Oracle® Communications LSMS

Full Upgrade Guide

Release 14.0

F91165-09

August 2025

Copyright © 2000, 2025, Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

CAUTION: Use only the guide downloaded from the Oracle Technology Network (OTN) (http://www.oracle.com/technetwork/indexes/documentation/oracle-comms-tekelec-2136003.html).

Before upgrading your system, access the My Oracle Support web portal (https://support.oracle.com) and review any Knowledge Alerts that may be related to the System Health Check or the Upgrade.

Before beginning this procedure, contact My Oracle Support and inform them of your upgrade plans. Refer to Appendix E for instructions on accessing My Oracle Support.

What's New in This Guide

This section introduces the documentation updates for Release 14.0 in Oracle Communications LSMS Full Upgrade Guide.

Release 14.0 – F91165-09, August 2025

- Updated the release versions in the Full Upgrade Paths table.
- Added a note in step 8 in <u>Procedure 6, Backup LSMS DB</u> that the edit supDBdump.sql to fix authorization table command is only required while upgrading from 13.X release.
- Updated step 9 in <u>Procedure 6, Backup LSMS DB</u> with information on migrating from 14.0.0.X to 14.0.0.Y by editing the file MySQLUserGrants.sql.
- Added step 14 in Procedure 11, Install the LSMS Application to create config file in the SSH directory
- Updated step 6 in <u>Procedure 19</u>, <u>Restore Database</u> with a command to restore supDB.

Release 14.0 – F91165-08, April 2025

• Added step 3 in <u>Procedure 6, Backup LSMS DB</u> to disable LSMS backup on both A and B servers

Release 14.0 – F91165-07, November 2024

- Added the command # rm -rf /var/TKLC/lsms/free/<regionDB> to extract the snapshot data from the archive tar files copied from LSMS in step 5 in Procedure 19.
- Updated the command to exchange key with remote ELAP and LSMS in step 4 and 5 in Procedure 22.
- Removed step 7 from Procedure 22.

Release 14.0 – F91165-06, October 2024

Updated the note about valid licenses to be installed on LSMS A and B servers in the <u>Procedure 16, TMN Toolkit and Marben OSI License Installation</u> section.

Release 14.0 - F91165-05, September 2024

- Added a note in step 7 in <u>Procedure 6, Backup LSMS DB</u> to take a note of EMS configuration.
- Added information about editing the MySQLUserGrants.sql file in Procedure 6, Backup LSMS DB.
- Added information about a warning displayed during the upgrade in step 11 in <u>Procedure 11, Install the LSMS</u> Application.

Release 14.0 – F91165-04, September 2024

Updated the <u>Required Materials</u> section to add reference to Release Notes to access the procedure to obtain the license key files for Marben OSI and TMN Toolkit from Artifex for successful communication between LSMS and NPAC.

Release 14.0 - F91165-03, August 2024

- Updated the Required Materials section.
- Added a note in the Upgrade Timeline for LSMS Procedure Execution Order section.
- Updated the note in step 4 in Procedure 6, BACKUP LSMS DB.
- Updated step 8 in Procedure 6, BACKUP LSMS DB.
- Updated Procedure 10, Configure Network Interface Using Platefg Utility.

- Added a note in <u>Procedure 15, Segmented Configuration for LSMS Cards</u>.
- Updated step 2 in <u>Procedure 16, TMN Toolkit and Marben OSI License Installation</u>.
- Removed the Appendix "Procedure to Procure TMN and Marben Licenses".
- Replaced the reference to Appendix F with Appendix E throughout the document.

Release 14.0 – F91165-02, June 2024

- Added the procedure for SSH Key Exchange between ELAP and LSMS.
- Updated the reference to Procedure 22 in Timeline table for Maintenance Window Task.

1. INTRODUCTION

1.1 Purpose and Scope

This document is designed to detail the steps necessary to upgrade the functionality of the LSMS 13.5.X. on E5APPB-02 to the LSMS 14.0.0.Y on the E5APPB-02 cards.

This work is intended to be non-intrusive to the signaling network traffic and is to be performed within the limits of a normally scheduled maintenance window unless otherwise stated.

It will be necessary to halt the provisioning activity during the execution of the procedures outlined herein while a full database backup is being taken. Normal provisioning can resume once the full upgrade has completed. For any issues incurred in executing any part of this document, follow the contact/escalation list.

The individual executing this procedure must be experienced and well proficient with the following platforms and technologies.

- Unix/Linux Admin
- VI Editor
- IP Networking
- Oracle LSMS Platform E5-APP-B (TPD through Initial Implementation)

If you do not have these skills or if you are not completely comfortable working in Unix or Linux system environment,

1.3 Acronyms

Table 1. Acronyms

BIOS	Basic Input Output System
DB	Database
E5-APP-B/E5APPB	Eagle5 Application Card class B cpu/board
E5APPB-02	E5 Based Application card installed with 480 G SSD Hard Drive
ELAP	Eagle LNP Application Processor
IPM	Initial Product Manufacture
LSMS	Local Service Management System
NAS	Network Attached Storage
NPAC	Number Portability Administration Centre
QS	Query Server
SERVDI	Support ELAP Reload Via Database Image
TPD	Tekelec Platform Distribution
MPS	Multi Purpose System

1.4 Definitions

Table 2. Definitions

Active LSMS	LSMS on which the sentry is running and it takes updates from the NPAC.
Standby LSMS	LSMS on which data is replicated from the Active LSMS.
System health check	Procedure used to determine the health and status of the LSMS server, typically performed using the TPD syscheck utility.

1.5 Terminology

Multiple servers may be involved with the procedures in this manual. Therefore, most steps in the written procedures begin with the name or type of server to which the step applies. For example:

Each step has a checkbox for every command within the step that the technician should check to keep track of the progress of the procedure.

The title box describes the operations to be performed during that step.

Each command that the technician is to enter is in 9 point Lucida Console font

1 MPS A: Verify all Materials are listed in Material List (Section 1.6)									
				ls required					
		ar	e pres	sent					
	Figure 1. Francis of a star that indicates the Companies which it mode to be assessed

Fi	gur	e 1. E	xamp	le of a step th	at indica	ates the Server on which it needs to be executed			
Fi	gur	e 1. E	xamp	le of a step th	nat indica	ates the Server on which it needs to be executed			

Figure 2. Example of a step that needs to be executed on both MPS A and MPS B servers

1.6 Required Materials

- LSMS 14.0 works on OL8.x and needs license key files for Marben OSI and TMN Toolkit from Artifex for successful communication between LSMS and NPAC. Make sure to get the two license key files from Artifex before the scheduled upgrade date. Refer to LSMS 14.0 Release Notes, section 3.3: Marben OSI and TMN Toolkit license key files, for details. Make sure to start the process at least 7 days before the scheduled upgrade date.
- Two (2) target-release TPD USBs

USB.

- Two (2) target-release LSMS USBs or a target release LSMS ISO file.
- A terminal and null modem cable to establish a serial connection.
- 100mbps link is required for database transfer to remote server.
- Remote Server or NAS server to store DB Backup before migration.
- TMN and Marben OSI license for OL8 server
- Type of Network configuration single/segmented

Write down the system configuration information.

• System configuration information like NTP Server IP, App IP, ELAP IP etc.

App IP: ______
App Gateway: _____
NTP Server IPs: _____

ELAP Server IPs: _____
NPAC Server IPs: _____
NPAC Customer ID: _____
NMS IPs: _____
Other IPs required: _____
Remote Server IP to copy DB Backup:

• Passwords for users on the local system:

LSMS USERS										
login MPS A password MPS B password										
lsmsmgr										
lsmsadm										
lsmsall										
lsmsuext										

lsmsuser	
lsmsview	
root	
mysql dbroot user	
admusr	
Command-line	

Table 3: User Password Table

Note: After the MPS servers are IPM'ed with TPD 7.5.x, then "root" user access is disabled. "admusr" can be used if required to access the MPS servers. After the installation of LSMS application the "root" user access is again enabled.

1.7E5APPB Server (Rear)

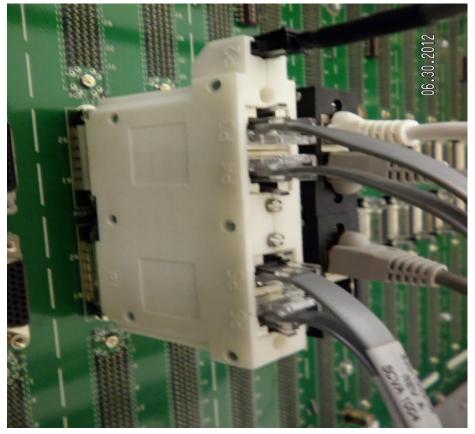

Figure 3. E5-APP-B Server (Rear)

1.7 Switch Configuration

VLAN configuration on the switch is done based on the LSMS/NAS Segmented Type Configuration. Please note that the VLAN IDs can be different based on the LAB network configuration.

Name |VTag| Rout If | Tagged ports | Untagged ports

default |1 | sw0 | |1/1/1-1/1/24

vlan2 |2 | |1/1/3,1/1/4 |

vlan3 |3 | |1/1/3,1/1/4 |

naspri-network |5 | |1/1/3,1/1/4,1/1/17 |

```
elap-network | 159 | | 1/1/3,1/1/4,1/1/19 |
gui-network | 161 | | 1/1/3,1/1/4,1/1/20 |
Optionally assign some name to the switch ports:
interface 1/1/3
name LSMS-A_NAS/ELAP/GUI
interface 1/1/4
name LSMS-B_NAS/ELAP/GUI
interface 1/1/17
name LSMS-A_NAS-pri
interface 1/1/18
```

nassec-network |6 | |1/1/3,1/1/4,1/1/18 |

interface 1/1/19

interface 1/1/20

name LSMS-B_NAS-sec

name ELAP-network-uplink

name Gui-network-uplink

1.8 Fallback

If for any reason a fallback to the original configuration is required, the procedure will be to re-IPM the server and install the old LSMS version.

2. GENERAL DESCRIPTION

This document defines the step-by-step actions performed to execute a software full upgrade to E5APPB-02.

The LSMS application can be installed or upgraded based on the table below.

Table 4 Install-Full Upgrade paths for E5APPB-02

TPD Release for IPM	LSMS Initial Installation Release
8.10.1.5.0_150.14.0 or later	14.0.Y
Full upgrade Source Release	Full upgrade Destination Release
13.5.X	14.0.0.Y
14.0.0.X	14.0.0.Y

*Note: LSMS 14.0.Y is supported on E5APPB-02 cards only

The LSMS upgrade paths are shown in the figures below. The general timeline for all processes to perform a software upgrade, from pre-upgrade backups to a final system health check, is also included below.

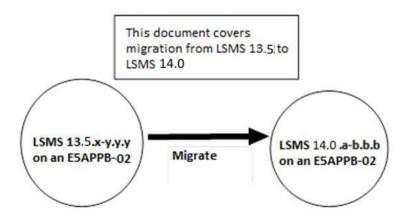

Figure 4: Full upgrade Path - LSMS 13.5.X to 14.0.Y

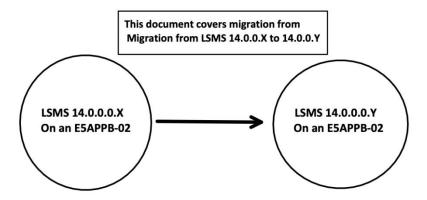

Figure 5: Full upgrade Path - LSMS 14.0.0.X to 14.0.0.Y

3. FULL UPGRADE PROCEDURES

3.1 Upgrade Timeline for LSMS Procedure Execution Order

NOTE: Before starting the procedure make sure you have all the required information listed in section 1.6. Do not proceed further until you have this required information, missing any information will be fatal post upgrade.

3.1.1.1 Preparation phase

Before planning or starting Full Upgrade to LSMS 14.0 customer will have to procure TMN and Marben Licenses for NPAC connection to work on OL8 post upgrade. Contact My Oracle Support (3.7Appendix E) to procure the licenses.

