XID_REPORT	CLOB		An XML report describing the details of the transactions backed out by the compensating transaction
USERNAME	VARCHAR2(128)	NOT NULL	User who is executing the compensating transaction

See Also:

"USER_FLASHBACK_TXN_REPORT"

5.357 DBA_FLASHBACK_TXN_STATE

DBA_FLASHBACK_TXN_STATE displays information about the compensating status of all transactions in the database.

For each compensating transaction, there could be multiple rows, where each row provides the dependency relation between the transactions that have been compensated by the compensating transaction.

Related View

USER_FLASHBACK_TXN_STATE displays information about the compensating status of the transactions owned by the current user. This view does not display the USERNAME column.

Column	Datatype	NULL	Description
COMPENSATING_XID	RAW(8)		Transaction ID of the compensating transaction

Column	Datatype	NULL	Description
XID	RAW(8)		A transaction that has been compensated by the compensating transaction
DEPENDENT_XID	RAW(8)		A dependent transaction of XID **Note:** In the case of BACKOUT_MODE = CASCADE, there must be another row with XID = DEPENDENT_XID of this column.
BACKOUT_MODE	VARCHAR2(16)		Mode in which XID was backed out: • NOCASCADE • NOCASCADE_FORCE • NONCONFLICT_ONLY • CASCADE
USERNAME	VARCHAR2(128)	NOT NULL	User who is performing the compensating transaction

See Also:

"USER_FLASHBACK_TXN_STATE"

5.358 DBA_FREE_SPACE

DBA_FREE_SPACE describes the free extents in all tablespaces in the database.

If a data file (or entire tablespace) is offline in a locally managed tablespace, you will not see any extent information. If an object has extents in an online file of the tablespace, you will see extent information about the offline data file. However, if the object is entirely in the offline file, a query of this view will not return any records.

If a data file does not have any free space, you will not see a row for the data file in this view.

Related View

USER_FREE_SPACE describes the free extents in the tablespaces accessible to the current user.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the extent
FILE_ID	NUMBER		Absolute file number of the data file containing the extent
BLOCK_ID	NUMBER		Starting block number of the extent
BYTES	NUMBER		Size of the extent (in bytes)
BLOCKS	NUMBER		Size of the extent (in Oracle blocks)
RELATIVE_FNO	NUMBER		Relative file number of the file containing the extent

See Also:

"USER_FREE_SPACE"

5.359 DBA_FREE_SPACE_COALESCED

DBA_FREE_SPACE_COALESCED describes statistics on coalesced space in all tablespaces in the database.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace
TOTAL_EXTENTS	NUMBER		Total number of free extents in the tablespace
EXTENTS_COALESCED	NUMBER		Total number of coalesced free extents in the tablespace
PERCENT_EXTENTS_COALESCED	NUMBER		Percentage of coalesced free extents in the tablespace
TOTAL_BYTES	NUMBER		Total number of free bytes in the tablespace
BYTES_COALESCED	NUMBER		Total number of coalesced free bytes in the tablespace
TOTAL_BLOCKS	NUMBER		Total number of free Oracle blocks in the tablespace
BLOCKS_COALESCED	NUMBER		Total number of coalesced free Oracle blocks in the tablespace
PERCENT_BLOCKS_COALESCED	NUMBER		Percentage of coalesced free Oracle blocks in the tablespace

5.360 DBA_GG_AUTO_CDR_COLUMN_GROUPS

DBA_GG_AUTO_CDR_COLUMN_GROUPS provides details about all of the Oracle GoldenGate automatic conflict detection and resolution (CDR) column groups in the database.

Its columns are the same as those in ALL_GG_AUTO_CDR_COLUMN_GROUPS.

> **See Also:**
>
> "ALL_GG_AUTO_CDR_COLUMN_GROUPS"

5.361 DBA_GG_AUTO_CDR_COLUMNS

DBA_GG_AUTO_CDR_COLUMNS provides details about all of the Oracle GoldenGate automatic conflict detection and resolution (CDR) columns in the database.

Its columns are the same as those in ALL_GG_AUTO_CDR_COLUMNS.

> **See Also:**
>
> "ALL_GG_AUTO_CDR_COLUMNS"

5.362 DBA_GG_AUTO_CDR_TABLES

DBA_GG_AUTO_CDR_TABLES provides details about all the tables configured for Oracle GoldenGate automatic conflict detection and resolution (CDR).

Its columns are the same as those in ALL_GG_AUTO_CDR_TABLES.

> **See Also:**
>
> "ALL_GG_AUTO_CDR_TABLES"

5.363 DBA_GG_INBOUND_PROGRESS

DBA_GG_INBOUND_PROGRESS displays information about the progress made by all GoldenGate inbound servers in the database. Its columns are the same as those in ALL_GG_INBOUND_PROGRESS.

> **See Also:**
>
> "ALL_GG_INBOUND_PROGRESS"

5.364 DBA_GG_PROC_OBJECT_EXCLUSION

DBA_GG_PROC_OBJECT_EXCLUSION provides details about all tables that should be filtered when operating on given objects.

Column	Datatype	NULL	Description
PACKAGE_OWNER	VARCHAR2(384)		Procedure package owner
PACKAGE_NAME	VARCHAR2(384)		Procedure package name
OBJECT_OWNER	VARCHAR2(384)		Object owner to filter for the given procedure
OBJECT_NAME	VARCHAR2(384)		Object name to filter for the given procedure

5.365 DBA_GG_PROCEDURE_ANNOTATION

DBA_GG_PROCEDURE_ANNOTATION annotates the position of Owner and Object arguments in procedure calls.

Column	Datatype	NULL	Description
PACKAGE_OWNER	VARCHAR2(384)	NOT NULL	Procedure package owner
PACKAGE_NAME	VARCHAR2(384)	NOT NULL	Procedure package name
PROCEDURE_NAME	VARCHAR2(384)	NOT NULL	Procedure name

Column	Datatype	NULL	Description
OBJECT_OWNER_ARGPOS	NUMBER	NOT NULL	Object owner name position in argument list, -1 if not present
OBJECT_ARGPOS	NUMBER	NOT NULL	Object name position in argument list, -1 if not present
MIN_DB_VERSION	VARCHAR2(100)		Minimum database version for the procedure
MAX_DB_VERSION	VARCHAR2(100)		Maximum database version for the procedure
MIN_REDO_COMPAT_LEVEL	VARCHAR2(100)		Minimum redo compatibility for the procedure
MAX_REDO_COMPAT_LEVEL	VARCHAR2(100)		Maximum redo compatibility for the procedure
FLAGS	NUMBER		Additional information about procedure arguments

5.366 DBA_GG_SUPPORTED_PACKAGES

DBA_GG_SUPPORTED_PACKAGES provides details about supported procedure packages for Oracle GoldenGate replication.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(384)	NOT NULL	Procedure package owner
NAME	VARCHAR2(384)	NOT NULL	Procedure package name
FEATURE	VARCHAR2(384)	NOT NULL	DBMS feature that the procedure package belongs to
MIN_DB_VERSION	VARCHAR2(100)		Minimum database version for the supported package
MAX_DB_VERSION	VARCHAR2(100)		Maximum database version for the supported package
MIN_REDO_COMPAT_LEVEL	VARCHAR2(100)		Minimum redo compatibility for the supported package
MAX_REDO_COMPAT_LEVEL	VARCHAR2(100)		Maximum redo compatibility for the supported package
SUPPORTED_LEVEL	VARCHAR2(100)		Supported level of the package

5.367 DBA_GG_SUPPORTED_PROCEDURES

DBA_GG_SUPPORTED_PROCEDURES provides details about all procedures that are supported for Oracle GoldenGate replication.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Procedure package owner
PACKAGE_NAME	VARCHAR2(128)		Procedure package name
PROCEDURE_NAME	VARCHAR2(128)		Procedure name
MIN_DB_VERSION	VARCHAR2(100)		Minimum database version for the procedure
MAX_DB_VERSION	VARCHAR2(100)		Maximum database version for the procedure
MIN_REDO_COMPAT_LEVEL	VARCHAR2(100)		Minimum redo compatibility for the procedure
MAX_REDO_COMPAT_LEVEL	VARCHAR2(100)		Maximum redo compatibility for the procedure
SUPPORTED_MODE	VARCHAR2(100)		Supported mode for the procedure: ALWAYS or DBMS_ROLLING

Column	Datatype	NULL	Description
EXCLUSION_RULE_EXISTS	VARCHAR2(3)		Specifies whether an exclusion rule exists for the procedure (YES) or not (NO). **See Also:** "DBA_GG_PROC_OBJECT_EXCLUSION"

5.368 DBA_GLOBAL_CONTEXT

DBA_GLOBAL_CONTEXT displays the definition (name, schema, and package) of all global contexts created in the database.

This view is a subset of DBA_CONTEXT, which describes all contexts, including global contexts.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(128)	NOT NULL	Name of the context namespace
SCHEMA	VARCHAR2(128)	NOT NULL	Schema of the package that administers the globally accessible context
PACKAGE	VARCHAR2(128)	NOT NULL	Package that administers the globally accessible context

See Also:

- "DBA_CONTEXT"
- *Oracle Database Security Guide* for more information about using global application contexts
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SESSION.SET_CONTEXT procedure

5.369 DBA_GOLDENGATE_INBOUND

DBA_GOLDENGATE_INBOUND displays information about all GoldenGate inbound servers in the database. Its columns are the same as those in ALL_GOLDENGATE_INBOUND.

See Also:

"ALL_GOLDENGATE_INBOUND"

5.370 DBA_GOLDENGATE_NOT_UNIQUE

DBA_GOLDENGATE_NOT_UNIQUE displays all tables that have no primary and no non-null unique indexes.

Most of the tables displayed by this view are supported because their columns contain enough information to be maintained by Oracle GoldenGate. Some tables, however, cannot be

supported because their columns do not contain the necessary information. Unsupported tables usually contain a column defined using an unsupported data type.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Schema name of the non-unique table
TABLE_NAME	VARCHAR2(128)		Table name of the non-unique table
BAD_COLUMN	VARCHAR2(1)		Indicates that the table has a column not useful in the where clause. Possible values: • Y - Table column is defined using an unbounded data type, such as LONG or BLOB. If two rows in the table match except in their LOB columns, then the table cannot be maintained properly. Log apply services will attempt to maintain these tables, but you must ensure the application does not allow uniqueness only in the unbounded columns. • N - Enough column information is present to maintain the table in Oracle GoldenGate but the log transport services and log apply services would run more efficiently if you added a primary key. You should consider adding a disabled RELY constraint to these tables.

5.371 DBA_GOLDENGATE_PRIVILEGES

DBA_GOLDENGATE_PRIVILEGES displays details about Oracle GoldenGate privileges. Its columns are the same as those in ALL_GOLDENGATE_PRIVILEGES.

> **See Also:**
>
> "ALL_GOLDENGATE_PRIVILEGES"

5.372 DBA_GOLDENGATE_RULES

DBA_GOLDENGATE_RULES displays information about all GoldenGate server rules in the database. Its columns are the same as those in ALL_GOLDENGATE_RULES.

> **See Also:**
>
> "ALL_GOLDENGATE_RULES"

5.373 DBA_GOLDENGATE_SUPPORT_MODE

DBA_GOLDENGATE_SUPPORT_MODE displays information about the level of Oracle GoldenGate capture process support for the tables in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Table owner
OBJECT_NAME	VARCHAR2(128)		Table name
SUPPORT_MODE	VARCHAR2(6)		Capture process support level for the table: • FULL - A capture process can capture changes made to all of the columns in the table • ID KEY - A capture process can capture changes made to the key columns and any other columns in the table supported by the capture process, except for LOB, LONG, LONG RAW, and XMLType columns. • PLSQL - A capture process can capture changes made to the table as long as Procedural Supplemental Logging is enabled on the source database. Such tables include hierarchy-enabled tables, AQ queue tables, and tables containing columns of type MDSYS.SDO_TOPO_GEOMETRY, MDSYS.SDO_GEORASTER, or MDSYS.SDO_RDF_TRIPLE_S. • NONE - A capture process cannot capture changes made to any columns in the table because the table is not supported for replication.
EXPLANATION	VARCHAR2(4000)		Reason the table does not have FULL capture process support This column is populated only when both of the following conditions are met: • The value of the COMPATIBLE initialization parameter is 20.0 or higher • The value of the SUPPORT_MODE column is ID KEY, INTERNAL, PLSQL, or NONE

5.374 DBA_HANG_MANAGER_PARAMETERS

DBA_HANG_MANAGER_PARAMETERS shows the available user-tunable Blocker Resolver parameters and their values.

> **Note:**
>
> This view is deprecated. Oracle recommends that you instead use the DBA_BLOCKER_RESOLVER_PARAMETERS view.

> **See Also:**
>
> "DBA_BLOCKER_RESOLVER_PARAMETERS"

5.375 DBA_HEAT_MAP_SEG_HISTOGRAM

DBA_HEAT_MAP_SEG_HISTOGRAM displays segment access information for all segments. Its columns are the same as those in ALL_HEAT_MAP_SEG_HISTOGRAM.

> **See Also:**
>
> "ALL_HEAT_MAP_SEG_HISTOGRAM"

5.376 DBA_HEAT_MAP_SEGMENT

DBA_HEAT_MAP_SEGMENT displays the latest segment access time for all segments. Its columns are the same as those in ALL_HEAT_MAP_SEGMENT.

> **See Also:**
>
> "ALL_HEAT_MAP_SEGMENT"

5.377 DBA_HEATMAP_TOP_OBJECTS

DBA_HEATMAP_TOP_OBJECTS displays heat map information for the top 10000 objects by default.

If the database contains fewer than 10000 objects, then fewer than 10000 objects are returned by the view.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Object name
OBJECT_TYPE	VARCHAR2(18)		Object type
TABLESPACE_NAME	VARCHAR2(30)		Tablespace name
SEGMENT_COUNT	NUMBER		Segments in the tablespace
OBJECT_SIZE	NUMBER		Size of the object in MB
MIN_WRITETIME	DATE		Oldest modification time for a set of blocks
MAX_WRITETIME	DATE		Latest modification time for a set of blocks
AVG_WRITETIME	DATE		Average of the modification times for a set of blocks
MIN_READTIME	DATE		Oldest read time for a set of blocks
MAX_READTIME	DATE		Latest read time for a set of blocks
AVG_READTIME	DATE		Average of the read times for a set of blocks
MIN_FTSTIME	DATE		Minimum full table scan time of the object
MAX_FTSTIME	DATE		Maximum full table scan time of the object
AVG_FTSTIME	DATE		Average full table scan time of the object
MIN_LOOKUPTIME	DATE		Minimum lookup time of the object

Column	Datatype	NULL	Description
MAX_LOOKUPTIME	DATE		Maximum lookup time of the object
AVG_LOOKUPTIME	DATE		Average lookup time of the object

5.378 DBA_HEATMAP_TOP_TABLESPACES

DBA_HEATMAP_TOP_TABLESPACES displays heat map information for the top 100 tablespaces.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(128)		Tablespace name
SEGMENT_COUNT	NUMBER		Segments in the tablespace
ALLOCATED_BYTES	NUMBER		Total bytes allocated to the objects in the tablespace
MIN_WRITETIME	DATE		Minimum write time of objects tracked
MAX_WRITETIME	DATE		Maximum write time of objects tracked
AVG_WRITETIME	DATE		Average write time of objects tracked
MIN_READTIME	DATE		Minimum read time of objects tracked
MAX_READTIME	DATE		Maximum read time of objects tracked
AVG_READTIME	DATE		Average read time of objects tracked
MIN_FTSTIME	DATE		Minimum full table scan time of objects tracked
MAX_FTSTIME	DATE		Maximum full table scan time of objects tracked
AVG_FTSTIME	DATE		Average full table scan time of objects tracked
MIN_LOOKUPTIME	DATE		Minimum lookup time of objects tracked
MAX_LOOKUPTIME	DATE		Maximum lookup time of objects tracked
AVG_LOOKUPTIME	DATE		Average lookup time of objects tracked

5.379 DBA_HIER_CLASS

DBA_HIER_CLASS describes the classifications of all hierarchies in the database. Its columns are the same as those in ALL_HIER_CLASS.

> **See Also:**
>
> "ALL_HIER_CLASS"

5.380 DBA_HIER_CLASS_AE

DBA_HIER_CLASS_AE describes the classifications of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_CLASS_AE.

> **See Also:**
>
> "ALL_HIER_CLASS_AE"

5.381 DBA_HIER_COLUMNS

DBA_HIER_COLUMNS describes the columns of all hierarchies in the database. Its columns are the same as those in ALL_HIER_COLUMNS.

> **See Also:**
>
> "ALL_HIER_COLUMNS"

5.382 DBA_HIER_COLUMNS_AE

DBA_HIER_COLUMNS_AE describes the columns of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_COLUMNS_AE.

> **See Also:**
>
> "ALL_HIER_COLUMNS_AE"

5.383 DBA_HIER_HIER_ATTR_CLASS

DBA_HIER_HIER_ATTR_CLASS describes the classifications of the hierarchical attributes of all hierarchies in the database. Its columns are the same as those in ALL_HIER_HIER_ATTR_CLASS.

> **See Also:**
>
> "ALL_HIER_HIER_ATTR_CLASS"

5.384 DBA_HIER_HIER_ATTR_CLASS_AE

DBA_HIER_HIER_ATTR_CLASS_AE describes the classifications of the hierarchical attributes of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_HIER_ATTR_CLASS_AE.

> **See Also:**
>
> "ALL_HIER_HIER_ATTR_CLASS_AE"

5.385 DBA_HIER_HIER_ATTRIBUTES

DBA_HIER_HIER_ATTRIBUTES describes the hierarchical attributes of all hierarchies in the database. Its columns are the same as those in ALL_HIER_HIER_ATTRIBUTES.

> **See Also:**
>
> "ALL_HIER_HIER_ATTRIBUTES"

5.386 DBA_HIER_HIER_ATTRIBUTES_AE

DBA_HIER_HIER_ATTRIBUTES_AE describes the hierarchical attributes of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_HIER_ATTRIBUTES_AE.

> **See Also:**
>
> "ALL_HIER_HIER_ATTRIBUTES_AE"

5.387 DBA_HIER_JOIN_PATHS

DBA_HIER_JOIN_PATHS describes the join paths for all hierarchies in the database. Its columns are the same as those in ALL_HIER_JOIN_PATHS.

> **See Also:**
>
> "ALL_HIER_JOIN_PATHS"

5.388 DBA_HIER_JOIN_PATHS_AE

DBA_HIER_JOIN_PATHS_AE describes the join paths for all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_JOIN_PATHS_AE.

> **See Also:**
>
> "ALL_HIER_JOIN_PATHS_AE"

5.389 DBA_HIER_LEVEL_ID_ATTRS

DBA_HIER_LEVEL_ID_ATTRS describes the attributes that uniquely identify members of the levels of all hierarchies in the database. Its columns are the same as those in ALL_HIER_LEVEL_ID_ATTRS.

> **See Also:**
>
> "ALL_HIER_LEVEL_ID_ATTRS"

5.390 DBA_HIER_LEVEL_ID_ATTRS_AE

DBA_HIER_LEVEL_ID_ATTRS_AE describes the attributes that uniquely identify members of the levels of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_LEVEL_ID_ATTRS_AE.

> **See Also:**
>
> "ALL_HIER_LEVEL_ID_ATTRS_AE"

5.391 DBA_HIER_LEVELS

DBA_HIER_LEVELS describes the levels of all hierarchies in the database. Its columns are the same as those in ALL_HIER_LEVELS.

> **See Also:**
>
> "ALL_HIER_LEVELS"

5.392 DBA_HIER_LEVELS_AE

DBA_HIER_LEVELS_AE describes the levels of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIER_LEVELS_AE.

> **See Also:**
>
> "ALL_HIER_LEVELS_AE"

5.393 DBA_HIERARCHIES

DBA_HIERARCHIES describes all hierarchies in the database. Its columns are the same as those in ALL_HIERARCHIES.

> **See Also:**
>
> "ALL_HIERARCHIES"

5.394 DBA_HIERARCHIES_AE

DBA_HIERARCHIES_AE describes all hierarchies (across all editions) in the database. Its columns are the same as those in ALL_HIERARCHIES_AE.

> **See Also:**
>
> "ALL_HIERARCHIES_AE"

5.395 DBA_HIGH_WATER_MARK_STATISTICS

DBA_HIGH_WATER_MARK_STATISTICS displays information about database high-watermark statistics.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Identifier of the database for which the high-watermark statistics are tracked
NAME	VARCHAR2(64)	NOT NULL	Name of the high-watermark statistic (see Table 5-1)
VERSION	VARCHAR2(17)	NOT NULL	Database version in which the high watermarks were tracked
HIGHWATER	NUMBER		Highest value of the statistic seen at sampling time
LAST_VALUE	NUMBER		Value of the statistic at the last sample time

Column	Datatype	NULL	Description
DESCRIPTION	VARCHAR2(4000)		Description of the high-watermark statistics (see Table 5-1)

Table 5-1 DBA_HIGH_WATER_MARK_STATISTICS Statistics

Name	Description
ACTIVE_SESSIONS	Maximum Number of Active Sessions seen in the system
CPU_COUNT	Maximum Number of CPUs
DATAFILES	Maximum Number of Datafiles
DB_SIZE	Maximum Size of the Database (Bytes)
EXADATA_DISKS	Number of physical disks
INSTANCES	Oracle Database instances
PART_INDEXES	Maximum Number of Partitions belonging to an User Index
PART_TABLES	Maximum Number of Partitions belonging to an User Table
QUERY_LENGTH	Maximum Query Length
SEGMENT_SIZE	Size of Largest Segment (Bytes)
SESSIONS	Maximum Number of Concurrent Sessions seen in the database
SQL_NCHAR_COLUMNS	Maximum Number of SQL NCHAR Columns
TABLESPACES	Maximum Number of Tablespaces
USER_INDEXES	Number of User Indexes
USER_MV	Maximum Number of Materialized Views (User)
USER_TABLES	Number of User Tables

5.396 DBA_HIST_ACTIVE_SESS_HISTORY

DBA_HIST_ACTIVE_SESS_HISTORY displays the history of the contents of the in-memory active session history of recent system activity.

DBA_HIST_ACTIVE_SESS_HISTORY contains snapshots of V$ACTIVE_SESSION_HISTORY. See "V$ACTIVE_SESSION_HISTORY" for further interpretation details for many of these columns (except SNAP_ID, DBID, and INSTANCE_NUMBER).

> **Note:**
>
> If you want to perform a join with the snapshots view, use the DBA_HIST_ASH_SNAPSHOT view instead of the DBA_HIST_SNAPSHOT view.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SAMPLE_ID	NUMBER	NOT NULL	ID of the sample

Column	Datatype	NULL	Description
SAMPLE_TIME	TIMESTAMP(3)	NOT NULL	Time of the sample
SAMPLE_TIME_UTC	TIMESTAMP(3)		SAMPLE_TIME in UTC
USECS_PER_ROW	NUMBER		Time in microseconds since the last active session history sample
SESSION_ID	NUMBER	NOT NULL	Session identifier
SESSION_SERIAL#	NUMBER		Session serial number (used to uniquely identify a session's objects)
SESSION_TYPE	VARCHAR2(10)		Session type: • FOREGROUND • BACKGROUND
SESSION_SERVER	VARCHAR2(9)		Session server type: • DEDICATED • SHARED • PSEUDO • POOLED • NONE
FLAGS	NUMBER		Reserved for future use
USER_ID	NUMBER		Oracle user identifier
SQL_ID	VARCHAR2(13)		SQL identifier of the SQL statement that is currently being executed
IS_SQLID_CURRENT	VARCHAR2(1)		Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)
SQL_CHILD_NUMBER	NUMBER		Child number of the SQL statement that is currently being executed
SQL_OPCODE	NUMBER		Indicates what phase of operation the SQL statement is in
SQL_OPNAME	VARCHAR2(64)		SQL command name
FORCE_MATCHING_SIGNATURE	NUMBER		Signature used when the CURSOR_SHARING parameter is set to FORCE
TOP_LEVEL_SQL_ID	VARCHAR2(13)		SQL identifier of the top level SQL statement
TOP_LEVEL_SQL_OPCODE	NUMBER		Indicates what phase of operation the top level SQL statement was in
SQL_PLAN_HASH_VALUE	NUMBER		Numerical representation of the SQL plan for the cursor
SQL_FULL_PLAN_HASH_VALUE	NUMBER		Numerical representation of the complete SQL plan for the cursor being executed by this session
SQL_ADAPTIVE_PLAN_RESOLVED	NUMBER		Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not
SQL_PLAN_LINE_ID	NUMBER		SQL plan line ID
SQL_PLAN_OPERATION	VARCHAR2(64)		Plan operation name
SQL_PLAN_OPTIONS	VARCHAR2(64)		Plan operation options
SQL_EXEC_ID	NUMBER		SQL execution identifier
SQL_EXEC_START	DATE		Time when the execution of the SQL started
PLSQL_ENTRY_OBJECT_ID	NUMBER		Object ID of the top-most PL/SQL subprogram on the stack (or NULL if there is no PL/SQL subprogram on the stack)

Column	Datatype	NULL	Description
PLSQL_ENTRY_SUBPROGRAM_ID	NUMBER		Subprogram ID of the top-most PL/SQL subprogram on the stack (or NULL if there is no PL/SQL subprogram on the stack)
PLSQL_OBJECT_ID	NUMBER		Object ID of the currently executing PL/SQL subprogram (or NULL if executing SQL)
PLSQL_SUBPROGRAM_ID	NUMBER		Subprogram ID of the currently executing PL/SQL object (or NULL if executing SQL)
QC_INSTANCE_ID	NUMBER		Query coordinator instance ID
QC_SESSION_ID	NUMBER		Query coordinator session ID
QC_SESSION_SERIAL#	NUMBER		Query coordinator session serial number
PX_FLAGS	NUMBER		Reserved for internal use
EVENT	VARCHAR2(64)		If SESSION_STATE = WAITING, then the event for which the session was waiting at the time of sampling. If SESSION_STATE = ON CPU, then this column will be NULL.
EVENT_ID	NUMBER		Identifier of the resource or event for which the session is waiting or for which the session last waited
SEQ#	NUMBER		Sequence number that uniquely identifies the wait (incremented for each wait)
P1TEXT	VARCHAR2(64)		Text of first additional parameter
P1	NUMBER		First additional parameter
P2TEXT	VARCHAR2(64)		Text of second additional parameter
P2	NUMBER		Second additional parameter
P3TEXT	VARCHAR2(64)		Text of third additional parameter
P3	NUMBER		Third additional parameter
WAIT_CLASS	VARCHAR2(64)		Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V$SESSION.WAIT_CLASS.
WAIT_CLASS_ID	NUMBER		Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V$SESSION.WAIT_CLASS_ID.
WAIT_TIME	NUMBER		Total wait time (in microseconds) for the event for which the session last waited (0 if currently waiting)
SESSION_STATE	VARCHAR2(7)		Session state: • WAITING • ON CPU
TIME_WAITED	NUMBER		Time that the current session actually spent waiting for the event (in microseconds). This column is set for waits that were in progress at the time the sample was taken.

Column	Datatype	NULL	Description
BLOCKING_SESSION_STATUS	VARCHAR2(11)		Status of the blocking session: • VALID • NO HOLDER • GLOBAL • NOT IN WAIT • UNKNOWN
BLOCKING_SESSION	NUMBER		Session identifier of the blocking session. Populated only when the session was waiting for enqueues or a "buffer busy" wait. Maps to V$SESSION.BLOCKING_SESSION.
BLOCKING_SESSION_SERIAL#	NUMBER		Serial number of the blocking session
BLOCKING_INST_ID	NUMBER		Instance number of the blocker shown in BLOCKING_SESSION
BLOCKING_HANGCHAIN_INFO	VARCHAR2(1)		Indicates whether the information about BLOCKING_SESSION comes from the hang chain (Y) or not (N)
CURRENT_OBJ#	NUMBER		Object ID of the object that the session is currently referencing. This information is only available if the session was waiting for Application, Cluster, Concurrency, and User I/O wait events. Maps to V$SESSION.ROW_WAIT_OBJ#.
CURRENT_FILE#	NUMBER		File number of the file containing the block that the session is currently referencing. This information is only available if the session was waiting for Cluster, Concurrency, and User I/O wait events. Maps to V$SESSION.ROW_WAIT_FILE#.
CURRENT_BLOCK#	NUMBER		ID of the block that the session is currently referencing
CURRENT_ROW#	NUMBER		Row identifier that the session is referencing
TOP_LEVEL_CALL#	NUMBER		Oracle top level call number
TOP_LEVEL_CALL_NAME	VARCHAR2(64)		Oracle top level call name
CONSUMER_GROUP_ID	NUMBER		Consumer group ID
XID	RAW(8)		Transaction ID that the session was working on at the time of sampling. V$SESSION does not contain this information.
REMOTE_INSTANCE#	NUMBER		Remote instance identifier that will serve the block that this session is waiting for. This information is only available if the session was waiting for cluster events.
TIME_MODEL	NUMBER		Time model information
IN_CONNECTION_MGMT	VARCHAR2(1)		Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)
IN_PARSE	VARCHAR2(1)		Indicates whether the session was parsing at the time of sampling (Y) or not (N)
IN_HARD_PARSE	VARCHAR2(1)		Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)
IN_SQL_EXECUTION	VARCHAR2(1)		Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)
IN_PLSQL_EXECUTION	VARCHAR2(1)		Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)

Column	Datatype	NULL	Description
IN_PLSQL_RPC	VARCHAR2(1)		Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)
IN_PLSQL_COMPILATION	VARCHAR2(1)		Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)
IN_JAVA_EXECUTION	VARCHAR2(1)		Indicates whether the session was executing Java at the time of sampling (Y) or not (N)
IN_BIND	VARCHAR2(1)		Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)
IN_CURSOR_CLOSE	VARCHAR2(1)		Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)
IN_SEQUENCE_LOAD	VARCHAR2(1)		Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)
IN_INMEMORY_QUERY	VARCHAR2(1)		Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N)
IN_INMEMORY_POPULATE	VARCHAR2(1)		Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_PREPOPULATE	VARCHAR2(1)		Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_REPOPULATE	VARCHAR2(1)		Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_TREPOPULATE	VARCHAR2(1)		Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)
IN_TABLESPACE_ENCRYPTION	VARCHAR2(1)		Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)
CAPTURE_OVERHEAD	VARCHAR2(1)		Indicates whether the session is executing capture code (Y) or not (N)
REPLAY_OVERHEAD	VARCHAR2(1)		Indicates whether the session is executing replay code (Y) or not (N)
IS_CAPTURED	VARCHAR2(1)		Indicates whether the session is being captured (Y) or not (N)
IS_REPLAYED	VARCHAR2(1)		Indicates whether the session is being replayed (Y) or not (N)
IS_REPLAY_SYNC_TOKEN_HOLDER	VARCHAR2(1)		Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay
SPID	VARCHAR2(24)		Operating system process identifier
STID	VARCHAR2(24)		Operating system thread identifier
SERVICE_HASH	NUMBER		Hash that identifies the Service
PROGRAM	VARCHAR2(84)		Name of the operating system program
MODULE	VARCHAR2(64)		Name of the currently executing module as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure
ACTION	VARCHAR2(64)		Name of the currently executing action as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure
CLIENT_ID	VARCHAR2(64)		Client identifier of the session

Column	Datatype	NULL	Description
CLIENT_INFO	VARCHAR2(64)		Client information for the session
MACHINE	VARCHAR2(64)		Client's operating system machine name
PORT	NUMBER		Client port number
ECID	VARCHAR2(64)		Execution context identifier (sent by Application Server)
DBREPLAY_FILE_ID	NUMBER		If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.
DBREPLAY_CALL_COUNTER	NUMBER		If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL.
TM_DELTA_TIME	NUMBER		Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated
TM_DELTA_CPU_TIME	NUMBER		Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds
TM_DELTA_DB_TIME	NUMBER		Amount of time spent by this session in database calls over the last TM_DELTA_TIME microseconds
DELTA_TIME	NUMBER		Time interval (in microseconds) since the last time this session was sampled or created, over which the next five statistics are accumulated
DELTA_READ_IO_REQUESTS	NUMBER		Number of read I/O requests made by this session over the last DELTA_TIME microseconds
DELTA_WRITE_IO_REQUESTS	NUMBER		Number of write I/O requests made by this session over the last DELTA_TIME microseconds
DELTA_READ_IO_BYTES	NUMBER		Number of I/O bytes read by this session over the last DELTA_TIME microseconds
DELTA_WRITE_IO_BYTES	NUMBER		Number of I/O bytes written by this session over the last DELTA_TIME microseconds
DELTA_INTERCONNECT_IO_BYTES	NUMBER		Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds
PGA_ALLOCATED	NUMBER		Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken
UGA_ALLOCATED	NUMBER		Amount of the user global area (UGA) (in bytes) consumed by this session at the time this sample was taken
WORKAREA_ALLOCATED	NUMBER		Amount of space in work areas (in bytes) consumed by this session at the time this sample was taken
TEMP_SPACE_ALLOCATED	NUMBER		Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken
DBOP_NAME	VARCHAR2(64)		Database operation name. If the type is SQL, the DBOP_NAME will be NULL.
DBOP_EXEC_ID	NUMBER		Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.397 DBA_HIST_APPLY_SUMMARY

DBA_HIST_APPLY_SUMMARY displays historical statistics information about each apply process for Oracle GoldenGate, and Oracle XStream. This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
STARTUP_TIME	DATE	NOT NULL	The time that the apply process was last started
READER_TOTAL_MESSAGES_DEQUEUED	NUMBER		Total number of messages dequeued since the apply process was last started
READER_LAG	NUMBER		For captured messages, the delay (in seconds) between the creation of the last message and it being received by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being received by the apply process.
COORD_TOTAL_RECEIVED	NUMBER		Total number of transactions received by the coordinator process since the apply process was last started
COORD_TOTAL_APPLIED	NUMBER		Total number of transactions applied by the apply process since the apply process was last started
COORD_TOTAL_ROLLBACKS	NUMBER		Number of transactions which were rolled back due to unexpected contention

Column	Datatype	NULL	Description
COORD_TOTAL_WAIT_DEPS	NUMBER		Number of times since the apply process was last started that an apply server waited to apply a logical change record (LCR) in a transaction until another apply server applied a transaction because of a dependency between the transactions
COORD_TOTAL_WAIT_CMTS	NUMBER		Number of times since the apply process was last started that an apply server waited to commit a transaction until another apply server committed a transaction to serialize commits
COORD_LWM_LAG	NUMBER		For captured messages, the delay (in seconds) between the creation of the message corresponding to the low watermark and it being applied by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being applied by the apply process.
SERVER_TOTAL_MESSAGES_APPLIED	NUMBER		Total number of messages applied by all the apply servers since the apply process was last started
SERVER_ELAPSED_DEQUEUE_TIME	NUMBER		Time elapsed (in hundredths of a second) dequeuing messages by all the apply servers since the apply process was last started
SERVER_ELAPSED_APPLY_TIME	NUMBER		Time elapsed (in hundredths of a second) applying messages by all the apply servers since the apply process was last started
CON_DBID	NUMBER		The database ID of the PDB
REPLICAT_NAME	VARCHAR2(128)		The name of the replicat group created from GGSCI using GoldenGate
UNASSIGNED_COMPLETE_TXN	NUMBER		Total number of complete transactions that the coordinator has not assigned to any apply servers
TOTAL_LCRS_RETRIED	NUMBER		Total number of LCRs retried by this server
TOTAL_TRANSACTIONS_RETRIED	NUMBER		Total transactions retried by this server
TOTAL_ERRORS	NUMBER		Number of transactions applied by the apply process that resulted in an apply error since the apply process was last started
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: • XStream • GoldenGate
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.398 DBA_HIST_ASH_SNAPSHOT

DBA_HIST_ASH_SNAPSHOT provides the list of snapshots that contains Active Session History (ASH) data.

This view differs from DBA_HIST_SNAPSHOT in that it provides snapshots which had errors flushing some Automatic Workload Repository (AWR) tables, but for which ASH data may be successfully flushed (DBA_HIST_SNAPSHOT filters out snapshots which had errors flushing AWR tables).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STARTUP_TIME	TIMESTAMP(3)	NOT NULL	Startup time of the instance
BEGIN_INTERVAL_TIME	TIMESTAMP(3)	NOT NULL	Time at the beginning of the snapshot interval
END_INTERVAL_TIME	TIMESTAMP(3)	NOT NULL	Time at the end of the snapshot interval; the actual time the snapshot was taken
FLUSH_ELAPSED	INTERVAL DAY(5) TO SECOND(1)		Amount of time to perform the snapshot
SNAP_LEVEL	NUMBER		Snapshot level
STATUS	NUMBER		Indicates if the snapshot was successfully flushed without any errors. Possible values: • 0 - No errors • 1 - Errors on some AWR tables
ERROR_COUNT	NUMBER		Number of errors occurring in the tables for the particular snapshot
BL_MOVED	NUMBER		Reserved for internal use
SNAP_FLAG	NUMBER		Condition under which the snapshot was inserted. Possible values are: • 1 - Manual snapshot created using a PL/SQL package • 2 - Imported snapshot • 4 - Snapshot taken while Diagnostic Pack or Tuning Pack was not enabled
SNAP_TIMEZONE	INTERVAL DAY(0) TO SECOND(0)		Snapshot time zone expressed as offset from UTC (Coordinated Universal Time) time zone
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.399 DBA_HIST_BASELINE

DBA_HIST_BASELINE displays information on baselines taken in the system.

For each baseline, this view displays the complete time range and whether the baseline is the default baseline.

Column	Datatype	NULL	Description
DBID	NUMBER		Database ID
BASELINE_ID	NUMBER		Internal ID for the baseline
BASELINE_NAME	VARCHAR2(64)		User-specified name for the baseline
BASELINE_TYPE	VARCHAR2(13)		The baseline type, as follows: STATIC - baselines that are created manually by the user MOVING WINDOW - baselines that have dynamic start and end snapshot IDs GENERATED - baselines that are automatically generated by the system, using a template
START_SNAP_ID	NUMBER		Start snapshot ID for the baseline
START_SNAP_TIME	TIMESTAMP(3)		Time associated with the start snapshot ID
END_SNAP_ID	NUMBER		End snapshot ID for the baseline
END_SNAP_TIME	TIMESTAMP(3)		Time associated with the end snapshot ID
MOVING_WINDOW_SIZE	NUMBER		If BASELINE_TYPE is MOVING WINDOW, this field is the size of the moving window in number of days. If NULL, then the window size is the value of the AWR retention setting.
CREATION_TIME	DATE		Time the baseline was created
EXPIRATION	NUMBER		How long to keep the baseline, in number of days. A NULL value means that the baseline will be kept forever.
TEMPLATE_NAME	VARCHAR2(64)		Name of the template that created this baseline, if any.
LAST_TIME_COMPUTED	DATE		Last time that statistics were computed on the baseline.
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.400 DBA_HIST_BASELINE_DETAILS

DBA_HIST_BASELINE_DETAILS displays details about the baseline.

Column	Datatype	NULL	Description
DBID	NUMBER		Database ID
INSTANCE_NUMBER	NUMBER		Instance ID for the baseline data
BASELINE_ID	NUMBER		Internal ID for the baseline
BASELINE_NAME	VARCHAR2(64)		User-specified name for the baseline
BASELINE_TYPE	VARCHAR2(13)		The baseline type, as follows: STATIC - baselines that are created manually by the user MOVING WINDOW - baselines that have dynamic start and end snapshot IDs GENERATED - baselines that are automatically generated by the system, using a template
START_SNAP_ID	NUMBER		Start snapshot ID for the baseline
START_SNAP_TIME	TIMESTAMP(3)		Start snapshot time for the baseline
END_SNAP_ID	NUMBER		End snapshot ID for the baseline
END_SNAP_TIME	TIMESTAMP(3)		End snapshot time for the baseline
SHUTDOWN	VARCHAR2(3)		Whether or not there is a database startup or shutdown in this interval (YES, NO, or NULL).
ERROR_COUNT	NUMBER		Number of errors in the snapshots in the baseline snapshot range
PCT_TOTAL_TIME	NUMBER		Amount of time captured in snapshots, divided by the total possible time for this baseline
LAST_TIME_COMPUTED	DATE		Last time that statistics were computed on the baseline
MOVING_WINDOW_SIZE	NUMBER		If BASELINE_TYPE is MOVING WINDOW, this field is the size of the moving window in number of days. If NULL, then the window size is the value of the AWR retention setting.
CREATION_TIME	DATE		Time the baseline was created
EXPIRATION	NUMBER		How long to keep the baseline, in number of days. A value of NULL indicates that the baseline will be kept forever.
TEMPLATE_NAME	VARCHAR2(64)		Name of the template that created this baseline, if any.
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.401 DBA_HIST_BASELINE_METADATA

DBA_HIST_BASELINE_METADATA displays metadata information for the baseline.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
BASELINE_ID	NUMBER	NOT NULL	Internal ID for the baseline
BASELINE_NAME	VARCHAR2(64)		User-specified name for the baseline
BASELINE_TYPE	VARCHAR2(13)		The baseline type, as follows: STATIC - baselines that are created manually by the user MOVING WINDOW - baselines that have dynamic start and end snapshot IDs GENERATED - baselines that are automatically generated by the system, using a template
START_SNAP_ID	NUMBER		Start snapshot ID for the baseline
END_SNAP_ID	NUMBER		End snapshot ID for the baseline
MOVING_WINDOW_SIZE	NUMBER		If BASELINE_TYPE is MOVING WINDOW, this field is the size of the moving window in number of days. If NULL, then the window size is the value of the AWR retention setting.
CREATION_TIME	DATE		Time the baseline was created
EXPIRATION	NUMBER		How long to keep the baseline, in number of days. If the value is NULL, the baseline will be kept forever.
TEMPLATE_NAME	VARCHAR2(64)		Name of the template that created this baseline, if any
LAST_TIME_COMPUTED	DATE		Last time that statistics were computed on the baseline
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.402 DBA_HIST_BASELINE_TEMPLATE

DBA_HIST_BASELINE_TEMPLATE displays the templates used by the system for baseline generation.

The system uses this information to determine which baselines should be automatically created or removed.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
TEMPLATE_ID	NUMBER	NOT NULL	Internal ID for the template

Column	Datatype	NULL	Description
TEMPLATE_NAME	VARCHAR2(128)	NOT NULL	Name of the template
TEMPLATE_TYPE	VARCHAR2(9)	NOT NULL	Type of the template, as follows: SINGLE - one time period REPEATING - maintain a time period
BASELINE_NAME_PREFIX	VARCHAR2(128)	NOT NULL	Name to use for the baselines that are created: For a template type of SINGLE, the BASELINE_NAME_PREFIX is the name that will be used. For a template type of REPEATING, the BASELINE_NAME will be the prefix to the name.
START_TIME	DATE	NOT NULL	For a template type of SINGLE, this is the start time for future baselines For a template type of REPEATING, this is the effective start time that baselines should start being generated.
END_TIME	DATE	NOT NULL	For a template type of SINGLE, this is the end time for future baselines. For a template type of REPEATING, this is the effective end time that baselines should stop being generated.
DAY_OF_WEEK	VARCHAR2(9)		For a template type of REPEATING, this indicates the day of the week to create the baseline: SUNDAY, MONDAY, TUESDAY, WEDNESDAY, THURSDAY, FRIDAY, SATURDAY, ALL.
HOUR_IN_DAY	NUMBER		For a template type of REPEATING, a value from 0 - 23 to indicate the hour of the day to create the baseline for.
DURATION	NUMBER		For a template type of REPEATING, the length of time for the baseline to be created.
EXPIRATION	NUMBER		How long to keep the baseline, in number of days
REPEAT_INTERVAL	VARCHAR2(128)		String that represents the time repeating information in the format used by the DBMS_SCHEDULER package
LAST_GENERATED	DATE		Last time a baseline was generated for this template
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_SCHEDULER package

5.403 DBA_HIST_BG_EVENT_SUMMARY

DBA_HIST_BG_EVENT_SUMMARY displays the historical summary background event activity.

This view contains snapshots from V$SESSION_EVENT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2(64)	NOT NULL	Name of the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the class of the wait event
WAIT_CLASS	VARCHAR2(64)		Name of the class of the wait event
TOTAL_WAITS	NUMBER		Total number of waits for the event
TOTAL_TIMEOUTS	NUMBER		Total number of timeouts for the event
TIME_WAITED_MICRO	NUMBER		Total amount of time waited for the event (in microseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

> "V$SESSION_EVENT"

5.404 DBA_HIST_BUFFER_POOL_STAT

DBA_HIST_BUFFER_POOL_STAT displays historical statistics about all buffer pools available for the instance.

This view contains snapshots of V$BUFFER_POOL_STATISTICS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
ID	NUMBER	NOT NULL	Buffer pool identifier number

Column	Datatype	NULL	Description
NAME	VARCHAR2(20)		Name of the buffer pool
BLOCK_SIZE	NUMBER		Block Size
SET_MSIZE	NUMBER		Buffer pool maximum set size
CNUM_REPL	NUMBER		Number of buffers on the replacement list
CNUM_WRITE	NUMBER		Number of buffers on the write list
CNUM_SET	NUMBER		Number of buffers in the set
BUF_GOT	NUMBER		Number of buffers gotten by the set
SUM_WRITE	NUMBER		Number of buffers written by the set
SUM_SCAN	NUMBER		Number of buffers scanned in the set
FREE_BUFFER_WAIT	NUMBER		Free buffer wait statistic
WRITE_COMPLETE_WAIT	NUMBER		Write complete wait statistic
BUFFER_BUSY_WAIT	NUMBER		Buffer busy wait statistic
FREE_BUFFER_INSPECTED	NUMBER		Free buffer inspected statistic
DIRTY_BUFFERS_INSPECTED	NUMBER		Dirty buffers inspected statistic
DB_BLOCK_CHANGE	NUMBER		Database blocks changed statistic
DB_BLOCK_GETS	NUMBER		Database blocks gotten statistic
CONSISTENT_GETS	NUMBER		Consistent gets statistic
PHYSICAL_READS	NUMBER		Physical reads statistic
PHYSICAL_WRITES	NUMBER		Physical writes statistic
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$BUFFER_POOL_STATISTICS"

5.405 DBA_HIST_BUFFERED_QUEUES

DBA_HIST_BUFFERED_QUEUES displays historical information about all buffered queues available for the instance.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_SCHEMA	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
STARTUP_TIME	DATE	NOT NULL	Startup time of the instance
QUEUE_ID	NUMBER	NOT NULL	ID of the queue
NUM_MSGS	NUMBER		Total number of outstanding messages currently enqueued in the buffered queue for the subscriber (includes the count of the messages overflowed to disk)
SPILL_MSGS	NUMBER		Current number of overflow messages spilled to disk from the buffered queue
CNUM_MSGS	NUMBER		Cumulative total number of messages enqueued into the buffered queue since the buffered queue was created.
CSPILL_MSGS	NUMBER		Cumulative total number of overflow messages spilled to disk from the buffered queue since the buffered queue was created
EXPIRED_MSGS	NUMBER		Number of expired messages
OLDEST_MSGID	RAW(16)		Message ID of the oldest message
OLDEST_MSG_ENQTM	TIMESTAMP(3)		Enqueue time of the oldest message
QUEUE_STATE	VARCHAR2(25)		Indicates whether the queue is in recovery mode (QUEUE IS IN RECOVERY MODE) or not (NORMAL)
ELAPSED_ENQUEUE_TIME	NUMBER		Total time spent in enqueue (in hundredths of a second)
ELAPSED_DEQUEUE_TIME	NUMBER		Total time spent in dequeue (in hundredths of a second)
ELAPSED_TRANSFORMATION_TIME	NUMBER		Total time for evaluating transformations (in hundredths of a second)
ELAPSED_RULE_EVALUATION_TIME	NUMBER		Total time for rule evaluations (in hundredths of a second)
ENQUEUE_CPU_TIME	NUMBER		Total CPU time for enqueue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER		Total CPU time for dequeue (in hundredths of a second)
LAST_ENQUEUE_TIME	TIMESTAMP(3)		Last message enqueue time
LAST_DEQUEUE_TIME	TIMESTAMP(3)		Last message dequeue time
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.406 DBA_HIST_BUFFERED_SUBSCRIBERS

DBA_HIST_BUFFERED_SUBSCRIBERS displays historical information about the subscribers for all buffered queues in the instance.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_SCHEMA	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
SUBSCRIBER_ID	NUMBER	NOT NULL	Internal subscriber number (for identification)
SUBSCRIBER_NAME	VARCHAR2(128)		Name of the subscriber
SUBSCRIBER_ADDRESS	VARCHAR2(1024)		Address of the subscribing agent
SUBSCRIBER_TYPE	VARCHAR2(128)		Type of subscriber: • PROXY - Proxy subscriber • SUBSCRIBOR
STARTUP_TIME	DATE	NOT NULL	Startup time of the instance
LAST_BROWSED_SEQ	NUMBER		Sequence number of the most recently browsed message for the subscriber (comparable to the number of messages in the V$STREAMS_APPLY_READER view)
LAST_BROWSED_NUM	NUMBER		Internal Message number for the most recently browsed message for the subscriber
LAST_DEQUEUED_SEQ	NUMBER		Sequence number of the most recently dequeued message for the subscriber (comparable to the number of messages in the V$STREAMS_APPLY_COORDINATOR view)
LAST_DEQUEUED_NUM	NUMBER		Internal Message number for the most recently dequeued message for the subscriber
CURRENT_ENQ_SEQ	NUMBER		Current sequence number of the most recently enqueued message for the subscriber
NUM_MSGS	NUMBER		Total number of outstanding messages currently enqueued in the buffered queue for the subscriber (includes the count of the messages overflowed to disk)
CNUM_MSGS	NUMBER		Cumulative total number of messages enqueued for the subscriber since the creation of the buffered queue
TOTAL_DEQUEUED_MSG	NUMBER		Total number of messages dequeued by the subscriber
TOTAL_SPILLED_MSG	NUMBER		Total number of spilled messages for the subscriber
EXPIRED_MSGS	NUMBER		Number of expired messages
MESSAGE_LAG	NUMBER		Message lag of the subscriber
ELAPSED_DEQUEUE_TIME	NUMBER		Total time spent in dequeue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER		Total CPU time for dequeue (in hundredths of a second)

Column	Datatype	NULL	Description
LAST_DEQUEUE_TIME	TIMESTAMP(3)		Last message dequeue time
OLDEST_MSGID	RAW(16)		Message ID of the oldest message
OLDEST_MSG_ENQTM	TIMESTAMP(3)		Enqueue time of the oldest message
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.407 DBA_HIST_CAPTURE

DBA_HIST_CAPTURE displays historical statistics information about each capture process for Oracle GoldenGate, and XStream capture operations.

This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the capture process
STARTUP_TIME	DATE	NOT NULL	Time that the capture process was last started
LAG	NUMBER		Delay (in seconds) between the creation and capture of the most recently captured message
TOTAL_MESSAGES_CAPTURED	NUMBER		Total changes captured since the capture process was last started
TOTAL_MESSAGES_ENQUEUED	NUMBER		Total number of messages enqueued since the capture process was last started
ELAPSED_RULE_TIME	NUMBER		Elapsed time (in hundredths of a second) evaluating rules since the capture process was last started
ELAPSED_ENQUEUE_TIME	NUMBER		Elapsed time (in hundredths of a second) enqueuing messages since the capture process was last started
ELAPSED_REDO_WAIT_TIME	NUMBER		Elapsed time (in hundredths of a second) spent by the capture process in the WAITING FOR REDO state since the capture process was last started.
ELAPSED_PAUSE_TIME	NUMBER		Elapsed pause time (in hundredths of a second) spent by the capture process since the capture process was last restarted
CON_DBID	NUMBER		The database ID of the PDB
EXTRACT_NAME	VARCHAR2(128)		Name of the extract process, if applicable
BYTES_REDO_MINED	NUMBER		The total amount of redo data mined (in bytes) since the capture process last started

Column	Datatype	NULL	Description
BYTES_SENT	NUMBER		Total number of bytes sent by the capture process to the extract process since the last time the extract process attached to the capture process
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: • XStream • GoldenGate
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.408 DBA_HIST_CHANNEL_WAITS

DBA_HIST_CHANNEL_WAITS display the amount of messages broadcast on KSR and KSXR channels as well as the total time taken for the broadcast to complete.

KSR channels are local to an instance, that is, only processes within an instance subscribed to the channel can receive the message. KSXR channels allow messages to be broadcast across instances. The messages broadcast and the total time to broadcast are cumulative from the start of the instance. Channels with high overall average wait times could indicate potential problems with a subscriber on that channel which can lead to poor scaled performance.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
CHANNEL	VARCHAR2(64)		The name of the KSR or KSXR channel
MESSAGES_PUBLISHED	NUMBER		The cumulative count of messages published on the channel (from instance startup)
WAIT_COUNT	NUMBER		The total number of times a publisher has waited for a broadcast to complete. This metric is only pertinent for asynchronous broadcasts where the broadcast can be dispatched and publisher can wait for completion at a later point of time. A high wait count along with increased wait time can indicate a potential performance bottleneck.
WAIT_TIME_USEC	NUMBER		The cumulative amount of time in microseconds that publishers have waited for message broadcast to complete. Average time for broadcast on a channel can be computed by dividing WAIT_TIME_USEC by WAIT_COUNT. A high average time can indicate a potential performance bottleneck.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.409 DBA_HIST_CLUSTER_INTERCON

DBA_HIST_CLUSTER_INTERCON displays information about the devices used by the instance to access the interconnect (that is, communicate with other instances).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAME	VARCHAR2(256)	NOT NULL	Operating system name of the device
IP_ADDRESS	VARCHAR2(64)	NOT NULL	IP address of the device
IS_PUBLIC	VARCHAR2(3)		Indicates whether the device is a public interface (YES) or a private interface (NO) Public interfaces can be listened to by outside applications, which may be a security problem. Oracle recommends using private interfaces for interconnect.
SOURCE	VARCHAR2(31)		Describes the type of device
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.410 DBA_HIST_COLORED_SQL

DBA_HIST_COLORED_SQL displays the SQL IDs that have been marked for AWR SQL capture.

If a SQL statement is colored using the DBMS_WORKLOAD_REPOSITORY.ADD_COLORED_SQL procedure, then AWR will always capture the SQL statistics for the colored SQL ID. A SQL statement can be removed from coloring using the DBMS_WORKLOAD_REPOSITORY.REMOVE_COLORED_SQL procedure.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
SQL_ID	VARCHAR2(13)	NOT NULL	SQL ID of colored SQL statement
CREATE_TIME	DATE	NOT NULL	Time the SQL ID was colored
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_WORKLOAD_REPOSITORY package.

5.411 DBA_HIST_COMP_IOSTAT

DBA_HIST_COMP_IOSTAT displays information about I/O statistics aggregated on the component level.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
COMPONENT	VARCHAR2(64)	NOT NULL	Component name
FILE_TYPE	VARCHAR2(64)	NOT NULL	File type
IO_TYPE	CHAR(5)	NOT NULL	The type of I/O performed
OPERATION	CHAR(5)	NOT NULL	Operation name
BYTES	NUMBER	NOT NULL	Number of bytes
IO_COUNT	NUMBER	NOT NULL	Number of I/Os that were performed
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.412 DBA_HIST_CON_SYS_TIME_MODEL

DBA_HIST_CON_SYS_TIME_MODEL displays historical system time model statistics, including OLAP timed stastistics. This view contains snapshots of V$SYS_TIME_MODEL.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
STAT_ID	NUMBER		Statistic ID
STAT_NAME	VARCHAR2(64)		Statistic name
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. • When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong. • When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

5.413 DBA_HIST_CON_SYSMETRIC_HIST

DBA_HIST_CON_SYSMETRIC_HIST externalizes all available history of the system metric values for the entire set of data kept in the database. This view contains snapshots of V$CON_SYSMETRIC_HISTORY.

Note:

This view is not populated and is reserved for future use.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
BEGIN_TIME	DATE		Begin time of the interval
END_TIME	DATE		End time of the interval
INTSIZE	NUMBER		Interval size (in hundredths of a second)
GROUP_ID	NUMBER		Group ID
METRIC_ID	NUMBER		Metric ID
METRIC_NAME	VARCHAR2(64)		Metric name
VALUE	NUMBER		Metric value
METRIC_UNIT	VARCHAR2(64)		Unit of measurement
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. • When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong. • When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

5.414 DBA_HIST_CON_SYSMETRIC_SUMM

DBA_HIST_CON_SYSMETRIC_SUMM displays a history of statistical summary of all metric values in the system metrics long duration (60–second) group. This view contains snapshots of V$CON_SYSMETRIC_SUMMARY.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
BEGIN_TIME	DATE		Begin time of the interval
END_TIME	DATE		End time of the interval

Column	Datatype	NULL	Description
INTSIZE	NUMBER		Interval size (in hundredths of a second)
GROUP_ID	NUMBER		Group ID
METRIC_ID	NUMBER		Metric ID
METRIC_NAME	VARCHAR2(64)		Metric name
METRIC_UNIT	VARCHAR2(64)		Unit of measurement
NUM_INTERVAL	NUMBER		Number of intervals observed
MINVAL	NUMBER		Minimum value observed
MAXVAL	NUMBER		Maximum value observed
AVERAGE	NUMBER		Average over the period
STANDARD_DEVIATION	NUMBER		One standard deviation
SUM_SQUARES	NUMBER		Sum of the squared deviations from the mean
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. • When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong. • When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

Note:

- "V$CON_SYSMETRIC_SUMMARY"
- "DBA_HIST_SYSMETRIC_SUMMARY"

5.415 DBA_HIST_CON_SYSSTAT

DBA_HIST_CON_SYSSTAT displays historical system statistics information, including OLAP kernel statistics. This view contains snapshots of V$CON_SYSSTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STAT_ID	NUMBER	NOT NULL	Statistic identifier
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
VALUE	NUMBER		Statistic value

Column	Datatype	NULL	Description
CON_DBID	NUMBER	NOT NULL	The database ID for the PDB of the sampled session
CON_ID	NUMBER	NOT NULL	The ID of the container that CON_DBID identifies. Possible values include: • When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. • When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong. • When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

5.416 DBA_HIST_CON_SYSTEM_EVENT

DBA_HIST_CON_SYSTEM_EVENT displays historical information on total waits for an event in a container. This view contains snapshots of V$CON_SYSTEM_EVENT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2(64)	NOT NULL	Name of the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the Class of the Wait Event
WAIT_CLASS	VARCHAR2(64)		Name of the Class of the Wait Event
TOTAL_WAITS	NUMBER		Total number of waits for the event
TOTAL_TIMEOUTS	NUMBER		Total number of timeouts for the event
TIME_WAITED_MICRO	NUMBER		Total amount of time waited for the event (in microseconds)
TOTAL_WAITS_FG	NUMBER		Total number of waits for the event, from foreground sessions
TOTAL_TIMEOUTS_FG	NUMBER		Total number of timeouts for the event, from foreground sessions
TIME_WAITED_MICRO_FG	NUMBER		Amount of time waited for the event (in microseconds), from foreground sessions
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$CON_SYSTEM_EVENT"

5.417 DBA_HIST_CR_BLOCK_SERVER

DBA_HIST_CR_BLOCK_SERVER displays historical statistics on the Global Cache Service processes (LMS) used in cache fusion.

This view contains snapshots of V$CR_BLOCK_SERVER.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
CR_REQUESTS	NUMBER		Number of CR blocks served due to remote CR block requests
CURRENT_REQUESTS	NUMBER		Number of current blocks served due to remote CR block requests CR_REQUESTS + CURRENT_REQUESTS = global cache CR blocks served (from V$SYSSTAT).
DATA_REQUESTS	NUMBER		Number of current or CR requests for data blocks
UNDO_REQUESTS	NUMBER		Number of CR requests for undo blocks
TX_REQUESTS	NUMBER		Number of CR requests for undo segment header blocks DATA_REQUESTS + UNDO_REQUESTS + TX_REQUESTS = total number of requests handled by the LMS processes
CURRENT_RESULTS	NUMBER		Number of requests for which no changes were rolled out of the block returned to the requesting instance
PRIVATE_RESULTS	NUMBER		Number of requests for which changes were rolled out of the block returned to the requesting instance, and only the requesting transaction can use the resulting CR block

Column	Datatype	NULL	Description
ZERO_RESULTS	NUMBER		Number of requests for which changes were rolled out of the block returned to the requesting instance. Only zero-XID transactions can use the block.
DISK_READ_RESULTS	NUMBER		Number of requests for which the requesting instance had to read the requested block from disk
FAIL_RESULTS	NUMBER		Number of requests that failed; the requesting transaction must reissue the request
FAIRNESS_DOWN_CONVERTS	NUMBER		Number of times an instance receiving a request has down-converted an X lock on a block because it was not modifying the block
FLUSHES	NUMBER		Number of times the log has been flushed by an LMS process
FLUSHES	NUMBER		Number of times the log has been flushed by an LMS process
BUILDS	NUMBER		Number of requests for which the server had to fabricate a CR block
LIGHT_WORKS	NUMBER		Number of times the light-work rule was evoked. This rule prevents the LMS processes from going to disk while responding to CR requests for data, undo, or undo segment header blocks. This rule can prevent the LMS process from completing its response to the CR request.
ERRORS	NUMBER		Number of times an error was signalled by an LMS process
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$CR_BLOCK_SERVER"

5.418 DBA_HIST_CURRENT_BLOCK_SERVER

DBA_HIST_CURRENT_BLOCK_SERVER displays historical statistics on the Global Cache Service processes (LMS) used in cache fusion.

This view contains snapshots of V$CURRENT_BLOCK_SERVER.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PIN0	NUMBER		Pins taking less than 100 microseconds
PIN1	NUMBER		Pins taking 100 microseconds to 1 millisecond
PIN10	NUMBER		Pins taking 1 to 10 milliseconds
PIN100	NUMBER		Pins taking 10 to 100 milliseconds
PIN1000	NUMBER		Pins taking 100 to 1000 milliseconds
PIN10000	NUMBER		Pins taking 1000 to 10000 milliseconds
PINOVER	NUMBER		Pins taking more than 10000 milliseconds
FLUSH0	NUMBER		Flushes taking less than 100 microseconds
FLUSH1	NUMBER		Flushes taking 100 microseconds to 1 millisecond
FLUSH10	NUMBER		Flushes taking 1 to 10 milliseconds
FLUSH100	NUMBER		Flushes taking 10 to 100 milliseconds
FLUSH1000	NUMBER		Flushes taking 100 to 1000 milliseconds
FLUSH10000	NUMBER		Flushes taking 1000 to 10000 milliseconds
FLUSHOVER	NUMBER		Flushes taking more than 10000 milliseconds
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$CURRENT_BLOCK_SERVER"

5.419 DBA_HIST_DATABASE_INSTANCE

DBA_HIST_DATABASE_INSTANCE displays the databases and instances in the Workload Repository.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number
STARTUP_TIME	TIMESTAMP(3)	NOT NULL	Startup time of the instance

Column	Datatype	NULL	Description
PARALLEL	VARCHAR2(3)	NOT NULL	Indicates whether the instance is running in an Oracle Real Application Clusters (Oracle RAC) environment (YES) or not (NO)
VERSION	VARCHAR2(17)	NOT NULL	Database version
DB_NAME	VARCHAR2(9)		Name of the database
INSTANCE_NAME	VARCHAR2(16)		Name of the instance
HOST_NAME	VARCHAR2(64)		Name of the host
LAST_ASH_SAMPLE_ID	NUMBER	NOT NULL	Last sample ID for the active session history
PLATFORM_NAME	VARCHAR2(101)		Platform on which the instance is running
CDB	VARCHAR2(3)		Possible values are: • YES if the database is a CDB • NO if the database is not a CDB
EDITION	VARCHAR2(7)		The edition of the database: • PO: Personal Edition • FREE: Oracle Database Free • SE2: Standard Edition or Standard Edition 2 • EE: Enterprise Edition • HP: Enterprise Edition - High Performance • XP: Enterprise Edition - Extreme Performance
DB_UNIQUE_NAME	VARCHAR2(30)		Unique database name
DATABASE_ROLE	VARCHAR2(16)		Current role of the database: • SNAPSHOT STANDBY • LOGICAL STANDBY • PHYSICAL STANDBY • PRIMARY • FAR SYNC
CDB_ROOT_DBID	NUMBER		The database ID of the CDB root for the sampled session
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
STARTUP_TIME_TZ	TIMESTAMP(3) WITH TIME ZONE		Startup time of the instance

See Also:

"DB_UNIQUE_NAME"

5.420 DBA_HIST_DATAFILE

DBA_HIST_DATAFILE displays a history of the data file information from the control file.

This view contains snapshots of V$DATAFILE.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
FILE#	NUMBER	NOT NULL	File identification number
CREATION_CHANGE#	NUMBER	NOT NULL	Change number at which the data file was created
FILENAME	VARCHAR2(513)	NOT NULL	Name of the data file
TS#	NUMBER	NOT NULL	Tablespace number
TSNAME	VARCHAR2(30)		Name of the tablespace
BLOCK_SIZE	NUMBER		Block size of the data file
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$DATAFILE"

5.421 DBA_HIST_DB_CACHE_ADVICE

DBA_HIST_DB_CACHE_ADVICE displays historical predictions of the number of physical reads for the cache size corresponding to each row.

This view contains snapshots of V$DB_CACHE_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BPID	NUMBER	NOT NULL	Buffer Pool identifier (ranges from 1 to 8)
BUFFERS_FOR_ESTIMATE	NUMBER	NOT NULL	Cache size for prediction (in terms of buffers)
NAME	VARCHAR2(20)		Buffer pool name

Column	Datatype	NULL	Description
BLOCK_SIZE	NUMBER		Block size in bytes for buffers in the pool (the standard block size, the power of 2 nonstandard block sizes, 2048, 4096, 8192, 16384, or 32768)
ADVICE_STATUS	VARCHAR2(3)		Status of the advisory: • ON - Currently running • OFF - Disabled (the estimates are historical and calculated when last enabled)
SIZE_FOR_ESTIMATE	NUMBER		Cache size for prediction (in megabytes)
SIZE_FACTOR	NUMBER		Size factor with respect to the current cache size
PHYSICAL_READS	NUMBER		Physical reads for the cache size
BASE_PHYSICAL_READS	NUMBER		Base physical reads for the cache size
ACTUAL_PHYSICAL_READS	NUMBER		Actual physical reads for the cache size
ESTD_PHYSICAL_READ_TIME	NUMBER		Estimated physical read time for the cache size
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$DB_CACHE_ADVICE"

5.422 DBA_HIST_DISPATCHER

DBA_HIST_DISPATCHER displays historical information for each dispatcher process present at the time of the snapshot.

This view contains snapshots of information from V$DISPATCHER and V$QUEUE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAME	VARCHAR2(4)	NOT NULL	Name of the dispatcher process
SERIAL#	NUMBER		Serial number of the dispatcher process
IDLE	NUMBER		Total idle time for the dispatcher (in hundredths of a second)

Column	Datatype	NULL	Description
BUSY	NUMBER		Total busy time for the dispatcher (in hundredths of a second)
WAIT	NUMBER		Total time that all items in the dispatcher queue have waited (in hundredths of a second). Divide by TOTALQ for average wait per item.
TOTALQ	NUMBER		Total number of items that have ever been in the dispatcher queue
SAMPLED_TOTAL_CONN	NUMBER		Cumulative sum of total number of connections to the dispatcher over all samples. To determine the average number of connections to the dispatcher between two snapshots, divide the difference in SAMPLED_TOTAL_CONN by the difference in NUM_SAMPLES (obtained from DBA_HIST_SHARED_SERVER_SUMMARY).
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$DISPATCHER"
- "V$QUEUE"

5.423 DBA_HIST_DLM_MISC

DBA_HIST_DLM_MISC displays miscellaneous Oracle Real Application Clusters (Oracle RAC) statistics.

This view contains snapshots of V$DLM_MISC.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER		Database ID for the snapshot
INSTANCE_NUMBER	NUMBER		Instance number for the snapshot
STATISTIC#	NUMBER		Statistic number
NAME	VARCHAR2(38)		Statistic name
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.424 DBA_HIST_DYN_REMASTER_STATS

DBA_HIST_DYN_REMASTER_STATS displays historical statistical information about the dynamic remastering process.

All times are given in hundredths of a second, except where otherwise noted, and total values reflect what has been collected since instance startup. This view contains snapshots of V$DYNAMIC_REMASTER_STATS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
REMASTER_TYPE	VARCHAR2(11)	NOT NULL	Remaster process type. Possible values: • AFFINITY: This value is used for the row containing statistics that pertain to dynamic remastering activity on object affinity. • READ-MOSTLY: This value is used for the row containing statistics that pertain to dynamic remastering activity on read-mostly objects.
PERSISTENT_OBJECTS	NUMBER		Current number of objects that are marked persistent read-mostly in the cluster
REMASTER_OPS	NUMBER		Total number of dynamic remastering operations
REMASTER_TIME	NUMBER		Total dynamic remastering time
REMASTERED_OBJECTS	NUMBER		Total number of objects dynamically remastered due to affinity
QUIESCE_TIME	NUMBER		Total quiesce step time
FREEZE_TIME	NUMBER		Total freeze step time
CLEANUP_TIME	NUMBER		Total cleanup step time
REPLAY_TIME	NUMBER		Total replay step time
FIXWRITE_TIME	NUMBER		Total fixwrite step time
SYNC_TIME	NUMBER		Total synchronization step time
REMASTERED_BUFFERS	NUMBER		Total sum of the sizes (number of buffers) of all dynamically remastered objects The size of a buffer is specified by the DB_BLOCK_SIZE initialization parameter. The default is 8192 bytes.

Column	Datatype	NULL	Description
AVG_BUFFER_AGE	NUMBER		Average time (in seconds) that buffers spent in the request queue, waiting to be processed
FILTERED_OBJECTS	NUMBER		Number of requests that were filtered (not processed)
FILTERED_BUFFERS	NUMBER		Total sum of the sizes (number of buffers) of all requests that were filtered The size of a buffer is specified by the DB_BLOCK_SIZE initialization parameter. The default is 8192 bytes.
RESOURCES_CLEANED	NUMBER		Total number of resources cleaned in the cleanup steps
REPLAYED_LOCKS_SENT	NUMBER		Total number of locks replayed to other instances in the replay steps
REPLAYED_LOCKS_RECEIVED	NUMBER		Total number of locks received from other instances in the replay steps
CURRENT_OBJECTS	NUMBER		Current number of objects remastered on this instance due to affinity or the current number of objects that are marked read-mostly in the cluster
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

> "V$DYNAMIC_REMASTER_STATS"

5.425 DBA_HIST_ENQUEUE_STAT

DBA_HIST_ENQUEUE_STAT displays historical statistics on the number of enqueue (lock) requests for each type of lock.

This view contains snapshots of V$ENQUEUE_STATISTICS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EQ_TYPE	VARCHAR2(2)	NOT NULL	Type of enqueue requested
REQ_REASON	VARCHAR2(64)	NOT NULL	Reason for the enqueue request

Column	Datatype	NULL	Description
TOTAL_REQ#	NUMBER		Total number of enqueue requests or enqueue conversions for this type of enqueue
TOTAL_WAIT#	NUMBER		Total number of times an enqueue request or conversion resulted in a wait
SUCC_REQ#	NUMBER		Number of times an enqueue request or conversion was granted
FAILED_REQ#	NUMBER		Number of times an enqueue request or conversion failed
CUM_WAIT_TIME	NUMBER		Total amount of time (in milliseconds) spent waiting for the enqueue or enqueue conversion
EVENT#	NUMBER		Event number
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$ENQUEUE_STATISTICS"

5.426 DBA_HIST_EVENT_HISTOGRAM

DBA_HIST_EVENT_HISTOGRAM displays event histogram historical statistics information.

This view contains snapshots of V$EVENT_HISTOGRAM.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2(64)	NOT NULL	Name of the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the class of the wait event
WAIT_CLASS	VARCHAR2(64)		Name of the class of the wait event
WAIT_TIME_MILLI	NUMBER	NOT NULL	Wait time (in milliseconds)
WAIT_COUNT	NUMBER		Wait count
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$EVENT_HISTOGRAM"

5.427 DBA_HIST_EVENT_NAME

DBA_HIST_EVENT_NAME displays information about wait events.

This view contains a snapshot of V$EVENT_NAME.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2(64)	NOT NULL	Name of the wait event
PARAMETER1	VARCHAR2(64)		Description of the first parameter for the wait event
PARAMETER2	VARCHAR2(64)		Description of the second parameter for the wait event
PARAMETER3	VARCHAR2(64)		Description of the third parameter for the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the class of the wait event
WAIT_CLASS	VARCHAR2(64)		Name of the class of the wait event
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.428 DBA_HIST_FILEMETRIC_HISTORY

DBA_HIST_FILEMETRIC_HISTORY displays the history of file metrics collected in the Workload Repository.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FILEID	NUMBER	NOT NULL	File number
CREATIONTIME	NUMBER	NOT NULL	File creation time
BEGIN_TIME	DATE	NOT NULL	Begin time of the interval
END_TIME	DATE	NOT NULL	End time of the interval
INTSIZE	NUMBER	NOT NULL	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	NOT NULL	ID of the group to which the file belongs
AVGREADTIME	NUMBER	NOT NULL	Average file read time
AVGWRITETIME	NUMBER	NOT NULL	Average file write time
PHYSICALREAD	NUMBER	NOT NULL	Number of physical reads
PHYSICALWRITE	NUMBER	NOT NULL	Number of physical writes
PHYBLKREAD	NUMBER	NOT NULL	Number of physical block reads
PHYBLKWRITE	NUMBER	NOT NULL	Number of physical block writes
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.429 DBA_HIST_FILESTATXS

DBA_HIST_FILESTATXS displays information about file read/write statistics.

This view contains snapshots of V$FILESTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FILE#	NUMBER	NOT NULL	File identification number
CREATION_CHANGE#	NUMBER	NOT NULL	Change number at which the data file was created
FILENAME	VARCHAR2(513)	NOT NULL	Name of the data file

Column	Datatype	NULL	Description
TS#	NUMBER	NOT NULL	Tablespace number
TSNAME	VARCHAR2(30)		Name of the tablespace
BLOCK_SIZE	NUMBER		Block size of the data file
PHYRDS	NUMBER		Number of physical reads done
PHYWRTS	NUMBER		Number of times DBWR is required to write
SINGLEBLKRDS	NUMBER		Number of single block reads
READTIM	NUMBER		Time (in hundredths of a second) spent doing reads if the TIMED_STATISTICS parameter is true; 0 if TIMED_STATISTICS is false
WRITETIM	NUMBER		Time (in hundredths of a second) spent doing writes if the TIMED_STATISTICS parameter is true; 0 if TIMED_STATISTICS is false
SINGLEBLKRDTIM	NUMBER		Cumulative single block read time (in hundredths of a second)
PHYBLKRD	NUMBER		Number of physical blocks read
PHYBLKWRT	NUMBER		Number of blocks written to disk, which may be the same as PHYWRTS if all writes are single blocks
WAIT_COUNT	NUMBER		Shows the number of waits at the file level for contended buffers. This value includes the individual wait events that are included in the buffer busy waits wait event. **See Also:** "buffer busy waits"
TIME	NUMBER		Time spent waiting for the wait events in the WAIT_COUNT column
OPTIMIZED_PHYBLKRD	NUMBER		Number of physical reads from Database Smart Flash Cache blocks
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

"V$FILESTAT"

5.430 DBA_HIST_IC_CLIENT_STATS

DBA_HIST_IC_CLIENT_STATS displays information about the usage of an interconnect device by the instance.

The information is divided into several areas of the Oracle Database, each identified by the NAME value.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAME	VARCHAR2(9)	NOT NULL	Identifies the area of the Oracle Database: • ipq - Parallel query communications • dlm - Database lock management • cache - Global cache communications All other values are internal to Oracle and are not expected to have high usage.
BYTES_SENT	NUMBER		Number of bytes sent by the instance since instance startup for the software area identified by NAME. This information is aggregated across all devices used by the instance.
BYTES_RECEIVED	NUMBER		Number of bytes received by the instance since instance startup for the software area identified by NAME. This information is aggregated across all devices used by the instance.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.431 DBA_HIST_IC_DEVICE_STATS

DBA_HIST_IC_DEVICE_STATS displays operating system information about the usage of interconnect devices by the machine.

This usage contains Oracle usage but is not limited to it. The quality of the information depends on the operating system.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot

Column	Datatype	NULL	Description
IF_NAME	VARCHAR2(256)	NOT NULL	Name of the device (same as NAME in DBA_HIST_CLUSTER_INTERCON)
IP_ADDR	VARCHAR2(64)	NOT NULL	IP address of the device (same as IP_ADDRESS in DBA_HIST_CLUSTER_INTERCON)
NET_MASK	VARCHAR2(16)		Network mask
FLAGS	VARCHAR2(32)		Flags
MTU	NUMBER		Maximum transmission unit
BYTES_RECEIVED	NUMBER		Number of bytes received since operating system start time
PACKETS_RECEIVED	NUMBER		Number of packets received since operating system start time
RECEIVE_ERRORS	NUMBER		Number of receive errors since operating system start time
RECEIVE_DROPPED	NUMBER		Number of receive messages that were dropped
RECEIVE_BUF_OR	NUMBER		Number of receive buffer overruns experienced
RECEIVE_FRAME_ERR	NUMBER		Number of receive errors due to frame error
BYTES_SENT	NUMBER		Number of bytes sent since operating system start time
PACKETS_SENT	NUMBER		Number of packets sent since operating system start time
SEND_ERRORS	NUMBER		Number of send errors since operating system start time
SENDS_DROPPED	NUMBER		Number of send messages that were dropped
SEND_BUF_OR	NUMBER		Number of send buffer overruns experienced
SEND_CARRIER_LOST	NUMBER		Number of send errors due to carrier lost
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.432 DBA_HIST_IM_SEG_STAT

DBA_HIST_IM_SEG_STAT displays information about historical in-memory segment statistics.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TS#	NUMBER	NOT NULL	Tablespace number

Column	Datatype	NULL	Description
OBJ#	NUMBER	NOT NULL	Dictionary object number
DATAOBJ#	NUMBER	NOT NULL	Data object number
MEMBYTES	NUMBER		Size of in-memory version of the segment in bytes
SCANS	NUMBER		Count of segment statistics
SCANS_DELTA	NUMBER		Delta values for in-memory scans
DB_BLOCK_CHANGES	NUMBER		The total number of changes that were part of an update or delete operation that were made to segment blocks
DB_BLOCK_CHANGES_DELTA	NUMBER		Delta value for database block changes
POPULATE_CUS	NUMBER		Count of compression units (CUs) populated per segment
POPULATE_CUS_DELTA	NUMBER		Delta value for compression unit (CU) populate operations
REPOPULATE_CUS	NUMBER		Count of CUs repopulated per segment
REPOPULATE_CUS_DELTA	NUMBER		Delta value for compression unit (CU) repopulate operations
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.433 DBA_HIST_IM_SEG_STAT_OBJ

DBA_HIST_IM_SEG_STAT_OBJ displays information about object metadata for historical in-memory segments.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database id for the snapshot
TS#	NUMBER	NOT NULL	Tablespace number
OBJ#	NUMBER	NOT NULL	Dictionary object number
DATAOBJ#	NUMBER	NOT NULL	Data object number
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject
OBJECT_TYPE	VARCHAR2(128)		Type of the object
TABLESPACE_NAME	VARCHAR2(128)		Tablespace name for the object
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.434 DBA_HIST_INST_CACHE_TRANSFER

DBA_HIST_INST_CACHE_TRANSFER displays the historical statistics on the cache blocks transferred among instances.

This view contains snapshots of V$INSTANCE_CACHE_TRANSFER.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
INSTANCE	NUMBER	NOT NULL	Instance from which the blocks are transferred
CLASS	VARCHAR2(18)	NOT NULL	Class of the cache block
CR_BLOCK	NUMBER		CR block transfers not affected by remote processing delays
CR_BUSY	NUMBER		Current block transfers affected by remote contention
CR_CONGESTED	NUMBER		CR block transfers affected by remote system load
CURRENT_BLOCK	NUMBER		Current block transfers not affected by remote processing delays
CURRENT_BUSY	NUMBER		Current block transfers affected by remote contention
CURRENT_CONGESTED	NUMBER		Current block transfers affected by remote system load
LOST	NUMBER		The number of blocks that were sent by a particular instance but that never arrived in this instance
CR_2HOP	NUMBER		The count of CR blocks which were received by this instance from a particular instance after a 2-way round-trip
CR_3HOP	NUMBER		The count of CR blocks which were received by this instance from a particular instance after a 3-way round-trip
CR_RDMA	NUMBER		The count of CR Blocks which were directly read from a remote instance via RDMA
CURRENT_2HOP	NUMBER		The count of current blocks which were received by this instance from a particular instance after a 2-way round-trip
CURRENT_3HOP	NUMBER		The count of current blocks which were received by this instance from a particular instance after a 3-way round-trip

Column	Datatype	NULL	Description
CURRENT_RDMA	NUMBER		The count of current blocks which were directly read from a remote instance via RDMA
CR_BLOCK_TIME	NUMBER		Total time waited for CR blocks from a particular instance (includes the other times)
CR_BUSY_TIME	NUMBER		The time waited for CR blocks which were received by this instance from a particular instance and which were delayed by a log flushed on the sending instance
CR_CONGESTED_TIME	NUMBER		The time waited for CR blocks which were received by this instance from a particular instance and which were delayed because LMS was busy
CURRENT_BLOCK_TIME	NUMBER		Total time waited for CR blocks from a particular instance (includes the other times)
CURRENT_BUSY_TIME	NUMBER		The time waited for current blocks which were received by this instance from a particular instance and which were delayed by a log flushed on the sending instance
CURRENT_CONGESTED_TIME	NUMBER		The time waited for current blocks which were received by this instance from a particular instance and which were delayed because LMS was busy
LOST_TIME	NUMBER		The time waited for blocks that were sent by a particular instance but that never arrived in this instance
CR_2HOP_TIME	NUMBER		The time waited for CR blocks which were received by this instance from a particular instance after a 2-way round-trip
CR_3HOP_TIME	NUMBER		The time waited for CR blocks which were received by this instance from a particular instance after a 3-way round-trip
CR_RDMA_TIME	NUMBER		Total time waited to directly read CR blocks from a remote instance via RDMA (in centiseconds)
CURRENT_2HOP_TIME	NUMBER		The time waited for current blocks which were received by this instance from a particular instance after a 2-way round-trip
CURRENT_3HOP_TIME	NUMBER		The time waited for current blocks which were received by this instance from a particular instance after a 3-way round-trip
CURRENT_RDMA_TIME	NUMBER		Total time waited to directly read current blocks from a remote instance via RDMA (in centiseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> "V$INSTANCE_CACHE_TRANSFER"

5.435 DBA_HIST_INSTANCE_RECOVERY

DBA_HIST_INSTANCE_RECOVERY displays the historical monitoring of the mechanisms available to the user to limit recovery I/O.

This view contains snapshots of V$INSTANCE_RECOVERY.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
RECOVERY_ESTIMATED_IOS	NUMBER		Number of dirty buffers in the buffer cache.
ACTUAL_REDO_BLKS	NUMBER		Current actual number of redo blocks required for recovery
TARGET_REDO_BLKS	NUMBER		Current target number of redo blocks that must be processed for recovery. This value is the minimum value of the following 3 columns, and identifies which of the 3 user-defined limits determines checkpointing.
LOG_FILE_SIZE_REDO_BLKS	NUMBER		Maximum number of redo blocks required to guarantee that a log switch does not occur before the checkpoint completes
LOG_CHKPT_TIMEOUT_REDO_BLKS	NUMBER		Number of redo blocks that need to be processed during recovery to satisfy the LOG_CHECKPOINT_TIMEOUT parameter. The value displayed is not meaningful unless LOG_CHECKPOINT_TIMEOUT has been set.
LOG_CHKPT_INTERVAL_REDO_BLKS	NUMBER		Number of redo blocks that need to be processed during recovery to satisfy the LOG_CHECKPOINT_INTERVAL parameter. The value displayed is not meaningful unless LOG_CHECKPOINT_INTERVAL has been set.
FAST_START_IO_TARGET_REDO_BLKS	NUMBER		This column is obsolete and maintained for backward compatibility. The value of this column is always null.

