## 1. Purpose

The objective of this document is to explain the installation and configuration of Oracle HTTP Server 11g R1 (11.1.1.6.0). This includes setting up of server details, configuration of compression rules and enabling SSL.

## 2. Introduction to Oracle HTTP Server (OHS)

Oracle HTTP Server is the Web server component for Oracle Fusion Middleware. It is based on Apache web server, and includes all base Apache modules and modules developed specifically by Oracle. It provides a HTTP listener for Oracle WebLogic Server and the framework for hosting static pages, dynamic pages, and applications over the Web. Key aspects of Oracle HTTP Server are its technology, its serving of both static and dynamic content and its integration with both Oracle and non-Oracle products.

Oracle HTTP Server consists of several components that run within the same process. These components provide the extensive list of features that Oracle HTTP Server offers when handling client requests.

Following are the major components:

### 2.1 HTTP Listener

Oracle HTTP Server is based on an Apache HTTP listener to serve client requests. An HTTP server listener handles incoming requests and routes them to the appropriate processing utility.

### 2.2 Modules (mods)

Modules extend the basic functionality of Oracle HTTP Server, and support integration between Oracle HTTP Server and other Oracle Fusion Middleware components. There are modules developed specifically by Oracle for Oracle HTTP Server. Ex: mod\_wl\_ohs, mod\_plsql

Oracle HTTP Server also includes the base Apache and third-party modules out-of-the-box. These modules are not developed by Oracle. Ex: mod\_proxy, mod\_perl

## 3. Installation of OHS 11g

Invoke the setup exe to start the installation

This completes the installation of Oracle HTTP Server with <Instance> and <component>. Example: Instance is instance1 and component is ohs1.

If you would like to change the port after the installation(OHS Listen Port) edit \$ORACLE\_INSTANCE/config/OHS/<component\_name>/httpd.conf and change the listen port.

**NOTE**: This port is for http protocol and not for https.

😑 http	d.conf
181	
182	÷
183	# Listen: Allows you to bind Apache to specific IP addresses and/or
184	$\ddagger$ ports, instead of the default. See also the <virtualhost></virtualhost>
185	# directive.
186	÷
187	$\sharp$ Change this to Listen on specific IP addresses as shown below to
188	# prevent Apache from glomming onto all bound IP addresses (0.0.0.0)
189	÷
190	# Listen 12.34.56.78:80
191	
192	# OHS Listen Port
193	Listen 7777
194	
195	*
196	# Dynamic Shared Object (DSO) Support
197	÷
198	# To be able to use the functionality of a module which was built as a DSO you
199 200	<pre># have to place corresponding `LoadModule' lines at this location so the # directives contained in it are actually available before they are used.</pre>

- 200 # directives contained in it are actually available \_before\_ they are u
  201 # Statically compiled modules (those listed by `httpd -l') do not need
  202 # to be loaded here.
  203 #
  204 # Example:
  205 # LoadModule foo\_module "\${ORACLE\_HOME}/ohs/modules/mod\_foo.so"
  206

## 4. Configure Oracle HTTP Server infront of Weblogic Server

In Oracle HTTP Server requests from Oracle HTTP Server to Weblogic server are proxied using mod\_wl\_ohs module. This configuration file needs to be modified to include the Weblogic server and port details.

mod\_wl\_ohs.conf file is located at

{ORACLE\_INSTANCE}/config/OHS/{COMPONENT\_NAME}/mod\_wl\_ohs.conf

Add the below directives to mod\_wl\_ohs.conf file.

### 4.1 For WebLogic in single instance

<Location /<<context/url>> >

SetHandler weblogic-handler

WebLogicHost <<server name>>

WeblogicPort <<port>>

</Location>

Example:

<Location /FCJNeoWeb>

SetHandler weblogic-handler

WebLogicHost wlserver1

WeblogicPort 7707

</Location>

This will forward /FCJNeoWeb from HTTP server to /FCJNeoWeb on WebLogic Server wlserver1: 7707

