1. Overview

As part of Oracle Credit Appraisal Management Middleware solution, it is required to migrate information from the back office system during Implementation.

This document aims at providing an insight into the steps that are required to be executed to migrate data into OBCFPM and the purpose of each of the tables used for migration.

2. Glossary

Abbreviation	Detailed Description
FO	Front Office
MO	Middle Office
BO	Back Office
RM	Relationship Manager
FCUBS	Oracle Flexcube
ELCM	Oracle Flexcube Enterprise Limit and Collateral Management
BRD	Business Requirement Document
OBCFPM	Oracle Banking Credit Facilities Process Management

3. Migration

3.1 Introduction

OBCFPM system captures more detailed information on credit and party details for a customer, however not all the data that are captured in OBCFPM need to be handed off to Back office system. The data that are not supported by back office system will be retained in OBCFPM and used during the life cycle event transactions.

Data is classified in OBCFPM into two categories:

1. Replicated Data
2. OBCFPM owned Data

Replicated Data

Replication data are data which are handed off to back office system and owned by back office. Post hand off, back office system will be the owner and hence it needs to be replicated back to OBCFPM on a pre-defined frequency as required by the bank

OBCFPM owned Data

OBCFPM is owner of these data and hence classified as OBCFPM Owned. During the course of the life cycle events OBCFPM, as part of handoff OBCFPM will push the data into these tables. However as part of migration, implementation teams needs to ensure that these tables are populated with data for enabling the data to be available for the life cycle event transactions.

During an implementation phase, it is required to migrate data into both these categories of tables from the back office/legacy system.
