1. About this Manual

1.1 Introduction

This manual is designed to help you to quickly get familiar with the Oracle Banking Payments. It takes you through the various stages of Instruments, Instrument Clearing and Positive Pay processing.

You can further obtain information specific to a particular field by placing the cursor on the relevant field and striking <F1> on the keyboard.

1.2 <u>Audience</u>

This manual is intended for the following User/User Roles:

Role	Function
Front Office Operators	DD/Manager's Check issue and payment transactions except authorization
Back Office Operators	Instrument related maintenances/Instrument Transaction Input functions except Authorization
Instrument Department Officers	Instrument Maintenance/ Transaction Authorization

1.3 **Documentation Accessibility**

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

1.4 Organization

This manual is organized into the following chapters.:

Chapter	Description
Chapter 1	About this Manual gives information on the intended audience. It also lists the various chapters covered in this User Manual.
Chapter 2	Instruments provides information on Instruments.
Chapter 3	Instrument Clearing provides information on Instrument Clearing.
Chapter 4	Positive Pay provides information on Positive Pay.
Chapter 3	<i>Function ID Glossary</i> has alphabetical listing of Function/Screen ID's used in the module with page references for quick navigation.

1.5 <u>Glossary of Icons</u>

This User Manual may refer to all or some of the following icons:

lcons	Function
×	Exit
+	Add row
	Delete row
Q	Option List

2. Instruments

For customers requesting for issue of Demand Draft/ Manager's Cheque, Oracle Banking Payments has a provision to capture the details of the instrument to be issued and allocate a unique instrument number for the same.

When the instrument is presented for payment, the receiving bank presents the same in local clearing to the bank which issued the instrument. The payment of the instrument can also be effected by internal transfer the proceeds to Beneficiary's account held with the issuing bank itself.

2.1 Instrument Maintenances

Instrument related maintenances helps in defining various parameters as required by the bank, for processing Instrument issuance and payments.

This chapter contains the following section:

- Section 2.1.1, "Instrument Code"
- Section 2.1.2, "Instrument Inventory"
- Section 2.1.3, "Network Preferences for Instrument Detailed"
- Section 2.1.4, "Foreign Currency Instrument Issuer"

2.1.1 Instrument Code

You can define the instrument codes through this screen.

You can invoke 'Instrument Code Detailed' screen by typing 'PGDINSCD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

nstrument Code Detailed				;; x
🕞 New 🔎 Enter Query				
Host Code *		Instrument Currency	Q	
Instrument Code *	Q	Instrument Validation	Internal	
Code Description		Issuer Code	Q	
Instrument type				
Stale Period			Revalidation Details	
Months			Revalidation Allowed	Yes
Days			Revalidation Period in Months	
			Revalidation Period in Days	
				Audit Exit

You can specify the following fields:

Host Code

The system indicates the Host Code of transaction branch on clicking 'New'.

Instrument Code

Specify the Instrument Code.

Code Description

Specify the description of the Instrument Code.

Instrument Type

Select the type of Instrument Type from below values:

- Cheque
- Demand Draft
- Managers Cheque
- Demand Draft-FCY
- Remittance-Outward
- Remittance-Inward
- Traveller's Cheque

Instrument Currency

All valid currencies are listed. Choose the relevant instrument currency for the code maintained.

Instrument Validation

Select the option from values listed - Internal/External. Instrument Validations can be done both internally and externally.

- Internal Inventory Validation within the system is done on selecting Internal.
- External All the validations for the instruments are done by the external system.

When the Instrument type is 'Cheque' and it is issued by FCUBS / any other DDA system, validation is happening externally and this option is to be maintained.

Issuer Code

Specify the Issuer Code from the list of values. This field is disabled for instrument types 'Demand Draft-FCY' and 'Cheque'.

For other Instrument types, this field is mandatory and system validate the same on save.

Stale Period

This the period till when the instruments code is valid from the day it is created.

Month

Specify the period in number of months.

Days

Specify the period in number of days.

Note

- You are allowed to maintain the stale period either in months or in days not as a combination of months and days.
- Stale period specified here is validated when the instrument transaction is booked. System validates the instrument date and the date, the transaction is booked. If it is more than the period defined, error message is displayed.

Revalidation Details

Revalidation Allowed

Select the Revalidation Allowed between Yes or No.

Revalidation Period in Months

Specify the Revalidation Period in Months.

Revalidation Period in Days

Specify the Revalidation Period in Days.

2.1.1.1 Instrument Code Summary

You can search for records in the Instrument Code Summary Screen. You can invoke 'Instrument Code Summary' screen by typing 'PGSINSCD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Instru	ment Code Sum	mary									;;×

You can search using one or more of the following parameters:

- Authorization Status
- Host Code
- Instrument Type
- Instrument Validation
- Record Status
- Instrument Code
- Instrument Currency

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

2.1.2 Instrument Inventory

You can maintain valid range of numbers per Instrument Type. This maintenance is branchwise.

You can invoke 'Instrument Inventory Maintenance' screen by typing 'PIDINSNO' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

strument Inventory Det	ailed			44

Instrument Branch *	(HEL Q	Sequence Number		
Issue Date *				
Start Number *				
End Number *				
NAVIZE SAUN	ALTERNIC SECTION	NY TOPSESSION	2555800338	Audit E

You can specify the following fields:

Host Code

The system indicates the Host Code of transaction branch on clicking 'New'.

Instrument Code

All valid Instrument codes of instrument type 'Demand Draft' and 'Manager's Cheque' are listed. Select the appropriate code.

Instrument Branch

User's logged in branch is displayed in this field.

Issue Date

System defaults the current date in this field on clicking 'New' button.

Start Number

Specify the Starting Number of the range of inventory numbers to be maintained.

End Number

Specify the End Number of the range of inventory numbers to be maintained

Code Description

System defaults the Code Description of the Instrument Code selected.

Instrument type

System defaults the Instrument Type based on the Instrument Code selected.

Sequence Number

System generates the Sequence Number automatically. It is generated based on the number of times the same Instrument Code is created. When same instrument code is created multiple times, the Sequence number for that code gets incremented.

Note

While allocating inventory number for a processing completed inventory issue transaction, FIFO rule will be followed.

2.1.2.1 Instrument Inventory Summary

You can search for instrument inventory records in this screen. You can invoke 'Instrument Inventory Summary' screen by typing 'PISINSNO' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Page 1 (0 of 0 items) < 4				

You can specify the following fields:

Host Code

The system indicates the Host Code of transaction branch on clicking 'New'.

Instrument Code

All valid Instrument codes of instrument type 'Demand Draft' and 'Manager's Cheque' are listed. Choose the appropriate code from the LOV.

Code Description

System defaults the Description of the Code based on the Instrument Code selected.

Instrument Currency

System defaults the Instrument Currency based on the Instrument Code selected.

Instrument type

The system Instrument Type based on the Instrument Code selected.

Instrument Preferences

Instrument Payable GL/Account

This field lists all the valid GL's and Nostro accounts.

Payable GL is fetched as credit account during Instrument issue and Debit account during Instrument liquidation through any payment mode clearing, transfer or cancellation. All valid liability type GLs are listed for this field.

Nostro accounts which are linked to a correspondent BIC in, Currency correspondent maintenance for the Instrument currency will be allowed for the screen if the instrument type is Demand Draft –FCY.

Authorization rekey Required

Check this box to enable authorization in the transaction screens for the fields specified in Authorization Rekey fields. System validates the authorization fields in instrument screens based on this.

Drawee BIC

System defaults the Drawee BIC based on the Nostro account selected in Instrument Payable GL/Account. This field will be null and disabled, when a GL is selected.

Instrument Number Generation

Select the Instrument Number Generation between Auto or Manual.

Instrument Number Length

If the Instrument Number Generation is maintained as 'Manual' you can specify the Instrument Number Length.

Price Code

Instrument Issue

Specify the price code for Instrument Issue.

Instrument Stop Pay

Specify the price code for Instrument Stop Pay.

Instrument Cancel

Specify the price code for Instrument Cancel.

Instrument Revalidation

Specify the Instrument Revalidation from the list of values. All valid price code are listed. This field can be maintained if revalidation is allowed for the instrument.

Duplicate Instrument issue

Specify the Duplicate Instrument issue from the list of values.

Accounting Codes for Instrument Issues

Debit Liquidation

Accounting template codes are maintained for instrument issue. Specify the accounting code for DRLQ event.

Credit Liquidation

Specify the accounting code for CRLQ event.

Accounting Codes for Instrument Payment

Debit Liquidation

Accounting template codes are maintained for instrument payment. Specify the accounting code for DRLQ event.

Credit Liquidation

Specify the accounting code for CRLQ event.

Accounting codes maintained in this careen are applicable to payments initiated from Instrument Issue / payment screens. For instruments received for payment in clearing accounting code applicable for clearing is used.

Foreign Currency Instrument Preferences

Generate Cheque Presentment Notification

Check this box for foreign currency drafts. User can issue Foreign currency drafts, only if this option is enabled.

Message Format

Select from the list of values (MT/MX).

Note

- Select Message Format as MT to generate MT110 (Advice of Cheque(s)).
- Select Message Format as MX to generate camt.107.001.01 (Cheque Presentment Notification).

Credit Liquidation on

Select the Credit Liquidation on from the following:

- Issue Date (Default)
- Reconciliation Date

Based on the above option selected CRLQ accounting entries on Foreign currency DD issue are posted on Issue date itself or on receipt of Nostro Account statement.

FX Preferences

FX Rate Type

Select the FX Rate Type from the list of values. All valid rate type is listed.

Rate Override Variance

Specify the override variance allowed for FX Rate.

Rate Stop Variance

Specify the stop variance allowed for FX rate.

Note

If exchange rate is manually provided from queue screens, override/stop variance check is done by the system.