mo	i_wi_ohs.cont
1	# NOTE : This is a template to configure mod_weblogic.
2	
3	LoadModule weblogic_module "\${ORACLE_HOME}/ohs/modules/mod_wl_ohs.so"
4	LoadModule deflate_module "\${ORACLE_HOME}/ohs/modules/mod_deflate.so"
5	
6	$\ddagger$ This empty block is needed to save mod_wl related configuration from EM to t
7	<ifmodule weblogic_module=""></ifmodule>
8	# WebLogicHost <weblogic_host></weblogic_host>
9	# WebLogicPort <weblogic_port></weblogic_port>
10	# Debug ON
11	# WLLogFile /tmp/weblogic.log
12	# MatchExpression *.jsp
13	
14	
15	# <location weblogic=""></location>
16	# SetHandler weblogic-handler
17	# PathTrim /weblogic
18	<pre># ErrorPage http:/WEBLOGIC_HOME:WEBLOGIC_PORT/</pre>
19	<pre># </pre>
20	
21	<location fcjneoweb=""></location>
22	SetHandler weblogic-handler
23	WebLogicHost wlserver1
24	WebLogicPort 7707
25	

### 4.2 For Weblogic instances in cluster

<Location /<<context/url>>>

SetHandler weblogic-handler

WebLogicCluster <server1>:<port1>,<server2>:<port2>

</Location>

Example

<Location / FCJNeoWeb >

SetHandler weblogic-handler

WebLogicCluster wlserver1:7010, wlserver2:7010

</Location>

This will forward /FCJNeoWeb from HTTP server to /FCJNeoWeb on WebLogic Cluster wlserver1:7010 and wlserver2:7010

mo	1_wl_ohs.conf
1	# NOTE : This is a template to configure mod weblogic.
2	_
з	LoadModule weblogic_module "\${ORACLE_HOME}/ohs/modules/mod_wl_ohs.so"
4	LoadModule deflate_module "\${ORACLE_HOME}/ohs/modules/mod_deflate.so"
5	
6	# This empty block is needed to save mod_wl related configuration from EM to this fi
7	<ifmodule weblogic_module=""></ifmodule>
8	# WebLogicHost <weblogic_host></weblogic_host>
9	# WebLogicPort <weblogic_port></weblogic_port>
10	# Debug ON
11	# WLLogFile /tmp/weblogic.log
12	# MatchExpression *.jsp
13	
14	
15	# <location weblogic=""></location>
16	# SetHandler weblogic-handler
17	# PathTrim /weblogic
18	
19	<pre># </pre>
20	
2:	<location fcjneoweb=""></location>
20 2: 2: 2: 2: 2: 2: 2: 2:	<location fcjneoweb=""></location>
2:	SetHandler weblogic-handler
2	WebLogicCluster wlserver1:7010,wlserver2:7010
2	
21	

## 5. Enable "WebLogic Plug-In Enabled" flag in weblogic

This flag needs to be enabled in weblogic if it is accessed through proxy plugins. When the WebLogic plugin is enabled, a call to getRemoteAddr will return the address of the browser client from the proprietary WL-Proxy-Client-IP header instead of the web server.

- a. Plugin flag at managed server level
  - i. Click on 'Environment'- > 'Servers' -> '<ManagedServer>' -> 'General' -> 'Advanced'
  - ii. Check the 'WebLogic Plug-In Enabled' box.
  - iii. Click 'Save'
  - iv. Restart the Server.
- b. Plugin flag at domain level
  - v. Click on <Domain> -> 'Web Applications'
  - vi. Check the 'WebLogic Plug-In Enabled' box.
  - vii. Click 'Save'
  - viii. Restart the server.

## 6. Compression rule setting

Content compression in Oracle HTTP Server is done using mod\_deflate. This can compress HTML, text or XML files to approx. 20 - 30% of their original sizes, thus saving on server traffic. However, compressing files causes a slightly higher load on the server, but clients' connection times to server is reduced.

### 6.1 Loading mod\_deflate

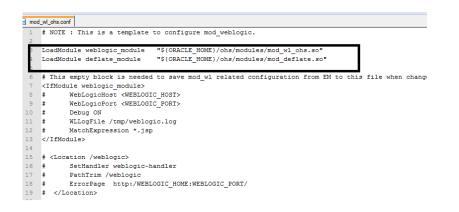

mod\_deflate is used for compression in OHS and this is installed in Oracle HTTP Server under location

"\${ORACLE\_HOME}/OHS/modules/mod\_deflate.so"

But it might not be loaded.

To load the file add the below directive in mod\_wl\_ohs.conf file

LoadModule deflate\_module "\${ORACLE\_HOME}/OHS/modules/mod\_deflate.so"

## 6.2 Configuring file types

mod\_deflate also requires to specify which type files are going to be compressed.

