- **Record Actions** - Enables you to perform various actions on the hold request. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request.

Copyright © 2024, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.
Delete	Used to delete the hold request.
	Note: The **Delete** button appears when the hold request is in the **Draft** status.
Submit	Used to submit the hold request.
	Note: The **Submit** button appears when the hold request is in the **Draft** status.
Re Submit	Used to re-submit the hold activation or release request.
	Note: The **Re Submit** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** or **Release Approval in Progress** status. • A user with the approval To Do role is reviewing the hold request.
Approve	Used to approve the hold activation or release request.
	Note: The **Approve** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** or **Release Approval in Progress** status. • A user with the approval To Do role is reviewing the hold request.
Reject	Used to reject the hold activation request.
	Note: The **Reject** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** status. • A user with the approval To Do role is reviewing the hold request.
Release	Used to release the hold request.
	Note: The **Release** button appears when the hold request is in the **Active** status.
Discard	Used to discard the future dated hold request.
	Note: The **Discard** button appears when the following conditions are met: • The hold request is future dated (i.e. when the hold request start date is later than the system date). • The hold request is in the **Active** status.

- **Record Information** - This section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the hold request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the hold request status is updated.
Create Date/Time	Displays the date and time when the hold request is created.

Hold Entities

The **Hold Entities** zone lists the entities which are added in the hold request. It contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This column appears when the entity level in the hold request is set to **Person**.
Account Information	Displays information about the account. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This column appears when the entity level in the hold request is set to **Account**.
Bill Information	Displays information about the bill. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill. This column appears when the entity level in the hold request is set to **Bill**.
Entity ID	Indicates the entity which is kept on hold through the hold request.
Start Date	Displays the date from when the entity is on hold.
End Date	Displays the date till when the entity is on hold.
	Note: Once the hold request is either manually or automatically released, the system updates the hold entity end date to the system date.
Hold Amount	Displays the bill amount which is kept on hold through the hold request.
	Note: This column appears when the entity level in the hold request is set to **Bill**.
Bill After Date	Displays the date after which bills can be generated for the account.
	Note: This column appears when the entity level in the hold request is set to **Account**. Once the hold request is either manually or automatically released, the bill after date is cleared (i.e., set to NULL) for the respective account.
Postpone Credit Review Until	Displays the date after which overdue debt can be monitored for the entity either through the **Overdue** or **Delinquency Management** process.
	Note: This column appears when the entity level in the hold request is set to **Account** or **Person**.
Defer Auto Pay Date	Displays the date till when you want to hold the automatic payment process for the account.
	Note: This column appears when the entity level in the hold request is set to **Account**.
Hierarchy	Indicates whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold through the hold request. The valid values are: • Y

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	• N
	Note: This column appears when the entity level in the hold request is set to **Person**. The system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
Hold Refund Until	Displays the date after which the refund request can be processed for the account.
	Note: This column appears when the entity level in the hold request is set to **Account**. The system does not stop you from creating A/P adjustments for an account from the **Adjustment** screen when the refund process is kept on hold for the account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold entity.
Delete	Used to delete the hold entity from the hold request.

Note:

The **Edit** and **Delete** buttons appear only when the hold request is in the **Draft** or **Active** status.

A check box appears corresponding to each hold entity. To update the details of a hold entity, select the check box corresponding to the hold entity and then click the **Edit** button. You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to update the details of all the hold entities listed in the respective page. For more information, see Editing the Entity Details of a Hold Request on page 1741.

You can also mass update the end date of the hold entities in a hold request at once by clicking the **Edit All** link available in the upper right corner of this zone. The link appears only when the hold request is in the **Draft** or **Active** status. For more information, see Updating the End Date of All the Hold Entities (Mass Edit) on page 1743.

To delete a hold entity, select the check box corresponding to the hold entity and click the **Delete** button. You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the hold entities listed in the respective page. For more information, see Deleting an Entity from a Hold Request on page 1745.

You can filter the list using the **Entity ID** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Search Account

The **Search Account** zone allows you to search for accounts using various search criteria. It also allows you to add the accounts in the hold request. It appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Account**
- The status of the hold request is set to **Draft**.

It contains the following two sections:

Copyright © 2024, Oracle and/or its affiliates.

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account using the account, policy, or individual membership details. The valid values are: • Account Details • Policy Details • Individual Membership Details **Note:** By default, the **Account Details** option is selected. The **Individual Membership Details** and **Policy Details** options appear in the **Search By** list only when the **Environment Type** option type of the **SYSDT** feature configuration is set to **H**. For more information, see Setting the SYSDT Feature Configuration on page 1660.	Yes
Account ID	Used to search for a particular account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears. On selecting the account, the respective information string appears corresponding to the **Account ID** field. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.	No
Division	You can use this field while searching for an account using the account or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular division. • **Individual Membership Details** - This field enables you to search for individual membership's member persons' accounts that belong to a particular division. **Note:** This field appears when the **Account Details** or**Individual Membership Details** option is selected from the **Search By** list. The list includes only those divisions which are already defined in the system.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Address Source	Used to search for accounts where a particular address source is used to route the account's bills and/or quotes via the postal service. The valid values are: • Account Override • Bill • Main • Multiple Account Override • Person **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **BILL_ADDR_SRCE_FLG** lookup field.	Yes (Conditional) **Note:** This field is required when the search criteria is specified in the **State**, **County**, or **Postal** field.
Bill Cycle	Used to search for accounts with a particular bill cycle. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those bill cycles which are already defined in the system.	No
State	You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a particular state. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular state. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular state. **Note:** The **Search** (🔍) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	No
Customer Class	You can use this field while searching for an account using the account or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular customer class.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Individual Membership Details** - This field enables you to search for individual membership's member persons' accounts that belong to a particular customer class. **Note:** This field appears when the **Account Details** or **Individual Membership Details** option is selected from the **Search By** list. The list includes only those customer classes which are already defined in the system.	
County	You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a particular county. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular county. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular county. **Note:** You can specify comma-separated values in this field.	No
Postal	You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a specific postal or zip code. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in an area with a particular postal or zip code. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in an area with a particular postal or zip code. **Note:** You can specify comma-separated values in this field.	No
Price Item	Used to search for accounts for which charges of a particular price item are created.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Policy Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears.	
Policy Plan Number	Used to search for accounts of persons that are linked to policies having a particular policy plan. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Policy Type	Used to search for accounts of persons that are linked to policies created using a particular policy type. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The list includes only those policy types which are already defined in the system.	Yes (Conditional) **Note:** This field is required if you are searching for accounts using the state, county, postal, start date, or end date as a search criteria.
Source System	Used to search for accounts of persons that are linked to policies originated from a particular external system. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The list includes only those source systems which are already defined in the system.	Yes (Conditional) **Note:** This field is required if you are searching for accounts using the state, county, postal, start date, or end date as a search criteria.
Policy Number	Used to search for accounts of persons that are linked to a particular policy. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Start Date	You can use this field while searching for an account using the policy or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies with a particular start date. • **Individual Membership Details** - This field enables you to search for accounts of persons that are linked to individual memberships with a particular start date.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** or **Policy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	
End Date	You can use this field while searching for an account using the policy or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies with a particular end date. • **Individual Membership Details** - This field enables you to search for accounts of persons that are linked to individual memberships with a particular end date. **Note:** This field appears when the **Individual Membership Details** or **Policy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Status	Used to search for accounts of persons that are linked to policies with a particular status. The valid values are: • In Force/Active • Cancel • Canceled • Pending Cancelation • Pending • Pending Reinstatement • Pending Termination • Post Run out • Reinstated • Run out • Terminated **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Health Plan	Used to search for accounts of persons that are linked to individual memberships of a particular health plan.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** option is selected from the **Search By** list. You must specify a health plan which is already defined in the system.	
Membership Identifier Type	Used to search for accounts of persons that are linked to individual memberships using a particular membership identifier type. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those membership identifier types which are already defined in the system.	Yes (Conditional) **Note:** If you specify the membership identifier as a search criteria, you have to select the membership identifier type.
Membership Identifier	Used to search for accounts of persons that are linked to a particular individual membership. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the membership identifier type as a search criteria, you have to enter the membership identifier.
Product Type	Used to search for accounts of persons that are linked to individual memberships of a particular health product type. The valid values are: • Exclusive Provider Organization • Health Maintenance Organization • Point-of-Service Plan • Preferred Provider Organization **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_TYPE_FLG** lookup field.	No
Product Category	Used to search for accounts of persons that are linked to individual memberships of a particular health product category. The valid value is: • Medical	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_HC_CAT_FLG** lookup field.	
Product LOB	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB. **Note:** This field appears when the **Individual Membership Details** option is selected from the**Search By** list. The list includes only those values which are defined in the **PRODUCT_LOB_FLG** lookup field.	No
Product LOB Category	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB category. The valid values are: • Commercial • Government • State Programs **Note:** This field appears when the **Individual Membership Details** option is selected from the**Search By** list. The list includes only those values which are defined in the **PRODUCT_LOB_CAT_FLG** lookup field.	No
Characteristic Type	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to **Account**. • **Individual Membership Details** - This field enables you to search for member persons' accounts of the individual memberships with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to **Membership**. • **Policy Details** - This field enables you to search for policy persons' accounts of the policies with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to **Policy**.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts with a particular characteristic. • **Individual Membership Details** - This field enables you to search for member persons' accounts of the individual memberships with a particular characteristic. • **Policy Details** - This field enables you to search for policy persons' accounts of the policies with a particular characteristic. **Note:** This field appears when you select an option from the **Characteristic Type** list.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Note: You must specify at least one search criterion while searching for an account.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays additional information about the account. In addition, this column has a context menu (⌄) icon which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Country	Displays the country in which the account's main customer resides.
State	Displays the state where the county is located.
County	Displays the county name.
Postal	Displays the postal or zip code of the address.
Customer Class	Indicates the customer class to which the account belongs.
Division	Indicates the division to which the account belongs.
Account ID	Displays the account ID.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add an account to the hold request.

A check box appears corresponding to each account. On selecting the check box, you can add the account to the hold request. You can also select multiple accounts at the same time. In addition, you can select the check box

Copyright © 2024, Oracle and/or its affiliates.

corresponding to the column header. This allows you to add all the accounts listed in the respective page to the hold request.

Note: The **Export** option is available in the **Explorer Zone** menu. On clicking the **Export** option, you can extract the search results in the CSV format. Two additional columns named **Account Identifier Type** and **Account Identifier** appear in the CSV file apart from the columns listed above in the **Search Results** section.

Search Bill

The **Search Bill** zone allows you to search for bills using various search criteria. It also allows you to add the bills in the hold request. It appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Bill**
- The status of the hold request is set to **Draft**.

It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using the bill details. The valid value is: • Bill Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search for a particular bill. **Note:** The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears. On selecting the bill, the respective information string appears corresponding to the **Bill ID** field. It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.	No
Alternate Bill ID	Used to search for a bill using its alternate bill ID.	No
Address Source	Used to search for bills which are routed using a particular address source. The valid values are: • Account Override • Bill • Main • Multiple Account Override • Person	Yes (Conditional) **Note:** This field is required if you are searching for bills using the state, country, or postal as a search criteria.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the **BILL_ADDR_SRCE_FLG** lookup field.	
Bill Date From	Used to search for bills which are completed on or after the specified date. **Note:** By default, the current date appears in this field. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required if you have specified the value in the **To** field.
State	Used to search for bills where billing address belongs to a particular state. **Note:** The **Search** ( ) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	No
To	Used to search for bills which are completed on or before the specified date. **Note:** By default, the current date appears in this field. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required if you have specified the value in the **Bill Date From** field.
County	Used to search for bills where billing address belongs to a particular county.	No
Show All Bills	Used to indicate whether you want to search for all the bills or only the non-zero bills. **Note:** By default, this option is not selected and as a result, only the non-zero bills that meet the search criteria appears in the search results. However, if you select the **Show All Bills** option, the system lists all the bills including zero amount bills that meet the search criteria in the **Search Results** section.	No
Postal	Used to search for bills where billing address belongs to a particular postal or zip code.	No

Note:

You must specify at least one search criterion while searching for a bill.

The number of days between Bill From Date and Bill To Date should not exceed 60 days.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Account Information	Indicates the account for which the bill is created. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Country	Displays the country to which the bill is routed via the postal service.
State	Displays the state where the county is located.
County	Displays the county name.
Postal	Displays the postal or zip code of the address.
Entity ID	Displays the bill ID.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the hold request.

The **Log** tab contains the following zone:

- Hold Request Log on page 1736

Hold Request Log

The **Hold Request Log** zone lists the complete trail of actions performed on the hold request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the hold request.
Details	Displays the details about the action performed on the hold request.
User	Indicates the user who has performed the action on the hold request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the hold request. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the hold request is rejected or released.

Note: You can manually add a log entry for the hold request by clicking the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

Adding a Person in a Hold Request

Prerequisites

To add a person in a hold request, you should have:

- States defined in the application

Procedure

To add a person in a hold request:

1. Search for the draft hold request in the **Hold Request** screen where you want to add another person.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Expand the **Search Person** zone.
4. Enter the search criteria in the **Search Person** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of persons that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the person that you want to add in the hold request.

> **Note:** You can also select multiple persons at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the persons listed in the respective page to the hold request.

7. Click the **Add** button in the **Search Person** zone.
   A message appears indicating that the selected person is successfully added in the hold request. Note that the person is added in the **Hold Entities** zone.

> **Note:** You cannot add a person in a hold request when it is created through the **Upload Request** feature.

Adding an Account in a Hold Request

Prerequisites

To add an account in a hold request, you should have:

- Divisions, bill cycles, customer classes, states, health plans, membership identifier types, and policy types defined in the application

Copyright © 2024, Oracle and/or its affiliates.

- Values defined in the **BILL_ADDR_SRCE_FLG**, **PRODUCT_TYPE_FLG**, **PRODUCT_HC_CAT_FLG**, **PRODUCT_LOB_FLG**, and **PRODUCT_LOB_CAT_FLG** lookup fields
- Required characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To add an account in a hold request:

1. Search for the draft hold request in the **Hold Request** screen where you want to add another account.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Expand the **Search Account** zone.
4. Enter the search criteria in the **Search Account** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of accounts that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the account that you want to add in the hold request.

   Note: You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the accounts listed in the respective page to the hold request.
7. Click the **Add** button in the **Search Account** zone.
   A message appears indicating that the selected account is successfully added in the hold request. Note that the account is added in the **Hold Entities** zone.

   Note: You cannot add an account in a hold request when it is created through the **Upload Request** feature.

Adding a Bill in a Hold Request

Prerequisites

To add a bill in a hold request, you should have:

- States defined in the application
- Values defined in the **BILL_ADDR_SRCE_FLG** lookup field

Copyright © 2024, Oracle and/or its affiliates.

Procedure

To add a bill in a hold request:

1. Search for the draft hold request in the **Hold Request** screen where you want to add another bill.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Expand the **Search Bill** zone.
4. Enter the search criteria in the **Search Bill** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the bill that you want to add in the hold request.

> **Note:** You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the bills listed in the respective page to the hold request.

7. Click the **Add** button in the **Search Bill** zone.
   A message appears indicating that the selected bill is successfully added in the hold request. Note that the bill is added in the **Hold Entities** zone.

> **Note:**
>
> You cannot add a bill in the hold request if its outstanding amount is zero.
>
> You cannot add a bill in a hold request when it is created through the **Upload Request** feature.

Editing a Hold Request

Prerequisites

To edit a hold request, you should have:

- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To edit a hold request:

1. Search for the hold request in the **Hold Request** screen.

Copyright © 2024, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Hold Request** zone.

   The **Hold Request** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the hold request.
   - **Hold Processes** - Used to indicate one or more processes of the entity that you want to keep on hold for a particular period.
   - **Characteristics** - Used to define the characteristics for the hold request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Hold Request Type	Indicates the hold request type using which the hold request is created.	Not applicable
Start Date	Displays the date from when the hold request is effective.	Not applicable
End Date	Used to specify the date till when the hold request is effective. **Note:** The hold request end date cannot be earlier than the hold request start date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. You must specify a date which is equal to or later than the system date.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field. You cannot change the hold reason when the hold request is in the **Active** status.	Yes
Entity	Indicates the type of entity for which the hold request is created. The valid values are: • Account • Bill • Person	Not applicable

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify additional information about the hold request. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** ( ) icon at the bottom right corner of the text box.	No

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

5. Modify the required details in the **Main** section.
6. Add or remove the hold processes from the hold request, if required.

Note:

You cannot delete a process or modify the details of a process except the end date when the hold request is in the **Active** status. Note that you cannot specify a date which is earlier than the system date.

A new process is added with the start date later than or equal to the system date.

You cannot change the past end date of an entity or process in the hold request.

You cannot add or remove a hold process from the hold request when it is created through the **Upload Request** feature.

7. Define, edit, or remove characteristics of the hold request, if required.
8. Click **Save**.
   The changes made to the hold request are saved.

Editing the Entity Details of a Hold Request

Procedure

To edit the entity details of a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Select the check box corresponding to the hold entity that you want to edit in the **Hold Entities** zone.

Copyright © 2024, Oracle and/or its affiliates.

Note: You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to update the details of all the hold entities listed in the respective page.

4. Click **Edit**.

The **Edit Hold Request Entities** screen appears. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.

In addition, this screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Entity ID	Displays the entity ID.	Not applicable
Entity Information	Displays the information about the entity.	Not applicable
Start Date	Used to specify the date from when you want to hold the entity. **Note:** This field is editable only when the hold request is in the **Draft** status. The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes
End Date	Used to specify the date till when you want to hold the entity. **Note:** The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date or system date. You cannot update a past dated end date of a hold entity. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Hold Amount	Used to specify the outstanding bill amount that you want to keep on hold.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: This column appears when the **Bill** option is selected from the **Entity** list. This field is editable only when the **Allow Partial Hold for Bill** option is selected in the respective hold request type. You must specify a non-zero value in this field and the specified amount should not exceed the outstanding bill amount.	
Hierarchy	Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer. **Note:** This column appears when the **Person** option is selected from the **Entity** list. This column is editable only when the hold request is in the **Draft** status.	No

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

5. Modify the details of the hold entities, if required.
6. Click **Save**.
   The changes made to the hold request are saved.

Note: After updating the end date of a hold entity, you need to execute the **Hold Request Monitor** (**C1-HLMON**) batch. On executing the batch, the system will accordingly update the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.

Related Topics

For more information on...	See...
How to search for a hold request	Searching for a Hold Request on page 1694

Hold Entities zone	Hold Entities on page 1721

Updating the End Date of All the Hold Entities (Mass Edit)

Procedure

To update the end date of all the hold entities at once in a hold request:

1. Search for the hold request in the **Hold Request** screen.

Copyright © 2024, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Click the **Edit All** link available in the upper right corner of the **Hold Entities** zone.

   The **Hold Request Information** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Displays the date from when the hold request is effective.	Not applicable
End Date	Displays the date till when the hold request is effective.	Not applicable
Hold Entity End Date	Used to specify the date till when you want to hold all the entities in the hold request. **Note:** The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date or system date. You cannot update a past dated end date of a hold entity. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes

Note: The **Edit All** link appears when the hold request is in the **Draft** or **Active** status.

4. Enter the required date in the **Hold Entity End Date** field.
5. Click **Save**.

   The end date of the hold entities, hold processes, and the hold request is set to the specified date. For example, a hold request exists with the following hold processes and hold entities:

	Original Start Date	Original End Date
Hold Request	01-01-2021	12-31-2021
Hold Process: Billing	01-01-2021	12-31-2021
Hold Process: Auto Pay	01-01-2021	06-30-2021
Account 1	01-01-2021	12-31-2021
Account 2	01-20-2021	03-31-2021
Account 3	04-04-2021	10-30-2021

Now, if you want to mass update the hold entity end date to 09-30-2021 on 04-01-2021, the system updates the hold entity, hold process, and hold request end dates as shown in the following table:

	Original Start Date	Original End Date
Hold Request	01-01-2021	09-30-2021
Hold Process: Billing	01-01-2021	09-30-2021
Hold Process: Auto Pay	01-01-2021	06-30-2021

Copyright © 2024, Oracle and/or its affiliates.

	Original Start Date	**Original End Date**
Account 1	01-01-2021	09-30-2021
Account 2	01-20-2021	03-31-2021
Account 3	04-04-2021	09-30-2021

While updating the end date of a hold entity, the system checks whether the existing hold entity end date is earlier than the new hold entity end date. If the existing hold entity end date is earlier than the new hold entity end date, the system does not consider and update the end date of such hold entities. However, if the existing hold entity end date is later than the new hold entity end date, the system considers and updates the end date of such hold entities. Similarly, the system checks whether the existing hold process end date is earlier than the new hold entity end date. If the existing hold process end date is earlier than the new hold entity end date, the system does not consider and update the end date of such hold processes. However, if the existing hold process end date is later than the new hold entity end date, the system considers and updates the end date of such hold processes. Finally, the hold request end date is also set to the new hold entity end date.

A log is also created for the hold request indicating that mass update is done for the end date of the entities.

Note:

If the start date of any hold entity is later than the new hold entity end date, the system throws an appropriate error message and does not update the end date of the respective hold entity.

After updating the end date of a hold entity, you need to execute the **Hold Request Monitor** (**C1-HLMON**) batch. On executing the batch, the system will accordingly update the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.

Deleting an Entity from a Hold Request

Procedure

To delete an entity from a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Select the check box corresponding to the hold entity that you want to delete in the **Hold Entities** zone.

Note: You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the hold entities listed in the respective page.

4. Click **Delete**.
   A message appears confirming whether you want to delete the hold entity.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** The **Delete** button appears when the hold request is in the **Draft** or **Active** status. However, the system enables you to delete an entity from the hold request only when it is in the **Draft** status. Also, the entity (i.e., bill or account) added from the **Account Receivable Central**, **Funding Request**, or **Delinquency Central** screen, respectively, cannot be deleted from the hold request even when it is in the **Draft** status.

5. Click **OK**.
   The hold entities are deleted from the hold request.

> **Note:** You cannot remove an entity from a hold request when it is created through the **Upload Request** feature.

Discarding a Hold Request

Prerequisites

To discard a hold request, you should have:

- Reasons defined for the **Discarded** status of the **C1-HoldRequest** business object in the **Status Reason** screen

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To discard a hold request:

1. Search for a future dated active hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to discard.
   The **Hold Request** screen appears.
3. Click the **Discard** button in the **Hold Request** zone.

   The **Discard Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discard Reason	Used to indicate the reason why you want to discard the hold request. **Note:** The list includes only those reasons which are defined for the **Discarded** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while discarding the hold request.	No

Note:

The **Discard** button appears when the following conditions are met:

- The hold request is future dated (i.e. when the hold request start date is later than the system date).
- The hold request is in the **Active** status.

4. Select the reason for discarding the hold request from the **Discard Reason** list.
5. Enter the comments (if any) while discarding the hold request in the respective field.
6. Click **Save**.
   The status of the hold request is changed to **Discarded**. Note that the hold request end date, hold entity end date, and the hold process end date are not changed to the date when the hold request is discarded.

Related Topics

Hold Request screen	Hold Request (Used for Viewing) on page 1717
Hold Request zone	Hold Request on page 1718

Submitting a Hold Activation Request

Prerequisites

To submit a hold activation request, you should have:

- At least one entity (such as, person, account, or bill depending on the specified entity level) added to the hold request

Procedure

To submit a hold activation request:

1. Search for the hold request in the **Hold Request** screen.

Copyright © 2024, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to submit.
   The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Hold Request** zone.

   The system behaves in the following manner:

If...	**Then...**
The **Activation Approval** option is selected in the respective hold request type	The status of the hold request is changed to **Activation Approval In Progress**. A To Do is created using the To Do type (i.e., **C1-HLDAP**) specified in the **Activation Approval To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Activation Approval To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the approver.
The **Activation Approval** option is not selected in the respective hold request type and the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count (defined in the respective hold request type)	The status of the hold request is changed to **Deferred Processing**. **Note:** You need to execute the **Hold Request Periodic Monitor** (**C1-HLDRQ**) batch. It considers the hold requests which are in the **Deferred Processing** status and then changes its status to **Active**. Once the hold request is activated, you need to execute the following batches: • **C1-DELBI** - If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. • **C1-HLMON** - On executing the **C1-HLMON** batch, the system will set the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.
The **Activation Approval** option is not selected in the respective hold request type and the number of entities added (either manually or via filter criteria) in the hold request does not exceed the defer processing count (defined in the respective hold request type)	The status of the hold request is changed to **Active**. In addition, the system does the following (in the online mode): • If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date. • If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account. The status of the overdue process is changed to **Inactive**. • An alert is created in the dashboard whenever an account is kept on hold through a hold request. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
	Note: A warning message appears while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date. The system does not allow you to activate a hold request when the hold request end date is earlier than the system date. If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note:

If the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

The **Submit** button appears when the hold request is in the **Draft** status.

On activating a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If…	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the bill after date for the respective account. In addition, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
	Note: The bill after date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the delinquency process is on hold, and the entity start date in	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.

Copyright © 2024, Oracle and/or its affiliates.

If…	Then...
the hold request is earlier than or equal to the system date	**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the defer auto pay date for the respective account.
	Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.
The hold request is created for an account, the refund process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the hold refund until date for the respective account. In addition, the status of the non-final refund request (if any) for the respective account is set to **Hold**.
	Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than the system date	The automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table.
The hold request is created for a person, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the bill after date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. In addition, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
	Note: In this scenario, the bill after date is always set in the deferred mode when the **C1-HLMON** batch is executed. The bill after date then appears in the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for a person, the delinquency process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective person and its immediate accounts (where the person is the main customer). If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Copyright © 2024, Oracle and/or its affiliates.

If…	Then...
	Note: In this scenario, the postpone credit review until date is always set in the deferred mode when the **C1-HLMON** batch is executed. The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

Note:

If the hold entity end date is not specified, the system will consider the respective process end date while deriving the above dates. If both the hold entity end date and respective process end date are not specified, the system will consider the hold request end date while deriving the above dates.

The system does not change the start date of the hold request, hold entity, or hold process when it is a future date.

However, if the number of entities added in the hold request exceeds the defer processing count, the system behavior mentioned in the above table would be completed when the **C1-HLMON** batch is executed.

Approving a Hold Activation Request

You can view the number of hold requests for which activation is pending for approval from the **Hold Request** screen. The approver can review, and accordingly approve or reject the hold activation request based on the observations. In addition, the approver can request the submitter to resubmit the hold activation request for approval after making the necessary changes in it.

Note: The system will not allow you to approve, reject, or request to resubmit a hold activation request submitted by you.

To approve a hold activation request, you should have:

- Activation approval To Do role assigned in the system

Procedure

To approve a hold activation request:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	**a.** Search for the hold request with the **Activation Approval In Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	b. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.
Review a hold activation request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is accurate, click the **Approve** button in the **Hold Request** zone.

   The system behaves in the following manner:

If...	Then...
The number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count (defined in the respective hold request type)	The status of the hold request is changed to **Deferred Processing**.
	Note: You need to execute the **Hold Request Periodic Monitor** (**C1-HLDRQ**) batch. It considers the hold requests which are in the **Deferred Processing** status and then changes its status to **Active**. Once the hold request is activated, you need to execute the following batches: • **C1-DELBI** - If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. • **C1-HLMON** - On executing the **C1-HLMON** batch, the system will set the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.
The number of entities added (either manually or via filter criteria) in the hold request does not exceed the defer processing count (defined in the respective hold request type)	The status of the hold request is changed to **Active**. In addition, the system does the following (in the online mode): • If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date. • If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account. The status of the overdue process is changed to **Inactive**.

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
	• An alert is created in the dashboard whenever an account is kept on hold through a hold request. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.
	Note: A warning message appears while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date. The system does not allow you to activate a hold request when the hold request end date is earlier than the system date. If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note:

If the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

The **Approve** button appears when the hold request is in the **Activation Approval In Progress** status and when a user with the activation approval To Do role is reviewing the hold request.

On approving a hold activation request, the system does the following in the online or deferred (i.e., when the **C1-HLMON** batch is executed) mode depending on the defer processing count:

If…	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the bill after date for the respective account. In addition, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
	Note: The bill after date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the delinquency process is	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.

Copyright © 2024, Oracle and/or its affiliates.

If…	Then...
on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the defer auto pay date for the respective account.
	Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.
The hold request is created for an account, the refund process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the hold refund until date for the respective account. In addition, the status of the non-final refund request (if any) for the respective account is set to **Hold**.
	Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than the batch business date	The automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table.
The hold request is created for a person, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the bill after date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. In addition, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
	Note: In this scenario, the bill after date is always set in the deferred mode when the **C1-HLMON** batch is executed. The bill after date then appears in the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for a person, the delinquency process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective person and its immediate accounts (where the person is the main customer). If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Rejecting a Hold Activation Request

Prerequisites

To reject a hold activation request, you should have:

- Activation approval To Do role assigned in the system
- Reasons defined for the **Rejected** status of the **C1-HoldRequest** business object in the **Status Reason** screen.

Note: The system will not allow you to approve, reject, or request to resubmit a hold activation request submitted by you.

Procedure

To reject a hold activation request:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	**a.** Search for the hold request with the **Activation Approval In Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
Review a hold activation request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is incorrect, click the **Reject** button in the **Hold Request** zone.

   The **Reject Hold Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the hold activation request. **Note:** The list includes only those reasons which are defined for the **Rejected** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while rejecting the hold activation request. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⤡) icon at the bottom right corner of the text box.	No

Note: The **Reject** button appears when the following conditions are met:

- The hold request is in the **Activation Approval In Progress** status.
- A user with the activation approval To Do role is reviewing the hold request.

4. Select the reason for rejecting the hold activation request from the **Status Reason** list.
5. Enter the comments (if any) while rejecting the hold activation request in the respective field.
6. Click **Save**.
   The status of the hold request is changed to **Rejected**.

Requesting to Resubmit a Hold Activation Request for Approval

While reviewing a hold activation request, the approver can also request the submitter to resubmit the hold activation request for approval after making the necessary changes to it.

Prerequisites

To request to resubmit a hold activation request for approval, you should have:

- Activation approval To Do role assigned in the system
- Submitter To Do type and submitter To Do role defined in the respective hold request type

Procedure

To request to resubmit a hold activation request for approval:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	**a.** Search for the hold request with the **Activation Approval In Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.
Review a hold activation request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

   The **Hold Request** screen appears.
2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is incomplete and you want the submitter to make the required changes and resubmit the hold activation request for approval, click the **Re Submit** button in the **Hold Request** zone.

   The **Resubmit Hold Request** window appears. It contains following field:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes that the submitter should make in the hold request before resubmitting the activation request for approval. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⁄) icon at the bottom right corner of the text box.	Yes

Note: The **Re Submit** button appears when the following conditions are met:

- The hold request is in the **Activation Approval In Progress** status.
- A user with the activation approval To Do role is reviewing the hold request.

4. Enter the comments in the respective field.
5. Click **Save**.
   The status of the hold request is changed to **Draft**. A To Do is created using the To Do type (i.e., **C1-HOLSB**) specified in the **Submitter To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Submitter To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the submitter.

Note:

The To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

Releasing a Hold Request

Prerequisites

To release a hold request, you should have:

- Reasons defined for the **Released** status of the **C1-HoldRequest** business object in the **Status Reason** screen

Procedure

To release a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to release.
   The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.

Copyright © 2024, Oracle and/or its affiliates.

4. Click the **Release** button in the **Hold Request** zone.

   The **Release Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Release Reason	Used to indicate the reason why you want to release the hold request.	Yes
	Note: The list includes only those reasons which are defined for the **Released** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	
Comments	Used to specify additional information while releasing the hold request.	No
	Note: You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇘) icon at the bottom right corner of the text box.	

Note: The **Release** button appears when the hold request is in the **Active** status.

5. Select the reason for releasing the hold request from the **Release Reason** list.
6. Enter the comments (if any) while releasing the hold request in the respective field.
7. Click **Save**.

   The system behaves in the following manner:

If...	Then...
The **Release Approval** option is selected in the respective hold request type	The status of the hold request is changed to **Release Approval in Progress**. A To Do is created using the To Do type (i.e., **C1-HLDAP**) specified in the **Release Approval To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Release Approval To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the approver.
The **Release Approval** option is not selected in the respective hold request type	The status of the hold request is changed to **Released**. If the hold entity end date and hold process end date is earlier than the system date, the system sets the hold entity end date and hold process end date to the system date. It also sets the hold request end date to the system date. In addition, the alert end date on the respective account is set to the system date.

On releasing a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If…	Then…
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The defer auto pay until date is set to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table.
	Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.

Copyright © 2024, Oracle and/or its affiliates.

If…	Then…
The hold request is created for an account, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The bill after date is cleared for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.
	Note: The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it is cleared from the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The postpone credit review until date is set to the system date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The postpone credit review until date is set to the system date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the refund process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The hold refund until date is set to the system date for the respective account. In addition, the status of the refund request (if any) for the respective accounts is changed from **Hold** to its previous status.
	Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.
The hold request is created for a person, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The bill after date is cleared either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
	Note: In this scenario, the bill after date is always cleared in the deferred mode when the **C1-HLMON** batch is executed. The bill after date is cleared from the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for a person, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The postpone credit review until date is set to the system date for the respective person and its immediate accounts (where the person is the main customer). If the Hierarchy option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Copyright © 2024, Oracle and/or its affiliates.

If…	Then…
	Note: In this scenario, the postpone credit review until date is always set in the deferred mode when the **C1-HLMON** batch is executed. The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

Note: The above dates are updated to the system date only when the entity end date or respective process end date is not earlier than the system date.

However, if the number of entities added in the hold request exceeds the defer processing count, a log entry is created indicating that the hold request is manually released but the release process (i.e. system behavior mentioned in the above table) would be completed when the **C1-HLMON** batch is executed.

Approving a Hold Release Request

You can view the number of hold requests for which release is pending for approval from the **Hold Request** screen. The approver can review, and accordingly approve the hold release request based on the observations. In addition, the approver can request the submitter to resubmit the hold release request for approval after making the necessary changes in it.

Note: The system will not allow you to approve or request to resubmit a hold release request submitted by you.

To approve a hold release request, you should have:

- Release approval To Do role assigned in the system

Procedure

To approve a hold release request:

1. Do either of the following:

If you want to...	Then...
Review a hold release request through the Hold Request screen	**a.** Search for the hold request with the **Release Approval in Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
Review a hold release request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is accurate, click the **Approve** button in the **Hold Request** zone.

The status of the hold request is changed to **Released**. If the hold entity end date and hold process end date is earlier than the system date, the system sets the hold entity end date and hold process end date to the system date. It also sets the hold request end date to the system date. In addition, the alert end date on the respective account is set to the system date.

Note: The **Approve** button appears when the hold request is in the **Release Approval in Progress** status and when a user with the release approval To Do role is reviewing the hold request.

On releasing a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If…	Then…
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The defer auto pay until date is set to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table.
	Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.
The hold request is created for an account, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The bill after date is cleared for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.
	Note: The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it is cleared from the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity end date in the	The postpone credit review until date is set to the system date for the respective account.

Copyright © 2024, Oracle and/or its affiliates.

If…	Then…
hold request is earlier than or equal to the system date	**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The postpone credit review until date is set to the system date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the refund process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The hold refund until date is set to the system date for the respective account. In addition, the status of the refund request (if any) for the respective accounts is changed from **Hold** to its previous status.
	Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.
The hold request is created for a person, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The bill after date is cleared either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
	Note: In this scenario, the bill after date is always cleared in the deferred mode when the **C1-HLMON** batch is executed. The bill after date is cleared from the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for a person, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The postpone credit review until date is set to the system date for the respective person and its immediate accounts (where the person is the main customer). If the Hierarchy option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
	Note: In this scenario, the postpone credit review until date is always set in the deferred mode when the **C1-HLMON** batch is executed. The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

Copyright © 2024, Oracle and/or its affiliates.

Note: The above dates are updated to the system date only when the entity end date or respective process end date is not earlier than the system date.

However, if the number of entities added in the hold request exceeds the defer processing count, a log entry is created indicating that the hold request is manually released but the release process (i.e. system behavior mentioned in the above table) would be completed when the **C1-HLMON** batch is executed.

Requesting to Resubmit a Hold Release Request for Approval

While reviewing a hold release request, the approver can also request the submitter to resubmit the hold release request for approval after making the necessary changes to it.

Prerequisites

To request to resubmit a hold release request for approval, you should have:

- Release approval To Do role assigned in the system
- Submitter To Do type and submitter To Do role defined in the respective hold request type

Procedure

To request to resubmit a hold release request for approval:

1. Do either of the following:

If you want to...	Then...
Review a hold release request through the Hold Request screen	**a.** Search for the hold request with the **Release Approval In Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.
Review a hold release request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	g. Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is incomplete and you want the submitter to make the required changes and resubmit the hold release request for approval, click the **Re Submit** button in the **Hold Request** zone.

   The **Resubmit Hold Request** window appears. It contains following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes that the submitter should make in the hold request before resubmitting the release request for approval. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⁄) icon at the bottom right corner of the text box.	Yes

Note: The **Re Submit** button appears when the following conditions are met:

- The hold request is in the **Release Approval In Progress** status.
- A user with the release To Do role is reviewing the hold request.

4. Enter the comments in the respective field.
5. Click **Save**.
   The status of the hold request is changed to **Active**. A To Do is created using the To Do type (i.e., **C1-HOLSB**) specified in the **Submitter To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Submitter To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the submitter.

Note:

The To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

Adding a Log Entry for a Hold Request

Procedure

To add a log entry for a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request for which you want to add a log entry.
   The **Hold Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

   The **Add Hold Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Log Details	Used to specify additional comments for the hold request.	Yes
	Note: You can resize the text box depending on your requirement by clicking the **Resize Handle** (⟋) icon at the bottom right corner of the text box.	

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Hold Request Log** zone.

Chapter 27

Delinquency Central

Topics:

- Prerequisites
- Delinquency Central (Used for Viewing)
- Overdue Process Information for Account: {Account ID}

Oracle Revenue Management and Billing provides a complete overview of the overdue bills belonging to the delinquent accounts of a particular person using the **Delinquency Central**. User can review the overdue bills and perform following actions from the delinquency central:

- Initiate customer contact
- Initiate hold on overdue process
- Create payment arrangement for an account
- Create promise to pay for person's account

The Delinquency Central assists you in identifying all the overdue processes, overdue bills & delinquent accounts using an overdue monitoring process.

For more information on how to setup the delinquency central, see Prerequisites on page 1770.

Related Topics

Delinquency Central screen	Delinquency Central (Used for Viewing) on page 1770
Overdue Process Information for Account: {Account ID}	Overdue Process Information for Account: {Account ID} on page 1777

Prerequisites

To setup delinquency central, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to overdue event.
- Define the overdue event type and overdue process template in the system.
- Promise To Pay type defined in the application.
- Customer contact type defined in the application.
- Hold request type defined in the application.

Delinquency Central (Used for Viewing)

The **Delinquency Central** screen allows you to:

- Search for an overdue process
- View the details of an overdue process
- View the details of an overdue event
- Create customer contact
- Create a hold request for an overdue process
- Create a payment arrangement for an account
- Create a promise to pay for a person's account
- Create a payment agreement request for an account

This screen consists of the following zones:

- Search Overdue Process on page 1770
- Overdue Events on page 1775

Search Overdue Process

The **Search Overdue Process** zone allows you to search for overdue processes using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for overdue processes using person, account, bill or overdue process. The valid values are: • Person • Account • Bill • Overdue Process **Note:** By default, the **Person** option is selected.	No
Person ID	Used to search for overdue processes which belong to a particular person.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Person** option from the **Search By** list.	
Person Identifier Type	Used to search for overdue processes with a particular person identifier type. **Note:** This field appears when you select the **Person** option from the **Search By** list.	Yes (Conditional) **Note:** If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search for overdue processes with a specific value of the person identifier type. **Note:** This field appears when you select the **Person** option from the **Search By** list.	Yes
Account ID	Used to search for overdue processes created for a particular account. **Note:** This field appears when you select the **Account** option from the **Search By** list.	No
Account Identifier Type	Used to search for overdue processes with a particular account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.	Yes (Conditional) **Note:** If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search for overdue processes with a particular account identifier. **Note:** This field appears when you select the **Account** option from the **Search By** list.	Yes
Bill ID	Used to search for overdue processes with a particular bill. **Note:** This field appears when you select the **Bill** option from the **Search By** list.	No
Alternate Bill ID	Used to search for overdue processes using an alternate bill ID. **Note:** This field appears when you select the **Bill** option from the **Search By** list.	No
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and its value. **Note:** This field appears when you select the **Bill** option from the **Search By** list.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Overdue Process Template	Used to search for overdue processes with a particular overdue process template. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Start Date	Used to search for overdue processes with a particular start date. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	Yes
End Date	Used to search overdue process with a particular end date. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	Yes
Status	Used to search for overdue processes with a particular status. The valid values are: • Active • Inactive **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
On Hold	Used to search for overdue processes that are on hold. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Overdue Amount From	Used to search for overdue processes with a particular lower limit of the overdue amount. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
To	Used to search for overdue processes with a particular higher limit of the overdue amount. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and value. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No

- In addition to above search parameters, the screen consists of following fields in the **Person Details** or **Account Details** section:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Main Customer	Displays the name of the main customer to whom the account belongs. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Person Name	Displays the name of the person to whom the account belongs. **Note:** This field appears when you select the **Person** option from the **Search By** list.
Person Identifier Type	Displays the person identifier type. **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Person Identifier	Displays the value of the person identifier type. **Note:** This field appears when you select the **Person** or **Account**option from the **Search By** list.
Account Identifier Type	Displays the account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Account Identifier	Displays the value of the account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Overdue	Displays whether the person account(s)/bill(s) are overdue. The valid values are: • Yes • No **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Active Overdue processes	Displays the number of overdue processes linked to the person's account that are in active status. **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Hold(s) on Account(s)	Displays the number of hold requests on the particular account.
Number of Overdue Bills	Displays the total number of bills that are overdue. **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Total Overdue Amount	Displays the total overdue amount for an account.
Last Payment Date	Displays date of the last payment made by the person.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Last Payment Amount	Displays the amount last paid by the person.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number Of Payment Arrangements	Displays the number of payment arrangements for the person's account.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Total Number of Overdue Process on Hold	Displays the total number of overdue process that are on hold.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Promise To Pay	Displays the number of promise to pay belonging to the person.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Broken Promise To Pay	Displays the total number of promise to pay that are broken.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Overdue Process	Display additional information about the overdue process.
	Note: It has a link. On clicking the link, the **Overdue Process** screen appears where you can view the details of the overdue process.
Overdue Process Template	Displays the template that was used to create overdue process's events.
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears with the details of the account.
Person Information	Display additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears with the details of the person.
Overdue Amount	Displays the overdue amount under that overdue process.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
On Hold	Displays whether the overdue process is on hold.
Overdue Process Details	On clicking the **View** (🔗) icon, the **Overdue Process Details** screen appears where you can view details of the overdue process.

On clicking the **Broadcast** (📡) icon corresponding to the overdue process, the **Overdue Events** zone appears with the details of the respective overdue process.

Searching for an Overdue Process

Prerequisites

To search for an overdue process, you should have:

- Overdue process defined in the application.

Procedure

To search for an overdue process:

1. Click the **Menu** link in the **Application** toolbar

Copyright © 2024, Oracle and/or its affiliates.

2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
   The **Delinquency Central** screen appears.
3. Enter the search criteria in the **Search Overdue Process** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of overdue processes that meet the search criteria appear in the **Search Results** section.

- Defining a Promise To Pay for an Overdue Process on page 1783

Person Information

The **Person Information** zone displays details of the person whose account is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Person Name	Displays the name of the person whose account is linked to the overdue process.
Phone Number	Displays the phone number of the person.
Address	Displays the address of the person.

Copyright © 2024, Oracle and/or its affiliates.

Account Information

The **Account Information** zone displays the details of the account that is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Last Payment Date	Displays the date of the last payment made from the account that is linked with the overdue process.
Last Payment Amount	Displays the amount last paid from the account.

Customer Contact Details

The **Customer Contact Details** zone displays the contact details of the customer whose account is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Contact Date/Time	Displays the date and time when the customer was contacted.
Customer Contact Information	Displays additional information about the customer contact. **Note:** It has a link. On clicking the link, the **Customer Contact** screen appears where you can view the details of the respective customer contact.
Preferred Contact Method	Displays the preferred method of contacting the customer.
Comments	Displays the comments that are placed against each customer.

Promise To Pay

The **Promise To Pay** zone displays promise to pay created for an account which is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Promise To Pay Information	Displays additional information of promise to pay. **Note:** It has a link. On clicking the link, the **Promise To Pay** screen appears where you can view the details of promise to pay.
Scheduled Amount	Displays the amount to be paid on the **Scheduled Date**.
Scheduled Date	Displays the date when the payment is expected as per promise to pay.
Status	Displays the status of promise to pay.
Created By	Displays the user ID who has created the promise to pay.

Copyright © 2024, Oracle and/or its affiliates.

Hold Details

The **Hold Details** zone displays the details of the person whose account is linked to the overdue process. This zone contains the following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request. **Note:** It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the hold request.
Status	Displays the status of the hold request.
Entity	Displays the hold request entity.
Entity Information	Displays the information about the entity on hold. **Note:** It has a link. On clicking the link, the **Account**, **Bill** or **Person** screen appears, where you can view details of the respective account, bill or person.
Start Date	Displays the date when the hold request is created.
End Date	Displays the end date of the hold request.

Overdue Bills

The **Overdue Bills** zone displays details of the overdue bills. This zone contains following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Due Date	Displays the due date of the bill.
Overdue Amount	Displays the amount that is overdue in the bill.
Days Past Due	Displays the number of days past after the bill date.

Payment Arrangement

The **Payment Arrangement** zone displays the details of the payment arrangement that is created for an account linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Contract Information	Displays the payment arrangement contract information . In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Payoff Balance	Displays the total amount that is paid against the payment arrangement contract.
Arrange Amount	Displays the amount that is paid in installments as per the payment arrangement contract.
Number of Installments	Displays the number of installments used to calculate the **Arrange Amount**.

Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following fields:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the name of the person for whom the bill is generated.	No
Person ID	Used to specify the person ID.	No
Bills of Persons in Hierarchy	Used to indicate whether you want to search for a bills generated against a person's hierarchy.	No
Bill Cycle	Used to indicate bills where a particular bill cycle is defined.	No
Bill Currency	Used to indicate the bill currency.	No
Billing Method	Used to indicate the billing method. The valid values are: • Ad-Hoc Billing • Regular Billing	No
Bill ID	Used to specify the bill ID.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Account ID	Used to indicate the account against which the bill is generated.	No
On or After Bill Date	Used to specify the date when the bill was completed.	No
Account Identifier Type	Used to search for bills where the account against which it is generated, a particular account identifier type is defined.	No
Account Identifier	Used to search for a bill generated against an account with a particular account identifier.	No

Note: You must specify at least one search criterion while searching for the bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Person Name	Displays the name of the person against whom the bill is generated.
Bill ID	Displays the bill ID.
Bill Status	Displays the status of the bill. The valid values are: • Pending • Complete
Bill Date	Displays the date when the bill was completed.
Due Date	Displays the due date of the bill.
Current Charges	Displays the bill amount.
Bill Information	Displays additional information about the bill.

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
   The **Delinquency Central** screen appears.
3. Select the **Bill** option from the **Search By** list.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of bills that meet the search criteria appear in the **Search Results** section.

Adding the Customer Contact Details

Procedure

To add customer contact details:

1. Search for an overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section , select the check box corresponding to the overdue process linked to the account *f*or which you want to add the customer contact.
3. Click **Contact Customer**.

Copyright © 2024, Oracle and/or its affiliates.

The **Customer Contact** screen appears.

4. Enter the required details.
   The fields **Person ID**, **Contact Date/Time** and **User ID** are auto-populated.
5. Click **Save**.
   The customer is contacted based on the value set for **Preferred Contact Method** field on the **Customer Contact** screen.

Creating a Hold Request for an Overdue Process

Procedure

To create a hold request for an overdue process:

1. Search for an overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a hold request for an overdue process.
3. Click **Create Hold Request** button.
   The **Add Hold Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory
Hold Request Type	Used to indicate the hold request type that is used for creating a hold request.	Yes

4. Select the required hold request type from the **Hold Request Type** field.
5. Click **OK**.
   The **Hold Request** screen appears.
6. Enter the required details for an overdue process.
7. Click **Save**.
   A hold request is defined for an overdue process where the status of the hold request is set as **Draft**.

> **Note:**
>
> The **Hold Request** screen appears where you can view the details of the hold request.

Creating a Payment Arrangement for an Overdue Process

Procedure

To create a payment arrangement for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a payment arrangement for an overdue process.
3. Click the **Create Payment Arrangement** button.
   The **Payment Arrangement** screen appears. It contains the following tabs:
   - **Main**
   - **History**
4. Enter the required details in the **Payment Arrangement** screen.
5. Click the **Save** button in the **Page Title** area of the **Payment Arrangement** screen.
   A payment arrangement is created with the respective payment arrangement contract.

Note: The **Payment Arrangement** screen appears with the details of the payment arrangement.

Defining a Promise To Pay for an Overdue Process

Procedure

To create a promise to pay for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to define a promise to pay for an overdue process.
3. Click the **Create Promise To Pay** button.
   A message appears confirming that the promise to pay will be created for the account for which the overdue process is initiated.
4. Click **OK**.
   The **Promise To Pay** screen appears.
5. Enter the required details in the **Promise To Pay** screen.
6. Click the **Save** button in the **Page Title** area of the **Promise To Pay** screen.
   A promise to pay is created with the scheduled payment details.

Chapter 28

Upload Request

Topics:

- Prerequisites
- Upload Request (Without Approval) Status Transition
- Upload Request (With Approval) Status Transition
- Defer Upload Request Validation
- Mass Account Billing Cycle Update
- Mass Contract Rider Update
- Mass Billable Charge Creation (Financial Services)
- Mass Hold Request Creation
- Mass Refund Request Creation
- Mass Write Off Request Creation
- Mass Policy Reinstatement
- Mass Bill Group Level Sorting
- Mass Bill Group Level Derivation and Pricing Parameter Creation
- Mass Billable Charge Creation (Fully Insured Group and Individual)
- Mass Payment Tender Cancellation
- Upload Request Type
- Upload Request (Used for Searching)
- Upload Request (Used for Viewing)

Oracle Revenue Management and Billing provides a generic upload feature which enables you to upload various types of data. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

While uploading data for the above supported entities, you need to specify the upload request type using which you want to upload the file. It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can upload a data file in the CSV format. You cannot upload data for more than one entity type through the same CSV file. For example, you cannot upload data for billable charges and hold requests using a single CSV file. An upload request of the specified upload request type is created when the file is successfully uploaded in the system. You can track a file through an upload request.

Once an upload request is created, the status of the upload request is set to **Draft**. The status of each record uploaded through an upload request is set to **Pending**. However, if the mandatory data is not available or data required for deriving mandatory data is incorrect in the record, the status of record is set to **Invalid**. You can then edit, delete, or validate the upload request. During the validation process, the system and custom validations (if any) are executed. The status of each record is changed to **Valid** or **Invalid** depending on whether the record was validated successfully or not.

Once the upload request is validated, you can either cancel or submit the upload request for further processing. On submitting an upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked).

You can optionally configure the system to use the approval workflow process for an upload request. If the **Approval Required** flag is set to **Yes** in an upload request type, then on submitting the respective upload request, the approval workflow process creates a To Do for the approver to review the upload request. Once the approver approves the upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. However, if the approver rejects the upload request, the status of the upload request is set to **Rejected**.

During the upload process, an upload request goes through various statuses in its lifecycle. Note that the lifecycle of an upload request is driven by the business object using which the upload request is created. In this release, we have shipped the following upload request business objects:

- Update Bill Cycle Upload Request (C1-BillCycleUpdateUplReq)
- Billable Charge Upload Request (C1-BillableChargeUploadRequest)
- Update Contract Rider Upload Request (C1-ContractRiderUpdateUplReq)
- Hold Request Upload Request (C1-HoldUploadRequest)
- Refund Request Upload Request (C1-RefundUploadRequest)
- Write Off Request Upload Request (C1-WriteOffUploadRequest)
- Reinstatement Upload Request (C1-ReinstatementUploadRequest)
- Bill Group Sorting Upload Request (C1-BillGrpSortUploadRequest)
- Bill Group Derivation and Pricing Parameters Upload Request(C1-BillLevelUploadRequest)

During the upload request process, an upload request creation goes through various statuses in its lifecycle. For more information about the upload request statuses, see Upload Request (Without Approval) Status Transition and Upload Request (With Approval) Status Transition.

Note: The lifecycle of an upload request creation is driven by the respective business object using which the request is created. The upload request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the upload request process, see Prerequisites on page 1787.

Copyright © 2024, Oracle and/or its affiliates.

Prerequisites

To setup the upload request process, you need to do the following:

- Define the required upload request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the values for the following parameters in the **C1-REN-VALID** algorithm:
  - Policy Status after Processing Reinstatement Upload Request
  - Policy Reinstatement Status for Reason Verification
- Define the value for the **Online Record Process Limit** parameter in the **C1-DEFERUPLD** algorithm.
- Define the value for the **Policy Status after Processing Reinstatement Upload Request** parameter in the **C1-REN-PROC** algorithm.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive the To Do for approving a bill cycle update upload request.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive the To Do for approving a contract rider update upload request.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive the To Do for approving a hold upload request.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive the To Do for approving a refund upload request.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive the To Do for approving a write off upload request.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive the To Do for approving a billable charge upload request.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive the To Do for approving a reinstatement upload request.
- Create a To Do type named **C1-BGSRT** using the following information:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive the To Do for approving a bill group sorting upload request.
- Create a To Do type named **C1-BGDVP** using the following information:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Copyright © 2024, Oracle and/or its affiliates.

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive the To Do for approving a bill group derivation and pricing parameters upload request.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when approval workflow is off:

Copyright © 2024, Oracle and/or its affiliates.

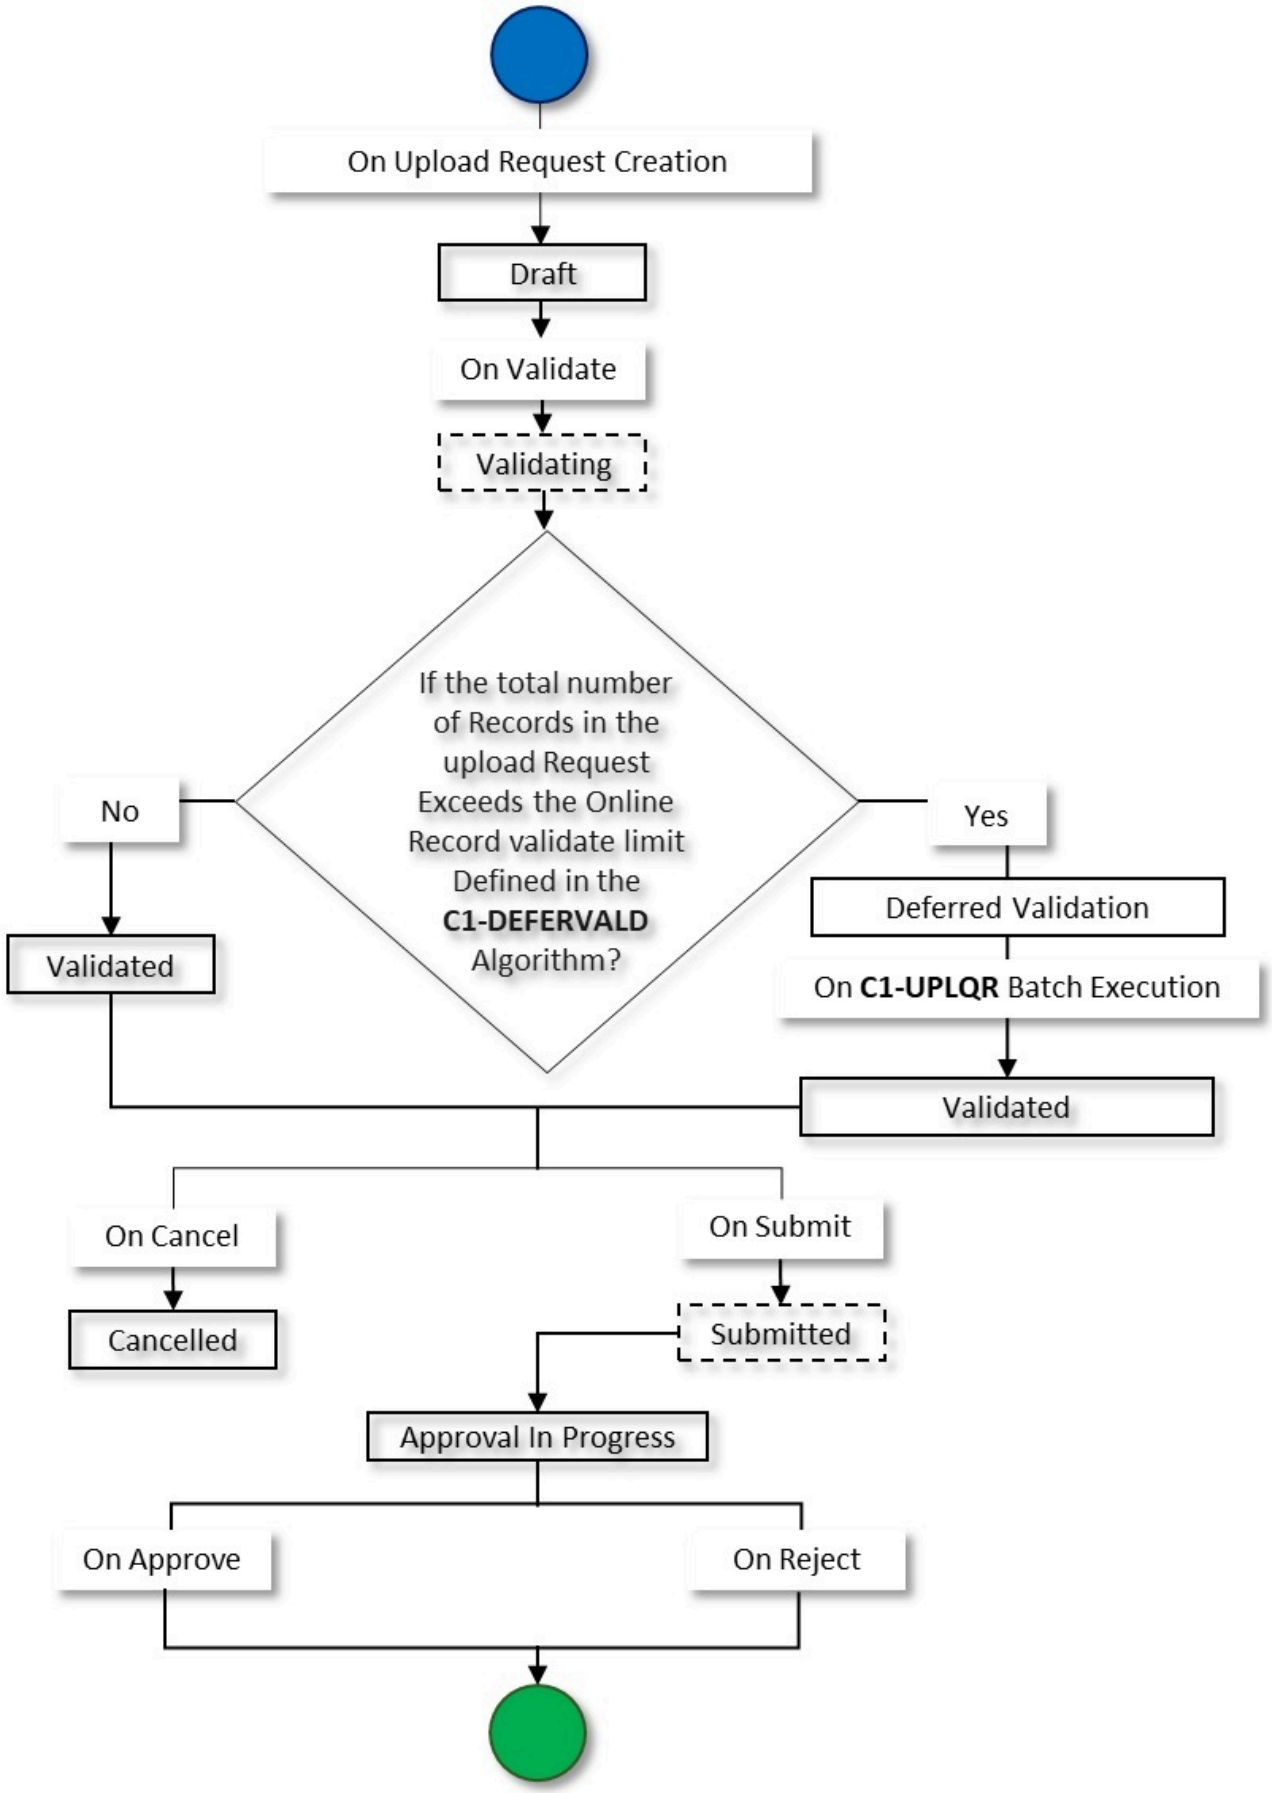
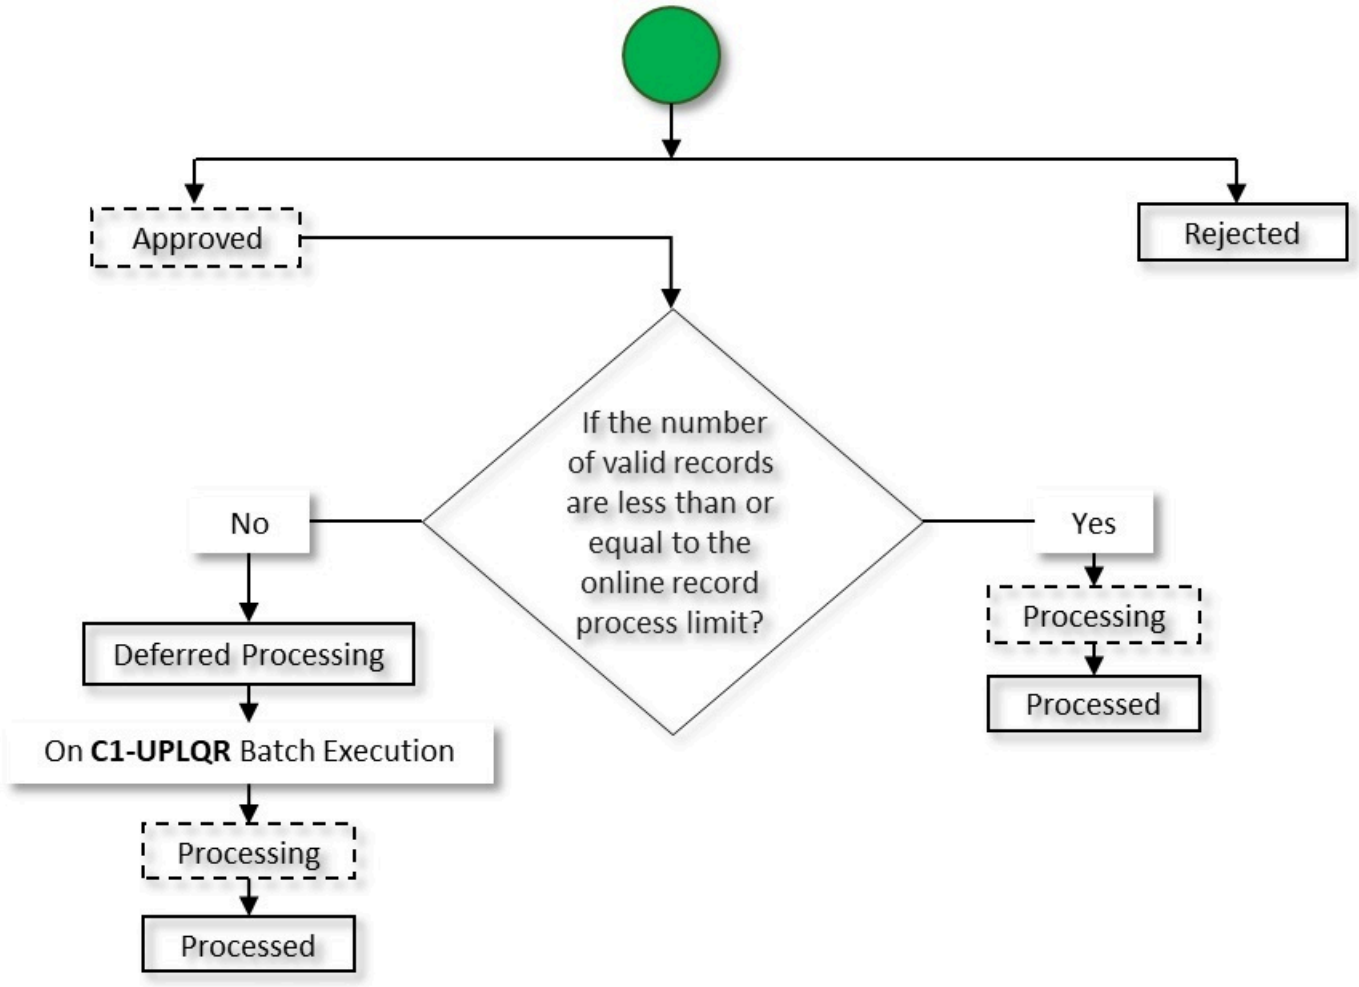
Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when approval workflow is on:

Copyright © 2024, Oracle and/or its affiliates.



Copyright © 2024, Oracle and/or its affiliates.



Defer Upload Request Validation

Until now, the system enabled you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

The system faced performance issues while validating a CSV file uploaded through the Upload Request feature when the CSV file had voluminous records. Therefore, now the system has introduced defer processing mechanism while validating a CSV file. The defer processing mechanism for the validation process is introduced for the following business objects:

- C1-BillableChargeUploadRequest
- C1-HoldUploadRequest
- C1-RefundUploadRequest
- C1-WriteOffUploadRequest
- C1-BillLevelUploadRequest

Copyright © 2024, Oracle and/or its affiliates.

Two new statuses named **Validating** and **Deferred Validation** are added in the lifecycle of the above business objects. Now, when you click the **Validate** button, the system changes the status of the upload request to **Validating**. The system then invokes the **C1-DEFERVALD** algorithm which is attached to the **Validating** status. It checks whether the total number of records in the upload request exceeds the online record validate limit defined in the **C1-DEFERVALD** algorithm. If the total number of records in the upload request does not exceed the online record validate limit, all records in the upload request are validated immediately and its record status is changed to **Valid** or **Invalid** depending on whether it is successfully validated or not. Finally, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the status of the upload request is changed to **Deferred Validation**. On executing the **C1-UPLRQ** batch, the system checks whether there are any upload requests in the **Deferred Validation** status. If there is an upload request in the **Deferred Validation** status, all records in the upload request are validated in the deferred mode and its record status is changed to **Valid** or **Invalid** depending on whether it is successfully validated or not. Finally, the status of the upload request is changed to **Validated**.

Mass Account Billing Cycle Update

Until now, the system enabled you to update the bill cycle for an account from the user interface. Now, the system provides the ability to update the bill cycle for multiple accounts at once through the **Upload Request** feature.

Prerequisites

To setup the mass account billing cycle creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass account billing cycle creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for account billing cycle (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillCycleUpdateUplReq** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BCU-DERIV	C1-BCU-DERIV	Refer to C1-BCU-DERIV on page 1794.

Processed	-	-	-	-

C1-BCU-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**. It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BCU-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the account ID and bill cycle specified in the record are valid. If the account ID and bill cycle are valid and if the bill cycle is associated with the division to which the account belongs, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill cycle is invalid, or if the bill cycle is not associated with the division to which the account belongs, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

Copyright © 2024, Oracle and/or its affiliates.

It also checks whether there are two or more records with the same account ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Copyright © 2024, Oracle and/or its affiliates.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BCU-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record, the system reads the account ID and bill cycle, and updates the bill cycle information of the account using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Account Billing Cycle Update CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass account billing cycle through an upload request:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type. **Note:** This data is required when the account ID is not specified.	Yes (Conditional)
Account Identifier	Used to specify the identifier of the account whose bill cycle you want to update. **Note:** This data is required when the account ID is not specified.	Yes (Conditional)
Account ID	Used to indicate the account whose bill cycle you want to update. **Note:** If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination.	No
Bill Cycle	Used to specify the bill cycle. **Note:** You must specify a valid bill cycle which is associated with the division to which the account belongs.	Yes

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the account billing cycle creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain account identifier type, then the sequence of the **Account Identifier Type** column header should be set to 1 during data mapping.

Sample Account Billing Cycle Update CSV File

```
ACCTNM,Demo_Individual_A1,4907254926,BK01,,1124824886,BK02,,5887989898,BK03
```

Mass Contract Rider Update

Until now, the system enabled you to update the contract rider details for a contract from the user interface. Now, the system provides the ability to update the contract rider details for multiple contracts at once through the **Upload Request** feature.

Prerequisites

To setup the mass contract rider creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass contract rider creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for contract rider (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-ContractRiderUpdateUplReq** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CR-DERIV	C1-CR-DERIV	Refer to C1-CR-DERIV on page 1798.
Validated	Enter	C1-CR-VALID	C1-CR-VALID	Refer to C1-CR-VALID on page 1798.
Canceled	-	-	-	-

C1-CR-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**. It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-CR-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the account ID, contract ID, contract type, and bill factor specified in the record are valid. If the account ID, contract ID, contract type, and bill factor are valid, if the specified contract belongs to the account, and if the **Contract Rider Applicability** flag on the bill factor is set to **Y**, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill factor is invalid, or if the specified contract does not belong to the account, or if the **Contract Rider Applicability** flag on the bill factor is set to **N**, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It also checks whether there are two or more records with the same account ID and contract type combination. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

Copyright © 2024, Oracle and/or its affiliates.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-CR-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record, the system reads the account ID and contract ID, and updates the contract rider information of the contract using the entity business object defined in the upload request type. If the contract ID is not specified in the record, then the system derives the active contract of the specified contract type on the account, and then updates the contract rider information of the contract. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Contract Rider Update CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass contract rider through an upload request:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified.
Account Identifier	Used to specify the identifier of the account whose contract you want to update.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified.
Account ID	Used to indicate the account whose contract you want to update.	Yes (Conditional) **Note:** This data is required when the account identifier type, account identifier, and contract ID are not specified.
Contract Type	Used to indicate the type of the contract whose details you want to update. **Note:** You must specify a contract type which already exists in the system.	Yes (Conditional) **Note:** This data is required when the contract ID is not specified.
Contract ID	Used to indicate the contract whose contract rider information you want to update. **Note:** If you do not specify the contract ID, the system derives the active contract using the account ID and contract type combination.	No
Start Date	Used to specify the date from when the bill factor is effective for the contract. **Note:** The start date cannot be later than the end date.	Yes
End Date	Used to specify the date till when the bill factor is effective for the contract. **Note:** The end date cannot be earlier than the start date.	No
Bill Factor	Used to specify the bill factor. **Note:** You must specify a valid bill factor where the **Contract Rider Applicability** flag is set to **Y**.	Yes

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the contract rider creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain account identifier type, then the sequence of the **Account Identifier Type** column header should be set to 1 during data mapping.

Mass Billable Charge Creation (Financial Services)

Until now, the system enabled you to create a billable charge from the user interface. Now, the system provides the ability to create multiple billable charges for different accounts at once through the **Upload Request** feature.

Prerequisites

To setup the mass billable charge creation feature for the financial services, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass billable charge creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for billable charge (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillableChargeUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillableChargeUploadRequest

C1-CRTUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BC-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating billable charges and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not

Copyright © 2024, Oracle and/or its affiliates.

derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BC-VALID

This algorithm validates the data upload in an upload request for creating billable charges before the request is submitted for processing.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

Copyright © 2024, Oracle and/or its affiliates.

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

  Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-BC-PROC

This algorithm fetches the list of records that are in **Valid**status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Billable Charge Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass billable charges for financial services through an upload request:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account Identifier Type** and **Account Identifier** is not specified.
Contract ID	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when you want to create the billable charge against a specific contract on the account. If this data is not specified then billable charge is created against a contract with highest priority.
Start Date	Used to specify the start date of billable charge. **Note:** You need to specify the start date in **YYYY-MM-DD** format.	Yes
End Date	Used to specify the end date of billable charge. **Note:** You need to specify the start date in **YYYY-MM-DD** format.	Yes
Charge Type	Used to specify the charge type for which you want to create a billable charge.	No
Description On Bill	Used to specify description for a billable charge.	Yes
Recurring Flag	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set policy invoice frequency. The valid values are: • BP • FR	Yes (Conditional) **Note:** This data is required when **Frequency** or **Bill Period** is specified.
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) **Note:** This data is required when **Recurring Flag** is set to **FR**.
Bill Period	Used to specify the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional) **Note:** This data is required when **Recurring Flag** is set to **BP**.
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No
Description on Bill1, Description on Bill2, ..., Description on Bill5	Used to specify description for the billable charge lines.	Yes (Conditional) **Note:** This data is required when the charge amount is specified.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Currency1, Currency2, ..., Currency5	Used to specify the currency in which the amount is charged. **Note:** If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional) **Note:** This data is required when the charge amount is specified.
Amount1, Amount2, ..., Amount5	Used to specify the charge amount.	Yes (Conditional) **Note:** This data is required when the description on bill or currency is specified.
Show On Bill1, Show on Bill2, ..., Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: • true • false **Note:** By default, the value will be set to **True** if the column does not contain any value.	No
Summary1, Summary2, ..., Summary5	Used to indicate whether the charge should be included in the summary line or not. The valid value are: • true • false **Note:** By default, the value will be set to **True** if the column does not contain any value.	No
Memo Only1, Memo Only2, ..., Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: • true • false **Note:** By default, the value will be set to **False** if the column does not contain any value.	No
GL Distribution Code1, GL Distribution Code2, ..., GL distribution Code5	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional) **Note:** This data is required when **False** is specified in the **Memo Only** column corresponding to the bill line description.
Price Item	Used to specify the price item code.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when **Variance Parameter** or **Price Item Parameter** and **Price Item Parameter Value** is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Price Item Parameter** and **Price Item Parameter Value** are not specified.
Price Item Parameter1, Price Item Parameter2, ..., Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter** is not specified.
Price Item Parameter Value1, Price Item Parameter Value2, ..., Price Item Parameter Value15	Used to specify the parameter value. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter** is not specified.
SQI1, SQI2, ..., SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) **Note:** This data is required when the service quantity is specified.
SQI Value1, SQI Value2, ..., SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional) **Note:** This data is required when the SQI is specified.
Effective Date1, Effective Date2, ..., Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional) **Note:** This data is required when **Char Type** or **Char Val** is specified.
Char Type1, Char Type2, ..., Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Value1, Char Value2, ..., Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when **Effective Date** or **Char Type** is specified.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the billable charge creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain account Id, then the sequence of the **Account Id** column header should be set to 1 during data mapping.

C1-HLD-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.If the hold entity is **ACCT** and the entity ID is not specified in the

Copyright © 2024, Oracle and/or its affiliates.

record, it derives the account ID using the account identifier type and account identifier combination. Similarly, if the hold entity is **PERS** and the entity ID is not specified in the record, it derives the person ID using the person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HLD-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is **valid**. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**.If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the **person ID** using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to Invalid. It also checks whether there are two or more records with the same entity ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

Copyright © 2024, Oracle and/or its affiliates.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-HLD-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the hold request type, start date, end date, hold reason, hold entity, hold entity start date, hold entity end date, comments, hold process details, and hold characteristic details, it creates one hold request using the entity business object defined in the upload request type. However, if there are multiple entity IDs with the same combination, all are added in the same hold request. The hold request is created in the **Draft** status and then transitioned to **Submit**. From the **Submit** status, the status of the hold request is either changed to **Approval In Progress** or **Active** depending on whether the **Approval Required** flag is set to **Yes**. If the number of bills of the entities which are kept on hold through the hold request does not exceed the defer processing count (defined in the hold request type), the status of the hold request is changed to **Active**. However, if the number of bills of the entities which are kept on hold through the hold request exceeds the defer processing count, the status of the hold request is changed to **Deferred Processing**. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Hold Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass hold requests through an upload request:

Column Name	Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type using which you want to create the hold request. **Note:** You must specify a hold request type which is already defined in the system. It should be in the **Active** status.	Yes
Start Date	Used to specify the date from when the hold request is effective. **Note:** The hold request start date cannot be later than the hold request end date.	Yes
End Date	Used to specify the date till when the hold request is effective. **Note:** The hold request end date cannot be earlier than the hold request start date.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity. **Note:** You must specify a value which is already defined in the **HOLD_REASON_FLG** lookup field. It should be in the **Active** status.	Yes
Hold Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: • Account • Bill • Person	Yes
Account Identifier Type	Used to specify the account identifier type. **Note:** You must specify an account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the hold entity is set to **Account** and the hold entity ID is not specified in the record.
Account Identifier	Used to specify the account identifier. The system will derive the account using the given account identifier type and account identifier combination and then create a hold request for the respective account.	Yes (Conditional) **Note:** This data is required when the hold entity is set to **Account** and the hold entity ID is not specified in the record.
Person Identifier Type	Used to specify the person identifier type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: You must specify a person identifier type which is already defined in the system.	**Note:** This data is required when the hold entity is set to **Person** and the hold entity ID is not specified in the record.
Person Identifier	Used to specify the person identifier. The system will derive the person using the given person identifier type and person identifier combination and then create a hold request for the respective person.	Yes (Conditional) **Note:** This data is required when the hold entity is set to **Person** and the hold entity ID is not specified in the record.
Hold Entity ID	Used to indicate the entity (such as, person, account, or bill) that you want to keep on hold. **Note:** If the hold entity is set to **Account**, you must specify the account ID in this column. If the hold entity is set to **Person**, you must specify the person ID in this column. And, if the hold entity is set to **Bill**, you must specify the bill ID in this column. If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination. Similarly, if you do not specify the person ID, the system derives the person ID using the person identifier type and person identifier combination.	Yes (Conditional) **Note:** This data is required when the hold entity is set to **Bill**.
Comments	Used to specify additional information about the hold request.	No
Hold Entity Start Date	Used to specify the date from when you want to hold the entity. **Note:** The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date.	Yes
Hold Entity End Date	Used to specify the date till when you want to hold the entity. **Note:** The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date.	No

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Hold Funding	Used to indicate whether you want to hold the funding process for the entity. The valid values are: • Y • N **Note:** You can hold the funding process when the hold entity is set to **Account**, **Person**, or **Bill**.	No
Hold Funding Start Date	Used to specify the date from when you want to hold the funding process for the entity. **Note:** The hold funding start date must be between the hold request start and end dates. The hold funding start date cannot be later than the hold funding end date.	Yes (Conditional) **Note:** This data is required when the hold funding is set to **Y** in the record.
Hold Funding End Date	Used to specify the date till when you want to hold the funding process for the entity. **Note:** The hold funding end date must be between the hold request start and end dates. The hold funding end date cannot be earlier than the hold funding start date.	No
Hold Overdue	Used to indicate whether you want to hold the overdue process for the entity. The valid values are: • Y • N **Note:** You can hold the overdue process when the hold entity is set to **Account**. Note that you cannot set both hold overdue and hold delinquency to **Y** for an account in the same duration. The **Overdue** process is valid for the financial services and health insurance domains but the **Delinquency** process is valid only for the health insurance domain.	No
Hold Overdue Start Date	Used to specify the date from when you want to hold the overdue process for the entity.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: The hold overdue start date must be between the hold request start and end dates. The hold overdue start date cannot be later than the hold overdue end date.	**Note:** This data is required when the hold overdue is set to **Y** in the record.
Hold Overdue End Date	Used to specify the date till when you want to hold the overdue process for the entity. **Note:** The hold overdue end date must be between the hold request start and end dates. The hold overdue end date cannot be earlier than the hold overdue start date.	No
Hold Bill Generation	Used to indicate whether you want to hold the bill generation process for the entity. The valid values are: • Y • N **Note:** You can hold the bill generation process when the hold entity is set to **Account** or **Person**.	No
Hold Bill Generation Start Date	Used to specify the date from when you want to hold the bill generation process for the entity. **Note:** The hold bill generation start date must be between the hold request start and end dates. The hold bill generation start date cannot be later than the hold bill generation end date.	Yes (Conditional) **Note:** This data is required when the hold bill generation is set to **Y** in the record.
Hold Bill Generation End Date	Used to specify the date till when you want to hold the bill generation process for the entity. **Note:** The hold bill generation end date must be between the hold request start and end dates. The hold bill generation end date cannot be earlier than the hold bill generation start date.	No
Hold Auto Pay	Used to indicate whether you want to hold the automatic payment process for the entity. The valid values are: • Y • N	No

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: You can hold the automatic payment process when the hold entity is set to **Account**.	
Hold Auto Pay Start Date	Used to specify the date from when you want to hold the automatic payment process for the entity. **Note:** The hold auto pay start date must be between the hold request start and end dates. The hold auto pay start date cannot be later than the hold auto pay end date.	Yes (Conditional) **Note:** This data is required when the hold auto pay is set to **Y** in the record.
Hold Auto Pay End Date	Used to specify the date till when you want to hold the automatic payment process for the entity. **Note:** The hold auto pay end date must be between the hold request start and end dates. The hold auto pay end date cannot be earlier than the hold auto pay start date.	No
Hold Refund	Used to indicate whether you want to hold the refund process for the entity. The valid values are: • Y • N **Note:** You can hold the refund process when the hold entity is set to **Account**.	No
Hold Refund Start Date	Used to specify the date from when you want to hold the refund process for the entity. **Note:** The hold refund start date must be between the hold request start and end dates. The hold refund start date cannot be later than the hold refund end date.	Yes (Conditional) **Note:** This data is required when the hold refund is set to **Y** in the record.
Hold Refund End Date	Used to specify the date till when you want to hold the refund process for the entity. **Note:** The hold refund end date must be between the hold request start and end dates. The hold refund end date cannot be earlier than the hold refund start date.	No

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Hold Delinquency	Used to indicate whether you want to hold the delinquency process for the entity. The valid values are: • Y • N **Note:** You can hold the delinquency process when the hold entity is set to **Person** or **Account**. Note that you cannot set both hold overdue and hold delinquency to **Y** for an account in the same duration. The **Overdue** process is valid for the financial services and health insurance domains but the **Delinquency** process is valid only for the health insurance domain.	No
Hold Delinquency Start Date	Used to specify the date from when you want to hold the delinquency process for the entity. **Note:** The hold delinquency start date must be between the hold request start and end dates. The hold delinquency start date cannot be later than the hold delinquency end date.	Yes (Conditional) **Note:** This data is required when the hold delinquency is set to **Y** in the record.
Hold Delinquency End Date	Used to specify the date till when you want to hold the delinquency process for the entity. **Note:** The hold delinquency end date must be between the hold request start and end dates. The hold delinquency end date cannot be earlier than the hold delinquency start date.	No
Effective Date1, Effective Date2, ..., Effective Date5	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.
Char Type1, Char Type2, ..., Char Type5	Used to specify the characteristic type. **Note:** You must specify a characteristic type where the characteristic entity is set to **Hold Request**.	No
Char Val1, Char Val2, ..., Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the characteristic type is specified in the record.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the hold request creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain hold request type, then the sequence of the **Hold Request Type** column header should be set to 1 during data mapping.

Sample Hold Request Creation CSV File

Mass Refund Request Creation

Until now, the system enabled you to create a refund request from the user interface. Now, the system provides the ability to create multiple refund requests at once through the **Upload Request** feature.

Prerequisites

To setup the mass refund request creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass refund request creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for refund request (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-RefundUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:

Copyright © 2024, Oracle and/or its affiliates.

- Time Interval
- Timer Active
- User ID
- Batch Language
- Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-RefundUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-RF-DERIV	C1-RF-DERIV	Refer to C1-RF-DERIV on page 1820.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer to C1-DEFERVALD on page 1802.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1476.
Validated	Enter	C1-RF-VALID	C1-RF-VALID	Refer to C1-RF-VALID on page 1820.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer to C1-UPLSUBENT on page 1795.