Table 5: Timeline table for full upgrade preparation

	LSMS 1A			LSMS 1B			
Procedure Task		1A	Task Start time (min)	1B	Task	Procedure	
Procedure 1	Setup upgrade environment	5	0				
			5	5	Setup upgrade environment	Procedure 1	
Procedure 2	Pre Full upgrade Health Check	5	10	5	Pre Full upgrade Health Check	Procedure 2	
Procedure 3	Verify LSMS QS	10	20

3.3 Pre Full upgrade Steps

Check off $(\sqrt{})$ each step as it is completed. Boxes have been provided for this purpose under each step number.

Should this procedure fail, Contact My Oracle Support following the instructions on the Appendix E.

Procedure 1 SETTING UP FULL UPGRADE ENVIRONMENT

Procedure 1 - Setting Up Full upgrade Environment

S T E P	Α	В	This procedure sets up the full upgrade environment. Estimated time: 5 minutes			
1.			MPS X: Login as root to MPS	SSH to MPS IP: login: root Password: <root_password></root_password>		
2.			MPS X: Start capture file.	Start a capture file using Iso Console, or by starting a local screen session and capturing its output.		
3.			MPS X: Access mate MPS via serial console	# minicom mate		
4.			mate MPS: Login as root.	console login: root Password: <root_password></root_password>		
	This procedure is complete!					

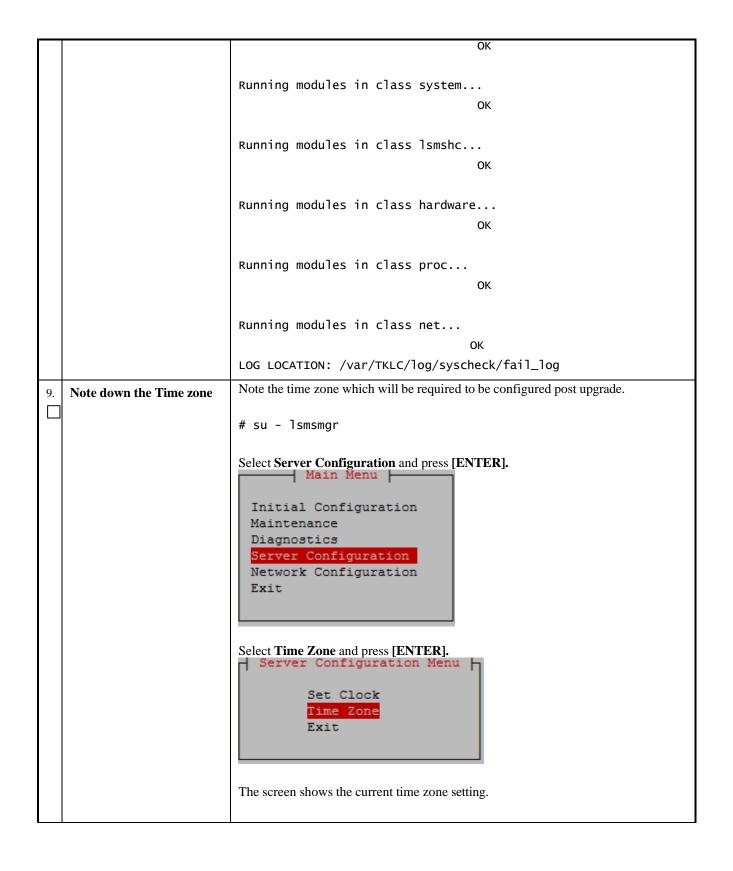

Procedure 2 PRE-FULL UPGRADE SYSTEM HEALTH CHECK

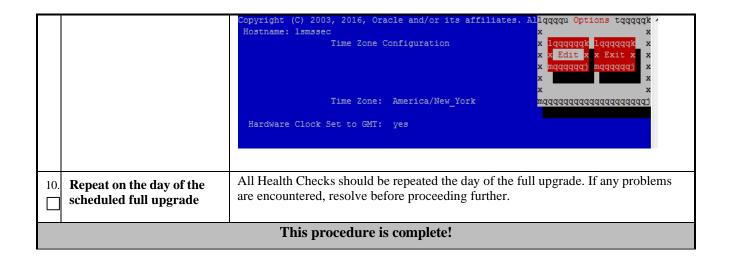

Note: This procedure may be executed outside of the maintenance window.

S	This procedure determines the health of the MPS before and after full upgrade.			
E P #	Estimated time: 5 minutes			
1.	MPS A and B: Log in to the server as the user "root".	Login: root Password: <root_password></root_password>		

		# date
2.	MPS A and B:	Thu May 12 05:55:27 EDT 2016
	Validate date, time and time	
	zone to ensure accuracy.	
3.	MPS A and B:	Execute the following command on both LSMS A and B to verify the HA state of
	Execute the "hastatus"	mated LSMS pair.
	command to verify the HA	# hastatus
	state of this server.	
		Verify that the hastatus of one of the servers is Active and the other is Standby.
		WARNING : If the output from the above command is anything else other than "ACTIVE" and "STANDBY", do not proceed with this procedure and contact My Oracle Support following the instructions on the Appendix E.
4.	LSMS Standby server:	Execute the following command to verify that MySQL replication is working
	Verify that the STANDBY	correctly on the STANDBY LSMS server:
	server's MySQL replication	# tail /var/TKLC/lsms/logs/dbreplMon.log
	is functioning properly.	If MySQL replication is functioning correctly then the following output will be observed, make sure that at least the last line of your output matches the lines below.
		Thu Dec 07 05:58:12 2017 All tests passed on STANDBY
		Thu Dec 07 05:59:19 2017 All tests passed on STANDBY
		Thu Dec 07 06:00:25 2017 All tests passed on STANDBY
		Thu Dec 07 06:01:32 2017 All tests passed on STANDBY
		WARNING: If at least the last line of your output does not match the lines above then do not proceed with this upgrade and contact My Oracle Support following the instructions on the Appendix E.
5.	LSMS Active server:	Execute the following command to verify that MySQL replication is working correctly on the ACTIVE LSMS server:
	Verify that the ACTIVE server's MySQL replication	# tail /var/TKLC/lsms/logs/dbreplMon.log
	is functioning properly.	If MySQL replication is functioning correctly then the following output will be
		observed, make sure that at least the last line of your output matches the lines below.
		Thu Dec 07 05:58:12 2017 All tests passed on ACTIVE
		Thu Dec 07 05:59:19 2017 All tests passed on ACTIVE
		Thu Dec 07 06:00:25 2017 All tests passed on ACTIVE
		Thu Dec 07 06:01:32 2017 All tests passed on ACTIVE
		The Dec of 00.01.32 Zolf All tests passed on Active
		WARNING: If at least the last line of your output does not match the lines above then do not proceed with this upgrade and contact My Oracle Support following the instructions on the Appendix E.

		# syscheck
6.	MPS A and B:	# Syscheck
	Execute syscheck	Running modules in class disk
		ОК
		Running modules in class services
		OK
		Running modules in class system
		ОК
		j
		Running modules in class lsmshc

		ОК
		Running modules in class net
		ОК
		LOG LOCATION: /var/TKLC/log/syscheck/fail_log
7.	LSMS Active server:	Execute the following command on the ACTIVE LSMS server to display the
I	Capture the output of	current LSMS sentry status:
	'sentry status' command	# sentry status
	·	NOTE : Verify that the output displays a Status of "running" for all processes; the
		regional processes (npacagents) may or may not be associated in the Comment
		field. If the output from this command displays any other Status than "running"
		contact My Oracle Support following the instructions on the Appendix E.
		Capture the output from this command and make it available to Oracle Technical
		Services if required.
		# sch hackunsonvon
8.	LSMS Active server:	# ssh backupserver
		# syscheck
	SSH to NAS server and	Running modules in class disk
	execute syscheck.	OK
		UK UK
		Dimension modulos de aless compless
		Running modules in class services

Procedure 3 VERIFY LSMS QUERY SERVER

Procedure 3 - Verify LSMS Query Server

S	This procedure determines i	f the LSMS 13.5 has an Optional Query Server.					
E P #	Estimated time: 10 minutes	Estimated time: 10 minutes					
1.	LSMS Active server: Log in to the server as the user "lsmsadm".	Login: lsmsadm Password: <lsmsadm_password></lsmsadm_password>					
2.	LSMS Active server: Verify if the Query Server Feature is active on the LSMS System.	<pre>\$ /usr/TKLC/lsms/tools/lsmsdb -c queryservers /usr/TKLC/lsms/tools/lsmsdb: Query Server Feature is not enabledOR cs2-bss2 (<lsms ip="" query="" server="">) ConnectedOR cs2-bss2 (<lsms ip="" query="" server="">) Disconnected</lsms></lsms></pre>					
3.	LSMS Active server: Note down the Query Server IP Address (es).	If the Query Server exists on the LSMS System, note the IP address (es) for later use.					
	This procedure is complete!						

3.4 Data Backup before Full upgrade

Procedure 4 DISCONNECT ELAP FROM LSMS

Procedure 4 - Disconnect ELAP from LSMS

S T	This procedure disconnects the ELAP from LSMS.Estimated time: 5 minutes
E P	Note: This procedure needs to be executed on all the connected ELAPs.
#	

1.	ELAP Active server: Verify ELAP 10.2 install	NOTE: Verify the following.
	Ž	1. ELAP 10.2 is successfully installed and configured.
		2. ELAP 10.2 is connected to Eagle for data download
2.	LSMS Active server: Log in to the server as the user "lsmsadm".	Login: lsmsadm Password: <lsmsadm_password></lsmsadm_password>
3.	LSMS Active server:	\$ eagle status
	Disconnect the connected ELAPs	Look for all connected ELAPs and disconnect each of them.
		<pre>\$ eagle stop <elap clli=""> eagle: Stopping</elap></pre>
		eagle: Stopping eagle: eagleagent STPA stopped at Tue Apr 26 05:48:52 2023
4.	ELAP Active server: Login to ELAP GUI	Login to the ELAP (connected to LSMS) GUI through VIP as uiadmin.
5.	ELAP Active server: Disable the Bulk Download	Go to menu Maintenance -> LSMS HS Bulk Download -> Change Enabled Click on 'Disable LSMS Bulk Download for this ELAP' button.
		ELAP_A_NAME Change LSMS HS Bulk Download Enabled
		INFO: The LSMS Bulk Download for this ELAP is currently Enabled.
		CAUTION: This action will Disable the LSMS Bulk Download for this ELAP.
		Disable LSMS Bulk Download for this ELAP
		Thu December 26 2013 22:45:49 EST 2013 © Tekelec, Inc., All Rights Reserved.
		ELAP_A_NAME Change LSMS HS Bulk Download Enabled
		SUCCESS: The LSMS Bulk Download for this ELAP is now Disabled.
		Thu December 26 2013 22:48:14 EST 2013 © Tekelec, Inc., All Rights Reserved.
6.	ELAP Active server: Disable the LSMS Connection	Go to menu Maintenance -> LSMS Connection -> Change Enabled Click on 'Disable LSMS Connection' button.
		ELAP_A_NAME Change LSMS Connection Allowed
		INFO: The LSMS Connection is currently Enabled.
		CAUTION: This action will Disable the LSMS Connection.
		Disable LSMS Connection
		Thu December 26 2013 22:48:49 EST 2013 © Tekelec, Inc., All Rights Reserved.
		ELAP_A_NAME Change LSMS Connection Allowed
		✓ SUCCESS: The LSMS Connection is now Disabled.
		Thu December 26 2013 22:55:58 EST 2013 © Tekelec, Inc., All Rights Reserved.

7.	All connected ELAPs: Disconnect LSMS connection	Repeat the steps 4 to 6 for all ELAPs connected to LSMS.				
	This procedure is complete!					

Procedure 5 DISCONNECT NPAC FROM LSMS

Procedure 5 - Disconnect NPAC from LSMS

S T E P	This procedure disconnects NPAC from LSMS. Estimated time: 5 minutes				
1.	LSMS Active server: Log in to the server as the user "lsmsadm".	Login: lsmsadm Password: <lsmsadm_password></lsmsadm_password>			
2.	LSMS Active server: Stop all connected NPAC regions	Execute the following command to list the active NPAC regions \$ dbnames -n all -a Canada CanadaDB MidAtlantic MidAtlanticDB Midwest MidwestDB Northeast NortheastDB Southeast SoutheastDB Southwest SouthwestDB WestCoast WestCoastDB Western WesternDB Note: The above output shall vary depending on LSMS configuration. Note: Store this output as it will be required during DB restore phase post upgrade. Execute the following command to stop an NPAC region. \$ lsms stop < region name> Checking if npacagent is running Yes. Stopping npacagent OK. npacagent stopped: Wed Jan 2 05:52:42 2014 Command complete. Execute the above command for all active regions.			
3.	LSMS Active server: Login to LSMS GUI	Login to LSMS Active GUI through VIP as 'lsmsall' user.			
4.	LSMS Active server: Deactivate all active regions	Click on the NPAC region. Go to the menu Configure -> LNP System -> NPAC -> Modify -> Primary Uncheck the 'Activate Region' checkbox and click 'OK'.			