Column	Datatype	NULL	Description
TARGET_MTTR	NUMBER		Effective MTTR (mean time to recover) target value in seconds. The TARGET_MTTR value is calculated based on the value of the FAST_START_MTTR_TARGET parameter (the TARGET_MTTR value is used internally), and is usually an approximation of the parameter's value. However, if the FAST_START_MTTR_TARGET parameter value is very small (for example, one second), or very large (for example, 3600 seconds), then the calculation will produce a target value dictated by system limitations. In such cases, the TARGET_MTTR value will be the shortest calculated time, or the longest calculated time that recovery is expected to take. If FAST_START_MTTR_TARGET is not specified, then the value of this field is the current estimated MTTR.
ESTIMATED_MTTR	NUMBER		Current estimated mean time to recover (MTTR) based on the number of dirty buffers and log blocks (0 if FAST_START_MTTR_TARGET is not specified). This value tells you how long you can expect recovery to take based on the work the system is doing right now.
CKPT_BLOCK_WRITES	NUMBER		Number of blocks written by checkpoint writes
OPTIMAL_LOGFILE_SIZE	NUMBER		Redo log file size (in megabytes) that is considered optimal based on the current setting of FAST_START_MTTR_TARGET. It is recommended that all online redo logs be configured to be at least this value.
ESTD_CLUSTER_AVAILABLE_TIME	NUMBER		Estimated time (in seconds) that the cluster would become partially available should the instance fail. This column is only meaningful in an Oracle Real Application Clusters (Oracle RAC) environment. In a non-Oracle RAC environment, the value of this column is null.
WRITES_MTTR	NUMBER		Number of writes driven by the FAST_START_MTTR_TARGET parameter
WRITES_LOGFILE_SIZE	NUMBER		Number of writes driven by the smallest redo log file size
WRITES_LOG_CHECKPOINT_SETTINGS	NUMBER		Number of writes driven by the LOG_CHECKPOINT_INTERVAL parameter or the LOG_CHECKPOINT_TIMEOUT parameter
WRITES_OTHER_SETTINGS	NUMBER		Number of writes driven by other reasons (such as the deprecated FAST_START_IO_TARGET parameter)
WRITES_AUTOTUNE	NUMBER		Number of writes due to auto-tune checkpointing
WRITES_FULL_THREAD_CKPT	NUMBER		Number of writes due to full thread checkpoints
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

> "V$INSTANCE_RECOVERY"

5.436 DBA_HIST_INTERCONNECT_PINGS

DBA_HIST_INTERCONNECT_PINGS displays information about measured latency of interconnect messages (round-trip) from instance to instance.

In Oracle Database 11*g* and later releases, the PING process assesses the latencies associated with communications for each pair of instances.

Every few seconds, the process in one instance (INSTANCE_NUMBER value) sends two messages to each instance (TARGET_INSTANCE value). One message has a size of 500 bytes and the other has a size of 8 KB. The message is received by the PING process on the target instance and is immediately acknowledged. The time for the round-trip is measured and collected.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TARGET_INSTANCE	NUMBER	NOT NULL	Target instance number
CNT_500B	NUMBER		Number of pings of size 500 bytes from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER)
WAIT_500B	NUMBER		Sum of round-trip times for messages of size 500 bytes from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER). Dividing by CNT_500B gives the average latency.
WAITSQ_500B	NUMBER		Sum of squares (divided by 1000) of round-trip times for messages of size 500 bytes from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER). When used with CNT_500B and WAIT_500B, the standard deviation of the latency can be calculated.
CNT_8K	NUMBER		Number of pings of size 8 KB from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER)
WAIT_8K	NUMBER		Sum of round-trip times for messages of size 8 KB from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER). Dividing by CNT_8K gives the average latency.
WAITSQ_8K	NUMBER		Sum of squares (divided by 1000) of round-trip times for messages of size 8 KB from INSTANCE_NUMBER to TARGET_INSTANCE since the startup of the source instance (INSTANCE_NUMBER). When used with CNT_8K and WAIT_8K, the standard deviation of the latency can be calculated.

Column	Datatype	NULL	Description
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.437 DBA_HIST_IOSTAT_DETAIL

DBA_HIST_IOSTAT_DETAIL displays I/O statistics aggregated by combination of file type and function (component).

This view contains snapshots of V$IOSTAT_FILE and V$IOSTAT_FUNCTION.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FUNCTION_ID	NUMBER	NOT NULL	Function ID
FUNCTION_NAME	VARCHAR2(30)	NOT NULL	Function name
FILETYPE_ID	NUMBER	NOT NULL	Type of file (for example, log file, data file, and so on)
FILETYPE_NAME	VARCHAR2(30)	NOT NULL	Name of the file, in the case of a data file or temp file. For all other files, a corresponding string to be displayed (for example, ARCHIVELOG).
SMALL_READ_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes written
SMALL_READ_REQS	NUMBER	NOT NULL	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	NOT NULL	Number of single block write requests
LARGE_READ_REQS	NUMBER	NOT NULL	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	NOT NULL	Number of multiblock write requests
NUMBER_OF_WAITS	NUMBER	NOT NULL	Number of I/O waits by functionality
WAIT_TIME	NUMBER	NOT NULL	Total wait time (in milliseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.438 DBA_HIST_IOSTAT_FILETYPE

DBA_HIST_IOSTAT_FILETYPE displays historical I/O statistics by file type.

This view contains snapshots of V$IOSTAT_FILE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FILETYPE_ID	NUMBER	NOT NULL	Type of file (for example, log file, data file, and so on)
FILETYPE_NAME	VARCHAR2(30)	NOT NULL	Name of the file, in the case of a data file or temp file. For all other files, a corresponding string to be displayed (for example, ARCHIVELOG).
SMALL_READ_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes written
SMALL_READ_REQS	NUMBER	NOT NULL	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	NOT NULL	Number of single block write requests
SMALL_SYNC_READ_REQS	NUMBER	NOT NULL	Number of synchronous single block read requests
LARGE_READ_REQS	NUMBER	NOT NULL	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	NOT NULL	Number of multiblock write requests
SMALL_READ_SERVICETIME	NUMBER	NOT NULL	Total service time (in milliseconds) for single block read requests
SMALL_WRITE_SERVICETIME	NUMBER	NOT NULL	Total service time (in milliseconds) for single block write requests

Column	Datatype	NULL	Description
SMALL_SYNC_READ_LATENCY	NUMBER	NOT NULL	Latency for single block synchronous reads (in milliseconds)
LARGE_READ_SERVICETIME	NUMBER	NOT NULL	Total service time (in milliseconds) for multiblock read requests
LARGE_WRITE_SERVICETIME	NUMBER	NOT NULL	Total service time (in milliseconds) for multiblock write requests
RETRIES_ON_ERROR	NUMBER	NOT NULL	Number of read retries on error
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$IOSTAT_FILE"

5.439 DBA_HIST_IOSTAT_FILETYPE_NAME

DBA_HIST_IOSTAT_FILETYPE_NAME displays historical I/O statistics for file type names.

This view contains snapshots of V$IOSTAT_FILE.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
FILETYPE_ID	NUMBER	NOT NULL	Type of file (for example, log file, data file, and so on)
FILETYPE_NAME	VARCHAR2(30)	NOT NULL	Name of the file, in the case of a data file or temp file. For all other files, a corresponding string to be displayed (for example, ARCHIVELOG).
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> "V$IOSTAT_FILE"

5.440 DBA_HIST_IOSTAT_FUNCTION

`DBA_HIST_IOSTAT_FUNCTION` displays historical I/O statistics by function.

This view contains snapshots of `V$IOSTAT_FUNCTION`.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FUNCTION_ID	NUMBER	NOT NULL	Function ID
FUNCTION_NAME	VARCHAR2(128)	NOT NULL	Function name
SMALL_READ_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes written
SMALL_READ_REQS	NUMBER	NOT NULL	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	NOT NULL	Number of single block write requests
LARGE_READ_REQS	NUMBER	NOT NULL	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	NOT NULL	Number of multiblock write requests
NUMBER_OF_WAITS	NUMBER	NOT NULL	Number of I/O waits by functionality
WAIT_TIME	NUMBER	NOT NULL	Total wait time (in milliseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that `CON_DBID` identifies. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$IOSTAT_FUNCTION"

5.441 DBA_HIST_IOSTAT_FUNCTION_NAME

DBA_HIST_IOSTAT_FUNCTION_NAME displays historical I/O statistics by function names.

This view contains snapshots of V$IOSTAT_FUNCTION.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
FUNCTION_ID	NUMBER	NOT NULL	Function ID
FUNCTION_NAME	VARCHAR2(128)	NOT NULL	Function name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

"V$IOSTAT_FUNCTION"

5.442 DBA_HIST_JAVA_POOL_ADVICE

DBA_HIST_JAVA_POOL_ADVICE displays historical information about estimated parse time in the Java pool for different pool sizes.

This view contains snapshots of V$JAVA_POOL_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
JAVA_POOL_SIZE_FOR_ESTIMATE	NUMBER	NOT NULL	Java pool size for the estimate (in megabytes)
JAVA_POOL_SIZE_FACTOR	NUMBER		Size factor with respect to the current Java pool size
ESTD_LC_SIZE	NUMBER		Estimated memory in use by the library cache (in megabytes)
ESTD_LC_MEMORY_OBJECTS	NUMBER		Estimated number of library cache memory objects in the Java pool of the specified size

Column	Datatype	NULL	Description
ESTD_LC_TIME_SAVED	NUMBER		Estimated elapsed parse time saved (in seconds), owing to library cache memory objects being found in a Java pool of the specified size. This is the time that would have been spent in reloading the required objects in the Java pool had they been aged out due to insufficient amount of available free memory.
ESTD_LC_TIME_SAVED_FACTOR	NUMBER		Estimated parse time saved factor with respect to the current Java pool size
ESTD_LC_LOAD_TIME	NUMBER		Estimated elapsed time (in seconds) for parsing in a Java pool of the specified size.
ESTD_LC_LOAD_TIME_FACTOR	NUMBER		Estimated load time factor with respect to the current Java pool size
ESTD_LC_MEMORY_OBJECT_HITS	NUMBER		Estimated number of times a library cache memory object was found in a Java pool of the specified size
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Static Data Dictionary Views: DBA_HIST_LATCH to DBA_STORED_SETTINGS

This chapter contains the static data dictionary views DBA_HIST_LATCH through DBA_STORED_SETTINGS.

6.1 DBA_HIST_LATCH

DBA_HIST_LATCH displays historical aggregate latch statistics for both parent and child latches, grouped by latch name.

This view contains snapshots of V$LATCH.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
LATCH_HASH	NUMBER	NOT NULL	Latch hash
LATCH_NAME	VARCHAR2(64)	NOT NULL	Latch name
LEVEL#	NUMBER		Latch level
GETS	NUMBER		Number of times the latch was requested in willing-to-wait mode
MISSES	NUMBER		Number of times the latch was requested in willing-to-wait mode and the requester had to wait
SLEEPS	NUMBER		Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch
IMMEDIATE_GETS	NUMBER		Number of times a latch was requested in no-wait mode
IMMEDIATE_MISSES	NUMBER		Number of times a no-wait latch request did not succeed (that is, missed)
SPIN_GETS	NUMBER		Number of willing-to-wait latch requests which missed the first try but succeeded while spinning
SLEEP[1 | 2 | 3 | 4]	NUMBER		These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero.
WAIT_TIME	NUMBER		Elapsed time spent waiting for the latch (in microseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$LATCH"

6.2 DBA_HIST_LATCH_CHILDREN

DBA_HIST_LATCH_CHILDREN displays historical statistics about child latches.

This view includes all columns of DBA_HIST_LATCH plus the CHILD# column. Note that child latches have the same parent if their LATCH# columns match each other. This view contains snapshots of V$LATCH_CHILDREN.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
LATCH_HASH	NUMBER	NOT NULL	Latch hash
LATCH_NAME	VARCHAR2(64)	NOT NULL	Latch name
CHILD#	NUMBER	NOT NULL	Child latch number (unique only to each parent latch)
GETS	NUMBER		Number of times the latch was requested in willing-to-wait mode
MISSES	NUMBER		Number of times the latch was requested in willing-to-wait mode and the requester had to wait
SLEEPS	NUMBER		Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch
IMMEDIATE_GETS	NUMBER		Number of times a latch was requested in no-wait mode
IMMEDIATE_MISSES	NUMBER		Number of times a no-wait latch request did not succeed (that is, missed)
SPIN_GETS	NUMBER		Number of willing-to-wait latch requests which missed the first try but succeeded while spinning

Column	Datatype	NULL	Description
SLEEP[1 | 2 | 3 | 4]	NUMBER		These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero.
WAIT_TIME	NUMBER		Elapsed time spent waiting for the latch (in microseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.3 DBA_HIST_LATCH_MISSES_SUMMARY

DBA_HIST_LATCH_MISSES_SUMMARY displays historical summary statistics about missed attempts to acquire a latch.

This view contains snapshots of V$LATCH_MISSES.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PARENT_NAME	VARCHAR2(64)	NOT NULL	Latch name of a parent latch
WHERE_IN_CODE	VARCHAR2(80)	NOT NULL	Location that attempted to acquire the latch
NWFAIL_COUNT	NUMBER		Number of times that no-wait acquisition of the latch failed
SLEEP_COUNT	NUMBER		Number of times that acquisition attempts caused sleeps
WTR_SLP_COUNT	NUMBER		Number of times a waiter slept
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$LATCH_MISSES"

6.4 DBA_HIST_LATCH_NAME

DBA_HIST_LATCH_NAME displays information about decoded latch names for the latches shown in DBA_HIST_LATCH.

This view contains a snapshot of V$LATCHNAME.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
LATCH_HASH	NUMBER	NOT NULL	Latch hash
LATCH_NAME	VARCHAR2(64)	NOT NULL	Latch name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> - "DBA_HIST_LATCH"
> - "V$LATCHNAME"

6.5 DBA_HIST_LATCH_PARENT

DBA_HIST_LATCH_PARENT displays historical statistics about parent latches.

This view contains snapshots of V$LATCH_PARENT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
LATCH_HASH	NUMBER	NOT NULL	Latch hash
LATCH_NAME	VARCHAR2(64)	NOT NULL	Latch name
LEVEL#	NUMBER	NOT NULL	Latch level
GETS	NUMBER		Number of times the latch was requested in willing-to-wait mode
MISSES	NUMBER		Number of times the latch was requested in willing-to-wait mode and the requester had to wait
SLEEPS	NUMBER		Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch
IMMEDIATE_GETS	NUMBER		Number of times a latch was requested in no-wait mode
IMMEDIATE_MISSES	NUMBER		Number of times a no-wait latch request did not succeed (that is, missed)
SPIN_GETS	NUMBER		Number of willing-to-wait latch requests which missed the first try but succeeded while spinning
SLEEP[1 | 2 | 3 | 4]	NUMBER		These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero.
WAIT_TIME	NUMBER		Elapsed time spent waiting for the latch (in microseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$LATCH_PARENT"

6.6 DBA_HIST_LIBRARYCACHE

DBA_HIST_LIBRARYCACHE displays historical statistics about library cache performance and activity.

This view contains snapshots of V$LIBRARYCACHE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAMESPACE	VARCHAR2(15)	NOT NULL	Library cache namespace
GETS	NUMBER		Number of times a lock was requested for objects of the namespace
GETHITS	NUMBER		Number of times an object's handle was found in memory
PINS	NUMBER		Number of times a PIN was requested for objects of the namespace
PINHITS	NUMBER		Number of times all of the metadata pieces of the library object were found in memory
RELOADS	NUMBER		Any PIN of an object that is not the first PIN performed since the object handle was created, and which requires loading the object from disk
INVALIDATIONS	NUMBER		Total number of times objects in the namespace were marked invalid because a dependent object was modified
DLM_LOCK_REQUESTS	NUMBER		Number of GET requests lock instance locks
DLM_PIN_REQUESTS	NUMBER		Number of PIN requests lock instance locks
DLM_PIN_RELEASES	NUMBER		Number of release requests PIN instance locks
DLM_INVALIDATION_REQUESTS	NUMBER		Number of GET requests for invalidation instance locks
DLM_INVALIDATIONS	NUMBER		Number of invalidation pings received from other instances
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$LIBRARYCACHE"

6.7 DBA_HIST_LOG

DBA_HIST_LOG displays historical log file information from the control file. This view contains snapshots of V$LOG.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
GROUP#	NUMBER	NOT NULL	Log group number
THREAD#	NUMBER	NOT NULL	Log thread number
SEQUENCE#	NUMBER	NOT NULL	Log sequence number
BYTES	NUMBER		Size of the log (in bytes)
MEMBERS	NUMBER		Number of members in the log group
ARCHIVED	VARCHAR2(3)		Archive status (YES) or NO)
STATUS	VARCHAR2(16)		Log status: • UNUSED - Online redo log has never been written to. This is the state of a redo log that was just added, or just after a RESETLOGS, when it is not the current redo log. • CURRENT - Current redo log. This implies that the redo log is active. The redo log could be open or closed. • ACTIVE - Log is active but is not the current log. It is needed for crash recovery. It may be in use for block recovery. It may or may not be archived. • CLEARING - Log is being re-created as an empty log after an ALTER DATABASE CLEAR LOGFILE statement. After the log is cleared, the status changes to UNUSED. • CLEARING_CURRENT - Current log is being cleared of a closed thread. The log can stay in this status if there is some failure in the switch such as an I/O error writing the new log header. • INACTIVE - Log is no longer needed for instance recovery. It may be in use for media recovery. It may or may not be archived. • INVALIDATED - Archived the current redo log without a log switch.
FIRST_CHANGE#	NUMBER		Lowest system change number (SCN) in the log
FIRST_TIME	DATE		Time of the first SCN in the log
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$LOG"

6.8 DBA_HIST_MEM_DYNAMIC_COMP

DBA_HIST_MEM_DYNAMIC_COMP displays historical memory component sizes.

This view contains snapshots of V$MEMORY_DYNAMIC_COMPONENTS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
COMPONENT	VARCHAR2(64)	NOT NULL	Component name
CURRENT_SIZE	NUMBER		Current size of the component
MIN_SIZE	NUMBER		Minimum size of the component since instance startup
MAX_SIZE	NUMBER		Maximum size of the component since instance startup
USER_SPECIFIED_SIZE	NUMBER		Value of the user parameter for the component
OPER_COUNT	NUMBER		Number of operations since instance startup
LAST_OPER_TYPE	VARCHAR2(13)		Last completed operation for the component: • STATIC • INITIALIZING • DISABLED • GROW • SHRINK • SHRINK_CANCEL
LAST_OPER_MODE	VARCHAR2(9)		Mode of the last completed operation: • MANUAL • DEFERRED • IMMEDIATE
LAST_OPER_TIME	DATE		Start time of the last completed operation
GRANULE_SIZE	NUMBER		Granularity of the GROW or SHRINK operation

Column	Datatype	NULL	Description
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$MEMORY_DYNAMIC_COMPONENTS"

6.9 DBA_HIST_MEMORY_RESIZE_OPS

DBA_HIST_MEMORY_RESIZE_OPS displays memory resize operations history.

This view contains snapshots of V$MEMORY_RESIZE_OPS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
COMPONENT	VARCHAR2(64)	NOT NULL	Component name
OPER_TYPE	VARCHAR2(13)	NOT NULL	Operation type: • STATIC • INITIALIZING • DISABLED • GROW • SHRINK • SHRINK_CANCEL
START_TIME	DATE	NOT NULL	Start time of the operation
END_TIME	DATE	NOT NULL	End time of the operation
TARGET_SIZE	NUMBER	NOT NULL	Requested value of the parameter after the resize
OPER_MODE	VARCHAR2(9)		Operation mode: • MANUAL • DEFERRED • IMMEDIATE
PARAMETER	VARCHAR2(80)		Name of the parameter for the resize operation
INITIAL_SIZE	NUMBER		Parameter value at the start of the operation
FINAL_SIZE	NUMBER		Real value of the parameter after the resize

Column	Datatype	NULL	Description
STATUS	VARCHAR2(9)		Completion status of the operation: • INACTIVE • PENDING • COMPLETE • CANCELLED • ERROR
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$MEMORY_RESIZE_OPS"

6.10 DBA_HIST_MEMORY_TARGET_ADVICE

DBA_HIST_MEMORY_TARGET_ADVICE displays memory target advice history.

This view contains snapshots of V$MEMORY_TARGET_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
MEMORY_SIZE	NUMBER	NOT NULL	If the MEMORY_SIZE_FACTOR column has a value of 1, then this column shows the current size of memory, as set by the MEMORY_TARGET initialization parameter. If the value of the MEMORY_SIZE_FACTOR column is less than or greater than 1, then this column shows a proposed memory size.
MEMORY_SIZE_FACTOR	NUMBER		A multiplier for the current memory size. Possible values are 0.25, 0.5, 0.75, 1, 1.5, 1.75 and 2. This multiplier times the current memory size equals the value of the MEMORY_SIZE column.
ESTD_DB_TIME	NUMBER		For current memory size (MEMORY_SIZE_FACTOR = 1), the amount of database time required to complete the current workload. For a proposed memory size, the estimated amount of database time that would be required if the MEMORY_TARGET parameter were changed to the proposed size.

Column	Datatype	NULL	Description
ESTD_DB_TIME_FACTOR	NUMBER		For a proposed memory size, ratio of estimated database time to current database time
VERSION	NUMBER		Version number of this recommendation
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$MEMORY_TARGET_ADVICE"

6.11 DBA_HIST_METRIC_NAME

DBA_HIST_METRIC_NAME describes attributes of the set of RDBMS metrics.

This view contains a snapshot of V$METRICNAME.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
GROUP_ID	NUMBER	NOT NULL	Metric Group ID
GROUP_NAME	VARCHAR2(64)		Metric group name
METRIC_ID	NUMBER	NOT NULL	Metric ID
METRIC_NAME	VARCHAR2(64)	NOT NULL	Metric name
METRIC_UNIT	VARCHAR2(64)	NOT NULL	Unit of measurement
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$METRICNAME"

6.12 DBA_HIST_MTTR_TARGET_ADVICE

DBA_HIST_MTTR_TARGET_ADVICE displays historical predictions of the number of physical I/O requests for the MTTR corresponding to each row.

The data also includes a physical I/O factor, which is the ratio of the number of estimated I/O requests to the number of I/O requests actually performed by the current MTTR setting during the measurement interval. This view contains snapshots of V$MTTR_TARGET_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
MTTR_TARGET_FOR_ESTIMATE	NUMBER		MTTR setting being simulated (equal to the current MTTR setting if this is the first row of the view)
ADVICE_STATUS	VARCHAR2(5)		Current status of MTTR simulation: • ON SET • READY SET • OFF
DIRTY_LIMIT	NUMBER		Dirty buffer limit derived from the MTTR being simulated
ESTD_CACHE_WRITES	NUMBER		Estimated number of cache physical writes under the MTTR
ESTD_CACHE_WRITE_FACTOR	NUMBER		Estimated cache physical write ratio under the MTTR. It is the ratio of the estimated number of cache writes to the number of cache writes under the current MTTR setting.
ESTD_TOTAL_WRITES	NUMBER		Estimated total number of physical writes under the MTTR
ESTD_TOTAL_WRITE_FACTOR	NUMBER		Estimated total physical write ratio under the MTTR. It is the ratio of the estimated total number of physical writes to the total number of physical writes under the current MTTR setting.
ESTD_TOTAL_IOS	NUMBER		Estimated total number of I/O requests under the MTTR
ESTD_TOTAL_IO_FACTOR	NUMBER		Estimated total I/O ratio under the MTTR. It is the ratio of the estimated total number of I/O requests to the total number of I/O requests under the current MTTR setting.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$MTTR_TARGET_ADVICE"

6.13 DBA_HIST_MUTEX_SLEEP

DBA_HIST_MUTEX_SLEEP displays mutex sleep summary historical statistics information.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database identifier for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
MUTEX_TYPE	VARCHAR2(32)	NOT NULL	Mutex type
LOCATION	VARCHAR2(40)	NOT NULL	The code location where the waiter slept for the mutex
SLEEPS	NUMBER		Number of sleeps for this MUTEX_TYPE and LOCATION
WAIT_TIME	NUMBER		Wait time in microseconds
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.14 DBA_HIST_OPTIMIZER_ENV

DBA_HIST_OPTIMIZER_ENV displays the optimizer environments that have been captured in the Workload Repository.

This view is used with the DBA_HIST_SQLSTAT view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
OPTIMIZER_ENV_HASH_VALUE	NUMBER	NOT NULL	Hash value for the optimizer environment
OPTIMIZER_ENV	RAW(2000)		Optimizer environment
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"DBA_HIST_SQLSTAT"

6.15 DBA_HIST_OPTIMIZER_ENV_DETAILS

DBA_HIST_OPTIMIZER_ENV_DETAILS displays parameter values for the optimizer environments that have been captured in the Workload Repository.

This view is used with the DBA_HIST_SQLSTAT view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
OPTIMIZER_ENV_HASH_VALUE	NUMBER	NOT NULL	Hash value for the optimizer environment
NAME	VARCHAR2(50)		Parameter name
VALUE	VARCHAR2(25)		Parameter value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

This view is available starting with Oracle Database 23ai.

6.16 DBA_HIST_OSSTAT

DBA_HIST_OSSTAT displays historical operating system statistics.

This view contains snapshots of V$OSSTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STAT_ID	NUMBER	NOT NULL	Statistic ID
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$OSSTAT"

6.17 DBA_HIST_OSSTAT_NAME

DBA_HIST_OSSTAT_NAME displays the names of the operating system statistics.

This view is used with DBA_HIST_OSSTAT.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
STAT_ID	NUMBER	NOT NULL	Statistic ID
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "DBA_HIST_OSSTAT"

6.18 DBA_HIST_PARAMETER

DBA_HIST_PARAMETER displays historical information about the initialization parameters that were in effect for the instance.

This view contains snapshots of V$SYSTEM_PARAMETER.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PARAMETER_HASH	NUMBER	NOT NULL	Parameter hash
PARAMETER_NAME	VARCHAR2(64)	NOT NULL	Name of the parameter
VALUE	VARCHAR2(512)		Parameter value for the session (if modified within the session); otherwise, the instance-wide parameter value
ISDEFAULT	VARCHAR2(9)		Indicates whether the parameter is set to the default value (TRUE) or the parameter value was specified in the parameter file (FALSE)
ISMODIFIED	VARCHAR2(10)		Indicates whether the parameter has been modified after instance startup: • MODIFIED - Parameter has been modified with ALTER SESSION • SYSTEM_MOD - Parameter has been modified with ALTER SYSTEM (which causes all the currently logged in sessions' values to be modified) • FALSE - Parameter has not been modified after instance startup
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$SYSTEM_PARAMETER"

6.19 DBA_HIST_PARAMETER_NAME

DBA_HIST_PARAMETER_NAME displays information about the parameter names captured in the workload repository.

This view is used with the DBA_HIST_PARAMETER view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
PARAMETER_HASH	NUMBER	NOT NULL	Parameter hash
PARAMETER_NAME	VARCHAR2(64)	NOT NULL	Name of the parameter
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "DBA_HIST_PARAMETER"

6.20 DBA_HIST_PDB_IN_SNAP

DBA_HIST_PDB_IN_SNAP captures a list of open pluggable databases (PDBs) at the time of the Automatic Workload Repository (AWR) snapshot. This view can be used with other DBA_HIST_ views to construct the number of opened PDBs at the time of the snapshot.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	AWR snapshot ID
DBID	NUMBER	NOT NULL	Database ID of the database that took this snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number of the instance that took this snapshot
CON_DBID	NUMBER		DBID of an open PDB at the time of the snapshot
FLAG	NUMBER		Flag field in capture properties of the PDB. Not used at this time.
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
OPEN_TIME_TZ	TIMESTAMP(3) WITH TIME ZONE		Time the PDB was last opened

6.21 DBA_HIST_PDB_INSTANCE

DBA_HIST_PDB_INSTANCE displays the pluggable databases (PDBs) and instances in the Workload Repository.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number
STARTUP_TIME	TIMESTAMP(3)	NOT NULL	Startup time of the instance
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB for the sampled session
OPEN_TIME	TIMESTAMP(3)	NOT NULL	Time the PDB was last opened
OPEN_MODE	VARCHAR2(16)		Open mode of the database
PDB_NAME	VARCHAR2(128)		PDB name

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
SNAP_ID	NUMBER		The unique snapshot identifier of the snapshot that flushed the corresponding row
STARTUP_TIME_TZ	TIMESTAMP(3) WITH TIME ZONE		Startup time of the instance
OPEN_TIME_TZ	TIMESTAMP(3) WITH TIME ZONE		Time the PDB was last opened

6.22 DBA_HIST_PERSISTENT_QMN_CACHE

DBA_HIST_PERSISTENT_QMN_CACHE displays the historical summary background queue table activity.

This view contains snapshots from V$PERSISTENT_QMN_CACHE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_TABLE_ID	NUMBER	NOT NULL	Queue table object ID
TYPE	VARCHAR2(32)		Type of the queue table's queue monitor cache
STATUS	NUMBER		Status of the queue table's queue monitor cache
NEXT_SERVICE_TIME	TIMESTAMP(3)		Time when the queue table should be serviced by QMON servers
WINDOW_END_TIME	TIMESTAMP(3)		Time manager activity period for non-owner queue table operations
TOTAL_RUNS	NUMBER		Total number of times this queue table is served
TOTAL_LATENCY	NUMBER		Cumulative latency in serving the queue table (in hundredths of a second)
TOTAL_ELAPSED_TIME	NUMBER		Total time spent in processing this queue table (in seconds)
TOTAL_CPU_TIME	NUMBER		Cumulative CPU time for serving the queue table (in hundredths of a second)
TMGR_ROWS_PROCESSED	NUMBER		Number of time manager entries processed
TMGR_ELAPSED_TIME	NUMBER		Cumulative time for time management activities (in hundredths of a second)
TMGR_CPU_TIME	NUMBER		Cumulative CPU time for time management activities (in hundredths of a second)

Column	Datatype	NULL	Description
LAST_TMGR_PROCESSING_TIME	TIMESTAMP(3)		Last timer manager processing time
DEQLOG_ROWS_PROCESSED	NUMBER		Number of dequeue log entries processed
DEQLOG_PROCESSING_ELAPSED_TIME	NUMBER		Total time for processing dequeue log entries (in hundredths of a second)
DEQLOG_PROCESSING_CPU_TIME	NUMBER		Total CPU time for processing dequeue log entries (in hundredths of a second)
LAST_DEQLOG_PROCESSING_TIME	TIMESTAMP(3)		Last dequeue log processing time
DEQUEUE_INDEX_BLOCKS_FREED	NUMBER		Number of dequeue index blocks freed
HISTORY_INDEX_BLOCKS_FREED	NUMBER		Number of history index blocks freed
TIME_INDEX_BLOCKS_FREED	NUMBER		Number of time manager index blocks freed
INDEX_CLEANUP_COUNT	NUMBER		Number of times index block cleanup was attempted
INDEX_CLEANUP_ELAPSED_TIME	NUMBER		Total time for index block cleanup (in hundredths of a second)
INDEX_CLEANUP_CPU_TIME	NUMBER		Total CPU time for index block cleanup (in hundredths of a second)
LAST_INDEX_CLEANUP_TIME	TIMESTAMP(3)		Last index block cleanup time
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

6.23 DBA_HIST_PERSISTENT_QUEUES

DBA_HIST_PERSISTENT_QUEUES displays Oracle Database AQ persistent queues historical statistics information.

This view contains snapshots of V$PERSISTENT_QUEUES.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot

Column	Datatype	NULL	Description
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_SCHEMA	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_ID	NUMBER	NOT NULL	Identifier for the queue
FIRST_ACTIVITY_TIME	TIMESTAMP(6)		First queue activity time since database startup
ENQUEUED_MSGS	NUMBER		Number of messages enqueued
DEQUEUED_MSGS	NUMBER		Number of messages dequeued **Note:** This column will not be incremented until all the subscribers of the message have dequeued the message and its retention time has elapsed.
BROWSED_MSGS	NUMBER		Number of messages that have been browsed
ELAPSED_ENQUEUE_TIME	NUMBER		Total time (in hundredths of a second) spent doing enqueue
ELAPSED_DEQUEUE_TIME	NUMBER		Total time (in hundredths of a second) spent doing dequeue
ENQUEUE_CPU_TIME	NUMBER		Total CPU time for enqueue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER		Total CPU time for dequeue (in hundredths of a second)
AVG_MSG_AGE	NUMBER		Average age of messages in the queue
DEQUEUED_MSG_LATENCY	NUMBER		Last dequeued message latency (in seconds)
ELAPSED_TRANSFORMATION_TIME	NUMBER		Total time (in hundredths of a second) spent doing transformation
ELAPSED_RULE_EVALUATION_TIME	NUMBER		Total time (in hundredths of a second) spent doing rule evaluation
ENQUEUED_EXPIRY_MSGS	NUMBER		Number of messages enqueued with expiry
ENQUEUED_DELAY_MSGS	NUMBER		Number of messages enqueued with delay
MSGS_MADE_EXPIRED	NUMBER		Number of messages expired by time manager
MSGS_MADE_READY	NUMBER		Number of messages made ready by time manager
LAST_ENQUEUE_TIME	TIMESTAMP(6)		Last message enqueue time
LAST_DEQUEUE_TIME	TIMESTAMP(6)		Last message dequeue time
LAST_TM_EXPIRY_TIME	TIMESTAMP(6)		Last time message was expired by time manager
LAST_TM_READY_TIME	TIMESTAMP(6)		Last time message was made ready by time manager
ENQUEUE_TRANSACTIONS	NUMBER		Number of enqueue transactions
DEQUEUE_TRANSACTIONS	NUMBER		Number of dequeue transactions
EXECUTION_COUNT	NUMBER		Number of executions of the dequeue cursor
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$PERSISTENT_QUEUES"

6.24 DBA_HIST_PERSISTENT_SUBS

DBA_HIST_PERSISTENT_SUBS displays Oracle Database AQ persistent queue subscribers historical statistics information.

This view contains snapshots of V$PERSISTENT_SUBSCRIBERS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
QUEUE_SCHEMA	VARCHAR2(128)	NOT NULL	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
SUBSCRIBER_ID	NUMBER	NOT NULL	Internal subscriber number
SUBSCRIBER_NAME	VARCHAR2(128)		Name of the subscriber
SUBSCRIBER_ADDRESS	VARCHAR2(1024)		Address of the subscribing agent
SUBSCRIBER_TYPE	VARCHAR2(128)		Type of the subscriber: • PROXY - Propagation subscriber • SUBSCRIBER - Normal subscriber • RECIPIENT - Recipient
FIRST_ACTIVITY_TIME	TIMESTAMP(6)		First subscriber activity time since database startup
ENQUEUED_MSGS	NUMBER		Number of messages enqueued since FIRST_ACTIVITY_TIME
DEQUEUED_MSGS	NUMBER		Number of messages dequeued since FIRST_ACTIVITY_TIME
AVG_MSG_AGE	NUMBER		Average age of messages in the queue
BROWSED_MSGS	NUMBER		Number of messages that have been browsed
EXPIRED_MSGS	NUMBER		Number of messages expired since FIRST_ACTIVITY_TIME
DEQUEUED_MSG_LATENCY	NUMBER		Last dequeued message latency (in seconds)

Column	Datatype	NULL	Description
LAST_ENQUEUE_TIME	TIMESTAMP(6)		Timestamp of the last enqueued message
LAST_DEQUEUE_TIME	TIMESTAMP(6)		Timestamp of the last dequeued message
ELAPSED_DEQUEUE_TIME	NUMBER		Total time spent in dequeue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER		Total CPU time for dequeue (in hundredths of a second)
DEQUEUE_TRANSACTIONS	NUMBER		Number of dequeue transactions
EXECUTION_COUNT	NUMBER		Number of executions of the dequeue index cursor
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

"V$PERSISTENT_SUBSCRIBERS"

6.25 DBA_HIST_PGA_TARGET_ADVICE

DBA_HIST_PGA_TARGET_ADVICE displays historical predictions of how the cache hit percentage and over allocation count statistics displayed by the V$PGASTAT performance view would be impacted if the value of the PGA_AGGREGATE_TARGET parameter is changed.

This view contains snapshots of V$PGA_TARGET_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PGA_TARGET_FOR_ESTIMATE	NUMBER	NOT NULL	Value of PGA_AGGREGATE_TARGET for the prediction (in bytes)
PGA_TARGET_FACTOR	NUMBER		PGA_TARGET_FOR_ESTIMATE / the current value of the PGA_AGGREGATE_TARGET parameter
ADVICE_STATUS	VARCHAR2(3)		Indicates whether the advice is enabled (ON) or disabled (OFF) depending on the value of the STATISTICS_LEVEL parameter
BYTES_PROCESSED	NUMBER		Total bytes processed by all the work areas considered by this advice (in bytes)
ESTD_TIME	NUMBER		Time (in seconds) required to process the bytes

Column	Datatype	NULL	Description
ESTD_EXTRA_BYTES_RW	NUMBER		Estimated number of extra bytes which would be read or written if PGA_AGGREGATE_TARGET was set to the value of the PGA_TARGET_FOR_ESTIMATE column. This number is derived from the estimated number and size of work areas which would run in one-pass (or multi-pass) for that value of PGA_AGGREGATE_TARGET.
ESTD_PGA_CACHE_HIT_PERCENTAGE	NUMBER		Estimated value of the cache hit percentage statistic when PGA_AGGREGATE_TARGET equals PGA_TARGET_FOR_ESTIMATE. This column is derived from the above two columns and is equal to BYTES_PROCESSED / (BYTES_PROCESSED + ESTD_EXTRA_BYTES_RW)
ESTD_OVERALLOC_COUNT	NUMBER		Estimated number of PGA memory over-allocations if the value of PGA_AGGREGATE_TARGET is set to PGA_TARGET_FOR_ESTIMATE. A nonzero value means that PGA_TARGET_FOR_ESTIMATE is not large enough to run the work area workload. Hence, PGA_AGGREGATE_TARGET should not be set to PGA_TARGET_FOR_ESTIMATE since Oracle will not be able to honor that target.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

- "PGA_AGGREGATE_TARGET"

6.26 DBA_HIST_PGASTAT

DBA_HIST_PGASTAT displays historical PGA memory usage statistics as well as statistics about the automatic PGA memory manager when it is enabled.

This view contains snapshots of V$PGASTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot

Column	Datatype	NULL	Description
INSTANCE_NUMBER	NUMBER	NOT NULL	Database instance number
NAME	VARCHAR2(64)	NOT NULL	Name of the statistic: • aggregate PGA auto target • aggregate PGA target parameter • bytes processed • cache hit percentage • extra bytes read/written • global memory bound • max processes count • maximum PGA allocated • maximum PGA used for auto workareas • maximum PGA used for manual workareas • over allocation count • PGA memory freed back to OS • process count • recompute count (total) • total freeable PGA memory • total PGA allocated • total PGA inuse • total PGA used for auto workareas • total PGA used for manual workareas **See Also:** V$PGASTAT for descriptions of the statistics
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$PGASTAT"

6.27 DBA_HIST_PLAN_OPERATION_NAME

DBA_HIST_PLAN_OPERATION_NAME displays historical information about SQL plan operation names.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database identifier
OPERATION_ID	NUMBER	NOT NULL	Plan operation identifier

Column	Datatype	NULL	Description
OPERATION_NAME	VARCHAR2(64)		Plan operation name. This value also appears in the SQL_PLAN_OPERATION column of the DBA_HIST_ACTIVE_SESS_HISTORY view.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.28 DBA_HIST_PLAN_OPTION_NAME

DBA_HIST_PLAN_OPTION_NAME displays historical information about SQL plan option names.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database identifier
OPTION_ID	NUMBER	NOT NULL	Plan option identifier
OPTION_NAME	VARCHAR2(64)		Plan option name. This value also appears in the SQL_PLAN_OPTIONS column of the DBA_HIST_ACTIVE_SESS_HISTORY view.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.29 DBA_HIST_PROCESS_MEM_SUMMARY

DBA_HIST_PROCESS_MEM_SUMMARY displays historical information about dynamic PGA memory usage by named component categories for each process.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot

Column	Datatype	NULL	Description
CATEGORY	VARCHAR2(15)	NOT NULL	Category name. Categories include "SQL", "PL/SQL", "OLAP" and "JAVA". Special categories are "Freeable" and "Other". Freeable memory has been allocated to the process by the operating system, but has not been allocated to a category. "Other" memory has been allocated to a category, but not to one of the named categories
IS_INSTANCE_WIDE	NUMBER		This column shows whether the process memory detail is for only this container or for the whole instance. If the value is 1, the detail is for the whole instance. Any other value is the container ID for the container to which the detail pertains, as seen in the CON_ID column.
NUM_PROCESSES	NUMBER		Number of processes
NON_ZERO_ALLOCS	NUMBER		Number of processes with nonzero allocations
USED_TOTAL	NUMBER		Bytes of PGA memory used by the process for the category
ALLOCATED_TOTAL	NUMBER		Total number of bytes of PGA memory allocated by the process for the category.
ALLOCATED_AVG	NUMBER		Average number of bytes of PGA memory allocated by the process for the category
ALLOCATED_STDDEV	NUMBER		Standard deviation of the number of bytes of PGA memory allocated by the process for the category
ALLOCATED_MAX	NUMBER		Maximum bytes of PGA memory ever allocated by the process for the category
MAX_ALLOCATED_MAX	NUMBER		Maximum bytes of PGA memory that can be allocated by the process for the category
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.30 DBA_HIST_PROCESS_WAITTIME

DBA_HIST_PROCESS_WAITTIME displays CPU and wait time by process types.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PROCESS_TYPE	VARCHAR2(5)	NOT NULL	Process type

Column	Datatype	NULL	Description
DESCRIPTION	VARCHAR2(64)	NOT NULL	Process description
WAIT_CLASS_TYPE	VARCHAR2(64)	NOT NULL	Type of wait class
VALUE	NUMBER		Wait time or CPU used time in milliseconds
CON_DBID	NUMBER		The database ID of the PDB for the process
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.31 DBA_HIST_RECOVERY_PROGRESS

DBA_HIST_RECOVERY_PROGRESS displays database recovery progress information for an instance.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
START_TIME	DATE	NOT NULL	Start time of the recovery operation
TYPE	VARCHAR2(64)	NOT NULL	Type of recovery operation being performed: • CRASH RECOVERY • INSTANCE RECOVERY • MEDIA RECOVERY
ITEM	VARCHAR2(32)	NOT NULL	Item being measured. When TYPE is CRASH RECOVERY or INSTANCE RECOVERY, the possible values are: • Log Files • Redo Blocks When TYPE is MEDIA RECOVERY, the possible values are: • Active Apply Rate • Average Apply Rate • Maximum Apply Rate • Redo Applied • Log Files • Last Applied Redo • Active Time • Elapsed Time • Apply Time per Log • Checkpoint Time per Log • Standby Apply Lag • Recovery ID

Column	Datatype	NULL	Description
UNITS	VARCHAR2(32)		The units of measurement for each item
SOFAR	NUMBER		Amount of work done so far
TOTAL	NUMBER		Total amount of work expected
TIMESTAMP	DATE		Timestamp of the last redo record applied
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root. • *n*: Where *n* is the applicable container ID for the rows containing data

6.32 DBA_HIST_REPLICATION_TBL_STATS

DBA_HIST_REPLICATION_TBL_STATS displays replication table statistics for Oracle GoldenGate and XStream sessions. This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: • XStream • GoldenGate
TOTAL_INSERTS	NUMBER		Number of insert operations on this table processed by this apply server
TOTAL_UPDATES	NUMBER		Number of update operations on this table processed by this apply server
TOTAL_DELETES	NUMBER		Number of delete operations on this table processed by this apply server
CDR_SUCCESSFUL	NUMBER		Number of successfully resolved conflicts
CDR_FAILED	NUMBER		Number of conflicts that could not be resolved due to an error during resolution
REPERR_CNT	NUMBER		The total number of errors for the replication operation
HANDLE_COLLISIONS	NUMBER		Number of collisions on this table handled by this apply server
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.33 DBA_HIST_REPLICATION_TXN_STATS

DBA_HIST_REPLICATION_TXN_STATS displays replication transaction statistics for Oracle GoldenGate and XStream sessions.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Object name
SESSION_TYPE	VARCHAR2(64)	NOT NULL	Type of session
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: • XStream • GoldenGate
SOURCE_DATABASE	VARCHAR2(128)		Database where the transaction originated
SOURCE_TXN_ID	VARCHAR2(128)	NOT NULL	Original transaction ID at the source database
FIRST_LCR_TIME	DATE		Time of the first LCR (message in an error transaction)
TOTAL_LCRS_COUNT	NUMBER		Total number of LCRs for this replication transaction
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.34 DBA_HIST_REPORTS

DBA_HIST_REPORTS displays information about XML reports captured into Automatic Workload Repository (AWR).

The reports themselves belong to components such as SQL Monitor, DBOP, and Real-Time ADDM.

Each XML report contains details about some activity of a component. For example, a SQL Monitor report contains a detailed report about a particular execution of a SQL statement, or a Real-Time ADDM report contains system performance data analyzed by Real-Time ADDM.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		ID of the first Automatic Workload Repository (AWR) snapshot that will be taken after this report is generated
DBID	NUMBER		Database ID of the current database for the report
INSTANCE_NUMBER	NUMBER		Instance number (for an Oracle RAC system)
REPORT_ID	NUMBER		ID of the captured report
COMPONENT_ID	NUMBER		ID of the component (for example, SQL Monitor) whose report is captured
SESSION_ID	NUMBER		ID of the session corresponding to the captured report (currently used only for SQL Monitor reports)
SESSION_SERIAL#	NUMBER		Session serial number corresponding to the captured report (currently used only for SQL Monitor reports)
PERIOD_START_TIME	DATE		Time when the activity period started
PERIOD_END_TIME	DATE		Time when the activity period ended
GENERATION_TIME	DATE		Time when this report was generated
COMPONENT_NAME	VARCHAR2(128)		Name of the component whose report this is
REPORT_NAME	VARCHAR2(128)		Name of this report
REPORT_PARAMETERS	VARCHAR2(1024)		Parameters associated with this report
KEY1	VARCHAR2(128)		Key1 associated with the captured report
KEY2	VARCHAR2(128)		Key2 associated with the captured report
KEY3	VARCHAR2(128)		Key3 associated with the captured report
KEY4	VARCHAR2(256)		Key4 associated with the captured report
GENERATION_COST_SECONDS	NUMBER		Time taken to generate this report (in seconds)
REPORT_SUMMARY	VARCHAR2(4000)		Summary of this report
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"DBA_HIST_REPORTS_DETAILS"

6.35 DBA_HIST_REPORTS_CONTROL

DBA_HIST_REPORTS_CONTROL contains control information about the report capture mechanism that automatically captures XML reports to Automatic Workload Repository (AWR).

Reports are captured automatically for components like SQL Monitor and Real-Time Automatic Database Diagnostic Monitor (Real-Time ADDM).

Column	Datatype	NULL	Description
DBID	NUMBER		Database ID of the current database for the report
EXECUTION_MODE	VARCHAR2(12)		Mode of execution of automatic report capture. Possible values: • REGULAR: Regular per-minute report capture subject to DBTIME budget • FULL_CAPTURE: Report capture will be run per minute without the DBTIME budget constraints and is provided to capture a more comprehensive set of reports **NOTE**: The FULL_CAPTURE mode can be started and ended respectively by executing the START_REPORT_CAPTURE and FINISH_REPORT_CAPTURE APIs in the DBMS_AUTO_REPORT package. At all other times, the execution mode should be REGULAR.

> **See Also:**
>
> *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_AUTO_REPORT package

6.36 DBA_HIST_REPORTS_DETAILS

DBA_HIST_REPORTS_DETAILS displays details about each report captured in Automatic Workload Repository (AWR).

Metadata for each report appears in the DBA_HIST_REPORTS view while the actual report is available in the DBA_HIST_REPORTS_DETAILS view.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		ID of the first AWR snapshot that will be taken after this report is generated
DBID	NUMBER		Database ID of the current database for the report
INSTANCE_NUMBER	NUMBER		Instance number (for an Oracle RAC system)
REPORT_ID	NUMBER		ID of the captured report
SESSION_ID	NUMBER		ID of the session corresponding to the captured report (currently used only for SQL Monitor reports)
SESSION_SERIAL#	NUMBER		Session serial number relevant to this report (currently used only for SQL Monitor reports)

Column	Datatype	NULL	Description
GENERATION_TIME	DATE		Time when this report was generated
REPORT_COMPRESSED	BLOB		Actual XML report in compressed form
REPORT	CLOB		Full uncompressed report
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

> "DBA_HIST_REPORTS"

6.37 DBA_HIST_REPORTS_TIMEBANDS

DBA_HIST_REPORTS_TIMEBANDS contains bands of time with a new row created every day corresponding to a band of time.

Each band of time represents a period of time, and has a row for every report captured automatically into Automatic Workload Repository (AWR) during that time. If the activity period of a report spans across two bands of time (for example. the activity started before midnight and ended after midnight), then the view contains two rows for that report, with one row for each band of time. The view is partitioned to provide fast access to all reports captured in a given time frame.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		The AWR snapshot id corresponding to the report
DBID	NUMBER		Database ID of the current database for the report
INSTANCE_NUMBER	NUMBER		Instance number (for an Oracle RAC system)
CON_DBID	NUMBER		CDB ID of the captured report
COMPONENT_ID	NUMBER		ID of the component (for example, SQL Monitor) whose report is captured
COMPONENT_NAME	VARCHAR2(128)		Name of the component whose report is captured
BAND_START_TIME	DATE		Starting time of the time band
BAND_LENGTH	NUMBER		Length of time band in days (currently unused)
REPORT_ID	NUMBER		ID of the captured report
REPORT_GENERATION_TIME	DATE		Time when the report was generated
PERIOD_START_TIME	DATE		Time when the activity period started
PERIOD_END_TIME	DATE		Time when the activity period ended

Column	Datatype	NULL	Description
KEY1	VARCHAR2(128)		Key1 associated with the captured report
KEY2	VARCHAR2(128)		Key2 associated with the captured report
KEY3	VARCHAR2(128)		Key3 associated with the captured report
KEY4	VARCHAR2(256)		Key4 associated with the captured report
SESSION_ID	NUMBER		ID of the session corresponding to the captured report (currently used only for SQL Monitor reports)
SESSION_SERIAL#	NUMBER		Session serial number corresponding to the captured report (currently used only for SQL Monitor reports)
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.38 DBA_HIST_RESOURCE_LIMIT

DBA_HIST_RESOURCE_LIMIT displays historical information about global resource use for some of the system resource.

This view contains snapshots of V$RESOURCE_LIMIT.

If time is of interest, join this view with DBA_HIST_SNAPSHOT.END_INTERVAL_TIME.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
RESOURCE_NAME	VARCHAR2(30)	NOT NULL	Name of the resource
CURRENT_UTILIZATION	NUMBER		Number of (resources, locks, or processes) currently being used
MAX_UTILIZATION	NUMBER		Maximum consumption of the resource since the last instance start up
INITIAL_ALLOCATION	VARCHAR2(10)		Initial allocation. This will be equal to the value specified for the resource in the initialization parameter file (UNLIMITED for infinite allocation).
LIMIT_VALUE	VARCHAR2(10)		Unlimited for resources and locks. This can be greater than the initial allocation value (UNLIMITED for infinite limit).
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.39 DBA_HIST_ROWCACHE_SUMMARY

DBA_HIST_ROWCACHE_SUMMARY displays historical summary statistics for data dictionary activity.

This view contains snapshots of V$ROWCACHE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
PARAMETER	VARCHAR2(32)	NOT NULL	Name of the initialization parameter that determines the number of entries in the data dictionary cache
TOTAL_USAGE	NUMBER		Sum of the total number of entries in the cache
USAGE	NUMBER		Number of cache entries that contain valid data
GETS	NUMBER		Total number of requests for information on the data object
GETMISSES	NUMBER		Number of data requests resulting in cache misses
SCANS	NUMBER		Number of scan requests
SCANMISSES	NUMBER		Number of times a scan failed to find the data in the cache
SCANCOMPLETES	NUMBER		For a list of subordinate entries, the number of times the list was scanned completely
MODIFICATIONS	NUMBER		Number of inserts, updates, and deletions
FLUSHES	NUMBER		Number of times flushed to disk
DLM_REQUESTS	NUMBER		Number of DLM requests
DLM_CONFLICTS	NUMBER		Number of DLM conflicts
DLM_RELEASES	NUMBER		Number of DLM releases
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.40 DBA_HIST_RSRC_CONSUMER_GROUP

DBA_HIST_RSRC_CONSUMER_GROUP displays historical information about Resource Manager consumer groups.

This view contains snapshots of V$RSRC_CONS_GROUP_HISTORY.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SEQUENCE#	NUMBER	NOT NULL	A sequential counter that uniquely describes the DBA_HIST_RSRC_PLAN entry to which these consumer group statistics apply. When the instance is restarted, this value is reset to zero.
CONSUMER_GROUP_ID	NUMBER	NOT NULL	Consumer group object ID (a unique number, consistent across database shutdowns and startups)
CONSUMER_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the consumer group
REQUESTS	NUMBER	NOT NULL	Cumulative number of requests that were executed in the consumer group
CPU_WAIT_TIME	NUMBER	NOT NULL	Cumulative amount of time that sessions waited for CPU because of resource management. This does not include waits due to latch or enqueue contention, I/O waits, and so on.
CPU_WAITS	NUMBER	NOT NULL	Cumulative number of times all sessions in the consumer group had to wait for CPU because of resource management. This does not include waits due to latch or enqueue contention, I/O waits, and so on.
CONSUMED_CPU_TIME	NUMBER	NOT NULL	Cumulative amount of CPU time consumed by all sessions in the consumer group (in milliseconds)
YIELDS	NUMBER	NOT NULL	Cumulative number of times that sessions in the consumer group had to yield CPU to other sessions because of quantum expiration
ACTIVE_SESS_LIMIT_HIT	NUMBER	NOT NULL	Number of times that sessions in the consumer group were queued because the consumer group reached its active session limit
UNDO_LIMIT_HIT	NUMBER	NOT NULL	Number of times that queries in the consumer group were cancelled because the consumer group reached its UNDO_POOL limit
SWITCHES_IN_CPU_TIME	NUMBER	NOT NULL	Number of switches into the consumer group because of the Resource Manager plan's SWITCH_TIME limit
SWITCHES_OUT_CPU_TIME	NUMBER	NOT NULL	Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_TIME limit

Column	Datatype	NULL	Description
SWITCHES_IN_IO_MEGABYTES	NUMBER	NOT NULL	Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_MEGABYTES limit
SWITCHES_OUT_IO_MEGABYTES	NUMBER	NOT NULL	Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_MEGABYTES limit
SWITCHES_IN_IO_REQUESTS	NUMBER	NOT NULL	Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_REQS limit
SWITCHES_OUT_IO_REQUESTS	NUMBER	NOT NULL	Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_REQS limit
SWITCHES_IN_IO_LOGICAL	NUMBER		Number of switches into the consumer group because of the Resource Manager plan's SWITCH_IO_LOGICAL limit
SWITCHES_OUT_IO_LOGICAL	NUMBER		Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_IO_LOGICAL limit
SWITCHES_IN_ELAPSED_TIME	NUMBER		Number of switches into the consumer group because of the Resource Manager plan's SWITCH_ELAPSED_TIME limit
SWITCHES_OUT_ELAPSED_TIME	NUMBER		Number of switches out of the consumer group because of the Resource Manager plan's SWITCH_ELAPSED_TIME limit
PGA_LIMIT_SESSIONS_KILLED	NUMBER		The number of sessions that were terminated because their PGA allocation exceeded the PGA limit specified in the Resource Plan's SESSION_PGA_LIMIT directive
SQL_CANCELED	NUMBER	NOT NULL	Number of times that SQL queries running in the consumer group were terminated because they exceeded the Resource Manager plan's SWITCH_TIME limit and CANCEL_SQL was specified as the Resource Manager plan's SWITCH_GROUP
ACTIVE_SESS_KILLED	NUMBER	NOT NULL	Number of times that sessions running in the consumer group were terminated because they exceeded the Resource Manager plan's SWITCH_TIME limit and KILL_SESSION was specified as the Resource Manager plan's SWITCH_GROUP
IDLE_SESS_KILLED	NUMBER	NOT NULL	Number of times that sessions in the consumer group were terminated because they were idle for too long (reached MAX_IDLE_TIME)
IDLE_BLKR_SESS_KILLED	NUMBER	NOT NULL	Number of times that sessions in the consumer group were terminated because they were idle too long (reached MAX_IDLE_BLOCKER_TIME) and were blocking other sessions
QUEUED_TIME	NUMBER	NOT NULL	Total amount of time that sessions in the consumer group have spent in the QUEUED state because of the active session limit (in milliseconds)
QUEUE_TIME_OUTS	NUMBER	NOT NULL	Number of times that requests from sessions in the consumer group timed out because they were queued for too long (reached QUEUEING_P1)
IO_SERVICE_TIME	NUMBER	NOT NULL	Cumulative I/O wait time (in milliseconds)

Column	Datatype	NULL	Description
IO_SERVICE_WAITS	NUMBER	NOT NULL	Total number of wait requests
SMALL_READ_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	NOT NULL	Number of multiblock megabytes written
SMALL_READ_REQUESTS	NUMBER	NOT NULL	Number of single block read requests
SMALL_WRITE_REQUESTS	NUMBER	NOT NULL	Number of single block write requests
LARGE_READ_REQUESTS	NUMBER	NOT NULL	Number of multiblock read requests
LARGE_WRITE_REQUESTS	NUMBER	NOT NULL	Number of multiblock write requests
PQS_QUEUED	NUMBER		Number of times that sessions in the consumer group were queued when trying to run parallel statements
PQ_QUEUED_TIME	NUMBER		Total amount of time that sessions in the consumer group were queued when trying to run parallel statements (in milliseconds)
PQ_QUEUE_TIME_OUTS	NUMBER		Number of times that parallel statements from sessions in the consumer group timed out because their queue time exceeded the Resource Manager plan's PARALLEL_QUEUE_TIMEOUT limit
PQS_COMPLETED	NUMBER		Total number of completed parallel statements in the consumer group
PQ_SERVERS_USED	NUMBER		Total number of parallel servers used by completed parallel statements in the consumer group
PQ_ACTIVE_TIME	NUMBER		Cumulative sum of the parallel active times for all completed parallel statements in the consumer group (in milliseconds)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$RSRC_CONS_GROUP_HISTORY"

6.41 DBA_HIST_RSRC_METRIC

DBA_HIST_RSRC_METRIC displays information about historical Resource Manager metrics for the past hour.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BEGIN_TIME	TIMESTAMP(3)	NOT NULL	Begin time of the interval
END_TIME	TIMESTAMP(3)	NOT NULL	End time of the interval
INTSIZE_CSEC	NUMBER	NOT NULL	Interval size (in hundredths of a second)
SEQUENCE#	NUMBER	NOT NULL	A sequential counter that uniquely describes the V$RSRC_PLAN_HISTORY entry to which these consumer group statistics apply. When the instance is restarted, this value is reset to zero.
CONSUMER_GROUP_ID	NUMBER	NOT NULL	Consumer group object ID (a unique number, consistent across database shutdowns and startups)
CPU_CONSUMED_TIME	NUMBER	NOT NULL	Cumulative amount of CPU time consumed by all sessions in the consumer group, in milliseconds
CPU_WAIT_TIME	NUMBER	NOT NULL	Cumulative amount of time that sessions waited for CPU because of resource management, in milliseconds. This does not include waits due to latch or enqueue contention, I/O waits, and so on. When CPU resources are not being actively managed, this value is set to zero.
AVG_RUNNING_SESSIONS	NUMBER		Average number of sessions in the consumer group that are currently running
AVG_WAITING_SESSIONS	NUMBER		Average number of sessions in the consumer group that are waiting for CPU due to resource management. When CPU resources are not being actively managed, this value is set to zero.
RUNNING_SESSION_LIMIT	NUMBER		Maximum number of sessions in the consumer group that can run simultaneously. The value of this column is NUM_CPUS multiplied by the consumer group's MAX_UTILIZATION_LIMIT directive in the current Resource Manager plan.
AVG_CPU_UTILIZATION	NUMBER		Average percentage of CPU consumed by the consumer group, with respect to the total number of CPUs in the system
IO_REQUESTS	NUMBER	NOT NULL	I/O requests
IO_MEGABYTES	NUMBER	NOT NULL	I/O megabytes
IOPS	NUMBER		I/O operations per second during the previous minute for this PDB
IOMBPS	NUMBER		I/O megabytes per second during the previous minute for this PDB
AVG_ACTIVE_PARALLEL_STMTS	NUMBER		The average number of parallel statements that were running during the 1-minute metric window
AVG_QUEUED_PARALLEL_STMTS	NUMBER		The average number of parallel statements that were queued during the 1-minute metric window
AVG_ACTIVE_PARALLEL_SERVERS	NUMBER		The average number of parallel servers that were actively running as part of a parallel statement during the 1-minute metric window

Column	Datatype	NULL	Description
AVG_QUEUED_PARALLEL_SERVERS	NUMBER		The average number of parallel servers that were requested by queued parallel statements during the 1-minute metric window
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.42 DBA_HIST_RSRC_PDB_METRIC

DBA_HIST_RSRC_PDB_METRIC displays information about historical Resource Manager metrics for the past hour by PDB.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BEGIN_TIME	TIMESTAMP(3)	NOT NULL	Begin time of the interval
END_TIME	TIMESTAMP(3)	NOT NULL	End time of the interval
INTSIZE_CSEC	NUMBER	NOT NULL	Interval size (in hundredths of a second)
SEQUENCE#	NUMBER	NOT NULL	A sequential counter that uniquely describes the V$RSRC_PLAN_HISTORY entry to which these PDB statistics apply. When the instance is restarted, this value is reset to zero.
CPU_CONSUMED_TIME	NUMBER	NOT NULL	Cumulative amount of CPU time consumed by all sessions in the PDB, in milliseconds
CPU_WAIT_TIME	NUMBER	NOT NULL	Cumulative amount of time that sessions waited for CPU because of resource management, in milliseconds. This does not include waits due to latch or enqueue contention, I/O waits, and so on. When CPU resources are not being actively managed, this value is set to zero.
AVG_RUNNING_SESSIONS	NUMBER		Average number of sessions in the PDB that are currently running
AVG_WAITING_SESSIONS	NUMBER		Average number of sessions in the PDB that are waiting for CPU due to resource management. When CPU resources are not being actively managed, this value is set to zero.
AVG_CPU_UTILIZATION	NUMBER		Average percentage of CPU consumed by the PDB, with respect to the total number of CPUs in the system
IOPS	NUMBER		I/O operations per second during the previous minute for this PDB

Column	Datatype	NULL	Description
IOMBPS	NUMBER		I/O megabytes per second during the previous minute for this PDB
IOPS_THROTTLE_EXEMPT	NUMBER		Indicates how much of the I/O per second in the current PDB was exempted from throttling. For example, if the value in the IOPS column is 20 I/Os and the value in the IOPS_THROTTLE_EXEMPT column is 5 I/Os, then 5 I/Os of the 20 I/Os in that second were exempted from throttling. I/O throttling is defined by the MAX_IOPS database initialization parameter.
IOMBPS_THROTTLE_EXEMPT	NUMBER		Indicates how many megabytes of I/O executed per second in the current PDB were exempted from throttling. For example, if the value in the IOMBPS column is 200 megabytes and the value in the IOMBPS_THROTTLE_EXEMPT column is 50 megabytes, then 50 megabytes of the 200 megabytes were exempt from throttling. I/O megabytes per second throttling is defined by the MAX_MBPS database initialization parameter.
AVG_IO_THROTTLE	NUMBER		Average throttle time per I/O operation in milliseconds during the previous minute for this PDB
AVG_ACTIVE_PARALLEL_STMTS	NUMBER		The average number of parallel statements that were running during the 1-minute metric window
AVG_QUEUED_PARALLEL_STMTS	NUMBER		The average number of parallel statements that were queued during the 1-minute metric window
AVG_ACTIVE_PARALLEL_SERVERS	NUMBER		The average number of parallel servers that were actively running as part of a parallel statement during the 1-minute metric window
AVG_QUEUED_PARALLEL_SERVERS	NUMBER		The average number of parallel servers that were requested by queued parallel statements during the 1-minute metric window
SGA_BYTES	NUMBER	NOT NULL	The current SGA usage for this PDB in bytes
BUFFER_CACHE_BYTES	NUMBER	NOT NULL	The current usage of the buffer cache by this PDB in bytes
SHARED_POOL_BYTES	NUMBER	NOT NULL	The current usage of the shared pool by this PDB in bytes
PGA_BYTES	NUMBER	NOT NULL	The current PGA usage for this PDB in bytes
PLAN_ID	NUMBER	NOT NULL	Resource Manager plan identifier
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Column	Datatype	NULL	Description
MAX_AVG_RUNNING_SESSIONS	NUMBER	NOT NULL	Maximum value of AVG_RUNNING_SESSIONS during the last hour

Note:

- "MAX_IOPS"
- "MAX_MBPS"

6.43 DBA_HIST_RSRC_PLAN

DBA_HIST_RSRC_PLAN displays historical information about resource plans.

This view contains snapshots of V$RSRC_PLAN_HISTORY.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SEQUENCE#	NUMBER	NOT NULL	A sequential counter that uniquely describes a row. When the instance is restarted, this value is reset to zero.
START_TIME	DATE	NOT NULL	Time that the resource plan was enabled
END_TIME	DATE		Time that the resource plan was disabled; NULL if the row contains the current resource plan information
PLAN_ID	NUMBER	NOT NULL	Resource plan ID; NULL if the Resource Manager was disabled
PLAN_NAME	VARCHAR2(128)	NOT NULL	Resource plan name; NULL if the Resource Manager was disabled
CPU_MANAGED	VARCHAR2(4)	NOT NULL	Indicates whether the resource plan has parameters that specify a policy for how the Resource Manager should schedule sessions to manage CPU usage (ON) or whether Resource Manager is not managing CPU usage (OFF)

Column	Datatype	NULL	Description
PARALLEL_EXECUTION_MANAGED	VARCHAR2(4)		State of parallel statement queuing: • OFF - Parallel statement queuing is disabled • STARTUP - Parallel statement queuing is enabled. This is a temporary state that can occur when an Oracle RAC database is undergoing configuration changes • FIFO - Parallel statement queuing is enabled. All parallel statements are managed in a single Oracle RAC FIFO queue • FULL - Parallel statement queuing is enabled. All parallel statements are managed in per-consumer group queues according to the current resource plan. This state is used when a resource plan that contains resource allocation directives (MGMT_P*) is enabled.
INSTANCE_CAGING	VARCHAR2(4)		Indicates whether instance caging is enabled (ON) or disabled (OFF). Instance caging is enabled if the CPU_COUNT initialization parameter is explicitly modified to a value other than 0 and Resource Manager is enabled.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$RSRC_PLAN_HISTORY"

6.44 DBA_HIST_RULE_SET

DBA_HIST_RULE_SET displays historical information about rule set statistics.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule set
NAME	VARCHAR2(128)	NOT NULL	Name of the rule set
STARTUP_TIME	DATE	NOT NULL	Startup time of the instance

Column	Datatype	NULL	Description
CPU_TIME	NUMBER		Total CPU time (in hundredths of a second) spent in evaluation of the rule set
ELAPSED_TIME	NUMBER		Total elapsed time (in hundredths of a second) spent in evaluation of the rule set
EVALUATIONS	NUMBER		Number of evaluations on the rule set
SQL_FREE_EVALUATIONS	NUMBER		Number of evaluations on the rule set which did not internally issue SQL to evaluate rules
SQL_EXECUTIONS	NUMBER		Total number of SQL statements executed during evaluation of the rule set
RELOADS	NUMBER		Number of times the rule set object was reloaded in shared memory
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.45 DBA_HIST_SAGAS

DBA_HIST_SAGAS provides a history of all completed sagas in the database. Its columns are the same as those in ALL_HIST_SAGAS.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

Completed sagas are retained in this view for the length of time specified by the SAGA_HIST_RETENTION initialization parameter. The default is 30 days.

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "ALL_HIST_SAGAS"
- "SAGA_HIST_RETENTION"

6.46 DBA_HIST_SEG_STAT

DBA_HIST_SEG_STAT displays historical information about segment-level statistics.

This view captures the top segments based on a set of criteria and captures information from V$SEGSTAT. The total value is the value of the statistics since instance startup. The delta value is the value of the statistics from the BEGIN_INTERVAL_TIME to the END_INTERVAL_TIME in the DBA_HIST_SNAPSHOT view.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TS#	NUMBER	NOT NULL	Tablespace number
OBJ#	NUMBER	NOT NULL	Dictionary object number
DATAOBJ#	NUMBER	NOT NULL	Data object number
LOGICAL_READS_TOTAL	NUMBER		Cumulative value for logical reads
LOGICAL_READS_DELTA	NUMBER		Delta value for logical reads
BUFFER_BUSY_WAITS_TOTAL	NUMBER		Cumulative value for buffer busy waits
BUFFER_BUSY_WAITS_DELTA	NUMBER		Delta value for buffer busy waits
DB_BLOCK_CHANGES_TOTAL	NUMBER		Cumulative value for db block changes (in blocks)
DB_BLOCK_CHANGES_DELTA	NUMBER		Delta value for db block changes (in blocks)
PHYSICAL_READS_TOTAL	NUMBER		Cumulative value for physical reads (in blocks)
PHYSICAL_READS_DELTA	NUMBER		Delta value for physical reads (in blocks)
PHYSICAL_WRITES_TOTAL	NUMBER		Cumulative value for physical writes (in blocks)
PHYSICAL_WRITES_DELTA	NUMBER		Delta value for physical writes (in blocks)
PHYSICAL_READS_DIRECT_TOTAL	NUMBER		Cumulative value for physical reads direct (in blocks)
PHYSICAL_READS_DIRECT_DELTA	NUMBER		Delta value for physical reads direct (in blocks)
PHYSICAL_WRITES_DIRECT_TOTAL	NUMBER		Cumulative value for physical writes direct (in blocks)
PHYSICAL_WRITES_DIRECT_DELTA	NUMBER		Delta value for physical writes direct (in blocks)
ITL_WAITS_TOTAL	NUMBER		Cumulative value for ITL waits
ITL_WAITS_DELTA	NUMBER		Delta value for ITL waits
ROW_LOCK_WAITS_TOTAL	NUMBER		Cumulative value for row lock waits
ROW_LOCK_WAITS_DELTA	NUMBER		Delta value for row lock waits
GC_CR_BLOCKS_SERVED_TOTAL	NUMBER		Cumulative value for global cache CR blocks served
GC_CR_BLOCKS_SERVED_DELTA	NUMBER		Delta value for global cache CR blocks served
GC_CU_BLOCKS_SERVED_TOTAL	NUMBER		Cumulative value for global cache current blocks served
GC_CU_BLOCKS_SERVED_DELTA	NUMBER		Delta value for global cache current blocks served

Column	Datatype	NULL	Description
GC_BUFFER_BUSY_TOTAL	NUMBER		Cumulative value for global cache buffer busy
GC_BUFFER_BUSY_DELTA	NUMBER		Delta value for global cache buffer busy
GC_CR_BLOCKS_RECEIVED_TOTAL	NUMBER		Cumulative value for global cache CR blocks received
GC_CR_BLOCKS_RECEIVED_DELTA	NUMBER		Delta value for global cache CR blocks received
GC_CU_BLOCKS_RECEIVED_TOTAL	NUMBER		Cumulative value for global cache current blocks received
GC_CU_BLOCKS_RECEIVED_DELTA	NUMBER		Delta value for global cache current blocks received
SPACE_USED_TOTAL	NUMBER		Number of bytes used by user data
SPACE_USED_DELTA	NUMBER		Delta value for space used by user data (in bytes). A negative value indicates the number of bytes deleted in the segment.
SPACE_ALLOCATED_TOTAL	NUMBER		The number of bytes that are allocated
SPACE_ALLOCATED_DELTA	NUMBER		Delta value for the space allocated (in bytes). A negative value indicates the number of bytes deallocated to the tablespace.
TABLE_SCANS_TOTAL	NUMBER		Cumulative value for table scans
TABLE_SCANS_DELTA	NUMBER		Delta value for table scans
CHAIN_ROW_EXCESS_TOTAL	NUMBER		Cumulative value of number of chained row pieces that can be eliminated by table reorganization
CHAIN_ROW_EXCESS_DELTA	NUMBER		Delta value of number of chained row pieces that can be eliminated by table reorganization
PHYSICAL_READ_REQUESTS_TOTAL	NUMBER		Cumulative value of number of physical read I/O requests issued for the monitored segment
PHYSICAL_READ_REQUESTS_DELTA	NUMBER		Delta value of number of physical read I/O requests issued for the monitored segment
PHYSICAL_WRITE_REQUESTS_TOTAL	NUMBER		Cumulative value of number of physical write I/O requests issued for the monitored segment
PHYSICAL_WRITE_REQUESTS_DELTA	NUMBER		Delta value of number of physical write I/O requests issued for the monitored segment
OPTIMIZED_PHYSICAL_READS_TOTAL	NUMBER		Cumulative value of number of physical reads from Database Smart Flash Cache for the monitored segment
OPTIMIZED_PHYSICAL_READS_DELTA	NUMBER		Delta value of number of physical reads from Database Smart Flash Cache for the monitored segment
IM_SCANS_TOTAL	NUMBER		Count of segment statistics
IM_SCANS_DELTA	NUMBER		Delta values for in-memory scans
POPULATE_CUS_TOTAL	NUMBER		Count of compression units (CUs) populated per segment
POPULATE_CUS_DELTA	NUMBER		Delta value for compression unit (CU) populate operations
REPOPULATE_CUS_TOTAL	NUMBER		Count of CUs repopulated per segment
REPOPULATE_CUS_DELTA	NUMBER		Delta value for compression unit (CU) repopulate operations

Column	Datatype	NULL	Description
IM_DB_BLOCK_CHANGES_TOTAL	NUMBER		The total number of changes that were part of an update or delete operation that were made to segment blocks
IM_DB_BLOCK_CHANGES_DELTA	NUMBER		Delta value for database block changes
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.47 DBA_HIST_SEG_STAT_OBJ

DBA_HIST_SEG_STAT_OBJ displays all the names of the segments captured in the workload repository.

This view is used with the DBA_HIST_SEG_STAT view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
TS#	NUMBER	NOT NULL	Tablespace number
OBJ#	NUMBER	NOT NULL	Dictionary object number
DATAOBJ#	NUMBER	NOT NULL	Data object number
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example: partition)
OBJECT_TYPE	VARCHAR2(18)		Type of the object for example: table, tablespace)
TABLESPACE_NAME	VARCHAR2(30)		Tablespace Name for the object
PARTITION_TYPE	VARCHAR2(8)		Partition Type, if relevant
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "DBA_HIST_SEG_STAT"

6.48 DBA_HIST_SERVICE_NAME

DBA_HIST_SERVICE_NAME displays the names of the Services tracked by the Workload Repository.

This view contains information for V$SERVICES.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
SERVICE_NAME_HASH	NUMBER	NOT NULL	Hash of the service name
SERVICE_NAME	VARCHAR2(64)	NOT NULL	Name of the service
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$SERVICES"

6.49 DBA_HIST_SERVICE_STAT

DBA_HIST_SERVICE_STAT displays the history of important service statistics tracked by the Workload Repository.

The call rate statistics in this view can be used for making run-time routing decisions, for tracking service levels, and for per-instance diagnostics per call rate.

The elapsed timing for each call provides a relative value across instances for how well a node is processing SQL calls issued under a service name. When aggregation is enabled for the service name, this view provides historical data on the timing and work done for calls issued for the whole service. This view contains information from V$SERVICE_STATS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SERVICE_NAME_HASH	NUMBER	NOT NULL	Hash of the service name
SERVICE_NAME	VARCHAR2(64)	NOT NULL	Name of the service
STAT_ID	NUMBER	NOT NULL	Statistic identifier
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
VALUE	NUMBER		Value of the statistic
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.50 DBA_HIST_SERVICE_WAIT_CLASS

DBA_HIST_SERVICE_WAIT_CLASS displays the history of wait class information for services as tracked by the Workload Repository.

This view contains information from V$SERVICE_WAIT_CLASS.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SERVICE_NAME_HASH	NUMBER	NOT NULL	Hash of the service name
SERVICE_NAME	VARCHAR2(64)	NOT NULL	Name of the service
WAIT_CLASS_ID	NUMBER	NOT NULL	Identifier for the class of the wait event
WAIT_CLASS	VARCHAR2(64)		Name for the class of the wait event
TOTAL_WAITS	NUMBER		Total number of waits for this event
TIME_WAITED	NUMBER		Total amount of time waited for this event (in hundredths of a second)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$SERVICE_WAIT_CLASS"

6.51 DBA_HIST_SESS_SGA_STATS

DBA_HIST_SESS_SGA_STATS shows usage statistics for high utilization Oracle GoldenGate and XStream sessions.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Object name
SESSION_TYPE	VARCHAR2(64)	NOT NULL	Type of session
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: • XStream • GoldenGate
SGA_USED	NUMBER		The total amount of shared memory (in bytes) currently used by the session out of the amount allocated (SGA_ALLOCATED)
SGA_ALLOCATED	NUMBER		The total amount of shared memory (in bytes) allocated from the pool for the session

Column	Datatype	NULL	Description
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.52 DBA_HIST_SESS_TIME_STATS

DBA_HIST_SESS_TIME_STATS displays information about CPU and I/O time for interesting Oracle GoldenGate and XStream sessions.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SESSION_TYPE	VARCHAR2(64)	NOT NULL	Type of session
MIN_LOGON_TIME	DATE		Minimum logon time
SUM_CPU_TIME	NUMBER		Total CPU time
SUM_SYS_IO_WAIT	NUMBER		Total system I/O wait time
SUM_USER_IO_WAIT	NUMBER		Total user I/O wait time
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
SESSION_MODULE	VARCHAR2(64)	NOT NULL	Session module. Valid values: • XStream • GoldenGate
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.53 DBA_HIST_SESSMETRIC_HISTORY

DBA_HIST_SESSMETRIC_HISTORY displays the history of several important session metrics.

> **Note:**
>
> This view is populated only if a session metric exceeds a server metric threshold that was configured using the DBMS_SERVER_ALERT package.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BEGIN_TIME	DATE	NOT NULL	Begin time of the interval
END_TIME	DATE	NOT NULL	End time of the interval
SESSID	NUMBER	NOT NULL	Session ID
SERIAL#	NUMBER	NOT NULL	Session serial number
INTSIZE	NUMBER	NOT NULL	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	NOT NULL	Group ID
METRIC_ID	NUMBER	NOT NULL	Metric ID
METRIC_NAME	VARCHAR2(64)	NOT NULL	Metric name
VALUE	NUMBER	NOT NULL	Metric Value
METRIC_UNIT	VARCHAR2(64)	NOT NULL	Unit of measurement
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> The DBMS_SERVER_ALERT package in *Oracle Database PL/SQL Packages and Types Reference*

6.54 DBA_HIST_SGA

DBA_HIST_SGA displays historical summary information about the system global area (SGA).

This view contains snapshots of V$SGA.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAME	VARCHAR2(64)	NOT NULL	SGA component group
VALUE	NUMBER	NOT NULL	Memory size (in bytes)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$SGA"

6.55 DBA_HIST_SGA_TARGET_ADVICE

DBA_HIST_SGA_TARGET_ADVICE provides historical information about the SGA_TARGET initialization parameter.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SGA_SIZE	NUMBER	NOT NULL	Size of the SGA
SGA_SIZE_FACTOR	NUMBER	NOT NULL	Ratio between the SGA_SIZE and the current size of the SGA
ESTD_DB_TIME	NUMBER	NOT NULL	Estimated DB_TIME for this SGA_SIZE
ESTD_PHYSICAL_READS	NUMBER		Estimated number of physical reads
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "SGA_TARGET"

6.56 DBA_HIST_SGASTAT

DBA_HIST_SGASTAT displays detailed historical information on the system global area (SGA).

This view contains snapshots of V$SGASTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NAME	VARCHAR2(64)		SGA component group
POOL	VARCHAR2(30)		Designates the pool in which the memory in NAME resides: • in-memory pool - Memory is allocated from the In-Memory pool • java pool - Memory is allocated from the Java pool • large pool - Memory is allocated from the large pool • numa pool - Memory is allocated from the NUMA pool • shared pool - Memory is allocated from the shared pool • streams pool - Memory is allocated from the Streams pool
BYTES	NUMBER		Memory size (in bytes)
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$SGASTAT"

6.57 DBA_HIST_SHARED_POOL_ADVICE

DBA_HIST_SHARED_POOL_ADVICE displays historical information about estimated parse time in the shared pool for different pool sizes.

This view contains snapshots of V$SHARED_POOL_ADVICE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SHARED_POOL_SIZE_FOR_ESTIMATE	NUMBER	NOT NULL	Shared pool size for the estimate (in megabytes)
SHARED_POOL_SIZE_FACTOR	NUMBER		Size factor with respect to the current shared pool size
ESTD_LC_SIZE	NUMBER		Estimated memory in use by the library cache (in megabytes)
ESTD_LC_MEMORY_OBJECTS	NUMBER		Estimated number of library cache memory objects in the shared pool of the specified size
ESTD_LC_TIME_SAVED	NUMBER		Estimated elapsed parse time saved (in seconds), owing to library cache memory objects being found in a shared pool of the specified size. This is the time that would have been spent in reloading the required objects in the shared pool had they been aged out due to insufficient amount of available free memory.
ESTD_LC_TIME_SAVED_FACTOR	NUMBER		Estimated parse time saved factor with respect to the current shared pool size
ESTD_LC_LOAD_TIME	NUMBER		Estimated elapsed time (in seconds) for parsing in a shared pool of the specified size.
ESTD_LC_LOAD_TIME_FACTOR	NUMBER		Estimated load time factor with respect to the current shared pool size
ESTD_LC_MEMORY_OBJECT_HITS	NUMBER		Estimated number of times a library cache memory object was found in a shared pool of the specified size

Column	Datatype	NULL	Description
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$SHARED_POOL_ADVICE"

6.58 DBA_HIST_SHARED_SERVER_SUMMARY

DBA_HIST_SHARED_SERVER_SUMMARY displays historical information for shared servers.

This includes information about shared server activity, the servers, common queues, and dispatcher queues. This view obtains information from V$SHARED_SERVER, V$DISPATCHER, V$CIRCUIT, and V$QUEUE, and is aggregated over all servers, dispatchers, queues, and circuits.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
NUM_SAMPLES	NUMBER		Total number of samples
SAMPLE_TIME	NUMBER		Last sample timestamp
SAMPLED_TOTAL_CONN	NUMBER		Cumulative sum of total number of connections over all samples. To determine the average number of connections between two snapshots, divide the difference in SAMPLED_TOTAL_CONN by the difference in NUM_SAMPLES.
SAMPLED_ACTIVE_CONN	NUMBER		Cumulative sum of active number of connections over all samples. To determine the average number of active connections between two snapshots, divide the difference in SAMPLED_ACTIVE_CONN by the difference in NUM_SAMPLES.
SAMPLED_TOTAL_SRV	NUMBER		Cumulative sum of total number of servers over all samples. To determine the average number of servers between two snapshots, divide the difference in SAMPLED_TOTAL_SRV by the difference in NUM_SAMPLES.

Column	Datatype	NULL	Description
SAMPLED_ACTIVE_SRV	NUMBER		Cumulative sum of active number of servers over all samples. To determine the average number of active servers between two snapshots, divide the difference in SAMPLED_ACTIVE_SRV by the difference in NUM_SAMPLES.
SAMPLED_TOTAL_DISP	NUMBER		Cumulative sum of total number of dispatchers over all samples. To determine the average number of dispatchers between two snapshots, divide the difference in SAMPLED_TOTAL_DISP by the difference in NUM_SAMPLES.
SAMPLED_ACTIVE_DISP	NUMBER		Cumulative sum of active number of dispatchers over all samples. To determine the average number of active dispatchers between two snapshots, divide the difference in SAMPLED_ACTIVE_DISP by the difference in NUM_SAMPLES.
SRV_BUSY	NUMBER		Total shared server busy time (in hundredths of a second)
SRV_IDLE	NUMBER		Total shared server idle time (in hundredths of a second)
SRV_IN_NET	NUMBER		Total shared server incoming network wait time (in hundredths of a second). This includes waits for receives and resets. This time is also included in SRV_BUSY.
SRV_OUT_NET	NUMBER		Total shared server outgoing network wait time (in hundredths of a second). This includes waits for sends and outbound connection requests. This time is also included in SRV_BUSY.
SRV_MESSAGES	NUMBER		Number of messages processed
SRV_BYTES	NUMBER		Total number of bytes in all messages
CQ_WAIT	NUMBER		Total time that all items in the common queue have waited (in hundredths of a second)
CQ_TOTALQ	NUMBER		Total number of items that have ever been in the common queue
DQ_TOTALQ	NUMBER		Total number of items that have ever been in a dispatcher queue
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> - "V$SHARED_SERVER"
> - "V$DISPATCHER"
> - "V$CIRCUIT"
> - "V$QUEUE"

6.59 DBA_HIST_SNAP_ERROR

DBA_HIST_SNAP_ERROR displays information about the snapshot error information in the Workload Repository.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table in which the error occurred
ERROR_NUMBER	NUMBER	NOT NULL	Error number for the error encountered
STEP_ID	NUMBER		For internal use only
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.60 DBA_HIST_SNAPSHOT

DBA_HIST_SNAPSHOT displays information about the snapshots in the Workload Repository.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STARTUP_TIME	TIMESTAMP(3)	NOT NULL	Startup time of the instance
BEGIN_INTERVAL_TIME	TIMESTAMP(3)	NOT NULL	Time at the beginning of the snapshot interval
END_INTERVAL_TIME	TIMESTAMP(3)	NOT NULL	Time at the end of the snapshot interval; the actual time the snapshot was taken
FLUSH_ELAPSED	INTERVAL DAY(5) TO SECOND(1)		Amount of time to perform the snapshot

Column	Datatype	NULL	Description
SNAP_LEVEL	NUMBER		Snapshot level
ERROR_COUNT	NUMBER		Number of errors occurring in the tables for the particular snapshot
SNAP_FLAG	NUMBER		Condition under which the snapshot was inserted. Possible values are: 0 - Snapshot was taken automatically by the Manageability Monitor Process (MMON process) 1 - Manual snapshot created using a PL/SQL package 2 - Imported snapshot 4 - Snapshot taken while Diagnostic Pack or Tuning Pack was not enabled
SNAP_TIMEZONE	INTERVAL DAY(0) TO SECOND(0)		Snapshot time zone expressed as offset from UTC (Coordinated Universal Time) time zone
BEGIN_INTERVAL_TIME_TZ	TIMESTAMP(3) WITH TIME ZONE		Time at the beginning of the snapshot interval, with timezone
END_INTERVAL_TIME_TZ	TIMESTAMP(3) WITH TIME ZONE		Time at the end of the snapshot interval; the actual time the snapshot was taken, with timezone
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> Table F-1 for more information about the MMON process

6.61 DBA_HIST_SQL_BIND_METADATA

DBA_HIST_SQL_BIND_METADATA displays historical information on metadata for bind variables used by SQL cursors.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID for the snapshot
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
NAME	VARCHAR2(128)		Name of the bind variable
POSITION	NUMBER	NOT NULL	Position of the bind variable in the SQL statement
DUP_POSITION	NUMBER		If the binding is performed by name and the bind variable is duplicated, then this column gives the position of the primary bind variable

Column	Datatype	NULL	Description
DATATYPE	NUMBER		Internal identifier for the bind data type. Beginning in Oracle Database 12*c*, a number representing a PL/SQL data type can appear in this column.
DATATYPE_STRING	VARCHAR2(15)		Textual representation of the bind data type. Beginning in Oracle Database 12*c*, a text representation of a PL/SQL-only data type can appear in this column. If the actual data type is a PL/SQL sub type, the name of the data type, not the sub type will be displayed.
CHARACTER_SID	NUMBER		National character set identifier
PRECISION	NUMBER		Precision (for numeric binds)
SCALE	NUMBER		Scale (for numeric binds)
MAX_LENGTH	NUMBER		Maximum bind length
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.62 DBA_HIST_SQL_PLAN

DBA_HIST_SQL_PLAN displays the execution plan information for each child cursor in the workload repository.

