customer can be charged different admin fee for the services based on health coverage class and network type:

Service	Price Item	Health Coverage Class	Network Type	Fees
Claim Based Fees	CLBDFS	Medical	In	\$100
		Medical	Out	\$150
		Dental	In	\$50
		Dental	Out	\$75

In such case, you need to first define two predefined parameters named Health Coverage Class and Network Type where the parameter usage is set to **Price Item**). In the Health Coverage Class parameter, you must specify the above listed values (i.e. Medical and Dental)) as the predefined values. And, in the Network Type parameter, you must specify the above listed values (i.e. In and Out)) as the predefined values. Then, in order to define parameter based pricing for the CLBDFS price item using the Health Coverage Class and Network Type parameters, you must associate these parameters with the CLBDFS price item using the following specifications:

Parameter	Display Order	Mandatory (Yes or No)	Optional Priority
Health Coverage Class	10	Yes	-
Network Type	20	Yes	-

Prerequisites

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the parameter usage is set to **Price Item**)

Procedure

To associate a parameter with a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the parameter is associated with the price item or price item bundle.	Yes
Effective End Date	Used to specify the date till when the parameter is associated with the price item or price item bundle.	No
Parameter	<p>Used to indicate the parameter that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>The Search (🔍) icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.</p> <p>In the Parameter Search window, the system allows you to search only those parameters where the parameter usage is set to Price Item.</p> <p>If you select a predefined parameter, the Add (➕) icon appears corresponding to the Parameter field. On clicking the Add icon, a grid appears where you can specify a list of predefined parameter values which are valid for the price item or price item bundle while defining its pricing. If you do not list any predefined parameter value in this grid, the system enables you to specify any predefined value of the parameter while defining the pricing for the price item or price item bundle.</p>	Yes
Business Label	Used to specify a business label for the parameter. If you specify the business label for a parameter, the business label appears throughout the application instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should appear in the pricing parameter information string across the application.	Yes
Parameter Usage	<p>Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Aggregation – Used when you want to use the parameter for aggregating transactions. • Pricing – Used when you want to use the parameter for aggregating transactions as well as for defining the price item pricing. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing.	No