In the LOCATION section of mod\_wl\_ohs.conf file add the below entries.

AddOutputFilterByType DEFLATE text/plain

AddOutputFilterByType DEFLATE text/xml

AddOutputFilterByType DEFLATE application/xhtml+xml

AddOutputFilterByType DEFLATE text/css

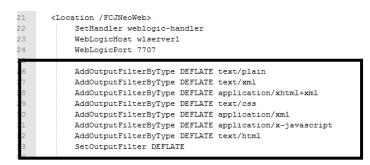

AddOutputFilterByType DEFLATE application/xml

AddOutputFilterByType DEFLATE application/x-javascript

AddOutputFilterByType DEFLATE text/html

SetOutputFilter DEFLATE

Images are supposed to be in a compressed format, and therefore are bypassed by mod\_deflate.

### 6.3 httpd.conf file changes

This is a server configuration file which typically contains directives that affect how the server runs, such as user and group IDs it should use, and location of other files. Cross check the existence of mod\_wl\_ohs.conf include in httpd.conf file.

httpd.conf file is present under location

"\${ORACLE\_INSTANCE}/config/OHS/{COMPONENT\_NAME}/httpd.conf"

In this file cross check for the below entry

include "\${ORACLE\_INSTANCE}/config/OHS/\${COMPONENT\_NAME}/mod\_wl\_ohs.conf"

If above include entry is not present, then add the above include section.

#Directives to setup logging via ODL OraLogDDr "\$(ORACLE\_INSTANCE)/diagnostics/logs/\${COMPONENT\_TYPE}}\${COMPONENT\_NAME}" OraLogNode odl-text OraLogSeverity WANNING:32 OIT OraLogSeverity WANNING:32 OIT OraLogRotationParams S 10:70 018 020 \$ Set it to On to enable Audit Logs 021 OraAuditEnable On 022 023 \$ Include the configuration files needed for mod\_weblogic 034 include "\$(ORACLE\_INSTANCE)/config/\${COMPONENT\_TYPE}}\${COMPONENT\_NAME}/mod\_w1\_ohs.conf" 035 026 \$ Include the SSL definitions and Virtual Host container 027 include the SSL definitions and Virtual Host container 028 \$ Include the admin virtual host (Proxy Virtual Host) related configuration 030 include "\$(ORACLE\_INSTANCE)/config/\${COMPONENT\_TYPE}\${COMPONENT\_NAME}/admin.conf" 031 include "\$(ORACLE\_INSTANCE)/config/\${COMPONENT\_TYPE}\${COMPONENT\_NAME}/admin.conf" 031 include "\$(ORACLE\_INSTANCE)/config/\${COMPONENT\_TYPE}\${COMPONENT\_NAME}/admin.conf" 031 include "\$(ORACLE\_INSTANCE)/config/\${COMPONENT\_TYPE}\${COMPONENT\_NAME}/admin.conf" 031 include "\$(ORACLE\_INSTANCE)/config/\${COMPONENT\_TYPE}\${COMPONENT\_NAME}/admin.conf" 033

## 7. Configuring SSL for Oracle HTTP Server

Secure Sockets Layer (SSL) is required to run any Web site securely. Secure Sockets Layer (SSL) is an encrypted communication protocol that is designed to securely send messages across the Internet.

Reading of "**SSL\_Configuration on Weblogic**" document provided as part of FCUBS installation is recommended before proceeding with further setup.

In Oracle HTTP server, SSL configuration can be done between

- 1. Browser to Oracle HTTP Server(Mandatory)
- 2. Oracle HTTP Server to Oracle Weblogic Server(If required)

### 7.1 SSL configuration for Inbound Request to Oracle HTTP

### <u>Server</u>

Perform these tasks to enable and configure SSL between browser and Oracle HTTP Server.