Modify LNP System NPAC < Canada, primary>	×			
SMS Name Region8 NPAC Canada Address Info Component Info Contact Info Comm Info	Activate Region			
NPAC OSI Address				
PSEL CW7 SSEL CW7 TSEL NSAP 10 248 10	5			
LSMS OSI Address				
PSEL psel SSEL ssel TSEL NSAP 10 248 10	78			
NPAC FTP Address 10 248 10 5				
Modify NPAC Component? OK Cancel				
Note: Similarly, Deactivate all the active NPAC regions.				
This procedure is complete!				

Procedure 6 BACKUP LSMS DB

Procedure 6 - Backup LSMS DB

_							
	S T E P #	Estimated time: 90 minutes	This procedure outlines the steps to backup the LSMS DB. Estimated time: 90 minutes NOTE: The estimated time may differ depending on the DB size.				
ľ	1.	LSMS Active server: Log in to the server as the user "root"	Login: root Password: <root_password></root_password>				
	2.	LSMS Active server: Record DB counts	# lsmsdb -c counts				
	3.	LSMS Active and Standby Server: Disable LSMS backup on both A and B servers	Run the following command on both LSMS A and B to disable LSMS backup: # sed -i '/^#/! {/lsmsbkp_wrapper/ s/^/#/}' /etc/cron.d/lsmsbkp.cron				
	4	LSMS Active server: Remove existing DB snapshots	<pre># rm -rf /var/TKLC/lsms/free/mysql-snapshot-* # rm -rf /var/TKLC/lsms/free/snapinfo.sql</pre>				

Execute below command to verify "QUERY_SERVER" and "RESYNCDB QUERY SERVER" feature is enabled:
1smsdb -c features grep -w QUERY_SERVER UERY_S # 1smsdb -c features grep -w RESYNCDB_QUERY_SERVER If these features are not enabled then execute the below commands to enable them: # su - 1smsadm
step is
lsmsdb -c snapshot WARNING: This command may cause a brief interruption in traffic being sent from the NPAC to connected network elements and local LSMS provisioning may be INTERRUPTED. Do you want to continue? [Y/N]Y Creating snapshot of the database partition, please wait File descriptor 5 (socket:[34104267]) leaked on lvcreate invocation. Parent PID 28676: /usr/TKLC/lsms/tools/lsmsdb Logical volume "dbbackup" created The database is available to the application again. Disk snapshot created successfully. Snapshot mounted successfully. Created snapinfo.sql file successfully MidAtlanticDB/ MidAtlanticDB/ServiceProvNetwork.MYD Logical volume "dbbackup" successfully removed Note: The execution time of the above command shall vary according to the DB size. Verify that the following snapshot files are created at /var/TKLC/lsms/free directory: • mysql-snapshot-noreplDB.tar.gz • mysql-snapshot-supDB.tar.gz • mysql-snapshot- <regiondb>.tar.gz</regiondb>
snapinfo.sql Execute the following command and verify that the snapshot files are created for all the NPAC regions listed in the command output. Note: The below command shows only the regions for which the DB exists. # lsmsdb -c dblist CanadaDB MidAtlanticDB MidwestDB NortheastDB SoutheastDB SoutheastDB SoutheastDB SoutheastDB WestCoastDB WestCoastDB WestCoastDB WestCoastDB westCoastDB preformance_schema supDB

8.	LSMS Active server:	Run the following command on LSMS Active server CLI to take MySQL dump
		of the supDB database.
	Take MySQL dump of supDB.	<pre># mysqldump -udbroot -p[dbroot_password] supDB > /var/TKLC/lsms/free/supDBdump.sql</pre>
	Note: Take a note of EMS configuration (IP, user, Group) and delete the same on LSMS.	Note: Below warning message can be ignored if displayed: Warning: Using a password on the command line interface can be insecure.
		Note: Do not run the following command when upgrading from 14.0.0.X to 14.0.0.Y. This command is only required while upgrading from 13.X release.
		Edit supDBdump.sql to fix Authorization table # sed -i 's/function/functions/g' supDBdump.sql
9.	LSMS Active server: Take MySQL dump of mysql.user.	Create MySQLUserGrants.sql file listing all the users and their privileges using the following shell script MySQLUser.sh in the root directory:
		File: MySQLUser.sh MYSQL_CONN="-udbroot -ppassword"
		<pre>mysql \${MYSQL_CONN}skip-column-names -A -e "SELECT CONCAT('SHOW CREATE USER '!', user,'''@''', host,''';') FROM mysql.user WHERE user<>''" sed '/mysql/d' mysql \${MYSQL_CONN}skip- column-names -A sed 's/\$/;/g' sed "s/IDENTIFIED WITH 'mysql_native_password' AS/IDENTIFIED BY/g" sed "s/IDENTIFIED WITH 'mysql_native_password'/IDENTIFIED BY/g" sed "s/REQUIRE NONE PASSWORD EXPIRE DEFAULT ACCOUNT UNLOCK//g" > /var/TKLC/lsms/free/MysQLUserGrants.sql</pre>
		<pre>mysql \${MYSQL_CONN}skip-column-names -A -e "SELECT CONCAT('SHOW GRANTS FOR ''', user,'''@''', host,''';') FROM mysql.user WHERE user<>''" mysql \${MYSQL_CONN}skip- column-names -A sed 's/\$/;/g' sed 's/IDENTIFIED BY PASSWORD/IDENTIFIED BY/g' sed '/mysql/d' >> /var/TKLC/lsms/free/MySQLUserGrants.sql</pre>
		Note: Edit MYSQL_CONN for the proper connection properties and this will generate the MySQLUserGrants.sql file with grant statements from the 5.7 machine that you can source into the 8.0 machine.
		Run the MySQLUser.sh file to generate MySQLUserGrants.sql
		<pre># chmod +x MySQLUser.sh # ./MySQLUser.sh</pre>
		Run command to edit MySQLUserGrants.sql # sed -i 's/CREATE USER/CREATE USER IF NOT EXISTS/g' MySQLUserGrants.sql
		The content of the MySQLUserGrants.sql will be: GRANT USAGE ON *.* TO 'lsmsadm'@'%' IDENTIFIED BY '57570851ac3cc01499';
		Edit the .sql file and replace the password of all the users with plain text password to contain something like: GRANT USAGE ON *.* TO 'lsmsadm'@'%' IDENTIFIED BY 'password-in-plain-text';
		Run below commands to recover plain text password for default lsms users: For dbroot user:

/usr/TKLC/lsms/tools/pass_fetch pass1

For materepl user:

/usr/TKLC/lsms/tools/pass_fetch pass3 -> materepl

For cmdline user:

/usr/TKLC/lsms/tools/pass_fetch pass4 For other default users:

/usr/TKLC/lsms/tools/pass_fetch pass2

Remove entry for `lsmsrepl`@`<lsmsqs IP>` from the

MySQLUserGrants.sql. This will be added during LSMSQS configuration.

Note: There is no way to reverse the hash to recover the plain text. So the customer has to provide us the plain text passwords for users which were added by customer.

Edit the MySQLUserGrants.sql file and edit the second line:

CREATE USER IF NOT EXISTS 'dbnopriv'@'%'IDENTIFIED BY;

Here '' are missing after IDENTIFIED BY;

Example: CREATE USER IF NOT EXISTS 'dbnopriv'@'%' IDENTIFIED BY '':

For migration from 14.0.0.X to 14.0.0.Y edit the file MySQLUserGrants.sql

Remove below two lines in MySQLUserGrants.sql:

GRANT SELECT, INSERT, UPDATE, DELETE, CREATE, DROP, RELOAD, SHUTDOWN, PROCESS, FILE, REFERENCES, INDEX, ALTER, SHOW DATABASES, SUPER, CREATE TEMPORARY TABLES, LOCK TABLES, EXECUTE, REPLICATION SLAVE, REPLICATION CLIENT, CREATE VIEW, SHOW VIEW, CREATE ROUTINE, ALTER ROUTINE, CREATE USER IF NOT EXISTS, EVENT, TRIGGER, CREATE TABLESPACE, CREATE ROLE, DROP ROLE ON *.* TO `dbroot`@`%` WITH GRANT OPTION;

GRANT

APPLICATION_PASSWORD_ADMIN,AUDIT_ABORT_EXEMPT,AUDIT_ADMIN,AUTHENTICATION_POLICY_ADMIN,BACKUP_ADMIN,BINLOG_ADMIN,BINLOG_ENCRYPTION_ADMIN,CLONE_ADMIN,CONNECTION_ADMIN,ENCRYPTION_KEY_ADMIN,FIREWALL_EXEMPT,FLUSH_OPTIMIZER_COSTS,FLUSH_STATUS,FLUSH_TABLES,FLUSH_USER_RESOURCES,GROUP_REPLICATION_ADMIN,GROUP_REPLICATION_STREAM,INNODB_REDO_LOG_ARCHIVE,INNODB_REDO_LOG_ENABLE,PASSWORDLESS_USER_ADMIN,PERSIST_RO_VARIABLES_ADMIN,REPLICATION_APPLIER,REPLICATION_SLAVE_ADMIN,RESOURCE_GROUP_USER,ROLE_ADMIN,SENSITIVE_VARIABLES_OBSERVER,SERVICE_CONNECTION_ADMIN,SESSION_VARIABLES_ADMIN,SET_USER_ID,SHOW_ROUTINE,SYSTEM_USER,SYSTEM_VARIABLES_ADMIN,TABLE_ENCRYPTION_ADMIN,TELEMETRY_LOG_ADMIN,XA_RECOVER_ADMIN ON *.* TO `dbroot`@`% WITH GRANT OPTION;

Add below line at the end of MySQLUserGrants.sql:

"GRANT ALL PRIVILEGES ON *.* TO 'dbroot'@'%' WITH GRANT OPTION;"

10.	LSMS Active server: Log into the Active LSMS server GUI	Login to LSMS GUI as Ismsall user.			
11.	LSMS Active server: Record the configured MySQL Port	Go to "Admin -> MySQL Port -> View" and record the configured MySQL Port.			
12.	LSMS Active server: Record the configured ELAP Credentials	Go to "Configure -> LNP System -> EMS -> View" and record the configured ELAP Credentials.			
13.	LSMS Active and Standby Server Copy and Backup license file when upgrading from LSMS 14.0.0.X release	Login to LSMS CLI and take back up of the below 2 files from both Active and Standby server: /usr/TKLC/osi/conf/license /usr/local/netech/etc/license These licenses will be required after full upgrade is complete			
	This procedure is complete!				