C1-RF-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating refund requests and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-RF-VALID

This algorithm validates the data uploaded in an upload request for creating refund requests before the request is submitted for processing.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

Copyright © 2024, Oracle and/or its affiliates.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-RF-PROC

This algorithm fetches the list of records that are in **Valid** status for a given request ID and invokes the entity business object for creating the refund requests. If successfully processed, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Refund Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass refund requests through an upload request:

Column Name	Description	Mandatory (Yes or No)
Refund Request Type	Used to specify the refund request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the refund request.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the refund request.	Yes (Conditional) **Note:** This data is required when the **Account Identifier Type** and **Account Identifier** are not specified.
Entity Type	Used to specify the entity type. The valid values are:	Yes

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	• **ADID** - Used when you want to create refund request against an adjustment. • **BLID** - Used when you want to create refund request against the bill. • **BSID** - Used when you want to create refund request against bill segment. • **PEID** - Used when you want to create refund request against payment event. • **PYID** - Used when you want to create refund request against payment.	
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the refund adjustments are created.	No
Refund Amount	Used to specify the amount that you want to refund.	Yes
Comments	Used to specify the comments which are added on the refund request.	No
Effective Date1, Effective Date2, ..., Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) **Note:** This data is required when **Char Type** or **Char Val** is specified.
Char Type1, Char Type2, ..., Char Type5	Used to indicate the characteristic that must be defined for the refund request.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Val1, Char Val2, ..., Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Type** is specified.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the refund request creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain refund request type, then the sequence of the **Refund Request Type** column header should be set to 1 during data mapping.

Sample Refund Request Creation CSV File

```
REFUND_REQ_WITH_APP,,,9646391134,Bill,964633710789,,679,

Mass Write Off Request Creation

Until now, the system enabled you to create a write-off request from the user interface. Now, the system provides the ability to create multiple write-off requests at once through the **Upload Request** feature.

Prerequisites

To setup the mass write off request creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass write off request creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for write off request (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-WriteOffUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-WriteOffUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-WriteOffUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-WO-DERIV	C1-WO-DERIV	Refer to C1-WO-DERIV on page 1824.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer to C1-DEFERVALD on page 1802.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1476.
Validated	Enter	C1-WO-VALID	C1-WO-VALID	Refer to C1-WO-VALID on page 1824.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer to C1-UPLSUBENT on page 1795.
	Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer to C1-DEFERUPLD on page 1795.
	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1476.

	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1476.
Processed	-	-	-	-

C1-WO-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating write off requests and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-WO-VALID

Information will be available shortly.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes

Copyright © 2024, Oracle and/or its affiliates.

the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-WO-PROC

This algorithm fetches the list of records that are in **Valid** status for a given request ID and invokes the entity business object for creating the write off requests. If successfully processed, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Write Off Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass write off requests through an upload request:

Column Name	Description	Mandatory (Yes or No)
Write Off Request Type	Used to specify the write off request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the write off request.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the write off request.	Yes (Conditional) **Note:** This data is required when the **Account Identifier Type** and **Account Identifier** are not specified.
Entity Type	Used to specify the entity type. The valid values are: • **ADID** - Used when you want to create write off request against an adjustment. • **BLID** - Used when you want to create write off request against the bill. • **BSID** - Used when you want to create write off request against bill segement. • **PEID** - Used when you want to create write off request against payment event. • **PYID** - Used when you want to create write off request against payment.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the write off adjustments are created.	No
Write Off Amount	Used to specify the amount that you want to write off.	Yes
Comments	Used to specify the comments which are added on the write off request.	No
Effective Date1, Effective Date2, ..., Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) **Note:** This data is required when **Char Type** or **Char Val** is specified.
Char Type1, Char Type2, ..., Char Type5	Used to indicate the characteristic that must be defined for the write off request.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Val1, Char Val2, ..., Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Type** is specified.

Copyright © 2024, Oracle and/or its affiliates.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the write off request creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain write off request type, then the sequence of the **Write Off Request Type** column header should be set to 1 during data mapping.

Sample Write Off Request Creation CSV File

```

off,,,,,,,,,,,,,,
TR_WO_WA,,,1778883101,Bill,177887558997,WRITEOFA,-540,write -
off,,,,,,,,,,,,,,
```

Mass Policy Reinstatement

Until now, the system enabled you to reinstate a fully-insured group policy from the user interface. Now, the system provides the ability to reinstate multiple fully-insured group policies at once through the **Upload Request** feature.

Prerequisites

To setup the mass policy reinstatement creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass policy reinstatement creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for policy reinstatement (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-ReinstatementUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-ReinstatementUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-ReinstatementUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CRTUPLDTL	C1-CRTUPLDTL	Refer to C1-CRTUPLDTL on page 1802.

C1-CRTUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-REN-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the policy ID using the source system and policy number combination whenever the policy ID is not specified in the record. Once the policy ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the policy ID using the source system and policy number combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-REN-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the policy ID and reinstatement reason specified in the record is valid. If the policy ID and reinstatement reason are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the policy ID is invalid, it derives the policy ID using the source system and policy number combination and updates the

Copyright © 2024, Oracle and/or its affiliates.

record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the policy ID using the source system and policy number combination, or if the reinstatement reason is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It also checks whether there are two or more policies with the same policy ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**. It contains the following parameters:

- **Policy Status after Processing Reinstatement Upload Request** - Used to specify the status to which you want to transition the policy when the reinstatement upload request is processed.
- **Policy Reinstatement Status for Reason Verification** - Used to validate the reinstatement reason. The reason should be a valid reason for the specified status.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the

Copyright © 2024, Oracle and/or its affiliates.

Exclude To Do Entries From Auto Completion (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BC-PROC

This algorithm fetches the list of records that are in **Valid**status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Policy Reinstatement CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass policy reinstatements through an upload request:

Column Name	Description	Mandatory (Yes or No)
Policy ID	Used to indicate the policy which you want to reinstate. **Note:** If you do not specify the policy ID, the system derives the policy ID using the source system and policy number combination.	No
Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional) **Note:** This data is required when the policy ID is not specified.
Policy Number	Used to indicate the policy number.	Yes (Conditional) **Note:** This data is required when the policy ID is not specified.
Reinstatement Reason	Used to indicate the reason why you want to reinstate the policy. **Note:** You must specify a reason which is defined for the status specified in the **Policy Reinstatement Status for Reason Verification** parameter of the **C1-REN-VALID** algorithm.	Yes

> **Note:** You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the policy reinstatement creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain policy Id, then the sequence of the **Policy Id** column header should be set to 1 during data mapping.

Copyright © 2024, Oracle and/or its affiliates.

Sample Policy Reinstatement CSV File

```
DGSSY1,Demo_Group_BG1_Policy,ZZ-PAYMENT-RECEIVED
```

Mass Bill Group Level Sorting

Until now, the system enabled you to define sort ID for a bill group from the user interface. Now, the system provides the ability to define sort ID for multiple bill groups at once through the **Upload Request** feature.

Prerequisites

To setup the mass bill group level sorting creation feature, you need to do the following:

- Define the required upload request types in the system.
- Create a To Do type named **C1-BGSRT** using the following information:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive a To Do while submitting a mass bill group level sorting upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for bill group level sorting (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillGrpSortUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillGrpSortUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillGrpSortUploadRequest** business object:

Copyright © 2024, Oracle and/or its affiliates.

C1-BLSRTUPLD

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLSRTDERV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

Copyright © 2024, Oracle and/or its affiliates.

C1-BLSRTVALD

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group sort record.
- The end date is not earlier than the start date and the start date is not later than the end date.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group sort record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

Copyright © 2024, Oracle and/or its affiliates.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BLSRTPROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the bill group (person) ID and sort ID, it creates one bill group sort record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Bill Group Level Sorting CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass bill group level sorting through an upload request:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the sort ID. **Note:** You must specify an effective child person of the parent customer for whom you are creating the bill group sorting upload request. In addition, note that you must specify a child person whose person type is set to **Bill Group** and who is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.	Yes (Conditional) **Note:** This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.

Copyright © 2024, Oracle and/or its affiliates.

Sr. No.	Value	Description	Mandatory (Yes or No)
2	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type. **Note:** This data is required when the bill group (i.e. person) ID is not specified.	Yes (Conditional)
3	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the sort ID. **Note:** This data is required when the bill group (i.e. person) ID is not specified.	Yes (Conditional)
4	Sort ID	Used to specify the sort ID.	Yes
5	Description	Used to specify the description for the sort ID.	Yes
6	Start Date	Used to specify the date from when the sort ID is effective for the bill group. **Note:** The start date cannot be later than the end date.	Yes
7	End Date	Used to specify the date till when the sort ID is effective for the bill group. **Note:** The end date cannot be earlier than the start date.	No

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the bill group level sorting creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain billing group Id, then the sequence of the **Billing Group Id** column header should be set to 1 during data mapping.

Sample Bill Group Level Sorting CSV File

```
1887432126,Social Security -
number,"342-23-5469",1111,"bg",2024-07-01,2024-07-31
```

Mass Bill Group Level Derivation and Pricing Parameter Creation

Until now, the system enabled you to define derivation and pricing parameters for a bill group from the user interface. Now, the system provides the ability to define derivation and pricing parameters for multiple bill groups at once through the **Upload Request** feature.

Copyright © 2024, Oracle and/or its affiliates.

Prerequisites

To setup the mass bill group level derivation pricing parameter creation feature, you need to do the following:

- Define the required upload request types in the system.
- Create a To Do type named **C1-BGDVP** using the following information:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive a To Do while submitting a mass bill group level derivation and pricing parameters upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for bill group level derivation pricing parameter (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillLevelUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillLevelUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillLevelUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BLVUPLDTL	C1-BLVUPLDTL	Refer to C1-BLVUPLDTL on page 1837.
	Enter	C1-BLVLDERIV	C1-BLVLDERIV	Refer to C1-BLVLDERIV on page 1837.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer to C1-DEFERVALD on page 1802.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1476.

C1-BLVUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLVLDERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLVLVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.

Copyright © 2024, Oracle and/or its affiliates.

- All mandatory information is available in the bill group derivation and pricing parameters record.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group derivation and pricing parameters record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- The number of characters specified in each field does not exceed the maximum field length.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.
- The source system exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the effective bill group sort record.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It contains the following parameter:

- **Source System Extendable Lookup** - Used to specify the source system extendable lookup business object. The bill group derivation and pricing parameters records should contain the source system which is already defined in this extendable lookup.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

Copyright © 2024, Oracle and/or its affiliates.

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BLVLVLPRO

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, it creates one bill group derivation and pricing parameters record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Bill Group Level Derivation and Pricing Parameter CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating a mass bill group level derivation and pricing parameters through an upload request:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Source System	Used to indicate the source system from where the claim and enrollment transactions are received. **Note:** You must specify a source system which already exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter of the **C1-BLVLVALID** algorithm.	Yes
2	Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Sr. No.	Value	Description	Mandatory (Yes or No)
		Note: You must not specify the ampersand (&) character in the parameter 1.	
3	Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the parameter 2.	No
4	Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the parameter 3.	No
5	Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the parameter 4.	No
6	Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination. **Note:** The effective date must be within the date range of the sort ID defined for the bill group.	Yes
7	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the derivation and pricing parameters. **Note:** You must specify an effective child person of the parent customer for whom you are creating the bill group derivation and pricing parameters upload request. In addition, note that you must specify a child person whose person type is set to **Bill Group** and who is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.	Yes (Conditional) **Note:** This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
8	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional) **Note:** This data is required when the bill group (i.e. person) ID is not specified.
9	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Sr. No.	Value	Description	Mandatory (Yes or No)
			Note: This data is required when the bill group (i.e. person) ID is not specified.
10	Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the mass bill group level derivation and pricing parameters creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain source system, then the sequence of the **Source System** column header should be set to 1 during data mapping.

Sample Bill Group Level Derivation and Pricing Parameter CSV File

```

number,"342-23-5469",1111
```

Mass Billable Charge Creation (Fully Insured Group and Individual)

Until now, the system enabled you to create an upload request for billable charge creation using the **C1-BillableChargeUploadRequest** business object. However, this business object was not supported to create billable charges at the policy plan, health plan, group membership, and individual membership levels.

A health insurance customer may want to adjust revenue through billable charges at the membership or plan level. Also, for a bill group, there can be multiple contracts of the same contract type for each policy plan on the bill group's accounts. Therefore, until now, the billable charges were manually created from the user interface as the above business object was not supported to create mass billable charges for the fully insured group and individual lines of business. Now, a new business object named **C1-BillableChargeUploadFI** is introduced in this release. It enables you to create billable charges at the policy plan, health plan, group membership, and individual membership levels. In addition, the system now derives the appropriate contract against which the billable charge should be created at the membership or plan level.

You need to create an upload request type for the **C1-BillableChargeUploadFI** business object. You can then upload a billable charge creation file in the CSV format using the respective upload request type. The billable charge creation file should contain records with the following additional information apart from the basic details – Source System, Policy Number, Plan Number, Health Plan Code, Subscriber Identifier Type, Subscriber Identifier, Membership Type, External Membership ID.

When the contract ID is not specified, the system uses the source system, policy number, plan number combination to derive the contract against which the billable charge should be created for the policy plan. Similarly, the system uses the health plan code to derive the contract against which the billable charge should be created for the health plan. And, when the **C1MMBRSH** characteristic is not specified in the record, the system uses either of the following to derive the group or individual membership against which the billable charge should be created:

- Subscriber Identifier Type and Subscriber Identifier
- Membership Type
- External Membership ID

Once you upload a billable charge creation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. If the mandatory data is missing in any record, the corresponding data record is created

Copyright © 2024, Oracle and/or its affiliates.

in the **Invalid** status. In addition, if the system could not derive the account ID, policy plan ID, and contract ID, the corresponding data record is created in the **Invalid** status. Once the pending records are validated, the status of the data record is changed to either **Valid** or **Invalid**. On processing a valid record, the system does the following:

- Create a billable charge for the membership or plan.
- Stamps the respective membership ID or plan ID as a characteristic on the billable charge.

If the data record is successfully processed, the status of the data record is changed to **Processed**. However, if any error occurs while creating a billable charge, the status of the data record is changed to **Error**.

Prerequisites

To setup the mass billable charge creation feature for the fully insured group and individual, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive a To Do while submitting a mass billable charge creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for billable charge (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillableChargeUploadFI** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillableChargeUploadFI

The following table lists the algorithms which are used in the lifecycle of the **C1-BillableChargeUploadFI** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CRTUPLDTL	C1-CRTUPLDTL	Refer to C1-CRTUPLDTL on page 1802.

C1-CRTUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BC-FIDER

This algorithm reads the **BO_DATA_AREA** in the request's primary table; derives additional data that is required for creating billable charges and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

Copyright © 2024, Oracle and/or its affiliates.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-BCFI-VAL

This algorithm validates the data upload in an upload request for creating billable charges before the request is submitted for processing.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Copyright © 2024, Oracle and/or its affiliates.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BC-PROC

This algorithm fetches the list of records that are in **Valid**status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Mass Billable Charge Creation CSV Format (Fully Insured Individual)

The following table lists and describes the columns that should be available in the CSV file while creating mass billable charges for fully insured individual through an upload request:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account Identifier Type** and **Account Identifier** are not specified.
Health Plan Code	Used to specify the health plan code.	Yes (Conditional) **Note:** This data is required when the **Contract ID** is not specified.
Contract ID	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Health Plan Code** is not specified.
Start Date	Used to specify the start date of billable charge. **Note:** You need to specify the start date in **YYYY-MM-DD** format.	Yes
End Date	Used to specify the end date of billable charge.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: You need to specify the end date in **YYYY-MM-DD** format.	
Charge Type	Used to indicate the charge type.	No
Description On Bill	Used to specify description for a billable charge.	Yes
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No
Description On Bill1, Description On Bill2, Description On Bill3, Description On Bill4, Description On Bill5	Used to specify description for the billable charge lines.	Yes (Conditional) **Note:** This data is required while creating a pass-through charge.
Currency1, Currency2, Currency3, Currency4, Currency5	Used to specify the currency in which the amount is charged. **Note:** If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional) **Note:** This data is required while creating a pass-through charge.
Amount1, Amount2, Amount3, Amount4, Amount5	Used to specify the charge amount.	Yes (Conditional) **Note:** This data is required while creating a pass-through charge.
Show On Bill1, Show On Bill2, Show On Bill3, Show On Bill4, Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: • true • false **Note:** By default, the value will be set to **True** if the column does not contain any value.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Appears In Summary1, Appears in Summary2,	Used to indicate whether the charge should be included in the summary line or not. The valid value are:	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Appears in Summary3, Appears in Summary4, Appears in Summary5	• true • false **Note:** By default, the value will be set to **True** if the column does not contain any value.	**Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Memo Only1, Memo Only2, Memo Only3, Memo Only4, Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: • true • false **Note:** By default, the value will be set to **False** if the column does not contain any value.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Distribution Code1, Distribution Code2, Distribution Code3, Distribution Code4, Distribution Code5	Used to specify the distribution code which indicates the account associated with the charge.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Subscriber Identifier Type	Used to derive the group or individual membership against which the billable charge should be created.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when a membership ID characteristic is not specified. Note that while deriving the membership ID characteristic, the system considers the characteristic type which is specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration. The subscriber identifier type is required if the subscriber identifier is specified.
Subscriber Identifier	Used to derive the group or individual membership against which the billable charge should be created.	Yes (Conditional) **Note:** This data is required when a membership ID characteristic is not specified. Note that while deriving the membership ID characteristic, the system considers the characteristic type which is specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration. The subscriber identifier is required if the subscriber identifier type is specified.
Membership Type	Used to derive the group or individual membership against which the billable charge should be created.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: If you specify the membership type, you need to specify either the subscriber identifier type and subscriber identifier or external membership ID. Otherwise, the system will not be able to derive the membership ID.	**Note:** This data is required when a membership ID characteristic is not specified. Note that while deriving the membership ID characteristic, the system considers the characteristic type which is specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration.
External Membership ID	Used to specify the external membership ID.	Yes (Conditional)
	Note: Here, you need to specify a membership ID which is maintained in the external source system.	**Note:** This data is required when a membership ID characteristic is not specified. Note that while deriving the membership ID characteristic, the system considers the characteristic type which is specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration.
Price Item	Used to specify the price item code.	Yes (Conditional) **Note:** This data is required when **Variance Parameter** or, **Price Item Parameter** and **Price Item Parameter Value** is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Price Item Parameter** and **Price Item Parameter Value** are not specified.
Price Item Parameter1, Price Item	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Parameter2, ..., Price Item Parameter15	**Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	**Note:** This data is required when **Price Item** is specified and **Variance Parameter** is not specified.
Price Item Parameter Value1, Price Item Parameter Value2, ..., Price Item Parameter Value15	Used to specify the parameter value. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter** is not specified.
SQI1, SQI2, SQI3, SQI4, SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) **Note:** This data is required when the service quantity is specified.
SQI Value1, SQI Value2, SQI Value3, SQI Value4, SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional) **Note:** This data is required when the SQI is specified.
Effective Date1, Effective Date2, ..., Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional) **Note:** This data is required when either one of the field - **Effective Date** or **Characteristic Type** or **Characteristic Value** is specified. This data is for user defined fields, keeping as optional we can expand it if required.
Char Type1, Char Type2, ..., Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Value1, Char Value2, ..., Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Type** is specified.

Copyright © 2024, Oracle and/or its affiliates.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the billable charge creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain account Id, then the sequence of the **Account Id** column header should be set to 1 during data mapping.

Mass Billable Charge Creation CSV Format (Fully Insured Group)

The following table lists and describes the columns that should be available in the CSV file while creating mass billable charges for fully insured group through an upload request:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account Identifier Type** and **Account Identifier** is not specified.
Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional) **Note:** This data is required when the **Contract ID** is not specified.
Policy Number	Used to indicate the policy number.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the **Contract ID** is not specified.
Plan Number	Used to indicate the plan number of the policy.	Yes (Conditional) **Note:** This data is required when the **Contract ID** is not specified.
Contract Id	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when either the**Source System, Policy Number, or Plan Number** is not specified
Start Date	Used to specify the start date of the billable charge. **Note:** You need to specify the start date in **YYYY-MM-DD** format.	Yes
End Date	Used to specify the end date of the billable charge. **Note:** You need to specify the end date in **YYYY-MM-DD** format.	Yes
Charge Type	Used to indicate the charge type.	Yes
Description On Bill	Used to specify description for a billable charge.	No
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) **Note:** This data is required if **Recurring Flag** is set to **FR**.
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No
Description On Bill1, Description On Bill2, Description On Bill3, Description On Bill4, Description On Bill5	Used to specify description for the billable charge lines.	Yes (Conditional) **Note:** This data is required when the charge amount is specified.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Currency1, Currency2, Currency3, Currency4, Currency5	Used to specify description for the billable charge lines.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Amount1, Amount2, Amount3, Amount4, Amount5	Used to specify the charge amount.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Show On Bill1, Show On Bill2, Show On Bill3, Show On Bill4, Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: • true • false **Note:** By default, the value will be set to **true** if the column does not contain any value.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Appears In Summary1, Appears in Summary2,	Used to indicate whether the charge should be included in the summary line or not. The valid value are:	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Appears in Summary3, Appears in Summary4, Appears in Summary5	• true • false **Note:** By default, the value will be set to **true** if the column does not contain any value.	**Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Memo Only1, Memo Only2, Memo Only3, Memo Only4, Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: • true • false **Note:** By default, the value will be set to **false** if the column does not contain any value.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Distribution Code1, Distribution Code2, Distribution Code3, Distribution Code4, Distribution Code5	Used to specify the distribution code which indicates the account associated with the charge.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Subscriber Identifier Type	Used to derive the group or individual membership against which the billable charge should be created.	Yes (Conditional) **Note:** This data is required when the **Membership ID** is not specified.
Subscriber Identifier	Used to derive the group or individual membership against which the billable charge should be created.	Yes (Conditional) **Note:** This data is required when the **Membership ID** is not specified.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Membership Type	Used to derive the group or individual membership against which the billable charge should be created.	No **Note:** This data is required when the **Membership ID** is not specified.
External Membership ID	Used to specify the external membership ID. **Note:** Here, you need to specify a membership ID which is maintained in the external source system.	No **Note:** This data is required when the **Membership ID** is not specified.
Price Item	Used to specify the price item code.	Yes (Conditional) **Note:** This data is required when **Variance Parameter** or, **Price Item Parameter** and **Price Item Parameter Value** is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Price Item Parameter** and **Price Item Parameter Value** are not specified.
Price Item Parameter1, Price Item Parameter2, ..., Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter** is not specified.
Price Item Parameter Value1, Price Item Parameter Value2, ..., Price Item Parameter Value15	Used to specify the parameter value. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter** is not specified.
SQI1, SQI2, SQI3, SQI4, SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) **Note:** This data is required when the service quantity is specified.
SQI Value1, SQI Value2, SQI Value3, SQI Value4, SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the service quantity identifier is specified.
Effective Date1, Effective Date2, ..., Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional) **Note:** This data is required when either one of the field - **Effective Date** or **Characteristic Type** or **Characteristic Value** is specified. This data is for user defined fields, keeping as optional we can expand it if required.
Char Type1, Char Type2, ..., Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Value1, Char Value2, ..., Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Type** is specified.

Note: You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the billable charge creation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain account Id, then the sequence of the **Account Id** column header should be set to 1 during data mapping.

Mass Payment Tender Cancellation

Until now, the system enabled you to cancel the payment from the user interface and through inbound web service using the payment event ID or payment ID. Now, the system enables you to cancel the payments through canceling a payment tender. The system provides the ability to perform mass payment tender cancellation through the **Upload Request** feature.

A new upload request type named **TNDR_CNCL_UPL_REQ_TYPE** is shipped with the product. You can upload a payment tender cancellation file in the CSV format using the **TNDR_CNCL_UPL_REQ_TYPE** upload request type.

The payment tender cancellation file should contain records with the following details – External Source ID, External Reference ID, Check Number, Tender Type, Tender Amount, Cancel Reason Code, Bank Code, Bank Account Key, Characteristic Type 1 to 5, Characteristic Value 1 to 5. The External Reference ID or Check Number is mandatory. It is used to identify the payment tenders which should be canceled using the given cancel reason.

Once you upload a payment tender cancellation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. If the mandatory data is missing in any record, the corresponding data record is created in the **Invalid** status.

On validating a data record, the system checks the following:

- Whether the payment tender is canceled
- Whether the payment event or payments associated with the payment tender are canceled
- Whether the payment is partially or fully refunded
- Whether the payment is in the **Freezable** or **Error** status

If any of the above condition is met, the status of the data record is changed to **Invalid**. However, if none of the above conditions are met, the status of the data record is changed to **Valid**. On processing a valid record, the system derives the payment event ID and then does the following:

- Cancels the payment tender using the given cancel reason
- Cancels the payment event and the corresponding payments

If the data record is successfully processed, the status of the data record is changed to **Processed**. However, if any error occurs while canceling the payment tender, the status of the data record is changed to **Error**. Once the payment tender is successfully canceled, the characteristics (if any) available in the data record are stamped on the payment tender.

To implement this feature, the following changes are made in the system:

- A new business object named **C1-TndrCnclUploadRequest** is introduced in this release.
- Three new algorithms named **C1-TND-DERIV**, **C1-TND-VALID**, and **C1-TND-PROC** are introduced in this release.

Prerequisites

To setup the mass payment tender cancellation creation feature, you need to do the following:

- Define the required upload request types in the system.
- Assign the **C1-TNDCL** To Do type to a To Do role whose users must receive a To Do while submitting a mass payment tender cancellation creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for payment tender cancellation (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-TndrCnclUploadRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:

Copyright © 2024, Oracle and/or its affiliates.

- Time Interval
- Timer Active
- User ID
- Batch Language
- Email Address

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-TndrCnclUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-TndrCnclUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-TND-DERIV	C1-TND-DERIV	Refer to C1-TND-DERIV.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer toC1-DEFERVALD.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 1476.
Validated	Enter	C1-TND-VALID	C1-TND-VALID	Refer toC1-TND-VALID.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer toC1-UPLSUBENT.
	Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer toC1-DEFERUPLD.
	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 1476.
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	Refer toC1-UPLAPPENT.
	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	Refer toC1-UPLAPPEXT.
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer toF1-TODOCOMPL on page 1366.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer toC1-DEFERUPLD.
	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 1476.
Rejected	-	-	-	-
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 1476.
Processing	Enter	C1-TND-PROC	C1-TND-PROC	Refer toC1-TND-PROC .
	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1476.
Processed	-	-	-	-

C1-TND-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

Copyright © 2024, Oracle and/or its affiliates.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-TND-VALID

This algorithm is invoked when the user clicks on the Validate button on a tender cancelation upload request. For each row in 'Pending' status in the child table, this algorithm validates if the derived Payment Event and **Tender Cancel Reason** code that is provided are valid.

Validations are put to check whether the derived payment event i.e. pay tender is not already canceled, whether the payment/s associated with the payment event is not canceled or not partially/fully refunded, whether payment/s associated with derived are not in the freezable or error status. Such kinds of validations are to be checked.

If the validation fails, then record status will be updated to **'Invalid'** (INVL) and the error details will be inserted in **C1_UPLOAD_REQ_EXCP** table.

If there are no records in **'Pending'** status, then user gets an error message 'There are no records to be validated'. In this case, user can only delete the upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

Copyright © 2024, Oracle and/or its affiliates.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-TND-PROC

This algorithm fetches the list of records that are in **'Valid'** status for a given request **ID** and for derived payment events' respective payment tender is canceled. If successfully done, then the record status will be updated to **'Processed'**, otherwise the record status will be updated to **'Error'** and error details will be logged in the exception table.

Mass Payment Tender Cancellation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass payment tender cancellations through an upload request:

Column Name	Column Description	Mandatory (Yes or No)
External Source ID	Used to search for a Payment Tender Cancellation whose information is received from a particular external source system. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
External Reference ID	Used to identify the payment tenders which should be canceled using the given cancel reason.	Yes (Conditional) **Note:** This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Check Number	Used to specify the check number if the payment is made through check.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
		Note: This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Tender Type	Indicates the type of tender through which the payment is made.	Yes (Conditional)
	Note: If the tender type is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event.	**Note:** This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Tender Amount	Used to specify the tender amount.	Yes (Conditional)
	Note: You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	**Note:** This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Cancel Reason	Used to indicate the reason why you want to cancel the payment tender.	Yes (Conditional)
		Note: This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Bank Code	Used to indicate the bank code which should be charged for cancellation.	Yes (Conditional)
		Note: This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Bank Account	Indicates the bank account through which automatic payment is made.	Yes (Conditional)
		Note: This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Char Type1, Char Type2, Char Type3, Char Type4, Char Type5	Used to indicate the characteristic that must be defined for the payment tender cancellation.	Yes (Conditional)
		Note: This data is required when **Effective Date** or **Char Val** is specified.
Char Val1, Char Val2, Char Val3, Char Val4, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
		Note: This data is required when **Effective Date** or **Char Type** is specified.

Note:

Once you upload a payment tender cancellation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. If the mandatory data is missing in any record, the corresponding data record is created in the **Invalid** status.

You must ensure that the way in which the columns are arranged in the CSV file is explicitly specified during data mapping in the payment tender cancellation upload request type. Otherwise, erroneous results might occur. For example, if the first column in the CSV file will contain external source Id, then the sequence of the **External Source Id** column header should be set to 1 during data mapping.

Sample Payment Tender Cancellation CSV File