Small FX Limit Currency

Select the FX Limit Currency from the list of values. Currency other that EUR also can be selected, for cross currency transactions.

Small FX Limit Amount

Specify the FX Limit Amount. Internal and external rates picked are based on the limit maintained here.

Note

• If Small FX limit is defined, then auto rate pick up happens only if the transfer amount is withing the limit. The Transfer Amount is converted to Limit Currency maintained using midrate of FX rate type linked and limit check is done.

• If Small FX limit is not maintained, then auto rate pick up is done from internal rates maintained, for all cross currency payment transactions without any limit check.

External Exchange Rate Applicable

Check this box to apply external exchange rate, when the transfer amount is more than the FX Limit specified. System validates the breach amount and checks for External Exchange rate.

Note

- If external system is available, then the transaction details are sent, to receive the exchange rate.
- Instrument transactions are moved to Exchange Rate exception queue if the response is rejected/timed out.
- Valid error message is displayed, when Small FX limit is breached and when there is no Exchange Rate system.

Authorization Rekey Fields

You can define the authorization rekey fields here, which is validated during the transaction authorization.

Rekey Field Name

Select the Rekey fields from the list of values. The field name values are factory-shipped. Following are the Rekey fields available for instrument:

- BENEF_NAME (Beneficiary Name)
- CR_AC_NO (Credit Account Number)
- DR_AC_NO (Debit Account Number)
- INSTRUMENT_AMOUNT (Instrument Amount)
- INSTRUMENT_CCY (Instrument Currency)
- PAYABLE_BRN_CODE (Payable Branch Code)

Description

System defaults the description of the Rekey Field name selected.

Transaction Type

Select the Transaction type from the options listed - Instrument Issue/ Instrument Payment.

2.1.3.1 Instrument Preference Summary

You can search for records in the Instrument Preference Summary Screen. You can invoke 'Instrument Preference Summary' screen by typing 'PISINPRF' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Specify the following fields:

Host Code

Host Code for user's logged in branch is defaulted in this screen.

Instrument code

All valid instrument codes of type 'Demand Draft-FCY' are available in the list. Select the required instrument code.

Code Description

This is defaulted based on the instrument code selected.

Instrument currency

The value is defaulted based on the instrument code selected.

Issuer BIC

All valid BICs are available for this field. Select the required BIC.

Issuer Bank Name

This field is defaulted based on the issuer BIC selected.

Direct correspondent flag

Check this flag if there is a direct correspondent relation with the issuer bank.

Account Number

It is mandatory to maintain the account number if 'Direct Correspondent 'flag is checked. All accounts of type OUR/THEIR maintained for the issuer BIC (11 digit BIC if not available 8 digit BIC+XXX) in currency correspondent maintenance for the issuer BIC are listed. 2-7.

Correspondent Bank BIC

It is mandatory to maintain Correspondent Bank BIC if 'Direct Correspondent' flag is not checked. All valid BICs that are available in currency correspondent maintenance are available for Correspondent Bank BIC field.

Correspondent Bank Account

All valid BICs that are available in currency correspondent maintenance are listed for Correspondent Bank BIC field. All accounts of type OUR/THEIR maintained for the correspondent bank BIC in currency correspondent maintenance are available in correspondent bank account field.

Correspondent Bank Name

This disabled field is auto-populated based on the correspondent BIC selected.

2.1.4.1 Foreign Currency Instrument Issuer Summary

You can search for records in the Foreign Currency Instrument Issuer Summary Details Screen. You can invoke the Foreign Currency Instrument Issuer Summary Details screen by

typing 'PISFCISR' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

o data to display. ge 1 (0 of 0 items) < ∢ 1 →				

You can specify the following fields:

Host Code

The system indicates the Host Code of transaction branch on clicking 'New'.

Instrument Code

Specify the Instrument Code from the list of values. All valid Instrument Codes maintained with Instrument type as 'Demand Draft', 'Banker's Cheque' and 'Remittance-Outward' and 'Remittance-Inward' are listed.

External Bank Code

For instrument codes of Instrument type 'Demand Draft, 'Banker's cheque' and 'Remittance Inward' this field is defaulted as the issuer code linked to the instrument code and disabled.

For Instrument codes of type 'Remittance-outward' all valid Bank codes maintained in PMDBNKCD are listed.

Bank Name

System defaults the Bank Name based on the Bank Code selected.

Instrument type

System defaults the Instrument Type based on the Instrument Code selected.

Instrument Description

System defaults the Instrument Description based on the Instrument Code selected.

Instrument Currency

System defaults the Instrument Currency based on the Instrument Code selected.

Payable Account or GL

Specify the Payable Account or GL from the list of values. Lists all external GLs of type 'Liability' /'Asset' available in External Chart of Accounts and all valid accounts (Normal/ Nostro) with account currency as Instrument currency. System uses this GL/Account in accounting based on this maintenance.

Account Branch

This field is defaulted and disabled as the Account Branch of the selected account. If GL is selected, this field is enabled and lists all valid branch codes of the Host. It is optional to select a branch. If a Branch is selected, this branch is defaulted as the account branch irrespective of the Transaction Branch. If this branch is not selected then transaction branch is defaulted as Account Branch for the GL during accounting.

Branch Code

System defaults the Branch Code of the Account Branch selected.

Branch Name

System defaults the Branch Name of the Account Branch selected.

Limit Amount

Specify the Limit Amount in instrument currency upto which the instrument can be issued.

2.1.5.1 Instrument External Bank Code Summary

You can invoke 'Instrument External Bank Code Summary' screen by typing 'PISEXTBK' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Instr	ument External E	ank Code Su	immary	1828	SSN/J	Start Start			SAAD		::×

You can specify the following fields:

Host Code

The system indicates the host code that is linked to the transaction branch of the customer.

Instrument Code

Specify the Instrument Code from the list of values. All valid Instrument Codes of type TC (Traveller's Cheque) are listed.

Code Description

Specify the Description of the Instrument Code.

Instrument Type

System defaults the Instrument Type based on the Instrument Code selected.

Instrument Currency

System defaults the Instrument Currency based on the Instrument Code selected.

Issuer Code

System defaults the Issuer Code based on the Instrument Code selected.

Denomination Details

This the period till when the instruments code is valid from the day it is created.

Denomination Code

Specify the Denomination Code.

Code Description

Specify the Code Description.

Denomination Value

Specify the Denomination Value.

2.1.6.1 Denomination Code for Traveller's Cheques Summary

You can search for records in the Instrument Code Summary Screen. You can invoke 'Denomination Code for Traveller's Cheques Summary' screen by typing 'PISDENOM' in the

field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Search	🗙 Reset 🛛 🛱 Clear All						Records per page 15	•

Remarks				
				Audit Exit

You can specify the following fields:

Host Code

System displays the Host Code of transaction branch on clicking 'New'.

Modification Reference

Modification Reference is system generated reference.

Modification Date

Modification Date is defaulted as current date and is disabled.

Instrument Code

Specify the Instrument Code from the list of values. All valid Instrument Codes of the Instrument Type Demand Draft, Manager's cheque and Foreign DD are listed.

Instrument Type

System defaults the Instrument Type based on the Instrument Code selected.

Instrument Currency

System defaults the Instrument Currency based on the Instrument Code selected.

Instrument Branch

System defaults the From Instrument Branch based on the Instrument Code selected.

Sequence Number

System defaults the From Sequence Number based on the Instrument Code selected.

From Instrument Number & To Instrument Number

You can select one or a range of instruments and mark them as used. If a single instrument status is to be changed, same number is to be entered as From & To Number.

Mark as Used

You can check this field if instrument needs to be used.

Remarks

Specify the Remarks.

2.1.8.1 Unused Instruments Status Change Summary

You can invoke 'Unused Instruments Status Change Summary' screen by typing 'PISUNUSE' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can specify the following fields:

Host Code

System displays the Host Code of transaction branch on clicking 'New'.

Instrument Code

Specify the Instrument Code from the list of values. All valid Instrument Codes of the Instrument Type Demand Draft, Manager's cheque and Foreign DD are listed.

Instrument Branch

System defaults the From Instrument Branch based on the Instrument Code selected.

Issue Date

Modification Date is defaulted as current date and is disabled.

Sequence Number

Specify the Sequence Number.

From Instrument Number

System defaults the From Instrument Number based on the Instrument Code selected.

To Instrument Number

System defaults the From Instrument Number based on the Instrument Code selected.

Instrument type

System defaults the Instrument Type based on the Instrument Code selected.

Instrument Currency

System defaults the Instrument Currency based on the Instrument Code selected.

Instrument Number

Based on the range mentioned the instrument numbers are listed.

Instrument Status

System defaults the Instrument Status based on the Instrument Number selected.

Usage Type

You can select Usage Type from the following:

- Issued
- Marked as Issued (if the instrument is marked as used from PIDUNUSE screen)

View Instrument

You can click on View Detail button if Usage Type is Issued. This will open to Instrument Issue View screen PIDINSVW for the record.

2.1.9.1 Instrument Inventory Status View Summary

You can invoke 'Instrument Inventory Status View Summary' screen by typing 'PISININV' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can specify the following fields:

Transaction Branch

The system indicates the Transaction Branch on clicking 'New'.

Transaction Reference Number

The system populates the Transaction Reference Number.

Host Code

This field is defaulted as user's logged in Host.

Instrument Number

This field is populated by system upon successfully completing the instrument issue processing, if the instrument number generation is maintained as 'Auto'. The new instrument number is allocated based on the branch and instrument code and available inventory in FIFO order.

This field is to be manually maintained if it is not set as 'Auto'.

Based on system parameter (TRACK_MANUAL_INST_INVENTORY) value Y/N, system will validate the inventory for manually entered instrument numbers.

MICR number

During the issue of instrument, you can enter the MICR Number.

