# Tested Configurations

---

This document covers the tested configurations for Primavera Data Warehouse and Primavera Analytics release.

---

**Note:**All platforms and technologies certified with a base Primavera Data Warehouse and Primavera Analytics version are also supported with the latest patch set of the platform or technology for that major release version (unless specified). Before you install the latest version of a platform or technology, install the most recent Primavera Data Warehouse and Primavera Analytics patch set certified for it.

---

Oracle has tested on the following configurations and certifies this release to work on these platforms. Customers may choose to install on non-certified platforms but do so at their own risk. If any problems are found with non-certified platforms, these may take longer to investigate and resolve by Oracle. Oracle will only test and have access to tested platforms and configurations. In addition, the resolution for any issues with non-tested configurations could be a recommendation that to resolve the issue you will need to deploy the product on a tested platform. If it is still decided to deploy on a non-certified configuration, it is strongly recommended to fully test the product and non-certified platform in a test environment.