```
,12345681,,CASH,100,WRAT,,,TDRL,26777879,,,,,,,,
,,12345683,,,ROBL,,,TDRL,65777689,,,,,,,,
CASH-01,12345682,,,,INSF,,,TDRL,33455000,,,,,,,,
,,12345686,CHEC,200,ROBL,,,TDRL,12785555,,,,,,,,
```

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

This section lists the match types that are shipped with the product:

- Contract
- Contract Type

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to **Contract (CONT)**.
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to **Contract Type (CNTY)**. If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintainance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)

Copyright © 2024, Oracle and/or its affiliates.

- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- Upload Request Type List on page 1296
- Upload Request Type on page 1297

Upload Request Type List

The **Upload Request Type List** zone lists the upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the **Edit** (✎) icon, the **Upload Request Type** screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Upload Request Type** screen appears where you can define a new upload request type using an existing upload request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the upload request type. **Note:** You can delete an upload request type only when an upload request is not yet created using the upload request type.
Mapping	On clicking the **Mapping** (🔗) icon, the **Upload Request Mapping** screen appears where you can do the following: • Map the data of the CSV file to the schema of the respective upload request business object. The system will then store the data in the respective tags of the upload request business object schema. • Configure the search filters for the respective upload request type. The system will then display the search filters (in the specified sequence) in the **Data Records** zone of the **Upload Request** screen while viewing the details of the respective upload requests.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column is applicable only for an upload request type which is created using the **C1-UplRequestType** business object and not for an upload request type which is created using the**C1-AdjRequestType** business object.
Status	Indicates the status of the upload request type. The valid values are: • ACTIVE • INACTIVE

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. It contains the following sections:

- **Main** - Displays the basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object using which an upload request should be created.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: • Active • Inactive
File Size (KB)	Indicates the maximum file size (in kilobytes) allowed while uploading files using the upload request type. If you upload a file that exceeds the maximum file size, the system will not allow you to upload the file.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the upload request type is created using the **Adjustment Upload Request Type** (**C1-AdjRequestType**) business object.
Defer Algorithm	Indicates the algorithm that is triggered when you create adjustments for an adjustment upload request or when you approve the adjustment data file uploaded through an adjustment upload request.
	Note: The **C1-UPLDEFEVL** algorithm is shipped with the product. You need to attach this algorithm to the **Defer Algorithm** field. This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode (i.e., when the **C1-UPLRQ** batch is executed). This field appears when the upload request type is created using the **Adjustment Upload Request Type** (**C1-AdjRequestType**) business object. It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.
Entity Business Object	Indicates the Business Object of the entity when you create the upload request type.
	Note: The **Search** icon appears corresponding to this field. On clicking the Search icon the **Business Object Search** window appears.
Approval Required	Indicates whether approval is required while uploading a file using the upload request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when a upload request is submitted for approval.
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do Type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve a upload request which is submitted for approval.
	Note: This field appears when the **Approval Required** option is selected. On selecting the **To Do Type**, the **To Do Roles** configured on the **To Do Type** is populated. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
FK Reference Code	Indicates the foreign key reference which specifies the created upload request type.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when you create upload request type using **Upload Request Type** business object. It has a link. On clicking the link, the **Foreign Key Reference** screen appears where you can view the details of the respective To Do role.
	U

- **Adjustment Match Type**

  In addition, this section has the following columns:

Note: The **Match Type** column is displayed for **Adjustment Upload Request** Business Object.

Column Name	Column Description
Match Type	Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are: • Contract • Contract Type
	Note: The **Match Type** column is displayed for **Adjustment Upload Request** business object (C1-AdjRequestType).
Algorithm	Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears with the details of the respective algorithm. The **Algorithm** column is displayed for **Adjustment Upload Request** Business Object (C1-AdjRequestType).

- **Characteristics** - Lists the characteristics of the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - Enables you to perform various actions on the upload request type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an upload request type.
Delete	Used to delete the upload request type.
	Note: You can delete an upload request type when a upload request is not yet created using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** - This section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which an upload request type is created.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

If you want to create...	Then, you should have...
An adjustment upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Defer algorithm created using the **C1-UPLDEFEVL** algorithm type in the system • Required To Do role assigned to the **C1-ADJUP** To Do type in the application • Algorithm created using the **C1-MTCIALG** or **C1-MTCTALG** algorithm type depending on the match type using which you want to create the adjustments
An account bill cycle upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUUR** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application

Copyright © 2024, Oracle and/or its affiliates.

If you want to create...	Then, you should have...
	• Required foreign key reference (for example, C1-ACCT) defined in the application
A bill group derivation and pricing parameters upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • An approval To Do type named **C1-BGDVP** created with the following specifications: sort key - **Upload Request ID**, drill key table - **C1_UPLOAD_REQ**, and drill key field - **UPLOAD_REQ_ID** • Required To Do role assigned to the **C1-BGDVP** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference (for example, C1-ACCT) defined in the application
A bill group sorting upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • An approval To Do type named **C1-BGSRT** created with the following specifications: sort key - **Upload Request ID**, drill key table - **C1_UPLOAD_REQ**, and drill key field - **UPLOAD_REQ_ID** • Required To Do role assigned to the **C1-BGSRT** To Do type in the application • Required entity business object (for example, C1-BillingGroupSortId) defined in the application • Required foreign key reference defined in the application
A billable charge creation upload request type (for the financial services business)	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUR** To Do type in the application • Required entity business object (for example, C1-BILLCHARGE) defined in the application • Required foreign key reference (for example, C1-BCHIN) defined in the application
A billable charge creation upload request type (for the fully insured group and individual lines of business)	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUR** To Do type in the application • Required entity business object (for example, C1-BILLCHARGE) defined in the application • Required foreign key reference (for example, C1-BCHIN) defined in the application
A contract rider upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-CRUUR** To Do type in the application • Required entity business object (for example, C1_SA) defined in the application • Required foreign key reference (for example, C1-SATY) defined in the application
A hold request creation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-HLDUR** To Do type in the application

Copyright © 2024, Oracle and/or its affiliates.

If you want to create...	Then, you should have...
	• Required entity business object (for example, C1-HoldRequest) defined in the application • Required foreign key reference (for example, C1-HLDRE) defined in the application
A refund request creation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-REFUR** To Do type in the application • Required entity business object (for example, C1-RefundReq) defined in the application • Required foreign key reference (for example, C1-REFWO) defined in the application
A policy reinstatement upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-RPUR** To Do type in the application • Required entity business object (for example, C1-POLICY) defined in the application • Required foreign key reference (for example, C1-POLCY) defined in the application
A payment tender cancellation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-TNDCL** To Do type in the application • Required foreign key reference (for example, C1-PEVT) defined in the application
A write off request creation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-WOUR** To Do type in the application • Required entity business object (for example, C1-WORequest) defined in the application • Required foreign key reference (for example, C1-REFWO) defined in the application

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object using which you want to create the upload request type. The valid values are:	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Adjustment Upload Request Type (i.e., C1-AdjRequestType)** - Enables you to maintain an adjustment upload request type. • **Upload Request Type (i.e., C1-UplRequestType)** - Enables you to maintain an upload request type. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Upload Request Type** (i.e., **C1-UPLREQTYP**) maintenance object.	

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the upload request type.
- **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload request.

  Note: This section appears when you are creating an upload request type using the **C1-AdjRequestType** business object.
- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the business object using which you are defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object using which you want to create the respective upload request. If you are creating an upload request type using the **C1-AdjRequestType** business object, the valid value is: • **Adjustment Upload Request (i.e., C1-ADJUPLD)** - Enables you to maintain an adjustment upload request. However, if you are creating an upload request type using the **C1-UplRequestType** business object, the valid values are: • **Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)** - Enables you to maintain an account bill cycle upload request.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest)** - Enables you to maintain a bill group derivation and pricing parameters upload request. • **Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)** - Enables you to maintain a bill group sorting upload request. • **Billable Charge Upload (i.e., C1-BillableChargeUploadRequest)** - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the financial services domain. • **Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)** - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business. • **Contract Rider Upload i.e., C1-ContractRiderUpdateUplReq)** - Enables you to maintain a contract rider upload request. • **Hold Request Upload (i.e., C1-HoldUploadRequest)** - Enables you to maintain a hold request creation upload request. • **Refund Request Upload (i.e., C1-RefundUploadRequest)** - Enables you to maintain a refund request creation upload request. • **Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)** - Enables you to maintain a policy reinstatement upload request. • **Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)** - Enables you to maintain a payment tender cancellation upload request. • **Write Off Request Upload (i.e., C1-WriteOffUploadRequest)** - Enables you to maintain a write off request creation upload request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Upload Request** (Adjustment Upload) (i.e., **C1-UPLREQ**) or**Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object depending on the business object used to create the upload request type.	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive	Yes
File Size (KB)	Used to indicate the maximum file size limit (in kilobytes) while uploading files through the respective upload request. **Note:** You must specify a positive integer value in this field. This field appears when you are creating an upload request type using the **C1-AdjRequestType** business object.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you click the **Create Adjustment** or **Approve** button. **Note:** The **Search** (🔍) icon appears corresponding to the **Defer Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. You need to attach an algorithm created using the **C1-UPLDEFEVL** algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode. The **Deferred** mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is executed. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. This field appears when you are creating an upload request type using the **C1-AdjRequestType** business object.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate the business object using which you want to create the entities through the respective upload request. **Note:** The **Search** (🔍) icon appears corresponding to the **Entity Business Object** field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when you are creating an upload request type using the **C1-UplRequestType** business object. The **Upload Request** feature enables you to upload business object based entities and non business object based entities in the system. If you want to create business object based entities through the respective upload request, you need to specify the entity business object in the upload request type. However, if you want to create non business object based entities (i.e., entities created via any business service) through the respective upload request, you do not need to specify the entity business object in the upload request type.	No
Approval Required	Used to indicate whether approval is required while creating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** option is selected. You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the **Approval Required** option is selected.	**Note:** This field is required when the **Approval Required** option is selected.
FK Reference Code	Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request. The system displays the entity information in the **Data Records** zone of the **Upload Request** screen. **Note:** The **Search** (🔍) icon appears corresponding to the **FK Reference Code** field. On clicking the **Search** icon, the **Foreign Key Search** window appears. This field appears when you are creating an upload request type using the **C1-UplRequestType** business object.	No

6. Enter the required details in the **Main** section.
7. Associate a match type with the adjustment upload request type.
8. Define characteristics for the upload request type, if required.
9. Click **Save**.
   The upload request type is defined.

Defining a Match Type for an Adjustment Upload Request Type

In addition, this section contains the following fields in the grid:

Note: This field appears when **Adjustment Upload Request Type** (**C1-AdjRequestType**) business object is selected.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are:	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Contract • Contract Type	**Note:** This field is required when you select the **Adjustment Upload Request** option from the **Upload Request Business Object** list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	Yes (Conditional) **Note:** This field is required when you select the match type from the respective field.

Defining a Characteristic for an Upload Request Type

Prerequisites

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request Type**)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload *r*equest type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Upload Request Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details in the **Characteristics** section.

Copyright © 2024, Oracle and/or its affiliates.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then *r*epeat step 2.

> **Note:** However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing an Upload Request Type

Prerequisites

To edit an upload request type, you should have:

If you want to edit...	Then, you should have...
An adjustment upload request type	• Upload request business objects defined in the application • Defer algorithm created using the **C1-UPLDEFEVL** algorithm type in the system • Required To Do role assigned to the **C1-ADJUP** To Do type in the application • Algorithm created using the **C1-MTCIALG** or **C1-MTCTALG** algorithm type depending on the match type using which you want to create the adjustments
An account bill cycle upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUUR** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference (for example, C1-ACCT) defined in the application
A bill group derivation and pricing parameters upload request type	• Upload request business objects defined in the application • An approval To Do type named **C1-BGDVP** created with the following specifications: sort key - **Upload Request ID**, drill key table - **C1_UPLOAD_REQ**, and drill key field - **UPLOAD_REQ_ID** • Required To Do role assigned to the **C1-BGDVP** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference (for example, C1-ACCT) defined in the application
A bill group sorting upload request type	• Upload request business objects defined in the application • An approval To Do type named **C1-BGSRT** created with the following specifications: sort key - **Upload Request ID**, drill key table - **C1_UPLOAD_REQ**, and drill key field - **UPLOAD_REQ_ID** • Required To Do role assigned to the **C1-BGSRT** To Do type in the application

Copyright © 2024, Oracle and/or its affiliates.

If you want to edit...	Then, you should have...
	• Required entity business object (for example, C1-BillingGroupSortId) defined in the application • Required foreign key reference defined in the application
A billable charge creation upload request type (for the financial services business)	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUR** To Do type in the application • Required entity business object (for example, C1-BILLCHARGE) defined in the application • Required foreign key reference (for example, C1-BCHIN) defined in the application
A billable charge creation upload request type (for the fully insured group and individual lines of business)	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUR** To Do type in the application • Required entity business object (for example, C1-BILLCHARGE) defined in the application • Required foreign key reference (for example, C1-BCHIN) defined in the application
A contract rider upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-CRUUR** To Do type in the application • Required entity business object (for example, C1_SA) defined in the application • Required foreign key reference (for example, C1-SATY) defined in the application
A hold request creation upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-HLDUR** To Do type in the application • Required entity business object (for example, C1-HoldRequest) defined in the application • Required foreign key reference (for example, C1-HLDRE) defined in the application
A refund request creation upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-REFUR** To Do type in the application • Required entity business object (for example, C1-RefundReq) defined in the application • Required foreign key reference (for example, C1-REFWO) defined in the application
A policy reinstatement upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-RPUR** To Do type in the application • Required entity business object (for example, C1-POLICY) defined in the application • Required foreign key reference (for example, C1-POLCY) defined in the application
A payment tender cancellation upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-TNDCL** To Do type in the application • Required foreign key reference (for example, C1-PEVT) defined in the application

Copyright © 2024, Oracle and/or its affiliates.

If you want to edit...	Then, you should have...
A write off request creation upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-WOUR** To Do type in the application • Required entity business object (for example, C1-WORequest) defined in the application • Required foreign key reference (for example, C1-REFWO) defined in the application

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
   The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *u*pload request type whose details you want to edit.

   The **Upload Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the upload request type.
   - **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload request.

     Note: This section appears when you are editing an upload request type which is created using the **C1-AdjRequestType** business object.
   - **Characteristics** - Used to define the characteristics for the upload request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the business object which is used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object using which you want to create the respective upload request. If you are creating an upload request type using the **C1-AdjRequestType** business object, the valid value is: • **Adjustment Upload Request (i.e., C1-ADJUPLD)** - Enables you to maintain an adjustment upload request. However, if you are creating an upload request type using the **C1-UplRequestType** business object, the valid values are: • **Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)** - Enables you to maintain an account bill cycle upload request. • **Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest)** - Enables you	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	to maintain a bill group derivation and pricing parameters upload request. • **Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)** - Enables you to maintain a bill group sorting upload request. • **Billable Charge Upload (i.e., C1-BillableChargeUploadRequest)** - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the financial services domain. • **Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)** - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business. • **Contract Rider Upload i.e., C1-ContractRiderUpdateUplReq)** - Enables you to maintain a contract rider upload request. • **Hold Request Upload (i.e., C1-HoldUploadRequest)** - Enables you to maintain a hold request creation upload request. • **Refund Request Upload (i.e., C1-RefundUploadRequest)** - Enables you to maintain a refund request creation upload request. • **Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)** - Enables you to maintain a policy reinstatement upload request. • **Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)** - Enables you to maintain a payment tender cancellation upload request. • **Write Off Request Upload (i.e., C1-WriteOffUploadRequest)** - Enables you to maintain a write off request creation upload request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object.	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇗) icon at the bottom right corner of the text box.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of an upload request type to **Inactive** when the corresponding upload request is in a status other than **Canceled**, **Rejected**, **Completed**, or **Processed**.	Yes
File Size (KB)	Used to indicate the maximum file size limit (in kilobytes) while uploading files through the respective upload request. **Note:** You must specify a positive integer value in this field. This field appears when you are editing an upload request type which is created using the **C1-AdjRequestType** business object.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you click the **Create Adjustment** or **Approve** button. **Note:** The **Search** (🔍) icon appears corresponding to the **Defer Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. You need to attach an algorithm created using the **C1-UPLDEFEVL** algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode. The **Deferred** mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is executed. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. This field appears when you are editing an upload request type which is created using the **C1-AdjRequestType** business object.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate the business object using which you want to create the entities through the respective upload request. **Note:** The **Search** (🔍) icon appears corresponding to the **Entity Business Object** field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when you are editing an upload request type which is created using the **C1-UplRequestType** business object.	No
Approval Required	Used to indicate whether approval is required while creating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** option is selected. You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval. **Note:** The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
FK Reference Code	Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **FK Reference Code** field. On clicking the **Search** icon, the **Foreign Key Search** window appears. This field appears when you are editing an upload request type which is created using the **C1-UplRequestType** business object.	

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove a match type from the adjustment upload request type, if required.
7. Define, edit, or remove characteristics of the upload request type, if required.
8. Click **Save**.
   The changes made to the upload request type are saved.

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type

Copyright © 2024, Oracle and/or its affiliates.

- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
   The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Duplicate**(⧉) icon in the **Duplicate** column *c*orresponding to the upload request type whose copy you want to create.

   The **Upload Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request type.
   - **Adjustment Match Type** - Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type.

     Note: This field appears when **Adjustment Upload Request Type** (**C1-AdjRequestType**) business object is selected.
   - **Characteristics** - Used to define the characteristics for the upload request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object using which you are defining an upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request. When you create upload request type using upload request business object, the valid values are: • Bill Cycle Update Upload (i.e C1-BillCycleUpdateUplReq) • Bill Group Derivation & Pricing Parameter (i.e C1-BillLevelUploadRequest) • Bill Group Sorting Upload Request (i.e C1-BillGrpSortUploadRequest) • Billable Charge Upload (i.e C1-BillableChargeUploadRequest) • Billable Charge Upload for Fully Insured (i.e C1-BillableChargeUploadFI) • Contract Rider Upload (i.e C1-ContractRiderUpdateUplReq) • Hold Request Upload (i.e C1-HoldUploadRequest) • Refund Request Upload (i.e C1-RefundUploadRequest)	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Reinstatement Upload Request (i.e C1-ReinstatementUploadRequest) • Tender Cancelation Upload Request (i.e C1-TndrCnclUploadRequest) • Write Off Request Upload (i.e C1-WriteOffUploadRequest) **Note:** The above mentioned business objects are shipped with the product. It enables you to maintain an upload request type. The list includes those business objects which are created using an **Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object.	
Description	Used to specify the description for an upload request type.	Yes
Detailed Description	Used to specify additional information about an upload request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of an upload request type to **Inactive** when the corresponding upload request is in a status other than **Cancelled**, **Approved**, **Rejected**, or **Completed**.	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. **Note:** This field appears when **Adjustment Upload Request Type** business object (**C1-AdjRequestType**) is selected.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode. **Note:** Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any upload requests in the **Deferred** status. If there is an upload request in the **Deferred** status, the system creates the entities (for example, adjustments). This field appears when **Adjustment Upload Request Type** business object (**C1-AdjRequestType**) is selected. In **Upload Request Type**, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from **Validated** to **Deferred Processing** else the status is changed to **Processed**. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	
Entity Business Object	Used to indicate the business object that you want to use to create the upload request type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when **Upload Request Type** business object (**C1-UplRequestType**) is selected.	No
Approval Required	Used to indicate whether approval is required while uploading a file using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when an upload request is submitted for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>

Mapping Data and Configuring Filters for an Upload Request Type

In order to read the data from a Comma-Separated Values (CSV) file, you need to map its columns with the schema of the upload request business object. The system will then store the data in the respective tags of the upload request business object schema. While mapping the columns with the schema, you need to specify the column headers that would appear in the CSV file. The system will then create the XML tags by converting the column header into camelCase after removing the spaces from the column header. For example, if the header in the CSV file is Account Id, then the corresponding XML tag formed by the system is accountId. The system will then store the data from the column in the respective tag.

The system enables you to configure the search filters for an upload request type. It then displays the search filters (in the specified sequence) in the **Data Records** zone of the **Upload Request** screen while viewing the details of the respective upload requests. Once an upload request is created using an upload request type, you cannot change the search filters

Copyright © 2024, Oracle and/or its affiliates.

of the upload request type. In addition, while copying an upload request type, the system does not automatically copy the search filters from the upload request type. You will then have to manually configure the search filters for the new upload request type.

Note: This configuration option is applicable only for an upload request type which is created using the **C1-UplRequestType** business object and not for an upload request type which is created using the**C1-AdjRequestType** business object.

Procedure

To configure search filters for an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping**(🔗) icon in the **Mapping** column corresponding *t*o the upload request type whose details you want to edit.

   The **Upload Request Mapping** screen appears. It contains the following field:

Field Name	Field Description
Upload Request Type	Displays the description of the upload request type.

   In addition, it contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the column header (i.e., field) using which you want to filter the data records.	Yes (Conditional) **Note:** This field is required when you are configuring a search filter for the upload request type.
Searchable	Used to indicate whether the field should be searchable or not. The system will then accordingly display the field in the **Data Records** zone in the **Upload Request** screen. **Note:** You can set maximum 10 fields as searchable in an upload request type.	Yes (Conditional) **Note:** This field is required when you are configuring a search filter for the upload request type.
Sequence	Used to indicate the order in which you want to display the field in the **Data Records** zone in the **Upload Request** screen. **Note:** You must specify a unique value which is less than or equal to 10.	Yes (Conditional) **Note:** This field is required when you are configuring a search filter for the upload request type.

4. Enter the required details in **Upload Request Mapping** screen.

   Note: If you want to add more than one mapped to the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete** (🗑) icon corresponding to the column header.

5. Click **Save**.
   The columns are mapped to the CSV files for upload request type.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
   The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *u*pload request type that you want to delete.

   A message appears confirming whether you want to delete the upload request type.

   Note: You can delete an upload request type only when an upload request is not yet created using the upload request type.

   Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.
5. Click **OK**.
   The upload request type is deleted.

Upload Request (Used for Searching)

The **Upload Request** screen allows you to search for a upload request using various search criteria. It also allows you to upload, validate and process the transaction data. It contains the following zone:

- Search Upload Request on page 1890

Through this screen, you can navigate to the following screen:

- Upload Request (Used for Viewing) on page 1896

Search Upload Request

The **Search Upload Request** zone allows you to search for a upload request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an upload request using the request details. The valid value is: • Request Details	Yes
Upload Date From	Used to search for upload requests which are created from a particular date onwards. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Status	Used to search for upload requests with a particular status. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Deferred Validation	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Draft • Processed • Rejected • Validated • Validating	
To	Used to search for upload requests which are created till a particular date. **Note:** You can either manually specify the date or select it using the **Date Picker** () icon corresponding to the field.	No
User ID	Used to search for upload requests which are created by a particular user.	No
Upload Request Type	Used to search for upload requests which are created using a particular upload request type. **Note:** The list includes only those upload request types which are already defined in the system	No
File Name	Used to search for a particular file name.	No
Upload Request ID	Used to search for a particular upload request.	No

Note: You must specify at least one search criterion while searching for an upload request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request was created in the system.
Upload Request Information	Displays information about the upload request. **Note:** It has a link. On clicking the link, the **Upload Request** screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the upload request. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Validated • Validating
Upload Request Type	Displays the upload request type using which the upload request is created.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Entity Business Object	Displays the business object code of the entity. In addition, a context menu (⊙) icon appears, corresponding to this field, which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
File Name	Displays the uploaded file name.
Total Records	Displays the total number of records in the uploaded csv file.
Created By	Indicates the user who has created the upload request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Upload Request

Prerequisites

To search for an upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.
   The **Upload Request** screen appears.
4. Enter the search criteria in the **Search Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of upload requests that meet the search criteria appears in the **Search Results** section.

Viewing the Upload Request Details

Procedure

To view the details of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request whose details you want to view.

   The **Upload Request** screen appears. It consists of the following tabs:

   - Upload Request - Main on page 1897
   - Upload Request - Log on page 1901
3. Ensure that the **Main** tab is selected.
4. View the details of the upload request in the **Upload Request** zone.
5. View the data records in the csv file of the upload request in the **Data Records** zone.

Creating an Upload Request

Prerequisites

To create an upload request, you should have:

- Upload request types defined in the application

Procedure

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

   The **Select Upload Request Type** screen appears. It contains the following field:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request. **Note:** The list includes only those upload request types which are already defined in the system.	Yes

Tip: Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

Note:

The **Select Upload Request Type** screen appears when there are multiple upload request types defined in the application. If there is only one upload request type defined in the application, the **{XXX} Upload Request** screen appears.

Here, {XXX} changes depending on the upload request type that you have selected.

4. Select the required upload request type from the respective field.
5. Click **OK**.

   The **{XXX} Upload Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request.
   - **Characteristics** - Used to define the characteristics for the upload request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting or bill group derivation and pricing parameters upload request. **Note:** This field appears when you are creating an upload request using an upload request type where the upload request business object is set to **C1-BillGrpSortUploadRequest** or **C1-BillLevelUploadRequest**. The system allows you to create a bill group sorting or bill group derivation and pricing parameters upload request for a person whose person type is set to **Parent Customer**. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes
File Name	Used to specify the name and path of the file that you want to upload.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can also click the **Choose File** button corresponding to this field to browse to the location where the file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

6. Enter the required details in the **Main** section.
7. Click the **Choose File** button corresponding to the **File Name** field.
8. Browse to the location where the file that you want to upload is available in the system.
9. Click **Open**.
   The file name appears in the **File Name** field.
10. Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
11. Define characteristics for the upload request, if required.
12. Click **Save**.
    A message appears indicating the number of records which are successfully uploaded. Then, an upload request is created in the **Draft** status. If the required identifier (such as account ID, person ID, policy ID, or bill group ID) is available in the record, the status of the record is set to **Pending**. However, if the required identifier could not be derived from the system, the status of the record is set to **Invalid**.

How to define a characteristic for an upload request	Defining a Characteristic for an Upload Request on page 1895

Defining a Characteristic for an Upload Request

Prerequisites

To define a characteristic for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

Procedure

To define a characteristic for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	**Note:** This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Upload Request**.	**Note:** This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** ( ) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the upload request, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a characteristic from the upload request, click the **Delete** ( ) icon corresponding to the characteristic.

Upload Request (Used for Viewing)

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of an upload request
- Delete an upload request
- View the details of an upload request
- Validate an upload request
- Cancel an upload request
- Submit an upload request
- Approve or reject an upload request
- View the data uploaded to a request

Copyright © 2024, Oracle and/or its affiliates.

- View the log of an upload request
- Add a log entry for an upload request

This screen consists of the following tabs:

- **Main** - This tab contains the following two zones:
  - **Upload Request** - Displays the details of the upload request.
  - **Data Records** - Lists the data records of the upload request.
- **Log** - This tab lists the complete trail of actions performed on the upload request.

Upload Request - Main

The **Main** tab contains the following zones:

- Upload Request on page 1897
- Data Records on page 1899

Upload Request

The **Upload Request** zone displays the details of the upload request. It contains the following sections:

- **Main** - Displays the basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.
Upload Request Type	Indicates the upload request type using which the upload request is created. **Note:** It has a link. On clicking the link, the **Upload Request Type** screen appears where you can view the details of the respective upload request type.
Status	Indicates the status of the payment request. The valid values are: • Approval In Progress • Approved • Cancelled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Submitted • Validated • Validating
File Name	Displays name of the uploaded file.

- **Statistics** - This section lists the statistics of records in the upload request. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in CSV file.
Pending Records	Displays the count of data records pending after successful derivation.
Valid Records	Displays the count of valid data records.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Invalid Records	Displays the count of data records after unsuccessful derivation.
Error Records	Displays the count of data records in error status.
Processed Records	Displays the count of data records after processing.

- **Record Actions** - Enables you to perform various actions on the upload request. It contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the upload request. **Note:** The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.
Delete	Used to delete the upload request. **Note:** The **Delete** button appears when the upload request is in the **Draft** status.
Validate	Used to validate the upload request. **Note:** The **Validate** button appears when the upload request is in the **Draft** status.
Cancel	Used to cancel the upload request. **Note:** The **Cancel** button appears when the upload request is in the **Validated** status.
Submit	Used to submit the upload request. **Note:** The **Submit** button appears when: • The upload request is in the **Validated** status. • The **Approval Required** check box is selected in the upload request type using which the upload request is created.
Approve	Used to approve the upload request. **Note:** The **Approve** button appears when: • The upload request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the upload request.
Reject	Used to reject the upload request. **Note:** The **Reject** button appears when: • The upload request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the upload request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the upload request status is updated.
Create Date/Time	Displays the date and time when the upload request is created.

- **Characteristics** - Lists the characteristics of the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Data Records

The **Data Records** zone lists the data records of the upload request. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2, ...,Search Criteria 10 **Note:** We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	Used to search for data from the CSV file with respect to the field.	No
Record Status	Used to indicate whether you want to search data records for an upload request. The valid values are: • Error • Invalid	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Pending • Processed • Valid	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the **View** (🔗) icon, the **Data Record Details** window appears where you can view the details of the data records.
Search Result 1, Search Result 2, ..., Search Result 10 **Note:** We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	Displays data from the CSV file.
Record Status	Indicates the status of the data record. The valid values are: • Error • Invalid • Pending • Processed • Valid
Message(s)	Displays message for the data record respective to it's status.
Entity ID	Displays entity ID of the upload request. **Note:** The entity ID is displayed only for data records with **Processed** status.
Entity Information	Displays entity information for the **FK Reference Code** selected in **Upload Request Type** screen. **Note:** The entity information is displayed only for data records with **Processed** status. It has a link. On clicking the link, the respective entity screen appears depending upon the upload request type selected where you can view the details of the respective entity.

Note: By default the **Search Results** section displays data records for all the statuses though data is not added or selected to any of the fields and are searched through the **Search Criteria** section.

Upload Request - Log

The **Log** tab contains the following zone:

- Upload Request Log on page 1901

Upload Request Log

The **Upload Request Log** zone lists the complete trail of actions performed on the upload request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the upload request. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the upload request is rejected or processed.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Editing an Upload Request

Procedure

To edit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request whose details you want to edit.
   The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Upload Request** zone.

   The entity **Upload Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request.
   - **Characteristics** - Used to define the characteristics for the upload request.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type using which the upload request is created.	Not applicable
File Name	Displays name of the uploaded CSV file.	Not applicable
Comments	Used to specify additional information about the upload request.	No

Note: The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the upload request, if required.
7. Click **Save**.
   The changes made to the upload request are saved.

Validating an Upload Request

Prerequisites

To validate an upload request, you should have:

- Upload Request Types defined in the request.

Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request that you want to validate.
   The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Validate** button in the **Upload Request** zone.
   The status of the upload request is changed to **Validated**.

> **Note:**
>
> The **Validate** button appears when the upload request is in the **Draft** status.
>
> Length of value (in bytes) too long for Field Entity ID. Maximum length: 14 Found 20.
>
> No pending records are present to be validated.
>
> Start Date is missing.

Cancelling an Upload Request

Prerequisites

To cancel an upload request, you should have:

- Reasons defined for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Note: While cancelling an upload request, you need to specify the reason why you want to cancel the upload request. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Procedure

To cancel an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.
   The **Upload Request** screen appears.

Copyright © 2024, Oracle and/or its affiliates.

3. Ensure that the **Main** tab is selected.
4. Click the **Cancel** button in the **Upload Request** zone.

   The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request. **Note:** The list includes only those reasons which are defined for the **Canceled** status of the **C1-UplRequestType** business object through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while cancelling the upload request.	No

Note: The **Cancel** button appears when the following conditions are met:

- The upload request is in the **Validated** status.
- A user with the approval To Do role is reviewing the hold request.

Note: The **Cancel** button appears when the upload request is in the **Validated** status.

5. Select the reason for cancelling the upload request from the **Cancel Reason** list.
6. Enter the comments (if any) while cancelling the upload request in the respective field.
7. Click **Save**.
   The status of the upload request is changed to **Canceled**.

Approving an Upload Request

You can view the number of upload requests which is pending for approval in the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

> **Note:** The system will not allow you to approve or reject an upload request submitted by you.

To approve a upload request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Approve an upload request through the Upload Request screen	**a.** Search for the upload request with the **Approval In Progress** status in the **Upload Request** screen. A list of upload requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request which you want to review.
Approve an upload request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter the required To Do type in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	g. Click the link in the **Message** column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

2. Review the details in the **Upload Request** screen.
3. If the information in the upload request is accurate, click the **Approve** button in the **Upload Request** zone.

The system behaves in the following manner:

<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td>The number of valid records in the upload request does not exceed the online record process limit defined in the C1-DEFERUPLD algorithm</td><td>The following table lists the behavior for the different upload requests:
<table>
<tr><th>Upload Request</th><th>Behavior</th></tr>
<tr><td>Bill Cycle Update</td><td>The bill cycle information is updated for the accounts.</td></tr>
<tr><td>Billable Charge</td><td>The billable charges are created.</td></tr>
<tr><td>Contract Rider Update</td><td>The contract rider information is updated for the contracts.</td></tr>
<tr><td>Hold Request</td><td>The hold requests are created.</td></tr>
<tr><td>Refund Request</td><td>The refund requests are created.</td></tr>
<tr><td>Write Off Request</td><td>The write off requests are created.</td></tr>
<tr><td>Policy Reinstatement</td><td>The policies are reinstated and the status of the policies is changed to the one defined in the Policy Status after Processing Reinstatement Upload Request parameter of the C1-REN-VALID algorithm.</td></tr>
<tr><td>Bill Group Sorting</td><td>The sort ID is defined for the respective bill group.</td></tr>
<tr><td>Bill Group Derivation and Pricing Parameters</td><td>The derivation and pricing parameters are defined for the respective bill group and sort ID combination.</td></tr>
</table>
In addition, the status of the upload request is changed to Processed.</td></tr>
<tr><td>The number of valid records in the upload request exceeds the online record process limit defined in the C1-DEFERUPLD algorithm</td><td>The system changes the status of the upload request to Deferred Processing. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred Processing status. If there is an upload</td></tr>
</table>

Rejecting an Upload Request

Prerequisites

To reject an upload request, you should have:

- Approval To Do role assigned in the system.
- Reasons defined for the **Rejected** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Note: The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To reject an upload request:

1. Do either of the following:

If you want to...	Then...
Reject an upload request through the Upload Request screen	**a.** Search for the upload request with the **Approval In Progress** status in the **Upload Request** screen. A list of upload requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request which you want to review.
Reject an upload request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter the required To Do type in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the upload request that you want to review.

   The **Upload Request** screen appears.
2. Review the details in the **Upload Request** screen.
3. If the information in the upload request is incorrect, click the **Reject** button in the **Upload Request** zone.

   The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those reasons which are defined for the **Rejected** status of the **C1-UplRequestType** business object through the **Status Reason** screen.	
Comments	Used to specify additional information while rejecting the upload request.	No

Note: The **Reject** button appears when the following conditions are met:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

4. Select the reason for rejecting the upload request from the **Status Reason** list.
5. Enter the comments (if any) while rejecting the upload request in the respective field.
6. Click **Save**.
   The status of the upload request is changed to **Rejected**.

Viewing the Data Record Details

Procedure

To view the details of a data record:

1. Search for the data record in the **Data Records** zone in the **Upload Request** screen.
2. In the **Search Results** section, click the **View** (🔗) icon in the **View** column corresponding to the data record whose details you want to view.

   The **Data Record Details** window appears. It contains the following columns:

Column Name	Column Description
Sr. No.	Displays the sequential number of data.
CSV Column Header	Displays name of the column in uploaded CSV file.
CSV Column Value	Displays value in the column in uploaded CSV file.

3. Ensure that the **Main** tab is selected.
4. View the details of the data record in the **Data Record Details** window.

Viewing the Log of an Upload Request

Procedure

To view the log of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *u*pload request whose log you want to view.

   The **Upload Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. View the complete trail of actions performed on the upload request in the **Upload Request Log** zone.

Adding a Log Entry for an Upload Request

Procedure

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *u*pload request for which you want to add a log entry.

   The **Upload Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

   The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Log Details	Used to specify additional comments for the upload request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Upload Request Log** zone.

Chapter 29

General Ledger (GL) Accounting Template

Topics:

- GL Accounting Template (Without Approval) Status Transition
- GL Accounting Template (With Approval) Status Transition
- Algorithms Used in C1- GLAT
- Prerequisites
- GL Accounting Template (Used for Searching)
- GL Accounting Template (Used for Viewing)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, …, and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, …, Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do for the approver to review the GL Accounting template. Once the approver approves

a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	**BS**	**AD**	**PS**
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	**Process**	**Sub Process 1**	**Sub Process 2**	**Sub Process 3**
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

Copyright © 2024, Oracle and/or its affiliates.

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	**Use GL Accounting Template (Y or N)**	**Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)**	**Algorithm Behaviour**
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

Copyright © 2024, Oracle and/or its affiliates.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	**Then, the system...**
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... • FT GL for the bill segment calculation line using the distribution code on the respective rate component • FT GL for the pass through line using the distribution code on the respective pass through line • Balancing FT GL using the distribution code on contract type
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	**Then, the system...**
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... • FT GL for bill segment calculation line using the lines in the GL Accounting template. • FT GL for the pass through line using the distribution code on the respective pass through line.

Copyright © 2024, Oracle and/or its affiliates.

If the bill segment is...	Then, the system...
	• Balancing FT GL using the line in the GL Accounting template.
A post processing bill segment	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: • GLAT Description • GLAT Status Description • GLAT ID

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: • If soft parameter value is set to Y then approval workflow will be triggered.
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the **C1-GLATAAPEN** Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: • If soft parameter value is set to Y then approval workflow will be triggered.
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the **C1-GLATAAPEN** Algorithm. It

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				does not allow the submitter to approve or reject the GLAT request.
Deactivation Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- GL Accounting Template (Used for Viewing) on page 1929

This screen consists of the following zones:

- Search GL Accounting Template on page 1924
- GL Accounting Template Lines on page 1925

Copyright © 2024, Oracle and/or its affiliates.

Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: • Draft • Approval In Progress • Deactivation Approval In Progress • Active • Inactive • Rejected	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template. **Note:** It has a link. On clicking the link, the **GL Accounting Template** screen appears where you can view the details of the respective template.
Description	Displays the description of process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

Note: By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears when you click the **Broadcast** (ᯤ) icon corresponding to the template in the **Search Results** section.

Searching for a GL Accounting Template

Copyright © 2024, Oracle and/or its affiliates.

Procedure

To search for a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
   The **GL Accounting Template** screen appears.
3. Enter the search criteria in the **Search GL Accounting Template** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of templates that meet the search criteria appears in the **Search Results** section.

Creating a GL Accounting Template

Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

Procedure

To create a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
   The **GL Accounting Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

   The **GL Accounting Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments.**
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** -Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

4. Enter the required details

Copyright © 2024, Oracle and/or its affiliates.

> **Note:**
>
> You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.
>
> At least one credit and one debit line is required while defining a template.
>
> System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.
>
> Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.
6. Click **Save**.
   The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

Viewing the GL Accounting Template Details

Procedure

To view the details of a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to view.

   The **GL Accounting Template** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the template. It contains the following zone:
     - **GL Accounting Template** - Displays the details of the template.
   - **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
     - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.
3. View the details of the template in the **GL Accounting Template** zone.

Viewing the GL Accounting Template Lines Details

Procedure

To view the details of a GL Accounting Template Lines:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the **Broadcast** (((•))) icon corresponding to the template in the **Search *R*esults** section.

   The **GL Accounting Template Lines** zone appears in the **GL Accounting Template** screen.
3. View the details of the template lines in the **GL Accounting Template Lines** zone.

Related Topics

GL Accounting Template (Used for Viewing)

Once you create a template, the **GL Accounting Template** screen allows you to:

- View the details of a template
- Edit the details of a template
- Delete a template
- Submit a template for approval
- Approve or reject a template
- Deactivate a template

This screen consists of the following tabs:

- **Main** - Displays information about the template. It contains the following zone:
  - **GL Accounting Template** - Displays the details of the template.
- **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

GL Accounting Template - Main

The **Main** tab on the **GL Accounting Template** contains the following zone:

GL Accounting Template on page 1929

GL Accounting Template

The **GL Accounting Template** zone displays the details of the template. This zone contains the following sections:

- **Main** - This section provides basic information about the GL Accounting template. It contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
GL Accounting Template Information	Displays information about the template
Status	Indicates the status of the template.
Process	Displays the process.
Description	Displays the description of the process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- **GL Accounting Template Lines** - Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.
	Note: The **Edit** button appears when the template is in the **Draft** or **Rejected** status.
Delete	Used to delete the template.
	Note: The **Delete** button appears when the template is in the **Draft** or **Rejected** status.
Submit	Used to activate the template.
	Note: The **Submit** button appears when the template is in the **Draft** or **Rejected** status.
Approve	Used to approve the template.
	Note: the **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
Reject	Used to reject the template.

Copyright © 2024, Oracle and/or its affiliates.

Button Name	Button Description
	Note: the **Reject** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
Deactivate	Used to deactivate the active template.
	Note: The **Deactivate** button appears when the template is in the **Active** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

GL Accounting Template Log on page 1931

GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

Editing a GL Accounting Template

Procedure

To edit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template whose details you want to edit.
   The **GL Accounting Template** screen for editing appears.
3. Click the **Edit** button in the **GL Accounting Template** zone.

Note: The **Edit** button appears when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments.**
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** - Used to specify the template lines in a GL accounting template. This section contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

Note:

If you want to specify more than one template lines, click the **Add** (+) icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete** (🗑) icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.
5. Click **Save**.
   The changes made to the GL Accounting template are saved.

Deleting a GL Accounting Template

Procedure

To delete a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template that you want to delete.
   The **GL Accounting Template** screen appears.
3. Click the **Delete** button in the **GL Accounting Template** zone.
   A message appears confirming whether you want to delete the template.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** The **Delete** button appears when the template is in the **Draft** or **Rejected** status.

4. Click **OK**.
   The GL Accounting template is deleted.

> **Note:**
>
> You can delete a template when its status is **Draft**.

Submitting a GL Accounting Template

Prerequisites

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

Procedure

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template that you want to submit.
   The **GL Accounting Template** screen appears.
3. Click the **Submit** button in the **GL Accounting Template** zone.
   The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the **C1-GLATSUB** algorithm.	A To Do of the **C1-GLAT** To Do type is created and sent to the approver and the status of the template is changed to **Approval In Progress**.
Approval Required Flag is set to No in the **C1-GLATSUB** algorithm.	The template is created using the specified process and the status of the template is changed to **Active** .

> **Note:**
>
> The **Submit** button appears when the template is in the **Draft** or **Rejected** status.

Approving a GL Accounting Template

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

Note: The system will not allow you to approve or reject a template submitted by you.

Procedure

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the GL Accounting template screen	**a.** Search for the template in the **GL Accounting template** screen. **b.** In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template which you want to review.
Approve a GL Accounting Template from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-GLAT** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the GL Accounting template that you want to review.

   The **GL Accounting Template** screen appears.
2. Review the template details.
3. Click the **Approve** button in the **GL Accounting Template** zone.

   The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to **Active** as specified in the GL Accounting template.

Copyright © 2024, Oracle and/or its affiliates.

Note: The **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

Rejecting a GL Accounting Template

Prerequisites

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

Procedure

To reject a GL Accounting template

1. Do either of the following:

If you want to	Then
Reject a GL Accounting template through the GL Accounting Template screen	**a.** Search for the template in the **GL Accounting Template** screen. **b.** In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template which you want to review.
Reject a GL Accounting template from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-GLAT** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos.

Copyright © 2024, Oracle and/or its affiliates.

If you want to	Then
	f. Click the link in the **Message** column corresponding to the To Do of the template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Reject** button in the **GL Accounting Template** zone.

The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes
Comments	Used to specify additional information while rejecting the template.	No

Note: The **Reject** button appears when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the template is changed to **Rejected**.

Deactivating a GL Accounting Template

Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

Note:

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

Procedure

To deactivate a GL Accounting template:

Copyright © 2024, Oracle and/or its affiliates.

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template that you want to deactivate.
   The **GL Accounting Template** screen appears.
3. Click the **Deactivate** button in the **GL Accounting Template** zone.

   Note: The **Deactivate** button appears when the template is in the **Active** status.

   The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments for the deactivation of template.	No

4. Click **OK**.
   The GL Accounting template status is changed to **Deactivation Approval In Progress** .

Accrual

Topics:

- Accrual Created through UI (Without Approval) Status Transition
- Accrual Created through UI (With Approval) Status Transition
- Accrual Created through Batch (Without Approval) Status Transition
- Accrual Created through Batch (With Approval) Status Transition
- Accrual Processes
- Accrual Cycle (Used for Searching)
- Accrual Cycle (Used for Viewing)
- Accrual Type (Used for Searching)
- Accrual Type (Used for Viewing)
- Accrual (Used for Searching)
- Accrual (Used for Viewing)

Oracle Revenue Management and Billing enables you to calculate and create accrual for accounts. An accrual allows an entity to record expenses and revenues for which it expects to expend cash or receive cash, respectively, in a future reporting period.

The accrual is an adjustment which is created for the following:

- Revenues that have been earned but are not yet recorded in the books of accounts.
- Expenses that have been incurred but are not yet recorded in the book of accounts.

The system also enables you to reverse the accrual for accounts. You need to define whether the accounts belonging to a division are eligible for accrual or not. If a division is eligible for accrual, by default, all accounts belonging to the division are eligible for accrual. However, you can exclude an account from accrual, if required. To enable the accruals feature, you need to define the following:

- **Accrual Cycle** - You must specify the following information in the accrual cycle:
  - Dates when accrual should be calculated and created for the accounts where the accrual cycle is defined.
  - Accrual reversal period for each accrual date.

  If a division is eligible for accrual, you need to specify the accrual cycle for the division. By default, all accounts belonging to a division will inherit the accrual cycle of the division. However, you can override the accrual cycle of an account
- **Accrual Type** - You must specify the following information in the accrual type:
  - Type of the accrual object that you want to create for posting the accrual amount. At present, the product enables you to create adjustments to record accruals for accounts in the system.
  - Whether you want to calculate the accrual based on the historical or actual data. If you want to calculate the accrual based on the historical data, you need to specify the number of historical bills that you want to consider for accrual calculation. The system will only consider the completed historical bills during accrual calculation. Besides specifying the historical bill count, you also need to specify the type of day (i.e. Business Day or Calendar Day) which is used to calculate the accrual amount. However, if you want to calculate the accrual based on the actual data, you need to specify whether trial bill or unbilled pass through billable charges created through the Transaction Feed Management process should be considered to calculate the accrual amount.

- Whether you want to calculate accrual at the bill or bill segment level.
- Cancel reason that you want to use while reversing the accrual
- Algorithms that you want to use during the accrual calculation, creation, and reversal
- Whether any objects, such as adjustments created using a particular adjustment type, bill segments created for a particular price item, or adjustments' or bill segments' financial transactions where a particular distribution code is used, must be excluded during the accrual calculation.
- Divisions to which you want to associate the accrual type.

The accrual process includes the following sub-processes:

- **Accrual Calculation** - In this process, accounts that are eligible for accrual will have its accrual amount calculated on the basis of the accrual type configuration.
- **Accrual Creation** - In this process, on the basis of the calculated accrual amount and information configured on the accrual type, the accrual adjustment will be created.
- **Accrual Reversal** - In this process, reversal of accrual adjustments will be done to prevent double posting of revenue, once billing is done. On the basis of the accrual reversal schedule, an account with accrual adjustments will be selected for accrual reversal processing. For every frozen adjustment, a cancellation is done in order to reverse journal entries.

During the accrual process, an accrual goes through various statuses in its lifecycle. You can execute accrual process either using user interface (UI), or batch. For more information about the accrual statuses, see, Accrual Created through UI (Without Approval) Status Transition on page 1943, Accrual Created through UI (With Approval) Status Transition on page 1943, Accrual Created through Batch (Without Approval) Status Transition on page 1944, and Accrual Created through Batch (With Approval) Status Transition on page 1945

Note that the lifecycle of an accrual is driven by the business object using which the accrual is created. An accrual business object named **C1_ACCRUALS** is shipped with the product. The accrual feature explained in this document is articulated based on the lifecycle and logic defined in the **C1_ACCRUALS** business object.

Accrual Processes

An accrual allows an entity to record expenses and revenues for which it expects to expend cash or receive cash, respectively, in a future reporting period. Following are the accrual processes to implement accrual in the application:

- Account's Eligibility Check for Accrual on page 1947
- Accrual Calculation on page 1947
- Accrual Creation on page 1948
- Accrual Reversal on page 1949

Copyright © 2024, Oracle and/or its affiliates.

Account's Eligibility Check for Accrual

The accrual eligibility process checks a number of account attributes to ensure that the accounts are eligible for accrual. The following table lists the internal process that identifies an account's eligibility for accrual. There will be a switch/ indicator in the division and account levels that captures the information as given below:

Division Accrual (Yes/ No)	Account Accrual (Yes/ No)	Eligibility for Accrual (Yes/No)	Description
Yes	No	No	Account has the highest priority over division.
Yes	Blank	Yes	Division has the highest priority in the absence of account information.
Yes	Yes	Yes	Account has the highest priority over division.
No	Yes	No	If the division is set to no, ignore the account level switch.
No	No	No	If the division is set to no, ignore the account level switch.
No	Blank	No	If the division is set to no, ignore the account level switch.

Following accounts are considered for accrual eligibility:

1. The Invoicing Group's (IG) Master Account is the only account which is eligible for accrual.
2. The Invoice Construct Usage Account is not eligible for accrual.
3. You can only process the accrual eligible accounts for calculation purposes.

Accrual Calculation

The accrual calculation process calculates the accrual amount of only those accounts that are eligible for accrual. Depending upon the accrual type of those eligible accounts, an algorithm is created to calculate the accrual amount that is based on the following parameters:

- Calculate Accrual at the Bill Level Based on Historical Data on page 1947
- Calculate Accrual at the Price Item Level Based on Historical Data on page 1948
- Calculate Accrual at the Bill Level Based on Actual Data on page 1948
- Calculate Accrual at the Price Item Level Based on Actual Data on page 1948

Note: By default, all the adjustments (for bill level and bill segment level) are included in the accrual calculation. However, some adjustments from the calculation lines are excluded, through the look up references provided in the application.

Calculate Accrual at the Bill Level Based on Historical Data

The accounts eligible for accrual have their accrual amount calculated at the bill level based on the historical data. The number of historical bills to be considered for accrual calculation is based on the value configured in the accrual type of the eligible account.

For example, if there are two historical bills, the system considers the last two completed bills for accrual calculation. The accrual amount is the average of the bill segments and frozen adjustments on the last two bills. If the option from the Type of Day field is set as Business Day, the system does not consider the weekends and holidays during the accrual calculation. However, if the option from the Type of Day field is set as Calendar Day, the system considers the weekends and holidays during the accrual calculation.

Copyright © 2024, Oracle and/or its affiliates.

Calculate Accrual at the Price Item Level Based on Historical Data

The accounts eligible for accrual have their accrual amount calculated at the price item level based on the historical data. The number of historical bills to be considered for accrual calculation is based on the value configured in the accrual type of the eligible account.

For example, if there are two historical bills, then the system considers the last two completed bills for accrual calculation. The accrual amount is the average of price items on the last two bills. If the option from the **Type of Day** field is set as **Business Day**, the system does not consider the weekends and holidays during the accrual calculation. However, if the option from the **Type of Day** is set as **Calendar Day**, the system considers the weekends and holidays during the accrual calculation.

Calculate Accrual at the Bill Level Based on Actual Data

The accounts eligible for accrual have their accrual amount calculated at the bill level based on the actual data. The actual data can be sourced from a trial bill or rated Transaction Feed Management transaction. The accrual source to be considered is based on the value configured in the accrual type of the account.

Following scenarios indicate how the accrual amount is calculated:

- If the accrual source is transaction feed and accrual amount is calculated at bill level; the accrual amount is the sum of unbilled pass through billable charges created for the account either manually or automatically through the Transaction Feed Management process and frozen adjustments of the account.
- If the accrual source is transaction feed and accrual amount is calculated at bill segment level; the accrual amount is the sum of unbilled pass through billable charges created for the account automatically through the Transaction Feed Management process.

Calculate Accrual at the Price Item Level Based on Actual Data

The accounts eligible for accrual have their accrual amount calculated at the price item level based on the actual data. The actual data can be sourced from a trial bill or rated Transaction Feed Management transaction. The accrual source to be considered is based on the value configured in the accrual type of the account.

Following scenarios indicate how the accrual amount is calculated:

- If the accrual source is trial bill and accrual amount is calculated at bill level; the accrual amount is the sum of price items and frozen adjustments on the latest trial bill.
- If the accrual source is trial bill and accrual amount is calculated at price item level; the accrual amount is the sum of price items on the latest trial bill.

Accrual Creation

The accrual creation takes place based on the calculated accrual amount and accrual type information which is used to create an accrual adjustment. You can create the adjustments for accruals through the **C1_ACCRE** batch process. The accruals which are either in the **Ready for Accrual** or **Processed** status are considered in this batch process. Based on the adjustment type defined in the accrual type, the system accordingly creates the accrual adjustment for the account. The status of the accrual is changed to **Accrued**.

Note:

For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

The system also enables you to manually create the accrual for an account. You can optionally configure the approval workflow process for accruals. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. The debit approval hierarchy is used for approving the accrual. You can define an approval hierarchy where users with different To Do role at each level can approve or reject the accrual. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the accrual, the status of the accrual is changed to **Processed**. However, if an approver at any level in the hierarchy rejects the accrual, the status of the accrual is changed to **Rejected**.

Copyright © 2024, Oracle and/or its affiliates.

Accrual Reversal

The reversal of accrual adjustments is done to prevent double posting of revenue, once the billing is done. On the basis of the accrual reversal schedule, an account with accrual adjustments is selected for the accrual reversal processing. For every frozen adjustment, a cancellation is done in order to reverse journal entries.

You can reverse the accrual through the **C1_ACREV** batch process. On reversing the accrual, the accrual adjustments are cancelled and the status of the accrual is changed to **Reversed**.

Note: For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Accrual Cycle (Used for Searching)

The **Accrual Cycle** screen allows you to search for an accrual cycle using various search criteria. It also allows you to define an accrual cycle. It contains the following zone:

- Search Accrual Cycle on page 1949

Search Accrual Cycle

The **Search Accrual Cycle** zone allows you to search for an accrual cycle using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Cycle	Used to search a particular accrual cycle.	No
Description	Used to search an accrual cycles with a particular description.	No

Note: You must specify at least one search criterion while searching for an accrual cycle.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Accrual Cycle	Displays the name of accrual cycle.
Accrual Cycle Information	Displays information about the accrual cycle.
	Note: It has a link. On clicking the link, the **Accrual Cycle** screen appears where you can view the details of the respective accrual cycle.

Searching for an Accrual Cycle

Prerequisites

To search for an accrual cycle, you should have:

- Accrual cycles defined in the application

Procedure

To search for an accrual cycle:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **A** and then click **Accrual Cycle**.
   The **Accrual Cycle** screen appears.
3. Enter the search criteria in the **Search Accrual Cycle** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of accrual cycles that meet the search criteria appear in the **Search Results** section.

Viewing the Accrual Cycle Details

Procedure

To view the details of an accrual cycle:

1. Search for an accrual cycle in the **Accrual Cycle** screen.
2. In the **Search Results** section, click the link in the **Accrual Cycle Information** column corresponding to the *a*ccrual cycle whose details you want to view.

   The **Accrual Cycle** screen appears.
3. View the details of the accrual cycle in the **Accrual Cycle** zone.

Defining an Accrual Cycle

Prerequisites

To define an accrual cycle, you should have:

- Accrual business object defined in the application.

Procedure

To define an accrual cycle:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **A** and then click **Accrual Cycle**.
   The **Accrual Cycle** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Accrual Cycle** screen.

   The **Accrual Cycle** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the accrual cycle.
   - **Schedule Periods** - Used to specify the schedule period of an accrual cycle for which the accrual is calculated.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Cycle	Used to specify the accrual cycle.	Yes
Description	Used to specify the description for the accrual cycle.	Yes

4. Enter the required details in the **Main** section.
5. Add the schedule periods for the accrual cycle.
6. Click **Save**.
   The accrual cycle is defined.

Adding a Schedule Period in an Accrual Cycle

Prerequisites

To add a schedule period in an accrual cycle, you should have:

- Accrual cycles (in which you want to add a schedule period) defined in the application

Procedure

To add a schedule period in an accrual cycle:

Copyright © 2024, Oracle and/or its affiliates.

1. Ensure that the **Schedule Periods** section is expanded when you are defining or editing an accrual cycle.

   The **Schedule Periods** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Date	Used to specify the date from when the accrual creation process for an applicable account is initiated.	Yes
Reversal Start Date	Used to specify the date from when the accrual reversal process starts. **Note:** The **Reversal Start Date** must be later than the **Accrual Date**. The **Reversal Start Date** cannot be later than the **Reversal End Date**.	Yes
Reversal End Date	Used to specify the date till when the accrual reversal process ends. **Note:** The **Reversal End Date** cannot be earlier than the **Reversal Start Date**.	Yes

2. Enter the required details in the **Schedule Periods** section.
3. If you want to add more than one schedule period in an accrual cycle, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a schedule period from an accrual cycle, click the **Delete** (🗑) icon corresponding to the **Accrual Date** field.

4. Click **Save**.
   The schedule period is added in the accrual cycle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Cycle	Used to specify the accrual cycle.	Yes
Description	Used to specify the description for the accrual cycle.	Yes

4. Modify the required details in the **Main** section.
5. Add, edit, or remove the schedule period information from the accrual cycle.
6. Click **Save**.
   The changes made to the accrual cycle are saved.

Note: You can edit an accrual cycle only when the accrual cycle is not referenced to an accrual type for creating an accrual.

Accrual Type (Used for Searching)

The **Accrual Type** screen allows you to search for an accrual type using various search criteria. It also allows you to define an accrual type. t contains the following zone:

- Search Accrual Type on page 1955

Search Accrual Type

The **Search Accrual Type** zone allows you to search an accrual type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type	Used to search a particular accrual type.	No
Description	Used to search accrual types having a particular description.	No
Accrual Criteria	Used to search accrual types which are created to calculate accruals based on a particular bill criteria. The valid values are: • **Actual** - Used to search accrual types which are created to calculate accruals based on the actual bill data. • **Historical** - Used to search accrual types which are created to calculate accruals based on the historical bill data.	No
Posting Method	Used to search accrual types which are created to calculate accruals at a particular level. The valid values are: • **Bill Level** - Used to search accrual types which are created to accrue the bill segments and adjustments of bills at the bill level. • **Bill Distribution Code Level** - Used to search accrual types which are created to accrue the bill segments and adjustments of bills at the distribution code level. • **Price Item Level** - Used to search accrual types which are created to accrue the bill segments and adjustments of bills at the price item level. • **Price Item Distribution Code Level** - Used to search accrual types which are created to accrue the bill segments of a particular price item at the distribution code level.	No
Division	Used to search accrual types which are associated to a particular division. **Note:** You can only view those divisions to which you have access in the **Division** list.	No

Copyright © 2024, Oracle and/or its affiliates.

Note: You must specify at least one search criterion while searching for an accrual type.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Accrual Type	Displays the accrual type.
Accrual Type Information	Displays information about the accrual type.
	Note: It has a link. On clicking the link, the **Accrual Type** screen appears where you can view the details of the respective accrual type.
Accrual Criteria	Indicates the bill criteria which is used to calculate the accrual.
Posting Method	Indicates the bill level at which the accrual is calculated.
Type of Day	Indicates the type of day which is used as a reference for calculating the accruals.
Division	Indicates the division to which the accrual type is associated.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Defining an Accrual Type

Prerequisites

To define an accrual type, you should have:

- Accrual type business object defined in the application.
- Accrual business object defined in the application.
- Adjustment types defined in the application (where the **Print by Default** and **Influence Next Bill Balance** check box is not selected).

Procedure

To define an accrual type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **A** and then click **Accrual Type**.
   The **Accrual Type** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Accrual Type** screen.

   The **Accrual Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the accrual type.
   - **Algorithms** - Used to associate algorithms with the accrual type.
   - **Objects to Exclude** - Used to specify the entities that you want to exclude while accrual calculation.
   - **Divisions** - Used to specify the divisions to which the accrual type can be associated.
   - **Characteristics** - Used to define a list of characteristics for the accrual type.

Copyright © 2024, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type	Used to specify the accrual type.	Yes
Description	Used to specify the description for the accrual type.	Yes
Accrual Object	Used to indicate the type of accrual object that you want to create while posting the accrual details. The valid values are: • Adjustment • Custom **Note:** At present, you can only create adjustments to record the accruals for the accounts in the application.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created while posting the accrual details.. **Note:** The **Search** (🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field. The **Adjustment Type** field appears only when you select the **Adjustment** option from the **Accrual Object** field.	No
Accrual Criteria	Used to indicate the bill criteria using which you want to calculate the accrual. The valid values are: • **Actual** - Used to indicate whether you want to calculate accruals based on the actual bill data. • **Historical** - Used to indicate whether you want to calculate accruals based on the historical bill data.	Yes
Accrual Source	Used to indicate the source of data that you want to use for calculating the accruals that are based on the actual data. The valid values are: • Transaction Feed • Trial Bill	Yes (Conditional) **Note:** This field is required for calculating accruals using the actual data.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you select the **Actual** option from the **Accrual Criteria** field.	
Historical Bill Count	Used to specify the number of historical bills that you want to consider for calculating the accrual. **Note:** This field appears only when you select the **Historical** option from the **Accrual Criteria** field.	Yes (Conditional) **Note:** This field is required for calculating accruals using the historical data.
Accrual Request Business Object	Used to indicate the business object using which you want to create the accrual request. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. On specifying the business object, the description of the business object appears corresponding to the **Accrual Request Business Object** field.	Yes
Approval Required	Used to indicate whether approval is required for the accruals which are created using the accrual type.	No
Approval Profile	Used to indicate the approval profile which you want to use for approving the accruals which are created using the accrual type. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the accruals.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required for the accruals which are created using the accrual type. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for specifying the hierarchy using which you want to approve the accruals.
Submitter To Do Type	Used to indicate the To Do task assigned to the To Do type for the approver who can resubmitting the accrual for approval	Yes (Conditional) **Note:** This field is required for approving the accruals.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the submitter To Do type, the description of the submitter To Do type appears corresponding to the **Submitter To Do Type** field. The **Submitter To Do Type** field appears only when the **Approval Required** check box is selected.	
Submitter To Do Role	Used to indicate the To Do role of the approver who can resubmit the accrual for approval. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the accruals.
Type of Day	Used to indicate the type of day for which you want to calculate the accrual amount. • Business Day • Calendar Day **Note:** If the **Business Day** option is selected, the system calculates the accrual amount using the following formula: Accrual amount = (Sum of resulting bill amount / Total number of business days from previous bills) * Number of business days for the current billing cycle. If the **Calendar Day** option is selected, the system calculates the accrual amount using the following formula: Accrual amount = (Sum of bill amount / Total number of calendar days of previous bills) * Number of calendar days for the current billing cycle.	Yes
Posting Method	Used to indicate the level at which you want to calculate the accruals. The valid values are: • **Bill Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the bill level. • **Bill Distribution Code Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the distribution code level.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Price Item Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the price item level. • **Price Item Distribution Code Level** - Used to indicate that the accrual is created to calculate the bill segments of a particular price item at the distribution code level.	
Proration Required	Used to indicate whether you want to prorate the accrual amount for the trail bills and historical bill segments for the recurring and non-recurring charges using different posting methods. It is calculated using the below formula: Expected accrual amount for each price item = (Sum of resulting bill segment amount / Total number of days) * Number of days in the accrual cycle **Note:** This field appears in the following scenarios: • When the **Actual** and the **Trial Bill** options are selected from the **Accrual Criteria** and the **Accrual Source** fields respectively. • When the **Historical** option is selected from the **Accrual Criteria** field.	No
Calculation Lines Required	Used to indicate whether you want to view the bill segments and adjustments which are used for calculating the accrual amount.	No

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:
You can view the accrual calculation lines in the Accrual screen only when the following conditions are satisfied:
• Accrual is created using the batch process and not manually from the user interface.
• Accrual is created using an accrual type with either of the following combinations:
<table><tr><th>Accrual Criteria</th><th>Accrual Source</th><th>Posting Method</th></tr><tr><td>Historical</td><td>-</td><td>Bill Level</td></tr><tr><td>Historical</td><td>-</td><td>Price Item Level</td></tr><tr><td>Actual</td><td>Trial Bill</td><td>Bill Level</td></tr><tr><td>Actual</td><td>Trial Bill</td><td>Price Item Level</td></tr></table>• When the Do you want to insert detail level calculation? parameter in the Accrual Calculation (C1_ACCR_CAL) algorithm is set to Y.
The Calculation Lines Required check box is by default selected and cannot be unchecked if you select the Bill Distribution Code Level or the Price Item Distribution Code Level option from the Posting Method field.</td><td></td></tr>
<tr><td>Price Item Accrual Criteria Required</td><td>Used to indicate whether accrual criteria is required for calculating accrual at the price item level.</td><td>No</td></tr>
<tr><td>Cancel Reason</td><td>Used to indicate the cancel reason that you want to use while reversing the accrual. The valid values are:
• Broken Payment Arrangement
• Credit Note
• Enter
Note: The list includes only those values which are specified in the ACCR_CAN_RSN_CD lookup field.</td><td>No</td></tr>
<tr><td>Contract Type</td><td>Used to indicate the contract type whose contract exists on the accounts.</td><td>Yes</td></tr>
</table>

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears where you can select the required contract type.	
Applicable for Account	Used to indicate whether the **Accrual Type** is used to calculate accruals at the account level.	Yes (Conditional)
	Note: If you do not select the **Applicable for Account** check box, the system will consider the accrual type to calculate accruals at the division level.	**Note:** This field is required for indicating the accrual type can be associated to an account and not the division for calculating accruals.

4. Enter the required details in the **Main** section.
5. Associate algorithms with the accrual type in the **Algorithms** section, if required.
6. Exclude the entities which are not required for calculating the accrual using the accrual type in the **Objects to Exclude** section, if required.
7. Associate a list of divisions to which you want to associate the accrual type in the **Divisions** section, if required.
8. Define a list of characteristics for the accrual type in the **Characteristics** section, if required.
9. Click **Save**.
   The accrual type is defined.

Associating an Algorithm with an Accrual Type

Prerequisites

To associate an algorithm with an accrual type, you should have:

- System events defined in the application
- Algorithms defined for the system events

Procedure

To associate an algorithm with an accrual type:

Copyright © 2024, Oracle and/or its affiliates.

1. Ensure that the **Algorithms** section is expanded in the **Accrual Type** screen when you are defining, editing, or copying an **Accrual Type**.
   The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for which the algorithm is executed. The valid values are: • **Accrual Calculation** - Used to attach an algorithm which is triggered for calculating an accrual. • **Accrual Creation** - Used to attach an algorithm which is triggered for creating an accrual request. • **Accrual Eligibility** - Used to attach an algorithm which is triggered to verify the eligibility of the accrual. • **Accrual Post Calculation** - Used to attach an algorithm which is triggered for undertaking the post calculation activities for the accrual amount. • **Accrual Post Processing** - Used to attach an algorithm which is triggered for undertaking some postprocessing activities on the accrual amount. • **Accrual Pre Processing** - Used to attach an algorithm which is triggered for undertaking some preprocessing activities on the accrual amount. • **Accrual Reversal** - Used to attach an algorithm which is triggered for the accrual reversal process. • **Accrual Reversal Post Processing** - Used to attach an algorithm which is triggered for undertaking some postprocessing activities on the accrual reversal process. • **Accrual Reversal Pre Processing** - Used to attach an algorithm which is triggered for undertaking some preprocessing activities on the accrual reversal process.	Yes (Conditional) **Note:** This field is required while associating an algorithm with the accrual type.
Sequence	Used to specify the order in which the algorithms with the same system event must be executed.	Yes (Conditional) **Note:** This field is required while associating an algorithm with the accrual type.
Algorithm	Used to specify the algorithm that you want to execute on the system event.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	**Note:** This field is required while associating an algorithm with the accrual type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm to the accrual type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to disassociate an algorithm from the accrual type, click the **Delete** (🗑) icon corresponding to the algorithm.

4. Click **Save**.
   The algorithm is associated with an accrual type.

Excluding an Entity from an Accrual Type

Procedure

To exclude an entity from an accrual type:

1. Ensure that the **Objects To Exclude** section is expanded in the **Accrual Type** screen when you are defining, editing, or copying an **Accrual Type**.
   The **Objects To Exclude** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Entity Type	Used to indicate the type of entity. The valid values are: • Adjustment Type • Distribution Code • Price Item	Yes (Conditional) **Note:** This field is required while excluding an entity from the accrual type.
Sequence	Used to specify the order in which the entities must be excluded from the accrual type.	Yes (Conditional) **Note:** This field is required while excluding an entity from the accrual type.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Entity	Used to indicate the value for the selected entity type. **Note:** On selecting a predefined entity type, the **Search** (🔍) icon appears corresponding to the **Entity** field. On clicking the **Search** (🔍) icon, you can search for a predefined entity value. On specifying the entity, the description of the entity appears corresponding to the **Entity** field. By default, the **Entity** field is disabled. It is enabled only when you select a predefined entity type from the **Entity Type** field.	Yes (Conditional) **Note:** This field is required while excluding an entity from the accrual type.

2. Enter the required details in the **Objects To Exclude** section.
3. If you want to exclude more than one entity from the accrual type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove an excluded entity from the accrual type, click the **Delete** (🗑) icon corresponding to the entity.

4. Click **Save**.
   The entity is excluded from the accrual type.

Associating a Division with an Accrual Type

Prerequisites

To associate a division with an accrual type, you should have:

- Divisions defined in the application.

Procedure

To associate a division with an accrual type:

1. Ensure that the **Divisions** section is expanded in the **Accrual Type** screen when you are defining, editing, or copying an **Accrual Type**.
   The **Divisions** section contains the following fields in a grid:

Fields Name	Fields Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the accrual type is effective for the division.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Fields Name	Fields Description	Mandatory (Yes or No)
		Note: This field is required while associating a division with an accrual type.
Division	Used to indicate division to which you want to associate the accrual type.	Yes (Conditional) **Note:** This field is required while associating a division with an accrual type.

2. Enter the required details in the **Divisions** section.
3. If you want to associate more than one division with the accrual type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate a division from the accrual type, click the **Delete** (🗑) icon corresponding to the division.

4. Click **Save**.
   The division is associated with the accrual type.

Accrual Type (Used for Viewing)

The **Accrual Type** screen allows you to view the details of an accrual type. It also allows you to define, edit, copy, or delete an accrual type. It contains the following zone:

- Accrual Type on page 1967

Accrual Type

The **Accrual Type** zone displays the details of an accrual type. It contains the following sections:

- **Main** - Displays basic information about the accrual type. It contains the following fields:

Field Name	Field Description
Accrual Type	Displays the accrual type.
Description	Displays the description of the accrual type.
Accrual Object	Indicates the type of accrual object that you want to create while posting the accrual details. The valid values are: • Adjustment • Custom
Adjustment Type	Indicates the adjustment type using which the adjustment must be created while posting the accrual details.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Accrual Criteria	Indicates the bill criteria using which you want to calculate the accrual. The valid values are: • **Actual** - Indicates whether you want to calculate accruals based on the actual bill data. • **Historical** - Indicates whether you want to calculate accruals based on the historical bill data.
Accrual Source	Indicates the source of data that you want to use for calculating the accruals that are based on the actual data. The valid values are: • Transaction Feed • Trial Bill
Historical Bill Count	Displays the number of historical bills that you want to consider for calculating the accrual.
Accrual Request Business Object	Indicates the business object using which you want to create the accrual request.
Approval Required	Indicates whether approval is required for the accruals which are created using the accrual type.
Approval Profile	Indicates the approval profile which you want to use for approving the accruals which are created using the accrual type.
Hierarchical Approval	Indicates whether multi-level or single-level approval is required for the accruals which are created using the accrual type.
Submitter To Do Type	Indicates the To Do task assigned to the To Do type for the approver who can resubmitting the accrual for approval
Submitter To Do Role	Indicates the To Do role of the approver who can resubmit the accrual for approval.
Type of Day	Indicates the type of day for which you want to calculate the accrual amount. • Business Day • Calendar Day
Posting Method	Indicates the level at which you want to calculate the accruals. The valid values are: • **Bill Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the bill level. • **Bill Distribution Code Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the distribution code level. • **Price Item Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the price item level. • **Price Item Distribution Code Level** - Indicates that the accrual is created to calculate the bill segments of a particular price item at the distribution code level.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Proration Required	Indicates whether you want to prorate the accrual amount for the trail bills which have recurring bill segments.
Calculation Lines Required	Indicates whether you want to view the bill segments and adjustments which are used for calculating the accrual amount.
Price Item Accrual Criteria Required	Indicates whether accrual criteria is required for calculating accrual at the price item level.
Cancel Reason	Indicates the cancel reason that you want to use while reversing the accrual. The valid values are: • Broken Payment Arrangement • Credit Note • Enter
Contract Type	Indicates the contract type whose contract exists on the accounts.
Applicable for Account	Indicates whether the **Accrual Type** is used to calculate accruals at the account level.

- **Algorithms** - Lists the algorithms that are associated with the accrual type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event for which the algorithm is executed. The valid values are: • **Accrual Calculation** - Used to indicate the algorithm which is triggered for calculating an accrual. • **Accrual Creation** - Used to indicate the algorithm which is triggered for creating an accrual request. • **Accrual Eligibility** - Used to indicate the algorithm which is triggered to verify the eligibility of the accrual. • **Accrual Post Calculation** - Used to indicate the algorithm which is triggered for undertaking the post calculation activities for the accrual amount. • **Accrual Post Processing** - Used to indicate the algorithm which is triggered for undertaking some postprocessing activities on the accrual amount. • **Accrual Pre Processing** - Used to indicate the algorithm which is triggered for undertaking some preprocessing activities on the accrual amount. • **Accrual Reversal** - Used to indicate the algorithm which is triggered for the accrual reversal process. • **Accrual Reversal Post Processing** - Used to indicate the algorithm which is triggered for undertaking some postprocessing activities on the accrual reversal process. • **Accrual Reversal Pre Processing** - Used to indicate the algorithm which is triggered for undertaking some preprocessing activities on the accrual reversal process.
Sequence	Displays the order in which the algorithms with the same system event must be executed.
Algorithm	Displays the algorithm that is executed on the system event.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.

- **Objects to Exclude** - Lists the entities that are excluded from the accrual type for calculating the accrual. It contains the following columns:

Column Name	Column Description
Entity Type	Indicates the type of entity. The valid values are: • Adjustment Type • Distribution Code • Price Item
Sequence	Displays the order in which the entities are excluded from the accrual type.
Entity	Indicates the value for the selected entity type.

- **Divisions** - Lists the divisions which are associated with the accrual type. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the accrual type is effective for the division.
Division	Indicates the division which you want to associate with the accrual type.

- **Characteristics** - Lists the characteristics of the accrual type. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the accrual type.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the accrual type.
Delete	Used to delete the accrual type.
Duplicate	Used to create a new accrual type using an existing accrual type.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the accrual type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Editing an Accrual Type

Prerequisites

To edit an accrual type, you should have:

- Accrual type business object defined in the application.
- Accrual business object defined in the application.
- Adjustment types defined in the application (where the **Print by Default** and **Influence Next Bill Balance** check box is not selected).

Procedure

To edit an accrual type:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the *a*ccrual type whose details you want to edit.
   The **Accrual Type** screen appears.
3. Click the **Edit** button in the **Accrual Type** zone.

   The **Accrual Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the accrual type.
   - **Algorithms** - Used to associate algorithms with the accrual type.
   - **Objects to Exclude** - Used to specify the entities that you want to exclude while accrual calculation.
   - **Divisions** - Used to specify the divisions to which the accrual type can be associated.
   - **Characteristics** - Used to define a list of characteristics for the accrual type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type	Used to specify the accrual type.	Not applicable
Description	Used to specify the description for the accrual type.	Yes
Accrual Object	Used to indicate the type of accrual object that you want to create while posting the accrual details. The valid values are: • Adjustment • Custom **Note:** At present, you can only create adjustments to record the accruals for the accounts in the application.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created while posting the accrual details.. **Note:** The **Search** (🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field. The **Adjustment Type** field appears only when you select the **Adjustment** option from the **Accrual Object** field.	No
Accrual Criteria	Used to indicate the bill criteria using which you want to calculate the accrual. The valid values are: • **Actual** - Used to indicate whether you want to calculate accruals based on the actual bill data. • **Historical** - Used to indicate whether you want to calculate accruals based on the historical bill data.	Yes
Accrual Source	Used to indicate the source of data that you want to use for calculating the accruals that are based on the actual data. The valid values are: • Transaction Feed • Trial Bill **Note:** This field appears only when you select the **Actual** option from the **Accrual Criteria** field.	Yes (Conditional) **Note:** This field is required for calculating accruals using the actual data.
Historical Bill Count	Used to specify the number of historical bills that you want to consider for calculating the accrual. **Note:** This field appears only when you select the **Historical** option from the **Accrual Criteria** field.	Yes (Conditional) **Note:** This field is required for calculating accruals using the historical data.
Accrual Request Business Object	Used to indicate the business object using which you want to create the accrual request.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. On specifying the business object, the description of the business object appears corresponding to the **Accrual Request Business Object** field.	
Approval Required	Used to indicate whether approval is required for the accruals which are created using the accrual type.	No
Approval Profile	Used to indicate the approval profile which you want to use for approving the accruals which are created using the accrual type. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the accruals.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required for the accruals which are created using the accrual type. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for specifying the hierarchy using which you want to approve the accruals.
Submitter To Do Type	Used to indicate the To Do task assigned to the To Do type for the approver who can resubmitting the accrual for approval **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the submitter To Do type, the description of the submitter To Do type appears corresponding to the **Submitter To Do Type** field. The **Submitter To Do Type** field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the accruals.
Submitter To Do Role	Used to indicate the To Do role of the approver who can resubmit the accrual for approval. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the accruals.
Type of Day	Used to indicate the type of day for which you want to calculate the accrual amount.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Business Day • Calendar Day **Note:** If the **Business Day** option is selected, the system calculates the accrual amount using the following formula: Accrual amount = (Sum of resulting bill amount / Total number of business days from previous bills) * Number of business days for the current billing cycle. If the **Calendar Day** option is selected, the system calculates the accrual amount using the following formula: Accrual amount = (Sum of bill amount / Total number of calendar days of previous bills) * Number of calendar days for the current billing cycle.	
Posting Method	Used to indicate the level at which you want to calculate the accruals. The valid values are: • **Bill Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the bill level. • **Bill Distribution Code Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the distribution code level. • **Price Item Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the price item level. • **Price Item Distribution Code Level** - Used to indicate that the accrual is created to calculate the bill segments of a particular price item at the distribution code level.	Yes
Proration Required	Used to indicate whether you want to prorate the accrual amount for the trail bills and historical bill segments for the recurring and non-recurring charges using different posting methods. It is calculated using the below formula: Expected accrual amount for each price item = (Sum of resulting bill segment amount / Total number of days) * Number of days in the accrual cycle	No

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note: This field appears in the following scenarios:
When the Actual and the Trial Bill options are selected from the Accrual Criteria and the Accrual Source fields respectively.
When the Historical option is selected from the Accrual Criteria field.</td><td></td></tr>
<tr><td>Calculation Lines Required</td><td>Used to indicate whether you want to view the bill segments and adjustments which are used for calculating the accrual amount.
Note:
You can view the accrual calculation lines in the Accrual screen only when the following conditions are satisfied:
Accrual is created using the batch process and not manually from the user interface.
Accrual is created using an accrual type with either of the following combinations:<table><tr><th>Accrual Criteria</th><th>Accrual Source</th><th>Posting Method</th></tr><tr><td>Historical</td><td>-</td><td>Bill Level</td></tr><tr><td>Historical</td><td>-</td><td>Bill Segment Level</td></tr><tr><td>Actual</td><td>Trial Bill</td><td>Bill Level</td></tr><tr><td>Actual</td><td>Trial Bill</td><td>Bill Segment Level</td></tr></table>
When the Do you want to insert detail level calculation? parameter in the Accrual Calculation (C1_ACCR_CAL) algorithm is set to Y.

Field Name	Field Description	Mandatory (Yes or No)
	• Credit Note • Enter **Note:** The list includes only those values which are specified in the **ACCR_CAN_RSN_CD** lookup field.	
Contract Type	Used to indicate the contract type whose contract exists on the accounts. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears where you can select the required contract type.	Yes
Applicable for Account	Used to indicate whether the **Accrual Type** is used to calculate accruals at the account level. **Note:** If you do not select the **Applicable for Account** check box, the system will consider the accrual type to calculate accruals at the division level. This field is disabled when you are editing an account level accrual type (i.e. when the **Applicable for Account** field check box is selected).	Yes (Conditional) **Note:** This field is required for indicating the accrual type can be associated to an account and not the division for calculating accruals.

4. Modify the required details in the **Main** section.
5. Associate or disassociate algorithms from the accrual type.
6. Add, edit, or remove the excluded entities from the accrual type.
7. Associate or disassociate divisions from the accrual type.
8. Define, edit, or remove characteristics from the accrual type.
9. Click **Save**.
   The changes made to the accrual type are saved.

Note: You can edit an accrual type only when the accrual type is not yet used for creating an accrual.

Deleting an Accrual Type

Procedure

To delete an accrual type:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the *a*ccrual type that you want to delete.
   The **Accrual Type** screen appears.
3. Click the **Delete** button in the **Accrual Type** zone.
   A message appears confirming whether you want to delete the accrual type.
4. Click **OK**.
   An accrual type is deleted.

> **Note:** You can delete an accrual type only when the accrual type is not yet used for creating an accrual.

Copying an Accrual Type

Instead of creating an accrual type from scratch, you can create a new accrual type using an existing accrual type. This is possible through copying an accrual type. On copying an accrual type, the details including the algorithms, objects to exclude, divisions, and characteristics are copied to the new accrual type. You can then edit the details, if required.

Prerequisites

To copy an accrual type, you should have:

- Accrual type (whose copy you want to create) defined in the application
- Accrual type business object defined in the application.
- Accrual business object defined in the application.
- Adjustment types defined in the application (where the **Print by Default** and **Influence Next Bill Balance** check box is not selected).

Procedure

To copy an accrual type:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the *a*ccrual type whose copy you want to create.
   The **Accrual Type** screen appears.
3. Click the **Duplicate** button in the **Accrual Type** zone.

   The **Accrual Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the accrual type.

Copyright © 2024, Oracle and/or its affiliates.

- **Algorithms** - Used to associate algorithms with the accrual type.
- **Objects to Exclude** - Used to specify the entities that you want to exclude while accrual calculation.
- **Divisions** - Used to specify the divisions to which the accrual type can be associated.
- **Characteristics** - Used to define a list of characteristics for the accrual type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type	Used to specify the accrual type.	Yes
Description	Used to specify the description for the accrual type.	Yes
Accrual Object	Used to indicate the type of accrual object that you want to create while posting the accrual details. The valid values are: • Adjustment • Custom **Note:** At present, you can only create adjustments to record the accruals for the accounts in the application.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created while posting the accrual details.. **Note:** The **Search** (🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field. The **Adjustment Type** field appears only when you select the **Adjustment** option from the **Accrual Object** field.	No
Accrual Criteria	Used to indicate the bill criteria using which you want to calculate the accrual. The valid values are: • **Actual** - Used to indicate whether you want to calculate accruals based on the actual bill data. • **Historical** - Used to indicate whether you want to calculate accruals based on the historical bill data.	Yes
Accrual Source	Used to indicate the source of data that you want to use for calculating the accruals that are based on the actual data. The valid values are:	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Transaction Feed • Trial Bill **Note:** This field appears only when you select the **Actual** option from the **Accrual Criteria** field.	**Note:** This field is required for calculating accruals using the actual data.
Historical Bill Count	Used to specify the number of historical bills that you want to consider for calculating the accrual. **Note:** This field appears only when you select the **Historical** option from the **Accrual Criteria** field.	Yes (Conditional) **Note:** This field is required for calculating accruals using the historical data.
Accrual Request Business Object	Used to indicate the business object using which you want to create the accrual request. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. On specifying the business object, the description of the business object appears corresponding to the **Accrual Request Business Object** field.	Yes
Approval Required	Used to indicate whether approval is required for the accruals which are created using the accrual type.	No
Approval Profile	Used to indicate the approval profile which you want to use for approving the accruals which are created using the accrual type. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the accruals.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required for the accruals which are created using the accrual type. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for specifying the hierarchy using which you want to approve the accruals.
Submitter To Do Type	Used to indicate the To Do task assigned to the To Do type for the approver who can resubmitting the accrual for approval	Yes (Conditional) **Note:** This field is required for approving the accruals.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the submitter To Do type, the description of the submitter To Do type appears corresponding to the **Submitter To Do Type** field. The **Submitter To Do Type** field appears only when the **Approval Required** check box is selected.	
Submitter To Do Role	Used to indicate the To Do role of the approver who can resubmit the accrual for approval. **Note:** This field appears only when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the accruals.
Type of Day	Used to indicate the type of day for which you want to calculate the accrual amount. • Business Day • Calendar Day **Note:** If the **Business Day** option is selected, the system calculates the accrual amount using the following formula: Accrual amount = (Sum of resulting bill amount / Total number of business days from previous bills) * Number of business days for the current billing cycle. If the **Calendar Day** option is selected, the system calculates the accrual amount using the following formula: Accrual amount = (Sum of bill amount / Total number of calendar days of previous bills) * Number of calendar days for the current billing cycle.	Yes
Posting Method	Used to indicate the level at which you want to calculate the accruals. The valid values are: • **Bill Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the bill level. • **Bill Distribution Code Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the distribution code level.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Price Item Level** - Used to indicate that the accrual is created to calculate the bill segments and adjustments of bills at the price item level. • **Price Item Distribution Code Level** - Used to indicate that the accrual is created to calculate the bill segments of a particular price item at the distribution code level.	
Proration Required	Used to indicate whether you want to prorate the accrual amount for the trail bills and historical bill segments for the recurring and non-recurring charges using different posting methods. It is calculated using the below formula: Expected accrual amount for each price item = (Sum of resulting bill segment amount / Total number of days) * Number of days in the accrual cycle **Note:** This field appears in the following scenarios: • When the **Actual** and the **Trial Bill** options are selected from the **Accrual Criteria** and the **Accrual Source** fields respectively. • When the **Historical** option is selected from the **Accrual Criteria** field.	No
Calculation Lines Required	Used to indicate whether you want to view the bill segments and adjustments which are used for calculating the accrual amount.	No

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:
You can view the accrual calculation lines in the Accrual screen only when the following conditions are satisfied:
• Accrual is created using the batch process and not manually from the user interface.
• Accrual is created using an accrual type with either of the following combinations:
<table><tr><th>Accrual Criteria</th><th>Accrual Source</th><th>Posting Method</th></tr><tr><td>Historical</td><td>-</td><td>Bill Level</td></tr><tr><td>Historical</td><td>-</td><td>Bill Segment Level</td></tr><tr><td>Actual</td><td>Trial Bill</td><td>Bill Level</td></tr><tr><td>Actual</td><td>Trial Bill</td><td>Bill Segment Level</td></tr></table>• When the Do you want to insert detail level calculation? parameter in the Accrual Calculation (C1_ACCR_CAL) algorithm is set to Y.
The Calculation Lines Required check box is by default selected and cannot be unchecked if you select the Bill Distribution Code Level or the Price Item Distribution Code Level option from the Posting Method field.</td><td></td></tr>
<tr><td>Price Item Accrual Criteria Required</td><td>Used to indicate whether accrual criteria is required for calculating accrual at the price item level.</td><td>No</td></tr>
<tr><td>Cancel Reason</td><td>Used to indicate the cancel reason that you want to use while reversing the accrual. The valid values are:
• Broken Payment Arrangement
• Credit Note
• Enter
Note: The list includes only those values which are specified in the ACCR_CAN_RSN_CD lookup field.</td><td>No</td></tr>
<tr><td>Contract Type</td><td>Used to indicate the contract type whose contract exists on the accounts.</td><td>Yes</td></tr>
</table>

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears where you can select the required contract type.	
Applicable for Account	Used to indicate whether the **Accrual Type** is used to calculate accruals at the account level.	Yes (Conditional)
	Note: If you do not select the **Applicable for Account** check box, the system will consider the accrual type to calculate accruals at the division level.	**Note:** This field is required for indicating the accrual type can be associated to an account and not the division for calculating accruals.

4. Enter the required details in the **Main** section.
5. Associate or disassociate algorithms from the accrual type.
6. Add, edit, or remove the excluded entities from the accrual type.
7. Associate or disassociate divisions from the accrual type.
8. Define, edit, or remove characteristics from the accrual type.
9. Click **Save**.
   The new accrual type is defined.

Accrual (Used for Searching)

The **Accrual** screen allows you to search for an accrual using various search criteria. It also allows you to define an accrual manually. It contains the following zone:

- Search Accrual on page 1983

Search Accrual

The **Search Accrual** zone allows you to search for an accrual. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an accrual using the accrual details. The valid value is: • **Accrual Details**	Not applicable
Account ID	Used to indicate whether you want to search for accruals belonging to a particular account. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears where you can specify the account whose accrual details you want to view.	No
Division	Used to indicate whether you want to search for accruals associated with a particular division. **Note:** You can only view those divisions to which you have access in the **Division** list.	No
Accrual Type	Used to search for accruals which are created using a particular accrual type.	No
Posting Method	Used to indicate whether you want to search for accruals which are calculated at a particular level. The valid values are: • **Bill Level** - Used to indicate whether you want to search for accruals whose bill segments and adjustments of bills are calculated at the bill level. • **Bill Distribution Code Level** - Used to indicate whether you want to search for accruals whose bill segments and adjustments of bills are calculated at the distribution code level. • **Price Item Level** - Used to indicate whether you want to search for accruals whose bill segments and adjustments of bills are calculated at the at the price item level. • **Price Item Distribution Code Level** - Used to indicate whether you want to search for accruals whose bill segments of a particular price item are calculated at the distribution code level.	No
Accrual Cycle	Used to search for accruals which are created using a particular accrual cycle.	No
Creation Date From	Used to indicate whether you want to search for accruals which are created from a particular date onwards.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Accrual Creation Mode	Used to indicate whether you want to search for accruals which are created using a particular mode. The valid values are: • **Batch** - Used to indicate whether you want to search for accruals which are created in the system using the batch mode. • **Manual** - Used to indicate whether you want to search for accruals which are created manually in the system.	No
Creation Date To	Used to search accruals which are created till a particular date.	No
Status	Used to search for accruals with a particular status. The valid values are: • **Ready For Accrual** • **Accrued** • **Reversed** • **Approval In Progress** • **Cancelled** • **Draft** • **Ignore** • **Processed** • **Rejected**	No

Note: You must specify at least one search criterion while searching for an accrual.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Accrual Information	Displays the concatenated string of information about the accrual separated by a comma (,). **Note:** It has a link. On clicking the link, the **Accrual** screen appears where you can view the details of the respective accrual.
Division	Indicates the division to which the accrual account belongs.
Accrual Type	Indicates the accrual type using which the accrual is created for the account in the system.
Posting Method	Indicates the level at which the accrual is calculated for the account.
Accrual Creation Mode	Indicates the creation mode using which the accrual is created for the account in the system.
Status	Displays the current status of the accrual.
Create Date/Time	Displays the date and time when the accrual is created is created in the system.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Accrual

Procedure

To search for an accrual :

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Accrual**.
   A sub-menu appears.
3. Click the **Search** option from the **Accrual** sub-menu.
   The **Accrual** screen appears.
4. Enter the search criteria in the **Search Accrual** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of accruals that meet the search criteria appears in the **Search Results** section.

Viewing the Accrual Details

Procedure

To view the details of an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the *a*ccrual whose details you want to view.
   The **Accrual** screen appears. It contains the following tabs:
   - Accrual - Main on page 1992
   - Accrual - Log on page 1996
3. Ensure that the **Main** tab is selected.
4. View the details of the accrual in the **Accrual** zone.

Defining an Accrual

Prerequisites

To define an accrual, you should have:

- Account (for which you want to define the accrual) defined in the application.
- Accrual-specific active contract associated with the account.
- Batch **C1_ACCRE** defined in the application, if an accrual creation takes place through a batch.
- Algorithm **C1_ACCR_CRE** defined for accrual creation in the application.
- Algorithm **C1_ACCR_CAL** defined for accrual calculation in the application.
- Algorithm **C1_ACCR_REV** defined for accrual reversal in the application.
- Accrual type associated with the division to which the account belongs or accrual type associated with the account for accrual calculation.
- Characteristic types defined in the application (where the characteristic entity is set to **Accrual**).

Procedure

To define an accrual:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Accrual**.
   A sub-menu appears.
3. Click the **Add** option from the **Accrual** sub menu.

   The **Accrual** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the accrual.
   - **Characteristics** - Used to specify the detail-specific characteristics for an accrual.
   - **Accrual Details** - Used to specify the accrual details for an accrual.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to specify the account for which you want to define an accrual. **Note:** The **Search** (🔍) icon appears corresponding to the this field. On clicking the **Search** icon, the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Account ID** field.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Contract	Indicates the accrual-specific active contract that is associated with the account. **Note:** This field is populated automatically when you specify the account in the **Account ID** field. It is a read-only field and cannot be edited.	Not applicable
Reversal Start Date	Used to specify the date from when the accrual reversal process starts. **Note:** The **Reversal Start Date** must be later than the **Accrual Date**. The **Reversal Start Date** cannot be later than the **Reversal End Date**.	Yes
Reversal End Date	Used to specify the date till when the accrual reversal process ends. **Note:** The **Reversal End Date** cannot be earlier than the **Reversal Start Date**.	Yes
Posting Method	Indicates the level at which the accrual is calculated for the account. The valid values are: • **Bill Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the bill level. • **Bill Distribution Code Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the distribution code level. • **Price Item Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the price item level. • **Price Item Distribution Code Level** - Indicates that the accrual is created to calculate the bill segments of a particular price item at the distribution code level. **Note:** This field is populated automatically when you specify the account in the **Account ID** field. It is a read-only field and cannot be edited.	Not applicable
Accrual Type	Indicates the accrual type associated with the account.	Not applicable

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is populated automatically when you specify the account in the **Account ID** field. It is a read-only field and cannot be edited.	
Accrual Creation Mode	Indicates the method using which the accrual is created for the account in the system. The valid values are: • **Batch** - Indicates whether the accrual is created using the batch mode. • **Manual** - Indicates whether the accrual is created manually in the system. **Note:** This field is populated automatically when you specify the account in the **Account ID** field. It is a read-only field and cannot be edited.	Not applicable
Currency	Indicates the currency using which the accrual is calculated for the account in the system. **Note:** This field is populated automatically when you specify the account in the **Account ID** field. It is a read-only field and cannot be edited.	Not applicable
Comments	Used to specify additional information about the accrual.	No

Tip: Alternatively, you can access the **Accrual** screen by clicking the **Add** button in the **Page Title** area of the **Accrual** screen.

4. Define detail-specific characteristics for the accrual, if required.
5. Add details about the accrual, if required.
6. Click **Save**.
7. The accrual is defined.

Defining a Characteristic for an Accrual

Prerequisites

To define a characteristic for an accrual, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Accrual**).

Procedure

To define a characteristic for an accrual:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an accrual.

   The **Characteristics** section contains the following fields in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Accrual Detail Sequence	Used to specify the sequence in which the accrual processing must be executed. **Note:** It is a read-only field and cannot be edited.	Not applicable
Effective Date	Used to specify the date from when the characteristic is effective for an accrual.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for an accrual.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Accrual**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for an accrual.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for an accrual.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an accrual., click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from an accrual, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.

Copyright © 2024, Oracle and/or its affiliates.

The characteristics are defined for an accrual..

Adding the Details for an Accrual

Procedure

To add the details for an accrual:

1. Ensure that **Accrual Details** section is expanded when you are defining or editing an accrual.

   The **Accrual Details** section contains the following fields in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for an accrual.	Yes (Conditional)
	Note: The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears.	**Note:** This field is required when the price item information is not defined for the accrual contract.
Amount	Used to specify the accrual amount.	Yes
Override Reason	Used to specify the override reason for the accrual.	No

2. Enter the required details in the **Accrual Details** section.
3. Click **Save**.
   The accrual details are defined for an accrual.

Accrual (Used for Viewing)

The **Accrual** screen allows you to do the following:

- View the details of an accrual
- Define an accrual manually
- Edit an accrual
- Submit an accrual for approval
- Approve, Reject, and Re-Submit an accrual
- Delete an accrual
- View the accrual calculation lines

Copyright © 2024, Oracle and/or its affiliates.

The **Accrual** screen contains the following tabs:

- Accrual - Main on page 1992
- Accrual Log on page 1996

Accrual - Main

The **Main** tab displays information about the accrual. It contains the following zones:

- Accrual on page 1992
- Accrual Details on page 1994
- Accrual Calculation Lines on page 1995

Accrual

The **Accrual** zone displays the details of an accrual. It contains the following sections:

- **Main** - Displays basic information about the accrual. It contains the following fields:

Field Name	Field Description
Accrual Information	Displays the concatenated string of information about the accrual separated by a comma (,).
Account Information	Displays the concatenated string of information about the account for which the accrual is created separated by a comma (,). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Contract Information	Displays the accrual-specific active contract that is associated with the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Division	Indicates the division which is associated with the accrual.
Status	Indicates the current status of the accrual. The valid values are: • Draft • Approval In Progress • Ready For Accrual • Accrued • Accrual Reversed • Rejected • Processed • Ignore • Cancelled
Accrual Cycle	Indicates the accrual cycle associated with the deal type which is used for creating the accrual.
Accrual Date	Displays the date on which the accrual is processed for the account.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Reversal Start Date	Displays the date from when the accrual reversal process starts for the account.
Reversal End Date	Displays the date till when the accrual reversal process ends for the account.
Accrual Type	Indicates the accrual type using which the accrual is calculated for the account.
Accrual Creation Mode	Displays the creation mode using which the accrual is calculated. • **Batch** - Indicates whether the accrual is created using the batch mode. • **Manual** - Indicates whether the accrual is created manually in the system.
Posting Method	Displays the level at which the accrual is calculated for the account. The valid values are: • **Bill Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the bill level. • **Bill Distribution Code Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the distribution code level. • **Price Item Level** - Indicates that the accrual is created to calculate the bill segments and adjustments of bills at the price item level. • **Price Item Distribution Code Level** - Indicates that the accrual is created to calculate the bill segments of a particular price item at the distribution code level.
Accrual Amount	Displays the accrual amount.

- **Characteristics** - Lists the detail-specific characteristics defined for the accrual. It contains the following fields:

Field Name	Field Description
Accrual Detail Sequence	Displays the sequence of the accrual detail.
Effective Date	Displays the date from when the characteristic is effective for the accrual detail.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an accrual. **Note:** The **Edit** button appears only when the accrual is in the **Draft** or **Ready for Accrual** status.
Delete	Used to delete an accrual. **Note:** The **Delete** button appears only when the accrual is in the **Draft** or **Ready for Accrual** status.
Return to Draft	Used to send the accrual in the **Draft** status for editing.

Copyright © 2024, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Return to Draft** button appears only when the accrual is in the **Ready for Accrual** status.
Submit	Used to submit an accrual for approval.
	Note: The **Submit** button appears only when the accrual is in the **Draft** status.
Approve	Used to approve the accrual.
	Note: The **Approve** button appears only when the accrual is in the **Approval in Progress** status.
Reject	Used to reject the accrual.
	Note: The **Reject** button appears only when the accrual is in the **Approval in Progress** status.
Re Submit	Used to resubmit the accrual for specific changes.
	Note: The **Re Submit** button appears only when the accrual is in the **Approval in Progress** status.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the accrual is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the accrual status is updated in the system.
Create Date/Time	Displays the date and time when the accrual is created in the system.

Accrual Details

The **Accrual Details** zone displays the details of an accrual. It contains the following columns:

Column Name	Column Description
Sequence Number	Displays the sequence in which the accrual detail is considered for accrual calculation.
Price Item	Displays the price item that is defined for the accrual calculation.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It contains a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective accrual adjustment.
Amount	Displays the accrual amount.
Override Reason	Displays the reason why the price item or the accrual amount is overridden in case if the accrual is edited.
Adjustment Information	Displays information about the adjustment that is created using the accrual creation batch.
	Note: It contains a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.

On clicking the **Broadcast** (ᯤ) icon corresponding to an accrual detail, the **Accrual Calculation Lines** zone appears where you can view a list of calculation lines for the respective accrual detail.

Note:

The **Accrual Calculation Lines** zone appears only when the following conditions are satisfied:

- The **Calculation Lines Required** check box is selected for the accrual type which is associated with the accrual.
- Accrual is created using the batch process and not manually from the user interface.
- Accrual is created using an accrual type with either of the following combinations:

Accrual Criteria	Accrual Source	Posting Method
Historical	-	Bill Level
Historical	-	Price Item Level
Actual	Trial Bill	Bill Level
Actual	Trial Bill	Price Item Level

- When the **Do you want to insert detail level calculation?** parameter in the **Accrual Calculation (C1_ACCR_CAL)** algorithm is set to **Y**.

Accrual Calculation Lines

The **Accrual Calculation** zone displays the calculation lines generated after the accrual creation batch is executed for a particular accrual detail. It contains the following columns:

Column Name	Column Description
Entity Information	Displays the concatenated string of information about the entity separated by a comma (,) for which the calculation line is created.
Entity Type	Indicates the type of the entity.
Inclusion Amount	Displays the amount calculated for the specific entity for accrual.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Bill Cycle Days	Displays the number of days after which the accrual calculation is done for the entity.
Historical Calculation Days	Displays the historical days for which the accrual calculation is done for the entity.
Bill Information	Displays the concatenated string of information about the bill separated by a comma (,). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Recurring Charge Calculation Days	Displays the number of days after which the recurring charge is calculated for the entity.
Recurring Charge Total Days	Displays the total number of days for which the recurring charge is calculated for the entity.

By default, the **Accrual Calculation Lines** zone does not appear in the **Accrual** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the accrual detail in the **Accrual Details** zone.

Adding a Log Entry for an Accrual

Procedure

To add a log entry for an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual *f*or which you want to add a log entry.

   The **Accrual** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Accrual Log** zone.

   The **Add Accrual Log** window appears. It contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Accrual Information	Displays the concatenated string of information about the accrual separated by a comma (,).	Not applicable
Log Details	Used to specify the reason for creating a new log entry for the accrual.	Yes

5. Enter the required details in the **Log Details** field.
6. Click **Save**.
   The log entry is added for the accrual.

Editing an Accrual

Prerequisites

To edit an accrual, you should have:

- Account (for which you want to define the accrual) defined in the application.
- Accrual-specific active contract associated with the account.
- Batch **C1_ACCRE** defined in the application, if an accrual creation takes place through a batch.
- Algorithm **C1_ACCR_CAL** defined for accrual calculation in the application.
- Algorithm **C1_ACCR_REV** defined for accrual reversal in the application.
- Accrual type associated with the division to which the account belongs or accrual type associated with the account for accrual calculation.
- Characteristic types defined in the application (where the characteristic entity is set to **Accrual**).

Procedure

To edit an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual *w*hose details you want to edit.
   The **Accrual** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Accrual** zone
   The **Accrual** screen appears. It contains the following sections:
   - **Main** - Used to specify basic details about the accrual. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular account. **Note:** It is a read-only field and cannot be edited.	Yes
Contract	Used to specify the accrual contract of the account. **Note:** It is a read-only field and cannot be edited.	Not applicable
Accrual Cycle	Used to specify the accrual cycle for the account.	Not applicable

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: It is a read-only field and cannot be edited.	
Posting Method	Used to specify the posting method used for an accrual. **Note:** It is a read-only field and cannot be edited.	Not applicable
Accrual Type	Used to specify the type of an accrual. **Note:** It is a read-only field and cannot be edited.	Not applicable
Accrual Creation Mode	Used to specify the creation method of an accrual. **Note:** It is a read-only field and cannot be edited.	Not applicable
Currency	Used to specify the currency used for calculating the accrual. **Note:** It is a read-only field and cannot be edited.	Not applicable
Comments	Used to specify the comments for an accrual.	No

5. Add, edit, or remove the detail-specific characteristics from the accrual, if required.
6. Add, edit, or remove the details of the accrual.
7. Click **Save**.
   The changes made to the accrual are saved.

Note:

You can edit n accrual only when it is in the **Ready for Accrual** status.

While editing an accrual which is created through a batch process, the system allows you to edit only the accrual amount of the bill or the price item in the **Accrual Details** zone. Whereas, if you are editing an accrual which is created manually, the system allows you to edit the price item code as well as the accrual amount of the price item or the bill in the **Accrual Details** zone. The override reason is mandatory when you are editing a manually created accrual in the system.

Deleting an Accrual

Procedure

To delete an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual *t*hat you want to delete.
   The **Accrual** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Accrual** zone.
   A message appears confirming whether you want to delete the accrual.
5. Click **OK**.
   The accrual is deleted.

> **Note:** You can delete an accrual only when it is created manually in the system and is in the **Draft** or **Ready for Accrual** status.

Chapter 31

Payment Agreement Request

Topics:

- Payment Agreement Request (Without Approval) Status Transition
- Payment Agreement Request (With Approval) Status Transition
- Prerequisites
- Algorithms Used in C1-PaymentAgreementRequest
- Payment Agreement Request Type
- Payment Agreement Request (Used for Searching)
- Payment Agreement Request (Used for Viewing)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount - 100$, Unpaid Amount - 75$)
- B2 (Bill Amount - 250$, Unpaid Amount - 125$)
- B3 (Bill Amount - 150$, Unpaid Amount - 150$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exists in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exists in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

Copyright © 2024, Oracle and/or its affiliates.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see Payment Agreement Request (Without Approval) Status Transition on page 2006 and Payment Agreement Request (With Approval) Status Transition on page 2006. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

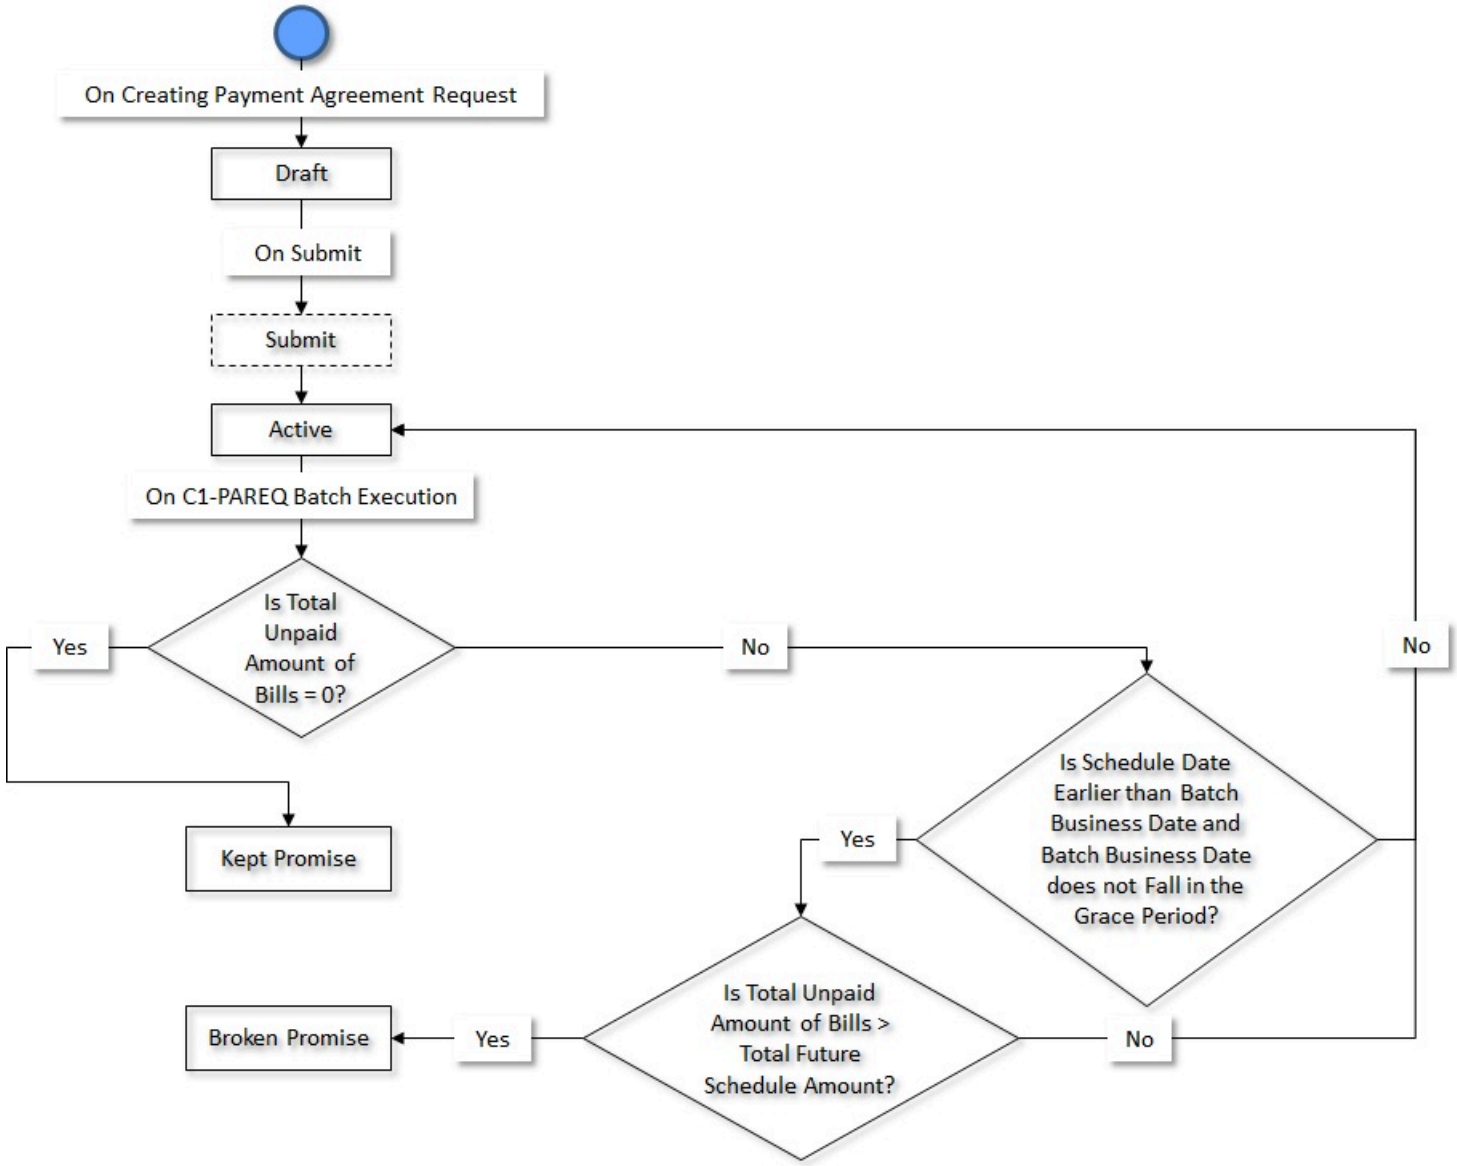
Note: The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see Prerequisites on page 2007.

Copyright © 2024, Oracle and/or its affiliates.

Payment Agreement Request (Without Approval) Status Transition

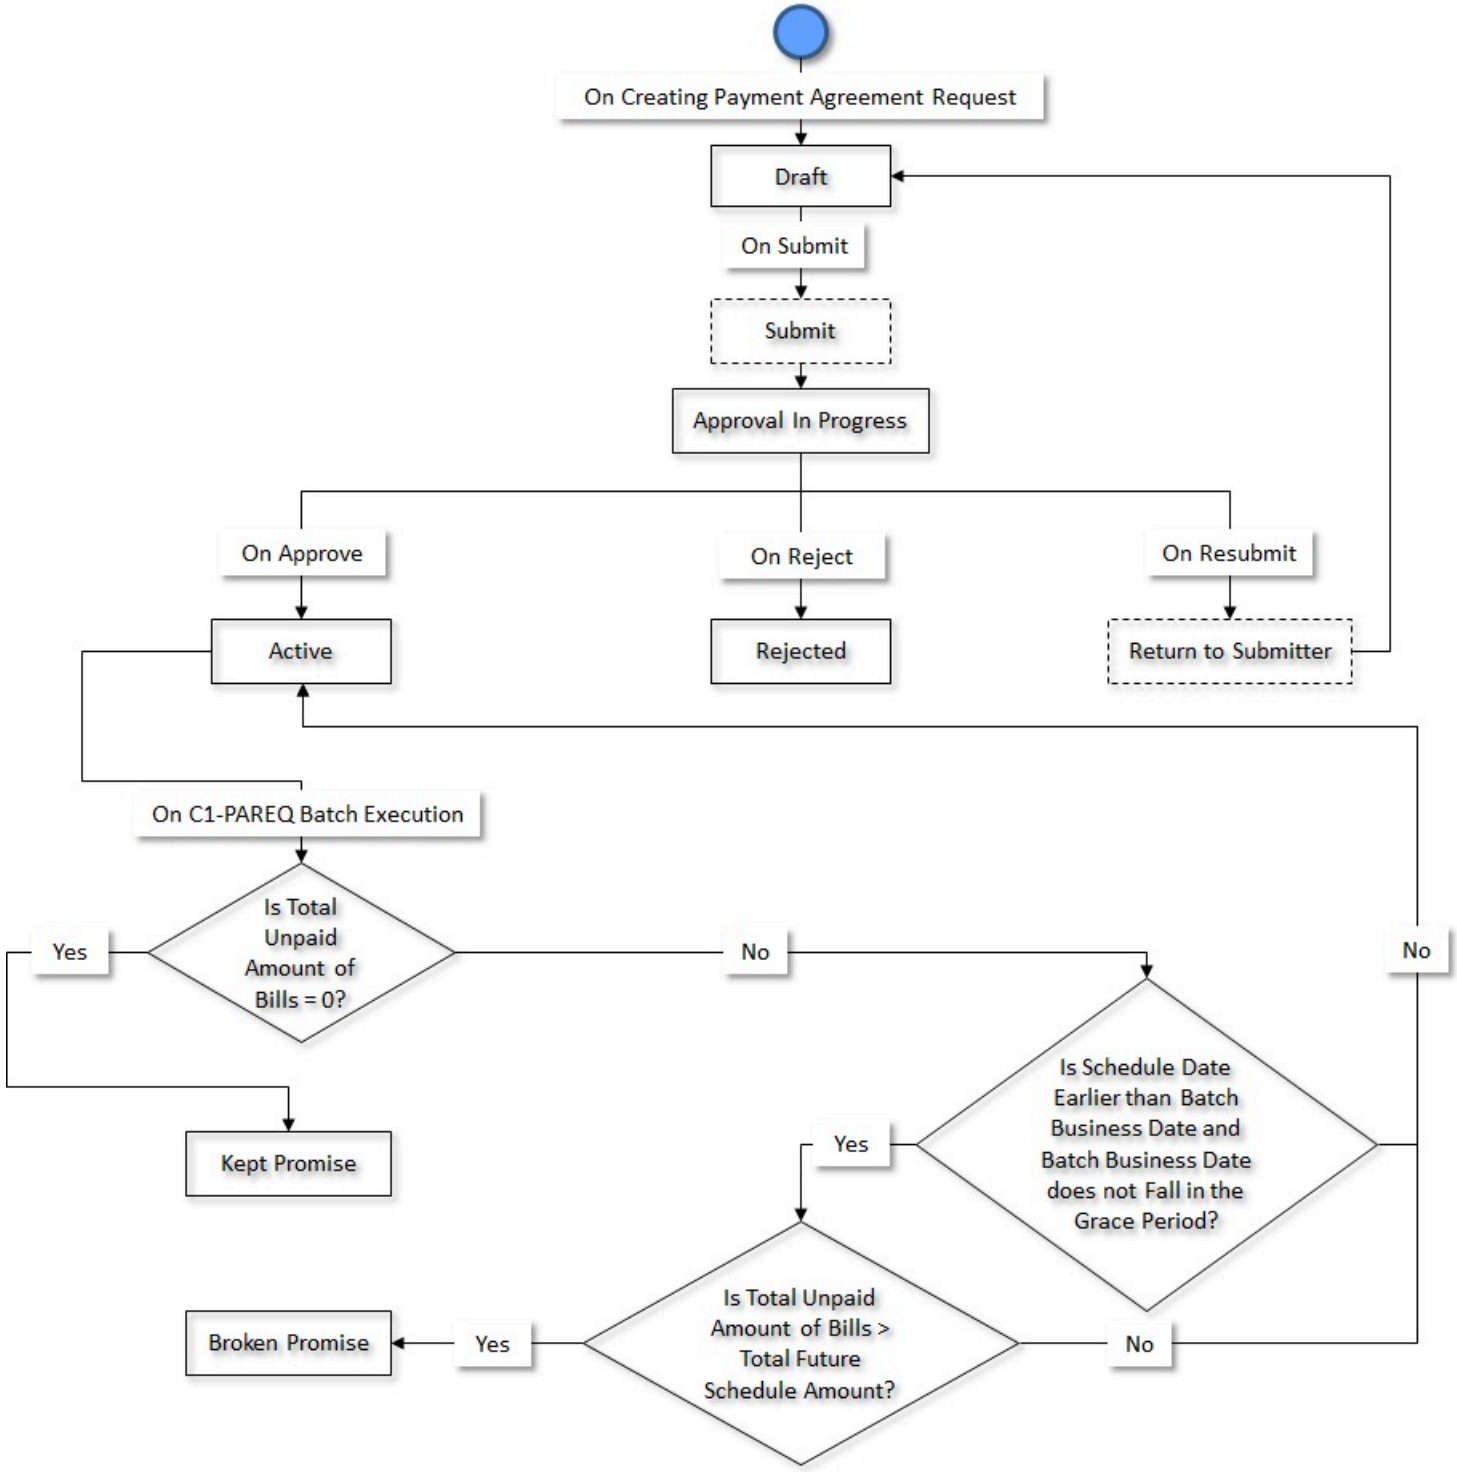
The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:



Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

Copyright © 2024, Oracle and/or its affiliates.



Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**

Copyright © 2024, Oracle and/or its affiliates.

- Define the required pay methods for **Payment Agreement Request**
- Define the required third party payors for **Payment Agreement Request**
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create Payment Agreement Requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- The **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch process to monitor the payment agreement request and move the request to next stage

Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to C1-PA-INFO on page 2008
Pre-Processing	C1-PA-PRE	C1-PA-PRE	Refer to C1-PA-PRE on page 2009
Validation	C1-PA-VAL	C1-PA-VAL	Refer to C1-PA-PRE on page 2009

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentAgreementRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submit	Enter	C1-PA-SUBMIT	C1-PA-SUBMIT	Refer to C1-PA-SUBMIT on page 2009
Approval In Progress	Enter	C1-PA-APPENT	C1-PA-APPENT	Refer to C1-PA-APPENT on page 2009
Approval In Progress	Exit	C1-PA-APPEXT	C1-PA-APPEXT	Refer to C1-PA-APPEXT on page 2009
Return to Submitter	Enter	C1-PA-RESUB	C1-PA-RESUB	Refer to C1-PA-RESUB on page 2009
Active	Monitor	C1-PA-MONTR	C1-PA-MONTR	Refer to C1-MONTR on page 2009
Active	Enter	C1-PA-ACTENT	C1-PA-ACTENT	Refer to C1-ACTENT on page 2009

C1-PA-INFO

This algorithm generates the payment agreement request information string which appears throughout the application. This algorithm concatenates the following fields:

- Payment Agreement Request Type Description
- Payment Agreement Request Status Description
- Payment Agreement Request ID

Copyright © 2024, Oracle and/or its affiliates.

C1-PA-PRE

This Algorithm is used to avoid the concurrency issue for payment agreement.

C1-PA-SUBMIT

This Algorithm is used to validate payment agreement request.

C1-PA-APPENT

This algorithm creates **To Do** based on the **Approval To Do Type** configured in Payment Agreement Request Type.

C1-PA-APPEXT

This algorithm checks whether an approver is associated with the approval **To Do Role** specified in the **Payment Agreement Request Type**. It does not allow the submitter to approve or reject the payment agreement request.

C1-PA-RESUB

This algorithm is invoked on **Re-Submit** button. It moves the status of Payment Agreement Request into **Draft**. A 'To Do' will be generated for the user as submitter whose **To Do Type** and **To Do Role** are fetched from Payment Agreement Request Type.

C1-MONTR

This algorithm is invoked from the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch. It changes the status of the payment request from **Active** to **KP** (Kept Promise) or **BP** (Broken Promise) based on payment received.

C1-ACTENT

This algorithm will validate Payment Agreement Request before activation.

Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement provide flexibility in payment of installment amount and schedule of payment.

The **C1-PaymentAgreementRequest** business object is created for payment agreement maintenance.

The **Payment Agreement Request Type** screen consists of the following zones:

- Payment Agreement Request Type List on page 2010
- Payment Agreement Request Type on page 2010

Copyright © 2024, Oracle and/or its affiliates.

Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the **Edit** (✎) icon, the **Payment Agreement Request Type** screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Payment Agreement Request Type** screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the payment agreement request type.
	Note: You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

Payment Agreement Request Type

The **Payment Agreement Request Type** zone displays the details of the payment agreement request type. This zone contains the following sections:

- **Main** - This section provides basic information about the payment agreement request type. It contains the following fields:

Field Name	Field Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Payment Agreement Request Business Object	Indicates the business object that will be used to create the payment agreement request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the payment agreement request type.
Status	Indicates the status of the payment agreement request type. The valid values are: • Active • Inactive
Status Change Notification Type	Indicates the notification type on the status change of payment agreement request type. The valid values are: • Alert • To Do • Both
Approval Required	Indicates whether approval is required while creating payment agreement request using the payment agreement request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when you submit the payment agreement request for approval. **Note:** This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears.
Approval To Do Role	Indicates that users with the specified To Do role can only approve or reject the payment agreement request submitted for approval. **Note:** This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Role** screen appears with the details of the respective To Do role.
Submitter To Do Type	Indicates the To Do type for the submitter when the payment agreement request type is resubmitted by the approver.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears.
Submitter To Do Role	Indicates the To Do role of the submitter when the payment agreement request type is resubmitted by the approver.
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Role** screen appears with the details of the respective To Do role.

- **Characteristics** - This section lists the characteristics of the payment agreement request type. It contains the following columns:

Column Name	Column Description	Mandatory (Yes Or No)
Characteristic Type	Indicates the characteristic type.	No
Characteristic Value	Displays the value of the characteristic type.	No

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment agreement request type.
Delete	Used to delete the payment agreement request type.
	Note: You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.
Duplicate	Used to create a new payment agreement request type using an existing payment agreement request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment agreement request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Copyright © 2024, Oracle and/or its affiliates.

By default, the **Payment Agreement Request Type** zone does not appear in the **Payment Agreement Request Type** screen. It appears when you click the **Broadcast** (ᯤ) icon corresponding to a payment agreement request type in the **Payment Agreement Request Type List** zone.

Defining a Payment Agreement Request Type

Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

Procedure

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object that you want to use to create the payment agreement request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

Copyright © 2024, Oracle and/or its affiliates.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment agreement request type.
- **Characteristics** - Used to define the characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: • Active • Inactive	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: • Alert • To Do • Both	No
Approval Required	Used to indicate whether approval is required for creating payment agreement request using the payment agreement request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Approval Required** check box is selected.	**Note:** This field is required when the **Approval Required** option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the **Approval To Do Type**field.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the **Submitter To Do Type**field.

6. Enter the required details.
7. Define characteristics for the payment agreement request type, if required.
8. Click **Save**.
   The payment agreement request type is defined.

Defining a Characteristic for a Payment Agreement Request Type

Prerequisites

To define a characteristic for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Payment Agreement Request Type)

Copyright © 2024, Oracle and/or its affiliates.

Procedure

To define a characteristic for a payment agreement request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment *a*greement request type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment agreement request type.

2. Enter the required details.

   Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment agreement request type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the payment agreement request type, click the ***D*elete** (🗑) icon corresponding to the characteristic.

Editing a Payment Agreement Request Type

Prerequisites

To edit a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

Copyright © 2024, Oracle and/or its affiliates.

Procedure

To edit a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
   The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the payment agreement request type whose details you want to edit.

   The **Payment Agreement Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment agreement request type.
   - **Characteristics** - Used to define the characteristics for the payment agreement request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Displays the payment agreement request type.	Not applicable
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Upload Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: • Active • Inactive	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: • Alert • To Do • Both	No
Approval Required	Used to indicate whether approval is required for editing payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears.	**Note:** This field is required when the **Approval Required** check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.

Tip: Alternatively, you can click the **Edit** button in the **Payment Agreement Request Type** zone to edit the details of the payment agreement request type.

5. Modify the required details.

Note: You can search for a **Approval To Do Type** and **Submitter To Do Type** by clicking the **Search** (🔍) icon corresponding to the respective field.

6. Define, edit, or remove characteristics of the payment agreement request type, if required.
7. Click **Save**.
   The changes made to the payment agreement request type are saved.

Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval

Procedure

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
   The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** (⎘) icon in the **Duplicate** column *c*orresponding to the payment agreement request type whose copy you want to create.

   The **Payment Agreement Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment agreement request type.
   - **Characteristics** - Used to define the characteristics for the payment agreement request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type (whose copy you want to create).	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: • Active	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Inactive	
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: • Alert • To Do • Both	No
Approval Required	Used to indicate whether approval is required while creating payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval. **Note:** This field appears when the **Approval Required** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.

Tip: Alternatively, you can click the **Duplicate** button in the **Payment Agreement Request Type** zone to create a copy of the payment agreement request type.

5. Enter the required details.

Copyright © 2024, Oracle and/or its affiliates.

6. Define, edit, or remove characteristics of the payment agreement request type, if required.
7. Click **Save**.
   The new payment agreement request type is defined.

Deleting a Payment Agreement Request Type

Procedure

To delete a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
   The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the payment agreement request type that you want to delete.
   A message appears confirming whether you want to delete the payment agreement request type.

> **Note:** You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.

> **Tip:** Alternatively, you can click the **Delete** button in the **Payment Agreement Request Type** zone to delete the payment agreement request type.

5. Click **OK**.
   The payment agreement request type is deleted.

Bill Details

The **Bill Details** zone lists unpaid debt bill details. You will not find any records in this zone if the payment agreement request list does not have any unpaid bills assigned to it. This zone contains the following columns:

Column Name	Column Description
Bill Information	Indicates the bill against which the payment agreement request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Original Bill Amount	Displays the bill amount when the bill was generated.
Current Bill Balance	Displays the outstanding amount.
Due Date	Displays the due date of the bill.

By default, the **Bill Details** zone does not appear in the **Payment Agreement Request** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment agreement request in the **Search Payment Agreement Request** zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4368.

Searching for a Payment Agreement Request

Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application

Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Payment Agreement Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.
   The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

Defining a Characteristic for a Payment Agreement Request

Prerequisites

To define a characteristic for a payment agreement request:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Agreement Request**)

Procedure

To define a characteristic for a Payment Agreement Request:

Copyright © 2024, Oracle and/or its affiliates.

1. Ensure that the **Characteristics** section is expanded when you are editing, submitting, approving, rejecting or *r*esubmitting a payment agreement.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the characteristic is effective for the payment agreement request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment agreement request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment agreement request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment agreement request.

2. Enter the required details.

   Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment agreement request, click the **Add** (+) icon *a*nd then repeat step 2.

   Note: However, if you want to remove a characteristic from the payment agreement request, click the **Delete** (🗑) icon corresponding to the characteristic.

To define payment schedule for a Payment Agreement Request:

1. Ensure that the **Payment Schedule** section is expanded when you are editing, submitting, approving, *r*ejecting or resubmitting a payment agreement.

   The **Payment Schedule** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Date	Used to indicate the date schedule for the payment.	Yes (Conditional) **Note:** This field is required when you are defining a payment schedule for the payment agreement request.
Schedule Amount	Used to indicate the amount scheduled for overdue or unpaid bills to be paid in installments. **Note:** This field appears when you select a **Schedule Date** for the payment schedule.	Yes (Conditional) **Note:** This field is required when you select a **Schedule Date** for the payment schedule.
Auto Pay ID	Used to indicate the auto pay id of the payor. **Note:** This field appears when you select auto pay method option for **Pay Method**. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Auto Pay ID Search** window appears.	No

2. Enter the required details.

   Note: If you select a auto pay method option for **Pay Method**, the **Search** (🔍) icon appears corresponding to the **Auto Pay ID** field. On clicking the **Search** icon, you can search for a **Payor Account ID**.

3. If you want to define more than one payment schedule for the payment agreement request, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a payment schedule from the payment agreement request, click the ***D*elete** (🗑) icon corresponding to the payment schedule.

  Note: This tab will be displayed when the payment agreement is in **Draft** status.
- **Log** - This tab lists the complete trail of actions performed on the payment agreement request.

Payment Agreement Request - Main

The **Main** tab on the **Payment Agreement Request** contains the following zones:

- Payment Agreement Request on page 2031
- Bill Details on page 2033
- Payment Schedule on page 2034

Payment Agreement Request

The **Payment Agreement Request** zone displays the details of the payment agreement request. This zone contains the following sections:

- **Main** - This section provides basic information about the payment agreement request. It contains the following fields:

Field Name	Field Description
Payment Agreement Request Information	Displays information about the payment agreement request.
Payment Agreement Request Type	Indicates the payment agreement request type using which the payment agreement request is created.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Payment Agreement Request Type** screen appears where you can view the details of the payment agreement request type.
Account Information	Displays information about the account for which the payment agreement request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Status	Indicates the status of the payment agreement request. The valid values are: • Active • Draft • Approval In Progress • Broken Promise • Kept Promise • Rejected
Payor Account ID	Displays the payment agreement requests which are created for a particular payor account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Pay Method	Displays the method of payment of amount.
Total Unpaid Amount	Displays the unpaid amount for selected bills.
Total Future Schedule Amount	Displays the total schedule amount.

- **Characteristics** - This section lists the characteristics of the payment of selected bills. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the payment agreement request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the payment agreement request.
	Note: The **Edit** button appears when the payment agreement request is in the **Active** or**Draft** status.
Delete	Used to delete the payment agreement request.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The **Delete** button appears when the payment agreement request is in the **Draft** status.
Submit	Used to submit the payment agreement request for approval.
	Note: The **Submit** button appears when the payment agreement request is in the **Draft** status.
Approve	Used to approve the payment agreement request.
	Note: The **Approve** button appears when: • The payment agreement request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the payment agreement request.
Reject	Used to reject the payment agreement request.
	Note: The **Reject** button appears when: • The payment agreement request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the payment agreement request.
Resubmit	Used to change the status of the payment agreement request to **Draft**.
	Note: The **Resubmit** button appears when: • The payment agreement request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the payment agreement request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment agreement request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the payment agreement request status is updated.
Create Date/Time	Displays the date and time when the payment agreement request is created.

Bill Details

The **Bill Details** zone displays the bill details of the payment agreement request. This zone contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Bill Amount	Displays the bill amount when the bill was generated.
Due Date	Displays the due date of the bill.
Unpaid Amount	Displays the amount which is eligible for payment against the bill.
Overdue Process Information	Displays the overdue process information about the bill.
	Note: It has a link. On clicking the link, the **Overdue Process** screen appears with details of the overdue process of the bill.

This zone contains the **Delete** button. This button appears when the payment agreement request is in the **Draft** status. It is used to delete bills of payment agreement request.

Note: One payment agreement request will have complete status debit bills of only one account. All bills under one payment agreement will be of same currency. Once payment agreement request is active, bills added under the request cannot be deleted.

The **Search Bills** zone lists bills that are overdue for an account. You will not find any records in this zone if the payment agreement request does not have overdue bills in the account. This zone contains the following fields as search criteria:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment agreement request using bill details. **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search for a particular bill. **Note:** The **Search** (🔍) icon appears corresponding to the field. On clicking the **Search** icon, the **Bill Search** window appears.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

Copyright © 2024, Oracle and/or its affiliates.

By default, the **Search Bills** zone appears in the **Bills** tab of **Payment Agreement Request** screen. By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

By default, the search results section displays the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Unpaid Amount	Displays the amount which is eligible for payment agreement request against the bill.
Overdue Process Information	Displays the overdue process information for the bill.

Adding an Overdue Bill in a Payment Agreement Request

Prerequisites

To add an overdue bill in a payment agreement request, you should have:

- Overdue bills should be available for accounts to add in payment agreement request

Procedure

To add an overdue bill in a payment agreement request:

Note: A bill with outstanding amount greater than zero which is not part of an overdue process will be allowed to be added in a payment agreement request. While a bill with negative outstanding amount will not be allowed to be added in a payment agreement request.

1. Search for the payment agreement request in the **Payment Agreement Request** screen which is in **Draft** or **Active** status.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to view.
   The **Payment Agreement Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. Enter the search criteria in the **Search Bills** zone.
   In the **Search Results** section, list of bills meeting the search criteria are displayed.
5. Select the check box corresponding to the bill which you want to add to the payment agreement request from the **Search Results** section.

   You can add more than one bill to the payment agreement request at the same time.

Copyright © 2024, Oracle and/or its affiliates.

6. Click **Add**.
   A message appears indicating that selected bills have been successfully added to the payment agreement request.
7. Click **OK**.
   Note that the bill is added in the **Bill Details** zone in the **Main** tab.

Viewing the Log of a Payment Agreement Request

Procedure

To view the log of a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to view.

   The **Payment Agreement Request** screen appears. It consists of the following tabs:

   - **Main** - This tab contains the following three zones:
     - **Payment Agreement Request** - Displays the details of the payment agreement request.
     - **Bill Details** - Lists the bill details of the payment agreement request.
     - **Payment Schedule** - Lists the payment schedule details of the bills for the payment agreement request.
   - **Bills** - This tab lists the unpaid bill amount details for the same account.

     Note: This tab will be displayed when the payment agreement is in **Draft** status.
   - **Log** - This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

   The **Payment Agreement Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment agreement request.
Details	Displays the details about the action performed on the payment agreement request.
User	Indicates the user who has performed the action on the payment agreement request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment agreement request.
Status Reason	Indicates the reason why the payment agreement request was rejected.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Old Payment Schedule	Displays the details of old payment schedule.

Note: You can manually add a log entry for the payment agreement request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

Related Topics

Adding a Log Entry for a Payment Agreement Request

Procedure

To add a log entry for a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to edit.

   The **Payment Agreement Request** screen appears. It consists of the following tabs:

   - **Main** - This tab contains the following three zones:
     - **Payment Agreement Request** - Displays the details of the payment agreement request.
     - **Bill Details** - Lists the bill details of the payment agreement request.
     - **Payment Schedule** - Lists the payment schedule details of the bills for the payment agreement request.
   - **Bills** - This tab lists the unpaid bill amount details for the same account.

     Note: This tab will be displayed when the payment agreement is in **Draft** status.
   - **Log** - This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

   The **Add Payment Agreement Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable
Log Details	Used to specify additional comments for the payment agreement request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Payment Agreement Request Log** zone.

Chapter 32

Dispute Request

Topics:

- Dispute Request (Without Approval) Status Transition
- Dispute Request (With Approval) Status Transition
- Prerequisites
- Algorithms Used in C1-DisputeRequest
- Dispute Request Type
- Dispute Request (Used for Searching)
- Dispute Request (Used for Viewing)

Oracle Revenue Management and Billing allows you to create a dispute request for an account. Through a dispute request, the dispute against a particular bill, bill segment, and/or adjustment is tracked and closed. While creating a dispute request, you need to specify the dispute request type using which you want to create the dispute request. It is the dispute request type which helps the system to determine:

- The business object using which the dispute request should be created
- Whether the dispute request must be approved before creating adjustments to settle a dispute against a bill, bill segment, or adjustment
- Approval profile using which the dispute request must be approved
- Whether multi-level or single-level approval is required for a dispute request
- Whether debit or credit hierarchy must be used for approval when the dispute request amount is zero
- Default adjustment type using which adjustments must be created

You can add completed bills, its bill segments, and adjustments in the dispute request. In other words, at present, the system enables you to resolve the dispute against a bill, bill segment, and adjustment. If the dispute is against a bill, the system, by default, sets the dispute amount and does not allow you to change the dispute amount. The dispute amount is set to the original bill amount because the original bill amount and dispute amount must be equal. However, if the original bill amount is positive, then the dispute amount is set to negative, and vice versa. If the dispute is against a bill segment or adjustment, you can change the dispute amount, if required.

Once a dispute request is created, the status of the dispute request is set to Draft. You can then edit or delete the dispute request, if required. Once you add the bills, bill segments, or adjustments in a dispute request, you can submit the dispute request. On submitting a dispute request, the system behaves in the following manner:

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Bill	Fully Paid	Not applicable	The system does the following: **1.** Creates the adjustment using the specified adjustment type for the bill. **2.** Swaps the adjustment onto the next bill.
Bill	Unpaid	Yes	The system does the following:

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
			1. Stops the automatic payment created for the current bill. **2.** A characteristic is defined on the current bill indicating the date till when the bill should not be considered by the **Overdue Monitor (C1-ADMOV)** batch. **Note:** The above step (2) occurs when the approval is required for the dispute request. **3.** Reopens the current bill of the account. **4.** Creates the adjustment using the specified adjustment type for the bill and swaps the adjustment onto the current bill. **5.** Completes and freeze the current bill.
Bill	Unpaid	No	The system does the following: **1.** Creates the adjustment using the specified adjustment type for the bill. **2.** Swaps the adjustment onto the current or next bill depending on the value defined for the **Adjustment on Next Bill** parameter in an algorithm created using the **C1- ENTERADJ** algorithm type.
Bill	Partially Paid	Not applicable	The system does the following: **1.** Creates two adjustments using the specified adjustment type for the bill. **2.** Swaps one adjustment onto the current bill and another adjustment onto the next bill. **Example:** A dispute is raised against a bill (Bill Amount - 100, Dispute Amount - 100, and Unpaid Amount - 50), then one adjustment (with the adjustment amount 50) is swap on the current bill and another adjustment (with the adjustment amount 50) is swap on the next bill.