This view captures information from V$SQL_PLAN and is used with the DBA_HIST_SQLSTAT view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line by line).
ID	NUMBER	NOT NULL	A number assigned to each step in the execution plan
OPERATION	VARCHAR2(30)		Name of the internal operation performed in this step (for example, TABLE ACCESS)
OPTIONS	VARCHAR2(30)		A variation on the operation described in the OPERATION column (for example, FULL)
OBJECT_NODE	VARCHAR2(128)		Name of the database link used to reference the object (a table name or view name). For local queries that use parallel execution, this column describes the order in which output from operations is consumed.
OBJECT#	NUMBER		Object number of the table or the index

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Name of the user who owns the schema containing the table or index
OBJECT_NAME	VARCHAR2(128)		Name of the table or index
OBJECT_ALIAS	VARCHAR2(261)		Alias for the object
OBJECT_TYPE	VARCHAR2(20)		Type of the object
OPTIMIZER	VARCHAR2(20)		Current mode of the optimizer for the first row in the plan (statement line), for example, ALL_ROWS. When the operation is a database access (for example, TABLE ACCESS), this column indicates whether or not the object is analyzed.
PARENT_ID	NUMBER		ID of the next execution step that operates on the output of the current step
DEPTH	NUMBER		Depth (or level) of the operation in the tree. It is not necessary to issue a CONNECT BY statement to get the level information, which is generally used to indent the rows from the PLAN_TABLE table. The root operation (statement) is level 0.
POSITION	NUMBER		Order of processing for all operations that have the same PARENT_ID
SEARCH_COLUMNS	NUMBER		Number of index columns with start and stop keys (that is, the number of columns with matching predicates)
COST	NUMBER		Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.
CARDINALITY	NUMBER		Estimate, by the cost-based optimizer, of the number of rows produced by the operation
BYTES	NUMBER		Estimate, by the cost-based optimizer, of the number of bytes produced by the operation
OTHER_TAG	VARCHAR2(35)		Describes the contents of the OTHER column. See EXPLAIN PLAN for values.
PARTITION_START	VARCHAR2(64)		Start partition of a range of accessed partitions
PARTITION_STOP	VARCHAR2(64)		Stop partition of a range of accessed partitions
PARTITION_ID	NUMBER		Step that computes the pair of values of the PARTITION_START and PARTITION_STOP columns
OTHER	VARCHAR2(4000)		Other information specific to the execution step that users may find useful. See EXPLAIN PLAN for values.
DISTRIBUTION	VARCHAR2(20)		Stores the method used to distribute rows from producer query servers to consumer query servers
CPU_COST	NUMBER		CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.
IO_COST	NUMBER		I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.
TEMP_SPACE	NUMBER		Temporary space usage of the operation (sort or hash-join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.

Column	Datatype	NULL	Description
ACCESS_PREDICATES	VARCHAR2(4000)		Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.
FILTER_PREDICATES	VARCHAR2(4000)		Predicates used to filter rows before producing them
PROJECTION	VARCHAR2(4000)		Expressions produced by the operation
TIME	NUMBER		Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is null.
QBLOCK_NAME	VARCHAR2(128)		Name of the query block
REMARKS	VARCHAR2(4000)		Remarks
TIMESTAMP	DATE		Timestamp for when the plan was produced
OTHER_XML	CLOB		Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan • Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

6.63 DBA_HIST_SQL_SUMMARY

DBA_HIST_SQL_SUMMARY displays historical SQL summary information.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TOTAL_SQL	NUMBER	NOT NULL	Total number of SQLs
TOTAL_SQL_MEM	NUMBER	NOT NULL	Total sharable memory in bytes for SQLs
SINGLE_USE_SQL	NUMBER	NOT NULL	Total number of single execution SQLs
SINGLE_USE_SQL_MEM	NUMBER	NOT NULL	Total sharable memory in bytes for single execution SQLs
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.64 DBA_HIST_SQL_WORKAREA_HSTGRM

DBA_HIST_SQL_WORKAREA_HSTGRM displays the historical cumulative work area execution statistics (cumulated since instance startup) for different work area groups.

This view contains snapshots of V$SQL_WORKAREA_HISTOGRAM.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
LOW_OPTIMAL_SIZE	NUMBER	NOT NULL	Lower bound for the optimal memory requirement of work areas included in the row (in bytes)
HIGH_OPTIMAL_SIZE	NUMBER	NOT NULL	Upper bound for the optimal memory requirement of work areas included in the row (in bytes)
OPTIMAL_EXECUTIONS	NUMBER		Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which have been executed in optimal mode since instance startup
ONEPASS_EXECUTIONS	NUMBER		Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which have been executed in one-pass mode since instance startup

Column	Datatype	NULL	Description
MULTIPASSES_EXECUTIONS	NUMBER		Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which have been executed in multi-pass mode since instance startup
TOTAL_EXECUTIONS	NUMBER		Sum of OPTIMAL_EXECUTIONS, ONEPASS_EXECUTIONS, and MULTIPASSES_EXECUTIONS
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

"V$SQL_WORKAREA_HISTOGRAM"

6.65 DBA_HIST_SQLBIND

DBA_HIST_SQLBIND displays historical information on bind variables used by SQL cursors.

This view contains snapshots of V$SQL_BIND_CAPTURE.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
NAME	VARCHAR2(128)		Name of the bind variable
POSITION	NUMBER	NOT NULL	Position of the bind variable in the SQL statement
DUP_POSITION	NUMBER		If the binding is performed by name and the bind variable is duplicated, then this column gives the position of the primary bind variable.
DATATYPE	NUMBER		Internal identifier for the bind data type. Beginning in Oracle Database 12*c*, a number representing a PL/SQL data type can appear in this column.
DATATYPE_STRING	VARCHAR2(15)		Textual representation of the bind data type. Beginning in Oracle Database 12*c*, a text representation of a PL/SQL-only data type can appear in this column. If the actual data type is a PL/SQL sub type, the name of the data type, not the sub type will be displayed.
CHARACTER_SID	NUMBER		National character set identifier

Column	Datatype	NULL	Description
PRECISION	NUMBER		Precision (for numeric binds)
SCALE	NUMBER		Scale (for numeric binds)
MAX_LENGTH	NUMBER		Maximum bind length
WAS_CAPTURED	VARCHAR2(3)		Indicates whether the bind value was captured (YES) or not (NO)
LAST_CAPTURED	DATE		Date when the bind value was captured. Bind values are captured when SQL statements are executed. To limit the overhead, binds are captured at most every 15 minutes for a given cursor.
VALUE_STRING	VARCHAR2(4000)		Value of the bind represented as a string
VALUE_ANYDATA	ANYDATA		Value of the bind represented using the self-descriptive Sys.AnyData data type. This representation is useful to programmatically decode the value of the bind variable. This column is NULL if a PL/SQL-only data type appears in the DATATYPE column.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

> "V$SQL_BIND_CAPTURE"

6.66 DBA_HIST_SQLCOMMAND_NAME

DBA_HIST_SQLCOMMAND_NAME displays the mapping between SQL opcodes and names.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
COMMAND_TYPE	NUMBER	NOT NULL	SQL command number
COMMAND_NAME	VARCHAR2(64)		SQL command name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.67 DBA_HIST_SQLSTAT

DBA_HIST_SQLSTAT displays historical information about SQL statistics.

This view captures the top SQL statements based on a set of criteria and captures the statistics information from V$SQL. The total value is the value of the statistics since instance startup. The delta value is the value of the statistics from the BEGIN_INTERVAL_TIME to the END_INTERVAL_TIME in the DBA_HIST_SNAPSHOT view.

This view is used with the DBA_HIST_OPTIMIZER_ENV, DBA_HIST_SQLTEXT, and DBA_HIST_SQL_PLAN views to provide a complete picture of historical SQL statistics.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line by line).
OPTIMIZER_COST	NUMBER		Cost of the query given by the optimizer
OPTIMIZER_MODE	VARCHAR2(10)		Mode under which the SQL statement is executed
OPTIMIZER_ENV_HASH_VALUE	NUMBER		Hash Value for the optimizer environment
SHARABLE_MEM	NUMBER		Amount of shared memory used by the child cursor (in bytes)
LOADED_VERSIONS	NUMBER		Indicates whether the context heap is loaded (1) or not (0)
VERSION_COUNT	NUMBER		Number of children associated with the cursor
MODULE	VARCHAR2(64)		Contains the name of the module that was executing at the time that the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_MODULE
ACTION	VARCHAR2(64)		Contains the name of the action that was executing at the time that the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_ACTION
SQL_PROFILE	VARCHAR2(64)		Name of the applied SQL Profile

Column	Datatype	NULL	Description
FORCE_MATCHING_SIGNATURE	NUMBER		The signature used when the CURSOR_SHARING parameter is set to FORCE
PARSING_SCHEMA_ID	NUMBER		Schema ID that was used to originally build the child cursor
PARSING_SCHEMA_NAME	VARCHAR2(128)		Schema name that was used to originally build the child cursor
PARSING_USER_ID	NUMBER		User ID that was used to originally build the child cursor
FETCHES_TOTAL	NUMBER		Cumulative number of fetches associated with the SQL statement
FETCHES_DELTA	NUMBER		Delta number of fetches associated with the SQL statement
END_OF_FETCH_COUNT_TOTAL	NUMBER		Cumulative number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic is not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed. By definition, the value of the END_OF_FETCH_COUNT column should be less or equal to the value of the EXECUTIONS column.
END_OF_FETCH_COUNT_DELTA	NUMBER		Delta number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic is not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed.
SORTS_TOTAL	NUMBER		Cumulative number of sorts that were done for this child cursor
SORTS_DELTA	NUMBER		Delta number of sorts that were done for this child cursor
EXECUTIONS_TOTAL	NUMBER		Cumulative number of executions that took place on this object since it was brought into the library cache
EXECUTIONS_DELTA	NUMBER		Delta number of executions that took place on this object since it was brought into the library cache
PX_SERVERS_EXECS_TOTAL	NUMBER		Cumulative number of PX server executions
PX_SERVERS_EXECS_DELTA	NUMBER		Delta number of PX server executions
LOADS_TOTAL	NUMBER		Cumulative number of times the object was either loaded or reloaded
LOADS_DELTA	NUMBER		Delta number of times the object was either loaded or reloaded
INVALIDATIONS_TOTAL	NUMBER		Cumulative number of times this child cursor has been invalidated
INVALIDATIONS_DELTA	NUMBER		Delta number of times this child cursor has been invalidated
PARSE_CALLS_TOTAL	NUMBER		Cumulative number of parse calls for this child cursor
PARSE_CALLS_DELTA	NUMBER		Delta number of parse calls for this child cursor
DISK_READS_TOTAL	NUMBER		Cumulative number of disk reads for this child cursor

Column	Datatype	NULL	Description
DISK_READS_DELTA	NUMBER		Delta number of disk reads for this child cursor
BUFFER_GETS_TOTAL	NUMBER		Cumulative number of buffer gets for this child cursor
BUFFER_GETS_DELTA	NUMBER		Delta number of buffer gets for this child cursor
ROWS_PROCESSED_TOTAL	NUMBER		Cumulative number of rows the parsed SQL statement returns
ROWS_PROCESSED_DELTA	NUMBER		Delta number of rows the parsed SQL statement returns
CPU_TIME_TOTAL	NUMBER		Cumulative value of CPU time (in microseconds) used by this cursor for parsing/executing/fetching
CPU_TIME_DELTA	NUMBER		Delta value of CPU time (in microseconds) used by this cursor for parsing/executing/fetching
ELAPSED_TIME_TOTAL	NUMBER		Cumulative value of elapsed time (in microseconds) used by this cursor for parsing/executing/fetching. If the cursor uses parallel execution, then ELAPSED_TIME_TOTAL is the cumulative time for the query coordinator, plus all parallel query worker processes.
ELAPSED_TIME_DELTA	NUMBER		Delta value of elapsed time (in microseconds) used by this cursor for parsing/executing/fetching
IOWAIT_TOTAL	NUMBER		Cumulative value of user I/O wait time (in microseconds)
IOWAIT_DELTA	NUMBER		Delta value of user I/O wait time (in microseconds)
CLWAIT_TOTAL	NUMBER		Cumulative value of cluster wait time (in microseconds)
CLWAIT_DELTA	NUMBER		Delta value of cluster wait time (in microseconds)
APWAIT_TOTAL	NUMBER		Cumulative value of application wait time (in microseconds)
APWAIT_DELTA	NUMBER		Delta value of application wait time (in microseconds)
CCWAIT_TOTAL	NUMBER		Cumulative value of concurrency wait time (in microseconds)
CCWAIT_DELTA	NUMBER		Delta value of concurrency wait time (in microseconds)
DIRECT_WRITES_TOTAL	NUMBER		Cumulative value of direct writes
DIRECT_WRITES_DELTA	NUMBER		Delta value of direct writes
PLSEXEC_TIME_TOTAL	NUMBER		Cumulative value of PL/SQL Execution Time (in microseconds)
PLSEXEC_TIME_DELTA	NUMBER		Delta value of PL/SQL Execution Time (in microseconds)
JAVEXEC_TIME_TOTAL	NUMBER		Cumulative value of Java Execution Time (in microseconds)
JAVEXEC_TIME_DELTA	NUMBER		Delta value of Java Execution Time (in microseconds)
IO_OFFLOAD_ELIG_BYTES_TOTAL	NUMBER		Cumulative value of number of I/O bytes which can be filtered by the Exadata storage system **See Also:** Oracle Exadata Storage Server Software documentation for more information

Column	Datatype	NULL	Description
IO_OFFLOAD_ELIG_BYTES_DELTA	NUMBER		Delta value of number of I/O bytes which can be filtered by the Exadata storage system **See Also:** Oracle Exadata Storage Server Software documentation for more information
IO_INTERCONNECT_BYTES_TOTAL	NUMBER		Cumulative value of number of I/O bytes exchanged between Oracle Database and the storage system
IO_INTERCONNECT_BYTES_DELTA	NUMBER		Delta value of number of I/O bytes exchanged between Oracle Database and the storage system
PHYSICAL_READ_REQUESTS_TOTAL	NUMBER		Cumulative value of number of physical read I/O requests issued by the monitored SQL
PHYSICAL_READ_REQUESTS_DELTA	NUMBER		Delta value of number of physical read I/O requests issued by the monitored SQL
PHYSICAL_READ_BYTES_TOTAL	NUMBER		Cumulative value of number of bytes read from disks by the monitored SQL
PHYSICAL_READ_BYTES_DELTA	NUMBER		Delta value of number of bytes read from disks by the monitored SQL
PHYSICAL_WRITE_REQUESTS_TOTAL	NUMBER		Cumulative value of number of physical write I/O requests issued by the monitored SQL
PHYSICAL_WRITE_REQUESTS_DELTA	NUMBER		Delta value of number of physical write I/O requests issued by the monitored SQL
PHYSICAL_WRITE_BYTES_TOTAL	NUMBER		Cumulative value of number of bytes written to disks by the monitored SQL
PHYSICAL_WRITE_BYTES_DELTA	NUMBER		Delta value of number of bytes written to disks by the monitored SQL
OPTIMIZED_PHYSICAL_READS_TOTAL	NUMBER		Cumulative value of number of physical reads from the Database Smart Flash Cache or the Exadata Smart Flash Cache by the monitored SQL
OPTIMIZED_PHYSICAL_READS_DELTA	NUMBER		Delta value of number of physical reads from the Database Smart Flash Cache or the Exadata Smart Flash Cache by the monitored SQL
CELL_UNCOMPRESSED_BYTES_TOTAL	NUMBER		Cumulative value of number of uncompressed bytes (that is, size after decompression) that are offloaded to the Exadata cells **See Also:** Oracle Exadata Storage Server Software documentation for more information
CELL_UNCOMPRESSED_BYTES_DELTA	NUMBER		Delta value of number of uncompressed bytes (that is, size after decompression) that are offloaded to the Exadata cells **See Also:** Oracle Exadata Storage Server Software documentation for more information
IO_OFFLOAD_RETURN_BYTES_TOTAL	NUMBER		Cumulative value of number of bytes that are returned by the Exadata cell for smart scan only (that is, not including bytes for other database I/O) **See Also:** Oracle Exadata Storage Server Software documentation for more information
IO_OFFLOAD_RETURN_BYTES_DELTA	NUMBER		Delta value of number of bytes that are returned by the Exadata cell for smart scan only (that is, not including bytes for other database I/O) **See Also:** Oracle Exadata Storage Server Software documentation for more information

Column	Datatype	NULL	Description
BIND_DATA	RAW(2000)		Bind data
FLAG	NUMBER		Reserved for internal use
OBSOLETE_COUNT	NUMBER		Number of times that a parent cursor became obsolete
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.68 DBA_HIST_SQLTEXT

DBA_HIST_SQLTEXT displays the text of SQL statements belonging to shared SQL cursors captured in the Workload Repository.

This view captures information from V$SQL and is used with the DBA_HIST_SQLSTAT view.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
SQL_TEXT	CLOB		Full text for the SQL statement exposed as a CLOB column
COMMAND_TYPE	NUMBER		Oracle command type definition
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$SQL"
- "DBA_HIST_SQLSTAT"

6.69 DBA_HIST_STAT_NAME

DBA_HIST_STAT_NAME displays decoded statistic names for the statistics captured in the Workload Repository.

This includes OLAP statisitics and OLAP timed events. This view captures information from V$STATNAME and is used with DBA_HIST_SYSSTAT and DBA_HIST_SYS_TIME_MODEL.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
STAT_ID	NUMBER	NOT NULL	Statistic identifier
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$STATNAME"
- "DBA_HIST_SYSSTAT"

6.70 DBA_HIST_STREAMS_APPLY_SUM

DBA_HIST_STREAMS_APPLY_SUM displays information about each apply process and its activities.

This view contains a snapshot of V$STREAMS_APPLY_COORDINATOR, V$STREAMS_APPLY_READER, and V$STREAMS_APPLY_SERVER. This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
STARTUP_TIME	DATE	NOT NULL	Time that the apply process was last started
READER_TOTAL_MESSAGES_DEQUEUED	NUMBER		Total number of messages dequeued since the apply process was last started
READER_LAG	NUMBER		For captured messages, the delay (in seconds) between the creation of the last message and it being received by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being received by the apply process.
COORD_TOTAL_RECEIVED	NUMBER		Total number of transactions received by the coordinator process since the apply process was last started
COORD_TOTAL_APPLIED	NUMBER		Total number of transactions applied by the apply process since the apply process was last started
COORD_TOTAL_ROLLBACKS	NUMBER		Number of transactions which were rolled back due to unexpected contention
COORD_TOTAL_WAIT_DEPS	NUMBER		Number of times since the apply process was last started that an apply server waited to apply a logical change record (LCR) in a transaction until another apply server applied a transaction because of a dependency between the transactions
COORD_TOTAL_WAIT_CMTS	NUMBER		Number of times since the apply process was last started that an apply server waited to commit a transaction until another apply server committed a transaction to serialize commits
COORD_LWM_LAG	NUMBER		For captured messages, the delay (in seconds) between the creation of the message corresponding to the low watermark and it being applied by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being applied by the apply process.
SERVER_TOTAL_MESSAGES_APPLIED	NUMBER		Total number of messages applied by all the apply servers since the apply process was last started
SERVER_ELAPSED_DEQUEUE_TIME	NUMBER		Time elapsed (in hundredths of a second) dequeuing messages by all the apply servers since the apply process was last started

Column	Datatype	NULL	Description
SERVER_ELAPSED_APPLY_TIME	NUMBER		Time elapsed (in hundredths of a second) applying messages by all the apply servers since the apply process was last started
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$STREAMS_APPLY_COORDINATOR"
- "V$STREAMS_APPLY_READER"
- "V$STREAMS_APPLY_SERVER"

6.71 DBA_HIST_STREAMS_CAPTURE

DBA_HIST_STREAMS_CAPTURE displays information about each capture process.

This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the capture process
STARTUP_TIME	DATE	NOT NULL	Time that the capture process was last started
LAG	NUMBER		Delay (in seconds) between the creation and capture of the most recently captured message
TOTAL_MESSAGES_CAPTURED	NUMBER		Total changes captured since the capture process was last started
TOTAL_MESSAGES_ENQUEUED	NUMBER		Total number of messages enqueued since the capture process was last started
ELAPSED_RULE_TIME	NUMBER		Elapsed time (in hundredths of a second) evaluating rules since the capture process was last started
ELAPSED_ENQUEUE_TIME	NUMBER		Elapsed time (in hundredths of a second) enqueuing messages since the capture process was last started
ELAPSED_REDO_WAIT_TIME	NUMBER		Elapsed time (in hundredths of a second) spent by the capture process in the WAITING FOR REDO state

Column	Datatype	NULL	Description
ELAPSED_PAUSE_TIME	NUMBER		Elapsed pause time
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.72 DBA_HIST_STREAMS_POOL_ADVICE

DBA_HIST_STREAMS_POOL_ADVICE displays historical information about the estimated count of spilled or unspilled messages and the associated time spent in the spill or unspill activity for different Streams pool sizes.

This view is intended for use with Automatic Workload Repository (AWR).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID of the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number of the snapshot
SIZE_FOR_ESTIMATE	NUMBER	NOT NULL	Pool size for the estimate (in megabytes)
SIZE_FACTOR	NUMBER		Size factor with respect to the current pool size
ESTD_SPILL_COUNT	NUMBER		Estimated count of messages spilled from the Streams pool
ESTD_SPILL_TIME	NUMBER		Estimated elapsed time (in seconds) to spill
ESTD_UNSPILL_COUNT	NUMBER		Estimated count of unspills (read back from disk)
ESTD_UNSPILL_TIME	NUMBER		Estimated elapsed time (in seconds) to unspill
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.73 DBA_HIST_SYS_TIME_MODEL

DBA_HIST_SYS_TIME_MODEL displays historical system time model statistics, including OLAP timed stastistics.

This view contains snapshots of V$SYS_TIME_MODEL.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STAT_ID	NUMBER	NOT NULL	Statistic ID
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$SYS_TIME_MODEL"
- "DBA_HIST_CON_SYS_TIME_MODEL"
- "V$CON_SYSMETRIC"

6.74 DBA_HIST_SYSMETRIC_HISTORY

DBA_HIST_SYSMETRIC_HISTORY externalizes all available history of the system metric values for the entire set of data kept in the database.

This view contains snapshots of V$SYSMETRIC_HISTORY.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BEGIN_TIME	DATE	NOT NULL	Begin time of the interval
END_TIME	DATE	NOT NULL	End time of the interval
INTSIZE	NUMBER	NOT NULL	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	NOT NULL	Group ID
METRIC_ID	NUMBER	NOT NULL	Metric ID
METRIC_NAME	VARCHAR2(64)	NOT NULL	Metric name
VALUE	NUMBER	NOT NULL	Metric Value
METRIC_UNIT	VARCHAR2(64)	NOT NULL	Unit of measurement

Column	Datatype	NULL	Description
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$SYSMETRIC_HISTORY"
- "DBA_HIST_CON_SYSMETRIC_HIST"
- "V$CON_SYSMETRIC_HISTORY"

6.75 DBA_HIST_SYSMETRIC_SUMMARY

DBA_HIST_SYSMETRIC_SUMMARY displays a history of statistical summary of all metric values in the System Metrics Long Duration group.

This view contains snapshots of V$SYSMETRIC_SUMMARY.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
BEGIN_TIME	DATE	NOT NULL	Begin time of the interval
END_TIME	DATE	NOT NULL	End time of the interval
INTSIZE	NUMBER	NOT NULL	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	NOT NULL	Group ID
METRIC_ID	NUMBER	NOT NULL	Metric ID
METRIC_NAME	VARCHAR2(64)	NOT NULL	Metric name
METRIC_UNIT	VARCHAR2(64)	NOT NULL	Unit of measurement
NUM_INTERVAL	NUMBER	NOT NULL	Number of intervals observed
MINVAL	NUMBER	NOT NULL	Minimum value observed
MAXVAL	NUMBER	NOT NULL	Maximum value observed
AVERAGE	NUMBER	NOT NULL	Average over the period
STANDARD_DEVIATION	NUMBER	NOT NULL	One standard deviation
SUM_SQUARES	NUMBER		Sum of the squared deviations from the mean
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$SYSMETRIC_SUMMARY"
- "DBA_HIST_CON_SYSMETRIC_SUMM"
- "V$CON_SYSMETRIC_SUMMARY"

6.76 DBA_HIST_SYSSTAT

DBA_HIST_SYSSTAT displays historical system statistics information, including OLAP kernel statistics.

This view contains snapshots of V$SYSSTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
STAT_ID	NUMBER	NOT NULL	Statistic identifier
STAT_NAME	VARCHAR2(64)	NOT NULL	Statistic name
VALUE	NUMBER		Statistic value
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$SYSSTAT"

6.77 DBA_HIST_SYSTEM_EVENT

DBA_HIST_SYSTEM_EVENT displays historical information on total waits for an event.

This view contains snapshots of V$SYSTEM_EVENT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
EVENT_ID	NUMBER	NOT NULL	Identifier of the wait event
EVENT_NAME	VARCHAR2(64)	NOT NULL	Name of the wait event
WAIT_CLASS_ID	NUMBER		Identifier of the Class of the Wait Event
WAIT_CLASS	VARCHAR2(64)		Name of the Class of the Wait Event
TOTAL_WAITS	NUMBER		Total number of waits for the event
TOTAL_TIMEOUTS	NUMBER		Total number of timeouts for the event
TIME_WAITED_MICRO	NUMBER		Total amount of time waited for the event (in microseconds)
TOTAL_WAITS_FG	NUMBER		Total number of waits for the event, from foreground sessions
TOTAL_TIMEOUTS_FG	NUMBER		Total number of timeouts for the event, from foreground sessions
TIME_WAITED_MICRO_FG	NUMBER		Amount of time waited for the event (in microseconds), from foreground sessions
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$SYSTEM_EVENT"

6.78 DBA_HIST_TABLESPACE

DBA_HIST_TABLESPACE displays tablespace information contained in the Workload Repository.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
TS#	NUMBER	NOT NULL	Tablespace number
TSNAME	VARCHAR2(30)	NOT NULL	Tablespace name
CONTENTS	VARCHAR2(30)		Tablespace contents: • UNDO • PERMANENT • TEMPORARY
SEGMENT_SPACE_MANAGEMENT	VARCHAR2(30)		Indicates whether the free and used space in the tablespace is managed using free lists (MANUAL) or bitmaps (AUTO)
EXTENT_MANAGEMENT	VARCHAR2(30)		Indicates whether the extents in the tablespace are dictionary managed (DICTIONARY) or locally managed (LOCAL)
BLOCK_SIZE	NUMBER		Block size of the tablespace
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.79 DBA_HIST_TABLESPACE_STAT

DBA_HIST_TABLESPACE_STAT displays tablespace information from the control file.

This view contains snapshots of V$TABLESPACE and DBA_TABLESPACES.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
TS#	NUMBER	NOT NULL	Tablespace number
TSNAME	VARCHAR2(30)		Tablespace name
CONTENTS	VARCHAR2(9)		Tablespace contents: • PERMANENT • TEMPORARY

Column	Datatype	NULL	Description
STATUS	VARCHAR2(9)		Tablespace status: • ONLINE • OFFLINE • READ ONLY
SEGMENT_SPACE_MANAGEMENT	VARCHAR2(6)		Indicates whether the free and used segment space in the tablespace is managed using free lists (MANUAL) or bitmaps (AUTO)
EXTENT_MANAGEMENT	VARCHAR2(10)		Indicates whether the extents in the tablespace are dictionary managed (DICTIONARY) or locally managed (LOCAL)
IS_BACKUP	VARCHAR2(5)		Indicates whether the tablespace is part of a backup
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$TABLESPACE"
- "DBA_TABLESPACES"

6.80 DBA_HIST_TBSPC_SPACE_USAGE

DBA_HIST_TBSPC_SPACE_USAGE displays historical tablespace usage statistics.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER		Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
TABLESPACE_ID	NUMBER		Tablespace ID
TABLESPACE_SIZE	NUMBER		Tablespace size (in database blocks)
TABLESPACE_MAXSIZE	NUMBER		Maximum size of the tablespace (in database blocks)
TABLESPACE_USEDSIZE	NUMBER		Used size of the tablespace (in database blocks)
RTIME	VARCHAR2(25)		Runtime
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.81 DBA_HIST_TEMPFILE

DBA_HIST_TEMPFILE displays a history of the temp file information from the control file. This view contains snapshots of V$TEMPFILE.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
FILE#	NUMBER	NOT NULL	File identification number
CREATION_CHANGE#	NUMBER	NOT NULL	Change number at which the temp file was created
FILENAME	VARCHAR2(513)	NOT NULL	Name of the temp file
TS#	NUMBER	NOT NULL	Tablespace number
TSNAME	VARCHAR2(30)		Name of the tablespace
BLOCK_SIZE	NUMBER		Block size of the temp file
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$TEMPFILE"

6.82 DBA_HIST_TEMPSTATXS

DBA_HIST_TEMPSTATXS displays information about temporary file read/write statistics.

This view contains snapshots of V$TEMPSTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
FILE#	NUMBER	NOT NULL	File identification number
CREATION_CHANGE#	NUMBER	NOT NULL	Change number at which the temp file was created
FILENAME	VARCHAR2(513)	NOT NULL	Name of the temp file
TS#	NUMBER	NOT NULL	Tablespace number
TSNAME	VARCHAR2(30)		Name of the tablespace
BLOCK_SIZE	NUMBER		Block size of the temp file
PHYRDS	NUMBER		Number of physical reads done
PHYWRTS	NUMBER		Number of times DBWR is required to write
SINGLEBLKRDS	NUMBER		Number of single block reads
READTIM	NUMBER		Time (in hundredths of a second) spent doing reads if the TIMED_STATISTICS parameter is true; 0 if false
WRITETIM	NUMBER		Time (in hundredths of a second) spent doing writes if the TIMED_STATISTICS parameter is true; 0 if false
SINGLEBLKRDTIM	NUMBER		Cumulative single block read time (in hundredths of a second)
PHYBLKRD	NUMBER		Number of physical blocks read
PHYBLKWRT	NUMBER		Number of blocks written to disk, which may be the same as PHYWRTS if all writes are single blocks
WAIT_COUNT	NUMBER		Shows the number of waits at the file level for contended buffers. This value includes the individual wait events that are included in the buffer busy waits wait event. **See Also:** "buffer busy waits"
TIME	NUMBER		Time spent waiting for the wait events in the WAIT_COUNT column
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$TEMPSTAT"

6.83 DBA_HIST_THREAD

DBA_HIST_THREAD displays historical thread information from the control file.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
THREAD#	NUMBER	NOT NULL	Thread number
THREAD_INSTANCE_NUMBER	NUMBER		Instance number of the thread
STATUS	VARCHAR2(6)		Thread status (OPEN) or (CLOSED)
OPEN_TIME	DATE		Last time the thread was opened
CURRENT_GROUP#	NUMBER		Current log group
SEQUENCE#	NUMBER		Sequence number of the current log
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.84 DBA_HIST_TOPLEVELCALL_NAME

DBA_HIST_TOPLEVELCALL_NAME displays the mapping between Oracle top level calls and names.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
TOP_LEVEL_CALL#	NUMBER	NOT NULL	Oracle top level call number
TOP_LEVEL_CALL_NAME	VARCHAR2(64)		Oracle top level call name
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.85 DBA_HIST_UNDOSTAT

DBA_HIST_UNDOSTAT displays the history of histograms of statistical data to show how well the system is working.

The available statistics include undo space consumption, transaction concurrency, and length of queries executed in the instance. This view contains snapshots of V$UNDOSTAT.

Column	Datatype	NULL	Description
BEGIN_TIME	DATE	NOT NULL	Identifies the beginning of the time interval
END_TIME	DATE	NOT NULL	Identifies the end of the time interval
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
UNDOTSN	NUMBER	NOT NULL	Represents the last active undo tablespace in the duration of time. The tablespace ID of the active undo tablespace is returned in this column. If more than one undo tablespace was active in that period, the active undo tablespace that was active at the end of the period is reported.
UNDOBLKS	NUMBER		Represents the total number of undo blocks consumed. You can use this column to obtain the consumption rate of undo blocks, and thereby estimate the size of the undo tablespace needed to handle the workload on your system.
TXNCOUNT	NUMBER		Identifies the total number of transactions executed within the period
MAXQUERYLEN	NUMBER		Identifies the length of the longest query (in number of seconds) executed in the instance during the period. You can use this statistic to estimate the proper setting of the UNDO_RETENTION initialization parameter. The length of a query is measured from the cursor open time to the last fetch/execute time of the cursor. Only the length of those cursors that have been fetched/ executed during the period are reflected in the view.
MAXQUERYSQLID	VARCHAR2(13)		SQL identifier of the longest running SQL statement in the period
MAXCONCURRENCY	NUMBER		Identifies the highest number of transactions executed concurrently within the period
UNXPSTEALCNT	NUMBER		Number of attempts to obtain undo space by stealing unexpired extents from other transactions
UNXPBLKRELCNT	NUMBER		Number of unexpired blocks removed from certain undo segments so they can be used by other transactions
UNXPBLKREUCNT	NUMBER		Number of unexpired undo blocks reused by transactions
EXPSTEALCNT	NUMBER		Number of attempts to steal expired undo blocks from other undo segments
EXPBLKRELCNT	NUMBER		Number of expired undo blocks stolen from other undo segments

Column	Datatype	NULL	Description
EXPBLKREUCNT	NUMBER		Number of expired undo blocks reused within the same undo segments
SSOLDERRCNT	NUMBER		Identifies the number of times the error ORA-01555 occurred. You can use this statistic to decide whether the UNDO_RETENTION initialization parameter is set properly given the size of the undo tablespace. Increasing the value of UNDO_RETENTION can reduce the occurrence of this error.
NOSPACEERRCNT	NUMBER		Identifies the number of times space was requested in the undo tablespace and there was no free space available. That is, all of the space in the undo tablespace was in use by active transactions. The corrective action is to add more space to the undo tablespace.
ACTIVEBLKS	NUMBER		Total number of blocks in the active extents of the undo tablespace for the instance at the sampled time in the period
UNEXPIREDBLKS	NUMBER		Total number of blocks in the unexpired extents of the undo tablespace for the instance at the sampled time in the period
EXPIREDBLKS	NUMBER		Total number of blocks in the expired extents of the undo tablespace for the instance at the sampled time in the period
TUNED_UNDORETENTION	NUMBER		System tuned value indicating the period for which undo is being retained The value of this column is not meaningful on an Oracle Active Data Guard standby database instance, because the system does not tune this value on such instances.
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$UNDOSTAT"

6.86 DBA_HIST_WAITCLASSMET_HISTORY

DBA_HIST_WAITCLASSMET_HISTORY displays the history of the wait event class metric data kept by the Workload Repository.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID of the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number of the snapshot
WAIT_CLASS_ID	NUMBER	NOT NULL	Identifier of the class of the wait event
WAIT_CLASS	VARCHAR2(64)		Name of the class of the wait event
BEGIN_TIME	DATE	NOT NULL	Begin time of the interval
END_TIME	DATE	NOT NULL	End time of the interval
INTSIZE	NUMBER	NOT NULL	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	NOT NULL	Metric group ID
AVERAGE_WAITER_COUNT	NUMBER	NOT NULL	Average waiter count
DBTIME_IN_WAIT	NUMBER	NOT NULL	Percent of database time spent in the wait
TIME_WAITED	NUMBER	NOT NULL	Time waited during the interval (in microseconds)
WAIT_COUNT	NUMBER	NOT NULL	Number of times waited
TIME_WAITED_FG	NUMBER		Time waited (in hundredths of a second), from foreground sessions
WAIT_COUNT_FG	NUMBER		Number of times waited, from foreground sessions
CON_DBID	NUMBER		The database ID of the PDB for the sampled session
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.87 DBA_HIST_WAITSTAT

DBA_HIST_WAITSTAT displays historical block contention statistics. This view contains snapshots of V$WAITSTAT.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Unique snapshot ID
DBID	NUMBER	NOT NULL	Database ID for the snapshot
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the snapshot
CLASS	VARCHAR2(18)	NOT NULL	Class of the block
WAIT_COUNT	NUMBER		Number of waits by the OPERATION for this CLASS of block
TIME	NUMBER		Sum of all wait times for all the waits by the OPERATION for this CLASS of block
CON_DBID	NUMBER		The database ID of the PDB for the sampled session

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$WAITSTAT"

6.88 DBA_HIST_WR_CONTROL

DBA_HIST_WR_CONTROL displays the control information for the Workload Repository.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Database ID
SNAP_INTERVAL	INTERVAL DAY(5) TO SECOND(1)	NOT NULL	Snapshot interval; how often to automatically take snapshots
RETENTION	INTERVAL DAY(5) TO SECOND(1)	NOT NULL	Retention setting for the snapshots; amount of time to keep the snapshots
TOPNSQL	VARCHAR2(10)		The number of Top SQL flushed for each SQL criteria (elapsed time, CPU time, parse calls, sharable memory, version count)
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
SRC_DBID	NUMBER		Database ID of the non-CDB, CDB, or PDB where the AWR snapshot data was collected
SRC_DBNAME	VARCHAR2(128)		Database name of the non-CDB, CDB, or PDB where the AWR snapshot data was collected
TABLESPACE_NAME	VARCHAR2(128)		Name of the tablespace in which AWR snapshot data resides

6.89 DBA_HIST_WR_SETTINGS

DBA_HIST_WR_SETTINGS displays the settings and metadata for the Workload Repository.

Column	Datatype	NULL	Description
LOCAL_AWRDBID	NUMBER	NOT NULL	Database ID of the local database
VIEW_LOCATION	VARCHAR2(8)		Data source of the DBA_HIST dictionary views. Possible values include: • AWR_PDB: Views display AWR data stored in the PDB. • AWR_ROOT: Views display AWR data stored in the root.
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.90 DBA_HISTOGRAMS

DBA_HISTOGRAMS is a synonym for DBA_TAB_HISTOGRAMS.

> **See Also:**
>
> "DBA_TAB_HISTOGRAMS"

6.91 DBA_HIVE_COLUMNS

DBA_HIVE_COLUMNS describes all Hive columns in a Hive metastore. Its columns are the same as those in ALL_HIVE_COLUMNS.

> **See Also:**
>
> "ALL_HIVE_COLUMNS"

6.92 DBA_HIVE_DATABASES

DBA_HIVE_DATABASES describes all the Hive schemas in a Hadoop cluster. Its columns are the same as those in ALL_HIVE_DATABASES.

> **See Also:**
>
> "ALL_HIVE_DATABASES"

6.93 DBA_HIVE_PART_KEY_COLUMNS

DBA_HIVE_PART_KEY_COLUMNS provides information about all Hive table partition columns in the database. Its columns are the same as those in ALL_HIVE_PART_KEY_COLUMNS.

> **See Also:**
>
> "ALL_HIVE_PART_KEY_COLUMNS"

6.94 DBA_HIVE_TAB_PARTITIONS

DBA_HIVE_TAB_PARTITIONS provides information about all Hive table partitions in the database. Its columns are the same as those in ALL_HIVE_TAB_PARTITIONS.

> **See Also:**
>
> "ALL_HIVE_TAB_PARTITIONS"

6.95 DBA_HIVE_TABLES

DBA_HIVE_TABLES provides information about all the Hive tables in the Hive metastore. Its columns are the same as those in ALL_HIVE_TABLES.

> **See Also:**
>
> "ALL_HIVE_TABLES"

6.96 DBA_HOST_ACES

DBA_HOST_ACES describes access control entries defined in host access control lists.

Related View

USER_HOST_ACES describes the status of access control entries for the current user to access network hosts through PL/SQL network utility packages. This view does not display the ACE_ORDER, START_DATE, END_DATE, GRANT_TYPE, INVERTED_PRINCIPAL, PRINCIPAL, or PRINCIPAL_TYPE columns.

Column	Datatype	NULL	Description
HOST	VARCHAR2(1000)	NOT NULL	Network host
LOWER_PORT	NUMBER(5)		Lower bound of the port range
UPPER_PORT	NUMBER(5)		Upper bound of the port range
ACE_ORDER	NUMBER	NOT NULL	Order number of the access control entry
START_DATE	TIMESTAMP(6)		Start date of the access control entry
END_DATE	TIMESTAMP(6)		End date of the access control entry
GRANT_TYPE	VARCHAR2(5)		Indicates whether the access control entry grants or denies the privilege
INVERTED_PRINCIPAL	VARCHAR2(3)		Indicates whether the principal is inverted or not
PRINCIPAL	VARCHAR2(128)		Principal the privilege is applied to
PRINCIPAL_TYPE	VARCHAR2(16)		Type of the principal
PRIVILEGE	VARCHAR2(128)		Privilege

See Also:

"USER_HOST_ACES"

6.97 DBA_HOST_ACLS

DBA_HOST_ACLS describes access control lists assigned to restrict access to network hosts through PL/SQL network utility packages.

Column	Datatype	NULL	Description
HOST	VARCHAR2(1000)	NOT NULL	Network host
LOWER_PORT	NUMBER(5)		Lower bound of the port range
UPPER_PORT	NUMBER(5)		Upper bound of the port range
ACL	VARCHAR2(4000)		The name of the access control list
ACLID	RAW(8)		The object ID of the access control list
ACL_OWNER	VARCHAR2(128)		The owner of the access control list

6.98 DBA_IDENTIFIERS

DBA_IDENTIFIERS displays information about the identifiers in all stored objects in the database. Its columns are the same as those in ALL_IDENTIFIERS.

> **See Also:**
>
> "ALL_IDENTIFIERS"

6.99 DBA_ILMDATAMOVEMENTPOLICIES

DBA_ILMDATAMOVEMENTPOLICIES contains information specific to data movement-related attributes of an Automatic Data Optimization policy in a database.

Related View

USER_ILMDATAMOVEMENTPOLICIES contains information specific to data movement-related attributes of an Automatic Data Optimization policy for a user.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)	NOT NULL	The Automatic Data Optimization policy name is autogenerated
ACTION_TYPE	VARCHAR2(11)		Type of data movement action performed by the Automatic Data Optimization policy: • ANNOTATE • COMPRESSION • EVICT • STORAGE
SCOPE	VARCHAR2(7)		Identifies the scope of the Automatic Data Optimization policy: • ROW • GROUP • SEGMENT
COMPRESSION_LEVEL	VARCHAR2(30)		Compression level to move selected rows or the entire segment to, for a compression Automatic Data Optimization policy
TIER_TABLESPACE	VARCHAR2(128)		Tablespace to move the object to, for a storage Automatic Data Optimization policy

Column	Datatype	NULL	Description
TIER_STATUS	VARCHAR2(9)		This column is only valid for storage tiering policies, and indicates whether the storage tiering policy was specified with a READ ONLY clause. This column takes READ ONLY as a potential value. In all other cases, it is blank. In other words, this column indicates whether the tablespace the object is being moved to will be made READ ONLY after the movement.
CONDITION_TYPE	VARCHAR2(22)		Column on which the condition for the policy is based. Possible values: • LAST ACCESS TIME • LAST MODIFICATION TIME • CREATION TIME • USER DEFINED • LOW ACCESS
CONDITION_DAYS	NUMBER		Number of days in the condition for the policy
CUSTOM_FUNCTION	VARCHAR2(128)		Optional function that evaluates the precondition on the policy
POLICY_SUBTYPE	VARCHAR2(10)		Storage tier on which the policy is specified
ACTION_CLAUSE	CLOB		Text of the action executed by the policy
TIER_TO	VARCHAR2(10)		Storage tier where the data is placed after the policy is executed

"USER_ILMDATAMOVEMENTPOLICIES"

6.100 DBA_ILMEVALUATIONDETAILS

DBA_ILMEVALUATIONDETAILS displays details on evaluation of Automatic Data Optimization policies considered for Automatic Data Optimization tasks.

It also shows the job name that executes the policy, in case the policy was selected for execution. If the policy was not selected for execution, this view provides a reason.

Related View

USER_ILMEVALUATIONDETAILS displays details on evaluation of Automatic Data Optimization policies considered for Automatic Data Optimization tasks for a user. It also shows the job name that executes the policy, in case the policy was selected for execution. If the policy was not selected for execution, this view provides a reason.

Note:

Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

Column	Datatype	NULL	Description
TASK_ID	NUMBER		Number that uniquely identifies a specific Automatic Data Optimization task
POLICY_NAME	VARCHAR2(128)	NOT NULL	Name of the Automatic Data Optimization policy
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object associated with the Automatic Data Optimization policy
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object associated with the Automatic Data Optimization policy
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject associated with the Automatic Data Optimization policy
OBJECT_TYPE	VARCHAR2(18)		Object type. Valid values include TABLE, TABLE PARTITION, and TABLE SUBPARTITION.
SELECTED_FOR_EXECUTION	VARCHAR2(42)		Indicates whether the policy has been selected for execution on the object. If not, the reason for not being selected is listed. Possible values: • POLICY DISABLED • SELECTED FOR EXECUTION • POLICY OVERRULED • INHERITED POLICY OVERRULED • PRECONDITION NOT SATISFIED • JOB ALREADY EXISTS • NO OPERATION SINCE LAST ILM ACTION • TABLE HAS MATERIALIZED VIEW • TARGET COMPRESSION NOT HIGHER THAN CURRENT • STATISTICS NOT AVAILABLE The value SELECTED FOR EXECUTION means a job was created for this policy on the object. The other values state the reason why the policy on the object was selected for execution.
JOB_NAME	VARCHAR2(128)		Name of the job in the case where the policy is selected for execution on this object
COMMENTS	VARCHAR2(4000)		Reserved for future use

> **See Also:**
>
> "USER_ILMEVALUATIONDETAILS"

6.101 DBA_ILMOBJECTS

DBA_ILMOBJECTS displays all the Automatic Data Optimization policies and objects in the database.

Many objects inherit policies via their parent objects or because they were created in a particular tablespace. This view provides a mapping between the policies and objects and indicates whether a policy is inherited by an object or is directly specified on it.

Related View

USER_ILMOBJECTS displays all the Automatic Data Optimization policies and objects for a user.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)	NOT NULL	Policy name is auto-generated
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object associated with the Automatic Data Optimization policy
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object associated with the Automatic Data Optimization policy
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject associated with the Automatic Data Optimization policy
OBJECT_TYPE	VARCHAR2(18)		Object type. Valid values include: • INDEX • INDEX PARTITION • LOB • LOB PARTITION • TABLE • TABLE PARTITION • TABLE SUBPARTITION Direct policies on Index, Index Partition, LOB, and LOB Partition are not supported in Oracle Database 12*c*.
INHERITED_FROM	VARCHAR2(20)		Indicates if the policy is inherited by the object or subobject, or directly specified on the object or subobject. If the policy is inherited, the level from which the policy is inherited (TABLE, TABLE PARTITION, TABLESPACE) is identified.
TBS_INHERITED_FROM	VARCHAR2(30)		The tablespace name, if the policy is inherited from a tablespace
ENABLED	VARCHAR2(7)		Indicates if the Automatic Data Optimization policy is enabled for the object (YES or NO)
DELETED	VARCHAR2(7)		Possible values: • YES - Indicates that the policy is deleted for any objects that may be added in the future, but is active for those objects that are currently associated with that policy • NO - Indicates that the policy is active

> **See Also:**
>
> "USER_ILMOBJECTS"

6.102 DBA_ILMPARAMETERS

DBA_ILMPARAMETERS can be queried to provide information on the Automatic Data Optimization parameters in the database and their values.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)		Name of the Automatic Data Optimization environment parameter. The value is one of the constants defined in the DBMS_ILM_ADMIN package.
VALUE	NUMBER		Value of the parameter

> **See Also:**
>
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the API interface for implementing Automatic Data Optimization strategies
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_ILM_ADMIN package

6.103 DBA_ILMPOLICIES

DBA_ILMPOLICIES displays details about Automatic Data Optimization policies in the database.

The view contains common details relevant to all types of Automatic Data Optimization policies, not just details relevant to the data movement-related Automatic Data Optimization policies.

Related View

USER_ILMPOLICIES displays details about Automatic Data Optimization policies owned by the user.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		The name of the Automatic Data Optimization policy is auto-generated
POLICY_TYPE	VARCHAR2(13)		Type of the policy. Valid values include DATAMOVEMENT.
TABLESPACE	VARCHAR2(30)		Tablespace name, in the case of a tablespace-level policy
ENABLED	VARCHAR2(6)		Indicates whether the policy is enabled or not
DELETED	VARCHAR2(7)		Possible values: • YES - Indicates that the policy associated has been deleted (but shall remain active for this object) • NO - Indicates that the policy is active

Note:

Automatic Data Optimization policies cannot be set on tables with object types or materialized views.

See Also:

"USER_ILMPOLICIES"

6.104 DBA_ILMRESULTS

DBA_ILMRESULTS displays information on data movement-related Automatic Data Optimization jobs in the database.

Related View

USER_ILMRESULTS displays information on data movement-related Automatic Data Optimization jobs for tasks created by the user.

Note:

Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

Column	Datatype	NULL	Description
TASK_ID	NUMBER		Number that uniquely identifies a specific Automatic Data Optimization task
JOB_NAME	VARCHAR2(128)		Name of the Automatic Data Optimization job

Column	Datatype	NULL	Description
JOB_STATE	VARCHAR2(35)		State of the job. Possible values: • JOB CREATED • COMPLETED SUCCESSFULLY • FAILED • STOPPED • JOB CREATION FAILED • DEPENDENT OBJECTS BEING REBUILT • FAILED TO REBUILD DEPENDENT OBJECTS
START_TIME	TIMESTAMP(6)		Start time of the Automatic Data Optimization job
COMPLETION_TIME	TIMESTAMP(6)		Completion time of the Automatic Data Optimization job
COMMENTS	VARCHAR2(4000)		Additional information in cases where the Automatic Data Optimization job execution fails
STATISTICS	CLOB		Job specific statistics, such as space saved via compression. This column is in the form of comma separated name / value pairs, with each pair representing a particular statistic name and value.

See Also:

"USER_ILMRESULTS"

6.105 DBA_ILMTASKS

DBA_ILMTASKS displays information on Automatic Data Optimization execution.

Related View

USER_ILMTASKS displays information on Automatic Data Optimization tasks created by a user.

Note:

Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

Column	Datatype	NULL	Description
TASK_ID	NUMBER		Number that uniquely identifies a specific Automatic Data Optimization task
TASK_OWNER	VARCHAR2(128)	NOT NULL	User who initiates the task
STATE	VARCHAR2(9)		Possible values: • INACTIVE: Indicates that the task was created for previewing • ACTIVE: Indicates that jobs have been created for the qualifying policies in the task • COMPLETE: Indicates that the task has completed

Column	Datatype	NULL	Description
CREATION_TIME	TIMESTAMP(6)		The time that the task was created
START_TIME	TIMESTAMP(6)		Start time of a specific task
COMPLETION_TIME	TIMESTAMP(6)		Completion time of a specific task

> **See Also:**
>
> "USER_ILMTASKS"

6.106 DBA_IM_EXPRESSIONS

DBA_IM_EXPRESSIONS provides information about the list of expressions (SYS_IME virtual columns) that are currently enabled for in-memory storage.

Typically, you can query this view after invoking the DBMS_INMEMORY_ADMIN.IME_CAPTURE_EXPRESSIONS PL/SQL procedure to see the list of hot expressions added to different tables across the database.

Based on this view, you can:

- Populate expressions on a particular table immediately
- Drop certain expressions that are marked for in-memory but not desired by users

Related View

USER_IM_EXPRESSIONS provides information about the list of expressions (SYS_IME virtual columns) that are currently enabled for in-memory storage in schemas owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(129)		Table owner
TABLE_NAME	VARCHAR2(129)		Table name
OBJECT_NUMBER	NUMBER		Object number of the table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name of the expression added to the table (with SYS_IME prefix)
SQL_EXPRESSION	LONG		SQL representation of the expression

> **See Also:**
>
> "USER_IM_EXPRESSIONS"

6.107 DBA_IMMUTABLE_ROW_VERSION_COLS

DBA_IMMUTABLE_ROW_VERSION_COLS displays information about row versioned columns in all immutable tables in the database. Its columns are the same as those in ALL_IMMUTABLE_ROW_VERSION_COLS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_IMMUTABLE_ROW_VERSION_COLS"

6.108 DBA_IMMUTABLE_ROW_VERSION_HISTORY

DBA_IMMUTABLE_ROW_VERSION_HISTORY provides a history of row versions in all immutable tables in the database. Its columns are the same as those in ALL_IMMUTABLE_ROW_VERSION_HISTORY.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_IMMUTABLE_ROW_VERSION_HISTORY"

6.109 DBA_IMMUTABLE_TABLE_COLUMNS

DBA_IMMUTABLE_TABLE_COLUMNS displays information about columns valid in each epoch in all immutable tables in the database. Its columns are the same as those in ALL_IMMUTABLE_TABLE_COLUMNS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_IMMUTABLE_TABLE_COLUMNS"

6.110 DBA_IMMUTABLE_TABLE_EPOCHS

`DBA_IMMUTABLE_TABLE_EPOCHS` displays epoch information for all immutable tables in the database. Its columns are the same as those in `ALL_IMMUTABLE_TABLE_EPOCHS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_IMMUTABLE_TABLE_EPOCHS"

6.111 DBA_IMMUTABLE_TABLES

`DBA_IMMUTABLE_TABLES` describes all immutable tables in the database. Its columns are the same as those in `ALL_IMMUTABLE_TABLES`.

> **See Also:**
>
> "ALL_IMMUTABLE_TABLES"

6.112 DBA_INCOMPLETE_SAGAS

`DBA_INCOMPLETE_SAGAS` describes all incomplete sagas in the database. Its columns are the same as those in `ALL_INCOMPLETE_SAGAS`.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_INCOMPLETE_SAGAS"

6.113 DBA_IND_COLUMNS

`DBA_IND_COLUMNS` describes the columns of all the indexes on all tables and clusters in the database. Its columns are the same as those in `ALL_IND_COLUMNS`.

> **See Also:**
>
> "ALL_IND_COLUMNS"

6.114 DBA_IND_EXPRESSIONS

`DBA_IND_EXPRESSIONS` lists expressions of function-based indexes on all tables and clusters in the database. Its columns are the same as those in `ALL_IND_EXPRESSIONS`.

> **See Also:**
>
> "ALL_IND_EXPRESSIONS"

6.115 DBA_IND_PARTITIONS

`DBA_IND_PARTITIONS` displays, for each index partition in the database, the partition-level partitioning information, the storage parameters for the partition, and various partition statistics generated by the `DBMS_STATS` package. Its columns are the same as those in `ALL_IND_PARTITIONS`.

> **See Also:**
>
> "ALL_IND_PARTITIONS"

6.116 DBA_IND_PENDING_STATS

DBA_IND_PENDING_STATS describes pending statistics for all tables, partitions, and subpartitions in the database collected using the DBMS_STATS package. Its columns are the same as those in ALL_IND_PENDING_STATS.

> **See Also:**
>
> "ALL_IND_PENDING_STATS"

6.117 DBA_IND_STATISTICS

DBA_IND_STATISTICS displays optimizer statistics for all indexes in the database collected using the DBMS_STATS package. Its columns are the same as those in ALL_IND_STATISTICS.

> **See Also:**
>
> "ALL_IND_STATISTICS"

6.118 DBA_IND_SUBPARTITIONS

DBA_IND_SUBPARTITIONS displays, for each index subpartition in the database, the subpartition-level partitioning information, the storage parameters for the subpartition, and various subpartition statistics generated by the DBMS_STATS package. Its columns are the same as those in ALL_IND_SUBPARTITIONS.

> **See Also:**
>
> "ALL_IND_SUBPARTITIONS"

6.119 DBA_INDEX_USAGE

DBA_INDEX_USAGE displays cumulative statistics for each index.

Column	Datatype	NULL	Description
OBJECT_ID	NUMBER	NOT NULL	Object ID for the index
NAME	VARCHAR2(128)	NOT NULL	Index name
OWNER	VARCHAR2(128)	NOT NULL	Index owner
TOTAL_ACCESS_COUNT	NUMBER		Total number of times the index has been accessed
TOTAL_EXEC_COUNT	NUMBER		Total executions the index has participated in

Column	Datatype	NULL	Description
TOTAL_ROWS_RETURNED	NUMBER		Total rows returned by the index. Index usage is categorized into buckets of different ranges. Each bucket has a range of values for access count and rows returned. An entry is placed into a bucket if the rows returned or access counts falls within the range of that bucket.
BUCKET_0_ACCESS_COUNT	NUMBER		The index has not been accessed
BUCKET_1_ACCESS_COUNT	NUMBER		The index has been accessed once
BUCKET_2_10_ACCESS_COUNT	NUMBER		The index has been accessed between 2 and 10 times
BUCKET_2_10_ROWS_RETURNED	NUMBER		The index has returned between 2 and 10 rows
BUCKET_11_100_ACCESS_COUNT	NUMBER		The index has been accessed between 11 and 100 times
BUCKET_11_100_ROWS_RETURNED	NUMBER		The index has returned between 11 and 100 rows
BUCKET_101_1000_ACCESS_COUNT	NUMBER		The index has been accessed between 101 and 1000 times
BUCKET_101_1000_ROWS_RETURNED	NUMBER		The index has returned between 101 and 1000 rows
BUCKET_1000_PLUS_ACCESS_COUNT	NUMBER		The index has been accessed more than 1000 times
BUCKET_1000_PLUS_ROWS_RETURNED	NUMBER		The index has returned more than 1000 rows
LAST_USED	DATE		Time that the index was last used

> **See Also:**
>
> "V$INDEX_USAGE_INFO"

6.120 DBA_INDEXES

DBA_INDEXES describes all indexes in the database. To gather statistics for this view, use the DBMS_STATS package. This view supports parallel partitioned index scans. Its columns are the same as those in ALL_INDEXES.

> **See Also:**
>
> "ALL_INDEXES"

6.121 DBA_INDEXTYPE_ARRAYTYPES

DBA_INDEXTYPE_ARRAYTYPES displays information about the array types specified by all indextypes in the database. Its columns are the same as those in ALL_INDEXTYPE_ARRAYTYPES.

> **See Also:**
>
> "ALL_INDEXTYPE_ARRAYTYPES"

6.122 DBA_INDEXTYPE_COMMENTS

DBA_INDEXTYPE_COMMENTS displays comments for all user-defined indextypes in the database. Its columns are the same as those in ALL_INDEXTYPE_COMMENTS.

> **See Also:**
>
> "ALL_INDEXTYPE_COMMENTS"

6.123 DBA_INDEXTYPE_OPERATORS

DBA_INDEXTYPE_OPERATORS lists all the operators supported by indextypes in the database. Its columns are the same as those in ALL_INDEXTYPE_OPERATORS.

> **See Also:**
>
> "ALL_INDEXTYPE_OPERATORS"

6.124 DBA_INDEXTYPES

DBA_INDEXTYPES describes all indextypes in the database. Its columns are the same as those in ALL_INDEXTYPES.

> **See Also:**
>
> "ALL_INDEXTYPES"

6.125 DBA_INMEMORY_ADVISOR_RECOMMENDATION

DBA_INMEMORY_ADVISOR_RECOMMENDATION displays In-Memory Advisor recommendations.

In-Memory Advisor simulates various Oracle Database In-Memory sizes and estimates the database time for a reference workload for each size. The results are displayed in this view.

Column	Datatype	NULL	Description
TASK_ID	NUMBER		In-Memory Advisor task ID
INMEMORY_SIZE	NUMBER		Simulated In-Memory size (in bytes)
ESTIMATED_DB_TIME_LOW	NUMBER		Low end of the predicted database time range (in seconds)
ESTIMATED_DB_TIME_HIGH	NUMBER		High end of the predicted database time range (in seconds)
ESTIMATED_DB_TIME_ANALYTICS_LOW	NUMBER		Low end of the predicted database analytical time range (in seconds)
ESTIMATED_DB_TIME_ANALYTICS_HIGH	NUMBER		High end of the predicted database analytical time range (in seconds)
RECOMMENDED_OBJ_LIST	CLOB		List of recommended objects for the simulated In-Memory size (INMEMORY_SIZE)

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.126 DBA_INMEMORY_AIMTASKDETAILS

DBA_INMEMORY_AIMTASKDETAILS displays details for an Automatic In-Memory management task.

Column	Datatype	NULL	Description
TASK_ID	NUMBER		Number that uniquely identifies a specific automatic IM column store management task
OBJECT_OWNER	VARCHAR2(128)		Owner of the object subject to automatic IM column store management task action
OBJECT_NAME	VARCHAR2(128)		Name of the object subject to automatic IM column store management task action
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject subject to automatic IM column store management task action
ACTION	VARCHAR2(16)		Action taken on the object
STATE	VARCHAR2(10)		Status of the action on the object

> **See Also:**
>
> *Oracle Database In-Memory Guide* for more information about configuring the Automatic In-Memory feature

6.127 DBA_INMEMORY_AIMTASKS

DBA_INMEMORY_AIMTASKS displays information about Automatic In-Memory management tasks.

Column	Datatype	NULL	Description
TASK_ID	NUMBER		Number that uniquely identifies a specific automatic IM column store management task
CREATION_TIME	TIMESTAMP(6)		Creation time of the task
STATE	VARCHAR2(7)		State of the task

> **See Also:**
>
> *Oracle Database In-Memory Guide* for more information about configuring the Automatic In-Memory feature

6.128 DBA_INTERNAL_TRIGGERS

DBA_INTERNAL_TRIGGERS describes internal triggers on all tables in the database. Its columns are the same as those in ALL_INTERNAL_TRIGGERS.

> **See Also:**
>
> "ALL_INTERNAL_TRIGGERS"

6.129 DBA_INVALID_OBJECTS

DBA_INVALID_OBJECTS describes all invalid objects in the database. You can use this view to identify invalid objects before and after a database upgrade.

This view eliminates old versions of object types. It only includes the object type it if is the latest version.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example, partition)
OBJECT_ID	NUMBER		Dictionary object number of the object.

Column	Datatype	NULL	Description
DATA_OBJECT_ID	NUMBER		Dictionary object number of the segment that contains the object. **Note:** OBJECT_ID and DATA_OBJECT_ID display data dictionary metadata. Do not confuse these numbers with the unique 16-byte object identifier (*object ID*) that Oracle Database assigns to row objects in object tables in the system.
OBJECT_TYPE	VARCHAR2(23)		Type of the object (such as TABLE, INDEX). The current version of the type is shown only if it is invalid. In other words, if prior versions of the type are invalid but the most recent version of the type is valid, it will not be in this list.
CREATED	DATE		Timestamp for the creation of the object
LAST_DDL_TIME	DATE		Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)
TIMESTAMP	VARCHAR2(19)		Timestamp for the specification of the object (character data)
STATUS	VARCHAR2(7)		Status of the object: • VALID • INVALID • N/A
TEMPORARY	VARCHAR2(1)		Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)
GENERATED	VARCHAR2(1)		Indicates whether the name of this object was system-generated (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether this is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
NAMESPACE	NUMBER		Namespace for the object
EDITION_NAME	VARCHAR2(128)		Name of the edition in which the object is actual
SHARING	VARCHAR2(18)		Values: • DATA LINK - If the object is data-linked or a data link to an object in the root • METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root • EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root • NONE - If none of the above applies
EDITIONABLE	VARCHAR2(1)		Values: • Y - For objects marked EDITIONABLE • N - For objects marked NONEDITIONABLE • NULL - For objects whose type is not editionable in the database

Column	Datatype	NULL	Description
ORACLE_MAINTAINED	VARCHAR2(1)		Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
APPLICATION	VARCHAR2(1)		Indicates whether the object is an Application common object (Y) or not (N)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the object
DUPLICATED	VARCHAR2(1)		Indicates whether this object is duplicated on this shard (Y) or not (N)
SHARDED	VARCHAR2(1)		Indicates whether this object is sharded (Y) or not (N)
IMPORTED_OBJECT	VARCHAR2(1)		Indicates whether this object is imported (Y) or not (N)
SYNCHRONOUS_DUPLICATED	VARCHAR2(1)		Indicates whether this object is a synchronous duplicated table (Y) or not (N)
CREATED_APPID	NUMBER		ID of the Application that created the object
CREATED_VSNID	NUMBER		ID of the Application Version that created the object
MODIFIED_APPID	NUMBER		ID of the Application that last modified the object
MODIFIED_VSNID	NUMBER		ID of the Application Version that last modified the object

6.130 DBA_JAVA_ARGUMENTS

DBA_JAVA_ARGUMENTS displays argument information about all stored Java classes in the database. Its columns are the same as those in ALL_JAVA_ARGUMENTS.

> **See Also:**
>
> "ALL_JAVA_ARGUMENTS"

6.131 DBA_JAVA_CLASSES

DBA_JAVA_CLASSES displays class level information about all stored Java classes in the database. Its columns are the same as those in ALL_JAVA_CLASSES.

> **See Also:**
>
> "ALL_JAVA_CLASSES"

6.132 DBA_JAVA_COMPILER_OPTIONS

DBA_JAVA_COMPILER_OPTIONS displays information about all native compiler options in the database. Its columns are the same as those in ALL_JAVA_COMPILER_OPTIONS.

> **See Also:**
>
> "ALL_JAVA_COMPILER_OPTIONS"

6.133 DBA_JAVA_DERIVATIONS

DBA_JAVA_DERIVATIONS displays mapping information about Java source objects and their derived Java class objects and Java resource objects for all Java classes in the database. Its columns are the same as those in ALL_JAVA_DERIVATIONS.

> **See Also:**
>
> "ALL_JAVA_DERIVATIONS"

6.134 DBA_JAVA_FIELDS

DBA_JAVA_FIELDS displays field information about all stored Java classes in the database. Its columns are the same as those in ALL_JAVA_FIELDS.

> **See Also:**
>
> "ALL_JAVA_FIELDS"

6.135 DBA_JAVA_IMPLEMENTS

DBA_JAVA_IMPLEMENTS describes interfaces implemented by all stored Java classes in the database. Its columns are the same as those in ALL_JAVA_IMPLEMENTS.

> **See Also:**
>
> "ALL_JAVA_IMPLEMENTS"

6.136 DBA_JAVA_INNERS

DBA_JAVA_INNERS displays information about inner classes referred to by all stored Java classes in the database. Its columns are the same as those in ALL_JAVA_INNERS.

> **See Also:**
>
> "ALL_JAVA_INNERS"

6.137 DBA_JAVA_LAYOUTS

DBA_JAVA_LAYOUTS displays class layout information about all stored Java classes in the database. Its columns are the same as those in ALL_JAVA_LAYOUTS.

> **See Also:**
>
> "ALL_JAVA_LAYOUTS"

6.138 DBA_JAVA_METHODS

DBA_JAVA_METHODS displays method information about all stored Java classes in the database. Its columns are the same as those in ALL_JAVA_METHODS.

> **See Also:**
>
> "ALL_JAVA_METHODS"

6.139 DBA_JAVA_NCOMPS

DBA_JAVA_NCOMPS displays ncomp-related information about all Java classes in the database. Its columns are the same as those in ALL_JAVA_NCOMPS.

> **See Also:**
>
> "ALL_JAVA_NCOMPS"

6.140 DBA_JAVA_POLICY

DBA_JAVA_POLICY describes Java security permissions for all users in the database.

Related View

USER_JAVA_POLICY describes Java security permissions for the current user.

Column	Datatype	NULL	Description
KIND	VARCHAR2(8)		Indicates whether the permission is a positive (GRANT) or a limitation (RESTRICT)
GRANTEE	VARCHAR2(128)	NOT NULL	Name of the user, schema, or role to which the permission object is assigned
TYPE_SCHEMA	VARCHAR2(128)	NOT NULL	Schema in which the permission object is loaded
TYPE_NAME	VARCHAR2(4000)		Permission class type, which is designated by a string containing the full class name, such as, java.io.FilePermission
NAME	VARCHAR2(4000)		Target attribute (name) of the permission object. This name is used when defining the permission.
ACTION	VARCHAR2(4000)		Action attribute for this permission. Many permissions expect a null value if no action is appropriate for the permission.
ENABLED	VARCHAR2(8)		Indicates whether the permission is enabled (ENABLED) or disabled (DISABLED)
SEQ	NUMBER		Sequence number used to identify this row. This number should be supplied when disabling, enabling, or deleting the permission.

See Also:

"USER_JAVA_POLICY"

6.141 DBA_JAVA_RESOLVERS

DBA_JAVA_RESOLVERS displays information about resolvers of all Java classes in the database. Its columns are the same as those in ALL_JAVA_RESOLVERS.

See Also:

"ALL_JAVA_RESOLVERS"

6.142 DBA_JAVA_THROWS

DBA_JAVA_THROWS displays information about exceptions thrown from methods of all Java classes in the database. Its columns are the same as those in ALL_JAVA_THROWSa.

> **See Also:**
>
> "ALL_JAVA_THROWS"

6.143 DBA_JOBS

DBA_JOBS describes all jobs in the database.

Related View

USER_JOBS describes the jobs owned by the current user.

Column	Datatype	NULL	Description
JOB	NUMBER	NOT NULL	Identifier of job. Neither import/export nor repeated executions change this value.
LOG_USER	VARCHAR2(128)	NOT NULL	Login user when the job was submitted
PRIV_USER	VARCHAR2(128)	NOT NULL	User whose default privileges apply to this job
SCHEMA_USER	VARCHAR2(128)	NOT NULL	Default schema used to parse the job For example, if the SCHEMA_USER is SCOTT and you submit the procedure HIRE_EMP as a job, the Oracle Database looks for SCOTT.HIRE_EMP
LAST_DATE	DATE		Date on which this job last successfully executed
LAST_SEC	VARCHAR2(8)		Same as LAST_DATE. This is when the last successful execution started.
THIS_DATE	DATE		Date that this job started executing (usually null if not executing)
THIS_SEC	VARCHAR2(8)		Same as THIS_DATE. This is when the last successful execution started.
NEXT_DATE	DATE	NOT NULL	Date that this job will next be executed
NEXT_SEC	VARCHAR2(8)		Same as NEXT_DATE. The job becomes due for execution at this time.
TOTAL_TIME	NUMBER		Total wall clock time spent by the system on this job (in seconds) when it last executed
BROKEN	VARCHAR2(1)		Y: no attempt is made to run this job N: an attempt is made to run this job
INTERVAL	VARCHAR2(200)	NOT NULL	A date function, evaluated at the start of execution, becomes next NEXT_DATE
FAILURES	NUMBER		Number of times the job has started and failed since its last success
WHAT	VARCHAR2(4000)		Body of the anonymous PL/SQL block that the job executes

Column	Datatype	NULL	Description
NLS_ENV	VARCHAR2(4000)		Session parameters describing the NLS environment of the job
MISC_ENV	RAW(32)		Other session parameters of the session that created the job. The job is run using these parameters.
INSTANCE	NUMBER		ID of the instance that can execute or is executing the job. The default is 0.

> **See Also:**
>
> "USER_JOBS"

6.144 DBA_JOBS_RUNNING

DBA_JOBS_RUNNING lists all jobs that are currently running in the instance.

Column	Datatype	NULL	Description
SID	NUMBER		Identifier of process that is executing the job. See "V$LOCK".
JOB	NUMBER		Identifier of job. This job is currently executing.
FAILURES	NUMBER		Number of times this job started and failed since its last success.
LAST_DATE	DATE		Date that this job last successfully executed.
LAST_SEC	VARCHAR2(8)		Same as LAST_DATE. This is when the last successful execution started.
THIS_DATE	DATE		Date that this job started executing.
THIS_SEC	VARCHAR2(8)		Same as THIS_DATE. This is when the last successful execution started.
INSTANCE	NUMBER		Indicates which instance can execute or is executing the job; the default is 0.

6.145 DBA_JOIN_IND_COLUMNS

DBA_JOIN_IND_COLUMNS describes all join conditions in the database. Its columns are the same as those in ALL_JOIN_IND_COLUMNS.

> **See Also:**
>
> "ALL_JOIN_IND_COLUMNS"

6.146 DBA_JOINGROUPS

DBA_JOINGROUPS describes join groups in the database. A join group is a user-created object that consists of two or more columns that can be meaningfully joined. The maximum number of columns that can be included in a join group is 255.

In certain queries, join groups enable the database to eliminate the performance overhead of decompressing and hashing column values. Join groups require an In-Memory column store (IM column store).

Related View

USER_JOINGROUPS describes join groups belonging to the user. This view does not display the JOINGROUP_OWNER column.

Column	Datatype	NULL	Description
JOINGROUP_OWNER	VARCHAR2(128)	NOT NULL	Join group owner. This is the user that created the join group.
JOINGROUP_NAME	VARCHAR2(128)	NOT NULL	This is the user specified name of the join group. The join group name is specified when the join group is created as part of the CREATE INMEMORY JOIN GROUP statement.
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Table owner
TABLE_NAME	VARCHAR2(128)	NOT NULL	Table name
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
FLAGS	VARCHAR2(6)		Possible values: • MASTER: Indicates which column in the join group is mastering the global dictionary. A join group is a group of columns sharing a global dictionary; the global dictionary is associated with one column and the other columns share the same dictionary. The column with which the global dictionary is associated is called the mastering column. • NULL: Indicates that the column is not mastering the global dictionary.
GD_ADDRESS	RAW(8)		The memory address of the global dictionary. Ideally, all the columns in one join group should have the same global dictionary address (that is, they share the same global structure). This might not always be the case (for example, a column might be added to a join group after it was populated into memory - in which case its GD_ADDRESS field will be NULL). In such cases, you should force re-populate the tables that are part of the join group and check the views after the repopulates complete.
AUTO_CREATED	VARCHAR2(3)		Indicates whether the join group was created by Automatic In-Memory (AIM) (YES) or whether the join group was user-created (NO)
CREATION_DATE	DATE	NOT NULL	Date and time at which the join group was created

See Also:

- "USER_JOINGROUPS"
- *Oracle Database In-Memory Guide* for an introduction to join groups
- *Oracle Database SQL Language Reference* for information about creating a join group using the `CREATE INMEMORY JOIN GROUP` statement

6.147 DBA_JSON_COLLECTION_TABLES

`DBA_JSON_COLLECTION_TABLES` describes all JSON collection tables in the database. Its columns are the same as those in `ALL_JSON_COLLECTION_TABLES`.

Note:

This view is available starting with Oracle Database 23ai.

See Also:

"ALL_JSON_COLLECTION_TABLES"

6.148 DBA_JSON_COLLECTION_VIEWS

`DBA_JSON_COLLECTION_VIEWS` describes all JSON collection views in the database. Its columns are the same as those in `ALL_JSON_COLLECTION_VIEWS`.

Note:

This view is available starting with Oracle Database 23ai, Release Update 23.6.

See Also:

"ALL_JSON_COLLECTION_VIEWS"

6.149 DBA_JSON_COLLECTIONS

DBA_JSON_COLLECTIONS describes all JSON collections in the database. Its columns are the same as those in ALL_JSON_COLLECTIONS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_COLLECTIONS"

6.150 DBA_JSON_COLUMNS

DBA_JSON_COLUMNS provides information on all JavaScript Object Notation (JSON) columns in the database. Its columns are the same as those in ALL_JSON_COLUMNS.

> **See Also:**
>
> - "ALL_JSON_COLUMNS"
> - *Oracle Database JSON Developer's Guide* for more information about using JSON with Oracle Database

6.151 DBA_JSON_DATAGUIDE_FIELDS

DBA_JSON_DATAGUIDE_FIELDS extracts the path and type information from all the data guides in the database, which are the data guides returned by the DBA_JSON_DATAGUIDE view. Its columns are the same as those in ALL_JSON_DATAGUIDE_FIELDS.

> **See Also:**
>
> "ALL_JSON_DATAGUIDE_FIELDS"

6.152 DBA_JSON_DATAGUIDES

DBA_JSON_DATAGUIDES provides information on all JavaScript Object Notation (JSON) columns in the database that have data guide enabled. Its columns are the same as those in ALL_JSON_DATAGUIDES.

> **See Also:**
>
> "ALL_JSON_DATAGUIDES"

6.153 DBA_JSON_DOMAIN_SCHEMA_COLUMNS

DBA_JSON_DOMAIN_SCHEMA_COLUMNS describes JSON schema constraints on columns of all data use case domains in the database. Its columns are the same as those in ALL_JSON_DOMAIN_SCHEMA_COLUMNS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DOMAIN_SCHEMA_COLUMNS"

6.154 DBA_JSON_DUALITY_VIEW_LINKS

DBA_JSON_DUALITY_VIEW_LINKS describes the links associated with all JSON-relational duality views in the database. Its columns are the same as those in ALL_JSON_DUALITY_VIEW_LINKS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DUALITY_VIEW_LINKS"

6.155 DBA_JSON_DUALITY_VIEW_TAB_COLS

DBA_JSON_DUALITY_VIEW_TAB_COLS describes the table columns associated with all JSON-relational duality views in the database. Its columns are the same as those in ALL_JSON_DUALITY_VIEW_TAB_COLS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DUALITY_VIEW_TAB_COLS"

6.156 DBA_JSON_DUALITY_VIEW_TABS

DBA_JSON_DUALITY_VIEW_TABS describes the tables associated with all JSON-relational duality views in the database. Its columns are the same as those in ALL_JSON_DUALITY_VIEW_TABS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DUALITY_VIEW_TABS"

6.157 DBA_JSON_DUALITY_VIEWS

DBA_JSON_DUALITY_VIEWS describes all JSON-relational duality views in the database. Its columns are the same as those in ALL_JSON_DUALITY_VIEWS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DUALITY_VIEWS"

6.158 DBA_JSON_INDEXES

DBA_JSON_INDEXES describes all indexes on JSON data in the database. Its columns are the same as those in ALL_JSON_INDEXES.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_INDEXES"

6.159 DBA_JSON_SCHEMA_COLUMNS

DBA_JSON_SCHEMA_COLUMNS describes JSON schema constraints on columns in all tables in the database. Its columns are the same as those in ALL_JSON_SCHEMA_COLUMNS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_SCHEMA_COLUMNS"

6.160 DBA_KAFKA_APPLICATIONS

DBA_KAFKA_APPLICATIONS describes all Oracle SQL Access to Kafka (OSAK) applications in the database.

Related View

USER_KAFKA_APPLICATIONS describes OSAK applications owned by the current user. This view does not display the OWNER or CLUSTER_ID columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the application
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the application
CLUSTER_NAME	VARCHAR2(30)	NOT NULL	Name of the OSAK cluster associated with the application
APPLICATION_NAME	VARCHAR2(30)	NOT NULL	Application name (also used as the Kafka group name)
TOPIC_NAME	VARCHAR2(249)	NOT NULL	Name of the Kafka topic associated with the application
FORMAT	VARCHAR2(4000)		Format of the Kafka topic value data: • AVRO • DSV • JSON
KEY_FORMAT	VARCHAR2(4000)		Format of the Kafka topic key data: • AVRO • DSV • JSON
NUM_VIEWS	NUMBER(38)	NOT NULL	Number of OSAK views for the application
NUM_PARTITIONS	NUMBER(38)	NOT NULL	Number of Kafka partitions associated with the OSAK views for the application
NUM_VIEWS_REQUESTED	NUMBER(38)	NOT NULL	Number of OSAK views requested for the application
APPLICATION_TYPE	VARCHAR2(30)	NOT NULL	Type of application: • LOAD • SEEKABLE • STREAMING
OPTIONS	BLOB	NOT NULL	User-supplied options (excluding AVRO-related schemas)
AVRO_SCHEMA	BLOB		User-supplied AVRO schema for the Kafka topic value data
KEY_AVRO_SCHEMA	BLOB		Reserved for future use

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "USER_KAFKA_APPLICATIONS"
- "DBMS_KAFKA_APPLICATIONS"

6.161 DBA_KAFKA_CLUSTERS

DBA_KAFKA_CLUSTERS describes the Oracle SQL Access to Kafka (OSAK) clusters for which any database user has READ access.

Related View

USER_KAFKA_CLUSTERS describes the OSAK clusters that are owned by the current user or for which the current user has READ access. This view does not display the OWNER or GRANTEE columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cluster The value of this column is always SYS.
CLUSTER_ID	VARCHAR2(40)	NOT NULL	System-generated unique cluster ID
STATE	NUMBER(38)	NOT NULL	Current state of the cluster: • 0 - CONNECTED • 1 - MAINTENANCE • 2 - BROKEN • 3 - DEREGISTERED
CLUSTER_NAME	VARCHAR2(30)	NOT NULL	User-supplied name of the cluster
BOOTSTRAP_SERVERS	VARCHAR2(4000)	NOT NULL	Comma-separated list of bootstrap servers for the cluster Each bootstrap server is represented in the following form: *hostname*:*port*
KAFKA_PROVIDER	VARCHAR2(128)	NOT NULL	Provider of the Kafka cluster software: • APACHE - Apache Kafka • OSS - Oracle Cloud Infrastructure Streaming Service
CONNECTION_TS	TIMESTAMP(6)		If GRANTEE is currently connected to the cluster, the date and time at which the connection was started; otherwise NULL
CLUSTER_DESCRIPTION	VARCHAR2(4000)		Optional user-supplied description of the Oracle SQL access to the cluster
GRANTEE	VARCHAR2(128)		User who is granted access to the cluster

Note:

This view is available starting with Oracle Database 23ai.

- "DBMS_KAFKA_CLUSTERS" for information about viewing all registered OSAK clusters in the database

6.162 DBA_KAFKA_LOAD_METRICS

DBA_KAFKA_LOAD_METRICS displays metrics for DBMS_KAFKA.EXECUTE_LOAD_APP operations on all tables in the database.

Related View

USER_KAFKA_LOAD_METRICS displays metrics for DBMS_KAFKA.EXECUTE_LOAD_APP operations on tables owned by the current user. This view does not display the OWNER or CLUSTER_ID columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table into which the Kafka data was loaded (TARGET_TABLE)
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the EXECUTE_LOAD_APP operation
CLUSTER_NAME	VARCHAR2(30)	NOT NULL	Name of the OSAK cluster associated with the OSAK cluster ID
APPLICATION_NAME	VARCHAR2(30)		Application name (also used as the Kafka group name)
TARGET_TABLE	VARCHAR2(128)	NOT NULL	Name of the table into which the Kafka data was loaded
TARGET_TABLE_SCHEMA	VARCHAR2(128)	NOT NULL	Schema of the table into which the Kafka data was loaded
INSERTED_ROWS	NUMBER(38)		Total number of rows inserted into the table by the load operation
KAFKA_RECORDS	NUMBER(38)		Total number of Kafka records fetched for the load operation
STARTED_TIME	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the Kafka data started being loaded into the table
FINISHED_TIME	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the Kafka data finished being loaded into the table

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "USER_KAFKA_LOAD_METRICS"
- "DBMS_KAFKA_LOAD_METRICS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_KAFKA.EXECUTE_LOAD_APP procedure

6.163 DBA_KAFKA_OPS

DBA_KAFKA_OPS describes operations for all Oracle SQL Access to Kafka (OSAK) views in the database.