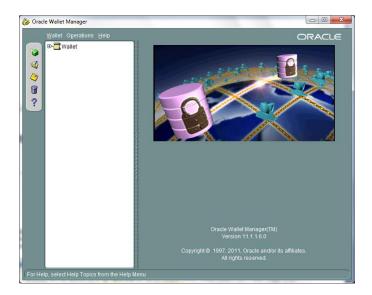

1. Obtain a certificate from CA or create a self signed certificate.

2. Create an Oracle Wallet which contains the above SSL Certificate. The default wallet that is automatically installed with Oracle HTTP Server is for testing purposes only. The default wallet is located in "\${ORACLE\_INSTANCE}/config/OHS/\${COMPONENT\_NAME}/keystores/default"

3. Configuring Wallet in ssl.conf file

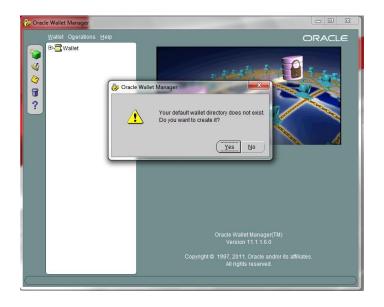

#### 7.1.1 Create a new Wallet and import Certificate

1. Go to the \Oracle\_WT1\bin\launch.exe, this will launch your wallet manager

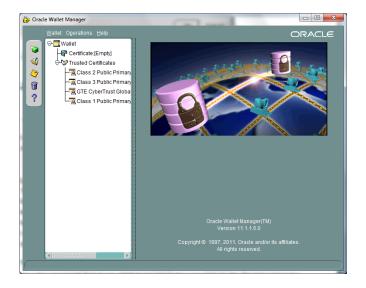

2. Click on Create new and then click no option.

3. Enter the wallet password and click on OK, this will create a new wallet.

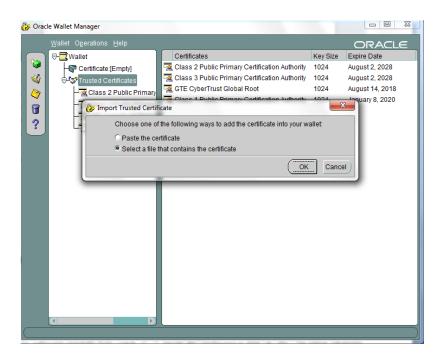

4. Not it will ask for certificate request creation, Click on NO to proceed

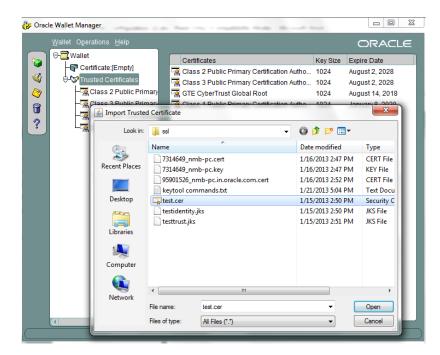

5. Right click on trusted certificates and then import trusted certificate.

6. Browse to the folder where certificate is stored and click on Open

- 7. Click on Save Wallet button on the left side navigation and save the wallet either to default location("\${ORACLE\_INSTANCE}/config/OHS/\${COMPONENT\_NAME}/keystores/default") or folder of your choice.
- 🐉 Oracle Wallet Manager ORACLE Vallet Operations Hel ٩ 4 Close 8 Download From The Directory Service.. 8 Save Ctrl+W ? Save As.. Save In System Default Delete... Change Password.. Auto Login Use Windows Registry Alt+F4 Exit racle Wallet Manager(TM) Version 11.1.1.6.0
- 8. Click on Wallet tab and enable Auto Login

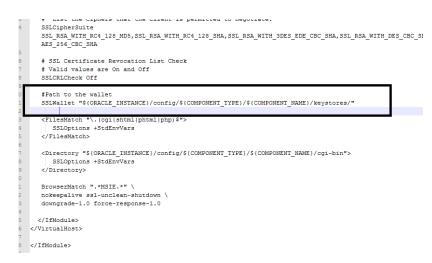

#### 7.1.2 Configuring Wallet in ssl.conf file

In ssl.conf file the newly created wallet need to updated. This file is located under folder

"\${ORACLE\_INSTANCE}/config/OHS/\${COMPONENT\_NAME}/

1. Change the SSLWallet directive to point to the location of new wallet created.

SSLWallet "\${ORACLE\_INSTANCE}/config/\${COMPONENT\_TYPE}/\${COMPONENT\_NAME}/keystores/"

2. Change the Listen port number in ssl.conf file to the SSL enabled port, by default the value is 4443

1	***	*******

# 7.2 <u>Configuring SSL between Oracle HTTP Server and Oracle</u> <u>Weblogic Server</u>

SSL for outbound requests from Oracle HTTP Server are configured in mod\_wl\_ohs.