Bill Segment	Fully Paid	Not applicable	The system does the following:

Copyright © 2024, Oracle and/or its affiliates.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
			1. Creates the adjustment using the specified adjustment type for the bill segment. **2.** Swaps the adjustment onto the next bill.
Bill Segment	Unpaid	Yes	The system does the following: **1.** Stops the automatic payment created for the current bill. **2.** A characteristic is defined on the current bill indicating the date till when the bill should not be considered by the **Overdue Monitor (C1-ADMOV)** batch. **Note:** The above step (2) occurs when the approval is required for the dispute request. **3.** Reopens the current bill of the account. **4.** Creates the adjustment using the specified adjustment type for the bill segment and swaps the adjustment onto the current bill. **5.** Completes and freeze the current bill.
Bill Segment	Unpaid	No	The system does the following: **1.** Creates the adjustment using the specified adjustment type for the bill segment. **2.** Swaps the adjustment onto the current or next bill depending on the value defined for the **Adjustment on Next Bill** parameter in an algorithm created using the **C1- ENTERADJ** algorithm type.
Bill Segment	Partially Paid	Not applicable	The system does the following: **1.** Creates two adjustments using the specified adjustment type for the bill segment. **2.** Swaps one adjustment onto the current bill and another adjustment onto the next bill. **Example:** A dispute is raised against a bill segment (Bill Segment Amount - 100, Dispute Amount - 100, and Unpaid Bill Segment Amount -

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Adjustment	Partially Paid	Not applicable	The system does the following: **1.** Creates two adjustments using the specified adjustment type for the adjustment (against which you have raised a dispute). **2.** Swaps one adjustment onto the current bill and another adjustment onto the next bill. **Example:** A dispute is raised against an adjustment (Adjustment Amount - 100, Dispute Amount - 100, and Unpaid Adjustment Amount - 50), then one adjustment (with the adjustment amount 50) is swap on the current bill and another adjustment (with the adjustment amount 50) is swap on the next bill.

Finally, the status of the dispute request is changed to **Processed**. You can optionally configure the system to use the approval workflow process for a dispute request. If the **Approval Required** flag is set to **Yes** in a dispute request type, then on submitting the respective dispute request, the approval workflow process creates a To Do for the approver to review the dispute request. Once the approver approves the dispute request, the system behaves as mentioned in the above table. The approver can approve, reject, or resubmit the dispute request. When the dispute request is resubmitted to the submitter, the submitter can edit, cancel, or submit the dispute request.

The approval process is configured through the approval profile. The approval profile allows you to define the debit and credit hierarchy. If the dispute request amount is negative, the credit hierarchy in the approval profile is used for approval. However, if the dispute request amount is positive, the debit hierarchy in the approval profile is used for approval. You can either opt to use single-level or multi-level approval for the dispute requests.

During the dispute request process, a dispute request creation goes through various statuses in its lifecycle. For more information about the dispute request statuses, see Dispute Request (Without Approval) Status Transition on page 2054 and Dispute Request (With Approval) Status Transition on page 2054.

Note: The lifecycle of a dispute request creation is driven by the respective business object using which the request is created. The dispute request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the dispute request process, see Prerequisites on page 2055.

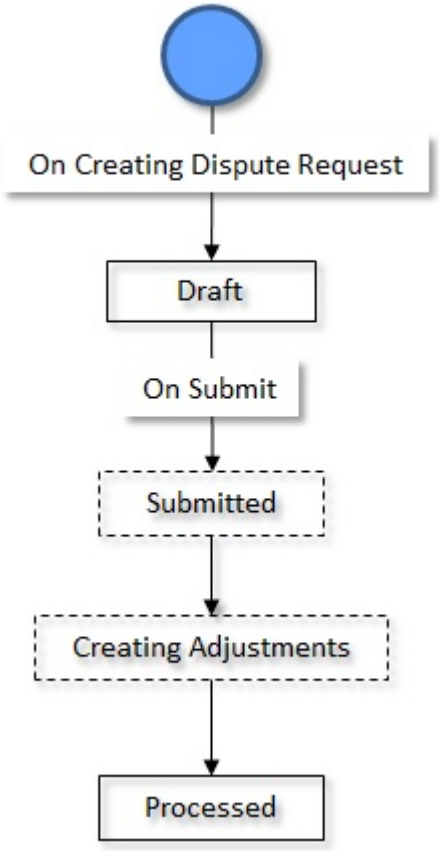
Dispute Request (Without Approval) Status Transition

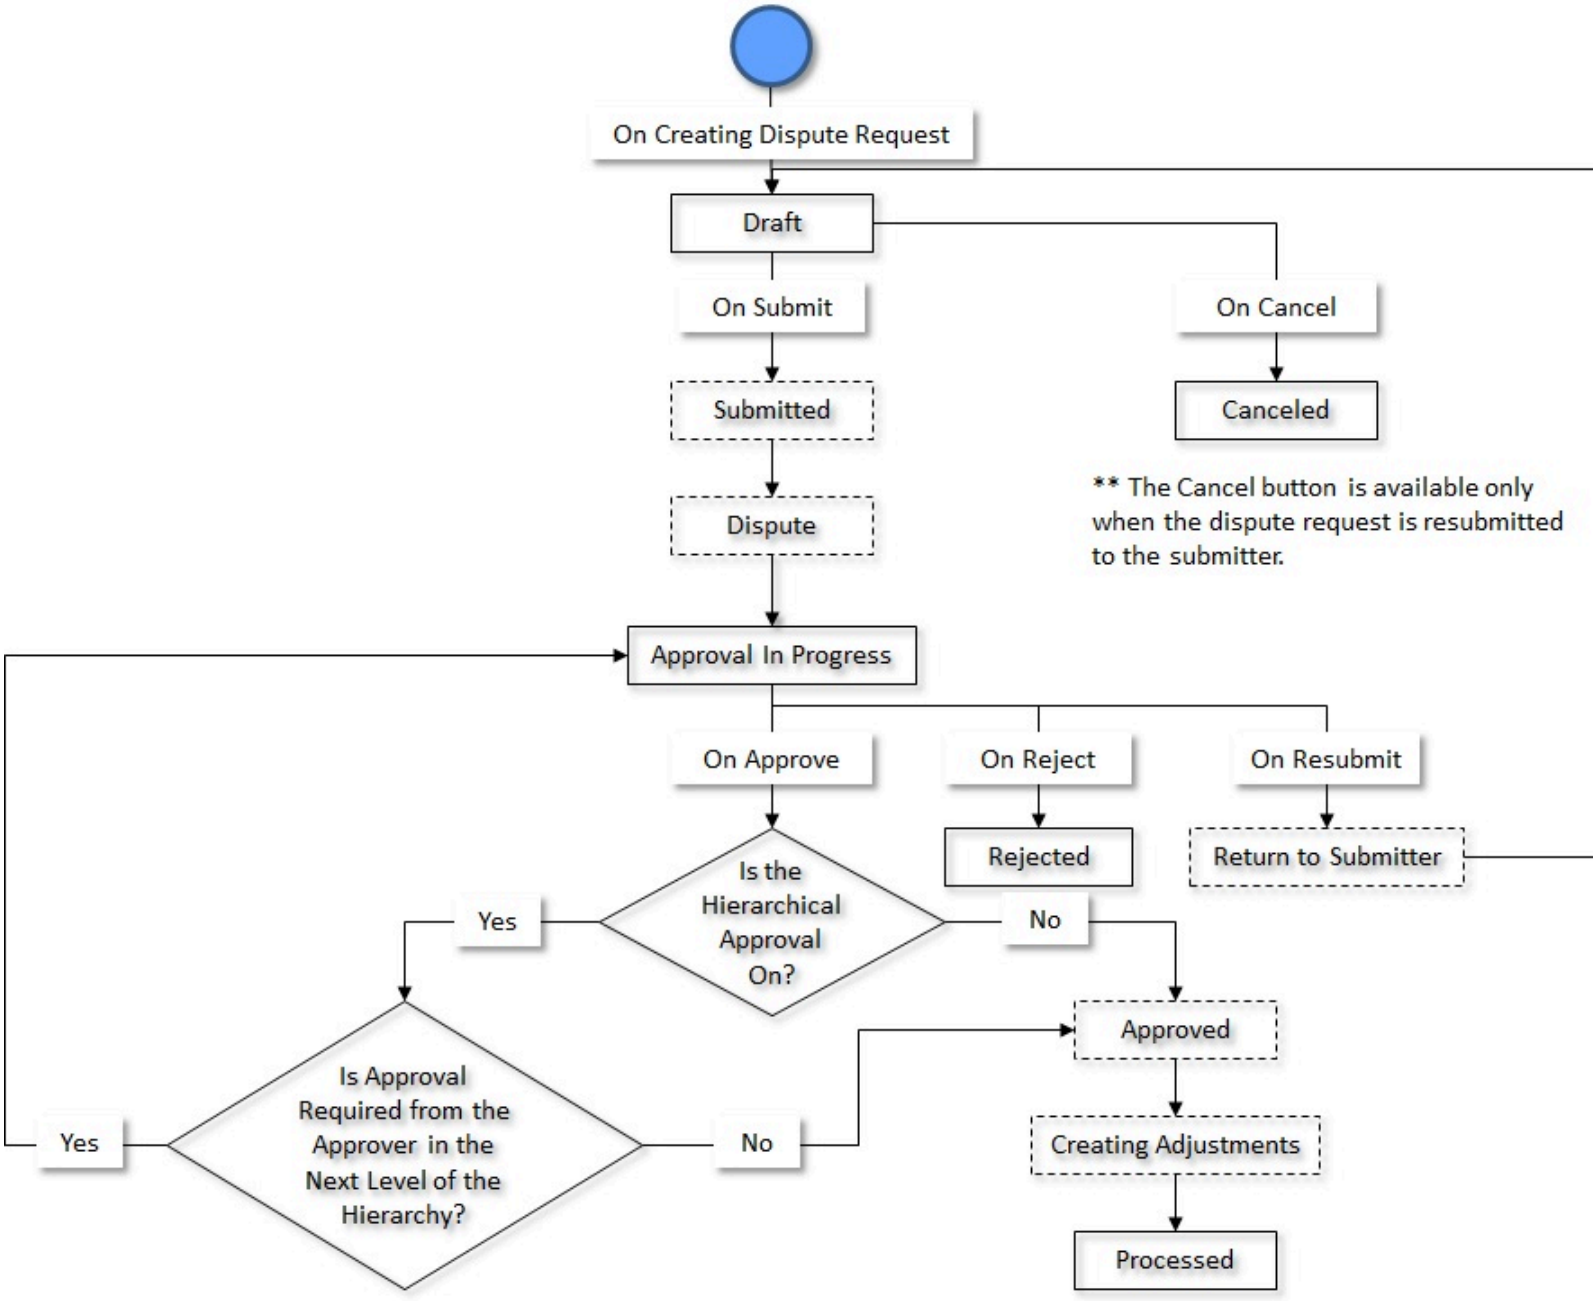
The following figure graphically indicates how a dispute request moves from one status to another when approval workflow is off:



Dispute Request (With Approval) Status Transition

The following figure graphically indicates how a dispute request moves from one status to another when approval workflow is on:

Copyright © 2024, Oracle and/or its affiliates.



Prerequisites

To setup the dispute request process, you need to do the following:

- Define the required refund request types in the system
- Define the required adjustment types (for creating dispute adjustments) where A/P request type is defined
- Define the required characteristic types where the characteristic entity is set to **Dispute Request Type**
- Define the required characteristic types where the characteristic entity is set to **Dispute Request**
- Define rejected status reasons for the **C1-DisputeRequest** business object
- Assign the **C1-DSPSB** To Do type to a To Do role whose users must receive To Do generated while submitting a dispute request for approval

Copyright © 2024, Oracle and/or its affiliates.

- Define the required approval profiles with the credit/debit hierarchy and **C1_DISAP** To Do type
- Create an algorithm using the **C1-DSPTRQINF** algorithm type if you want to create Dispute Requests using the dispute request information.
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen

Algorithms Used in C1-DisputeRequest

The following table lists the algorithms which are attached to the **C1-DisputeRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-DSPTRQINF	C1-DSPTRQINF	This algorithm generates the dispute request information string which appears throughout the application. It concatenates the following fields: • Dispute Request Type Description • Dispute Request Status Description • Dispute Request ID
Validation	C1-DSPTVADN	C1-DSPTVADN	This algorithm validates following: **Draft** status validations: • At-least one entity should be selected to submit a dispute. **Dispute Request** with at-least one **Bill** or **Bill Line Item** should be added for submission • Dispute amount cannot be zero or null • If a bill is already present in dispute request and request is not in final status then user should not be allowed to add same bill in another dispute request • Disputed Amount should be equal to bill outstanding amount if bill Line item contain multiple contracts

The following table lists the algorithms which are used in the lifecycle of the **C1-DisputeRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DISPUTSUB	C1-DISPUTSUB	This algorithm checks the following: • Whether the approval is required for the dispute request. If the approval is required for a dispute request, the status of the dispute request is changed to **Approval In Progress**. However, if the approval is not required for a dispute request, the status of the dispute request is changed to **Creating Adjustment**. • At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the dispute request.

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				• Whether the approval profile attached to the **Dispute Request Type**has the credit hierarchy and **To Do Type** defined.
Submitted	Enter	C1-DPTSTAUPY	C1-DPTSTAUPY	This algorithm is used to stop auto pay on bill. **Parameter - Characteristic Type** Characteristic Type is used to add the characteristic which is stamped on the bill to postpone overdue process
Dispute	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input **Next Status** or to the status related to the input **Next Transition Condition**. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Dispute	Enter	C1-DPTSTAUPY	C1-DPTSTAUPY	This algorithm is used to stop auto pay on bill. **Parameter - Characteristic Type** Characteristic Type is used to add the characteristic which is stamped on the bill to postpone overdue process
Creating Adjustments	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input **Next Status** or to the status related to the input **Next Transition Condition**. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Creating Adjustments	Enter	C1-ENTERADJS	C1-ENTERADJ	This algorithm is executed on submit or on approve of an dispute request. It creates the adjustments which will be swapped on the current or next bill. Adjustment are created with below logic **Unpaid Bill logic** • If stop auto pay switch is **No** and auto pay exist then create adjustment on next bill • If stop auto pay switch is **Yes** then perform below step • If bill cannot be reopen or adjustment need to be created on next bill then create adjustment on next bill

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description

				• If approval is configured then create to do for manual creation of auto pay (Auto Pay is stopped while submitting the request)
				• Else
				  • create adjustment on current bill
				  • if approval is configured then
				  • Bill reopen and complete (Auto Pay is stopped while submitting the request)
				  • Delete overdue char from bill

Status	System Event	Algorithm	Algorithm Type	Description

				• Else
				  • Stop auto pay
				  • Reopen and complete
				Paid Bill logic
				• Adjustment will be created on next bill
				Partial Bill Logic
				• Adjustment will be created to balance current bill and another adjustment will be created for remaining amount and it will be stamped on next bill.
				• If dispute adjustment will increase the debit or credit balance then adjustment will be stamped on next bill.
				There are four parameters for this algorithm.
				Parameter 1 - Adjustment on Next Bill (Required)
				• Adjustments should be swapped on the current or next bill. It is used only for unpaid bill.
				Parameter 2 - Match Type Entity Flag (Required)
				• Valid values for this parameter are **BILL**, **BSEG** and **SA**. This parameter defines the open item at which the match events are to be created. For bills which are not paid yet, new match events will be created based on the value of this parameter.
				• Based on the flag defined **Match Events** are created as follows,

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				• If the **Match Type Flag** is **BILL**, then all FTs on a bill have the same Match Event. • If the **Match Type Flag** is **BSEG**, then each line item (bill segment or adjustment) on the bill will have a unique match event. • If the **Match Type Flag** is **SA**, then line items belonging to the same contract within a bill will have the same match event. **Parameter 3 - To Do Type** • To Do will be sent to the user if bill can't be reopen and auto pay has been stopped.

Status	System Event	Algorithm	Algorithm Type	Description
				Parameter 4 - Characteristic Type • Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process
Approval In Progress	Enter	C1-DSPTAPP	C1-DSPTAPP	This algorithm creates the following: • A To Do using the To Do type specified in the approval profile which is attached to the dispute request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an **Exclude To Do Type Characteristic Type** indicating that it should not be automatically completed.
Approved	Enter	C1-DSPAPPRVD	C1-DSPAPPRVD	This algorithm is triggered when the approver clicks the **Approve** button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the dispute request is changed to **Approval In Progress** and the algorithm attached to the Approval In Progress status is invoked. If further approval is not

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				required, the status of the dispute request is changed to **Creating Adjustment**.
Return to Submitter	Enter	C1-DSPTRESUB	C1-DSPTRESUB	This algorithm is invoked on **Re-Submit** button. It moves the status of **Dispute Request** into **Draft**. A **To Do** will be generated for the user as submitter whose **To Do Type** and **To Do Role** are fetched from **Dispute Request Type**.
Rejected	Enter	C1-DSPTREJT	C1-DSPTREJT	This algorithm is executed when on reject. **Parameter 1 - To Do Type** • To Do will be sent to the user if bill can't be reopen and auto pay has been stopped. **Parameter 2 - Characteristic Type** • Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process
Canceled	Enter	C1-DSPTREJT	C1-DSPTREJT	This algorithm is executed when on reject. **Parameter 1 - To Do Type** • To Do will be sent to the user if bill can't be reopen and auto pay has been stopped. **Parameter 2 - Characteristic Type** • Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process

Dispute Request Type

Oracle Revenue Management and Billing allows you to define:

- **Dispute Request Type** - It is used to create a dispute request. You can define multiple dispute request types in the system. A dispute request type helps the system to determine:
  - Whether the dispute request must be approved before creating dispute adjustments in the system
  - Approval profile using which the dispute request must be approved
  - Whether multi-level or single-level approval is required while creating dispute adjustments in the system
  - Adjustment type using which the dispute adjustment must be created when the total dispute amount is less than the minimum dispute amount
  - Default adjustment type using which dispute adjustments must be created

While defining a dispute request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the dispute request (which is created using the dispute request type) is sent for approval before creating the dispute adjustments. However, if the **Approval Required** check box is not selected, the dispute adjustments are created immediately on submitting a dispute request. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy and credit approval hierarchy is used for approving dispute request. Therefore, while defining an approval profile for dispute, you need to define credit and debit hierarchy and set the To Do Type to **C1-DISAP**.

Copyright © 2024, Oracle and/or its affiliates.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the dispute request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the `Manager` To Do role will approve or reject the dispute request, and at the second level, a user with the `Senior Manager` To Do role will approve or reject the dispute request. On submitting a dispute request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the dispute request, the dispute adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the dispute adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval - First Level (Threshold Amount: 300, To Do Role: `Manager`) and Second Level (Threshold Amount: 500, To Do Role: `Senior Manager`). Now, if the total dispute amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total dispute amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total dispute amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the dispute request and create the dispute adjustments.

The system supports both single-level and multi-level approval process while approving dispute request. If the **Hierarchical Approval** check box is selected while defining a dispute request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a dispute request type, the approval is required only from the approval level where the total dispute amount falls within the threshold limit. Let us understand this with the help of some examples.

<table>
<tr><th>Dispute Request Type</th><th>Approval Profile</th><th>Approval Hierarchy</th><th>Hierarchical Approval</th></tr>
<tr><td>D1</td><td>Dispute Analyst</td><td><u>Credit Hierarchy</u><table><tr><th>Threshold Amount</th><th>To Do Role</th></tr><tr><td>$500</td><td>Senior Analyst</td></tr><tr><td>$750</td><td>Manager</td></tr><tr><td>$1500</td><td>Senior Manager</td></tr></table></td><td>Yes</td></tr>
<tr><td>D2</td><td>Dispute Analyst</td><td><u>Credit Hierarchy</u><table><tr><th>Threshold Amount</th><th>To Do Role</th></tr><tr><td>$500</td><td>Senior Analyst</td></tr><tr><td>$750</td><td>Manager</td></tr><tr><td>$1500</td><td>Senior Manager</td></tr></table></td><td>No</td></tr>
<tr><td>D3</td><td>Dispute Analyst</td><td><u>Debit Hierarchy</u><table><tr><th>Threshold Amount</th><th>To Do Role</th></tr><tr><td>$100</td><td>Senior Analyst</td></tr><tr><td>$200</td><td>Manager</td></tr><tr><td>$300</td><td>Senior Manager</td></tr></table></td><td>Yes</td></tr>
</table>

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><th>Dispute Request Type</th><th>Approval Profile</th><th>Approval Hierarchy</th><th>Hierarchical Approval</th></tr>
<tr><td>D4</td><td>Dispute Analyst</td><td><u>Debit Hierarchy</u><table><tr><th>Threshold Amount</th><th>To Do Role</th></tr><tr><td>$100</td><td>Senior Analyst</td></tr><tr><td>$200</td><td>Manager</td></tr><tr><td>$300</td><td>Senior Manager</td></tr></table></td><td>No</td></tr>
</table>

The following table indicates how the system will behave in different dispute scenarios:

Dispute Request	Dispute Request Type	Total Refund Amount ($)	Comments
DR1	D1	200	This dispute request is automatically approved by the system because the total dispute amount is less than $500.
DR2	D1	750	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role This is because the total dispute amount is either equal to $750 or less than $1500 and hierarchical approval is required.
DR3	D1	2000	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role **3.** Users with the `Senior Manager` To Do role This is because the total dispute amount is greater than $1500 and hierarchical approval is required.
DR4	D2	200	This dispute request is automatically approved by the system because the total dispute amount is less than $500.
DR5	D2	750	The To Do is sent for approval to users with the `Manager` To Do role. This is because the total dispute amount is either equal to $750 or less than $1500 and hierarchical approval is not required.
DR6	D2	2000	The To Do is sent for approval to users with the `Senior Manager` To Do role. This is because the total dispute amount is greater than $1500 and hierarchical approval is not required.
DR7	D3	90	This dispute request is automatically approved by the system because the total dispute amount is less than $100.
DR8	D3	250	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role

Copyright © 2024, Oracle and/or its affiliates.

Dispute Request	Dispute Request Type	Total Refund Amount ($)	Comments
			2. Users with the `Manager` To Do role This is because the total dispute amount is either equal to $200 or less than $300 and hierarchical approval is required.
DR9	D3	500	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role **3.** Users with the `Senior Manager` To Do role This is because the total dispute amount is greater than $300 and hierarchical approval is required.
DR10	D4	90	This dispute request is automatically approved by the system because the total dispute amount is less than $100.
DR11	D4	250	The To Do is sent for approval to users with the `Manager` To Do role. This is because the total dispute amount is either equal to $200 or less than $300 and hierarchical approval is not required.
DR12	D4	500	The To Do is sent for approval to users with the `Senior Manager` To Do role. This is because the total dispute amount is greater than $300 and hierarchical approval is not required.

The **Dispute Request Type** screen allows you to define, edit, delete, and copy a dipsute request type. This screen consists of the following zones:

- Dispute Request Type List on page 2063
- Dispute Request Type on page 2064

Dispute Request Type List

The **Dispute Request Type List** zone lists dispute request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Dispute Request Type	Displays the dispute request type.
Description	Displays the description of the dispute request type.
Edit	On clicking the **Edit** (✎) icon, the **Dispute Request Type** screen appears where you can edit the details of the dispute request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Dispute Request Type** screen appears where you can define a dispute request type using an existing dispute request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the dispute request type.
	Note: You can delete a dispute request type when you have not created a dispute request using the dispute request type.

Copyright © 2024, Oracle and/or its affiliates.

On clicking the **Broadcast** (ᯤ) icon corresponding to dispute request type, the **Dispute Request Type** zone appears with the details of the respective dispute request type.

Dispute Request Type

The **Dispute Request Type** zone displays the details of the dispute request type. This zone consists of the following sections:

- **Main** - This section provides basic information about the dispute request type. It contains the following fields:

Field Name	Field Description
Dispute Request Type	Displays the dispute request type.
Description	Displays the description of the dispute request type.
Dispute Request Business Object	Indicates the business object that will be used to create the dispute request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the dispute request type.
Status	Indicates the status of the dispute request type. The valid values are: • Active • Inactive
Default Adjustment Type	Indicates the adjustment type using which the dispute adjustment must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Approval Required	Indicates whether approval is required while creating the dispute adjustments using the dispute request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the dispute request type.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **Approval Profile** screen appears where you can view the details of the respective approval profile.
Hierarchical Approval	Indicates whether multi-level or single approval is required while creating the dispute adjustments using the dispute request type. **Note:** This field appears when the **Approval Required** check box is selected.
Zero Threshold Amount Hierarchy	Indicates that based on the approval profile hierarchy, To Do Type from the hierarchy (credit/debit) will be picked up.
Submitter To Do Type	Indicates the To Do type for the submitter when the dispute request type is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the To Do role for the submitter when the dispute request type is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.

- **Characteristics** - This section lists the characteristics of the dispute request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the dispute request type.
Delete	Used to delete the dispute request type. **Note:** You can delete a dispute request type when you have not created a dispute request using the dispute request type.
Duplicate	Used to create a new dispute request type using an existing dispute request type.

- **Record Information** - This section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the dispute request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Dispute Request Type** zone does not appear in the **Dispute Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the dispute request type in the **Dispute Request Type List** zone.

Defining a Dispute Request Type

Prerequisites

To define a dispute request type, you should have:

- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To define a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Dispute Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Dispute Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type Business Object	Used to indicate the business object that you want to use to create the dispute request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Dispute Request Type** screen.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** The **Select Business Object** screen appears when there are multiple dispute request type business objects defined in the application. If there is only one dispute request type business object defined in the application, the **Dispute Request Type** screen appears.

4. Select the required dispute request type business object from the respective field.
5. Click **OK**.

The **Dispute Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the dispute request type.
- **Characteristics** - Used to define the characteristics for the dispute request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Used to specify the dispute request type.	Yes
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No
Status	Used to indicate the status of the dispute request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a dispute request type to **Inactive** if there are dispute requests which are created using the dispute request type and are currently in the **Draft** or **Approval In Progress** status.	Yes
Default Adjustment Type	Used to indicate the adjustment type using which the dispute adjustment must be created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	Yes
Approval Required	Used to indicate whether approval is required while creating the dispute adjustments using the dispute request type.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the dispute request type. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the dispute adjustments using the dispute request type. **Note:** This field appears when the **Approval Required** check box is selected.	No
Zero Threshold Amount Hierarchy	Used to indicate that based on the approval profile hierarchy, To Do Type from the hierarchy will be selected. The valid values are: • Credit • Debit	No
Submitter To Do Type	Used to indicate the To Do type for the submitter when the dispute request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the dispute request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.

Note:

When the threshold amount is equal to zero for the request then based on the value in **Zero Threshold Amount Hierarchy**, the to do type will be picked from the **Approval Profile** hierarchy to send notification.

Only when the **Approval Required** checkbox is selected, you will be able to select **Hierarchical Approval** and **Approval Profile** to be used. If hierarchical approval is not selected, the request has to be approved by a single approver (highest level approver determined by the dispute amount and approval profile.

Copyright © 2024, Oracle and/or its affiliates.

6. Enter the required details depending on whether you want to define dispute request type.
7. Define characteristics for the dispute request type, if required.
8. Click **Save**.
   The dispute request type is defined.

Defining a Characteristic for a Dispute Request Type

Prerequisites

To define a characteristic for a dispute request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Dispute Request Type**)

Procedure

To define a characteristic for a dispute request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a dispute *r*equest type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Dispute Request Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the dispute request type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the dipsute request type.

2. Enter the required details.

   Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the dispute request type, click the **Add** (+) icon and *t*hen repeat step 2.

Copyright © 2024, Oracle and/or its affiliates.

Note: However, if you want to remove a characteristic from the dispute request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Dispute Request Type

Prerequisites

To edit a dispute request type, you should have:

- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To edit a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Dipsute Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Dipsute Request Type** sub-menu.
   The **Dispute Request Type** screen appears.
4. In the **Dispute Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *d*ispute request type whose details you want to edit.

   The **Dispute Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the dispute request type.
   - **Characteristics** - Used to define the characteristics for the dispute request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Displays the dispute request type.	Not applicable
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No

Copying a Dispute Request Type

Instead of creating a dispute request type from scratch, you can create a new dispute request type using an existing dispute request type. This is possible through copying a dispute request type. On copying a dispute request type, the details including the characteristics are copied to the new dispute request type. You can then edit the details, if required.

Prerequisites

To copy a dispute request type, you should have:

- Dispute request type (whose copy you want to create) defined in the application
- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To copy a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Dispute Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Dispute Request Type** sub-menu.
   The **Dispute Request Type** screen appears.
4. In the **Dispute Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the dispute request type whose copy you want to create.

   The **Dispute Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the dispute request type.
   - **Characteristics** - Used to define the characteristics for the dispute request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Used to specify the dispute request type.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No
Status	Used to indicate the status of the dispute request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a dispute request type to **Inactive** if there are dispute requests which are created using the dispute request type and are currently in the **Draft** or **Approval In Progress** status.	Yes
Default Adjustment Type	Used to indicate the adjustment type using which the dispute adjustment must be created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	Yes
Approval Required	Used to indicate whether approval is required while creating the dispute adjustments using the dispute request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the dispute request type. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the dispute adjustments using the dispute request type.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Approval Required** check box is selected.	
Zero Threshold Amount Hierarchy	Used to indicate that based on the approval profile hierarchy, To Do Type from the hierarchy will be selected. The valid values are: • Credit • Debit	No
Submitter To Do Type	Used to indicate the To Do type for the submitter when the dispute request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the dispute request is resubmitted by the approver. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.

Tip: Alternatively, you can click the **Duplicate** button in the **Dispute Request Type** zone to create a copy of the dispute request type.

5. Enter the required details.
6. Define, edit, or remove characteristics of the dispute request type, if required.
7. Click **Save**.
   The new dispute request type is defined.

Dispute Request (Used for Searching)

The **Dispute Request** screen allows you to search for a dispute request using various search criteria. It also allows you to create a dispute request. Through this screen, you can navigate to the following screen:

- Dispute Request (Used for Viewing) on page 2084

This screen consists of the following zone:

- Search Dispute Request on page 2076

Search Dispute Request

The **Search Dispute Request** zone allows you to search for dispute requests using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a dispute request using request, person, account or bill details. The valid values are: • **Request Details** - Used when you want to search for dispute requests. • **Person, Account, or Bill Details** - Used when you want to search for person, account, or bill requests.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the **Request Details** option is selected.	
Dispute Request Type	Used to search dispute requests which are created using a particular dispute request type. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Status	Used to search dispute requests with a particular status. The valid values are: • Approval In Progress • Cancelled • Draft • Processed • Rejected **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
User ID	Used to search dispute requests which are created by a particular user. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Created From	Used to search dispute requests which are created from a particular date onwards. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
To	Used to search dispute requests which are created till a particular date. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Dispute Request ID	Used to search a particular dispute request. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Account ID	Used to search dispute requests which are created for a particular account. **Note:** The **Search** () icon appears corresponding to the field. On clicking the **Search** icon, the **Account Search** window appears.	No
Dispute Reason	Used to search dispute requests which are created using a particular dispute reason for the bill.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you select the **Request Details** option from the **Search By** list.	
Person ID	Used to search dispute requests which are created for a particular person. **Note:** This field appears when you select the **Person, Account, or Bill Details** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to the field. On clicking the **Search** icon, the **Person Search** window appears.	No
Bill ID	Used to search dispute requests which includes bill segments or adjustments of a particular bill. **Note:** This field appears only when you select the **Person, Account, or Bill Details** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to the field. On clicking the **Search** icon, the **Bill Search** window appears.	No
Alternate Bill ID	Used to search dispute requests which are created for a particular bill using the alternate bill ID. **Note:** This field appears when you select the **Person, Account, or Bill Details** option from the **Search By** list.	No
Bill Date From	Used to search dispute requests which includes bill segments or adjustments of bills which are created from a particular date onwards. **Note:** This field appears when you select the **Person, Account, or Bill Details** option from the **Search By** list.	No
To	Used to search dispute requests which includes bill segments or adjustments of bills which are created till a particular date. **Note:** This field appears when you select the **Person, Account, or Bill Details** option from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for a dispute request.

Copyright © 2024, Oracle and/or its affiliates.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date Time	Displays the date and time when the dispute request is created.
Dispute Request Information	Displays information about the dispute request.
	Note: It has a link. On clicking the link, the **Dispute Request** screen appears depending on whether the request is for dispute.
Status	Indicates the status of the dispute request.
Account Information	Displays additional information about the account for which the dispute request is created.
	Note: It has a link. On clicking the link, the **Account** screen appears with the details of the respective account.
Created By	Indicates the user who has created the dispute request.

Searching for a Dispute Request

Prerequisites

To search for a dispute request, you should have:

- Dispute request types defined in the application

Procedure

To search for a dispute request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Dispute Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Dispute Request** sub-menu.
   The **Dispute Request** screen appears.
4. Enter the search criteria in the **Search Dispute Request** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.

Copyright © 2024, Oracle and/or its affiliates.

A list of dispute requests that meet the search criteria appears in the **Search Results** section.

Viewing the Dispute Request Details

Procedure

To view the details of a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to *t*he dispute request whose details you want to view.

   The **Dispute Request** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the dispute request. It contains the following zones:
     - **Dispute Request** - Displays the details of the dispute request.
     - **Dispute Details** - Lists the entities, such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed.
     - **Dispute Adjustments** - Displays the adjustment details of dispute request.

       Note: This zone appears when you click the Broadcast (ᯤ) icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and when the status is **Processed**.
     - **Previous Dispute Requests** - Displays the details of the bill which must be disputed.

       Note: This zone appears when you click the Broadcast (ᯤ) icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.
   - **Bills** - Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to dispute.
   - **Log** - Lists the complete trail of actions performed on the dispute request.
3. View the details of the dispute request in the **Dispute Request** zone.
4. View the entities such as auto payment events, and/or credit bill line items (such as credit bill segments and *a*djustments), of the account which must be disputed in the **Dispute Details** zone.
5. View the adjustment details of dispute request in the **Dispute Adjustments** zone.
6. View the details of the bill which must be disputed in the **Previous Dispute Requests** zone.

Creating a Dispute Request

Prerequisites

To create a dispute request, you should have:

- Dispute request types defined in the application

Procedure

To create a dispute request:

1. Do either of the following:

If you want to	Then
Define a dispute request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. The **Account Receivable Central** screen appears. **c.** Search for the bill in the **Account Receivable Central** screen. **d.** In the **Search Results** section, select the required bill and then click **Dispute**.
	Note: Only one bill at a time is allowed to select for **Dispute Request** from the **Account Receivable Central** screen.
Define a dispute request from the Dispute Request screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Dispute Request**. A sub-menu appears. **c.** Click the **Add** option from the **Dispute Request** sub-menu.

The **Select Dispute Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Used to indicate the request type using which you want to create the dispute request.	Yes
Account ID	Used to search dispute requests which are created for a particular account.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	
Dispute Reason	Used to indicate the dispute requests which are created using a particular dispute reason for the bill.	Yes

Tip: Alternatively, you can access the **Select Dispute Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Dispute Request** screen.

2. Select the required dispute request type from the respective field.
3. Click **Save**.

   The dispute request is defined and the status of the dispute request is set to **Draft**. The **Dispute Request** screen appears where you can view the details of the dispute request. It contains the following tabs:

Note: The dispute request can be created only for bill with zero outstanding amount.

- **Main** - Displays information about the dispute request. It contains the following zones:
  - **Dispute Request** - Displays the details of the dispute request.
  - **Dispute Details** - Lists the entities, such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed.
  - **Dispute Adjustments** - Displays the adjustment details of dispute request.

    Note: This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and when the status is **Processed**.
  - **Previous Dispute Requests** - Displays the details of the bill which must be disputed.

    Note: This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.
- **Bills** - Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to dispute.
- **Log** - Lists the complete trail of actions performed on the dispute request.

4. Add auto payment events, or credit bill line items that you want to dispute.
5. Edit the dispute amount of each entity, if required.
6. Define characteristics for the dispute request, if required.

Defining a Characteristic for a Dispute Request

Prerequisites

To define a characteristic for a dispute request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Dispute Request**)

Procedure

To define a characteristic for a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to *t*he dispute request whose details you want to edit.
   The **Dispute Request** screen appears.
3. Click the **Edit** button in the **Dispute Request** zone.
   The **Dispute Request** screen appears.

> **Note:** The **Edit** button appears when the dispute request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the dispute request.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the dispute request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the dispute request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Dispute Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the dispute request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the dispute request.

5. Enter the required details in the **Characteristics** section.

> **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the dispute request, click the **Add** (+) icon and then *r*epeat step 5.

> **Note:** However, if you want to remove a characteristic from the dispute request, click the **Delete** (🗑) icon corresponding to the characteristic.

Dispute Request (Used for Viewing)

Once you create a dispute request, the **Dispute Request** screen allows you to:

- Edit and delete a dispute request
- View the details of a dispute request
- Submit a dispute request for approval
- Approve or reject a dispute request
- View the log of a dispute request
- Add a log entry for a dispute request

This screen consists of the following tabs:

- Dispute Request - Main on page 2084
- Dispute Request - Bills on page 2089
- Dispute Request - Log on page 2091

Dispute Request - Main

The **Main** tab displays information about the dispute request. It contains the following zones:

- Dispute Request on page 2084
- Dispute Details on page 2086
- Dispute Adjustments on page 2087

> **Note:** This zone appears when you click the Broadcast (ᯤ) icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and when the status is **Processed**.

- Previous Dispute Requests on page 2088

> **Note:** This zone appears when you click the Broadcast (ᯤ) icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.

Dispute Request

The **Dispute Request** zone displays the details of the dispute request. This zone contains the following sections:

- **Main** - This section provides basic information about the dispute request. It contains the following fields:

Field Name	Field Description
Dispute Request Information	Displays information about the dispute request.
Dispute Request Type	Indicates the dispute request type using which the dispute request is created.
	Note: It has a link. On clicking the link, the **Dispute Request Type** screen appears where you can view the details of the dispute request type.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Status	Indicates the status of the refund request. The valid values are: • Draft • Approval In Progress • Cancelled • Rejected • Processed
Dispute Reason	Indicates the reason why the dispute request is rejected.
Account Information	Indicates the account for which the dispute request is created. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Comments	Displays additional information about the dispute request.

- **Characteristics** - Lists the characteristics defined for the dispute request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the dispute request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the dispute request. **Note:** The **Edit** button appears when the dispute request is in the **Draft** status.
Delete	Used to delete the dispute request. **Note:** The **Delete** button appears when the dispute request is in the **Draft** status.
Submit	Used to submit the dispute request for approval. **Note:** The **Submit** button appears when the dispute request is in the **Draft** status.
Cancel	Used to cancel the dispute request resubmitted for approval. **Note:** The **Cancel** button appears when the dispute request is in the **Draft** status.
Approve	Used to approve the dispute request. **Note:** The **Approve** button appears when: • The dispute request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the dispute request.
Reject	Used to reject the dispute request.

Copyright © 2024, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Reject** button appears when: • The dispute request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the dispute request.
Re Submit	Used to resubmit the dispute request to the submitter.
	Note: The **Re-Submit** button appears when the dispute request is in the **Approval In Progress** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the dispute request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the dispute request status is updated
Create Date/Time	Displays the date and time when the dispute request is created.

Dispute Details

The **Dispute Details** zone lists the credit/debit bill line items (such as bill segments and adjustments) that you have added to the dispute request. This zone contains the following columns:

Column Name	Column Description
Entity Type	Indicates whether the entity is a bill, bill segment, or an adjustment.
Entity ID	Displays the entity ID.
Currency	Indicates the currency in which the entity was created.
Dispute Amount	Displays the entity amount.
Adjustment Type	Indicates the adjustment type using which the dispute adjustment must be created.
	Note: By default, the adjustment type specified in the dispute request type appears in this column. You can change the adjustment type, if required, by editing the dispute request. It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment.
Stop Auto Pay	Displays whether to stop auto payment or not. The valid values are: • Yes • No

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Entity Information	Displays information about the entity. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the respective entity screen appears with the details of the respective entity.

Note:

On clicking the Broadcast (ᯤ) icon corresponding to the entity type as **Bill**, the **Dispute Adjustments** and **Previous Dispute Requests** zones appears with the details of the respective bill.

The **Dispute Details** zone appears when the status is **Processed**.

Dispute Amount currency will be same as bill or invoice currency. It cannot be zero or null. It will be less than or equal to the original, outstanding bill amount, or bill line item amount if the bill line item contains multiple contract.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Dispute Adjustments

The **Dispute Adjustments** zone lists the adjustment details of dispute request. This zone contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustments in dispute request.
	Note: It has a link. On clicking the link, the respective **Adjustment** screen appears with the details of adjustment for respective entity.
Adjustment Amount	Displays the adjustment amount.

Note:

On clicking the Broadcast (ᯤ) icon corresponding to the entity type as **Bill**, the **Dispute Adjustments** zone appears with the details of the respective bill.

The **Dispute Adjustments** zone appears when the status is **Processed**.

Dispute **Adjustment Amount** cannot be zero or null, it should be delta amount.

Dispute Request - Bills

The **Bills** tab allows you to search bills with credit/debit line items, such as credit/debit bill segments and adjustments, that you want to dispute. It contains the following zones:

- Search Bills on page 2089
- Bill Line Items on page 2090

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with credit/debit balance or have one or more credit/debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a bill using the bill details. The valid values are: • Bill Details • Bill and Price Item Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search a particular bill. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Bill Search** window appears.	No
Price Item	Used to search bills which are created for a particular price item. **Note:** This field appears when you select **Bill and Price Item Details** option from the **Search By** list. You can search for a price item by clicking the **Search** (🔍) icon corresponding to the field. On clicking the **Search** icon, the **Price Item Search** window appears.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Bill Amount	Displays the total bill amount.

If you want to dispute a bill with credit/debit balance and all credit/debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All credit/debit bill segments and adjustments of the bill are added in the **Dispute Details** zone on the **Main** tab. However, if you select a bill (with credit/debit balance) which contains one or more credit/debit line items or if you select a bill (with credit/debit balance) which contains one or more credit/debit line items, the system will not allow you to add the credit/debit line items by directly adding the bill. In such case, you need to individually select the credit/debit bill segments and adjustments of the bill and then add them to the dispute request.

Note:

If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

Multiple bill of same account can be added to the dispute request. Multiple bill line items of any bill can also be added to the dispute request.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application.
	Note: It has a link. If the entity is a bill segment then on clicking the link, the **Bill Segment** screen appears with the details of the respective bill segment. However, if the entity is an adjustment then on clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Entity Amount	Displays the bill segment or adjustment amount.
Currency	Displays the currency in which the amount is billed.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.

You can select one or more credit/debit bill segments or adjustments and click the **Add** button in this zone to add selected credit/debit bill segments or adjustments to the dispute request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast** (ᯤ) icon corresponding to the bill in the **Search Bills** zone.

Editing a Dispute Request

Prerequisites

Copyright © 2024, Oracle and/or its affiliates.

To edit a dispute request, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to *t*he dispute request whose details you want to edit.
   The **Dispute Request** screen appears.
3. Click the **Edit** button in the **Dispute Request** zone.

   The **Dispute Request** screen appears. It contains the following section:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Displays information about the dispute request.	Not applicable
Dispute Reason	Used to indicate the dispute requests which are created using a particular dispute reason for the bill.	Yes
Account Information	Indicates the account for which the dispute request is created.	Not applicable
Comments	Used to specify additional information about the dispute request.	No

   In addition, this screen contains the following two sections:

   - **Characteristics** - Used to define the characteristics for the dispute request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the dispute request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the dispute request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Dispute Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the dispute request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the dispute request.

4. Modify the details of the dispute request, if required.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Define, edit, or remove characteristics of the dispute request, if required.
6. Click **Save**.
   The changes made to the dispute request are saved.

Submitting a Dispute Request

Prerequisites

To submit a dispute request, you should have:

- Credit/debit bill line items added in the dispute request

Procedure

To submit a dispute request:

Copyright © 2024, Oracle and/or its affiliates.

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to *t*he dispute request that you want to submit.
   The **Dispute Request** screen appears.
3. Click the **Submit** button in the **Dispute Request** zone.

   The system behaves in the following manner:

If...	Then
The **Approval Required** and **Hierarchical Approval** check boxes are selected in the dispute request type using which the dispute request is created	A To Do of the **C1-DSPSB** To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the dispute request is changed to **Approval In Progress**.
The **Approval Required** check box is selected, but the **Hierarchical Approval** check box is not selected in the dispute request type using which the dispute request is created	A To Do of the **C1-DSPSB** To Do type is created and sent to the approver at the hierarchy level where the total dispute amount falls within the threshold limit. In addition, the status of the dispute request is changed to **Approval In Progress**.
The **Approval Required** check box is not selected in the dispute request type using which the dispute request is created	The dispute adjustments are created using the specified adjustment types and the status of the dispute request is changed to **Processed**.

Note:

The **Submit** button appears when the dispute request is in the **Draft** status.

Dispute request with atleast one bill or bill line item has to be added for submission.

Approving a Dispute Request

You can view the number of dispute requests which are pending for approval in the **Dispute Request** screen. The approver can review, and accordingly approve or reject the dispute request based on the observations.

Note: The system will not allow you to approve or reject a dispute request submitted by you.

Procedure

To approve a dispute request:

1. Do either of the following:

If you want to	Then
Approve a dispute request through the Dispute Request screen	**a.** Search for the dispute request in the **Dispute Request** screen.

Copyright © 2024, Oracle and/or its affiliates.

If you want to	Then
	b. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request which you want to review.
Approve a dispute request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1_DISAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the dispute request that you want to review.

The **Dispute Request** screen appears.

2. Review the dispute request details.
3. Click the **Approve** button in the **Dispute Request** zone.

The system behaves in the following manner:

If...	Then
The **Hierarchical Approval** check box is not selected in the dispute request type using which the dispute request is created	The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to **Processed**.

Note: The **Approve** button appears when:

- The dispute request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the dispute request.

Rejecting a Dispute Request

Prerequisites

To reject a dispute request, you should have:

Copyright © 2024, Oracle and/or its affiliates.

- Rejection reasons defined in the application

Note:

While rejecting a dispute request, you need to specify the reason why you want to reject the dispute request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-DisputeRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a dispute request submitted by you.

Procedure

To reject a dispute request:

1. Do either of the following:

If you want to	Then
Reject a dispute request through the Dispute Request screen	**a.** Search for the dispute request in the **Dispute Request** screen. **b.** In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request which you want to review.
Reject a dispute request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-DISAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the dispute request that you want to review.

   The **Dispute Request** screen appears.
2. Review the dispute request details.
3. Click the **Reject** button in the **Dispute Request** zone.

   The **Reject Dispute Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the dispute request.	Yes
Comments	Used to specify additional information while rejecting the dispute request.	No

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** The **Reject** button appears when:
>
> - The dispute request is in the **Approval In Progress** status.
> - A user with the approval To Do role is reviewing the dispute request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the dispute request is changed to **Rejected**.

Resubmitting a Dispute Request

Prerequisites

To resubmit a dispute request, you should have:

- Entities added in the dispute request which is submitted for approval.

Procedure

To resubmit a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to *t*he dispute request that you want to resubmit.
   The **Dispute Request** screen appears.
3. Click the **Re Submit** button in the **Dispute Request** zone.

   The **Resubmit Dispute Request** screen appears.

   > **Note:** The **Resubmit** button appears when the dispute request is in the **Approval In Progress** status.

   A To Do of the **C1-DSPSB** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the dispute request is changed to **Draft**.
4. Enter the comments in the respective field and click **Save**.

> **Note:** While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the dispute request type and the request will be moved to Draft status. The submitter can do necessary changes and re-submit the request. Log will be maintained when the approver sends the request back to submitter.

Editing the Dispute Details

Prerequisites

To edit the dispute details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the dispute details:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to *t*he dispute request whose bill line item details you want to edit.
   The **Dispute Request** screen appears.
3. Select the bill whose details you want to edit in the **Dispute Details** zone and click the **Edit** button available in the upper left corner of this zone.
   The **Edit Dispute Details** screen appears.

Note: A bill line item from the dispute request can be edited when the dispute request is in the **Draft** status.

The **Edit Dispute Details** screen contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request ID	Displays the dispute request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are • Adjustments • Bill • Bill Segment
Entity ID	Displays the entity ID.
Entity Information	Displays the entity information.
Dispute Amount	Indicates the amount that must be disputed.
Currency	Displays the currency in which the entity was created.
Adjustment Type	Displays the adjustment type using which the dispute adjustment must be created.
Stop Auto Pay	Displays whether auto pay needs to be stopped for the entity of the dispute request.

4. Modify the details of the bill line items.
5. Click **Save**.

Copyright © 2024, Oracle and/or its affiliates.

The changes made to the dispute bill line items are saved.

Deleting a Bill from the Dispute Request

Procedure

To delete a bill from the dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to *t*he dispute request whose bill you want to delete.
   The **Dispute Request** screen appears.
3. In the **Dispute Details** zone, select the bills and click the **Delete** button available in the upper left corner of *t*his zone.
   A message appears confirming whether you want to delete the bill from the dispute request.

> **Note:** You can delete bill from the dispute request when the request is in the **Draft** status.

4. Click **OK**.
   The selected bill gets deleted from the dispute request.

Viewing the Bill Line Items

Procedure

To view the bill line items of a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to *t*he dispute request whose log you want to view.

   The **Dispute Request** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the dispute request. It contains the following zones:
     - **Dispute Request** - Displays the details of the dispute request.
     - **Dispute Details** - Lists the entities, such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed.
     - **Dispute Adjustments** - Displays the adjustment details of dispute request.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and when the status is **Processed**.

- **Previous Dispute Requests** - Displays the details of the bill which must be disputed.

> **Note:** This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.

- **Bills** - Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to dispute. It contains the following zones:
  - **Search Bills** - Lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.

> **Note:** Filter the bills, if required, in the **Search Bills** zone.

  - **Bill Line Items** - Lists the debit and credit bill segments and adjustments of the bill.

> **Note:** This zone appears when you click the Broadcast (📡) icon corresponding to the entity type as **Bill** in the **Search Bills** zone.

  This tab appears when the dispute request is in the **Draft** status.
- **Log** - Lists the complete trail of actions performed on the dispute request.

3. View the details of the bill line items in the **Bill Line Items** zone.

Adding a Bill to the Dispute Request

You can dispute the credit/debit bills to the account.

Prerequisites

To add a credit/debit bill to the dispute request, you should have:

- Completed bills for the account with one or more credit/debit line items

Procedure

To add a credit/debit bill to the dispute request:

1. Click the **Bills** tab in the **Dispute Request** screen.
   The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

> **Note:** If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone.

3. Do either of the following:

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
A bill has all credit/debit line items and you want to add the credit/debit bill to the dispute request	**a.** In the **Search Bills** zone, select the bills that you want to dispute. **b.** Click the **Add** button available at the upper left corner of the **Search Bills** zone.
A bill has credit balance and one or more debit line items and you want to add the credit bill to the dispute request	**a.** In the **Search Bills** zone, select the bills that you want to dispute. **b.** Click the **Add** button available at the upper left corner of the **Search Bills** zone.

4. Click **Add**.
   A message appears indicating that the selected bills are added to the dispute request.

> **Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the dispute request.

5. Click **OK**.

   Note that all the credit/debit bill segments or adjustments of the bills are added in the **Dispute Details** zone on the **Main** tab.

> **Note:** Irrespective of whether you select a credit/debit bill, or credit/debit bill segments or adjustments, the credit/debit bill segments or adjustments are added in the **Dispute Details** zone. The credit/debit bill is not added to the **Dispute Details** zone.

Adding a Bill Line Item to the Dispute Request

You can dispute the credit/debit bill line items, such as bill segments and adjustments, to the account. While adding a credit/debit bill line item to the dispute request, you can either:

- Directly add all credit/debit line items of a bill to the dispute request by adding the bill which has all bill segments and adjustments in credit
- Individually add a credit bill segment or adjustment of a bill (with one or more credit/debit line items) to the dispute request

Prerequisites

To add a credit/debit bill line item to the dispute request, you should have:

- Completed bills for the account with one or more credit/debit line items

Procedure

To add a credit/debit bill line item to the dispute request:

1. Click the **Bills** tab in the **Dispute Request** screen.
   The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add a particular credit bill line item to the dispute request	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.
A bill has credit balance and one or more debit line items	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.
A bill has debit balance and one or more credit line items	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.

4. Click **Add**.
   A message appears indicating that the selected bill segments or adjustments are added to the dispute request.

> **Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the dispute request.

5. Click **OK**.

   Note that the credit bill segments or adjustments are added in the **Dispute Details** zone on the **Main** tab.

> **Note:**
>
> Irrespective of whether you select a credit/debit bill, or credit/debit bill segments or adjustments, the credit/debit bill segments or adjustments are added in the **Dispute Details** zone. The credit bill is not added to the **Dispute Details** zone.
>
> The system will not allow you to add a debit line item to the **Dispute Details** zone.

Chapter 33

Earnings Credit Rate

Topics:

- Prerequisites
- Financial Transaction Distribution Object Status Transition
- Algorithms Used in C1-FTDIST
- Earnings Credit Rate Eligibility
- Financial Transaction Distribution Type
- Financial Transaction Distribution Rule
- Expiration Cycle Extendable Lookup
- Extendable Lookup (Expiration Cycle)
- Distribution Hierarchy Extendable Lookup
- Extendable Lookup (Distribution Hierarchy)
- Financial Transaction Distribution Object Extendable Lookup
- Extendable Lookup (Financial Transaction Distribution Object)
- Financial Transaction Distribution (Used for Searching)
- Financial Transaction Distribution (Used for Viewing)

Oracle Revenue Management and Billing enables you to generate the earnings credit rate (ECR) when the account is eligible for earnings credit rate and is associated with a contract of a contract type where the **Financial Transaction Distribution Object** characteristic is defined. In other words, the system enables you to create the financial transaction distribution (ECR) object when the adjustment and/or bill segment financial transaction created against an ECR contract is frozen. The status of the financial transaction distribution object is set to **Pending**.

To enable the Earnings Credit Rate (ECR) feature, you need to setup the following:

- **Financial Transaction Distribution Type** - A financial transaction distribution type is an object which controls the distribution of a credit and debit bill segment or adjustment financial transaction. It is associated to a contract type through a financial transaction distribution object. It helps the system to determine:
  - Whether it is defined for adjustment or bill segment financial transactions whose credit or debit amount should be distributed.
  - The type of adjustment (such as transfer adjustment) should be created when the credit or debit amount on the financial transaction distribution object is distributed.
  - The financial transaction distribution rule using which the credit or debit amount on the financial transaction distribution object should be distributed.
  - Whether the credit or debit amount on the financial transaction distribution object should be used to offset an adjustment or bill segment of the same account (where ECR is earned), another account of the customer (for whom ECR is earned), or the account identified as per the distribution hierarchy.
  - Whether the credit or debit amount on the financial transaction distribution object should be written off when it is equal to or less than the write off threshold amount.
  - The type of adjustment that should be created when the credit or debit amount on the financial transaction distribution object is written off.
  - The type of adjustment that should be created when the credit or debit amount on the financial transaction distribution object is expired.
  - The type of adjustment that should be created when the excess credit amount on the financial transaction distribution object is refunded at the end of the year.
  - The business object using which the financial transaction distribution object should be created.

- **Financial Transaction Distribution Rule** - A financial transaction distribution rule is associated with one or more financial transaction distribution types. It helps the system to determine:
  - The method using which the credit or debit amount on the financial transaction distribution object should be distributed. If the distribution method is set to **Fee Based**, the system will distribute the credit or debit amount on the financial transaction distribution object to offset fees starting from the highest to lowest amount. If the distribution method is set to **Priority Based**, the system will distribute the credit or debit amount on the financial transaction distribution object to the accounts in the order of their account distribution priority. If the distribution method is set to **Weighted Average**, the system will distribute the credit or debit amount on the financial transaction distribution object to the accounts in the weighted average ratio.
  - The distribution hierarchy using which the accounts, to which the credit or debit amount on the financial transaction distribution object should be distributed, should be derived.
  - The priority in which the objects, such as adjustments of a particular adjustment type or bill segments created for a particular price item, should be offset using the credit or debit amount on the financial transaction distribution object.
  - The objects, such as adjustments of a particular adjustment type or bill segments created for a particular price item, should be excluded from offsetting.
  - Algorithms that should be used to select the accounts, interpret the order of distribution, and then distribute the credit or debit amount.
- **Expiration Cycle** - An expiration cycle is an extendable lookup reference object which indicates the frequency at which the financial transaction distribution object created for the account should be expired (i.e. after two months or 45 days from the date of creation). You can associate an expiration cycle with one or more accounts.
- **Distribution Hierarchy** - A distribution hierarchy is an extendable lookup reference object which indicates the list of hierarchies that should be considered while deriving accounts for offsetting the credit or debit amount on the financial transaction distribution object. The valid hierarchy lists are:
  - **IGA Member Accounts Same Division** - If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against other member accounts of an invoicing group in which the source account is also a member account.
  - **Person Relationship (Child) Same Division** - If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the child persons' accounts who are related to the parent person (i.e. source customer) using a particular relationship type and belongs to the same division.
  - **Person Relationship (Child) Other Division** - If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the child persons' accounts who are related to the parent person (i.e. source customer) using a particular relationship type and belongs to a different division.
  - **Person Relationship (Parent) Same Division** - If this option is selected, the system will first offset the credit or debit amount on the financial

Copyright © 2024, Oracle and/or its affiliates.

transaction distribution object against the source account, other accounts of the source customer, and then against the parent persons' accounts who are related to the child person (i.e. source customer) using a particular relationship type and belongs to the same division.

- **Person Relationship (Parent) Other Division** - If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the parent persons' accounts who are related to the child person (i.e. source customer) using a particular relationship type and belongs to a different division.

You can associate a distribution hierarchy with one or more financial transaction distribution rules.

- **Financial Transaction Distribution Object** - A financial transaction distribution type is associated to a contract type through a financial transaction distribution object. You can include multiple financial transaction distribution types in a financial transaction distribution object. You can associate a financial transaction distribution object to one or more contract types.
- **Earnings Credit Rate Eligibility** - You can define earnings credit rate eligibility for each account in the system. It helps the system to determine:
  - Whether the account is eligible for generating earnings credit rate (i.e. financial transaction distribution object).
  - Whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.
  - The priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.
  - The expiration cycle for the account.

The following two batches are introduced in this release:

- **Financial Transaction Distribution Monitor (C1-FTDPR)** - It is used to monitor or check whether there are any financial transaction distribution objects in the Pending status. If there is a financial transaction distribution object in the Pending status, the system validates the financial transaction distribution object and changes the status of the financial transaction distribution object to Validated. From the Validated status, the status of the financial transaction distribution object is changed to either of the following:
  - **Refund** (when there is excess credit amount on the financial transaction distribution object at the end of the year and the source account belongs to a particular customer class where is refund is allowed).
  - **Write Off** (when the credit or debit amount on the financial transaction distribution object is equal to or less than the write off threshold amount)
  - **Expire** (when the credit or debit amount on the financial transaction distribution object is expired)

  Accordingly, the refund, write off, and expire adjustments are created. However, if none of the above conditions are met, the status of the financial transaction distribution object remains as **Validated**.
- **FT Distribution Single Threaded Transition Batch (C1-FTDTS)** - It is used to monitor or check whether there are any financial transaction distribution objects in the Validated status. If there is a financial transaction distribution object in the Validated status, the system changes the status of the financial transaction distribution object to **Apply Rule** and executes

Copyright © 2024, Oracle and/or its affiliates.

the algorithm attached to the **Apply Rule** system event on the financial transaction distribution rule version which is effective on the batch business date. Once the credit or debit distribution array of accounts is created, the status of the financial transaction distribution object is changed to **Distributed** and then the algorithm attached to the Distribute system event on the financial transaction distribution rule version which is effective on the batch business date is executed. On the credit or debit amount distribution, two adjustments are created - one against the source contract and another against the bill segment or adjustment's contract to which the amount is distributed. Once the credit or debit amount on the financial transaction distribution object is fully distributed, the status of the financial transaction distribution object is changed to **Complete**. However, if the credit or debit amount on the financial transaction distribution object is not yet fully distributed, the status of the financial transaction distribution object is changed to **Validated**.

Copyright © 2024, Oracle and/or its affiliates.

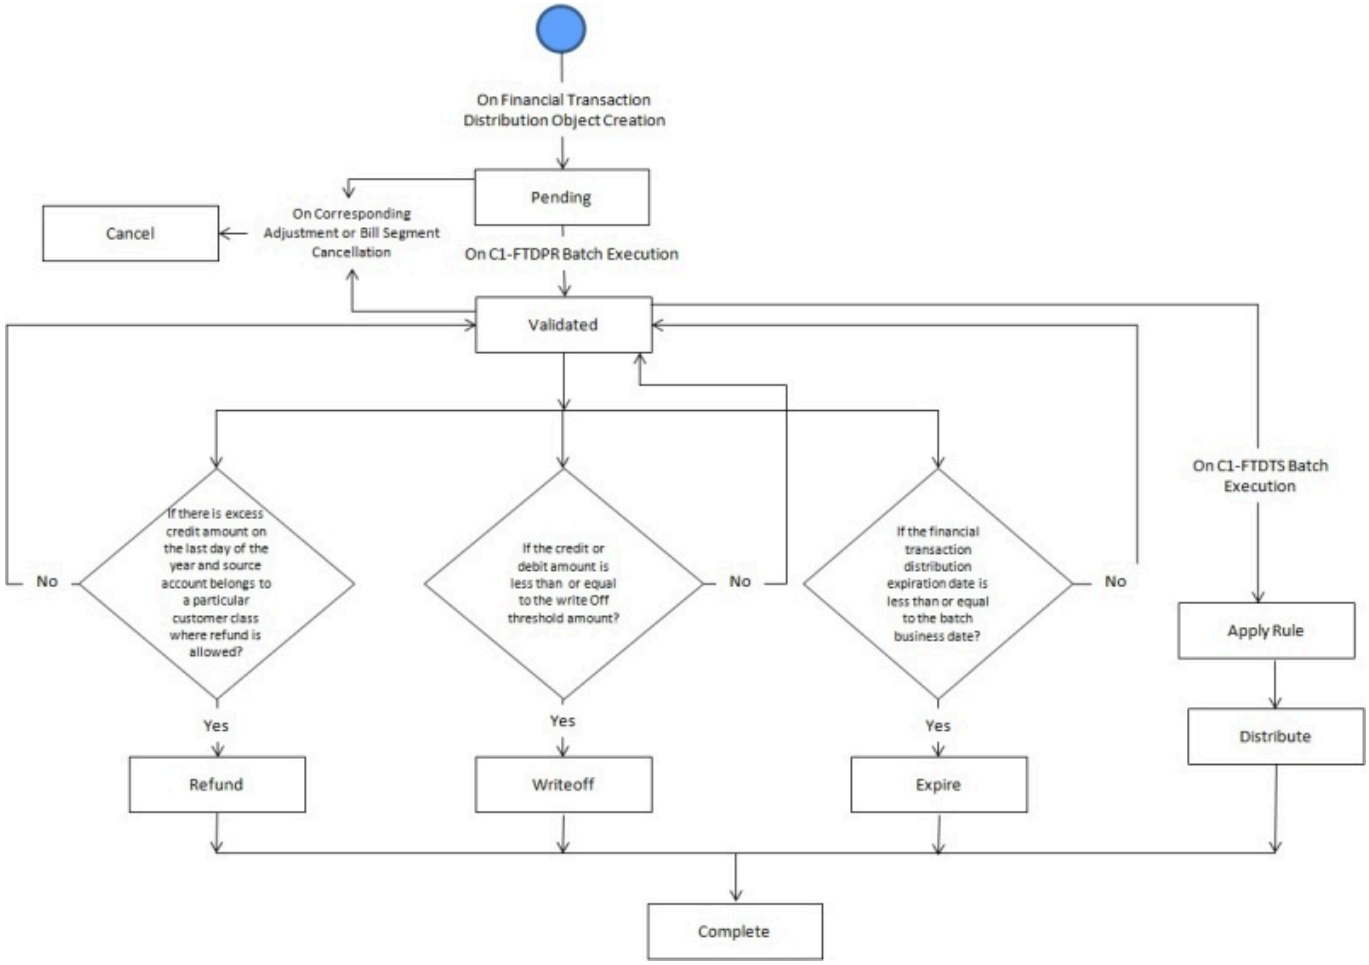
Prerequisites

To setup the earnings credit rate process, you need to do the following:

- Add the earnings credit rate to the eligible accounts.
- Define the required financial transaction distribution types in the system.
- Define the required financial transaction distribution rules in the system.
- Define the following extendable lookup reference objects in the system:
  - Expiration Cycle
  - Distribution Hierarchy
  - Financial transaction distribution object

Financial Transaction Distribution Object Status Transition

The following figure graphically indicates how an financial transaction distribution object is created in the system:



Note: For more information about the batches, refer *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-FTDIST

The following table lists the algorithms which are attached to the **C1-FTDIST** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-FTDISTINF	C1-FTDISTINF	This algorithm formats the FT Distribution that appears throughout the system. It concatenates the fields and separator specified as algorithm parameters. Possible fields are: **Field** / **Description** ACCT_ID — Account ID ADJ_ID — Adjustment ID BO_STATUS_CD — Status BO_STATUS_REASON_CD — Status Reason BSEG_ID — Bill Segement ID BUS_OBJ_CD — Business Object CRE_DTTM — Creation Date/ Time EXPIRATION_DT — Expiration Date FT_DISTRIBUTION_ID — FT Distribution FT_DIST_TYPE_CD — FT Distribution Type FT_ID — FT ID ILM DT — ILM Date SA_ID — SA ID STATUS_UPD_DTTM — Status Update Date/Time TOT_AMT — Payoff Amount
Validation	C1-VALFTDIST	C1-VALFTDIST	This algorithm validates the Business Object - Financial Transaction Distribution, which includes: • Adjustment ID or Bill Segment ID must be supplied.

The following table lists the algorithms which are used in the lifecycle of the **C1-FTDIST** business object:

Status	System Event	Algorithm	Algorithm Type	Description
In Progress	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified.

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Validate	Monitor	C1-FTDVALIDT	C1-FTDVALIDT	This algorithm transitions the FT Distribution record from validate to any of the following statuses based on certain conditions: • It transitions to **Expire** status (based on Parameter Expire Status Transition Condition) when the credit is not fully distributed and process date is before or on the same day as the Expiration Date defined in the record. • It transitions to **Write Off** status (based on Parameter Write Off Status Transition Condition) when the Total Amount is less than or equal to the Write Off Threshold defined in the FT Distribution Type linked to the record. It also uses Parameter Handle Negative or Positive for Write Off. If the Parameter is Negative and the Payoff Amount of the record is negative or the Parameter is Positive and the Payoff Amount of the record is positive, then proceed with Write Off. • It transitions to **Refund status** (based on Parameter Refund Status Transition Condition) when the Parameter Refund at End of Year is Y and the record's source account's customer class is equal to Parameter Applicable Customer Class for Refund. If none of the conditions are met, the record remains at Validate status. If none of the conditions are met, the record remains at **Validate** status.
Apply Rule	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either of the one soft parameters may be specified. If

Status	System Event	Algorithm	Algorithm Type	Description
				both the soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Apply Rule	Enter	C1-FTDAPRL	C1-FTDAPRL	This algorithm will call the pre-processing and apply rule algorithms that are configured in the effective rule version of the FT Distribution Rule of the Financial Transaction Distribution record's FT Distribution Type.
Distributed	Enter	C1-FTDDIST	C1-FTDDIST	This algorithm will trigger the distribute algorithms configured in the effective rule version of the FT Distribution Rule linked to the FT Distribution Type of the Financial Transaction Distribution record. After invoking the algorithms, the FT Distribution amount is compared to the sum of the distribution amounts with frozen transfer adjustments in the list. If the amounts are equal, the FT Distribution record is transitioned to **Complete** (based on the Parameter Complete Status Transition Condition). Otherwise, it is transitioned back to **Validate** (based on the Validate Status Transition Condition).
Expire	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Expire	Enter	C1-FTDEXP	C1-FTDEXP	This algorithm expires credit amount by creating an expiration adjustment defined in the FT Distribution Type. The Expiration Adjustment created will have a characteristic of type Parameter Financial Transaction Distribution Characteristic Type and

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				value equal to the FT Distribution ID. The FT Distribution record will have a characteristic of type Write off Adjustment with value equal to the Expiration Adjustment ID.
Refund	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either of the one soft parameters may be specified. If both the soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Refund	Enter	C1-FTDREFUND	C1-FTDREFUND	This algorithm refunds the credit amount by creating a refund adjustment defined in the FT Distribution Type. The Refund Adjustment will be linked to the Refund Contract (with type equal to Parameter Refund Contract Type) attached to the source Account of the FT Distribution. The Refund Adjustment will be linked to the FT Distribution via a characteristic with type Parameter Financial Transaction Distribution Characteristic Type. Also, the FT Distribution record will have a characteristic of type Refund Adjustment with value equal to the Refund Adjustment ID.
Write Off	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Write Off	Enter	C1-FTDWRTOFF	C1-FTDWRTOFF	This algorithm writes off the credit amount by creating a write off adjustment defined in the FT Distribution Type. The Write off

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				Adjustment created will have a characteristic of type Parameter Financial Transaction Distribution Characteristic Type and value equal to the FT Distribution ID. The FT Distribution record will have a characteristic of type Write Off Adjustment with value equal to the Write Off Adjustment ID.
Cancel	Enter	C1-FTDCANCEL	C1-FTDCANCEL	This algorithm will cancel all the transfer adjustments listed in the Financial Transaction Distribution record's Distribution List. The cancel reason code will be copied or taken from the original Distribution Object's cancel reason. If it is not provided, it will use the parameter Default Cancel Reason.
Complete	Enter	C1-FTDCOMP	C1-FTDCOMP	This algorithm will trigger the post-processing algorithms configured in the effective rule version of the FT Distribution Rule linked to the FT Distribution Type of the Financial Transaction Distribution record.

Earnings Credit Rate Eligibility

This screen allows you to add earnings credit rate eligibility for each account in the system and helps you to determine the following:

- Whether the account is eligible for generating earnings credit rate (i.e. financial transaction distribution object).
- Whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.
- The priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.
- The expiration cycle for the account.

This screen contains the following zone:

- Earnings Credit Rate Eligibility on page 2114

Earnings Credit Rate Eligibility

The **Earnings Credit Rate Eligibility** zone allows you to add earnings credit rate eligibility for each account in the system.

This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Earnings Credit Rate ID	Displays the earnings credit rate ID.	Not applicable

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search for a particular account. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	Yes
Earnings Credit Rate Eligible	Used to define whether an earned credit rate can be calculated and created for the account or not.	No
Offset Eligibility	Used to define whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.	No
Offset Distribution Type	Used to search the financial transaction distribution type which would be used to offset the credit or debit amount from another account. If this field is left blank, then the financial transaction distribution type for the earning credit rate source account will be used. **Note:** This field is enabled when the **Offset Eligibility** check box is selected. This field is enabled when the **Offset Eligibility** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transaction Offset Distribution Type FK Search** window appears.	No
Account Distribution Priority	Used to indicate the priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.	No
Expiration Cycle	Used to indicate the expiration cycle for the account.	Yes

Defining Earnings Credit Rate Eligibility for an Account

Prerequisites

To define an earnings credit rate eligibility for an account, you should have:

- Accounts defined in the application.
- Expiration cycle defined in the application.
- Financial transaction distribution type defined in the application.

Copyright © 2024, Oracle and/or its affiliates.

Procedure

To define earnings credit rate eligibility for an account:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Earnings Credit Rate Eligibility**.
   The **Earnings Credit Rate Eligibility** screen appears. It contains the following section:
   - **Main** - Used to add the basic details about the earnings credit rate eligibility for an account. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Earnings Credit Rate ID	Displays the earnings credit rate ID.	Not applicable
Account ID	Used to search for a particular account. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	Yes
Earnings Credit Rate Eligible	Used to define whether an earned credit rate can be calculated and created for the account or not.	No
Offset Eligibility	Used to define whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.	No
Offset Distribution Type	Used to search the financial transaction distribution type which would be used to offset the credit or debit amount from another account. If this field is left blank, then the financial transaction distribution type for the earning credit rate source account will be used. **Note:** This field is enabled when the **Offset Eligibility** check box is selected. This field is enabled when the **Offset Eligibility** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transaction Offset Distribution Type FK Search** window appears.	No
Account Distribution Priority	Used to indicate the priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.	No
Expiration Cycle	Used to indicate the expiration cycle for the account.	Yes

3. Enter the required details.
4. Click **Save**.
   The earnings credit rate eligibility is defined for the account.

Financial Transaction Distribution Type

The **Financial Transaction Distribution Type** screen allows you to define, edit, copy, and delete a financial transaction distribution object type.

This screen contains the following zones:

- Financial Transaction Distribution Type List on page 2117
- Financial Transaction Distribution Type on page 2118

Financial Transaction Distribution Type List

The **Financial Transaction Distribution Type List** zone allows you to view the list of financial transaction distribution types that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
FT Distribution Type	Displays the financial transaction distribution type.
Description	Displays the description of the financial transaction distribution type. **Note:** It has a link. On clicking the link, the **Financial Transaction Distribution Type** zone appears with the details of the respective financial transaction distribution type.
Related Transaction BO	Displays the corresponding transaction business object. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears with the details of the respective business object.
FT Adjustment Type	Displays the adjustment type used in the financial transaction adjustment.
Distribution Object Type	Displays the financial transaction object type used in distributing the credit.
Edit	On clicking the **Edit** (✎) icon, the **FT Distribution Type** screen appears where you can edit the details of the financial transaction distribution type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **FT Distribution Type** screen appears where you can define a financial transaction distribution type using an existing financial transaction distribution type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the financial transaction distribution type.

Copyright © 2024, Oracle and/or its affiliates.

On clicking the **Broadcast** (ᯤ) icon corresponding to the financial transaction distribution type, the **Financial Transaction Distribution Type** zone appears with the details of the respective financial transaction distribution type.

You can filter the list using the **Financial Transaction Distribution Type**, **Description**, or **Financial Transaction Object Type** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (⩛) icon in the upper right corner of this zone.

Financial Transaction Distribution Type

The **Financial Transaction Distribution Type** zone displays the details of the financial transaction distribution types that are already defined in the system. This zone contains the following sections:

- **Main** - This section provides basic information about the financial transaction distribution type. It contains the following fields:

Field Name	**Field Description**
FT Distribution Type	Displays the financial transaction distribution type.
Description	Displays the description of the financial transaction distribution type.
FT Object Type	Indicates the business object that will be used to create the financial transaction distribution type. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
FT Adjustment Type	Displays the adjustment type used in the financial transaction adjustment.
Distribution Object Type	Displays the financial transaction object type used in distributing the credit.
Distribution Adjustment Type	Displays the adjustment type which is used for distribution if the **Transfer Adjustment** option is selected from the **Distribution Object Type** list.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
FT Distribution Rule	Displays the financial transaction distribution rule to be used for distributing the credit or debit in an account.
	Note: It has a link. On clicking the link, the **Financial Transaction Distribution Rule** screen appears where you can view the details of the respective financial transaction distribution rule.
Write Off Threshold Amount	Displays the minimum credit amount for write off. Any amount specified in this field is assumed to be negative. For example, a value of "2" is treated as "-2". Such that if the credit is only "-2", then this will written off instead of distributing it to offset.
Write Off Adjustment Type	Displays the adjustment type used for write off.
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Expiration Adjustment Type	Displays the adjustment type used for expiration.
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Refund Adjustment Type	Displays the adjustment type used for refund.
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Offset Indicator	Displays whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.
Related Transaction BO	Displays the object using which financial transaction object is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - This section lists the characteristics of the financial transaction distribution type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Copyright © 2024, Oracle and/or its affiliates.

Button Name	Button Description
Edit	Used to edit the details of the financial transaction distribution type.
Delete	Used to delete the financial transaction distribution type.
Duplicate	Used to create a new financial transaction distribution type using an existing financial transaction distribution type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Financial Transaction Distribution Type** zone does not appear in the **Financial Transaction Distribution Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the financial transaction distribution type in the **Financial Transaction Distribution Type List** zone.

Defining a Financial Transaction Distribution Type

Prerequisites

To define a financial transaction distribution type, you should have:

- Financial transaction distribution objects defined in the application.
- Adjustment types defined in the application.
- Financial transaction distribution rule defined in the application.
- Required characteristics defined in the application.

Procedure

To define a financial transaction distribution type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2024, Oracle and/or its affiliates.

2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Financial Transaction Distribution Type** sub-menu.

   The **Financial Transaction Distribution Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the financial transaction distribution type.
   - **Characteristics** - Used to define the characteristics for the financial transaction distribution type.

   Main - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to specify the financial transaction distribution type.	Yes
Description	Used to specify the description of the financial transaction distribution type.	Yes
FT Object Type	Used to indicate the business object that will be used to create the financial transaction distribution type. The valid values are: • Adjustment • Bill Segment	Yes
FT Adjustment Type	Used to indicate the adjustment type used in the financial transaction adjustment. **Note:** By default, this field is disabled. This field gets enabled when you select **Adjustment** option from the **FT Object Type** list.	Yes (Conditional) **Note:** This field is required when you are selecting the **Adjustment** option for the **FT Object Type** list.
Distribution Object Type	Used to indicate the financial transaction object type used in distribution.	Yes
Distribution Adjustment Type	Used to indicate the adjustment type which is used for distribution if the **Transfer Adjustment** option is selected from the **Distribution Object Type** list.	No
FT Distribution Rule	Used to indicate the financial transaction distribution rule to be used for distributing the credit or debit in an account. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transaction Offset Distribution Type FK Search** window appears.	No
Offset Indicator	Used to indicate whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Write Off Threshold Amount	Used to specify the minimum credit amount for write off.	Yes (Conditional) **Note:** This field is required when you do not check the **Offset Indicator** check box.
Write Off Adjustment Type	Used to indicate the adjustment type used for write off. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	Yes (Conditional) **Note:** This field is required when you do not check the **Offset Indicator** check box.
Expiration Adjustment Type	Used to indicate the adjustment type used for expiration. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	Yes (Conditional) **Note:** This field is required when you do not check the **Offset Indicator** check box.
Refund Adjustment Type	Used to indicate the adjustment type used for refund. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	Yes (Conditional) **Note:** This field is required when you do not check the **Offset Indicator** check box.
Related Transaction BO	Used to indicate the object using which financial transaction object is created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transaction Business Object Search** window appears.	Yes

Characteristics - This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the financial transaction distribution type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the financial transaction distribution type.

Tip: Alternatively, you can access the **Financial Transaction Distribution Type** screen by clicking the **Add** button in the **Page Title** area of the **Financial Transaction Distribution Type** screen.

4. Enter the required details.
5. Define characteristics for the financial transaction distribution type, if required.
6. Click **Save**.
   The financial transaction distribution type is defined.

Defining a Characteristic for a Financial Transaction Distribution Type

Procedure

To define a characteristic for a financial transaction distribution type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a financial *t*ransaction distribution type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the financial transaction distribution type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the financial transaction distribution type.

Copyright © 2024, Oracle and/or its affiliates.

2. Enter the required details.

> **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the financial transaction distribution type, click the **Add** (+) icon and then repeat step *2*.

> **Note:** However, if you want to remove a characteristic from the financial transaction distribution type, click the **Delete** (🗑) icon corresponding to the characteristic.

Copying a Financial Transaction Distribution Type

Instead of creating a financial transaction distribution type from scratch, you can create a new financial transaction distribution type using an existing financial transaction distribution type. This is possible through copying a financial transaction distribution type. On copying a financial transaction distribution type, the details including the characteristics are copied to the new financial transaction distribution type. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution type, you should have:

- Financial transaction distribution type (whose copy you want to create) defined in the application
- Financial transaction distribution type business objects defined in the application

Procedure

To copy a financial transaction distribution type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Type** sub-menu.
   The **Financial Transaction Distribution Type** screen appears.
4. In the **Financial Transaction Distribution Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** *c*olumn corresponding to the financial transaction distribution type whose copy you want to create.

   The **Financial Transaction Distribution Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the financial transaction distribution type.
   - **Characteristics** - Used to define the characteristics for the financial transaction distribution type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to specify the financial transaction distribution type.	Yes
Description	Used to specify the description of the financial transaction distribution type.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
FT Object Type	Used to indicate the business object that will be used to create the financial transaction distribution type. The valid values are: • Adjustment • Bill Segment	Yes
FT Adjustment Type	Used to indicate the adjustment type used in the financial transaction adjustment. **Note:** By default, this field is disabled. This field gets enabled when you select **Adjustment** option from the **FT Object Type** list.	Yes (Conditional) **Note:** This field is required when you are selecting the **Adjustment** option for the **FT Object Type** list.
Distribution Object Type	Used to indicate the financial transaction object type used in distribution.	Yes
Distribution Adjustment Type	Used to indicate the adjustment type which is used for distribution if the **Transfer Adjustment** option is selected from the **Distribution Object Type** list.	No
FT Distribution Rule	Used to indicate the financial transaction distribution rule to be used for distributing the credit or debit in an account. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transaction Offset Distribution Type FK Search** window appears.	No
Offset Indicator	Used to indicate whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.	No
Write Off Threshold Amount	Used to specify the minimum credit amount for write off.	Yes (Conditional) **Note:** This field is required when you do not check the **Offset Indicator** check box.
Write Off Adjustment Type	Used to indicate the adjustment type used for write off. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	Yes (Conditional) **Note:** This field is required when you do not check the **Offset Indicator** check box.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Expiration Adjustment Type	Used to indicate the adjustment type used for expiration. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	Yes (Conditional) **Note:** This field is required when you do not check the **Offset Indicator** check box.
Refund Adjustment Type	Used to indicate the adjustment type used for refund. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	Yes (Conditional) **Note:** This field is required when you do not check the **Offset Indicator** check box.
Related Transaction BO	Used to indicate the object using which financial transaction object is created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transaction Business Object Search** window appears.	Yes

Tip: Alternatively, you can click the **Duplicate** button in the **Financial Transaction Distribution Type** zone to create a copy of the financial transaction distribution type

5. Enter the required details.
6. Define, edit, or remove characteristics of the financial transaction distribution type, if required.
7. Click **Save**.
   The new financial transaction distribution type is defined.

Financial Transaction Distribution Rule

Once you create a financial transaction distribution rule, the **Financial Transaction Distribution Rule** screen allows you to:

- Edit the details of a financial transaction distribution rule
- Copy a financial transaction distribution rule
- Delete a financial transaction distribution rule
- View the details of a financial transaction distribution rule
- Add the financial transaction distribution rule version
- Edit the details of a financial transaction distribution rule version
- Copy a financial transaction distribution rule version
- Include or exclude objects from a financial transaction distribution rule version
- Associate or dissociate algorithms from a financial transaction distribution rule version
- Delete a financial transaction distribution rule version
- View the details of a financial transaction distribution rule version

This screen consists of following zones:

- Financial Transaction Distribution Rule List on page 2130
- Financial Transaction Distribution Rule on page 2131
- Financial Transaction Distribution Rule Version List on page 2133
- Financial Transaction Distribution Rule Version on page 2134

Financial Transaction Distribution Rule List

The **Financial Transaction Distribution Rule List** zone allows you to view the list of financial transaction distribution rules that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
FT Distribution Rule	Displays the financial transaction distribution rule.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Description	Displays the description of the financial transaction distribution rule.
Distribution Method	Indicates the principle for distributing credit for accounts other than the credit or debit source account. The valid values are: • Fee Based • Priority Based • Weighted Average
Distribution Hierarchy	Indicates the hierarchy of accounts in which the distribution needs to be made.
Edit	On clicking the **Edit** (✎) icon, the **Financial Transaction Distribution Rule** screen appears where you can edit the details of the financial transaction distribution rule.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Financial Transaction Distribution Rule** screen appears where you can define a financial transaction distribution rule using an existing financial transaction distribution rule.
Delete	On clicking the **Delete** (🗑) icon, you can delete the financial transaction distribution rule.

On clicking the **Broadcast** (📡) icon corresponding to the financial transaction distribution rule, the **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zones appear with the details of the respective financial transaction distribution rule and financial transaction distribution rule version.

You can filter the list using the **FT Distribution Rule**, **Description** , **Effective Date**, and **Distribution Method** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Copying a Financial Transaction Distribution Rule

Instead of creating a financial transaction distribution rule from scratch, you can create a new financial transaction distribution rule using an existing financial transaction distribution rule. This is possible through copying a financial transaction distribution rule. On copying a financial transaction distribution rule, the details are copied to the new financial transaction distribution rule. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution rule, you should have:

- Financial transaction distribution rule (whose copy you want to create) defined in the application
- Financial transaction distribution rule business objects defined in the application

Procedure

To copy a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
   A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
   The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** *c*olumn corresponding to the financial transaction distribution rule whose copy you want to create.

   The **Financial Transaction Distribution Rule** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the financial transaction distribution rule.

   Main - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Used to specify the financial transaction distribution rule.	Yes
Description	Used to specify the description of the financial transaction distribution rule.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule.	No
Distribution Method	Used to indicate the principle for distributing credit for accounts other than the credit or debit source account. The valid values are: • Fee Based • Priority Based • Weighted Average	Yes
Distribution Hierarchy	Used to indicate the hierarchy of accounts in which the distribution needs to be made.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Financial Transaction Distribution Rule** zone to create a copy of the financial transaction distribution rule.

Copyright © 2024, Oracle and/or its affiliates.

5. Enter the required details.
6. Click **Save**.
   The new financial transaction distribution rule is defined.

Defining a Financial Transaction Distribution Rule Version

Prerequisites

To define a financial transaction distribution rule version, you should have:

- Financial transaction distribution rule defined in the application.
- Object types and algorithms defined in the application.

Procedure

To define a financial transaction distribution rule version:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
   A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
   The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** (ᯤ) icon corresponding to *t*he financial transaction distribution rule whose details you want to edit.
   The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.
5. Click the **Add** link in the upper right corner of the **Financial Transaction Distribution Rule Version List** *z*one.
   The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the financial transaction distribution rule version.
   - **Included Objects** - Used to include the objects in financial transaction distribution rule version.
   - **Excluded Objects** - Used to exclude the objects in financial transaction distribution rule version.
   - **Algorithms** - Used to define the algorithms that are added for financial transaction distribution rule version.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

The **Included Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. **Note:** It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	No
Bill Status	Used to indicate the status of the bill.	No

Note: If you include object, then all the fields are mandatory.

The **Excluded Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type.	No

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	

Note: If you exclude object, then all the fields are mandatory.

The **Algorithms** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No
Algorithm	Used to specify the algorithm code. **Note:** It has a link. On clicking the link, **Algorithm** screen appears with the details of the respective algorithm. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	No

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Enter the required details.
7. Include or exclude the object types, if required.
8. Add the algorithms, if required.
9. Click **Save**.
   The financial transaction distribution rule version is defined.

   A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
   A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
   The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** (📡) icon corresponding to *t*he financial transaction distribution rule whose details you want to edit.
   The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zones appear.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit** (✎) icon in the **Edit** *c*olumn corresponding to the *f*inancial transaction distribution rule version whose details you want to edit.
   The **Financial Transaction Distribution Rule Version** screen appears.
6. Ensure that the **Included Objects** section is expanded when you are editing the financial transaction *d*istribution rule version.
7. Enter the required details in the **Included Objects** section.

> **Note:** If you select a predefined object type, the **Search** (🔍) icon appears corresponding to the **Value** field. On clicking the **Search** icon, you can search for a predefined object value.

8. If you want to include more than one object in the financial transaction distribution rule version, click the **Add** *(*+) *i*con and then repeat step *7*.

> **Note:** However, if you want to remove an included object from the financial transaction distribution rule version, click the **Delete** (🗑) icon corresponding to the object.

Excluding Objects in a Financial Transaction Distribution Rule Version

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To exclude objects from a financial transaction distribution rule version:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
   A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
   The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** (ᯤ) icon corresponding to *t*he financial transaction distribution rule whose details you want to edit.
   The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zones appear.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit** (✎) icon in the **Edit** *c*olumn corresponding to the financial transaction distribution rule version whose details you want to edit.
   The **Financial Transaction Distribution Rule Version** screen appears.
6. Ensure that the **Excluded Objects** section is expanded when you are editing the financial transaction *d*istribution rule version.
7. Enter the required details in the **Excluded Objects** section.

> **Note:** If you select a predefined object type, the **Search** (🔍) icon appears corresponding to the **Value** field. On clicking the **Search** icon, you can search for a predefined object value.

8. If you want to exclude more than one object in the financial transaction distribution rule version, click the **Add** *(*+) *i*con and then repeat step *7*.

> **Note:** However, if you want to remove an excluded object from the financial transaction distribution rule version, click the **Delete** (🗑) icon corresponding to the object.

Associating Algorithms with a Financial Transaction Distribution Rule Version

Prerequisites

To associate algorithms with a financial transaction distribution rule version, you should have:

- Algorithms defined in the application.

Procedure

To associate algorithms with a financial transaction distribution rule version:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
   A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.

Copyright © 2024, Oracle and/or its affiliates.

The **Financial Transaction Distribution Rule** screen appears.

4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** (ᯤ) icon corresponding to *t*he financial transaction distribution rule whose details you want to edit.
   The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit** (✎) icon in the **Edit** *c*olumn corresponding to the financial transaction distribution rule version whose details you want to edit.
   The **Financial Transaction Distribution Rule Version** screen appears.
6. Ensure that the **Algorithms** section is expanded when you are editing the financial transaction *d*istribution rule version.
7. Enter the required details in the **Algorithms** section.

> **Note:** On clicking the **Search** (🔍) icon corresponding to the **Algorithm** column, you can search for a predefined algorithm.

8. If you want to associate more than one algorithm to the financial transaction distribution rule version, click the **Add** (+) icon and then repeat step 5.

> **Note:** However, if you want to disassociate an algorithm from the financial transaction distribution rule version, click the **Delete** (🗑) icon corresponding to the algorithm.

Editing a Financial Transaction Distribution Rule Version

Procedure

To edit a financial transaction distribution rule version:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
   A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
   The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** (ᯤ) icon corresponding to *t*he financial transaction distribution rule whose details you want to edit.
   The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit** (✎) icon in the **Edit** *c*olumn corresponding to the *f*inancial transaction distribution rule version whose details you want to edit.
   The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the financial transaction distribution rule version.
   - **Included Objects** - Used to include the objects in financial transaction distribution rule version.
   - **Excluded Objects** - Used to exclude the objects in financial transaction distribution rule version.
   - **Algorithms** - Used to define the algorithms in the financial transaction distribution rule version.

Copyright © 2024, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

The **Included Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. **Note:** It has a link. On clicking the link, respective object type screen appears with the details of the respective object type.	No
Bill Status	Used to indicate the status of the bill.	No

Note: If you include object, then all the fields are mandatory.

The **Excluded Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Value	Used to specify the value of the object type. **Note:** It has a link. On clicking the link, respective object type screen appears with the details of the respective object type.	No

Note: If you exclude object, then all the fields are mandatory.

The **Algorithms** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No
Algorithm	Used to specify the algorithm code. **Note:** It has a link. On clicking the link, **Algorithm** screen appears with the details of the respective algorithm.	No

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Modify the details of the financial transaction distribution rule version.
7. Modify the included or excluded objects from the financial transaction distribution rule version, if required.
8. Edit the algorithms, if required
9. Click **Save**.
   The changes made to the financial transaction distribution rule version are saved.

Copying a Financial Transaction Distribution Rule Version

Instead of creating a financial transaction distribution rule version from scratch, you can create a new financial transaction distribution rule version using an existing financial transaction distribution rule version. This is possible through copying a financial transaction distribution rule version. On copying a financial transaction distribution rule version, the details are copied to the new financial transaction distribution rule. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution rule, you should have:

- Financial transaction distribution rule version (whose copy you want to create) defined in the application
- Financial transaction distribution rule version business objects defined in the application

Procedure

To copy a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
   A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
   The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast** (📡) icon corresponding to *t*he financial transaction distribution rule whose details you want to edit.
   The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.

Copyright © 2024, Oracle and/or its affiliates.

5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the financial transaction distribution rule version whose copy you want *t*o create.

   The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the financial transaction distribution rule version.
   - **Included Objects** - Used to include the objects in financial transaction distribution rule version.
   - **Excluded Objects** - Used to exclude the objects in financial transaction distribution rule version.
   - **Algorithms** - Used to define the algorithms in the financial transaction distribution rule version.

   Main - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

Note: If you include object, then all the fields are mandatory.

Included Objects - This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type.	No

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	
Bill Status	Used to indicate the status of the bill.	No

Excluded Objects - This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. **Note:** It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	No

Note: If you exclude object, then all the fields are mandatory.

Algorithms - This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No
Algorithm	Used to specify the algorithm code.	No

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: It has a link. On clicking the link, **Algorithm** screen appears with the details of the respective algorithm. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Enter the required details.
7. Define, edit, or remove objects from the financial transaction distribution rule version , if required.
8. Associate or dissociate the algorithms from the financial transaction distribution rule version, if required
9. Click **Save**.
   The new financial transaction distribution rule version is defined.

Expiration Cycle Extendable Lookup

The **Expiration Cycle Extendable Lookup** screen allows you to search for an expiration cycle. An expiration cycle is an extendable lookup reference object which indicates the frequency at which the financial transaction distribution object created for the account should be expired (i.e. after two months or 45 days from the date of creation). You can associate an expiration cycle with one or more accounts. This screen contains the following zone:

- Extendable Lookup Search on page 2153

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search the details of expiration cycle business object. This zone contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description
Business Object	Used to search the expiration cycle business object.
Description	Used to search the expiration cycle business object with a particular description.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the business objects.
Description	Displays description of the business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective business object.

Note: You must specify at least one search criterion while searching for the expiration cycle business object.

Searching for an Expiration Cycle Extendable Lookup

Prerequisites

To search for an expiration cycle extended lookup, you should have:

- Expiration cycle extended lookup defined in the application.

Procedure

To search for an expiration cycle extended lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. Search for **C1-EXPCYCLE** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business *o*bject.
   The **Extended Lookup** screen appears.
5. View the list of expiration cycle extended lookup values in the **Extendable Lookup Value List** zone.

> **Note:**
>
> You must specify at least one search criterion while searching for an expiration cycle extended lookup.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Extendable Lookup Value List

The **Extendable Lookup Value List** zone allows you to view the list of expiration cycle extended lookup values that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
Value	Displays the expiration cycle extended lookup value.
Description	Displays the description of the expiration cycle extended lookup value.
Detailed Description	Displays the additional information about the expiration cycle extended lookup value.
Owner	Displays the owner of the expiration cycle extended lookup value.
Edit	On clicking the **Edit** (✎) icon, the **Expiration Cycle** screen appears where you can edit the details of the expiration cycle extended lookup value.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Expiration Cycle** screen appears where you can define a expiration cycle extended lookup value using an existing expiration cycle extended lookup value.
Delete	On clicking the **Delete** (🗑) icon, you can delete the expiration cycle extended lookup value.

On clicking the **Broadcast** (📡) icon corresponding to the expiration cycle extended lookup value, the **Extendable Lookup Value** zone appear with the details of the respective expiration cycle extended lookup value.

You can filter the list using the **Value** or **Description** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone allows you to view the details of the expiration cycle extended lookup value. This zone contains the following section:

- **Main** - This section allows you to view the details of the expiration cycle extended lookup value. It contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Expiration Cycle	Displays the expiration cycle extended lookup value.
Description	Displays the description of the expiration cycle extended lookup value.
Override Description	Displays the overridden description of the expiration cycle extended lookup value.
Detailed Description	Displays the additional information about the expiration cycle extended lookup value.
Status	Displays the status of expiration cycle extended lookup value.
Duration Unit	Displays the duration unit of the expiration cycle extended lookup value.
Duration Value	Displays the period till when the expiration cycle extended lookup value is active.
Consider Holiday	Displays whether to consider holidays or not while calculating the duration value.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the expiration cycle extended lookup value.
Delete	Used to delete the expiration cycle extended lookup value.
Duplicate	Used to create a new expiration cycle extended lookup value using an existing expiration cycle extended lookup value.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the expiration cycle extended lookup value is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears with the details of the respective business object.
Owner	Indicates the person or entity that created the expiration cycle business object.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the extendable lookup value of the **Extendable Lookup Value List** zone.

Defining an Expiration Cycle

Procedure

To define an expiration cycle:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
   The **Extended Lookup Query** screen appears.
3. Search for **C1-EXPCYCLE** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business *o*bject.
   The **Extended Lookup** screen appears.
5. Click the **Add** button in the **Page Title** area of the **Extended Lookup** screen.
   The **Expiration Cycle** screen appears. It contains the following section:
   - **Main** - Used to specify basic details about the expiration cycle.

   Main - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Expiration Cycle	Used to specify the value of expiration cycle.	Yes
Description	Used to specify the description of the expiration cycle.	Yes
Override Description	Used to specify the override description of the expiration cycle.	No
Detailed Description	Used to specify the additional information about the expiration cycle.	No
Status	Used to indicate the status of the expiration cycle.	No
Duration Unit	Used to indicate the duration unit of the expiration cycle.	Yes
Duration Value	Used to indicate the period till when the expiration cycle is active.	Yes
Consider Holiday	Used to indicate whether to consider the holiday while calculating the duration value.	No

6. Enter the required details.
7. Click **Save**.
   The expiration cycle is defined.

Editing an Expiration Cycle

Procedure

To edit an expiration cycle:

1. Search for the **C1-EXPCYCLE** business object in the **Extended Lookup Query** screen.
2. In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business *o*bject.
   The **Extended Lookup** screen appears.
3. In the **Extended Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *e*xtended lookup value whose details you want to edit.
   The **Expiration Cycle** screen appears. It contains the following section:
   - **Main** - Used to specify basic details about the expiration cycle.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Expiration Cycle	Used to specify the value of expiration cycle.	Yes
Description	Used to specify the description of the expiration cycle.	Yes
Override Description	Used to specify the override description of the expiration cycle.	No
Detailed Description	Used to specify the additional information about the expiration cycle.	No
Status	Used to indicate the status of the expiration cycle.	No
Duration Unit	Used to indicate the duration unit of the expiration cycle.	Yes
Duration Value	Used to indicate the period till when the expiration cycle is active.	Yes
Consider Holiday	Used to indicate whether to consider the holiday while calculating the duration value.	No

Tip: Alternatively, you can click the **Edit** button in the **Extended Lookup Value** zone to edit the details of the expiration cycle.

4. Modify the details, if required.
5. Click **Save**.
   The changes made to the expiration cycle are saved.

Copying an Expiration Cycle

Instead of creating an expiration cycle from scratch, you can create a new expiration cycle using an existing expiration cycle This is possible through copying an expiration cycle. On copying an expiration cycle, the details are copied to the new expiration cycle. You can then edit the details, if required.

Prerequisites

To copy an expiration cycle, you should have:

- Expiration cycle(whose copy you want to create) defined in the application
- Expiration cycle business objects defined in the application

Procedure

To copy an expiration cycle:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
   The **Extended Lookup Query** screen appears.
3. Search for **C1-EXPCYCLE** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business *o*bject.
   The **Extended Lookup** screen appears.
5. In the **Extended Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the expiration cycle whose copy you want to create.

Copyright © 2024, Oracle and/or its affiliates.

The **Expiration Cycle** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the expiration cycle.

Main - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Expiration Cycle	Used to specify the value of expiration cycle.	Yes
Description	Used to specify the description of the expiration cycle.	Yes
Override Description	Used to specify the override description of the expiration cycle.	No
Detailed Description	Used to specify the additional information about the expiration cycle.	No
Status	Used to indicate the status of the expiration cycle.	No
Duration Unit	Used to indicate the duration unit of the expiration cycle.	Yes
Duration Value	Used to indicate the period till when the expiration cycle is active.	Yes
Consider Holiday	Used to indicate whether to consider the holiday while calculating the duration value.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the expiration cycle.

6. Enter the required details.
7. Click **Save**.
   The new expiration cycle is defined.

Distribution Hierarchy Extendable Lookup

The **Distribution Hierarchy Extendable Lookup** screen allows you to search for a distribution hierarchy. A distribution hierarchy is an extendable lookup reference object which indicates the list of hierarchies that should be considered while deriving accounts for offsetting the credit or debit amount on the financial transaction distribution object. This screen contains the following zone:

- Extendable Lookup Search on page 2161

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search the details of distribution hierarchy business object. This zone contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description
Business Object	Used to search the distribution hierarchy business object.
Description	Used to search the distribution hierarchy business object with a particular description.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the business object.
Description	Displays information about the business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective business object.

Note: You must specify at least one search criterion while searching for the distribution hierarchy business object.

Searching for a Distribution Hierarchy Extendable Lookup

Prerequisites

To search for a distribution hierarchy extended lookup, you should have:

- Distribution hierarchy extended lookup defined in the application.

Procedure

To search for a distribution hierarchy extended lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. Search for **C1-HIERARCHY** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business *o*bject.
   The **Extended Lookup** screen appears.
5. View the list of distribution hierarchy extended lookup values in the **Extendable Lookup Value List** zone.

> **Note:**
>
> You must specify at least one search criterion while searching for a distribution hierarchy extended lookup.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Extendable Lookup (Distribution Hierarchy)

The **Extendable Lookup** (Distribution Hierarchy) screen allows you to add, edit, copy, and delete a distribution hierarchy. This screen contains the following zones:

- Extendable Lookup Value List on page 2163
- Extendable Lookup Value on page 2163

Copyright © 2024, Oracle and/or its affiliates.

Extendable Lookup Value List

The **Extendable Lookup Value List** zone allows you to view the list of distribution hierarchy extended lookup values that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
Value	Displays the distribution hierarchy extended lookup value.
Description	Displays the description of the distribution hierarchy extended lookup value.
Detailed Description	Displays the additional information about distribution hierarchy extended lookup value.
Owner	Displays the person or entity that created the distribution hierarchy extended lookup value.
Edit	On clicking the **Edit** (✎) icon, the **Distribution Hierarchy** screen appears where you can edit the details of the distribution hierarchy extended lookup value.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Distribution Hierarchy** screen appears where you can define a distribution hierarchy extended lookup value using an existing distribution hierarchy extended lookup value.
Delete	On clicking the **Delete** (🗑) icon, you can delete the distribution hierarchy extended lookup value.

On clicking the **Broadcast** (📡) icon corresponding to the distribution hierarchy extended lookup value, the **Extendable Lookup Value** zone appear with the details of the respective distribution hierarchy extended lookup value.

You can filter the list using the **Value** or **Description** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone allows you to view the details of the distribution hierarchy extended lookup value. This zone consists of the following section:

- **Main** - This section lists the distribution hierarchy extended lookup values. It contains the following fields:

Field Name	Field Description
Hierarchy Code	Displays the unique hierarchy code.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.
Description	Displays the description of the distribution hierarchy extended lookup value.
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.
Status	Displays the status of the distribution hierarchy extended lookup value.

- **Hierarchy List** - This section lists the hierarchy of the distribution. It contains the following columns:

Column Name	Column Description
Sequence	Displays the order of priority according to which the distribution will be made in hierarchy.
Value	Displays the value of hierarchy.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the distribution hierarchy extended lookup value.
Delete	Used to delete the distribution hierarchy extended lookup value.
Duplicate	Used to create a new distribution hierarchy extended lookup value using an existing distribution hierarchy extended lookup value.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the distribution hierarchy extended lookup value is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears with the details of the respective business object.
Owner	Indicates the person or entity that created the distribution hierarchy business object.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the extendable lookup value of the **Extendable Lookup Value List** zone.

Defining a Distribution Hierarchy

Procedure

To define a distribution hierarchy:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
   The **Extended Lookup Query** screen appears.
3. Search for **C1-HIERARCHY** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business *o*bject.
   The **Extended Lookup** screen appears.
5. Click the **Add** button in the **Page Title** area of the **Extended Lookup** screen.
   The **Hierarchy** screen appears. It contains the following sections:
   - **Main** - Used to specify basic details about the distribution hierarchy.
   - **Hierarchy List** - Used to specify the hierarchy of the distribution.

   Main - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Code	Displays the unique hierarchy code.	Yes
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.	No
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.	No
Description	Displays the description of the distribution hierarchy extended lookup value.	Yes
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.	No
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.	No
Status	Displays the status of the distribution hierarchy extended lookup value.	No

   Hierarchy List - This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order of priority according to which the distribution will be made in hierarchy.	Yes
Value	Used to specify the value of hierarchy.	Yes

Copying a Distribution Hierarchy

Instead of creating a distribution hierarchy from scratch, you can create a new distribution hierarchy using an existing distribution hierarchy This is possible through copying a distribution hierarchy. On copying a distribution hierarchy, the details are copied to the new distribution hierarchy. You can then edit the details, if required.

Prerequisites

To copy a distribution hierarchy, you should have:

- Distribution hierarchy(whose copy you want to create) defined in the application
- Distribution hierarchy business object defined in the application

Procedure

To copy a distribution hierarchy:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
   The **Extended Lookup Query** screen appears.
3. Search for **C1-HIERARCHY** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business *o*bject.
   The **Extended Lookup** screen appears.
5. In the **Extended Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the distribution hierarchy whose copy you want to create.

   The **Hierarchy** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the distribution hierarchy.
   - **Hierarchy List** - Used to specify the hierarchy list of distribution.

   Main - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Code	Displays the unique hierarchy code.	Yes
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.	No
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.	No
Description	Displays the description of the distribution hierarchy extended lookup value.	Yes
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.	No
Status	Displays the status of the distribution hierarchy extended lookup value.	No

Hierarchy List - This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order of priority according to which the distribution will be made in hierarchy.	Yes
Value	Used to specify the value of hierarchy.	Yes

Note:

You must specify at least one hierarchy list while defining a distribution hierarchy.

If you want to specify more than one hierarchy within the hierarchy list, click the **Add** (+) icon in the **Hierarchy List** section and then specify the details. However, if you want to remove a hierarchy from the hierarchy list, click the **Delete** () icon corresponding to the hierarchy.

Tip: Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the distribution hierarchy.

6. Enter the required details.
7. Add to the hierarchy list, if required.
8. Click **Save**.
   The new distribution hierarchy is defined.

Financial Transaction Distribution Object Extendable Lookup

The **Financial Transaction Distribution Object Extendable Lookup** screen allows you to search for a financial transaction distribution object. A financial transaction distribution object is an extendable lookup reference object which handles all the information related to the transactional data for a credit or debit that will be distributed or in the middle of distribution. It contains the financial transaction source information, expiration dates of the credit, and recipients. This screen contains the following zone:

- Extendable Lookup Search on page 2170

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search the details of financial transaction distribution object business object. This zone contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description
Business Object	Used to search the financial transaction distribution object business object.
Description	Used to search the financial transaction distribution object business object with a particular description.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the business object.
Description	Displays information about the business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective business object.

Note: You must specify at least one search criterion while searching for the financial transaction distribution object business object.

Procedure

To delete a financial transaction distribution object:

1. Search for the **C1-FTDISTOBJECT** business object in the **Extended Lookup Query** screen.
2. In the **Search Results** section, click the **Description** link corresponding to the **C1-FTDISTOBJECT** business *o*bject.
   The **Extended Lookup** screen appears.
3. In the **Extended Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to *t*he financial transaction distribution object that you want to delete.

   A message appears confirming whether you want to delete the financial transaction distribution object.

> **Tip:** Alternatively, you can click the **Delete** button in the **Extended Lookup Value** zone to delete the financial transaction distribution object.

4. Click **OK**.
   The financial transaction distribution object is deleted.

Copying a Financial Transaction Distribution Object

Instead of creating a financial transaction distribution object from scratch, you can create a new financial transaction distribution object using an existing financial transaction distribution object: This is possible through copying a financial transaction distribution object. On copying a distribution hierarchy, the details are copied to the new financial transaction distribution object. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution object, you should have:

- Financial transaction distribution object(whose copy you want to create) defined in the application

Copyright © 2024, Oracle and/or its affiliates.

- Financial transaction distribution object business object defined in the application

Procedure

To copy a financial transaction distribution object:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
   The **Extended Lookup Query** screen appears.
3. Search for **C1-FTDISTOBJECT** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-FTDISTOBJECT** business *o*bject.
   The **Extended Lookup** screen appears.
5. In the **Extended Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the financial transaction distribution object whose copy you want to create.

   The **Financial Transaction Distribution Object** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the financial transaction distribution object.
   - **Financial Transaction Distribution Type List** - Used to specify the financial transaction distribution types associated to a financial transaction distribution object.

   Main - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Object Code	Used to specify the financial transaction distribution object code.	Yes
Description	Used to specify the description of the financial transaction distribution object extended lookup value.	Yes
Override Description	Used to specify the override description of the financial transaction distribution object extended lookup value.	No
Detailed Description	Used to specify the additional information about the financial transaction distribution object extended lookup value.	No
Status	Used to indicate the status of the financial transaction distribution object extended lookup value.	No

   Financial Transaction Distribution Type List - This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to indicate the financial transaction distribution type to be associated to a financial transaction distribution object.	Yes

Copyright © 2024, Oracle and/or its affiliates.

> **Note:**
>
> You must specify at least one financial transaction distribution type while defining a financial transaction distribution object.
>
> If you want to specify more than one financial transaction distribution type within the financial transaction distribution type list, click the **Add** (+) icon in the **Financial Transaction Distribution Type List** section and then specify the details. However, if you want to remove a financial transaction distribution type from the financial transaction distribution type list, click the **Delete** (🗑) icon corresponding to the financial transaction distribution type.

> **Tip:** Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the financial transaction distribution object.

6. Enter the required details.
7. Add financial transaction distribution type, if required.
8. Click **Save**.
   The new financial transaction distribution object is defined.

Viewing the Financial Transaction Distribution Object Details

Procedure

To view the details of a financial transaction distribution object:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
   The **Extended Lookup Query** screen appears.
3. Search for **C1-FTDISTOBJECT** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-FTDISTOBJECT** business *o*bject.
   The **Extended Lookup** screen appears.
5. In the **Extended Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the financial *t*ransaction distribution object extended lookup value whose details you want to view.
   The **Extended Lookup Value** zone appears.
6. View the details of the financial transaction distribution object in the **Extended Lookup Value** zone.

Financial Transaction Distribution (Used for Searching)

The **Financial Transaction Distribution** screen allows you to search a financial transaction distribution object using various search criteria. This screen contains the following zone:

- Financial Transaction Distribution Search on page 2179

Financial Transaction Distribution Search

The **Financial Transaction Distribution Search** zone allows you to search the details of the financial transaction distribution using various search criteria. This zone contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description
Search By	Used to indicate whether you want to search for financial transaction distribution object using which of the following options: • FT Distribution Type/Status/Expiry Date • FT Distribution ID
FT Distribution ID	Used to specify the financial transaction distribution ID. **Note:** This field appears when you select the **FT Distribution ID** option from the **Search By** list.
FT Distribution Type	Used to indicate the financial transaction distribution type against which the object is created. **Note:** This field appears only when you select the **FT Distribution Type/Status/Expiry Date** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transaction Distribution Type FK Search** window appears.
FT Object Type	Used to indicate the business object that was used to create the financial transaction distribution type. **Note:** This field appears when you select the **FT Distribution Type/Status/Expiry Date** option from the **Search By** list.
Contract	Used to specify the contract on which financial transaction distribution object is created. **Note:** This field appears when you select the **FT Distribution Type/Status/Expiry Date** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Search** window appears.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Expiration Date	Used to specify the credit expiration date of the financial transaction distribution object. **Note:** This field appears when you select the **FT Distribution Type/ Status/Expiry Date** option from the **Search By** list.
Status	Used to indicate the status of the financial transaction distribution object. **Note:** This field appears when you select the **FT Distribution Type/ Status/Expiry Date** option from the **Search By** list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Information	Indicates the information about the financial transaction distribution object. **Note:** It has a link. On clicking the link, the **Financial Transaction Distribution** screen appears with the details of the respective financial transaction distribution.
Status	Indicates the status of financial transaction distribution object.
Financial Transaction Distribution Type	Indicates the financial transaction distribution type information against which the object is created. **Note:** It has a link. On clicking the link, the **Financial Transaction Distribution Type** screen appears where you can view the details of the respective financial transaction distribution type.
Contract	Indicates the contract information on which the financial transaction distribution object is created. **Note:** It has a link. On clicking the link, the **Contract** screen appears with the details of the respective contract.
Create Date Time	Displays the date and time when the financial transaction distribution object is created.
Expiration Date	Displays the expiration date of the financial transaction distribution object.

Searching for a Financial Transaction Distribution Object

Prerequisites

Copyright © 2024, Oracle and/or its affiliates.

To search for a financial transaction distribution, you should have:

- Financial transaction distribution types defined in the application.

Procedure

To search for a financial transaction distribution:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Financial Transaction Distribution**.
   The **Financial Transaction Distribution** screen appears.
3. Enter the search criteria in the **Financial Transaction Distribution Search** zone depending on whether you *w*ant to search for a financial transaction distribution.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required. In case of **Financial Transaction Distribution ID**, wild card search is not supported.

Financial Transaction Distribution (Used for Viewing)

The **Financial Transaction Distribution** screen allows you to view the details of the financial transaction distribution. This screen consists of the following tabs:

- Financial Transaction Distribution - Main on page 2182
- Financial Transaction Distribution - Log on page 2184

Financial Transaction Distribution - Main

The **Main** tab on the **Financial Transaction Distribution** screen contains the following zone:

- Financial Transaction Distribution on page 2182

Financial Transaction Distribution

The **Financial Transaction Distribution** zone displays the details of the financial transaction distribution types that are already defined in the system. This zone consists of the following sections:

- **Main** - This section provides basic information about the financial transaction distribution type. It contains the following fields:

Field Name	Field Description
Information	Indicates the information about the financial transaction distribution object.
FT Distribution Type	Displays the financial transaction distribution type.
	Note: It has a link. On clicking the link, the **Financial Transaction Distribution Type** screen appears with the details of the respective financial transaction distribution type. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transaction Distribution Type FK Search** window appears.
Account	Indicates the account on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Contract	Indicates the contract on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective account. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Search** window appears.
Status	Indicates the status of the financial transaction distribution object.
Financial Transaction ID	Displays the financial transaction ID.
Bill segment	Indicates the bill segment information on which the financial transaction distribution object is distributed. a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill Segment** screen appears where you can view the details of the respective bill segment.
Amount	Displays the distributed amount.
Expiration Date	Displays the expiration date of the financial transaction distribution object.

- **Distribution List** - This section displays the distribution list of the financial transaction distribution object. It contains the following columns:

Column Name	Column Description
Account	Indicates the account on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Contract	Indicates the contract on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective account.
Transfer Adjustment	Indicates the transfer adjustments made on the financial transaction distribution object.
Distribution Amount	Displays the distributed amount.

- **Characteristics** - This section lists the characteristics of the financial transaction distribution type. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the financial transaction distribution object.
Characteristic Type	Indicates the characteristic type.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution object is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the financial transaction distribution object status is updated.
Create Date/Time	Displays the date and time when the financial transaction distribution object is created.

Chapter 34

Deferred Revenue Recognition

Topics:

- Prerequisites
- Deferred Revenue Recognition Status Transition
- Algorithms Used in Deferred Revenue Recognition
- Deferred Revenue Recognition Template (Used for Searching)
- Deferred Revenue Recognition Template (Used for Viewing)
- Deferred Revenue Recognition (Used for Searching)
- Deferred Revenue Recognition (Used for Viewing)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is $1200. When this new business is booked, the revenue of $1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, $200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information about the deferred revenue recognition statuses, see Deferred Revenue Recognition Status Transition on page 2189.

Note: The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see Prerequisites on page 2189.

Copyright © 2024, Oracle and/or its affiliates.

Prerequisites

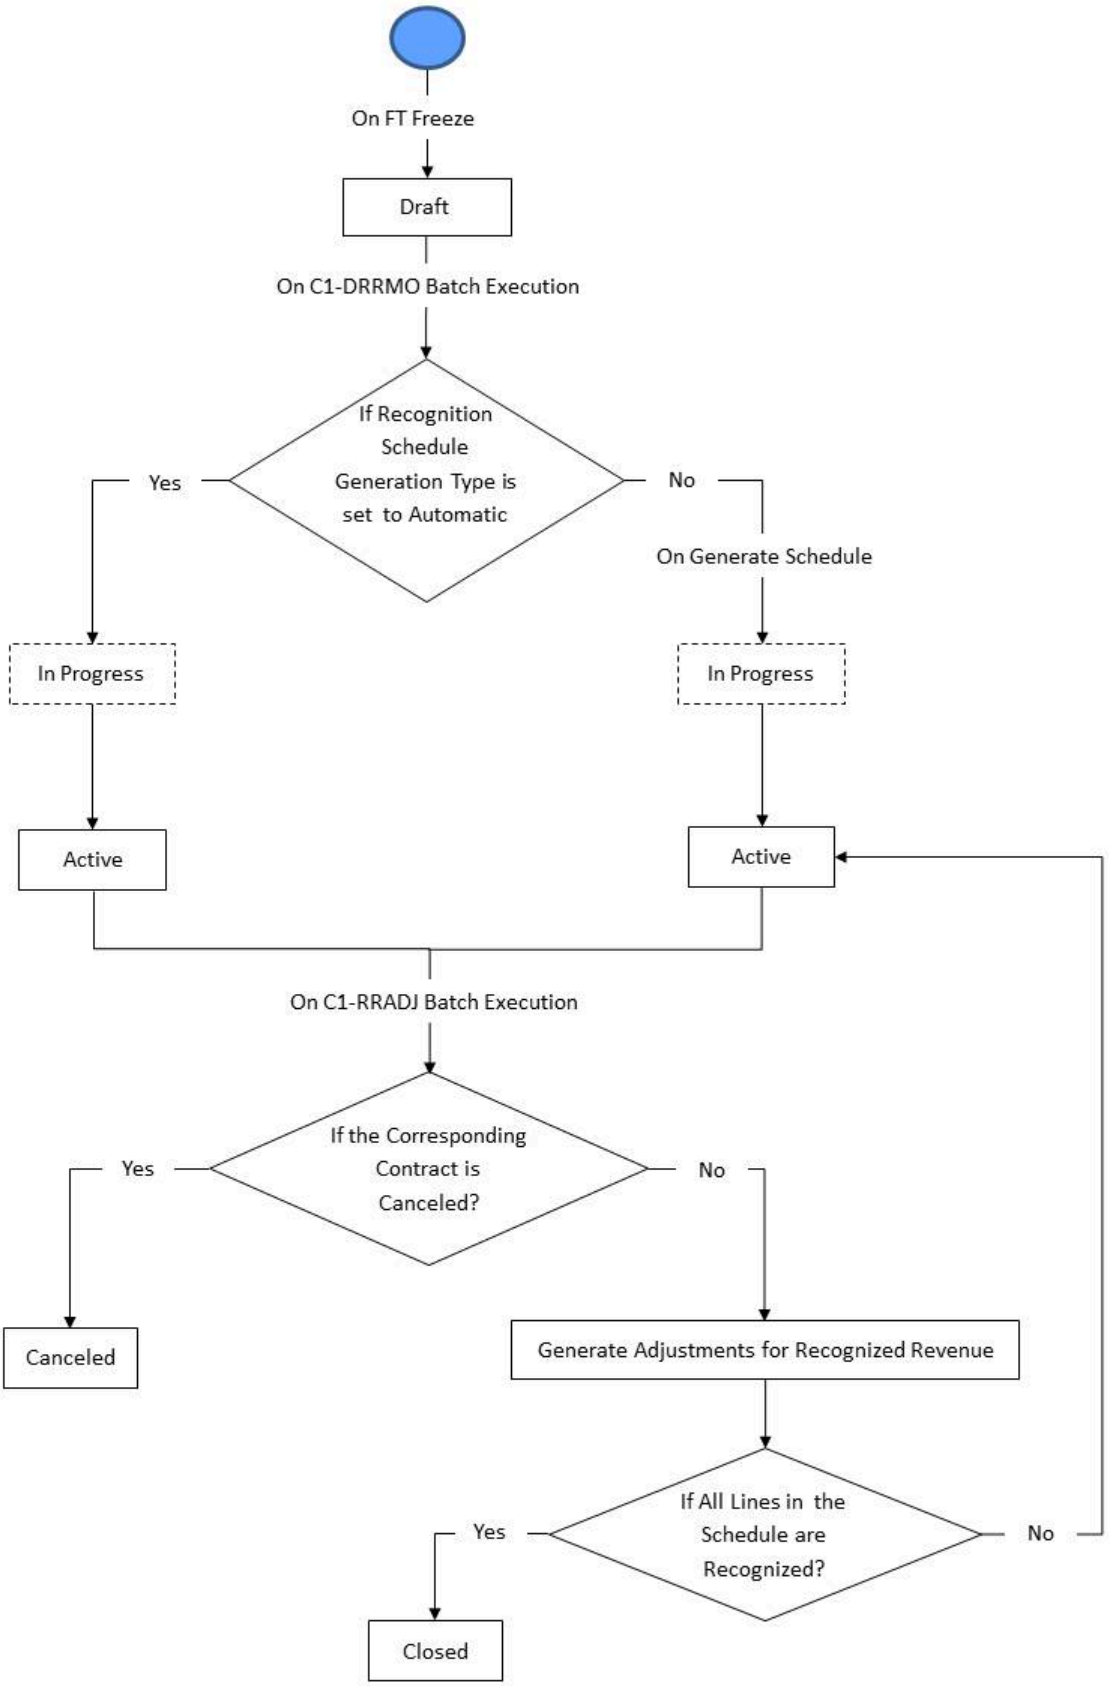
To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
  - Use Calendar or Business Days (C or B)
  - Override Default Recognition Date (Y or N)
  - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
  - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Deferred Revenue Recognition Status Transition

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

Copyright © 2024, Oracle and/or its affiliates.



Copyright © 2024, Oracle and/or its affiliates.

Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter: • Use Contract Expiration Date (Y or N) - Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.
		C1-REVRECITM	C1-REVRECITM	This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				(which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters: • **Use Calendar or Business Days (C or B)** - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory. • **Override Default Recognition Date (Y or N)** - Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory. • **Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)** - Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day. • **Override Default Monthly Recognition Date (1-31)** - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, …, 31. This parameter is required when you want to override the default monthly recognition date.
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVITMREC	C1-REVITMREC	If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter: • **Create Adjustments (Y or N)** - Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.
		C1-DRRTM-INF	C1-DRRTM-INF	This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order: **1.** Deferred Revenue Recognition Template **2.** Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	This algorithm validates the deferred revenue recognition template. It checks the following: • Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule. • Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events. • Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination. • Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field. • Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.>> Whether the low proration limit is between 0 to 31 and is less than the high proration limit. In addition, it does not allow you to:

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				• Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition. • Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status. • Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status. You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.
		C1-DRRSC-INF	C1-DRRSC-INF	This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order: **1.** Deferred Revenue Recognition Template **2.** Deferred Revenue Recognition Status **3.** Distribution Code **4.** Deferred Revenue Recognition ID
		C1-REVMON	C1-REVMON	This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.
		C1-REVRECINP	C1-REVRECINP	This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: • Next Status • Next Transition Condition At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.

Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- Deferred Revenue Recognition Template (Used for Viewing) on page 2202

This screen consists of the following zone:

- Search Deferred Revenue Recognition Template on page 2195

Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: • Daily • Monthly • Weekly	No
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are:	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Active • Inactive	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the respective deferred revenue recognition template.
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

Searching for a Deferred Revenue Recognition Template

Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
   The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Copyright © 2024, Oracle and/or its affiliates.

4. Click **Search**.
   A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

Defining a Deferred Revenue Recognition Template

Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

   The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the deferred revenue recognition template.
   - **Parameters** - Used to specify the various parameters for the deferred revenue recognition template.
   - **Algorithms** - Used to associate algorithms with the deferred revenue recognition template.
   - **Divisions** - Used to associate a deferred revenue recognition template with a division.
   - **Characteristics** - Used to define the characteristics for the deferred revenue recognition template.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: • Active • Inactive	Yes

   The **Parameters** section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition. **Note:** The **Search** (icon appears corresponding to this field. On clicking the **Search** icon, the **Distribution Code Search** window appears.	Yes
Contract Type	Used to indicate a particular type of contract. **Note:** The **Search** (icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created. **Note:** The **Search** ( ) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	No
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: • Automatic • Manual	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: • Daily • Monthly • Weekly	Yes
Allow Proration	Used to allow proration. **Note:** The **Allow Proration** field appears when you select **Recognition Schedule** as **Monthly**.	Yes
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.	Yes (Conditional) **Note:** This field is required when the recognition schedule is selected as monthly and when the **Allow Proration** check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	(in which it is enrolled) is less than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.	**Note:** This field is required when the recognition schedule is selected as monthly and when the **Allow Proration** check box is selected.

4. Enter the required details.
5. Associate algorithms with the deferred revenue recognition template, if required.
6. View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
7. Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
8. Click **Save**.
   The deferred revenue recognition template is created.

Associating Algorithms with a Deferred Revenue Recognition Template

Procedure

To associate algorithms with a deferred revenue recognition template:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue *r*ecognition template.

   The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes
Sequence	Used to specify the sequence number. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the **Algorithm** field.	

2. Enter the required details in the **Algorithms** section.
3. If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add** (+) icon, and then repeat 2.

Note: However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete** (🗑) icon corresponding to the algorithm.

Associating Deferred Revenue Recognition Template With A Division

Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

Procedure

To associate deferred revenue recognition template with a division:

1. Ensure that the **Divisions** section is expanded when you are creating or *e*diting a deferred revenue recognition template.

   The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template. **Note:** You can only view those divisions to which you have access in the **Division** list.	No

2. Select the required division from the list.
3. If you want to associate the deferred revenue recognition template with more than one division, click the **Add** (+) icon and then repeat step *2*.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑) icon corresponding to the division.

4. Click **Save**.
   The deferred revenue recognition template is associated with the divisions.

Defining a Characteristic for a Deferred Revenue Recognition Template

Prerequisites

To define a characteristic for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

Procedure

To define a characteristic for a deferred revenue recognition template:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value**d field.	**Note:** This field is required when you are defining a characteristic for the deferred revenue recognition template.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add** (+) icon *a*nd then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete** (🗑) icon corresponding to the characteristic.

Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- Deferred Revenue Recognition Template on page 2203

Copyright © 2024, Oracle and/or its affiliates.

Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** - Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: • Active • Inactive

- **Parameters** - Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code. **Note:** It has a link. On clicking the link, the **Distribution Code** screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the **Deferred Revenue Recognition Template** which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: • Manual • Automatic
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: • Daily • Monthly • Weekly
Allow Proration	Used to allow proration. **Note:** The **Allow Proration** field appears when you select **Recognition Schedule** as **Monthly**.
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.

- **Divisions** - Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** - Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No
Algorithm	Displays an algorithm that needs to be attached to the selected system event. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.	No

- **Characteristics** - Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** -This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template. **Note:** The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.
Delete	Used to delete the deferred revenue recognition template.

Copyright © 2024, Oracle and/or its affiliates.

-
- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Editing a Deferred Revenue Recognition Template

Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column *c*orresponding to the deferred revenue recognition template whose details you want to edit.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.
   The **Deferred Revenue Recognition Template** screen appears.

   Note: The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.
4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics of the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.
   The changes made to the deferred revenue recognition template are saved.

Deleting a Deferred Revenue Recognition Template

Procedure

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.

Copyright © 2024, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column *c*orresponding to the deferred revenue recognition template that you want to delete.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.
   A message appears confirming whether you want to delete the deferred revenue recognition template.
4. Click **OK**.
   The deferred revenue recognition template is deleted.

Deferred Revenue Recognition (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition using various search criteria. Through this screen, you can navigate to the following screen:

- Deferred Revenue Recognition (Used for Viewing) on page 2212

This screen consists of the following zone:

Copyright © 2024, Oracle and/or its affiliates.

- Search Deferred Revenue Recognition on page 2207

Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: • Account Details • Person Details • Deferred Revenue Recognition Details • Financial Transaction Details • Policy Details **Note:** By default, the **Account Details** option is selected.	Yes
Person ID	Used to search deferred revenue recognition which are assigned to a particular person. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	No
Account ID	Used to search the account ID. **Note:** This field appears only when you select the **Account Details** option from the **Search By** list.	No
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Account Details** option from the **Search By** list.	**Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	No
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	No
Status	Used to search deferred revenue recognition with a particular status. The valid values are: • Active • Closed • Canceled • Draft **Note:** This field appears when you select the **Person Details**, **Account Details**, or **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition. **Note:** This field appears when you select the **Person Details**, **Account Details**, or **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid. **Note:** This field appears when you select the **Person Details** or **Account Details** option from the **Search By** list.	No
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	
Description	Used to specify the description of the deferred revenue recognition. **Note:** This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: • Daily • Monthly • Weekly **Note:** This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction. **Note:** This field appears only when you select the **Financial Transaction Details** option from the **Search By** list.	
Policy Type	Used to indicate the type of policy. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	Yes
Policy Number	Used to indicate the policy number. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Plan Number	Used to indicate the plan number of the policy. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Source System	Used to indicate the name of the external system from where the policy originated. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Start Date	Used to indicate the date from when the policy is effective.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Policy Details** option from the **Search By** list.	
End Date	Used to indicate the date till when the policy is effective.	No
	Note: This field appears when you select the **Policy Details** option from the **Search By** list.	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition** screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the respective financial transaction.

Searching for a Deferred Revenue Recognition

Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application

Copyright © 2024, Oracle and/or its affiliates.

- Recognition Schedules defined in the application
- Source Systems defined in the application

Procedure

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable**.
   A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.
   The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

Viewing the Deferred Revenue Recognition Details

Procedure

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

   The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

   - Deferred Revenue Recognition - Main on page 2212
   - Deferred Revenue Recognition - Log on page 2215
3. Ensure that the **Main** tab is selected.
4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- Deferred Revenue Recognition - Main on page 2212
- Deferred Revenue Recognition - Log on page 2215

Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- Deferred Revenue Recognition on page 2212
- Associated Deferred Revenue Recognitions on page 2214
- Recognition Schedule on page 2214
- Revenue Recognition Items on page 2215

Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** - Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction Information** screen appears where you can view the details of the financial transaction.
Total Revenue Deferred	Displays the total revenue deferred.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: • Active • Closed • Canceled • Draft

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	Note: The **Edit** button appears when the deferred revenue recognition is in the **Active** status.
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	Note: The **Generate Schedule** button appears only when the deferred revenue recognition is in the **Draft** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** - Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition** screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: • Active • Closed • Canceled

Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

Copyright © 2024, Oracle and/or its affiliates.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

Note: This zone appears when the deferred revenue recognition is in the **Active** status.

Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. "
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the deferred revenue recognition.

Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- Deferred Revenue Recognition Log on page 2215

Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

Editing a Deferred Revenue Recognition

Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you want to edit.
   The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.
   The **Deferred Revenue Recognition** screen appears.

> **Note:** The **Edit** button appears when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics of the deferred revenue recognition, if required.
7. Click **Save**.
   The changes made to the deferred revenue recognition are saved.

Creating the Deferred Revenue Recognition Schedule

Prerequisites

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.

Copyright © 2024, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.
   The **Deferred Revenue Recognition** screen appears.
3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

Note: The **Generate Schedule** button appears when the deferred revenue recognition is in the **Draft** status.

   The status of the deferred revenue recognition is changed to **Active**.

Defining a Characteristic for a Deferred Revenue Recognition

Prerequisites

To define a characteristic for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

Procedure

To define a characteristic for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

   The **Characteristics** section contains the following fields in a grid:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.

Copyright © 2024, Oracle and/or its affiliates.

2. Enter the required details in the **Characteristics** section.

> **Note:** If you select a characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

3. If you want to define more than one characteristic for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the characteristic.

Adding Related Deferred Revenue Recognitions

Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

Procedure

To add related deferred revenue recognitions:

1. Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred revenue recognition.

   The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Deferred Revenue Recognition Search** window appears.	Yes
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transactions Search** window appears.	Yes

2. Enter the required details in the **Related Deferred Revenue Recognitions** section.
3. If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the related deferred revenue recognition.

Editing the Deferred Revenue Recognition Schedule Details

Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

Procedure

To edit the details of the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

   The **Deferred Revenue Recognition** screen appears.
3. Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.
   The **Edit Recognition Schedule** screen appears.

   Note: A recognition schedule from the deferred revenue recognition can be edited when the deferred revenue recognition is in the **Active** status.

   The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

   In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

4. Modify the details of the recognition schedule.
5. If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 4.

   Note: However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete** () icon corresponding to the recognition schedule.
6. Click **Save**.

Viewing the Log of a Deferred Revenue Recognition

Procedure

To view the log of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to view.

   The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

   - Deferred Revenue Recognition - Main on page 2212
   - Deferred Revenue Recognition - Log on page 2215
3. Click the **Log** tab.
   The **Log** tab appears.
4. View the complete trail of actions performed on the deferred revenue recognition in the **Deferred Revenue Recognition Log** zone.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the dispute request.
Details	Displays the details about the deferred revenue recognition log
User	Indicates the user who has performed deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the deferred revenue recognition
Status Reason	Displays the status reason of action performed on the deferred revenue recognition

Chapter 35

Product Lifecycle Management

Topics:

- Prerequisites
- Product Status Transition through User Interface
- Product Status Transition through a Batch Process
- Product Version Status Transition
- Product Enrollment Status Transition through User Interface
- Product Enrollment Status Transition through a Batch Process
- Product Service (Used for Searching)
- Product Service (Used for Viewing)
- Product (Used for Searching)
- Product Version (Used for Viewing)
- Product (Used for Viewing)
- Product Enrollment (Used for Searching)
- Product Enrollment (Used for Viewing)

Oracle Revenue Management and Billing facilitates a process of managing the entire lifecycle of a product from inception to service and then to retirement. The system allows you to create the following types of products:

- **Standard** - This type of product is a standalone product.
- **Packaged** - This type of a product is a bundle or group of products.
- **Informational** - This type of a product is used in the product hierarchy, but does not have its own pricing.

On creating a product, the status of the product is set to **Draft**. You can associate a product to one or more divisions. You can create a product to product relationship in the system. You can add product versions in the product. A product version is the entity which holds the following information:

- Product services which are offered with the product
- Price list from where the pricing for offered product services should be obtained.
- Eligibility criteria which must be satisfied when the account enrolls for the product.

The above information is captured when you create a product version for a standard product. However, when you create a product version for a packaged product, it holds the following information:

- Standard products which are offered in the packaged product.

> **Note:** Some of these products might be compulsorily offered with the packaged product while some of the products might be optional.

- Standard products' services which are offered in the packaged product.

> **Note:** Some of these product services might be compulsorily offered with the standard product while some of the product services might be optional.

- Add-on product services which are offered in the packaged product.
- Price list from where the pricing for offered product services and add-on product services should be obtained.
- Eligibility criteria which must be satisfied when the account enrolls for the packaged product.

A product version is effective from a particular date and its effective date must fall within the product date range. On creating a product version, the status of the product version is set to **In Progress**. You can activate a product when at least one of its product versions is in the **Finalized** status.

A product service can be associated to one or more price items. A product service can be offered with a product when it is associated with at least one price item in the system.

Once the product is activated, you can enroll the account for the product. On enrolling for a product, the system retrieves the product details from the product version which is effective on the system date. While enrolling for a standard product, you cannot remove mandatory product services from the product. However, you can enroll for optional product services which are offered with the product.

Similarly, while enrolling for a packaged product, you cannot remove mandatory products and product services from the packaged product. However, you can enroll for optional products and product services which are offered with the packaged product. While enrolling an account for a product, you can set the product enrollment priority for the account.

Once you create the product enrollment, the status of the enrollment is set to **Pending**. On submitting the product enrollment, the validation process is initiated. If all conditions are met, the status of the product enrollment is changed to **Enrolled**. You can unenroll for the product, whenever required.

You can retire a product, whenever required. The product, product version, and product enrollment goes through various statuses in their lifecycle.

The following batches are newly introduced for the Product Lifecycle Management feature:

- Product BO Monitor (C1-PRTRN)
- Product Enrollment Monitor (C1-ENTRN)

For more information on how to setup the product lifecycle management feature, see Prerequisites on page 2225.

Copyright © 2024, Oracle and/or its affiliates.

Prerequisites

To setup the product lifecycle management feature, you need to do the following:

- Define the required customer and account in the system.
- Create a approval workflow group with a group name **PRODUCTPLM** for the product and product version.
- Define the feature configuration as **C1-PRODCH**.
- Define the sequence of execution of **C1-PROD-TDCC**, **C1-TRAN-RETR**, and **C1-PROD-ACTV** algorithms, in the **ACTIVE** status of the **C1_PRODUCT_BO** business object.
- Define the following parameters for the predefined **C1-PROD-TDCC** algorithm-type.
  - To Do Type1
  - Number of Days
  - Customer Contact
- Define the parameters for the predefined **C1-PRTRN** batch control.

  Note: If the batch date is not defined while creating the batch control, system date is assigned as the batch date.
- Define at least one packaged or standard product for product enrollment purposes.
- Associate at least one price list with a product, when you are defining single or multiple product versions.

Product Status Transition through User Interface

Product Service (Used for Searching)

The **Product Service** screen allows you to search for a product service using various search criteria. Through this screen, you can navigate to the following screen:

Copyright © 2024, Oracle and/or its affiliates.

- Product Service (Used for Viewing) on page 2239

This screen consists of the following zone:

- Search Product Service on page 2232

For more information on...	See...
How to search for a product service	Searching for a Product Service on page 2233
How to view the details of a product service	Viewing the Product Service Details on page 2238

Search Product Service

The **Product Service Search** zone allows you to search for a product service using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to search for a product service based on the unique user-defined product service.	No
Description	Used to specify the description of a product service.	No
Start Date	Used to search for product service which starts from a particular date onwards.	No
End Date	Used to search for product service which is created till a particular date.	No
Price Item Information	Used to search for product service for which a price item information is created or updated in the system.	No

Note: You must specify at least one search criterion while searching for a product service.

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Product Service	Displays the service code of a product service.
Description	Displays the description of product service. **Note:** It has a link. On clicking the link, the **Product Service** screen appears where you can view the details of the respective product service.
Start Date	Displays the date from when the product service is effective.
End Date	Displays the date till when the product service is effective.

On clicking the **Broadcast** (📡) icon corresponding to a service code, the **Price Items** zone appears with the details of the respective product service.

Searching for a Product Service

Prerequisite

To search for a product service, you should have:

- Product Service defined in the application.
- Price Item defined in the application.

Procedure

To search for a product service:

1. From the **Main** menu, select **Pricing Management** and then click **Product Service**.
   A sub-menu appears.
2. Click the **Search** option from the **Product Service** sub-menu.
   The **Product Service** screen appears.
3. Enter the search criteria in theSearch Product Service on page 2232 zone.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of product services that meet the search criteria appear in the **Search Results** section.

Viewing the Product Service Price Items

Procedure

To view the price items of the product:

1. Search for a product service in the **Product Service** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to a service code whose details you want to view.

   The **Price Items** zone appears. It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code that is set for each product service. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the product service will begin.
End Date	Displays the date till when the product service will be available.

Defining a Product Service

Prerequisites

To define a product service, you should have:

Copyright © 2024, Oracle and/or its affiliates.

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)
- Price Item business object defined in the application.

Procedure

To define a product service:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product Service**.
   The sub-menu appears.
3. Click the **Add** option from the **Product Service** sub-menu.

   The **Product Service** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the product service.
   - **Characteristics** - Used to define the characteristics for a product service.
   - **Price Items** - Used to define price item for a product service.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to specify the product service. **Note:** While defining a product service, ensure that at least one price item is associated with the product service.	Yes
Description	Used to specify the description of a product service.	Yes
Start Date	Used to specify the date from when the product service is effective. **Note:** The product service end date cannot be earlier than the product service start date.	Yes
End Date	Used to specify the date till when the product service is effective. **Note:** The product service end date cannot be earlier than the product service start date.	Yes

   Note:

   If the product service is used in one or more product versions, the product service's end date cannot be earlier than the product version's effective date.

4. Enter the required details in the **Main** section.

   Note:

   The Start Date field is mandatory.

5. Define the characteristics for a product service, if required.
6. Define the price item for a product service.
7. Click **Save**.
   The product service is defined.

For more information on...	See...
Defining the characteristics for a product service	Defining a Characteristics for a Product Service on page 2237
Associating the product service with a Price Item	Associating a Product Service with a Price Item on page 2236

Associating a Product Service with a Price Item

Prerequisites

To associate a product service with a price item, you should have:

- Price Item business object defined in the application.

Procedure

To associate a product service with a price item:

1. Ensure that the **Price Items** section is expanded when you are defining, editing, or copying a product service.

   The Price Item section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item which is associated with this product service. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Price Item Search** window appears.	No