Related View

USER_KAFKA_OPS describes operations for OSAK views owned by the current user. This view does not display the OWNER or CLUSTER_ID columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the OSAK view
OP_KEY	VARCHAR2(30)	NOT NULL	Unique operation key (replacement for the location file)
OP_TYPE	VARCHAR2(30)	NOT NULL	Generic operation type
OP	VARCHAR2(30)	NOT NULL	Specific type of operation within OP_TYPE
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the operation
CLUSTER_NAME	VARCHAR2(30)	NOT NULL	Name of the OSAK cluster associated with the operation
APPLICATION_NAME	VARCHAR2(30)		Name of the OSAK application associated with the operation (also used as the Kafka group name)
TOPIC_NAME	VARCHAR2(249)		Name of the Kafka topic associated with the operation
PARTITION_ID	NUMBER(38)		Partition ID of the Kafka topic associated with the operation
OFFSET	NUMBER(38)		Next offset from which an SEQ operation will start reading
RELATIVE_OFFSET	NUMBER(38)		Number of offsets, including the watermark, from which an SEQ operation will start reading
WATERMARK	VARCHAR2(5)		Basis for the start read offset for an SEQ operation (WMH or WML)
START_OFFSET_EPOCH_TIME	NUMBER(38)		Timestamp (in milliseconds) that determines the next offset from which the operation will start reading This value is used by the DBMS_KAFKA.INIT_OFFSET_TS and DBMS_KAFKA.SEEK_OFFSET_TS procedures.
END_OFFSET_EPOCH_TIME	NUMBER(38)		Timestamp (in milliseconds) that determines the end offset at which the operation will stop reading This value is used by the DBMS_KAFKA.SEEK_OFFSET_TS procedure.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "USER_KAFKA_OPS"
> - "DBMS_KAFKA_OPS"
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_KAFKA.INIT_OFFSET_TS` and `DBMS_KAFKA.SEEK_OFFSET_TS` procedures

6.164 DBA_KAFKA_OPS_RESULTS

`DBA_KAFKA_OPS_RESULTS` displays the results of operations for all Oracle SQL Access to Kafka (OSAK) views in the database.

Related View

`USER_KAFKA_OPS_RESULTS` displays the results of operations for Oracle SQL Access to Kafka (OSAK) views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of OSAK view
`OP_KEY`	`VARCHAR2(30)`		Unique operation key (replacement for the location file)
`ROWS_READ`	`NUMBER(38)`		Number of Kafka records read and returned by the operation
`LAST_OFFSET`	`NUMBER(38)`		Kafka offset of the last record read by the operation

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "USER_KAFKA_OPS_RESULTS"
> - "DBMS_KAFKA_OPS_RESULTS"

6.165 DBA_KAFKA_PARTITIONS

`DBA_KAFKA_PARTITIONS` describes partitions for Kafka topics associated with all Oracle SQL Access to Kafka (OSAK) views in the database.

Related View

USER_KAFKA_PARTITIONS describes partitions for Kafka topics associated with OSAK views owned by the current user. This view does not display the OWNER or CLUSTER_ID columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the OSAK view
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the topic/partition
CLUSTER_NAME	VARCHAR2(30)	NOT NULL	User-supplied name of the associated Kafka server/cluster
APPLICATION_NAME	VARCHAR2(30)	NOT NULL	Application name (also used as the Kafka group name)
TOPIC_NAME	VARCHAR2(249)	NOT NULL	Kafka topic name associated with the topic/partition
PARTITION_ID	NUMBER(38)	NOT NULL	Partition ID of the Kafka topic
VIEW_ID	NUMBER(38)	NOT NULL	ID of the OSAK view associated with the topic/partition
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the OSAK view associated with the topic/partition
TEMP_TABLE_NAME	VARCHAR2(128)		Name of the OSAK global temporary table associated with the topic/partition The value of this column is null if the application type is LOAD, that is, if the application was created using the DBMS_KAFKA.CREATE_LOAD_APP procedure. The application type is displayed in the APPLICATION_TYPE column of the DBA_KAFKA_APPLICATIONS view.

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "USER_KAFKA_PARTITIONS"
- "DBMS_KAFKA_PARTITIONS"

6.166 DBA_KGLLOCK

DBA_KGLLOCK lists all the locks and pins held on KGL objects (objects in the Kernel Generic Library cache).

Column	Datatype	NULL	Description
kgllkuse	RAW(4)		Address of the user session that holds the lock or pin
kgllkhdl	RAW(4)		Address of the handle for the KGL object

Column	Datatype	NULL	Description
kgllkmod	NUMBER		Current mode of the lock or pin
kgllkreq	NUMBER		Mode in which the lock or pin was requested
kgllktype	VARCHAR2(4)		Whether this is a lock or a pin

6.167 DBA_LIBRARIES

DBA_LIBRARIES describes all libraries in the database. Its columns are the same as those in ALL_LIBRARIES.

> **See Also:**
>
> "ALL_LIBRARIES"

6.168 DBA_LMT_FREE_SPACE

DBA_LMT_FREE_SPACE describes the free extents in all locally managed tablespaces in the database.

Column	Datatype	NULL	Description
TABLESPACE_ID	NUMBER		Identifier number of the tablespace containing the extent
FILE_ID	NUMBER		File identifier number of the file containing the extent
BLOCK_ID	NUMBER		Starting block number of the extent
BLOCKS	NUMBER		Size of the extent (in Oracle blocks)

6.169 DBA_LMT_USED_EXTENTS

DBA_LMT_USED_EXTENTS describes the extents comprising the segments in all locally managed tablespaces in the database.

Column	Datatype	NULL	Description
SEGMENT_FILEID	NUMBER		File number of the segment header of the extent
SEGMENT_BLOCK	NUMBER		Block number of the segment header of the extent
TABLESPACE_ID	NUMBER		Identifier number of the tablespace containing the extent
EXTENT_ID	NUMBER		Extent number in the segment
FILEID	NUMBER		File identifier number of the file containing the extent
BLOCK	NUMBER		Starting block number of the extent
LENGTH	NUMBER		Number of blocks in the extent

6.170 DBA_LOB_PARTITIONS

DBA_LOB_PARTITIONS displays all LOB partitions in the database. Its columns are the same as those in ALL_LOB_PARTITIONS.

> **See Also:**
>
> "ALL_LOB_PARTITIONS"

6.171 DBA_LOB_SUBPARTITIONS

DBA_LOB_SUBPARTITIONS displays partition-level attributes of all LOB data subpartitions in the database. Its columns are the same as those in ALL_LOB_SUBPARTITIONS.

> **See Also:**
>
> "ALL_LOB_SUBPARTITIONS"

6.172 DBA_LOB_TEMPLATES

DBA_LOB_TEMPLATES describes all LOB subpartition templates in the database. Its columns are the same as those in ALL_LOB_TEMPLATES.

> **See Also:**
>
> "ALL_LOB_TEMPLATES"

6.173 DBA_LOBS

DBA_LOBS displays the BLOBs and CLOBs contained in all tables in the database. BFILEs are stored outside the database, so they are not described by this view. This view's columns are the same as those in ALL_LOBS.

> **See Also:**
>
> "ALL_LOBS"

6.174 DBA_LOCK

DBA_LOCK lists all locks or latches held in the database, and all outstanding requests for a lock or latch.

Column	Datatype	NULL	Description
SESSION_ID	NUMBER		Session holding or acquiring the lock
LOCK_TYPE	VARCHAR2(26)		Lock type **See Also:** For a listing of lock types, see Oracle Enqueue Names
MODE_HELD	VARCHAR2(40)		Lock mode
MODE_REQUESTED	VARCHAR2(40)		Lock mode requested
LOCK_ID1	VARCHAR2(40)		Type-specific lock identifier, part 1
LOCK_ID2	VARCHAR2(40)		Type-specific lock identifier, part 2
LAST_CONVERT	NUMBER		The last convert
BLOCKING_OTHERS	VARCHAR2(40)		Whether the lock is currently blocking others
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.175 DBA_LOCK_INTERNAL

DBA_LOCK_INTERNAL displays a row for each lock or latch that is being held, and one row for each outstanding request for a lock or latch.

Column	Datatype	NULL	Description
SESSION_ID	NUMBER		Session holding or acquiring the lock
LOCK_TYPE	VARCHAR2(56)		Lock type **See Also:** For a listing of lock types, see Oracle Enqueue Names
MODE_HELD	VARCHAR2(40)		Lock mode
MODE_REQUESTED	VARCHAR2(40)		Lock mode requested
LOCK_ID1	VARCHAR2(1130)		Type-specific lock identifier, part 1
LOCK_ID2	VARCHAR2(40)		Type-specific lock identifier, part 2

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.176 DBA_LOCKDOWN_PROFILES

DBA_LOCKDOWN_PROFILES provides information about lockdown profiles.

The PRIVATE_DBAAS, PUBLIC_DBAAS, and SAAS lockdown profiles are empty placeholder profiles for the lockdown profiles of their corresponding deployment type. You can modify and add restrictions to these profiles based on their deployment purpose. For example, if you have a Software as a Service (SAAS) application, you can modify the SAAS lockdown profile and use it. You can also delete and re-create these profiles.

Column	Datatype	NULL	Description
PROFILE_NAME	VARCHAR2(128)	NOT NULL	Name of the lockdown profile
RULE_TYPE	VARCHAR2(128)		Rule type. A lockdown profile is used to restrict operations that can be performed by users connected to a given PDB. It provides the ability to add or remove different types of rules like STATEMENT, FEATURES or OPTIONS which will be restricted in the PDB.
RULE	VARCHAR2(128)		Rule to be enabled or disabled
CLAUSE	VARCHAR2(128)		Clause of the statement
CLAUSE_OPTION	VARCHAR2(128)		Option of the clause
OPTION_VALUE	VARCHAR2(4000)		Value of the option
MIN_VALUE	VARCHAR2(4000)		Minimum value allowed for the option
MAX_VALUE	VARCHAR2(4000)		Maximum value allowed for the option
LIST	VARCHAR2(4000)		List of allowed values for the option
STATUS	VARCHAR2(7)		Status of the lockdown profile: • ENABLE • DISABLE • EMPTY
USERS	VARCHAR2(6)		User type. Possible values: • COMMON • LOCAL • ALL
EXCEPT_USERS	CLOB		For internal use only

> **See Also:**
>
> - "PDB_LOCKDOWN"
> - *Oracle Multitenant Administrator's Guide* for an introduction to PDB lockdown profiles
> - *Oracle Database SQL Language Reference* for more information about creating lockdown profiles
> - *Oracle Database SQL Language Reference* for more information about dropping lockdown profiles
> - *Oracle Database SQL Language Reference* for more information about altering lockdown profiles

6.177 DBA_LOCKS

`DBA_LOCKS` is a synonym for `DBA_LOCK`.

> **See Also:**
>
> "DBA_LOCK"

6.178 DBA_LOG_GROUP_COLUMNS

`DBA_LOG_GROUP_COLUMNS` describes all columns in the database that are specified in log groups. Its columns are the same as those in `ALL_LOG_GROUP_COLUMNS`.

> **See Also:**
>
> "ALL_LOG_GROUP_COLUMNS"

6.179 DBA_LOG_GROUPS

`DBA_LOG_GROUPS` describes log group definitions on all tables in the database. Its columns are the same as those in `ALL_LOG_GROUPS`.

> **See Also:**
>
> "ALL_LOG_GROUPS"

6.180 DBA_LOGMNR_DICTIONARY_BUILDLOG

DBA_LOGMNR_DICTIONARY_BUILDLOG describes all successful LogMiner dictionary builds available for GoldenGate REGISTER EXTRACT.

When this view is queried from a PDB, it returns only LogMiner dictionary builds performed in that PDB.

Column	Datatype	NULL	Description
NAME	VARCHAR2(384)		User-supplied name of the LogMiner dictionary build
DATE_OF_BUILD	VARCHAR2(20)		Date and time at which the LogMiner dictionary build was performed
START_SCN	NUMBER		Begin SCN of the LogMiner dictionary build operation
END_SCN	NUMBER		End SCN of the LogMiner dictionary build operation
BUILD_TYPE	VARCHAR2(20)		Internal string that identifies how the LogMiner dictionary build was initiated
BUILD_OP	NUMBER		Internal number that identifies how the LogMiner dictionary build was initiated
CONTAINER_ID	NUMBER		ID of the container in which the LogMiner dictionary build was performed (the CDB root or a PDB)
CONTAINER_UID	NUMBER		Unique number that identifies the container in which the LogMiner dictionary build was performed (the CDB root or a PDB)
CONTAINER_NAME	VARCHAR2(384)		Name of the container in which the LogMiner dictionary build was performed (the CDB root or a PDB)
RESETLOGS_CHANGE#	NUMBER		SCN that identifies the redo branch of the LogMiner dictionary build

6.181 DBA_LOGMNR_LOG

DBA_LOGMNR_LOG displays all archived logs registered with active LogMiner persistent sessions in the database.

A persistent LogMiner session is created either by starting Data Guard SQL Apply on a logical standby database for the first time or by creating Replication capture.

Column	Datatype	NULL	Description
LOGMNR_SESSION_ID	NUMBER	NOT NULL	Unique identifier of the persistent session
NAME	VARCHAR2(513)		Name of the archived log
DBID	NUMBER	NOT NULL	Database identifier that produced the archived log
RESETLOGS_SCN	NUMBER	NOT NULL	SCN at which resetlogs operation was performed at the source database generating the archived log
RESETLOGS_TIME	NUMBER	NOT NULL	Timestamp at which resetlogs operation was performed at the source database generating the archived log
MODIFIED_TIME	DATE		Time at which the archived log was registered with LogMiner

Column	Datatype	NULL	Description
THREAD#	NUMBER	NOT NULL	Redo thread at the source database that generated the archived log
SEQUENCE#	NUMBER	NOT NULL	Logfile sequence number
FIRST_SCN	NUMBER	NOT NULL	Lowest SCN of the redo record contained in the logfile
NEXT_SCN	NUMBER		Highest possible SCN of the redo record contained in the logfile
FIRST_TIME	DATE		Time of the first redo record contained in the logfile
NEXT_TIME	DATE		Time of the last redo record contained in the logfile
DICTIONARY_BEGIN	VARCHAR2(3)		Indicates whether the archived log contains the beginning of a LogMiner dictionary (YES) or not (NO)
DICTIONARY_END	VARCHAR2(3)		Indicates whether the archived log contains the end of a LogMiner dictionary (YES) or not (NO)
KEEP	VARCHAR2(3)		Indicates whether the logfile is still required for this LogMiner session (YES) or not (NO)
SUSPECT	VARCHAR2(3)		Indicates whether the archived log content was deemed to be corrupt or the archived log is partially filled (YES) or not (NO)

6.182 DBA_LOGMNR_PURGED_LOG

DBA_LOGMNR_PURGED_LOG displays archived redo log files that have been applied to the logical standby database and can be deleted because they are no longer needed.

Files in this view are refreshed as a result of executing the DBMS_LOGSTDBY.PURGE_SESSION PL/SQL procedure for Oracle Data Guard SQL Apply:

Column	Datatype	NULL	Description
FILE_NAME	VARCHAR2(513)		Fully qualified names of the archived redo log files that are no longer needed by SQL Apply and can be deleted from the operating system

See Also:

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_LOGSTDBY.PURGE_SESSION procedure

6.183 DBA_LOGMNR_SESSION

DBA_LOGMNR_SESSION displays all active LogMiner persistent sessions in the database.

A persistent LogMiner session is created either by starting Data Guard SQL Apply on a logical standby database for the first time or by creating Replication capture.

Column	Datatype	NULL	Description
ID	NUMBER	NOT NULL	Unique session identifier

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)	NOT NULL	Unique session name
SOURCE_DATABASE	VARCHAR2(128)		Global name of the source database whose archived logs are to be mined in this persistent LogMiner session
SOURCE_DBID	NUMBER		Database ID of the source database
SOURCE_RESETLOGS_SCN	NUMBER		Resetlogs SCN associated with the incarnation of the source database whose archived logs are mined
SOURCE_RESETLOGS_TIME	NUMBER		Resetlogs time associated with the incarnation of the source database whose archived logs are mined
FIRST_SCN	NUMBER		Only modifications that occurred on or after this SCN can be mined using this persistent session
END_SCN	NUMBER		No modifications that occurred on or after this SCN can be mined using this persistent session
RELOCATION_SCN	NUMBER		SCN below which GoldenGate capture cannot be altered This value is set when a PDB containing GoldenGate capture has been relocated to another CDB or switched to its Data Guard PDB, or when the CDB is upgraded using the DBMS_ROLLING package.
WAIT_FOR_LOG	VARCHAR2(3)		Indicates whether the persistent session waits for RFS to register new archived logs or to fill gaps (YES) or not (NO)
HOT_MINE	VARCHAR2(3)		Indicates whether real-time mining is on (YES) or not (NO)
SAFE_PURGE_SCN	NUMBER		Persistent session can safely be purged up to this SCN
CHECKPOINT_SCN	NUMBER		SCN at which the latest checkpoint is taken by the persistent LogMiner session
PURGE_SCN	NUMBER		The session has been purged up to this SCN

6.184 DBA_LOGSTDBY_EVENTS

DBA_LOGSTDBY_EVENTS displays information about the activity of the logical standby database system.

It can be used to determine the cause of failures that occur when applying redo data to logical standby databases. This view is for logical standby databases only.

Column	Datatype	NULL	Description
EVENT_TIME	DATE		Time when the event was logged
EVENT_TIMESTAMP	TIMESTAMP(6)	NOT NULL	Timestamp when the event was logged
START_SCN	NUMBER		The SCN at which the associated transaction started at the primary database. This SCN refers to the system change number at the primary database.

Column	Datatype	NULL	Description
CURRENT_SCN	NUMBER		SCN associated with the change at the primary database. If a failure occurred, then examine this column to determine which archived log file contains the source of the failure (for example, an unsupported record).
COMMIT_SCN	NUMBER		SCN value on which the change was committed at the primary database
XIDUSN	NUMBER		Transaction ID undo segment number at the primary database of the associated transaction
XIDSLT	NUMBER		Transaction ID slot number at the primary database of the associated transaction
XIDSQN	NUMBER		Transaction ID sequence number at the primary database of the associated transaction
EVENT	CLOB		Statement that was being processed when the failure occurred
STATUS_CODE	NUMBER		Status (or Oracle error code) belonging to the STATUS message
STATUS	VARCHAR2(2000)		Description of the current activity of the process or the reason why the apply operation stopped
SRC_CON_NAME	VARCHAR2(384)		Identifies the PDB name at the primary database where the transaction was executed
SRC_CON_ID	NUMBER		Contains the PDB ID (the PDB_ID column from the DBA_PDBS view) of the primary database where the associated change was generated.

> **Note:**
>
> In a CDB, this view shows data only when queried in the root.

6.185 DBA_LOGSTDBY_HISTORY

DBA_LOGSTDBY_HISTORY displays the history of switchovers and failovers in a Data Guard configuration.

It does this by showing the complete sequence of redo log streams processed or created on the local system, across all role transitions. (After a role transition, a new log stream is started and the log stream sequence number is incremented by the new primary database.). This view is for logical standby databases only.

Column	Datatype	NULL	Description
STREAM_SEQUENCE#	NUMBER		Lists the sequence numbers for all log streams created or applied on the local system. **Note**: A value of 0 indicates an unknown sequence order; this is reserved for future log streams.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(16)		Description of the log stream processing: • Past - The log stream has already been processed • Immediate Past - This is the most recently processed log stream; its status is transitioning from Current to Past • Current - The log stream is currently being processed • Immediate Future - This is the next log stream to be processed; its status is transitioning from Future to Current • Future - The log stream will be processed
SOURCE	VARCHAR2(5)		Describes how the log stream was started: • RFS - The RFS process created the log stream • User - A user registered the initial log file for the log stream • Synch - A user issued the ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY DDL statement • Redo - The log stream information was recorded in the redo log
DBID	NUMBER		Database identifier of the primary database that created the log stream
FIRST_CHANGE#	NUMBER		Lowest system change number (SCN) in the current log file
LAST_CHANGE#	NUMBER		Highest system change number (SCN) in the current log file
FIRST_TIME	DATE		Time of the first SCN entry (FIRST_CHANGE#) in the current log file
LAST_TIME	DATE		Time of the last SCN entry (LAST_CHANGE#) in the current log file
DGNAME	VARCHAR2(255)		Unique database name (DB_UNIQUE_NAME) of the primary database that produced the log stream. See V$DATAGUARD_CONFIG to display all database DB_UNIQUE_NAME values defined in the Data Guard configuration.
MERGE_CHANGE#	NUMBER		SCN that should be used to flashback a failed primary (that created the log stream) or to flashback a bystander logical standby database following a failover, in the context of the associated redo log stream. It is the SCN up to which redo for the associated log stream can be merged safely in all databases using local copies of archived logs received from the primary database. In order to apply changes beyond this following a failover, you will need to fetch and mine the redo logs from the failover target.

Column	Datatype	NULL	Description
PROCESSED_CHANGE#	NUMBER		Strict upper bound on the SCN up to which SQL Apply has applied redo records before it switched to a new log stream (either because it was activated and became the primary database, or in the case of a bystander logical standby database where it switched to a new log stream to accommodate a new primary database).

> **Note:**
>
> In a CDB, this view shows data only when queried in the root.

6.186 DBA_LOGSTDBY_LOG

DBA_LOGSTDBY_LOG displays information about the logs registered for a logical standby database.

This view is for logical standby databases only.

Column	Datatype	NULL	Description
THREAD#	NUMBER	NOT NULL	Thread ID of the archive log. The THREAD number is 1 for a single instance. For Real Application Clusters, this column will contain different numbers.
RESETLOGS_CHANGE#	NUMBER	NOT NULL	Start SCN of the branch
RESETLOGS_ID	NUMBER	NOT NULL	Resetlogs identifier (a numeric form of the timestamp of the branch)
SEQUENCE#	NUMBER	NOT NULL	Sequence number of the archive log file
FIRST_CHANGE#	NUMBER	NOT NULL	System change number (SCN) of the current archive log
NEXT_CHANGE#	NUMBER		SCN of the next archive log
FIRST_TIME	DATE		Date of the current archive log
NEXT_TIME	DATE		Date of the next archive log
FILE_NAME	VARCHAR2(513)		Name of the archive log
TIMESTAMP	DATE		Time when the archive log was registered
DICT_BEGIN	VARCHAR2(3)		Indicates whether the beginning of the dictionary build is in this archive log (YES) or not (NO)
DICT_END	VARCHAR2(3)		Indicates whether the end of the dictionary build is in this archive log (YES) or not (NO)

Column	Datatype	NULL	Description
APPLIED	VARCHAR2(8)		Indicates primarily whether a given foreign archived log has been applied fully by SQL Apply: • YES - SQL Apply has fully applied the foreign archived log and no longer needs it • CURRENT - SQL Apply is currently applying changes contained in the foreign archived log • NO - SQL Apply has not started applying any changes contained in the foreign archived log • FETCHING - SQL Apply encountered a corruption while reading redo records from this foreign archived log, and is currently using the automatic gap resolution to refetch a new copy of the log from the primary database • CORRUPT - SQL Apply encountered a corruption while reading redo records from this foreign archived log, and refetching a new copy of the archived log did not resolve the problem. SQL Apply will not refetch a new copy of this archived log automatically, and will require user intervention to manually register a new copy of the foreign archived log.
BLOCKS	NUMBER		Number of blocks in the log
BLOCK_SIZE	NUMBER		Size of each block in the log

Note:

The SCN values in this view correlate to the SCN values shown in the DBA_LOGSTDBY_PROGRESS view.

Note:

In a CDB, this view shows data only when queried in the root.

6.187 DBA_LOGSTDBY_NOT_UNIQUE

DBA_LOGSTDBY_NOT_UNIQUE displays all tables that have no primary and no non-null unique indexes.

Most of the tables displayed by this view are supported because their columns contain enough information to be maintained in a logical standby database. Some tables, however, cannot be supported because their columns do not contain the necessary information. Unsupported tables usually contain a column defined using an unsupported data type.

In a CDB, the data displayed pertains to the container in which the view is queried.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Schema name of the non-unique table

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Table name of the non-unique table
BAD_COLUMN	VARCHAR2(1)		• Y - Table column is defined using an unbounded data type, such as LONG or BLOB. If two rows in the table match except in their LOB columns, then the table cannot be maintained properly. Log apply services will attempt to maintain these tables, but you must ensure the application does not allow uniqueness only in the unbounded columns. • N - Enough column information is present to maintain the table in the logical standby database but the log transport services and log apply services would run more efficiently if you added a primary key. You should consider adding a disabled RELY constraint to these tables.

6.188 DBA_LOGSTDBY_PARAMETERS

DBA_LOGSTDBY_PARAMETERS displays the list of parameters used by SQL apply for logical standby databases.

This view is for logical standby databases only.

Column	Datatype	NULL	Description
NAME	VARCHAR2(64)		Name of the parameter: • MAX_SGA - System global area (SGA) allocated for the log apply services cache (in megabytes) • MAX_SERVERS - Number of processes used by SQL Apply services • PREPARE_SERVERS - Controls the number of parallel execution servers used to prepare changes • APPLY_SERVERS - Controls the number of parallel execution servers used to apply changes • MAX_EVENTS_RECORDED - Number of events stored in the DBA_LOGSTDBY_EVENTS view • RECORD_SKIP_ERRORS - Indicates records that are skipped • RECORD_SKIP_DDL - Indicates skipped DDL statements • RECORD_APPLIED_DDL - Indicates applied DDL statements • RECORD_UNSUPPORTED_OPERATIONS - Shows whether SQL Apply will capture information about transactions that did unsupported operations at the primary database in the DBA_LOGSTDBY_EVENTS view • EVENT_LOG_DEST - Indicates where SQL Apply records the occurrence of an interesting event • LOG_AUTO_DELETE - Shows whether SQL Apply will automatically delete remote archived logs received from the primary database, once the contents of the logs are applied at the logical standby database. • LOG_AUTO_DEL_RETENTION_TARGET - How many minutes a remote archived log received from the primary database will be retained at the logical standby database, once the contents of the log are applied by SQL Apply. • PRESERVE_COMMIT_ORDER - Shows whether transactions are committed at the logical standby database in the same order that they were committed at the primary database
VALUE	VARCHAR2(2000)		Value of the parameter
UNIT	VARCHAR2(64)		Unit of the value, if applicable
SETTING	VARCHAR2(64)		Possible values are as follows: • SYSTEM - Parameter value was not explicitly set by the user. However, the user can change it with an appropriate call to the APPLY_SET procedure. • USER - Parameter value was explicitly set by the user
DYNAMIC	VARCHAR2(64)		YES if the parameter can be set dynamically (that is, without having to stop SQL Apply) NO if setting the parameter requires that SQL Apply be stopped

> **Note:**
>
> In a CDB, this view shows data when queried in the root.

6.189 DBA_LOGSTDBY_PLSQL_MAP

DBA_LOGSTDBY_PLSQL_MAP shows the mapping between a supported user invokable (/external) PL/SQL procedure to the corresponding replicated internal PL/SQL procedure.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner name of the procedure
PKG_NAME	VARCHAR2(128)		Package name of the user invokable procedure
PROC_NAME	VARCHAR2(128)		Procedure name of the user invokable procedure
INTERNAL_PKG_NAME	VARCHAR2(128)		Package name of the internal procedure
INTERNAL_PROC_NAME	VARCHAR2(128)		Procedure name of the internal procedure

> **Note:**
>
> In a CDB, this view shows data when queried in the root or a PDB.

6.190 DBA_LOGSTDBY_PLSQL_SUPPORT

DBA_LOGSTDBY_PLSQL_SUPPORT shows the PL/SQL packages that are only supported during rolling operations.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner name of the package
PKG_NAME	VARCHAR2(128)		Package name of the user invokable procedure
SUPPORT_LEVEL	VARCHAR2(12)		Logical standby PL/SQL support level for the package: • ALWAYS - PL/SQL replication is always supported for this package, whether it is called inside or outside of DBMS_ROLLING • DBMS_ROLLING: PL/SQL replication is supported only when the procedure is called inside DBMS_ROLLING

> **Note:**
>
> In a CDB, this view shows data when queried in the root or a PDB.

> **See Also:**
>
> *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ROLLING` package

6.191 DBA_LOGSTDBY_PROGRESS

`DBA_LOGSTDBY_PROGRESS` is deprecated. The information that was provided in this view is now provided in the `V$LOGSTDBY_PROGRESS` view.

> **See Also:**
>
> "V$LOGSTDBY_PROGRESS"

6.192 DBA_LOGSTDBY_SKIP

`DBA_LOGSTDBY_SKIP` displays the skip rules that are used by SQL Apply.

This view is for logical standby databases only.

Column	Datatype	NULL	Description
ERROR	VARCHAR2(1)		Indicates how the skip rule was created: • Y - For rules from DBMS_LOGSTDBY.SKIP_ERROR • N - For rules from DBMS_LOGSTDBY.SKIP
STATEMENT_OPT	VARCHAR2(128)		Specifies the type of statement that should be skipped
OWNER	VARCHAR2(128)		Name of the schema under which the skip option should be used
NAME	VARCHAR2(261)		Name of the object that is being skipped
USE_LIKE	VARCHAR2(1)		Indicates whether the statement should use a SQL wildcard search when matching names (Y) or not (N)
ESC	VARCHAR2(1)		Escape character used when performing wildcard matches
PROC	VARCHAR2(392)		Name of a stored procedure that will be executed when processing the skip option

> **See Also:**
>
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_LOGSTDBY.SKIP_ERROR` procedure
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_LOGSTDBY.SKIP` procedure

6.193 DBA_LOGSTDBY_SKIP_TRANSACTION

DBA_LOGSTDBY_SKIP_TRANSACTION displays the skip settings chosen. This view is for logical standby databases only.

Column	Datatype	NULL	Description
XIDUSN	NUMBER		Transaction ID undo segment number
XIDSLT	NUMBER		Transaction ID slot number
XIDSQN	NUMBER		Transaction ID sequence number
CON_NAME	VARCHAR2(384)		Container name

6.194 DBA_LOGSTDBY_SUPPORT_MODE

DBA_LOGSTDBY_SUPPORT_MODE displays information about whether tables in the database are supported for logical standby.

The query results for this view depend on whether the database is currently undergoing a manual rolling upgrade performed using transient logical standby databases. If the database *is* undergoing such an upgrade, then this view displays information about whether tables in the database are supported for transient logical standby. If the database *is not* undergoing such an upgrade, then this view displays information about whether tables in the database are supported for logical standby.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Table owner
TABLE_NAME	VARCHAR2(128)		Table name
SUPPORT_MODE	VARCHAR2(11)		If the database is currently undergoing a manual rolling upgrade performed using transient logical standby databases, then this column indicates whether the table is supported for transient logical standby. Otherwise, this column indicates whether the table is supported for logical standby. Possible values: • SUPPORTED - The table is fully supported • INTERNAL - The table is not supported because it contains data that should not be replicated. Such tables include mapping tables for index-organized tables, storage tables for nested tables, materialized view logs, secondary objects associated with domain indexes, and temporary tables. • UNSUPPORTED - The table is not supported because it contains a data type that is not supported or uses a feature that is not supported

Column	Datatype	NULL	Description
EXPLANATION	VARCHAR2(4000)		Reason the table is not fully supported for transient logical standby This column is populated only when all of the following conditions are met: • The database is currently undergoing a manual rolling upgrade using transient logical standby databases • The value of the COMPATIBLE initialization parameter is 20.0 or higher • The value of the SUPPORT_MODE column is INTERNAL or UNSUPPORTED

6.195 DBA_LOGSTDBY_UNSUPPORTED

DBA_LOGSTDBY_UNSUPPORTED displays the schemas, tables, and columns in those tables that contain data types that are unsupported by logical standby.

The query results for this view depend on whether the database is currently undergoing a manual rolling upgrade performed using transient logical standby databases. If the database *is* undergoing such an upgrade, then this view displays information about tables in the database that are unsupported for transient logical standby. If the database *is not* undergoing such an upgrade, then this view displays information about tables in the database are unsupported for logical standby.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the unsupported table
TABLE_NAME	VARCHAR2(128)		Name of the unsupported table
COLUMN_NAME	VARCHAR2(128)		Name of the unsupported column
ATTRIBUTES	VARCHAR2(4000)		If the database is currently undergoing a manual rolling upgrade performed using transient logical standby databases and the value of the COMPATIBLE initialization parameter is 20.0 or higher, then this column displays the reason the table is unsupported by SQL Apply.
DATA_TYPE	VARCHAR2(106)		Data type of the unsupported column

Note:

When the value of the COMPATIBLE initialization parameter is 20.0 or higher, this view displays all columns in unsupported tables. Otherwise, this view displays only the unsupported columns in unsupported tables.

> **Note:**
>
> A rolling upgrade performed using the `DBMS_ROLLING` PL/SQL package supports more object types than a manual rolling upgrade performed using transient logical standby databases.

> **See Also:**
>
> - "DBA_ROLLING_UNSUPPORTED" for more information about determining unsupported data types for a rolling upgrade using the `DBMS_ROLLING` package
> - *Oracle Data Guard Concepts and Administration* for more information about rolling operations
> - *Oracle Data Guard Concepts and Administration* for more information about unsupported tables for rolling upgrade operations
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ROLLING` package

6.196 DBA_LOGSTDBY_UNSUPPORTED_TABLE

`DBA_LOGSTDBY_UNSUPPORTED_TABLE` displays the data tables that are unsupported by logical standby.

The query results for this view depend on whether the database is currently undergoing a manual rolling upgrade performed using transient logical standby databases. If the database *is* undergoing such an upgrade, then this view displays information about tables in the database that are unsupported for transient logical standby. If the database *is not* undergoing such an upgrade, then this view displays information about tables in the database are unsupported for logical standby.

The data displayed pertains to the container in which the view is queried.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`		Owner of the unsupported table
`TABLE_NAME`	`VARCHAR2(128)`		Name of the unsupported table
`EXPLANATION`	`VARCHAR2(4000)`		If the database is currently undergoing a manual rolling upgrade performed using transient logical standby databases, then this column displays the reason the table is unsupported for transient logical standby. Otherwise, this column displays the reason the table is unsupported for logical standby. This column is populated only when the value of the `COMPATIBLE` initialization parameter is `20.0` or higher.

6.197 DBA_MEASURE_FOLDER_CONTENTS

DBA_MEASURE_FOLDER_CONTENTS describes the contents of all OLAP measure folders in the database. Its columns are the same as those in ALL_MEASURE_FOLDER_CONTENTS.

> **See Also:**
>
> "ALL_MEASURE_FOLDER_CONTENTS"

6.198 DBA_MEASURE_FOLDER_SUBFOLDERS

DBA_MEASURE_FOLDER_SUBFOLDERS describes the OLAP measure folders contained within the database OLAP measure folders. Its columns are the same as those in ALL_MEASURE_FOLDER_SUBFOLDERS.

> **See Also:**
>
> "ALL_MEASURE_FOLDER_SUBFOLDERS"

6.199 DBA_MEASURE_FOLDERS

DBA_MEASURE_FOLDERS describes all OLAP measure folders in the database. Its columns are the same as those in ALL_MEASURE_FOLDERS.

> **See Also:**
>
> "ALL_MEASURE_FOLDERS"

6.200 DBA_METADATA_PROPERTIES

DBA_METADATA_PROPERTIES describes OLAP metadata properties in the database. Its columns are the same as those in ALL_METADATA_PROPERTIES.

> **See Also:**
>
> "ALL_METADATA_PROPERTIES"

6.201 DBA_METHOD_PARAMS

DBA_METHOD_PARAMS describes the method parameters of all object types in the database. Its columns are the same as those in ALL_METHOD_PARAMS.

> **See Also:**
>
> "ALL_METHOD_PARAMS"

6.202 DBA_METHOD_RESULTS

DBA_METHOD_RESULTS describes the method results of all object types in the database. Its columns are the same as those in ALL_METHOD_RESULTS.

> **See Also:**
>
> "ALL_METHOD_RESULTS"

6.203 DBA_MINING_MODEL_ATTRIBUTES

DBA_MINING_MODEL_ATTRIBUTES describes all machine learning model attributes in the database. Its columns are the same as those in ALL_MINING_MODEL_ATTRIBUTES.

> **See Also:**
>
> "ALL_MINING_MODEL_ATTRIBUTES"

6.204 DBA_MINING_MODEL_PARTITIONS

DBA_MINING_MODEL_PARTITIONS describes all the model partitions accessible to the system. Its columns are the same as those in ALL_MINING_MODEL_PARTITIONS.

> **See Also:**
>
> "ALL_MINING_MODEL_PARTITIONS"

6.205 DBA_MINING_MODEL_SETTINGS

DBA_MINING_MODEL_SETTINGS describes all machine learning model settings in the database. Its columns are the same as those in ALL_MINING_MODEL_SETTINGS.

> **See Also:**
>
> "ALL_MINING_MODEL_SETTINGS"

6.206 DBA_MINING_MODEL_TABLES

DBA_MINING_MODEL_TABLES describes the tables that contain metadata about the machine learning models in the database.

Machine learning models are schema objects created by Oracle Machine Learning for SQL (OML4SQL).

Model tables reside in the schema of the machine learning model owner. The metadata stored in the tables is controlled by OML4SQL APIs. The tables are read-only. They should not be modified by users.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the machine learning model
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the machine learning model
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
TABLE_TYPE	VARCHAR2(21)		The type of metadata stored in the table

6.207 DBA_MINING_MODEL_VIEWS

DBA_MINING_MODEL_VIEWS describes all model views in the database. Its columns are the same as those in ALL_MINING_MODEL_VIEWS.

> **See Also:**
>
> "ALL_MINING_MODEL_VIEWS"

6.208 DBA_MINING_MODEL_XFORMS

DBA_MINING_MODEL_XFORMS describes the user-specified transformations embedded in all models accessible in the system. Its columns are the same as those in ALL_MINING_MODEL_XFORMS.

> **See Also:**
>
> "ALL_MINING_MODEL_XFORMS"

6.209 DBA_MINING_MODELS

DBA_MINING_MODELS describes all machine learning models in the database. Its columns are the same as those in ALL_MINING_MODELS.

> **See Also:**
>
> "ALL_MINING_MODELS"

6.210 DBA_MLE_ENV_IMPORTS

DBA_MLE_ENV_IMPORTS describes import name to module mappings in all Oracle Database Multilingual Engine (MLE) environments in the database. Its columns are the same as those in ALL_MLE_ENV_IMPORTS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_MLE_ENV_IMPORTS"

6.211 DBA_MLE_ENVS

DBA_MLE_ENVS describes all Oracle Database Multilingual Engine (MLE) environments in the database. Its columns are the same as those in ALL_MLE_ENVS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_MLE_ENVS"

6.212 DBA_MLE_MODULES

DBA_MLE_MODULES describes all Oracle Database Multilingual Engine (MLE) modules in the database. Its columns are the same as those in ALL_MLE_MODULES.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_MLE_MODULES"

6.213 DBA_MLE_PROCEDURES

DBA_MLE_PROCEDURES describes all Oracle Database Multilingual Engine (MLE) functions and procedures in the database. Its columns are the same as those in ALL_MLE_PROCEDURES.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_MLE_PROCEDURES"

6.214 DBA_MVIEW_AGGREGATES

`DBA_MVIEW_AGGREGATES` describes the grouping functions (aggregated measures) that appear in the `SELECT` list of all aggregated materialized view in the database. Its columns are the same as those in `ALL_MVIEW_AGGREGATES`.

> **See Also:**
>
> "ALL_MVIEW_AGGREGATES"

6.215 DBA_MVIEW_ANALYSIS

`DBA_MVIEW_ANALYSIS` describes all materialized views in the database that potentially support query rewrite and that provide additional information for analysis by applications. Its columns are the same as those in `ALL_MVIEW_ANALYSIS`.

> **Note:**
>
> This view excludes materialized views that reference remote tables or that include references to non-static values such as `SYSDATE` or `USER`. This view also excludes materialized views that were created as snapshots before Oracle8*i* and that were never altered to enable query rewrite.

> **See Also:**
>
> "ALL_MVIEW_ANALYSIS"

6.216 DBA_MVIEW_COMMENTS

`DBA_MVIEW_COMMENTS` displays comments on all materialized views in the database. Its columns are the same as those in `ALL_MVIEW_COMMENTS`.

> **See Also:**
>
> "ALL_MVIEW_COMMENTS"

6.217 DBA_MVIEW_DETAIL_LOGICAL_PARTITION

DBA_MVIEW_DETAIL_LOGICAL_PARTITION displays freshness information, with respect to logical partition change tracking (LPCT) detail partitions, for all materialized views in the database. Its columns are the same as those in ALL_MVIEW_DETAIL_LOGICAL_PARTITION.

> **See Also:**
>
> "ALL_MVIEW_DETAIL_LOGICAL_PARTITION"

6.218 DBA_MVIEW_DETAIL_PARTITION

DBA_MVIEW_DETAIL_PARTITION displays freshness information, with respect to partition change tracking (PCT) detail partitions, for all materialized views in the database. Its columns are the same as those in ALL_MVIEW_DETAIL_PARTITION.

> **See Also:**
>
> "ALL_MVIEW_DETAIL_PARTITION".

6.219 DBA_MVIEW_DETAIL_RELATIONS

DBA_MVIEW_DETAIL_RELATIONS represents the named detail relations that are either in the FROM list of a materialized view, or that are indirectly referenced through views in the FROM list. Its columns are the same as those in ALL_MVIEW_DETAIL_RELATIONS.

> **See Also:**
>
> "ALL_MVIEW_DETAIL_RELATIONS"

6.220 DBA_MVIEW_DETAIL_SUBPARTITION

DBA_MVIEW_DETAIL_SUBPARTITION displays freshness information, with respect to partition change tracking (PCT) detail subpartitions, for all materialized views in the database. Its columns are the same as those in ALL_MVIEW_DETAIL_SUBPARTITION.

> **See Also:**
>
> "ALL_MVIEW_DETAIL_SUBPARTITION"

6.221 DBA_MVIEW_JOINS

DBA_MVIEW_JOINS describes a join between two columns in the WHERE clause of a subquery that defines a materialized view. Its columns are the same as those in ALL_MVIEW_JOINS.

> **See Also:**
>
> "ALL_MVIEW_JOINS"

6.222 DBA_MVIEW_KEYS

DBA_MVIEW_KEYS describes the columns or expressions in the SELECT list upon which materialized views in the database are based. Its columns are the same as those in ALL_MVIEW_KEYS.

> **See Also:**
>
> "ALL_MVIEW_KEYS"

6.223 DBA_MVIEW_LOG_FILTER_COLS

DBA_MVIEW_LOG_FILTER_COLS displays all columns (excluding primary key columns) being logged in the materialized view logs.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the master table being logged
NAME	VARCHAR2(128)		Name of the master table being logged
COLUMN_NAME	VARCHAR2(128)		Column being logged

6.224 DBA_MVIEW_LOGS

DBA_MVIEW_LOGS describes all materialized view logs in the database. Its columns are the same as those in ALL_MVIEW_LOGS.

> **See Also:**
>
> "ALL_MVIEW_LOGS"

6.225 DBA_MVIEW_REFRESH_TIMES

DBA_MVIEW_REFRESH_TIMES describes refresh times of all materialized views in the database. Its columns are the same as those in ALL_MVIEW_REFRESH_TIMES.

> **See Also:**
>
> "ALL_MVIEW_REFRESH_TIMES"

6.226 DBA_MVIEWS

DBA_MVIEWS describes all materialized views in the database. Its columns are the same as those in ALL_MVIEWS.

> **See Also:**
>
> "ALL_MVIEWS"

6.227 DBA_MVREF_CHANGE_STATS

DBA_MVREF_CHANGE_STATS displays the change data load information on the base tables associated with a refresh run for all the materialized views for the database.

Related View

USER_MVREF_CHANGE_STATS displays the change data load information on the master tables associated with a refresh run for all the materialized views in the database that are accessible to the current user.

Column	Datatype	NULL	Description
TBL_OWNER	VARCHAR2(128)	NOT NULL	Owner of the master table for the materialized view
TBL_NAME	VARCHAR2(128)	NOT NULL	Name of the master table for the materialized view
MV_OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MV_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
REFRESH_ID	NUMBER	NOT NULL	The refresh ID of the refresh run
NUM_ROWS_INS	NUMBER		The number of inserts in the materialized view log of the table (applicable only if the table has a materialized view log)
NUM_ROWS_UPD	NUMBER		The number of updates in the materialized view log of the table (applicable only if the table has a materialized view log)
NUM_ROWS_DEL	NUMBER		The number of deletes in the materialized view log of the table (applicable only if the table has a materialized view log)

Column	Datatype	NULL	Description
NUM_ROWS_DL_INS	NUMBER		The number of direct load inserts on the table
PMOPS_OCCURRED	CHAR(1)		Indicates whether a partition-maintenance operation (PMOP) occurred. Possible values: • Y • N • NULL: Indicates an unknown value
PMOP_DETAILS	VARCHAR2(4000)		Details of the PMOPs in the following format: • TRUNCATE (low_bound, high_bound) • EXECHANGE (low_bound, high_bound)
NUM_ROWS	NUMBER		The number of rows in the table at the start of the refresh operation

> **See Also:**
>
> "USER_MVREF_CHANGE_STATS"

6.228 DBA_MVREF_RUN_STATS

DBA_MVREF_RUN_STATS has information about each refresh run for all the materialized views for the database, with each run being identified by the REFRESH_ID. The information includes timing statistics related to the run and the parameters specified in that run.

Related View

USER_MVREF_RUN_STATS has information about each refresh run for the materialized views accessible for the current database user, with each run being identified by the REFRESH_ID. The information includes timing statistics related to the run and the parameters specified in that run. This view does not display the RUN_OWNER column.

Column	Datatype	NULL	Description
RUN_OWNER	VARCHAR2(128)	NOT NULL	Owner of the refresh operation (the user who launched the operation)
REFRESH_ID	NUMBER	NOT NULL	The refresh ID of the refresh run
NUM_MVS	NUMBER	NOT NULL	The number of materialized views being refreshed in the run
MVIEWS	VARCHAR2(4000)		Shows the list of comma separated parameters specified in the API for the materialized view refresh operation
BASE_TABLES	VARCHAR2(4000)		For internal use only
METHOD	VARCHAR2(4000)		The METHOD parameter specified by the API
ROLLBACK_SEG	VARCHAR2(4000)		The ROLLBACK_SEG parameter specified by the API
PUSH_DEFERRED_RPC	CHAR(1)		The PUSH_DEFERRED_RPC parameter specified by the API
REFRESH_AFTER_ERRORS	CHAR(1)		The REFRESH_AFTER_ERRORS parameter specified by the API

Column	Datatype	NULL	Description
PURGE_OPTION	NUMBER		The PURGE_OPTION parameter specified by the API
PARALLELISM	NUMBER		The PARALLELISM parameter specified by the API
HEAP_SIZE	NUMBER		The HEAP_SIZE parameter specified by the API
ATOMIC_REFRESH	CHAR(1)		The ATOMIC_REFRESH parameter specified by the API
NESTED	CHAR(1)		The NESTED parameter specified by the API
OUT_OF_PLACE	CHAR(1)		The OUT_OF_PLACE parameter specified by the API
NUMBER_OF_FAILURES	NUMBER		The number of failures that occurred in processing the API
START_TIME	TIMESTAMP(6)		Start time of the refresh run
END_TIME	TIMESTAMP(6)		End time of the refresh run
ELAPSED TIME	NUMBER		The length of time for the refresh run, in seconds
LOG_SETUP_TIME	NUMBER		Log setup time (in seconds) for the materialized view for a non-atomic refresh; NULL for an atomic refresh
LOG_PURGE_TIME	NUMBER		Log purge time (in seconds) for the materialized view in the case of atomic refresh; NULL in the case of non-atomic refresh
COMPLETE_STATS_AVAILABLE	CHAR(1)		Indicates whether all the complete refresh statistics are available for this run: • Y: All the statistics are available • N: All the statistics are not available

See Also:

"USER_MVREF_RUN_STATS"

6.229 DBA_MVREF_STATS

DBA_MVREF_STATS shows the REFRESH_ID associated with each refresh run of each materialized view for the database. It also provides some basic timing statistics related to that materialized view's refresh in that run.

Related View

USER_MVREF_STATS shows the REFRESH_ID associated with each refresh run of each materialized view for the database that is accessible to the current user. It also provides some basic timing statistics related to that materialized view's refresh in that run. This view does not display the MV_OWNER column.

Column	Datatype	NULL	Description
MV_OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MV_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
REFRESH_ID	NUMBER	NOT NULL	The refresh ID of the refresh run

Column	Datatype	NULL	Description
REFRESH_METHOD	VARCHAR2(30)		The refresh method used to refresh the materialized view: • FAST • PCT • COMPLETE • OUT OF PLACE FAST • OUT OF PLACE PCT • OUT OF PLACE COMPLETE
REFRESH_OPTIMIZATIONS	VARCHAR2(4000)		The refresh optimization, for example, a null refresh, or a primary key/foreign key that is applied during refresh of the materialize view
ADDITIONAL_EXECUTIONS	VARCHAR2(4000)		The additional executions, for example, an index rebuild, or log operations involved during refresh of the materialized view
START_TIME	TIMESTAMP(6)		Start time of the refresh run
END_TIME	TIMESTAMP(6)		End time of the refresh run
ELAPSED_TIME	NUMBER		The length of time for the refresh run, in seconds
LOG_SETUP_TIME	NUMBER		Log setup time (in seconds) for the materialized view for a non-atomic refresh; NULL for an atomic refresh
LOG_PURGE_TIME	NUMBER		Log purge time (in seconds) for the materialized view in the case of atomic refresh; NULL in the case of non-atomic refresh
INITIAL_NUM_ROWS	NUMBER		Initial number of rows in the materialized view (at the start of the refresh)
FINAL_NUM_ROWS	NUMBER		Final number of rows in the materialized view (at the end of the refresh)

See Also:

"USER_MVREF_STATS"

6.230 DBA_MVREF_STATS_PARAMS

DBA_MVREF_STATS_PARAMS displays the refresh statistics properties associated with each materialized view. These properties can be modified with the DBMS_MVIEW_STATS.SET_MVREF_STATS_PARAMS procedure.

Related View

USER_MVREF_STATS_PARAMS displays the refresh statistics properties associated with each materialized view accessible to the current user. These properties can be modified with the DBMS_MVIEW_STATS.SET_MVREF_STATS_PARAMS procedure.

Column	Datatype	NULL	Description
MV_OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MV_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view

Column	Datatype	NULL	Description
COLLECTION_LEVEL	VARCHAR2(8)		The collection level for the materialized view
RETENTION_PERIOD	NUMBER		The retention period for the materialize view

> **See Also:**
>
> "USER_MVREF_STATS_PARAMS"

6.231 DBA_MVREF_STATS_SYS_DEFAULTS

DBA_MVREF_STATS_SYS_DEFAULTS displays the system-wide defaults for the refresh history statistics properties for materialized views. These values can be altered with the SET_SYSTEM_DEFAULTS procedure by a database administrator.

This view contains exactly two rows corresponding to the collection-level and retention-period properties; their initial values are TYPICAL and 31 respectively.

Related View

USER_MVREF_STATS_SYS_DEFAULTS displays the system-wide defaults for the refresh history statistics properties for materialized views accessible to the current user. These values can be altered with the SET_SYSTEM_DEFAULTS procedure by a database administrator.

Column	Datatype	NULL	Description
PARAMETER_NAME	CHAR(16)		Value of the parameter_name parameter: • COLLECTION_LEVEL • RETENTION_PERIOD
VALUE	VARCHAR2(40)		The system-wide default value for the parameter

> **See Also:**
>
> "USER_MVREF_STATS_SYS_DEFAULTS"

6.232 DBA_MVREF_STMT_STATS

DBA_MVREF_STMT_STATS shows information associated with each refresh statement of a materialized view in a refresh run.

Related View

USER_MVREF_STMT_STATS shows information associated with each refresh statement of a materialized view accessible to the current user in a refresh run.

Column	Datatype	NULL	Description
MV_OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MV_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
REFRESH_ID	NUMBER	NOT NULL	The refresh ID of the refresh run
STEP	NUMBER	NOT NULL	A number indicating the step in the refresh process in which the statement is executed for the materialized view. Steps are numbered consecutively starting at 1.
SQLID	VARCHAR2(14)	NOT NULL	The SQL ID of the statement
STMT	CLOB	NOT NULL	The text of the SQL statement
EXECUTION_TIME	NUMBER	NOT NULL	The time it took to execute the statement (in seconds)
EXECUTION_PLAN	XMLTYPE STORAGE NOT TRANSPORTABLE BINARY		For internal use only

See Also:

"USER_MVREF_STMT_STATS"

6.233 DBA_NESTED_TABLE_COLS

DBA_NESTED_TABLE_COLS describes the columns of all nested tables in the database. Its columns are the same as those in ALL_NESTED_TABLE_COLS.

To gather statistics for this view, use the DBMS_STATS package.

See Also:

"ALL_NESTED_TABLE_COLS"

6.234 DBA_NESTED_TABLES

DBA_NESTED_TABLES describes all nested tables contained in all tables in the database. Its columns are the same as those in ALL_NESTED_TABLES.

See Also:

"ALL_NESTED_TABLES"

6.235 DBA_NETWORK_ACL_PRIVILEGES

DBA_NETWORK_ACL_PRIVILEGES describes the network privileges defined in all access control lists that are currently assigned to network hosts.

> **Note:**
>
> This DBA_NETWORK_ACL_PRIVILEGES view is deprecated in Oracle Database 12*c* Release 1 (12.1). Oracle recommends that you use the DBA_HOST_ACES view, instead.

Column	Datatype	NULL	Description
ACL	VARCHAR2(4000)		Path of the access control list
ACLID	RAW(8)	NOT NULL	Object ID of the access control list
PRINCIPAL	VARCHAR2(128)		Principal (database user or role) whom the privilege is granted to or denied from
PRIVILEGE	VARCHAR2(128)		Network privilege
IS_GRANT	VARCHAR2(5)		Indicates whether the privilege is granted (true) or denied (false)
INVERT	VARCHAR2(5)		Indicates whether the access control entry contains invert principal (true) or not (false)
START_DATE	TIMESTAMP(6)		Start date of the access control entry
END_DATE	TIMESTAMP(6)		End date of the access control entry
ACL_OWNER	VARCHAR2(128)		Owner of the access control list

> **See Also:**
>
> "DBA_HOST_ACES"

6.236 DBA_NETWORK_ACLS

DBA_NETWORK_ACLS describes the access control list assignments to network hosts.

> **Note:**
>
> This DBA_NETWORK_ACLS view is deprecated in Oracle Database 12*c* Release 1 (12.1). Oracle recommends that you use the DBA_HOST_ACLS view, instead.

Column	Datatype	NULL	Description
HOST	VARCHAR2(1000)	NOT NULL	Network host
LOWER_PORT	NUMBER(5)		Lower bound of the port range

Column	Datatype	NULL	Description
UPPER_PORT	NUMBER(5)		Upper bound of the port range
ACL	VARCHAR2(4000)		Path of the access control list
ACLID	RAW(8)		Object ID of the access control list
ACL_OWNER	VARCHAR2(128)		Owner of the access control list

> **See Also:**
>
> "DBA_HOST_ACLS"

6.237 DBA_OBJ_AUDIT_OPTS

DBA_OBJ_AUDIT_OPTS describes auditing options on all objects.

> **Note:**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

Related View

USER_OBJ_AUDIT_OPTS describes auditing options on all objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the object
OBJECT_TYPE	VARCHAR2(23)		Type of the object
ALT	VARCHAR2(3)		Auditing ALTER WHENEVER SUCCESSFUL / UNSUCCESSFUL
AUD	VARCHAR2(3)		Auditing AUDIT WHENEVER SUCCESSFUL / UNSUCCESSFUL
COM	VARCHAR2(3)		Auditing COMMENT WHENEVER SUCCESSFUL / UNSUCCESSFUL
DEL	VARCHAR2(3)		Auditing DELETE WHENEVER SUCCESSFUL / UNSUCCESSFUL
GRA	VARCHAR2(3)		Auditing GRANT WHENEVER SUCCESSFUL / UNSUCCESSFUL
IND	VARCHAR2(3)		Auditing INDEX WHENEVER SUCCESSFUL / UNSUCCESSFUL
INS	VARCHAR2(3)		Auditing INSERT WHENEVER SUCCESSFUL / UNSUCCESSFUL
LOC	VARCHAR2(3)		Auditing LOCK WHENEVER SUCCESSFUL / UNSUCCESSFUL

Column	Datatype	NULL	Description
REN	VARCHAR2(3)		Auditing RENAME WHENEVER SUCCESSFUL / UNSUCCESSFUL
SEL	VARCHAR2(3)		Auditing SELECT WHENEVER SUCCESSFUL / UNSUCCESSFUL
UPD	VARCHAR2(3)		Auditing UPDATE WHENEVER SUCCESSFUL / UNSUCCESSFUL
EXE	VARCHAR2(3)		Auditing EXECUTE WHENEVER SUCCESSFUL / UNSUCCESSFUL
CRE	VARCHAR2(3)		Auditing CREATE WHENEVER SUCCESSFUL / UNSUCCESSFUL
REA	VARCHAR2(3)		Auditing READ WHENEVER SUCCESSFUL / UNSUCCESSFUL
WRI	VARCHAR2(3)		Auditing WRITE WHENEVER SUCCESSFUL / UNSUCCESSFUL
FBK	VARCHAR2(3)		Auditing FLASHBACK WHENEVER SUCCESSFUL / UNSUCCESSFUL

- *Oracle Database SQL Language Reference* for more information about the SQL AUDIT statement for traditional auditing
- *Oracle Database Security Guide* to learn how to find information about audited activities

6.238 DBA_OBJ_COLATTRS

DBA_OBJ_COLATTRS describes object columns and attributes contained in all tables in the database. Its columns are the same as those in ALL_OBJ_COLATTRS.

See Also:

"ALL_OBJ_COLATTRS"

6.239 DBA_OBJECT_SIZE

DBA_OBJECT_SIZE lists the sizes, in bytes, of various PL/SQL objects.

Related View

- USER_OBJECT_SIZE lists the size of PL/SQL objects owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(18)		Type of the object: TYPE, TYPE BODY, TABLE, VIEW, SYNONYM, SEQUENCE, PROCEDURE, FUNCTION, PACKAGE, PACKAGE BODY, JAVA SOURCE, JAVA CLASS or JAVA RESOURCE
SOURCE_SIZE	NUMBER		Size of the source in bytes. Must be in memory during compilation, or dynamic recompilation.
PARSED_SIZE	NUMBER		Size of the parsed form of the object, in bytes. Must be in memory when an object is being compiled that references this object.
CODE_SIZE	NUMBER		Code size, in bytes. Must be in memory when this object is executing.
ERROR_SIZE	NUMBER		Size of error messages, in bytes. In memory during the compilation of the object when there are compilation errors.

See Also:

"USER_OBJECT_SIZE"

6.240 DBA_OBJECT_TABLES

DBA_OBJECT_TABLES describes all object tables in the database. Its columns are the same as those in ALL_OBJECT_TABLES.

See Also:

"ALL_OBJECT_TABLES"

6.241 DBA_OBJECT_USAGE

DBA_OBJECT_USAGE displays statistics about index usage gathered from the database for all the indexes in the database.

You can use this view to monitor index usage. All indexes that have been used at least once can be monitored and displayed in this view.

Related View

- USER_OBJECT_USAGE displays statistics about index usage gathered from the database for the indexes owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Index owner
INDEX_NAME	VARCHAR2(128)	NOT NULL	Index name in sys.obj$.name
TABLE_NAME	VARCHAR2(128)	NOT NULL	Table name in sys.obj$.name
MONITORING	VARCHAR2(3)		Indicates whether the monitoring feature is turned on. Possible values: • YES • NO
USED	VARCHAR2(3)		Indicates whether the index has been accessed. Possible values: • YES • NO
START_MONITORING	VARCHAR2(19)		Start monitoring time in sys.object_stats.start_monitoring
END_MONITORING	VARCHAR2(19)		End monitoring time in sys.object_stats.end_monitoring

See Also:

"USER_OBJECT_USAGE"

6.242 DBA_OBJECTS

DBA_OBJECTS describes all objects in the database. Its columns are the same as those in ALL_OBJECTS.

See Also:

"ALL_OBJECTS"

6.243 DBA_OBJECTS_AE

DBA_OBJECTS_AE describes all objects (across all editions) in the database. Its columns are the same as those in ALL_OBJECTS_AE.

See Also:

"ALL_OBJECTS_AE"

6.244 DBA_OGG_AUTO_CAPTURED_TABLES

DBA_OGG_AUTO_CAPTURED_TABLES describes all tables in the database that are enabled for Oracle GoldenGate automatic capture.

Related View

USER_OGG_AUTO_CAPTURED_TABLES describes the tables owned by the current user that are enabled for Oracle GoldenGate automatic capture. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
NAME	VARCHAR2(128)	NOT NULL	Name of the table
ALLOW_NOVALIDATE_PK	VARCHAR2(3)		Indicates whether a primary key constraint in NOVALIDATE mode can be used as a unique identifier for the table (YES) or not (NO)

> **See Also:**
>
> "USER_OGG_AUTO_CAPTURED_TABLES"

6.245 DBA_OPANCILLARY

DBA_OPANCILLARY provides ancillary information for all operator bindings in the database. Its columns are the same as those in ALL_OPANCILLARY.

> **See Also:**
>
> "ALL_OPANCILLARY"

6.246 DBA_OPARGUMENTS

DBA_OPARGUMENTS provides argument information for all operator bindings in the database. Its columns are the same as those in ALL_OPARGUMENTS.

> **See Also:**
>
> "ALL_OPARGUMENTS"

6.247 DBA_OPBINDINGS

DBA_OPBINDINGS describes the binding functions and methods on all operators in the database. Its columns are the same as those in ALL_OPBINDINGS.

> **See Also:**
>
> "ALL_OPBINDINGS"

6.248 DBA_OPERATOR_COMMENTS

DBA_OPERATOR_COMMENTS displays comments for all user-defined operators in the database. Its columns are the same as those in ALL_OPERATOR_COMMENTS.

> **See Also:**
>
> "ALL_OPERATOR_COMMENTS"

6.249 DBA_OPERATORS

DBA_OPERATORS describes all operators in the database. Its columns are the same as those in ALL_OPERATORS.

> **See Also:**
>
> "ALL_OPERATORS"

6.250 DBA_OPTSTAT_OPERATION_TASKS

DBA_OPTSTAT_OPERATION_TASKS displays the history of tasks that are performed as part of statistics operations (recorded in DBA_OPTSTAT_OPERATIONS). Each task represents a target object to be processed in the corresponding parent operation.

Column	Datatype	NULL	Description
OPID	NUMBER		Internal identifier for the statistics operation that the task belongs to
TARGET	VARCHAR2(100)		Name of the object that this task operates on
TARGET_OBJN	NUMBER		Object number of the target object

Column	Datatype	NULL	Description
TARGET_TYPE	VARCHAR2(40)		Type of the target object. Possible values are: • TABLE • TABLE (GLOBAL STATS ONLY): Task is created to gather only global statistics of a partitioned table • TABLE (COORDINATOR JOB): Coordinator task for a partitioned table when concurrency is on • TABLE PARTITION • TABLE SUBPARTITION • INDEX • INDEX PARTITION • INDEX SUBPARTITION
TARGET_SIZE	NUMBER		Target size (in number of blocks) when the task started
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Task start time
END_TIME	TIMESTAMP(6) WITH TIME ZONE		Task end time
STATUS	VARCHAR2(49)		Current task status. Possible values are: • PENDING: Task is queued for processing • IN PROGRESS: Task is currently running • COMPLETED: Task has completed successfully • FAILED: Task has failed • SKIPPED: Task has been skipped, as it does not exist any more, or its stats are not stale (applies only to only automatic statistics gathering) • TIMED OUT: Maintenance window was not enough to complete this task (applies only to automatic statistics gathering)
JOB_NAME	VARCHAR2(50)		Name of the scheduler job that executes this task (for example, when concurrency is on)
ESTIMATED_COST	NUMBER		Estimated cost of the task (measured as elapsed time in seconds). This column is populated only when concurrency is on.
BATCHING_COEFF	NUMBER		For internal use only
ACTIONS	NUMBER		For internal use only
PRIORITY	NUMBER		Rank of the task among all target objects for the parent operation
FLAGS	NUMBER		For internal use only
NOTES	VARCHAR2(4000)		Notes about the underlying task, such as the failure message for tasks with status FAILED.

See Also:

"DBA_OPTSTAT_OPERATIONS"

6.251 DBA_OPTSTAT_OPERATIONS

DBA_OPTSTAT_OPERATIONS contains a history of statistics operations performed at the schema and database level using the DBMS_STATS package.

Column	Datatype	NULL	Description
ID	NUMBER		Internal ID of the statistics operation
OPERATION	VARCHAR2(64)		Operation name
TARGET	VARCHAR2(64)		Target on which the operation was performed
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the operation started
END_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the operation ended
STATUS	VARCHAR2(49)		Current operation status. Possible values are: • IN PROGRESS: Operation is currently running • COMPLETED: Operation has completed successfully • FAILED: Operation has failed • TIMED OUT: Maintenance window was not enough to complete this operation (applies only to automatic statistics gathering)
JOB_NAME	VARCHAR2(32)		Name of the scheduler job that executes this operation (for example, a user scheduled statistics gathering job)
SESSION_ID	NUMBER		ID of the session in which this operation is invoked
NOTES	VARCHAR2(4000)		Notes about the operation, such as a failure message for operations with status FAILED

See Also:

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_STATS package
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_REPAIR.ADMIN_TABLES procedure
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_REPAIR.DUMP_ORPHAN_KEYS procedure

6.252 DBA_ORPHAN_KEY_TABLE

DBA_ORPHAN_KEY_TABLE reports key values from indexes where the underlying base table has block corruptions.

To create the view, run the DBMS_REPAIR.ADMIN_TABLES procedure. To populate the orphan key table for an index, run the DBMS_REPAIR.DUMP_ORPHAN_KEYS procedure on the index. For each key in the index that points to a corrupt data block, Oracle inserts a row into the orphan key table.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema name of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index
IPART_NAME	VARCHAR2(128)	NULL	Name of the index partition or subpartition
INDEX_ID	NUMBER	NOT NULL	Dictionary object ID of the index
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the base table of the index
PART_NAME	VARCHAR2(128)	NULL	Name of the base table partition or subpartition
TABLE_ID	NUMBER	NOT NULL	Dictionary object ID of the base table
KEYROWID	ROWID	NOT NULL	Physical rowid of the corrupt data row
KEY	ROWID	NOT NULL	Key values for the index entry
DUMP_TIMESTAMP	DATE	NOT NULL	Timestamp when the entry was made into the orphan key table

6.253 DBA_OUTLINE_HINTS

DBA_OUTLINE_HINTS describes the set of hints stored in all outlines in the database.

Related View

USER_OUTLINE_HINTS describes the set of hints stored in the outlines owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)		Name of the outline
OWNER	VARCHAR2(128)		Name of the user who created the outline
NODE	NUMBER		ID of the query or subquery to which the hint applies. The top-level query is labeled 1. Subqueries are assigned sequentially numbered labels, starting with 2.
STAGE	NUMBER		Outline hints can be applied at three different stages during the compilation process. This column indicates the stage at which this hint was applied.
JOIN_POS	NUMBER		Position of the table in the join order. The value is 0 for all hints except access method hints, which identify a table to which the hint and the join position apply.
HINT	CLOB		Text of the hint

See Also:

"USER_OUTLINE_HINTS"

6.254 DBA_OUTLINES

DBA_OUTLINES describes all stored outlines in the database.

Related View

USER_OUTLINES describes the stored outlines owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)		User-specified or generated name of the stored outline. The name must be of a form that can be expressed in SQL.
OWNER	VARCHAR2(128)		Name of the user who created the outline
CATEGORY	VARCHAR2(128)		User-defined name of the category to which the outline belongs
USED	VARCHAR2(6)		Indicates whether the outline has ever been used (USED) or not (UNUSED)
TIMESTAMP	DATE		Timestamp of outline creation
VERSION	VARCHAR2(64)		Oracle version that created the outline
SQL_TEXT	LONG		SQL text of the query, including any hints that were a part of the original statement. If bind variables are included, the variable names are stored as SQL text, not the values that are assigned to the variables. **Note:** This field may contain sensitive information about your database or application. Therefore, use discretion when granting SELECT or VIEW object privileges on these views.
SIGNATURE	RAW(16)		Signature uniquely identifying the outline SQL text
COMPATIBLE	VARCHAR2(12)		Indicates whether the outline hints were compatible across a migration (COMPATIBLE) or not (INCOMPATIBLE)
ENABLED	VARCHAR2(8)		Indicates whether the outline is enabled (ENABLED) or disabled (DISABLED)
FORMAT	VARCHAR2(6)		Hint format: • NORMAL • LOCAL
MIGRATED	VARCHAR2(12)		Indicates whether the outline has been migrated to a SQL plan baseline (MIGRATED) or not (NOT-MIGRATED)

See Also:

"USER_OUTLINES"

6.255 DBA_OUTSTANDING_ALERTS

DBA_OUTSTANDING_ALERTS describes alerts which the server considers to be outstanding.

Column	Datatype	NULL	Description
SEQUENCE_ID	NUMBER		Alert sequence number
REASON_ID	NUMBER	NOT NULL	ID of the alert reason
OWNER	VARCHAR2(128)		Owner of the object on which the alert was issued
OBJECT_NAME	VARCHAR2(513)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example: partition)
OBJECT_TYPE	VARCHAR2(64)		Object type (for example: table, tablespace)
REASON	VARCHAR2(4000)		Reason for the alert
TIME_SUGGESTED	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was last updated
CREATION_TIME	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was first created
SUGGESTED_ACTION	VARCHAR2(4000)		Advice of the recommended action
ADVISOR_NAME	VARCHAR2(128)		Name of the advisor to be invoked for more information
METRIC_VALUE	NUMBER		Value of the related metrics
MESSAGE_TYPE	VARCHAR2(12)		Message type: • Notification • Warning
MESSAGE_GROUP	VARCHAR2(64)		Name of the message group to which the alert belongs
MESSAGE_LEVEL	NUMBER		Message severity level (1 to 32)
HOSTING_CLIENT_ID	VARCHAR2(64)		ID of the client or security group to which the alert relates
MODULE_ID	VARCHAR2(64)		ID of the module that originated the alert
PROCESS_ID	VARCHAR2(128)		Process ID
HOST_ID	VARCHAR2(256)		DNS host name of the originating host
HOST_NW_ADDR	VARCHAR2(256)		IP or other network address of the originating host
INSTANCE_NAME	VARCHAR2(16)		Originating instance name
INSTANCE_NUMBER	NUMBER		Originating instance number
USER_ID	VARCHAR2(128)		User ID
EXECUTION_CONTEXT_ID	VARCHAR2(128)		Execution Context ID
ERROR_INSTANCE_ID	VARCHAR2(142)		ID of an error instance plus a sequence number
STATE_TRANSITION_NUMBER	NUMBER		Sequence number of the state transition for the alert
PDB_NAME	VARCHAR2(128)		PDB name
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

6.256 DBA_PARALLEL_EXECUTE_CHUNKS

DBA_PARALLEL_EXECUTE_CHUNKS displays the chunks for all tasks in the database.

Related View

USER_PARALLEL_EXECUTE_CHUNKS displays the chunks for tasks created by the current user. This view does not display the TASK_OWNER column.

Column	Datatype	NULL	Description
CHUNK_ID	NUMBER	NOT NULL	Unique ID for the chunk
TASK_OWNER	VARCHAR2(128)	NOT NULL	Owner of the task
TASK_NAME	VARCHAR2(128)	NOT NULL	Name of the task
STATUS	VARCHAR2(20)		Status of the chunk: • UNASSIGNED • ASSIGNED • PROCESSED • PROCESSED_WITH_ERROR
START_ROWID	ROWID		Rowid for the first row in the chunk
END_ROWID	ROWID		Rowid for the last row in the chunk
START_ID	NUMBER		Number column value of the first row in the chunk
END_ID	NUMBER		Number column value of the last row in the chunk
JOB_NAME	VARCHAR2(128)		Name of the job which processed this chunk
START_TS	TIMESTAMP(6)		Processing start time for the chunk
END_TS	TIMESTAMP(6)		Processing end time for the chunk
ERROR_CODE	NUMBER		Error code returned during the execution of the chunk if the STATUS column is PROCESSED_WITH_ERROR
ERROR_MESSAGE	VARCHAR2(4000)		Error message returned during the execution of the chunk if the STATUS column is PROCESSED_WITH_ERROR

See Also:

"USER_PARALLEL_EXECUTE_CHUNKS"

6.257 DBA_PARALLEL_EXECUTE_TASKS

DBA_PARALLEL_EXECUTE_TASKS displays all tasks in the database.

Related View

USER_PARALLEL_EXECUTE_TASKS displays the tasks created by the current user. This view does not display the TASK_OWNER column.

Column	Datatype	NULL	Description
TASK_OWNER	VARCHAR2(128)	NOT NULL	Owner of the task

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2(128)	NOT NULL	Name of the task
CHUNK_TYPE	VARCHAR2(12)		Type of parallel update: • UNDELARED • ROWID_RANGE • NUMBER_RANGE
STATUS	VARCHAR2(19)		Status of the task: • CREATED • CHUNKING • CHUNKING_FAILED • CHUNKED • PROCESSING • FINISHED • FINISHED_WITH_ERROR • CRASHED
TABLE_OWNER	VARCHAR2(128)		Owner of the table to be chunked
TABLE_NAME	VARCHAR2(128)		Name of the table to be chunked
NUMBER_COLUMN	VARCHAR2(128)		Name of the column holding IDs (only applicable to NUMBER_RANGE chunking type)
TASK_COMMENT	VARCHAR2(4000)		Comment field
JOB_PREFIX	VARCHAR2(128)		Prefix of the job name executing this task
SQL_STMT	CLOB		Argument used in the previous DBMS_PARALLEL_EXECUTE.RUN_TASK
LANGUAGE_FLAG	NUMBER		Argument used in the previous DBMS_PARALLEL_EXECUTE.RUN_TASK
EDITION	VARCHAR2(130)		Argument used in the previous DBMS_PARALLEL_EXECUTE.RUN_TASK
APPLY_CROSSEDITION_TRIGGER	VARCHAR2(130)		Argument used in the previous DBMS_PARALLEL_EXECUTE.RUN_TASK
FIRE_APPLY_TRIGGER	VARCHAR2(10)		Argument used in the previous DBMS_PARALLEL_EXECUTE.RUN_TASK
PARALLEL_LEVEL	NUMBER		Argument used in the previous DBMS_PARALLEL_EXECUTE.RUN_TASK
JOB_CLASS	VARCHAR2(128)		Argument used in the previous DBMS_PARALLEL_EXECUTE.RUN_TASK

See Also:

- "USER_PARALLEL_EXECUTE_TASKS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PARALLEL_EXECUTE.RUN_TASK procedure

6.258 DBA_PART_COL_STATISTICS

DBA_PART_COL_STATISTICS displays column statistics and histogram information for all table partitions in the database. Its columns are the same as those in ALL_PART_COL_STATISTICS.

> **See Also:**
>
> "ALL_PART_COL_STATISTICS"

6.259 DBA_PART_HISTOGRAMS

DBA_PART_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on all table partitions in the database. Its columns are the same as those in ALL_PART_HISTOGRAMS.

> **See Also:**
>
> "ALL_PART_HISTOGRAMS"

6.260 DBA_PART_INDEXES

DBA_PART_INDEXES displays the object-level partitioning information for all partitioned indexes in the database. Its columns are the same as those in ALL_PART_INDEXES.

> **See Also:**
>
> "ALL_PART_INDEXES"

6.261 DBA_PART_KEY_COLUMNS

DBA_PART_KEY_COLUMNS describes the partitioning key columns for all partitioned objects in the database. Its columns are the same as those in ALL_PART_KEY_COLUMNS.

> **See Also:**
>
> "ALL_PART_KEY_COLUMNS"

6.262 DBA_PART_LOBS

DBA_PART_LOBS displays table-level information for all partitioned LOBs in the database, including default attributes for LOB data partitions. Its columns are the same as those in ALL_PART_LOBS.

> **See Also:**
>
> "ALL_PART_LOBS"

6.263 DBA_PART_TABLES

DBA_PART_TABLES displays the object-level partitioning information for all partitioned tables in the database. Its columns are the same as those in ALL_PART_TABLES.

> **See Also:**
>
> "ALL_PART_TABLES"

6.264 DBA_PARTIAL_DROP_TABS

DBA_PARTIAL_DROP_TABS describes all tables in the database that have partially completed DROP COLUMN operations. Its columns are the same as those in ALL_PARTIAL_DROP_TABS.

> **See Also:**
>
> "ALL_PARTIAL_DROP_TABS"

6.265 DBA_PDB_HISTORY

DBA_PDB_HISTORY describes the lineage of the PDB to which it belongs.

Column	Datatype	NULL	Description
PDB_NAME	VARCHAR2(128)	NOT NULL	Name of this PDB in one of its incarnations
PDB_ID	NUMBER	NOT NULL	Container ID of this PDB in one of its incarnations.
PDB_DBID	NUMBER	NOT NULL	Database ID of this PDB in one of its incarnations
PDB_GUID	RAW(16)	NOT NULL	Globally unique ID of this PDB in one of its incarnations
OP_SCNBAS	NUMBER	NOT NULL	SCN base when an operation was performed on one of the incarnations of this PDB

Column	Datatype	NULL	Description
OP_SCNWRP	NUMBER	NOT NULL	SCN wrap when an operation was performed on one of incarnations of this PDB
OP_TIMESTAMP	DATE	NOT NULL	Timestamp of an operation performed on one of the incarnations of this PDB
OPERATION	VARCHAR2(16)	NOT NULL	Operation that was performed on one of the incarnations of this PDB
DB_VERSION	NUMBER	NOT NULL	Database version
CLONED_FROM_PDB_NAME	VARCHAR2(128)		Name of a PDB from which one of the incarnations of this PDB was cloned
CLONED_FROM_PDB_DBID	NUMBER		Database ID of a PDB from which one of the incarnations of this PDB was cloned
CLONED_FROM_PDB_GUID	RAW(16)		Globally unique ID of a PDB from which one of the incarnations of this PDB was cloned
DB_NAME	VARCHAR2(128)		Name of a CDB in which one of the incarnations of this PDB was created
DB_UNIQUE_NAME	VARCHAR2(128)		Unique name of a CDB in which one of the incarnations of this PDB was created
DB_DBID	NUMBER		Database ID of a CDB in which one of the incarnations of this PDB was created
CLONETAG	VARCHAR2(128)		Clone tag name for the PDB if the PDB was cloned using the snapshot copy mechanism
DB_VERSION_STRING	VARCHAR2(204)		Database version string

6.266 DBA_PDB_SAVED_STATES

DBA_PDB_SAVED_STATES shows information about the current saved PDB states in the CDB.

This view is a data link, so the data is also available within the PDB.

Column	Datatype	NULL	Description
CON_ID	NUMBER	NOT NULL	The ID of the PDB
CON_NAME	VARCHAR2(128)	NOT NULL	Name of the PDB
INSTANCE_NAME	VARCHAR2(128)	NOT NULL	Name of the instance for which the state is saved
CON_UID	NUMBER	NOT NULL	Unique ID assigned to the PDB at creation time
GUID	RAW(16)		Globally unique immutable ID assigned to the PDB at creation time
STATE	VARCHAR2(14)		Open state of the PDB
RESTRICTED	VARCHAR2(3)		Restricted mode of the PDB

See Also:

Oracle Database SQL Language Reference for more information about preserving a PDB's open mode across an instance restart

6.267 DBA_PDB_SNAPSHOTFILE

DBA_PDB_SNAPSHOTFILE displays the files associated with snapshots taken of pluggable databases (PDBs).

You can use this view in conjunction with the DBA_PDB_SNAPSHOT view. Join the SNAPSHOT_SCN column in this view with the SNAPSHOT_SCN column in DBA_PDB_SNAPSHOT to determine the files associated with a particular PDB snapshot. A PDB snapshot consists of an archive log file, one or more data files, and one or more XML files. A row is added to this view for each file associated with a PDB snapshot.

Column	Datatype	NULL	Description
CON_ID	NUMBER	NOT NULL	The ID of the PDB
SNAPSHOT_SCN	NUMBER	NOT NULL	SCN at which the snapshot was taken
SNAPSHOT_FILENAME	VARCHAR2(513)	NOT NULL	Snapshot file name
SNAPSHOT_FILETYPE	VARCHAR2(8)	NOT NULL	Snapshot file type. Possible values: • ARCH: Archive log file • DATA: Data file • XML: XML file

See Also:

"DBA_PDB_SNAPSHOTS"

6.268 DBA_PDB_SNAPSHOTS

DBA_PDB_SNAPSHOTS describes the snapshots taken of pluggable databases (PDBs).

Rows are added to this view when a snapshot of a PDB is taken by using the ALTER PLUGGABLE DATABASE SNAPSHOT SQL statement.

Column	Datatype	NULL	Description
CON_ID	NUMBER	NOT NULL	The ID of the PDB
CON_UID	NUMBER	NOT NULL	Unique ID assigned to the PDB at creation time
CON_NAME	VARCHAR2(128)	NOT NULL	Name of the PDB
SNAPSHOT_NAME	VARCHAR2(128)	NOT NULL	Snapshot name of the PDB
SNAPSHOT_SCN	NUMBER	NOT NULL	SCN at which the snapshot was taken
PREVIOUS_SNAPSHOT_SCN	NUMBER	NOT NULL	SCN at which the previous snapshot for the PDB was taken
SNAPSHOT_TIME	NUMBER	NOT NULL	Timestamp at which the snapshot was taken
PREVIOUS_SNAPSHOT_TIME	NUMBER	NOT NULL	Timestamp of the previous snapshot for this PDB
FULL_SNAPSHOT_PATH	VARCHAR2(4000)	NOT NULL	Full path for the snapshot

> **Note:**
>
> This view does not display snapshot copy PDBs, which are created by using the `CREATE PLUGGABLE DATABASE ... SNAPSHOT COPY` SQL statement.

> **See Also:**
>
> "DBA_PDB_SNAPSHOTFILE" for information about the files associated with a particular PDB snapshot

6.269 DBA_PDBS

`DBA_PDBS` describes PDBs belonging to a given CDB.

When queried from a CDB root, this view describes all PDBs that belong to the CDB. When queried from an application root, it describes all PDBs that belong to the application container. When queried from a regular PDB or from an application PDB, it describes the regular PDB or the application PDB.

Column	Datatype	NULL	Description
PDB_ID	NUMBER	NOT NULL	Container ID of the PDB
PDB_NAME	VARCHAR2(128)	NOT NULL	Name of the PDB
DBID	NUMBER	NOT NULL	PDB identifier calculated when the PDB is created and stored in all file headers associated with the PDB
CON_UID	NUMBER	NOT NULL	Unique identifier associated with the container
GUID	RAW(16)		Globally unique immutable ID assigned to the PDB at creation time

Column	Datatype	NULL	Description
STATUS	VARCHAR2(10)		State of the PDB. Possible values: • NEW - The PDB has never been opened since it was created. It must be opened in READ WRITE mode for Oracle to perform processing needed to complete the integration of the PDB into the CDB and mark it NORMAL. An error will be thrown if an attempt is made to open the PDB read only. • NORMAL - The PDB is ready to be used. • UNPLUGGED - The PDB has been unplugged. The only operation that can be performed on it is DROP PLUGGABLE DATABASE. • RELOCATING: The PDB is in the process of being relocated to a different CDB. • RELOCATED: The PDB has been relocated to a different CDB. • REFRESHING: The PDB is a refresh PDB. • UNDEFINED: The PDB is in an undefined state. • UNUSABLE - The PDB is being created or an unrecoverable error was encountered during its creation. The PDB cannot be opened while its state is set to UNUSABLE. If the PDB remains in this state because of an error encountered during its creation, it can only be dropped. The alert log can be checked to determine if there was an error during PDB creation.
CREATION_SCN	NUMBER		Creation SCN
VSN	NUMBER		The version number of the PDB
LOGGING	VARCHAR2(9)		Shows the current logging mode for the PDB. Possible values: • LOGGING • NOLOGGING
FORCE_LOGGING	VARCHAR2(3)		Specifies whether force logging is turned on for the PDB. Possible values: • NO • YES
FORCE_NOLOGGING	VARCHAR2(3)		Specifies whether force nologging is turned on for the PDB. Possible values: • NO • YES
APPLICATION_ROOT	VARCHAR2(3)		Indicates whether the PDB is an application root.
APPLICATION_PDB	VARCHAR2(3)		Indicates whether a PDB is an application PDB
APPLICATION_SEED	VARCHAR2(3)		Indicates whether a PDB is an application seed (an application seed is also an application PDB)
APPLICATION_ROOT_CON_ID	NUMBER		If this PDB is an application PDB, the container ID of an application root to which this application PDB belongs. If this PDB is an application root clone, the container ID of an application root to which this application root clone belongs. Otherwise, NULL.
IS_PROXY_PDB	VARCHAR2(3)		Indicates whether this PDB is a proxy PDB

Column	Datatype	NULL	Description
CON_ID	NUMBER	NOT NULL	The ID of the container that CON_DBID identifies. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
UPGRADE_PRIORITY	NUMBER		The upgrade priority of the PDB.
APPLICATION_CLONE	VARCHAR2(3)		Indicates whether this PDB is an application root clone (YES) or not (NO)
FOREIGN_CDB_DBID	NUMBER		The foreign CDB's DBID
UNPLUG_SCN	NUMBER		SCN at which the PDB was unplugged
FOREIGN_PDB_ID	NUMBER		The foreign PDB ID
CREATION_TIME	DATE	NOT NULL	PDB creation timestamp
REFRESH_MODE	VARCHAR2(6)		PDB refresh mode. Possible values: • MANUAL • AUTO
REFRESH_INTERVAL	NUMBER		PDB refresh interval. This is applicable only when REFRESH_MODE is AUTO.
TEMPLATE	VARCHAR2(3)		For internal use only
LAST_REFRESH_SCN	NUMBER		System change number (SCN) of the last refresh operation
TENANT_ID	VARCHAR2(255)		Pluggable database tenant key
SNAPSHOT_MODE	VARCHAR2(6)		Pluggable database snapshot mode
SNAPSHOT_INTERVAL	NUMBER		Pluggable database snapshot interval, in minutes
CREDENTIAL_NAME	VARCHAR2(262)		Credential object name associated with the PDB
LAST_REFRESH_TIME	DATE		Time of the last refresh operation
CLOUD_IDENTITY	VARCHAR2(32767)		Cloud identifier for the PDB
SOURCE_PDB_NAME	VARCHAR2(128)		Name of the source PDB
SOURCE_DB_LINK	VARCHAR2(128)		Name of the source database link
PRIORITY	NUMBER		The priority of the PDB when performing an OPEN or SAVE STATE operation on multiple PDBs with a single ALTER PLUGGABLE DATABASE or ALTER DATABASE statement If a priority is not assigned to the PDB, then the value of this column is null. An operation is performed first on the PDB with the lowest PRIORITY number, then on the PDB with the second lowest PRIORITY number, and so on. The operation is then performed on PDBs with no assigned priority, if any, in no particular order.