Source Code

This field is defaulted as 'MANL'.

Instrument type

Based on the Instrument Code selected, Instrument Type gets auto-populated.

Instrument Code

All valid Instrument codes of instrument type 'Demand Draft' and 'Manager's Cheque' are listed. Select the appropriate code.

Code Description

Based on the Instrument Code selected, Code Description gets auto-populated.

Prefunded GL

You can select the value between Yes or No. If the Prefunded GL is 'Yes' Debit Account can be a valid GL. In other cases, system defaults the Prefunded GL maintained in Source code maintenance as the debit account while posting the accounting.

Test key

Specify the Test Key, if the transaction is for instrument type 'Remittance Inward'.

Re-issue with reversed instrument

Check this box, if instrument is to be re-issued with same instrument number. By default, this flag is unchecked.

Note

Reversal is allowed only once for an instrument number.

2.2.1.1 Main Tab

Click Main tab from the Instrument Issue screen.

Debit Details		Instrument Details		
Debit Account/GL	Q	Booking Date		
Account Currency	Q	Instruction Date *		
Account Branch		Issue Date		
Account/GL Name	P	Instrument Currency *		
Debit Amount		Instrument Amount *

Remarks				
Additional Details				
Issuer Bank Details		Payable Bank Details		
Bank Code	Q	Bank Code	Q	
Dank Code		Bank Name		
Bank Name		Dalik Indilic		
	Q	Branch Code	Q	

You can specify the following fields:

<u>Debit Details</u>

Debit Account/GL

You can select the purchaser details. You can select a valid customer account.

Account Currency

The system indicates the Account Currency.

Account Branch

The system indicates the Branch of Account.

Account/GL Name

The system indicates the name of the Account or the GL name depending on your selection.

Debit Amount

Specify the Debit Amount to be issued.

Customer Number

The system indicates the unique Customer Number that is tagged to the account.

Customer Service Model

The system indicates the Customer Service Model for the account. For example, GOLD and PLATINUM.

Instrument Details

Booking Date

The system defaults the current date on clicking 'New'.

Instruction Date

Specify the request date obtained from the customer. This is defaulted as current date. You can change this to a back date or forward date.

Issue Date

The system specifies the Issue Date. If request date is a back dated, issue date will be set as the current date. Instrument Date is the same as Issue Date.

Note

System does holiday check using local holidays maintained for branch, when future dated request is placed. The request is processed with the following possibilities:

- If customer preference is available for Instruction date movement, then issue date is moved forward or backward to a business day.
- If no customer preference is available it is always moved forward to next business day.

Instrument Currency

This is defaulted by the system based on the Instrument Code selected.

Instrument Amount

Specify the Instrument Amount for transfer. This is a mandatory field.

Exchange Rate

Specify the Exchange Rate if debit account currency is different from the transfer currency. The system retains the input value and validates the same against override and stop variances maintained in the Network preference.

If exchange rate is not specified, then the system populates the exchange rate on enrich or save, if the transfer amount is less than small FX limit maintained. If transfer amount is more than small FX limit and, if external exchange rate is applicable, then rate pick up will happen during transaction processing.

FX Reference Number

Specify the Foreign Exchange reference.

Enrich

Click this button to trigger computation of Charges and populate the Charges in the **Pricing** tab.

Beneficiary Details

Beneficiary Name

Specify the Account Name of the beneficiary. This is a mandatory field.

Payable Branch Code

This is optional based on the Instrument Type. Select the required Branch Code from the list of values.

Payable Branch Name

This is defaulted by the system based on the Payable Branch Name selected.

Remarks

Specify internal remarks, if any.

Issuer Bank Details

Bank Code

Specify the Bank Code from the list of values.

Bank Name

This is defaulted by the system based on the Bank Code selected.

Branch Code

Specify the Branch Code from the list of values.

Branch Name

This is defaulted by the system based on the Branch Code selected.

Payable Bank Details

Bank Code

Specify the Bank Code from the list of values.

Bank Name

This is defaulted by the system based on the Bank Code selected.

Branch Code

Specify the Branch Code from the list of values.

Branch Name

This is defaulted by the system based on the Branch Code selected.

2.2.1.2 Additional details

You can specify the additional beneficiary details by clicking the 'Additional Details' button.

Additional Details sub screen consist of two tabs:

- Additional Details
- TC Denomination Details

Transaction Reference No		Host Code			
Activation Date		Instrument Currency			
	Additional Details	50 <u>802201</u>		TC Denomination Details

ender To Receiver Informatio	n				
Line 1	Q				
Line 2	Q				
Line 3	Q				
Line 4	Q				
Line 5	Q				
Line 6	Q				

You can specify the Following details:

Debtor Identifier

Account/Party Identifier

Specify the Account/Party Identifier.

Bank Identifier Code

Select the BIC from the list of values. All the valid BIC codes are listed here.

Name and Address1

Specify the Name and Address.

Address 2-4

Specify the Addresses.

Phone Number and Debtor Identifier

Specify the Phone Number and Debtor Identifier.

Payee Details

Beneficiary Account Specify the Beneficiary Account.

Name and Address1

Specify the Name and Address.

Address 2-4

Specify the Addresses.

Phone Number and Debtor Identifier

Specify the Phone Number and Identifier of the Payee.

Sender to Receiver Information

Line 1-6

Specify the lines.

Note

System lists the standard code words such as /ACC/, /INT/, /INS/. The code word /REC/ is not listed in the LOV as per SWIFT 2019 change.

2.2.1.3 TC Denomination details

You can specify the TC Denomination details..

Serial Numb	Den Om	ination Code 🌷 🗘	Code Description ♀	Denomination Value 💲	Units Issued * 0	Series Start Number 🗘
No data to displa	iy.					
Page 1 (0 o	of O items) < 🐗	1 > >				

Denomination details tab is enabled only if the instrument type is TC

You can specify the Following details:

Serial Number

System generates the Serial Number.

Denomination Code

Specify the Denomination Code from the list of values. Lists all the codes maintained for the instrument code in PIDDENOM.

Code Description

Code Description is defaulted based on the Denomination Code selected.

Denomination Value

Denomination Value is defaulted based on the Denomination Code selected.

Units Issued

Specify the Issued Units.

Series Start Number

If the instrument number generation is 'Auto', then Start Series Number is populated by system. You can manually enter the Series Start Number if the instrument generation is manual.

End Number

Based on the Units Issued, End Number is populated. You can manually enter the Series End Number if the instrument generation is manual.

Total Value

Total Value is calculated by the system by multiplying the Denomination value with the units issued.

2.2.1.4 Pricing Tab

Click the **Pricing** tab from the Instrument Issue screen:

Component Name ≎	Pricing Currency	Pricing Code	≎ Waived ≎	Amount 0	Debtor Account Currency 💲	Debit Amount \$
o data to display.						
ge 1 (0 of 0 items) K (1) > >					

Note

- On clicking the Enrich button, system would compute the Charges, and Tax on Charges if applicable, based on the maintenance for Pricing Code specified in Instrument Preferences (PIDINPRF).
- There may be one or more applicable Charge and Tax components as defined in the Pricing Code maintenance. For each Charge and/or Tax component, the fixed amount or rate would be fetched from Pricing Value Maintenance screen (PPDV-LMNT).

You can specify the following fields:

Component Name

The system displays the name of the applicable Charge component.

Pricing Currency

The system displays the Pricing Currency of the component from the Pricing Code Maintenance.

Pricing Code

The system displays the Pricing Code of the component from the Pricing Code Maintenance.

Waived

Check this box to select the charge component to waive the associated charges.

Note

- If a particular Charge component is waived by you, then system would automatically also check the Waiver check box for the associated Tax component (identified from the Pricing code maintenance) if displayed in this grid.
- If charge/tax component is already waived in the Pricing Value maintenance, this component would still be displayed with the value and the waiver flag checked. This flag would not be allowed to be unchecked.

Amount

The system displays the fixed or calculated charge amount using the Pricing Value Maintenance. You can edit this field to a non-zero value.

Debit Account Currency

The system displays the Currency of the selected Debit Account.

Note

Debit Currency is the same as Pricing Currency.

Debit Amount

The system displays the Debit Amount.

2.2.1.5 UDF Tab

Click on the 'UDF' button present in the bottom of the screen to invoke this screen.

Fields	
□ Field Label * ≎	Field Value 🗢

ssue Duplicate Revalidate	Liquidate Foreign DD	1838-2011						

You can search using one or more of the following parameters:

- Transaction Reference Number
- Instrument Amount
- Instrument Code
- Debit Account/GL
- Instrument Type
- Instrument Number
- Source Code
- Authorization Status
- Customer No
- Issue Date
- Transaction Status
- Queue Code
- Source Reference Number.

Once you have specified the search parameters, click 'Execute Query' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

You can perform the following actions on this summary screen:

Revalidate

On selecting an instrument from the View screen that allows revalidation, Revalidation (Function ID: PIDREVAL) screen is displayed with the selected Instrument details.

Issue Duplicate

On selecting an instrument from the View screen that allows duplicate issue, Instrument Duplicate Issue (Function ID: PIDISDUP) screen is displayed with the selected Instrument details.

Liquidate Foreign DD

On selecting an instrument from the View screen that allows liquidating Foreign DDs for which CRLQ is pending, Instrument FCY DD Liquidation (PIDFCYLQ) is displayed with the selected Instrument details.

2.2.3 Instrument FCY DD Liquidation

You can define the instrument codes through this screen.

You can invoke 'Instrument FCY DD Liquidation' screen by typing 'PIDFCYLQ' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

nstrument FCY DD Liquidation			
🕞 New 问 Enter Query

Drawee Bank BIC			
Liquidation Type Statement Internal Entry Reference Value Date Remarks	Q		
	<u>621010122</u>		<u></u>
			Audit Ex

You can specify the following fields:

Host Code

System displays the Host Code of transaction branch on clicking 'New'.