Start Date	Used to specify the date from when the product service is effective.	No
End Date	Used to specify the date till when the product service is effective. **Note:** The price item end date cannot be earlier than the price item start date.	No

2. Enter the required details in the **Price Items** section.

   Note: The product service is used in one or more product versions, and therefore the product service's start date cannot be later than the product version's effective date.

3. If you want to associate one or more price items with the product service, click the **Add** (+) *i*con and then repeat step 2. However, if you want to remove the price items from the product service, click the **Delete** (🗑) icon corresponding to the price item.
4. Click **Save**.

Copyright © 2024, Oracle and/or its affiliates.

Note:

You cannot associate the same price item multiple times with the product service.

You can remove a price item from the product service even though the product version is in the Finalized status. A To Do Type named **C1-SVCU1** gets created whenever any modifications are made to the product service.

You can associate a price item with a product service when the price item's date range is within the product service's date range.

If there are changes with respect to the price items associated with the product service, then you must create a new version for that product.

The product service is associated with the price item.

Defining a Characteristics for a Product Service

Prerequisites

To define a characteristic for a product service, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)

Procedure

To define a characteristic for a product service:

1. Ensure that the **Characteristics** section is expanded when you are *d*efining, editing, or copying a product service.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the product service.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the product service.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Product Service**	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the product service.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the product service.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the product service, click the **Add** (+) *I*con and then repeat step 2. However, if you want to remove a characteristic from the product service, *c*lick the **Delete** (🗑) icon corresponding to the characteristic.
4. Select an appropriate characteristic type from the **Characteristic Type** list.

Viewing the Product Service Details

Procedure

To view the details of the product service:

1. Search for a product service in the **Product Service** screen.
2. In the **Search Results** section, click the link in the **Description** column *c*orresponding to the service code whose details you want to view.

   The **Product Service** screen appears. It contains the following zones:

   - **Product Service**
   - **Associated Price Items**
3. View the product service details in the Product Service on page 2239 zone.

Product Service (Used for Viewing)

The **Product Service** screen allows you to:

- View the details and characteristics of the product service
- Edit, Delete, and Copy the details of the product service
- View the product service business object
- View the price items that are associated with the product service

The **Product Service** screen consists of the following zones:

- Product Service on page 2239
- Price Items on page 2240

Product Service

The **Product Service** zone displays the details of the product service. It contains the following sections:

- **Main** - Displays the basic information about the product service. It contains the following fields:

Field Name	Field Description
Product Service	Displays the product service that is assigned to a product service.
Description	Displays the description of the product service.
Start Date	Displays the date when the product service starts.
End Date	Displays the date when the product service ends.

- **Characteristics** - Lists the characteristics defined for the product service. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the product service.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the product service.
Delete	Used to delete the product service.
Duplicate	Used to create a new product service using an existing product service information.

- **Record Information** - This section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the product service is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Price Items

The **Product Service Price Item** zone lists various price items that are associated with a service. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays the price item information that is associated with a service.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the product service will begin.
End Date	Displays the date till when the product service will be available.

Editing a Product Service

Procedure

To edit a product service:

1. Search for the product service in the **Product Service**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the product service whose details you want to edit.
   The **Product Service** screen appears.
3. Click the **Edit** button in the **Product Service** zone.
   The **Product Service** screen appears.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Modify the details of the product service in the main section, if required.
5. Modify the characteristics for a product service, if required.

Copyright © 2024, Oracle and/or its affiliates.

6. Associate the price items with a product service, if required.
7. Click **Save**.
   The changes made to the product service are saved.

Deleting a Product Service

Procedure

To delete a product service:

1. Search for the product service in the **Product Service**.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the link in the **Description** column *c*orresponding to the product service whose details you want to delete.
   The **Product Service** screen appears.
3. Click the **Delete** button in the **Product Service** zone.
   A message appears confirming whether you want to delete the product service.

   Note: If the product service is associated with the product version, then the product service cannot be deleted.

4. Click **OK**.
   The product service is deleted.

Copying a Product Service

Instead of creating a product service from scratch, you can create a new product service using an existing product service. This is possible through copying a product service. On copying a product service, the details including the algorithms and characteristics are copied to the new product service. You can then edit the details, if required.

Prerequisites

To define a product service, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)
- Price Item business object defined in the application.

Procedure

To define a product service:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product Service**.
   The sub-menu appears.
3. Click the **Search** option from the **Product Service** sub-menu.

   The **Product Service** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the product service.
   - **Characteristics** - Used to define the characteristics for a product service.
   - **Price Items** - Used to define price item for a product service.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to specify the product service.	Yes
Description	Used to specify the description of a product service.	Yes
Start Date	Used to specify the date from when the product service is effective.	Yes
End Date	Used to specify the date till when the product service is effective.	Yes

Tip: Alternatively, you can click the **Duplicate** button in the **Record Actions** section, in the **Product Service** zone to create a copy of the product service.

4. Enter the required details in the **Main** section.
5. Define the characteristics for a product service, if required.
6. Define the price item for a product service, if required.
7. Click **Save**.
   The new product service is defined.

Search Product

The **Search Product** zone allows you to search for a product using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to search for a particular product.	No
Description	Used to search products with a particular description.	No
Start Date	Used to search for products which are created from a particular date onwards.	No
End Date	Used to search for products which are created till a particular date.	No
Product Type	Used to search for products which are created using a particular product type. The valid values are: • Packaged • Informational • Standard	No
Product Category	Used to search for products which are created using a specific category. The valid values are: • Checking • Loans • Others • Savings	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search for products which are created using a specific status. The valid values are: • Active • Draft • Error • Retired	No
Division	Used to search for products which belong to a specific division.	No
Product Manager's To Do Role	Used to search for products which belong to a specific Product Manager's To Do Role. **Note:** If you select a predefined To Do Role, the **Search** (🔍) icon appears corresponding to the **Product Manager's To Do Role** field. On clicking the **Search** icon, you can search for a predefined To Do value. On specifying the value for a predefined To Do Role, the description of the To Do Role value appears corresponding to the **Product Manager's To Do Role** field.	No

Note: You must specify at least one search criterion while searching for a product.

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Product	Displays the code of the product.
Description	Displays the description of the product. **Note:** It has a link. On clicking the link, the **Product** screen appears with the details of the respective product.
Status	Displays the status of the product.
Product Type	Indicates the type of the product.
Product Category	Indicates the category of the product.
Start Date	Displays the date from when the product is effective.
End Date	Displays the date till when the product is effective.

On clicking the **Broadcast** (📡) icon corresponding to the product column, the **Product Version List** zone appears with the details of the respective product.

Defining a Product to Product Relationship

Prerequisites

To define a product to product relationship, you should have:

- Relationship Type defined in the application.

Procedure

To define a product to product relationship:

1. Ensure that the **Product to Product Relationship** section is expanded when you are defining, editing, or copying a product.

   The Product to Product Relationship section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product.	Yes
Relationship Type	Used to indicate the relationship type with the product. The valid values are: • Child product	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Parent product	
Effective Start Date	Used to specify the date from when the product to product relationship will begin.	No
Effective End Date	Used to specify the date till when the product to product relationship will be available.	No

2. Define the details of the product in the main section, if required.

> **Note:**
> The product to product relationship start and end dates must be within the product's start and end dates.

3. Define the division for a product, if required.

> **Note:**
> The division associated with the child product is not associated with the packaged product.

4. Define the product to product relationship for a product, if required.

> **Note:**
> The child product that you want to add in the product version is not effective, as it must be in an active state.

5. Define the characteristics for a product, if required.
6. Click **Save**.
   The product to product relationship is defined.

Defining a Product Version

Prerequisites

Copyright © 2024, Oracle and/or its affiliates.

To define a product version, you should have:

- Product defined in the application.

Procedure

To define a product version:

1. Search for the product in the **Search Product** zone.
2. In the **Search Results** section, click the **Broadcast** (📡) icon, corresponding to the product whose product version details you want to view.
   The **Product Version List Search** zone appears
3. Click the **Add** link in the **Product Version List** zone.
   The **Product Version** screen appears. It contains the following sub sections:
   - **Main** - Used to specify the basic details of the product version.
   - **Product Services** - Used to assign the product services to the product version.
   - **Price Lists** - Used to associate the price lists with a product version.
   - **Eligibility** - Used to specify the eligibility criteria for a product version.
   - **Characteristics** - Used to define the characteristics for a product version.

   The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Product Type	Displays the product type.	Not applicable
Product	Displays the product code.	Not applicable
Effective Date	Used to specify the effective date from when the product version will be effective.	Yes
Status	Used to specify the status of the version. **Note:** It is a read-only field, and cannot be edited.	Yes
Description	Used to specify the description for the version.	No
Terms and Conditions	Used to specify the terms and conditions for the version. **Note:** Click the **Search** (🔍) icon appearing corresponding to the **Terms and Conditions** field. On clicking the **Search** icon, you can search for a predefined terms and conditions.	Yes

Note:

The Effective Date field is mandatory.

4. Enter the required details in the **Products and Services** and/or **Product Services** section.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:**
>
> If the product type is **Packaged** then **Products and Services** section appears. If the product type is **Standard** then **Product Services** section is displayed. If the else both of these sections do not appear.
>
> You must have at least one product added in the product version.
>
> You must have at least one product service added in the product version.
>
> The effective date of a product version cannot be earlier than the product start date.
>
> You must select the Inclusion check box when the product service is defined as mandatory in the effective product version.
>
> You cannot add a product version when the product is in the Retired status.
>
> The product that you want to add in the product version must be in the Active status.

5. Enter the required details in the **Price List** section.

> **Note:**
>
> The pricing for the price item which is associated with the product service must be available in the price list.

6. Enter the required details in the **Eligibility** section.
7. Enter the required details in the **Characteristics** section.
8. Click **Save**.
   The product version is defined.

Defining Eligibility Criteria for a Product Version

Procedure

To associate a price list with a product version:

1. Search for a product in the **Search Product** zone.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the product *w*hose details you want to view.
   The **Product** screen appears. It consists of the following tabs:
   - Product - Main on page 2273
   - Product - Log on page 2275
3. Ensure that the **Main** tab is selected.
4. Click the **Add** link in the **Product Version** zone.
   The **Product Version** screen appears.
5. Click the **Product Services** link mentioned in the **Sections** navigation panel.
   The **Eligibility** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Criteria	Displays the criteria (📄) icon. By clicking the criteria icon, additional fields are displayed that allow you to enter various types of criteria.	Not applicable
Eligibility Type	Indicates the list of logical criteria that is checked during enrollment of the customer to the Product and Product Version. The valid value is: • Eligibility Rule	No
Start Date	Used to specify the date from when the eligibility criteria will be effective.	Yes (Conditional) **Note:** This field is required when you have selected the eligibility criteria from the eligibility type dropdown.
End Date	Used to specify the date till when the eligibility criteria will be effective.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the eligibility criteria.	No
Sequence	Used to specify the order in which the product version eligibility criteria should be executed.	Yes
Parameter	Indicates the parameter (on the left hand side) which is used in the pricing eligibility criteria.	No
Operator	Displays the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value Type	Indicates the parameter value against which you want to compare the parameter.	No
Parameter	Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).	No
Is True	Indicates what happens when the condition is true (satisfied). The valid values are: • **Check Next Condition** - Indicates that the condition with consecutive sequence number should be executed. • **Rule Is False** - Indicates that the action specified in the **Rule False Action** field should be executed. • **Rule Is True** - Indicates that the action specified in the **Rule True Action** field should be executed.	No
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: • **Check Next Condition** - Indicates that the condition with consecutive sequence number should be executed. • **Rule Is False** - Indicates that the action specified in the **Rule False Action** field should be executed. • **Rule Is True** - Indicates that the action specified in the **Rule True Action** field should be executed.	No
Is Insufficient	Indicates what happens when the data is insufficient. The valid values are: • **Check Next Condition** - Indicates that the condition with consecutive sequence number should be executed. • **Rule Is False** - Indicates that the action specified in the **Rule False Action** field should be executed. • **Rule Is True** - Indicates that the action specified in the **Rule True Action** field should be executed.	No

6. Enter the required details in the **Eligibility** section.
7. If you want to add more than one eligibility / criteria to the product version, click the **Add** (+) icon. *H*owever, if you want to remove a eligibility / criteria from the **Eligibility** section, click the **Delete** (🗑) icon corresponding to the criteria / sequence field.
8. Click **Save**.

Copyright © 2024, Oracle and/or its affiliates.

Note:

You cannot define eligibility criteria for the product version when the eligibility criteria is already defined for the price list.

You cannot define an eligibility criteria whose start date is earlier than the product version effective date.

You cannot define multiple eligibility criteria for the product version with the overlapping date range.

The eligibility is defined for the product version.

Defining a Characteristic for a Product Version

Procedure

To define a characteristic for a product version:

1. Search for a product in the **Search Product** zone.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the product whose details you want to view.
   The **Product** screen appears. It consists of the following tabs:
   - Product - Main
   - Product - Log
3. Ensure that the **Main** tab is selected.
4. Click the **Add** link in the **Product Version** zone.
   The **Product Version** screen appears.
5. Click the **Product Services** link mentioned in the **Sections** navigation panel.
   The **Characteristics** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the product version.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those characteristic types where the characteristic entity is set to Price Item.	**Note:** This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	**Note:** This field is required when you are defining a characteristic for the price item or price item bundle.

6. Enter the required details in the **Characteristics** section.
7. If you want to add more than one characteristic to the product version, click the **Add** (+) icon. However, if you want to remove a characteristic from the **Characteristics** section, click the **Delete** (🗑) icon corresponding to the effective date field.
8. Click **Save**.
   The characteristics are defined for the product version.

Product Version - Main

The **Product Version - Main** tab displays information about the product version and services. It contains the following zones:

- Product Version on page 2262
- Services on page 2265
- Add-on Product Services on page 2264
- Price Items on page 2240
- Eligibility Criteria on page 2266

Product Version

The **Product Version** zone displays the details of the product version. It contains the following sections:

- **Main** - Displays the basic information about the product version. It contains the following fields:

Field Name	Field Description
Product	Displays information about the product. **Note:** It has a link. On clicking the link, the **Product** screen appears where you can view the details of the product.
Effective Date	Displays the date from when the product version will be effective.
Product Type	Displays the type of product for which the product version is created.
Status	Displays the status of the product version.
Description	Displays the description of the product version.
Terms and Conditions	Displays the terms and conditions that are applicable for the product version.

- **Record Actions** - This section contains the following fields:

Button Name	Button Description
Edit	Used to edit the details of the product version. **Note:** The **Edit** button appears when the product version status is **In Progress, Finalized, and Draft**.

Copyright © 2024, Oracle and/or its affiliates.

Button Name	Button Description
Delete	Used to delete the details of the product version.
	Note: The **Delete** button appears when the product version status is **In Progress, Finalized, and Draft**.
Duplicate	Used to create a new version using an existing product version.
	Note: The **Duplicate** button appears when the product version status is **In Progress, Finalized, and Draft**.
Finalized	Used to finalize all the changes and make the product **Active**.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product version is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the product version is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- Enter the required details in the Products on page 2263 zone.
- Enter the required details in the Product Services on page 2264 zone.

Note: Products and Product Services section is displayed when the product type is selected as **Packaged** product from the Search Product on page 2243 zone in the **Product** screen.

- Enter the required details in the Add-on Product Services on page 2264 zone.
- Enter the required details in the Services on page 2265 zone.

Note: The services section appear when the product type is selected as a **Standard** product from the Search Product on page 2243 zone in the **Product** screen.

- Enter the required details in the Price List on page 2266 zone.
- Enter the required details in the Eligibility Criteria on page 2266 zone.

Products

The **Products** zone displays the details of the product. It contains the following fields:

Field Name	Field Description
Product	Displays the product service that is assigned to a product.
Effective Date	Displays the date from when the product is effective.
Description	Displays the description of the product

Editing a Product Version

Procedure

To edit a product version:

1. Search for the product in the **Search Product** zone.
2. In the **Search Results** section, click the **Broadcast** (((•))) icon, corresponding to the product column.
   The **Product Version List** zone appears.
3. Click the link in the **Description** column, corresponding to the status column.
   The **Product Version** screen appears.
4. Click the **Edit** button in the **Product Version** zone.
   The **Product Version** screen appears.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Modify the details of the product version in the main section, if required.

> **Note:**
>
> The effective date of a product version cannot be later than the product end date.

6. Define, edit, or remove the products and/or services for a product version, if required.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:**
>
> You must select the Inclusion check box when the product service is defined as mandatory in the effective product version.

7. Modify the price list for a product version, if required.
8. Define, edit, or remove the eligibility for a product version, if required.
9. Define, edit, or remove the characteristics for a product version, if required.
10. Click **Save**.

> **Note:**
>
> You cannot edit the details of the product version except the characteristics when the product version is in the Finalized status.

The changes made to the product version are saved.

1. Search for the product in the **Search Product** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the **Broadcast** (📡) icon, corresponding to the product column.
   The **Product Version List** zone appears.
3. Click the link in the **Description** column, corresponding to the status column.
   The **Product Version** screen appears.
4. Click the **Delete** button in the **Product Version** zone.

Copyright © 2024, Oracle and/or its affiliates.

A message appears confirming whether you want to delete the product version.

5. Click **OK**.

> **Note:**
>
> You cannot delete the product version which is in the Finalized status.

The product version is deleted.

Copying a Product Version

Instead of creating a product version from scratch, you can create a new product version using an existing product version. This is possible through copying a product version. On copying a product version, the details including the algorithms and characteristics are copied to the new product version. You can then edit the details, if required.

Prerequisites

To copy a product version, you should have:

- Product and Product Type defined in the application.
- Product Status and Service Code defined in the application.
- Product Category, Division, and Product To Do Role defined in the application.
- Eligibility Type, Characteristic Type, Price List, and Terms and Conditions defined in the application.
- Parameter, Operator, Parameter Value Type, Is True, Is False, and Is Sufficient defined in the application.

Procedure

To copy a product version:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product**.
   The sub-menu appears.
3. Click the **Search** option from the **Product** sub-menu.
   The **Product** screen appears.
4. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the product column *w*hose version you want to copy.
   The **Product Version List** zone appears.
5. Click the link in the **Description** column, to view the details of the product version.
   The **Product Version** screen appears.
6. Click the **Duplicate** button in the **Record Actions** section.
   The **Product Version** screen appears. It contains the following sections:
   - **Main** - Used to specify basic details of the product version.
   - **Products and Services** - Used to define the products and services for a product version.
   - **Price List**

     - Used to define the Price List for the product version.
   - **Eligibility**

     - Used to define the Eligibility for the product version.
   - **Characteristics**

Copyright © 2024, Oracle and/or its affiliates.

- Used to define the Characteristics for the product version.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Type	Displays the product type.	Not applicable
Product	Displays the product code.	Not applicable
Effective Date	Used to specify the effective date from when the product version will be effective.	Yes
Status	Used to specify the status of the version. **Note:** It is a read-only field, and cannot be edited.	Yes
Description	Used to specify the description for the version.	No
Terms and Conditions	Used to specify the terms and conditions for the version. **Note:** Click the **Search** (🔍) icon appearing corresponding to the **Terms and Conditions** field. On clicking the **Search** icon, you can search for a predefined terms and conditions.	Yes

7. Enter the required details in the **Products and Services** and/or **Product Services** section.

Note: If the product type is **Packaged** then **Products and Services** section appears. If the product type is **Standard** then **Product Services** section appears. If the product type is **Information Only** neither of these sections are displayed.

8. Enter the required details in the **Price List** section.
9. Enter the required details in the **Eligibility** section.
10. Enter the required details in the **Characteristics** section.
11. Click **Save**.
    The new product service is defined.

Finalizing a Product Version

Prerequisites

To finalize a product version, you should have:

- Product Version status as In Progress

Procedure

To finalize a product version:

1. Search for the product in the **Product Search** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the product *w*hose details you want to view.
   The **Product Version List** screen appears.
3. In the **Product Version List** zone, click the link in the **Description** column, for that product version, *w*hose product version log you want to view.
   The **Product Version** screen appears.
4. Click the **Finalize** button in the **Product Version** zone.
   The status of the product version is changed to **Finalized**.

> **Note:**
>
> You cannot finalize the product version when its effective date is earlier than the product start date.

> **Note:**
>
> The **Finalize** button appears when the product version is in the **In Progress** status.

Viewing the Log of a Product Version

Procedure

To view the log of a Product Version:

1. Search for the product in the **Product** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the product, *w*hose product version log you want to view.
   The **Product Version List** screen appears.
3. In the **Product Version List** zone, click the link in the **Description** column, for that product version, whose product version log you want to view.
   The **Product Version** screen appears. It consists of the following tabs:
   - Product Version - Main on page 2262

Copyright © 2024, Oracle and/or its affiliates.

- Product Version - Log on page 2268

4. Click the **Log** tab.
   The **Log** tab appears.
5. View the complete trail of actions performed on the product version in the **Product Version Log** zone.

How to define a product version	Defining a Product Version on page 2251

Product - Main

The **Product - Main** tab displays information about the product, division, product to product relationship, characteristics, and product version. It contains the following zones:

- Product Details on page 2273
- Product Version List on page 2245

Product Details

The **Product Details** zone displays the details of the product. It contains the following sections:

Copyright © 2024, Oracle and/or its affiliates.

- **Main** - Displays the basic information about the product. It contains the following fields:

Field Name	Field Description
Product	Displays information about the product. **Note:** It has a link. On clicking the link, the **Product** screen appears where you can view the details of the product.
Description	Displays the description of the product version.
Status	Displays the status of the product version.
Product Type	Displays the type of product for which the product version is created.
Product Category	Displays the category to which the product is associated.
Start Date	Displays the date from when the product is effective.
End Date	Displays the date from till when the product is effective.
Compliance Number	Displays the number supplied by the legal department
Product Manager To Do Role	Displays all the To Dos that are raised against this product, and are assigned to this particular To Do Role.

- **Record Actions** - This section contains the following fields:

Button Name	Button Description
Edit	Used to edit the details of the product. **Note:** The **Edit** button appears when the product status is **Active** and **Draft**.
Duplicate	Used to create a new product using an existing product. **Note:** The **Duplicate** button appears when the product status is **Active** and **Draft**.
Retire	Used to indicate that the product is no longer available for use. **Note:** The **Retire** button appears only when the product status is **Active**.
Active	Used to activate the product. **Note:** The **Active** button appears when the product status is **Draft**.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product version is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Divisions** - Displays the division defined for the product. It contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Division	Displays the division to which the product belongs. **Note:** It has a link. On clicking the link, the **Division** screen appears where you can view the details of the division.

- **Product to Product Relationship** - Lists the characteristics of the product version. It contains the following columns:

Column Name	Column Description
Product	Displays the product with whom the relationship has to be made.
Relationship Type	Displays the type of relationship.
Effective Start Date	Displays the date from when the product to product relationship will be effective.
Effective End Date	Displays the date till when the product to product relationship will be effective.

- **Characteristics** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics for the product will be effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the characteristic value.

Product Version List

The **Product Version List** zone lists the information related to the product version.

Column Name	Column Description
Effective Date	Displays the date from when the product version is effective.
Description	Displays the description of the product version. **Note:** It has a link. On clicking the link, the **Product Version** screen appears where you can view the details of the respective product version.
Status	Displays the status of the product version.

Product - Log

The **Product - Log** tab contains the following zone:

- Product Log on page 2276

Copyright © 2024, Oracle and/or its affiliates.

Product Log

The **Product Log** zone lists the complete trail of actions performed on the product. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the product.
Details	Displays the details about the action performed on the product.
User	Displays the user who has performed the action on the product.
Log Type	Displays the type of log.
Related Object	Displays the object or entity that is generated when the action is performed on the product.
Status Reason	Displays the status reason of action performed on the product.

Editing a Product

Procedure

To edit a product:

1. Search for the product in the **Search Product** zone.
2. In the **Search Results** section, click the link in the **Description** column, corresponding *t*o the product column whose details you want to edit.
   The **Product** screen appears.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
3. Click the **Edit** button in the **Record Actions** zone.
   The **Product** screen appears.
4. Modify the details of the product in the main section, if required.

   Note:

   The product start date cannot be later than its product version's effective date.

   The product end date cannot be earlier than its product version's effective date.

   You cannot update the product type field because a product version is already defined for the product.

   You cannot add or edit a product version when the product is in the Retired status.
5. Define, edit, or remove the divisions for a product, if required.

   Note:

   You cannot remove the division from the product because an account from this division is already enrolled to the product.

   You cannot remove the division from the packaged product because the child product is associated to the division.
6. Define, edit, or remove the product to product relationship for a product, if required.
7. Define, edit, or remove the characteristics for a product, if required.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:**
>
> You cannot change the value of the characteristic when the product is in the Active status. To change the value of the characteristic, the characteristic type should not be of **C1-STOPE** type.

8. Click **Save**.
   The changes made to the product are saved.

Copying a Product

Instead of creating a product from scratch, you can create a new product using an existing product. This is possible through copying a product. On copying a product, the details including the algorithms and characteristics are copied to the new product. You can then edit the details, if required.

Prerequisites

To copy a product, you should have:

- Product, Product Type, Product Category, and Product Manager's To Do Role defined in the application.
- Division defined in the application.
- Relationship Type and Characteristic Type defined in the application.

Procedure

To copy a product:

1. Search for a product in the **Product** screen.
2. In the **Search Results** section, click the link in the **Description** column, corresponding *t*o the product column, whose details you want to copy.
   The **Product** screen appears.
3. Click the **Duplicate** button in the **Record Actions** section.
   The **Product** screen appears.
4. Enter the required product details in the **Main** section, if required.
5. Define, edit, or remove the divisions for a product, if required.
6. Define, edit, or remove the product to product relationship for a product, if required.
7. Define, edit, or remove the characteristics for a product, if required.
8. Click **Save**.
   The new product is defined.

Activating a Product

Prerequisites

To activate a product, you should have:

- Product must have the status as Draft.
- Product Version Status should be Finalized.

Procedure

To activate a product:

1. Search for a product in the **Product** screen.
2. In the **Search Results** section, click the link in the **Description** column, corresponding *t*o the product column that needs to be activated.
   The **Product** screen appears.
3. Click the **Active** button in the **Record Actions** section.

> **Note:**
>
> You can activate a product when there is at least one product version in the Finalized status.

The product is activated, as the status is changed from **Draft** to **Active**.

Retiring a Product

Prerequisites

To retire a product, you should have:

- Product Status must be Active.
- Product End Date less than equal to current date.

Procedure

To retire a product:

1. Search for a product in the **Product** screen.

Copyright © 2024, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Description** column, corresponding *t*o the product column that needs to be activated.
   The **Product** screen appears.
3. Click the **Retire** button in the **Record Actions** section.
   The **Retire Product** screen appears.
4. Mention the **End Date** of the product.

   Note:

   The enrollments for the product, which you are retiring, are still effective.

5. Click **Save**.

   The product is retired, as the status is changed from **Active** to **Retired**.

   Note:

   On retiring the product, the end date of the effective product enrollments is set to the system date.

Search Enrollment

The **Search Enrollment** zone allows you to search for the enrolled products using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an enrolled product using the option of Product Enrollment. The valid values are: • Product Enrollment **Note:** By default, the **Product Enrollment** option is selected.	Yes
Enrollment ID	Used to search an enrollment, based on the enrollment ID.	No
Account ID	Used to search an enrollment, based on the account ID.	No
Person ID	Used to search an enrollment, based on the person ID.	No
Product	Used to search an enrollment, based on the product ID.	No
Status	Used to search an enrollment with a particular status. The valid values are: • Canceled • Enrolled • Error • Pending • Unenrolled • Validated	No
Start Date	Used to search enrollments which are initiated from a specific date.	No
Enrollment Channel	Used to search enrollments based on a enrollment source. The valid values are: • Oracle Revenue Management and Billing	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to search enrollments which are initiated till a specific date.	No

Note: You must specify at least one search criterion while searching for an enrollment.

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Enrollment ID	Displays the enrollment ID of the enrolled product.
	Note: It has a link. On clicking the link, the **Product Enrollment** screen appears where you can view the details of the respective enrolled product.
Account Information	Displays the account ID of the enrolled product.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Start Date	Displays the date from when the enrolled product is effective.
End Date	Displays the date till when the enrolled product is effective.

On clicking the **Broadcast** (📡) icon corresponding to an enrollment ID, the **Enrolled Products** zone appears with the details of the products that are enrolled.

- **Enrolled Products** - The **Enrolled Products** section contains the following columns:

Column Name	Column Description
Product Type	Displays the type of product which is enrolled.
Product	Displays the name of the enrolled product.
Version Description	Displays the description of the enrolled product version.
	Note: It has a link. On clicking the link, the **Product Version** screen appears where you can view the details of the respective enrolled product.
Start Date	Displays the date from when the enrolled product is effective.
End Date	Displays the date till when the enrolled product is effective.

- **Enrolled Services** - The **Enrolled Services** section contains the following columns:

Column Name	Column Description
Service Code	Displays the type of service which is enrolled.
Description	Displays the description of the enrolled service.
	Note: It has a link. On clicking the link, the **Product Service** screen appears where you can view the details of the respective enrolled service.
Start Date	Displays the date from when the enrolled service is effective.
End Date	Displays the date till when the enrolled service is effective.

Searching for a Product Enrollment

Prerequisite

To search for a product enrollment, you should have:

- Enrollment Details defined in the application.
- Account ID and Person ID defined in the application.
- Product and Status defined in the application.
- Enrollment defined in the application.

Procedure

To search for a product enrollment:

1. From the **Main** menu, select **Pricing Management** and then click **Product Enrollment**.
   A sub-menu appears.
2. Click the **Search** option from the **Product Enrollment** sub-menu.
   The **Product Enrollment** screen appears.
3. Enter the search criteria in the Search Enrollment on page 2280 zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of enrolled products that meet the search criteria appear in the **Search Results** section.

   Note: If you have specified any other search criterion other than the product enrollment ID, the system generates a message saying that the product enrollment ID is invalid.

Enrolling an Account for One or More Products and Services

Prerequisites

To enroll an account for one or more products and services, you should have:

- Account Information defined in the application.
- Enrollment Channel defined in the application.
- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To enroll an account for one or more products and services:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product Enrollment**.
   The sub-menu appears.
3. Click the **Add** option from the **Product Enrollment** sub-menu.

   The **Product Enrollment** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the account for product enrollment. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Used to specify the enrollment ID once the product is defined for an enrollment. **Note:** Enrollment ID is displayed when the product is added for enrollment.	Yes
Account ID	Used to specify the account ID. **Note:** You can search for an account by clicking the **Search** (🔍) icon corresponding to the **Account Information** field.	Yes
Status	Displays the status of the product. **Note:** The product enrollment will always have the status as **Pending**.	No
Start Date	Used to specify the date from when the product enrollment is effective.	Yes
End Date	Used to specify the date till when the product enrollment is effective.	Yes
Enrollment Channel	Used to specify the source for product enrollment.	Yes
Comments	Used to specify the comments for product enrollment.	No

   - **Product and Services** - Used to define products and services for a product. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product for enrollment. **Note:** You can search for a product by clicking the **Search** (🔍) icon corresponding to the **Product** field.	No
Start Date	Used to specify the date from when the product is effective.	No
End Date	Used to specify the date till when the product is effective.	No
Inclusion	Used to indicate whether the product is used for enrollment.	No
Standard Product	Displays the standard product which is included within the main product.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the standard product is effective.	No
End Date	Used to specify the date till when the standard product is effective.	No
Inclusion	Used to indicate whether the standard product is used for enrollment.	No
Services	Displays the service that is a part of the standard product.	No
Start Date	Used to specify the date from when the service is effective.	No
End Date	Used to specify the date till when the service is effective.	No
Inclusion	Used to indicate whether the service is used for enrollment. **Note:** The inclusion check-box is already checked, if the service has been marked as **Mandatory** in the **Product Version** zone.	No
Add on Services	Displays the add-on service which is a part of the packaged product.	No
Start Date	Used to specify the date from when the add-on service is effective.	No
End Date	Used to specify the date till when the add-on service is effective.	No
Inclusion	Used to indicate whether the add-on service is used for enrollment.	No

- **Product Priority** - Used to define the product priority for product enrollment.

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Displays the enrollment ID.	No
Packaged Products	Displays the packaged product which is added for enrollment.	No
Standard Products	Displays the standard product which is added for enrollment.	No
Product Enrolled Start Date	Displays the date from when the product's enrolled date is effective.	No
Product Enrolled End Date	Displays the date till when the product's enrolled date is effective.	No
Priority	Displays the priority of the product in terms of enrollment.	No

- **Characteristics** - Used to define the characteristics for a product enrollment.

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic will be effective.	No
Characteristics Type	Used to indicate the characteristic type for a characteristic.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristics Value	Used to indicate the characteristic value.	No

4. Enter the required details in the **Main** section.

> **Note:**
>
> The Start Date field is mandatory.

5. Enter the required details in the **Product and Services** section.

> **Note:**
>
> At least one product service must be added in the product version.

6. Enter the required details in the **Product Priority** section.

> **Note:**
>
> Ensure that priority for the product is specified.

7. Enter the required details in the **Characteristics** section.
8. Click **Save**.

> **Note:**
>
> You cannot enroll for a product where none of its product versions are effective within the enrollment date range.
>
> You cannot enroll for a product where the product start date is later than the enrollment start date.
>
> The enrollment start and end dates should be within the start and end dates of the product.
>
> At least one product must be selected while enrolling products for an account.
>
> At least one price item associated with the product service must be effective during enrollment.

The account is added for enrollment.

Product Enrollment - Main

The **Product Enrollment - Main** tab displays information about the product enrollment, services, and its priority. It contains the following zones:

- Product Enrollment on page 2291
- Enrolled Products on page 2292
- Enrolled Services on page 2293
- Enrolled Standard Products on page 2293
- Enrolled Add-on Services on page 2283
- Product Priority on page 2295

Product Enrollment

The **Product Enrollment** zone displays the details of the enrollment. It contains the following sections:

- **Main** - Displays the basic information about the enrollment. It contains the following fields:

Field Name	Field Description
Enrollment ID	Displays the enrollment ID.
Account Information	Displays information about the account. In addition, this column has a context menu (▾) which helps in navigating to other screens in the application.
Status	Displays the status of the enrollment.
Start Date	Displays the date from when product enrollment is effective.
End Date	Displays the date till when product enrollment is effective.
Enrollment Channel	Indicates the channel which is used for product enrollment.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Comments	Displays the comments that are added for product enrollment.

- **Record Actions** - This section contains the following fields:

Button Name	Button Description
Edit	Used to edit the details of the product enrollment.
	Note: The **Edit** button appears when the product enrollment status is **Enrolled**, **Cancelled**, and **Pending** status.
Duplicate	Used to create a new product enrollment using an existing enrollment.
	Note: The **Duplicate** button appears when the product enrollment status is **Enrolled**, **Cancelled**, **Pending**, and **Unenrolled**.
Delete	Used to delete a product enrollment.
	Note: The **Delete** button appears when the product enrollment status is **Canceled**.
Unenroll	Used to unenroll already conducted product enrollment.
	Note: The **Unenroll** button appears when the product enrollment status is **Enrolled**.
Submit	Used to submit the product for an enrollment.
	Note: The **Submit** button appears when the product enrollment status is **Pending**.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product enrollment is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective for product enrollment.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the characteristic value.

Enrolled Products

The **Enrolled Products** zone displays the products that have been enrolled. It contains the following columns:

Columns Name	Column Description
Product Type	Displays the type of the product.
Product	Displays the name of the product.

Copyright © 2024, Oracle and/or its affiliates.

Columns Name	Column Description
Version Description	Displays the description of the enrolled product version. **Note:** It has a link. On clicking the link, the **Product Version** screen appears where you can view the details of the respective product version.
Start Date	Displays the date from when the enrollment is effective.
End Date	Displays the date till when the enrollment is effective.

Note: By default, the **Enrolled Services** zone does not appear. It appears when the product type is **Standard** and you click the **Broadcast** (📡) icon corresponding to the product type column.

Status Reason	Displays the status reason of action performed in the product enrollment.

Viewing the Standard Products Included in an Enrolled Product

Procedure

To view the standard product included in an enrolled product:

1. Search for an enrolled product in the **Product** screen.
2. In the **Search Results** section, click the link in the **Enrollment ID** column whose details you want to view.

   The **Product Enrollment** screen appears.

   Note: To view the standard products that are included in an enrolled product, the product must be a **Packaged** product.
3. In the **Enrolled Products** zone, click the **Broadcast** (ᯤ) icon corresponding to the product type, *w*hose enrolled standard products you want to view.

   The **Enrolled Standard Products** zone appears.
4. View the list of the standard products that are enrolled in the **Enrolled Standard Products** screen.

   Note: The **Enrolled Standard Products** zone appears when the product is of **Business** type, displayed in the **Enrolled Products** zone.

Related Topics

Editing a Product Enrollment

Procedure

To edit a product enrollment:

1. Search for the product in the **Search Enrollment** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
2. Click the link in the **Enrollment ID** column, corresponding to the broadcast icon.

Copyright © 2024, Oracle and/or its affiliates.

The **Product Enrollment** screen appears.

3. Click the **Edit** button in the **Product Enrollment** zone.
   The **Product Enrollment** screen appears.
4. Modify the details of the product version in the main section, if required.
5. Define, edit, or remove the products and/or services for a product enrollment, if required.
6. Modify the product priority for a product enrollment, if required.

> **Note:**
>
> The priority for the enrolled product must be greater than zero (0).

7. Define, edit, or remove the characteristics for a product enrollment, if required.
8. Click **Save**.

> **Note:**
>
> You cannot edit the details of the product enrollment when it is in the enrolled status.

The changes made to the product enrollment are saved.

You cannot enroll for more than one product with the same product type and priority combination.

Copying a Product Enrollment

Instead of creating a product enrollment from scratch, you can create a new product enrollment using an existing enrollment. This is possible through copying a product enrollment. On copying a product enrollment, the details including the algorithms and characteristics are copied to the new product. You can then edit the details, if required.

Prerequisites

To copy a product enrollment, you should have:

- Account ID, Account Start and End Date, and Enrollment Channel defined in the application.
- Product and Characteristic Type defined in the application.

Procedure

To copy a product enrollment:

1. Search for a product in the **Product Enrollment** screen.
2. In the **Search Results** section, click the link in the **Description** column, corresponding to the product column, *w*hose details you want to copy.
   The **Product Enrollment** screen appears.
3. Click the **Duplicate** button in the **Record Actions** section.
   The **Product Enrollment** screen appears.
4. Enter the required product details in the **Main** section, if required.
5. Define, edit, or remove the products and services, if required.
6. Define, edit, or remove the product priority, if required.
7. Define, edit, or remove the characteristics, if required.
8. Click **Save**.
   The new product enrollment is defined.

Enrolling a Product Enrollment

Prerequisites

To enroll a product for an enrollment, you should have:

- Status of the product defined as Pending or Validated.
- Account Information defined in the application.
- Enrollment Channel defined in the application.
- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

To enroll a product for an enrollment:

1. Search for the product in the **Search Enrollment** zone.
2. Click the link in the **Enrollment ID** column, corresponding to the broadcast icon.
   The **Product Enrollment** screen appears.
3. Click the **Submit** button in the **Product Enrollment** zone.
   The product status gets changed to **Enroll**.

> **Note:** Once the submit button is clicked the ORMB application validates the account information, enrollment channel, product, and characteristic type field to ensure that they contain appropriate data. If any information is missing then an error message is displayed.

Unenrolling a Product Enrollment

Prerequisites

To unenroll a product for an enrollment, you should have:

- Status of the product defined as enrolled.
- Account Information defined in the application.
- Enrollment Channel defined in the application.

Copyright © 2024, Oracle and/or its affiliates.

- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

To unenroll a product for an enrollment:

1. Search for the product in the **Search Enrollment** zone.
2. Click the link in the **Enrollment ID** column, corresponding to the broadcast icon.
   The **Product Enrollment** screen appears.
3. Click the **Unenroll** button in the **Product Enrollment** zone.

   The Unenroll Product Enrollment Pre Transition window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Displays the enrollment ID of the enrolled product.	Not applicable
Status	Displays the status of the enrolled product.	Not applicable
Start Date	Displays the start date of the enrolled product.	Not applicable
End Date	Displays the end date of the enrolled product.	No

Note: If the user manually performs the unenrollment process, the application will simply change the product enrollment status from **Enroll** to **Unenroll**. If in-case the **End Date** is not mentioned during the enrollment, the application keeps the **End Date** in an **Open** state. If the user does not performs the unenrollment process, then a batch named **C1-EXTRN** gets executed. This batch performs a check to ensure that the product end date and the business date make a match. If they both match, then all of the enrollments with relation to the product are unenrolled.

4. Click **Save**.
   The product enrollment status is changed to **Unenroll**.

Chapter 36

Subscription Billing

Topics:

- Prerequisites
- Subscription Type (Used for Searching)
- Subscription Type (Used for Viewing)
- Account Subscription (Used for Searching)
- Account Subscription (Used for Viewing)

Oracle Revenue Management and Billing (ORMB) facilitates the service based billing wherein the customers pay a subscription price to have access to a product or service. For example, the customer may subscribe for newspaper service, cable service, internet service, video service (like Netflix, Amazon Prime Video), cloud service, and so on. The consumers may have to pay one or more charges with respect to the subscribed service. These charges can be one-time or recurring charges in nature.

In **ORMB**, you can carry out service based billing for an account by creating subscription on the account. While creating an account subscription, you need to specify the subscription type using which you want to create the account subscription. It is the subscription type which helps the system to determine:

- The business object using which the account subscription must be created in the system.
- The division and contract type for which the subscription type is created.
- The default duration for which the account subscription or service charge must be renewed when the automatic renewal option is selected.
- Whether the service charges should be prorated when the account subscription is suspended for a particular duration, or when one or more services or the entire account subscription is terminated.
- Whether already billed charges should be adjusted on the next bill in case of suspension and termination.
- The adjustment type using which the adjustments must be created when the account subscription is edited, suspended, or resumed.
- The adjustment type using which the adjustments must be created when one or more services or the entire account subscription is terminated.
- The services which the consumer can subscribe when the account subscription is created using the subscription type.
- The charges which can be charged when the consumer subscribes for a particular service.
- The distribution code for each charge which indicates the GL account to which the corresponding financial transaction must be posted.
- Whether the monthly recurring revenue is exempted for the service.
- The algorithm which must be executed when the account subscription is terminated, suspended, or resumed.

While creating an account subscription, the system allows you to use only those subscription types for the account which are defined for the division to which the account belongs and which are associated with the contract type whose contract exists on the account. You can specify whether the account subscription must be automatically renewed for the default duration (which is specified in the subscription type). In case of subscription renewal, you can specify whether there is any cost escalation at the time of renewal. You can add services and its charges in the account subscription depending on the subscription type. The

system allows you to indicate whether the charge is a one-time charge or a recurring charge. You can specify the frequency at which the recurring charges should be created for the subscribed services. In case of service charge renewal, you can specify whether there is any cost escalation at the time of renewal.

Once an account subscription is created, the status of the account subscription is set to **Draft**. You can then edit, delete, submit, or cancel the account subscription, if required. You can optionally configure approval workflow for the account subscription. On submitting an account subscription when the approval workflow is off, the status of the account subscription is changed to Active. However, on submitting an account subscription when the approval workflow is on, an approval transaction is created for the account subscription. Only when the approver approves the approval transaction, the status of the account subscription is changed to Active. Note that the status of the account subscription is changed to Active when the subscription start date is past dated. However, if the subscription start date is a future date, the status of the account subscription is changed to **Validated** irrespective of whether the approval workflow is on or off.

A new batch named **Account Subscription Periodic Monitor (C1-ASUBM)** batch is introduced in this release. It monitors or checks whether there are any account subscriptions in the **Validated** status. If there is an account subscription in the **Validated** status and its subscription start date is earlier than or equal to batch business date, the status of the account subscription is changed to **Active**. You can then edit the details, if required. However, while editing, you can only change end dates and add the services and charges in the account subscription. You cannot remove a service or charge from the account subscription once it is in the Active status. For more information on batch, see **Oracle Revenue Management and Billing Batch Guide**.

The system allows you to suspend the account subscription for a particular duration. While suspending the account subscription, you need to specify the suspension reason and suspension condition indicating whether fees should be charged or not for the suspended period. Based on the suspension condition and proration options defined, the system will accordingly update or cancel billable charges.

The system also allows you to terminate a particular service or all services at the same time. While terminating a service, you can specify the termination charges, if any. If the termination charges are specified, the adjustments will be created and posted accordingly on the next bill.

Prerequisites

To setup the subscription billing feature, you need to do the following:

- Define the required subscription billing types in the system.
- Define the required characteristic types where the characteristic entity is set to **Subscription Type**.
- Define the required characteristic types where the characteristic entity is set to **Account Subscription**.
- Define values for the option types in the feature configuration.
- Define values for the lookup field.
- Define predefined values for the characteristic type.
- Adjustment Type will be validated based on the adjustment type profile attached on the Contract Type.
- At least one subscription charge is mandatory, for each subscription service.
- An account with a division same as the division of the selected subscription type.
- An account with a unique contract ID on the contract type.
- At least one subscription service is mandatory, for each subscription type.

Subscription Type (Used for Searching)

The **Subscription Type** screen allows you to search for the subscription type details using various search criteria. It contains the following zone:

- Search Subscription Type on page 2303

Through this screen, you can navigate to the following screen:

- Subscription Type (Used for Viewing) on page 2309

Search Subscription Type

The **Search Subscription Type** zone allows you to search for a subscription type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to search by a subscription type.	Yes
Description	Used to search a subscription type with a particular description.	No
Division	Used to search a subscription type which is associated with a particular division.	No
Contract Type	Used to specify the contract type to which the contract to which the subscription type belongs.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears.	
Status	Used to search the subscription type with a particular status. The valid values are: • Active • Inactive	No

Note: You must specify at least one search criterion while searching for a subscription type.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Subscription Type Information	Displays the basic information about the subscription type. **Note:** It has a link. On clicking the link, the **Subscription Type** screen appears where you can view the details of the respective subscription type.
Status	Indicates the status of the subscription type. The valid values are: • Active • Inactive
Division	Displays the division to which the subscription type belongs.
Contract Type	Displays the contract type that you want to associate with the subscription type.

Searching for a Subscription Type

Prerequisites

To search for a subscription type, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To search for a subscription type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **S** and then click **Subscription Type**.

Copyright © 2024, Oracle and/or its affiliates.

The **Subscription Type** screen appears.

3. Enter the search criteria in the **Search Subscription Type** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of subscription types that meet the search criteria appears in the **Search Results** section.

> **Note:** You must specify at least one search criterion while searching for a subscription type.

Defining a Subscription Type

Prerequisites

To define a subscription type, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To define a subscription type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2024, Oracle and/or its affiliates.

2. From the **Admin** menu, select **S** and then click **Subscription Type**.
   The **Subscription Type** screen appears.
3. Enter the search criteria in the **Search Subscription Type** zone.
4. Click **Add** button in the page title area of the **Subscription Type** screen.
   The **Subscription Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the subscription services.
   - **Subscription Services** - Used to specify the details of the subscription services.
   - **Algorithms** - Used to specify the algorithms used in the subscription type.
   - **Characteristics** - Used to define the characteristics for the subscription type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to specify the subscription type.	Yes
Description	Used to specify the description for the subscription type.	Yes
Account Subscription Business Object	Used to indicate the business object using which you want to create a person when the corresponding account subscription is processed.	Yes
Detailed Description	Used to specify additional information about the subscription type.	No
Division	Used to indicate the division to which you want to associate the subscription type.	Yes
Contract Type	Used to indicate the **Contract Type** to which you want to associate the subscription type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears.	Yes
Renewal Duration Type	Used to indicate the renewal cycle. The valid values are: • Day • Month • Week • Year	Yes
Renewal Duration	Used to specify the duration of the renewal of the subscription.	Yes
Status	Used to indicate the status of the subscription type. The valid values are: • Active • Inactive	Yes
Prorate Charges	Indicates whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.	No
Adjust Billed Charges	Indicates the billed charges adjusted. **Note:** This field appears when you check the **Prorate Charges** check box.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created. **Note:** This field appears when you check the **Prorate Charges** and **Adjust Billed Charges** check box.	No
Termination Adjustment Type	Used to indicate the adjustment type used for termination of the subscription service. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	No

The **Subscription Services** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Monthly Recurring Revenue (MRR) Exempted	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Distribution Code	Used to indicate distribution code linked to the service that will be used on the billable charge. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Distribution Code Search** window appears.	No

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event.	Yes
Sequence	Used to specify the sequence number.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	Yes

5. Enter the required details in the **Main** section.
6. Add algorithms for the subscription type, if required.
7. Define characteristics for the subscription type, if required.
8. Click **Save**.
   The subscription type is defined.

How to define a characteristic for a subscription type	Defining a Characteristic for a Subscription Type on page 2308

Defining a Characteristic for a Subscription Type

Prerequisites

To define a characteristic for a subscription type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Subscription Type**)

Procedure

To define a characteristic for a subscription type:

1. Ensure that the **Characteristics** section is expanded when you are defining, *e*diting, or copying a subscription type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a subscription type.
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a subscription type.
Characteristic Value	Used to specify the value of characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a subscription type.

2. Enter the required details in the **Characteristics** section.

   Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the subscription type, click the **Add** (+) icon and *t*hen repeat step 2.

   Note: However, if you want to remove a characteristic from the subscription type, click the **Delete** (🗑) icon corresponding to the characteristic.

Subscription Type (Used for Viewing)

The **Subscription Type** screen allows you to define, edit, copy, and delete subscription type. It contains the following zone:

- Subscription Type on page 2309

Subscription Type

The **Subscription Type** zone displays the details of the subscription type. It contains the following sections:

- **Main** - Displays basic information about the subscription type. It contains the following fields:

Field Name	Field Description
Subscription Type	Displays the subscription type.
Description	Displays the description for the subscription type.
Account Subscription Business Object	Indicates the business object using which you want to create a person when the corresponding account subscription is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the subscription type.
Division	Indicates the division to which you want to associate the subscription type. **Note:** It has a link. On clicking the link, the **Division** screen appears where you can view the details of the respective division.
Contract Type	Indicates the **Contract Type** to which you want to associate the subscription type.
Renewal Duration Type	Indicates the renewal cycle. The valid values are: • Day • Month • Week • Year
Renewal Duration	Displays the duration of the renewal of the subscription.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Status	Indicates the status of the subscription type. The valid values are: • Active • Inactive
	Note: You cannot change the status of a **Subscription Type** to **Inactive** if there are account subscriptions that are created using the **Subscription Type** and are currently in the **Draft** or **Approval In Progress** status.
Prorate Charges	Indicates whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.
Adjust Billed Charges	Indicates the billed charges adjusted.
	Note: This field appears when you check the **Prorate Charges** check box.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
	Note: This field appears when you check the **Prorate Charges** and **Adjust Billed Charges** check box. It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective business object.
Termination Adjustment Type	Indicates the adjustment type used for termination of the subscription service.

- The **Subscription Services** section contains the following columns:

Column Name	Column Description
Subscription Service	Displays the type of the subscription service.
Monthly Recurring Revenue (MRR) Exempted	Indicates whether the service type is exempted from MRR calculation.
Subscription Charge	Indicates the charges related to the subscription service.
Distribution Code	Indicates the distribution code linked to the service that will be used on the billable charge.

- **Characteristics** - Lists the characteristics defined for the subscription type. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the subscription is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the subscription type.
Delete	Used to delete the subscription type.

Copyright © 2024, Oracle and/or its affiliates.

Button Name	Button Description
	Note: You can delete an subscription type when you have not created an subscription type using the subscription type.
Duplicate	Used to create a new subscription type using an existing subscription type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the subscription type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- The **Algorithms** section contains the following columns:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Displays the system event.	Yes
Sequence	Displays the sequence number.	Yes
Algorithm	Displays an algorithm associated to the system event that you have selected.	Yes
	Note: It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective subscription type.

Defining an Account Subscription

Prerequisites

To define an account subscription, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To define an account subscription:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Account Subscription**.
   A sub-menu appears.
3. Click the **Add** option from the **Account Subscription** sub-menu.
   The **Account Subscription** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to search a particular subscription type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the window appears.	Yes
Account ID	Used to search a particular subscription type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	Yes

Tip: Alternatively, you can access the **Account Subscription** screen by clicking the **Add** button in the page title area of the **Account Subscription** screen.

4. Click **OK**.
   The **Account Subscription** screen appears. It contains the following sections:

Copyright © 2024, Oracle and/or its affiliates.

- **Main** - Used to specify basic details about the subscription services.
- **Subscription Services and Charges** - Used to specify the details of the subscription services.
- **Characteristics** - Used to define the characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type Information	Displays the basic information about the subscription type.	Not applicable
Account Information	Displays the basic information about the account linked to the subscription type.	Not applicable
Subscription Start Date	Used to specify the date from when the subscription is effective. **Note:** The subscription start date cannot be later than the subscription end date.	Yes
Subscription End Date	Used to specify the date till when the subscription is effective. **Note:** The subscription end date cannot be earlier than the subscription start date.	Yes
Automatic Renewal	Used to indicate whether you want to renew the subscription automatically.	No
Cost Escalation (in Percentage)	**Note:** This field appears when **Automatic Renewal** check box is selected.	No
Comments	Used to specify additional information about the account subscription.	No

The **Subscription Services and Charges** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Service Start Date	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Service End Date	Used to indicate distribution code linked to the service that will be used on the billable charge.	No
Subscription Charge	Used to specify the type of the subscription charges.	Yes
Charge Amount	Used to specify the charges related to the subscription charge.	Yes
Charge Start Date	Used to specify the date from when the charges are effective.	Yes
Charge End Date	Used to specify the date till when the charges are effective.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
One-Time Charge	Used to indicate whether you want to pay the subscription charges one-time.	No
Recurring Charge Frequency	Used to specify whether you want to pay the subscription charges on regular recurring basis. **Note:** This field gets enabled when you select the check box corresponding to the **One-Time Charge** field.	No
Automatic Renewal	Used to indicate whether you want to renew the subscription services and charges automatically.	No
Cost Escalation (in Percentage)	Used to indicate the percentage in which the subscription charge amount must increase when the automatic renewal of the subscription is triggered. **Note:** This field appears when **Automatic Renewal** check box is selected.	No
Description on Bill	Used to specify the description on the bill.	No

5. Enter the required details in the **Main** section.
6. Enter the required details in the **Subscription Services and Charges** section.
7. Define characteristics for an account subscription, if required.
8. Click **Save**.
   The account subscription is defined.

How to define a characteristic for a subscription type	Defining a Characteristic for an Account Subscription on page 2321

Defining a Characteristic for an Account Subscription

Prerequisites

To define a characteristic for an account subscription, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Account Subscription**)

Procedure

To define a characteristic for an account subscription:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an account subscription.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a characteristic for an account subscription.
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for an account subscription.
Characteristic Value	Used to specify the value of characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for an account subscription.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for an account subscription, click the **Add** (+) icon and *t*hen repeat step 2.

Note: However, if you want to remove a characteristic from an account subscription, click the **Delete** (🗑) icon corresponding to the characteristic.

Termination Charge Type	Used to indicate the type of account subscription termination charges.	Yes
Charge Amount	Used to indicate the charges for the termination of the account subscription.	Yes
Termination Adjustment Type	Used to specify termination adjustment type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** screen appears.	Yes

4. Click **Save**.
   An account subscription is terminated.

Note: You can terminate only those account subscriptions whose status is in **Active** or **Suspended** status.

Resuming an Account Subscription

Procedure

To resume an account subscription:

Copyright © 2024, Oracle and/or its affiliates.

1. Search for an account subscription in the **Account Subscription** screen.
2. In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding *to* an account subscription whose details you want to edit.
   The **Account Subscription** screen appears.
3. Click the **Resume** button in the **Account Subscription** zone.
   The **Confirm Resume** window appears.
4. Click **OK**.
   An account subscription is resumed.

> **Note:** You can resume only those account subscriptions whose status is in **Suspended** status.

Viewing the Log of an Account Subscription

Procedure

To view the log of an account subscription:

1. Search for the account subscription in the **Account Subscription** screen.
2. In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding *to* the account subscription whose log you want to view.
   The **Account Subscription** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. View the complete trail of actions performed on the account subscription in the **Account Subscription Log** zone.

Chapter 37

Mass Pricing Update

Topics:

- Prerequisites
- Mass Pricing Update Request (Without Approval) Status Transition
- Mass Pricing Update Request (With Approval) Status Transition
- Algorithms Used in C1-MassPricingReq
- Request Type
- Mass Pricing Update Request (Used for Searching)
- Mass Pricing Update Request (Used for Viewing)
- Mass Pricing Update Request

Oracle Revenue Management and Billing provides the ability for mass price item pricing update. In other words, the system enables you to update multiple active price item pricing assigned to a person, account, price list, or product at the same time. You can search for the price assignments which you want to update using the following fields:

- Price Item
- Price Item Parameters
- Account ID
- Person ID
- Division
- Update Date
- Pricing Entity Type

On specifying the search criteria, the system fetches the number of entities on which the price item pricing is defined and the number of price assignments on a particular type of pricing entity. Once you select one or more price item pricing, you can create the mass pricing update request by clicking the **Mass Pricing Update** button. While creating a mass pricing update request, you need to specify the mass pricing update request type using which you want to create the mass pricing update request. It is the mass pricing update request type which helps the system to determine:

- The business object using which the mass pricing update request should be created in the system.
- Whether the approval is required for the mass pricing update request.
- Whether the mass pricing update must be performed in the deferred mode when the number of price assignments in the mass pricing update request exceeds the defer processing count.

Once the mass pricing update request type is selected, you need to specify the mass pricing update criteria, mass pricing update type, and rate value. Once a mass pricing update request is created in the **Draft** status, you can submit the mass pricing update request. On submitting a mass pricing update request, the status of the mass pricing update request is changed to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count. If the status is changed to **Deferred Processing**, you need to click the **Submit Batch** button. On clicking the **Submit Batch** button, the system automatically creates a batch job using the **C1-GENRQ** batch control. While creating the batch job, it uses the values defined for the **Thread Count** and **Thread Pool Name** option types in the **C1-MASPRI** feature configuration.

Once the batch job is executed, the status of the mass pricing update request is changed to **Updating Price Assignments**. If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment

is created. However, if a price assignment is not yet referred in the system, the existing price assignment is updated. Once the price assignment is newly created or updated, the status of the record in the mass pricing update request is changed to **Processed**. However, if a price assignment is referred for a future date, the status of the record in the mass pricing update request is changed to **Error**. In addition, if any error occurs while updating an existing price assignment or creating a new price assignment, the status of the record in the mass pricing update request is changed to Error. Finally, the status of the mass pricing update request is changed to **Processed**.

You can optionally configure the approval workflow for the mass pricing update request. If the **Approval Required** field is set to **Yes** in the mass pricing update request type, the status of the mass pricing update request is changed to **Approval In Progress** when you submit the mass pricing update request. Once the approver approves the mass pricing update request, the status of the mass pricing update request is changed to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count. However, if the approver rejects a mass pricing update request, the status of the mass pricing update request is changed to **Rejected**.

For more information on how to setup the mass pricing update process, see Prerequisites on page 2341.

Copyright © 2024, Oracle and/or its affiliates.

Prerequisites

To setup the mass pricing update feature, you need to do the following:

- Define the required mass pricing update request types in the system.
- Set the **Mass Pricing Update (C1-MASPRI)** feature configuration
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions
- Define one To Do type for submitter and another To Do type for approver when the approval is required for a mass pricing update request
- Assign a To Do role to the required To Do types in the application

Rejected	Enter	C1-MPRIRJTD	C1-MPRIRJTD	Refer to C1-MPRIRJTD on page 2346

C1-REQST-INF

This algorithm generates the request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Request Type Description
2. Request Status
3. Request ID

C1-MPRIVALDN

This algorithm is invoked when you create a mass pricing update request. It checks the following:

- Whether the mass pricing update criteria is specified.
- Whether the mass pricing update type is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
- Whether the rate value is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
- Whether the currency is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price** and the mass pricing update type is set to **Absolute**.
- If any of the above conditions are not met, the system does not allow you to create the mass pricing update request.

Copyright © 2024, Oracle and/or its affiliates.

C1-MPRISUBMT

This algorithm is invoked when you submit a mass pricing update request. If the approval workflow is configured on the respective mass pricing update request type, it changes the status of the mass pricing update request to **Approval in Progress**. However, if the approval workflow is not configured on the respective mass pricing update request type, it changes the status of the mass pricing update request to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count.

C1-MPRIAPTD

This algorithm is invoked when the status of the mass pricing update request is changed to **Approval in Progress**. It creates a To Do using the approval To Do type which is specified in the respective mass pricing update request type. Once a To Do is created, it is assigned to all users with an approval To Do role which is specified in the respective mass pricing update request type.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-MPRIDEFER

This algorithm is invoked when the status of the mass pricing update request is changed to **Running C1-GENRQ Batch**. It creates a batch job using the **C1-GENRQ** batch control. While creating the batch job, it uses the values defined in the **Thread Count** and **Thread Pool Name** option types of the **Mass Pricing Update (C1-MASPRI)** feature configuration. It also creates a log for the mass pricing update request which indicates the batch job ID.

Copyright © 2024, Oracle and/or its affiliates.

C1-MPRIAPRD

This algorithm is invoked when you approve a mass pricing update request. If the number of price assignments in the mass pricing update request exceeds the defer processing count, the status of the mass pricing update request is changed to **Deferred Processing**. However, if the number of price assignments in the mass pricing update request does not exceed the defer processing count, the status of the mass pricing update request is changed to **Updating Price Assignments**.

C1-MPRIUPDPA

This algorithm is invoked when the status of the mass pricing update request is changed to **Updating Price Assignments**. If a price assignment is referred in past, this algorithm ends the existing price assignment and creates a new price assignment. However, if a price assignment is not yet referred in the system, this algorithm updates the existing price assignment. Once the price assignment is newly created or updated, the status of the record in the mass pricing update request is changed to **Processed**. However, if a price assignment is referred for a future date, the status of the record in the mass pricing update request is changed to **Error**. In addition, if any error occurs while updating an existing price assignment or creating a new price assignment, the status of the record in the mass pricing update request is changed to **Error**. Note that if a price assignment is included multiple times in a mass pricing update request, the system will update the price assignment only once.

C1-MPRIRJTD

This algorithm is invoked when the status of the mass pricing update request is changed to **Rejected**. It creates a To Do using the submitter To Do type which is specified in the respective mass pricing update request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the respective mass pricing update request type.

Request Type

Oracle Revenue Management and Billing allows you to define a mass pricing update request type using which you can create mass pricing update requests. It is the mass pricing request type which helps the system to determine:

- The business object using which the mass pricing update request should be created in the system.
- Whether the approval is required for the mass pricing update request.
- Whether the mass pricing update must be performed in the deferred mode when the number of price assignments in the mass pricing update request exceeds the defer processing count.

The **Request Type** screen allows you to define, edit, copy, and delete a mass pricing update request type. It contains the following zones:

- Request Type List on page 2346
- Request Type on page 2347

Request Type List

The **Request Type List** zone lists the mass pricing update request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Request Type	Displays the mass pricing update request type.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Description	Displays the description of the mass pricing update request type.
Edit	On clicking the **Edit** (✎) icon, the **Mass Pricing Request Type** screen appears where you can edit the details of the mass pricing update request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Mass Pricing Request Type** screen appears where you can define a new mass pricing update request type using an existing mass pricing update request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the mass pricing update request type.
	Note: You can delete the mass pricing update request type when you have not created a mass pricing update request using the mass pricing update request type.

On clicking the **Broadcast** (📡) icon corresponding to a mass pricing update request type, the **Request Type** zone appears with the details of the respective mass pricing update request type.

You can define a new mass pricing update request type by clicking the **Add**link in the upper right corner of the **Request Type List** zone.

Request Type

The **Request Type** zone displays the details of the mass pricing update request type. It contains the following sections:

- **Main** - Displays the basic information about the mass pricing update request type. It contains the following fields:

Field Name	Field Description
Request Type	Displays the mass pricing update request type.
Request Business Object	Indicates the business object using which you want to create a mass pricing update request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description for the mass pricing update request type.
Detailed Description	Displays the additional information about the mass pricing update request type.
Status	Indicates the status of the mass pricing update request type. The valid values are: • Active • Inactive

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Defer Processing Count	Indicates whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count. **Note:** Deferred mode means in the background when the **Generic Request Periodic Monitor (C1-GENRQ)** batch is invoked. You can configure the **Generic Request Periodic Monitor (C1-GENRQ)** batch such that it is executed at regular intervals. For more information about the **Generic Request Periodic Monitor (C1-GENRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).
Approval Required	Indicates whether approval is required before updating the price item pricing through a mass pricing update request.
Approval Type	Indicates the type of approval. The valid value is: • Request Level Approval
Approval To Do Type	Indicates that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of respective To Do type.
Approval To Do Role	Indicates that the users with the specified To Do role will receive the mass pricing update request when it is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of respective To Do role.
Submitter To Do Type	Indicates that To Do entry of the specified To Do type must be created when an approver rejects a mass pricing update request. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of respective To Do type.
Submitter To Do Role	Indicates that the users with the specified To Do role will receive the mass pricing update request when it is rejected by an approver.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of respective To Do role.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the mass pricing update request type.
Delete	Used to delete the mass pricing update request type. **Note:** You can delete a mass pricing update request type when you have not created a mass pricing update request using the mass pricing update request type.
Duplicate	Used to create a new mass pricing update request type using an existing mass pricing update request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the mass pricing update request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Request Type** zone does not appear in the **Request Type** screen. It appears when you click the **Broadcast** ( ) icon corresponding to a mass pricing update request type in the **Request Type List** zone.

You can define a new mass pricing update request type by clicking the **Add**link in the upper right corner of this zone.

Defining a Mass Pricing Update Request Type

Prerequisites

To define a mass pricing update request type, you should have:

- Mass pricing update request type business objects defined in the application.

Copyright © 2024, Oracle and/or its affiliates.

- Mass pricing update request business objects defined in the application.
- One To Do type defined for submitter and another To Do type defined for approver when the approval is required for a mass pricing update request
- A To Do role assigned to the required To Do types in the application

Procedure

To define a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Request Type Business Object	Used to indicate the business object using which you want to create the mass pricing update request type. **Note:** You can create a mass pricing update request type using the **Mass Pricing Request Type (C1-MassPricingReqType)** business object.	Yes

Note: Alternatively, you can access this screen by clicking the **Add** link in the upper right corner of the **Request Type List** zone.

4. Select the **Mass Pricing Request Type** business object from the respective field.
5. Click **OK**.

   The **Mass Pricing Update Request Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: • Mass Pricing Request	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: • Active	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Inactive	
Defer Processing Count	Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count. **Note:** Deferred mode means in the background when the **Generic Request Periodic Monitor (C1-GENRQ)** batch is invoked. You can configure the **Generic Request Periodic Monitor (C1-GENRQ)** batch such that it is executed at regular intervals. For more information about the **Generic Request Periodic Monitor (C1-GENRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).	No
Approval Required	Used to indicate whether approval is required before updating the price item pricing through a mass pricing update request.	No
Approval Type	Used to indicate the type of approval. The valid value is: • Request Level Approval **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval. **Note:** The **Search** icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. The **Approval To Do Type** field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that the users with the specified To Do role must receive the mass pricing update request for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified approval To Do type.	**Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the mass pricing update request. **Note:** The **Search** icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. The **Submitter To Do Type** field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the mass pricing update request. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

6. Enter the required details in the **Main** section.
7. Click **Save**.
   The mass pricing update request type is defined.

Editing a Mass Pricing Update Request Type

Prerequisites

To edit a mass pricing update request type, you should have:

- Mass pricing update request business objects defined in the application.

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To edit a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Request Type** sub-menu.
   The **Request Type** screen appears.
4. In the **Request Type List** zone, click the **Edit** ( ) icon in the **Edit** column corresponding *t*o the mass pricing update request type whose details you want to edit.

   The **Mass Pricing Update Request Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: • Mass Pricing Request	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: • Active • Inactive	Yes
Defer Processing Count	Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Deferred mode means in the background when the **Generic Request Periodic Monitor (C1-GENRQ)** batch is invoked. You can configure the **Generic Request Periodic Monitor (C1-GENRQ)** batch such that it is executed at regular intervals. For more information about the **Generic Request Periodic Monitor (C1-GENRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).	
Approval Required	Indicates whether approval is required before updating the price item pricing through a mass pricing update request.	No
Approval Type	Indicates the type of approval. The valid value is: • Request Level Approval **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Type	Indicates that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval. **Note:** The **Search** icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. The **Approval To Do Type** field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Indicates that the users with the specified To Do role must receive the mass pricing update request for approval. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Indicates that To Do entry of the specified To Do type must be created when the approver rejects the mass pricing update request. **Note:** The **Search** icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. The **Submitter To Do Type** field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Indicates that the users with the specified To Do role must receive a To Do when the approver rejects the mass pricing update request. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Tip: Alternatively, you can edit the details of a mass pricing update request type by clicking the **Edit** button in the **Request Type** zone.

5. Modify the required details in the **Main** section.
6. Click **Save**.
   The changes made to the mass pricing update request type are saved.

Copying a Mass Pricing Update Request Type

Instead of creating a mass pricing update request type from scratch, you can create a new mass pricing update request type using an existing mass pricing update request type. This is possible through copying a mass pricing update request type. On copying a mass pricing update request type, the details including the characteristics are copied to the new mass pricing update request type. You can then edit the details, if required.

Prerequisites

To copy a mass pricing update request type, you should have:

- Mass pricing update request type (whose copy you want to create) defined in the application.
- Mass pricing update request business objects defined in the application.

Copyright © 2024, Oracle and/or its affiliates.

Procedure

To copy a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Request Type** sub-menu.
   The **Request Type** screen appears.
4. In the **Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to *t*he request type whose copy you want to create.

   The **Mass Pricing Update Request Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: • Mass Pricing Request	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: • Active • Inactive	Yes
Defer Processing Count	Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Deferred mode means in the background when the **Generic Request Periodic Monitor (C1-GENRQ)** batch is invoked. You can configure the **Generic Request Periodic Monitor (C1-GENRQ)** batch such that it is executed at regular intervals. For more information about the **Generic Request Periodic Monitor (C1-GENRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).	
Approval Required	Used to indicate whether approval is required before updating the price item pricing through a mass pricing update request.	No
Approval Type	Used to indicate the type of approval. The valid value is: • Request Level Approval **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. The **Approval To Do Type** field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that the users with the specified To Do role must receive the mass pricing update request for approval. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the mass pricing update request. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **To Do Type Search** window appears. The **Submitter To Do Type** field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the mass pricing update request. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Tip: Alternatively, you can copy a mass pricing update request type by clicking the **Duplicate** button in the **Request Type** zone.

5. Enter the required details in the **Main** section.
6. Click **Save**.
   The new mass pricing update request type is defined.

Deleting a Mass Pricing Update Request Type

Procedure

To delete a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Request Type** sub-menu.
   The **Request Type** screen appears.

Copyright © 2024, Oracle and/or its affiliates.

4. In the **Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the mass pricing update request type that you want to delete.
   A message appears confirming whether you want to delete the mass pricing update request type.

   Note: You can delete a mass pricing update request type when you have not created a mass pricing update request using the mass pricing update request type.

   Tip: Alternatively, you can delete a mass pricing update request type by clicking the **Delete** button in the **Request Type** zone.
5. Click **OK**.
   The mass pricing update request type is deleted.

Search Mass Pricing Update Request

The **Search Mass Pricing Update Request** zone allows you to search for a mass pricing update request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Created From	Used to search mass pricing update requests which are created from a particular date onwards.	No
Status	Used to search mass pricing update requests with a particular status. The valid values are: • Approval in Progress • Deferred Processing • Draft • Processed • Rejected • Running C1-GENRQ Batch	No
Created Until	Used to search mass pricing update requests which are created till a particular date.	No
User ID	Used to search mass pricing update requests which are created by a particular user.	No
Request Type	Used to search mass pricing update requests which are created using a particular mass pricing update request type.	No
Request ID	Used to search a particular mass pricing update request.	No

Note: You must specify at least one search criterion while searching a mass pricing update request.

- **Search Result** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Result** section contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Creation Date Time	Displays the date and time when the mass pricing update request is created.
Request Information	Displays information about the mass pricing update request. **Note:** It has a link. On clicking the link, the **Mass Pricing Update Request** screen appears where you can view the details of the respective mass pricing update request.
Status	Indicates the status of the mass pricing update request. The valid values are: • Approval in Progress • Deferred Processing • Draft • Processed • Rejected • Running C1-GENRQ Batch
Created By	Indicates the user who has created the mass pricing update request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Mass Pricing Update Request

Prerequisites

To search for a mass pricing update request, you should have:

- Mass pricing update request types defined in the application

Procedure

To search for a mass pricing update request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Mass Pricing Update Request** sub-menu.
   The **Mass Pricing Update Request** screen appears.
4. Enter the search criteria in the **Search Mass Pricing Update Request** zone.

Copyright © 2024, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of mass pricing update requests that meet the search criteria appears in the **Search Results** section.

Creating a Mass Pricing Update Request

Prerequisites

To define a mass pricing update request, you should have:

- Mass pricing update request types defined in the application
- A currency conversion algorithm attached to the **Currency Conversion For Bill Segments** algorithm spot of the respective division

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To define a mass pricing update request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Mass Pricing Update Request** sub-menu.
   The **Mass Pricing Update Request** screen appears.
4. Search for the required price assignments which you want to update in the **Search Price Assignments** zone.
5. Do either of the following:

If you want to...	Then...
Update all price assignments of a particular pricing entity type	**a.** Select the check box corresponding to the respective pricing entity type. **b.** Click **Mass Pricing Update**.
Update all price assignments of one or more pricing entity type	**a.** Select the check box corresponding to the respective pricing entity types. **b.** Click **Mass Pricing Update**.
Update all price assignments of all pricing entity types	**a.** Select the check box corresponding to all pricing entity types. **b.** Click **Mass Pricing Update**.
Update the price item pricing assigned to a particular person	**a.** Select the check box corresponding to the **Customer Agreed** pricing entity type. The **Customer Agreed Price Assignments** zone appears. **b.** Select the check box corresponding to the required price item pricing that you want to update in the **Customer Agreed Price Assignments** zone. **c.** Click **Mass Pricing Update**.
Update the price item pricing assigned to a particular account	**a.** Select the check box corresponding to the **Account Agreed** pricing entity type. The **Account Agreed Price Assignments** zone appears. **b.** Select the check box corresponding to the required price item pricing that you want to update in the **Account Agreed Price Assignments** zone. **c.** Click **Mass Pricing Update**.
Update the price item pricing assigned to a particular price list	**a.** Select the check box corresponding to the **Price List** pricing entity type. The **Price list Price Assignments** zone appears. **b.** Select the check box corresponding to the required price item pricing that you want to update in the **Price list Price Assignments** zone. **c.** Click **Mass Pricing Update**.
Update the price item pricing assigned to a particular price list associated to a particular product	**a.** Select the check box corresponding to the **Product** pricing entity type.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	The **Product Price list Price Assignments** zone appears. **b.** Select the check box corresponding to the required price item pricing that you want to update in the **Product Price list Price Assignments** zone. **c.** Click **Mass Pricing Update**.

The **Select Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Mass Pricing Update Request Type	Used to indicate the mass pricing update request type using which you want to create a mass pricing update request.	Yes

6. Select the required mass pricing update request type from the respective field.
7. Click **OK**.

The **Mass Pricing Update Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the mass pricing update request.	Not applicable
Mass Pricing Update Criteria	Used to indicate whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: • Decrease Price • End Date Price • Increase Price	Yes
Mass Pricing Update Type	Used to indicate whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: • Absolute • Percentage **Note:** This field appears when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.	Yes (Conditional) **Note:** This field is required when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
Rate Value	Used to specify the rate by which you want to increase or decrease the price. **Note:** This field appears when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**. You cannot specify a negative value or zero in the **Rate Value** field.	Yes (Conditional) **Note:** This field is required when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
Currency	Used to indicate the currency in which the rate is specified.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the mass pricing update type is set to **Absolute**. If the pricing currency is different from the currency which is specified in the mass pricing update request, the system does the currency conversion using the algorithm which is attached to the **Currency Conversion For Bill Segments** algorithm spot of the respective division.	**Note:** This field is required when the mass pricing update type is set to **Absolute**.
Update Date	Displays the date when you want to update the price assignments. The system fetches the price assignments which are effective on the update date. If you want to forcibly end a price item pricing through the mass pricing update request, the end date in the price item pricing is set to the update date. However, if you want to increase or decrease the rate in a price item pricing through the mass pricing update request, the system behaves in the following manner: • If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. • If a price assignment is not yet referred in the system, the existing price assignment is updated. **Note:** You cannot update a price assignment through a mass pricing update request when the start or end date of the price assignment is equal to the update date.	Not applicable

8. Enter the required details in the **Mass Pricing Update Request** screen.
9. Click **Save**.
   The mass pricing update request is defined in the **Draft** status. And, the status of all price assignment records in the mass pricing update request is set to **Pending**.

Mass Pricing Update Request (Used for Viewing)

The **Mass Pricing Update Request** screen allows you to:

- View the details of a mass pricing update request
- Edit the details of a mass pricing update request
- Delete a mass pricing update request
- Submit a mass pricing update request for processing

Copyright © 2024, Oracle and/or its affiliates.

- Approve or reject a mass pricing update request
- Submit a batch job for a mass pricing update request
- View the log of a mass pricing update request
- Add a log entry for a mass pricing update request

It consists of the following tabs:

- Mass Pricing Update Request - Main on page 2366
- Mass Pricing Update Request - Log on page 2369

Mass Pricing Update Request - Main

The **Main** tab displays information about the mass pricing update request. It contains the following zones:

- Mass Pricing Update Request on page 2366
- Price Assignments on page 2368

Mass Pricing Update Request

The **Mass Pricing Update Request** zone displays the details of the mass pricing update request. It contains the following sections:

- **Main** - Displays basic information about the mass pricing update request. It contains the following fields:

Field Name	Field Description
Request Information	Displays information about the mass pricing update request.
Mass Pricing Update Request Type	Indicates the mass pricing update request type using which the mass pricing update request is created. **Note:** It has a link. On clicking the link, the **Request Type** screen appears where you can view the details of the respective mass pricing update request type.
Status	Indicates the status of the mass pricing update request. The valid values are: • Approval in Progress • Deferred Processing • Draft • Processed • Rejected • Running C1-GENRQ Batch
Mass Pricing Update Criteria	Indicates whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: • Decrease Price • End Date Price • Increase Price
Mass Pricing Update Type	Indicates whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: • Absolute • Percentage

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
Rate Value	Displays the rate by which you want to increase or decrease the price.
	Note: This field appears when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
Currency	Indicates the currency in which the rate is specified.
	Note: This field appears when the mass pricing update type is set to **Absolute**.
Update Date	Displays the date when you want to update the price assignments.

- **Statistics** - Displays summarized information about the records which are included in the mass pricing update request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of price assignments which are included in the mass pricing update request.
Processed Records	Displays the total number of price assignments which are successfully updated through the mass pricing update request.
Error Records	Displays the total number of price assignments which could not be updated through the mass pricing update request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the mass pricing update request.
	Note: The **Edit** button appears when the mass pricing update request is in the **Draft** status.
Delete	Used to delete the mass pricing update request.
	Note: The **Delete** button appears when the mass pricing update request is in the **Draft** status.
Submit	Used to submit the mass pricing update request for updating the price assignments.
	Note: The **Submit** button appears when the mass pricing update request is in the **Draft** status.
Submit Batch	Used to generate a batch job using the **Generic Request Periodic Monitor (C1-GENRQ)** batch control.
	Note: The **Submit Batch** button appears when the mass pricing update request is in the **Deferred Processing** status.
Approve	Used to approve the mass pricing update request.

Button Name	Button Description
	Note: The **Approve** button appears when: • The mass pricing update request is in the **Approval in Progress**status. • A user with the approval To Do role is reviewing the mass pricing update request.
Reject	Used to reject the mass pricing update request.
	Note: The **Reject** button appears when: • The mass pricing update request is in the **Approval in Progress**status. • A user with the approval To Do role is reviewing the mass pricing update request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the mass pricing update request is created. In addition, a context menu appears corresponding to the **Business Object**field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the mass pricing update request status is updated.
Creation Date Time	Displays the date and time when the mass pricing update request is created.

Price Assignments

The **Price Assignments** zone lists the price assignments which you want to update through the mass pricing update request. It contains the following columns:

Column Name	Column Description
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the **Price Item Pricing** screen appears where you can view the details of the respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).
Entity ID	Indicates the entity to which the price item pricing is assigned.
Pricing Entity Type	Indicates the type of entity on which the price assignment is done. The valid values are: • Account Agreed • Customer Agreed • Price List • Product

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Mass Pricing Update Status	Indicates the status of the price assignment record which is included in the mass pricing update request. The valid values are: • Pending • Processed • Error

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Mass Pricing Update Request - Log

The **Log** tab contains the following zone:

- Mass Pricing Update Request Log on page 2369

Mass Pricing Update Request Log

The **Mass Pricing Update Request Log** zone lists the complete trail of actions performed on the mass pricing update request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the mass pricing update request.
Details	Displays the details of the action performed on the mass pricing update request.
User	Indicates the user who has performed the action on the mass pricing update request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the mass pricing update request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the mass pricing update request is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the mass pricing update request by clicking the **Add Log Entry** link in the upper right corner of the **Mass Pricing Update Request Log** zone.

Creating a Mass Pricing Update Request

Prerequisites

To define a mass pricing update request, you should have:

- Mass pricing update request types defined in the application
- A currency conversion algorithm attached to the **Currency Conversion For Bill Segments** algorithm spot of the respective division

Procedure

To define a mass pricing update request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Mass Pricing Update Request** sub-menu.
   The **Mass Pricing Update Request** screen appears.
4. Search for the required price assignments which you want to update in the **Search Price Assignments** zone.
5. Do either of the following:

If you want to...	Then...
Update all price assignments of a particular pricing entity type	**a.** Select the check box corresponding to the respective pricing entity type. **b.** Click **Mass Pricing Update**.
Update all price assignments of one or more pricing entity type	**a.** Select the check box corresponding to the respective pricing entity types. **b.** Click **Mass Pricing Update**.
Update all price assignments of all pricing entity types	**a.** Select the check box corresponding to all pricing entity types. **b.** Click **Mass Pricing Update**.
Update the price item pricing assigned to a particular person	**a.** Select the check box corresponding to the **Customer Agreed** pricing entity type. The **Customer Agreed Price Assignments** zone appears. **b.** Select the check box corresponding to the required price item pricing that you want to update in the **Customer Agreed Price Assignments** zone. **c.** Click **Mass Pricing Update**.
Update the price item pricing assigned to a particular account	**a.** Select the check box corresponding to the **Account Agreed** pricing entity type. The **Account Agreed Price Assignments** zone appears. **b.** Select the check box corresponding to the required price item pricing that you want to update in the **Account Agreed Price Assignments** zone. **c.** Click **Mass Pricing Update**.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
Update the price item pricing assigned to a particular price list	**a.** Select the check box corresponding to the **Price List** pricing entity type. The **Price list Price Assignments** zone appears. **b.** Select the check box corresponding to the required price item pricing that you want to update in the **Price list Price Assignments** zone. **c.** Click **Mass Pricing Update**.
Update the price item pricing assigned to a particular price list associated to a particular product	**a.** Select the check box corresponding to the **Product** pricing entity type. The **Product Price list Price Assignments** zone appears. **b.** Select the check box corresponding to the required price item pricing that you want to update in the **Product Price list Price Assignments** zone. **c.** Click **Mass Pricing Update**.

The **Select Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Mass Pricing Update Request Type	Used to indicate the mass pricing update request type using which you want to create a mass pricing update request.	Yes

6. Select the required mass pricing update request type from the respective field.
7. Click **OK**.

The **Mass Pricing Update Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the mass pricing update request.	Not applicable
Mass Pricing Update Criteria	Used to indicate whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: • Decrease Price • End Date Price • Increase Price	Yes
Mass Pricing Update Type	Used to indicate whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: • Absolute • Percentage **Note:** This field appears when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.	Yes (Conditional) **Note:** This field is required when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Value	Used to specify the rate by which you want to increase or decrease the price. **Note:** This field appears when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**. You cannot specify a negative value or zero in the **Rate Value** field.	Yes (Conditional) **Note:** This field is required when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
Currency	Used to indicate the currency in which the rate is specified. **Note:** This field appears when the mass pricing update type is set to **Absolute**. If the pricing currency is different from the currency which is specified in the mass pricing update request, the system does the currency conversion using the algorithm which is attached to the **Currency Conversion For Bill Segments** algorithm spot of the respective division.	Yes (Conditional) **Note:** This field is required when the mass pricing update type is set to **Absolute**.
Update Date	Displays the date when you want to update the price assignments. The system fetches the price assignments which are effective on the update date. If you want to forcibly end a price item pricing through the mass pricing update request, the end date in the price item pricing is set to the update date. However, if you want to increase or decrease the rate in a price item pricing through the mass pricing update request, the system behaves in the following manner: • If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. • If a price assignment is not yet referred in the system, the existing price assignment is updated. **Note:** You cannot update a price assignment through a mass pricing update request when the start or end date of the price assignment is equal to the update date.	Not applicable

8. Enter the required details in the **Mass Pricing Update Request** screen.
9. Click **Save**.
   The mass pricing update request is defined in the **Draft** status. And, the status of all price assignment records in the mass pricing update request is set to **Pending**.

Editing a Mass Pricing Update Request

Procedure

To edit a mass pricing update request:

1. Search for the mass pricing update request in the **Mass Pricing Update Request** screen.
2. In the **Search Results** section, click the link in the **Request Information** column corresponding to *t*he mass pricing update request whose details you want to edit.
   The **Mass Pricing Update Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Mass Pricing Update Request** zone.

   The **Mass Pricing Update Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the mass pricing update request.	Not applicable
Mass Pricing Update Criteria	Used to indicate whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: • Decrease Price • End Date Price • Increase Price	Yes
Mass Pricing Update Type	Used to indicate whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: • Absolute • Percentage **Note:** The **Mass Pricing Update Type** field appears when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.	Yes (Conditional) **Note:** The **Mass Pricing Update Type** field is required when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
Rate Value	Used to specify the rate by which you want to increase or decrease the price. **Note:** The **Rate Value** field appears when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**. You cannot specify a negative value or zero in the **Rate Value** field.	Yes (Conditional) **Note:** The **Rate Value** field is required when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.

Deleting a Mass Pricing Update Request

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To delete a mass pricing update request:

1. Search for the mass pricing update request in the **Mass Pricing Update Request** screen.
2. In the **Search Results** section, click the link in the **Request Information** column corresponding to *t*he mass pricing update request that you want to delete.
   The **Mass Pricing Update Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Mass Pricing Update Request** zone.
   A message appears confirming whether you want to delete the mass pricing update request.

   Note: The **Delete** button in the **Mass Pricing Update Request** zone appears when the mass pricing update request is in the **Draft** status.

   Note: The **Delete** button appears when the mass pricing update request is in the **Draft** status.
5. Click **OK**.
   The mass pricing update request is deleted.

Submitting a Mass Pricing Update Request

Procedure

To submit a mass pricing update request:

1. Search for the mass pricing update request in the **Mass Pricing Update Request** screen.
2. In the **Search Results** section, click the link in the **Request Information** column corresponding to *t*he mass pricing update request that you want to submit.
   The **Mass Pricing Update Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Mass Pricing Update Request** zone.

   The system behaves in the following manner:

If...	Then...
The **Approval Required** option is selected in the mass pricing update request type using which the mass pricing update request is created	The status of the mass pricing update request is changed to **Approval in Progress**. A To Do is created using the approval To Do type which is specified in the mass pricing update request type. Once a To Do is created, it is assigned to all users with an approval To Do role which is specified in the mass pricing update request type.
The **Approval Required** option is not selected in the mass pricing update request type and the number of price assignments in the mass pricing update request exceeds the defer processing count	The status of the mass pricing update request is changed to **Deferred Processing**.

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
The **Approval Required** option is not selected in the mass pricing update request type and the number of price assignments in the mass pricing update request does not exceed the defer processing count	The status of the mass pricing update request is changed to **Updating Price Assignments**. If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. However, if a price assignment is not yet referred in the system, the existing price assignment is updated. Once the price assignment is newly created or updated, the status of the record in the mass pricing update request is changed to **Processed**. However, if a price assignment is referred for a future date, the status of the record in the mass pricing update request is changed to **Error**. In addition, if any error occurs while updating an existing price assignment or creating a new price assignment, the status of the record in the mass pricing update request is changed to **Error**. Finally, the status of the mass pricing update request is changed to **Processed**.
	Note: If a price assignment is included multiple times in a mass pricing update request, the system will update the price assignment only once.

Note: The **Submit** button appears when the mass pricing update request is in the **Draft** status.

Generating a Batch Job for a Mass Pricing Update Request

Procedure

To generate a batch job for a mass pricing update request:

1. Search for the mass pricing update request in the **Mass Pricing Update Request** screen.
2. In the **Search Results** section, click the link in the **Request Information** column corresponding to *t*he mass pricing update request for which you want to submit a batch job.
   The **Mass Pricing Update Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit Batch** button in the **Mass Pricing Update Request** zone.

   A batch job is created using the **C1-GENRQ** batch control. While creating the batch job, it uses the values defined in the **Thread Count** and **Thread Pool Name** option types of the **Mass Pricing Update (C1-MASPRI)** feature configuration. In addition, a log is created for the mass pricing update request which indicates the batch job ID. Finally, the status of the mass pricing update request is changed to **Running C1-GENRQ Batch**.

Note: The **Submit Batch** button appears when the mass pricing update request is in the **Deferred Processing** status.

Mass Pricing Update Request

The **Mass Pricing Update Request** screen allows you to search for price assignments using various search criteria. The search results (i.e. price assignments) are grouped based on the pricing entity type, such as **Account Agreed**, **Customer Agreed**, **Price List**, and **Product**. You can then create a mass pricing update request for the following:

- All price assignments of a particular pricing entity type
- All price assignments of one or more pricing entity type
- All price assignments of all pricing entity types
- A price item pricing assigned to a particular person, account, or price list
- A price item pricing assigned to a price list which is associated to a product
- One or more price assignments of a person, account, or price list
- One or more price assignments of a price list which is associated to a product

It contains the following zones:

- Search Price Assignments on page 2380
- Account Agreed Price Assignments on page 2382
- Customer Agreed Price Assignments on page 2383
- Price List Price Assignments on page 2384
- Product Price List Price Assignments on page 2385

Search Price Assignments

The **Search Price Assignments** zone allows you to search for active price assignments on different pricing entity type. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search pricing which is defined for a particular price item. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears.	Yes
Account ID	Used to search pricing which is assigned to a particular account. **Note:** The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search pricing which is assigned to a particular person. **Note:** The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears.	No
Division	Used to search pricing which belongs to a particular division. **Note:** You can only view those divisions to which you have access in the **Division** list.	Yes
Update Date	Used to search pricing which is effective on a particular date. **Note:** By default, this field is set to the current date. The update date cannot be earlier than the system date.	Yes
Pricing Entity Type	Used to search pricing which is defined on a particular type of entity. The valid values are: • Account Agreed • Customer Agreed • Price List • Product **Note:** This field appears when you click the **Advanced Search** link available in the right side of the **Search Price Assignments** zone.	No

In addition, it contains the **Price Item Parameters** section which has the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search pricing which is defined using a particular parameter. **Note:** The **Search** (🔍) icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, the **Parameter Search** window appears.	No
Parameter Value	Used to search pricing which is defined using a particular parameter value.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If the value type of the parameter is **Adhoc** or **Predefined**, the **Search** (🔍) icon appears corresponding to the **Parameter Value** field. On clicking the **Search** icon, the **Parameter Value Search** window appears.	**Note:** This field is required when you are searching for price assignments which are created using a particular parameter.

Note: If you want to add more than one parameter while searching for price assignments, click the **Add** (+) icon and then specify the parameter and parameter value. However, if you want to remove a parameter and parameter value combination from the search criteria, click the **Delete** (🗑) icon corresponding to the parameter and parameter value combination.

- **Search Result** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Result** section contains the following columns:

Column Name	Column Description
Pricing Entity Type	Indicates the type of entity on which the price item pricing is defined. The valid values are: • Account Agreed • Customer Agreed • Price List • Product
Pricing Entity Count	Indicates the number of entities on which the price item pricing is defined.
Price Assignment Count	Indicates the number of price assignments on a particular type of pricing entity.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

On clicking the **Broadcast** (📡) icon corresponding to a pricing entity type, the **Account Agreed Price Assignments**, **Customer Agreed Price Assignments**, **Price List Price Assignments**, or **Product Price List Price Assignments** zone appears depending on the pricing entity type.

A check box appears corresponding to each pricing entity type. On selecting the check box, you can create a mass pricing update request for all price assignments which are done on the respective pricing entity type. You can also create a mass pricing update request for all price assignments which are done on one or more pricing entity types at the same time. In addition, you can select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are done on all pricing entity types.

Account Agreed Price Assignments

The **Account Agreed Price Assignments** zone lists the active pricing of a price item which is assigned to an account. It contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Account Information	Indicates the account to which the price item pricing is assigned. In addition, the **Account Information** column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Account Identifier Type	Indicates the primary identifier type of the account.
Account Identifier	Indicates the account to which the price item pricing is assigned.
Pricing Information	Displays information about the price item pricing. **Note:** It has a link. On clicking the link, the **Price Item Pricing** screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined. **Note:** The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined at the account level.

Customer Agreed Price Assignments

The **Customer Agreed Price Assignments** zone lists the active pricing of a price item which is assigned to a person. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person to whom the price item pricing is assigned. In addition, the **Person Information** column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Person Identifier Type	Indicates the primary identifier type of a person.
Person Identifier	Indicates the person to whom the price item pricing is assigned.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the **Price Item Pricing** screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined at the person level.

Price List Price Assignments

The **Price List Price Assignments** zone lists the active pricing of a price item which is assigned to a price list. It contains the following columns:

Column Name	Column Description
Price List Information	Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Price List** screen appears where you can view the details of the respective price list.
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the **Price Item Pricing** screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Copyright © 2024, Oracle and/or its affiliates.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined in the price lists.

Product Price List Price Assignments

The **Product Price List Price Assignments** zone lists the active pricing of a price item which is added in the price lists associated with the products. It contains the following columns:

Column Name	Column Description
Product	Displays information about the product.
Product Version	Displays information about the effective product version.
Price List Information	Indicates the price list associated with the product to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Price List** screen appears where you can view the details of respective price list.
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the **Price Item Pricing** screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in the **Pricing Parameters** field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined in the price lists associated with the products.

Searching for Price Assignments on a Pricing Entity

Prerequisites

To search for price assignments on a pricing entity, you should have:

- Price items, accounts, persons, and divisions defined in the application
- Price item associated with the required division
- Access to the required division

Procedure

To search for price assignments on a pricing entity:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Mass Pricing Update Request** sub-menu.
   The **Mass Pricing Update Request** screen appears.
4. Enter the search criteria in the **Search Price Assignments** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.

   The number of price assignments on the following types of pricing entity are listed in the **Search Results** section:

   - Account Agreed
   - Customer Agreed
   - Price List
   - Product

Procedure

To view the price assignments defined at the person level:

1. Search for price assignments in the **Mass Pricing Update Request** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the **Customer Agreed** *p*ricing entity type whose details you want to view.
   The **Customer Agreed Price Assignments** zone appears.
3. View the price item pricing assigned to the persons in the **Customer Agreed Price Assignments** zone.

Chapter 38

Price Item, Parameter, and SQI Upload

Topics:

- Uploading a Price Item File in the XML Format
- Uploading a Price Item File in the CSV Format
- C1-PRCITM-PR
- C1-PRICEUPL
- XML File Format for Uploading Price Items
- Sample XML Format for Uploading Price Items
- CSV File Format for Uploading Price Items
- Sample CSV Format for Uploading Price Items
- Uploading a Parameter File in the XML Format
- Uploading a Parameter File in the CSV Format
- XML File Format for Uploading Parameters
- Sample XML Format for Uploading Parameters
- CSV File Format for Uploading Parameters
- Sample CSV Format for Uploading Parameters
- Uploading an SQI File in the XML Format
- Uploading an SQI File in the CSV Format
- XML File Format for Uploading Service Quantity Identifiers (SQIs)
- Sample XML Format for Uploading Service Quantity Identifiers (SQIs)
- CSV File Format for Uploading Service Quantity Identifiers (SQIs)

There might be situations when the customer wants to move the price item, parameter, and service quantity identifier information from the legacy system to Oracle Revenue Management and Billing (ORMB). In such situations, you can use the **Price Item, Parameter, and SQI Upload** feature in ORMB to create new price items or edit the existing price items using the **File Upload Interface** utility. You can also use the **Price Item, Parameter, and SQI Upload** feature to create new parameters and SQIs using the **File Upload Interface** utility. However, at present, you cannot edit the existing parameters and SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters and SQIs from the respective user interface.

Note: If you want to edit an existing price item in the system, you must provide all details of the price item and not just the details which you want to update. This is because the **File Upload Interface** utility supports the **Replace** operation and not the **Edit** operation while editing the price item.

You can upload the price item, parameter, and SQI files in the XML or CSV format using the **File Upload Interface** utility. You can specify the following in the XML and CSV files along with the basic details of the price item:

- Parameters and divisions which you want to associate with the price item
- Characteristics for the price item
- Division-specific characteristics for the price item
- Division-specific SQIs for the price item
- Details of the price item relationship

Note: While uploading the price item file, you need to ensure that the parameters and service quantity identifiers mentioned in the price item file are already present in the system.

You can upload the price items, parameters, and SQIs from the same file or from individual files based on the business requirements. For more information, refer to Uploading Price Items, Parameters, and SQIs from the Same File on page 2449.

At present, the system does not allow you to configure the approval process for the **Price Item, Parameter, and SQI Upload** feature. Therefore, you must ensure that the files are pre-approved before uploading them in the system.

- Sample CSV Format for Uploading SQIs
- Uploading Price Items, Parameters, and SQIs from the Same File

Uploading a Price Item File in the XML Format

To upload a price item file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading price items in the XML format
2. Upload the price item file
3. Create or update the price items in the system

Related Topics

For more information on...	See...
How to define a file request type for uploading price items in the XML format	Defining a File Request Type for Uploading Price Items in the XML Format on page 2391
How to upload a price item file	Uploading a Price Item File on page 2392
How to create or update the price items in the system	Creating or Updating Price Items on page 2392

Defining a File Request Type for Uploading Price Items in the XML Format

Procedure

To define a file request type for uploading price items in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Object** option from the **Service Type** list.
9. Enter the **C1_PRICEITEM_BO** business object or custom price item business object in the **Service Name** field.
10. Attach an algorithm created using the **C1-PRCITM-PR** algorithm type to the **Pre-Processing Algorithm** field corresponding to the price item business object.

> **Note:** For more information about the **C1-PRCITM-PR** algorithm, refer to C1-PRCITM-PR on page 2394.

11. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new price items or edit the existing price items using the file request type.
12. Click **Save**.
    The file request type is defined for uploading price items in the XML format.

Copyright © 2024, Oracle and/or its affiliates.

Uploading a Price Item File

You can upload a price item file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Price Items

You can create or edit the price items in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading a Price Item File in the CSV Format

To upload a price item file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading price items in the CSV format
2. Upload the price item file
3. Create or update the price items in the system

Related Topics

For more information on...	See...
How to define a file request type for uploading price items in the CSV format	Defining a File Request Type for Uploading Price Items in the CSV Format on page 2392
How to upload a price item file	Uploading a Price Item File on page 2393
How to create or update the price items in the system	Creating or Updating Price Items on page 2393

Defining a File Request Type for Uploading Price Items in the CSV Format

Procedure

To define a file request type for uploading price items in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
   The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.

Copyright © 2024, Oracle and/or its affiliates.

10. In the **Services** section, enter the required sequence number.
11. Select the **Business Object** option from the **Service Type** list.
12. Enter the **C1_PRICEITEM_BO** business object or custom price item business object in the **Service Name** field.
13. Attach an algorithm created using the **C1-PRCITM-PR** algorithm type to the **Pre-Processing Algorithm** *f*ield corresponding to the price item business object.

> **Note:** For more information about the **C1-PRCITM-PR** algorithm, refer to C1-PRCITM-PR on page 2394.

14. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new *p*rice items or edit the existing price items using the file request type.
15. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** *s*ection.
16. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** *s*ection.
17. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	PRICEITEMCODE	C1_PRICEITEM_BO/priceItemCode
2	DESCRIPTION	C1_PRICEITEM_BO/description

18. Click **Save**.
The file request type is defined for uploading price items in the CSV format.

Uploading a Price Item File

You can upload a price item file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Price Items

You can create or edit the price items in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Copyright © 2024, Oracle and/or its affiliates.

C1-PRCITM-PR

The **C1-PRCITM-PR** algorithm does the following:

- Defaults the following fields which are required to create the price item, but are not provided by the legacy system:

Field Name	Condition	Default Value	Default Value Description
Price Item Usage	-	PRBL	Pricing and Billing
Price Item Type	Price Item Usage = PRBL	FEES	Fees
Bundle	-	No	No
Bundle Type	Price Item Usage = PRIC, Price Item Type = FEES and Bundle = Yes	REGU	Regular
Price Item Status	-	ACTV	Active
Global Price List	-	No	No

- Generates the price item parameter group using the parameter codes and parameter values for each the price item relationship.
- Validates whether the division, SQI, price item characteristic types, division-specific price item characteristic type, and parameters are already defined in the system.

Related Topics

For more information on...	See...

C1-PRICEUPL

The **C1-PRICEUPL** algorithm does the following:

- Defaults the following fields which are required to create the parameter, but are not provided by the legacy system:

Field Name	Condition	Default Value
Parameter Usage	Source Entity = TRN	Price Item

XML File Format for Uploading Price Items

Before uploading a price item file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
C1_PRICEITEM_BO	Used to specify the details of the price item or price item bundle whose record you want to create or update in the system.	Yes
priceItemCode	Used to specify the price item or price item bundle.	Yes
description	Used to specify the description for the price item or price item bundle.	Yes
priceItemAvailFor	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: • **PRIC** - Enables you to use the price item or price item bundle for only pricing. • **PRBL** - Enables you to use the price item or price item bundle for pricing and billing.	Yes
priceItemType	Used to indicate the type of the price item or price item bundle. If the price item or price item bundle is used for only pricing, the valid values are: • FEES • RATE However, if the price item or price item bundle is used for the pricing and billing, the valid value is: • FEES	Yes
piStatusFlag	Used to indicate the status of the price item or price item bundle. The valid values are: • **ACTV** - Enables you to set the price item or price item bundle to **Active**. • **INAC** - Enables you to set the price item or price item bundle to **Inactive**.	Yes
bundleSw	Used to indicate whether you want to define a price item bundle. The valid values are: • Y • N	Yes
bundleTypeFlg	Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: • **PHAN** - Enables you to create a phantom price item bundle. • **REGU** - Enables you to create a regular price item bundle. • **RTIO** - Enables you to create a ratio price item bundle. However, if the price item bundle is available for only pricing and the price item type is set to **FEES**, the valid value is:	Yes (Conditional) **Note:** This data is required when you are creating a price item bundle.

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><th>Tag Name</th><th>Tag Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• REGU - Enables you to create a regular price item bundle.
Note: You cannot define a price item bundle when it is available for only pricing and when the price item type is set to RATE.</td><td></td></tr>

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required when you want to do either of the following: • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle
startDate	Used to specify the date from when you want to associate the price item or price item bundle with the parent price item or add the price item or price item bundle to the price item bundle.	Yes (Conditional) **Note:** This data is required when you want to do either of the following: • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle
endDate	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item or add the price item or price item bundle to the price item bundle.	No
priceItemReTypeFlg	Used to indicate how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are: • **BNDL** - Enables you to set the relationship type to **Bundle**. • **CG** - Enables you to set the relationship type to **Custom**. • **DENB** - Enables you to set the relationship type to **Denominator**. • **NUMB** - Enables you to set the relationship type to **Numerator**. • **OTHR** - Enables you to set the relationship type to **Other**. • **PROD** - Enables you to set the relationship type to **Price Item**. • **SVC** - Enables you to set the relationship type to **Service**. • **SVCG** - Enables you to set the relationship type to **Service Group**.	Yes (Conditional) **Note:** This data is required when you want to do either of the following: • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must use the **OTHR**, **CG**, **PROD**, **SVC**, or **SVCG** relationship type while associating a price item or price item bundle to the parent price item. However, you must use the **BNDL** relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the **DENB** and **NUMB** relationship type while adding a price item or price item bundle in the ratio price item bundles.	
priceItemParmGroup	Used to specify the parameter and its value based on which you want to determine pricing for the price item or price item bundle.	No
priceParmCode	Used to specify the parameter using which you want to determine the pricing for the price item or price item bundle. **Note:** You must specify a parameter which is associated with the price item or price item bundle and whose parameter usage is set to **Pricing**. You cannot specify any special character except underscore (_) in the parameter name.	Yes (Conditional) **Note:** This data is required when you want to determine the pricing for the price item or price item bundle using a parameter.
priceParmVal	Used to specify the parameter value using which you want to determine the pricing for the price item or price item bundle. **Note:** You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes (Conditional) **Note:** This data is required when you want to determine the pricing for the price item or price item bundle using a parameter.
priceItemRelCharacteristic	Used to specify a list of relationship-specific characteristics for the price item or price item bundle.	No

Note: When you want to edit the existing price items using the **File Upload Interface** utility, you need to provide all details of the price item and not just the details which you want to update. This is because the system supports replace operation and not the edit operation while editing the price items.

CSV File Format for Uploading Price Items

Before uploading a price item file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: • **PRIC** - Enables you to use the price item or price item bundle for only pricing. • **PRBL** - Enables you to use the price item or price item bundle for pricing and billing.	Yes
Price Item Type	Used to indicate the type of the price item or price item bundle. If the price item or price item bundle is used for only pricing, the valid values are: • FEES • RATE However, if the price item or price item bundle is used for the pricing and billing, the valid value is: • FEES	Yes
Status	Used to indicate the status of the price item or price item bundle. The valid values are: • **ACTV** - Enables you to set the price item or price item bundle to **Active**. • **INAC** - Enables you to set the price item or price item bundle to **Inactive**.	Yes
Bundle	Used to indicate whether you want to define a price item bundle. The valid values are: • Y • N	Yes
Bundle Type	Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: • **PHAN** - Enables you to create a phantom price item bundle. • **REGU** - Enables you to create a regular price item bundle. • **RTIO** - Enables you to create a ratio price item bundle. However, if the price item bundle is available for only pricing and the price item type is set to **FEES**, the valid value is: • **REGU** - Enables you to create a regular price item bundle.	Yes (Conditional) **Note:** This data is required when you are creating a price item bundle.

Copyright © 2024, Oracle and/or its affiliates.

	Note: You cannot define a price item bundle when it is available for only pricing and when the price item type is set to **RATE**.	
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: • Y • N	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle.	Yes (Conditional) **Note:** This data is required when the price item or price item bundle is used for pricing and billing.
Price Item Parameter Information		
Effective Start Date	Used to specify the date from when the parameter is effective for the price item or price item bundle.	Yes (Conditional) **Note:** This data is required when you want to associate a parameter with the price item or price item bundle.
Effective End Date	Used to specify the date till when the parameter is effective for the price item or price item bundle.	No
Parameter	Used to indicate the parameter that you want to associate with the price item or price item bundle. **Note:** You must specify a parameter which is already defined in the system. The system allows you to specify only those parameters where the parameter usage is set to **Price Item**.	Yes (Conditional) **Note:** This data is required when you want to associate a parameter with the price item or price item bundle.
Business Label	Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Yes (Conditional) **Note:** This data is required when you want to associate a parameter with the price item or price item bundle.
Parameter Usage	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: • **AGG**	Yes (Conditional) **Note:** This data is required when you want to associate a parameter with the price item or price item bundle.

Copyright © 2024, Oracle and/or its affiliates.

	- Indicates that you want to use the parameter for aggregating transactions. • **PRI** - Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing.	
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing. The valid values are: • Y • N	No
Priority	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Yes (Conditional) **Note:** This data is required when you want to associate an optional parameter with the price item or price item bundle.
Predefined Parameter Values for Price Item		
Predefined Parameter Value for Price Item	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional) **Note:** This data is required when you want to define valid predefined parameter values for the price item or price item bundle.
Division Information		
Division	Used to indicate the division to which you want to associate the price item or price item bundle.	Yes
Division-Specific SQIs for Price Item		
SQI	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.	Yes (Conditional) **Note:** This data is required when you want to define a division-specific SQI for the price item or price item bundle.
Division-Specific Characteristics for Price Item		
Characteristic Type	Used to specify the characteristic type. **Note:** You must specify a characteristic type which is already defined in the system. You must specify a characteristic type where the characteristic entity is set to **Division/Price Item Combination**.	Yes (Conditional) **Note:** This data is required when you are defining a division-specific characteristic for the price item or price item bundle.

Copyright © 2024, Oracle and/or its affiliates.

Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional) **Note:** This data is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when you are defining a division-specific characteristic for the price item or price item bundle.
Price Item Characteristics		
Characteristic Type	Used to specify the characteristic type. **Note:** You must specify a characteristic type which is already defined in the system. You must specify a characteristic type where the characteristic entity is set to **Price Item**.	Yes (Conditional) **Note:** This data is required when you are defining a characteristic for the price item or price item bundle.
Effective Date	Used to specify the date from when the characteristic is effective for the price item or price item bundle.	Yes (Conditional) **Note:** This data is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when you are defining a characteristic for the price item or price item bundle.
Price Item Relationship		
Price Item	Used to indicate the price item or price item bundle that you want to associate with the parent price item or add to the price item bundle.	Yes (Conditional) **Note:** This data is required when you want to do either of the following: • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle
Effective Start Date	Used to specify the date from when you want to associate the price item or price item bundle with the parent price item or add the price item or price item bundle to the price item bundle.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

		Note: This data is required when you want to do either of the following: • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle
Effective End Date	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item or add the price item or price item bundle to the price item bundle.	No
Relationship Type	Used to indicate how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are: • **BNDL** - Enables you to set the relationship type to **Bundle**. • **CG** - Enables you to set the relationship type to **Custom**. • **DENB** - Enables you to set the relationship type to **Denominator**. • **NUMB** - Enables you to set the relationship type to **Numerator**. • **OTHR** - Enables you to set the relationship type to **Other**. • **PROD** - Enables you to set the relationship type to **Price Item**. • **SVC** - Enables you to set the relationship type to **Service**. • **SVCG** - Enables you to set the relationship type to **Service Group**. **Note:** You must use the **OTHR**, **CG**, **PROD**, **SVC**, or **SVCG** relationship type while associating a price item or price item bundle to the parent price item. However, you must use the **BNDL** relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the **DENB** and **NUMB** relationship type while adding a price item or price item bundle in the ratio price item bundles.	Yes (Conditional) **Note:** This data is required when you want to do either of the following: • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle
Price Item Parameter=Parameter Value	Used to specify the parameter and its value using which you want to determine the pricing for the child price item or price item bundle.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

	Note: You must specify a parameter which is associated with the price item or price item bundle and whose parameter usage is set to **Pricing**. You cannot specify any special character except underscore (_) in the parameter name. You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value. You cannot specify more than 50 parameter and parameter value combinations while uploading the price item file in the CSV format.	**Note:** This data is required when you want to determine the pricing for the child price item or price item bundle using a parameter.
Relationship-Specific Characteristics for Price Item		
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional)
	Note: You must specify a characteristic type which is already defined in the system. You must specify a characteristic type where the characteristic entity is set to **Price Item Relationship**.	**Note:** This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Effective Date	Used to specify the date from when the relationship-specific characteristic is effective for the price item or price item bundle.	Yes (Conditional) **Note:** This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.

Sample CSV Format for Uploading Price Items

The following table lists the price items that you want to create using the CSV format:

		Service Group

Note: The system will create the above price items when the required contract types, parameters, predefined parameter values, divisions, SQIs, characteristic types, predefined characteristic values are defined in the application.

The following table lists the field transformation details that you need to specify in the file request type using which you want to upload price items in the system:

1	Price Item	C1_PRICEITEM_BO/priceItemCode
2	Description	C1_PRICEITEM_BO/description
3	Price Item Usage	C1_PRICEITEM_BO/priceItemAvailFor
4	Price Item Type	C1_PRICEITEM_BO/priceItemType

Uploading a Parameter File in the XML Format

To upload a parameter file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading parameters in the XML format
2. Upload the parameter file
3. Create the parameters in the system

How to create the parameters in the system	Creating Parameters on page 2425

Defining a File Request Type for Uploading Parameters in the XML Format

Procedure

To define a file request type for uploading parameters in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Object** option from the **Service Type** list.
9. Enter the **C1_PRICE_PARM** business object or custom parameter business object in the **Service Name** field.
10. Attach an algorithm created using the **C1-PRICEUPL** algorithm type to the **Pre-Processing Algorithm** field corresponding to the parameter business object.

    Note: For more information about the **C1-PRICEUPL** algorithm, refer to C1-PRICEUPL on page 2394.

11. Select the **Add** option from the **Operation** list.

    Note: At present, you cannot edit the existing parameters using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters from the user interface.

12. Click **Save**.
    The file request type is defined for uploading parameters in the XML format.

Uploading a Parameter File

You can upload a parameter file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating Parameters

You can create the parameters in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading a Parameter File in the CSV Format

To upload a parameter file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading parameters in the CSV format
2. Upload the parameter file
3. Create the parameters in the system

Related Topics

For more information on...	See...
How to define a file request type for uploading parameters in the CSV format	Defining a File Request Type for Uploading Parameters in the CSV Format on page 2426
How to upload a parameter file	Uploading a Parameter File on page 2427
How to create the parameters in the system	Creating Parameters on page 2427

Defining a File Request Type for Uploading Parameters in the CSV Format

Procedure

To define a file request type for uploading parameters in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
   The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
10. In the **Services** section, enter the required sequence number.
11. Select the **Business Object** option from the **Service Type** list.
12. Enter the **C1_PRICE_PARM** business object or custom parameter business object in the **Service Name** field.
13. Attach an algorithm created using the **C1-PRICEUPL** algorithm type to the **Pre-Processing Algorithm** field corresponding to the parameter business object.

    Note: For more information about the **C1-PRICEUPL** algorithm, refer to C1-PRICEUPL on page 2394.

14. Select the **Add** option from the **Operation** list.

    Note: At present, you cannot edit the existing parameters using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters from the user interface.

15. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.

Copyright © 2024, Oracle and/or its affiliates.

16. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
17. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	PRICEPARMCODE	C1_PRICE_PARM/priceParmCode
2	DESCRIPTION	C1_PRICE_PARM/description

18. Click **Save**.
The file request type is defined for uploading parameters in the CSV format.

Uploading a Parameter File

You can upload a parameter file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating Parameters

You can create the parameters in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Parameters

Before uploading a parameter file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1_PRICE_PARM	Used to specify the details of the parameter whose record you want to create or update in the system.	Yes
pricingEligibilitySw	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria. The valid values are: • Y	No

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><th>Tag Name</th><th>Tag Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• N

Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains TRN.</td><td></td></tr>
<tr><td>priceItemSw</td><td>Used to indicate whether the parameter can be associated with a price item or price item bundle. The valid values are:
• Y
• N

Note:
You must ensure that this tag contains N when a parameter is defined using the following source entity and source type combinations:
<table><tr><th>Source Entity</th><th>Source Type</th></tr><tr><td>ACCT</td><td>BAL</td></tr><tr><td>ACCT</td><td>CNT</td></tr><tr><td>PERS</td><td>BAL</td></tr><tr><td>PERS</td><td>CNT</td></tr><tr><td>ALGO</td><td>-</td></tr><tr><td>SQI</td><td>-</td></tr></table></td><td>No</td></tr>
<tr><td>priceListEligibilitySw</td><td>Used to indicate whether the parameter can be used while defining the price list eligibility criteria. The valid values are:
• Y
• N

Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains TRN.</td><td>No</td></tr>
<tr><td>productEligibilitySw</td><td>Used to indicate whether the parameter can be used while defining the product eligibility criteria. The valid values are:
• Y
• N

Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains ALGO, SQI, or TRN.</td><td>No</td></tr>
<tr><td>priceParmCode</td><td>Used to specify the parameter name.

Note: You cannot specify any special character except underscore (_) in the parameter name.</td><td>Yes</td></tr>
</table>

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
description	Used to specify the description for the parameter.	Yes
priceParmTypeFlag	Used to indicate the type of value that you want to store in the parameter. The valid values are: • **ADV** - Enables you to store an adhoc value in the parameter. • **DFV** - Enables you to store a predefined value in the parameter. • **FKV** - Enables you to store a reference value in the parameter.	Yes
sourceEntityFlg	Used to indicate the entity from where the parameter value should be derived. The valid values are: • **ACCT** - Enables you to derive the parameter value from the account. • **ALGO** - Enables you to derive the parameter value from an algorithm. • **PERS** - Enables you to derive the parameter value from the person. • **PRD** - Enables you to derive the parameter value from the product. • **SQI** - Enables you to derive the parameter value from a service quantity identifier. • **TRN** - Enables you to derive the parameter value from a transaction.	Yes
sourceTypeCode	Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><th>Tag Name</th><th>Tag Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>
Note:
You must ensure that this tag contains no value when the sourceEntityFlg tag contains TRN.
You must ensure that this tag contains the following information depending on the source entity and source type combination:
<table>
<tr><th>Source Entity</th><th>Source Type</th><th>Source Type Code</th></tr>
<tr><td>ACCT</td><td>CHAR</td><td>A characteristic type where the characteristic entity is set to Account.</td></tr>
<tr><td>ACCT</td><td>FLD</td><td>A field from the CI_ACCT table.</td></tr>
<tr><td>ACCT</td><td>BAL</td><td>A value from the BAL_FLG lookup field.</td></tr>
<tr><td>ACCT</td><td>CNT</td><td>A value from the CNT_FLG lookup field.</td></tr>
<tr><td>PERS</td><td>CHAR</td><td>A characteristic type where the characteristic entity is set to Person.</td></tr>
<tr><td>PERS</td><td>FLD</td><td>A field from the CI_PER table.</td></tr>
<tr><td>PERS</td><td>BAL</td><td>A value from the BAL_FLG lookup field.</td></tr>
<tr><td>PERS</td><td>CNT</td><td>A value from the CNT_FLG lookup field.</td></tr>
<tr><td>PRD</td><td>CHAR</td><td>A characteristic type where the characteristic entity is set to Product.</td></tr>
<tr><td>PRD</td><td>FLD</td><td>A field from the C1_PRODUCT table.</td></tr>
<tr><td>SQI</td><td>-</td><td>A service quantity identifier which is already defined in the system.</td></tr>
</table>
</td><td></td></tr>
<tr><td>sourceTypeFlg</td><td>Used to indicate the type of source from where the parameter value should be derived. The valid values are:
• CHAR - Enables you to derive the parameter value from a characteristic.</td><td>Yes</td></tr>
</table>

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **FLD** - Enables you to derive the parameter value from a field. • **BAL** - Enables you to derive the parameter value from a usage amount. • **CNT** - Enables you to derive the parameter value from a usage counter.	
	Note: You must ensure that this tag contains no value when the **sourceEntityFlg** tag contains **ALGO**, **SQI**, or **TRN**. You must ensure that this tag does not contain **BAL** or **CNT** when the **sourceEntityFlg** tag contains **PRD**.	
validationAlgoCd	Used to indicate the algorithm using which you want to validate the adhoc parameter value.	No
	Note: You must ensure that this tag contains value when the **priceParmTypeFlag** tag contains **ADV**.	
referredTable	Used to indicate the table whose primary key (column) you want to set as the reference entity.	Yes (Conditional)
		Note: This data is required when the **priceParmTypeFlag** tag contains **FKV**.
referredField	Used to indicate the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.	Yes (Conditional)
		Note: This data is required when the **priceParmTypeFlag** tag contains **FKV**.
priceParmValue	Used to specify a list of predefined values for the parameter.	Yes (Conditional)
		Note: This data is required when the **priceParmTypeFlag** tag contains **DFV**.
priceParmVal	Used to specify the parameter value.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	**Note:** This data is required when the **priceParmTypeFlag** tag contains **DFV**.
descr	Used to specify the description for the parameter value.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required when the **priceParmTypeFlag** tag contains **DFV**.

CSV File Format for Uploading Parameters

Before uploading a parameter file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following columns:

Parameter	Used to specify the parameter name. **Note:** You cannot specify any special character except underscore (_) in the parameter name.	Yes
Description	Used to specify the description for the parameter.	Yes
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: • **ADV** - Enables you to store an adhoc value in the parameter.	Yes

Copyright © 2024, Oracle and/or its affiliates.

	• **DFV** - Enables you to store a predefined value in the parameter. • **FKV** - Enables you to store a reference value in the parameter.	
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: • **ACCT** - Enables you to derive the parameter value from the account. • **ALGO** - Enables you to derive the parameter value from an algorithm. • **PERS** - Enables you to derive the parameter value from the person. • **PRD** - Enables you to derive the parameter value from the product. • **SQI** - Enables you to derive the parameter value from a service quantity identifier. • **TRN** - Enables you to derive the parameter value from a transaction.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: • **CHAR** - Enables you to derive the parameter value from a characteristic. • **FLD** - Enables you to derive the parameter value from a field. • **BAL** - Enables you to derive the parameter value from a usage amount. • **CNT** - Enables you to derive the parameter value from a usage counter. **Note:** You must not specify the source type when the source entity is set to **ALGO**, **SQI**, or **TRN**. You must not specify the source type as **BAL** or **CNT** when the source entity is set to **PRD**.	Yes
Source Type Code	Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><td></td><td></td><td></td></tr>
<tr><td></td><td>
Note:
You must not specify the source type code when the source entity is set to TRN.
You must specify the source type code depending on the following source entity and source type combination:
<table>
<tr><th>Source Entity</th><th>Source Type</th><th>Source Type Code</th></tr>
<tr><td>ACCT</td><td>CHAR</td><td>A characteristic type where the characteristic entity is set to Account.</td></tr>
<tr><td>ACCT</td><td>FLD</td><td>A field from the CI_ACCT table.</td></tr>
<tr><td>ACCT</td><td>BAL</td><td>A value from the BAL_FLG lookup field.</td></tr>
<tr><td>ACCT</td><td>CNT</td><td>A value from the CNT_FLG lookup field.</td></tr>
<tr><td>PERS</td><td>CHAR</td><td>A characteristic type where the characteristic entity is set to Person.</td></tr>
<tr><td>PERS</td><td>FLD</td><td>A field from the CI_PER table.</td></tr>
<tr><td>PERS</td><td>BAL</td><td>A value from the BAL_FLG lookup field.</td></tr>
<tr><td>PERS</td><td>CNT</td><td>A value from the CNT_FLG lookup field.</td></tr>
<tr><td>PRD</td><td>CHAR</td><td>A characteristic type where the characteristic entity is set to Product.</td></tr>
<tr><td>PRD</td><td>FLD</td><td>A field from the C1_PRODUCT table.</td></tr>
<tr><td>SQI</td><td>-</td><td>A service quantity identifier which is already defined in the system.</td></tr>
</table>
</td><td></td></tr>
<tr><td>Validation Algorithm</td><td>Used to indicate the algorithm using which you want to validate the adhoc parameter value.
Note: You must specify a validation algorithm when the value type is set to Adhoc.</td><td>No</td></tr>
<tr><td>Reference Entity</td><td>Used to indicate the table whose primary key (column) you want to set as the reference entity.</td><td>Yes (Conditional)
Note: This data is required when the value type is set to Reference.</td></tr>
</table>

Copyright © 2024, Oracle and/or its affiliates.

<table>
<tr><td></td><td></td><td></td></tr>
<tr><td>Field Name</td><td>Used to indicate the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</td><td>Yes (Conditional)

Note: This data is required when the value type is set to **Reference**.</td></tr>
<tr><td colspan="3">**Predefined Parameter Values**</td></tr>
<tr><td>Parameter Value</td><td>Used to specify the parameter value.

Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.</td><td>Yes (Conditional)

Note: This data is required when the value type is set to **Predefined**.</td></tr>
<tr><td>Description</td><td>Used to specify the description for the parameter value.</td><td>Yes (Conditional)

Note: This data is required when the value type is set to **Predefined**.</td></tr>
<tr><td colspan="3">**Parameter Usage Information**</td></tr>
<tr><td>Price Item</td><td>Used to indicate whether the parameter can be associated with a price item or price item bundle. The valid values are:
• Y
• N

Note:
You must specify the value as **N** when a parameter is defined using the following source entity and source type combinations:
<table><tr><th>Source Entity</th><th>Source Type</th></tr><tr><td>ACCT</td><td>BAL</td></tr><tr><td>ACCT</td><td>CNT</td></tr><tr><td>PERS</td><td>BAL</td></tr><tr><td>PERS</td><td>CNT</td></tr><tr><td>ALGO</td><td>-</td></tr><tr><td>SQI</td><td>-</td></tr></table></td><td>No</td></tr>
<tr><td>Pricing Eligibility Criteria</td><td>Used to indicate whether the parameter can be used while defining the pricing eligibility criteria. The valid values are:
• Y
• N</td><td>No</td></tr>
<tr><td>Price List Eligibility Criteria</td><td>Used to indicate whether the parameter can be used while defining the price list eligibility criteria. The valid values are:
• Y</td><td>No</td></tr>
</table>

Copyright © 2024, Oracle and/or its affiliates.

	• N **Note:** You must specify the value as **N** when the source entity is set to **TRN**.	
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria. The valid values are: • Y • N **Note:** You must specify the value as **N** when the source entity is set to **ALGO**, **SQI**, or **TRN**.	No

Sample CSV Format for Uploading Parameters

Using the below example, you can create the following parameters:

- Country
- Currency

Note: The system will create the above parameters when the required fields, characteristic types, usage amount, usage counter, validation algorithm, referenced tables, and referenced fields are defined in the application.

The following table lists the field transformation details that you need to specify in the file request type using which you want to upload parameters in the system:

1	Parameter	C1_PRICE_PARM_BO/priceParmCode
2	Description	C1_PRICE_PARM_BO/description
3	Value Type	C1_PRICE_PARM_BO/priceParmTypeFlag
4	Source Entity	C1_PRICE_PARM_BO/sourceEntityFlg
5	Source Type	C1_PRICE_PARM_BO/sourceTypeFlg
6	Source Type Code	C1_PRICE_PARM_BO/sourceTypeCode
7	Validation Algorithm	C1_PRICE_PARM_BO/validationAlgoCd
8	Reference Entity	C1_PRICE_PARM_BO/referredTable
9	Field Name	C1_PRICE_PARM_BO/referredField
10	Parameter Values	C1_PRICE_PARM_BO/0/priceParmValue/priceParmVal
11	Description	C1_PRICE_PARM_BO/0/priceParmValue/descr
12	Parameter Values	C1_PRICE_PARM_BO/1/priceParmValue/priceParmVal

Copyright © 2024, Oracle and/or its affiliates.

13	Description	C1_PRICE_PARM_BO/1/priceParmValue/descr
14	Parameter Values	C1_PRICE_PARM_BO/2/priceParmValue/priceParmVal
15	Description	C1_PRICE_PARM_BO/2/priceParmValue/descr
16	Parameter Values	C1_PRICE_PARM_BO/3/priceParmValue/priceParmVal
17	Description	C1_PRICE_PARM_BO/3/priceParmValue/descr
18	Parameter Values	C1_PRICE_PARM_BO/4/priceParmValue/priceParmVal

Uploading an SQI File in the XML Format

To upload an SQI file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading SQIs in the XML format
2. Upload the SQI file
3. Create the SQIs in the system

How to create the SQIs in the system	Creating SQIs on page 2444

Defining a File Request Type for Uploading SQIs in the XML Format

Procedure

To define a file request type for uploading SQIs in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Service** option from the **Service Type** list.
9. Enter the **C1-SQIUPLOAD** business service or custom SQI business service in the **Service Name** field.
10. Select the **Add** option from the **Operation** list.

> **Note:** At present, you cannot edit the existing SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing SQIs from the user interface.

11. Click **Save**.
    The file request type is defined for uploading SQIs in the XML format.

Uploading an SQI File

You can upload an SQI file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating SQIs

You can create the SQIs in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading an SQI File in the CSV Format

To upload an SQI file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading SQIs in the CSV format
2. Upload the SQI file
3. Create the SQIs in the system

Defining a File Request Type for Uploading SQIs in the CSV Format

Procedure

To define a file request type for uploading SQIs in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
   The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
10. In the **Services** section, enter the required sequence number.
11. Select the **Business Service** option from the **Service Type** list.
12. Enter the **C1-SQIUPLOAD** business service or custom SQI business service in the **Service Name** field.
13. Select the **Add** option from the **Operation** list.

> **Note:** At present, you cannot edit the existing SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing SQIs from the user interface.

14. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** *s*ection.
15. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** *s*ection.
16. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	DECIMALPOSITIONS	C1-SQIUPLOAD/decimalPositions
2	DESCRIPTION	C1-SQIUPLOAD/description

17. Click **Save**.
    The file request type is defined for uploading SQIs in the CSV format.

Uploading an SQI File

You can upload an SQI file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating SQIs

You can create the SQIs in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Service Quantity Identifiers (SQIs)

Before uploading an SQI file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-SQIUPLOAD	Used to specify the details of the SQI whose record you want to create or update in the system.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier (SQI).	Yes (Conditional) **Note:** This data is required when you want to define an SQI.
description	Used to specify the description for the SQI.	Yes (Conditional) **Note:** This data is required when you want to define an SQI.

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
decimalPositions	Used to specify the appropriate number of decimal positions for the SQI. **Note:** If you do not specify the value in this tag, by default, it is set to zero (0). You can specify maximum precision of 18 decimal positions for an SQI.	No

Sample XML Format for Uploading Service Quantity Identifiers (SQIs)

Using the below example, you can create the following SQIs:

- ACCTBAL
- AVGDBAL
- OVDLMT