6.270 DBA_PENDING_CONV_TABLES

DBA_PENDING_CONV_TABLES describes all pending conversion tables in the database. Its columns are the same as those in ALL_PENDING_CONV_TABLES.

> **See Also:**
>
> "ALL_PENDING_CONV_TABLES"

6.271 DBA_PENDING_TRANSACTIONS

DBA_PENDING_TRANSACTIONS describes unresolved transactions (either due to failure or if the coordinator has not sent a commit/rollback).

Column	Datatype	NULL	Description
FORMATID	NUMBER		The format identifier of the transaction identifier
GLOBALID	RAW(64)		The global part (gtrid) of the transaction identifier
BRANCHID	RAW(64)		The branch qualifier (bqual) of the transaction identifier

6.272 DBA_PG_EDGE_RELATIONSHIPS

DBA_PG_EDGE_RELATIONSHIPS describes edge relationships in all property graphs in the database. Its columns are the same as those in ALL_PG_EDGE_RELATIONSHIPS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_EDGE_RELATIONSHIPS"

6.273 DBA_PG_ELEMENT_LABELS

DBA_PG_ELEMENT_LABELS describes labels for the element tables in all property graphs in the database. Its columns are the same as those in ALL_PG_ELEMENT_LABELS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_ELEMENT_LABELS"

6.274 DBA_PG_ELEMENTS

`DBA_PG_ELEMENTS` describes element tables in all property graphs in the database. Its columns are the same as those in `ALL_PG_ELEMENTS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_ELEMENTS"

6.275 DBA_PG_KEYS

`DBA_PG_KEYS` describes key columns in all property graphs in the database. Its columns are the same as those in `ALL_PG_KEYS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_KEYS"

6.276 DBA_PG_LABEL_PROPERTIES

`DBA_PG_LABEL_PROPERTIES` describes properties in all property graphs in the database. Its columns are the same as those in `ALL_PG_LABEL_PROPERTIES`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_LABEL_PROPERTIES"

6.277 DBA_PG_LABELS

`DBA_PG_LABELS` describes labels in all property graphs in the database. Its columns are the same as those in `ALL_PG_LABELS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_LABELS"

6.278 DBA_PG_PROP_DEFINITIONS

`DBA_PG_PROP_DEFINITIONS` describes columns and expressions exposed as properties in all property graphs in the database. Its columns are the same as those in `ALL_PG_PROP_DEFINITIONS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_PROP_DEFINITIONS"

6.279 DBA_PLSQL_COLL_TYPES

DBA_PLSQL_COLL_TYPES describes all named PL/SQL collection types in the database. Its columns (except for CHAR_USED) are the same as those in ALL_PLSQL_COLL_TYPES.

> **See Also:**
>
> "ALL_PLSQL_COLL_TYPES"

6.280 DBA_PLSQL_OBJECT_SETTINGS

DBA_PLSQL_OBJECT_SETTINGS displays information about the compiler settings for all stored objects in the database. Its columns are the same as those in ALL_PLSQL_OBJECT_SETTINGS.

> **See Also:**
>
> "ALL_PLSQL_OBJECT_SETTINGS"

6.281 DBA_PLSQL_TYPE_ATTRS

DBA_PLSQL_TYPE_ATTRS describes the attributes of all PL/SQL types in the database. Its columns are the same as those in ALL_PLSQL_TYPE_ATTRS.

> **See Also:**
>
> "ALL_PLSQL_TYPE_ATTRS"

6.282 DBA_PLSQL_TYPES

DBA_PLSQL_TYPES describes all PL/SQL types in the database. Its columns are the same as those in ALL_PLSQL_TYPES.

> **See Also:**
>
> "ALL_PLSQL_TYPES"

6.283 DBA_POLICIES

DBA_POLICIES describes all Oracle Virtual Private Database (VPD) security policies in the database. Its columns are the same as those in ALL_POLICIES.

A security policy is a list of security requirements and rules that regulate row level access to database objects.

> **See Also:**
>
> "ALL_POLICIES"

6.284 DBA_POLICY_ATTRIBUTES

DBA_POLICY_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies in the database. Its columns are the same as those in ALL_POLICY_ATTRIBUTES.

> **See Also:**
>
> "ALL_POLICY_ATTRIBUTES"

6.285 DBA_POLICY_CONTEXTS

DBA_POLICY_CONTEXTS describes all driving contexts in the database. Its columns are the same as those in ALL_POLICY_CONTEXTS.

> **See Also:**
>
> "ALL_POLICY_CONTEXTS"

6.286 DBA_POLICY_GROUPS

DBA_POLICY_GROUPS describes all policy groups in the database. Its columns are the same as those in ALL_POLICY_GROUPS.

> **See Also:**
>
> "ALL_POLICY_GROUPS"

6.287 DBA_PRIV_AUDIT_OPTS

DBA_PRIV_AUDIT_OPTS describes current system privileges being audited across the system and by user.

> **Note:**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

Column	Datatype	NULL	Description
USER_NAME	VARCHAR2(128)		User name if by user auditing; ANY CLIENT if access by a proxy on behalf of a client is being audited; NULL for systemwide auditing
PROXY_NAME	VARCHAR2(128)		Name of the proxy user which is performing an operation for the client; NULL if the client is performing the operation directly
PRIVILEGE	VARCHAR2(40)	NOT NULL	Name of the system privilege being audited
SUCCESS	VARCHAR2(10)		Mode for WHENEVER SUCCESSFUL system auditing
FAILURE	VARCHAR2(10)		Mode for WHENEVER NOT SUCCESSFUL system auditing

6.288 DBA_PRIV_CAPTURES

DBA_PRIV_CAPTURES lists the privilege analysis policies in the database.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)	NOT NULL	Name of the privilege analysis policy
DESCRIPTION	VARCHAR2(1024)		Description of the privilege analysis
TYPE	VARCHAR2(16)		Type of the privilege analysis policy. Possible values: • G_DATABASE: Database wide privilege analysis • G_ROLE: Role privilege analysis • G_CONTEXT: Context privilege analysis • G_ROLE_AND_CONTEXT: Role and context privilege analysis
ENABLED	VARCHAR2(1)		Enabling status of the privilege analysis
ROLES	ROLE_ID_LIST		List of roles whose privileges to analyze if the privilege analysis type is G_ROLE or G_ROLE_AND_CONTEXT
CONTEXT	VARCHAR2(4000)		Context condition if the privilege analysis type is G_CONTEXT or G_ROLE_AND_CONTEXT
RUN_NAME	VARCHAR2(128)		Displays run name information for each run

> **See Also:**
>
> *Oracle Database Security Guide* for more information about privilege analysis

6.289 DBA_PRIVATE_TEMP_TABLES

`DBA_PRIVATE_TEMP_TABLES` describes all of the private temporary tables in the database.

Related View

`USER_PRIVATE_TEMP_TABLES` describes the private temporary tables in the current session. This view does not display the `INST_ID` column.

Column	Datatype	NULL	Description
`SID`	`NUMBER`		Session ID of the session that created the private temporary table
`SERIAL#`	`NUMBER`		Session serial number of the session that created the private temporary table
`INST_ID`	`NUMBER`		Instance ID of the session that created the private temporary table
`OWNER`	`VARCHAR2(128)`		Owner name of the private temporary table
`TABLE_NAME`	`VARCHAR2(128)`		Private temporary table name
`TABLESPACE_NAME`	`VARCHAR2(128)`		Private temporary table's tablespace name
`DURATION`	`VARCHAR2(128)`		Private temporary table's duration (for example, `SESSION` or `TRANSACTION`)
`NUM_ROWS`	`NUMBER`		Number of rows in the private temporary table when analyzed
`BLOCKS`	`NUMBER`		Number of blocks used by private temporary table
`AVG_ROW_LEN`	`NUMBER`		Average row length
`LAST_ANALYZED`	`DATE`		Timestamp of last analyze
`TXN_ID`	`RAW(8)`		Transaction ID of the transaction duration private temporary table
`SAVE_POINT_NUM`	`NUMBER`		Save point number of the transaction duration private temporary table

> **See Also:**
>
> - "USER_PRIVATE_TEMP_TABLES"
> - "PRIVATE_TEMP_TABLE_PREFIX"
> - *Oracle Database Administrator's Guide* for an introduction to private temporary tables

6.290 DBA_PROCEDURES

DBA_PROCEDURES lists all functions and procedures that are available in the database, along with their associated properties. Its columns are the same as those in ALL_PROCEDURES.

See Also:

- "ALL_PROCEDURES"
- "DBA_ARGUMENTS" for information about the arguments of all of the functions and procedures that are available in the database

6.291 DBA_PROFILES

DBA_PROFILES displays all profiles and their limits.

Column	Datatype	NULL	Description
PROFILE	VARCHAR2(128)	NOT NULL	Profile name
RESOURCE_NAME	VARCHAR2(32)	NOT NULL	Resource name
RESOURCE_TYPE	VARCHAR2(8)		Indicates whether the resource profile is a KERNEL or a PASSWORD parameter
LIMIT	VARCHAR2(128)		Limit placed on this resource for the profile
COMMON	VARCHAR2(3)		Indicates whether the profile is common. Possible values: • YES if a profile is common • NO if a profile is local (not common)
INHERITED	VARCHAR2(3)		Indicates whether the profile definition was inherited from another container (YES) or not (NO)
IMPLICIT	VARCHAR2(3)		Indicates whether the profile was created by an implicit application (YES) or not (NO)
ORACLE_MAINTAINED	VARCHAR2(3)		Indicates whether the profile was created by Oracle-supplied scripts (YES) or not (NO) Note that a profile created by Oracle-supplied scripts is local to all PDBs and can be changed inside a PDB to accommodate individual application requirements.
MANDATORY	VARCHAR2(3)		Indicates whether the profile is a mandatory user profile (YES) or not (NO) **See Also:** The MANDATORY_USER_PROFILE initialization parameter

6.292 DBA_PROPERTY_GRAPHS

DBA_PROPERTY_GRAPHS describes all property graphs in the database. Its columns are the same as those in ALL_PROPERTY_GRAPHS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PROPERTY_GRAPHS"

6.293 DBA_PROPAGATION

DBA_PROPAGATION displays information about all propagations in the database. Its columns are the same as those in ALL_PROPAGATION.

> **See Also:**
>
> "ALL_PROPAGATION"

6.294 DBA_PROXIES

DBA_PROXIES displays information about all proxy connections in the database.

Related View

USER_PROXIES displays information about connections the current user is allowed to proxy. This view does not display the PROXY or PROXY_AUTHORITY columns.

Column	Datatype	NULL	Description
PROXY	VARCHAR2(128)		Name of the proxy user
CLIENT	VARCHAR2(128)	NOT NULL	Name of the client user who the proxy user can act on behalf of
AUTHENTICATION	VARCHAR2(3)		Indicates whether the proxy is required to supply the client's authentication credentials (YES) or not (NO)
AUTHORIZATION_CONSTRAINT	VARCHAR2(35)		Indicates the proxy's authority to exercise roles on the client's behalf: • NO CLIENT ROLES MAY BE ACTIVATED • PROXY MAY ACTIVATE ROLE • PROXY MAY ACTIVATE ALL CLIENT ROLES • PROXY MAY NOT ACTIVATE ROLE

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)		Name of the role referenced in AUTHORIZATION_CONSTRAINT
PROXY_AUTHORITY	VARCHAR2(9)		Value is either: • DIRECTORY if an EUS proxy is enabled for the database user • DATABASE if this row describes a local proxy permission

See Also:

- "USER_PROXIES"
- "PROXY_USERS" for a list of proxy users and the clients on whose behalf they can act

6.295 DBA_QUARANTINED_TRANSACTIONS

DBA_QUARANTINED_TRANSACTIONS lists all quarantined transactions in the current container.

Column	Datatype	NULL	Description
USN	NUMBER	NOT NULL	Undo segment number of the quarantined transaction
SLT	NUMBER	NOT NULL	Slot number of the quarantined transaction
SQN	NUMBER	NOT NULL	Sequence number of the quarantined transaction
REASON	VARCHAR2(256)		Reason the transaction failed to recover
TRACE_FILE_NAME	VARCHAR2(4096)		Name of the trace file containing the reason for the transaction's recovery failure, along with diagnostic information about the failure
UNDO_TSN	NUMBER		Undo tablespace number for the quarantined transaction
UNDO_RECORD_OBJN	NUMBER		Dictionary object number of the object (OBJN)
UNDO_RECORD_OBJD	NUMBER		Dictionary object number of the segment that contains the object (OBJD)
DATA_BLOCK_TSN	NUMBER		Tablespace ID for the object
PREV_UNDO_BLOCK_DBA	NUMBER		Previous undo block address, which was used for rollback
UBA_RDBA	NUMBER		Relative data block address of the current undo block being applied for rollback
UBA_SQN	NUMBER		Undo block sequence number of the current undo block being applied for rollback
UBA_RECORD_NUMBER	NUMBER		Undo record number of the current undo block being applied for rollback
TXN_START_SCN	NUMBER		Start SCN of the quarantined transaction
INCIDENT_TIME	VARCHAR2(64)		Time at which the incident occurred

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "V$FAST_START_TRANSACTIONS"

6.296 DBA_QUEUE_EVENT_STREAMS

`DBA_QUEUE_EVENT_STREAMS` describes all Transactional Event Queue (TxEventQ) event streams in the database. Its columns are the same as those in `ALL_QUEUE_EVENT_STREAMS`.

> **See Also:**
>
> "ALL_QUEUE_EVENT_STREAMS"

6.297 DBA_QUEUE_SCHEDULES

`DBA_QUEUE_SCHEDULES` describes all propagation schedules in the database. Its columns are the same as those in `ALL_QUEUE_SCHEDULES`.

> **See Also:**
>
> "ALL_QUEUE_SCHEDULES"

6.298 DBA_QUEUE_SUBSCRIBERS

`DBA_QUEUE_SUBSCRIBERS` displays all subscribers on all queues in the database. Its columns are the same as those in `ALL_QUEUE_SUBSCRIBERS`.

> **See Also:**
>
> "ALL_QUEUE_SUBSCRIBERS"

6.299 DBA_QUEUE_TABLES

DBA_QUEUE_TABLES contains information about the owner instance for a queue table.

A queue table can contain multiple queues. In this case, each queue in a queue table has the same owner instance as the queue table. Its columns are the same as those in ALL_QUEUE_TABLES.

> **See Also:**
>
> "ALL_QUEUE_TABLES"

6.300 DBA_QUEUES

DBA_QUEUES describes the operational characteristics of every queue in a database. Its columns are the same as those in ALL_QUEUES.

> **See Also:**
>
> - "ALL_QUEUES"
> - *Oracle Database Advanced Queuing User's Guide* for more information about Advanced Queuing

6.301 DBA_RAT_CAPTURE_SCHEMA_INFO

DBA_RAT_CAPTURE_SCHEMA_INFO displays the login schema and current schema that were in effect when SQL statements were recorded in a workload capture.

This view is useful when you perform a workload replay in extended PL/SQL mode. This type of replay may include SQL statements that perform table operations such as SELECT, UPDATE, and DELETE. If the current schema was different from the login schema at the time of the workload capture, then those table operations may have been performed with the privileges of the current user, not the login user. During workload replay, all operations are performed with the privileges of the login user. Therefore, errors can occur during replay if the login user does not have the necessary privileges to perform the table operations.

To resolve this issue, you can use this view in conjunction with the DBA_WORKLOAD_CAPTURE_SQLTEXT view. Join the CAPTURE_ID column in this view with the CAPTURE_ID column in DBA_WORKLOAD_CAPTURE_SQLTEXT to determine the login schema and current schema that were in effect when each SQL statement in DBA_WORKLOAD_CAPTURE_SQLTEXT was captured. Examine the SQL_TEXT column in DBA_WORKLOAD_CAPTURE_SQLTEXT to determine whether the SQL statement involved any table operations, and whether those table operations were performed with the privileges of the current user or the login user. You can then grant to the login user the necessary privileges for performing those table operations before performing a workload replay.

Column	Datatype	NULL	Description
CAPTURE_ID	NUMBER(38)		Internal key for the workload capture
SQL_ID	VARCHAR2(13)		SQL identifier for the parent cursor in the library cache
LOGIN_SCHEMA	VARCHAR2(128)		The schema of the user who logged on to the session in which the SQL statement was recorded in the workload capture. This value does not change during a session.
CURRENT_SCHEMA	VARCHAR2(128)		The currently active default schema for the session when the SQL statement was recorded in the workload capture. This value may change during a session through use of an ALTER SESSION SET CURRENT_SCHEMA statement. It may also change during a session to reflect the owner of any active definer's rights object.

See Also:

"DBA_WORKLOAD_CAPTURE_SQLTEXT"

6.302 DBA_RCHILD

DBA_RCHILD displays all the children in any refresh group.

Column	Datatype	NULL	Description
REFGROUP	NUMBER		Internal identifier of the refresh group
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object in the refresh group
NAME	VARCHAR2(128)	NOT NULL	Name of the object in the refresh group
TYPE#	VARCHAR2(128)		Type of the object in the refresh group

6.303 DBA_RECOVERABLE_SCRIPT

DBA_RECOVERABLE_SCRIPT provides details about recoverable operations.

Column	Datatype	NULL	Description
SCRIPT_ID	RAW(16)		Unique ID of the operation
CREATION_TIME	DATE		Time the operation was invoked
INVOKING_PACKAGE_OWNER	VARCHAR2(128)		Invoking package owner of the operation
INVOKING_PACKAGE	VARCHAR2(128)		Invoking package of the operation
INVOKING_PROCEDURE	VARCHAR2(128)		Invoking procedure of the operation
INVOKING_USER	VARCHAR2(128)		Script owner
STATUS	VARCHAR2(12)		State of the recoverable script: GENERATING, NOT EXECUTED, EXECUTING, EXECUTED, or ERROR
TOTAL_BLOCKS	NUMBER		Total number of blocks for the recoverable script to be executed

Column	Datatype	NULL	Description
DONE_BLOCK_NUM	NUMBER		Last block executed, thus far
SCRIPT_COMMENT	VARCHAR2(4000)		Comment for the recoverable script

6.304 DBA_RECOVERABLE_SCRIPT_BLOCKS

DBA_RECOVERABLE_SCRIPT_BLOCKS provides details about recoverable script blocks.

Column	Datatype	NULL	Description
SCRIPT_ID	RAW(16)		Global unique ID of the recoverable script to which this block belongs
BLOCK_NUM	NUMBER		The *n*th block in the recoverable script to be executed
FORWARD_BLOCK	CLOB		Forward block to be executed
FORWARD_BLOCK_DBLINK	VARCHAR2(128)		Database where the forward block is executed
UNDO_BLOCK	CLOB		Block to roll back the forward operation
UNDO_BLOCK_DBLINK	VARCHAR2(128)		Database where the undo block is executed
STATUS	VARCHAR2(12)		Status of the block execution: GENERATING, NOT EXECUTED, EXECUTING, EXECUTED, or ERROR
BLOCK_COMMENT	VARCHAR2(4000)		Comment for the block

6.305 DBA_RECOVERABLE_SCRIPT_ERRORS

DBA_RECOVERABLE_SCRIPT_ERRORS provides details about errors that occurred during script execution.

Column	Datatype	NULL	Description
SCRIPT_ID	RAW(16)		Global unique ID of the recoverable script
BLOCK_NUM	NUMBER		The *n*th block that failed
ERROR_NUMBER	NUMBER		Number of the error encountered while executing the block
ERROR_MESSAGE	VARCHAR2(4000)		Error message encountered while executing the block
ERROR_CREATION_TIME	DATE		Time that the error was created

6.306 DBA_RECOVERABLE_SCRIPT_HIST

DBA_RECOVERABLE_SCRIPT_HIST displays details about executed or purged recoverable operations.

Column	Datatype	NULL	Description
SCRIPT_ID	RAW(16)		Unique id of the operation
CREATION_TIME	DATE		Time the operation was invoked
INVOKING_PACKAGE_OWNER	VARCHAR2(128)		Invoking package owner of the operation
INVOKING_PACKAGE	VARCHAR2(128)		Invoking package of the operation

Column	Datatype	NULL	Description
INVOKING_PROCEDURE	VARCHAR2(128)		Invoking procedure of the operation
INVOKING_USER	VARCHAR2(128)		Script owner
STATUS	VARCHAR2(8)		state of the recoverable script: EXECUTED, PURGED
TOTAL_BLOCKS	NUMBER		total number of blocks for the recoverable script to be executed
DONE_BLOCK_NUM	NUMBER		last block so far executed
SCRIPT_COMMENT	VARCHAR2(4000)		comment for the recoverable script

6.307 DBA_RECOVERABLE_SCRIPT_PARAMS

DBA_RECOVERABLE_SCRIPT_PARAMS provides details about recoverable operation parameters.

Column	Datatype	NULL	Description
SCRIPT_ID	RAW(16)		Unique ID of the operation
PARAMETER	VARCHAR2(128)		Name of the parameter
PARAM_INDEX	NUMBER		Index for multi-valued parameter
VALUE	VARCHAR2(4000)		Value of the parameter

6.308 DBA_RECYCLEBIN

DBA_RECYCLEBIN displays information about all recycle bins in the database.

Related View

USER_RECYCLEBIN displays information about the recycle bin owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Name of the original owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	New name of the object
ORIGINAL_NAME	VARCHAR2(128)		Original name of the object
OPERATION	VARCHAR2(9)		Operation carried out on the object: • DROP - Object was dropped • TRUNCATE - Object was truncated **Note:** The Oracle Database currently only supports recovering dropped objects from the recycle bin. The truncated objects cannot be recovered.

Column	Datatype	NULL	Description
TYPE	VARCHAR2(25)		Type of the object: • TABLE • NORMAL INDEX • BITMAP INDEX • NESTED TABLE • LOB • LOB INDEX • DOMAIN INDEX • IOT TOP INDEX • IOT OVERFLOW SEGMENT • IOT MAPPING TABLE • TRIGGER • Table Partition • Table Composite Partition • Index Partition • Index Composite Partition • LOB Partition • LOB Composite Partition
TS_NAME	VARCHAR2(30)		Name of the tablespace to which the object belongs
CREATETIME	VARCHAR2(19)		Timestamp for the creation of the object
DROPTIME	VARCHAR2(19)		Timestamp for the dropping of the object
DROPSCN	NUMBER		System change number (SCN) of the transaction which moved the object to the recycle bin
PARTITION_NAME	VARCHAR2(128)		Name of the partition which was dropped
CAN_UNDROP	VARCHAR2(3)		Indicates whether the object can be undropped (YES) or not (NO)
CAN_PURGE	VARCHAR2(3)		Indicates whether the object can be purged (YES) or not (NO)
RELATED	NUMBER	NOT NULL	Object number of the parent object
BASE_OBJECT	NUMBER	NOT NULL	Object number of the base object
PURGE_OBJECT	NUMBER	NOT NULL	Object number for the object which gets purged
SPACE	NUMBER		Number of blocks used by the object

See Also:

"USER_RECYCLEBIN"

6.309 DBA_REDEFINITION_ERRORS

DBA_REDEFINITION_ERRORS is an online redefinition view. It displays the dependent objects for which errors were raised while attempting to create similar objects on the interim table of the redefinition.

Column	Datatype	NULL	Description
OBJECT_TYPE	VARCHAR2(12)		Type of the redefinition object: • TABLE • INDEX • CONSTRAINT • TRIGGER • NESTED TABLE • PARTITION • MV LOG
OBJECT_OWNER	VARCHAR2(4000)		Owner of the redefinition object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the redefinition object
BASE_TABLE_OWNER	VARCHAR2(128)		Owner of the base table of the redefinition object
BASE_TABLE_NAME	VARCHAR2(128)		Name of the base table of the redefinition object
DDL_TXT	CLOB		DDL used to create the corresponding interim redefinition object
EDITION_NAME	VARCHAR2(128)		Reserved for future use
ERR_NO	NUMBER(38)		Oracle error number corresponding to this error
ERR_TXT	VARCHAR2(1000)		Oracle error text corresponding to this error

See Also:

Oracle Database Administrator's Guide for more information about online redefinition

6.310 DBA_REDEFINITION_OBJECTS

DBA_REDEFINITION_OBJECTS is an online redefinition view. It displays the objects involved in the current redefinitions.

Column	Datatype	NULL	Description
OBJECT_TYPE	VARCHAR2(12)		Type of the redefinition object: • TABLE • INDEX • CONSTRAINT • TRIGGER • NESTED TABLE • PARTITION • MV LOG
OBJECT_OWNER	VARCHAR2(4000)		Owner of the redefinition object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the redefinition object
BASE_TABLE_OWNER	VARCHAR2(128)		Owner of the base table of the redefinition object
BASE_TABLE_NAME	VARCHAR2(128)		Name of the base table of the redefinition object
INTERIM_OBJECT_OWNER	VARCHAR2(4000)		Owner of the corresponding interim redefinition object
INTERIM_OBJECT_NAME	VARCHAR2(128)		Name of the corresponding interim redefinition object
EDITION_NAME	VARCHAR2(128)		Reserved for future use

> **See Also:**
>
> *Oracle Database Administrator's Guide* for more information about online redefinition

6.311 DBA_REDEFINITION_STATUS

DBA_REDEFINITION_STATUS is an online redefinition view. It provides information about the online redefinition status.

Column	Datatype	NULL	Description
REDEFINITION_ID	NUMBER(38)	NOT NULL	ID for the redefinition object
BASE_TABLE_OWNER	VARCHAR2(128)		Owner of the base table of the redefinition object
BASE_TABLE_NAME	VARCHAR2(128)		Name of the base table of the redefinition object
BASE_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the base object of the redefinition object
BASE_OBJECT_TYPE	VARCHAR2(9)		Type of the base object of the redefinition object
INTERIM_OBJECT_OWNER	VARCHAR2(128)		Owner of the interim object of the redefinition object
INTERIM_OBJECT_NAME	VARCHAR2(128)		Name of the interim object of the redefinition object
OPERATION	VARCHAR2(128)	NOT NULL	The current redefinition operation: • START_REDEF_TABLE • SYNC_INTERIM_TABLE • COPY_TABLE_DEPENDENTS • FINISH_REDEF_TABLE
STATUS	VARCHAR2(128)	NOT NULL	Status of the previous redefinition operation: • FAILURE • SUCCESS
RESTARTABLE	VARCHAR2(1)	NOT NULL	Indicates whether the previous operation can be restarted
ERR_TXT	VARCHAR2(1000)		The error message raised from the previous operation
ACTION	VARCHAR2(400)		The suggested action
REFRESH_DEP_MVIEWS	VARCHAR2(1)		Indicates whether the online redefinition will also refresh dependent materialized views when syncing the interim table (Y) or not (N)

> **See Also:**
>
> *Oracle Database Administrator's Guide* for more information about online redefinition

6.312 DBA_REFRESH

DBA_REFRESH describes all refresh groups in the database. Its columns are the same as those in ALL_REFRESH.

> **See Also:**
>
> "ALL_REFRESH"

6.313 DBA_REFRESH_CHILDREN

DBA_REFRESH_CHILDREN lists all of the objects in all refresh groups in the database. Its columns are the same as those in ALL_REFRESH_CHILDREN.

> **See Also:**
>
> "ALL_REFRESH_CHILDREN"

6.314 DBA_REFS

DBA_REFS describes the REF columns and REF attributes in object type columns of all the objects in the database. Its columns are the same as those in ALL_REFS.

> **See Also:**
>
> "ALL_REFS"

6.315 DBA_REGISTERED_ARCHIVED_LOG

DBA_REGISTERED_ARCHIVED_LOG displays information about all registered archived logfiles in the database.

Column	Datatype	NULL	Description
CONSUMER_NAME	VARCHAR2(128)	NOT NULL	Consumer name of the archived logs
SOURCE_DATABASE	VARCHAR2(128)		Name of the database which generated the redo logs
THREAD#	NUMBER	NOT NULL	Thread number of the archived redo log. The thread number is 1 for a single instance. For Real Application Clusters, this column will contain different numbers.
SEQUENCE#	NUMBER	NOT NULL	Sequence number of the archived redo log file
FIRST_SCN	NUMBER	NOT NULL	System change number (SCN) of the current archived redo log

Column	Datatype	NULL	Description
NEXT_SCN	NUMBER		System change number (SCN) of the next archived redo log
FIRST_TIME	DATE		Date and time of the current archived redo log
NEXT_TIME	DATE		Date and time of the next archived redo log
NAME	VARCHAR2(513)		Name of the archived redo log
MODIFIED_TIME	DATE		Time when the archived redo log was registered
DICTIONARY_BEGIN	VARCHAR2(3)		Indicates whether the beginning of the dictionary build is in the archived redo log (YES) or not (NO)
DICTIONARY_END	VARCHAR2(3)		Indicates whether the end of the dictionary build is in the archived redo log (YES) or not (NO)
PURGEABLE	VARCHAR2(3)		Indicates whether the redo log can be permanently removed (YES) or not (NO)
RESET_LOGS_CHANGE#	NUMBER	NOT NULL	Resetlogs change number of the database when the log was written
RESET_TIMESTAMP	NUMBER	NOT NULL	Resetlogs time of the database when the log was written

6.316 DBA_REGISTERED_MVIEWS

DBA_REGISTERED_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) in the database. Its columns are the same as those in ALL_REGISTERED_MVIEWS.

> **See Also:**
>
> "ALL_REGISTERED_MVIEWS"

6.317 DBA_REGISTRY

DBA_REGISTRY displays information about all components in the database that are loaded into the component registry.

The component registry tracks components that can be separately loaded into the Oracle Database. When a SQL script loads the PL/SQL packages and other database objects for a component into the database, the script records the component name, status, and version. If scripts are used to upgrade/downgrade the dictionary elements for the component, then those scripts also record status and version information.

Related View

USER_REGISTRY displays information about the components owned by the current user that are loaded into the component registry.

Column	Datatype	NULL	Description
COMP_ID	VARCHAR2(30)	NOT NULL	Component identifier

Column	Datatype	NULL	Description
COMP_NAME	VARCHAR2(255)		Component name
VERSION	VARCHAR2(30)		Component version loaded
VERSION_FULL	VARCHAR2(30)		Component full version
STATUS	VARCHAR2(11)		Component status: • INVALID • VALID • LOADING • LOADED • UPGRADING • UPGRADED • DOWNGRADING • DOWNGRADED • REMOVING • REMOVED
MODIFIED	VARCHAR2(20)		Time when the component was last modified
NAMESPACE	VARCHAR2(30)	NOT NULL	Component namespace
CONTROL	VARCHAR2(128)	NOT NULL	User that created the component entry
SCHEMA	VARCHAR2(128)	NOT NULL	User that contains the objects for the component
PROCEDURE	VARCHAR2(61)		Validation procedure
STARTUP	VARCHAR2(8)		Indicates whether the component requires a startup after the upgrade (REQUIRED) or not
PARENT_ID	VARCHAR2(30)		Parent component identifier
OTHER_SCHEMAS	VARCHAR2(4000)		A list of ancillary schema names associated with the component

See Also:

"USER_REGISTRY"

6.318 DBA_REGISTRY_BACKPORTS

DBA_REGISTRY_BACKPORTS displays backported bug fixes that were applied to the database. This view displays only bug fixes that changed the data dictionary of the database.

Column	Datatype	NULL	Description
BUGNO	NUMBER	NOT NULL	Bug number
VERSION_FULL	VARCHAR2(30)	NOT NULL	Component full version
COMP_ID	VARCHAR2(30)	NOT NULL	Component identifier
NAMESPACE	VARCHAR2(30)	NOT NULL	Component namespace
BACKPORT_TYPE	VARCHAR2(30)	NOT NULL	Type of backported bug fix The value of this columns is always DICTIONARY, which indicates that the bug fix changed the data dictionary of the database.

Column	Datatype	NULL	Description
BACKPORT_TIME	TIMESTAMP(6)	NOT NULL	Date and time at which the backported bug fix was applied

6.319 DBA_REGISTRY_HIERARCHY

DBA_REGISTRY_HIERARCHY displays information about the components loaded into the database, grouped by owner and organized in the component hierarchy.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(30)	NOT NULL	Component namespace
COMP_ID	VARCHAR2(4000)		Component identifier
VERSION	VARCHAR2(30)		Component version loaded
VERSION_FULL	VARCHAR2(30)		Component full version
STATUS	VARCHAR2(11)		Component status: • INVALID • VALID • LOADING • LOADED • UPGRADING • UPGRADED • DOWNGRADING • DOWNGRADED • REMOVING • REMOVED
MODIFIED	VARCHAR2(20)		Time when the component was last modified

6.320 DBA_REGISTRY_HISTORY

DBA_REGISTRY_HISTORY provides information about upgrades, downgrades, and critical patch updates that have been performed on the database.

Column	Datatype	NULL	Description
ACTION_TIME	TIMESTAMP(6)		The time the upgrade, downgrade, or patch action was completed
ACTION	VARCHAR2(30)		The specific action (for example, UPGRADE or DOWNGRADE)
NAMESPACE	VARCHAR2(30)		The namespace of the components affected (for example, SERVER)
VERSION	VARCHAR2(30)		The version number of the server (for example, 10.2.0.1.0)
ID	NUMBER		Bundle ID
COMMENTS	VARCHAR2(255)		Additional comments about the action taken
BUNDLE_SERIES	VARCHAR2(30)		If a bundle patch, the series (for example, PSU or DBBP)

6.321 DBA_REGISTRY_LOG

DBA_REGISTRY_LOG displays operating information about components loaded into the database.

Column	Datatype	NULL	Description
OPTIME	VARCHAR2(20)		Operation time
NAMESPACE	VARCHAR2(30)		Component namespace
COMP_ID	VARCHAR2(30)		Component identifier
OPERATION	VARCHAR2(11)		Operation name
MESSAGE	VARCHAR2(1000)		Message

6.322 DBA_REGISTRY_SCHEMAS

DBA_REGISTRY_SCHEMAS lists the primary and ancillary schemas included in the component registry. The ancillary schemas that are listed in this view are the same schemas that would be included in the OTHER_SCHEMAS column of the DBA_REGISTRY view.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(30)		Component namespace
COMP_ID	VARCHAR2(30)		Component identifier
SCHEMA	VARCHAR2(128)		User that contains the objects for the component

See Also:

- "DBA_REGISTRY"
- "USER_REGISTRY"

6.323 DBA_REGISTRY_SQLPATCH

DBA_REGISTRY_SQLPATCH contains information about the SQL patches that have been installed in the database.

A SQL patch is a patch that contains SQL scripts which need to be run after OPatch completes. DBA_REGISTRY_SQLPATCH is updated by the datapatch utility. Each row contains information about an installation attempt (apply or roll back) for a given patch.

Column	Datatype	NULL	Description
INSTALL_ID	NUMBER	NOT NULL	Unique numeric identifier for this datapatch session. All patches installed in the same invocation of datapatch will have the same value for INSTALL_ID.
PATCH_ID	NUMBER	NOT NULL	ID associated with the patch
PATCH_UID	NUMBER	NOT NULL	UPI (Universal Patch ID) associated with the patch

Column	Datatype	NULL	Description
PATCH_TYPE	VARCHAR2(10)	NOT NULL	Type of the patch. Possible values: • INTERIM: Interim patch • RU: Release Update • RUI: Release Update Increment • RUR: Release Update Revision • CU: Cumulative Update
ACTION	VARCHAR2(15)	NOT NULL	APPLY or ROLLBACK
STATUS	VARCHAR2(25)	NOT NULL	Possible values: • SUCCESS: Patch application has completed with no errors • WITH ERRORS: Patch application finished with errors
ACTION_TIME	TIMESTAMP(6)	NOT NULL	Timestamp when the install was performed
DESCRIPTION	VARCHAR2(100)		Description of this patch from OPatch metadata
LOGFILE	VARCHAR2(500)	NOT NULL	Location of the logfile for this apply or rollback attempt
RU_LOGFILE	VARCHAR2(500)		Logfile location for RU specific commands
FLAGS	VARCHAR2(10)		One or more of the following: • J: Patch is a JVM patch • M: Patch installation was merged with another patch • N: Patch requires normal mode • R: Patch installation has been retried • U: Patch requires upgrade mode
PATCH_DESCRIPTOR	XMLTYPE	NOT NULL	Contents of the XML descriptor for the patch
PATCH_DIRECTORY	BLOB		Contents of the patch directory under ORACLE_HOME/sqlpatch
SOURCE_VERSION	VARCHAR2(15)		5 digit version (for example, 18.3.2.0.0) for the version on which the patch was applied
SOURCE_BUILD_DESCRIPTION	VARCHAR2(80)		Build description (for example, Release_Update or Release_Update_Revision) for the version on which the patch was applied
SOURCE_BUILD_TIMESTAMP	TIMESTAMP(6)		Build timestamp for the version on which the patch was applied
TARGET_VERSION	VARCHAR2(15)		5 digit version (for example, 18.4.0.0.0) for the version to be installed
TARGET_BUILD_DESCRIPTION	VARCHAR2(80)		Build description (for example, Release_Update or Release_Update_Revision) for the version to be installed
TARGET_BUILD_TIMESTAMP	TIMESTAMP(6)		Build timestamp for the version to be installed

  https://support.oracle.com/rs?type=doc&id=1585822.1

6.324 DBA_REPAIR_TABLE

DBA_REPAIR_TABLE describes any corruptions found by the DBMS_REPAIR.CHECK_OBJECT procedure.

This information is used by the DBMS_REPAIR.FIX_CORRUPT_BLOCKS procedure on execution. To create this view, first run the DBMS_REPAIR.ADMIN_TABLES procedure. To populate the resulting repair table for an object, run the DBMS_REPAIR.CHECK_OBJECT procedure on the object.

Note:

The table created by the DBMS_REPAIR.ADMIN_TABLES procedure is called REPAIR TABLE by default. If you specify a different name, this view will have the name you specify, preceded by "DBA_REPAIR_".

Column	Datatype	NULL	Description
OBJECT_ID	NUMBER	NOT NULL	Dictionary object number of the object with the corruption
TABLESPACE_ID	NUMBER	NOT NULL	Tablespace number of the corrupt object
RELATIVE_FILE_ID	NUMBER)	NOT NULL	Relative file number of the corrupt object
BLOCK_ID	NUMBER	NOT NULL	Block number of the corruption
CORRUPT_TYPE	NUMBER	NOT NULL	Type of corruption encountered
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema of the corrupt object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the corrupt object
BASEOBJECT_NAME	VARCHAR2(128)	NULL	If the object is an index, the name of its base table
PARTITION_NAME	VARCHAR2(128)	NULL	Partition or subpartition name, if applicable
CORRUPT_DESCRIPTION	VARCHAR2(2000)	NULL	Description of corruption
REPAIR_DESCRIPTION	VARCHAR2(200)	NULL	Description of repair action
MARKED_CORRUPT	VARCHAR2(10)	NOT NULL	Whether the block is marked corrupt (TRUE | FALSE)
CHECK_TIMESTAMP	DATE	NOT NULL	Date and time when this row was inserted into the repair table
FIX_TIMESTAMP	DATE	NULL	Date and time when the block was modified by the FIX_CORRUPT_BLOCKS procedure, if applicable
REFORMAT_TIMESTAMP	DATE	NULL	Reserved for future use

> **See Also:**
>
> *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_REPAIR` package

6.325 DBA_REPL_DBNAME_MAPPING

`DBA_REPL_DBNAME_MAPPING` provides details about the database name mapping in replication. Its columns are the same as those in `ALL_REPL_DBNAME_MAPPING`.

> **See Also:**
>
> "ALL_REPL_DBNAME_MAPPING"

6.326 DBA_REPLICATION_PROCESS_EVENTS

`DBA_REPLICATION_PROCESS_EVENTS` provides information about the replication processes events in the database. Its columns are the same as those in `ALL_REPLICATION_PROCESS_EVENTS`.

> **See Also:**
>
> "ALL_REPLICATION_PROCESS_EVENTS"

6.327 DBA_RESOURCE_INCARNATIONS

`DBA_RESOURCE_INCARNATIONS` lists all resource incarnations that are running or eligible for HA status notification.

Column	Datatype	NULL	Description
RESOURCE_TYPE	VARCHAR2(30)	NOT NULL	Type of resource
RESOURCE_NAME	VARCHAR2(256)		Name of resource
DB_UNIQUE_NAME	VARCHAR2(30)	NOT NULL	Database unique name
DB_DOMAIN	VARCHAR2(128)	NOT NULL	Database domain
INSTANCE_NAME	VARCHAR2(30)	NOT NULL	Name of instance at which resource is located
HOST_NAME	VARCHAR2(512)		Name of host at which resource is located
STARTUP_TIME	TIMESTAMP(9) WITH TIME ZONE		Resource startup date and time

6.328 DBA_RESUMABLE

DBA_RESUMABLE displays all resumable statements executed in the system.

Related View

USER_RESUMABLE displays the resumable statements executed by the current user. This view does not display the USER_ID column.

Column	Datatype	NULL	Description
USER_ID	NUMBER		User ID Number of the Resumable Statement Owner
SESSION_ID	NUMBER		Session Identifier of the Resumable Statement
INSTANCE_ID	NUMBER		Instance Number of the Resumable Statement
COORD_INSTANCE_ID	NUMBER		Instance Number on which the Parallel Coordinator is Running
COORD_SESSION_ID	NUMBER		Session Identifier of the Parallel Coordinator
STATUS	VARCHAR2(9)		Status of the resumable statement: • RUNNING • SUSPENDED • TIMEOUT • ERROR • ABORTED
TIMEOUT	NUMBER		Timeout of the resumable statement
START_TIME	VARCHAR2(20)		Start time of the resumable statement
SUSPEND_TIME	VARCHAR2(20)		Last time the resumable statement was suspended (initialized to NULL)
RESUME_TIME	VARCHAR2(20)		Last time the suspended resumable statement was resumed (initialized to NULL)
NAME	VARCHAR2(4000)		Name given in the resumable clause of the resumable statement
SQL_TEXT	VARCHAR2(1000)		Resumable statement, selected from the V$SQL view
ERROR_NUMBER	NUMBER		Error code of the last correctable error. When STATUS is set to RUNNING, its value will be 0.
ERROR_PARAMETER1	VARCHAR2(80)		First parameter for the error message (NULL if no error)
ERROR_PARAMETER2	VARCHAR2(80)		Second parameter for the error message (NULL if no error)
ERROR_PARAMETER3	VARCHAR2(80)		Third parameter for the error message (NULL if no error)
ERROR_PARAMETER4	VARCHAR2(80)		Forth parameter for the error message (NULL if no error)
ERROR_PARAMETER5	VARCHAR2(80)		Fifth parameter for the error message (NULL if no error)
ERROR_MSG	VARCHAR2(4000)		Error message corresponding to ERROR_NUMBER. It will be NULL when ERROR_NUMBER is 0.

> **See Also:**
>
> "USER_RESUMABLE"

6.329 DBA_REWRITE_EQUIVALENCES

DBA_REWRITE_EQUIVALENCES describes all rewrite equivalences in the database. Its columns are the same as those in ALL_REWRITE_EQUIVALENCES.

> **See Also:**
>
> "ALL_REWRITE_EQUIVALENCES"

6.330 DBA_RGROUP

DBA_RGROUP displays all refresh groups.

Column	Datatype	NULL	Description
REFGROUP	NUMBER		Internal identifier of the refresh group
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object in the refresh group
NAME	VARCHAR2(128)	NOT NULL	Name of the object in the refresh group
IMPLICIT_DESTROY	VARCHAR2(1)		Indicates whether the refresh group is destroyed when its last item is removed (Y) or not (N)
PUSH_DEFERRED_RPC	VARCHAR2(1)		Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N)
REFRESH_AFTER_ERRORS	VARCHAR2(1)		Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N)
ROLLBACK_SEG	VARCHAR2(128)		Name of the rollback segment to use while refreshing
JOB	NUMBER	NOT NULL	Identifier of the job used to refresh the group automatically
PURGE_OPTION	NUMBER(38)		Method for purging the transaction queue after each push. 1 indicates quick purge option; 2 indicates precise purge option
PARALLELISM	NUMBER(38)		Level of parallelism for transaction propagation
HEAP_SIZE	NUMBER(38)		Size of the heap
JOB_NAME	VARCHAR2(128)		The name of the job used to automatically refresh the group

6.331 DBA_ROLE_PRIVS

DBA_ROLE_PRIVS describes the roles granted to all users and roles in the database.

Related View

USER_ROLE_PRIVS describes the roles granted to the current user.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the user or role receiving the grant
GRANTED_ROLE	VARCHAR2(128)		Granted role name
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN OPTION (YES) or not (NO)
DELEGATE_OPTION	VARCHAR2(3)		Indicates whether the grant was with the DELEGATE OPTION (YES) or not (NO)
DEFAULT_ROLE	VARCHAR2(3)		Indicates whether the role is designated as a DEFAULT ROLE for the user (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the role was granted commonly (CONTAINER=ALL was used) • NO if the role was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the role grant was inherited from another container (YES) or not (NO)

See Also:

"USER_ROLE_PRIVS"

6.332 DBA_ROLES

DBA_ROLES describes all roles in the database.

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)	NOT NULL	Name of the role
ROLE_ID	NUMBER	NOT NULL	ID number of the role
PASSWORD_REQUIRED	VARCHAR2(8)		This column is deprecated in favor of the AUTHENTICATION_TYPE column

Column	Datatype	NULL	Description
AUTHENTICATION_TYPE	VARCHAR2(11)		Indicates the authentication mechanism for the role: • NONE - CREATE ROLE *role1*; • EXTERNAL - CREATE ROLE *role2* IDENTIFIED EXTERNALLY; • GLOBAL - CREATE ROLE *role3* IDENTIFIED GLOBALLY; • APPLICATION - CREATE ROLE *role4* IDENTIFIED USING *schema.package*; • PASSWORD - CREATE ROLE *role5* IDENTIFIED BY *role5*;
COMMON	VARCHAR2(3)		Indicates whether a given role is common. Possible values: • YES if the role is common • NO if the role is local (not common)
ORACLE_MAINTAINED	VARCHAR2(1)		Denotes whether the role was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A role for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
INHERITED	VARCHAR2(3)		Indicates whether the role was inherited from another container (YES) or not (NO)
IMPLICIT	VARCHAR2(3)		Indicates whether the role is a common role created by an implicit application (YES) or not (NO)
EXTERNAL_NAME	VARCHAR2(4000)		For a global role, the external name refers to the DN of a group from a directory service that is mapped to the global role. This is not applicable to a local role.

6.333 DBA_ROLLBACK_SEGS

DBA_ROLLBACK_SEGS describes rollback segments.

Column	Datatype	NULL	Description
SEGMENT_NAME	VARCHAR2(30)	NOT NULL	Name of the rollback segment
OWNER	VARCHAR2(6)		Owner of the rollback segment: • PUBLIC • SYS
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace containing the rollback segment
SEGMENT_ID	NUMBER	NOT NULL	ID number of the rollback segment
FILE_ID	NUMBER	NOT NULL	Absolute file number of the data file containing the segment header
BLOCK_ID	NUMBER	NOT NULL	ID number of the block containing the segment header
INITIAL_EXTENT	NUMBER		Initial extent size in bytes
NEXT_EXTENT	NUMBER		Secondary extent size in bytes
MIN_EXTENTS	NUMBER	NOT NULL	Minimum number of extents
MAX_EXTENTS	NUMBER	NOT NULL	Maximum number of extent
PCT_INCREASE	NUMBER		Percent increase for extent size

Column	Datatype	NULL	Description
STATUS	VARCHAR2(16)		Rollback segment status: • OFFLINE • ONLINE • NEEDS RECOVERY • PARTLY AVAILABLE • UNDEFINED
INSTANCE_NUM	VARCHAR2(40)		Rollback segment owning Oracle Real Application Clusters instance number
RELATIVE_FNO	NUMBER	NOT NULL	Relative file number of the segment header

6.334 DBA_ROLLING_DATABASES

DBA_ROLLING_DATABASES lists all the databases eligible for configuration with rolling operations.

Column	Datatype	NULL	Description
RDBID	NUMBER		Rolling operation database identifier
DBID	NUMBER		Oracle database identifier
DBUN	VARCHAR2(128)		Database unique name
ROLE	VARCHAR2(8)		Database role
OPEN_MODE	VARCHAR2(15)		Open mode information
PARTICIPANT	VARCHAR2(3)		Indicates whether the database is participating in the rolling operation (YES) or not (NO)
VERSION	VARCHAR2(128)		RDBMS version number
ENGINE_STATUS	VARCHAR2(14)		Running status of the MRP-recovery or LSP-apply process
RAC	VARCHAR2(3)		Indicates whether the database is an Oracle Real Application Clusters (Oracle RAC) database
UPDATE_PROGRESS	VARCHAR2(11)		Upgrade status of the system catalog
PROD_RSCN	VARCHAR(40)		Resetlogs SCN at which redo is currently being produced
PROD_RID	VARCHAR(40)		Resetlogs ID at which redo is currently being produced
PROD_SCN	VARCHAR(40)		Last SCN at which redo was produced
REDO_SOURCE	VARCHAR2(128)		Database unique name of the producer of redo being consumed
CONS_RSCN	VARCHAR(40)		Resetlogs SCN at which redo is currently being consumed
CONS_RID	VARCHAR(40)		Resetlogs ID at which redo is currently being consumed
CONS_SCN	VARCHAR(40)		Last SCN at which redo was consumed
UPDATE_TIME	TIMESTAMP(6)		Time of the last record update

> **See Also:**
>
> *Oracle Data Guard Concepts and Administration* for more information about rolling operations.

6.335 DBA_ROLLING_EVENTS

DBA_ROLLING_EVENTS lists all the events reported from the DBMS_ROLLING PL/SQL package.

Column	Datatype	NULL	Description
EVENTID	NUMBER		Event identifier which identifies event order
EVENT_TIME	TIMESTAMP(6)		Time associated with the event
TYPE	VARCHAR2(7)		Type of event: INFO, NOTICE, WARNING, or ERROR
MESSAGE	VARCHAR2(256)		Text describing the event details
STATUS	NUMBER		Status code associated with an event
INSTID	NUMBER		Instruction ID associated with an event
REVISION	NUMBER		Plan revision number associated with an event

> **See Also:**
>
> - *Oracle Data Guard Concepts and Administration* for more information about rolling operations.
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_ROLLING package

6.336 DBA_ROLLING_PARAMETERS

DBA_ROLLING_PARAMETERS lists the available parameters of the DBMS_ROLLING PL/SQL package.

Column	Datatype	NULL	Description
SCOPE	VARCHAR2(128)		Database unique name associated with a parameter
TYPE	VARCHAR2(7)		Type of parameter
NAME	VARCHAR2(32)		Name of the parameter
DESCRIPTION	VARCHAR2(256)		Description of the parameter
CURVAL	VARCHAR2(256)		Current value of the parameter
LSTVAL	VARCHAR2(256)		Prior value of the parameter
DEFVAL	VARCHAR2(256)		Default value of the parameter
MINVAL	NUMBER		Minimum value of the parameter
MAXVAL	NUMBER		Maximum value of the parameter

See Also:

- *Oracle Data Guard Concepts and Administration* for more information about rolling operations.
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ROLLING` package

6.337 DBA_ROLLING_PLAN

`DBA_ROLLING_PLAN` displays the instructions which constitute the active upgrade plan.

Each row in `DBA_ROLLING_PLAN` identifies a specific instruction scheduled to execute at a specific database. Instructions are created as a result of successful calls to the `DBMS_ROLLING.BUILD_PLAN` procedure.

During execution, groups of instructions are scheduled in batches to execute at remote databases. Groups of instructions are guaranteed to complete in `BATCHID` order.

Column	Datatype	NULL	Description
REVISION	NUMBER		Plan revision number associated with an instruction
BATCHID	NUMBER		Identifier for a batch of instructions which are requested together
INSTID	NUMBER		Identifier for a single instruction
SOURCE	VARCHAR2(128)		Database unique name where an instruction executes
TARGET	VARCHAR2(128)		The site where a given instruction will execute
PHASE	VARCHAR2(14)		rolling operation phase in which an instruction executes
STATUS	VARCHAR2(7)		Scheduling status of the instruction
PROGRESS	VARCHAR2(10)		Execution progress of the instruction
DESCRIPTION	VARCHAR2(256)		Description of the instruction
EXEC_STATUS	NUMBER		Status code returned from instruction execution
EXEC_INFO	VARCHAR2(256)		Supplemental information obtained during instruction execution
EXEC_TIME	TIMESTAMP(6)		Time of instruction execution
FINISH_TIME	TIMESTAMP(6)		Time of instruction completion

See Also:

- *Oracle Data Guard Concepts and Administration* for more information about rolling operations.
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_ROLLING` package

6.338 DBA_ROLLING_STATISTICS

DBA_ROLLING_STATISTICS provides a list of rolling operation statistics.

Column	Datatype	NULL	Description
NAME	VARCHAR2(256)		Name of the statistic. Possible values: • DBMS_ROLLING execution time • logical to primary switchover finish time • primary services offline for • primary to logical switchover start time • rolling upgrade finish time • rolling upgrade start time • time for former primary to fully recover upgrade redo • time for former primary to start upgrade redo recovery • total time former primary in physical role • transient logical creation finish time • transient logical creation start time • transient logical protection finish time • transient logical protection start time • user upgrade time
VALUE	VARCHAR2(256)		Value of the statistic
UPDATE_TIME	TIMESTAMP(6)		Time of last update

See Also:

Oracle Data Guard Concepts and Administration for more information about rolling operations.

6.339 DBA_ROLLING_STATUS

DBA_ROLLING_STATUS displays the overall status of the rolling operation.

Column	Datatype	NULL	Description
REVISION	NUMBER		Revision number of the current upgrade plan
STATUS	VARCHAR2(12)		Readiness of the facility to begin or resume the rolling operation
PHASE	VARCHAR2(14)		Current phase of the plan
NEXT_INSTRUCTION	NUMBER		Instruction ID of the next pending instruction
REMAINING_INSTRUCTIONS	NUMBER		Number of remaining instructions to execute in the plan
COORDINATOR_INSTANCE	NUMBER		Instance number from which the rolling operation is being coordinated
COORDINATOR_PID	NUMBER		Process PID in which the rolling operation is being coordinated

Column	Datatype	NULL	Description
ORIGINAL_PRIMARY	VARCHAR2(128)		Database unique name of the original primary
FUTURE_PRIMARY	VARCHAR2(128)		Database unique name of the future primary
TOTAL_DATABASES	NUMBER		Number of total databases eligible to participate in the rolling operation
PARTICIPATING_DATABASES	NUMBER		Number of databases configured to participate in the rolling operation
INIT_TIME	TIMESTAMP(6)		Time of the last call to DBMS_ROLLING.INIT_PLAN
BUILD_TIME	TIMESTAMP(6)		Time of the last call to DBMS_ROLLING.BUILD
START_TIME	TIMESTAMP(6)		Time of the last call to DBMS_ROLLING.START_UPGRADE
SWITCH_TIME	TIMESTAMP(6)		Time of the last call to DBMS_ROLLING.SWITCHOVER
FINISH_TIME	TIMESTAMP(6)		Time of the last call to DBMS_ROLLING.FINISH

See Also:

- *Oracle Data Guard Concepts and Administration* for more information about rolling operations.
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_ROLLING package

6.340 DBA_ROLLING_SUPPORT_MODE

DBA_ROLLING_SUPPORT_MODE displays information about whether tables in the database are supported for rolling upgrades performed using the DBMS_ROLLING package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Table owner
TABLE_NAME	VARCHAR2(128)		Table name
SUPPORT_MODE	VARCHAR2(11)		Indicates whether the table is supported Possible values: • SUPPORTED - The table is fully supported • INTERNAL - The table is not supported because it contains data that should not be replicated. Such tables include mapping tables for index-organized tables, storage tables for nested tables, materialized view logs, secondary objects associated with domain indexes, and temporary tables. • UNSUPPORTED - The table is not supported because it contains a data type that is not supported or uses a feature that is not supported

Column	Datatype	NULL	Description
EXPLANATION	VARCHAR2(4000)		Reason why the table is not fully supported This column is populated only when both of the following conditions are met: • The value of the COMPATIBLE initialization parameter is 20.0 or higher • The value of the SUPPORT_MODE column is INTERNAL or UNSUPPORTED

6.341 DBA_ROLLING_UNSUPPORTED

DBA_ROLLING_UNSUPPORTED displays the schemas, tables, and columns in those tables that contain unsupported data types for a rolling upgrade operation for a logical standby database using the DBMS_ROLLING PL/SQL package.

Use this view before you perform a rolling upgrade using DBMS_ROLLING to determine what is unsupported.

The data pertains to the container in which the view is queried.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Schema name of the unsupported column
TABLE_NAME	VARCHAR2(128)		Name of the table that the unsupported column belongs to
COLUMN_NAME	VARCHAR2(128)		Name of the unsupported column
ATTRIBUTES	VARCHAR2(4000)		When the value of the COMPATIBLE initialization parameter is 20.0 or higher, this column displays the reason the table is unsupported. Otherwise, this column displays the reason the table is unsupported only if the reason is not a data type issue.
DATA_TYPE	VARCHAR2(106)		Data type of the unsupported column

Note:

When the value of the COMPATIBLE initialization parameter is 20.0 or higher, this view displays all columns in unsupported tables. Otherwise, this view displays only the unsupported columns in unsupported tables.

Note:

A rolling upgrade using DBMS_ROLLING supports more object types than a manual rolling upgrade using transient logical standby databases

See Also:

- "DBA_LOGSTDBY_UNSUPPORTED" for more information about determining unsupported data types for a manual rolling upgrade operation using transient logical standby databases
- *Oracle Data Guard Concepts and Administration* for more information about rolling operations
- *Oracle Data Guard Concepts and Administration* for more information about unsupported tables for rolling upgrade operations
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_ROLLING package

6.342 DBA_RSRC_CATEGORIES

DBA_RSRC_CATEGORIES displays all resource consumer group categories.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)		Name of the consumer group category
COMMENTS	VARCHAR2(2000)		Text comment on the consumer group category
STATUS	VARCHAR2(128)		Indicates whether the consumer group category is part of the pending area (PENDING) or not (NULL)
MANDATORY	VARCHAR2(3)		Indicates whether the consumer group category is mandatory (YES) or not (NO)

6.343 DBA_RSRC_CONSUMER_GROUP_PRIVS

DBA_RSRC_CONSUMER_GROUP_PRIVS displays information about all resource consumer groups and the users and roles assigned to them.

The grant referred to in this view and the related view is the grant of the SWITCH_CONSUMER_GROUP object privilege, which is granted using the DBMS_RESOURCE_MANAGER_PRIVS package. This privilege is not granted through the GRANT SQL statement.

Related View

USER_RSRC_CONSUMER_GROUP_PRIVS displays information about the resource consumer groups to which the current user is assigned. This view does not display the GRANTEE column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)	NOT NULL	User or role receiving the grant
GRANTED_GROUP	VARCHAR2(128)		Granted consumer group name
GRANT_OPTION	VARCHAR2(3)		Indicates whether the grant was with the GRANT option (YES) or not (NO)
INITIAL_GROUP	VARCHAR2(3)		Indicates whether the consumer group is designated as the default for this user or role (YES) or not (NO)

> **See Also:**
>
> - "USER_RSRC_CONSUMER_GROUP_PRIVS"
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_RESOURCE_MANAGER_PRIVS package

6.344 DBA_RSRC_CONSUMER_GROUPS

DBA_RSRC_CONSUMER_GROUPS displays information about all resource consumer groups in the database.

Column	Datatype	NULL	Description
CONSUMER_GROUP_ID	NUMBER	NOT NULL	ID of the consumer group
CONSUMER_GROUP	VARCHAR2(128)		Name of the consumer group
CPU_METHOD	VARCHAR2(128)		CPU resource allocation method for the consumer group
MGMT_METHOD	VARCHAR2(128)		Resource allocation method for the consumer group
INTERNAL_USE	VARCHAR2(3)		Indicates whether the consumer group is for internal use only (YES) or not (NO)
COMMENTS	VARCHAR2(2000)		Text comment on the consumer group
CATEGORY	VARCHAR2(128)		Category of the consumer group
STATUS	VARCHAR2(128)		Indicates whether the consumer group is part of the pending area (PENDING) or not (NULL)
MANDATORY	VARCHAR2(3)		Indicates whether the consumer group is mandatory (YES) or not (NO)

6.345 DBA_RSRC_GROUP_MAPPINGS

DBA_RSRC_GROUP_MAPPINGS displays the mapping between session attributes and consumer groups in the database.

Column	Datatype	NULL	Description
ATTRIBUTE	VARCHAR2(128)		Session attribute to match
VALUE	VARCHAR2(128)		Attribute value
CONSUMER_GROUP	VARCHAR2(128)		Target consumer group name
STATUS	VARCHAR2(128)		Indicates whether the consumer group is part of the pending area (PENDING) or not (NULL)

6.346 DBA_RSRC_IO_CALIBRATE

DBA_RSRC_IO_CALIBRATE displays I/O calibration results for the latest calibration run.

Column	Datatype	NULL	Description
START_TIME	TIMESTAMP(6)		Start time of the most recent I/O calibration
END_TIME	TIMESTAMP(6)		End time of the most recent I/O calibration
MAX_IOPS	NUMBER		Maximum number of data block read requests that can be sustained per second
MAX_MBPS	NUMBER		Maximum megabytes per second of maximum-sized read requests that can be sustained
MAX_PMBPS	NUMBER		Maximum megabytes per second of large I/O requests that can be sustained by a single process
LATENCY	NUMBER		Latency for data block read requests
NUM_PHYSICAL_DISKS	NUMBER		Number of physical disks in the storage subsystem (as specified by the user)
ADDITIONAL_INFO	VARCHAR2(1024)		Additional information about the most recent calibration run

6.347 DBA_RSRC_MANAGER_SYSTEM_PRIVS

DBA_RSRC_MANAGER_SYSTEM_PRIVS displays information about all the users and roles that have been granted the ADMINISTER_RESOURCE_MANAGER system privilege, which is granted using the DBMS_RESOURCE_MANAGER_PRIVS package.

This privilege is not granted through the GRANT SQL statement.

Related View

USER_RSRC_MANAGER_SYSTEM_PRIVS displays information about the users who are granted system privileges for the DBMS_RESOURCE_MANAGER package. This view does not display the GRANTEE column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)	NOT NULL	User or role receiving the grant
PRIVILEGE	VARCHAR2(40)	NOT NULL	Name of the system privilege
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)

See Also:

- "USER_RSRC_MANAGER_SYSTEM_PRIVS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_RESOURCE_MANAGER package

6.348 DBA_RSRC_MAPPING_PRIORITY

DBA_RSRC_MAPPING_PRIORITY displays information about all consumer group mapping attribute priorities.

Column	Datatype	NULL	Description
ATTRIBUTE	VARCHAR2(128)		Session attribute
PRIORITY	NUMBER		Priority (1 is the highest)
STATUS	VARCHAR2(128)		Indicates whether the consumer group is part of the pending area (PENDING) or not (NULL)

6.349 DBA_RSRC_PLAN_DIRECTIVES

DBA_RSRC_PLAN_DIRECTIVES displays information about all resource plan directives in the database.

Column	Datatype	NULL	Description
PLAN	VARCHAR2(128)		Name of the plan to which the directive belongs
GROUP_OR_SUBPLAN	VARCHAR2(128)		Name of the consumer group or subplan referred to
TYPE	VARCHAR2(14)		Indicates whether GROUP_OR_SUBPLAN refers to a consumer group (CONSUMER_GROUP) or a plan (PLAN)
CPU_P1	NUMBER		This column is deprecated. Use the MGMT_P1 column instead.
CPU_P2	NUMBER		This column is deprecated. Use the MGMT_P2 column instead.
CPU_P3	NUMBER		This column is deprecated. Use the MGMT_P3 column instead.
CPU_P4	NUMBER		This column is deprecated. Use the MGMT_P4 column instead.
CPU_P5	NUMBER		This column is deprecated. Use the MGMT_P5 column instead.
CPU_P6	NUMBER		This column is deprecated. Use the MGMT_P6 column instead.
CPU_P7	NUMBER		This column is deprecated. Use the MGMT_P7 column instead.
CPU_P8	NUMBER		This column is deprecated. Use the MGMT_P8 column instead.
MGMT_P1	NUMBER		Resource allocation at level 1. For share-based plans, indicates the number of shares.
MGMT_P2	NUMBER		Resource allocation at level 2.
MGMT_P3	NUMBER		Resource allocation at level 3.
MGMT_P4	NUMBER		Resource allocation at level 4.
MGMT_P5	NUMBER		Resource allocation at level 5.
MGMT_P6	NUMBER		Resource allocation at level 6.
MGMT_P7	NUMBER		Resource allocation at level 7.
MGMT_P8	NUMBER		Resource allocation at level 8.
ACTIVE_SESS_POOL_P1	NUMBER		Maximum number of calls this consumer group can run concurrently
QUEUEING_P1	NUMBER		Timeout in seconds for waits in the Active Session Limit queue

Column	Datatype	NULL	Description
PARALLEL_TARGET_PERCENTAGE	NUMBER		This column is deprecated. Use the PARALLEL_SERVER_LIMIT column instead.
PARALLEL_DEGREE_LIMIT_P1	NUMBER		Sessions in this consumer group are limited to this maximum degree of parallelism for all parallel operations
SWITCH_GROUP	VARCHAR2(128)		Group to switch to once the switch time is reached
SWITCH_FOR_CALL	VARCHAR2(5)		Indicates whether to switch back to the initial consumer group once the top call has completed (TRUE) or not (FALSE)
SWITCH_TIME	NUMBER		Amount of run time (in seconds) within a group before the session is automatically switched. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the run time is accumulated from the start of a call. Otherwise, the run time is accumulated for the length of the session.
SWITCH_IO_MEGABYTES	NUMBER		The maximum megabytes of I/O within a group that will trigger the action specified by SWITCH_GROUP. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the maximum megabytes of I/O is accumulated from the start of a call. Otherwise, the maximum megabytes of I/O is accumulated for the length of the session.
SWITCH_IO_REQS	NUMBER		The maximum I/O requests within a group that will trigger the action specified by SWITCH_GROUP. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the maximum I/O requests is accumulated from the start of a call. Otherwise, the maximum I/O requests is accumulated for the length of the session.
SWITCH_ESTIMATE	VARCHAR2(5)		Indicates whether estimated execution time should be used for switch criteria (TRUE) or not (FALSE)
MAX_EST_EXEC_TIME	NUMBER		Maximum estimated execution time
UNDO_POOL	NUMBER		Undo pool size for the consumer group
MAX_IDLE_TIME	NUMBER		Maximum idle time for the session
MAX_IDLE_BLOCKER_TIME	NUMBER		Maximum idle time for the session when blocking other sessions
MAX_UTILIZATION_LIMIT	NUMBER		This column is deprecated. Use UTILIZATION_LIMIT instead.
PARALLEL_QUEUE_TIMEOUT	NUMBER		Time (in seconds) that a query can remain in the parallel statement queue for the consumer group before it is removed from the queue. The PQ_TIMEOUT_ACTION directive in a Resource Manager plan can be used in conjunction with the PARALLEL_QUEUE_TIMEOUT directive to either cancel or run the removed query. If the PQ_TIMEOUT_ACTION directive is not specified, the default behavior is to cancel the query with ORA-07454.
SWITCH_TIME_IN_CALL	NUMBER		This column is deprecated. Specify the time in the SWITCH_TIME directive and set SWITCH_FOR_CALL to TRUE.

Column	Datatype	NULL	Description
SWITCH_IO_LOGICAL	NUMBER		The number of logical I/Os that will trigger the action specified by SWITCH_GROUP. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the number of logical I/Os is accumulated from the start of a call. Otherwise, the number of logical IOs is accumulated for the length of the session.
SWITCH_ELAPSED_TIME	NUMBER		The elapsed time that will trigger the action specified by SWITCH_GROUP. As with other switch directives, if SWITCH_FOR_CALL is TRUE, the elapsed time is accumulated from the start of a call. Otherwise, the elapsed time is accumulated for the length of the session.
PARALLEL_SERVER_LIMIT	NUMBER		Maximum percentage of the parallel target used before queuing subsequent parallel queries
UTILIZATION_LIMIT	NUMBER		Maximum resource utilization allowed, expressed in percentage
PARALLEL_STMT_CRITICAL	VARCHAR2(12)		Indicates whether parallel statements from this consumer group are eligible for queuing in the parallel statement queue: • BYPASS QUEUE - Parallel statements in this consumer group are critical and should never be queued. • QUEUE - All parallel statements in this consumer group, irrespective of the PARALLEL_DEGREE_POLICY initialization parameter value, are eligible for being queued. • FALSE - Certain parallel statements are eligible for queuing, depending on the PARALLEL_DEGREE_POLICY initialization parameter value. This is the default.
SESSION_PGA_LIMIT	NUMBER		The maximum amount of untunable PGA in MB that sessions in this consumer group can allocate before being terminated
PQ_TIMEOUT_ACTION	VARCHAR2(6)		Indicates the action to be taken on a parallel query in the parallel queue when its queue time exceeds the limit set by the Resource Manager plan's PARALLEL_QUEUE_TIMEOUT directive: • CANCEL - The statement terminates with error ORA-07454 • RUN - The statement runs immediately, and may get downgraded if parallel servers are unavailable
COMMENTS	VARCHAR2(2000)		Text comment on the plan directive
STATUS	VARCHAR2(128)		Indicates whether the plan directive is part of the pending area (PENDING) or not (NULL). **Note:** PDB resource plans must be single-level, they cannot contain subplans, and they must have 8 or fewer consumer groups. If a resource plan is imported into a PDB and it violates any of these PDB requirements, then the import will automatically convert the resource plan to a compliant version. The original, unmodified resource plan will be stored with a STATUS of LEGACY.

Column	Datatype	NULL	Description
MANDATORY	VARCHAR2(3)		Indicates whether the plan directive is mandatory (YES) or not (NO). Mandatory plans cannot be deleted.

See Also:

- "PARALLEL_DEGREE_POLICY"
- *Oracle Database Administrator's Guide* for information on resource plans in general
- *Oracle Database PL/SQL Packages and Types Reference* for information about specifying Resource Manager directive values using the DBMS_RESOURCE_MANAGER.CREATE_PLAN_DIRECTIVE procedure

6.350 DBA_RSRC_PLANS

DBA_RSRC_PLANS displays information about all resource plans in the database.

For a list of currently active plans, see "V$RSRC_PLAN".

Column	Datatype	NULL	Description
PLAN_ID	NUMBER	NOT NULL	ID number of the resource plan
PLAN	VARCHAR2(128)		Name of the resource plan
NUM_PLAN_DIRECTIVES	NUMBER		Number of plan directives for the plan
CPU_METHOD	VARCHAR2(128)		CPU resource allocation method for the plan
MGMT_METHOD	VARCHAR2(128)		Resource allocation method for the plan
ACTIVE_SESS_POOL_MTH	VARCHAR2(128)		Active session pool resource allocation method for the plan
PARALLEL_DEGREE_LIMIT_MTH	VARCHAR2(128)		Parallel degree limit resource allocation method for the plan
QUEUING_MTH	VARCHAR2(128)		Queuing resource allocation method for the plan
SUB_PLAN	VARCHAR2(3)		Indicates whether the plan is a subplan (YES) or not (NO)
COMMENTS	VARCHAR2(2000)		Text comment on the plan
STATUS	VARCHAR2(128)		Indicates whether the plan is part of the pending area (PENDING) or not (NULL)
MANDATORY	VARCHAR2(3)		Indicates whether the plan is mandatory (YES) or not (NO). Mandatory plans cannot be deleted.

> **See Also:**

> - *Oracle Database Administrator's Guide* for information on resource plans in general
> - *Oracle Database PL/SQL Packages and Types Reference* for more information on creating resource plans with the `DBMS_RESOURCE_MANAGER` package

6.351 DBA_RULE_SET_RULES

`DBA_RULE_SET_RULES` describes the rules in all rule sets in the database. Its columns are the same as those in `ALL_RULE_SET_RULES`.

> **See Also:**
>
> "ALL_RULE_SET_RULES"

6.352 DBA_RULE_SETS

`DBA_RULE_SETS` describes all rule sets in the database. Its columns are the same as those in `ALL_RULE_SETS`.

> **See Also:**
>
> "ALL_RULE_SETS"

6.353 DBA_RULES

`DBA_RULES` describes all rules in the database. Its columns are the same as those in `ALL_RULES`.

> **See Also:**
>
> "ALL_RULES"

6.354 DBA_SAGA_BROKERS

DBA_SAGA_BROKERS displays all saga brokers in the database.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_BROKERS"

6.355 DBA_SAGA_DETAILS

DBA_SAGA_DETAILS displays details for all sagas in the database. Its columns are the same as those in ALL_SAGA_DETAILS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_DETAILS"

6.356 DBA_SAGA_ERRORS

DBA_SAGA_ERRORS describes errors generated by all sagas in the database. Its columns are the same as those in ALL_SAGA_ERRORS.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_ERRORS"

6.357 DBA_SAGA_FINALIZATION

DBA_SAGA_FINALIZATION displays information about pending finalization actions for all sagas in the database. Its columns are the same as those in ALL_SAGA_FINALIZATION.

This view displays one row for each unique reservable table updated as part of a participant transaction for sagas that were either initiated in the current PDB or joined by participants in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_FINALIZATION"

6.358 DBA_SAGA_PARTICIPANT_SET

DBA_SAGA_PARTICIPANT_SET displays information about saga participants for all sagas in the database. Its columns are the same as those in ALL_SAGA_PARTICIPANT_SET.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_PARTICIPANT_SET"

6.359 DBA_SAGA_PARTICIPANTS

DBA_SAGA_PARTICIPANTS describes all saga participants in the database. Its columns are the same as those in ALL_SAGA_PARTICIPANTS.

This view displays sagas that were either initiated in the current PDB or joined by participants or coordinators in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_PARTICIPANTS"

6.360 DBA_SAGA_PENDING

`DBA_SAGA_PENDING` describes all pending sagas in the database. Its columns are the same as those in `ALL_SAGA_PENDING`.

This view displays sagas that were initiated in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_PENDING"

6.361 DBA_SAGAS

`DBA_SAGAS` describes all active sagas in the database. Its columns are the same as those in `ALL_SAGAS`.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

> **Note:**
>
> This view displays active sagas. Completed sagas are displayed in the DBA_HIST_SAGAS view.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGAS"

6.362 DBA_SCHEDULER_CHAIN_RULES

DBA_SCHEDULER_CHAIN_RULES displays information about the rules for all chains in the database. Its columns are the same as those in ALL_SCHEDULER_CHAIN_RULES.

> **See Also:**
>
> "ALL_SCHEDULER_CHAIN_RULES"

6.363 DBA_SCHEDULER_CHAIN_STEPS

DBA_SCHEDULER_CHAIN_STEPS displays information about the defined steps of all chains in the database. Its columns are the same as those in ALL_SCHEDULER_CHAIN_STEPS.

> **See Also:**
>
> "ALL_SCHEDULER_CHAIN_STEPS"

6.364 DBA_SCHEDULER_CHAINS

DBA_SCHEDULER_CHAINS displays information about all chains in the database. Its columns are the same as those in ALL_SCHEDULER_CHAINS.

> **See Also:**
>
> "ALL_SCHEDULER_CHAINS"

6.365 DBA_SCHEDULER_CREDENTIALS

DBA_SCHEDULER_CREDENTIALS displays information about all credentials in the database. Its columns are the same as those in ALL_SCHEDULER_CREDENTIALS.

> **Note:**
>
> This view is deprecated in favor of the DBA_CREDENTIALS view. Oracle recommends that you use DBA_CREDENTIALS instead. DBA_SCHEDULER_CREDENTIALS is retained for backward compatibility only.

> **See Also:**
>
> - "DBA_CREDENTIALS"
> - "ALL_SCHEDULER_CREDENTIALS"

6.366 DBA_SCHEDULER_DB_DESTS

DBA_SCHEDULER_DB_DESTS displays information about all destination objects in the database pointing to remote databases. Its columns are the same as those in ALL_SCHEDULER_DB_DESTS.

> **See Also:**
>
> "ALL_SCHEDULER_DB_DESTS"

6.367 DBA_SCHEDULER_DESTS

DBA_SCHEDULER_DESTS displays information about all destination objects for jobs in the database. Its columns are the same as those in ALL_SCHEDULER_DESTS.

> **See Also:**
>
> "ALL_SCHEDULER_DESTS"

6.368 DBA_SCHEDULER_EXTERNAL_DESTS

DBA_SCHEDULER_EXTERNAL_DESTS displays information about all destination objects in the database pointing to remote agents. Its columns are the same as those in ALL_SCHEDULER_EXTERNAL_DESTS.

> **See Also:**
>
> "ALL_SCHEDULER_EXTERNAL_DESTS"

6.369 DBA_SCHEDULER_FILE_WATCHERS

DBA_SCHEDULER_FILE_WATCHERS displays information about all scheduler file watch requests in the database. Its columns are the same as those in ALL_SCHEDULER_FILE_WATCHERS.

> **See Also:**
>
> "ALL_SCHEDULER_FILE_WATCHERS"

6.370 DBA_SCHEDULER_GLOBAL_ATTRIBUTE

DBA_SCHEDULER_GLOBAL_ATTRIBUTE displays the values of all scheduler attributes in the database (for example, DEFAULT_TIMEZONE and CURRENT_OPEN_WINDOW). Its columns are the same as those in ALL_SCHEDULER_GLOBAL_ATTRIBUTE.

> **See Also:**
>
> "ALL_SCHEDULER_GLOBAL_ATTRIBUTE"

6.371 DBA_SCHEDULER_GROUP_MEMBERS

DBA_SCHEDULER_GROUP_MEMBERS displays information about the members of all Scheduler object groups in the database. Its columns are the same as those in ALL_SCHEDULER_GROUP_MEMBERS.

> **See Also:**
>
> "ALL_SCHEDULER_GROUP_MEMBERS"

6.372 DBA_SCHEDULER_GROUPS

DBA_SCHEDULER_GROUPS displays information about all Scheduler object groups in the database. Its columns are the same as those in ALL_SCHEDULER_GROUPS.

> **See Also:**
>
> "ALL_SCHEDULER_GROUPS"

6.373 DBA_SCHEDULER_IN_MEMORY_TRACE

DBA_SCHEDULER_IN_MEMORY_TRACE displays scheduler in-memory trace information generated by all user processes in the database.

Column	Datatype	NULL	Description
USER#	NUMBER		Oracle identifier of the user generating scheduler trace
USERNAME	VARCHAR2(128)		Name of the user generating scheduler trace
PROCESSNAME	VARCHAR2(5)		Name of the process generating scheduler trace
SPID	VARCHAR2(24)		Operating system identifier of the process generating scheduler trace
PADDR	RAW(8)		Address of the process state object generating scheduler trace
TRACE_ST	CLOB		Scheduler trace generated by the process

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.374 DBA_SCHEDULER_INCOMPAT_MEMBER

DBA_SCHEDULER_INCOMPAT_MEMBER displays all Scheduler incompatibility resource objects members in the database. Its columns are the same as those in ALL_SCHEDULER_INCOMPAT_MEMBER.

> **See Also:**
>
> "ALL_SCHEDULER_INCOMPAT_MEMBER"

6.375 DBA_SCHEDULER_INCOMPATS

DBA_SCHEDULER_INCOMPATS displays all Scheduler incompatibility resource objects in the database. Its columns are the same as those in ALL_SCHEDULER_INCOMPATS.

> **See Also:**
>
> "ALL_SCHEDULER_INCOMPATS"

6.376 DBA_SCHEDULER_JOB_ARGS

DBA_SCHEDULER_JOB_ARGS displays information about the arguments of all Scheduler jobs in the database. Its columns are the same as those in ALL_SCHEDULER_JOB_ARGS.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_ARGS"

6.377 DBA_SCHEDULER_JOB_CLASSES

DBA_SCHEDULER_JOB_CLASSES displays information about all Scheduler job classes in the database. Its columns are the same as those in ALL_SCHEDULER_JOB_CLASSES.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_CLASSES"

6.378 DBA_SCHEDULER_JOB_DESTS

DBA_SCHEDULER_JOB_DESTS displays information about the state of all jobs in the database at each of their destinations. Its columns are the same as those in ALL_SCHEDULER_JOB_DESTS.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_DESTS"

6.379 DBA_SCHEDULER_JOB_LOG

DBA_SCHEDULER_JOB_LOG displays log information for all Scheduler jobs in the database. Its columns are the same as those in ALL_SCHEDULER_JOB_LOG.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_LOG"

6.380 DBA_SCHEDULER_JOB_ROLES

DBA_SCHEDULER_JOB_ROLES displays information about all Scheduler jobs in the database by database role.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler job
JOB_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(128)		Subname of the Scheduler job (for a job running a chain step)
JOB_CREATOR	VARCHAR2(128)		Creator of the Scheduler job
DATABASE_ROLE	VARCHAR2(16)		Name of the database role
PROGRAM_OWNER	VARCHAR2(4000)		Owner of the program associated with the job
PROGRAM_NAME	VARCHAR2(4000)		Name of the program associated with the job
JOB_TYPE	VARCHAR2(16)		Inline job action type: • PLSQL_BLOCK • STORED_PROCEDURE • EXECUTABLE • CHAIN
JOB_ACTION	VARCHAR2(4000)		Inline job action
JOB_CLASS	VARCHAR2(128)		Name of the job class associated with the job
SCHEDULE_OWNER	VARCHAR2(4000)		Owner of the schedule that the job uses (can be a window or a window group)
SCHEDULE_NAME	VARCHAR2(4000)		Name of the schedule that the job uses (can be a window or a window group)
SCHEDULE_TYPE	VARCHAR2(12)		Type of the schedule that the job uses: • IMMEDIATE - Start date and repeat interval are NULL • ONCE - Repeat interval is NULL • PLSQL - PL/SQL expression used as schedule • CALENDAR - Oracle calendaring expression used as schedule • EVENT - Event schedule • NAMED - Named schedule • WINDOW - Window used as schedule • WINDOW_GROUP - Window group used as schedule

Column	Datatype	NULL	Description
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Original scheduled start date of the job (for an inline schedule)
REPEAT_INTERVAL	VARCHAR2(4000)		Inline schedule PL/SQL expression or calendar string
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Date after which the job will no longer run (for an inline schedule)
LAST_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Last date on which the job ran
ENABLED	VARCHAR2(5)		Indicates whether the job is enabled (TRUE) or disabled (FALSE)
STATE	VARCHAR2(15)		Current state of the job: • DISABLED • RETRY SCHEDULED • SCHEDULED • RUNNING • COMPLETED • BROKEN • FAILED • REMOTE • SUCCEEDED • CHAIN_STALLED
COMMENTS	VARCHAR2(4000)		Comments on the job

6.381 DBA_SCHEDULER_JOB_RUN_DETAILS

DBA_SCHEDULER_JOB_RUN_DETAILS displays log run details for all Scheduler jobs in the database. Its columns are the same as those in ALL_SCHEDULER_JOB_RUN_DETAILS.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_RUN_DETAILS"

6.382 DBA_SCHEDULER_JOBS

DBA_SCHEDULER_JOBS displays information about all Scheduler jobs in the database. Its columns are the same as those in ALL_SCHEDULER_JOBS.

> **See Also:**
>
> "ALL_SCHEDULER_JOBS"

6.383 DBA_SCHEDULER_NOTIFICATIONS

DBA_SCHEDULER_NOTIFICATIONS displays information about the E-mail notifications for all jobs in the database. Its columns are the same as those in ALL_SCHEDULER_NOTIFICATIONS.

> **See Also:**
>
> "ALL_SCHEDULER_NOTIFICATIONS"

6.384 DBA_SCHEDULER_PROGRAM_ARGS

DBA_SCHEDULER_PROGRAM_ARGS displays information about the arguments of all Scheduler programs in the database. Its columns are the same as those in ALL_SCHEDULER_PROGRAM_ARGS.