Transaction Reference

Specify the Transaction Reference from the list of values. System lists the instrument issue transactions where:

- Transaction with Instrument Type as FCY DD
- Transaction status is liquidated and CRLQ is pending

Based on the transaction number selected, below fields are defaulted:

- Instrument Number
- Instrument Code

- Instrument Type
- Drawee Bank BIC
- Instrument Currency
- Amount
- Issue Date

Liquidation Reference

System displays the Liquidation Reference on clicking 'New'.

Liquidation Date

System displays the Liquidation Date as current date.

Liquidation Details

Liquidation Type

Select the Liquidation Type from the following:

- Statement Entry (Default)
- Adhoc

Statement Internal Entry Reference

Specify the Statement Internal Entry Reference from the list of values. This field is mandatory if the Liquidation type is selected as 'Statement Entry'.

Value Date

Value Date is defaulted on Statement Internal Entry Reference selected. This field is to be manually input if Adhoc option is selected.

Remarks

Specify the Remarks.

On authorization of the record, system will complete the credit liquidation of the instrument issue transaction selected.

2.2.3.1 Instrument FCY DD Liquidation Summary

You can invoke 'Instrument FCY DD Liquidation Summary' screen by typing 'PISFCYLQ' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

	uidation Summ	ary

Page 1 Of1 K (1) X	1									
rege I vii K I I /										
rage I vii K I V										

You can search using one or more of the following parameters:

- Transaction Reference
- Liquidation Reference
- Instrument Number
- Authorization Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

2.2.3.2 Instrument FCY DD Liquidation Processing

System will match the nostro debit entries which are not yet matched with pending FCY DD issue transactions with the below matching criteria:

MT 950/940/942 Details	Instrument Details
Credit /Debit Type - Debit	Instrument Issue for Foreign Currency DD
Account Servicing Institution Reference	Instrument Number
Nostro Account	Credit Account
Currency & Amount	Instrument Currency & Amount

For transaction where a nostro account statement match is found, Credit accounting entries are generated released for posting and CRLQ status is marked as Liquidated. On completion of CRLQ for an Instrument Type FCY DD, system will mark the issue record instrument status as 'Liquidated'. Value date is taken as the value date received in Nostro statement.

The statement entry which is matched based on which liquidation is done is marked as Matched. Only unmatched entries are picked up for matching with original foreign DD issue details.

2.2.4 Instrument Payment

Instrument issues can be liquidated by specifying the instrument Number through this screen. Liquidation can be initiated from the channels as well.Instrument can be liquidated to own bank account, GL or can be received as part of local clearing.

You can invoke 'Instrument Payment' screen by typing 'PIDINSPY' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Instrument Number Q Payment Date MM/DD/YYYY Authorization Status	
Payment Reference Q Creditor Account Number / GL Q Source Reference Number	(
Instrument Currency Q Instrument Status	
Page 1 011 K (1) X	

You can search using one or more of the following parameters:

- Instrument Amount
- Beneficiary Name
- Payment Mode
- Instrument Code
- Issue Date
- Instrument Type
- Instrument Number
- Payment Date

- Authorization Status
- Payment Reference
- Creditor Account Number / GL
- Source Reference Number
- Instrument Currency
- Instrument Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

2.2.5 Instrument Liquidation Process Flow

Instrument can be liquidated to own bank account, or can be received as part of local clearing.

- On initiating the instrument liquidation, the following processing steps are followed by the system:
 - Initial Validations: System should perform mandatory field checks and reference information checks. System validates whether account record is open and authorized.
 - Instrument Validation: Instrument status should be 'Active'. It should not be in any other status for example, liquidated, cancelled, and stale or payment stopped. If a valid Instrument is found, instrument details currency, amount and issue date are matched with instrument issue record. If the instrument is payable by a particular branch, then the liquidation can be initiated by that branch only.

Note

For instrument liquidations initiated from user interface, system throws an error for any validation exception.

- Sanction Check: If Sanction screening is required for instrument payment, then it should be possible to send the clearing party details to the external sanction system for verification.
- **Exchange Rate Pickup:** Based on instrument currency and credit account currency exchange rate is picked up.This can be internal/external rate.
- External Account Check: If the instrument is getting credited to an account with the same bank, credit account status check to be done with DDA system. This processing step is not applicable for GLs.
- Accounting Handoff: Accounting entries are handed off to external accounting system.

2.2.6 Instrument Payment View

You can view the complete details of the instrument payment in this screen.

You can invoke 'Instrument Payment View' screen by typing 'PIDISPVW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

The system indicates the type of Instrument.

2.2.7.1 Main Tab

You can specify the following field details in the Main tab:

Stop Pay Date

This field is displayed as current date.

Stop Pay Reason

Specify a reason to issue the Stop Pay.

Query (Field 75)

Specify the query, if any.

Beneficiary Name

The system indicates the name of the beneficiary as mentioned in the instrument.

Instrument Currency

The system indicates the Instrument Currency.

Instrument Amount

The system indicates the Instrument Amount.

Issue Date

The system indicates the date on which the instrument was issued.

Stop Pay revoked on

You can revoke the stop pay by invoking the 'Revoke' action. The date on which the Stop Pay revoked is displayed in this field.

Generate Cheque Cancellation or Stop Notification

Check this box, when a SWIFT message is to be generated for stop payment request sent for Foreign currency-Demand Draft instrument.

This is applicable only for foreign CCY-Demand Draft. When this is not checked, SWIFT message is not generated.

Message Format

Select from the list of values (MT/MX).

Note

- Select Message Format as MT to generate MT111 (Request for Stop Payment of a Cheque).
- Select Message Format as MX to generate camt.108.001.01 (Cheque Cancellation or Stop Notification).

Sending Bank BIC

This field is disabled, when stop payment is done through UI. For upload, this field is displayed with respective BIC.

Enrich button

Click the Enrich button to populate charge/tax amounts.

If charge pick up fails, system throws an error. You can then provide the required values and proceed with the transaction.

Cancel or Stop Reason

Note

You can input the value for the below field when the message format selected is MX.

Reason Code

Select from the list of values. It shows list Cheque Stop notification codes along with description.

Reason Description

Displays the description of the selected Reason Code.

Additional Information

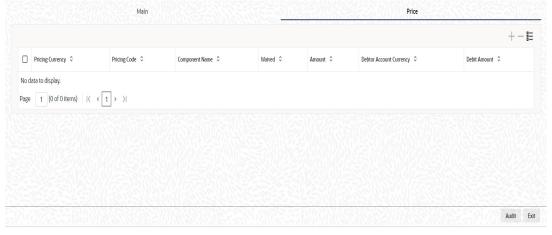

Specify the additional Information.

Originator

Select from the list of values.

2.2.7.2 Price Tab

Click the **Price** tab from the Instrument Payment screen. For more details on Pricing fields, refer to section 2.2.1.3:

2.2.7.3 Instrument Stop Pay Summary

You can search for records in the Instrument Stop Pay Summary Screen. You can invoke "Instrument Stop Pay Summary" screen by typing 'PISSTPAY' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button..

	op Pay Sun	nmary									
Search 🔣 Ac	Advanced Search	🕄 Reset [Clear All							Records per page	15 🔻

Account Description		Account No\ GL Code Description	
Popula	ite Charges	Beneficiary Details	
		Beneficiary Name	

You can invoke "Instrument Revalidation Detailed" screen by typing 'PIDREVAL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can specify the following fields:

Host Code

The system defaults the Host Code of transaction branch on clicking 'New'.

Revalidation Branch

The system defaults the Revalidation Branch of transaction branch on clicking 'New'.

Source

Specify the Source from the list of values. All valid source codes for the Host are listed.

Instrument Code

Specify the Instrument Code from the list of values. All instrument codes of validation type 'Internal' are listed if Revalidation Allowed is 'Yes'.

Instrument Number

Specify the Instrument Number from the list of values. All instruments issued for the selected Instrument Code are listed if

- Instrument status is Active
- Expiry date is reached based on the Stale period maintained for the instrument

Revalidation Reference

System generates the Revalidation Reference on clicking 'New' button.

Revalidation Date

Revalidation date is defaulted as Current Date.

Source Reference Number

This is an optional field for UI input. For Channel requests this is mandatory.

Code Description

System defaults the Code Description of the Instrument Code selected.

Instrument Type

System defaults the Instrument Type of the Instrument Code selected.

2.2.8.1 Main Tab

Revalidation Period

Days

Specify the Number of Days.

Months

Specify the Number of Months.

New Expiry Date

This is populated when the revalidation period is populated/modified. System recalculates the new Expiry date on save again. New expiry Date is derived as existing Expiry Date with addition of Revalidation Period.

Remarks

Specify the Remarks, if any.

Charge Account

This field is defaulted as the Charge Account on Instrument issue. You can change the Charge account if required to another account/GL. Charges are force posted.

Account Description

System defaults the Account Description of the Charge Account selected.

Populate Charges

This Field populates the charges based on the Price code maintained for revalidation in Network Preferences for the instrument. The charge is converted to Charge account currency in STANDARD mid-rate if cross currency is involved. You can modify/waive the charges.

Instrument Details

The following fields are auto populated on the Instrument Number selected:

- Issue Branch
- Issue Date
- Instrument Currency
- Instrument Amount
- Original Expiry Date

Debtor Details

Account No\ GL Code

The Account No\ GL Code field is auto populated on the Instrument Number selected:

Account No\ GL Code Description

The Account No\GL Code Description field is auto populated on the Instrument Number selected.