Procedure 7 TRANSFER DATABASE TO REMOTE SERVER

Procedure 7 - Transfer Database to Remote Server

S	This procedure transfers the database backup from the LSMS server to the remote server.				
Ë	Estimated time: 30 minutes				
P #	Note: 100mbps link is requir	red for database transfer to remote server.			
1.	LSMS Active server: Log in to the server as the user "root"	Login: root Password: <root_password></root_password>			
2.	LSMS Active server: Verify Connectivity between the LSMS and the remote server. If the remote server cannot be pinged, verify the network connectivity.	<pre># ping <remote ip=""> -c 3 PING <remote ip=""> (<remote ip="">) 56(84) bytes of data. 64 bytes from <remote ip="">: icmp_seq=1 ttl=64 time=0.022 ms 64 bytes from <remote ip="">: icmp_seq=2 ttl=64 time=0.020 ms 64 bytes from <remote ip="">: icmp_seq=3 ttl=64 time=0.020 ms <remote ip=""> ping statistics 3 packets transmitted, 3 received, 0% packet loss, time 2001ms</remote></remote></remote></remote></remote></remote></remote></pre>			

	rtt min/avg/max/mdev = 0.020/0.020/0.022/0.005 ms					
		1 cc 111/ avg/ ax/ acv = 0.020/ 0.020/ 0.022/ 0.003 ii				
3.	LSMS Active server: List the snapshot files	<pre># ls -lrt /var/TKLC/lsms/free/*snapshot* # ls -lrt /var/TKLC/lsms/free/supDBdump.sql # ls -lrt /var/TKLC/lsms/free/MySQLUserGrants.sql</pre>				
4.	Remote server: Remove the existing DB snapshot files	<pre># rm /var/TKLC/lsms/free/mysql-snapshot-* # rm /var/TKLC/lsms/free/supDBdump.sql # rm /var/TKLC/lsms/free/MySQLUserGrants.sql</pre>				
5.	LSMS Active server: Copy snapshot files to a Remote Server.	Transfer all the NPAC region DB snapshot files, the MySQL dump of supDB and the MySQL dump of mysql.user Note: The NPAC regions are: CanadaDB, MidAtlanticDB, MidwestDB,				
		NortheastDB, SoutheastDB, SouthwestDB, WestCoastDB and WesternDB # scp -p /var/TKLC/lsms/free/mysql-snapshot- <npac region="">.tar.gz root@<remote ip="">:<remote ip="" path=""> Password: <root_password> # sep -p /var/TKLC/lsms/free/auxpDRdvmn.sml peace@ Davate.</root_password></remote></remote></npac>				
		<pre># scp -p /var/TKLC/lsms/free/supDBdump.sql root@<remote ip="">:<remote ip="" path=""> Password: <root_password></root_password></remote></remote></pre>				
		<pre># scp -p /var/TKLC/lsms/free/MySQLUserGrants.sql root@<remote ip="">:<remote ip="" path=""> Password: <root_password></root_password></remote></remote></pre>				
		Or # cd /var/TKLC/lsms/free/ # sftp <username>@<ip address="" computer="" of="" remote=""> Connecting to <ip address="" computer="" of="" remote=""> The authenticity of host '<ip address="" computer="" of="" remote="">' can't be established. Procedure 9 PRE INSTALL CONFIGURATION

Procedure 9 – Pre-Install Configuration

S T E P	A	В	Estimated time: 15 mir	This procedure will perform the initial configuration required for LSMS installation. Estimated time: 15 minutes Note: Below procedure needs to be executed on both MPS A and MPS B servers.	
1.			MPS X: Log in to the server as the user "root"	Login: root Password: <root_password></root_password>	
2.			MPS X: Switch user to platefg. Select "Server Configuration" Menu	# su - platcfg	

			Note: While connected to the serial console, some console output might come
			when the user is using the serial console to configure the LSMS. Those serial
			output are harmless and can be ignored.
5.		MPS X:	
		Verify that the	Hostname Configuration
		Hostname is correct	
		then select and press "Exit".	
		Otherwise repeat the step above.	Current Hostname: lsmspri
			Options
			Edit
6.		MDC V. Navigata to	
0.		MPS X: Navigate to the Designation	Select Designation/Function and press [ENTER]
		Information screen.	Server Configuration Menu
			Hostname
			Designation/Function Configure Storage
			Set Clock Time Zone
			Exit
7.	П	MPS X:	Options
		1) Select "Edit"	
		from the options dialogue box.	Edit
		2) Set the	
		Designation as "1A" on Server A and as	
		"1B" on Server B,	
		Function as "LSMS and press "OK".	

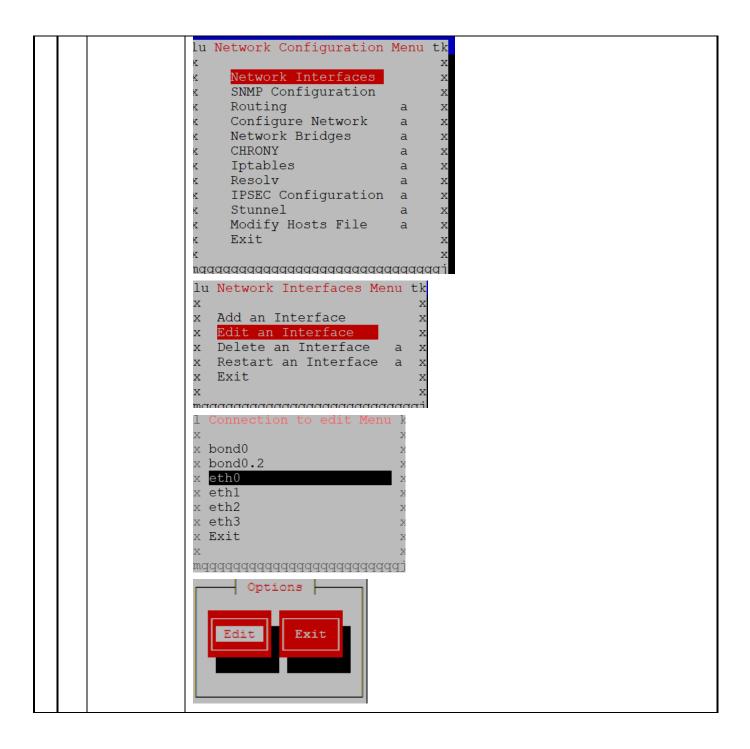

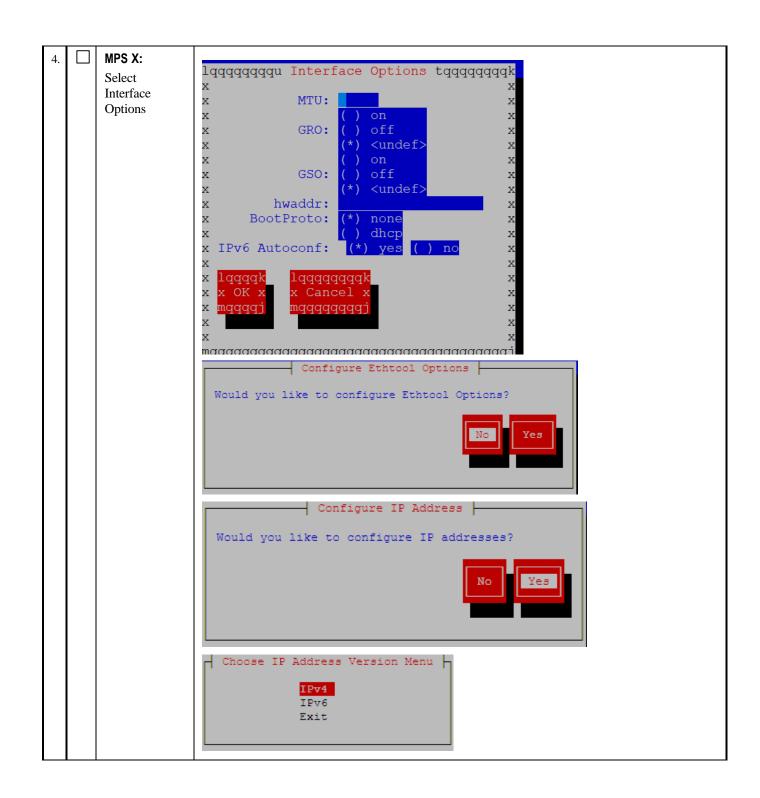

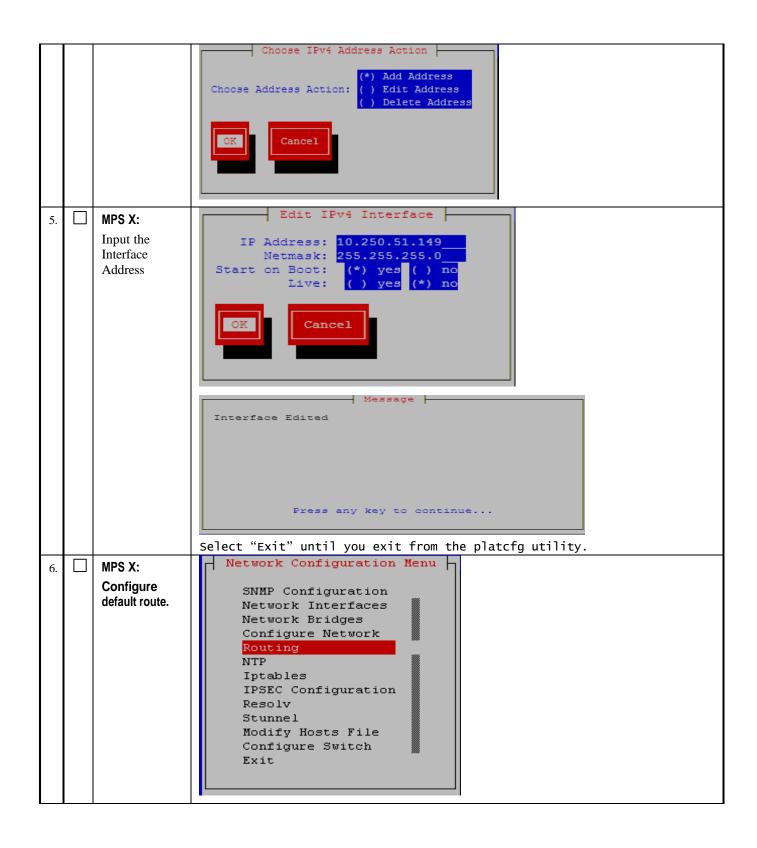

Procedure 10 CONFIGURE NETWORK INTERFACE USING PLATCFG UTILITY

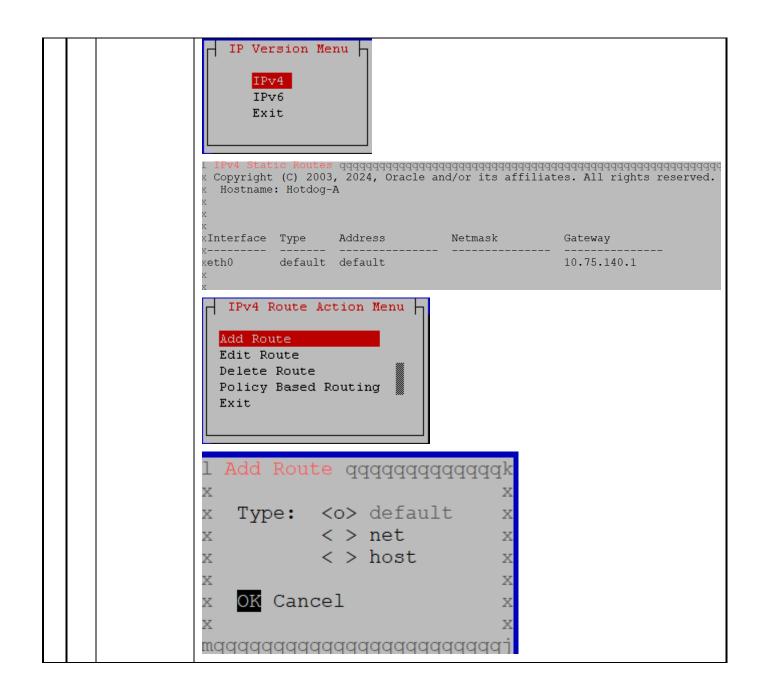

Procedure 10 – Configure Network Interfaces using platcfg utility

S		This procedure c	This procedure configures the network interfaces and makes the E5APPB servers accessible to the network.		
Е	В	Estimated time: 5 minutes

Procedure 11 INSTALL THE LSMS APPLICATION

Procedure 11 - Install the LSMS Application

S T E P	Α	В	This procedure installs the application on the server. Estimated time: 25 minutes Note: Below procedure needs to be executed on both MPS A and MPS B servers.	
1.			MPS X: Log in to console the server as the user "root"	Console Login: root Password: <root_password></root_password>
2.			MPS X: Perform Procedure in 3.7A.1 or copy LSMS 14.0.X ISO to /var/TKLC/upgrade directory.	
3.			MPS X: Start platefg utility by logging in as platefg user.	# su - platcfg
4.			MPS X: Early upgrade checks	The platefg Main Menu appears. On the " Main Menu ", select Maintenance and press [ENTER].