Refer to "**SSL\_Configuration on Weblogic**" document for weblogic server setting mentioned in below section.

### 7.2.1 Turn off KeepAliveEnabled

The below parameter in mod\_wl\_ohs should be turned off, by default it is on. Add the below directive under LOCATION section of mod\_wl\_ohs file

KeepAliveEnabled OFF

9	
6	AddOutputFilterByType DEFLATE text/plain
7	AddOutputFilterByType DEFLATE text/xml
8	AddOutputFilterByType DEFLATE application/xhtml+xml
9	AddOutputFilterByType DEFLATE text/css
0	AddOutputFilterByType DEFLATE application/xml
1	AddOutputFilterByType DEFLATE application/x-javascript
2	AddOutputFilterByType DEFLATE text/html
3	SetOutputFilter DEFLATE
4	
5	KeepAliveEnabled OFF
7	W1SSLWallet "D:\misc\ssl\"
8	

### 7.2.2 To enable one-way SSL

- 1. Generate a custom keystore identity.jks for Weblogic Server containing a certificate.
- 2. At Identity section in Keystores tab in weblogic Admin Console for server set
  - a. The custom trust store with the identity.jks file location
  - b. The keystore type as JKS
  - c. The passphrase used to created the keystore

- 3. Copy the certificate to Oracle HTTP Server and import the new certificate into OHS wallet as a trusted certificate.
- 4. Add following new directive in mod\_wl\_ohs.conf to point to the wallet location

WISSLWallet "\${ORACLE\_INSTANCE}/config/OHS/{COMPONENT\_NAME}/keystores/default"

5. Change the port in mod\_wl\_ohs file to point to SSL port of Weblogic server.

WebLogicHost wlserver1
WebLogicPort 443
AddOutputFilterByType DEFLATE text/plain
AddOutputFilterByType DEFLATE text/xml
AddOutputFilterByType DEFLATE application/xhtml+xml
AddOutputFilterByType DEFLATE text/css
AddOutputFilterByType DEFLATE application/xml
AddOutputFilterByType DEFLATE application/x-javascript
AddOutputFilterByType DEFLATE text/html
SetOutputFilter DEFLATE
KeepAliveEnabled OFF

6. Restart both Weblogic Server and Oracle HTTP Server

#### 7.2.3 <u>To enable two-way SSL</u>

- 1. Perform one-way SSL configuration steps
- 2. Generate a new trust store, trust.jks for Weblogic server

- 3. Keystore created for one-way SSL could be used, but it is recommended to create a separate truststore
- 4. Export the user certificate from Oracle HTTP Server wallet, and import it into truststore created above
- 5. At Trust section in Keystores tab in Weblogic Admin Console for the server set
  - a. The custom trust store with the trust.jks file location
  - b. The keystore type as JKS
  - c. The passphrase used to created the keystore

7. Restart Weblogic Server

# 8. Sample Configuration Files

httpd.conf

## 9. Starting, Stopping, and Restarting Oracle HTTP Server

Navigate to the below location in command prompt \${ORACLE\_INSTANCE}/bin/ and run below commands

### 9.1 <u>Start</u>

opmnctl startproc ias-component={COMPONENT\_NAME}

Example: opmnctl startproc ias-component=ohs1

### 9.2 <u>Stop</u>

opmnctl stopproc ias-component={COMPONENT\_NAME}

Example: opmnctl stopproc ias-component=ohs1

### 9.3 <u>Restart</u>

opmnctl restartproc ias-component={COMPONENT\_NAME}

Example: opmnctl restartproc ias-component=ohs1

# 10. Test the application

Test the application deployed on Weblogic using Oracle HTTP Server after restarting both the oracle http server and weblogic server

https://ohs\_servername:ohs\_https\_port/<<context/url>>

http://ohs\_servername:ohs\_http\_port/<<context/url>>

ohs\_servername: server on which OHS is deployed

ohs\_https\_port: port number mentioned against LISTEN directive in SSL.conf file

ohs\_http\_port: port number mentioned against LISTEN directive in httpd.conf file

Example:

https://localhost:4443/FCJNeoWeb/welcome.jsp

Or

http://localhost:7777/FCJNeoWeb/welcome.jsp

# 11. Server Logs Location

Oracle HTTP Server Logs are generated under folder

{ORACLE\_INSTANCE}/diagnostics/logs/OHS/{COMPONENT\_NAME}/