Beneficiary Details

Beneficiary Name

The Beneficiary Name field is auto populated on the Instrument Number selected.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

2.2.11 Processing Remittances

It is possible to process

- Inter-Branch Remittance within same bank
- Inter- Bank Remittance to other Correspondent Banks / Branch
- Support for test key generation is available for outward Inter-Bank remittances. Instrument type for Outward Remittance is 'Remittance-outward' (RO)
- It is possible to register the Inward remittance details received from Correspondent banks validating the Test Keys received. The payment of such remittances is supported from the designated payable branch. Instrument Type Remittance-Inward (RI) is to be used for registration of Inward remittances.

2.2.11.1 Test Key Maintenance

You can generate a Test Key for outward Inter-Bank remittances. Test key can be maintained and validated while receiving an inward remittance for registration.

You can invoke "Test Key Maintenance" screen by typing 'PMDTSTKY' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

t Key Maintenance				S
New 🏳 Enter Query				
Host Code *		Instrument type

age 1 (0 of 0 items) < 4	(<u>1</u>))			

You can specify the following fields:

Host Code

The system defaults the Host Code of transaction branch on clicking 'New'.

Instrument Code

Specify the Instrument Code from the list of values. All valid instrument codes defined for the Host of instrument type 'Remittance Outward'/'Remittance Inward' are listed.

External Bank Code

All External bank codes maintained for the Instrument code are listed from Instrument External Bank Codes Maintenance.

Test Key Parameter

Specify the Test Key Parameter from the list of values. Lists following parameters:

Amount

- Amount Range
- Currency
- Date
- Issue Branch
- Month
- Payable Branch
- Serial Number
- Year

Test key Sub-parameter

This field is defaulted to Not Applicable and will be disabled for all parameters except 'Date' and 'Amount'.

For the parameter Date the following sub-parameters are applicable:

- Not applicable
- Sunday
- Monday
- Tuesday
- Wednesday
- Thursday
- Friday
- Saturday

For the parameter Amount the sub-parameters applicable are:

- Amount Modulo 10
- Amount Modulo100

Note

Amount MOD 100 is used to resolve the code for first 2 units (Ones and Tens) of the Amount, where individual code value are maintained from 1, 2, to ... 99. From 100 onwards MOD 10 is applied.

Amount MOD 10 is used to resolve the code for first 1 units (Ones) of the Amount, where individual code value is maintained from 1, 2, to ... 9. From 10 onwards MOD 10 is applied.

Only one record is allowed for the same combination of Host, External Bank code and Parameter Amount (either Amount Modulo 10 OR Amount Modulo 100).

Code Details

Actual value

Specify the Actual Value.

Code Value

Specify the Code Value.

2.2.11.2 Test Key Summary

You can search for records in the Instrument Stop Pay Summary Screen. You can invoke "Test Key Summary" screen by typing 'PMSTSTKY' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Sensitive)										15 🔻

ay.										

You can search using the following parameter:

- Authorization Status
- Host Code
- Instrument Code
- Record Status
- External Bank Code
- Test Key Parameter

Once you have specified the above parameter, click 'Search' button. The system displays the records that match the search criteria. Double click a record or select a record to view the detailed maintenance screen.

2.2.11.3 Test Key Generation

The Test Key generated is sum of all the code value of the parameters maintained for the Instrument code and External Bank code (Inter-bank remittances). If no Test key maintenance is available, test key generation is skipped.

Test key generation is done upfront. The External Banks for which Test Key Maintenance is present, the Outward Remittance is not saved without the Test Key being generated.

The Test Key generation fails for Outward Remittance, if the corresponding code value of the (any) parameter is not maintained.

2.2.11.4 Test Key Validation

For a Remittance -inward registration, the Test Key received is the sum of all the code value of the parameters Maintained for the Instrument Code and External Bank code (Inter-bank remittances). If no Test key maintenance is available, test key validation is skipped.

The External Banks for which Test Key Maintenance is present for the instrument code and issuer code, the Remittance-Inward is not saved without the Test Key being validated.

The Test Key validation fails for Remittance Inward, if the corresponding code value of the (any) parameter is not maintained.

2.2.11.5 Remittance -Outward Processing

Remittance-outward instrument type is used for entering an inter-branch or inter-bank remittance.

The following are changes are applicable to the instrument issue process flow for supporting Remittance-outward:

Initial Validations

In addition to the normal instrument issue validations, the below additional validations are:

- The issuer branch and transaction branch are same.
- Payable Bank Code and Payable branch are mandatory.

Instrument number Generation

The system generates next serial number for the instrument code and populate as instrument number. The serial number starts with 1 preceded with zeroes.

Test Key Generation

System checks whether Test key maintenance is available for the Instrument Code and Payable bank code in Test Key maintenance.

If Test key maintenance is available, system generates the Test Key and populate the same for the Remittance-outward issue transaction. If the Test Key generation fails, the transaction is moved to process exception queue. You can retry or cancel the transaction from PE queue.

Accounting Changes

If the instrument type is Remittance outward, the Payable GL pick up is based on the external Bank Code maintenance PIDEXTBK. If GL is maintained in the maintenance PIDEXTBK, without account branch, then in accounting GL branch is populated as transaction branch.

2.2.11.6 Registration of Remittance -Inward

Remittance-inward instrument type is used for entering Inter-bank remittances received. A Remittance- inward record can be paid later when the beneficiary approaches the bank for payment.

The following additional steps are applicable to the instrument issue process flow for supporting Remittance-Inward:

Initial Validations

Additional mandatory validations for Remittance -Inward:

- Issuer Bank Code is defaulted based Instrument code. Issuer Branch is mandatory and should be one of the Branch maintained for issuer bank code in PIDEXTBK.
- Payable Bank Code is own bank code and Payable branch is one of valid branch codes of the Host. If the values are received in the request system validates the same. If the values are not available system defaults the own Bank code as Payable Bank Code and Branch code as transaction branch.
- Instrument Number (Serial number) is mandatory and should be unique for the instrument code derived.
- Debit account is fetched as the account/GL maintained for the issuer bank code in PIDEXTMT.

Test Key Validation

System checks whether Test key maintenance is available for the Issuer bank code and the Instrument Code in Test Key maintenance.

If Test key maintenance is available, system validates the Test Key. If the Test Key is not available or if the validation fails, the transaction is rejected.

2.2.12 Instrument Re-Issue Processing

To re-issue instrument, which is already reversed in Reversed status, the 'Re-issue with reversed instrument' check box is to be selected on PIDINSIS screen.

When the 'Re-issue with reversed instrument' check box is selected, specify the Instrument Number manually and system populates the original instrument details on screen. All the fields on the screen are editable fields including Issue date and MICR No.

System validates that original instrument is in 'Reversed' status and instrument transaction status is in 'Reversed' status. On successful validation only, system populates the instrument details. If failed, error message is shown that 'Instrument is not in Reversed status'.

Pricing is applicable as the pricing of the original transaction is reversed already.

2.2.13 Instrument FCY SWIFT Messages Processing

2.2.13.1 Upload of MT 110

Mapping of MT 110 fields

• The system does a straight through processing of the message and builds demand draft record with the message details upon receiving the MT 110.

Validations & upload of MT110

- The messages which were not uploaded because of DD issue transaction will be pending in Incoming Message Browser in repair status. It is possible to repair and to upload the message again.
- The message is marked as repair if field 54 is present.
- System does D2A conversion and bank re-direction for fields 53 & 52.
- Accounting entries are passed by debiting the Vostro/Nostro account of the correspondent bank (issuer bank itself or its correspondent bank, as the case may be and crediting the DD Payable GL.
- The message is marked as repair if the debit account could not be derived or if the incoming message has field 54 details.
- It is possible to initiate the foreign DD payment through the payment screen or through clearing.

2.2.13.2 Upload of MT 111

- MT111 is processed only if there is a foreign currency instrument in Active status with issuer BIC as drawer BIC (if available), else sender BIC. The instrument currency, amount & Payee in the message matches with issued instrument currency and amount.
- The incoming message is linked to the corresponding instrument issue transaction and stop pay of the instrument is processed. You can view the incoming message from the view message sub-screen of the Instrument view screen with message direction status as 'ln'.

- The message upload fails and message remains in In-browser with the error code & details if the instrument number is not available. If the instrument is in liquidated, cancelled or payment stopped status, the system links the message to the transaction. However, if no straight through processing happen, message remains in the in browser with the related exception details. You must manually generate MT 112 response message in this case.
- The Sending Bank BIC field gets populated.
- The stop pay record is now available in unauthorized status with upload user as the maker. On authorization, record status is Payment stopped.

2.2.13.3 SWIFT CBPRPlus Cheque Presentment Notification (camt.107)

 The system displays SWIFT CBPRPlus Cheque Presentment Notification (camt.107) message and Advice of Cheque (MT101) under All Messages (PXDALMSG) screen and in the Outbound Message Browser (PMSOUTBR).

2.2.13.4 Inbound Cheque Stop Request (camt.108) View Summary

You can search for records in the Inbound Cheque Stop Request (camt.108) view summary Screen. You can invoke "Inbound Cheque Stop Request (camt.108) View Summary" screen by typing 'PISISTRQ' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using the following parameter:

- Stop Report Reference
- Source Code
- Status Code
- Original Stop Request Reference
- Original Instruction Identification
- Originator
- Authorized
- Instruction Identification
- Booking Date

Once you have specified the above parameter, click 'Search' button. The system displays the records that match the search criteria.

Double click a record or select a record and click on 'Details' button to view the detailed maintenance screen.

2.2.13.6 Cheque Cancellation or Stop Request (camt.108) Processing

 Once system receives the incoming SWIFT CBPRPlus Cheque Cancel or Stop Request Message (camt.108) message, it gets populated in the Inbound Message Browser (PMSINBRW).