> **See Also:**
>
> "ALL_SCHEDULER_PROGRAM_ARGS"

6.385 DBA_SCHEDULER_PROGRAMS

DBA_SCHEDULER_PROGRAMS displays information about all Scheduler programs in the database. Its columns are the same as those in ALL_SCHEDULER_PROGRAMS.

> **See Also:**
>
> "ALL_SCHEDULER_PROGRAMS"

6.386 DBA_SCHEDULER_REMOTE_DATABASES

DBA_SCHEDULER_REMOTE_DATABASES displays information about all remote databases that have been registered as sources and destinations for remote database jobs. Its columns are the same as those in ALL_SCHEDULER_REMOTE_DATABASES.

> **See Also:**
>
> "ALL_SCHEDULER_REMOTE_DATABASES"

6.387 DBA_SCHEDULER_REMOTE_JOBSTATE

DBA_SCHEDULER_REMOTE_JOBSTATE displays information about the state of all jobs at remote databases. Its columns are the same as those in ALL_SCHEDULER_REMOTE_JOBSTATE.

> **See Also:**
>
> "ALL_SCHEDULER_REMOTE_JOBSTATE"

6.388 DBA_SCHEDULER_RESOURCES

DBA_SCHEDULER_RESOURCES displays all scheduler resource objects in the database. Its columns are the same as those in ALL_SCHEDULER_RESOURCES.

> **See Also:**
>
> "ALL_SCHEDULER_RESOURCES"

6.389 DBA_SCHEDULER_RSC_CONSTRAINTS

DBA_SCHEDULER_RSC_CONSTRAINTS lists all Oracle Scheduler resource constraint members in the database. Its columns are the same as those in ALL_SCHEDULER_RSC_CONSTRAINTS.

> **See Also:**
>
> "ALL_SCHEDULER_RSC_CONSTRAINTS"

6.390 DBA_SCHEDULER_RUNNING_CHAINS

DBA_SCHEDULER_RUNNING_CHAINS displays information about the chain steps of all running chains in the database. Its columns are the same as those in ALL_SCHEDULER_RUNNING_CHAINS.

> **See Also:**
>
> "ALL_SCHEDULER_RUNNING_CHAINS"

6.391 DBA_SCHEDULER_RUNNING_JOBS

DBA_SCHEDULER_RUNNING_JOBS displays information about all running Scheduler jobs in the database. Its columns are the same as those in ALL_SCHEDULER_RUNNING_JOBS.

> **See Also:**
>
> "ALL_SCHEDULER_RUNNING_JOBS"

6.392 DBA_SCHEDULER_SCHEDULES

DBA_SCHEDULER_SCHEDULES displays information about all Scheduler schedules in the database. Its columns are the same as those in ALL_SCHEDULER_SCHEDULES.

> **See Also:**
>
> "ALL_SCHEDULER_SCHEDULES"

6.393 DBA_SCHEDULER_WINDOW_DETAILS

DBA_SCHEDULER_WINDOW_DETAILS displays log details for all Scheduler windows in the database. Its columns are the same as those in ALL_SCHEDULER_WINDOW_DETAILS.

> **See Also:**
>
> "ALL_SCHEDULER_WINDOW_DETAILS"

6.394 DBA_SCHEDULER_WINDOW_GROUPS

DBA_SCHEDULER_WINDOW_GROUPS displays information about all Scheduler window groups in the database. Its columns are the same as those in ALL_SCHEDULER_WINDOW_GROUPS.

> **See Also:**
>
> "ALL_SCHEDULER_WINDOW_GROUPS"

6.395 DBA_SCHEDULER_WINDOW_LOG

DBA_SCHEDULER_WINDOW_LOG displays log information for all Scheduler windows in the database. Its columns are the same as those in ALL_SCHEDULER_WINDOW_LOG.

> **See Also:**
>
> "ALL_SCHEDULER_WINDOW_LOG"

6.396 DBA_SCHEDULER_WINDOWS

DBA_SCHEDULER_WINDOWS displays information about all Scheduler windows in the database. Its columns are the same as those in ALL_SCHEDULER_WINDOWS.

> **See Also:**
>
> "ALL_SCHEDULER_WINDOWS"

6.397 DBA_SCHEDULER_WINGROUP_MEMBERS

DBA_SCHEDULER_WINGROUP_MEMBERS displays the members of all Scheduler window groups in the database. Its columns are the same as those in ALL_SCHEDULER_WINGROUP_MEMBERS.

> **See Also:**
>
> "ALL_SCHEDULER_WINGROUP_MEMBERS"

6.398 DBA_SCHEMA_PRIVS

DBA_SCHEMA_PRIVS describes schema privileges granted to users and roles.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Grantee name, user, or role receiving the grant
PRIVILEGE	VARCHAR2(40)		Schema privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)

Column	Datatype	NULL	Description
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the grant was inherited from another container (YES) or not (NO)

Note:

This view is available starting with Oracle Database 23ai.

See Also:

"USER_SCHEMA_PRIVS"

6.399 DBA_SEC_RELEVANT_COLS

DBA_SEC_RELEVANT_COLS describes the security relevant columns of all security policies in the database. Its columns are the same as those in ALL_SEC_RELEVANT_COLS.

See Also:

"ALL_SEC_RELEVANT_COLS"

6.400 DBA_SECONDARY_OBJECTS

DBA_SECONDARY_OBJECTS provides information about all secondary objects that are associated with domain indexes in the database.

This view is only relevant in the context of domain indexes. Its columns are the same as those in "ALL_SECONDARY_OBJECTS".

6.401 DBA_SEGMENTS

DBA_SEGMENTS describes the storage allocated for all segments in the database.

Related View

USER_SEGMENTS describes the storage allocated for the segments owned by the current user's objects. This view does not display the OWNER, HEADER_FILE, HEADER_BLOCK, or RELATIVE_FNO columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Username of the segment owner
SEGMENT_NAME	VARCHAR2(128)		Name, if any, of the segment
PARTITION_NAME	VARCHAR2(128)		Object Partition Name (Set to NULL for nonpartitioned objects)
SEGMENT_TYPE	VARCHAR2(18)		Type of segment: • NESTED TABLE • TABLE • TABLE PARTITION • CLUSTER • LOBINDEX • INDEX • INDEX PARTITION • LOBSEGMENT • TABLE SUBPARTITION • INDEX SUBPARTITION • LOB PARTITION • LOB SUBPARTITION • ROLLBACK • TYPE2 UNDO • DEFERRED ROLLBACK • TEMPORARY • CACHE • SPACE HEADER • UNDEFINED
SEGMENT_SUBTYPE	VARCHAR2(10)		Subtype of LOB segment: SECUREFILE, ASSM, MSSM, and NULL
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the segment
HEADER_FILE	NUMBER		Absolute file number of the data file containing the segment header
HEADER_BLOCK	NUMBER		ID of the block containing the segment header
BYTES	NUMBER		Size, in bytes, of the segment
BLOCKS	NUMBER		Size, in Oracle blocks, of the segment
EXTENTS	NUMBER		Number of extents allocated to the segment
INITIAL_EXTENT	NUMBER		Size in bytes requested for the initial extent of the segment at create time. (Oracle rounds the extent size to multiples of 5 blocks if the requested size is greater than 5 blocks.)
NEXT_EXTENT	NUMBER		Size in bytes of the next extent to be allocated to the segment
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment
RETENTION	VARCHAR2(7)		Retention option for SECUREFILE segment
MINRETENTION	NUMBER		Minimum retention duration for SECUREFILE segment
PCT_INCREASE	NUMBER		Percent by which to increase the size of the next extent to be allocated
FREELISTS	NUMBER		Number of process freelists allocated to this segment

Column	Datatype	NULL	Description
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to this segment
RELATIVE_FNO	NUMBER		Relative file number of the segment header
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for segment blocks: • DEFAULT • KEEP • RECYCLE
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for segment blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for segment blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this segment
INMEMORY_PRIORITY	VARCHAR2(8)		Indicates the priority for In-Memory Column Store (IM column store) population: • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL
INMEMORY_DISTRIBUTE	VARCHAR2(15)		Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION
INMEMORY_DUPLICATE	VARCHAR2(13)		Indicates the duplicate setting for the IM column store in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
INMEMORY_COMPRESSION	VARCHAR2(17)		Indicates the compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO • NULL

Column	Datatype	NULL	Description
CELLMEMORY[11]	VARCHAR2(24)		The value for columnar compression in the storage cell flash cache. Possible values: • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format

1 This column is intended for use with Oracle Exadata

See Also:

"USER_SEGMENTS"

6.402 DBA_SEGMENTS_OLD

DBA_SEGMENTS_OLD lists information about storage allocated for all database segments.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Username of the segment owner
SEGMENT_NAME	VARCHAR2(128)		Name, if any, of the segment
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SEGMENT_TYPE	VARCHAR2(18)		Type of segment: INDEX PARTITION, TABLE PARTITION, TABLE, CLUSTER, INDEX, ROLLBACK, DEFERRED ROLLBACK, TEMPORARY, CACHE, LOBSEGMENT and LOBINDEX
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the segment
HEADER_FILE	NUMBER		ID of the file containing the segment header
HEADER_BLOCK	NUMBER		ID of the block containing the segment header
BYTES	NUMBER		Size, in bytes, of the segment
BLOCKS	NUMBER		Size, in Oracle blocks, of the segment
EXTENTS	NUMBER		Number of extents allocated to the segment
INITIAL_EXTENT	NUMBER		Size in bytes requested for the initial extent of the segment at create time. (Oracle rounds the extent size to multiples of 5 blocks if the requested size is greater than 5 blocks.)
NEXT_EXTENT	NUMBER		Size in bytes of the next extent to be allocated to the segment
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment

Column	Datatype	NULL	Description
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment
PCT_INCREASE	NUMBER		Percent by which to increase the size of the next extent to be allocated
FREELISTS	NUMBER		Number of process freelists allocated to the segment
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to this segment
RELATIVE_FNO	NUMBER		Relative file number of the segment header
BUFFER_POOL	VARCHAR2(7)		Buffer pool for the object

6.403 DBA_SENSITIVE_COLUMN_TYPES

DBA_SENSITIVE_COLUMN_TYPES describes sensitive column types in the database.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)		The name of the sensitive column type
USER_COMMENT	VARCHAR2(4000)		User comment on the sensitive column type
SOURCE_NAME	VARCHAR2(128)		The name of the discovery source for the sensitive column type
SOURCE_TYPE	VARCHAR2(3)		The type of the discovery source: • ADM: import from ADM • DB: added within the database

See Also:

Oracle Database Security Guide for more information about transparent sensitive data protection

6.404 DBA_SENSITIVE_DATA

DBA_SENSITIVE_DATA describes the sensitive columns in the database.

Column	Datatype	NULL	Description
SENSITIVE#	NUMBER	NOT NULL	Dictionary ID for the sensitive data
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	The schema containing the sensitive data
TABLE_NAME	VARCHAR2(128)	NOT NULL	The table containing the sensitive data
COLUMN_NAME	VARCHAR2(128)	NOT NULL	The name of the column identified as sensitive
SENSITIVE_TYPE	VARCHAR2(128)		The sensitive column type of the data
SOURCE_NAME	VARCHAR2(128)		The name of the discovery source for the sensitive data
USER_COMMENT	VARCHAR2(4000)		User comment on the sensitive data
TS	TIMESTAMP(6)		The time when the data was identified as sensitive in the database

> **See Also:**
>
> *Oracle Database Security Guide* for more information about transparent sensitive data protection

6.405 DBA_SEQUENCES

`DBA_SEQUENCES` describes all sequences in the database. Its columns are the same as those in `ALL_SEQUENCES`.

> **See Also:**
>
> "ALL_SEQUENCES"

6.406 DBA_SERVER_REGISTRY

`DBA_SERVER_REGISTRY` displays information about all server components in the database that are loaded into the component registry.

Column	Datatype	NULL	Description
COMP_ID	VARCHAR2(30)	NOT NULL	Component identifier
COMP_NAME	VARCHAR2(255)		Component name
VERSION	VARCHAR2(30)		Component version loaded
VERSION_FULL	VARCHAR2(30)		Component full version
STATUS	VARCHAR2(11)		Component status: • INVALID • VALID • LOADING • LOADED • UPGRADING • UPGRADED • DOWNGRADING • DOWNGRADED • REMOVING • REMOVED
MODIFIED	VARCHAR2(20)		Time when the component was last modified
CONTROL	VARCHAR2(128)	NOT NULL	User that created the component entry
SCHEMA	VARCHAR2(128)	NOT NULL	User that contains the objects for the component
PROCEDURE	VARCHAR2(61)		Validation procedure
STARTUP	VARCHAR2(8)		Indicates whether the component requires a startup after the upgrade (`REQUIRED`) or not
PARENT_ID	VARCHAR2(30)		Parent component identifier
OTHER_SCHEMAS	VARCHAR2(4000)		A list of ancillary schema names associated with the component

6.407 DBA_SERVICES

DBA_SERVICES displays all services in the database. The view excludes rows marked for deletion. Its columns are the same as those in ALL_SERVICES.

> **See Also:**
>
> "ALL_SERVICES"

6.408 DBA_SODA_COLLECTIONS

DBA_SODA_COLLECTIONS describes all Simple Oracle Document Access (SODA) collections in the database.

Related View

USER_SODA_COLLECTIONS describes the SODA collections owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
URI_NAME	NVARCHAR2(255)	NOT NULL	Collection name
OWNER	VARCHAR2(128)	NOT NULL	Owner of the collection
OBJECT_TYPE	VARCHAR2(10)	NOT NULL	Indicates whether the collection is table-based (TABLE) or view-based (VIEW)
OBJECT_SCHEMA	VARCHAR2(128)	NOT NULL	Name of the schema that includes the table or view on which the collection is based
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the table or view on which the collection is based
CREATED_ON	TIMESTAMP(6)	NOT NULL	Collection creation time
CREATE_MODE	VARCHAR2(10)	NOT NULL	Creation mode. Possible values: • DDL: A new table was created at collection creation time • MAP: The collection was created by mapping a preexisting table or view **Note:** For view-based collections, the value of this column is always MAP. New views are not created for view-based collections. A view-based collection is always created by mapping a preexisting view.
JSON_DESCRIPTOR	VARCHAR2(4000)	NOT NULL	Collection metadata, expressed in JavaScript Object Notation (JSON)

> **See Also:**
>
> "USER_SODA_COLLECTIONS"

6.409 DBA_SOURCE

DBA_SOURCE describes the text source of all stored objects in the database. Its columns are the same as those in ALL_SOURCE.

> **See Also:**
>
> "ALL_SOURCE"

6.410 DBA_SOURCE_AE

DBA_SOURCE_AE describes the text source of all stored objects (across all editions) in the database. Its columns are the same as those in ALL_SOURCE_AE.

> **See Also:**
>
> "ALL_SOURCE_AE"

6.411 DBA_SQL_ERROR_MITIGATIONS

DBA_SQL_ERROR_MITIGATIONS describes automatic error mitigations for SQL statements.

Column	Datatype	NULL	Description
SQL_ID	VARCHAR2(13)		Identifier for the relevant SQL statement
SIGNATURE	NUMBER		Unique SQL identifier generated from normalized SQL text
FORCE_MATCHING	VARCHAR2(3)		Indicates whether the signature is force matching (YES) or exact matching (NO)
SQL_TEXT	CLOB		SQL text
INCIDENT_ID	NUMBER		ID for the incident associated with the error mitigation
PROBLEM_KEY	VARCHAR2(64)		Description of the problem
PROBLEM_TYPE	VARCHAR2(17)		Problem type: • COMPILATION ERROR • EXECUTION ERROR
CREATED	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the first automatic error mitigation was created on this SQL
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start date and time of automatic error mitigation
END_TIME	TIMESTAMP(6) WITH TIME ZONE		End date and time of automatic error mitigation
NOTES	CLOB		Mitigation notes

Column	Datatype	NULL	Description
MITIGATION_TYPE	VARCHAR2(14)		Mitigation type: • ALTERNATE PLAN • SQL PATCH
MITIGATION_NAME	VARCHAR2(128)		Mitigation name
MITIGATION_DETAILS	CLOB		Mitigation details
STATUS	CHAR(7)		Mitigation status: • SUCCESS • FAILURE
LAST_VERIFIED	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the auto patch was last verified

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.412 DBA_SQL_FIREWALL_ALLOW_LISTS

DBA_SQL_FIREWALL_ALLOW_LISTS displays information about SQL Firewall allow-lists.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the target user
GENERATED_ON	TIMESTAMP(6) WITH TIME ZONE	NOT NULL	Date and time of allow-list generation
STATUS	VARCHAR2(8)		Allow-list status (ENABLED or DISABLED)
STATUS_UPDATED_ON	TIMESTAMP(6) WITH TIME ZONE	NOT NULL	Date and time of the most recent allow-list status change
TOP_LEVEL_ONLY	VARCHAR2(14)		Indicates whether the allow-list should be enforced on only top-level SQL commands, that is, SQL commands issued directly from the user (Y) or on all SQL commands, including top-level SQL commands and SQL commands from PL/SQL units (N)
ENFORCE	VARCHAR2(15)		Option of the allow-list enforcement: • ENFORCE_CONTEXT - Allowed contexts will be checked and enforced during database connection • ENFORCE_SQL - Allowed SQLs will be checked and enforced for every SQL statement execution • ENFORCE_ALL - Both allowed contexts and allowed SQLs will be checked and enforced
BLOCK	VARCHAR2(14)		If the allow-list is enabled, indicates whether the allow-list is enabled in blocking mode (Y) or non-blocking mode (N)

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.413 DBA_SQL_FIREWALL_ALLOWED_IP_ADDR

DBA_SQL_FIREWALL_ALLOWED_IP_ADDR lists the IP addresses that SQL Firewall target users are allowed to use to connect to the database.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the target user
IP_ADDRESS	VARCHAR2(128)	NOT NULL	Allowed client IP address

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.414 DBA_SQL_FIREWALL_ALLOWED_OS_PROG

DBA_SQL_FIREWALL_ALLOWED_OS_PROG lists the OS programs that SQL Firewall target users are allowed to use to connect to the database.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the target user
OS_PROGRAM	VARCHAR2(128)	NOT NULL	Allowed OS program name

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.415 DBA_SQL_FIREWALL_ALLOWED_OS_USER

DBA_SQL_FIREWALL_ALLOWED_OS_USER lists the OS user names that SQL Firewall target users are allowed to use to connect to the database.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the target user
OS_USER	VARCHAR2(128)	NOT NULL	Allowed OS user name

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.416 DBA_SQL_FIREWALL_ALLOWED_SQL

DBA_SQL_FIREWALL_ALLOWED_SQL displays information about allowed SQL for SQL Firewall allow-lists.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the target user
ALLOWED_SQL_ID	NUMBER	NOT NULL	Unique ID of allowed SQL entry for the target user
SQL_SIGNATURE	VARCHAR2(64)	NOT NULL	Allowed SQL signature
SQL_TEXT	VARCHAR2(4000)		SQL text (up to 1000 characters) To view the full SQL text, query the SQL_TEXT column of the DBA_SQL_FIREWALL_SQL_LOGS view.
ACCESSED_OBJECTS	VARCHAR2(4000)		List of accessed objects (up to 1000 characters) To view the full list of accessed objects, query the ACCESSED_OBJECTS column of the DBA_SQL_FIREWALL_SQL_LOGS view.
CURRENT_USER	VARCHAR2(128)		Name of the user who invoked the SQL command
TOP_LEVEL	VARCHAR2(9)		Indicates whether the allowed SQL entry is a top-level SQL command, that is, a SQL command issued directly from the user (Y) or a SQL command from a PL/SQL unit (N)
VERSION	NUMBER	NOT NULL	Version number for the allow-list when the allowed SQL was added You can use this value to determine whether specific allowed SQLs were added to the allow-list in the same batch.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "DBA_SQL_FIREWALL_SQL_LOGS"

6.417 DBA_SQL_FIREWALL_CAPTURE_LOGS

DBA_SQL_FIREWALL_CAPTURE_LOGS displays SQL Firewall capture logs.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the target user
SESSION_ID	NUMBER	NOT NULL	SQL Firewall session ID
COMMAND_TYPE	VARCHAR2(64)		Type of SQL command
SQL_SIGNATURE	VARCHAR2(64)		SQL signature
SQL_TEXT	VARCHAR2(4000)		SQL text (up to 1000 characters) To view the full SQL text, query the SQL_TEXT column of the DBA_SQL_FIREWALL_SQL_LOGS view.
ACCESSED_OBJECTS	VARCHAR2(4000)		List of accessed objects (up to 1000 characters) To view the full list of accessed objects, query the ACCESSED_OBJECTS column of the DBA_SQL_FIREWALL_SQL_LOGS view.
CURRENT_USER	VARCHAR2(128)		Name of the user who invoked the SQL command
TOP_LEVEL	VARCHAR2(9)		Indicates whether the SQL command is a top-level SQL command, that is, a SQL command issued directly from the user (Y) or a SQL command from a PL/SQL unit (N)
CLIENT_PROGRAM	VARCHAR2(84)		Name of the client program
OS_USER	VARCHAR2(128)		Name of the OS user of the client process
IP_ADDRESS	VARCHAR2(48)		Client IP address

Note:

This view is available starting with Oracle Database 23ai.

See Also:

"DBA_SQL_FIREWALL_SQL_LOGS"

6.418 DBA_SQL_FIREWALL_CAPTURES

DBA_SQL_FIREWALL_CAPTURES displays information about SQL Firewall captures.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the target user
TOP_LEVEL_ONLY	VARCHAR2(14)		Indicates whether SQL Firewall should capture only top-level SQL commands, that is, SQL commands issued directly from the user (Y) or all SQL commands, including top-level SQL commands and SQL commands from PL/SQL units (N)
STATUS	VARCHAR2(8)		Capture status (ENABLED or DISABLED)

Column	Datatype	NULL	Description
LAST_STARTED_ON	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the capture was last started
LAST_STOPPED_ON	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the capture was last stopped

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.419 DBA_SQL_FIREWALL_SESSION_LOGS

DBA_SQL_FIREWALL_SESSION_LOGS displays SQL Firewall session logs.

Column	Datatype	NULL	Description
SESSION_ID	NUMBER	NOT NULL	SQL Firewall session ID
USERNAME	VARCHAR2(128)		Name of the target user
LOGIN_TIME	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the target user logged in to the database
IP_ADDRESS	VARCHAR2(48)		Client IP address
CLIENT_PROGRAM	VARCHAR2(84)		Name of the client program
OS_USER	VARCHAR2(128)		Name of the OS user of the client process

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.420 DBA_SQL_FIREWALL_SQL_LOGS

DBA_SQL_FIREWALL_SQL_LOGS displays information about SQL logs for SQL Firewall.

Column	Datatype	NULL	Description
COMMAND_TYPE	VARCHAR2(64)		Type of SQL command
SQL_SIGNATURE	VARCHAR2(64)		SQL signature
SQL_TEXT	CLOB		SQL text
ACCESSED_OBJECTS	CLOB		List of accessed objects
CHARSET	VARCHAR2(64)		Character set of the SQL text

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.421 DBA_SQL_FIREWALL_STATUS

DBA_SQL_FIREWALL_STATUS displays the status of SQL Firewall.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(8)		SQL Firewall status (ENABLED or DISABLED)
STATUS_UPDATED_ON	TIMESTAMP(6) WITH TIME ZONE	NOT NULL	Date and time of the most recent SQL Firewall status change
EXCLUDE_JOBS	VARCHAR2(12)		Indicates whether the SQL Firewall will capture or enforce allow-lists for database connections and SQL executions of Oracle scheduler job sessions (Y) or not (N)

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

6.422 DBA_SQL_FIREWALL_VIOLATIONS

DBA_SQL_FIREWALL_VIOLATIONS lists SQL Firewall violations.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the target user
COMMAND_TYPE	VARCHAR2(64)		Type of SQL command
SQL_SIGNATURE	VARCHAR2(64)		SQL signature
SQL_TEXT	VARCHAR2(4000)		SQL text (up to 1000 characters) To view the full SQL text, query the SQL_TEXT column of the DBA_SQL_FIREWALL_SQL_LOGS view.
ACCESSED_OBJECTS	VARCHAR2(4000)		List of accessed objects (up to 1000 characters) To view the full list of accessed objects, query the ACCESSED_OBJECTS column of the DBA_SQL_FIREWALL_SQL_LOGS view.
CURRENT_USER	VARCHAR2(128)		Name of the user who invoked the SQL command
TOP_LEVEL	VARCHAR2(9)		Indicates whether the SQL command is a top-level SQL command, that is, a SQL command issued directly from the user (Y) or a SQL command from a PL/SQL unit (N)
IP_ADDRESS	VARCHAR2(48)		Client IP address
CLIENT_PROGRAM	VARCHAR2(84)		Name of the client program

Column	Datatype	NULL	Description
OS_USER	VARCHAR2(128)		Name of the OS user of the client process
CAUSE	VARCHAR2(17)		Cause of the violation: • Context violation • SQL violation
FIREWALL_ACTION	VARCHAR2(7)		Indicates whether the SQL Firewall action was Allowed or Blocked
OCCURRED_AT	TIMESTAMP(6) WITH TIME ZONE		Date and time of the violation

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "DBA_SQL_FIREWALL_SQL_LOGS"

6.423 DBA_SQL_MANAGEMENT_CONFIG

DBA_SQL_MANAGEMENT_CONFIG displays the configuration parameters of the SQL management base.

You must have the DBA role in order to change the configuration parameter values.

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the configuration parameter: • AUTO_CAPTURE_ACTION • AUTO_CAPTURE_MODULE • AUTO_CAPTURE_PARSING_SCHEMA_NAME • AUTO_CAPTURE_SQL_TEXT • PLAN_RETENTION_WEEKS • SPACE_BUDGET_PERCENT
PARAMETER_VALUE	VARCHAR2(4000)		Value of the configuration parameter
PARAMETER_VALUE_CLOB	CLOB		Value of the configuration parameter, in CLOB format
LAST_MODIFIED	TIMESTAMP(6)		Time the parameter value was last updated
MODIFIED_BY	VARCHAR2(128)		User who last updated the parameter value

6.424 DBA_SQL_QUARANTINE

DBA_SQL_QUARANTINE displays information about SQL Quarantine configurations.

Each row in this view represents a quarantine configuration for a SQL plan.

Column	Datatype	NULL	Description
SIGNATURE	NUMBER	NOT NULL	Unique SQL identifier generated from normalized SQL text
NAME	VARCHAR2(128)	NOT NULL	Unique plan identifier in string form as a search key
SQL_TEXT	CLOB	NOT NULL	Un-normalized SQL text
PLAN_HASH_VALUE	NUMBER		Unique plan identifier in numeric form as a search key
CPU_TIME	VARCHAR2(4000)		CPU time threshold (in seconds)
IO_MEGABYTES	VARCHAR2(4000)		I/O threshold (in megabytes)
IO_REQUESTS	VARCHAR2(4000)		Physical I/O threshold (number of physical I/O requests)
ELAPSED_TIME	VARCHAR2(4000)		Elapsed time threshold (in seconds)
IO_LOGICAL	VARCHAR2(4000)		Logical I/O threshold (number of logical I/O requests)
CREATOR	VARCHAR2(128)		User who created the quarantine configuration
ORIGIN	VARCHAR2(16)		Method by which the quarantine configuration was created. The only possible value is RESOURCE-MANAGER, which indicates that the quarantine configuration was created by the Resource Manager.
DESCRIPTION	VARCHAR2(500)		Text description
CREATED	TIMESTAMP(6)	NOT NULL	Time at which the quarantine configuration was created
LAST_EXECUTED	TIMESTAMP(6)		Time at which the quarantine configuration was last used
ENABLED	VARCHAR2(3)		Indicates whether the quarantine configuration is enabled (YES) or disabled (NO)
AUTOPURGE	VARCHAR2(3)		Indicates whether the quarantine configuration is auto-purged (YES) or not (NO)

See Also:

Oracle Database SQL Tuning Guide for more information about quarantined SQL plans

6.425 DBA_SQL_PATCHES

DBA_SQL_PATCHES displays the set of SQL patches.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)	NOT NULL	Name of the SQL patch
CATEGORY	VARCHAR2(128)	NOT NULL	Category of the SQL patch
SIGNATURE	NUMBER	NOT NULL	Unique identifier generated from normalized SQL text
SQL_TEXT	CLOB	NOT NULL	Un-normalized SQL text
CREATED	TIMESTAMP(6)	NOT NULL	Timestamp when the SQL patch was created
LAST_MODIFIED	TIMESTAMP(6)		Timestamp when the SQL patch was last modified

Column	Datatype	NULL	Description
DESCRIPTION	VARCHAR2(500)		Text description provided for the SQL patch
ORIGIN	VARCHAR2(22)		Origin of the patch: • AUTO-FOREGROUND-REPAIR • PATCH • UNKNOWN
STATUS	VARCHAR2(8)		Status of the SQL patch: • ENABLED • DISABLED
FORCE_MATCHING	VARCHAR2(3)		Indicates whether the signature is force matching (YES) or exact matching (NO)
TASK_ID	NUMBER		Advisor task ID that generated the SQL patch
TASK_EXEC_NAME	VARCHAR2(128)		Advisor execution name for the SQL patch
TASK_OBJ_ID	NUMBER		Advisor object ID for the SQL patch
TASK_FND_ID	NUMBER		Advisor finding ID for the SQL patch
TASK_REC_ID	NUMBER		Advisor recommendation ID for the SQL patch

6.426 DBA_SQL_PLAN_BASELINES

DBA_SQL_PLAN_BASELINES displays information about the SQL plan baselines currently created for specific SQL statements.

Column	Datatype	NULL	Description
SIGNATURE	NUMBER	NOT NULL	Unique SQL identifier generated from normalized SQL text
SQL_HANDLE	VARCHAR2(30)	NOT NULL	Unique SQL identifier in string form as a search key
SQL_TEXT	CLOB	NOT NULL	Un-normalized SQL text
PLAN_NAME	VARCHAR2(128)	NOT NULL	Unique plan identifier in string form as a search key
CREATOR	VARCHAR2(128)		User who created the plan baseline
ORIGIN	VARCHAR2(29)		How the plan baseline was created: • ADDM-SQLTUNE • AUTO-CAPTURE • AUTO-SQLTUNE • EVOLVE-AUTO-INDEX-LOAD • EVOLVE-CREATE-FROM-ADAPTIVE • EVOLVE-LOAD-FROM-AWR • EVOLVE-LOAD-FROM-CURSOR-CACHE • EVOLVE-LOAD-FROM-STS • FOREGROUND-CAPTURE • MANUAL-LOAD • MANUAL-LOAD-FROM-AWR • MANUAL-LOAD-FROM-CURSOR-CACHE • MANUAL-LOAD-FROM-STS • MANUAL-SQLTUNE • STORED-OUTLINE
PARSING_SCHEMA_NAME	VARCHAR2(128)		Name of the parsing schema
DESCRIPTION	VARCHAR2(500)		Text description provided for the plan baseline

Column	Datatype	NULL	Description
VERSION	VARCHAR2(64)		Database version at the time of plan baseline creation
CREATED	TIMESTAMP(6)	NOT NULL	Timestamp when the plan baseline was created
LAST_MODIFIED	TIMESTAMP(6)		Timestamp when the plan baseline was last modified
LAST_EXECUTED	TIMESTAMP(6)		Timestamp when the plan baseline was last executed **Note:** For performance reasons, this column is not updated immediately after each execution of the plan baseline. Therefore, the plan baseline may have been executed more recently than the value of this column indicates.
LAST_VERIFIED	TIMESTAMP(6)		Timestamp when the plan baseline was last verified
ENABLED	VARCHAR2(3)		Indicates whether the plan baseline is enabled (YES) or disabled (NO)
ACCEPTED	VARCHAR2(3)		Indicates whether the plan baseline is accepted (YES) or not (NO)
FIXED	VARCHAR2(3)		Indicates whether the plan baseline is fixed (YES) or not (NO)
REPRODUCED	VARCHAR2(3)		Indicates whether the optimizer was able to reproduce the plan (YES) or not (NO). The value of this column is set to YES when a plan is initially added to the plan baseline.
AUTOPURGE	VARCHAR2(3)		Indicates whether the plan baseline is auto-purged (YES) or not (NO)
ADAPTIVE	VARCHAR2(3)		Indicates whether a plan that is automatically captured by SQL plan management is marked adaptive or not. When a new adaptive plan is found for a SQL statement that has an existing SQL plan baseline, that new plan will be added to the SQL plan baseline as an unaccepted plan, and the ADAPTIVE column will be marked YES. When this new plan is verified (either manually or via the auto evolve task), the plan will be test executed and the final plan determined at execution will become an accepted plan if its performance is better than the existing plan baseline. At this point, the value of the ADAPTIVE column is set to NO since the plan is no longer adaptive, but resolved.
OPTIMIZER_COST	NUMBER		Optimizer cost at the time the plan baseline was created
MODULE	VARCHAR2(64)		Application module name
ACTION	VARCHAR2(64)		Application action
EXECUTIONS[1]	NUMBER		Number of executions at the time the plan baseline was created
ELAPSED_TIME[1]	NUMBER		Total elapsed time (in microseconds) at the time the plan baseline was created
CPU_TIME[1]	NUMBER		Total CPU time (in microseconds) at the time the plan baseline was created
BUFFER_GETS[1]	NUMBER		Total buffer gets at the time the plan baseline was created
DISK_READS[1]	NUMBER		Total disk reads at the time the plan baseline was created

Column	Datatype	NULL	Description
DIRECT_WRITES[1]	NUMBER		Total direct writes at the time the plan baseline was created
ROWS_PROCESSED[1]	NUMBER		Total rows processed at the time the plan baseline was created
FETCHES[1]	NUMBER		Total number of fetches at the time the plan baseline was created
END_OF_FETCH_COUNT[1]	NUMBER		Total number of full fetches at the time the plan baseline was created
FOREGROUND_LAST_VERIFIED	TIMESTAMP(6)		Timestamp when the SQL plan baseline was verified by real-time SQL plan management
NOTES	CLOB		Internal SQL plan baseline verification information

1 If the value of the ORIGIN column is equal to AUTO-CAPTURE, then data for this column is not populated.

6.427 DBA_SQL_PLAN_DIR_OBJECTS

DBA_SQL_PLAN_DIR_OBJECTS displays the objects created in the SQL plan directive.

Column	Datatype	NULL	Description
DIRECTIVE_ID	NUMBER		The identifier of the SQL plan directive
OWNER	VARCHAR2(128)		The username of the owner of the object in the SQL plan directive
OBJECT_NAME	VARCHAR2(128)		The name of the object in the SQL plan directive
SUBOBJECT_NAME	VARCHAR2(128)		The name of the subobject (for example, column) in the SQL plan directive
OBJECT_TYPE	VARCHAR2(6)		The type of the subobject in the SQL plan directive
NUM_ROWS	NUMBER		The number of rows in the object when the directive is created
NOTES	XMLTYPE		Other notes about the object

See Also:

- "DBA_SQL_PLAN_DIRECTIVES"
- *Oracle Database SQL Tuning Guide* for more information about SQL plan directives

6.428 DBA_SQL_PLAN_DIRECTIVES

DBA_SQL_PLAN_DIRECTIVES displays information about the SQL plan directives in the system.

Column	Datatype	NULL	Description
DIRECTIVE_ID	NUMBER	NOT NULL	The identifier of the SQL plan directive
TYPE	VARCHAR2(16)		The type of the SQL plan directive: • DYNAMIC SAMPLING: SQL plan directive • DYNAMIC SAMPLING RESULT: Dynamic sampling query results. This value appears only in Oracle Database 12*c* Release 2 (12.2.0.1) and later releases. • UNKNOWN: Unknown
ENABLED	VARCHAR2(3)		Indicates whether the SQL plan directive is enabled. Possible values: • YES: The SQL plan directive is enabled. • NO: The SQL plan directive is not enabled.
STATE	VARCHAR2(10)		The state of the SQL plan directive. Possible values include: • SUPERSEDED: This value indicates that the corresponding column or groups have an extension or histogram, or that another SQL plan directive exists that can be used for the directive. • USABLE: This value indicates that the SQL plan directive is usable for the optimizer.
AUTO_DROP	VARCHAR2(3)		If YES, the SQL plan directive gets dropped when unused beyond SPD_RETENTION_WEEKS
REASON	VARCHAR2(36)		The reason for creating the SQL plan directive
CREATED	TIMESTAMP(6)		The creation timestamp of the SQL plan directive
LAST_MODIFIED	TIMESTAMP(6)		The timestamp of most recent modification of the SQL plan directive
LAST_USED	TIMESTAMP(9)		The timestamp of most recent usage of the SQL plan directive
NOTES	XMLTYPE		Extra information about the SQL plan directive

See Also:

- "DBA_SQL_PLAN_DIR_OBJECTS"
- *Oracle Database SQL Tuning Guide* for more information about SQL plan directives

6.429 DBA_SQL_PROFILES

DBA_SQL_PROFILES displays information about SQL profiles currently created for specific SQL statements.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)	NOT NULL	Name of the SQL profile
CATEGORY	VARCHAR2(128)	NOT NULL	Category of the SQL profile
SIGNATURE	NUMBER	NOT NULL	Unique identifier generated from normalized SQL text
SQL_TEXT	CLOB	NOT NULL	Un-normalized SQL text
CREATED	TIMESTAMP(6)	NOT NULL	Timestamp when the SQL profile was created
LAST_MODIFIED	TIMESTAMP(6)		Timestamp when the SQL profile was last modified
DESCRIPTION	VARCHAR2(500)		Text description provided for the SQL profile
TYPE	VARCHAR2(7)		Type of the SQL profile (how it was created): • MANUAL • AUTO
STATUS	VARCHAR2(8)		Status of the SQL profile: • ENABLED • DISABLED • VOID
FORCE_MATCHING	VARCHAR2(3)		If YES, this causes SQL Profiles to target all SQL statements which have the same text after normalizing all literal values to bind variables. If a combination of literal values and bind variables is used in the same SQL text, then no transformation occurs. This is analogous to the matching algorithm use by the FORCE option of the CURSOR_SHARING parameter. If NO, literals are not transformed. This is analogous to the matching algorithm used by the EXACT option of the CURSOR_SHARING parameter.
TASK_ID	NUMBER		Advisor task ID that generated the SQL profile
TASK_EXEC_NAME	VARCHAR2(128)		Advisor execution name for the SQL profile
TASK_OBJ_ID	NUMBER		Advisor object ID for the SQL profile
TASK_FND_ID	NUMBER		Advisor finding ID for the SQL profile
TASK_REC_ID	NUMBER		Advisor recommendation ID for the SQL profile
TASK_CON_DBID	NUMBER		Database ID for the PDB tuning task generating the SQL profile

6.430 DBA_SQL_TRANSLATION_PROFILES

`DBA_SQL_TRANSLATION_PROFILES` describes all SQL translation profiles in the database. Its columns are the same as those in `ALL_SQL_TRANSLATION_PROFILES`.

> **See Also:**
>
> "ALL_SQL_TRANSLATION_PROFILES"

6.431 DBA_SQL_TRANSLATIONS

`DBA_SQL_TRANSLATIONS` describes all SQL translations in the database. Its columns are the same as those in `ALL_SQL_TRANSLATIONS`.

> **See Also:**
>
> "ALL_SQL_TRANSLATIONS"

6.432 DBA_SQLJ_TYPE_ATTRS

`DBA_SQLJ_TYPE_ATTRS` describes the attributes of all SQLJ object types in the database. Its columns are the same as those in `ALL_SQLJ_TYPE_ATTRS`.

> **See Also:**
>
> "ALL_SQLJ_TYPE_ATTRS"

6.433 DBA_SQLJ_TYPE_METHODS

`DBA_SQLJ_TYPE_METHODS` describes the methods of all SQLJ object types in the database. Its columns are the same as those in `ALL_SQLJ_TYPE_METHODS`.

> **See Also:**
>
> "ALL_SQLJ_TYPE_METHODS"

6.434 DBA_SQLJ_TYPES

`DBA_SQLJ_TYPES` describes all SQLJ object types in the database. Its columns are the same as those in `ALL_SQLJ_TYPES`.

> **See Also:**
>
> "ALL_SQLJ_TYPES"

6.435 DBA_SQLSET

`DBA_SQLSET` displays information about all SQL tuning sets in the database. Its columns are the same as those in `ALL_SQLSET`.

> **See Also:**
>
> "ALL_SQLSET"

6.436 DBA_SQLSET_BINDS

`DBA_SQLSET_BINDS` displays the bind values associated with all SQL tuning sets in the database. Its columns are the same as those in `ALL_SQLSET_BINDS`.

> **See Also:**
>
> "ALL_SQLSET_BINDS"

6.437 DBA_SQLSET_PLANS

`DBA_SQLSET_PLANS` describes captured plans in the SQL tuning sets in the database. Its columns are the same as those in `ALL_SQLSET_PLANS`.

> **See Also:**
>
> "ALL_SQLSET_PLANS"

6.438 DBA_SQLSET_REFERENCES

DBA_SQLSET_REFERENCES describes whether or not all SQL tuning sets in the database are active. A SQL tuning set cannot be dropped if it is referenced. Its columns are the same as those in ALL_SQLSET_REFERENCES.

> **See Also:**
>
> "ALL_SQLSET_REFERENCES"

6.439 DBA_SQLSET_STATEMENTS

DBA_SQLSET_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets in the database. Its columns, except for PARSING_SCHEMA_ID, are the same as those in ALL_SQLSET_STATEMENTS.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL tuning set for the statement
SQLSET_OWNER	VARCHAR2(128)		User name of the SQL tuning set owner
SQLSET_ID	NUMBER	NOT NULL	ID of the SQL tuning set for the statement
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
FORCE_MATCHING_SIGNATURE	NUMBER	NOT NULL	The signature used when the CURSOR_SHARING parameter is set to FORCE
SQL_TEXT	CLOB		Full text for the SQL statement exposed as a CLOB column.
PARSING_SCHEMA_NAME	VARCHAR2(128)		Name of the user in whose schema the statement was parsed
PARSING_SCHEMA_ID	NUMBER		ID of the schema in which the statement was parsed
PLAN_HASH_VALUE	NUMBER	NOT NULL	Hash value for the plan corresponding to statistics in this record
BIND_DATA	RAW(2000)		Bind data
BINDS_CAPTURED	CHAR(1)		Binds captured
MODULE	VARCHAR2(64)		Contains the name of the module that was executing at the time that the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_MODULE
ACTION	VARCHAR2(64)		Contains the name of the action that was executing at the time that the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_ACTION
ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) used by this cursor for parsing, executing, and fetching
CPU_TIME	NUMBER		CPU time (in microseconds) used by this cursor for parsing, executing, and fetching
BUFFER_GETS	NUMBER		Number of buffer gets for this child cursor

Column	Datatype	NULL	Description
DISK_READS	NUMBER		Number of disk reads for this child cursor
DIRECT_WRITES	NUMBER		Number of direct writes for this child cursor
ROWS_PROCESSED	NUMBER		Total number of rows that the parsed SQL statement returns
FETCHES	NUMBER		Number of fetches associated with the SQL statement
EXECUTIONS	NUMBER		Number of executions that took place on this object since it was brought into the library cache
END_OF_FETCH_COUNT	NUMBER		Number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic in not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed. By definition, the value of the END_OF_FETCH_COUNT column should be less than, or equal to, the value of the EXECUTIONS column.
OPTIMIZER_COST	NUMBER		Cost of this query, given by the optimizer
OPTIMIZER_ENV	RAW(2000)		Optimizer environment
PRIORITY	NUMBER		User-defined priority
COMMAND_TYPE	NUMBER		Oracle command type definition
FIRST_LOAD_TIME	VARCHAR2(19)		Timestamp of the parent creation time
STAT_PERIOD	NUMBER		Period of time (in seconds) during which the statistics of the SQL statement were collected
ACTIVE_STAT_PERIOD	NUMBER		Effective period of time (in seconds) during which the SQL statement was active
OTHER	CLOB		Client data, specified by the user, for this statement
PLAN_TIMESTAMP	DATE		Timestamp for the plan corresponding to the statistics in this record
SQL_SEQ	NUMBER	NOT NULL	SQL sequence
LAST_EXEC_START_TIME	VARCHAR2(19)		For SQLs captured from the cursor cache, this is the time when the most recent execution of this SQL started

See Also:

6.440 DBA_SQLTUNE_BINDS

DBA_SQLTUNE_BINDS displays the bind values associated with all tuned SQL statements in the database.

Related View

USER_SQLTUNE_BINDS displays the bind values associated with the tuned SQL statements owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER(38)	NOT NULL	Tuning task identifier
OBJECT_ID	NUMBER(38)	NOT NULL	Advisor framework object identifier
POSITION	NUMBER(38)	NOT NULL	Bind position
VALUE	ANYDATA		Bind value. This column is NULL for PL/SQL bind types.

> **See Also:**
>
> "USER_SQLTUNE_BINDS"

6.441 DBA_SQLTUNE_PLANS

DBA_SQLTUNE_PLANS displays information about the execution plans generated for all SQL statements in the database during a SQL tuning session.

Related View

USER_SQLTUNE_PLANS displays information about the execution plans generated for the SQL statements owned by the current user during a SQL tuning session.

Column	Datatype	NULL	Description
TASK_ID	NUMBER(38)	NOT NULL	Advisor task ID
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	Advisor task execution
OBJECT_ID	NUMBER(38)	NOT NULL	Advisor object ID
ATTRIBUTE	VARCHAR2(34)		Text string identifying the type of the execution plan: • Original - Original plan of the query • Original with adjusted cost - Same as Original but with adjusted cost • Using SQL profile - Plan with SQL profile applied • Using new indices - Plan with indexes applied
STATEMENT_ID	VARCHAR2(30)		Optional statement identifier specified in the EXPLAIN PLAN statement
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the execution plan
PLAN_ID	NUMBER		Plan identifier

Column	Datatype	NULL	Description
TIMESTAMP	DATE		Date and time when the EXPLAIN PLAN statement was issued
REMARKS	VARCHAR2(4000)		Place for comments that can be added to the steps of the execution plan
OPERATION	VARCHAR2(30)		Name of the operation performed at this step
OPTIONS	VARCHAR2(255)		Options used for the operation performed at this step
OBJECT_NODE	VARCHAR2(128)		Name of the database link used to reference the object
OBJECT_OWNER	VARCHAR2(128)		Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the object
OBJECT_ALIAS	VARCHAR2(261)		Object alias
OBJECT_INSTANCE	NUMBER(38)		Numbered position of the object name in the original SQL statement
OBJECT_TYPE	VARCHAR2(30)		Descriptive modifier that further describes the type of object
OPTIMIZER	VARCHAR2(255)		Current mode of the optimizer
SEARCH_COLUMNS	NUMBER		Number of index columns with start and stop keys (that is, the number of columns with matching predicates)
ID	NUMBER(38)	NOT NULL	Identification number for this step in the execution plan
PARENT_ID	NUMBER(38)		ID of the next step that operates on the results of this step
DEPTH	NUMBER(38)		Depth
POSITION	NUMBER(38)		Order of processing for steps with the same parent ID
COST	NUMBER(38)		Cost of the current operation estimated by the cost-based optimizer (CBO)
CARDINALITY	NUMBER(38)		Number of rows returned by the current operation (estimated by the CBO)
BYTES	NUMBER(38)		Number of bytes returned by the current operation

Column	Datatype	NULL	Description
OTHER_TAG	VARCHAR2(255)		Describes the function of the SQL text in the OTHER column. Values for OTHER_TAG are: • SERIAL - SQL is the text of a locally-executed, serial query plan. Currently, SQL is not loaded in OTHER for this case. • SERIAL_FROM_REMOTE - SQL text shown in the OTHER column will be executed at a remote site • PARALLEL_COMBINED_WITH_PARENT - Parent of this operation is a DFO that performs both operations in the parallel execution plan • PARALLEL_COMBINED_WITH_CHILD - Child of this operation is a DFO that performs both operations in the parallel execution plan. • PARALLEL_TO_SERIAL - SQL text shown in the OTHER column is the top-level of the parallel plan. • PARALLEL_TO_PARALLEL - SQL text shown in the OTHER column is executed and output in parallel • PARALLEL_FROM_SERIAL - Operation consumes data from a serial operation and outputs it in parallel
PARTITION_START	VARCHAR2(255)		Start partition of a range of accessed partitions
PARTITION_STOP	VARCHAR2(255)		Stop partition of a range of accessed partitions
PARTITION_ID	NUMBER(38)		Step that has computed the pair of values of the PARTITION_START and PARTITION_STOP columns
OTHER	LONG		Information about parallel execution servers and parallel queries
DISTRIBUTION	VARCHAR2(30)		Distribution method
CPU_COST	NUMBER(38)		User-defined CPU cost
IO_COST	NUMBER(38)		User-defined I/O cost
TEMP_SPACE	NUMBER(38)		Temporary space usage of the operation (sort or hash-join) as estimated by the CBO
ACCESS_PREDICATES	VARCHAR2(4000)		Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.
FILTER_PREDICATES	VARCHAR2(4000)		Predicates used to filter rows before producing them
PROJECTION	VARCHAR2(4000)		Expressions produced by the operation
TIME	NUMBER(38)		Elapsed time (in seconds) of the operation as estimated by the CBO
QBLOCK_NAME	VARCHAR2(128)		Name of the query block

Column	Datatype	NULL	Description
OTHER_XML	CLOB		Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan • Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans

"USER_SQLTUNE_PLANS"

6.442 DBA_SQLTUNE_RATIONALE_PLAN

DBA_SQLTUNE_RATIONALE_PLAN displays the association between rationales and operations in the execution plan of all SQL statements in the database.

Related View

USER_SQLTUNE_RATIONALE_PLAN displays the association between rationales and operations in the execution plan of the SQL statements owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER(38)	NOT NULL	Tuning task identifier
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	The name of the task execution with which this entry (row) is associated
RATIONALE_ID	NUMBER(38)	NOT NULL	Rationale identifier
OBJECT_ID	NUMBER(38)	NOT NULL	Advisor framework object identifier
OPERATION_ID	NUMBER(38)	NOT NULL	Operation identifier
PLAN_ATTRIBUTE	VARCHAR2(34)		Type of the execution plan: • Original - Original plan of the query • Original with adjusted cost - Same as Original but with adjusted cost • Using SQL profile - Plan with SQL profile applied • Using new indices - Plan with indexes applied

> **See Also:**
>
> "USER_SQLTUNE_RATIONALE_PLAN"

6.443 DBA_SQLTUNE_STATISTICS

DBA_SQLTUNE_STATISTICS displays statistics associated with all SQL statements in the database.

Related View

USER_SQLTUNE_STATISTICS displays statistics associated with the SQL statements owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER(38)	NOT NULL	Tuning task identifier
OBJECT_ID	NUMBER(38)	NOT NULL	Advisor framework object identifier
PARSING_SCHEMA_ID	NUMBER		Schema under which the SQL is parsed
MODULE	VARCHAR2(64)		Last application module recorded for the SQL
ACTION	VARCHAR2(64)		Last application action recorded for the SQL
ELAPSED_TIME	NUMBER		Elapsed time for the SQL statement
CPU_TIME	NUMBER		CPU time for the SQL
BUFFER_GETS	NUMBER		Number of buffer gets
DISK_READS	NUMBER		Number of disk reads
DIRECT_WRITES	NUMBER		Number of disk writes
ROWS_PROCESSED	NUMBER		Number of rows processed by the SQL
FETCHES	NUMBER		Number of fetches
EXECUTIONS	NUMBER		Number of executions
END_OF_FETCH_COUNT	NUMBER		End of fetch count
OPTIMIZER_COST	NUMBER		Optimizer cost for the SQL
OPTIMIZER_ENV	RAW(2000)		Optimizer environment
COMMAND_TYPE	NUMBER		Command type

> **See Also:**
>
> "USER_SQLTUNE_STATISTICS"

6.444 DBA_SR_GRP_STATUS

DBA_SR_GRP_STATUS provides information on the current refresh operations for the current synchronous refresh groups in the database. It has the same columns as the DBA_SR_GRP_STATUS_ALL view.

Refresh operations are controlled using the DBMS_SYNC_REFRESH package.

Related View

USER_SR_GRP_STATUS provides information on the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA_SR_GRP_STATUS.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the refresh operation, which is the user who launched the operation
GROUP_ID	NUMBER	NOT NULL	Group ID of the synchronous refresh group
OPERATION	VARCHAR2(7)		The phase of the refresh operation performed: • PREPARE • EXECUTE
STATUS	VARCHAR2(10)		The status of the refresh operation: • RUNNING • NOT PROCESSED • COMPLETE • ERROR-SOFT • ERROR-HARD • ABORT • PARTIAL
NUM_TBLS	NUMBER	NOT NULL	The number of tables in the synchronous refresh group
NUM_MVS	NUMBER	NOT NULL	The number of materialized views in the synchronous refresh group
BASE_TBLS_REFR_STATUS	VARCHAR2(13)		Indicates the refresh status of base tables in the synchronous refresh group. The possible values are: • NOT PROCESSED • COMPLETE • ABORT
NUM_MVS_COMPLETED	NUMBER		The number of materialized views which have completed refresh in the synchronous refresh group
NUM_MVS_ABORTED	NUMBER		The number of materialized views which have terminated refresh in the synchronous refresh group
ERROR_NUMBER	NUMBER		Error number of the run (if any)
ERROR_MESSAGE	VARCHAR2(4000)		Error message of the run (if any)
PREPARE_START_TIME	DATE		Time that the PREPARE_REFRESH phase of the run started
PREPARE_END_TIME	DATE		Time that the PREPARE_REFRESH phase of the run ended
EXECUTE_START_TIME	DATE		Time that the EXECUTE_REFRESH phase of the run started

Column	Datatype	NULL	Description
EXECUTE_END_TIME	DATE		Time that the EXECUTE_REFRESH phase of the run ended

See Also:

- "USER_SR_GRP_STATUS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SYNC_REFRESH package

6.445 DBA_SR_GRP_STATUS_ALL

DBA_SR_GRP_STATUS_ALL provides information on the refresh operations on the synchronous refresh groups in the database.

A refresh operation is also called a run, and it has two phases: PREPARE_REFRESH and EXECUTE_REFRESH. These phases are controlled using the DBMS_SYNC_REFRESH package.

Each row in this view provides information on a run of a group, identified by its GROUP_ID. The view contains information on the status of the objects of both current and past runs of both current and defunct synchronous refresh groups. Therefore, this view can be used to examine the history of synchronous refresh operations.

The current run of a group is the most recent run of a group; a current group is a currently valid group, which is capable of being refreshed. A group becomes defunct when it is unregistered for any reason, either explicitly by the user or implicitly as a side-effect when the user registers materialized views related to the materialized views in the group.

To view the status of refresh operations for the most recent runs of only the current groups, use the DBA_SR_GRP_STATUS view.

Related View

USER_SR_GRP_STATUS_ALL provides information on the refresh operations on the synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA_SR_GRP_STATUS_ALL.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the refresh operation, which is the user who launched the operation
GROUP_ID	NUMBER	NOT NULL	Group ID of the synchronous refresh group
OPERATION	VARCHAR2(7)		The phase of the refresh operation performed: • PREPARE • EXECUTE

Column	Datatype	NULL	Description
STATUS	VARCHAR2(10)		The status of the refresh operation: • RUNNING • NOT PROCESSED • COMPLETE • ERROR-SOFT • ERROR-HARD • ABORT • PARTIAL
CURRENT_RUN	VARCHAR2(1)		Indicates whether the record is for the most recent refresh-operation on the group: • Y - Yes • N - No
CURRENT_GROUP	VARCHAR2(1)		Indicates whether the record is for a current group: • Y - Yes • N - No
NUM_TBLS	NUMBER	NOT NULL	The number of tables in the synchronous refresh group
NUM_MVS	NUMBER	NOT NULL	The number of materialized views in the synchronous refresh group
BASE_TBLS_REFR_STATUS	VARCHAR2(13)		Indicates the refresh status of base tables in the synchronous refresh group. The possible values are: • NOT PROCESSED • COMPLETE • ABORT
NUM_MVS_COMPLETED	NUMBER		The number of materialized views which have completed refresh in the synchronous refresh group
NUM_MVS_ABORTED	NUMBER		The number of materialized views which have terminated refresh in the synchronous refresh group
ERROR_NUMBER	NUMBER		Error number of the run (if any)
ERROR_MESSAGE	VARCHAR2(4000)		Error message of the run (if any)
PREPARE_START_TIME	DATE		Time that the PREPARE_REFRESH phase of the run started
PREPARE_END_TIME	DATE		Time that the PREPARE_REFRESH phase of the run ended
EXECUTE_START_TIME	DATE		Time that the EXECUTE_REFRESH phase of the run started
EXECUTE_END_TIME	DATE		Time that the EXECUTE_REFRESH phase of the run ended

See Also:

- "USER_SR_GRP_STATUS_ALL"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SYNC_REFRESH package

6.446 DBA_SR_OBJ

DBA_SR_OBJ provides information on the objects registered for synchronous refresh for current groups.

Related View

USER_SR_OBJ provides information on the objects registered for synchronous refresh for current groups for the current user. Its columns are the same as those in DBA_SR_OBJ.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the synchronous refresh object
NAME	VARCHAR2(128)	NOT NULL	Name of the synchronous refresh object
TYPE	VARCHAR2(5)		Type of synchronous refresh object: • MVIEW • TABLE
GROUP_ID	NUMBER	NOT NULL	Group ID of the synchronous refresh group to which this object belongs
STAGING_LOG_NAME	VARCHAR2(128)		Name of the staging log for tables. This column has a value of NULL for materialized views.

> **See Also:**
>
> "USER_SR_OBJ"

6.447 DBA_SR_OBJ_ALL

DBA_SR_OBJ_ALL provides information on the objects registered for synchronous refresh for current and defunct groups.

To see information on the objects registered for synchronous refresh for only the current groups, use the DBA_SR_OBJ view.

Related View

USER_SR_OBJ_ALL provides information on the objects registered for synchronous refresh for current and defunct groups for the current user. Its columns are the same as those in DBA_SR_OBJ_ALL.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the synchronous refresh object
NAME	VARCHAR2(128)	NOT NULL	Name of the synchronous refresh object
TYPE	VARCHAR2(5)		Type of synchronous refresh object: • MVIEW • TABLE
GROUP_ID	NUMBER	NOT NULL	Group ID of the synchronous refresh group to which this object belongs

Column	Datatype	NULL	Description
CURRENT_GROUP	VARCHAR2(1)		Indicates whether the record is for a current group: • Y - Yes • N - No
STAGING_LOG_NAME	VARCHAR2(128)		Name of the staging log for tables. This column has a value of NULL for materialized views.

> **See Also:**
>
> "USER_SR_OBJ_ALL"

6.448 DBA_SR_OBJ_STATUS

DBA_SR_OBJ_STATUS provides information on the status of objects registered for synchronous refresh for the current refresh operations for the current synchronous refresh groups in the database.

To see information on the status of objects registered for synchronous refresh, use the DBA_SR_OBJ_STATUS_ALL view.

Related View

USER_SR_OBJ_STATUS provides information on the status of objects registered for synchronous refresh for the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA_SR_OBJ_STATUS.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the synchronous refresh object
NAME	VARCHAR2(128)	NOT NULL	Name of the synchronous refresh object
TYPE	VARCHAR2(5)		Type of synchronous refresh object: • MVIEW • TABLE
GROUP_ID	NUMBER	NOT NULL	Group ID of the synchronous refresh group to which this object belongs
STATUS	VARCHAR2(13)		Status of the synchronous refresh object: • NOT PROCESSED • COMPLETE • ABORT
ERROR_NUMBER	NUMBER		Error number of the run (if any)
ERROR_MESSAGE	VARCHAR2(4000)		Error message of the run (if any)
LAST_MODIFIED_TIME	DATE		Last modification time of the synchronous refresh object

> **See Also:**
>
> "USER_SR_OBJ_STATUS"

6.449 DBA_SR_OBJ_STATUS_ALL

DBA_SR_OBJ_STATUS_ALL provides information on the status of objects registered for synchronous refresh.

The view contains information on the status of the objects of both the current and past runs of both current and defunct groups. Therefore, this view can be used to examine the history of synchronous refresh operations. The current run of a group is the most recent run of a group; a current group is a currently valid group, which is capable of being refreshed. A group becomes defunct when it is unregistered for any reason, either explicitly by the user or implicitly as a side-effect when the user registers materialized views related to the materialized views in the group.

To see information on the status of refresh operations for the most recent runs of only the current groups, use the DBA_SR_OBJ_STATUS view.

Related View

USER_SR_OBJ_STATUS_ALL provides information on the status of objects registered for synchronous refresh in the database which are owned by the current user. Its columns are the same as those in DBA_SR_OBJ_STATUS_ALL.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the synchronous refresh object
NAME	VARCHAR2(128)	NOT NULL	Name of the synchronous refresh object
TYPE	VARCHAR2(5)		Type of synchronous refresh object: • MVIEW • TABLE
GROUP_ID	NUMBER	NOT NULL	Group ID of the synchronous refresh group to which this object belongs
STATUS	VARCHAR2(13)		Status of the synchronous refresh object: • NOT PROCESSED • COMPLETE • ABORT
CURRENT_RUN	VARCHAR2(1)		Indicates whether the record is for the most recent refresh operation on the group: • Y - Yes • N - No
CURRENT_GROUP	VARCHAR2(1)		Indicates whether the record is for a current group: • Y - Yes • N - No
ERROR_NUMBER	NUMBER		Error number of the run (if any)
ERROR_MESSAGE	VARCHAR2(4000)		Error message of the run (if any)
LAST_MODIFIED_TIME	DATE		Last modification time of the synchronous refresh object

> **See Also:**
>
> "USER_SR_OBJ_STATUS_ALL"

6.450 DBA_SR_PARTN_OPS

DBA_SR_PARTN_OPS provides information on the partition operations registered on the base tables of the materialized views registered for synchronous refresh.

These rows last only as long as the registrations are active; that is, they disappear after EXECUTE_REFRESH or ABORT_REFRESH of the base table by the DBMS_SYNC_REFRESH package.

Related View

USER_SR_PARTN_OPS provides information on the partition operations registered on the base tables of the materialized views registered for synchronous refresh belonging to the current user. Its columns are the same as those in DBA_SR_PARTN_OPS.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the base table registered for synchronous refresh
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
PARTITION_OP	VARCHAR2(128)	NOT NULL	Type of partition operation: • DROP • EXCHANGE • TRUNCATE
PARTITION_NAME	VARCHAR2(128)	NOT NULL	Name of the partition to be changed
OUTSIDE_TABLE_SCHEMA	VARCHAR2(128)		Schema in which the outside table (for EXCHANGE PARTITION) was created
OUTSIDE_TABLE_NAME	VARCHAR2(128)		Name of the outside table (for EXCHANGE PARTITION)

> **See Also:**
>
> - "USER_SR_PARTN_OPS"
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SYNC_REFRESH package

6.451 DBA_SR_STLOG_EXCEPTIONS

DBA_SR_STLOG_EXCEPTIONS provides information on the exceptions in the staging logs for the tables processed by DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG.

Related View

USER_SR_STLOG_EXCEPTIONS provides information on the exceptions in the staging logs for the tables belonging to the current user processed by DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG. Its columns are the same as those in DBA_SR_STLOG_EXCEPTIONS.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the base table registered for synchronous refresh
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the base table registered for synchronous refresh
STAGING_LOG_NAME	VARCHAR2(128)	NOT NULL	Name of the staging log for tables. This column has a value of NULL for materialized views.
BAD_ROWID	ROWID	NOT NULL	Row ID of the staging log row causing the exception for the synchronous refresh
ERROR_NUMBER	NUMBER		Error number of the exception for the synchronous refresh
ERROR_MESSAGE	VARCHAR2(4000)		Error message associated with the ERROR_NUMBER for the synchronous refresh

See Also:

- "USER_SR_STLOG_EXCEPTIONS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SYNC_REFRESH package

6.452 DBA_SR_STLOG_STATS

DBA_SR_STLOG_STATS provides information on the statistics in the staging logs for the tables processed by DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG.

These three statistics columns in the staging log are filled in PREPARE_STAGING_LOG:

- The number of inserts (NUM_INSERTS)
- The number of deletes (NUM_DELETES)
- The number of updates (NUM_UPDATES)

After the data in the staging logs of a synchronous refresh group have been processed by PREPARE_REFRESH and EXECUTE_REFRESH, the statistics columns for the tables in the group are cleared and appear as NULL.

Related View

USER_SR_STLOG_STATS provides information on the statistics in the staging logs for the tables belonging to the current user processed by DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the base table registered for synchronous refresh
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
STAGING_LOG_NAME	VARCHAR2(128)	NOT NULL	Name of the staging log for tables. NULL for materialized views
NUM_INSERTS	NUMBER	NOT NULL	The number of inserts in the staging log
NUM_DELETES	NUMBER	NOT NULL	The number of deletes in the staging log
NUM_UPDATES	NUMBER	NOT NULL	The number of updates in the staging log
PSL_MODE	VARCHAR2(33)		The mode specified by the user in running DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG. Possible values: • DELETE_TRUSTED • DELETE_TRUSTED and UPDATE_TRUSTED • ENFORCED • INSERT_TRUSTED • INSERT_TRUSTED and DELETE_TRUSTED • TRUSTED • UPDATE_TRUSTED • UPDATE_TRUSTED and INSERT_TRUSTED

See Also:

- "USER_SR_STLOG_STATS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SYNC_REFRESH package

6.453 DBA_SSCR_CAPTURE

DBA_SSCR_CAPTURE displays session state capture statistics.

Column	Datatype	NULL	Description
DB_NAME	VARCHAR2(4000)		Database name of captured session
INST_NAME	VARCHAR2(4000)		Instance name of captured session
INST_ID	NUMBER		Instance ID of captured session
SESSION_ID	NUMBER		Session ID of captured session
SESSION_SERIAL#	NUMBER		Session serial number of captured session
USER_NAME	VARCHAR2(128)	NOT NULL	User name of captured session
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema name of captured session
SEQUENCE#	NUMBER		Sequence number of captured session

Column	Datatype	NULL	Description
CAPTURE_MODE	VARCHAR2(7)		Mode of capture operation
CAPTURE_SCOPE	VARCHAR2(7)		Scope of capture operation
CAPTURE_FORMAT	VARCHAR2(9)		Format of capture files
CAPTURE_DIR	VARCHAR2(128)		Directory object of capture files
CAPTURE_LOCATOR	RAW(64)		Locator of primary capture file
CAPTURE_TIME	TIMESTAMP(6)		Timestamp of capture operation

6.454 DBA_SSCR_RESTORE

DBA_SSCR_RESTORE displays session state restore statistics.

Column	Datatype	NULL	Description
DB_NAME	VARCHAR2(4000)		Database name of restored session
INST_NAME	VARCHAR2(4000)		Instance name of restored session
INST_ID	NUMBER		Instance ID of restored session
SESSION_ID	NUMBER		Session ID of restored session
SESSION_SERIAL#	NUMBER		Session serial number of restored session
USER_NAME	VARCHAR2(128)	NOT NULL	User name of restored session
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema name of restored session
SEQUENCE#	NUMBER		Sequence number of restore operation
RESTORE_MODE	VARCHAR2(7)		Mode of restore operation
RESTORE_SCOPE	VARCHAR2(7)		Scope of restore operation
RESTORE_FORMAT	VARCHAR2(9)		Format of restore files
RESTORE_DIR	VARCHAR2(128)		Directory object of restore files
RESTORE_LOCATOR	RAW(64)		Locator of primary restore file
RESTORE_TIME	TIMESTAMP(6)		Timestamp of restore operation

6.455 DBA_STAT_EXTENSIONS

DBA_STAT_EXTENSIONS displays information about all optimizer statistics extensions in the database.

> **See Also:**
>
> "ALL_STAT_EXTENSIONS"

6.456 DBA_STATEMENTS

DBA_STATEMENTS Statements in stored objects accessible to sys. Its columns are the same as those in ALL_STATEMENTS.

> **See Also:**
>
> "ALL_STATEMENTS"

6.457 DBA_STMT_AUDIT_OPTS

DBA_STMT_AUDIT_OPTS describes current system auditing options across the system and by user.

> **Note:**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

Column	Datatype	NULL	Description
USER_NAME	VARCHAR2(128)		User name if by user auditing; ANY CLIENT if access by a proxy on behalf of a client is being audited; NULL for system-wide auditing
PROXY_NAME	VARCHAR2(128)		Name of the proxy user which is performing an operation for the client; NULL if the client is performing the operation directly
AUDIT_OPTION	VARCHAR2(40)	NOT NULL	Name of the system auditing option
SUCCESS	VARCHAR2(10)		Mode for WHENEVER SUCCESSFUL system auditing
FAILURE	VARCHAR2(10)		Mode for WHENEVER NOT SUCCESSFUL system auditing

6.458 DBA_STORED_SETTINGS

DBA_STORED_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges.

It also returns parameter information for all objects in the database and is accessible only to users with the SELECT_CATALOG_ROLE privilege. Its columns are the same as those in ALL_STORED_SETTINGS.

See Also:

"ALL_STORED_SETTINGS"

7

Static Data Dictionary Views: DBA_STREAMS_ADD_COLUMN to USER_ZONEMAPS

This chapter contains the static data dictionary views DBA_STREAMS_ADD_COLUMN through USER_ZONEMAPS.

7.1 DBA_STREAMS_ADD_COLUMN

DBA_STREAMS_ADD_COLUMN displays information about declarative rule-based transformations that add a column to a row logical change record (LCR).

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)		Owner of the rule
RULE_NAME	VARCHAR2(128)		Name of the rule
SCHEMA_NAME	VARCHAR2(128)		Schema of the column to be added
TABLE_NAME	VARCHAR2(128)		Table of the column to be added
COLUMN_NAME	VARCHAR2(4000)		Name of the column to be added
COLUMN_VALUE	ANYDATA		Value of the column to be added
COLUMN_TYPE	VARCHAR2(4000)		Type of the column to be added
COLUMN_FUNCTION	VARCHAR2(128)		Name of the default function used to add a column
VALUE_TYPE	VARCHAR2(3)		Indicates whether to modify the old (OLD), new (NEW), or both (*) values of the LCR
PRECEDENCE	NUMBER		3 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first)
STEP_NUMBER	NUMBER		Order in which this transformation should be executed

7.2 DBA_STREAMS_DELETE_COLUMN

DBA_STREAMS_DELETE_COLUMN displays information about declarative rule-based transformations that delete a column from a row logical change record (LCR).

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)		Owner of the rule
RULE_NAME	VARCHAR2(128)		Name of the rule
SCHEMA_NAME	VARCHAR2(128)		Schema of the column to be deleted
TABLE_NAME	VARCHAR2(128)		Table of the column to be deleted
COLUMN_NAME	VARCHAR2(4000)		Name of the column to delete

Column	Datatype	NULL	Description
VALUE_TYPE	VARCHAR2(3)		Indicates whether to modify the old (OLD), new (NEW), or both (*) values of the LCR
PRECEDENCE	NUMBER		1 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first)
STEP_NUMBER	NUMBER		Order in which this transformation should be executed

7.3 DBA_STREAMS_GLOBAL_RULES

DBA_STREAMS_GLOBAL_RULES displays information about the global rules created for all capture processes, propagations, and apply processes in the database. Its columns are the same as those in ALL_STREAMS_GLOBAL_RULES.

> **See Also:**
>
> "ALL_STREAMS_GLOBAL_RULES"

7.4 DBA_STREAMS_KEEP_COLUMNS

DBA_STREAMS_KEEP_COLUMNS displays information about declarative rule-based transformations that keep a list of columns in a row logical change record (LCR).

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)		Owner of the rule which has an associated transformation
RULE_NAME	VARCHAR2(128)		Name of the rule which has an associated transformation
SCHEMA_NAME	VARCHAR2(128)		Schema of the column to be kept
TABLE_NAME	VARCHAR2(128)		Table of the column to be kept
COLUMN_NAME	VARCHAR2(4000)		Column to keep
VALUE_TYPE	VARCHAR2(3)		Indicates whether to keep the old (OLD), new (NEW), or both (*) value of the LCR
PRECEDENCE	NUMBER		0 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first)
STEP_NUMBER	NUMBER		Order in which this transformation should be executed

7.5 DBA_STREAMS_MESSAGE_CONSUMERS

DBA_STREAMS_MESSAGE_CONSUMERS displays information about all Streams messaging clients in the database. Its columns are the same as those in ALL_STREAMS_MESSAGE_CONSUMERS.

> **See Also:**
>
> "ALL_STREAMS_MESSAGE_CONSUMERS"

7.6 DBA_STREAMS_NEWLY_SUPPORTED

DBA_STREAMS_NEWLY_SUPPORTED displays information about all tables in the database that are newly supported by capture processes. Its columns are the same as those in ALL_STREAMS_NEWLY_SUPPORTED.

> **See Also:**
>
> "ALL_STREAMS_NEWLY_SUPPORTED"

7.7 DBA_STREAMS_RENAME_COLUMN

DBA_STREAMS_RENAME_COLUMN displays information about declarative rule-based transformations that rename a column in a row logical change record (LCR).

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)		Owner of the rule
RULE_NAME	VARCHAR2(128)		Name of the rule
SCHEMA_NAME	VARCHAR2(128)		Schema of the column to be renamed
TABLE_NAME	VARCHAR2(128)		Table of the column to be renamed
FROM_COLUMN_NAME	VARCHAR2(4000)		Column to rename
TO_COLUMN_NAME	VARCHAR2(4000)		New column name
VALUE_TYPE	VARCHAR2(3)		Indicates whether to modify the old (OLD), new (NEW), or both (*) values of the LCR
PRECEDENCE	NUMBER		2 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first)
STEP_NUMBER	NUMBER		Order in which this transformation should be executed

7.8 DBA_STREAMS_RENAME_SCHEMA

DBA_STREAMS_RENAME_SCHEMA displays information about declarative rule-based transformations that rename a schema in a row logical change record (LCR).

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)		Owner of the rule
RULE_NAME	VARCHAR2(128)		Name of the rule
FROM_SCHEMA_NAME	VARCHAR2(128)		Schema to be renamed
TO_SCHEMA_NAME	VARCHAR2(128)		New schema name
PRECEDENCE	NUMBER		5 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first)
STEP_NUMBER	NUMBER		Order in which this transformation should be executed

7.9 DBA_STREAMS_RENAME_TABLE

DBA_STREAMS_RENAME_TABLE displays information about declarative rule-based transformations that rename a table in a row logical change record (LCR).

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)		Owner of the rule
RULE_NAME	VARCHAR2(128)		Name of the rule
FROM_SCHEMA_NAME	VARCHAR2(128)		Schema to be renamed
TO_SCHEMA_NAME	VARCHAR2(128)		New schema name
FROM_TABLE_NAME	VARCHAR2(128)		Table to be renamed
TO_TABLE_NAME	VARCHAR2(128)		New table name
PRECEDENCE	NUMBER		4 (the execution order relative to other transformations on the same STEP_NUMBER; the smaller number will be executed first)
STEP_NUMBER	NUMBER		Order in which this transformation should be executed

7.10 DBA_STREAMS_SCHEMA_RULES

DBA_STREAMS_SCHEMA_RULES displays information about the schema rules created for all capture processes, propagations, and apply processes in the database. Its columns are the same as those in ALL_STREAMS_SCHEMA_RULES.

See Also:

"ALL_STREAMS_SCHEMA_RULES"

7.11 DBA_STREAMS_TABLE_RULES

DBA_STREAMS_TABLE_RULES displays information about the table rules created for all capture processes, propagations, and apply processes in the database. Its columns are the same as those in ALL_STREAMS_TABLE_RULES.

> **See Also:**
>
> "ALL_STREAMS_TABLE_RULES"

7.12 DBA_STREAMS_TP_COMPONENT

DBA_STREAMS_TP_COMPONENT displays information about each Replication component at each database.

Column	Datatype	NULL	Description
COMPONENT_ID	NUMBER	NOT NULL	ID of the Replication component
COMPONENT_NAME	VARCHAR2(4000)		Name of the Replication component
COMPONENT_DB	VARCHAR2(128)		Database where the Replication component resides
COMPONENT_TYPE	VARCHAR2(20)		Type of the Replication component: • CAPTURE • PROPAGATION SENDER • PROPAGATION RECEIVER • APPLY • QUEUE
COMPONENT_CHANGED_TIME	DATE		Time that the Replication component was last changed

7.13 DBA_STREAMS_TP_COMPONENT_LINK

DBA_STREAMS_TP_COMPONENT_LINK displays information about how messages flow between Replication components.

Column	Datatype	NULL	Description
SOURCE_COMPONENT_ID	NUMBER	NOT NULL	ID of the source Replication component
SOURCE_COMPONENT_NAME	VARCHAR2(4000)		Name of the source Replication component
SOURCE_COMPONENT_DB	VARCHAR2(128)		Database where the source Replication component resides
SOURCE_COMPONENT_TYPE	VARCHAR2(20)		Type of the source Replication component: • CAPTURE • PROPAGATION SENDER • PROPAGATION RECEIVER • APPLY • QUEUE

Column	Datatype	NULL	Description
DESTINATION_COMPONENT_ID	NUMBER	NOT NULL	ID of the destination Replication component
DESTINATION_COMPONENT_NAME	VARCHAR2(4000)		Name of the destination Replication component
DESTINATION_COMPONENT_DB	VARCHAR2(128)		Database where the destination Replication component resides
DESTINATION_COMPONENT_TYPE	VARCHAR2(20)		Type of the destination Replication component: • CAPTURE • PROPAGATION SENDER • PROPAGATION RECEIVER • APPLY • QUEUE
PATH_ID	NUMBER	NOT NULL	ID of the stream path
POSITION	NUMBER		Position of the link within the stream path

7.14 DBA_STREAMS_TP_COMPONENT_STAT

DBA_STREAMS_TP_COMPONENT_STAT displays temporary performance statistics and session statistics about each Replication component.

Column	Datatype	NULL	Description
COMPONENT_ID	NUMBER	NOT NULL	ID of the Replication component
COMPONENT_NAME	VARCHAR2(4000)		Name of the Replication component
COMPONENT_DB	VARCHAR2(128)		Database where the Replication component resides
COMPONENT_TYPE	VARCHAR2(20)		Type of the Replication component: • CAPTURE • PROPAGATION SENDER • PROPAGATION RECEIVER • APPLY • QUEUE
SUB_COMPONENT_TYPE	VARCHAR2(27)		Type of the Replication subcomponent: • LOGMINER READER • LOGMINER PREPARER • LOGMINER BUILDER • CAPTURE SESSION • PROPAGATION SENDER+RECEIVER • APPLY READER • APPLY COORDINATOR • APPLY SERVER
SESSION_ID	NUMBER		ID of the Replication session for the Replication component
SESSION_SERIAL#	NUMBER		Serial number of the Replication session for the Replication component
STATISTIC_TIME	DATE		Time that the statistic was taken
STATISTIC_NAME	VARCHAR2(64)		Name of the statistic
STATISTIC_VALUE	VARCHAR2(4000)		Value of the statistic
STATISTIC_UNIT	VARCHAR2(64)		Unit of the statistic

Column	Datatype	NULL	Description
ADVISOR_RUN_ID	NUMBER		Logical number (1-based) of the Advisor run
ADVISOR_RUN_TIME	DATE		Time that the Advisor was run

7.15 DBA_STREAMS_TP_DATABASE

DBA_STREAMS_TP_DATABASE displays information about each database that contains Replication components.

Column	Datatype	NULL	Description
GLOBAL_NAME	VARCHAR2(128)	NOT NULL	Global name of the database
LAST_QUERIED	DATE	NOT NULL	Time that the database was last queried
VERSION	VARCHAR2(128)		Database version of the database
COMPATIBILITY	VARCHAR2(128)		Compatible setting of the database
MANAGEMENT_PACK_ACCESS	VARCHAR2(128)		Management pack access of the database

7.16 DBA_STREAMS_TP_PATH_BOTTLENECK

DBA_STREAMS_TP_PATH_BOTTLENECK displays temporary information about Replication components that might be slowing down the flow of messages in a stream path.

Column	Datatype	NULL	Description
PATH_ID	NUMBER		ID of the stream path
COMPONENT_ID	NUMBER		ID of the bottleneck component
COMPONENT_NAME	VARCHAR2(4000)		Name of the bottleneck component
COMPONENT_DB	VARCHAR2(128)		Database where the bottleneck component resides
COMPONENT_TYPE	VARCHAR2(20)		Type of the bottleneck component: • CAPTURE • PROPAGATION SENDER • PROPAGATION RECEIVER • APPLY • QUEUE
TOP_SESSION_ID	NUMBER		ID of the top session for the bottleneck component
TOP_SESSION_SERIAL#	NUMBER		Serial number of the top session for the bottleneck component
ACTION_NAME	VARCHAR2(64)		Action name for the bottleneck process
BOTTLENECK_IDENTIFIED	VARCHAR2(30)		Indicates whether the bottleneck was identified (YES) or not (NO)
ADVISOR_RUN_ID	NUMBER		Logical number (1-based) of the Advisor run
ADVISOR_RUN_TIME	DATE		Time that the Advisor was run

Column	Datatype	NULL	Description
ADVISOR_RUN_REASON	VARCHAR2(4000)		Reason for the bottleneck analysis result.: • NULL - Bottleneck is identified • PRE-11.1 DATABASE EXISTS - A pre-release 11.1 database exists in the stream path • DIAGNOSTIC PACK REQUIRED - A database in the stream path does not have the diagnostic package installed • NO BOTTLENECK IDENTIFIED

7.17 DBA_STREAMS_TP_PATH_STAT

DBA_STREAMS_TP_PATH_STAT displays temporary performance statistics about each stream path that exists in the Replication topology.

Column	Datatype	NULL	Description
PATH_ID	NUMBER		ID of the stream path
STATISTIC_TIME	DATE		Time that the statistic was taken
STATISTIC_NAME	VARCHAR2(64)		Name of the statistic
STATISTIC_VALUE	NUMBER		Value of the statistic
STATISTIC_UNIT	VARCHAR2(64)		Unit of the statistic
ADVISOR_RUN_ID	NUMBER		Logical number (1-based) of the Advisor run
ADVISOR_RUN_TIME	DATE		Time that the Advisor was run

7.18 DBA_STREAMS_TRANSFORM_FUNCTION

DBA_STREAMS_TRANSFORM_FUNCTION displays information about all rule-based transformation functions in the database. Its columns are the same as those in ALL_STREAMS_TRANSFORM_FUNCTION.

> **See Also:**
>
> "ALL_STREAMS_TRANSFORM_FUNCTION"

7.19 DBA_SUBPART_COL_STATISTICS

DBA_SUBPART_COL_STATISTICS provides column statistics and histogram information for all subpartitions in the database. Its columns are the same as those in ALL_SUBPART_COL_STATISTICS.

> **See Also:**
>
> "ALL_SUBPART_COL_STATISTICS"

7.20 DBA_SUBPART_HISTOGRAMS

DBA_SUBPART_HISTOGRAMS lists actual histogram data (end-points per histogram) for histograms on all table subpartitions in the database. Its columns are the same as those in ALL_SUBPART_HISTOGRAMS.

> **See Also:**
>
> "ALL_SUBPART_HISTOGRAMS"

7.21 DBA_SUBPART_KEY_COLUMNS

DBA_SUBPART_KEY_COLUMNS lists subpartitioning key columns for all composite-partitioned tables (and local indexes on composite-partitioned tables) in the database. Its columns are the same as those in ALL_SUBPART_KEY_COLUMNS.

> **See Also:**
>
> "ALL_SUBPART_KEY_COLUMNS"

7.22 DBA_SUBPARTITION_TEMPLATES

DBA_SUBPARTITION_TEMPLATES describes all subpartition templates in the database. Its columns are the same as those in ALL_SUBPARTITION_TEMPLATES.

> **See Also:**
>
> "ALL_SUBPARTITION_TEMPLATES"

7.23 DBA_SUBSCR_REGISTRATIONS

DBA_SUBSCR_REGISTRATIONS displays information about all subscription registrations in the database.

Related View

USER_SUBSCR_REGISTRATIONS displays information about the subscription registrations owned by the current user.