```
<root>
<request>
<payload>
<C1-SQIUPLOAD>
    <serviceQuantityIdentifier>ACCTBAL</serviceQuantityIdentifier>
    <description>Account Balance</description>
    <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
<C1-SQIUPLOAD>
    <serviceQuantityIdentifier>AVGDBAL</serviceQuantityIdentifier>
    <description>Average Daily Balance</description>
    <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
<C1-SQIUPLOAD>
    <serviceQuantityIdentifier>OVDLMT</serviceQuantityIdentifier>
    <description>Overdraft Limit</description>
    <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
</payload>
</request>
</root>
```

Uploading Price Items, Parameters, and SQIs from the Same File

If the price item, parameter, and SQI information is given in the same file, you need to use a file request type where the following business objects and business service are added in the **Services** section:

- C1_PRICE_PARM
- C1-SQIUPLOAD
- C1_PRICEITEM_BO

Note that the **C1_PRICE_PARM** business object and the **C1-SQIUPLOAD** business service should have higher sequence compared to the **C1_PRICEITEM_BO** business object in such file request type. Otherwise, erroneous results might occur.

Chapter 39

Product and Product Version Upload

Topics:

- Uploading a Product File in the XML Format
- Uploading a Product File in the CSV Format
- XML File Format for Uploading Products
- Sample XML Format for Uploading Products
- CSV File Format for Uploading Products
- Sample CSV Format for Uploading Products
- Uploading a Product Version File in the XML Format
- Uploading a Product Version File in the CSV Format
- XML File Format for Uploading Product Versions
- Sample XML Format for Uploading Product Versions
- CSV File Format for Uploading Product Versions
- Sample CSV Format for Uploading Product Versions

Oracle Revenue Management and Billing enables you to create new products and edit the existing products using the **File Upload Interface** utility. You can upload the product file in the XML or CSV format using the **File Upload Interface** utility. You can specify the following in the XML and CSV files along with the basic details of the product:

- Divisions which you want to associate with the product
- Characteristics for the product
- Details of the product to product relationship

The system also enables you to create new product versions and edit the existing product versions using the **File Upload Interface** utility. You can upload product versions along with the product or separately based on the requirements. You can specify the following in the XML and CSV files along with the basic details of the product version:

- Characteristics for the product version
- Eligibility criteria for the product version
- Services and price list which you want to add in the product version
- Standard products and their services which you want to add in the product version (in case of packaged product)

Uploading a Product File in the XML Format

To upload a product file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading products in the XML format
2. Upload the product file
3. Create or update the products in the system

Related Topics

How to define a file request type for uploading products in the XML format	Defining a File Request Type for Uploading Products in the XML Format on page 2452
How to upload a product file	Uploading a Product File on page 2452
How to create or update the products in the system	Creating or Updating Products on page 2453

Defining a File Request Type for Uploading Products in the XML Format

Procedure

To define a file request type for uploading products in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Object** option from the **Service Type** list.
9. Enter the **C1_PRODUCT_BO** business object or custom product business object in the **Service Name** field.
10. Attach an algorithm created using the **C1-PRODUCTPR** algorithm type to the **Pre-Processing Algorithm** field corresponding to the product business object.

    Note: For more information about the **C1-PRODUCTPR** algorithm, refer to C1-PRODUCTPR.

11. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new products or edit the existing products using the file request type.
12. Click **Save**.
    The file request type is defined for uploading products in the XML format.

Uploading a Product File

You can upload a product file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the product files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Copyright © 2024, Oracle and/or its affiliates.

Creating or Updating Products

You can create or edit the products in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the product files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading a Product File in the CSV Format

To upload a product file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading products in the CSV format
2. Upload the product file
3. Create or update the products in the system

How to upload a product file	Uploading a Product File on page 2454
How to create or update the products in the system	Creating or Updating Products on page 2454

Defining a File Request Type for Uploading Products in the CSV Format

Procedure

To define a file request type for uploading products in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
   The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
10. In the **Services** section, enter the required sequence number.
11. Select the **Business Object** option from the **Service Type** list.
12. Enter the **C1_PRODUCT_BO** business object or custom product business object in the **Service Name** field.
13. Attach an algorithm created using the **C1-PRODUCTPR** algorithm type to the **Pre-Processing Algorithm** field corresponding to the product business object.

> **Note:** For more information on **C1-PRODUCTPR**, please refer C1-PRODUCTPR.

Copyright © 2024, Oracle and/or its affiliates.

14. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new products or edit the existing products using the file request type.
15. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
16. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
17. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	PRODUCTCODE	C1_PRODUCT_BO/productCode
2	DESCRIPTION	C1_PRODUCT_BO/description

18. Click **Save**.
The file request type is defined for uploading products in the CSV format.

Uploading a Product File

You can upload a product file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the product files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Products

You can create or edit the products in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the product files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Products

Before uploading a product file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1_PRODUCT_BO	Used to specify the details of the product whose record you want to create or update in the system.	Yes
productCode	Used to specify the product.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
description	Used to specify the description for the product.	Yes
productTypeFlg	Used to indicate the type of the product. The valid values are: • **INFO** - Enables you to create an informational product. • **BUSS** - Enables you to create a packaged product. • **TECH** - Enables you to create a standard product.	Yes
productCategoryFlg	Used to indicate the category of the product. The valid values are: • **CHKG** • **LOAN** • **OTHS** • **SAVG**	Yes
startDate	Used to specify the date from when the product is effective.	Yes
endDate	Used to specify the date till when the product is effective.	No
complianceNumber	Used to specify the compliance number received from the legal department for a particular product.	No
productManagerToDoRole		No
productCharacteristic	Used to specify a list of characteristics for the product.	No
characteristicType	Used to specify the characteristic type.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product.
effectiveDate	Used to specify the date from when the characteristic is effective for the product.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product.
productDivision	Used to specify a list of divisions which you want to associate with the product.	Yes
division	Used to indicate the division to which you want to associate the product.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
productRel	Used to specify a list of products that you want to associate with the parent product.	No
productChildCd	Used to indicate the product that you want to associate with the parent product.	Yes (Conditional) **Note:** This data is required when you want to create a product to product relationship.
productRelType	Used to indicate the product to product relationship type. The valid values are: • **CHLD** • **PRNT**	Yes (Conditional) **Note:** This data is required when you want to create a product to product relationship.
productRelStartDate	Used to specify the date from when the product to product relationship is effective.	Yes (Conditional) **Note:** This data is required when you want to create a product to product relationship.
productRelEndDate	Used to specify the date till when the product to product relationship is effective.	No

Sample XML Format for Uploading Products

The following table lists the products that you want to create using the XML format:

Pensioners Savings Bank Account		
Mortgage Loan Waiver		
Locker Rental Waiver	-	-
Prime Credit Card	-	-
Platinum Debit Card	Prime Credit Card	Child
Sr. Citizen Privilege Saving Account	Pensioners Savings Bank Account	Child

CSV File Format for Uploading Products

Before uploading a product file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
Product	Used to specify the product.	Yes
Description	Used to specify the description for the product.	Yes
Product Type	Used to indicate the type of the product. The valid values are: • **INFO** - Enables you to create an informational product. • **BUSS** - Enables you to create a packaged product. • **TECH** - Enables you to create a standard product.	Yes
Product Category	Used to indicate the category of the product. The valid values are: • **CHKG** • **LOAN** • **OTHS** • **SAVG**	Yes
Start Date	Used to specify the date from when the product is effective.	Yes
End Date	Used to specify the date till when the product is effective.	No
Compliance Number	Used to specify the compliance number received from the legal department for a particular product.	No
Product Manager's To Do Role		No
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product.
Effective Date	Used to specify the date from when the characteristic is effective for the product.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Data	Description	Mandatory (Yes or No)
		Note: This data is required when you want to define a characteristic for the product.
Division	Used to indicate the division to which you want to associate the product.	Yes
Product	Used to indicate the product that you want to associate with the parent product.	Yes (Conditional) **Note:** This data is required when you want to create a product to product relationship.
Relationship Type	Used to indicate the product to product relationship type. The valid values are: • **CHLD** • **PRNT**	Yes (Conditional) **Note:** This data is required when you want to create a product to product relationship.
Start Date	Used to specify the date from when the product to product relationship is effective.	Yes (Conditional) **Note:** This data is required when you want to create a product to product relationship.
End Date	Used to specify the date till when the product to product relationship is effective.	No

Sample CSV Format for Uploading Products

The following table lists the products that you want to create using the CSV format:

Pensioners Savings Bank Account		
Mortgage Loan Waiver		
Locker Rental Waiver	-	-
Prime Credit Card	-	-
Platinum Debit Card	Prime Credit Card	Child
Sr. Citizen Privilege Saving Account	Pensioners Savings Bank Account	Child

Note that the system will create the above products when the required product types, characteristic types, predefined characteristic values, divisions, relationship types are defined in the application. In addition, the file request type which is used for uploading the product file in the CSV format must contain the following field transformation details:

The following table lists the field transformation details that you need to specify in the file request type using which you want to upload products in the system:

Uploading a Product Version File in the XML Format

To upload a product version file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading product versions in the XML format
2. Upload the product version file
3. Create or update the product versions in the system

How to create or update the product versions in the system	Creating or Updating Product Versions on page 2467

Defining a File Request Type for Uploading Product Versions in the XML Format

Procedure

To define a file request type for uploading product versions in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2024, Oracle and/or its affiliates.

2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Object** option from the **Service Type** list.
9. Enter the **C1_PRODUCT_VER_BO** business object or custom product version business object in the **Service Name** field.
10. Attach an algorithm created using the **C1-PRDVERPRE** algorithm type to the **Pre-Processing Algorithm** field corresponding to the product version business object.

    Note: For more information about the **C1-PRDVERPRE** algorithm, refer to C1-PRDVERPRE and C1-PRDVERPST.
11. Attach an algorithm created using the **C1-PRDVERPST** algorithm type to the **Post-Processing Algorithm** field corresponding to the product version business object (optional).

    Note: For more information about the **C1-PRDVERPST** algorithm, refer to C1-PRDVERPRE and C1-PRDVERPST .
12. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new product versions or edit the existing product versions using the file request type.
13. Click **Save**.
    The file request type is defined for uploading product versions in the XML format.

Uploading a Product Version File

You can upload a product version file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the product version files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Product Versions

You can create or edit the product versions in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the product version files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading a Product Version File in the CSV Format

To upload a product version file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading product versions in the CSV format
2. Upload the product version file
3. Create or update the product versions in the system

Defining a File Request Type for Uploading Product Versions in the CSV Format

Procedure

To define a file request type for uploading product versions in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
   The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
10. In the **Services** section, enter the required sequence number.
11. Select the **Business Object** option from the **Service Type** list.
12. Enter the **C1_PRODUCT_VER_BO** business object or custom product version business object in the **Service Name** field.
13. Attach an algorithm created using the **C1-PRDVERPRE** algorithm type to the **Pre-Processing Algorithm** field corresponding to the product version business object.

    Note: For more information on **C1-PRDVERPRE**, please refer C1-PRDVERPRE and C1-PRDVERPST.

14. Attach an algorithm created using the **C1-PRDVERPST** algorithm type to the **Post-Processing Algorithm** field corresponding to the product version business object (optional).

    Note: For more information on **C1-PRDVERPST**, please refer C1-PRDVERPRE and C1-PRDVERPST.

15. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new product versions or edit the existing product versions using the file request type.
16. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
17. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
18. In the **Field Transformation** section, specify the following details:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	PRODUCTCODE	C1_PRODUCT_VER_BO/productCode
2	EFFECTIVEDATE	C1_PRODUCT_VER_BO/effectiveDate
3	DESCRIPTION	C1_PRODUCT_VER_BO/description

19. Click **Save**.
    The file request type is defined for uploading product versions in the CSV format.

Uploading a Product Version File

You can upload a product version file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the product version files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Product Versions

You can create or edit the product versions in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the product version files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Product Versions

Before uploading a product version file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1_PRODUCT_VER_BO	Used to specify the details of the product version whose record you want to create or update in the system.	Yes
productCode	Used to specify the product version.	Yes
effectiveDate	Used to specify the date from when the product version is effective.	Yes
description	Used to specify the description for the product version.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
termsAndCondition	Used to specify the terms and conditions that are applicable for the product version.	No
productVersionCharacteristic	Used to specify a list of characteristics for the product version.	No
characteristicType	Used to specify the characteristic type.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product version.
characteristicEffectiveDate	Used to specify the date from when the characteristic is effective for the product version.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product version.
characteristicValue	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product version.
productVersionEligibility	Used to specify a list of eligible criteria's that decides the enrollment for the pricing and billing of the product version.	No
eligibilityRuleFlg	The valid value is: • **ELIG**	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
startDate	Used to specify the date from when the eligibility criteria is effective for the product version.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
endDate	Used to specify the date till when the eligibility criteria is effective for the product version.	No
description	Used to specify the description for the eligibility criteria.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
productVersionEligibilityDetail	Used to specify the details of the product version eligibility criteria.	No
sequenceNumber	Used to specify the order in which the product version eligibility criteria should be executed.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
lhsPriceParmCd	Used to specify the parameter (on the left hand side) which is used in the pricing eligibility criteria.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
operator	Used to specify the relational operator to define the relation between the parameter name and value. The valid values are: • < • <= • <> • = • > • >= • **BETW** • **IN** • **LIKE** • **NTIN**	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
rhsPriceParmCd	Used to specify the parameter value (on the right hand side) against which you want to compare the parameter (on the left hand side).	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
rhsPriceParmTypeFlg	Used to specify the parameter value against which you want to compare the parameter.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
rhsPriceParmVal	Used to specify the predefined parameter value for the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
trueFlag	The valid values are:	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **COND** • **RLFS** • **RLTR**	**Note:** This data is required when you want to define an eligibility criteria for the product version.
falseFlag	The valid values are: • **COND** • **RLFS** • **RLTR**	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
insufficientFlag	The valid values are: • **COND** • **RLFS** • **RLTR**	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
productVersionPriceList	Used to specify the details of the price list that you want to associate with the product version.	No
priceListId	Used to indicate the price list that you want to associate with the product version.	Yes (Conditional) **Note:** This data is required when you want to define a price list for the pricing of the product version.
productVersionService	Used to specify a list of predefined services that are valid for the product version.	No
serviceCd	Used to indicate the predefined service for the product version.	Yes (Conditional) **Note:** This data is required when you want to associate a predefined service for a product version.
mandatorySw	Used to specify whether the service is mandatory or not. The valid values are: • Y • N	Yes (Conditional) **Note:** This data is required when you want to associate a predefined service for a product version.
productVersionProduct	Used to specify a list of products which you want to associate with the product version.	No
productChildCd	Used to specify the product which you want to associate with the product version.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required when you want to associate a product with a product version.
productVersionProductService	Used to specify a list of predefined services of the associated product.	No
serviceCd	Used to specify the predefined service of the associated product.	Yes (Conditional) **Note:** This data is required when you want to associate a product with a product version.
inclusionSw	Used to specify whether the service should be included while defining the pricing of the product version. The valid values are: • Y • N	Yes (Conditional) **Note:** This data is required when you want to associate a product with a product version.

Sample XML Format for Uploading Product Versions

The following table lists the product versions that you want to create using the XML format:

Pensioners Savings		
Mortgage Loan Waiver		
Locker Rental Waiver		
Prime Credit Card		
Platinum Debit Card		
Sr. Citizen Privilege		

