U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are “commercial computer software” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited. The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

This software or hardware and documentation may provide access to or information on content, products and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

1 Preface

1.1 Introduction

Welcome to Local API Set up Guide for Oracle Banking Enterprise Limits and Collateral Management. It provides an overview on how to set up API locally on your system.

1.2 Intended Audience

This guide is intended for the following audience:

- Customers
- Partners

1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.4 Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For more information refer to the following links:

- <https://www.oracle.com/corporate/accessibility/learning-support.html#support-tab>

1.5 Related Documents

For more information on Oracle Banking Enterprise Limits and Collateral Management, refer to the following documents:

2 Hosting Swagger UI Locally

Pre-requisite

Make sure that Python is installed in your local.

Follow the below mentioned steps to set up the python path on your local:

1. Go to **Control Panel** and click **System and Security**.
2. On **System and Security** settings, click **System**.
3. On **System** settings, click **Advanced system settings**.

The **System Properties** pop-up window is displayed.

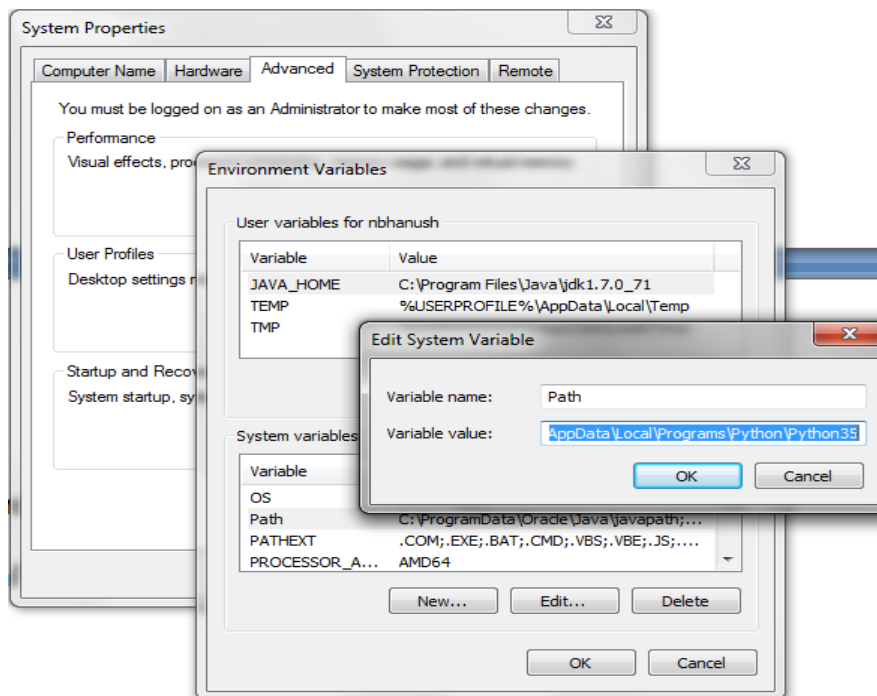

- On **System Properties** pop-up window, click **Environment Variables**.

The **Environment Variables** pop-up window is displayed.

- On **Environment Variables** pop-up window, Select **Path** under **System variables**, and click **Edit**. Add **Python installation** path in path variable.

For example: `C:\Users\xxxx\AppData\Local\Programs\Python\PythonXX`

- Click **OK** on the pop-up windows to save the path.

Follow the below steps to host the Swagger UI locally:

NOTE: Swagger UI needs an HTTP Server to render itself. You can run a standalone HTTP Server using Python.

1. Assuming the Swagger UI is deployed on a Windows machine in the following path -
D:\OBELCM\swaggerUI, run the following command to start a HTTP Server using python.
8888 is the port for HTTP server listen.

NOTE: The contents of the folder is shown in the below figure.

2. Open Command Prompt, and execute the following commands:

```
cd D:\OBELCM\swaggerUI
```

```
python -m SimpleHTTPServer 8888 (if Python version is older than Python 3)
```

```
python -m http.server 8888 (if Python version is Python 3)
```

3. Go to URL <http://localhost:8888/index.html> to access the Swagger UI. The following home screen displays:

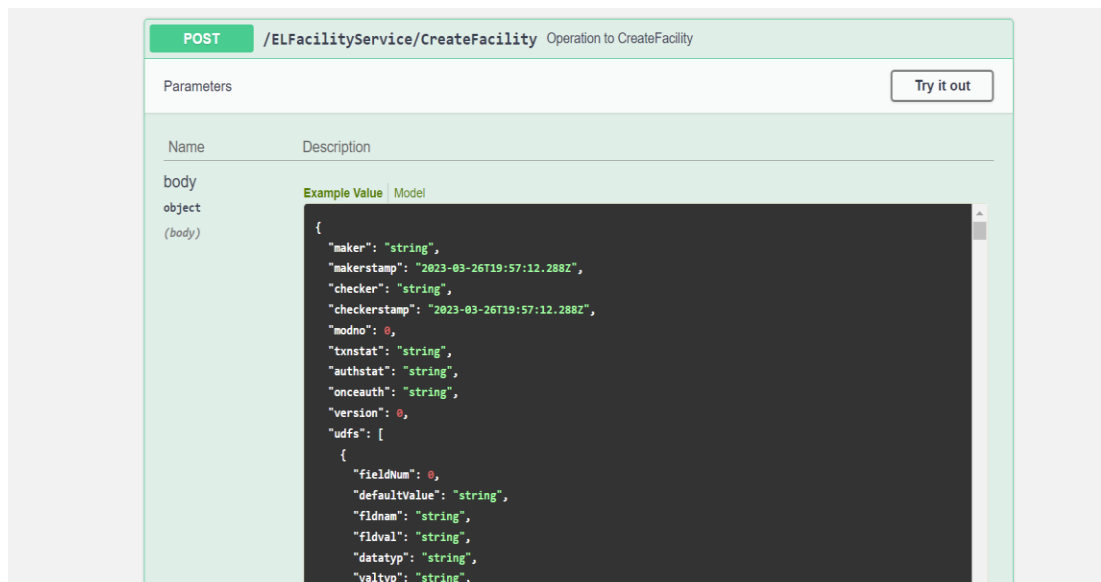

4. Click **Swagger API**.
5. Click on the respective services to route the details.

6. Click on the required service on the left panel, and then click on the required yaml or functionality in the right panel to get the required API. A sample screenshot is shown below:

7. Click on the required end point to expand it further. A sample screenshot is shown below:

NOTE: Try it out feature of Swagger has been disabled.

8. Make changes to the welcome.html file if the IP address and port numbers are to be changed.