Column	Datatype	NULL	Description
REG_ID	NUMBER		Registration ID
SUBSCRIPTION_NAME	VARCHAR2(128)	NOT NULL	Name of the subscription registration. The subscription name is of the form *schema.queue* if the registration is for a single consumer queue or *schema.queue:consumer_name* if the registration is for a multiconsumer queue.
LOCATION_NAME	VARCHAR2(256)	NOT NULL	Location endpoint of the registration
USER#	NUMBER	NOT NULL	Internally generated user ID
USER_CONTEXT	RAW(128)		Context the user provided during registration of PL/SQL registrations or an internally generated context for OCI registrations
CONTEXT_SIZE	NUMBER		Size of the context
NAMESPACE	VARCHAR2(9)		Namespace of the subscription registration: • ANONYMOUS • AQ • DBCHANGE
PRESENTATION	VARCHAR2(7)		Presentation format of notifications: • DEFAULT - Binary • XML
VERSION	VARCHAR2(8)		Database version: • 8.1.6 • 10.2 • 11.1
STATUS	VARCHAR2(8)		Status of the registration: • DB REG - Database registration • LDAP REG - LDAP registration
ANY_CONTEXT	ANYDATA		AnyData user context
CONTEXT_TYPE	NUMBER		Type of the user context
QOSFLAGS	VARCHAR2(64)		Quality of service of the registration: • RELIABLE - Reliable notifications persist across instance and database restarts • PAYLOAD - Payload delivery is required. It is only supported for client notification and only for RAW queues. • PURGE_ON_NTFN - Registration is to be purged automatically when the first notification is delivered to this registration location
PAYLOAD_CALLBACK	VARCHAR2(4000)		Any callback registered to serialize the notification payload

Column	Datatype	NULL	Description
TIMEOUT	TIMESTAMP(6)		Registration timeout
REG_TIME	TIMESTAMP(6) WITH TIME ZONE		Time of the registration
NTFN_GROUPING_CLASS	VARCHAR2(4)		Notification grouping class
NTFN_GROUPING_VALUE	NUMBER		Notification grouping value
NTFN_GROUPING_TYPE	VARCHAR2(7)		Notification grouping type: • SUMMARY • LAST
NTFN_GROUPING_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Notification grouping start time
NTFN_GROUPING_REPEAT_COUNT	VARCHAR2(40)		Notification grouping repeat count, or FOREVER

> **See Also:**
>
> "USER_SUBSCR_REGISTRATIONS"

7.24 DBA_SUPPLEMENTAL_LOGGING

DBA_SUPPLEMENTAL_LOGGING provides information about supplemental logging for a pluggable database (PDB) in a multitenant container database (CDB).

Column	Datatype	NULL	Description
MINIMAL	VARCHAR2(3)		Identifies whether minimal supplemental logging is on (YES or NO)
PRIMARY_KEY	VARCHAR2(3)		Identifies whether primary key supplemental logging is on (YES or NO)
UNIQUE_INDEX	VARCHAR2(3)		Identifies whether unique column supplemental logging is on (YES or NO)
FOREIGN_KEY	VARCHAR2(3)		Identifies whether foreign key supplemental logging is on (YES or NO)
ALL_COLUMN	VARCHAR2(3)		Identifies whether all column supplemental logging is on (YES or NO)
PROCEDURAL	VARCHAR2(3)		Identifies whether supplemental logging for procedural replication is on (YES or NO)
SUBSET_REP	VARCHAR2(3)		Indicates whether subset database replication is on (YES or NO)

> **See Also:**
>
> - *Oracle Database Utilities* for more information about supplemental logging
> - "V$DATABASE" for information about supplemental logging in a CDB

7.25 DBA_SYNC_CAPTURE

`DBA_SYNC_CAPTURE` displays information about all synchronous capture processes in the database. Its columns are the same as those in `ALL_SYNC_CAPTURE`.

> **See Also:**
>
> "ALL_SYNC_CAPTURE"

7.26 DBA_SYNC_CAPTURE_PREPARED_TABS

`DBA_SYNC_CAPTURE_PREPARED_TABS` displays information about all tables in the database that are prepared for synchronous capture instantiation. Its columns are the same as those in `ALL_SYNC_CAPTURE_PREPARED_TABS`.

> **See Also:**
>
> "ALL_SYNC_CAPTURE_PREPARED_TABS"

7.27 DBA_SYNC_CAPTURE_TABLES

`DBA_SYNC_CAPTURE_TABLES` displays information about all tables in the database that are captured by synchronous captures. Its columns are the same as those in `ALL_SYNC_CAPTURE_TABLES`.

> **See Also:**
>
> "ALL_SYNC_CAPTURE_TABLES"

7.28 DBA_SYNONYMS

DBA_SYNONYMS describes all synonyms in the database. Its columns are the same as those in ALL_SYNONYMS.

> **See Also:**
>
> "ALL_SYNONYMS"

7.29 DBA_SYS_PRIVS

DBA_SYS_PRIVS describes system privileges granted to users and roles.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Grantee name, user, or role receiving the grant
PRIVILEGE	VARCHAR2(40)		System privilege
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the grant was inherited from another container (YES) or not (NO)

> **See Also:**
>
> "USER_SYS_PRIVS"

7.30 DBA_SYS_PRIVS_ALL

DBA_SYS_PRIVS_ALL describes system privileges and schema privileges granted to users and roles.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Grantee name, user, or role receiving the grant
PRIVILEGE	VARCHAR2(40)		Privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted For system privileges, the value of this column is null.

Column	Datatype	NULL	Description
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the grant was inherited from another container (YES) or not (NO)

Note:

This view is available starting with Oracle Database 23ai.

See Also:

"USER_SYS_PRIVS_ALL"

7.31 DBA_TAB_COL_STAT_MODELS

DBA_TAB_COL_STAT_MODELS describes real-time statistics models for all tables in the database. Its columns are the same as those in ALL_TAB_COL_STAT_MODELS.

Real-time statistics models use machine learning algorithms to predict the number of distinct values (NDV) for table columns.

See Also:

"ALL_TAB_COL_STAT_MODELS"

7.32 DBA_TAB_COL_STATISTICS

DBA_TAB_COL_STATISTICS contains column statistics and histogram information extracted from DBA_TAB_COLUMNS. Its columns are the same as those in ALL_TAB_COL_STATISTICS.

See Also:

- "DBA_TAB_COLUMNS"
- "ALL_TAB_COL_STATISTICS"

7.33 DBA_TAB_COLS

DBA_TAB_COLS describes the columns of all tables, views, and clusters in the database.

Its columns (except for SENSITIVE_COLUMN) are the same as those in ALL_TAB_COLS.

To gather statistics for this view, use the DBMS_STATS package.

This view differs from DBA_TAB_COLUMNS in that system-generated hidden columns are not filtered out.

Columns marked with an asterisk (*) in the table below remain for backward compatibility with Oracle7. This information is now in the [TAB|PART]_COL_STATISTICS views.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table, view, or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table, view, or cluster
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
DATA_TYPE	VARCHAR2(128)		Data type of the column
DATA_TYPE_MOD	VARCHAR2(3)		Data type modifier of the column
DATA_TYPE_OWNER	VARCHAR2(128)		Owner of the data type of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
NULLABLE	VARCHAR2(1)		Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY.
COLUMN_ID	NUMBER		Sequence number of the column as created
DEFAULT_LENGTH	NUMBER		Length of the default value for the column
DATA_DEFAULT	LONG		Default value for the column
DATA_DEFAULT_VC	VARCHAR2(4000)		Default value for the column This column may truncate the default value.
NUM_DISTINCT*	NUMBER		Number of distinct values in the column
LOW_VALUE*	RAW(1000)		Low value in the column
HIGH_VALUE*	RAW(1000)		High value in the column
DENSITY*	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
NUM_NULLS	NUMBER		Number of NULLs in the column

Column	Datatype	NULL	Description
NUM_BUCKETS	NUMBER		Number of buckets in the histogram for the column **Note:** The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm.
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
CHAR_LENGTH	NUMBER		Displays the length of the column in characters. This value only applies to the following data types: • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the data type is not any of the following (NULL): • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
V80_FMT_IMAGE	VARCHAR2(3)		Indicates whether the column data is in release 8.0 image format (YES) or not (NO)
DATA_UPGRADED	VARCHAR2(3)		Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)
HIDDEN_COLUMN	VARCHAR2(3)		Indicates whether the column is a hidden column (YES) or not (NO)
VIRTUAL_COLUMN	VARCHAR2(3)		Indicates whether the column is a virtual column (YES) or not (NO)
SEGMENT_COLUMN_ID	NUMBER		Sequence number of the column in the segment
INTERNAL_COLUMN_ID	NUMBER	NOT NULL	Internal sequence number of the column

Column	Datatype	NULL	Description
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: • NONE • FREQUENCY • TOP-FREQUENCY • HEIGHT BALANCED • HYBRID
QUALIFIED_COL_NAME	VARCHAR2(4000)		Qualified column name
USER_GENERATED	VARCHAR2(3)		Indicates whether the column is a user-generated column (YES) or a system-generated column (NO)
DEFAULT_ON_NULL	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL for INSERT semantics (YES) or not (NO)
DEFAULT_ON_NULL_UPD	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL for UPDATE semantics (YES) or not (NO)
RESERVABLE_COLUMN	VARCHAR2(3)		Indicates whether the column is a reservable column (YES) or not (NO)
IDENTITY_COLUMN	VARCHAR2(3)		Indicates whether this is an identity column (YES) or not (NO)
SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether this is a sensitive column (YES) or not (NO)
EVALUATION_EDITION	VARCHAR2(128)		Name of the edition in which editioned objects referenced in an expression column are resolved
UNUSABLE_BEFORE	VARCHAR2(128)		Name of the oldest edition in which the index may be used as part of a query plan
UNUSABLE_BEGINNING	VARCHAR2(128)		Name of the edition for which the index may not be used as part of a query plan in this edition or any of its descendants
COLLATION	VARCHAR2(100)		Collation for the column. Only applies to columns with character data types.
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of a column, for which this virtual column generates a collation key
DOMAIN_OWNER	VARCHAR2(128)		If a data use case domain is specified for the column, the owner of the data use case domain
DOMAIN_NAME	VARCHAR2(128)		If a data use case domain is specified for the column, the name of the data use case domain
DOMAIN_COLUMN_NAME	VARCHAR2(128)		If a data use case domain is specified for the column, the name of the data use case domain column
DOMAIN_ASSOCIATION_ID	NUMBER		If a data use case domain is specified for the column, the INTERNAL_COLUMN_ID of the first column associated with the domain

Column	Datatype	NULL	Description
JSON_MODIFIER	VARCHAR2(448)		JSON-type modifier for the column A value is displayed only for columns of data type JSON. If one or more JSON-type modifiers are specified for the column, then the following is displayed: JSON(*modifier* [, *modifier*]...) Possible values for *modifier*: • ARRAY - JSON array • OBJECT - JSON object • SCALAR - JSON scalar • *data_type* - JSON scalar of type *data_type* • NULL - JSON null value If a JSON-type modifier is not specified for the column, then the following is displayed: JSON( )
VECTOR_INFO	VARCHAR2(56)		Indicates the number of vectors and their data type in an ONNX model Format: VECTOR(*dimension*,*element_type*) Example: VECTOR(768,float32)

7.34 DBA_TAB_COLUMNS

DBA_TAB_COLUMNS describes the columns of all tables, views, and clusters in the database.

Its columns (except for SENSITIVE_COLUMN) are the same as those in ALL_TAB_COLUMNS.

To gather statistics for this view, use the DBMS_STATS package.

This view filters out system-generated hidden columns. The DBA_TAB_COLS view does not filter out system-generated hidden columns.

Columns marked with an asterisk (*) in the table below remain for backward compatibility with Oracle7. This information is now in the [TAB|PART]_COL_STATISTICS views.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table, view, or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table, view, or cluster
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name

Column	Datatype	NULL	Description
DATA_TYPE	VARCHAR2(128)		Data type of the column
DATA_TYPE_MOD	VARCHAR2(3)		Data type modifier of the column
DATA_TYPE_OWNER	VARCHAR2(128)		Owner of the data type of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
NULLABLE	VARCHAR2(1)		Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY. The constraint should be in an ENABLE VALIDATE state.
COLUMN_ID	NUMBER		Sequence number of the column as created
DEFAULT_LENGTH	NUMBER		Length of the default value for the column
DATA_DEFAULT	LONG		Default value for the column
DATA_DEFAULT_VC	VARCHAR2(4000)		Default value for the column This column may truncate the default value.
NUM_DISTINCT*	NUMBER		Number of distinct values in the column
LOW_VALUE*	RAW(1000)		Low value in the column
HIGH_VALUE*	RAW(1000)		High value in the column
DENSITY*	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in the histogram for the column **Note:** The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm.
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO

Column	Datatype	NULL	Description
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
CHAR_LENGTH	NUMBER		Displays the length of the column in characters. This value only applies to the following data types: • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the data type is not any of the following (NULL): • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
V80_FMT_IMAGE	VARCHAR2(3)		Indicates whether the column data is in release 8.0 image format (YES) or not (NO)
DATA_UPGRADED	VARCHAR2(3)		Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: • NONE • FREQUENCY • TOP-FREQUENCY • HEIGHT BALANCED • HYBRID
DEFAULT_ON_NULL	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL for INSERT semantics (YES) or not (NO)
DEFAULT_ON_NULL_UPD	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL for UPDATE semantics (YES) or not (NO)
RESERVABLE_COLUMN	VARCHAR2(3)		Indicates whether the column is a reservable column (YES) or not (NO)
IDENTITY_COLUMN	VARCHAR2(3)		Indicates whether this is an identity column (YES) or not (NO)
SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether this is a sensitive column (YES) or not (NO)
EVALUATION_EDITION	VARCHAR2(128)		Name of the edition in which editioned objects referenced in an expression column are resolved
UNUSABLE_BEFORE	VARCHAR2(128)		Name of the oldest edition in which the index may be used as part of a query plan
UNUSABLE_BEGINNING	VARCHAR2(128)		Name of the edition for which the index may not be used as part of a query plan in this edition or any of its descendants
COLLATION	VARCHAR2(100)		Collation for the column. Only applies to columns with character data types.
DOMAIN_OWNER	VARCHAR2(128)		If a data use case domain is specified for the column, the owner of the data use case domain

Column	Datatype	NULL	Description
DOMAIN_NAME	VARCHAR2(128)		If a data use case domain is specified for the column, the name of the data use case domain
DOMAIN_COLUMN_NAME	VARCHAR2(128)		If a data use case domain is specified for the column, the name of the data use case domain column
DOMAIN_ASSOCIATION_ID	NUMBER		If a data use case domain is specified for the column, the INTERNAL_COLUMN_ID of the first column associated with the domain
JSON_MODIFIER	VARCHAR2(448)		JSON-type modifier for the column A value is displayed only for columns of data type JSON. If one or more JSON-type modifiers are specified for the column, then the following is displayed: JSON(*modifier* [, *modifier*]...) Possible values for *modifier*: • ARRAY - JSON array • OBJECT - JSON object • SCALAR - JSON scalar • *data_type* - JSON scalar of type *data_type* • NULL - JSON null value If a JSON-type modifier is not specified for the column, then the following is displayed: JSON( )
VECTOR_INFO	VARCHAR2(56)		Indicates the number of vectors and their data type in an ONNX model Format: VECTOR(*dimension*,*element_type*) Example: VECTOR(768,float32)

See Also:

- "ALL_TAB_COLUMNS"
- "DBA_TAB_COLS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_STATS package

7.35 DBA_TAB_COMMENTS

DBA_TAB_COMMENTS displays comments on all tables and views in the database. Its columns are the same as those in ALL_TAB_COMMENTS.

See Also:

"ALL_TAB_COMMENTS"

7.36 DBA_TAB_HISTGRM_PENDING_STATS

DBA_TAB_HISTGRM_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions in the database. Its columns are the same as those in ALL_TAB_HISTGRM_PENDING_STATS.

> **See Also:**
>
> "ALL_TAB_HISTGRM_PENDING_STATS"

7.37 DBA_TAB_HISTOGRAMS

DBA_TAB_HISTOGRAMS describes histograms on columns of all tables in the database. Its columns are the same as those in ALL_TAB_HISTOGRAMS.

> **See Also:**
>
> "ALL_TAB_HISTOGRAMS"

7.38 DBA_TAB_IDENTITY_COLS

DBA_TAB_IDENTITY_COLS describes all table identity columns. Its columns are the same as those in ALL_TAB_IDENTITY_COLS.

> **See Also:**
>
> "ALL_TAB_IDENTITY_COLS"

7.39 DBA_TAB_MODIFICATIONS

DBA_TAB_MODIFICATIONS describes modifications to all tables in the database that have been modified since the last time statistics were gathered on the tables. Its columns are the same as those in ALL_TAB_MODIFICATIONS.

> **See Also:**
>
> "ALL_TAB_MODIFICATIONS"

7.40 DBA_TAB_PARTITIONS

DBA_TAB_PARTITIONS displays partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS_STATS package for all partitions in the database.

Its columns are the same as those in "ALL_TAB_PARTITIONS".

7.41 DBA_TAB_PENDING_STATS

DBA_TAB_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions in the database. Its columns are the same as those in ALL_TAB_PENDING_STATS.

> **See Also:**
>
> "ALL_TAB_PENDING_STATS"

7.42 DBA_TAB_PRIVS

DBA_TAB_PRIVS describes all object grants in the database.

Related View

USER_TAB_PRIVS describes the object grants for which the current user is the object owner, grantor, or grantee.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the object. The object can be any object, including tables, packages, indexes, sequences, and so on.
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2(40)		Privilege on the object
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
HIERARCHY	VARCHAR2(3)		Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
TYPE	VARCHAR2(24)		Type of the object
INHERITED	VARCHAR2(3)		Indicates whether the grant was inherited from another container (YES) or not (NO)

> **See Also:**
>
> "USER_TAB_PRIVS"

7.43 DBA_TAB_STATISTICS

`DBA_TAB_STATISTICS` displays optimizer statistics for all tables in the database. Its columns are the same as those in `ALL_TAB_STATISTICS`.

> **See Also:**
>
> "ALL_TAB_STATISTICS"

7.44 DBA_TAB_STAT_PREFS

`DBA_TAB_STAT_PREFS` displays information about statistics preferences for all tables in the database. Its columns are the same as those in `ALL_TAB_STAT_PREFS`.

> **See Also:**
>
> "ALL_TAB_STAT_PREFS".

7.45 DBA_TAB_STATS_HISTORY

`DBA_TAB_STATS_HISTORY` provides a history of table statistics modifications for all tables in the database. Its columns are the same as those in `ALL_TAB_STATS_HISTORY`.

> **See Also:**
>
> "ALL_TAB_STATS_HISTORY"

7.46 DBA_TAB_SUBPARTITIONS

`DBA_TAB_SUBPARTITIONS` displays, for each table subpartition, the subpartition name, name of the table and partition to which it belongs, its storage attributes, and statistics generated by the `DBMS_STATS` package.

Its columns are the same as those in "ALL_TAB_SUBPARTITIONS".

7.47 DBA_TABLE_ACCESS_STATS

DBA_TABLE_ACCESS_STATS displays the scan count for all tables and partitions in the database. Its columns are the same as those in ALL_TABLE_ACCESS_STATS.

> **Note:**
>
> The ALL_TABLE_ACCESS_STATS and DBA_TABLE_ACCESS_STATS views do not display data for Oracle-maintained schemas. You can view data for an Oracle-maintained schema by connecting to the schema and querying the USER_TABLE_ACCESS_STATS view.

> **See Also:**
>
> - "ALL_TABLE_ACCESS_STATS"
> - "USER_TABLE_ACCESS_STATS"

7.48 DBA_TABLE_VIRTUAL_COLUMNS

DBA_TABLE_VIRTUAL_COLUMNS describes virtual columns in all tables in the database. Its columns are the same as those in ALL_TABLE_VIRTUAL_COLUMNS.

> **See Also:**
>
> "ALL_TABLE_VIRTUAL_COLUMNS"

7.49 DBA_TABLES

DBA_TABLES describes all relational tables in the database. Its columns are the same as those in ALL_TABLES.

To gather statistics for this view, use the DBMS_STATS package.

> **See Also:**
>
> "ALL_TABLES"

7.50 DBA_TABLESPACE_GROUPS

DBA_TABLESPACE_GROUPS describes all tablespace groups in the database.

Column	Datatype	NULL	Description
GROUP_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace group
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace

7.51 DBA_TABLESPACE_THRESHOLDS

DBA_TABLESPACE_THRESHOLDS describes space utilization threshold settings for all tablespaces in the database.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(30)		Tablespace name
CONTENTS	VARCHAR2(9)		Tablespace contents: • UNDO • PERMANENT • TEMPORARY
EXTENT_MANAGEMENT	VARCHAR2(10)		Indicates whether the extents in the tablespace are dictionary managed (DICTIONARY) or locally managed (LOCAL)
THRESHOLD_TYPE	VARCHAR2(8)		Indicates whether the threshold value is derived from a DEFAULT threshold or an EXPLICIT threshold
METRICS_NAME	VARCHAR2(64)		Name of the metric for which the threshold is set
WARNING_OPERATOR	VARCHAR2(12)		Relational operator for warning thresholds: • GT • EQ • LT • LE • GE • CONTAINS • NE • DO_NOT_CHECK
WARNING_VALUE	VARCHAR2(256)		Warning threshold value
CRITICAL_OPERATOR	VARCHAR2(12)		Relational operator for critical thresholds: • GT • EQ • LT • LE • GE • CONTAINS • NE • DO_NOT_CHECK
CRITICAL_VALUE	VARCHAR2(256)		Critical threshold value

7.52 DBA_TABLESPACE_USAGE_METRICS

DBA_TABLESPACE_USAGE_METRICS describes tablespace usage metrics for all types of tablespaces, including permanent, temporary, and undo tablespaces.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(30)		Tablespace name
USED_SPACE	NUMBER		Total space consumed by all objects created in the tablespace, expressed as number of data blocks For undo tablespaces, the value of this column includes space consumed by both expired and unexpired undo segments.
ALLOCATION_SIZE	NUMBER		For smallfile tablespaces, the combined current size of all datafiles, expressed as number of data blocks For bigfile tablespaces, the current size of the single datafile
TABLESPACE_SIZE	NUMBER		The maximum size of the tablespace, expressed as number of data blocks • If the tablespace contains any datafiles with autoextend enabled, then this column displays the maximum size to which the tablespace can grow. Underlying storage free space, such as Oracle ASM or file system storage, is taken into account when computing this value. If the value of the MAX_PDB_STORAGE property of the CDB_PROPERTIES view is non-zero, then that value is also taken into account. For example: – If a tablespace has a current size of 5 GB, the combined maximum size of its datafiles is 32 GB, and its underlying storage has 20 GB of free space, then this column will have a value of approximately 25 GB. – If a tablespace has a current size of 10 GB, the combined maximum size of its datafiles is 20 GB, and its underlying storage has 25 GB of free space, then this column will have a value of approximately 20 GB. – If a tablespace has a current size of 15 GB, the combined maximum size of its datafiles is 32 GB, its underlying storage has 90 GB of free space, the current PDB size is 40 GB, and MAX_PDB_STORAGE is 50 GB, then this column will have a value of approximately 25 GB. • If the tablespace contains only datafiles with autoextend disabled, then this column displays the combined size of all datafiles in the tablespace.
USED_PERCENT	NUMBER		Percentage of used space, as a function of the maximum possible tablespace size
BLOCK_SIZE	NUMBER		Tablespace block size (in bytes)

7.53 DBA_TABLESPACES

DBA_TABLESPACES describes all tablespaces in the database.

Related View

USER_TABLESPACES describes the tablespaces accessible to the current user. This view does not display the PLUGGED_IN column.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace
BLOCK_SIZE	NUMBER	NOT NULL	Tablespace block size (in bytes)
INITIAL_EXTENT	NUMBER		Default initial extent size (in bytes)
NEXT_EXTENT	NUMBER		Default incremental extent size (in bytes)
MIN_EXTENTS	NUMBER	NOT NULL	Default minimum number of extents
MAX_EXTENTS	NUMBER		Default maximum number of extents
MAX_SIZE	NUMBER		Default maximum size of segments (in Oracle blocks)
PCT_INCREASE	NUMBER		Default percent increase for extent size
MIN_EXTLEN	NUMBER		Minimum extent size for this tablespace (in bytes)
STATUS	VARCHAR2(9)		Tablespace status: • ONLINE • OFFLINE • READ ONLY
CONTENTS	VARCHAR2(9)		Tablespace contents: • UNDO • LOST WRITE PROTECTION • PERMANENT • TEMPORARY
LOGGING	VARCHAR2(9)		Default logging attribute: • LOGGING • NOLOGGING
FORCE_LOGGING	VARCHAR2(3)		Indicates whether the tablespace is under force logging mode (YES) or not (NO)
EXTENT_MANAGEMENT	VARCHAR2(10)		Indicates whether the extents in the tablespace are dictionary managed (DICTIONARY) or locally managed (LOCAL)
ALLOCATION_TYPE	VARCHAR2(9)		Type of extent allocation in effect for the tablespace: • SYSTEM • UNIFORM • USER
PLUGGED_IN	VARCHAR2(3)		Indicates whether the tablespace is plugged in (YES) or not (NO)
SEGMENT_SPACE_MANAGEMENT	VARCHAR2(6)		Indicates whether the free and used segment space in the tablespace is managed using free lists (MANUAL) or bitmaps (AUTO)

Column	Datatype	NULL	Description
DEF_TAB_COMPRESSION	VARCHAR2(8)		Indicates whether default table compression is enabled (ENABLED) or not (DISABLED) **Note:** Enabling default table compression indicates that all tables in the tablespace will be created with table compression enabled unless otherwise specified.
RETENTION	VARCHAR2(11)		Undo tablespace retention: • GUARANTEE - Tablespace is an undo tablespace with RETENTION specified as GUARANTEE A RETENTION value of GUARANTEE indicates that unexpired undo in all undo segments in the undo tablespace should be retained even if it means that forward going operations that need to generate undo in those segments fail. • NOGUARANTEE - Tablespace is an undo tablespace with RETENTION specified as NOGUARANTEE • NOT APPLY - Tablespace is not an undo tablespace
BIGFILE	VARCHAR2(3)		Indicates whether the tablespace is a bigfile tablespace (YES) or a smallfile tablespace (NO)
PREDICATE_EVALUATION	VARCHAR2(7)		Indicates whether predicates are evaluated by host (HOST) or by storage (STORAGE)
ENCRYPTED	VARCHAR2(3)		Indicates whether the tablespace is encrypted (YES) or not (NO)
COMPRESS_FOR	VARCHAR2(30)		Default compression for what kind of operations: • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See *Oracle Database Concepts* for more information.
DEF_INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is by default enabled (ENABLED) or disabled (DISABLED) for tables in this tablespace
DEF_INMEMORY_PRIORITY	VARCHAR2(8)		Indicates the default priority for In-Memory Column Store (IM column store) population for this tablespace. Possible values: • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL

Column	Datatype	NULL	Description
DEF_INMEMORY_DISTRIBUTE	VARCHAR2(15)		Indicates how the IM column store is distributed by default for this tablespace in an Oracle Real Application Clusters (Oracle RACE) environment: • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION
DEF_INMEMORY_COMPRESSION	VARCHAR2(17)		Indicates the default compression level for the IM column store for this tablespace: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • NULL
DEF_INMEMORY_DUPLICATE	VARCHAR2(13)		Indicates the duplicate setting for the IM column store in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
SHARED	VARCHAR2(12)		Tablespace type: • SHARED: For shared tablespace • LOCAL_ON_LEAF: For local temporary tablespace for leaf (read-only) instances • LOCAL_ON_ALL: For local temporary tablespace for all instance types
DEF_INDEX_COMPRESSION	VARCHAR2(8)		Indicates whether default index compression is enabled (ENABLED) or not (DISABLED) **Note:** Enabling default index compression indicates that all indexes in the tablespace will be created with index compression enabled unless otherwise specified.
INDEX_COMPRESS_FOR	VARCHAR2(13)		Valid values are: • ADVANCED LOW • ADVANCED HIGH • NULL No other values are allowed.
DEF_CELLMEMORY	VARCHAR2(14)		This specifies the default value for the CELLMEMORY attribute that tables created in the tablespace will inherit unless the behavior is overridden explicitly This column is intended for use with Oracle Exadata.

Column	Datatype	NULL	Description
DEF_INMEMORY_SERVICE	VARCHAR2(12)		Indicates how the IM column store is populated on various instances by default for this tablespace. The possible values are: • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the DEF_INMEMORY_SERVICE_NAME column.
DEF_INMEMORY_SERVICE_NAME	VARCHAR2(1000)		Indicates the service name for the service on which the IM column store should be populated by default for this tablespace. This column has a value only when the corresponding DEF_INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.
LOST_WRITE_PROTECT	VARCHAR2(7)		The lost write protection setting for the tablespace. Possible values: • ENABLED: Indicates that lost write data is being collected • OFF: Indicates that lost write data is not being collected • SUSPEND: Indicates that lost write data is not currently being collected, but it can be enabled at a later date. The lost write data collected when the file was ENABLED remains in the lost write database, but it is not being checked or updated. If lost write protection is enabled for a tablespace, it is enabled for all data files for that tablespace, including data files added later. If lost write protection is enabled for a single data file, it does not have to be enabled for another data file in the same tablespace. You can check the lost write protection status for a data file by querying the LOST_WRITE_PROTECT column in the DBA_DATA_FILES view.
CHUNK_TABLESPACE	VARCHAR2(1)		Indicates whether this is a chunk tablespace (Y) or not (N)

- "DBA_DATA_FILES"

7.54 DBA_TEMP_FILES

DBA_TEMP_FILES describes all temporary files (tempfiles) in the database.

Column	Datatype	NULL	Description
FILE_NAME	VARCHAR2(513)		Name of the database temp file
FILE_ID	NUMBER		File identifier number of the database temp file
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace to which the file belongs
BYTES	NUMBER		Size of the file (in bytes)
BLOCKS	NUMBER		Size of the file (in Oracle blocks)
STATUS	VARCHAR2(7)		File status: • OFFLINE • ONLINE • UNKNOWN
RELATIVE_FNO	NUMBER		Tablespace-relative file number
AUTOEXTENSIBLE	VARCHAR2(3)		Indicates whether the file is autoextensible (YES) or not (NO)
MAXBYTES	NUMBER		maximum size of the file (in bytes)
MAXBLOCKS	NUMBER		Maximum size of the file (in Oracle blocks)
INCREMENT_BY	NUMBER		Default increment for autoextension (in Oracle blocks)
USER_BYTES	NUMBER		Size of the useful portion of the file (in bytes)
USER_BLOCKS	NUMBER		Size of the useful portion of the file (in Oracle blocks)
SHARED	VARCHAR2(12)		Type of tablespace this file belongs to: • SHARED: For shared tablespace • LOCAL_FOR_RIM: Local temporary tablespace for RIM (read-only) instances • LOCAL_FOR_ALL: Local temporary tablespace for all instance types
INST_ID	NUMBER		Instance ID of the instance to which the temp file belongs. This column has a NULL value for temp files that belong to shared tablespaces.

7.55 DBA_TEMP_FREE_SPACE

DBA_TEMP_FREE_SPACE displays temporary space usage information at tablespace level.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace
TABLESPACE_SIZE	NUMBER		Total size of the tablespace, in bytes
ALLOCATED_SPACE	NUMBER		Total allocated space, in bytes, including space that is currently allocated and used and space that is currently allocated and available for reuse
FREE_SPACE	NUMBER		Total free space available, in bytes, including space that is currently allocated and available for reuse and space that is currently unallocated

Column	Datatype	NULL	Description
SHARED	VARCHAR2(12)		Type of tablespace this file belongs to: • SHARED: For shared tablespace • LOCAL_FOR_RIM: Local temporary tablespace for RIM (read-only) instances • LOCAL_FOR_ALL: Local temporary tablespace for all instance types
INST_ID	NUMBER		Instance ID of the instance to which the tempfile belongs

7.56 DBA_THRESHOLDS

DBA_THRESHOLDS describes all thresholds.

Column	Datatype	NULL	Description
METRICS_NAME	VARCHAR2(64)		Metrics name
WARNING_OPERATOR	VARCHAR2(12)		Relational operator for warning thresholds: • GT • EQ • LT • LE • GE • CONTAINS • NE • DO NOT CHECK • DO_NOT_CHECK
WARNING_VALUE	VARCHAR2(256)		Warning threshold value
CRITICAL_OPERATOR	VARCHAR2(12)		Relational operator for critical thresholds: • GT • EQ • LT • LE • GE • CONTAINS • NE • DO NOT CHECK • DO_NOT_CHECK
CRITICAL_VALUE	VARCHAR2(256)		Critical threshold value
OBSERVATION_PERIOD	NUMBER		Observation period length (in minutes)
CONSECUTIVE_OCCURRENCES	NUMBER		Number of occurrences before an alert is issued
INSTANCE_NAME	VARCHAR2(16)		Instance name; NULL for database-wide alerts
OBJECT_TYPE	VARCHAR2(64)		Object type: • SYSTEM • SERVICE • EVENT_CLASS • TABLESPACE • FILE
OBJECT_NAME	VARCHAR2(513)		Name of the object for which the threshold is set

Column	Datatype	NULL	Description
STATUS	VARCHAR2(7)		Indicates whether the threshold is applicable on a valid object (VALID) or not (INVALID) Thresholds for non-tablespace metrics can only be set in ROOT and apply to a CDB as a whole. Any pre-existing non-tablespace thresholds that may exist in a PDB have a status of INVALID in the DBA_THRESHOLDS view. You can remove these threshold settings using the DBMS_SERVER_ALERT.SET_THRESHOLD API. See *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SERVER_ALERT.SET_THRESHOLD API.

7.57 DBA_TRANSFORMATIONS

DBA_TRANSFORMATIONS displays information about all transformations in the database. These transformations can be specified with Advanced Queuing operations such as enqueue, dequeue, and subscribe to automatically integrate transformations in AQ messaging. Its columns are the same as those in ALL_TRANSFORMATIONS.

> **See Also:**
>
> "ALL_TRANSFORMATIONS"

7.58 DBA_TRIGGER_COLS

DBA_TRIGGER_COLS describes the use of columns in all triggers in the database. Its columns are the same as those in ALL_TRIGGER_COLS.

> **See Also:**
>
> "ALL_TRIGGER_COLS"

7.59 DBA_TRIGGER_ORDERING

DBA_TRIGGER_ORDERING describes all triggers in the database that have FOLLOWS or PRECEDES ordering. Its columns are the same as those in ALL_TRIGGER_ORDERING.

> **See Also:**
>
> "ALL_TRIGGER_ORDERING"

7.60 DBA_TRIGGERS

DBA_TRIGGERS describes all triggers in the database. Its columns are the same as those in ALL_TRIGGERS.

> **See Also:**
>
> "ALL_TRIGGERS"

7.61 DBA_TRIGGERS_AE

DBA_TRIGGERS_AE describes all triggers (across all editions) in the database. Its columns are the same as those in ALL_TRIGGERS_AE.

> **See Also:**
>
> "ALL_TRIGGERS_AE"

7.62 DBA_TS_QUOTAS

DBA_TS_QUOTAS describes tablespace quotas for all users.

Related View

USER_TS_QUOTAS describes tablespace quotas for the current user. This view does not display the USERNAME column.

Column	Datatype	NULL	Description
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Tablespace name
USERNAME	VARCHAR2(128)	NOT NULL	User with resource rights on the tablespace
BYTES	NUMBER		Number of bytes charged to the user
MAX_BYTES	NUMBER		User's quota in bytes, or -1 if no limit
BLOCKS	NUMBER		Number of Oracle blocks charged to the user
MAX_BLOCKS	NUMBER		User's quota in Oracle blocks, or -1 if no limit
DROPPED	VARCHAR2(3)		Whether the tablespace has been dropped

> **See Also:**
>
> "USER_TS_QUOTAS"

7.63 DBA_TSDP_IMPORT_ERRORS

DBA_TSDP_IMPORT_ERRORS shows information about the errors encountered during import of the Transparent Sensitive Data Protection discovery result.

This error information corresponds to the last import of the discovery result done using the DBMS_TSDP_MANAGE.IMPORT_DISCOVERY_RESULT API.

Column	Datatype	NULL	Description
ERROR_CODE	NUMBER	NOT NULL	The ORA error code of the error encountered
SCHEMA_NAME	VARCHAR2(128)		The schema corresponding to the error
TABLE_NAME	VARCHAR2(128)		The table corresponding to the error
COLUMN_NAME	VARCHAR2(128)		The column corresponding to the error
SENSITIVE_TYPE	VARCHAR2(128)		The sensitive type corresponding to the error

See Also:

- *Oracle Database Security Guide* for more information about using Transparent Sensitive Data Protection
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_TSDP_MANAGE.IMPORT_DISCOVERY_RESULT procedure

7.64 DBA_TSDP_POLICY_CONDITION

DBA_TSDP_POLICY_CONDITION describes the Transparent Sensitive Data Protection policy and condition mapping. It also lists the property-value pairs for the condition.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		The name of the Transparent Sensitive Data Protection policy
SUB_POLICY	NUMBER	NOT NULL	The sub policy of the Transparent Sensitive Data Protection policy
PROPERTY	VARCHAR2(11)		The condition property. Possible values: • DATATYPE • LENGTH • SCHEMA_NAME • TABLE_NAME
VALUE	VARCHAR2(128)		The value of the condition property

See Also:

Oracle Database Security Guide for more information about using Transparent Sensitive Data Protection

7.65 DBA_TSDP_POLICY_FEATURE

DBA_TSDP_POLICY_FEATURE shows the Transparent Sensitive Data Protection policy security feature mapping for all the TSDP policies in the database.

At this time, only Oracle Data Redaction is supported.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		The name of the Transparent Sensitive Data Protection policy
SECURITY_FEATURE	VARCHAR2(12)		The Oracle security feature with which the Transparent Sensitive Data Protection policy is associated

See Also:

Oracle Database Security Guide for more information about using Transparent Sensitive Data Protection

7.66 DBA_TSDP_POLICY_PARAMETER

DBA_TSDP_POLICY_PARAMETER shows the parameter-value pairs for the condition of the Transparent Sensitive Data Protection policy.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		The name of the Transparent Sensitive Data Protection policy
SUB_POLICY	NUMBER	NOT NULL	The sub policy of the Transparent Sensitive Data Protection policy
PARAMETER	VARCHAR2(128)		The parameter for the Transparent Sensitive Data Protection sub policy
VALUE	VARCHAR2(4000)		The value of the parameter
DEFAULT_OPTION	VARCHAR2(5)		Indicates whether this is the default option for the policy: • TRUE: This is the default option for the policy • FALSE: This is not the default option for the policy

See Also:

Oracle Database Security Guide for more information about using Transparent Sensitive Data Protection

7.67 DBA_TSDP_POLICY_PROTECTION

DBA_TSDP_POLICY_PROTECTION shows the list of columns that have been protected through Transparent Sensitive Data Protection.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	The schema containing the sensitive data
TABLE_NAME	VARCHAR2(128)	NOT NULL	The table containing the sensitive column
COLUMN_NAME	VARCHAR2(128)	NOT NULL	The name of the sensitive column
TSDP_POLICY	VARCHAR2(128)		The TSDP policy name based on which the column protection was enabled
SECURITY_FEATURE	VARCHAR2(12)		The security feature enabled on the sensitive column
SECURITY_FEATURE_POLICY	VARCHAR2(128)	NOT NULL	Name of the underlying Oracle security feature policy
SUBPOLICY#	NUMBER	NOT NULL	The subpolicy of the Transparent Sensitive Data Protection policy based on which protection has been enabled

See Also:

Oracle Database Security Guide for more information about using Transparent Sensitive Data Protection

7.68 DBA_TSDP_POLICY_TYPE

DBA_TSDP_POLICY_TYPE shows the Transparent Sensitive Data Protection policy to sensitive column type mapping.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		The Transparent Sensitive Data Protection policy name
SENSITIVE_TYPE	VARCHAR2(128)		The sensitive column type name

See Also:

Oracle Database Security Guide for more information about using Transparent Sensitive Data Protection

7.69 DBA_TSM_DESTINATION

DBA_TSM_DESTINATION lists transparent session migration (TSM) destination session statistics.

Column	Datatype	NULL	Description
SOURCE_DATABASE_NAME	VARCHAR2(4000)		Database name of source session
DESTINATION_DATABASE_NAME	VARCHAR2(4000)		Database name of destination session
DESTINATION_INSTANCE_NAME	VARCHAR2(4000)		Instance name of destination session
DESTINATION_INSTANCE_ID	VARCHAR2(4000)		Instance ID of destination session
DESTINATION_INST_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Instance start time of destination session
SEQUENCE#	NUMBER		Migration sequence number
DESTINATION_SID	NUMBER		Session ID of destination session
DESTINATION_SERIAL#	NUMBER		Session serial number of destination session
DESTINATION_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start time for migration on destination session
DESTINATION_END_TIME	TIMESTAMP(6) WITH TIME ZONE		End time for migration on destination session
DESTINATION_USER_NAME	VARCHAR2(128)	NOT NULL	User associated with the destination session
DESTINATION_SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema associated with the destination session
DESTINATION_STATE	VARCHAR2(24)		Migration state of destination session

7.70 DBA_TSM_SOURCE

DBA_TSM_SOURCE lists transparent session migration (TSM) source session statistics.

Column	Datatype	NULL	Description
SOURCE_DATABASE_NAME	VARCHAR2(4000)		Database name of source session
SOURCE_INSTANCE_NAME	VARCHAR2(4000)		Instance name of source session
SOURCE_INSTANCE_ID	VARCHAR2(4000)		Instance ID of source session
SOURCE_INSTANCE_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Instance start time of source session
SEQUENCE#	NUMBER		Migration sequence number
SOURCE_SID	NUMBER		Session ID of source session
SOURCE_SERIAL#	NUMBER		Source serial number of source session
SOURCE_STATE	VARCHAR2(24)		Migration state of source session
CONNECT_STRING	VARCHAR2(4000)		Connect string specified for migration
SOURCE_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start time for migration on source session
COST	NUMBER		Estimate of migration cost
FAILURE_REASON	VARCHAR2(34)		Reason for migration failure, if any
SOURCE_END_TIME	TIMESTAMP(6) WITH TIME ZONE		End time for migration on source session
ROUNDTRIPS	NUMBER		Number of client/server round trips during migration
SOURCE_USER_NAME	VARCHAR2(128)	NOT NULL	User associated with the source session
SOURCE_SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema associated with the source session

Column	Datatype	NULL	Description
DESTINATION_DATABASE_NAME	VARCHAR2(4000)		Database name of the destination session

7.71 DBA_TSTZ_TAB_COLS

DBA_TSTZ_TAB_COLS displays information about the columns of all tables in the database, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.

Its columns (except for COLUMN_NAME, NESTED, VIRTUAL_COLUMN, SCALAR_COLUMN, and UNUSED_COLUMN) are the same as those in ALL_TSTZ_TAB_COLS.

> **See Also:**
>
> "ALL_TSTZ_TAB_COLS"

7.72 DBA_TSTZ_TABLES

DBA_TSTZ_TABLES displays information about all tables in the database, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.

Its columns are the same as those in ALL_TSTZ_TABLES.

> **See Also:**
>
> "ALL_TSTZ_TABLES"

7.73 DBA_TUNE_MVIEW

DBA_TUNE_MVIEW displays the result of executing the DBMS_ADVISOR.TUNE_MVIEW procedure.

Related View

USER_TUNE_MVIEW displays the result of executing the DBMS_ADVISOR.TUNE_MVIEW procedure. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_NAME	VARCHAR2(128)		Name of the task
ACTION_ID	NUMBER	NOT NULL	Identifier of the action
SCRIPT_TYPE	VARCHAR2(14)		Type of the script: • IMPLEMENTATION • UNDO

Column	Datatype	NULL	Description
STATEMENT	CLOB		Action statement

> **See Also:**
>
> - "USER_TUNE_MVIEW"
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_ADVISOR.TUNE_MVIEW procedure

7.74 DBA_TXEVENTQ_MIGRATION_STATUS

DBA_TXEVENTQ_MIGRATION_STATUS provides information about all migrations from AQ classic queues to Transactional Event Queues (TxEventQs).

Its columns (except for SUFFIX) are the same as those in ALL_TXEVENTQ_MIGRATION_STATUS.

Column	Datatype	NULL	Description
SOURCE_SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Source schema name
SOURCE_QUEUE_NAME	VARCHAR2(128)	NOT NULL	Source AQ classic queue name
SOURCE_QUEUE_TABLE	VARCHAR2(128)		Source AQ classic queue table name
TARGET_SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Target schema name
TARGET_QUEUE_NAME	VARCHAR2(128)	NOT NULL	Target TxEventQ name
EVENT_STATUS	NUMBER		Migration event status
EVENT	VARCHAR2(128)		Migration event
EVENT_TIMESTAMP	TIMESTAMP (6) WITH TIME ZONE		Date and time at which the migration event occurred
EVENT_ERROR_COMMENTS	VARCHAR2(1024)		Migration event error comments, if any
SUFFIX	VARCHAR2(2)		Temporary TxEventQ name suffix, if any This suffix is supplied by the user to avoid name conflicts during the migration.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_TXEVENTQ_MIGRATION_STATUS"

7.75 DBA_TYPE_ATTRS

DBA_TYPE_ATTRS describes the attributes of all object types in the database. Its columns (except for CHAR_USED) are the same as those in ALL_TYPE_ATTRS.

> **See Also:**
>
> "ALL_TYPE_ATTRS"

7.76 DBA_TYPE_METHODS

DBA_TYPE_METHODS describes the methods of all object types in the database. Its columns are the same as those in ALL_TYPE_METHODS.

> **See Also:**
>
> "ALL_TYPE_METHODS"

7.77 DBA_TYPE_VERSIONS

DBA_TYPE_VERSIONS describes the versions of all object types in the database. Its columns are the same as those in ALL_TYPE_VERSIONS.

> **See Also:**
>
> "ALL_TYPE_VERSIONS"

7.78 DBA_TYPES

DBA_TYPES describes all object types in the database. Its columns are the same as those in ALL_TYPES.

> **See Also:**
>
> "ALL_TYPES"

7.79 DBA_UMF_LINK

DBA_UMF_LINK displays information about the registered database links in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns all the registered database links in the topology if you are querying on a target node.

Column	Datatype	NULL	Description
TOPOLOGY_NAME	VARCHAR2(128)	NOT NULL	Topology name for the link
FROM_NODE_ID	NUMBER	NOT NULL	Node ID of the local node
TO_NODE_ID	NUMBER	NOT NULL	Node ID of the remote node
LINK_NAME	VARCHAR2(128)	NOT NULL	Fully qualified database link name

See Also:

Oracle Database Performance Tuning Guide for information about configuring the Remote Management Framework (RMF) architecture

7.80 DBA_UMF_REGISTRATION

DBA_UMF_REGISTRATION displays information about the registered nodes in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns all the registered nodes in the topology if you are querying on a target node.

Column	Datatype	NULL	Description
TOPOLOGY_NAME	VARCHAR2(128)	NOT NULL	Topology name for the node
NODE_NAME	VARCHAR2(128)	NOT NULL	Unique node name in the topology
NODE_ID	NUMBER	NOT NULL	Unique node ID in the topology
NODE_TYPE	NUMBER	NOT NULL	Node type. Possible value: • 0: RDBMS node
AS_SOURCE	VARCHAR2(5)		Indicates whether the node is a source node. Possible values: • TRUE: The node is a source node, and it can provide remote services • FALSE: The node is not a source node, and it cannot provide remote services
AS_CANDIDATE_TARGET	VARCHAR2(5)		Node is a candidate target. Possible values: • TRUE: Node can be promoted to target role • FALSE: Node cannot be promoted to target role

Column	Datatype	NULL	Description
STATE	VARCHAR2(20)		Current state of the node. Possible values: • OK: Node is registered • REGISTRATION_PENDING: Node registration has started, but has not been completed • SYNC_FAILED: Unable to synchronize the topology with the node

> **See Also:**
>
> *Oracle Database Performance Tuning Guide* for information about configuring the Remote Management Framework (RMF) architecture

7.81 DBA_UMF_SERVICE

DBA_UMF_SERVICE displays information about the registered services in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns all the registered services in the topology if you are querying on a target node

Column	Datatype	NULL	Description
TOPOLOGY_NAME	VARCHAR2(128)	NOT NULL	Topology name for the service
NODE_ID	NUMBER	NOT NULL	Node ID of the node providing the service
SERVICE_ID	VARCHAR2(7)		Service Identifier. Possible values: • 1: Automatic Workload Repository • 2: SQL Tuning

> **See Also:**
>
> *Oracle Database Performance Tuning Guide* for information about configuring the Remote Management Framework (RMF) architecture

7.82 DBA_UMF_TOPOLOGY

DBA_UMF_TOPOLOGY displays information about the registered topologies in the Remote Management Framework (RMF).

This view returns no rows if you are querying on an RMF source node. It returns one row per registered topology if you are querying on a target node.

Column	Datatype	NULL	Description
TOPOLOGY_NAME	VARCHAR2(128)	NOT NULL	Unique topology name
TARGET_ID	NUMBER		Node ID of the target node

Column	Datatype	NULL	Description
TOPOLOGY_VERSION	NUMBER	NOT NULL	Topology version number
TOPOLOGY_STATE	VARCHAR2(8)		Possible values: • ACTIVE: Topology can be used for RMF operations • INACTIVE: Topology cannot be used for RMF operations

> **See Also:**
>
> *Oracle Database Performance Tuning Guide* for information about configuring the Remote Management Framework (RMF) architecture

7.83 DBA_UNDO_EXTENTS

DBA_UNDO_EXTENTS describes the extents comprising the segments in all undo tablespaces in the database.

> **Note:**
>
> The status of the undo space distribution reported by DBA_UNDO_EXTENTS is correct for the undo tablespace that is active on the instance on which DBA_UNDO_EXTENTS is queried. However, due to the use of in-memory information that is different on each instance, there can be a discrepancy in the status of the undo space distribution of undo tablespaces active on other instances when queried from one instance. This does not affect undo functionality and is only a reporting discrepancy for other instances' undo tablespace space distribution status. As a best practice, query the space distribution for an undo tablespace from the instance on which it is active.

Column	Datatype	NULL	Description
OWNER	CHAR(3)		Owner of the undo tablespace
SEGMENT_NAME	VARCHAR2(128)	NOT NULL	Name of the undo segment
TABLESPACE_NAME	VARCHAR2(128)	NOT NULL	Name of the undo tablespace
EXTENT_ID	NUMBER		ID of the extent
FILE_ID	NUMBER	NOT NULL	Absolute file number of the data file containing the extent
BLOCK_ID	NUMBER		Start block number of the extent
BYTES	NUMBER		Size of the extent (in bytes)
BLOCKS	NUMBER		Size of the extent (in blocks)
RELATIVE_FNO	NUMBER		Relative number of the file containing the segment header
COMMIT_JTIME	NUMBER		Commit time of the undo in the extent expressed as Julian time. This column is deprecated, but retained for backward compatibility reasons.

Column	Datatype	NULL	Description
COMMIT_WTIME	VARCHAR2(20)		Commit time of the undo in the extent expressed as Wallclock time.This column is deprecated, but retained for backward compatibility reasons.
STATUS	VARCHAR2(9)		Transaction Status of the undo in the extent: • ACTIVE • EXPIRED • UNEXPIRED

7.84 DBA_UNUSED_COL_TABS

DBA_UNUSED_COL_TABS describes all tables in the database containing unused columns. Its columns are the same as those in ALL_UNUSED_COL_TABS.

> **See Also:**
>
> "ALL_UNUSED_COL_TABS"

7.85 DBA_UNUSED_GRANTS

DBA_UNUSED_GRANTS shows all the grants that are not used during the privilege capture.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)		Name of the privilege analysis policy
RUN_NAME	VARCHAR2(128)		Name of the run of the privilege analysis policy
GRANTEE	VARCHAR2(128)		Name of the user who is granted with the privilege or role
ROLENAME	VARCHAR2(128)		Name of the role that is granted to the grantee
SYS_PRIV	VARCHAR2(40)		Name of the system privilege that is granted to the grantee
SCH_PRIV	VARCHAR2(40)		Name of the schema privilege that is granted to the grantee
OBJ_PRIV	VARCHAR2(40)		Name of the object privilege that is granted to the grantee
USER_PRIV	VARCHAR2(25)		Name of the user privilege that is granted to the grantee
OBJECT_OWNER	VARCHAR2(128)		Name of the owner of the object for which the object privilege is granted
OBJECT_NAME	VARCHAR2(128)		Name of the object for which the object privilege is granted
OBJECT_TYPE	VARCHAR2(23)		Type of the object for which the object privilege is granted
COLUMN_NAME	VARCHAR2(128)		Name of the column in the table for which the object privilege is granted
OPTION$	NUMBER		Whether the grant option of the privilege is granted

> **See Also:**
>
> *Oracle Database Security Guide* for more information about privilege analysis

7.86 DBA_UNUSED_OBJPRIVS

DBA_UNUSED_OBJPRIVS lists the object privileges (without privilege grant paths) that are not used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of the privilege analysis policy
USERNAME	VARCHAR2(128)		Name of the user whose privileges are reported
ROLENAME	VARCHAR2(128)		Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)
OBJ_PRIV	VARCHAR2(40)		Unused object privilege
OBJECT_OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Name of the object that USERNAME has OBJ_PRIV on
OBJECT_TYPE	VARCHAR2(23)		Type of the object USERNAME has OBJ_PRIV on
COLUMN_NAME	VARCHAR2(128)		Name of the column that USERNAME has OBJ_PRIV on
GRANT_OPTION	NUMBER		Indicates whether the privilege is granted with the GRANT option: • 0 - Indicates that the privilege is granted without the GRANT option • 1 - Indicates that the privilege is granted with the GRANT option
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

> **See Also:**
>
> - "DBA_UNUSED_OBJPRIVS_PATH" for privilege grant path information for unused object privileges
> - *Oracle Database Security Guide* for more information about privilege analysis
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.87 DBA_UNUSED_OBJPRIVS_PATH

DBA_UNUSED_OBJPRIVS_PATH lists the object privileges that are not used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of the privilege analysis policy
USERNAME	VARCHAR2(128)		Name of the user whose privileges are reported
ROLENAME	VARCHAR2(128)		Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)
OBJ_PRIV	VARCHAR2(40)		Unused object privilege
OBJECT_OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Name of the object that USERNAME has OBJ_PRIV on
OBJECT_TYPE	VARCHAR2(23)		Type of the object that USERNAME has OBJ_PRIV on
COLUMN_NAME	VARCHAR2(128)		Name of the column that USERNAME has OBJ_PRIV on
GRANT_OPTION	NUMBER		Indicates whether the privilege is granted with the GRANT option: • 0 - Indicates that the privilege is granted without the GRANT option • 1 - Indicates that the privilege is granted with the GRANT option
PATH	GRANT_PATH		Object privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_USED_OBJPRIVS_PATH"
- "DBA_UNUSED_OBJPRIVS"
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.88 DBA_UNUSED_PRIVS

DBA_UNUSED_PRIVS lists the privileges that are not used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of the privilege analysis policy
USERNAME	VARCHAR2(128)		Name of the user whose unused privileges are reported
ROLENAME	VARCHAR2(128)		Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)
SYS_PRIV	VARCHAR2(40)		Unused system privilege
SCH_PRIV	VARCHAR2(40)		Unused schema privilege
OBJ_PRIV	VARCHAR2(40)		Unused object privilege
USER_PRIV	VARCHAR2(25)		Unused user privilege
OBJECT_OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Name of the object that USERNAME has OBJ_PRIV or USER_PRIV on
OBJECT_TYPE	VARCHAR2(23)		Type of the object that OBJ_PRIV has accessed or USER if USER_PRIV was used
COLUMN_NAME	VARCHAR2(128)		Name of the column that OBJ_PRIV has access on
OPTION$	NUMBER		Indicates whether the privilege is granted with the GRANT option or the ADMIN option: • 0 - Indicates that the privilege is granted without the GRANT option or ADMIN option • 1 - Indicates that the privilege is granted with the GRANT option or ADMIN option
PATH	GRANT_PATH		Privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_USED_PRIVS"
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.89 DBA_UNUSED_SCHEMA_PRIVS

DBA_UNUSED_SCHEMA_PRIVS lists the schema privileges (without privilege grant paths) that are not used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
USERNAME	VARCHAR2(128)		Name of the user whose privileges are reported
ROLENAME	VARCHAR2(128)		Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)
SCH_PRIV	VARCHAR2(40)		Unused schema privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted
ADMIN_OPTION	NUMBER		Indicates whether the privilege was granted with the ADMIN option: • 0 - Indicates that the privilege was granted without the ADMIN option • 1 - Indicates that the privilege was granted with the ADMIN option
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "DBA_UNUSED_SCHEMA_PRIVS_PATH" for privilege grant path information for unused schema privileges
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.90 DBA_UNUSED_SCHEMA_PRIVS_PATH

DBA_UNUSED_SCHEMA_PRIVS_PATH lists the schema privileges that are not used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
USERNAME	VARCHAR2(128)		Name of the user whose privileges are reported
ROLENAME	VARCHAR2(128)		Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)

Column	Datatype	NULL	Description
SCH_PRIV	VARCHAR2(40)		Unused schema privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted
ADMIN_OPTION	NUMBER		Indicates whether the privilege is granted with the ADMIN option: • 0 - Indicates that the privilege is granted without the ADMIN option • 1 - Indicates that the privilege is granted with the ADMIN option
PATH	GRANT_PATH		Schema privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

Note:

This view is available starting with Oracle Database 23ai.

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.91 DBA_UNUSED_SYSPRIVS

DBA_UNUSED_SYSPRIVS lists the system privileges (without privilege grant paths) that are not used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
USERNAME	VARCHAR2(128)		Name of the user whose privileges are reported
ROLENAME	VARCHAR2(128)		Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)
SYS_PRIV	VARCHAR2(40)		Unused system privilege

Column	Datatype	NULL	Description
ADMIN_OPTION	NUMBER		Indicates whether the privilege is granted with the ADMIN option: • 0 - Indicates that the privilege is granted without the ADMIN option • 1 - Indicates that the privilege is granted with the ADMIN option
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_UNUSED_SYSPRIVS_PATH" for privilege grant path information for unused system privileges
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.92 DBA_UNUSED_SYSPRIVS_PATH

DBA_UNUSED_SYSPRIVS_PATH lists the system privileges that are not used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
USERNAME	VARCHAR2(128)		Name of the user whose privileges are reported
ROLENAME	VARCHAR2(128)		Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)
SYS_PRIV	VARCHAR2(40)		Unused system privilege
ADMIN_OPTION	NUMBER		Indicates whether the privilege is granted with the ADMIN option: • 0 - Indicates that the privilege is granted without the ADMIN option • 1 - Indicates that the privilege is granted with the ADMIN option
PATH	GRANT_PATH		System privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_USED_SYSPRIVS_PATH"
- "DBA_UNUSED_SYSPRIVS"
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure

7.93 DBA_UNUSED_USERPRIVS

`DBA_UNUSED_USERPRIVS` lists the user privileges (without privilege grant paths) that are not used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

Column	Datatype	NULL	Description
`CAPTURE`	`VARCHAR2(128)`	`NOT NULL`	Name of a privilege analysis policy
`USERNAME`	`VARCHAR2(128)`		Name of the user whose privileges are reported
`ROLENAME`	`VARCHAR2(128)`		Name of the role whose unused privileges are reported (for `ROLE` type privilege analysis or `ROLE AND CONTEXT` privilege analysis)
`USER_PRIV`	`VARCHAR2(25)`		Unused user privilege
`ONUSER`	`VARCHAR2(128)`		The user whose user privileges the grantee can exercise
`GRANT_OPTION`	`NUMBER`		Indicates whether the privilege is granted with the `GRANT` option: • `0` - Indicates that the privilege is granted without the `GRANT` option • `1` - Indicates that the privilege is granted with the `GRANT` option
`RUN_NAME`	`VARCHAR2(128)`		The name of the run during which the privilege was reported

See Also:

- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure

7.94 DBA_UNUSED_USERPRIVS_PATH

DBA_UNUSED_USERPRIVS_PATH lists the user privileges that are not used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
USERNAME	VARCHAR2(128)		Name of the user whose privileges are reported
ROLENAME	VARCHAR2(128)		Name of the role whose unused privileges are reported (for ROLE type privilege analysis or ROLE AND CONTEXT privilege analysis)
USER_PRIV	VARCHAR2(25)		Unused user privilege
ONUSER	VARCHAR2(128)		The user whose user privileges the grantee can exercise
GRANT_OPTION	NUMBER		Indicates whether the privilege is granted with the GRANT option: • 0 - Indicates that the privilege is granted without the GRANT option • 1 - Indicates that the privilege is granted with the GRANT option
PATH	GRANT_PATH		User privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.95 DBA_UPDATABLE_COLUMNS

DBA_UPDATABLE_COLUMNS describes all columns in a join view that can be updated by the database administrator, subject to appropriate privileges. Its columns are the same as those in ALL_UPDATABLE_COLUMNS.

See Also:

- "ALL_UPDATABLE_COLUMNS"
- *Oracle Database Concepts* for information on updatable join views

7.96 DBA_USED_OBJPRIVS

DBA_USED_OBJPRIVS lists the object privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of the privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported
USED_ROLE	VARCHAR2(128)		Used role
OBJ_PRIV	VARCHAR2(40)		Used object privilege
OBJECT_OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Name of the object that OBJ_PRIV was used to access
OBJECT_TYPE	VARCHAR2(23)		Type of the object that OBJ_PRIV was used to access
COLUMN_NAME	VARCHAR2(128)		Name of the column that OBJ_PRIV was used to access
GRANT_OPTION	NUMBER		Indicates whether the GRANT option was used: • 0 - Indicates that the GRANT option was not used • 1 - Indicates that the GRANT option was used
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_USED_OBJPRIVS_PATH" for privilege grant path information for used object privileges
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.97 DBA_USED_OBJPRIVS_PATH

DBA_USED_OBJPRIVS_PATH lists the object privileges that are used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of the privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported
USED_ROLE	VARCHAR2(128)		Used role
OBJ_PRIV	VARCHAR2(40)		Used object privilege
OBJECT_OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Name of the object that OBJ_PRIV is used to access
OBJECT_TYPE	VARCHAR2(23)		Type of the object that OBJ_PRIV is used to access
COLUMN_NAME	VARCHAR2(128)		Name of the column that OBJ_PRIV is used to access
GRANT_OPTION	NUMBER		Indicates whether the GRANT option was used: • 0 - Indicates that the GRANT option was not used • 1 - Indicates that the GRANT option was used
PATH	GRANT_PATH		Object privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_UNUSED_OBJPRIVS_PATH"
- "DBA_USED_OBJPRIVS"
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.98 DBA_USED_PRIVS

DBA_USED_PRIVS lists the privileges that are used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was reported

Column	Datatype	NULL	Description
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported
USED_ROLE	VARCHAR2(128)		Used role
SYS_PRIV	VARCHAR2(40)		Used system privilege
SCH_PRIV	VARCHAR2(40)		Used schema privilege
OBJ_PRIV	VARCHAR2(40)		Used object privilege
USER_PRIV	VARCHAR2(25)		Used user privilege
OBJECT_OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Name of the object or user that OBJ_PRIV or USER_PRIV is used to access
OBJECT_TYPE	VARCHAR2(23)		Type of the object or user that OBJ_PRIV or USER_PRIV is used to access
COLUMN_NAME	VARCHAR2(128)		Name of the column that OBJ_PRIV is used to access
OPTION$	NUMBER		Indicates whether the GRANT option or the ADMIN option was used: • 0 - Indicates that the GRANT option or ADMIN option was not used • 1 - Indicates that the GRANT option or ADMIN option was used
PATH	GRANT_PATH		Used privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_UNUSED_PRIVS"
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.99 DBA_USED_PUBPRIVS

DBA_USED_PUBPRIVS lists the privileges that are used from the PUBLIC role for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy

Column	Datatype	NULL	Description
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user who used the privilege from the PUBLIC role
SYS_PRIV	VARCHAR2(40)		Used system privilege
SCH_PRIV	VARCHAR2(40)		Used schema privilege
OBJ_PRIV	VARCHAR2(40)		Used object privilege
OBJECT_OWNER	VARCHAR2(128)		Object owner
OBJECT_NAME	VARCHAR2(128)		Name of the object that OBJ_PRIV is used to access
OBJECT_TYPE	VARCHAR2(23)		Type of the object that OBJ_PRIV is used to access
OPTION$	NUMBER		Indicates whether the GRANT option or the ADMIN option was used: • 0 - Indicates that the GRANT option or ADMIN option was not used • 1 - Indicates that the GRANT option or ADMIN option was used
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.100 DBA_USED_SCHEMA_PRIVS

DBA_USED_SCHEMA_PRIVS lists the schema privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was used
OS_USER	VARCHAR2(128)		Operating system login username

Column	Datatype	NULL	Description
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported
USED_ROLE	VARCHAR2(128)		Used role
SCH_PRIV	VARCHAR2(40)		Used schema privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted
ADMIN_OPTION	NUMBER		Indicates whether the ADMIN option was used: • 0 - Indicates that the ADMIN option was not used • 1 - Indicates that the ADMIN option was used
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "DBA_USED_SCHEMA_PRIVS_PATH" for privilege grant path information for used schema privileges
- *Oracle Database Security Guide* for more information about privilege analysis

7.101 DBA_USED_SCHEMA_PRIVS_PATH

DBA_USED_SCHEMA_PRIVS_PATH lists the schema privileges that are used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported

Column	Datatype	NULL	Description
USED_ROLE	VARCHAR2(128)		Used role
SCH_PRIV	VARCHAR2(40)		Used schema privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted
ADMIN_OPTION	NUMBER		Indicates whether the ADMIN option was used: • 0 - Indicates that the ADMIN option was not used • 1 - Indicates that the ADMIN option was used
PATH	GRANT_PATH		Schema privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

Note:

This view is available starting with Oracle Database 23ai.

7.102 DBA_USED_SYSPRIVS

DBA_USED_SYSPRIVS lists the system privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was used
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported
USED_ROLE	VARCHAR2(128)		Used role

Column	Datatype	NULL	Description
SYS_PRIV	VARCHAR2(40)		Used system privilege
ADMIN_OPTION	NUMBER		Indicates whether the ADMIN option was used: • 0 - Indicates that the ADMIN option was not used • 1 - Indicates that the ADMIN option was used
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_USED_SYSPRIVS_PATH" for privilege grant path information for used system privileges
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.103 DBA_USED_SYSPRIVS_PATH

DBA_USED_SYSPRIVS_PATH lists the system privileges that are used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported
USED_ROLE	VARCHAR2(128)		Used role
SYS_PRIV	VARCHAR2(40)		Used system privilege
ADMIN_OPTION	NUMBER		Indicates whether the ADMIN option was used: • 0 - Indicates that the ADMIN option was not used • 1 - Indicates that the ADMIN option was used
PATH	GRANT_PATH		System privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- "DBA_UNUSED_SYSPRIVS_PATH"
- "DBA_USED_SYSPRIVS"
- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure

7.104 DBA_USED_USERPRIVS

`DBA_USED_USERPRIVS` lists the user privileges (without privilege grant paths) that are used for the privilege analysis policies reported by the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure.

This view provides access to analyzed privilege records in `SYS` tables.

You must have the `CAPTURE_ADMIN` role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported
USED_ROLE	VARCHAR2(128)		Used role
USER_PRIV	VARCHAR2(25)		Used user privilege
ONUSER	VARCHAR2(128)		The user whose user privileges the grantee can exercise
GRANT_OPTION	NUMBER		Indicates whether the privilege is granted with the `GRANT` option: • `0` - Indicates that the privilege is granted without the `GRANT` option • `1` - Indicates that the privilege is granted with the `GRANT` option
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT` procedure

7.105 DBA_USED_USERPRIVS_PATH

DBA_USED_USERPRIVS_PATH lists the user privileges that are used for the privilege analysis policies reported by the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure.

This view provides access to analyzed privilege records in SYS tables.

You must have the CAPTURE_ADMIN role to access this view.

Column	Datatype	NULL	Description
CAPTURE	VARCHAR2(128)	NOT NULL	Name of a privilege analysis policy
SEQUENCE	NUMBER	NOT NULL	The sequence number of the privilege analysis run during which the privilege was reported
OS_USER	VARCHAR2(128)		Operating system login username
USERHOST	VARCHAR2(128)		Client host machine name
MODULE	VARCHAR2(64)		Module name
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user whose privilege was reported
USED_ROLE	VARCHAR2(128)		Used role
USER_PRIV	VARCHAR2(25)		Used user privilege
ONUSER	VARCHAR2(128)		The user whose user privileges the grantee can exercise
GRANT_OPTION	NUMBER		Indicates whether the privilege is granted with the GRANT option: • 0 - Indicates that the privilege is granted without the GRANT option • 1 - Indicates that the privilege is granted with the GRANT option
PATH	GRANT_PATH		User privilege grant paths
RUN_NAME	VARCHAR2(128)		The name of the run during which the privilege was reported

See Also:

- *Oracle Database Security Guide* for more information about privilege analysis
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT procedure

7.106 DBA_USERS

DBA_USERS describes all users of the database.

Related View

USER_USERS describes the current user. This view does not display the PASSWORD, PROFILE, PASSWORD_VERSIONS, EDITIONS_ENABLED, AUTHENTICATION_TYPE, and LAST_LOGIN columns.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user
USER_ID	NUMBER	NOT NULL	ID number of the user
PASSWORD	VARCHAR2(4000)		This column is deprecated in favor of the AUTHENTICATION_TYPE column

Column	Datatype	NULL	Description
ACCOUNT_STATUS	VARCHAR2(32)	NOT NULL	Account status: • OPEN The account is open. • EXPIRED The password for the account is expired, either because the PASSWORD_LIFE_TIME limit was reached or because the password was expired by the ALTER USER ... PASSWORD EXPIRE command. The user can log in with the expired password, then change the password. • EXPIRED(GRACE) The password for the account is expired because the PASSWORD_LIFE_TIME limit was reached, but the password change grace period (PASSWORD_GRACE_TIME) has not yet elapsed. The user can log in with the expired password, but will receive an ORA-28002 warning as a reminder that the password must soon be changed. If the PASSWORD_GRACE_TIME elapses, the user can log in with the expired password, then change the password. • LOCKED The account is locked, either by the ALTER USER ... ACCOUNT LOCK command, or because the number of consecutive failed login attempts exceeded the FAILED_LOGIN_ATTEMPTS limit and the value of PASSWORD_LOCK_TIME is UNLIMITED. The account can be unlocked by the ALTER USER ... ACCOUNT UNLOCK command. • LOCKED(TIMED) The account is locked because the number of consecutive failed login attempts exceeded the FAILED_LOGIN_ATTEMPTS limit and the PASSWORD_LOCK_TIME has not yet elapsed. The account can be unlocked either by the ALTER USER ... ACCOUNT UNLOCK command or by waiting until the PASSWORD_LOCK_TIME has elapsed. • EXPIRED & LOCKED The password for the account is expired, as described for the EXPIRED account status, and the account is locked as described for the LOCKED account status. The account can first be unlocked as described for the LOCKED account status, then the password can be changed as described for the EXPIRED account status. • EXPIRED(GRACE) & LOCKED The password for the account is expired, as described for the EXPIRED(GRACE) account status, and the account is locked as described for the LOCKED account status. The account can first be unlocked as described for the LOCKED account status, then the password can be changed as described for the EXPIRED(GRACE) account status. • EXPIRED & LOCKED(TIMED) The password for the account is expired, as described for the EXPIRED account status, and the

Column	Datatype	NULL	Description
			account is locked as described for the `LOCKED(TIMED)` account status. The account can first be unlocked as described for the `LOCKED(TIMED)` account status, then the password can be changed as described for the `EXPIRED` account status. • `EXPIRED(GRACE) & LOCKED(TIMED)` The password for the account is expired, as described for the `EXPIRED(GRACE)` account status, and the account is locked as described for the `LOCKED(TIMED)` account status. The account can first be unlocked as described for the `LOCKED(TIMED)` account status, then the password can be changed as described for the `EXPIRED(GRACE)` account status. • `OPEN & IN ROLLOVER` The account is in the password rollover period. The user can log in with either the earlier password or the new password. However, at the time the user logs in, the server recalculates whether the account is still in its password rollover period. If the password rollover period has elapsed, then the login will succeed only if the new password was specified, and the account status will change to `OPEN`. • `EXPIRED & IN ROLLOVER` The account is in the password rollover period and the password is expired as described for the `EXPIRED` account status. The user can log in with either the earlier password or the new password. However, at the time the user logs in, the server recalculates whether the account is still in its password rollover period. If the password rollover period has elapsed, then the login will succeed only if the new password was specified, and the account status will change to `EXPIRED`. After logging in, the user will be prompted to change the password. • `LOCKED & IN ROLLOVER` The account is in the password rollover period and is also locked as described for the `LOCKED` account status. The account can be unlocked as described for the `LOCKED` account status, after which the user can log in as described for the `OPEN & IN ROLLOVER` account status. • `EXPIRED & LOCKED & IN ROLLOVER` The account is in the password rollover period, its password is expired as described for the `EXPIRED` account status, and the account is locked as described for the `LOCKED` account status. The account can be unlocked as described for the `LOCKED` account status, after which the user can log in as described for the `EXPIRED & IN ROLLOVER` account status. • `LOCKED(TIMED) & IN ROLLOVER` The account is in the password rollover period and is also locked as described for the

Column	Datatype	NULL	Description
			`LOCKED(TIMED)` account status. The account can be unlocked as described for the `LOCKED(TIMED)` account status, after which the user can log in with either the earlier password or the new password. However, at the time the user logs in, the server recalculates whether the account is still in its password rollover period. If the password rollover period has elapsed, then the login will succeed only if the new password was specified. • `EXPIRED & LOCKED(TIMED) & IN ROL` The account is in the password rollover period, its password is expired as described for the `EXPIRED` account status, and the account is locked as described for the `LOCKED(TIMED)` account status. The account can be unlocked as described for the `LOCKED(TIMED)` account status, after which the user can log in as described for the `EXPIRED & IN ROLLOVER` account status.
`LOCK_DATE`	`DATE`		Date the account was locked if account status was `LOCKED`
`EXPIRY_DATE`	`DATE`		Date of expiration of the account
`DEFAULT_TABLESPACE`	`VARCHAR2(30)`	`NOT NULL`	Default tablespace for data
`TEMPORARY_TABLESPACE`	`VARCHAR2(30)`	`NOT NULL`	Name of the default tablespace for temporary tables or the name of a tablespace group
`LOCAL_TEMP_TABLESPACE`	`VARCHAR2(30)`		Default local temporary tablespace for the user
`CREATED`	`DATE`	`NOT NULL`	User creation date
`PROFILE`	`VARCHAR2(128)`	`NOT NULL`	User resource profile name
`INITIAL_RSRC_CONSUMER_GROUP`	`VARCHAR2(128)`		Initial resource consumer group for the user
`EXTERNAL_NAME`	`VARCHAR2(4000)`		User external name. For centrally managed users, if the database user mapping is an exclusive mapping, then this will be the directory service DN for the user. If this database user is a shared schema, it will be the DN of a group.
`PASSWORD_VERSIONS`	`VARCHAR2(12)`		Shows the list of versions of the password hashes (also known as "verifiers") existing for the account. The values for this column can include: • `11G`: If a SHA-1 hash exists • `12C`: If a de-optimized PBKDF2-based hash exists • `HTTP`: If an MD5 hash (for HTTP Digest authentication) exists For more information about the 12C verifier, see *Oracle Database Concepts*. Note that any combination of these verifiers can exist for any given account.
`EDITIONS_ENABLED`	`VARCHAR2(1)`		Indicates whether editions have been enabled for the corresponding user (`Y`) or not (`N`)

Column	Datatype	NULL	Description
AUTHENTICATION_TYPE	VARCHAR2(8)		Indicates the authentication mechanism for the user: • NONE - The user has not been configured for an authentication method • EXTERNAL - CREATE USER *user1* IDENTIFIED EXTERNALLY; • GLOBAL - CREATE USER *user2* IDENTIFIED GLOBALLY; • PASSWORD - CREATE USER *user3* IDENTIFIED BY *password*;
PROXY_ONLY_CONNECT	VARCHAR2(1)		Indicates whether a user can connect directly (N) or whether the account can only be proxied (Y) by users who have proxy privileges for this account (that is, by users who have been granted the "connect through" privilege for this account). **Note:** Setting PROXY_ONLY_CONNECT for users is deprecated in this release, and may be desupported in a future release. Oracle recommends that you instead use schema-only accounts. For more information about schema-only accounts, see *Oracle Database Security Guide*.
COMMON	VARCHAR2(3)		Indicates whether a given user is common. Possible values • YES if a user is common • NO if a user is local (not common)
LAST_LOGIN	TIMESTAMP(9) WITH TIME ZONE		The time of the last user login This column is not populated when a user connects to the database with administrative privileges, that is, AS { SYSASM | SYSBACKUP | SYSDBA | SYSDG | SYSOPER | SYSRAC | SYSKM }.
ORACLE_MAINTAINED	VARCHAR2(1)		Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
INHERITED	VARCHAR2(3)		Indicates whether the user definition was inherited from another container (YES) or not (NO)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the user's schema
IMPLICIT	VARCHAR2(3)		Indicates whether this user is a common user created by an implicit application (YES) or not (NO)
ALL_SHARD	VARCHAR2(3)		In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are: • YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog. • NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created. In a non-sharded database, the value in this column is always NO.

Column	Datatype	NULL	Description
EXTERNAL_SHARD	VARCHAR2(3)		In a federated sharded database, the value in this column indicates whether the user is an external shard user (YES) or not (NO). In other types of databases, the value in this column is always NO.
PASSWORD_CHANGE_DATE	DATE		Date on which the user's password was last set This column is populated only when the value of the AUTHENTICATION_TYPE column is PASSWORD. Otherwise, this column is null.
MANDATORY_PROFILE_VIOLATION	VARCHAR2(3)		If the value in this column is YES, then the user account password violates the mandatory profile password complexity requirements and must be changed before the grace period expires. Otherwise, the value in this column is NO.
PROTECTED	VARCHAR2(3)		Indicates whether the user is a protected user (YES) or not (NO) A protected user can be managed only by another protected user or a common user.
READ_ONLY	VARCHAR2(3)		Indicates whether write privileges for the user are disabled (YES) or enabled (NO)
DICTIONARY_PROTECTED	VARCHAR2(3)		Indicates whether the user's schema is dictionary protected (YES) or not (NO) **See Also:** *Oracle Database Security Guide* for more information about dictionary-protected schemas

See Also:

- "USER_USERS"
- *Oracle Globally Distributed Database Guide* for more information about sharded database management

7.107 DBA_USERS_WITH_DEFPWD

DBA_USERS_WITH_DEFPWD displays all users in the database that are still using their default passwords.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user
PRODUCT	VARCHAR2(4000)		Name of the product the user belongs to

> **Note:**
>
> In a CDB, when DBA_USERS_WITH_DEFPWD is queried from a PDB, information about local users who are using their default passwords is displayed. To display information about common users, query DBA_USERS_WITH_DEFPWD from the root.

> **See Also:**
>
> *Oracle Multitenant Administrator's Guide* for an introduction to local and common users in a CDB

7.108 DBA_USTATS

DBA_USTATS describes the user-defined statistics collected on all tables and indexes in the database. Its columns are the same as those in ALL_USTATS.

> **See Also:**
>
> "ALL_USTATS"

7.109 DBA_VARRAYS

DBA_VARRAYS describes all varrays in the database. Its columns are the same as those in ALL_VARRAYS.

> **See Also:**
>
> "ALL_VARRAYS"

7.110 DBA_VIEWS

DBA_VIEWS describes all views in the database. Its columns are the same as those in ALL_VIEWS.

> **See Also:**
>
> "ALL_VIEWS"

7.111 DBA_VIEWS_AE

DBA_VIEWS_AE describes all views (across all editions) in the database. Its columns are the same as those in ALL_VIEWS_AE.

> **See Also:**
>
> "ALL_VIEWS_AE"

7.112 DBA_WAITERS

DBA_WAITERS shows all the sessions that are waiting for a lock. In an Oracle RAC environment, this only applies if the waiter is on the same instance.

Column	Datatype	NULL	Description
WAITING_SESSION	NUMBER		The waiting session
WAITING_CON_ID	NUMBER		The container ID (CON_ID) of the waiting session
HOLDING_SESSION	NUMBER		The holding session
HOLDING_CON_ID	NUMBER		The container ID (CON_ID) of the holding session.
LOCK_TYPE	VARCHAR2(26)		The lock type
MODE_HELD	VARCHAR2(40)		The mode held
MODE_REQUESTED	VARCHAR2(40)		The mode requested
LOCK_ID1	NUMBER		Lock ID 1
LOCK_ID2	NUMBER		Lock ID 2

7.113 DBA_WALLET_ACES

DBA_WALLET_ACES describes access control entries defined in wallet access control lists.

Related View

USER_WALLET_ACES describes the status of access control entries for the current user to access wallets through PL/SQL network utility packages. This view does not display the ACE_ORDER, START_DATE, END_DATE, GRANT_TYPE, INVERTED_PRINCIPAL, PRINCIPAL, or PRINCIPAL_TYPE columns.

Column	Datatype	NULL	Description
WALLET_PATH	VARCHAR2(1000)	NOT NULL	Wallet path
ACE_ORDER	NUMBER	NOT NULL	Order number of the access control entry
START_DATE	TIMESTAMP(6)		Start date of the access control entry
END_DATE	TIMESTAMP(6)		End date of the access control entry
GRANT_TYPE	VARCHAR2(5)		Indicates whether the access control entry grants or denies the privilege
INVERTED_PRINCIPAL	VARCHAR2(3)		Indicates whether the principal is inverted or not

Column	Datatype	NULL	Description
PRINCIPAL	VARCHAR2(128)		Principal the privilege is applied to
PRINCIPAL_TYPE	VARCHAR2(16)		Type of the principal
PRIVILEGE	VARCHAR2(128)		Privilege

> **See Also:**
>
> "USER_WALLET_ACES"

7.114 DBA_WALLET_ACLS

DBA_WALLET_ACLS displays the access control lists assigned to restrict access to wallets through PL/SQL network utility packages.

Column	Datatype	NULL	Description
WALLET_PATH	VARCHAR2(1000)	NOT NULL	Wallet path
ACL	VARCHAR2(4000)		Path of the access control list
ACLID	RAW(8)		Object ID of the access control list
ACL_OWNER	VARCHAR2(128)		Owner of the access control list

7.115 DBA_WARNING_SETTINGS

DBA_WARNING_SETTINGS displays information about the warning parameter settings for all objects in the database. Its columns are the same as those in ALL_WARNING_SETTINGS.

> **See Also:**
>
> "ALL_WARNING_SETTINGS"

7.116 DBA_WI_CAPTURE_FILES

Each row in DBA_WI_CAPTURE_FILES represents a capture file that belongs to the workload analyzed in the current Workload Intelligence job.

Column	Datatype	NULL	Description
JOB_ID	NUMBER	NOT NULL	The identifier of the job in the workload to which the given capture file belongs
FILE_ID	NUMBER	NOT NULL	The identifier of the current capture file
FILE_PATH	VARCHAR2(4000)	NOT NULL	The path of the current capture file

7.117 DBA_WI_JOBS

Each row in DBA_WI_JOBS describes a Workload Intelligence job, that is, a task that applies the algorithms of Workload Intelligence on a given capture directory.

Column	Datatype	NULL	Description
JOB_ID	NUMBER	NOT NULL	The job identifier
JOB_NAME	VARCHAR2(128)	NOT NULL	A name that uniquely identifies the given job
CAPTURE_DIRECTORY	VARCHAR2(4000)	NOT NULL	Path to the capture directory on which the given job has been applied
MODEL_ORDER	NUMBER		The order of the markov model that describes the workload associated with the current job. If NULL, the corresponding order has not been calculated yet.
THRESHOLD	NUMBER		A number in the range [0, 1] that represents the threshold that the user has given as an input parameter to the current job of Workload Intelligence for the identification of significant patterns. If NULL, the process of pattern identification has not been initiated yet.

7.118 DBA_WI_OBJECTS

Each row in DBA_WI_OBJECTS represents a database object (table) that is accessed by the given template in the given Workload Intelligence job.

Column	Datatype	NULL	Description
JOB_ID	NUMBER	NOT NULL	The identifier of the job in the workload of which the given object has been accessed
TEMPLATE_ID	NUMBER	NOT NULL	The identifier of the template in the given job by which the current object has been accessed
OBJECT_ID	NUMBER	NOT NULL	The identifier of the current object
ACCESS_TYPE	VARCHAR2(2)	NOT NULL	Possible values: • R - Indicates that the current object has been accessed for reading by the given template • W - Indicates that the current object has been accessed for writing by the given template • RW - Indicates that the current object has been accessed for both reading and writing by the given template

7.119 DBA_WI_PATTERN_ITEMS

Each row in DBA_WI_PATTERN_ITEMS represents a template that participates in a significant pattern that has been found by the given Workload Intelligence job.

Column	Datatype	NULL	Description
JOB_ID	NUMBER	NOT NULL	The identifier of the job in the workload of which the current pattern has been found

Column	Datatype	NULL	Description
PATTERN_ID	NUMBER	NOT NULL	The identifier of the pattern to which the current item (template) belongs
SEQUENCE_NUMBER	NUMBER	NOT NULL	Number that indicates the position of the current item in the given pattern
TEMPLATE_ID	NUMBER	NOT NULL	The identifier of the template that participates in the given position of the current pattern
IS_FIRST_IN_LOOP	CHAR(1)	NOT NULL	A flag that indicates whether or not the current item marks the beginning of a loop in the given pattern. The possible values are Y and N.
IS_LAST_IN_LOOP	CHAR(1)	NOT NULL	A flag that indicates whether or not the current item marks the end of a loop in the given pattern. The possible values are Y and N.

7.120 DBA_WI_PATTERNS

Each row in DBA_WI_PATTERNS represents a pattern that has been identified by Workload Intelligence as significant in the workload associated with the given job. Such a pattern consists of one or more templates.

