# Primavera Portfolio Management Tested Configurations

---

This document covers the tested configurations for Oracle Primavera Portfolio Management.

**Note:** All platforms and technologies certified with a base OPPM version are also supported with the latest patch set for that version (unless specified). Before you install the latest version of a platform or technology, install the most recent OPPM patch set certified for it. For information on certified platforms for Oracle and other third-party technologies, refer to the certification matrix of the respective technology and select the platform compatible with your Primavera applications and the respective technology.

---

For information on certified platforms for Oracle and other third-party technologies, refer to the certification matrix of the respective technology and select the platform compatible with your Primavera applications and the respective technology.

Oracle has tested on the listed configurations and certifies this release to work on these platforms. Customers may choose to install on non-certified platforms but do so at their own risk. If any problems are found with non-certified platforms, these may take longer to investigate and resolve by Oracle. Oracle will only test and have access to tested platforms and configurations. In addition, the resolution for any issues with non-tested configurations could be a recommendation that to resolve the issue you will need to deploy the product on a tested platform. If it is still decided to deploy on a non-certified configuration, it is strongly recommended to fully test the product and non-certified platform in a test environment.