- The system checks transactions in the Instrument Issue View Detailed (PNDINSVW) screen for the combination of cheque number, amount, currency, and sender combination received in the incoming message.
- If a match is not found, the 'Transaction Status' of the Incoming Cheque Cancel or Stop Request transaction is marked as 'Unmatched'.
- If a match is found, the 'Transaction Status' of the Incoming Cheque Cancel or Stop Request transaction is marked as 'Matched'.

2.2.13.7 Cheque Cancellation or Stop Report (camt.109) Processing

- The system generates the SWIFT CBPRPlus Cheque Cancellation / Stop Report (camt.109) after authorizing the Stop Report input.
- The system displays generated message under Messages (PXDALMSG) sub screen and in the Outbound Message Browser (PMSOUTBR).

3. Instrument Clearing

Highlights of Instrument Clearing

- Life cycle processing of instruments received for outward clearing
- Straight through processing of inward clearing record
- Processing of cheque returns

3.1 <u>Clearing Maintenances</u>

Clearing related maintenances helps in defining various parameters as required by the bank, for processing inbound /outbound clearing transactions.

3.1.1 <u>Clearing Network</u>

You can capture Network details for Instrument Clearing exclusively in this screen.

You can invoke 'Clearing Network Maintenance' screen by typing 'PGDNWMNT' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Clearing Network Code *	Q		
Clearing Network Description			
Host Code *			
Payment Type	Clearing		
Default Clearing Branch *	Q		
Routing Mask			
Time Zone Offset			
Dispatch Days			
Return Days			
IBAN Validation Required	Yes		
Min Davies Services		serve und her sone en anna anna anna anna anna anna ann	
twork Cutoff Time		Return Cut off Time	
Hour		Return Cut off Hour	
Minute		Return Cut off Minute	

You can specify the following fields:

Clearing Network Code

Clearing Network Code can be captured in this field. For each clearing servicing centre of the bank, a different network needs to be maintained.

Clearing Network Description

Network Code description can be maintained in this field.

Host Code

Host code is defaulted based on user's logged in branch.

Payment Type

The networks created using this screen will have default Payment type as 'Clearing'

Default Clearing Branch

Specify the Default Clearing Branch from the list of values.

Routing Mask

Routing mask applicable for the network can be captured in this field.

Time Zone Offset

Time zone is defaulted based on the host.

Dispatch Days

This denotes the number of working days before clearing value date, the clearing record has to be generated and dispatched to the Network. Both branch & Network holidays will be considered to find the dispatch date.

Return Days

This denotes the number of working days after clearing value date, the return transactions to be dispatched to Network for an incoming clearing. For an Outbound clearing, the return transaction details should be received within the number of network working days after clearing value date.

IBAN Validation Required

This flag can be checked if IBAN validation is required for Credit/Debit accounts and banks identifiers.

Network Cutoff Time

Hour

Clearing Network cutoff time can be maintained. Specify the hour in HH format that is lesser than 24.

Minute

Clearing Network cutoff time can be maintained. Specify the hour in MM format that is lesser than 60.

Return Cutoff Time

Return Cut off Hour

Cutoff time for return transactions in hours can be maintained, if applicable.

Return Cut off Minute

Return cutoff time in minutes can be maintained, if applicable.

3.1.1.1 Clearing Network Summary

You can search for records in the Clearing Network Summary Screen. You can invoke 'Clearing Network Summary' screen by typing ''PGSNWMNT' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can search using one or more of the following parameters:

- Authorization Status
- Record Status
- Host Code
- Clearing Network Code
- Default Clearing Branch

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

Double click a record to view the detailed maintenance screen.

3.1.2 Clearing Bank Directory

You can capture the Bank codes and related Branch codes for a Clearing Network in this screen.

The Routing details for every branch of a bank which is participating in the clearing needs to be captured in this screen.

You can invoke 'Clearing Bank Directory Detailed' screen by typing 'PGDBANKD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

learing Bank Directory De	etailed				::>
New 🏳 Enter Query

You can specify the following fields:

Clearing Network

Specify the Clearing Network Code from the list of values of valid clearing networks available for the Host.

Host Code

The system specifies the host code of the logged in user.

Bank Code

Specify the bank code.

Bank Name

Specify the name of the bank

Network Code Description

System defaults the Description on the Clearing Network selected.

Network Type Description

System defaults the Network Type Description on the Clearing Network selected.

Clearing Participation

Branch Code

Specify every bank's Branch, with which clearing transaction needs to be settled.

Branch Description

Specify the description of the branch.

Sector Code

Specify the Sector Code from the list of values.

Routing Number

Specify the Routing Number. This field is Alphanumeric. The length of the mask is validated with the Routing mask maintained in Clearing Network Maintenance.

Customer Float Days

Specify the Customer Float Days. Upto 2 digits are allowed.

Bank Float Days

Specify the Bank Float Days. Upto 2 digits are allowed.

3.1.2.1 Clearing Bank Directory Summary

You can invoke 'Clearing Bank Directory Summary' screen by typing 'PGSBANKD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button...

data to display.					
e 1 (0 of 0 items) < 4					

You can specify the following fields:

Clearing Network Code

You can select the Clearing Network for which preferences are to be maintained. All valid clearing network codes maintained for the Host will be listed.

Network Description

Network description is defaulted based on the Network selected.

Host Code

This field is defaulted with the Host Code linked to user's logged in branch.

Transaction Type

Transaction type can be Incoming or outgoing. Select any one.

Transaction currency

You can select the currency for which clearing preferences are to be maintained.

Common Preferences

Min Transaction Limit Amount

Minimum instrument amount allowed for the clearing Network is maintained in this field.

Max Transaction Limit Amount

Maximum limit of instrument amount allowed for the clearing Network is maintained.

Bank Float Days

You can maintain the Bank settlement days for the clearing. Working days is counted considering the Network holidays. Clearing settlement date will be Clearing date + Bank float days.

Customer Float Days

Clearing float days for clearing settlement will be maintained in this field. Working days is counted considering the Network holidays. Credit Value Date will be Clearing Value Date + Customer Float Days.

Accounting Details

Debit Liquidation Code

Specify the Accounting code for Debit Liquidation from the list of values.

Credit Liquidation Code

Specify the Accounting code for Credit Liquidation from the list of values.

Nostro Account

Specify the Nostro Account from the list of values. The list of values contains all valid Nostro accounts. This is an optional field. If this field is maintained clearing accounting is posted to Network account instead of clearing GL.

Return Accounting Details

Debit Liquidation Code

Specify the Accounting code for Debit Liquidation from the list of values.

Credit Liquidation Code

Specify the Accounting code for Credit Liquidation from the list of values.

Return GL

Specify the Return GL from the list of values. This field is used for return accounting of Inward clearing, when auto /manual return is processed from Exception Queues.

If Return GL is maintained, original transaction entries are posted to Return GL and then reversed. If Return GL is not maintained, no accounting is posted on return processing from exception queues.

Pricing Details

Pricing Code

If pricing required flag is checked, then maintaining pricing code is mandatory. Pricing codes specific to clearing is listed here.

Pricing Required

Check this box to indicate that charge/tax application is required for a clearing return transaction.

Return Pricing Details

Return Pricing Code

Specify the Return Pricing Code from the list of values. If 'Return Pricing required ' flag is checked, then maintaining Return pricing code is mandatory

Return Pricing Required

Check this box to maintain Return Pricing Code for a clearing return transaction.

FX Preferences

FX Rate Type

Specify the FX Rate Type from the list of values.

Rate Override Variance

Specify the Override Variance.

Small FX Limit Currency

Specify the Small FX Limit Currency from the list of values.

Small FX Limit Amount

Specify the Small FX Limit Amount.

External Exchange Rate Applicable

Check this box, if External Exchange Rate is applicable.

Instrument Details

Instrument Code

Specify the Instrument Code from the list of values.

3.1.4.1 Clearing Network Currency Preferences Summary

You can invoke 'Clearing Network Currency Preferences Summary screen by typing 'PGSNCYPR' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Sector Code *	Q		
Customer Float Days *			
Bank Float Days *			

You can specify the following fields:

Host Code

This field is defaulted with the Host Code linked to user's logged in branch.

Host Code Description

Network description is defaulted based on the Network selected.

Clearing Network Code

Specify the Clearing Network from the list of values. All valid clearing Network codes as defined in PGDNWMNT are listed.

Network Code Description

Network description is defaulted based on the Network selected.

Clearing Branch

Based on the Clearing Network selected, the Clearing Branch of the Network is defaulted.

Sector Code

Specify the Sector Code from the list of values. All valid sector codes are listed.

Sector Code Description

Sector Code description is defaulted based on the Sector Code selected.

Customer Service Model

Specify the Customer No from the list of values. All valid CSMs are listed.

Bank Float Days

Specify the Bank Float Days. Number upto 2 digits are allowed.

3.1.7.1 Sector level Clearing Float Days Maintenance Summary

You can invoke 'Sector level Clearing Float Days Maintenance Summary' screen by typing 'PGSFTSEC' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button..

Search 🔣 Advanced Search	🕄 Reset 📋 Clear Al	1				Record	ds per page 15

You can invoke 'Outbound Clearing Transaction Input' by typing 'PGDOTONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can specify the following fields:

Transaction Branch

The system displays the logged in user's logged in Branch code.

Host Code

The system displays the logged in host code.

Source Code

The displays the source code as MANL.

Network Code

Specify the network code. Alternatively you can select the network code from the option list. The list displays all valid clearing networks maintained for the Host.

If only once Network is available, that network will be auto populated on initiating New action

Credit to GL

You can select the value between Yes or No. If Credit to GL is Yes, Credit account can be a valid GL. In other cases, system defaults Credit account as the default GL maintained in Source code maintenance while doing the accounting posting.

Transaction Reference Number

The system displays the auto-generated Transaction reference number.

User Reference

The system defaults the User number here. You can modify if required.

Source Reference Number

Source Reference Number is disabled for Clearing transaction through UI. For Gateway, this field is enabled and user can specify the number.