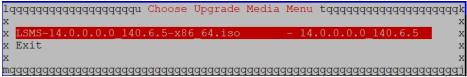

Select the "Upgrade" menu and press [ENTER].

Select the "Early Upgrade Checks" menu to verify that the system is ready for upgrade.

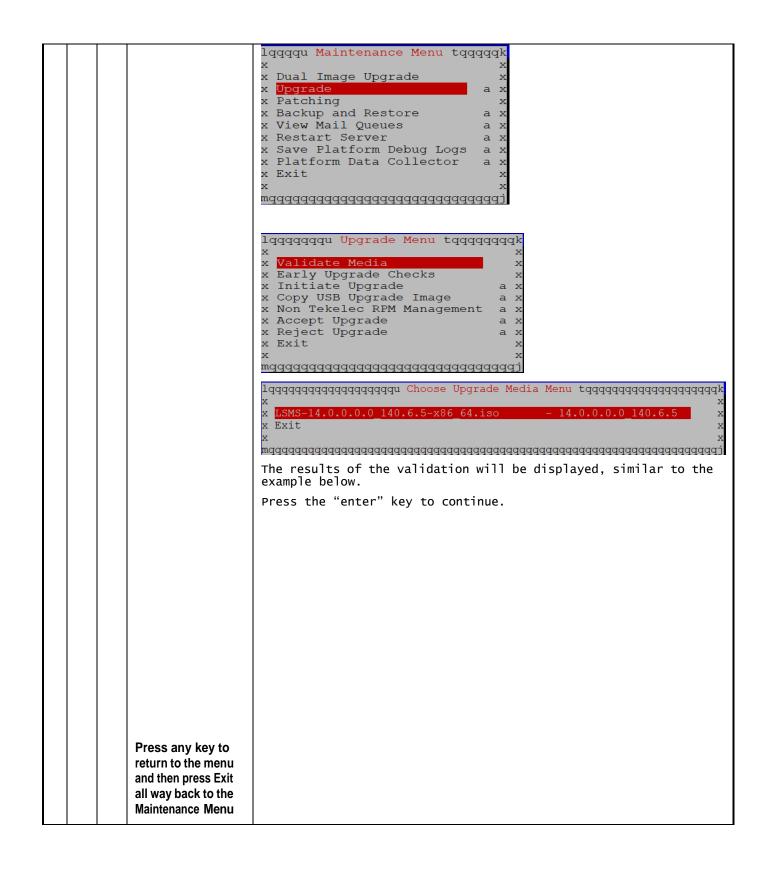

Select the desired upgrade media and press [ENTER].

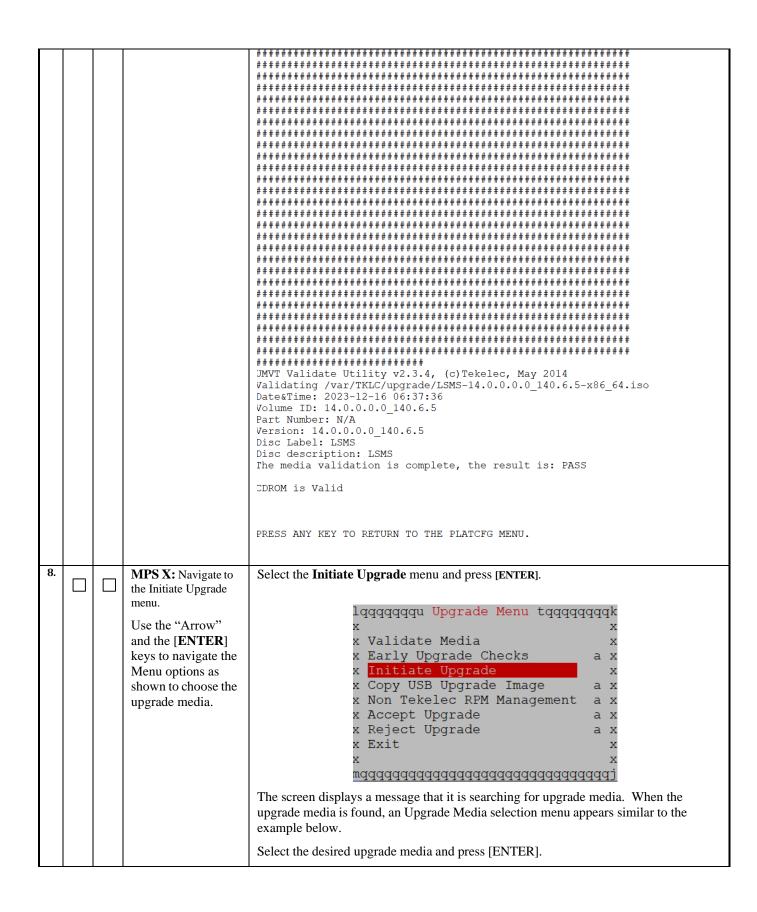

If the Early Upgrade Checks fail due to the ongoing syncing of raid mirrors, then follow the steps 5 and 6 to ignore the disk mirroring before the LSMS installation. If the Early Upgrade Checks passed then jump to Step 7.

			Early Checks failed for the next upgrade Look at earlyChecks.log for more info tarting Early Upgrade Checks at 1011413059 Running earlyUpgradeChecks() for Upgrade::EarlyPolicy::TPDEarlyChecks upgrade policy Verified server is not pending accept of previous upgrade EEROR: Raid mirrors are syncing! EEROR: md2 is syncing! EEROR: md2 is syncing! NTP Server: 10.250.32.10
Start Over
Submit
```

Note: The System Number shall be as follows:

- LEYYWWMMXX
- Where:
 - o LE is the new System Number Prefix for LSMS
 - \circ YY = YEAR year of the system shipment
 - WW= WEEK calendar week of the YY year when the system is shipped
 - MM = MANUFACTURER (if other than TKLC) Here 00 as Manufacturer is Oracle
 - \circ XX = number in line of systems shipped that week

^{*}Default route should be the route of the APP IP address.

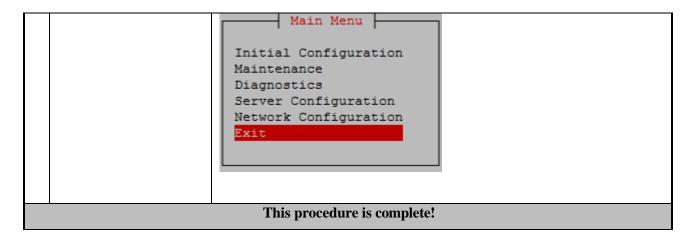

Once the values are entered press the down arrow to select the "Submit" button and press the right arrow to follow the link. **MPS A:** Apply network If the values pass a sanity test for validity, then the "Confirm" button will be settings visible. Use the down arrow to select "Confirm" and press the right arrow to apply the changes. If the sanity tests failed, the reasons will be stated. Use the left arrow key to go back to the edit screen.                                   Select Exit and press [ENTER]. The "platefg" utility terminates.
```

Procedure 16 TMN TOOLKIT AND MARBEN OSI LICENSE INSTALLATION

Note: Valid licenses need to be installed on both A and B LSMS servers. Refer to LSMS 14.0 Release Notes, section 3.3: Marben OSI and TMN Toolkit license key files, for details. Be sure to start the process at least 7 days before the scheduled upgrade date. If needed, temporary TMN Toolkit and Marben OSI licenses are available on the Oracle Software Delivery Cloud (edelivery.oracle.com) with the LSMS software.

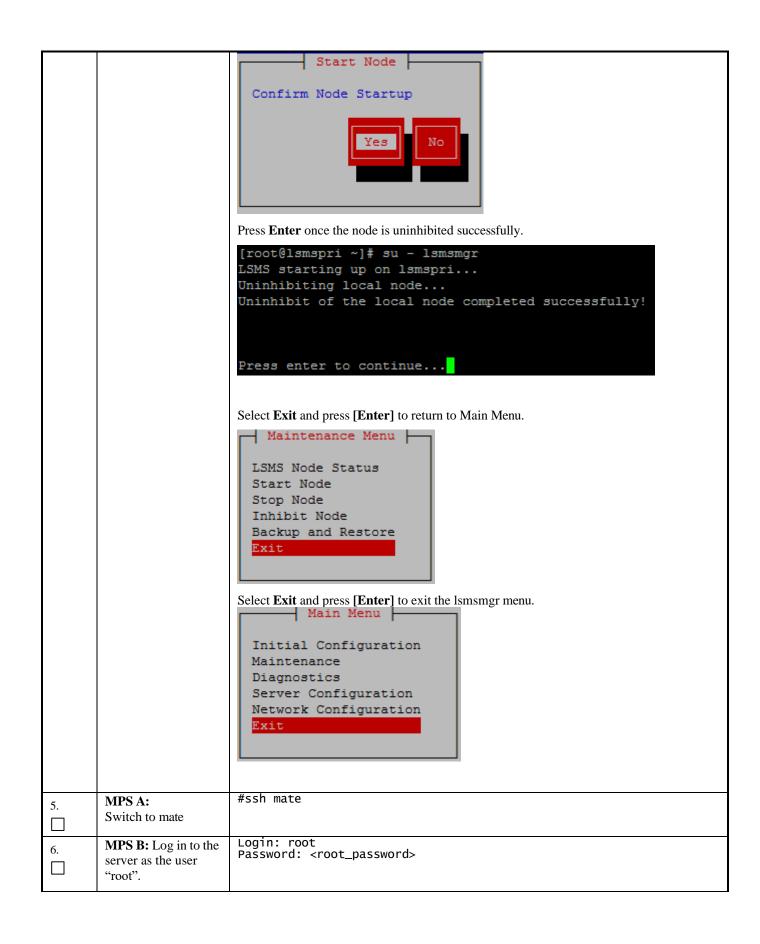

Procedure 16 - TMN Toolkit and Marben OSI License Installation

S T E P	This procedure will install the TMN Toolkit and Marben OSI License to both A and B LSMS servers. Estimated time: 5 minutes		
#			
1.		MPS X: Log in to the server as the user "root"	Login: root Password: <root_password></root_password>
2.		MPS X: Install the TMN toolkit license file	Copy the TMN Toolkit license file to /usr/local/netech/etc/license path following any steps mentioned in 3.7C.1 or 3.7C.2
			If upgrading from LSMS 14.0.0.X release copy backed up licenses on respective paths, there will be no need to procure new licenses.
			Open the file '/usr/local/netech/etc/license' using vi or vim and copy the content of license in the file and save the file.
			Cross check the content of file using : # cat /usr/local/netech/etc/license
3.		MPS X: Install the Marben OSI License	Copy Marben OSI License string using below command:
		file	<pre># echo "<marben license="" osi="" string="">" > /usr/TKLC/osi/conf/license</marben></pre>
4.]	MPS X: Restart the system	Reboot the system to take effect
		System	# reboot
	This procedure is complete!		