```
<root>
<request>

CSV File Format for Uploading Product Versions

Before uploading a product version file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
Product	Used to specify the product version.	Yes
Effective Date	Used to specify the date from when the product version is effective.	Yes
Version Description	Used to specify the description for the product version.	Yes
Terms and Conditions	Used to specify the terms and conditions that are applicable for the product version.	No
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product version.
Effective Date	Used to specify the date from when the characteristic is effective for the product version.	Yes (Conditional) **Note:** This data is required when you want to define a characteristic for the product version.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Data	Description	Mandatory (Yes or No)
		Note: This data is required when you want to define a characteristic for the product version.
Eligibility Usage		Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Start Date	Used to specify the date from when the eligibility criteria is effective for the product version.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
End Date	Used to specify the date till when the eligibility criteria is effective for the product version.	No
Description	Used to specify the description for the eligibility criteria.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Sequence Number	Used to specify the order in which the product version eligibility criteria should be executed.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Parameter	Used to specify the parameter (on the left hand side) which is used in the pricing eligibility criteria.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Operator	Used to specify the relational operator to define the relation between the parameter name and value. The valid values are: • < • <= • <> • = • > • >= • **BETW**	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.

Copyright © 2024, Oracle and/or its affiliates.

Data	Description	Mandatory (Yes or No)
	• **IN** • **LIKE** • **NTIN**	
Parameter Value	Used to specify the parameter value (on the right hand side) against which you want to compare the parameter (on the left hand side).	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Parameter Value Type	Used to specify the parameter value against which you want to compare the parameter.	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
rhsPriceParmVal	Used to specify the predefined parameter value for the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).	Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Is True		Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Is False		Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Is Insufficient		Yes (Conditional) **Note:** This data is required when you want to define an eligibility criteria for the product version.
Price List Id	Used to indicate the price list that you want to associate with the product version.	Yes (Conditional) **Note:** This data is required when you want to define a price list for the pricing of the product version.

Copyright © 2024, Oracle and/or its affiliates.

Data	Description	Mandatory (Yes or No)
Product Service	Used to indicate the predefined service for the product version.	Yes (Conditional) **Note:** This data is required when you want to associate a predefined service for a product version.
Mandatory	Used to specify whether the service is mandatory or not.	Yes (Conditional) **Note:** This data is required when you want to associate a predefined service for a product version.
Product	Used to specify the product which you want to associate with the product version.	Yes (Conditional) **Note:** This data is required when you want to associate a product with a product version.
Product Service	Used to specify the predefined service of the associated product.	Yes (Conditional) **Note:** This data is required when you want to associate a product with a product version.
Inclusion	Used to specify whether the service should be included while defining the pricing of the product version. The valid values are: • Y • N	Yes (Conditional) **Note:** This data is required when you want to associate a product with a product version.

Sample CSV Format for Uploading Product Versions

The following table lists the product versions that you want to create using the CSV format:

Pensioners Savings		
Mortgage Loan Waiver		
Locker Rental Waiver		
Prime Credit Card		
Platinum Debit Card		
Sr. Citizen Privilege		

Copyright © 2024, Oracle and/or its affiliates.

Note that the system will create the above product versions only when the characteristic types, predefined characteristic values, parameters, predefined parameter values, are defined in the application. In addition, the file request type which is used for uploading the product version file in the CSV format must contain the following field transformation details:

The following table lists the field transformation details that you need to specify in the file request type using which you want to upload product versions in the system:

1	Product	C1_PRODUCT_VER_BO/productCode
2	Effective Date	C1_PRODUCT_VER_BO/effectiveDate
3	Version Description	C1_PRODUCT_VER_BO/description
4	Terms and Conditions	C1_PRODUCT_VER_BO/termsAndCondition
5	Characteristic Type	C1_PRODUCT_VER_BO/0/productVersionCharacteristic/characteristicType
6	Effective Date	C1_PRODUCT_VER_BO/0/productVersionCharacteristic/ characteristicEffectiveDate
7	Characteristic Value	C1_PRODUCT_VER_BO/0/productVersionCharacteristic/characteristicValue
8	Eligibility Usage	C1_PRODUCT_VER_BO/0/productVersionEligibility/eligibilityRuleFlg
9	Start Date	C1_PRODUCT_VER_BO/0/productVersionEligibility/startDate
10	End Date	C1_PRODUCT_VER_BO/0/productVersionEligibility/endDate
11	Description	C1_PRODUCT_VER_BO/0/productVersionEligibility/description
12	Sequence Number	C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/sequenceNumber
13	Parameter	C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/lhsPriceParmCd
14	Operator	C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/operator
15	Parameter Value	C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/rhsPriceParmCd
16	Parameter Value Type	C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/rhsPriceParmTypeFlg
17		C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/rhsPriceParmVal
18	Is True	C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/trueFlag
19	Is False	C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/falseFlag
20	Is Insufficient	C1_PRODUCT_VER_BO/0/productVersionEligibility/0/ productVersionEligibilityDetail/insufficientFlag
21	Sequence Number	C1_PRODUCT_VER_BO/0/productVersionEligibility/1/ productVersionEligibilityDetail/sequenceNumber

Chapter 40

Price List and Price Item Pricing Upload

Oracle Revenue Management and Billing enables you to create new price lists and edit the existing price lists using the **File Upload Interface** utility. You can upload the price list file in the XML or CSV format using the **File Upload Interface** utility.

You can specify the following in the XML and CSV files along with the basic details of the price list:

- Divisions which you want to associate with the price list
- Characteristics for the price list
- Eligibility criteria for the price list
- Hierarchy details for the price list

To upload the price list file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type with the following specifications:
    - Set the**File Format** field to **Extensible Markup Language**.
    - Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
    - Add the **C1_PRICEASSIGN_SERVICE** business service in the **Services** section.
    - Set the **Operation** field to **Add** or **Replace** depending on whether you want to create new price lists or edit the existing price lists using the file request type.
2. Execute the **File Transformation and Upload Batch (C1-FTRAN)** batch to upload the price list file.
3. Execute the **File Request Processing (C1-FREQP)** batch to create or edit the price lists in the system.

Note: For more information about the XML file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide.*

To upload the price list file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type with the following specifications:
    - Set the **File Format** field to **Comma Separated Values**.
    - Select the **Data Transformation Required** option.
    - Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
    - Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.

- Add the **C1_PRICEASSIGN_SERVICE** business service in the **Services** section.
- Set the **Operation** field to **Add** or **Replace** depending on whether you want to create new price lists or edit the existing price lists using the file request type.
- Specify the following details in the Field Transformation section:
  - **Sequence** - Used to specify the data field in the CSV record which should be uploaded in the system.
  - **Field Name** - Used to indicate the field for which the data is uploaded in the system.
  - **Map Field XPath** - Used to specify the XPath of the field where you want to store the data field from the CSV record.

  For example,

Sequence	Field Name	Map Field XPath
1	PRICELISTID	C1_PRICEASSIGN_SERVICE/0/pricelist/priceListId
2	DESCRIPTION	C1_PRICEASSIGN_SERVICE/0/pricelist/description

  This means that the system should upload the first value (i.e. price list ID) and second value (i.e. price list description) from the CSV record in the **priceListId** and **description** fields using the **C1_PRICEASSIGN_SERVICE** business service.

2. Execute the **File Transformation and Upload Batch (C1-FTRAN)** batch to upload the price list file.
3. Execute the **File Request Processing (C1-FREQP)** batch to create or edit the price lists in the system.

Note: For more information about the CSV file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

The system also enables you to create new price item pricing for an account, customer, or price list and edit the existing price item pricing assigned to an account, customer, or price list using the **File Upload Interface** utility. You can upload price item pricing along with the price list or separately based on the requirements.

You can specify the following in the XML and CSV files along with the basic details of price item pricing:

- Person, account, or price list to which you want to assign the price item pricing
- Characteristics for the price item pricing
- Price item parameters based on which you want to define the price item pricing
- Basic details for the price components
- Tiering criteria for the price component (if the **Tiering Type** of the corresponding rate component is set to **STEP** or **Threshold**)
- Eligibility criteria for the price component (if the **Tiering Type** of the corresponding rate component is set to **STEP** or **Threshold**)

Copyright © 2024, Oracle and/or its affiliates.

To upload the price assignments file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type with the following specifications:
   - Set the **File Format** field to **Extensible Markup Language**.
   - Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
   - Add the **C1_PRICEASSIGN_SERVICE** business service in the **Services** section.
   - Set the **Operation** field to **Add** or **Replace** depending on whether you want to create new price item pricing or edit the existing price item pricing using the file request type.
2. Execute the **File Transformation and Upload Batch (C1-FTRAN)** batch to upload the price assignments file.
3. Execute the **File Request Processing (C1-FREQP)** batch to create or edit the price item pricing in the system.

Note: For more information about the XML file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

To upload the price assignments file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type with the following specifications:
   - Set the **File Format** field to **Comma Separated Values**.
   - Select the **Data Transformation Required** option.
   - Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
   - Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
   - Add the **C1_PRICEASSIGN_SERVICE** business service in the **Services** section.
   - Set the **Operation** field to **Add** or **Replace** depending on whether you want to create new price item pricing or edit the existing price item pricing using the file request type.
   - Specify the following details in the Field Transformation section:
     - **Sequence** - Used to specify the data field in the CSV record which should be uploaded in the system.
     - **Field Name** - Used to indicate the field for which the data is uploaded in the system.
     - **Map Field XPath** - Used to specify the XPath of the field where you want to store the data field from the CSV record.
2. Execute the **File Transformation and Upload Batch (C1-FTRAN)** batch to upload the price assignments file.
3. Execute the **File Request Processing (C1-FREQP)** batch to create or edit the price item pricing in the system.

Note: For more information about the CSV file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

Chapter 41

Invoice Request

Topics:

- Prerequisites
- Types of Invoice Request
- Invoice Request Manual Trial Bill Generation (Without Approval) Status Transition
- Invoice Request Manual Regular Bill Generation (Without Approval) Status Transition
- Invoice Request Manual Regular Bill Generation (With Approval) Status Transition
- Invoice Request Type
- Invoice Request (Used for Searching)
- Invoice Request (Used for Viewing)

Oracle Revenue Management and Billing enables you to generate an adhoc regular or trial bill for an account through an invoice request. The system enables you to create an invoice request manually. It enables you to create an invoice request for a person or an account. You can create an invoice request for an account where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**.

If you create an invoice request for a person, the system will consider all those accounts of the person where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**. You can then exclude an account from the invoice request, if required. The system also enables you to consider all accounts of the person and its child persons where the **Eligible For Invoice Request Creation (INVRACTE)** characteristic is set to **Y**.

Note: The system searches for the characteristic type which is specified in the **Invoice Request Account Eligibility Char Type** option type of the **C1-INVREQ** feature configuration. By default, this option type is set to **INVRACTE**. You can change the characteristic type, if required.

In other words, the system enables you to create the following types of invoice request:

- **Manual Regular Bill Generation Invoice Request** - It is used to generate an adhoc regular bill for an account. You can create a manual regular bill generation invoice request for a person or an account from the user interface.
- **Manual Trial Bill Generation Invoice Request** - It is used to generate an adhoc trial bill for an account. You can create a manual trial bill generation invoice request for a person or an account from the user interface.

While creating an invoice request, you need to specify an invoice request type using which you want to create the invoice request. The system enables you to create the invoice request types with the following combinations:

Invoice Mode	Bill Generation Type	Approval Process
Manual	Regular	On
Manual	Regular	Off
Manual	Trial	Off

It is the invoice request type which helps the system to determine:

- The business object using which the invoice request should be created in the system

Note: Two invoice request business objects named **Invoice Request - Regular Bill Generation** (**C1-InvoiceRequest**) and **Invoice Request - Trial Bill Generation** (**C1-InvoiceRequestTrial**) are introduced in this release. If the **Bill Generation Type** field is set to **Regular**, you must select the **Invoice Request - Regular Bill Generation** business object from the **Invoice Request Business Object** list. However, if the **Bill Generation Type** field is set to **Trial**, you must select the **Invoice Request - Trial Bill Generation** business object from the **Invoice Request Business Object** list.

- Whether a regular or trial bill generation invoice request should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode

Note:

The system will process a manual regular bill generation invoice request for an account in the deferred mode when the number of billable charges of the account exceeds the defer processing billable charge count.

The defer processing billable charge count is not considered when a manual regular bill generation invoice request is created for a person.

You can specify the defer processing billable charge count when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- Whether the approval is required for the invoice request

Note: You can only set the **Approval Required** flag when the invoice mode is set to **Manual** and bill generation type is set to **Regular**.

- The wait days which is used to calculate the processing date for an invoice request

Note:

If the invoice request is processed in the online mode, the system will process the invoice request when the processing date is earlier than or equal to the system date. However, if the invoice request is processed in the deferred mode, the system will process the invoice request when the processing date is earlier than or equal to the batch business date.

If required, you can configure the system such that the processing date does not fall on a holiday. To implement this requirement you need to specify the work calendar which helps to determine the working day.

While creating a manual invoice request, you need to specify the following - invoice request type, entity (i.e. person or account for which the invoice request should be created), cutoff date, accounting date, and bill date.

For more information about the types of invoice request, see Types of Invoice Request on page 2497.

For more information on how to setup the invoice request feature, see Prerequisites on page 2497.

Copyright © 2024, Oracle and/or its affiliates.

Prerequisites

To setup the invoice request process, you need to do the following:

- Define the required invoice request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Invoice Request Type**
- Define the required characteristic types where the characteristic entity is set to **Invoice Request**
- Assign the **C1-INVRA** To Do type to a To Do role whose users must receive To Do generated while submitting an invoice request for approval
- Assign the **C1-INVRS** To Do type to a To Do role whose users must receive To Do generated while resubmitting an invoice request
- Set the batch control type of the **Invoice Request Periodic Monitor (C1-INVRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about the **Invoice Request Periodic Monitor (C1-INVRQ)** batch, see *Oracle Revenue Management and Billing Batch Guide*.
- Set the batch control type of the **Pending Bill Generation (BILLOPEN)**, **Bill Segment Generation (BSGENREG)**, and **Bill Completion (POSTPROC)** batches to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Set the following feature configuration in the system:

- **Invoice Request Configuration (C1-INVREQ)**

Types of Invoice Request

The system allows you to create the following types of invoice requests:

- Manual Regular Bill Generation Invoice Request on page 2497
- Manual Trial Bill Generation Invoice Request on page 2499

Manual Regular Bill Generation Invoice Request

Once a manual regular bill generation invoice request is created in the **Draft** status, the system checks whether it is created for a person or an account. If a manual regular bill generation invoice request is created for an account, you can submit the invoice request. On submitting the invoice request, the system checks whether the number of the billable charges of the account exceed the defer processing billable charge count. If the number of the billable charges of the account exceed the defer processing billable charge count, the status of the invoice request is changed to **Defer Processing Batch**. However, if the number of the billable charges of the account does not exceed the defer processing billable charge count, the system checks whether the processing date of the invoice request is earlier than or equal to

Copyright © 2024, Oracle and/or its affiliates.

the system date. If the processing date is later than the system date, the status of the invoice request is changed to **Defer Processing**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Defer Processing** status. If there is an invoice request in the **Defer Processing** status, the system checks whether the processing date of the invoice request is earlier than or equal to the system date. If the processing date is later than the system date, the status of the invoice request remains as **Defer Processing**.

Note: The system enables you to cancel an invoice request which is in the **Defer Processing Batch** or **Defer Processing** status.

However, if the processing date is earlier than or equal to the system date, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the online mode. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

However, if a manual regular bill generation invoice request is created for a person, the system checks whether the number of accounts of the person (if the **Include Person Hierarchy** option is not selected) or the number of accounts of the person and its child persons (if the **Include Person Hierarchy** option is selected) exceeds the limit defined in the **Account Limit** option type of the **C1-INVREQ** feature configuration. If the number of accounts does not exceed the account limit, the system derives the account of the person or the person and its child persons. Once the accounts are successfully derived, the status of the invoice request is changed to **Defer Processing Batch**.

However, if the number of accounts exceeds the account limit, the status of the invoice request is changed to **Account Derivation Pending**. On the **C1-INVRQ** batch execution, the system checks whether there are any invoice requests in the **Account Derivation Pending** status. If there is an invoice request in the **Account Derivation Pending** status, the system derives the accounts of the person or the person and its child persons. Once the accounts are successfully derived, the status of the invoice request is changed to **Defer Processing Batch**.

When you execute the **BILLOPEN** batch with the **Off Cycle Switch** parameter set to **Y**, the system checks whether the account that meets the search criteria is included in any invoice request which is in the **Defer Processing Batch** status. If the account is included in the invoice request, the system checks whether the processing date of the invoice request is earlier than or equal to the batch business date. If processing date is earlier than or equal to the batch business date, the system checks whether there is any record in the **Processing** status for the account in the invoice request. If so, the system checks whether the pending bill already exists for the account. If the pending bill does not exist for the account, the system checks whether the cutoff date is later than the bill after date. If cutoff date is later than the bill after date, the system checks whether the accounting calendar is open for the accounting date. If the accounting calendar is open for the accounting date, the system creates the adhoc regular bill for the account in the **Pending** status. When you execute the **BSGENREQ** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the bill segments for the adhoc regular bill. When you execute the **POSTPROC** batch with the **Off Cycle Switch** parameter set to **Y**, the system creates the post-processing bill segments (if any) and completes the adhoc regular bill of the account. Finally, the status of the invoice request is changed to **Processed**.

However, if the pending bill exists for the account, or if the cutoff date is earlier than or equal to the bill after date, or if the accounting calendar is not open for the accounting date, or if an error occurs while creating adhoc regular bill or its bill segments, or if a To Do is generated for the bill review, the status of the record in the invoice request is changed to **Error**. If all records in the invoice request are in the **Error** status, the status of the invoice request is changed to **Error**. The system enables you to move such erroneous invoice request back to the **Draft** status.

You can optionally configure the approval process for the manual regular bill generation invoice request. If the **Approval Required** flag is set to **Yes** in the invoice request type, the status of the manual regular bill generation invoice request is changed to **Approval In Progress** when you submit the invoice request. The approver can then approve or reject the manual regular bill generation invoice request based on the observations.

Copyright © 2024, Oracle and/or its affiliates.

Manual Trial Bill Generation Invoice Request

The manual regular bill generation invoice request and manual trial bill generation invoice request are created and processed identically with the following exceptions:

- On submitting the manual trial bill generation invoice request for an account, the system does not check whether the number of the billable charges of the account exceed the defer processing billable charge count. Therefore, the manual trial bill generation invoice request is always processed in the deferred mode.
- You need to specify the following parameters while executing the **BILLOPEN**, **BSGENREQ**, and **POSTPROC** batches:
  - Bill Generation Type (set to **Trial**)
  - Description for Trial Billing Batch Run
  - Off Cycle Switch (set to **Y**)
- The **BSGENREQ** batch will not freeze and complete a trail bill for the account.
- At present, a To Do is not generated for a trial bill review, and therefore the system does not check whether a To Do is generated for a trial bill review.

Invoice Request Manual Trial Bill Generation (Without Approval) Status Transition

The following figure graphically indicates how an invoice request in the manual trial bill generation process moves from one status to another when the approval process is not configured in the invoice request type:

Invoice Request Type

Oracle Revenue Management and Billing enables you to configure an invoice request type using which you can create an invoice request. The invoice request type helps the system to determine:

- The invoice request business object for which the invoice request should be created in the system
- The mode in which the invoice should be created in the system
- The bill generation type using which the invoice should be created in the system
- Whether a manual regular bill generation invoice request for an account should be processed in the online or deferred mode
- The date calculation algorithm which is used to calculate the processing date for an automatic regular bill generation invoice request
- Whether the approval is required for the invoice request
- The submitter To Do role for resubmitting the invoice request for approval
- The wait days which is used to calculate the invoice request processing date

Note: The automatic invoice request is designed to work only for the fully-insured group and individual health insurance businesses and not for the financial services or self-funded health insurance businesses.

The **Invoice Request Type** screen allows you to define, edit, copy, delete, and view the details of an invoice request type. It contains the following zones:

- Invoice Request Type List on page 2515
- Invoice Request Type on page 2515

Copyright © 2024, Oracle and/or its affiliates.

Invoice Request Type List

The **Invoice Request Type List** zone lists the invoice request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Invoice Request Type	Displays the invoice request type.
Description	Displays the description of the invoice request type.
Edit	On clicking the **Edit** (✎) icon, the **Invoice Request Type** screen appears where you can edit the details of the invoice request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Invoice Request Type** screen appears where you can define a new invoice request type using an existing invoice request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the invoice request type.
	Note: You can delete an invoice request type only when an invoice request is not yet created using the invoice request type.

On clicking the **Broadcast** (📡) icon corresponding to an invoice request type, the **Invoice Request Type** zone appears with the details of the respective invoice request type.

How to view the details of an invoice request type	Viewing the Invoice Request Type Details on page 2532

Invoice Request Type

The **Invoice Request Type** zone displays the details of the invoice request type. It contains the following sections:

- **Main** - The **Main** section displays basic information about the invoice request type. It contains the following fields:

Field Name	Field Description
Invoice Request Type	Displays the invoice request type.
Description	Displays the description of the invoice request type.
Invoice Request Business Object	Indicates the business object using which the invoice request should be created in the system. In addition, the context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the invoice request type.
Status	Indicates the current status of the invoice request type. The valid values are: • Active • Inactive
Invoice Mode	Indicates the mode in which the invoice request is created in the system using the invoice request type. The valid values are: • Automatic • Manual
Bill Generation Type	Indicates the type of bill that is generated for the invoice request in the system. The valid values are: • Regular • Trial
Defer Processing Billable Charge Count	Displays the count which helps to determine whether the invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).
	Note: This field appears only when the **Invoice Mode** is set to**Manual** and the **Bill Generation Type** is set to **Regular**. If you set the defer processing billable charge count to zero (0), the system resets the default value to 500.
Date Calculation Algorithm	Indicates the algorithm using which the date is calculated for processing the billable charges created for the bills in the invoice request.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm. This field appears only when the **Invoice Mode** is set to **Automatic**.
Approval Required	Indicates whether approval is required for approving the bills generated through the invoice request.
	Note: This field appears only when the **Invoice Mode** is set to**Manual** and the **Bill Generation Type** is set to **Regular**.
Approval To Do Type	Indicates that the To Do task of the specified To Do type must be created when the invoice request is submitted for approval.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type. This field appears only when the **Approval Required** option is selected.
Approval To Do Role	Indicates the user and/or group of users who can approve the invoice request.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role. This field appears only when the **Approval Required** option is selected.
Submitter To Do Type	Indicates that the To Do task of the specified To Do type is created for re-submitting the invoice request for approval.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the user and/or group of users who can re-submit the invoice request for approval.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Wait Days	Displays the maximum wait period (in days) after which the bills of the invoice request are processed.
	Note: You cannot specify a negative value in the **Wait Days** field.

- **Characteristics** - The **Characteristics** section lists the characteristics defined for the invoice request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the invoice request type.
Delete	Used to delete the invoice request type.
	Note: You can delete an invoice request type only when an invoice request is not yet created using the invoice request type.
Duplicate	Used to create a new invoice request type using an existing invoice request type.

- **Record Information** - The **Record Information** section contains the following field:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the invoice request type is created in the system. In addition, the context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Invoice Request Type** zone does not appear in the **Invoice Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an invoice request type in the **Invoice Request Type List** zone.

Related Topics

For more information on...	See...
How to edit an invoice request type	Editing an Invoice Request Type on page 2523

Defining an Invoice Request Type

Prerequisites

To define an invoice request type, you should have:

- Invoice request type business object defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To define an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Invoice Request Type** sub-menu.

   The **Invoice Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the invoice request type.
   - **Characteristics** - Used to define a list of characteristics for the invoice request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to specify the invoice request type.	Yes
Business Object	Indicates the business object using which you want to define the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Business Object	Used to indicate the invoice request business object for which you want to define the invoice request type. The valid values are: • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No
Status	Used to indicate the current status of the invoice request type. The valid values are: • Active • Inactive	Yes
Invoice Mode	Used to indicate the mode in which the invoice request should be created in the system using the invoice request type. The valid values are: • Automatic **Note:** The automatic mode is not supported while creating an invoice request type for the financial services domain. • Manual	Yes
Bill Generation Type	Used to indicate the type of bill that should be generated for the invoice request in the system using the invoice request type. The valid values are: • Regular • Trial **Note:** By default, this field is set to **Regular** when the **Invoice Mode** is set to **Automatic**.	Yes
Defer Processing Billable Charge Count	Used to specify the count which helps to determine whether the invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify a negative value in this field. Deferred mode means, in the background, when the **Generic Request Periodic Monitor (C1-GENRQ)** batch is invoked. You can configure the **Generic Request Periodic Monitor (C1-GENRQ)** batch such that it is executed at regular intervals. For more information about the **Generic Request Periodic Monitor (C1-GENRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	
Date Calculation Algorithm	Used to indicate the algorithm using which the date is calculated for processing the billable charges created for the bills in the invoice request. **Note:** The **Search** (🔍) icon appears corresponding to the **Date Calculation Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the **Date Calculation Algorithm** field. You can specify the date calculation algorithm only when the **Invoice Mode** is set to **Automatic**.	Yes (Conditional) **Note:** This field is required for creating an invoice request in the automatic mode.
Approval Required	Used to indicate whether approval is required for approving the bills generated through the invoice request. **Note:** This field appears only when the **Invoice Mode** is set to**Manual** and the **Bill Generation Type** is set to **Regular**.	No
Approval To Do Type	Used to indicate that the To Do task of the specified To Do type must be created when the invoice request is submitted for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears only when the **Approval Required** option is selected. The **C1-INVRA** To Do type is shipped with the product. You can use the **C1-INVRA** To Do type or a custom To Do type, if required.	**Note:** This field is required for approving the invoice request which is created using the invoice request type.
Approval To Do Role	Used to indicate the user and/or group of users who can approve the invoice request. **Note:** The list includes only those To Do roles which are associated with the approval To Do type. This field appears only when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required for approving the invoice request which is created using the invoice request type.
Submitter To Do Type	Used to indicate that the To Do task of the specified To Do type is created for re-submitting the invoice request for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The **C1-INVRS** To Do type is shipped with the product. You can use the **C1-INVRS** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required for resubmitting the invoice request for approval.
Submitter To Do Role	Used to indicate the user and/or group of users who can re-submit the invoice request for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	**Note:** This field is required for resubmitting the invoice request for approval. Once the it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
Wait Days	Used to specify the maximum wait period (in days) after which the bills in the invoice request are processed. **Note:** You cannot specify a negative value in the **Wait Days** field.	No

4. Enter the required details in the **Main** section.
5. Define a list of characteristics for the invoice request type, if required.
6. Click **Save**.
   The invoice request type is defined.

Invoice Request Type screen	Invoice Request Type on page 2514
How to define a characteristic for an invoice request type	Defining a Characteristic for an Invoice Request on page 2551

Defining a Characteristic for an Invoice Request Type

Prerequisites

To define a characteristic for an invoice request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Invoice Request Type**)

Procedure

To define a characteristic for an invoice request type:

1. Ensure that the **Characteristics** section is expanded when you *a*re defining, editing, or copying an invoice request type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Invoice Request Type**.	**Note:** This field is required while defining a characteristic for an invoice request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required while defining a characteristic for an invoice request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the invoice request type, click the **Add** (+) icon and *t*hen repeat step *2*.

Note: However, if you want to remove a characteristic from the invoice request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing an Invoice Request Type

Prerequisites

To edit an invoice request type, you should have:

- Invoice request type business object defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To edit an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.
   The **Invoice Request Type** screen appears.

Copyright © 2024, Oracle and/or its affiliates.

4. In the **Invoice Request Type List** zone, click the **Edit**( ) icon in the **Edit** column corresponding *t*o the invoice request type whose details you want to edit.

   The **Invoice Request Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the invoice request type.
   - **Characteristics** - Used to define a list of characteristics for the invoice request type.

   The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Invoice Request Type	Displays the invoice request type.	Not applicable
Business Object	Indicates the business object using which you want to define the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes
Invoice Request Business Object	Used to indicate the invoice request business object for which you want to define the invoice request type. The valid values are: • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No
Status	Used to indicate the current status of the invoice request type. The valid values are: • Active • Inactive	Yes
Invoice Mode	Used to indicate the mode in which the invoice request should be created in the system using the invoice request type. The valid values are: • Automatic **Note:** The automatic mode is not supported while creating an invoice request type for the financial services domain. • Manual	Yes
Bill Generation Type	Used to indicate the type of bill that should be generated for the invoice request in the system using the invoice request type. The valid values are: • Regular • Trial **Note:** By default, this field is set to **Regular** when the **Invoice Mode** is set to **Automatic**.	Yes
Defer Processing Billable Charge Count	Used to specify the count which helps to determine whether the invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately). **Note:** You cannot specify a negative value in this field. Deferred mode means, in the background, when the **Generic Request Periodic Monitor (C1-GENRQ)** batch is invoked. You can configure the **Generic Request Periodic Monitor (C1-GENRQ)** batch such that it is executed at regular intervals. For more information about the **Generic Request Periodic Monitor (C1-GENRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	
Date Calculation Algorithm	Used to indicate the algorithm using which the date is calculated for processing the billable charges created for the bills in the invoice request. **Note:** The **Search** (🔍) icon appears corresponding to the **Date Calculation Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the **Date Calculation Algorithm** field. You can specify the date calculation algorithm only when the **Invoice Mode** is set to **Automatic**.	Yes (Conditional) **Note:** This field is required for creating an invoice request in the automatic mode.
Approval Required	Used to indicate whether approval is required for approving the bills generated through the invoice request. **Note:** This field appears only when the **Invoice Mode** is set to**Manual** and the **Bill Generation Type** is set to **Regular**.	No
Approval To Do Type	Used to indicate that the To Do task of the specified To Do type must be created when the invoice request is submitted for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears only when the **Approval Required** option is selected. The **C1-INVRA** To Do type is shipped with the product. You can use the **C1-INVRA** To Do type or a custom To Do type, if required.	**Note:** This field is required for approving the invoice request which is created using the invoice request type.
Approval To Do Role	Used to indicate the user and/or group of users who can approve the invoice request. **Note:** The list includes only those To Do roles which are associated with the approval To Do type. This field appears only when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required for approving the invoice request which is created using the invoice request type.
Submitter To Do Type	Used to indicate that the To Do task of the specified To Do type is created for re-submitting the invoice request for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The **C1-INVRS** To Do type is shipped with the product. You can use the **C1-INVRS** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required for resubmitting the invoice request for approval.
Submitter To Do Role	Used to indicate the user and/or group of users who can re-submit the invoice request for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	**Note:** This field is required for resubmitting the invoice request for approval. Once the it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
Wait Days	Used to specify the maximum wait period (in days) after which the bills in the invoice request are processed. **Note:** You cannot specify a negative value in the **Wait Days** field.	No

Tip: Alternatively, you can access this screen by clicking the **Edit** button in the **Invoice Request Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the invoice request type, if required.
7. Click **Save**.
   The changes made to the invoice request type are saved.

Deleting an Invoice Request Type

Procedure

To delete an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.
   The **Invoice Request Type** screen appears.

Copyright © 2024, Oracle and/or its affiliates.

4. In the **Invoice Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to *t*he invoice request type that you want to delete.

   A message appears confirming whether you want to delete the invoice request type.

   Note: You can delete an invoice request type only when an invoice request is not yet created using the invoice request type.

5. Click **OK**.
   The invoice request type is deleted.

   Tip: Alternatively, you can delete an invoice request type by clicking the **Delete** button in the **Invoice Request Type** zone.

Copying an Invoice Request Type

Instead of creating an invoice request type from scratch, you can create a new invoice request type using an existing invoice request type. This is possible through copying an invoice request type. On copying an invoice request type, the details including the characteristics are copied to the new invoice request type. You can then edit the details, if required.

Prerequisites

To copy an invoice request type, you should have:

- Invoice request type (whose copy you want to create) defined in the application.
- Invoice request type business object defined in the application.
- Invoice request business objects defined in the application.
- Date calculation algorithm defined using the **C1-INVREDTCA** algorithm type.
- Required To Do role assigned to the **C1-INVRA** and **C1-INVRS** To Do types in the application

Procedure

To copy an invoice request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Invoice Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Invoice Request Type** sub-menu.
   The **Invoice Request Type** screen appears.
4. In the **Invoice Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to *t*he invoice request type whose copy you want to create.

   The **Invoice Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the invoice request type.
   - **Characteristics** - Used to define a list of characteristics for the invoice request type.

   The **Main** section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to specify the invoice request type.	Yes
Business Object	Indicates the business object using which you want to define the invoice request type.	Not applicable
Description	Used to specify the description for the invoice request type.	Yes
Invoice Request Business Object	Used to indicate the invoice request business object for which you want to define the invoice request type. The valid values are: • Invoice Request - Regular Bill Generation • Invoice Request - Trial Bill Generation	Yes
Detailed Description	Used to specify additional information about the invoice request type.	No
Status	Used to indicate the current status of the invoice request type. The valid values are: • Active • Inactive	Yes
Invoice Mode	Used to indicate the mode in which the invoice request should be created in the system using the invoice request type. The valid values are: • Automatic **Note:** The automatic mode is not supported while creating an invoice request type for the financial services domain. • Manual	Yes
Bill Generation Type	Used to indicate the type of bill that should be generated for the invoice request in the system using the invoice request type. The valid values are: • Regular • Trial **Note:** By default, this field is set to **Regular** when the **Invoice Mode** is set to **Automatic**.	Yes
Defer Processing Billable Charge Count	Used to specify the count which helps to determine whether the invoice request must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately). If the number of billable charges created for the bills which are selected in the invoice request exceeds the defer processing billable charge count, the system processes the invoice request in the deferred mode. However, if the number of billable charges created for the bills which are selected in the invoice request does not exceed the defer processing billable charge count, the system processes the invoice request in real time (i.e. immediately).	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify a negative value in this field. Deferred mode means, in the background, when the **Generic Request Periodic Monitor (C1-GENRQ)** batch is invoked. You can configure the **Generic Request Periodic Monitor (C1-GENRQ)** batch such that it is executed at regular intervals. For more information about the **Generic Request Periodic Monitor (C1-GENRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	
Date Calculation Algorithm	Used to indicate the algorithm using which the date is calculated for processing the billable charges created for the bills in the invoice request. **Note:** The **Search** (🔍) icon appears corresponding to the **Date Calculation Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the date calculation algorithm, the description of the date calculation algorithm appears corresponding to the **Date Calculation Algorithm** field. You can specify the date calculation algorithm only when the **Invoice Mode** is set to **Automatic**.	Yes (Conditional) **Note:** This field is required for creating an invoice request in the automatic mode.
Approval Required	Used to indicate whether approval is required for approving the bills generated through the invoice request. **Note:** This field appears only when the **Invoice Mode** is set to**Manual** and the **Bill Generation Type** is set to **Regular**.	No
Approval To Do Type	Used to indicate that the To Do task of the specified To Do type must be created when the invoice request is submitted for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears only when the **Approval Required** option is selected. The **C1-INVRA** To Do type is shipped with the product. You can use the **C1-INVRA** To Do type or a custom To Do type, if required.	**Note:** This field is required for approving the invoice request which is created using the invoice request type.
Approval To Do Role	Used to indicate the user and/or group of users who can approve the invoice request. **Note:** The list includes only those To Do roles which are associated with the approval To Do type. This field appears only when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required for approving the invoice request which is created using the invoice request type.
Submitter To Do Type	Used to indicate that the To Do task of the specified To Do type is created for re-submitting the invoice request for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The **C1-INVRS** To Do type is shipped with the product. You can use the **C1-INVRS** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required for resubmitting the invoice request for approval.
Submitter To Do Role	Used to indicate the user and/or group of users who can re-submit the invoice request for approval.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	**Note:** This field is required for resubmitting the invoice request for approval. Once the it is defined and saved, it cannot be changed as it is linked to request(s) which are under processing.
Wait Days	Used to specify the maximum wait period (in days) after which the bills in the invoice request are processed. **Note:** You cannot specify a negative value in the **Wait Days** field.	No

Tip: Alternatively, you can copy an invoice request type by clicking the **Duplicate** button in the **Invoice Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics from the invoice request type, if required.
7. Click **Save**.
   The new invoice request type is defined.

Invoice Request (Used for Searching)

The **Invoice Request** screen allows you to search for an invoice request using various search criteria. It also allows you to manually create an invoice request. It contains the following zone:

- Search Invoice Request on page 2533

Through this screen, you can navigate to the following screen:

- Invoice Request (Used for Viewing) on page 2541

Search Invoice Request

The **Search Invoice Request** zone allows you to search for an invoice request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an invoice request created for an account or a person. The valid values are: • Invoice Requests for Accounts • Invoice Requests for Persons **Note:** By default, the **Invoice Requests for Accounts** option is selected.	Yes
Invoice Request ID	Used to search a particular invoice request.	No
Creation From Date	Used to search invoice requests which are created from a particular date onwards.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field. The **Creation From Date** cannot be later than the **Created To** date.	
Created To	Used to search invoice requests which are created till a particular date. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field. The **Created To** date cannot be earlier than the **Creation From Date**.	No
Cutoff From	Used to indicate the date from when the billable charges are considered for processing the invoice request. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field. The cutoff from date cannot be later than the cutoff to date.	No
Cutoff To	Used to indicate the date till when the billable charges are considered for processing the invoice request. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field. The cutoff to date cannot be earlier than the cutoff from date.	No
Invoice Request Type	Used to search invoice requests which are created using a particular invoice request type.	No
Status	Used to search invoice requests which are in a particular status. The valid values are: • Account Derivation Pending • Approved • Approval In Progress • Canceled	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Deferred Processing • Deferred Processing Batch • Draft • Error • Processed • Rejected	
Person ID	Used to search invoice requests which include bills of a particular person. **Note:** The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears where you can search for a particular person.	No
Account ID	Used to search invoice requests which include bills of a particular account. **Note:** The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears where you can search for a particular account. This field appears only when the **Invoice Requests for Accounts** option is selected from the **Search By** list.	No
Bill Generation Type	Used to indicate the bill generation type using which the bills of the invoice request are created in the system. The valid values are: • Regular • Trial	No
External Reference Type	Used to indicate the external reference type using which the invoice request is created in the system. The valid values are: • Membership • Policy **Note:** This field appears only when the **Invoice Requests for Accounts** option is selected from the **Search By** list. This field is not applicable for the banking business.	No
External Reference ID	Used to specify the external reference ID of the account for which the invoice request is created in the system.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **External Reference ID** field. On clicking the **Search** icon, the **Search Membership** or the **Search Policy** window appears depending upon the option selected from the **External Reference Type** list. This field appears only when the **Invoice Requests for Accounts** option is selected from the **Search By** list. This field is not applicable for the banking business.	This field is required when you specify the external reference type.

Note: You must specify at least one search criterion while searching for an invoice request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the invoice request is created in the system.
Invoice Request Information	Displays information about the invoice request. **Note:** It has a link. On clicking the link, the **Invoice Request** screen appears where you can view the details of the respective invoice request.
Created By	Indicates the user who has created the invoice request.
Cutoff Date	Displays the date till when all the billable charges are considered for processing the invoice request.
Account Information	Displays information about the account for which the invoice request is processed in the system. In addition, this column has a context menu (⊙) which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This column appears only when the **Invoice Requests for Accounts** option is selected from the **Search By** list.
Person Information	Displays information about the person for whose accounts the invoice request is processed in the system. In addition, this column has a context menu (⊙) which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears with the details of the respective person. This column appears when the **Invoice Requests for Persons** option is selected from the **Search By** list.

How to search for an invoice request	Searching for an Invoice Request on page 2538

Searching for an Invoice Request

Prerequisites

To search for an invoice request, you should have:

- Invoice requests defined in the application

Procedure

To search for an invoice request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Invoice Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Invoice Request** sub-menu.
   The **Invoice Request** screen appears.
4. Enter the search criteria in the **Search Invoice Request** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of invoice requests that meet the search criteria appears in the **Search Results** section.

Manually Creating an Invoice Request

Prerequisites

To manually create an invoice request, you should have:

- Invoice request types defined in the application
- Entity (i.e., person or account for which you want to create the invoice request) defined in the application
- Bills generated for the entity (i.e., person or account) in the application

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To manually create an invoice request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Invoice Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Invoice Request** sub-menu.

   The **Add Invoice Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Used to indicate the invoice request type using which you want to create the invoice request in the system.	Yes

4. Select the required invoice request type from the **Invoice Request Type** list.
5. Click **OK**.

   The **Invoice Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the invoice request.
   - **Characteristics** - Used to define a list of characteristics for the invoice request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Type	Indicates the invoice request type using which you want to create the invoice request.	Not applicable
Entity	Used to indicate the entity for which you want to create the invoice request. The valid values are: • Account • Person **Note:** By default, the **Account** option is selected.	Yes
Account ID	Used to indicate the invoice request which includes the bills of a particular account. **Note:** The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears where you can search for the respective account. This field appears only when you select the **Account** option from the **Entity** list.	Yes (Conditional) This field is required while specifying the account for which you want to create the invoice request.
Person ID	Used to indicate the invoice request which includes the bills of a particular person.	Yes (Conditional) This field is required while specifying the

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears where you can search for the respective person. This field appears only when you select the **Person** option from the **Entity** list.	person for whose accounts you want to create the invoice request.
Include Person Hierarchy	Used to specify whether you want to include the accounts of all the child persons of the main person for creating the invoice request. **Note:** This field appears when you select the **Person** option from the **Entity** list.	No
Cutoff Date	Used to specify the date till when all the billable charges are considered for processing the invoice request. **Note:** By default, the current date appears in this field. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Accounting Date	Used to specify the accounting date for which the financial transaction of the bill is created. **Note:** By default, the current date appears in this field. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Bill Date	Used to specify the date on which the bill is generated for the entity. **Note:** The bill date cannot be on or earlier than the last bill date of the account. By default, the current date appears in this field. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Comments	Used to specify additional information about the invoice request.	No

6. Enter the required details in the **Main** section.
7. Define a list of characteristics for the invoice request in the **Characteristics** section, if required.
8. Click **Save**

Copyright © 2024, Oracle and/or its affiliates.

The invoice request is created in the **Draft** status and the status of all the records (in the invoice request) is set to **Pending**.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Invoice Request** screen.

Invoice Request (Used for Viewing)

The **Invoice Request** screen allows you to:

- View the details of the invoice request
- Edit the details of the invoice request
- Delete the invoice request
- Submit the invoice request for processing
- Approve or reject the invoice request
- Cancel the invoice request
- View the log of the invoice request
- Add a log entry for the invoice request

The **Invoice Request** screen contains the following tabs:

- Invoice Request - Main on page 2542
- Invoice Request - Log on page 2548

Copyright © 2024, Oracle and/or its affiliates.

Invoice Request - Main

The **Main** tab displays information about the invoice request. It contains the following zones:

- Invoice Request on page 2542
- Invoice Request Details on page 2546
- Account List on page 2547
- Excluded Accounts on page 2548

Invoice Request

The **Invoice Request** zone displays the details of the invoice request. It contains the following sections:

- **Main** - The **Main** section displays basic information about the invoice request. It contains the following fields:

Field Name	Field Description
Invoice Request Information	Displays information about the invoice request.
Invoice Request Type	Indicates the invoice request type using which the invoice request is created in the system. **Note:** It has a link. On clicking the link, the **Invoice Request Type** screen appears where you can view the details of the respective invoice request type.
Entity	Indicates the entity for which the invoice request is created in the system. The valid values are: • Account • Person
Account Information	Displays information about the account for which the invoice request is created in the system. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This field appears only when you are viewing the invoice request details of an account.
Person Information	Displays information about the person for whose accounts the invoice request is created in the system. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This field appears only when you are viewing the invoice request details of a person.
Include Person Hierarchy	Indicates whether the accounts of the child persons of the main person are included for processing the invoice request.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears only when you are viewing the invoice request details of a person.
Cutoff Date	Displays the date till when all the billable charges are considered for processing the invoice request.
Accounting Date	Displays the accounting date for which the financial transaction of the bill is created.
Bill Date	Displays the date on which the bill is generated. **Note:** The bill date must not be equal to or earlier than the last bill date of the account for which the invoice request is generated.
Processing Date	Indicates the date when the invoice request is processed. **Note:** `Processing Date = Invoice Request Creation Date + ' Wait Day + Work Days`
Status	Indicates the current status of the invoice request. The valid values are: • Account Derivation Pending • Approved • Approval In Progress • Cancelled • Deferred Processing • Deferred Processing - Batch • Draft • Error • Processed • Rejected • Submitted • Processing • Return to Submitter
Status Reason	Indicates the reason why the status of the invoice request is changed. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective status. This field appears only when you select **canceled** option from the status list.
Comments	Displays additional information about the invoice request. **Note:** This field appears only when the invoice request is in the **Processed** status.

- **Characteristics** - The **Characteristics** section lists the characteristics defined for the invoice request. It contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the invoice request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the invoice request. **Note:** The **Edit** button appears only when the invoice request is in the **Draft** status.
Delete	Used to delete the invoice request. **Note:** The **Delete** button appears only when the invoice request is in the **Draft** status.
Submit	Used to submit the invoice request for approval. **Note:** The **Submit** button appears only when the invoice request is in the **Draft** status.
Cancel	Used to cancel the invoice request. **Note:** The **Cancel** button appears when the invoice request is in the **Deferred Processing Batch** status.
Approve	Used to approve the invoice request. **Note:** The **Approve** button appears when: • The invoice request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the invoice request.
Reject	Used to reject the invoice request. **Note:** The **Reject** button appears when: • The invoice request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the invoice request.
Re Submit	Used to request the user for resubmitting the invoice request for approval. **Note:** The **Re Submit** button appears when: • The invoice request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the invoice request.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the invoice request is created in the system. In addition, this column has a context menu (⊙) icon appears

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the invoice request status is updated.
Create Date/Time	Displays the date and time when the invoice request is created.

- **External Reference** - The **External Reference** section lists the external references using which the invoice request is created in the system. It contains the following columns:

Column Name	Column Description
External Reference Type	Indicates the external reference type using which the invoice request is created for the external references. The valid values are: • Membership • Policy **Note:** The value in this field appears only when you are viewing the invoice request details of an account which belongs to the health insurance business and is created using an external reference.
External Reference Information	Displays information about the external reference for the invoice request. **Note:** It has a link. On clicking the link, the **Policy** screen appears with the details of the respective policy. The value in this field appears only when you are viewing the invoice request details of an account which belongs to the health insurance business and is created using an external reference.

- **Statistics** - The **Statistics** section displays information about the records generated while processing the invoice request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of records that were considered for processing the invoice request.
Processed Records	Displays the number of records that were processed while processing the invoice request.
Total Bills Created	Displays the total number of bills generated for the accounts considered for processing the invoice request.
Excluded Records	Displays the number of records that were excluded from the invoice request generation process.
Error Records	Displays the number of records which are in the error status.
Processing Records	Displays the number of records in the invoice request which are still under the generation process.
Pending Records	Displays the number of records that are pending to be processed for the invoice request generation process.

Invoice Request Details

The **Invoice Request Details** zone lists the persons whose accounts are added to the invoice request. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person for which the invoice request is created. In addition, this column has a context menu (⊙) icon appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Record Status	Indicates the status of the bills in the invoice request. The valid values are: • Pending • Error • Processing
Bill Information	Indicates the bill which is added to the invoice request. In addition, this column has a context menu (⊙) icon appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Error Message	Displays the error message indicating the error that occurred while processing the bills in the invoice request.
Recent Billed Date	Displays the date of the bill that has been recently processed from the invoice request.

Copyright © 2024, Oracle and/or its affiliates.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Filter** icon appears when the zone is **Account List**.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Account List

The **Account List** zone lists the accounts of the entity whose bills are considered for creating the invoice request. It contains the following columns:

Column Name	Column Description
Account Information	Indicates the account for which the invoice request is created in the system. In addition, this column has a context menu (⊙) which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Person Information	Indicates the person for which the invoice request is created in the system. In addition, this column has a context menu (⊙) which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Record Status	Indicates the status of the bills in the invoice request. The valid values are: • Pending • Error • Processing
Bill Information	Indicates the bill which is added to the invoice request. In addition, this column has a context menu (⊙) which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Error Message	Displays the error message indicating the error that occurred while processing the bills in the invoice request for the account.
Recent Billed Date	Displays the date of the bill that has been recently processed from the invoice request for the account.

A check-box appears corresponding to each account when the invoice request is in the **Draft** status. On selecting the check-box, and clicking the **Exclude** button, you can exclude the account from the invoice request process. You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header to exclude all the accounts from the invoice request process.

Copyright © 2024, Oracle and/or its affiliates.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Excluded Accounts

The **Excluded Accounts** zone lists the accounts of the main person whose bills are not considered for processing the invoice request. It contains the following columns:

Column Name	Column Description
Account Information	Indicates the account whose bills are excluded from the invoice request process. In addition, this column has a context menu (⊙) which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Person Information	Indicates the person to which the account belongs. In addition, this column has a context menu (⊙) which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.

A check-box appears corresponding to each account when the invoice request is in the **Draft** status. On selecting the check-box, and clicking the **Include** button, you can include the account to the invoice request process. You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header to include all the accounts of the person to the invoice request process.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Record Status**, **Account ID**, and **Person ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

The **Excluded Accounts** zone appears when **Invoice Requests for Persons** option is selected from the **Search By list** in the **Search Invoice Request** zone.

Invoice Request - Log

The **Log** tab contains the following zone:

- Invoice Request Log on page 2548

Invoice Request Log

The **Invoice Request Log** zone lists the complete trail of actions performed on the invoice request. It contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the invoice request.
Details	Displays the details of the action performed on the invoice request.
User	Indicates the user who has performed the action on the invoice request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the invoice request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the invoice request was changed.

Note: You can manually add a log entry for the invoice request by clicking the **Add Log Entry** link in the upper right corner of the **Invoice Request Log** zone.

Editing an Invoice Request

Prerequisites

To edit an invoice request, you should have:

- Invoice request types defined in the application
- Bills created in the application
- Account and Person entities defined in the application

Procedure

To edit an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to *t*he invoice request whose details you want to edit.
   The **Invoice Request** screen appears.
3. Click the **Edit** button in the **Invoice Request** zone.

   The **Invoice Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the invoice request.
   - **Characteristics** - Used to define a list of characteristics for the invoice request.

   The **Main** section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Invoice Request Information	Displays information about the invoice request.	Not applicable
Invoice Request Type	Indicates the invoice request type using which the invoice request is created in the system.	Not applicable
Entity	Indicates the entity for which the invoice request is created in the system. The valid values are: • Account • Person	Not applicable
Account ID	Used to edit the invoice request which includes the bills of a particular account. **Note:** The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears where you can search for the respective account. This field appears only when the **Account** option is selected from the **Entity** list.	Yes
Person ID	Used to edit the invoice request which includes the bills of a particular person. **Note:** The **Search** (🔍) icon appears corresponding to **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears where you can search for the respective person. This field appears only when the **Person** option is selected from the **Entity** list.	Yes
Include Person Hierarchy	Used to specify whether you want to include the accounts of all the child persons of the main person for creating the invoice request. **Note:** This field appears only when the **Person** option is selected from the **Entity** list.	No
Cutoff Date	Used to specify the date till when all the billable charges are considered for processing the invoice request. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Accounting Date	Used to specify the accounting date for which the financial transaction of the bill is created.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	
Bill Date	Used to specify the date on which the bill is generated for the entity. **Note:** The bill date cannot be on or earlier than the last bill date of the account. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Processing Date	Displays the date when the invoice request is processed in the system.	No
Comments	Used to specify additional information about the invoice request.	No

Note: The **Edit** button appears when the invoice request is in the **Draft** status.