Image Reference Number

The image reference for the image is specified here.

Image Reference Number is disabled for Clearing transaction through UI. For Gateway, this field is enabled and user can specify the number.

3.2.1.1 <u>Main Tab</u>

Remarks		Clearing Branch	
		Routing Number	
		Exchange Rate	
		FX Reference Number	

You can specify the following details here:

Credit Details

Creditor Account Number

Specify the Account number. Alternatively, you can select the account number from the option list. The list displays all the valid account numbers maintained in the system.

Account IBAN

The system displays the account IBAN based on the account selected.

Account Currency

The system displays the account currency based on the account selected.

Account Branch

The system displays the account branch based on the account selected.

Account/GL Name

The system displays the account name based on the account selected.

Credit Amount

System populates the credit amount based on the instrument account specified.

Customer Number

The system displays the customer number based on the account selected.

Customer Service Model

The system displays the customer service model applicable to the customer like Gold, Platinum, Elite etc.

Drawer Details

Drawer Account

Specify the drawer account number.

Account IBAN

Specify the account IBAN.

Drawer Name

Specify the name of the drawer.

Note

Drawer details are optional fields.

Bank Routing Number

Specify the routing number of the bank on which the instrument is drawn. Alternatively, you can select the routing number from the option list. The list displays all the all bank branches participating in the same clearing network.

Bank Name

The system displays the bank name based on the routing number selected.

Branch Name

The system displays the branch name based on the routing number selected.

Remarks

This is a free text field. Any internal remarks related to the clearing transaction can be entered in this field.

Instrument Details

Instrument Date

Select the Instrument date. Current date and Future date is accepted as Instrument Date.

Instrument Code

Specify the instrument code. Alternatively, you can select the instrument code from the option list. The list displays all the all valid instrument codes for the host.

Instrument Number

Specify the instrument number.

Instrument Currency

The system displays the instrument currency based on the instrument selected.

Instrument Amount

Specify the instrument amount.

Processing Dates

Booking Date

The system displays the current date as booking date and cannot be edited.

Clearing Value Date

The system defaults the clearing same as the instruction date if its a working day for the branch and network. In case of a holiday, this will be moved to the next working day.

Credit Value Date

The system calculates the credit value date as below:

Clearing Date+ Credit float days

Working days based on Network holidays maintained will be considered

Debit value date

The system calculates the debit value date as below:

Clearing Date+ Bank Float Days

Working days based on Network holidays maintained will be considered. This is the settlement date for clearing.

Dispatch Date

The system calculates the dispatch date as below:

Clearing date – Dispatch days

Working days based on Network holidays maintained will be considered. If dispatch date arrived at by system is a back date, then it will be set as current date and clearing date will be moved forward.

Return by Date

The system calculates the return by date as below:

Clearing Date+ Return days based on Network Working Days

Clearing Branch

The system defaults the clearing branch to which the transaction branch is linked based on the clearing branch linkage available.

Routing Number

The system displays the routing number based on the clearing branch selected.

Exchange Rate

Specify the exchange rate if credit account currency is different from the transfer currency. The system retains the input value and validates the same against override and stop variances maintained in the Network preference.

If exchange rate is not specified, then the system populates the exchange rate on enrich or save, if the transfer amount is less than small FX limit maintained. If transfer amount is more than small FX limit and, if external exchange rate is applicable, then rate pick up will happen during transaction processing.

FX Reference Number

Specify the foreign exchange reference

3.2.1.2 Pricing Tab

You can view the charge amount computed by the system for each of the Pricing components of the Pricing code linked to the network code of the transaction. Click the "Pricing" tab.

	Main			Pricing	(415,20 <i>06,6</i> 14,623
Component Name 🗘	Pricing Currency 🗘	Amount 0	Waived \$	Debit Currency 💲	Debit Amount 💲

	<u>6.2.19(9) 2 2 2 2 2 1 9</u>			<u>8.87382880168</u>	
DF MIS					Audit

Specify the following details:

Component Name

The system displays each Pricing component of the Pricing code from the Pricing Code maintenance.

Pricing Currency

The system displays the Pricing currency of each Pricing component of the Pricing code.

Amount

The system displays the calculated Charge amount for each Pricing component of the Pricing code.

Waived

The system displays if charges for any Pricing component are waived in the Pricing maintenance.

Debit Currency

The system displays the currency of the Charge account to be debited for the charges.

Debit Amount

The system displays the amount for each Pricing component debited to the charge account in Debit currency. If the Pricing currency is different from the Debit currency the calculated charges are converted to the Debit currency and populated in this field.

3.2.1.3 UDF Tab

Click on the 'UDF' button present in the bottom of the screen to invoke this screen.

ields		
□ Field Label * ≎		Field Value 🗢
No data to display.		
Page 1 (0 of 0 items)	K ∢ 1 ≻ >	

You can specify user defined fields for each transaction.

3.2.1.4 <u>MIS Tab</u>

Click on the 'MIS' button present in the bottom of the screen, to invoke this screen.

Details Transaction Reference Number *	MIS Group	Q	
		Default	
Transaction MIS		Composite MIS	
	Q		Q
	Q		Q
	Q		Q
	٩		Q
	Q		Q

You can specify the MIS details in this sub-screen.

Saving of Clearing transaction

On saving the transaction from UI initial validations are executed

- Referential checks
- Network limits , Network allowed currencies
- Instrument date checks (stale period/future date)
- Account Validity check
- Holiday checks
- Error message is displayed, in case of invalid details.

When the transaction is received through channels, it goes as auto authorized. On authorization of an Outgoing Clearing transaction, the following steps clearing process flow:

- Initial validations
 - Account/Bank re-direction
 - Referential checks
 - Network limits , Network allowed currencies
 - Instrument date checks (stale period/future date)
 - Account Validity check
 - Holiday checks
- Duplicate check
- Sanction Check
- Charge computation
- Exchange rate processing
- EAC & Accounting –On clearing date

3.2.1.5 Outbound Clearing Transaction Summary

You can search for outbound clearing transactions in the summary screen. You can invoke 'Outbound Clearing Transaction Summary 'screen by typing 'PGSOTONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can invoke 'Outbound Clearing Transaction Float Extension' screen by typing 'PGDFLTXN' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Q	Extension Done on	
	Customer Account	
	Account Description	
Populate Value Dates	Instrument Number	
	Instrument Currency	
	Instrument Amount	
	Debtor Bank Routing Number	
	Bank Name	
	Populate Value Dates	Populate Value Dates Instrument Namber Instrument Currency Instrument Answart Instrument Answart Debtor Bank Routing Namber

You can specify the following fields:

Host Code

Host code is defaulted based on user's logged in branch.

Clearing Transaction Reference

Specify the Clearing Transaction Reference from the list of values. Lists outward clearing transactions in 'Processed' status.

Clearing Value Date

Based on the Clearing Transaction Reference selected, Clearing Value Date is defaulted.

Float Extension (In Days)

Specify the Float Days. Number upto 2 digits are allowed.

Populate Value Dates

It is mandatory to populate the value dates based on the Float extension maintained. Once the Value dates are populated, Float extension field becomes disabled.

New Credit Value Date

New credit value date is derived by adding the float extension days counted as Network working day to the existing dates.

New Debit Value Date

New Debit value date is derived by adding the float extension days counted as Network working day to the existing dates.

Extension Reference

Extension Reference is defaulted based on user's logged in branch.

Extension Done on

Extension Done On Date is defaulted to current date.

Customer Account

Based on the Clearing Transaction Reference selected, Customer Account is defaulted.

Account Description

Based on the Clearing Transaction Reference selected, Account Description is defaulted.

Instrument Number

Based on the Clearing Transaction Reference selected, Instrument Number is defaulted.

Instrument Currency

Based on the Clearing Transaction Reference selected, Instrument Currency is defaulted.

Instrument Amount

Based on the Clearing Transaction Reference selected, Instrument Amount is defaulted.

Debtor Bank Routing Number

Based on the Clearing Transaction Reference selected, Debtor Bank Routing Number is defaulted.

Bank Name

Based on the Clearing Transaction Reference selected, Bank Name is defaulted.

3.2.5.1 Outbound Clearing Transaction Float Extension Summary

You can invoke 'Outbound Clearing Transaction Float Extension Summary' screen by typing 'PGSFLTXN' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

	Outbo	ound Clearing Transac	tion Float Extens	sion Summary		No.		888G				22	;; X

You can search using one or more of the following parameters:

- Clearing Transaction Reference
- Extension Done on
- Host Code
- Extension Reference
- Clearing Value Date
- Authorization Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria. Double click a record to view the detailed maintenance screen.

3.2.5.2 Float Extension Value Date Derivation & Accounting

New credit value date and Debit value date are derived by adding the float extension days counted as Network working day to the existing dates.

For example, existing credit Value Date is 1st Dec 2021 and float extension is 1 and 2nd Dec 2021 is a Holiday.

New Credit Value Date derived will be 3rd Dec 2021.

• The original accounting entries are reversed with negative amounts and new accounting is posted with the same transaction Reference & extended Debit Value Date and Credit Value Date.

3.2.6 Inbound Clearing

Inward Clearing screen allows you to book an inward Clearing Transaction by capturing details of the inward clearing instrument.

You can invoke 'Inward Clearing Transaction Input' Screen by typing 'PGDITONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

ound Clearing Transaction Input New 🖓 Enter Query			;;

You can specify the following fields:

Transaction Branch

The system displays the logged in user's Branch code.

Host Code

The system displays the logged in user's host code.

Source Code

The displays the source code as MANL.

Network Code

Specify the network code. Alternatively you can select the network code from the option list. The list displays all valid clearing networks maintained for the Host.

If only once Network is available, that network will be auto populated on initiating New action

Transaction Reference Number

The system displays the auto-generated Transaction reference number.