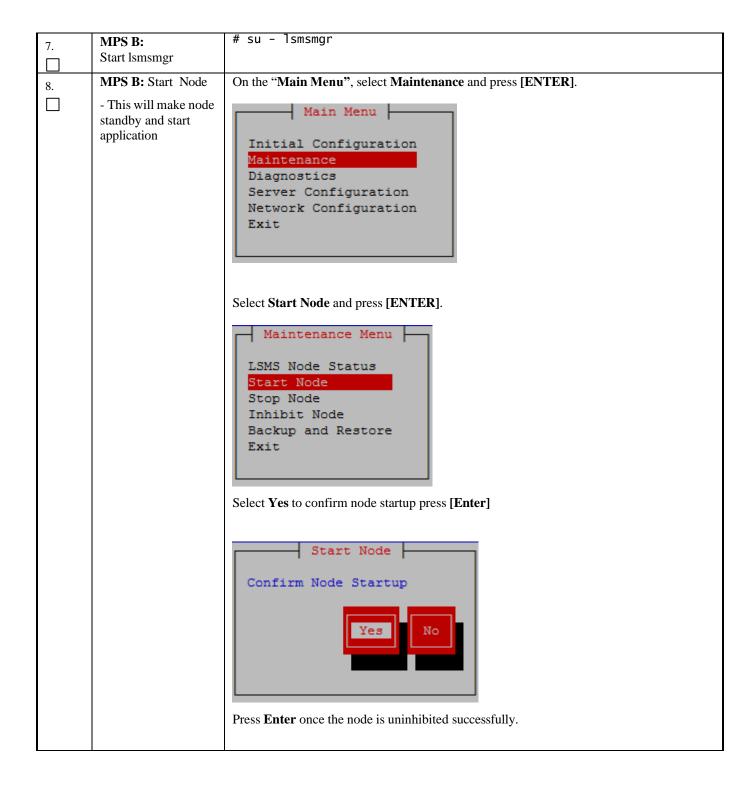

Procedure 17 START LSMS SERVICES

Procedure 17 - Start LSMS services

S T E P	This procedure starts the LSMS services. Estimated time: 10 minutes	
1.	MPS A: Log in to the server as the user "root".	Login: root Password: <root_password></root_password>
2.	MPS A: Check hastatus	Run below command to check lsms status is UNINITIALIZED "INHIBITED" before running startNode # hastatus UNINITIALIZED if status is UNINITIALIZED and not UNINITIALIZED "INHIBITED" run hafailover else continue with Step 3. #/usr/TKLC/plat/sbin/hafailoverinhibit # hastatus UNINITIALIZED "INHIBITED"
3.	MPS A: Start lsmsmgr	# su - lsmsmgr
4.	MPS A: Start Node - This will make node active and start application	On the "Main Menu", select Maintenance and press [ENTER]. Main Menu Initial Configuration Maintenance Diagnostics Server Configuration Network Configuration Exit Select Start Node and press [ENTER]. Maintenance Menu LSMS Node Status Start Node Stop Node Inhibit Node Backup and Restore Exit Select Yes to confirm node startup press [Enter]

Procedure 17 - Start LSMS services

```
[root@lsmssec ~]# su - lsmsmgr
LSMS starting up on 1smssec...
Checking status from active mate...
Running status on 1smspri node
Copying DB from active mate. Local node will become standby.
 This may take a while
LSMS shutting down lsmssec...
Syncing Binary Logs ...
Syncing mate:/mnt/snap/ to /var/TKLC/lsms/db/
Sync'ed
LSMS starting up on lsmssec...
Uninhibiting node 1smssec...
Startup of local node successful
Press enter to continue...
Select Exit and press [Enter] to return to Main Menu.
 - Maintenance Menu -
  LSMS Node Status
  Start Node
  Stop Node
  Inhibit Node
  Backup and Restore
  Exit
Select Exit and press [Enter] to exit the lsmsmgr menu.
       - Main Menu
  Initial Configuration
  Maintenance
  Diagnostics
  Server Configuration
  Network Configuration
  Exit
        This procedure is complete!
```

Procedure 18 POST CONFIGURATION HEALTH CHECK

Procedure 18 – Post Configuration Health Check

This procedure determines the health of the Server after an installation. This procedure will perform a syscheck on each LSMS server.

Estimated time:5 minutes

Procedure 18 – Post Configuration Health Check

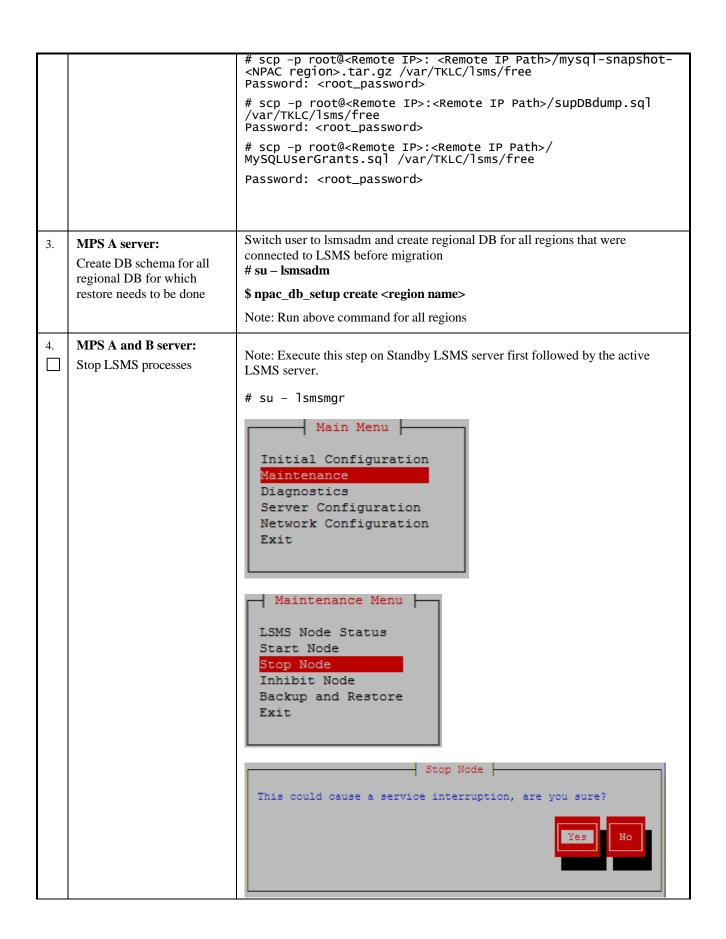

1.	MPS A and B: Log in to the server as the user "root".	Login: root Password: <root_password></root_password>
2.	MPS A and B: Validate date, time and time zone to ensure accuracy.	# date Thu May 12 05:55:27 EDT 2016
3.	MPS A and B: Execute the "hastatus" command to verify the HA state of this server. LSMS Standby server: Verify that the STANDBY server's MySQL replication is functioning properly.	Execute the following command on both LSMS A and B to verify the HA state of mated LSMS pair. # hastatus Verify that the hastatus of one of the servers is Active and the other is Standby. WARNING: If the output from the above command is anything else other than "ACTIVE" and "STANDBY", do not proceed with this procedure and contact My Oracle Support following the instructions on the Appendix E. Execute the following command to verify that MySQL replication is working correctly on the STANDBY LSMS server: # tail /var/TKLC/lsms/logs/dbreplMon.log If MySQL replication is functioning correctly then the following output will be observed, make sure that at least the last line of your output matches the lines below. Thu May 12 05:58:12 2016 All tests passed on STANDBY FIPS integrity verification test failed. Thu May 12 05:59:19 2016 All tests passed on STANDBY FIPS integrity verification test failed. FIPS integrity verification test failed.
		Thu May 12 06:01:32 2016 All tests passed on STANDBY WARNING: If at least the last line of your output does not match the lines above then do not proceed with this upgrade and contact My Oracle Support following the instructions on the Appendix E.
4.	MPS A and B:	# syscheck
+.	Execute syscheck	Running modules in class disk
╽╚	LACCITE SYSCHER	OK
		Running modules in class hardware
		OK
		Running modules in class lsmshc
		ОК
-		

3.7 Data Migration

Procedure 19 RESTORE DATABASE

Procedure 19 - Restore Database

S T E P	This procedure restores the database on the LSMS server. Estimated time:60 minutes	
1.	MPS A server: Log in to the server as the user "root".	Login: root Password: <root_password></root_password>
2.	MPS A server: Copy the snapshot files from the Remote server to the current LSMS Active server.	Transfer all the NPAC region DB snapshot files, supDB MySQL dump and users MySQL dump from the Remote server to current LSMS A server. Note: The NPAC regions are: CanadaDB, MidAtlanticDB, MidwestDB, NortheastDB, SoutheastDB, SouthwestDB, WestCoastDB and WesternDB

		Node shutdown completed successfully. Press any key to continue Exit the lsmsmgr menu.
4.	MPS A and B: Execute the "hastatus" command to verify the HA state of this server.	Execute the following command on both LSMS A and B to verify the HA state of mated LSMS pair. # hastatus Verify that the hastatus of both the servers is 'UNINITIALIZED "INHIBITED"'. WARNING: If the output from the above command is anything else other, do not proceed with this procedure and contact My Oracle Support following the instructions on the Appendix E.
5.	MPS A server: Extract the snapshot data from the archive tar files copied from LSMS.	<pre># cd /var/TKLC/lsms/free Restore the <regiondb> with the regional database name (For example: CanadaDB) # tar -xzvf /var/TKLC/lsms/free/mysql-snapshot- <regiondb>.tar.gz # scp /var/TKLC/lsms/free/<regiondb>/*MY* /var/TKLC/lsms/db/<regiondb> # rm -rf /var/TKLC/lsms/free/<regiondb></regiondb></regiondb></regiondb></regiondb></regiondb></pre>
6.	MPS A server: Restore supDB and MySQL Users.	<pre>Execute the below commands: # systemctl start mysqld Restore the 'supDB' # mysql -udbroot -p[dbroot_password] supDB < /var/TKLC/lsms/free/supDBdump.sql mysql -u dbroot -p<mysql_password> supDB -e 'UPDATE LsmsUser set FirstLogonFlag=1;' Restore MySQL users # mysql -udbroot -p[dbroot_password] < /var/TKLC/lsms/free/MySQLUserGrants.sql # systemctl stop mysqld Note: Below warning message can be ignored if displayed: Warning: Using a password on the command line interface can be insecure.</mysql_password></pre>

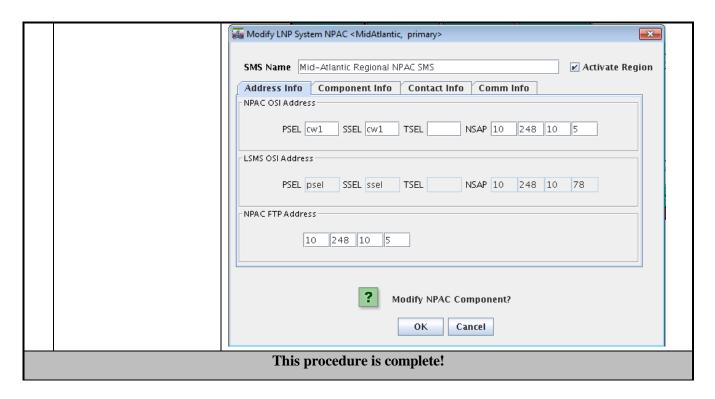

7.	MPS A server: Remove the snapshot files	Remove the snapshot files. # cd /var/TKLC/lsms/free # rm -f mysql-snapshot-* # rm -f supDBdump.sql # rm -f MySQLUserGrants.sql	
8.	MPS A server: Check ownership of database files	<pre>Verify dbadm:dbadm ownership of all database files and directories. # cd /var/TKLC/lsms/db # ls -ltr <db name=""> where <db name=""> is supDB or <region>DB, where <region> is the name of an NPAC region. If any databases have ownership other than dbadm:dbadm, change them using this command: # chown -R dbadm:dbadm <db name=""></db></region></region></db></db></pre>	
9.	MPS A and B server: Start LSMS processes	Note: Execute this step on LSMS A server first followed by LSMS B server. # startNode	
10.	MPS A and B: System Heath Check	Execute Procedure 17to verify the system health check after DB full upgrade.	
11.	LSMS Active server: Login to LSMS GUI	Login to LSMS Active GUI as Ismsall user.	
12.	LSMS Active server: Configure MySQL Port	Refer to the recorded value of MySQL Port in 28Procedure 6step 11. If the MySQL Port is default port, then skip the next step. Otherwise, go to "Admin -> MySQL Port -> Modify" and configure the port recorded from LSMS 13.5.X.	
13.	LSMS Active server: Verify the ELAP Credentials	Go to "Configure -> LNP System -> EMS -> View" to verify the ELAP Credentials are identical to the recorded value of the ELAP Credentials in Procedure 6step 12. Otherwise, go to "Configure -> LNP System -> EMS -> Modify" and configure the ELAP Credentials recorded from LSMS 13.5.X.	
		Note : Re-configure the EMS on LSMS with the details captured in Procedure 6, step 8.	
	This procedure is complete!		