4. Modify the details of the invoice request, if required.
5. Define, edit, or remove characteristics from the invoice request, if required.
6. Click **Save**.
   The changes made to the invoice request are saved.

How to define a characteristic for an invoice request	Defining a Characteristic for an Invoice Request on page 2551

Defining a Characteristic for an Invoice Request

Prerequisites

To define a characteristic for an invoice request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Invoice Request**)

Procedure

To define a characteristic for an invoice request:

1. Ensure that the **Characteristics** section is expanded when you *a*re manually creating or editing an invoice request.

   The **Characteristics** section contains the following fields in a grid:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the invoice request. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the invoice request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Invoice Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the invoice request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the invoice request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the invoice request, click the **Add** (+) icon and then *r*epeat step *2*.

> **Note:** However, if you want to remove a characteristic from the invoice request, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristic is defined for the invoice request.

Related Topics

Canceling an Invoice Request

Prerequisites

To cancel an invoice request, you should have:

- Reasons defined for the **Canceled** status of the **C1-InvoiceRequest** business object in the **Status Reason** screen

Procedure

To cancel an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to *t*he invoice request that you want to cancel.
   The **Invoice Request** screen appears.
3. Click the **Cancel** button in the **Invoice Request** zone.

   The **Invoice Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the invoice request. **Note:** The list includes only those reasons which are defined for the **Canceled** status of the **C1-InvoiceRequest** business object in the **Status Reason** screen.	Yes

Note: The **Cancel** button appears when the invoice request is in the **Deferred Processing** or **Deferred Processing - Batch** status.

4. Select the reason for canceling the invoice request from the **Status Reason** list.
5. Click **Save**.
   The status of the invoice request (along with the bills within the invoice request) is changed to **Canceled**.

Submitting an Invoice Request

Prerequisites

To submit an invoice request, you should have:

- The status of the invoice request in the **Draft** status.
- The invoice request type as **Manual**.

Procedure

To submit an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to *t*he invoice request that you want to submit.
   The **Invoice Request** screen appears.
3. Click the **Submit** button in the **Invoice Request** zone.

   The system behaves in the following manner:

If...	Then...
The **Approval Required** option is selected in the respective invoice request type	The status of the invoice request is changed to **Approval In Progress**. In this status, you can perform various actions on the invoice request, such as, **Approve** or **Reject** or **Return To Submitter**. If the approver clicks the **Approve** button, the status of the invoice request is changed to **Approved**. If the approver clicks the **Reject** button, the status of the invoice request is changed to **Rejected**. If the approver clicks the **Return To Submitter** button, a To Do is generated and the invoice request status is changed to **Draft**. The submitter updates the invoice request and redirects it back to the approver for approval purposes.
The **Approval Required** option is not selected in the respective invoice request type and the entity type is **Person**	The status of the invoice request is changed to **Processed**, or **Deferred Processing** or **Deferred Processing Batch**.
The **Approval Required** option is not selected in the respective invoice request type, and the entity type is **Account**, and the billable charge count exceeds the defer processing billable charge count	The status of the invoice request is changed to **Deferred Processing Batch**.
The **Approval Required** option is not selected in the respective invoice request type, and the entity type is **Account**, and the billable charge count does not exceed the defer processing billable charge count, and	The status of the invoice request is changed to **Processed** else it is changed to **Deferred Processing**.

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
the invoice processing date does not exceed the system date	

Note:

The **Submit** button appears when the invoice request is in the **Draft** status and invoice request type is **Manual**.

Approving an Invoice Request

You can view the number of invoice requests which are pending for approval in the **Invoice Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the invoice request based on the observations.

Note: The system will not allow you to approve, reject, or resubmit an invoice request submitted by you.

Prerequisites

To approve an invoice request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an invoice request:

1. Do either of the following:

If you want to...	Then...
Approve an invoice request through the Invoice Request screen	**a.** Search for the invoice request in the **Invoice Request** screen. **b.** In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request which you want to review.
Approve an Invoice request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-INVRATODO** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the invoice request that you want to review.

Copyright © 2024, Oracle and/or its affiliates.

The **Invoice Request** screen appears.

2. Review the details in the **Invoice Request** screen.
3. If the information in the invoice request is accurate, then click the **Approve** button in the **Invoice Request** zone.

   The system behaves in the following manner:

If...	Then...
The status of the invoice request is changed to **Approved**	A To Do entry is created using the To Do type **F1-TODOCOMPL** specified in the approval profile and is assigned back to the submitter to complete the invoice request.

Note: The **Approve** button appears when:

- The invoice request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the invoice request.

Rejecting an Invoice Request

Prerequisites

To reject an invoice request, you should have:

- Reasons defined for the **Rejected** status of the **C1-InvoiceRequest** business object in the **Status Reason** screen.

Note: The system will not allow you to approve, reject, or resubmit an invoice request submitted by you.

Procedure

To reject an invoice request:

1. Do either of the following:

If you want to...	Then...
Reject an invoice request through the Invoice Request screen	**a.** Search for the invoice request in the **Invoice Request** screen. **b.** In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request which you want to review.
Reject an invoice request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-INVRATODO** in the **To Do Type** field.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	d. Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the invoice request that you want to review.

The **Invoice Request** screen appears.

2. Review the details in the **Invoice Request** screen.
3. If the information in the invoice request is incorrect, then click the **Reject** button in the **Invoice Request** zone.
The **Reject Invoice Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the invoice request. **Note:** The list includes only those reasons which are defined for the **Rejected** status of the **C1-InvoiceRequest** business object in the **Status Reason** screen.	Yes
Comments	Used to specify additional information for rejecting the invoice request.	No

Note: The **Reject** button appears when:

- The invoice request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the invoice request.

4. Select the reason for rejecting the invoice request from the **Status Reason** list.
5. Click **Save**.
The status of the invoice request is changed to **Rejected**.

Requesting the Submitter to Resubmit the Invoice Request for Approval

Procedure

To request the submitter to resubmit the invoice request for approval:

1. Do either of the following:

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
Request for resubmitting an invoice request through the Invoice Request screen	**a.** Search for the invoice request in the **Invoice Request** screen. **b.** In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to the invoice request which you want to review.
Request for resubmitting an invoice request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-INVRATODO** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the invoice request that you want to review.

The **Invoice Request** screen appears.

2. Review the details in the **Invoice Request** screen.
3. If the information in the invoice request is incomplete and you want the submitter to make the required changes *a*nd resubmit the invoice request for approval, then click the **Resubmit** button in the **Invoice Request** zone.
The **Resubmit Invoice Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the invoice request before resubmitting it for approval.	Yes

Note: The **Resubmit** button appears when:

- The invoice request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the invoice request.

4. Specify the changes in the **Comments** field and then click **Save**.
A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the invoice request type. In addition, the status of the invoice request is changed to **Draft**.

Viewing the Log of an Invoice Request

Procedure

To view the log of an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to *t*he invoice request whose log you want to view.
   The **Invoice Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. View the complete trail of actions performed on the invoice request in the **Invoice Request Log** zone.

Adding a Log Entry for an Invoice Request

Procedure

To add a log entry for an invoice request:

1. Search for the invoice request in the **Invoice Request** screen.
2. In the **Search Results** section, click the link in the **Invoice Request Information** column corresponding to *t*he invoice request for which you want to add a log entry.
   The **Invoice Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Invoice Request Log** zone.

   The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the invoice request.	Not applicable
Log Details	Used to specify the reason for adding a log entry for the invoice request.	Yes

5. Enter the required details in the **Log Details** field.
6. Click **Save**.
   The log entry is added for the **Invoice Request Log** zone.

Chapter 42

Refund/Write Off Request

Topics:

- Prerequisites
- Refund Request (Without Approval) Status Transition
- Refund Request (With Approval) Status Transition
- Write Off Request (Without Approval) Status Transition
- Write Off Request (With Approval) Status Transition
- Account Level Refund/Write Off
- Refund/Write Off Adjustment at Bill Level
- Algorithms Used in C1-RefundReq
- Algorithms Used in C1-WORequest
- Refund/Write Off Request Type
- Refund/Write Off Request
- Refund Request
- Write Off Request

Oracle Revenue Management and Billing allows you to refund and write off amount to the account. If the amount received from the payor account is matched against the suspense or excess credit contract, the system facilitates you to refund the amount to the payor. In addition, you can refund the amount of a credit bill line item, such as credit bill segment or adjustment, if required. To refund the amount to the account holder, you need to create refund adjustments through a refund request. While creating a refund request, you need to specify the refund request type using which you want to create the refund request. It is the refund request type which helps the system to determine:

- Whether the refund request must be approved before creating refund adjustments in the system
- Approval profile using which the refund request must be approved
- Whether multi-level or single-level approval is required while creating refund adjustments in the system
- Tolerance limit for refund (i.e. minimum refund amount)
- Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
- Default adjustment type using which refund adjustments must be created

The system allows you to create refund adjustments only using those adjustment types where A/P request type is defined. Once the refund adjustments are created, the A/P Extract process will extract the information and accordingly refund the amount to the payor. During the refund request process, a refund request goes through various statuses in its lifecycle. For more information about the refund request statuses, see Refund Request (Without Approval) Status Transition on page 2563 and Refund Request (With Approval) Status Transition on page 2564.

Note that the lifecycle of a refund request is driven by the business object using which the refund request is created. A refund request business object named **C1-RefundReq** is shipped with the product. The refund request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-RefundReq** business object.

Similarly, the system facilitates you to write off the amount to the account through a write off request. While creating a write off request, you need to specify the write off request type using which you want to create the write off request. It is the write off request type which helps the system to determine:

- Whether the write off request must be approved before creating write off adjustments in the system
- Approval profile using which the write off request must be approved
- Whether multi-level or single-level approval is required while creating write off adjustments in the system
- Default adjustment type using which write off adjustments must be created

The system allows you to create write off adjustments only using those adjustment types where A/P request type is not defined. During the write off request process, a write off request goes through various statuses in its lifecycle. For more information about the write off request statuses, see Write Off Request (Without Approval) Status Transition on page 2565 and Write Off Request (With Approval) Status Transition on page 2566.

Note that the lifecycle of a write off request is driven by the business object using which the write off request is created. A write off request business object named **C1-WORequest** is shipped with the product. The write off request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-WORequest** business object.

For more information on how to setup the refund and write off request processes, see Prerequisites on page 2563.

Copyright © 2024, Oracle and/or its affiliates.

Prerequisites

To setup the refund request process, you need to do the following:

- Define the required adjustment types (for creating refund adjustments) where A/P request type is defined
- Define the required adjustment types (for creating write up adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define voided and rejected status reasons for the **C1-RefundReq** business object
- Assign the **C1-REFRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a refund request for approval
- Define the required approval profiles with the credit hierarchy and **C1-REFRQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen
- Define the required refund request types in the system

To setup the write off request process, you need to do the following:

- Define the required adjustment types (for creating write off adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define cancelled and rejected status reasons for the **C1-WORequest** business object
- Assign the **C1-WOREQ** To Do type to a To Do role whose users must receive To Do generated while submitting a write off request for approval
- Define the required approval profiles with the debit hierarchy and **C1-WOREQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen
- Define the required write off request types in the system

Account Level Refund/Write Off

Oracle Revenue Management and Billing enables you to create a refund/write off request at the account level. A new field named **Adjustment Level** is available while defining a refund/write off request. It allows you to control how the refund/write off adjustment should be created for the refund/write off request. It supports the following values:

- **Account** - Used when you want to create the refund/write off request at the account level. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the health insurance domain.

Copyright © 2024, Oracle and/or its affiliates.

- **Bill** - Used when you want to create the refund/write off request for a bill. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the financial services domain.
- **Segment** - Used when you want to create the refund/write off request for a bill, bill segment, adjustment, or payment of an account. Here, the refund/write off adjustment is created against the bill segment, adjustment, or payment segment, respectively. If you select this option, the system behaves in the traditional manner.

If you do not specify the value for the **Adjustment Level** field, the system considers the value defined in the **Default Adjustment Level** option type of the **C1_REFWO** feature configuration. If you select the **Account** option from the **Adjustment Level** list, the system checks the account balance while creating the refund/write off request. If the account balance is zero, the system throws an appropriate error message and does not allow you to create the refund/write off request at the account level. However, if the account balance is in credit, the system allows you to create a refund request for the account. Similarly, if the account balance is in debit, the system allows you to create a write off request for the account.

While creating a refund/write off request at the account level, the system, by default, sets the total refund/write off amount to the account balance. You cannot edit the refund/write off amount. Even, the post processing algorithms cannot update the refund/write off amount in the refund/write off request.

Note: The **Bills** and **Payments and Adjustments** tabs do not appear in the **Refund Request** and **Write Off Request** screens when the refund/write off request is created at the account level.

Before creating the refund/write off request at the account level, you need to do the following:

- Attach the **C1-NTACBAL** algorithm to the **Netting Account Balance** system event in the **Algorithms** tab of the **Installation Options - Framework** screen
- Set the netting contract type on the respective refund/write off request type

The system invokes the **C1-NTACBAL** algorithm while processing the refund/write off request where the adjustment level is set to **Account**. The **C1-NTACBAL** algorithm creates transfer adjustments on the netting contract of the account. The transfer adjustment creation process slightly varies depending on the adjustment level that is selected while defining a refund/write off request.

If the adjustment level is set to **Account**, the system checks whether a netting contract created using the netting contract type (specified in the refund/write off request type) exists for the account. If so, the system considers the unmatched financial transactions of the account and then creates a transfer adjustment against each of them on the netting contract. However, if the netting contract does not exist for the account, then the system does the following:

1. Creates a netting contract using the netting contract type specified in the refund/write off request type
2. Considers the unmatched financial transactions of the account and then creates a transfer adjustment against each of them on the netting contract

You can opt to exclude unmatched financial transactions of contracts created using a particular contract type by setting the **Excluded Contract types for netting** option type of the **C1_CMO** feature configuration. You can exclude multiple contract types by defining the **Excluded Contract types for netting** option type multiple times (with unique sequence number) in the feature configuration. This option type is considered only when the adjustment level is set to **Account**.

On submitting or approving a refund/write off request at the account level, the system validates whether the refund/write off amount matches the current account balance. If the refund/write off amount does not match the current account balance, the system does not allow you to process the refund/write off request. However, if the refund/write off amount matches the current account balance, the system creates the transfer adjustments and refund/write off adjustment on the netting contract of the account.

On voiding a refund request where the adjustment level is set to **Account**, the system cancels the transfer adjustments and refund adjustment on the netting contract of the account. And, on canceling a write off request where the adjustment level is set to **Account**, the system cancels the transfer adjustments and write off adjustment on the netting contract of the account.

Refund/Write Off Adjustment at Bill Level

Until now, you were able to create the refund/write off request for a bill or bill line item (i.e. bill segment or adjustment) of an account. On processing the refund/write off request, the system used to create refund/write off adjustment against the bill line item irrespective of whether the refund/write off is done at the bill or bill line item level. There was a requirement wherein the system should allow to create the refund/write off adjustment against the bill and not against the bill line items when the refund/write off is done at the bill level.

Now, Oracle Revenue Management and Billing enables you to create a refund/write off adjustment at the bill level. A new field named **Adjustment Level** is available while defining a refund/write off request. It allows you to control how the refund/write off adjustment should be created for the refund/write off request. It supports the following values:

- **Account** - Used when you want to create the refund/write off request at the account level. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the health insurance domain.
- **Bill** - Used when you want to create the refund/write off request for a bill. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the financial services domain.
- **Segment** - Used when you want to create the refund/write off request for a bill, bill segment, adjustment, or payment of an account. Here, the refund/write off adjustment is created against the bill segment, adjustment, or payment segment, respectively. If you select this option, the system behaves in the traditional manner.

By default, the adjustment level is set to **Segment**. If you select the **Bill** option from the **Adjustment Level** list, the system checks the account balance while creating the refund/write off request. If the account balance is zero, the system throws an appropriate error message and does not allow you to create the refund/write off request for the account. However, if the account balance is in credit, the system allows you to create a refund request for the account. Similarly, if the account balance is in debit, the system allows you to create a write off request for the account.

Note: The **Payments and Adjustments** tab does not appear in the **Refund Request** screen when the adjustment level is set to **Bill** in the refund request.

Before creating the refund/write off request where the adjustment level is set to **Bill**, you need to do the following:

- Attach the **C1-NTACBAL** algorithm to the **Netting Account Balance** system event in the **Algorithms** tab of the **Installation Options - Framework** screen
- Set the netting contract type on the respective refund/write off request type

The system invokes the **C1-NTACBAL** algorithm while processing the refund/write off request where the adjustment level is set to **Bill**. The **C1-NTACBAL** algorithm creates transfer adjustments on the netting contract of the account. The transfer adjustment creation process slightly varies depending on the adjustment level that is selected while defining a refund/write off request.

If the adjustment level is set to **Bill**, then the system checks whether a netting contract created using the netting contract type (specified in the refund/write off request type) exists for the account and its contract balance is equal to zero. If both the conditions are met, the system considers the unpaid bill segments and adjustments of the bill and then creates a transfer adjustment against each of them on the netting contract. However, if the netting contract does not exist for the account, then the system does the following:

1. Creates a netting contract using the netting contract type specified in the refund/write off request type
2. Considers the unpaid bill segments and adjustments of the bill and then creates a transfer adjustment against each of them on the netting contract

And, if the netting contract exists for the account, but its contract balance is not equal to zero, the system throws an appropriate error message on the user interface.

On voiding a refund request where the adjustment level is set to **Bill**, the system cancels the transfer adjustments and refund adjustment on the netting contract of the account. And, on canceling a write off request where the adjustment level is set to **Bill**, the system cancels the transfer adjustments and write off adjustment on the netting contract of the account.

Algorithms Used in C1-RefundReq

The following table lists the algorithms which are attached to the **C1-RefundReq** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields: • Refund or Write Off Request Type Description • Refund or Write Off Request Status Description • Refund or Write Off Request ID
Post-Processing	C1-REFWOPOSP	C1-REFWOPOSP	This algorithm recalculates and updates the total refund amount in the **Refund Request** zone when you change the refund amount against an entity while editing a refund request.
Validation	C1-REFUNDVAL	C1-REFUNDVAL	This algorithm validates the following for each entity that you have selected in the refund request: • The mandatory data, such as refund amount and adjustment type, is specified. • The refund amount is not less than zero. • The refund amount is not greater than the entity amount. • The refund amount is not greater than the eligible refund amount. • The partial refund is not done at the payment event or bill level.

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-REF-DFT	C1-REF-DFT	This algorithm fetches the account's main customer's name and address and displays in the **Refund Request** zone. In addition, when you refund the payments from the **Payment Event Summary** screen, this algorithm does the following: • The total eligible refund amount is calculated and accordingly displayed in the **Refund Request** screen. • The default refund adjustment type specified in the refund request type is fetched and displayed against the selected payment event or payments. • On selecting a payment event for refund, if all payments in the payment event are matched

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.
Submitted	Enter	C1-REFUNDSUB	C1-REFUNDSUB	This algorithm checks the following: • Whether the approval is required for the refund request. If the approval is required for a refund request, the status of the refund request is changed to **Approval In Progress**. However, if the approval is not required for a refund request, the status of the refund request is changed to **Creating Adjustment**. • At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the refund request. • Whether the approval profile attached to the refund request type has the credit hierarchy and C1-REFRQ To Do type defined.
Approval In Progress	Enter	C1-REFUNDAPP	C1-REFUNDAPP	This algorithm creates the following: • A To Do using the To Do type specified in the approval profile which is attached to the refund request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type.
Approved	Enter	C1-REFAPPRVD	C1-REFAPPRVD	This algorithm is triggered when the approver clicks the **Approve** button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the refund request is changed to **Approval In Progress** and the algorithm attached to the **Approval In Progress** status is invoked. If further approval is not required, the status

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				of the refund request is changed to **Creating Adjustment**.
Rejected	-	-	-	-
Creating Adjustment	Enter	C1-REFADJCRI	C1-REFADJCRI	This algorithm does the following: • Creates the refund adjustments for the refund request. These refund adjustments are created in the **Frozen** status. The adjustment ID is displayed corresponding to the entity in the **Refund Details** zone. • Stamps the bill ID of credit line item on the adjustment and the corresponding financial transaction. • If a match event is present for the credit bill line item and for payments which are matched against the excess credit contract, the existing match event is stamped on the refund or write up adjustment and the corresponding financial transaction. However, when a match event is not present for payments which are matched against the suspense contract or if the match event does not exist, a new match event is created and stamped on the refund or write up adjustment and the corresponding financial transaction. • If you are doing a partial refund for any entity, the corresponding match event status is set to **Open**. However, if you are refunding the entire eligible amount, the corresponding match event status is set to **Balanced**. • The details of the refund adjustments are added in the **A/P Check Request (CI_ADJ_APREQ)** table. • If a write up adjustment is created, the write up adjustment type specified in the refund request type is displayed corresponding to the entity in the **Refund Details** zone.
Processed	-	-	-	-
Voided	Enter	C1-REFVOID	C1-REFVOID	This algorithm is invoked on click of the **Void** button for a refund request which is in processed state.

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				The algorithm cancels all the frozen adjustments created for the refund request. The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (**F1_BUS_OBJ_STATUS_RSN_CHAR** table). If the reason is not found, it will use the status reason selected by the user

Algorithms Used in C1-WORequest

The following table lists the algorithms which are attached to the **C1-WORequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields: • Refund or Write Off Request Type Description • Refund or Write Off Request Status Description • Refund or Write Off Request ID
Post-Processing	C1-WOPOSP	C1-WOPOSP	This algorithm recalculates and updates the total write off amount in the **Write Off Request** zone when you change the write off amount against an entity while editing a write off request.
Validation	C1-WOBOVAL	C1-WOBOVAL	This algorithm validates the following for each entity that you have selected in the write off request: • The mandatory data, such as write off amount and adjustment type, is specified. • The write off amount is not less than zero. • The write off amount is not greater than the entity amount. • The write off amount is not greater than the eligible write off amount. • The partial write off is not done at the bill level. • The A/P Request Type is not defined in the selected adjustment type.

The following table lists the algorithms which are used in the lifecycle of the **C1-WORequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-WOSUBMIT	C1-WOSUBMIT	This algorithm checks the following: • Whether the approval is required for the write off request. If the approval is required for a write off request, the status of the write off request is changed to **Approval In Progress**. However, if the approval is not required for a write off request, the status of the write off request is changed to **Creating Adjustment**. • At least one debit bill line item (such as debit bill segment or adjustment) is selected in the write off request. • Whether the approval profile attached to the write off request type has the debit hierarchy and C1-WOREQ To Do type defined.
Approval In Progress	Enter	C1-WOAPPROVL	C1-WOAPPROVL	This algorithm creates the following: • A To Do using the To Do type specified in the approval profile which is attached to the write off request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type.
Approved	Enter	C1-WOAPPROVD	C1-WOAPPROVD	This algorithm is triggered when the approver clicks the **Approve** button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the write off request is changed to **Approval In Progress** and the algorithm attached to the **Approval In Progress** status is invoked. If further approval is not required, the status of the write off request is changed to **Creating Adjustment**.
Rejected	-	-	-	-
Creating Adjustment	Enter	C1-WOADJCRT	C1-WOADJCRT	This algorithm does the following: • Creates the write off adjustments for the write off request. These write off adjustments are created in the **Frozen** status. The adjustment ID is displayed corresponding to the entity in the **Write Off Details** zone. • Stamps the bill ID of debit line item on the adjustment and the corresponding financial transaction. • If a match event is present for the debit bill line item, the existing match event is stamped on the write off adjustment and the corresponding financial transaction. However, if the match event does not exist, a new match event is

Copyright © 2024, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				created and stamped on the write off adjustment and the corresponding financial transaction. • If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.
Processed	-	-	-	-
Cancelled	Enter	C1-WOCANCEL	C1-WOCANCEL	This algorithm is invoked on click of the **Cancel** button for a write off request which is in the **Processed** state. This algorithm cancels all the frozen adjustments created for the write off request. The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (**F1_BUS_OBJ_STATUS_RSN_CHAR** table). If the reason is not found, it will use the status reason selected by the user.

Refund/Write Off Request Type

Oracle Revenue Management and Billing allows you to define:

- **Refund Request Type** - It is used to create a refund request. You can define multiple refund request types in the system. A refund request type helps the system to determine:
  - Whether the refund request must be approved before creating refund adjustments in the system
  - Approval profile using which the refund request must be approved
  - Whether multi-level or single-level approval is required while creating refund adjustments in the system
  - Tolerance limit for refund (i.e. minimum refund amount)
  - Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
  - Default adjustment type using which refund adjustments must be created
- **Write Off Request Type** - It is used to create a write off request. You can define multiple write off request types in the system. A write off request type helps the system to determine:
  - Whether the write off request must be approved before creating write off adjustments in the system
  - Approval profile using which the write off request must be approved
  - Whether multi-level or single-level approval is required while creating write off adjustments in the system
  - Default adjustment type using which write off adjustments must be created

While defining a refund or write off request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the refund or write off request (which is created using the refund or write off request type) is sent for approval before creating the refund or write off adjustments. However, if the **Approval Required** check box is not selected, the refund or write off adjustments are created immediately on submitting a refund or write off request. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy is used for approving write off request and

Copyright © 2024, Oracle and/or its affiliates.

credit approval hierarchy is used for approving refund request. Therefore, while defining an approval profile for refund, you need to define credit hierarchy and set the To Do Type to **C1-REFRQ**. However, while defining an approval profile for write off, you need to define debit hierarchy and set the To Do Type to **C1-WOREQ**.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the refund or write off request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the `Manager` To Do role will approve or reject the refund or write off request, and at the second level, a user with the `Senior Manager` To Do role will approve or reject the refund or write off request. On submitting a refund or write off request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the refund or write off request, the refund or write off adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the refund or write off adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval - First Level (Threshold Amount: 300, To Do Role: `Manager`) and Second Level (Threshold Amount: 500, To Do Role: `Senior Manager`). Now, if the total refund or write off amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total refund or write off amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total refund or write off amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the refund or write off request and create the refund or write off adjustments.

The system supports both single-level and multi-level approval process while approving refund or write off request. If the **Hierarchical Approval** check box is selected while defining a refund or write off request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a refund or write off request type, the approval is required only from the approval level where the total refund or write off amount falls within the threshold limit. Let us understand this with the help of some examples.

Example 1

<table>
<tr><th>Refund Request Type</th><th>Approval Profile</th><th>Approval Hierarchy</th><th>Hierarchical Approval</th></tr>
<tr><td>R1</td><td>Refund Analyst</td><td>Credit Hierarchy<table><tr><th>Threshold Amount</th><th>To Do Role</th></tr><tr><td>$500</td><td>Senior Analyst</td></tr><tr><td>$750</td><td>Manager</td></tr><tr><td>$1500</td><td>Senior Manager</td></tr></table></td><td>Yes</td></tr>
<tr><td>R2</td><td>Refund Analyst</td><td>Credit Hierarchy<table><tr><th>Threshold Amount</th><th>To Do Role</th></tr><tr><td>$500</td><td>Senior Analyst</td></tr><tr><td>$750</td><td>Manager</td></tr><tr><td>$1500</td><td>Senior Manager</td></tr></table></td><td>No</td></tr>
</table>

The following table indicates how the system will behave in different refund scenarios:

Copyright © 2024, Oracle and/or its affiliates.

Refund Request	Refund Request Type	Total Refund Amount ($)	Comments
RR1	R1	200	This refund request is automatically approved by the system because the total refund amount is less than $500.
RR2	R1	750	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role This is because the total refund amount is either equal to $750 or less than $1500 and hierarchical approval is required.
RR3	R1	2000	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role **3.** Users with the `Senior Manager` To Do role This is because the total refund amount is greater than $1500 and hierarchical approval is required.
RR4	R2	200	This refund request is automatically approved by the system because the total refund amount is less than $500.
RR5	R2	750	The To Do is sent for approval to users with the `Manager` To Do role. This is because the total refund amount is either equal to $750 or less than $1500 and hierarchical approval is not required.
RR6	R2	2000	The To Do is sent for approval to users with the `Senior Manager` To Do role. This is because the total refund amount is greater than $1500 and hierarchical approval is not required.

Example 2

Write Off Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval
W1	Write Off Analyst	**Debit Hierarchy** **Threshold Amount** / **To Do Role** $100 / Senior Analyst $200 / Manager $300 / Senior Manager	Yes
W2	Write Off Analyst	**Debit Hierarchy** **Threshold Amount** / **To Do Role** $100 / Senior Analyst $200 / Manager	No

Copyright © 2024, Oracle and/or its affiliates.

Write Off Request Type	Approval Profile	Approval Hierarchy		Hierarchical Approval
		Threshold Amount	**To Do Role**	
		$300	Senior Manager	

The following table indicates how the system will behave in different write off scenarios:

Write Off Request	Write Off Request Type	Total Write Off Amount ($)	Comments
WO1	W1	90	This write off request is automatically approved by the system because the total write off amount is less than $100.
WO2	W1	250	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role This is because the total write off amount is either equal to $200 or less than $300 and hierarchical approval is required.
WO3	W1	500	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role **3.** Users with the `Senior Manager` To Do role This is because the total write off amount is greater than $300 and hierarchical approval is required.
WO4	W2	90	This write off request is automatically approved by the system because the total write off amount is less than $100.
WO5	W2	250	The To Do is sent for approval to users with the `Manager` To Do role. This is because the total write off amount is either equal to $200 or less than $300 and hierarchical approval is not required.
WO6	W2	500	The To Do is sent for approval to users with the `Senior Manager` To Do role. This is because the total write off amount is greater than $300 and hierarchical approval is not required.

The **Refund/Write Off Request Type** screen allows you to define, edit, delete, and copy a refund and write off request type. This screen consists of the following zones:

- Refund/Write Off Request Type List on page 2578
- Refund/Write Off Request Type on page 2579

Refund/Write Off Request Type List

The **Refund/Write Off Request Type List** zone lists refund and write off request types that are already defined in the system. It contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Description	Displays the description of the refund or write off request type.
Edit	On clicking the **Edit** (✎) icon, the **Refund/Write Off Request Type** screen appears where you can edit the details of the refund and write off request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Refund/Write Off Request Type** screen appears where you can define a refund and write off request type using an existing refund and write off request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the refund or write off request type.
	Note: You can delete a refund or write off request type when you have not created a refund or write off request using the refund or write off request type.

On clicking the **Broadcast** (📡) icon corresponding to refund or write off request type, the **Refund/Write Off Request Type** zone appears with the details of the respective refund or write off request type.

Refund/Write Off Request Type

The **Refund/Write Off Request Type** zone displays the details of the refund or write off request type. This zone consists of the following sections:

- **Main** - This section provides basic information about the refund or write off request type. It contains the following fields:

Field Name	Field Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Refund/Write Off Request Business Object	Indicates the business object that will be used to create the refund or write off request.
	Note: It has a link. On clicking the link, the **Business Object** screen appears with the details of the respective business object.
Description	Displays the description of the refund or write off request type.
Detailed Description	Displays additional information about the refund or write off request type.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Status	Indicates the status of the refund or write off request type. The valid values are: • Active • Inactive
Action	Indicates whether the request type is created for refund or write off. The valid values are: • Refund • Write Off
Minimum Refund Amount	Displays the minimum refund amount. **Note:** This field appears when the **Action** field is set to **Refund**.
Write Up Adjustment Type	Indicates the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount. **Note:** This field appears when the **Action** field is set to **Refund**.
Approval Required	Indicates whether approval is required while creating the refund or write off adjustments using the refund or write off request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the refund or write off request type. **Note:** This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **Approval Profile** screen appears with the details of the respective approval profile.
Hierarchical Approval	Indicates whether multi-level or single approval is required while creating the refund or write off adjustments using the refund or write off request type. **Note:** This field appears when the **Approval Required** check box is selected.
Adjustment Type	Indicates the adjustment type using which the refund or write off adjustments must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears with the details of the respective adjustment type.
Netting Contract Type	Indicates the contract type used for netting transactions when processing refunds or write-offs.

- **Characteristics** - This section lists the characteristics of the refund or write off request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund or write off request type.
Delete	Used to delete the refund or write off request type.
	Note: You can delete a refund or write off request type when you have not created a refund or write off request using the refund or write off request type.
Duplicate	Used to create a new refund or write off request type using an existing refund or write off request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund or write off request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Refund/Write Off Request Type** zone does not appear in the **Refund/Write Off Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the refund or write off request type in the **Refund/Write Off Request Type List** zone.

Defining a Refund or Write Off Request Type

Prerequisites

To define a refund or write off request type, you should have:

- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To define a refund or write off request type:

Copyright © 2024, Oracle and/or its affiliates.

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Refund/Write Off Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type Business Object	Used to indicate the business object that you want to use to create the refund or write off request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple refund and write off request type business objects defined in the application. If there is only one refund and write off request type business object defined in the application, the **Refund/Write Off Request Type** screen appears.

4. Select the required refund and write off request type business object from the respective field.
5. Click **OK**.

   The **Refund/Write Off Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the refund or write off request type.
   - **Characteristics** - Used to define the characteristics for the refund or write off request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the refund and write off request type business object used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object that you want to use while creating the refund or write off request.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No
Status	Used to indicate the status of the refund or write off request type. The valid values are: • Active • Inactive	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot change the status of a refund or write off request type to **Inactive** if there are refund or write off requests which are created using the refund or write off request type and are currently in the **Draft** or **Approval In Progress** status.	
Action	Used to indicate whether the request type is created for refund or write off. The valid values are: • Refund • Write Off	Yes
Minimum Refund Amount	Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment. **Note:** This field appears when the **Action** field is set to **Refund**.	Yes
Write Up Adjustment Type	Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount. **Note:** This field appears when the **Action** field is set to **Refund**. You can create write up adjustments only using those adjustment types where A/P request type is not defined.	Yes
Approval Required	Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Approval Required** check box is selected.	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type. **Note:** This field appears only when the **Approval Required** check box is selected.	No
Refund Adjustment Type	Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request. **Note:** This field appears when the **Action** field is set to **Refund**. The list includes only those adjustment types where A/P request type is defined.	Yes
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request. **Note:** This field appears when the **Action** field is set to **Write Off**. You can create write off adjustments only using those adjustment types where A/P request type is not defined.	Yes
Netting Contract Type	Used to indicate the contract type used for netting transactions when processing refunds or write-offs.	No

6. Enter the required details depending on whether you want to define refund or write off request type.

Note: You can search for an adjustment type by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define characteristics for the refund or write off request type, if required.

Copyright © 2024, Oracle and/or its affiliates.

8. Click **Save**.
   The refund or write off request type is defined.

Defining a Characteristic for a Refund or Write Off Request Type

Prerequisites

To define a characteristic for a refund or write off request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request Type**)

Procedure

To define a characteristic for a refund or write off request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a refund or *w*rite off request type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Refund Write Off Request Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the refund or write off request type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the refund or write off request type.

2. Enter the required details in the **Characteristics** section.

> **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the refund or write off request type, click the **Add** (+) *i*con and then repeat step *2*.

> **Note:** However, if you want to remove a characteristic from the refund or write off request type, click the **Delete** (🗑) icon corresponding to the characteristic.

How to define a characteristic for a refund or write off request type	Defining a Characteristic for a Refund or Write Off Request Type on page 2585

Copying a Refund or Write Off Request Type

Instead of creating a refund or write off request type from scratch, you can create a new refund or write off request type using an existing refund or write off request type. This is possible through copying a refund or write off request type. On copying a refund or write off request type, the details including the characteristics are copied to the new refund or write off request type. You can then edit the details, if required.

Prerequisites

To copy a refund or write off request type, you should have:

- Refund or Write Off request type (whose copy you want to create) defined in the application
- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To copy a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
   The **Refund/Write Off Request Type** screen appears.
4. In the **Refund/Write Off Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the refund or write off request type whose copy you want to create.

   The **Refund/Write Off Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the refund or write off request type.
   - **Characteristics** - Used to define the characteristics for the refund or write off request type.

   The **Main** section contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the refund and write off request type business object used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object that you want to use while creating the refund or write off request.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No
Status	Used to indicate the status of the refund or write off request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a refund or write off request type to **Inactive** if there are refund or write off requests which are created using the refund or write off request type and are currently in the **Draft** or **Approval In Progress** status.	Yes
Action	Used to indicate whether the request type is created for refund or write off. The valid values are: • Refund • Write Off	Yes
Minimum Refund Amount	Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment. **Note:** This field appears when the **Action** field is set to **Refund**.	Yes
Write Up Adjustment Type	Used to indicate the adjustment type using which the write up adjustment must be	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	created when the total refund amount is less than the minimum refund amount. **Note:** This field appears when the **Action** field is set to **Refund**. You can create write up adjustments only using those adjustment types where A/P request type is not defined.	
Approval Required	Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type. **Note:** This field appears only when the **Approval Required** check box is selected.	No
Refund Adjustment Type	Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request. **Note:** This field appears when the **Action** field is set to **Refund**. The list includes only those adjustment types where A/P request type is defined.	Yes
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line	Yes

Searching for a Refund or Write Off Request

Prerequisites

To search for a refund or write off request, you should have:

- Refund or Write Off request types defined in the application

Procedure

To search for a refund or write off request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request** sub-menu.
   The **Refund/Write Off Request** screen appears.
4. Enter the search criteria in the **Search Refund/Write Off Request** zone depending on whether you want to *s*earch for a refund or write off request.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Copyright © 2024, Oracle and/or its affiliates.

5. Click **Search**.
   A list of refund or write off requests that meet the search criteria appears in the **Search Results** section.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the Account Receivable Central screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. **c.** Search for the bill in the **Account Receivable Central** screen. **d.** In the **Search Results** section, select the required bill and then click **Refund**. **Note:** Only one bill at a time is allowed to select for **Refund Request** from the **Account Receivable Central** screen.
Define a refund request from the Refund Request screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**. A sub-menu appears. **c.** Click the **Add** option from the **Refund/Write Off Request** sub-menu.
Define a refund request from the Payment Event Summary screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Payments** and then click **Payment Event Summary**. **c.** Search for the payment event (whose payments you want to refund) in the **Payment Event Summary** screen. **d.** In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the payment event whose payments you want to view. The **Payments** zone appears.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	e. Select the check box corresponding to the payments that you want to refund. **f.** Click the **Refund** button in the **Payments** zone.

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	Used to indicate the type of request (refund or write off) to be created. **Note:** This field is pre-populated if the refund request is created from the **Account Receivable Central** screen. This field is editable if the refund request is created from the **Refund/Write Off Request** screen. This field appears read-only when you access the select **Request Type** screen from the **Payment Event Summary** screen.	Not applicable
Refund/Write Off Request Type	Used to indicate the request type using which you want to create the refund or write off request. **Note:** The refund request types are listed when you set the **Action** field to **Refund** and the write off request types are listed when you set the **Action** field to **Write Off**.	Yes
Account	Used to indicate the account for which you want to create the refund or write off request. **Note:** This field is pre-populated if the refund request is created from the **Account Receivable Central** screen. This field is editable if the refund request is created from the **Refund/Write Off Request** screen. You can search for an account by clicking the **Search** (🔍) icon corresponding to the respective field. This field appears read-only when you access the select **Request Type** screen from the **Payment Event Summary** screen.	Yes
Adjustment Level	Used to indicate the adjustment level for which you want to create the refund request. **Note:** It is a read-only field.	No

Copyright © 2024, Oracle and/or its affiliates.

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

   The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the refund request. It contains the following tabs:

Note: The refund request can be created only for bill with outstanding amount lesser than zero.

- **Main** - Displays information about the refund request. It contains the following zones:
  - **Refund Request** - Displays the details of the refund request.
  - **Refund Details** - Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
- **Payments** - Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
- **Bills** - Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears when the refund request is in the **Draft** status.
- **Log** - Lists the complete trail of actions performed on the refund request.

4. Add payment events, payments, or credit bill line items that you want to refund.
5. Edit the refund amount of each entity, if required.
6. Define characteristics for the refund request, if required.
7. Override the address if you want to sent the refund to an address other than the account's main customer address.

Adjustment Level	Indicates the adjustment level for which you want to create the write off request. **Note:** It is a read-only field.	No

- **Characteristics** - Lists the characteristics defined for the refund request. It contains the following fields:

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the refund request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund request. **Note:** The **Edit** button appears when the refund request is in the **Draft** status.
Delete	Used to delete the refund request. **Note:** The **Delete** button appears when the refund request is in the **Draft** status.
Submit	Used to submit the refund request for approval. **Note:** The **Submit** button appears when the refund request is in the **Draft** status.
Approve	Used to approve the refund request. **Note:** The **Approve** button appears when: • The refund request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the refund request.
Reject	Used to reject the refund request. **Note:** The **Reject** button appears when: • The refund request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the refund request.
Void	Used to void the refund request. **Note:** The **Void** button appears when the refund request is in the **Processed** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the refund request status is updated
Create Date/Time	Displays the date and time when the refund request is created.

Copyright © 2024, Oracle and/or its affiliates.

Refund Details

The **Refund Details** zone lists the payment events, payments, and credit bill line items (such as bill segments and adjustments) that you have added to the refund request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a payment event, payment, bill, bill segment, or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Refund Amount	Displays the amount that must be refunded. **Note:** By default, the amount which is eligible for refund appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created or against which the payment is matched. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created. **Note:** By default, the adjustment type specified in the refund request type appears in this column. You can change the adjustment type, if required, by editing the refund request.
Adjustment Information	Displays information about the refund adjustment. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment. The data appears in this column when the status of the refund request is **Processed**. The information string appears when an algorithm of the **C1-ADI-INFO** algorithm type is attached to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Payment Refunded	Displays the amount that has been refunded.

Note: On clicking the Broadcast () icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

Copyright © 2024, Oracle and/or its affiliates.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast** (📡) icon corresponding to the bill in the **Refund Details** zone.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

How to add a credit bill line item to the refund request	Adding a Credit Bill Line Item to the Refund Request on page 2624

Bills

The **Bills** tab allows you to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:

- Search Bills on page 2612
- Bill Line Items on page 2613

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using bill or bill and price item details. The valid values are: • Bill Details • Bill and Price Item Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search a particular bill. **Note:** The **Search** icon appears corresponding to this field. On clicking the Search icon the **Bill Search** window appears.	No
Bill Date From	Used to search bills which are created from a particular date onwards. **Note:** You can either manually specify the date or select it using the **Date Picker** icon corresponding to the field. The bill date from date cannot be later than the bill date to date.	No
Bill Date To	Used to search bills which are created till a particular date.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can either manually specify the date or select it using the **Date Picker** icon corresponding to the field. The bill date to date cannot be earlier than the bill date from date.	
Price Item	Used to search bills which are created for a particular price item. **Note:** This field appears when you select **Bill and Price Item Details** option from the **Search By** list. You can search for a price item by clicking the **search** (🔍) icon corresponding to the field.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

If you want to refund a bill with credit balance and all credit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All credit bill segments and adjustments of the bill are added in the **Refund Details** zone on the **Main** tab. However, if you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application.
	Note: It has a link. If the entity is a bill segment, the **Bill Segment** screen appears where you can view the details of the respective bill segment on clicking the link. However, if the entity is an adjustment, the **Adjustment** screen appears with the details of the respective adjustment on clicking the link.
Entity Amount	Displays the bill segment or adjustment amount.
Eligible Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Amount Refunded	Displays the amount which is already refunded to the account.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.

You can select one or more credit bill segments or adjustments and click the **Add** button in this zone to add selected credit bill segments or adjustments to the refund request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast** ( ) icon corresponding to the bill in the **Search Bills** zone.

Payments and Adjustments

The **Payments** tab allows you to search payment events or individual payments that you want to refund. It contains the following zones:

- Search Payment Event on page 2614
- Payments on page 2616

Search Payment Event

The **Search Payment Event** zone lists the payment events which are created for the account. You can filter the payment events using various search criteria. This zone contains the following two sections:

Copyright © 2024, Oracle and/or its affiliates.

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a payment event using the payment details. The valid values are: • Payment Details **Note:** By default, the **Payment Details** option is selected.	Yes
Payment Event ID	Used to search a particular payment event.	No
Suspense/Excess Credit Contract	Used to search payment events which include payments made against a particular suspense or excess credit contract. **Note:** The suspense and excess credit contracts are listed when these contracts are associated with the account	No
Check Number	Used to search a payment event which includes payment made through a particular check.	No
Payment Date	Used to search payment events which include payments created from a particular date onwards.	No
To	Used to search payment events which include payments created till a particular date.	No
MICR ID	Used to search payment events which include payments made with a particular MICR code.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Payment Event Information	Displays additional information about the payment event. **Note:** It has a link. On clicking the link, the **Payment Event** screen appears where you can view the details of the respective payment event.
Payment Date	Displays the date when the payments were created.
Tender Amount	Displays the tender amount.
Payment Event ID	Displays the payment event ID.

If you want to refund all payments of a payment event, you need to select the check box corresponding to the payment event and then click the **Add** button in the **Search Results** section. If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone on the **Main** tab. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Note: If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

Payments

The **Payments** zone lists only those payments which are created through the payment event and are currently in the **Frozen** status. This zone contains the following columns:

Column Name	Column Description
Payment ID	Displays the payment ID.
	Note: It has a link. On clicking the link, the **Payment** screen appears where you can view the details of the respective payment.
Payee Account Information	Displays additional information about the account for which the payment was made.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Payment Amount	Displays the payment amount.
Payment Currency	Indicates the currency in which the payment was made.
Payment Status	Indicates the status of the payment.
Match Type	Indicates the match type using which the payment was matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment was matched.
Amount Refunded	Displays the amount which is already refunded to the payor account.

You can select one or more payments and click the **Add** button in this zone to add selected payments to the refund request.

By default, the **Payments** zone does not appear in the **Payments** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the payment event in the **Search Payment Event** zone.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the Account Receivable Central screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. **c.** Search for the bill in the **Account Receivable Central** screen. **d.** In the **Search Results** section, select the required bill and then click **Refund**. **Note:** Only one bill at a time is allowed to select for **Refund Request** from the **Account Receivable Central** screen.
Define a refund request from the Refund Request screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**. A sub-menu appears.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	c. Click the **Add** option from the **Refund/Write Off Request** sub-menu.
Define a refund request from the Payment Event Summary screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Payments** and then click **Payment Event Summary**. **c.** Search for the payment event (whose payments you want to refund) in the **Payment Event Summary** screen. **d.** In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the payment event whose payments you want to view. The **Payments** zone appears. **e.** Select the check box corresponding to the payments that you want to refund. **f.** Click the **Refund** button in the **Payments** zone.

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	Used to indicate the type of request (refund or write off) to be created. **Note:** This field is pre-populated if the refund request is created from the **Account Receivable Central** screen. This field is editable if the refund request is created from the **Refund/Write Off Request** screen. This field appears read-only when you access the select **Request Type** screen from the **Payment Event Summary** screen.	Not applicable
Refund/Write Off Request Type	Used to indicate the request type using which you want to create the refund or write off request. **Note:** The refund request types are listed when you set the **Action** field to **Refund** and the write off request types are listed when you set the **Action** field to **Write Off**.	Yes
Account	Used to indicate the account for which you want to create the refund or write off request.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is pre-populated if the refund request is created from the **Account Receivable Central** screen. This field is editable if the refund request is created from the **Refund/Write Off Request** screen. You can search for an account by clicking the **Search** (🔍) icon corresponding to the respective field. This field appears read-only when you access the select **Request Type** screen from the **Payment Event Summary** screen.	
Adjustment Level	Used to indicate the adjustment level for which you want to create the refund request. **Note:** It is a read-only field.	No

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

   The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the refund request. It contains the following tabs:

Note: The refund request can be created only for bill with outstanding amount lesser than zero.

- **Main** - Displays information about the refund request. It contains the following zones:
  - **Refund Request** - Displays the details of the refund request.
  - **Refund Details** - Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
- **Payments** - Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
- **Bills** - Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears when the refund request is in the **Draft** status.
- **Log** - Lists the complete trail of actions performed on the refund request.

4. Add payment events, payments, or credit bill line items that you want to refund.
5. Edit the refund amount of each entity, if required.
6. Define characteristics for the refund request, if required.
7. Override the address if you want to sent the refund to an address other than the account's main customer address.

Defining a Characteristic for a Refund Request

Prerequisites

To define a characteristic for a refund request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define a characteristic for a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column *c*orresponding to the refund request whose details you want to edit.
   The **Refund Request** screen appears.
3. Click the **Edit** button in the **Refund Request** zone.
   The **Edit Refund Request** screen appears.

   Note: The **Edit** button appears only when the refund request is in the **Draft** status.
4. Ensure that the **Characteristics** section is expanded when you are editing the refund request.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Refund Write Off Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the refund request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the refund request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the refund request, click the **Add** (+) icon and then *r*epeat step *5*.

Note: However, if you want to remove a characteristic from the refund request, click the **Delete** (🗑) icon corresponding to the characteristic.

Adding a Payment Event to the Refund Request

Prerequisites

To add a payment event to the refund request, you should have:

- Payments made by the account for which you need to create the refund request

Procedure

To add a payment event to the refund request:

1. Click the **Payments** tab in the **Refund Request** screen.
   The **Payments** tab appears.
2. Filter the payment events, if required, in the **Search Payment Event** zone.

Note: You can only refund payments, which are matched against suspense or excess credit contracts, to the payor account. Therefore, you can only view payment events which includes payments matched against suspense or excess credit contracts. If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

3. Select the check box corresponding to the payment event, whose payments you want to refund, in the **Search *R*esults** section.

Note: You can add more than one payment event to the refund request at the same time.

4. Click **Add**.
   A message appears indicating that the selected payment events are added to the refund request.
5. Click **OK**.

   Note that the entity is added in the **Refund Details** zone on the **Main** tab.

Copyright © 2024, Oracle and/or its affiliates.

Note:

You can only refund payments which are in the **Frozen** status.

If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Adding a Credit Bill to the Refund Request

You can refund the credit bills to the account.

Prerequisites

To add a credit bill to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.
   The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

> **Note:** If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add the credit bill to the refund request	**a.** In the **Search Bills** zone, select the bills that you want to refund. **b.** Click the **Add** button available at the upper left corner of the **Search Bills** zone.
	Note: Default adjustment type selected in the write off request type should be non A/P.
A bill has credit balance and one or more debit line items and you want to add the credit bill to the refund request	**a.** In the **Search Bills** zone, select the bills that you want to refund. **b.** Click the **Add** button available at the upper left corner of the **Search Bills** zone.
	Note: Default adjustment type selected in the write off request type should be non A/P.

4. Click **Add**.
   A message appears indicating that the selected bills are added to the refund request.

> **Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.

   Note that all the credit bill segments or adjustments of the bills are added in the **Refund Details** zone on the **Main** tab.

> **Note:**
>
> Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.
>
> The system will not allow you to add a debit line item to the **Refund Details** zone.

Adding a Credit Bill Line Item to the Refund Request

You can refund the credit bill line items, such as bill segments and adjustments, to the account. While adding a credit bill line item to the refund request, you can either:

- Directly add all credit line items of a bill to the refund request by adding the bill which has all bill segments and adjustments in credit
- Individually add a credit bill segment or adjustment of a bill (with one or more credit line items) to the refund request

Prerequisites

To add a credit bill line item to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill line item to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.
   The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

> **Note:** If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add a particular credit bill line item to the refund request	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or adjustment that you want to refund.
A bill has credit balance and one or more debit line items	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or adjustment that you want to refund.
A bill has debit balance and one or more credit line items	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or adjustment that you want to refund.

Copyright © 2024, Oracle and/or its affiliates.

4. Click **Add**.
   A message appears indicating that the selected bill segments or adjustments are added to the refund request.

   Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.

   Note that the credit bill segments or adjustments are added in the **Refund Details** zone on the **Main** tab.

   Note:

   Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.

   The system will not allow you to add a debit line item to the **Refund Details** zone.

Editing a Refund Request

Prerequisites

To edit a refund request, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column *c*orresponding to the refund request whose details you want to edit.
   The **Refund Request** screen appears.
3. Click the **Edit** button in the **Refund Request** zone.

   The **Edit Refund Request** screen appears. It contains the following section:

Field Name	Field Description	Mandatory (Yes or No)
Refund Request Information	Displays information about the refund request.	Not applicable
Account Information	Indicates the account for which the refund request is created.	Not applicable
Person Name	Used to indicate the person for whom the refund request is created.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The system maintains a log when you edit the person name in a refund request. A log is created in the following format: `Person Name is changed; ' Old Value: <OLD NAME>; New ' Value: <NEW NAME>`	
Override Address	Used to indicate whether the account's mailing address must be overridden. **Note:** By default, the account's main customer's address appears in the following fields - Address 1, Address 2, Address 3, Address 4, City, Country, State, and Postal. You can override the address in these fields, if required. The system maintains a log when you edit the address in a refund request. A log is created in the following format: `Address is changed; Old ' Value: <OLD ADDRESS>; New ' Value: <NEW ADDRESS>`	No
Address 1	Used to specify the house number and apartment name.	No
Address 2	Used to specify the street name.	No
Address 3	Used to specify any landmark, if available.	No
Address 4	Used to specify the village, town, or city name.	No
City	Used to specify the city name.	No
Country	Used to specify the country name.	No
State	Used to specify the state name.	No
Postal	Used to specify the postal or zip code.	No
Comments	Used to specify additional information about the refund request.	No

In addition, this screen contains the following two sections:

- **Characteristics** - Used to define the characteristics for the refund request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Refund Write Off Request**.	**Note:** This field is required when you are defining a characteristic for the refund request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the refund request.

4. Modify the details of the refund request, if required.
5. Define, edit, or remove characteristics of the refund request, if required.
6. Click **Save**.
   The changes made to the refund request are saved.

Editing the Refund Details

Prerequisites

To edit the refund details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the refund details:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column *c*orresponding to the refund request whose bill line item details you want to edit.
   The **Refund Request** screen appears. You can edit the bill line items by either of the following ways:

Copyright © 2024, Oracle and/or its affiliates.

If...	Then
Select the bill whose details you want to edit in the **Refund Details** zone and click the **Edit** button available in the upper left corner of this zone.	The **Edit Request Details** screen appears.
In the **Refund Details** zone, click the **Broadcast** (📡) icon corresponding to the bill whose line items details you want to edit.	The **Bill Line Items** zone appears. **Note:** This zone appears when the Entity Type is **Bill**. **a.** Select the bill line item whose details you want to edit in the **Bill Line Items** zone and click the **Edit** button available in the upper left corner of this zone. The **Edit Request Details** screen appears.

Note: A bill line item from the refund request can be edited when the refund request is in the **Draft** status.

The **Edit Request Details** screen contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the refund request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	Indicates the adjustment type of the refund request type. You can search for an adjustment type by clicking the **Search**(🔍) icon corresponding to the field.	No

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are • Adjustments • Bill • Bill Segment • Payment Event • Payment
Entity ID	Displays the entity ID.
Entity Amount	Displays the entity amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the amount that must be refunded.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.

Copyright © 2024, Oracle and/or its affiliates.

Column Name	Column Description
	Note: You can search for an account by clicking the **Search**(🔍) icon corresponding to the field.
Bill ID	Displays the bill ID.

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the refund request.

Note:

In the **Bill Line Items** zone, click the **Broadcast** (📡) icon corresponding to the bill line item which you want to delete

Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

3. Modify the details of the bill line items.
4. Click **Save**.
   The changes made to the refund bill line items are saved.

Submitting a Refund Request

Prerequisites

To submit a refund request, you should have:

- Payment events, payments, or credit bill line items added in the refund request

Procedure

To submit a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request that you want to submit.
   The **Refund Request** screen appears.
3. Click the **Submit** button in the **Refund Request** zone.

   The system behaves in the following manner:

If...	Then...
The **Approval Required** and **Hierarchical Approval** check boxes are selected in the refund request type using which the refund request is created	A To Do of the **C1-REFRQ** To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the refund request is changed to **Approval In Progress**.
The **Approval Required** check box is selected, but the **Hierarchical Approval** check box is not selected in the refund request type using which the refund request is created	A To Do of the **C1-REFRQ** To Do type is created and sent to the approver at the hierarchy level where the total refund amount falls within the threshold limit. In addition, the status of the refund request is changed to **Approval In Progress**.
The **Approval Required** check box is not selected in the refund request type using which the refund request is created	The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to **Processed**.

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
	Note: The refund adjustments are created in the **Frozen** status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the refund adjustments and on the corresponding financial transactions. If you are doing a partial refund for any entity, the corresponding match event status is set to **Open**. However, if you are refunding the entire eligible amount, the corresponding match event status is set to **Balanced**.
The total refund amount is less than minimum refund amount	The write up adjustment is created using the write up adjustment type specified in the refund request type. In addition, the status of the refund request is changed to **Processed**.
	Note: The write up adjustment is created in the **Frozen** status. Approving a Refund Request

You can view the number of refund requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the refund request based on the observations.

Note: The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To approve a refund request:

1. Do either of the following:

If you want to...	Then...
Approve a refund request through the Refund/Write Off Request screen	**a.** Search for the refund request in the **Refund/Write Off Request** screen. **b.** In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request which you want to review.
Approve a refund request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**.

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	The **To Do Type for User Search** window appears. **c.** Enter **C1-REFRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the refund request that you want to review.

The **Refund Request** screen appears.

2. Review the refund request details.
3. Click the **Approve** button in the **Refund Request** zone.

The system behaves in the following manner:

If...	Then
The **Hierarchical Approval** check box is selected in the refund request type using which the refund request is created and the total refund amount is greater than the threshold amount specified at the next level in the approval hierarchy	A To Do of the **C1-REFRQ** To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the refund request remains as **Approval In Progress**.
The **Hierarchical Approval** check box is selected in the refund request type using which the refund request is created and the total refund amount is less than the threshold amount specified at the next level in the approval hierarchy	The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to **Processed**. **Note:** The refund adjustments are created in the **Frozen** status. Rejecting a Refund Request

Prerequisites

To reject a refund request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a refund request, you need to specify the reason why you want to reject the refund request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-RefundReq** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To reject a refund request:

1. Do either of the following:

If you want to...	Then...
Reject a refund request through the Refund/Write Off Request screen	**a.** Search for the refund request in the **Refund/Write Off Request** screen. **b.** In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column

Copyright © 2024, Oracle and/or its affiliates.

If you want to...	Then...
	corresponding to the refund request which you want to review.
Reject a refund request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-REFRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the refund request that you want to review.

The **Refund Request** screen appears.

2. Review the refund request details.
3. Click the **Reject** button in the **Refund Request** zone.

   The **Reject Refund Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the refund request.	Yes
Comments	Used to specify additional information while rejecting the refund request.	No

Note: The **Reject** button appears when:

- The refund request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the refund request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the refund request is changed to **Rejected**.

Voiding a Refund Request

There might be situations when incorrect refund request is processed in the system. In such case, the system provides you with an ability to void or cancel the refund request. However, note that you can void a refund request when the refund request is in the **Processed** status.

Prerequisites

To void a refund request, you should have:

- Void reasons defined in the application

Note: While voiding a refund request, you need to specify the reason why you want to void the refund request. You can select the appropriate void reason when you have defined the reasons for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen.

Procedure

To void a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column *c*orresponding to the refund request that you want to void.
   The **Refund Request** screen appears.

Copyright © 2024, Oracle and/or its affiliates.

3. Click the **Void** button in the **Refund Request** zone.

   The **Void Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to void the refund request.	Yes
Comments	Used to specify additional information while voiding the refund request.	No

> **Note:** The **Void** button appears when the refund request is in the **Processed** status.

4. Select the void reason from the **Status Reason** list.
5. Click **Save**.
   The status of the refund request is changed to **Voided**.

> **Note:** The **C1-REFVOID** algorithm cancels all the frozen adjustments created for the refund request which is in the **Processed** state.

- **Bills** - Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:
  - **Search Bills** - Lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
  - **Bill Line Items** - Lists the debit and credit bill segments and adjustments of the bill.

  This tab appears when the write off request is in the **Draft** status.
- **Log** - Lists the complete trail of actions performed on the write off request.

Write Off Request - Main

The **Main** tab displays information about the write off request. It contains the following zones:

- Write Off Request on page 2640
- Write Off Details on page 2642
- Bill Line Items on page 2643

Write Off Request

The **Write Off Request** zone displays the details of the write off request. This zone contains the following sections:

- **Main** - This section provides basic information about the write off request. It contains the following fields:

Field Name	Field Description
Write Off Request Information	Displays information about the write off request.
Write Off Request Type	Indicates the write off request type using which the write off request is created. **Note:** It has a link. On clicking the link, the **Refund/Write Off Request Type** screen appears where you can view the details of the write off request type.
Status	Indicates the status of the write off request. The valid values are: • Draft • Approval In Progress • Rejected • Processed • Cancelled
Status Reason	Indicates the reason why the write off request is rejected or cancelled. **Note:** This field appears when the write off request is in the **Rejected** or **Cancelled** status. It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the rejected or cancelled reason.
Account Information	Indicates the account for which the write off request is created. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Comments	Displays additional information about the write off request.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
Total Write Off Amount	Displays the total write off amount.

- **Characteristics** - Lists the characteristics defined for the write off request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the write off request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the write off request. **Note:** The **Edit** button appears when the write off request is in the **Draft** status.
Delete	Used to delete the write off request. **Note:** The **Delete** button appears when the write off request is in the **Draft** status.
Submit	Used to submit the write off request for approval. **Note:** The **Submit** button appears when the write off request is in the **Draft** status.
Approve	Used to approve the write off request. **Note:** The **Approve** button appears when: • The write off request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the write off request.
Reject	Used to reject the write off request. **Note:** The **Reject** button appears when: • The write off request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the write off request.
Cancel	Used to cancel the write off request. **Note:** The **Cancel** button appears when the write off request is in the **Processed** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the write off request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the write off request status is updated
Create Date/Time	Displays the date and time when the write off request is created.

Write Off Details

The **Write Off Details** zone lists the debit bill line items (such as bill segments and adjustments) that you have added to the write off request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Write Off Amount	Displays the amount that must be written off. **Note:** By default, the amount which is eligible for write off appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created. **Note:** By default, the adjustment type specified in the write off request type appears in this column. You can change the adjustment type, if required, by editing the write off request.
Adjustment Information	Displays information about the write off adjustment. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment. The data appears in this column when the status of the write off request is **Processed**. The information string appears when an algorithm of the **C1-ADI-INFO** algorithm type is attached to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.

Copyright © 2024, Oracle and/or its affiliates.

Note:

On clicking the **Broadcast** (((•))) icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded. **Note:** If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast** (((•))) icon corresponding to the bill in the **Write Off Details** zone.

Write Off Request - Bills

The **Bills** tab allows you to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:

- Search Bills on page 2644
- Bill Line Items on page 2645

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a bill using the bill details. The valid values are: • Bill Details • Bill and Price Item Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search a particular bill.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Price Item	Used to search bills which are created for a particular price item. **Note:** This field appears when you select **Bill and Price Item Details** option from the **Search By** list. You can search for a price item by clicking the **search** (🔍) icon corresponding to the field.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

Copyright © 2024, Oracle and/or its affiliates.

If you want to write off a bill with debit balance and all debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All debit bill segments and adjustments of the bill are added in the **Write Off Details** zone on the **Main** tab. However, if you select a bill (with debit balance) which contains one or more credit line items or if you select a bill (with credit balance) which contains one or more debit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application.
	Note: It has a link. If the entity is a bill segment, the **Bill Segment** screen appears where you can view the details of the respective bill segment on clicking the link. However, if the entity is an adjustment, the **Adjustment** screen appears with the details of the respective adjustment on clicking the link.
Entity Amount	Displays the bill segment or adjustment amount.
Eligible Amount	Displays the bill segment or adjustment amount which is eligible for write off. In other words, it means entity amount minus amount written off.
	Note: If the bill segment or adjustment has credit balance, the eligible amount for write off would be zero.
Amount Written Off	Displays the amount which is already written off to the account.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.

Copyright © 2024, Oracle and/or its affiliates.

You can select one or more debit bill segments or adjustments and click the **Add** button in this zone to add selected debit bill segments or adjustments to the write off request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast** ( ) icon corresponding to the bill in the **Search Bills** zone.

Write Off Request - Log

The **Log** tab contains the following zone:

- Write Off Request Log on page 2646

Write Off Request Log

The **Write Off Request Log** zone lists the complete trail of actions performed on the write off request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the write off request.
Details	Displays the details about the action performed on the write off request.
User	Indicates the user who has performed the action on the write off request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the write off request.
Status Reason	Displays the status reason of action performed on the write off request.

Note: You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

The **Add Request Log** window appears. Enter **Log Details** and click **Save**. The write off request log is added.

Creating a Write Off Request

Prerequisites

To create a write off request, you should have:

- Write off request types defined in the application

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To create a write off request:

1. Do either of the following:

If you want to...	Then...
Define a write off request from the Account Receivable Central screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. **c.** Search for the bill in the **Account Receivable Central** screen. **d.** In the **Search Results** section, select the required bill and then click **Write Off**. **Note:** Only one bill at a time is allowed to select for **Write Off Request** from the **Account Receivable Central** screen.
Define a write off request from the Write Off Request screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**. A sub-menu appears. **c.** Click the **Add** option from the **Refund/Write Off Request** sub-menu.

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	Used to indicate the type of request (refund or write off) to be created. **Note:** This field is pre-populated if the write off request is created from the **Account Receivable Central** screen. This field is editable if the write off request is created from the **Refund/Write Off Request** screen. This field appears read-only when you access the select **Request Type** screen from the **Payment Event Summary** screen.	Yes
Refund/Write Off Request Type	Used to indicate the request type using which you want to create the refund or write off request.	Yes

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The refund request types are listed when you set the **Action** field to **Refund** and the write off request types are listed when you set the **Action** field to **Write Off**.	
Account	Used to indicate the account for which you want to create the refund or write off request. **Note:** This field is pre-populated if the write off request is created from the **Account Receivable Central** screen. This field is editable if the write off request is created from the **Refund/Write Off Request** screen. You can search for an account by clicking the **Search** (🔍) icon corresponding to the respective field. This field appears read-only when you access the select **Request Type** screen from the **Payment Event Summary** screen.	Yes
Adjustment Level	Used to indicate the adjustment level for which you want to create the write off request. **Note:** It is a read-only field.	No

Tip: Alternatively, you can access the **Select Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request** screen.

2. Select the required write off request type and account from the respective fields.
3. Click **Save**.

   The write off request is defined and the status of the write off request is set to **Draft**. The **Write Off Request** screen appears with the details of the write off request. It contains the following tabs:

Note: The write off request can be created only for bill with outstanding amount greater than zero.

- **Main** - Displays information about the write off request. It contains the following zones:
  - **Write Off Request** - Displays the details of the write off request.
  - **Write Off Details** - Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
- **Bills** - Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears when the write off request is in the **Draft** status.
- **Log** - Lists the complete trail of actions performed on the write off request.

4. Add debit bill line items that you want to write off.
5. Edit the write off amount of each entity, if required.
6. Define characteristics for the write off request, if required.

Defining a Characteristic for a Write Off Request

Prerequisites

To define a characteristic for a write off request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define a characteristic for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column *c*orresponding to the write off request whose details you want to edit.
   The **Write Off Request** screen appears.
3. Click the **Edit** button in the **Write Off Request** zone.
   The **Edit Write Off Request** screen appears.

   Note: The **Edit** button appears only when the write off request is in the **Draft** status.
4. Ensure that the **Characteristics** section is expanded when you are editing the write off request.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Refund Write Off Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the write off request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the write off request, click the **Add** (+) icon and then *r*epeat step 5.

Note: However, if you want to remove a characteristic from the write off request, click the **Delete** (🗑) icon corresponding to the characteristic.

Adding a Debit Bill to the Write Off Request

Prerequisites

To add a debit bill to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.
   The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all debit line items and you want to add the debit bill to the write off request	**a.** In the **Search Bills** zone, select the bills that you want to write off. **b.** Click the **Add** button available at the upper left corner of the **Search Bills** zone.
	Note: Default adjustment type selected in the write off request type should be non A/P.
A bill has debit balance and one or more credit line items	**a.** In the **Search Bills** zone, select the bills that you want to write off. **b.** Click the **Add** button available at the upper left corner of the **Search Bills** zone.

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
and you want to add the debit bill to the write off request	**Note:** Default adjustment type selected in the write off request type should be non A/P.

4. Click **Add**.
   A message appears indicating that the selected bills are added to the write off request.

> **Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

   Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

> **Note:**
>
> Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.
>
> The system will not allow you to add a credit line item to the **Write Off Details** zone.

Adding a Debit Bill Line Item to the Write Off Request

You can write off the debit bill line items, such as bill segments and adjustments, of the account. While adding a debit bill line item to the write off request, you can either:

- Directly add all debit line items of a bill to the write off request by adding the bill which has all bill segments and adjustments in debit
- Individually add a debit bill segment or adjustment of a bill (with one or more debit line items) to the write off request

Prerequisites

To add a debit bill line item to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill line item to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.
   The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

> **Note:** If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do any of the following:

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
A bill has all debit line items and you want to add a particular debit bill line item to the write off request	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the debit bill segment or adjustment that you want to write off.
A bill has debit balance and one or more credit line items	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the debit bill segment or adjustment that you want to write off.
A bill has credit balance and one or more debit line items	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the debit bill segment or adjustment that you want to write off.

4. Click **Add**.
   A message appears indicating that the selected bill segments or adjustments are added to the write off request.

> **Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. Editing a Write Off Request

Prerequisites

To edit a write off request, you should have:

Copyright © 2024, Oracle and/or its affiliates.

- Adjustment types without A/P request type defined in the application

Procedure

To edit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.
   The **Write Off Request** screen appears.
3. Click the **Edit** button in the **Write Off Request** zone.

   The **Edit Write Off Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Write Off Request Information	Displays information about the write off request.	Not applicable
Account Information	Indicates the account for which the write off request is created.	Not applicable
Comments	Used to specify additional information about the write off request.	No

   In addition, this screen contains the following two sections:

   - **Characteristics** - Used to define the characteristics for the write off request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Refund Write Off Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the write off request.

4. Modify the details of the write off request, if required.
5. Define, edit, or remove characteristics of the write off request, if required.
6. Click **Save**.
   The changes made to the write off request are saved.

Editing the Write Off Details

Prerequisites

To edit the write off details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the write off details:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose bill line item details you want to edit.
   The **Write Off Request** screen appears. You can edit the bill line items of the write off request by using either of the following ways:

If...	Then...
Select the bill whose details you want to edit in the **Write Off Details** zone and click the **Edit** button available in the upper left corner of this zone.	The **Edit Request Details** screen appears.
In the **Write Off Details** zone, click the **Broadcast** ( ) icon corresponding to the bill whose line items details you want to edit.	The **Bill Line Items** zone appears. **Note:** This zone appears when the Entity Type is **Bill**. **a.** Select the bill line item whose details you want to edit in the **Bill Line Items** zone and click the **Edit** button available in the upper left corner of this zone. The **Edit Request Details** screen appears.

Note: A bill line item from the write off request can be edited when the write off request is in the **Draft** status.

The **Edit Request Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the write off request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	Indicates the adjustment type of the write off request type.	No

Copyright © 2024, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	You can search for an adjustment type by clicking the **Search** (🔍) icon corresponding to the field.	

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are • Adjustments • Bill • Bill Segment • Payment Event • Payment
Entity ID	Displays the entity ID.
Entity Amount	Displays the entity amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the amount that must be write off.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created. **Note:** You can search for an account by clicking the **Search** (🔍) icon corresponding to the field.
Bill ID	Displays the bill ID.

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the write off request.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

3. Modify the details of the bill line items.
4. Click **Save**.
   The changes made to the write off bill line items are saved.

Submitting a Write Off Request

Prerequisites

To submit a write off request, you should have:

- Debit bill line items added in the write off request

Procedure

To submit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.

Copyright © 2024, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to submit.
   The **Write Off Request** screen appears.
3. Click the **Submit** button in the **Write Off Request** zone.

   The system behaves in the following manner:

If...	Then
The **Approval Required** and **Hierarchical Approval** check boxes are selected in the write off request type using which the write off request is created	A To Do of the **C1-WOREQ** To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the write off request is changed to **Approval In Progress**.
The **Approval Required** check box is selected, but the **Hierarchical Approval** check box is not selected in the write off request type using which the write off request is created	A To Do of the **C1-WOREQ** To Do type is created and sent to the approver at the hierarchy level where the total write off amount falls within the threshold limit. In addition, the status of the write off request is changed to **Approval In Progress**.
The **Approval Required** check box is not selected in the write off request type using which the write off request is created	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to **Processed**.
	Note: The write off adjustments are created in the **Frozen** status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.
The total write off amount is less than the minimum threshold amount	The write off request is automatically approved by the system and write off adjustments are created using the specified adjustment types. In addition, the status of the write off request is changed to **Processed**.
	Note: The write off adjustments are created in the **Frozen** status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.

Note: The **Submit** button appears when the write off request is in the **Draft** status.

Approving a Write Off Request

You can view the number of write off requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the write off request based on the observations.

Note: The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To approve a write off request:

1. Do either of the following:

If you want to...	Then...
Approve a write off request through the Refund/Write Off Request screen	**a.** Search for the write off request in the **Refund/Write Off Request** screen. **b.** In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request which you want to review.
Approve a write off request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-WOREQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the write off request that you want to review.

   The **Write Off Request** screen appears.
2. Review the write off request details.
3. Click the **Approve** button in the **Write Off Request** zone.

   The system behaves in the following manner:

If...	Then...
The **Hierarchical Approval** check box is selected in the write off request type using which the write off request is created and the total write off amount is greater than the threshold amount specified at the next level in the approval hierarchy	A To Do of the **C1-WOREQ** To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the write off request remains as **Approval In Progress**.

Copyright © 2024, Oracle and/or its affiliates.

If...	Then...
The **Hierarchical Approval** check box is selected in the write off request type using which the write off request is created and the total write off amount is less than the threshold amount specified at the next level in the approval hierarchy	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to **Processed**.
	Note: The write off adjustments are created in the **Frozen** status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.
The **Hierarchical Approval** check box is not selected in the write off request type using which the write off request is created	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to **Processed**.
	Note: The write off adjustments are created in the **Frozen** status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.

Note: The **Approve** button appears when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

Rejecting a Write Off Request

Prerequisites

To reject a write off request, you should have:

- Rejection reasons defined in the application

Copyright © 2024, Oracle and/or its affiliates.

Note:

While rejecting a write off request, you need to specify the reason why you want to reject the write off request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-WORequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To reject a write off request:

1. Do either of the following:

If you want to...	Then...
Reject a write off request through the Refund/Write Off Request screen	**a.** Search for the write off request in the **Refund/Write Off Request** screen. **b.** In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request which you want to review.
Reject a write off request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-WOREQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the write off request that you want to review.

   The **Write Off Request** screen appears.
2. Review the write off request details.
3. Click the **Reject** button in the **Write Off Request** zone.

   The **Reject Write Off Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the write off request.	Yes
Comments	Used to specify additional information while rejecting the write off request.	No

Note: The **Reject** button appears when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the write off request is changed to **Rejected**.

Viewing the Log of a Write Off Request

Procedure

To view the log of a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column *c*orresponding to the write off request whose log you want to view.

   The **Write Off Request** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the write off request. It contains the following zones:
     - **Write Off Request** - Displays the details of the write off request.
     - **Write Off Details** - Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
     - **Bill Line Items** - Displays the details of the bill which must be written off.

     > **Note:**
     >
     > This zone appears when you click the Broadcast (ᯤ) icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

   - **Bills** - Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears when the write off request is in the **Draft** status.
   - **Log** - Lists the complete trail of actions performed on the write off request.
3. Click the **Log** tab
4. View the log of the write off request in the **Write Off Request Log** zone.

> **Note:** You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

Adding a Log Entry for a Write Off Request

Procedure

Copyright © 2024, Oracle and/or its affiliates.

To add a log entry for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column *c*orresponding to the write off request whose log you want to edit.

   The **Write Off Request** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the write off request. It contains the following zones:
     - **Write Off Request** - Displays the details of the write off request.
     - **Write Off Details** - Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
   - **Bills** - Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears when the write off request is in the **Draft** status.
   - **Log** - Lists the complete trail of actions performed on the write off request.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

   The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the write off request.	Not applicable
Log Details	Used to specify additional comments for the write off request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Write Off Request Log** zone.

Cancelling a Write Off Request

There might be situations when incorrect write off request is processed in the system. In such case, the system provides you with an ability to cancel the write off request. However, note that you can cancel a write off request when the write off request is in the **Processed** status.

Prerequisites

To cancel a write off request, you should have:

- Cancel reasons defined in the application

Note: While cancelling a write off request, you need to specify the reason why you want to cancel the write off request. You can select the appropriate cancel reason when you have defined the reasons for the **Cancelled** status of the **C1-WORequest** business object in the **Status Reason** screen.

Procedure

To cancel a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.

Copyright © 2024, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to cancel.
   The **Write Off Request** screen appears.
3. Click the **Cancel** button in the **Write Off Request** zone.

   The **Cancel Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the write off request.	Yes
Comments	Used to specify additional information while cancelling the write off request.	No

> **Note:** The **Cancel** button appears when the write off request is in the **Processed** status.

4. Select the cancel reason from the **Status Reason** list.
5. Click **Save**.
   The status of the write off request is changed to **Cancelled**.

> **Note:** The **C1-WOCANCEL** algorithm cancels all the frozen adjustments created for the write off request which is in the **Processed** state.

- Include Customer Hierarchy in a Deal
- Contracted Deal
- Deal Inactivation
- Average Price Validation Using Floor and Ceil Limits
- Considering Pass Through Charges While Calculating Original Revenue
- Considering SQI Based Billable Charges While Calculating Commitments

Oracle Revenue Management and Billing enables you to create a deal for an existing customer, account, or prospect person. A deal facilities you to simulate the proposed pricing on the proposed commitments, and thereby analyze the cost, revenue, and profitability of the deal. The system provides different ways in which you can simulate the pricing for an existing customer, account, or prospect person. You can use the following simulation types while creating a deal:

- **Customer** - This simulation type can be used while creating a deal for an existing customer or a prospect person. If you use this simulation type for an existing customer, the system does the following:
  - Copies the customer, all its accounts, and the customer hierarchy (i.e. its child persons and child persons' accounts), and creates the corresponding prospect persons and accounts in the system
  - Copies the price list assignments and price assignments of the customer, accounts, child persons and child persons' accounts, and assigns the price lists and pricing to the respective prospect persons and accounts in the **Proposed** status
  - Copies the product enrollments of the customer's and child persons' accounts, and enrolls the respective prospect accounts for the products in the **Proposed** status
  - Copies the commitments from the SQI-based billable charges of the customer's and child persons' accounts (based on the deal frequency and usage period), and accordingly adds proposed commitments for the respective prospect accounts

  However, if you use this simulation type for a prospect person, you need to manually:
  - Assign a price list and pricing to the prospect person, its accounts, and to its hierarchy
  - Enroll the prospect account for a product
  - Add commitments for the prospect account
- **Account** - This simulation type can be used while creating a deal for an existing account. If you use this simulation type, the system does the following:
  - Copies the account and creates the corresponding prospect account in the system
  - Copies the price list assignments and price assignments of the account and assigns the price lists and pricing to the respective prospect account in the **Proposed** status
  - Copies the product enrollments of the account, and enrolls the respective prospect account for the products in the **Proposed** status

- Stacking Commitments in Deal
- Terms and Conditions Selection in a Deal Based on Characteristic Value
- Terms and Conditions Grouping in a Deal Based on Characteristic Value
- Overriding Terms and Conditions in a Deal
- Refreshing Terms and Conditions in a Deal
- Bespoke Price List Creation during Deal Orchestration
- Assign Additional Price Items to Deal Entity
- Associate Price Items for Relationship Based Pricing in Deal

- Bill Factor Consideration During Deal Simulation
- Deal Creation Using a Deal Template
- Deal Dashboard Default View
- Assign Deal to the Next Level for Approval Based on Revenue Variation
- Customer Hierarchy Icons in Deal Pricing Management
- Copy the Price Item, Hierarchy Entity, and Terms and Conditions Selection from a Referred Deal
- Consider Only Prospect Accounts of a Customer During Deal Simulation
- Split the Deferred Deal Simulation Process

    - Copies the commitments from the SQI-based billable charges of the account (based on the deal frequency and usage period), and accordingly adds proposed commitments for the respective prospect account
- **Deal** - This simulation type can be used while creating a deal for an existing customer or a prospect person. If you use this simulation type for an existing customer, the system does the following:
    - Copies the customer and creates the corresponding prospect customer in the system
    - Copies the price list assignments and price assignments of the customer, and assigns the price lists and pricing to the respective prospect person in the **Proposed** status
    - Copies the commitments from the SQI-based billable charges of the customer's accounts (based on the deal frequency and usage period), and accordingly adds the rolled up proposed commitments for the respective prospect person

  However, if you use this simulation type for a prospect person, you need to manually:
    - Assign a price list and pricing to the prospect person
    - Add commitments for the prospect person

For more information about different stages involved in the deal lifecycle, see Different Stages in Deal Lifecycle on page 2714.

Note: The **Deal Pricing Management** feature is tested and certified on Google Chrome and not on Internet Explorer.

Deal Price Item Dependency Extendable Lookup

The **Deal Price Item Dependency Extendable Lookup** screen allows you to search for a deal price item dependency. The deal price item dependency is an extendable lookup reference object which indicates the division-specific price

Copyright © 2024, Oracle and/or its affiliates.

items interdependency defined for a deal. You can group a set of price items (along with its pricing parameters) which are dependent on each other for a division. It contains the following zone:

- Extendable Lookup Search on page 2687

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search the details of deal price item dependency business object. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description
Business Object	Used to search the deal price item dependency business object.
Description	Used to search the deal price item dependency business object with a particular description.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the deal price item dependency business object.
Description	Displays description of the deal price item dependency business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective business object.

Note: You must specify at least one search criterion while searching for the deal price item dependency business object.

Searching for a Deal Price Item Dependency Extendable Lookup

Prerequisites

To search for a deal price item dependency lookup, you should have:

- Deal price item dependency extendable lookup defined in the application.

Procedure

To search for a deal price item dependency extended lookup:

1. Click the **Admin** link in the **Application** toolbar.

Copyright © 2024, Oracle and/or its affiliates.

A list appears.

2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. Search for **C1-DealPriceitemDependency** business object.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the **C1-DealPriceitemDependency** business object.
   The **Extended Lookup** screen appears.
5. View the list of deal price item dependency extended lookup values in the **Extendable Lookup Value List** zone.

> **Note:**
>
> You must specify at least one search criterion while searching for an expiration cycle extended lookup.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Viewing the Deal Price Item Dependency Details

Procedure

1. Search for the **C1-DealPriceitemDependency** business object in the **Extendable Lookup Search** zone.

Adding Division-Specific Interdependent Price Item for Deal

Prerequisites

To add a division-specific interdependent price item for deal, you should have:

- Price items defined in the application
- Pricing parameters defined for the price item
- Divisions defined in the application

Copyright © 2024, Oracle and/or its affiliates.

- **C1-DealPriceitemDependency** business object defined in the application

Procedure

To add a division-specific interdependent price item for deal:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin menu**, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. Search for the **C1-DealPriceitemDependency** business object in the **Extendable Lookup Search** zone.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the **C1-DealPriceitemDependency** business object.
   The **Extendable Lookup** screen appears.
5. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.
   The **Extendable Lookup** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the deal price item dependency extendable lookup. It also allows you to add, edit, or delete a division-specific interdependent price item for deal. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Value	Used to specify the deal price item dependency extendable lookup value.	Yes
Description	Used to specify the description for the deal price item dependency extendable lookup value.	Yes
Override Description	Used to specify the overriding description of the deal price item dependency extendable lookup value.	No
Detailed Description	Used to specify additional information about the deal price item dependency extendable lookup value.	No
Status	Used to indicate the current status of the deal price item dependency extendable lookup value. The valid values are: • Active • Inactive	Yes

   In addition, the **Main** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number of the division-specific interdependent price items for deal.	Yes
Division	Used to indicate the division to which you want to add the interdependent price items for deal. **Note:** You can view only those divisions to which you have access in the **Division** list.	Yes