Source Reference Number

Source Reference Number is disabled for Clearing transaction through UI. For Gateway, this field is enabled and user can specify the number.

User Reference

The system defaults the User number. You can modify if required.

Image Reference Number

The image reference for the image file uploaded is specified here.

Image Reference Number is disabled for Clearing transaction through UI. For Gateway, this field is enabled and user can specify the number.

3.2.6.1 Main Tab

You can specify the following details here:

Debit Details

Debit Account Number

Specify the Account / GL number. Alternatively, you can select the account number from the option list. The list displays all the valid account numbers maintained in the system.

Account IBAN

The system displays the account IBAN based on the account selected.

Account Currency

The system displays the account currency based on the account selected.

Account Branch

The system displays the account branch based on the account selected.

Account/GL Name

The system displays the account name based on the account selected.

Debit Amount

The system displays the Debit amount.

Customer Number

The system displays the customer number based on the account selected.

Customer Service Model

The system displays the Customer Service Model based on the account selected.

Beneficiary Details

Account Number

Specify the Beneficiary account number.

Account IBAN

Specify the account IBAN.

Account Name

Specify the name of the Beneficiary.

Bank Routing Number

Specify the routing number of the bank on which the instrument is drawn. Alternatively, you can select the routing number from the option list. The list displays all the all bank branches participating in the same clearing network.

Bank Name

The system displays the bank name based on the routing number selected.

Branch Name

The system displays the branch name based on the routing number selected.

Remarks

Specify any internal remarks related to the clearing transaction.

Instrument Details

Instrument Date

Select the Instrument date. Current date and Future date is accepted as Instrument Date.

Instrument Code

Specify the instrument code. Alternatively, you can select the instrument code from the option list. The list displays all the all valid instrument codes for the host.

Instrument Number

Specify the instrument number.

Instrument Currency

The system displays the instrument currency based on the instrument selected.

Instrument Amount

Specify the instrument amount.

Processing Details

Booking Date

The system displays the current date as booking date and cannot be edited.

Clearing Date

The system defaults the clearing same as the instruction date if its a working day for the branch and network. In case of a holiday, this will be moved to the next working day.

Debit value date

The system calculates the debit value date as below:

Clearing Date+ Bank Float Days

Working days based on Network holidays maintained will be considered. This is the settlement date for clearing.

Credit Value Date

The system calculates the credit value date as below:

Clearing Date+ Credit float days

Working days based on Network holidays maintained will be considered

Return by Date

The system calculates the return by date as below:

Clearing Date+ Return days based on Network Working Days

Clearing Branch

The system defaults the clearing branch to which the transaction branch is linked based on the clearing branch linkage available.

Routing Number

The system displays the routing number based on the clearing branch selected.

3.2.6.2 Pricing Tab

You can view the charge amount computed by the system for each of the Pricing components of the Pricing code linked to the network code of the transaction. Click the "Pricing" tab.

Component Name 🗘	Pricing Currency 💲	Amount \$	Waived 🗘	Credit Currency 💲	Credit Amount 💲
lo data to display.					
age 1 (0 of 0 items) < (1 > >				

Specify the following details:

Pricing Component

The system displays each Pricing component of the Pricing code from the Pricing Code maintenance.

Pricing Currency

The system displays the Pricing currency of each Pricing component of the Pricing code.

Pricing Amount

The system displays the calculated Charge amount for each Pricing component of the Pricing code.

Waived

The system displays if charges for any Pricing component are waived in the Pricing maintenance.

Debit Currency

The system displays the currency of the Charge account to be debited for the charges.

Debit Amount

The system displays the Charge amount for each Pricing component debited to the charge account in Debit currency. If the Pricing currency is different from the Debit currency the calculated charges are converted to the Debit currency and populated in this field.

3.2.6.3 UDF Tab

Click on the 'UDF' button present in the bottom of the screen to invoke this screen.

it Amount 🗘

You can specify user defined fields for each transaction.

3.2.6.4 <u>MIS Tab</u>

Click on the 'MIS' button present in the bottom of the screen, to invoke this screen.

Transaction Reference Number *	MIS	Group Q Default	
ransaction MIS		Composite MIS	
	Q		Q
	Q		Q
	Q		Q
	Q		Q

You can specify the MIS details in this sub-screen.

Saving of Clearing transaction

Click Save to save the transaction. On save, the initial validations will be executed. When the transaction is received through channels, it will be auto authorized.

For more details on the process while saving the transaction, refer to section 3.3.2.3.

3.2.6.5 Inbound Clearing Transaction Summary

You can search for outbound clearing transactions in the summary screen. You can invoke 'Inbound Clearing Transaction Summary 'screen by typing 'PGSITONL' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Search 🔄 Advanced Search	💭 Reset 📋 Clear A	NI CONTRACTOR					Records per p	age 15	; •

- Return Status
- Original Transaction Reference

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

4. Positive Pay

Corporate customers can provide the bank with 'Cheque Issue Details'. These Positive Pay details are matched against cheques received for payment in Inward clearing. If a cheque listed for Positive Pay has been lost or stolen or otherwise cannot be accounted for, customer can place a stop payment order on such cheque.

4.1 **Positive Pay Maintenances**

4.1.1 **Positive Pay Preferences**

This maintenance is a generic maintenance which is applicable to all customers. This maintenance is required when there is a threshold amount above which Positive Pay validations are applicable to all customers or if UDF group is to be attached to Positive Pay input.

You can invoke "Positive Pay Preferences Detailed" screen by typing 'PIDPPPRF' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

vositive Pay Preferences Detailed

You can specify the following fields:

Host Code

The system defaults the Host Code.

Host Description

The system defaults the Host Description.

Threshold Amount For Positive Pay Validation

Threshold Currency

Specify the Threshold Currency from the list of values

Threshold Amount

Specify the cheque amount above which it is mandatory to have Positive Pay record for cheque payment.

Other Preferences

UDF Group

Specify the UDF Group from the list of values. All valid UDF groups are listed.

Beneficiary Name Validation Required

This preference flag indicates whether the Beneficiary name validation is required while process an inward positive pay transaction in clearing.

Stale Period

Days

Specify the Stale Period Days.

Months

Specify the Stale Period Months.

Note

Stale positive Pay instruments fails stale day validation, once received in inward clearing. Such transactions are moved to Return Queue.

4.1.1.1 Positive Pay Preferences Summary

You can invoke "Positive Pay Preferences Summary" screen by typing 'PISPPPRF' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

- Booking Date
- Beneficiary Name
- File Reference Number
- Issue Date
- Instrument Status
- Positive Pay Reference
- Batch Reference

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

You can initiate Modify and Change Status actions from Summary screen.

4.3 **Positive Pay Validation**

Below listed validations are done for inward clearing, if the instrument type is 'Cheque':

- Whether Positive Pay Preferences is available for the Debit Account
- If no preference is available for the account, host level preference is available

If no preference is available at Account/Host level, no positive pay validation is done.

Based on the preference, system validates whether cheque amount is greater than the minimum amount. If yes, it is mandatory to have the instrument number in positive Pay Instrument maintenance with 'Active' status. If no valid Positive Pay Instrument record is found, the transaction is moved to Return Queue.

If Beneficiary Name match Required is maintained as 'Yes' in the preference the beneficiary Name of the cheque is matched with the name maintained in Positive Pay maintenance. If the name is not matched, transaction is moved to Return Queue.

4.4 **Positive Pay Modification**

4.4.1 **Positive Pay Modification**

This screen can be initiated from Positive Pay View summary screen. If a single record is selected and modify operation is initiated, the details of the selected record is defaulted in the Modification screen.

Modification screen functions as a standalone screen too. You can select a Positive Pay reference and default the details for modification.

You can invoke "Positive Pay Modification" screen by typing "PIDPPMOD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

You can view the following fields on the basis of Positive Pay Reference selected:

- Booking Date
- Source Code
- Customer Account
- Cheque Number
- Modification Number
- Host Code

- Booking Branch
- Account Branch
- Account Description
- Account Currency
- File Name
- File Preference

Instrument Details

You can modify the following fields:

- Issue Date
- Cheque Amount
- Beneficiary Name
- Remarks

4.4.1.1 **Positive Pay Modification Summary**

You can invoke "Positive Pay Modification Summary" screen by typing 'PISPPMOD' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.

Status Change Reason		Beneficiary Name	

You can specify the following fields:

Host Code

The system indicates the Host Code of the logged in user.

Branch Code

The system indicates the Branch Code of the logged in user.

Source Code

Specify the Source Code from the list of values.

Positive Pay Reference

Specify the Positive Pay Reference from the list of values.

Based on the Positive Pay Reference selected, following fields are populated:

- Customer Account
- Cheque Number
- Current Status
- File Reference
- File Name
- Account description

- Issue Date
- Cheque Amount
- Beneficiary Name

New Status

Select the New Status for the record from the drop down list:

- Payment Stopped
- Active
- Cancelled
- Paid

Status Change Reason

Specify the Status Change Reason.

Current Status

Select the Current Status for the record from the drop down list:

- Active
- Payment Stopped
- Cancelled

Records with 'Paid' status are not listed for Status movement. You can cancel a cheque and revoke the cancellation by changing the status to Active. Stop Payment can be marked and you can revoke the Stop Payment by changing the status to Active.

Based on the Current status, the new status field will restrict the allowed values:

Current Status	Allowed list for new status
Active	Payment Stopped, Cancelled or Paid
Cancelled	Active
Payment Stopped	Active

Status Update Reference

System defaults the Update Reference on clicking New button.

Status Update Date

System defaults the Update Date to current date.

4.5.1.1 Positive Pay Status Movement Summary

You can invoke "Positive Pay Status Movement Summary" screen by typing 'PISPSTMV' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button.