Procedure 20 CONNECT LSMS 14.0.X TO NPAC

Procedure 20 - Connect LSMS to NPAC

S	This procedure connects the LSMS to the NPAC.
E P #	Estimated time:15 minutes

NOTE: Execute this procedure only when the NPAC region is not visible on the LSMS GUI, after the DB is restored.		
1.	MPS X: Verify LSMS installation	Note: 1. LSMS 14.0.X is successfully installed and configured. 2. NAS is successfully installed and configured.
2.	LSMS Active server: Login to LSMS Active GUI	Login to LSMS Active GUI through VIP as Ismsall user.
3.	LSMS Active server: Update NPAC Customer ID if required Note: If after restore NPAC ID is coming as it was before starting upgrade skip this step	Click on the NPAC region. Go to the menu Configure -> LNP System -> LSMS -> Modify Enter the new LNP SPID in the 'NPAC Customer ID' field and fill appropriate information in all other fields. Modify LNP System LSMS NPAC Customer ID Component Info Component Info Component Info Platform Type LSMS Platform Supplier Oracle Platform SW Release 13.3 Platform Model Modify LSMS Component? OK Cancel
4.	LSMS Active server: Create NPAC region(s) and connect it to the NPAC	Click on the NPAC region. Go to the menu Configure -> LNP System -> NPAC -> Modify -> Primary Enter the NPAC IP in the 'NSAP' field and NPAC FTP Address and check the 'Activate Region' checkbox. Fill the information in all other tabs.

Procedure 21 EXPORT THE DATABASE FROM LSMS 14.0.X TO THE QUERY SERVER

Procedure 21 - Export the Database from LSMS 14.0.X to the Query Server

S T E P	This procedure provides the steps to export the database from the LSMS 14.0.X system to the query server. Estimated time:30 minutes	
1.	LSMS Active server: Login as root.	Login to LSMS 14.0.X CLI as root user.
2.	LSMS Active server: Remove the existing DB snapshot files	<pre># rm /var/TKLC/lsms/free/mysql-snapshot-* # rm /var/TKLC/lsms/free/snapinfo.sql</pre>
3.	LSMS Active server: Create a snapshot	# lsmsdb -c snapshot WARNING: This command may cause a brief interruption in traffic being sent from the NPAC to connected network elements and local LSMS provisioning may be INTERRUPTED. Do you want to continue? [Y/N]Y Creating snapshot of the database partition, please wait lvcreate WARNING: the snapshot will be automatically disabled once it gets full lvcreate INFO: using default snapshot chunk size of 64 KB for "/dev/vgapp/dbbackup" lvcreate doing automatic backup of "vgapp" lvcreate logical volume "/dev/vgapp/dbbackup" successfully created The database is available to the application again.

$\overline{}$		
		Disk snapshot created successfully. mount: block device /dev/vgapp/dbbackup is write-protected, mounting read-only Snapshot mounted successfully. 6.	LSMS 14.0.X Query Server: Login as root to the Query Server	login: root Password: <root_password></root_password>
7.	LSMS 14.0.X Query	# cd /opt/mysql/mysql/bin
	Server: Shutdown the Mysql server	# ./mysqladmin -u root -p shutdown Enter password:
8.	LSMS 14.0.X Query	# cd /usr/mysql1
	Server: Extract the data for EACH region. Replace regionDB with regional database name	# gunzip -c mysql-snapshot- <regiondb>.tar.gz tar -xvf -</regiondb>
	Remove each tar.gz after it has extracted.	# rm mysql-snapshot- <regiondb>.tar.gz</regiondb>
9.	LSMS 14.0.X Query Server:	# cd /opt/mysql/mysql/bin
	Start the Mysql daemon on the Query Server.	<pre># ./mysqld_safeskip-replica -start & 1255 # Starting mysqld daemon with databases from /usr/mysql1:</pre>
10.	LSMS 14.0.X Query	# ./mysql -u root -p
	Server: Start the Mysql command line utility	mysql> RESET BINARY LOGS AND GTIDS; Query OK, 0 rows affected (0.23 sec)
	Reset the configuration information for master	
		mysql> reset replica; Query OK, 0 rows affected (0.19 sec)
	Reset the configuration information for slave	mysql> source /usr/mysql1/snapinfo.sql Query OK, O rows affected (0.17 sec)
	Configure the query server to start replication from the correct position on the master.	Query on, o rows arrected (0.17 Sec)
11.	LSMS Active server: As the root user, remove the intermediate tarballs from the LSMS 14.0.X server.	[root@lsmspri root]# rm /var/TKLC/lsms/free/mysql-snapshot*
	As the root user, remove the snapinfo.sql script from the LSMS 14.0.X server	[root@lsmspri root]# rm /var/TKLC/lsms/free/snapinfo.sql

12.	LSMS 14.0.X Query Server: Start the Mysql command line utility	NOTE: EMS changes may cause the Query server to disconnect. These steps will help prevent the disconnect. login: root # /opt/mysql/mysql/bin/mysql -u root -p	
13.	LSMS 14.0.X Query Server: Prepare the Query Server for the EMS Configuration	<pre>mysql> SET GLOBAL SQL_REPLICA_SKIP_COUNTER = 100; Query OK, 0 rows affected</pre>	
14.	LSMS 14.0.X Query Server: Validate the operation of the query server.	Perform Error! Reference source not found	
	This procedure is complete!		

Procedure 22 SSH KEY EXCHANGE BETWEEN ELAP AND LSMS

Procedure 22 - SSH KEY EXCHANGE BETWEEN ELAP AND LSMS

STEP	This procedure exchanges SSH keys between the ELAP and LSMS 14.0 (TPD 8).		
#	Note: Estimated time of co Check off $()$ each step as it	mpletion is 15 minutes. is completed. Boxes have been provided for this purpose under each step number.	
	Should this procedure fail, C	ontact Oracle technical services and ask for FULL UPGRADE ASSISTANCE.	
1.	Active ELAP: Login as elapdev.	login: elapdev Password: <elapdev_password></elapdev_password>	
2.	Active ELAP: Generate RSA keys on ELAP 10.2 server	NOTE: RSA keys don't exist on OL6 server ELAP 10.2. To exchange keys with LSMS 14, we need to generate RSA keys first on ELAP 10.2 server.	
		Please run below commands on the Active ELAP to generate RSA keys on ELAP A and B servers. 1. Go to elapdev home directory using cd command.	
		cd 2. Generate key on local ELAP. /usr/bin/ssh-keygen -t rsa -f .ssh/id_rsa -N ''	
		3. Generate key on remote ELAP ssh mate "/usr/bin/ssh-keygen -t rsa -f .ssh/id_rsa -N" """	
		Example: [elapdev@Ithaca-A ~]\$ cd [elapdev@Ithaca-A ~]\$ /usr/bin/ssh-keygen -t rsa -f .ssh/id_rsa -N ''	

Procedure 22 - SSH KEY EXCHANGE BETWEEN ELAP AND LSMS

	iure 22 - 88H KEY EXCHAI	
		Generating public/private rsa key pair.
		Your identification has been saved in .ssh/id_rsa.
		Your public key has been saved in .ssh/id_rsa.pub.
		The key fingerprint is:
		3e:d0:ea:25:fc:84:66:ff:4c:16:00:16:99:c8:ed:af elapdev@Ithaca-A
		The key's randomart image is:
		+[RSA 2048]+
		. 0++
		0.+.
		s .
		. =
		B.= 0
		+E* =
		. 0.0
		++
		[elapdev@Ithaca-A ~]# ssh mate "/usr/bin/ssh-keygen -t rsa -f .ssh/id_rsa -N '' "
		Sheek that was how and says the sheet and so were
3.	Active ELAP: Verify that the keys are generated for elapdev user on both ELAP A and B serves.	Check that rsa keys are generated for the elapdev user on local and mate using below command.
		Run below commands to verify the keys.
		\$ ls -lrt .ssh/id_rsa*
		\$ ssh mate 'ls -lrt .ssh/id_rsa*'
		\$ 3311 macc 13 11 c 13311/14_134
		Example:
		[elapdev@Crete-A ~]\$ ls -lrt .ssh/id_rsa*
		· · · · · · · · · · · · · · · · · · ·
		-rw-rr- 1 elapdev elap 569 Mar 20 08:16 .ssh/id_rsa.pub
		-rw 1 elapdev elap 2602 Mar 20 08:16 .ssh/id_rsa
		[elapdev@Crete-A ~]\$ ssh mate 'ls -lrt .ssh/id_rsa*'
		-rw-rr 1 elapdev elap 569 Mar 20 08:17 .ssh/id_rsa.pub
		-rw 1 elapdev elap 2602 Mar 20 08:17 .ssh/id_rsa

Procedure 22 - SSH KEY EXCHANGE BETWEEN ELAP AND LSMS

4.	Active ELAP: Exchange Secure Shell Keys with LSMS 14.0 SSH keys will first be exchanged between ELAP A and LSMS A and then between ELAP B and LSMS A.	Exchange secure shell keys with LSMS A server using below command. Run below commands to exchange keys with LSMS. 1. Exchange key with local ELAP and LSMS. /usr/TKLC/plat/bin/keyexchange lsmsadm@lsmsAIpAddr key=id_rsa.pub 2>&1 2. Exchange Key with remote ELAP and LSMS /usr/bin/ssh -l elapdev mate -t "/usr/TKLC/plat/bin/keyexchange lsmsadm@lsmsAIpAddr key=id_rsa.pub 2>&1"		
		Example: [elapdev@Ithaca-A ~]\$ /usr/TKLC/plat/bin/keyexchange lsmsadm@10.75.140.10key=id_rsa.pub 2>&1 The server does not know of 10.75.140.10. will just exchange host keys for the name given! Password of lsmsadm: ssh is working correctly.		
5.	Active ELAP: Exchange Secure Shell Keys with LSMS 14.0 SSH keys will next be exchanged between ELAP A and LSMS B and then between ELAP B and LSMS B	Exchange secure shell keys with LSMS B server using below command. Run below commands to exchange keys with LSMS. 1. Exchange key with local ELAP and LSMS. /usr/TKLC/plat/bin/keyexchange lsmsadm@lsmsBIpAddr key=id_rsa.pub 2>&1 2. Exchange Key with remote ELAP and LSMS /usr/bin/ssh -l elapdev mate -t "/usr/TKLC/plat/bin/keyexchange lsmsadm@lsmsBIpAddr key=id_rsa.pub 2>&1" Example: [elapdev@Ithaca-A ~]\$ /usr/TKLC/plat/bin/keyexchange lsmsadm@10.75.140.11 key=id_rsa.pub 2>&1 The server does not know of 10.75.140.10. will just exchange host keys for the name given! Password of lsmsadm: ssh is working correctly.		
6.	Active ELAP: Note down date and timestamp	\$date This procedure is complete!		
	This procedure is complete:			

Procedure 23 CONNECT LSMS 14.0.X TO ELAP

Procedure 22 - Connect LSMS to ELAP

S T E P #	This procedure connects the LSMS to ELAP. Estimated time:10 minutes			
7.	ELAP Active server: Login to ELAP GUI	Login to ELAP GUI through VIP as uiadmin.		
8.	ELAP Active server: Enable the LSMS Connection	Go to menu Maintenance -> LSMS Connection -> Change Enabled Click on 'Enable LSMS Connection' button. ELAP_A_NAME Change LSMS Connection Allowed		
		INFO The LSMS Connection is currently Disabled CAUTION: This action will Enable the LSMS Connection. Enable LSMS Connection. Fr.: December 27 2013 02:02:56 EST		
		ELAP_A NAME Change LSMS Connection Allowed		
		✓ SUCCESS: The LSMS Connection is now Enabled.		
		Fri December 27 2013 02:03:19 EST 2013 © Tekeles, Inc., All Rights Reserved.		
9.	ELAP Active server: Enable the bulkload.	Go to menu Maintenance -> LSMS HS Bulk Download -> Change Enabled Click on 'Enable LSMS Bulk Download for the ELAP' button.		
		ELAP_B_NAME Change LSMS HS Bulk Download Enabled		
		INFO: The LSMS Bulk Download for this ELAP is currently Disabled.		
		CAUTION: This action will Enable the LSMS Bulk Download for this ELAP. Enable LSMS Bulk Download for this ELAP		
		Thu June 09 2016 08:50:33 EDT Copyright © 2013-2016, Oracle and/or its affiliates. All rights reserved.		
		After clicking on the button, success message will be displayed.		
		SUCCESS The LSMS HS Bulk Download is now enabled.		
	This procedure is complete!			

Procedure 24 ACCEPT THE UPGRADE

Procedure 23 – Accept the upgrade.

S T E P	А	В	This procedure will accept the upgrade. Estimated time: 5 minutes
------------------	---	---	---

Procedure 23 – Accept the upgrade.

1			MPS X: Log in to the server	Login: root
1.			as the user "root".	Password: <root_password></root_password>
		Ш		
_			NEDGAY Governor	# su - platcfg
2.			MPS X: Start platcfg	
			utility.	
			MDC V. Accord The second	
3.			MPS X: Accept Upgrade	On the "Main Menu", select Maintenance and press [ENTER].
				Main Menu Main Menu
				Main Menu
				Maintenance
				Diagnostics
				Server Configuration
				Server Configuration Network Configuration Remote Consoles
				Exit
				EXIC
				Select the "Upgrade" menu and press [ENTER].
				Maintenance Menu
				Upgrade
				Backup and Restore
				View Mail Queues
				Restart Server
				Save Platform Debug Logs
				Exit
				Select the "Accept Upgrade" menu and press [ENTER].
				Upgrade Menu
				Validate Media
				Early Upgrade Checks
				Initiate Upgrade Copy USB Upgrade Image
				Non Tekelec RPM Management
				Accept Upgrade
				Reject Upgrade
				Exit
				Note: The "Prince Linear de" many is also il-11 - A 41- 1 CMC in (11)
				Note: The "Reject Upgrade" menu is also available after the LSMS installation.
				However, this option should not be used after the first installation of application. It should be used in subsequent upgrades to return to a previous application release.
				should be used in subsequent upgrades to return to a previous application release.
				Select Yes and press [ENTER] .

Procedure 23 – Accept the upgrade.

APPENDIX A. ISO IMAGE COPY FROM USB MEDIA

Assumption: The USB media contains the desired LSMS ISO.

A.1 ISO IMAGE COPY FROM USB MEDIA

Appendix A.1 - ISO Image copy from USB media

S T E P #	1A	1B	This procedure provi	ides instructions to copy an ISO image from an USB media.
1.			MPS X: Insert USB.	Insert media in USB drive
2.			MPS X: Log in to the server as the "root" user.	[hostname] consolelogin: root password: password
3.			MPS X: Run syscheck to make sure there is no error.	Execute the following command: # syscheck The output should look like: [root@hostname ~]# syscheck Running modules in class proc OK Running modules in class services OK Running modules in class system OK Running modules in class disk OK Running modules in class hardware OK Running modules in class net OK Running modules in class net OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log
4.			MPS X: Verify ISO image doesn't already exist.	Execute the following command to perform directory listing: # ls -al /var/TKLC/upgrade The output should look like: [root@hostname ~]# ls -al /var/TKLC/upgrade total 16 dr-xr-xr-x 2 root root 4096 Oct 22 16:31 . dr-xr-xr-x 21 root root 4096 Oct 18 13:40 If an ISO image exists, remove it by executing the following command: # rm -f /var/TKLC/upgrade/ <iso image=""></iso>
5.			MPS X: Delete unwanted ISOs from USB media.	Execute the following command to create a directory to mount the USB media: # mkdir -p /mnt/usb Execute the following command to get the USB drive name: # fdisk -l grep FAT The output should look like: /dev/sdc1 * 1 812 831472 6 FAT16 Execute the following command to mount the USB media using the USB drive name from the output above:

			<pre># mount /dev/sdc1 /mnt/usb</pre>
			Execute the following command to perform directory listing and verify the file name format is as expected: # ls -al /mnt/usb
			The output should look like: [root@hostname ~]# # ls -al /mnt/usb total 629400
			dr-xr-xr-x 2 root root 4096 Dec 5 13:33 . dr-xr-xr-x 22 root root 4096 Dec 5 13:55rw-rr 1 root root 829595648 Dec 5 16:20 LSMS- 14.0.0.0.0_140.6.5-x86_64.isoOnly one ISO file should be listed, if additional files are listed, execute the following command to remove unwanted ISOs: # rm -f /mnt/usb/ <iso_name>.iso</iso_name>
			For e.g., # rm -f /mnt/usb/LSMS-14.0.0.0.0_140.6.5-x86_64.iso
			# TIII -1 /IIIITL/USD/ LSMS-14.0.0.0.0_140.0.3-X00_04.1S0
6.		MPS X: Verify	Execute the following command to verify the available disk space:
		space exists for ISO.	# df -h /var/TKLC
			The output should look like: [root@lsmspri log]# df -h /var/TKLC Filesystem Size Used Avail Use% Mounted on /dev/mapper/vgroot-plat_var_tklc 3.9G 1.2G 2.5G 32% /var/TKLC
			Verify that there is at least 620M in the Avail column. If not, clean up files until there is space available.
			CAUTION: Make sure you know what files you can remove safely before cleaning up. It is recommended that you only clean up files in the /var/TKLC/upgrade directory as this is a platform owned directory that should only contain ISO images. This directory should not be expected to contain images for any length of time as they can get purged. Contact Technical Services beforehand if removing files other than the /var/TKLC/upgrade directory as removing files is dangerous.
7.		Copy iso from mounted path to	Execute the following command to copy ISO: # cp /mnt/usb/ <xyz.iso> /var/TKLC/upgrade/</xyz.iso>
		the destination path	Execute the following command to unmount the USB media: # umount /mnt/usb
8.		MPS X: Verify ISO image exists.	Execute the following command to perform directory listing: # ls -al /var/TKLC/upgrade
			The output should look like: The output should look like: [root@lsmspri log]# ls -al /var/TKLC/upgrade total 895152 drwxrwxr-x. 2 root admgrp 4096 Apr 20 17:16 . dr-xr-xr-x. 20 root root 4096 Apr 20 18:01r 1 admusr admgrp 916621312 Apr 20 17:16 LSMS- 14.0.0.0.0_140.6.5-x86_64.iso Repeat this procedure from step 5 if LSMS ISO file is not as expected.

9.		MPS X: Logout from server.	Logout from the server by executing the following command: # logout
10.		MPS X: Remove USB media.	Remove media from USB drive.
			This procedure is complete!

A.2 Copying LSMS backups from NAS to USB

S T E P	NAS	This procedure prov	ides instructions to copy LSMS backups from NAS to USB.
1.		NAS: Insert USB.	Insert media in USB drive
2.		NAS: Log in to the server as the "root" user.	[hostname] consolelogin: root password: password
3.		NAS: Run syscheck to make sure there is no error.	Execute the following command: # syscheck The output should look like: [root@hostname ~]# syscheck Running modules in class proc OK Running modules in class services OK Running modules in class system OK Running modules in class disk OK Running modules in class hardware OK Running modules in class net OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log
4.		NAS: Mount the USB media.	Execute the following command to create a directory to mount the USB media: # mkdir -p /mnt/usb Execute the following command to get the USB drive name: # fdisk -l grep FAT The output should look like: /dev/sdc1 * 1 812 831472 6 FAT32 Execute the following command to mount the USB media using the USB drive name from the output above: # mount /dev/sdc1 /mnt/usb Note: There should be space available in the USB. If not, clean up files until there is space available.
5.		Copy backup files to the mounted path	Execute the following command to copy ISO: # cp <backup files=""> /mnt/usb/</backup>

		While copying backup files to USB, Following error is expected: cp: failed to preserve ownership for `/mnt/usb/ <backup_file>': Operation not permitted Note: Please note the ownership of the backup files before copying. Therefore, after restoring the backups to server after IPM'ing, verify the ownership of backup files. If not matched, change the ownership with the "chown" command.</backup_file>
6.	NAS: Verify backup files exists	Execute the following command to perform directory listing: # ls -al /mnt/usb/ List of backup files should be displayed. Execute the following command to unmount the USB media: # umount /mnt/usb
7.	NAS: Logout from server.	Logout from the server by executing the following command: # logout
8.	NAS: Remove USB media.	Remove media from USB drive.

APPENDIX B. START AND VERIFY REPLICATION ON QUERY SERVER

Appendix B – Start and Verify REPLICATION ON Query Server

This procedure provides the steps to start and verify Replication on the query server This step is performed only if a query server exists in the customer system. Estimated time:30 minutes		
LSMS 14.0.X Query Server: Start Replication.	o send event	

2.	LSMS 14.0.X Query Server: OPTIONAL: If the Slave_IO_Running and Slave_SQL_Running column values are set to NO, the status is not good and the error will need to be investigated. Look at last few lines of error log, and record the error.	# tail /usr/mysql1/*.err Record error here: Contact My Oracle Support following the instructions on the Appendix E and ask for FULL UPGRADE ASSISTANCE.
3.	LSMS Active Server: Login to the LSMS Primary server as lsmsadm. Verify the Query Server is Connected.	Login: lsmsadm Password: <lsmsadm_password> [lsmsadm@lsmspri lsmsadm]\$ lsmsdb -c queryservers cs2-bss2 (<query ip="" server="">) Connected</query></lsmsadm_password>

APPENDIX C. COPYING LICENSE FILE ON THE LSMS SERVER

C.1 Copying File Using SCP

S T E P	This procedure will help copying the license file from a desktop to LSMS server					
1.	Server X: Login to server where license file is present	Loging to server using ID and password where license file is copied				
2.	Server X: SCP the file from server to LSMS server	<pre>scp <license file=""> root@<lsms ip="">: /usr/local/netech/etc/license</lsms></license></pre>				
3.	LSMS MPS: Check if the license file has been copied correctly	Run command to check for license file: \$ cat /usr/local/netech/etc/license Expected Output: Contents of license file should be displayed				
	This procedure is complete!					

C.2 Copying File Using USB

S	This procedure will help copying the license file from a desktop to LSMS server					
T	22.00 p.2000utate with north organism month and month a debatiop to 20.200 out to					
E						
P						
#						
1.	Server X: Copy license file to USB	Connect USB to desktop and copy the license file from desktop to USB.				
2.	LSMS MPS: Confirm how the USB is enumerated on LSMS server	Connect the USB to LSMS MPS which contains the license file and check on how it is enumerated using command: \$dmesg grep -i "removable disk" Expected output sd 6:0:0:0: Attached scsi removable disk sdc				
		This shows USB is enumerated as /dev/sdc				
3. LSMS MPS: Determine the partition name Run command fdisk —I on enumerated name device to determine partition name \$fdisk —I /dev/sdc Expected Output: Disk /dev/sdc: 2013 MB, 2013265920 bytes 256 heads, 63 sectors/track, 243 cylinders Units = cylinders of 16128 * 512 = 8257536 bytes Device Boot Start End Blocks Id						
		Device Boot Start End Blocks Id System /dev/sdc1 * 1 110 887008+ b W95 FAT32 This shows that partition name is /dev/sdc1				

4.	LSMS MPS: Copy license file from USB to MPS	Run below command to copy the license file from USB \$mkdir -p /tmp/usb \$ mount /dev/sdc1 /tmp/usb				
5.	LSMS MPS: Copy license file from /tmp directory	<pre>\$ cp /tmp/usb/<license-file> /usr/local/netech/etc/license</license-file></pre>				
6.	LSMS MPS: Check if the license file has been copied correctly	Run command to check for license file: \$ cat /usr/local/netech/etc/license Expected Output: Contents of license file should be displayed				
7.	LSMS MPS: Unmount the USB	Unmount the USB using command : \$umount /tmp/usb				
	This procedure is complete!					

APPENDIX D. SWOPS SIGN OFF.

Discrepancy List

Discrepancy List

APPENDIX E. MY ORACLE SUPPORT

CAUTION: Use only the guide downloaded from the Oracle Technology Network (OTN) (http://www.oracle.com/technetwork/indexes/documentation/oracle-comms-tekelec-2136003.html).

Before upgrading your system, access the **My Oracle Support** web portal (https://support.oracle.com) and review any Knowledge Alerts that may be related to the System Health Check or the Upgrade.

Before beginning this procedure, contact My Oracle Support and inform them of your upgrade plans. If installing for an Oracle customer on a customer site, obtain the customer's Support Identifier (SI) before requesting assistance.

Web portal (preferred option): My Oracle Support (MOS) (https://support.oracle.com/)

Phone: Contact your local Oracle Global Customer Support Center (http://www.oracle.com/support/contact.html)

Make the following selections on the Support telephone menu:

- 1. Select '2' for New Service Request
- 2. Select '3' for Hardware, Networking and Solaris Operating System Support
- 3. Select '1' for Technical Issues and when talking to the agent, please indicate that you are an existing Tekelec customer