These templates that comprise the given pattern are described in the related view DBA_WI_PATTERN_ITEMS.

Column	Datatype	NULL	Description
JOB_ID	NUMBER	NOT NULL	The identifier of the job in the workload of which the current pattern has been found
PATTERN_ID	NUMBER	NOT NULL	The identifier of the current pattern
LENGTH	NUMBER	NOT NULL	The length of the pattern, that is, the number of items (templates) it consists of
NUMBER_OF_EXECUTIONS	NUMBER	NOT NULL	The number of times the current pattern has been executed in the given workload
DB_TIME	NUMBER	NOT NULL	The total time consumed in the database server by all the executions of the current pattern in the given workload

See Also:

"DBA_WI_PATTERN_ITEMS"

7.121 DBA_WI_STATEMENTS

Each row in DBA_WI_STATEMENTS describes a statement (SQL or PL/SQL) that is part of the template with identifier TEMPLATE_ID, which has been found in the workload that is related to the Workload Intelligence job whose identifier is equal to JOB_ID.

A template may consist of multiple statements, for example, if it represents a transaction. In this case, there is one row in this view for every one of these statements. These statements

are ordered, based on the order defined by the corresponding transaction. Column SEQUENCE_NUMBER is used to describe this order.

Column	Datatype	NULL	Description
JOB_ID	NUMBER	NOT NULL	The identifier of the job in the workload of which the given statement has been found
TEMPLATE_ID	NUMBER	NOT NULL	The identifier of the template in the given job to which the current statement belongs
SEQUENCE_NUMBER	NUMBER	NOT NULL	A number that indicates the order of the current statement in the given template
SQL_TEXT	CLOB	NOT NULL	The SQL text associated with the current statement. Note that although multiple SQL statements can be classified to the same template, only one row is stored that represents them all. This row corresponds to the first instance of the given template that is found during parsing of the workload.

7.122 DBA_WI_TEMPLATE_EXECUTIONS

Each row in DBA_WI_TEMPLATE_EXECUTIONS represents an execution of a template in a capture that belongs to the workload that is associated with the current Workload Intelligence job.

Column	Datatype	NULL	Description
JOB_ID	NUMBER	NOT NULL	The identifier of the job in the workload of which the current execution of the given template belongs
CAPTURE_FILE_ID	NUMBER	NOT NULL	The identifier of the capture file in which the current execution of the given template was found
SEQUENCE_NUMBER	NUMBER	NOT NULL	A number that indicates the order of the current execution in the given capture file
TEMPLATE_ID	NUMBER	NOT NULL	The identifier of the template that was executed in the execution represented by the current row
DB_TIME	NUMBER	NOT NULL	The time that the current execution consumed on the database server

7.123 DBA_WI_TEMPLATES

Each row in DBA_WI_TEMPLATES describes a template that has been found in the workload that is related to the Workload Intelligence job whose identifier is equal to JOB_ID.

A template can represent either a simple query, or an entire transaction. Two queries in the given workload belong to the same template, if they exhibit trivial differences, for example, if they contain different literal values, different bind variable names, different comments, or different white spaces.

Column	Datatype	NULL	Description
JOB_ID	NUMBER	NOT NULL	The identifier of the job in the workload of which the given template has been found
TEMPLATE_ID	NUMBER	NOT NULL	The identifier of a template in a given job

Column	Datatype	NULL	Description
IS_TRANSACTION	CHAR(1)	NOT NULL	Flag that indicates whether the given template represents a transaction: • Y - indicates that the given template represents a transaction • N - indicates that the given template does not represent a transaction

7.124 DBA_WORKLOAD_ACTIVE_USER_MAP

DBA_WORKLOAD_ACTIVE_USER_MAP contains the mappings that are going to be valid for the next replay or are valid for the current replay.

Column	Datatype	NULL	Description
SCHEDULE_CAP_ID	NUMBER		The ID of a capture in the schedule
CAPTURE_USER	VARCHAR2(4000)	NOT NULL	The user name during the time of the workload capture
REPLAY_USER	VARCHAR2(4000)		The user name to which captured user should be remapped during replay

7.125 DBA_WORKLOAD_CAPTURE_SQLTEXT

DBA_WORKLOAD_CAPTURE_SQLTEXT displays all the SQL statements that have been recorded in a workload capture. For those SQL statements whose length exceeds 1000 characters, the full statements can be loaded to the DBA_WORKLOAD_LONG_SQLTEXT view using the DBMS_WORKLOAD_REPLAY.LOAD_LONG_SQLTEXT procedure.

Column	Datatype	NULL	Description
CAPTURE_ID	NUMBER(38)	NOT NULL	Internal key for the workload capture
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
SQL_TYPE	VARCHAR2(64)		Type of the SQL statement, which can include values such as INSERT, SELECT, and CREATE INDEX
SQL_TEXT	VARCHAR2(1000)		First thousand characters of the SQL text for the current cursor
SQL_LENGTH	NUMBER(38)		The length of the SQL statement
SQL_TEXT_COMPLETE	CHAR(1)		Indicates whether the SQL_TEXT column includes the full text of the SQL statement. Possible values: • Y: The column SQL_TEXT includes the full text of the SQL statement • N: The column SQL_TEXT contains only the first thousand characters of the SQL text

See Also:

- "DBA_WORKLOAD_LONG_SQLTEXT"
- "DBA_RAT_CAPTURE_SCHEMA_INFO"
- *Oracle Database PL/SQL Packages and Types Reference* for information about the `DBMS_WORKLOAD_REPLAY` package

7.126 DBA_WORKLOAD_CAPTURES

`DBA_WORKLOAD_CAPTURES` displays all the workload captures that have been performed in the current database.

It also lists captures on which `DBMS_WORKLOAD_CAPTURE.GET_CAPTURE_INFO()` or `DBMS_WORKLOAD_REPLAY.GET_REPLAY_INFO()` have been called. Each row contains information about one workload capture.

Column	Datatype	NULL	Description
ID	NUMBER	NOT NULL	Internal key for the workload capture
NAME	VARCHAR2(128)	NOT NULL	Name for the workload capture
DBID	NUMBER	NOT NULL	ID of the database in which the workload was captured
DBNAME	VARCHAR2(128)	NOT NULL	Name of the database in which the workload was captured
DBVERSION	VARCHAR2(17)	NOT NULL	Version of the database in which the workload was captured
PARALLEL	VARCHAR2(3)		Indicates whether the database in which the workload was captured is an Oracle RAC database (`YES`) or a single instance database (`NO`)
DIRECTORY	VARCHAR2(128)	NOT NULL	Name of the directory object for workload capture
STATUS	VARCHAR2(40)	NOT NULL	Current status of the workload capture: • `IN PROGRESS` - Workload capture is in progress • `COMPLETED` - Workload capture has completed successfully • `FAILED` - Workload capture was terminated due to errors encountered
START_TIME	DATE	NOT NULL	Datetime when the capture began
END_TIME	DATE		Datetime when the capture completed or failed; NULL if the capture is still in progress
DURATION_SECS	NUMBER		Duration of the workload capture (in seconds)
START_SCN	NUMBER	NOT NULL	Start SCN value for this capture
END_SCN	NUMBER		End SCN value for this capture; NULL if the capture is still in progress

Column	Datatype	NULL	Description
DEFAULT_ACTION	VARCHAR2(30)	NOT NULL	Mode in which to apply workload capture filters: • INCLUDE - All the capture filters are treated as EXCLUSION filters, determining the workload that will not be captured. • EXCLUDE - All the capture filters are treated as INCLUSION FILTERS, determining the workload that will be captured.
FILTERS_USED	NUMBER		Number of filters that were used for this capture
CAPTURE_SIZE	NUMBER		Total size of workload capture
DBTIME	NUMBER		Total amount of database time (in microseconds) that has been recorded in this workload capture
DBTIME_TOTAL	NUMBER		Total amount of database time (in microseconds) across the entire database during the workload capture, including the part of the workload that was not captured.
USER_CALLS	NUMBER		Total number of user calls that have been recorded in this workload capture
USER_CALLS_TOTAL	NUMBER		Total number of user calls across the entire database during the workload capture, including the part of the workload that was not captured.
USER_CALLS_UNREPLAYABLE	NUMBER		Total number of user calls that will not be replayed in a subsequent replay of this workload capture
PLSQL_SUBCALL_SIZE	NUMBER		Total size of workload capture for SQL executed from PL/SQL
PLSQL_CALLS	NUMBER		Total number of PL/SQL calls recorded in the workload capture
PLSQL_SUBCALLS	NUMBER		Total number of calls recorded in the workload capture for SQL executed from PL/SQL
PLSQL_DBTIME	NUMBER		Total amount of database time (in microseconds) from PL/SQL calls that have been recorded in the workload capture
TRANSACTIONS	NUMBER		Total number of transactions that have been recorded in this workload capture
TRANSACTIONS_TOTAL	NUMBER		Total number of transactions across the entire database during the workload capture, including the part of the workload that was not captured.
CONNECTS	NUMBER		Total number of session connects that have been recorded in this workload capture
CONNECTS_TOTAL	NUMBER		Total number of session connects across the entire database during the workload capture, including the part of the workload that was not captured
ERRORS	NUMBER		Total number of errors that have been recorded in this workload capture
AWR_DBID	NUMBER		Database ID of the AWR snapshots that correspond to this workload capture. For captures that were performed in the current database, this value is equal to the current database's DBID. For captures that were performed in other databases, this value will either be NULL or will be populated by DBMS_WORKLOAD_CAPTURE.IMPORT_AWR().

Column	Datatype	NULL	Description
AWR_BEGIN_SNAP	NUMBER		Begin snapshot ID of the AWR snapshots that correspond to this workload capture
AWR_END_SNAP	NUMBER		End snapshot ID of the AWR snapshots that correspond to this workload capture
AWR_EXPORTED	VARCHAR2(12)		Indicates whether the AWR snapshots that correspond to this workload capture have been exported using DBMS_WORKLOAD_CAPTURE.EXPORT_AWR() (YES) or not (NO), or whether AWR snapshots cannot be exported because the capture is still in progress, has run to completion successfully, or was done in a different database from which it was not exported (NOT POSSIBLE)
ERROR_CODE	NUMBER		Error code for this workload capture
ERROR_MESSAGE	VARCHAR2(512)		Error message for this workload capture
DIR_PATH	VARCHAR2(4000)	NOT NULL	Full directory path for the workload capture directory object
DIR_PATH_SHARED	VARCHAR2(10)	NOT NULL	Indicates whether the workload capture directory is shared by all the instances of the recording database (applicable only for Oracle RAC databases)
LAST_PROCESSED_VERSION	VARCHAR2(128)		Database version in which this capture was preprocessed using DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE() last; NULL if the capture has never been preprocessed
SQLSET_OWNER	VARCHAR2(128)		User name of the SQL tuning set owner
SQLSET_NAME	VARCHAR2(128)		Name of the SQL tuning set for this workload capture
PLSQL_MODE	VARCHAR2(12)		Capture options for PL/SQL calls. Possible values: • TOP_LEVEL: Top-level PL/SQL only • EXTENDED: Both top-level PL/SQL and SQL executed from PL/SQL
ENCRYPTION	VARCHAR2(128)		Indicates the encryption standard used for the given capture: • NULL - Capture files are not encrypted • AES128 – Capture files are encrypted using AES128 • AES192 – Capture files are encrypted using AES192 • AES256 – Capture files are encrypted using AES256
ENCRYPTION_VERIFIER	RAW(512)		Data used internally for creating an encrypted capture
PATCH_NAME	VARCHAR2(128)		Database workload capture and replay patch name This column is populated only for backports to Oracle Database 12c Release 1 (12.1) and earlier releases.
STORAGE_TYPE	NUMBER(38)		Describes where the captured workload is stored

> **See Also:**
>
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_WORKLOAD_CAPTURE package
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_WORKLOAD_REPLAY package

7.127 DBA_WORKLOAD_CONNECTION_MAP

DBA_WORKLOAD_CONNECTION_MAP displays the connection mapping information for workload replay. Each row defines one connection mapping for a particular workload replay.

Column	Datatype	NULL	Description
REPLAY_ID	NUMBER	NOT NULL	ID of the replay (corresponds to DBA_WORKLOAD_REPLAYS.ID)
CONN_ID	NUMBER	NOT NULL	Key (ID) of the connection mapping table
SCHEDULE_CAP_ID	NUMBER		Schedule capture ID (corresponds to DBA_WORKLOAD_SCHEDULE_CAPTURES.SCHEDULE_CAP_ID)
CAPTURE_CONN	VARCHAR2(4000)	NOT NULL	Connection string that was used during capture
REPLAY_CONN	VARCHAR2(4000)		Connection string that should be used during replay

7.128 DBA_WORKLOAD_DIV_SUMMARY

DBA_WORKLOAD_DIV_SUMMARY displays a summary of the replay divergence information in the DBA_WORKLOAD_REPLAY_DIVERGENCE view. DBA_WORKLOAD_REPLAY_DIVERGENCE may have duplicate entries, while DBA_WORKLOAD_DIV_SUMMARY keeps only one entry and tracks the number of occurrences of each duplicate entry.
Starting with Oracle Database 12.2.0.1, the replay report is generated from DBA_WORKLOAD_DIV_SUMMARY instead of from DBA_WORKLOAD_REPLAY_DIVERGENCE, which results in faster generation of the replay report.

Column	Datatype	NULL	Description
REPLAY_ID	NUMBER	NOT NULL	ID (key) for the workload replay
DIVERGENCE_TYPE	NUMBER	NOT NULL	Reserved for future use
IS_QUERY_DATA_DIVERGENCE	VARCHAR2(1)		Indicates whether the data divergence is from the number of rows fetched by SELECT queries (Y) or not (N)
IS_DML_DATA_DIVERGENCE	VARCHAR2(1)		Indicates whether the divergence is from the number of rows affected by INSERT, UPDATE, or DELETE SQL statements (Y) or not (N)
IS_ERROR_DIVERGENCE	VARCHAR2(1)		Indicates whether the divergence is from errors seen during capture or replay (Y) or not (N)
IS_THREAD_FAILURE	VARCHAR2(1)		Indicates whether the divergence is from sessions that failed during replay (Y) or not (N)

Column	Datatype	NULL	Description
IS_DATA_MASKED	VARCHAR2(1)		Indicates whether the SQL call contains masked bind data (Y) or not (N). If data masking technology is used at the replay database, the workload capture files need to be masked. Otherwise, SQL statements generated from capture files that contain sensitive bind data will not match the database. When the replay client sends masked bind data to the server, it turns on the IS_DATA_MASKED flag for the current SQL call.
IS_CLIENT_FAILURE	VARCHAR2(1)		Indicates whether the workload replay client failed during replay (Y) or not (N)
STREAM_ID	NUMBER	NOT NULL	Stream ID of the session that reported the divergence
SQL_ID	VARCHAR2(13)		SQL ID of the SQL that reported the divergence
EXPECTED_ERROR#	NUMBER		Error number that was seen during capture (0 if the capture ran successfully)
EXPECTED_ERROR_MESSAGE	VARCHAR2(4000)		Text of the error message whose number appears in the EXPECTED_ERROR# column
OBSERVED_ERROR#	NUMBER		Actual error number seen during replay (0 if the replay ran successfully, 15566 (corresponding to ORA-15566) if the captured call could not be replayed)
OBSERVED_ERROR_MESSAGE	VARCHAR2(4000)		Text of the error message whose number appears in the OBSERVED_ERROR# column
SERVICE	VARCHAR2(64)		Service name of the session that reported the divergence
MODULE	VARCHAR2(64)		Module name of the session that reported the divergence
INSTANCE_NUMBER	NUMBER		The number of the instance that reported the divergence
WRC_ID	NUMBER		The identifier of the workload replay client
OCCURRENCES	NUMBER		Number of times the divergence occurred during replay

Example

The following query prints the top 3 SQL statements that got error divergence during replay. This query shows the captured error number and the actual error number seen during replay.

```
SQL> SELECT * FROM
 (SELECT occurrences, sql_id, expected_error#, observed_error#
  FROM    dba_workload_div_summary
  WHERE   replay_id = 123
   AND    is_error_divergence = 'Y'
  ORDER BY occurrences DESC)
WHERE ROWNUM <= 3;

OCCURRENCES SQL_ID        EXPECTED_ERROR# OBSERVED_ERROR#
----------- ------------- --------------- ---------------
          8 0xrm2wjdqv17m               0               1
          4 8bzwdnnznspjd            1422               0
          3 6d8rwrac8dsk7               1            1400

SQL>
```

> **See Also:**
>
> "DBA_WORKLOAD_REPLAY_DIVERGENCE"

7.129 DBA_WORKLOAD_FILTERS

DBA_WORKLOAD_FILTERS displays all the workload filters that have been defined in the current database.

In Oracle Database 11*g*, only workload filters of type CAPTURE are supported. Starting with Oracle Database 11*g*R2, filters of type REPLAY are supported.

Column	Datatype	NULL	Description
TYPE	VARCHAR2(30)		Type of the workload filter (CAPTURE or REPLAY)
ID	VARCHAR2(40)		Sequence number of the workload filter
STATUS	VARCHAR2(6)		Status of the workload filter: • NEW - This filter will be used by the next subsequent operation such as the next workload capture. • IN USE - This filter is currently being used by an operation that is in progress such as an active workload capture. • USED - This filter was used in the past by some operation such as a past workload capture.
SET_NAME	VARCHAR2(1000)		Name of the filter set to which the filter belongs
NAME	VARCHAR2(128)		Name of the workload filter
ATTRIBUTE	VARCHAR2(128)		Name of the attribute on which the filter is defined
VALUE	VARCHAR2(4000)		Value of the attribute on which the filter is defined. Wildcards such as % and _ are supported if the attribute is of string type.

7.130 DBA_WORKLOAD_GROUP_ASSIGNMENTS

DBA_WORKLOAD_GROUP_ASSIGNMENTS displays all the workload capture groups and their assigned instances. A workload capture group is a subset of the captured workload. Each group accesses its own set of recorded database objects.

Column	Datatype	NULL	Description
REPLAY_DIR_NUMBER	NUMBER(38)	NOT NULL	The value that is associated with the subdirectory under the replay directory. See REPLAY_DIR_NUMBER in DBA_WORKLOAD_REPLAYS.
GROUP_ID	NUMBER(38)	NOT NULL	The identifier of a workload capture group
INSTANCE_NUMBER	NUMBER(38)	NOT NULL	The instance a given group is assigned to

> **See Also:**
>
> "DBA_WORKLOAD_REPLAYS"

7.131 DBA_WORKLOAD_LONG_SQLTEXT

DBA_WORKLOAD_LONG_SQLTEXT displays the captured SQL statements that are longer than 1000 characters. You can load SQL statements longer than 1000 characters to the DBA_WORKLOAD_LONG_SQLTEXT view using the DBMS_WORKLOAD_REPLAY.LOAD_LONG_SQLTEXT procedure.

Column	Datatype	NULL	Description
CAPTURE_ID	NUMBER(38)	NOT NULL	Internal key for the workload capture
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
SQL_FULLTEXT	CLOB		Full text for the SQL statement exposed as a CLOB column

> **See Also:**
>
> - "DBA_WORKLOAD_CAPTURE_SQLTEXT"
> - *Oracle Database PL/SQL Packages and Types Reference* for information about the DBMS_WORKLOAD_REPLAY package

7.132 DBA_WORKLOAD_REPLAY_CLIENTS

DBA_WORKLOAD_REPLAY_CLIENTS displays all workload replay clients and their assigned instances.

Column	Datatype	NULL	Description
WRC_ID	NUMBER(38)	NOT NULL	The identifier of a workload replay client
SCHEDULE_CAP_ID	NUMBER(38)	NOT NULL	A unique identifier for a workload capture added to a replay schedule. 0 for a non-consolidated replay
INSTANCE_NUMBER	NUMBER(38)	NOT NULL	The instance that the replay client connects to

7.133 DBA_WORKLOAD_REPLAY_DIVERGENCE

DBA_WORKLOAD_REPLAY_DIVERGENCE displays information about data/error divergence for a user call that has been replayed.

DBA_WORKLOAD_DIV_SUMMARY displays a summary of the replay divergence information in the DBA_WORKLOAD_REPLAY_DIVERGENCE view. DBA_WORKLOAD_REPLAY_DIVERGENCE may have duplicate entries, while DBA_WORKLOAD_DIV_SUMMARY keeps only one entry and tracks the number of occurrences of each duplicate entry.

Column	Datatype	NULL	Description
REPLAY_ID	NUMBER	NOT NULL	ID (key) for the workload replay
TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Time that the divergence occurred
DIVERGENCE_TYPE	NUMBER	NOT NULL	Reserved for future use
IS_QUERY_DATA_DIVERGENCE	VARCHAR2(1)		Indicates whether the data divergence is from the number of rows fetched by SELECT queries (Y) or not (N)
IS_DML_DATA_DIVERGENCE	VARCHAR2(1)		Indicates whether the divergence is from the number of rows affected by INSERT, UPDATE, or DELETE SQL statements (Y) or not (N)
IS_ERROR_DIVERGENCE	VARCHAR2(1)		Indicates whether the divergence is from errors seen during capture or replay (Y) or not (N)
IS_THREAD_FAILURE	VARCHAR2(1)		Indicates whether the divergence is from sessions that failed during replay (Y) or not (N)
IS_DATA_MASKED	VARCHAR2(1)		Indicates whether the SQL call contains masked bind data (Y) or not (N). If data masking technology is used at the replay database, the workload capture files need to be masked. Otherwise, SQL statements generated from capture files that contain sensitive bind data will not match the database. When the replay client sends masked bind data to the server, it turns on the IS_DATA_MASKED flag for the current SQL call.
IS_CLIENT_FAILURE	VARCHAR2(1)		Indicates whether the workload replay client failed during replay (Y) or not (N)
EXPECTED_ROW_COUNT	NUMBER		Number of rows fetched for SELECT queries or rows affected for INSERT, UPDATE, or DELETE SQL statements during capture
OBSERVED_ROW_COUNT	NUMBER		Actual number of rows fetched for SELECT queries or rows affected for INSERT, UPDATE, or DELETE SQL statements during replay
EXPECTED_ERROR#	NUMBER		Error number that was seen during capture (0 if the capture ran successfully)
EXPECTED_ERROR_MESSAGE	VARCHAR2(4000)		Text of the error message whose number appears in the EXPECTED_ERROR# column
OBSERVED_ERROR#	NUMBER		Actual error number seen during replay (0 if the replay ran successfully, 15566 (corresponding to ORA-15566) if the captured call could not be replayed)
OBSERVED_ERROR_MESSAGE	VARCHAR2(4000)		Text of the error message whose number appears in the OBSERVED_ERROR# column
STREAM_ID	NUMBER	NOT NULL	Stream ID of the session that reported the divergence
CALL_COUNTER	NUMBER	NOT NULL	Call counter of the user call that reported the divergence
CAPTURE_STREAM_ID	NUMBER		Internal ID of the capture file whose replay produced the divergence
SQL_ID	VARCHAR2(13)		SQL ID of the SQL that reported the divergence
SESSION_ID	NUMBER	NOT NULL	Session ID of the session that reported the divergence

Column	Datatype	NULL	Description
SESSION_SERIAL#	NUMBER	NOT NULL	Captured session serial number of the session that reported the divergence
SERVICE	VARCHAR2(64)		Service name of the session that reported the divergence
MODULE	VARCHAR2(64)		Module name of the session that reported the divergence
ACTION	VARCHAR2(64)		Action name of the session that reported the divergence
INSTANCE_NUMBER	NUMBER		The number of the instance that reported the divergence
WRC_ID	NUMBER		The identifier of the workload replay client

"DBA_WORKLOAD_DIV_SUMMARY"

7.134 DBA_WORKLOAD_REPLAY_SCHEDULES

DBA_WORKLOAD_REPLAY_SCHEDULES displays the names of replay schedules for the current replay directory.

A replay schedule defines one or multiple workload captures, and the order to start their replays. The current replay directory is set by DBMS_WORKLOAD_REPLAY.SET_REPLAY_DIRECTORY('replay_dir'). Each row in the view contains information about one replay schedule.

Column	Datatype	NULL	Description
SCHEDULE_NAME	VARCHAR2(128)	NOT NULL	The name of a schedule to be replayed. It defines one or multiple workload captures, and the order to start their replays.
DIRECTORY	VARCHAR2(128)	NOT NULL	Directory object name for the replay schedule name
STATUS	VARCHAR2(128)		NEW if the schedule is being created, CURRENT if the schedule is currently being used by a replay, otherwise NULL

See Also:

- "DBA_WORKLOAD_SCHEDULE_CAPTURES" displays the workload captures in a replay schedule.
- "DBA_WORKLOAD_SCHEDULE_ORDERING" displays the order to start captures in a replay schedule.
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_WORKLOAD_REPLAY package

7.135 DBA_WORKLOAD_REPLAYS

DBA_WORKLOAD_REPLAYS displays all the workload replays that have been performed in the current database.

It also lists replays on which DBMS_WORKLOAD_REPLAY.GET_REPLAY_INFO() has been called. Each row contains information about one workload replay.

Column	Datatype	NULL	Description
ID	NUMBER	NOT NULL	Internal key for the workload replay
NAME	VARCHAR2(128)	NOT NULL	Name of the workload replay
DBID	NUMBER	NOT NULL	ID of the database in which the workload was replayed
DBNAME	VARCHAR2(128)	NOT NULL	Name of the database in which the workload was replayed
DBVERSION	VARCHAR2(17)	NOT NULL	Version of the database in which the workload was replayed
PARALLEL	VARCHAR2(3)		Indicates whether the database in which the workload was replayed was an Oracle RAC database (YES) or a single instance database (NO)
DIRECTORY	VARCHAR2(128)		Name of the directory object for the workload replay
CAPTURE_ID	NUMBER		ID of the capture (DBA_WORKLOAD_CAPTURES.ID) that was replayed. If the replay involves a replay schedule, the CAPTURE_ID will be null.
STATUS	VARCHAR2(40)	NOT NULL	Current status of the workload replay: • PREPARE - Workload prepare has been started and is waiting for clients to join • IN PROGRESS - Workload replay is in progress • COMPLETED - Workload replay has successfully completed • CANCELLED - Workload replay or the workload prepare has been cancelled • FAILED - Workload replay was terminated due to errors encountered. See the COMMENTS column for further information.
PREPARE_TIME	DATE		Datetime at which the workload prepare started
START_TIME	DATE		Datetime when the replay began
END_TIME	DATE		Datetime when the replay completed or cancelled; NULL if the replay is still in progress
DURATION_SECS	NUMBER		Duration of the workload replay (in seconds)
NUM_CLIENTS	NUMBER	NOT NULL	Number of workload replay client processes that were used in this workload replay
NUM_CLIENTS_DONE	NUMBER	NOT NULL	Number of workload replay client processes that have finished replay
FILTER_SET_NAME	VARCHAR2(128)		Name of the filter set used for the replay
DEFAULT_ACTION	VARCHAR2(30)	NOT NULL	Reserved for future use

Column	Datatype	NULL	Description
SYNCHRONIZATION	VARCHAR2(9)		Indicates whether recorded transaction semantics should be maintained (TRUE) or not (FALSE) When synchronization is on, the commit order observed during the original workload capture will be preserved. Every action that is replayed will be executed only after all of its dependent commits have been executed. Dependent commits are commits that were issued before the given action in the original workload capture. **See Also:** DBMS_WORKLOAD_REPLAY.PREPARE_REPLAY() in *Oracle Database PL/SQL Packages and Types Reference* for a detailed explanation of this replay parameter
CONNECT_TIME_SCALE	NUMBER	NOT NULL	Connection time scaling factor for captured streams during replay. The value is interpreted as a percentage.The default value of 100 means 100 percent. **See Also:** DBMS_WORKLOAD_REPLAY.PREPARE_REPLAY() in *Oracle Database PL/SQL Packages and Types Reference* for a detailed explanation of this replay parameter
THINK_TIME_SCALE	NUMBER	NOT NULL	Think time scaling factor for captured streams during replay. It scales the thinking time elapsed between two successive user calls from the same captured stream. The input is interpreted as a percentage. The default value of 100 means 100 percent. **See Also:** DBMS_WORKLOAD_REPLAY.PREPARE_REPLAY() in *Oracle Database PL/SQL Packages and Types Reference* for a detailed explanation of this replay parameter
THINK_TIME_AUTO_CORRECT	VARCHAR2(5)		Indicates whether the think time should be automatically corrected between calls (TRUE) or not (FALSE) A value of TRUE reduces think time if replay goes slower than capture. A value of FALSE results in no action. **See Also:** DBMS_WORKLOAD_REPLAY.PREPARE_REPLAY() in *Oracle Database PL/SQL Packages and Types Reference* for a detailed explanation of this replay parameter
SCALE_UP_MULTIPLIER	NUMBER	NOT NULL	Before the multiple-capture replay, SCALE_UP_MULTIPLIER is used to scale up the query part of a workload capture. The queries from each captured session are replayed concurrently as many times as the value of SCALE_UP_MULTIPLIER.
USER_CALLS	NUMBER		Total number of user calls replayed
DBTIME	NUMBER		Accumulated database time (in microseconds) for the replay
NETWORK_TIME	NUMBER		Accumulated network time for the replay (in microseconds)
THINK_TIME	NUMBER		Accumulated think time (in microseconds) for the replay

Column	Datatype	NULL	Description
PAUSE_TIME	NUMBER		The total time (in seconds) that the replay has been paused (by calling the PAUSE_REPLAY procedure)
PLSQL_CALLS	NUMBER		Total number of replayed top-level PL/SQL calls
PLSQL_SUBCALLS	NUMBER		Total number of replayed calls for SQL executed from PL/SQL
PLSQL_DBTIME	NUMBER		Total amount of database time (in microseconds) from PL/SQL calls
ELAPSED_TIME_DIFF	NUMBER		Reserved for future use
REPLAY_DEADLOCKS	NUMBER		A workload replay uses either the timing information from the capture files or the commit-based synchronization. With commit-based synchronization, the capture-time commit order is preserved during replay, and sessions normally wait on the session that is to do the next commit; such waits are classified as “WCR: replay clock” waits. A replay deadlock occurs if the session that is to do the next commit is itself blocked by a session that is waiting on “WCR: replay clock.” Replay deadlocks are resolved by allowing the blocker to go ahead and commit out of order. Replay deadlocks are not detected as database deadlocks since “WCR: replay clock” is an idle wait, introduced specifically for DB Replay. **See Also**: "WCR: replay clock"
AWR_DBID	NUMBER		Database ID of the AWR snapshots that correspond to this workload replay. For replays that were performed in the current database, this value is equal to the current database's DBID. For replays that were performed in other databases, this value will either be NULL or will be populated by `DBMS_WORKLOAD_REPLAY.IMPORT_AWR()`. **See Also:** DBMS_WORKLOAD_REPLAY.IMPORT_AWR() in *Oracle Database PL/SQL Packages and Types Reference*
AWR_BEGIN_SNAP	NUMBER		Begin snapshot ID of the AWR snapshots that correspond to this workload replay
AWR_END_SNAP	NUMBER		End snapshot ID of the AWR snapshots that correspond to this workload replay
AWR_EXPORTED	VARCHAR2(12)		Indicates whether the AWR snapshots that correspond to this workload replay have been exported using `DBMS_WORKLOAD_REPLAY.EXPORT_AWR()` (`YES`) or not (`NO`), or whether AWR snapshots cannot be exported because the replay is still in progress, has run to completion successfully, or was done in a different database from which it was not exported (`NOT POSSIBLE`) **See Also:** DBMS_WORKLOAD_REPLAY.EXPORT_AWR() in *Oracle Database PL/SQL Packages and Types Reference*

Column	Datatype	NULL	Description
ERROR_CODE	NUMBER		Error code for this workload replay
ERROR_MESSAGE	VARCHAR2(512)		Error message for this workload replay
DIR_PATH	VARCHAR2(4000)		Full directory path for the replay directory object
REPLAY_DIR_NUMBER	NUMBER		A hash value computed based on the values of other columns in this view, such as the NAME, DBID, DBNAME, PREPARE_TIME, START_TIME, and END_TIME columns. It should be fairly unique for any replay. The value is used to create a subdirectory under the replay directory.
SQLSET_OWNER	VARCHAR2(128)		User name of the SQL tuning set owner
SQLSET_NAME	VARCHAR2(128)		Name of the SQL tuning set for this workload replay
SCHEDULE_NAME	VARCHAR2(128)		The name of a schedule to be replayed. It defines one or multiple workload captures, and the order to start their replays. If SCHEDULE_NAME is NULL, the replay is a regular replay introduced since Oracle Database 11*g*, done with existing APIs from DBMS_WORKLOAD_REPLAY: INITIALIZE_REPLAY, PREPARE_REPLAY, and START_REPLAY. If SCHEDULE_NAME is not NULL, the replay is a new consolidated replay introduced in Oracle Database 12*c*. That is, it is a replay of one or more workload captures done with new APIs at DBMS_WORKLOAD_REPLAY: INITIALIZE_CONSOLIDATED_REPLAY, PREPARE_CONSOLIDATED_REPLAY, and START_CONSOLIDATED_REPLAY. **See Also:** DBMS_WORKLOAD_REPLAY in *Oracle Database PL/SQL Packages and Types Reference*
DIVERGENCE_LOAD_STATUS	VARCHAR2(5)		Indicates whether replay divergence data have been loaded (TRUE) or not (FALSE)
PLSQL_MODE	VARCHAR2(12)		Replay options for PL/SQL calls. Possible values: • TOP_LEVEL: Top-level PL/SQL only • EXTENDED: SQL executed from PL/SQL or top-level PL/SQL if there is no SQL recorded inside the PL/SQL
CONNECT_TIME_AUTO_CORRECT	VARCHAR2(12)		Indicates whether the waiting time for a new session to be connected is automatically reduced when the replay proceeds faster than its capture. The reduced amount is determined by the elapsed-time difference between the replay and the capture of the slowest session. The default value is true. There is no impact when the replay proceeds slower than the capture.

Column	Datatype	NULL	Description
RAC_MODE	VARCHAR2(19)		Replay options in an Oracle RAC environment: • GLOBAL_SYNC: Synchronization is across all instances. This is the default. Database connections from workload replay client (wrc) are done based on connection remapping. • PER_INSTANCE_CLIENT: Synchronization is across all instances. All database connections from one wrc are connected to only one instance. • PER_INSTANCE_SYNC: Synchronization is within one instance. All database connections from one wrc are connected to only one instance.
QUERY_ONLY	VARCHAR2(1)		Indicates whether only the query-only workload from the current workload capture will be replayed, skipping all the DML/DDL that might update the database (Y) or not (N)
PDB_LEVEL	VARCHAR2(1)		Indicates whether the replay is a PDB-level replay (Y) or not (N)
NUM_CLIENTS_ABORTED	NUMBER		Number of workload replay clients terminated during the replay
PATCH_NAME	VARCHAR2(128)		Database workload capture and replay patch name This column is only populated for backports to Oracle Database 12c Release 1 (12.1) and earlier releases.
DURATION_LIMIT	NUMBER(38)		Replay duration limit (in seconds) If the replay duration limit has not been set, then the value of this column is null.
STATUS_DETAILS	VARCHAR2(128)		Provides additional details about the replay status If additional details are not available, then the value of this column is null.

See Also:

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_WORKLOAD_REPLAY package

7.136 DBA_WORKLOAD_SCHEDULE_CAPTURES

DBA_WORKLOAD_SCHEDULE_CAPTURES displays the workload captures used by replay schedules.

Each row in the view contains information about one workload capture.

Column	Datatype	NULL	Description
SCHEDULE_NAME	VARCHAR2(128)	NOT NULL	The name of a schedule to be replayed

Column	Datatype	NULL	Description
SCHEDULE_CAP_ID	NUMBER	NOT NULL	Identifies a workload capture added to a replay schedule. It starts with 1. If the same capture is added multiple times to a schedule, there will be multiple rows with different SCHEDULE_CAP_ID columns and identical CAPTURE_ID columns.
CAPTURE_ID	NUMBER	NOT NULL	Points to the capture ID from DBA_WORKLOAD_CAPTURES.
CAPTURE_DIR	VARCHAR2(128)	NOT NULL	Name of the directory object for workload capture
OS_SUBDIR	VARCHAR2(4000)	NOT NULL	Name of the subdirectory under the replay directory for this workload capture
MAX_CONCURRENT_SESSIONS	NUMBER		The maximal number of concurrent sessions that was seen in this workload capture
NUM_CLIENTS_ASSIGNED	NUMBER		Number of clients assigned to this workload capture before replay starts
NUM_CLIENTS	NUMBER		Number of clients that are running for this workload capture during replay
NUM_CLIENTS_DONE	NUMBER		Number of clients that have finished the replay of this workload capture
STOP_REPLAY	VARCHAR2(1)	NOT NULL	Indicates whether the whole replay will stop once the replay of this workload capture is done (Y) or not (N)
TAKE_BEGIN_SNAPSHOT	VARCHAR2(1)	NOT NULL	Indicates whether an AWR snapshot will be taken when the replay of this capture starts (Y) or not (N)
TAKE_END_SNAPSHOT	VARCHAR2(1)	NOT NULL	Indicates whether an AWR snapshot will be taken when the replay of this capture finishes (Y) or not (N)
QUERY_ONLY	VARCHAR2(1)	NOT NULL	Indicates whether only the query-only workload from the current workload capture will be replayed, skipping all the DML/DDL that might update the database (Y) or not (N)
START_DELAY_SECS	NUMBER		Displays the wait time (in seconds) when the replay of a workload capture is ready to start. "Ready to start" means the capture does not wait for any other capture, or all the captures for which it should wait have already been replayed. The default value is 0.
START_TIME	DATE		Start time for the replay of this capture
END_TIME	DATE		Finish time for the replay of this capture
AWR_DBID	NUMBER		AWR database ID of the replay
AWR_BEGIN_SNAP	NUMBER		AWR snapshot ID when the replay starts
AWR_END_SNAP	NUMBER		AWR snapshot ID when the replay finishes
NUM_CLIENTS_ABORTED	NUMBER		Number of workload replay clients terminated during the replay

7.137 DBA_WORKLOAD_SCHEDULE_ORDERING

DBA_WORKLOAD_SCHEDULE_ORDERING displays the start ordering between workload captures in the replay schedule.

Each row in the view defines one start ordering between two workload captures in the same replay schedule.

Column	Datatype	NULL	Description
SCHEDULE_NAME	VARCHAR2(128)	NOT NULL	Name of a schedule to be replayed
SCHEDULE_CAP_ID	NUMBER	NOT NULL	Identifies the workload capture that will wait
WAITFOR_CAP_ID	NUMBER	NOT NULL	Identifies the workload capture for which the workload capture identified by SCHEDULE_CAP_ID needs to wait. The replay of capture SCHEDULE_CAP_ID will not start until capture WAITFOR_CAP_ID finishes its replay. If the view has multiple rows with the same SCHEDULE_CAP_ID but different WAITFOR_CAP_ID, it defines a schedule so that the replay of a capture specified by SCHEDULE_CAP_ID will not start unless all the replays of the waited captures run into completion. If the view has multiple rows with the same WAITFOR_CAP_ID but different SCHEDULE_CAP_ID, it defines a schedule so that the replay of multiple captures will not start unless the replay of the capture specified by WAITFOR_CAP_ID finishes.

7.138 DBA_WORKLOAD_SQL_MAP

DBA_WORKLOAD_SQL_MAP contains the mapping information for skipping or replacing a SQL statement based on its sql_id during workload replay.

Column	Datatype	NULL	Description
REPLAY_ID	NUMBER(38)	NOT NULL	A foreign key to the ID column in the DBA_WORKLOAD_REPLAYs view
SCHEDULE_CAP_ID	NUMBER(38)	NOT NULL	The ID of a capture in the schedule
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the SQL statement at the time of capture
OPERATION	VARCHAR2(7)		SKIP or REPLACE
SQL_ID_NUMBER	NUMBER		Internal representation of SQL_ID
REPLACEMENT_SQL_TEXT	VARCHAR2(4000)		When the value in the OPERATION column is SKIP, this column is NULL. When the value in the OPERATION column is REPLACE, this column shows the SQL statement to be used.

7.139 DBA_WORKLOAD_TRACKED_COMMITS

DBA_WORKLOAD_TRACKED_COMMITS displays the commits tracked every second during a database replay.

Column	Datatype	NULL	Description
REPLAY_DIR_NUMBER	NUMBER	NOT NULL	The numerical value that is associated with the subdirectory under the replay directory. See REPLAY_DIR_NUMBER in DBA_WORKLOAD_REPLAYS
INSTANCE_NUMBER	NUMBER(38)		The instance where the commit is executed
FILE_ID	NUMBER(38)	NOT NULL	The file ID

Column	Datatype	NULL	Description
CALL_CTR	NUMBER(38)	NOT NULL	The call counter of the commit
COMMIT_SCN	NUMBER(38)		The recorded commit SCN value
PREV_GLOBAL_COMMIT_FILE_ID	NUMBER(38)		The file ID of the latest commit across all sessions
PREV_GLOBAL_COMMIT_SCN	NUMBER(38)		The recorded SCN of the latest commit across all sessions
PREV_LOCAL_COMMIT_CALL_CTR	NUMBER(38)		The call counter of the latest commit in the same session
CAPTURE_COMMIT_TIME	NUMBER(38)		The time in seconds since the capture started
CAPTURE_COMMIT_TIME_DELTA	NUMBER(38)		The elapsed time in seconds since the previous commit across all sessions during capture
REPLAY_COMMIT_TIME	NUMBER(38)		The time in seconds since the replay started
REPLAY_COMMIT_TIME_DELTA	NUMBER(38)		The elapsed time in seconds since the previous commit across all sessions during the replay

See Also:

DBA_WORKLOAD_REPLAYS

7.140 DBA_WORKLOAD_USER_MAP

DBA_WORKLOAD_USER_MAP contains all the mappings ever done until they are removed at some point.

The mappings are stored in a table made public through this view.

To remove old mappings, execute this statement:

```
SQL> delete * from DBA_WORKLOAD_USER_MAP;
```

Column	Datatype	NULL	Description
REPLAY_ID	NUMBER		This is a foreign key to the ID column in the DBA_WORKLOAD_REPLAYS view
SCHEDULE_CAP_ID	NUMBER		The ID of a capture in the schedule
CAPTURE_USER	VARCHAR2(4000)	NOT NULL	The user name during the time of the workload capture
REPLAY_USER	VARCHAR2(4000)		The user name to which the captured user should be remapped during replay. If the REPLAY_USER is null, the CAPTURE_USER is used during replay. In other words, the original user is used.

"DBA_WORKLOAD_REPLAYS"

7.141 DBA_XML_INDEXES

DBA_XML_INDEXES describes all XML indexes in the database. Its columns are the same as those in ALL_XML_INDEXES.

> **See Also:**
>
> "ALL_XML_INDEXES"

7.142 DBA_XML_NESTED_TABLES

DBA_XML_NESTED_TABLES describes all the tables and their corresponding nested tables. Its columns are the same as those in ALL_XML_NESTED_TABLES.

> **See Also:**
>
> "ALL_XML_NESTED_TABLES"

7.143 DBA_XML_OUT_OF_LINE_TABLES

DBA_XML_OUT_OF_LINE_TABLES descibes all the out of line tables connected to a given root table for the same schema. Its columns are the same as those in ALL_XML_OUT_OF_LINE_TABLES.

> **See Also:**
>
> "ALL_XML_OUT_OF_LINE_TABLES"

7.144 DBA_XML_SCHEMA_ATTRIBUTES

DBA_XML_SCHEMA_ATTRIBUTES describes all the attributes and their properties. Its columns are the same as those in ALL_XML_SCHEMA_ATTRIBUTES.

> **See Also:**
>
> "ALL_XML_SCHEMA_ATTRIBUTES"

7.145 DBA_XML_SCHEMA_COMPLEX_TYPES

DBA_XML_SCHEMA_COMPLEX_TYPES describes all complex types in the database. Its columns are the same as those in ALL_XML_SCHEMA_COMPLEX_TYPES.

> **See Also:**
>
> "ALL_XML_SCHEMA_COMPLEX_TYPES"

7.146 DBA_XML_SCHEMA_ELEMENTS

DBA_XML_SCHEMA_ELEMENTS describes all the elements and their properties. Its columns are the same as those in ALL_XML_SCHEMA_ELEMENTS.

> **See Also:**
>
> "ALL_XML_SCHEMA_ELEMENTS"

7.147 DBA_XML_SCHEMA_NAMESPACES

DBA_XML_SCHEMA_NAMESPACES describes all the available namespaces. Its columns are the same as those in ALL_XML_SCHEMA_NAMESPACES.

> **See Also:**
>
> "ALL_XML_SCHEMA_NAMESPACES"

7.148 DBA_XML_SCHEMA_SIMPLE_TYPES

DBA_XML_SCHEMA_SIMPLE_TYPES describes all simple types. Its columns are the same as those in ALL_XML_SCHEMA_SIMPLE_TYPES.

> **See Also:**
>
> "ALL_XML_SCHEMA_SIMPLE_TYPES"

7.149 DBA_XML_SCHEMA_SUBSTGRP_HEAD

DBA_XML_SCHEMA_SUBSTGRP_HEAD describes the heads of substitution groups. Its columns are the same as those in ALL_XML_SCHEMA_SUBSTGRP_HEAD.

> **See Also:**
>
> "ALL_XML_SCHEMA_SUBSTGRP_HEAD"

7.150 DBA_XML_SCHEMA_SUBSTGRP_MBRS

DBA_XML_SCHEMA_SUBSTGRP_MBRS describes all members of substitution groups. Its columns are the same as those in ALL_XML_SCHEMA_SUBSTGRP_MBRS.

> **See Also:**
>
> "ALL_XML_SCHEMA_SUBSTGRP_MBRS"

7.151 DBA_XML_SCHEMAS

DBA_XML_SCHEMAS describes all registered XML schemas in the database. Its columns are the same as those in ALL_XML_SCHEMAS.

> **See Also:**
>
> "ALL_XML_SCHEMAS"

7.152 DBA_XML_TAB_COLS

DBA_XML_TAB_COLS describes the columns of all XML tables in the database. Its columns are the same as those in ALL_XML_TAB_COLS.

> **See Also:**
>
> "ALL_XML_TAB_COLS"

7.153 DBA_XML_TABLES

DBA_XML_TABLES describes all XML tables in the database. Its columns are the same as those in ALL_XML_TABLES.

> **See Also:**
>
> "ALL_XML_TABLES"

7.154 DBA_XML_VIEW_COLS

DBA_XML_VIEW_COLS describes the columns of all XML views in the database. Its columns are the same as those in ALL_XML_VIEW_COLS.

> **See Also:**
>
> "ALL_XML_VIEW_COLS"

7.155 DBA_XML_VIEWS

DBA_XML_VIEWS describes all XML views in the database. Its columns are the same as those in ALL_XML_VIEWS.

> **See Also:**
>
> "ALL_XML_VIEWS"

7.156 DBA_XS_AUDIT_POLICY_OPTIONS

DBA_XS_AUDIT_POLICY_OPTIONS describes auditing options defined under all audit policies specific to Oracle Database Real Application Security.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		Name of the audit policy
AUDIT_CONDITION	VARCHAR2(4000)		Condition associated with the audit policy
AUDIT_OPTION	VARCHAR2(128)		Auditing option defined in the audit policy
CONDITION_EVAL_OPT	VARCHAR2(9)		Evaluation option associated with the audit policy's condition. The possible values are STATEMENT, SESSION, INSTANCE, NONE.

Column	Datatype	NULL	Description
COMMON	VARCHAR2(3)		Indicates whether the audit policy is a common audit policy (YES) or local (NO). The value is NULL in non-CDBs.

> **See Also:**
>
> *Oracle Database Security Guide* for more information about auditing

7.157 DBA_XS_AUDIT_TRAIL

DBA_XS_AUDIT_TRAIL describes all audit records specific to Oracle Database Real Application Security.

Column	Datatype	NULL	Description
USERID	VARCHAR2(128)		Name of the database user whose actions were audited
ACTION	NUMBER		Numeric audit trail action type code. The corresponding name of the action type is in the ACTION_NAME column.
ACTION_NAME	VARCHAR2(64)		Name of the action type corresponding to the numeric code in the ACTION column
OBJ_OWNER	VARCHAR2(128)		Owner of the object affected by the action
OBJ_NAME	VARCHAR2(128)		Name of the object affected by the action
RETURN_CODE	NUMBER		Oracle error code generated by the action
XS_USER_NAME	VARCHAR2(128)		Name of the Real Application Security user
XS_SESSIONID	RAW(33)		Identifer of the Real Application Security session
XS_INACTIVITY_TIMEOUT	NUMBER		Inactivity timeout of the Real Application Security session
XS_ENTITY_TYPE	VARCHAR2(32)		Type of the Real Application Security entity. Possible values are USER, ROLE, ROLESET, SECURITYCLASS, ACL, DATASECURITY, and NSTEMPLATE.
XS_TARGET_PRINCIPAL_NAME	VARCHAR2(128)		Target principal name in Real Application Security operations. Possible operations are set verifier, set password, add proxy, remove proxy, switch user, assign user, create session, grant roles.
XS_PROXY_USER_NAME	VARCHAR2(128)		Name of the Real Application Security proxy user.
XS_DATASEC_POLICY_NAME	VARCHAR2(128)		Name of the Real Application Security data security policy enabled or disabled
XS_SCHEMA_NAME	VARCHAR2(128)		Name of the schema in enable, disable data security policy and global callback operation
XS_CALLBACK_EVENT_TYPE	VARCHAR2(32)		Real Application Security global callback event type
XS_PACKAGE_NAME	VARCHAR2(128)		Real Application Security callback package name for the global callback

Column	Datatype	NULL	Description
XS_PROCEDURE_NAME	VARCHAR2(128)		Real Application Security callback procedure name for the global callback
XS_ENABLED_ROLE	VARCHAR2(128)		The role that is enabled
XS_COOKIE	VARCHAR2(1024)		Real Application Security session cookie
XS_NS_NAME	VARCHAR2(128)		Name of the Real Application Security session namespace
XS_NS_ATTRIBUTE	VARCHAR2(4000)		Name of the Real Application Security session namespace attribute
XS_NS_ATTRIBUTE_OLD_VAL	VARCHAR2(4000)		The old value of the Real Application Security session namespace attribute
XS_NS_ATTRIBUTE_NEW_VAL	VARCHAR2(4000)		The new value of the Real Application Security session namespace attribute
EVENT_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of audit record

See Also:

Oracle Database Security Guide for more information about auditing

7.158 DBA_XS_ENABLED_AUDIT_POLICIES

DBA_XS_ENABLED_AUDIT_POLICIES describes all the audit policies specific to Oracle Database Real Application Security that are enabled to users.

Note:

This view was known as DBA_XS_ENB_AUDIT_POLICIES in Oracle Database 12*c* Release 1. It was renamed to DBA_XS_ENABLED_AUDIT_POLICIES in Oracle Database 12*c* Release 2 (12.2.0.1).

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		Name of the audit policy
ENABLED_OPTION	VARCHAR2(15)		Enabled option of the audit policy. Possible values: • BY USER: For policies that are enabled on users • EXCEPT USERS: For policies that are enabled on users • BY GRANTED ROLE: For policies that are enabled on roles • INVALID: For policies that are enabled on roles
ENTITY_NAME	VARCHAR2(128)		Database entity (user name or role name) on which the audit policy is enabled

Column	Datatype	NULL	Description
ENTITY_TYPE	VARCHAR2(7)		Database entity type. Possible values: • USER: Indicates that the policy is enabled on a user or users. • ROLE: Indicates that the policy is enabled on a role or roles.
SUCCESS	VARCHAR2(3)		Indicates whether the audit policy is enabled for auditing successful events (YES) or not (NO)
FAILURE	VARCHAR2(3)		Indicates whether the audit policy is enabled for auditing unsuccessful events (YES) or not (NO)

See Also:

7.159 DBA_XS_ENB_AUDIT_POLICIES

DBA_XS_ENB_AUDIT_POLICIES is a synonym for the DBA_XS_ENABLED_AUDIT_POLICIES view.

See Also:

- "DBA_XS_ENABLED_AUDIT_POLICIES"
- *Oracle Database Security Guide* for more information about auditing
- *Oracle Database Security Guide* for more information about auditing

7.160 DBA_XSTREAM_ADMINISTRATOR

DBA_XSTREAM_ADMINISTRATOR displays information about the users who have been granted privileges to be XStream administrators by procedures in the DBMS_XSTREAM_AUTH package. Its columns are the same as those in ALL_XSTREAM_ADMINISTRATOR.

See Also:

"ALL_XSTREAM_ADMINISTRATOR"

7.161 DBA_XSTREAM_INBOUND

DBA_XSTREAM_INBOUND displays information about all XStream inbound servers in the database. Its columns are the same as those in ALL_XSTREAM_INBOUND.

> **See Also:**
>
> "ALL_XSTREAM_INBOUND"

7.162 DBA_XSTREAM_INBOUND_PROGRESS

DBA_XSTREAM_INBOUND_PROGRESS displays information about the progress made by all XStream inbound servers in the database. Its columns are the same as those in ALL_XSTREAM_INBOUND_PROGRESS.

> **See Also:**
>
> "ALL_XSTREAM_INBOUND_PROGRESS"

7.163 DBA_XSTREAM_OUT_SUPPORT_MODE

DBA_XSTREAM_OUT_SUPPORT_MODE displays information about the level of XStream capture process support for the tables in the database. Its columns are the same as those in ALL_XSTREAM_OUT_SUPPORT_MODE.

> **See Also:**
>
> "ALL_XSTREAM_OUT_SUPPORT_MODE"

7.164 DBA_XSTREAM_OUTBOUND

DBA_XSTREAM_OUTBOUND displays information about all XStream outbound servers in the database. Its columns are the same as those in ALL_XSTREAM_OUTBOUND.

> **See Also:**
>
> "ALL_XSTREAM_OUTBOUND"

7.165 DBA_XSTREAM_OUTBOUND_PROGRESS

DBA_XSTREAM_OUTBOUND_PROGRESS displays information about the progress made by all XStream outbound servers in the database. Its columns are the same as those in ALL_XSTREAM_OUTBOUND_PROGRESS.

> **See Also:**
>
> "ALL_XSTREAM_OUTBOUND_PROGRESS"

7.166 DBA_XSTREAM_RULES

DBA_XSTREAM_RULES displays information about all XStream rules in the database. Its columns are the same as those in ALL_XSTREAM_RULES.

> **See Also:**
>
> "ALL_XSTREAM_RULES"

7.167 DBA_XSTREAM_SPLIT_MERGE

DBA_XSTREAM_SPLIT_MERGE displays information about XStream current automatic split and merge operations.

Column	Datatype	NULL	Description
ORIGINAL_CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the original capture process
CLONED_CAPTURE_NAME	VARCHAR2(128)		Name of the cloned capture process
ORIGINAL_CAPTURE_STATUS	VARCHAR2(8)		Status of the original capture process: • DISABLED • ENABLED • ABORTED
CLONED_CAPTURE_STATUS	VARCHAR2(8)		Status of the cloned capture process: • DISABLED • ENABLED • ABORTED
ORIGINAL_XSTREAM_NAME	VARCHAR2(128)		Name of the original XStream component that receives database changes directly from the original capture process. The component is either a progagation or a local apply process.
CLONED_XSTREAM_NAME	VARCHAR2(128)		Name of the cloned XStream component that receives database changes directly from the cloned capture process. The component is either a progagation or a local apply process.

Column	Datatype	NULL	Description
XSTREAM_TYPE	VARCHAR2(11)		Type of the component in ORIGINAL_XSTREAM_NAME and CLONED_XSTREAM_NAME: • PROPAGATION • APPLY
RECOVERABLE_SCRIPT_ID	RAW(16)		Unique ID of the script to split or merge operation
SCRIPT_STATUS	VARCHAR2(12)		Status of the recoverable script: • GENERATING • NOT EXECUTING • EXECUTING • EXECUTED • ERROR
ACTION_TYPE	VARCHAR2(7)		type of action performed by the script: • SPLIT • MERGE • MONITOR
ACTION_THRESHOLD	VARCHAR2(40)		For SPLIT actions, the threshold set by the split_threshold capture process parameter. For MERGE actions, the threshold set by the merge_threshold capture process parameter.
STATUS	VARCHAR2(16)		Status of the action: • NOTHING TO SPLIT - Not ready to split or does not need to split • ABOUT TO SPLIT • SPLITTING - A split is in progress • SPLIT DONE - A split is done • NOTHING TO MERGE - Not ready to merge • ABOUT TO MERGE • MERGING - A merge is in progress • MERGE DONE - A merge is done • ERROR - An error was returned during a split or merge • NONSPLITTABLE - The original capture is not splittable either because it is disabled, it has more than one publisher to its queue, or it has only one destination for captured messages
STATUS_UPDATE_TIME	TIMESTAMP(6)		Time when status was last updated
CREATION_TIME	TIMESTAMP(6)		Time when the action started
LAG	NUMBER		Time (in seconds) that the cloned capture process lags behind the original capture process
JOB_OWNER	VARCHAR2(128)		Owner of the job that performs the split or merge operation
JOB_NAME	VARCHAR2(128)		Name of the job that performs the split or merge operation

Column	Datatype	NULL	Description
JOB_STATE	VARCHAR2(15)		Current state of the job: • DISABLED • RETRY SCHEDULED • SCHEDULED • RUNNING • COMPLETED • BROKEN • FAILED • REMOTE • SUCCEEDED • CHAIN_STALLED
JOB_NEXT_RUN_DATE	VARCHAR2(64)		Next time the job will run
ERROR_NUMBER	NUMBER		Error number if the capture process was terminated
ERROR_MESSAGE	VARCHAR2(4000)		Error message if the capture process was terminated

7.168 DBA_XSTREAM_SPLIT_MERGE_HIST

DBA_XSTREAM_SPLIT_MERGE_HIST displays information about past XStream automatic split and merge operations.

Column	Datatype	NULL	Description
ORIGINAL_CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the original capture process
CLONED_CAPTURE_NAME	VARCHAR2(128)		Name of the cloned capture process
ORIGINAL_QUEUE_OWNER	VARCHAR2(128)		Owner of the queue used by the original capture process
ORIGINAL_QUEUE_NAME	VARCHAR2(128)		Name of the queue used by the original capture process
CLONED_QUEUE_OWNER	VARCHAR2(128)		Owner of the queue used by the cloned capture process
CLONED_QUEUE_NAME	VARCHAR2(128)		Name of the queue used by the cloned capture process
ORIGINAL_CAPTURE_STATUS	VARCHAR2(8)		Status of the original capture process: • DISABLED • ENABLED • ABORTED
CLONED_CAPTURE_STATUS	VARCHAR2(8)		Status of the cloned capture process: • DISABLED • ENABLED • ABORTED
ORIGINAL_XSTREAM_NAME	VARCHAR2(128)		Name of the original XStream component that receives database changes directly from the original capture process. The component is either a progagation or a local apply process.
CLONED_XSTREAM_NAME	VARCHAR2(128)		Name of the cloned XStream component that receives database changes directly from the cloned capture process. The component is either a progagation or a local apply process.

Column	Datatype	NULL	Description
XSTREAM_TYPE	VARCHAR2(11)		Type of the component in ORIGINAL_XSTREAM_NAME and CLONED_XSTREAM_NAME: • PROPAGATION • APPLY
RECOVERABLE_SCRIPT_ID	RAW(16)		Unique ID of the script to split or merge operation
SCRIPT_STATUS	VARCHAR2(12)		Status of the recoverable script: • GENERATING • NOT EXECUTING • EXECUTING • EXECUTED • ERROR
ACTION_TYPE	VARCHAR2(7)		type of action performed by the script: • SPLIT • MERGE • MONITOR
ACTION_THRESHOLD	VARCHAR2(40)		For SPLIT actions, the threshold set by the split_threshold capture process parameter. For MERGE actions, the threshold set by the merge_threshold capture process parameter.
STATUS	VARCHAR2(16)		Status of the action: • NOTHING TO SPLIT - Not ready to split or does not need to split • ABOUT TO SPLIT • SPLITTING - A split is in progress • SPLIT DONE - A split is done • NOTHING TO MERGE - Not ready to merge • ABOUT TO MERGE • MERGING - A merge is in progress • MERGE DONE - A merge is done • ERROR - An error was returned during a split or merge • NONSPLITTABLE - The original capture is not splittable either because it is disabled, it has more than one publisher to its queue, or it has only one destination for captured messages
STATUS_UPDATE_TIME	TIMESTAMP(6)		Time when status was last updated
CREATION_TIME	TIMESTAMP(6)		Time when the action started
LAG	NUMBER		Time (in seconds) that the cloned capture process lags behind the original capture process
JOB_OWNER	VARCHAR2(128)		Owner of the job that performs the split or merge operation
JOB_NAME	VARCHAR2(128)		Name of the job that performs the split or merge operation
ERROR_NUMBER	NUMBER		Error number if the capture process was terminated
ERROR_MESSAGE	VARCHAR2(4000)		Error message if the capture process was terminated

7.169 DBA_XSTREAM_STMT_HANDLERS

DBA_XSTREAM_STMT_HANDLERS displays information about all XStream statement DML handlers in the database.

Column	Datatype	NULL	Description
HANDLER_NAME	VARCHAR2(128)	NOT NULL	Name of the statement handler
HANDLER_COMMENT	VARCHAR2(4000)		Comment of the statement handler
CREATION_TIME	TIMESTAMP(6)		Timestamp for script creation
MODIFICATION_TIME	TIMESTAMP(6)		Timestamp for script modification

7.170 DBA_XSTREAM_STMTS

DBA_XSTREAM_STMTS displays information about the statements in all XStream statement DML handlers in the database.

Column	Datatype	NULL	Description
HANDLER_NAME	VARCHAR2(128)	NOT NULL	Name of the statement handler
EXECUTION_SEQUENCE	NUMBER	NOT NULL	Execution sequence of the statement
STATEMENT	CLOB		Text of the SQL statement
CREATION_TIME	TIMESTAMP(6)		Timestamp for statement creation
MODIFICATION_TIME	TIMESTAMP(6)		Timestamp for statement modification

7.171 DBA_XSTREAM_TRANSFORMATIONS

DBA_XSTREAM_TRANSFORMATIONS displays information about all XStream transformations available on a system, in order of execution. Its columns are the same as those in ALL_XSTREAM_TRANSFORMATIONS.

> **See Also:**
>
> "ALL_XSTREAM_TRANSFORMATIONS"

7.172 DBA_XTERNAL_LOC_PARTITIONS

DBA_XTERNAL_LOC_PARTITIONS describes partition-level locations in the database. Its columns are the same as those in ALL_XTERNAL_LOC_PARTITIONS.

> **See Also:**
>
> "ALL_XTERNAL_LOC_PARTITIONS"

7.173 DBA_XTERNAL_LOC_SUBPARTITIONS

DBA_XTERNAL_LOC_SUBPARTITIONS describes subpartition-level locations in the database. Its columns are the same as those in ALL_XTERNAL_LOC_SUBPARTITIONS.

> **See Also:**
>
> "ALL_XTERNAL_LOC_SUBPARTITIONS"

7.174 DBA_XTERNAL_PART_TABLES

DBA_XTERNAL_PART_TABLES describes object-level information for partitioned external tables in the database. Its columns are the same as those in ALL_XTERNAL_PART_TABLES.

> **See Also:**
>
> "ALL_XTERNAL_PART_TABLES"

7.175 DBA_XTERNAL_TAB_PARTITIONS

DBA_XTERNAL_TAB_PARTITIONS describes partition-level information for partitioned external tables in the database. Its columns are the same as those in ALL_XTERNAL_TAB_PARTITIONS.

> **See Also:**
>
> "ALL_XTERNAL_TAB_PARTITIONS"

7.176 DBA_XTERNAL_TAB_SUBPARTITIONS

DBA_XTERNAL_TAB_SUBPARTITIONS describes subpartition-level information for partitioned external tables in the database. Its columns are the same as those in ALL_XTERNAL_TAB_SUBPARTITIONS.

> **See Also:**
>
> "ALL_XTERNAL_TAB_SUBPARTITIONS"

7.177 DBA_ZONEMAP_AUTO_ACTIONS

DBA_ZONEMAP_AUTO_ACTIONS provides information about automatic zone map tasks and executions.

Column	Datatype	NULL	Description
TASK_ID	NUMBER	NOT NULL	Zone map task identifier
MSG_ID	NUMBER	NOT NULL	Zone map message identifier
EXEC_NAME	VARCHAR2(128)		Zone map execution name
ACTION_MSG	VARCHAR2(4000)		Execution message text
TIME_STAMP	TIMESTAMP(9)		Execution timestamp

The TASK_ID, MSG_ID, and EXEC_NAME columns in this view correspond to the same columns in the DBA_ZONEMAP_AUTO_FINDINGS view. This allows you to correlate the actions in DBA_ZONEMAP_AUTO_ACTIONS with their corresponding findings in DBA_ZONEMAP_AUTO_FINDINGS.

See Also:

"DBA_ZONEMAP_AUTO_FINDINGS"

7.178 DBA_ZONEMAP_AUTO_FINDINGS

DBA_ZONEMAP_AUTO_FINDINGS provides information about automatic zone map findings.

Column	Datatype	NULL	Description
TASK_ID	NUMBER	NOT NULL	Zone map task identifier
MSG_ID	NUMBER	NOT NULL	Zone map message identifier
EXEC_NAME	VARCHAR2(128)		Zone map execution name
MESSAGE	VARCHAR2(4000)		Execution message text
TIME_STAMP	TIMESTAMP(9)		Finding timestamp
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object for which the finding was observed, typically a table name or a zone map name
FINDING_REASON	VARCHAR2(9)		Finding reason code
FINDING_TYPE	VARCHAR2(9)		Finding type. Possible values: • BLACKLIST: The table is no longer a candidate for automatic zone maps • ERROR: An error occurred • EVICT: The table does not meet automatic zone map creation criteria • OTHER Refer to the MESSAGE column for additional information about the reasoning behind the finding type.

Automatic zone map findings contain information that the database learned when performing automatic zone map executions. The database uses these findings to optimize subsequent automatic zone maps executions, which saves on execution time and resources.

The `TASK_ID`, `MSG_ID`, and `EXEC_NAME` columns in this view correspond to the same columns in the `DBA_ZONEMAP_AUTO_ACTIONS` view. This allows you to correlate the findings in `DBA_ZONEMAP_AUTO_FINDINGS` with their corresponding actions in `DBA_ZONEMAP_AUTO_ACTIONS`.

See Also:

"DBA_ZONEMAP_AUTO_ACTIONS"

7.179 DBA_ZONEMAP_MEASURES

`DBA_ZONEMAP_MEASURES` describes the measures for all the zone maps in the database. Its columns are the same as those in `ALL_ZONEMAP_MEASURES`.

Note:

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

See Also:

- "ALL_ZONEMAP_MEASURES"
- *Oracle Database Data Warehousing Guide* for more information about zone maps

7.180 DBA_ZONEMAPS

`DBA_ZONEMAPS` describes all the zone maps in the database. Its columns are the same as those in `ALL_ZONEMAPS`.

Note:

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

> **See Also:**
>
> - "ALL_ZONEMAPS"
> - *Oracle Database Data Warehousing Guide* for more information about zone maps

7.181 DBFS_CONTENT

DBFS_CONTENT displays all the path items from all available content stores in the system.

Column	Datatype	NULL	Description
STORE	VARCHAR2(256)		Name of store
MOUNT	VARCHAR2(256)		Location at which instance of store is mounted
PATHNAME	VARCHAR2(1024)		Name of path to item
PATHTYPE	VARCHAR2(32)		Type of path item (see DBMS_DBFS_CONTENT Constants - Path Name Types)
FILEDATA	BLOB		BLOB locator that can be used to access data in the path item
STD_ACCESS_TIME	TIMESTAMP(6)		Time of last access of a path name's contents
STD_ACL	VARCHAR2(1024)		Access Control List (in standard ACL syntax)
STD_CHANGE_TIME	TIMESTAMP(6)		Time of last change to the path name
STD_CHILDREN	NUMBER		Number of child directories/folders a directory/folder path has (this property should be available in providers that support the FEATURE_FOLDERS feature)
STD_CONTENT_TYPE	VARCHAR2(1024)		One or more client-supplied mime-types (in standard RFC syntax) describing the path name which is typically of TYPE_FILE. The content type is not necessarily interpreted by the store.
STD_CREATION_TIME	TIMESTAMP(6)		Time at which the item was created. Once set, this value remains the same for the lifetime of the path name.
STD_DELETED	NUMBER		Set to a nonzero number if the path name has been soft-deleted but not yet purged (see DBMS_DBFS_CONTENT Constants - Store Features)
STD_GUID	NUMBER		Store-specific unique identifier for a path name. Clients must not depend on the GUID being unique across different stores, but a given (store-name, store-specific-path name) has a stable and unique GUID for its lifetime.
STD_MODIFICATION_TIME	TIMESTAMP(6)		Time of last change to the data associated with a path name. Changes to the content of a TYPE_FILE or TYPE_REFERENCE path, the referent of the TYPE_LINK path, and addition or deletion of immediate children in a TYPE_DIRECTORY path, all constitute data changes.
STD_OWNER	VARCHAR2(32)		Client-supplied (or implicit) owner name for the path name

Column	Datatype	NULL	Description
STD_PARENT_GUID	NUMBER		Store-specific unique identifier for the parent of a path name. Clients must not depend on the GUID being unique across different stores, but a given (store-name, store-specific-path name) has a stable and unique GUID for its lifetime. The GUID of the parent of this path name (that is that std_parent_guid(pathname) == std_guid(parent(pathname))).
STD_REFERENT	VARCHAR2(1024)		Content of the symbolic link of a TYPE_LINK path, otherwise NULL. The STD_REFERENT can be an arbitrary string and must not necessarily be interpreted as path name by clients (or such interpretation should be done with great care).
OPT_HASH_TYPE	VARCHAR2(32)		Type of hash provided in the OPT_HASH_VALUE property (see DBMS_CRYPTO for possible options)
OPT_HASH_VALUE	VARCHAR2(128)		Hash value of type OPT_HASH_TYPE describing the content of the path name
OPT_LOCK_COUNT	NUMBER		Number of compatible locks placed on a path name. If different principals are allowed to place compatible (read) locks on a path, the OPT_LOCKER must specify all lockers with repeats so that lock counts can be correctly maintained.
OPT_LOCK_DATA	VARCHAR2(128)		Client-supplied user-data associated with a user-lock, uninterpreted by the store
OPT_LOCKER	VARCHAR2(128)		One or more implicit or client-specified principals that applied a user-lock on a path name
OPT_LOCK_STATUS	NUMBER		One of the (LOCK_READ_ONLY, LOCK_WRITE_ONLY, LOCK_READ_WRITE) values describing the type of lock currently applied on a path name
OPT_VERSION	NUMBER		Sequence number for linear versioning of a path name
OPT_VERSION_PATH	VARCHAR2(1024)		Version path name for hierarchical versioning of a path name
OPT_CONTENT_ID	RAW(128)		A provider-generated store-specific unique contentID in the form of a string for a file element (that may optionally not be associated with a path (see FEATURE_CONTENT_ID and FEATURE_LAZY_PATH in DBMS_DBFS_CONTENT Constants - Store Features)

See Also:

- *Oracle Database PL/SQL Packages and Types Reference* for more information about DBMS_DBFS_CONTENT Constants - Path Name Types and DBMS_DBFS_CONTENT Constants - Store Features
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_CRYPTO package

7.182 DBFS_CONTENT_PROPERTIES

DBFS_CONTENT_PROPERTIES displays all the property/value pairs for all path items in all content stores in the system.

Column	Datatype	NULL	Description
STORE	VARCHAR2(256)		Name of store
MOUNT	VARCHAR2(256)		Location at which instance of store is mounted
PATHNAME	VARCHAR2(1024)		Name of path to item
PROPERTY_NAME	VARCHAR2(32)		Name of the property
PROPERTY_VALUE	VARCHAR2(1024)		Value of the property
PROPERTY_TYPE	NUMBER		PL/SQL typecode for the property value

7.183 DBMS_ALERT_INFO

DBMS_ALERT_INFO describes registered alerts.

Column	Datatype	NULL	Description
NAME	VARCHAR2(30)	NOT NULL	Name of the alert
SID	VARCHAR2(30)	NOT NULL	Session ID of a session waiting for this alert
CHANGED	VARCHAR2(1)		Boolean flag to indicate that an alert has been signaled. Y: alert signaled, N: no alert.
MESSAGE	VARCHAR2(1800)		Optional message passed by signaler

7.184 DBMS_KAFKA_APPLICATIONS

DBMS_KAFKA_APPLICATIONS describes all Oracle SQL Access to Kafka (OSAK) applications in the database.

The role OSAK_ADMIN_ROLE allows users with no administrative privileges to query this table.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the application
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the application
APPLICATION_NAME	VARCHAR2(30)	NOT NULL	Application name (also used as the Kafka group name)
TOPIC_NAME	VARCHAR2(249)	NOT NULL	Name of the Kafka topic associated with the application
NUM_VIEWS	NUMBER(38)	NOT NULL	Number of OSAK views for the application
NUM_PARTITIONS	NUMBER(38)	NOT NULL	Number of Kafka partitions associated with the OSAK views for the application
NUM_VIEWS_REQUESTED	NUMBER(38)	NOT NULL	Number of OSAK views requested for the application

Column	Datatype	NULL	Description
APPLICATION_TYPE	VARCHAR2(30)	NOT NULL	Type of application: • LOAD • SEEKABLE • STREAMING
OPTIONS	BLOB	NOT NULL	User-supplied options (excluding AVRO-related schemas)
AVRO_SCHEMA	BLOB		User-supplied AVRO schema for the Kafka topic value data
KEY_AVRO_SCHEMA	BLOB		Reserved for future use
EXT_TABLE_NAME	VARCHAR2(128)		Name of the external table created for the application
EXT_TABLE_SCHEMA	VARCHAR2(128)		Schema of the external table created for the application
PARTITION_TABLE_NAME	VARCHAR2(128)		Name of the PARTITIONS table created for the application
PARTITION_TABLE_SCHEMA	VARCHAR2(128)		Schema of the PARTITIONS table created for the application
PARTITION_VIEW_NAME	VARCHAR2(128)		Name of the PARTITIONS view created for the application
PARTITION_VIEW_SCHEMA	VARCHAR2(128)		Schema of the PARTITIONS view created for the application

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "DBA_KAFKA_APPLICATIONS"
- "USER_KAFKA_APPLICATIONS"

7.185 DBMS_KAFKA_CLUSTERS

DBMS_KAFKA_CLUSTERS describes all registered Oracle SQL Access to Kafka (OSAK) clusters in the database.

The role OSAK_ADMIN_ROLE allows users with no administrative privileges to query this table.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cluster The value of this column is always SYS.
CLUSTER_ID	VARCHAR2(40)	NOT NULL	System-generated unique cluster ID

Column	Datatype	NULL	Description
STATE	NUMBER(38)	NOT NULL	Current state of the cluster: • 0 - CONNECTED • 1 - MAINTENANCE • 2 - BROKEN • 3 - DEREGISTERED
CLUSTER_NAME	VARCHAR2(30)	NOT NULL	User-supplied name of the cluster
BOOTSTRAP_SERVERS	VARCHAR2(4000)	NOT NULL	Comma-separated list of bootstrap servers for the cluster Each bootstrap server is represented in the following form: *hostname*:*port*
CLUSTER_ACCESS_DIRECTORY	VARCHAR2(128)	NOT NULL	Name of the directory object associated with the cluster Users with READ access to this directory object are allowed to access the cluster.
KAFKA_PROVIDER	VARCHAR2(128)	NOT NULL	Provider of the Kafka cluster software: • APACHE - Apache Kafka • OSS - Oracle Cloud Infrastructure Streaming Service
CREDENTIAL_NAME	VARCHAR2(128)		If KAFKA_PROVIDER = OSS, the name of the database credential for the Oracle Cloud Infrastructure Streaming Service connection
CREDENTIAL_SCHEMA	VARCHAR2(128)		If KAFKA_PROVIDER = OSS, the schema of CREDENTIAL_NAME
CLUSTER_CONFIG_DIRECTORY	VARCHAR2(128)		If KAFKA_PROVIDER = APACHE, the directory object that references the operating system directory containing the osakafka.properties file for the cluster
CLUSTER_DESCRIPTION	VARCHAR2(4000)		Optional user-supplied description of the Oracle SQL access to the cluster
CONNECTION_TS	TIMESTAMP(6)		Timestamp of the last known successful connection to the cluster The value of this column is NULL if a disconnect occurred or if there has never been a connection to the cluster.
OPTIONS	BLOB		Optional user-supplied options for the cluster

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "DBA_KAFKA_CLUSTERS"
- "USER_KAFKA_CLUSTERS"

7.186 DBMS_KAFKA_LOAD_METRICS

DBMS_KAFKA_LOAD_METRICS displays metrics for DBMS_KAFKA.EXECUTE_LOAD_APP operations on all tables in the database.

The role OSAK_ADMIN_ROLE allows users with no administrative privileges to query this table.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table into which the Kafka data was loaded (TARGET_TABLE)
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the EXECUTE_LOAD_APP operation
APPLICATION_NAME	VARCHAR2(30)		Application name (also used as the Kafka group name)
TARGET_TABLE	VARCHAR2(128)	NOT NULL	Name of the table into which the Kafka data was loaded
TARGET_TABLE_SCHEMA	VARCHAR2(128)	NOT NULL	Schema of the table into which the Kafka data was loaded
INSERTED_ROWS	NUMBER(38)		Total number of rows inserted into the table by the load operation
KAFKA_RECORDS	NUMBER(38)		Total number of Kafka records fetched for the load operation
STARTED_TIME	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the Kafka data started being loaded into the table
FINISHED_TIME	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the Kafka data finished being loaded into the table

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "DBA_KAFKA_LOAD_METRICS"
- "USER_KAFKA_LOAD_METRICS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_KAFKA.EXECUTE_LOAD_APP procedure

7.187 DBMS_KAFKA_MESSAGES

DBMS_KAFKA_MESSAGES displays messages logged by all Oracle SQL Access to Kafka (OSAK) applications in the database.

The role OSAK_ADMIN_ROLE allows users with no administrative privileges to query this table.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the application
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the application
CLUSTER_NAME	VARCHAR2(30)	NOT NULL	Name of the OSAK cluster associated with the application
APPLICATION_NAME	VARCHAR2(30)		Application name (also used as the Kafka group name)
VIEW_NAME	VARCHAR2(128)		Name of the view associated with the application
VIEW_SCHEMA	VARCHAR2(128)		Schema of the view associated with the application
MESSAGE_TYPE	VARCHAR2(20)		Message type
MESSAGE_TS	TIMESTAMP(6)		Timestamp for when the message was logged
MESSAGE	VARCHAR2(4000)		Message text

Note:

This view is available starting with Oracle Database 23ai.

See Also:

"USER_KAFKA_MESSAGES"

7.188 DBMS_KAFKA_OPS

DBMS_KAFKA_OPS describes operations for all Oracle SQL Access to Kafka (OSAK) views in the database.

The role OSAK_ADMIN_ROLE allows users with no administrative privileges to query this table.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the OSAK view
OP_KEY	VARCHAR2(30)	NOT NULL	Unique operation key (replacement for the location file)
OP_TYPE	VARCHAR2(30)	NOT NULL	Generic operation type
OP	VARCHAR2(30)	NOT NULL	Specific type of operation within OP_TYPE
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the operation
APPLICATION_NAME	VARCHAR2(30)		Name of the OSAK application associated with the operation (also used as the Kafka group name)
TOPIC_NAME	VARCHAR2(249)		Name of the Kafka topic associated with the operation
PARTITION_ID	NUMBER(38)		Partition ID of the Kafka topic associated with the operation
OFFSET	NUMBER(38)		Next offset from which an SEQ operation will start reading

Column	Datatype	NULL	Description
RELATIVE_OFFSET	NUMBER(38)		Number of offsets, including the watermark, from which an SEQ operation will start reading
WATERMARK	VARCHAR2(5)		Basis for the start read offset for an SEQ operation (WMH or WML)
START_OFFSET_EPOCH_TIME	NUMBER(38)		Timestamp (in milliseconds) that determines the next offset from which the operation will start reading This value is used by the DBMS_KAFKA.INIT_OFFSET_TS and DBMS_KAFKA.SEEK_OFFSET_TS procedures.
END_OFFSET_EPOCH_TIME	NUMBER(38)		Timestamp (in milliseconds) that determines the end offset at which the operation will stop reading This value is used by the DBMS_KAFKA.SEEK_OFFSET_TS procedure.
OPTIONS	BLOB		Options associated with the operation

Note:

This view is available starting with Oracle Database 23ai.

See Also:

- "DBA_KAFKA_OPS"
- "USER_KAFKA_OPS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_KAFKA.INIT_OFFSET_TS and DBMS_KAFKA.SEEK_OFFSET_TS procedures

7.189 DBMS_KAFKA_OPS_RESULTS

DBMS_KAFKA_OPS displays the results of operations for all Oracle SQL Access to Kafka (OSAK) views in the database.

The role OSAK_ADMIN_ROLE allows users with no administrative privileges to query this table.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of OSAK view
OP_KEY	VARCHAR2(30)		Unique operation key (replacement for the location file)
ROWS_READ	NUMBER(38)		Number of Kafka records read and returned by the operation
LAST_OFFSET	NUMBER(38)		Kafka offset of the last record read by the operation
OPTIONS	BLOB		Options associated with the operation results

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "DBA_KAFKA_OPS_RESULTS"
> - "USER_KAFKA_OPS_RESULTS"

7.190 DBMS_KAFKA_PARTITIONS

DBMS_KAFKA_PARTITIONS describes partitions for Kafka topics associated with all Oracle SQL Access to Kafka (OSAK) views in the database.

The role OSAK_ADMIN_ROLE allows users with no administrative privileges to query this table.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the OSAK view
CLUSTER_ID	VARCHAR2(40)	NOT NULL	ID of the OSAK cluster associated with the topic/partition
APPLICATION_NAME	VARCHAR2(30)	NOT NULL	Application name (also used as the Kafka group name)
TOPIC_NAME	VARCHAR2(249)	NOT NULL	Kafka topic name associated with the topic/partition
PARTITION_ID	NUMBER(38)	NOT NULL	Partition ID of the Kafka topic
VIEW_ID	NUMBER(38)	NOT NULL	ID of the OSAK view associated with the topic/partition
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the OSAK view associated with the topic/partition
VIEW_SCHEMA	VARCHAR2(128)	NOT NULL	Schema of the OSAK view associated with the topic/partition
TEMP_TABLE_NAME	VARCHAR2(128)		Name of the OSAK global temporary table associated with the topic/partition The value of this column is null if the application type is LOAD, that is, if the application was created using the DBMS_KAFKA.CREATE_LOAD_APP procedure. The application type is displayed in the APPLICATION_TYPE column of the DBMS_KAFKA_APPLICATIONS view.
TEMP_TABLE_SCHEMA	VARCHAR2(128)		Schema of the OSAK global temporary table associated with the topic/partition The value of this column is null if the application type is LOAD, that is, if the application was created using the DBMS_KAFKA.CREATE_LOAD_APP procedure. The application type is displayed in the APPLICATION_TYPE column of the DBMS_KAFKA_APPLICATIONS view.
OPTIONS	BLOB		Options associated with the partition

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "DBA_KAFKA_PARTITIONS"
> - "USER_KAFKA_PARTITIONS"

7.191 DBMS_KAFKA_SEC_ALLOWED_PROPERTIES

`DBMS_KAFKA_SEC_ALLOWED_PROPERTIES` displays valid Oracle SQL Access to Kafka (OSAK) security properties.

`DBMS_KAFKA_SEC_ALLOWED_PROPERTIES` is a system table that is created and populated during database installation. It displays the properties that are allowed in the `osakafka.properties` file, which contains security configuration properties as required by the `librdkafka` library.

Immediately after installation, `DBMS_KAFKA_SEC_ALLOWED_PROPERTIES` displays the initial Oracle SQL Access to Kafka (OSAK) security properties listed in Table 7-1. Subsequently, a user with the role `OSAK_ADMIN_ROLE` can view `DBMS_KAFKA_SEC_ALLOWED_PROPERTIES` and add additional properties to this table, as required or suggested by Oracle Support. Only the properties displayed in the `DBMS_KAFKA_SEC_ALLOWED_PROPERTIES` table are read from the `osakafka.properties` file.

Column	Datatype	NULL	Description
PROPERTY_NAME	VARCHAR2(200)	NOT NULL	Name of the security property
DESCRIPTION	VARCHAR2(4000)		Description of the security property

Table 7-1 Initial Oracle SQL Access to Kafka (OSAK) Security Properties

Property Name	Description
debug	Enables `rdkafka` client debug output. The debug information is logged in Oracle trace files. The only allowed value is `all`.
max.partition.fetch.bytes	Maximum number of bytes a Kafka server can return in a poll of a single partition. This is a positive integer value. Oracle Cloud Infrastructure (OCI) Streaming service Kafka recommends limiting the request size to 1 MB per partition.
osak.kgmps.max.message.size	Maximum number of bytes a Kafka client can fetch in a poll of a single partition. This is a positive integer value with a default of 1 MB. This parameter, along with `max.partition.fetch.bytes`, allows for the retrieval of single Kafka records larger the 1 MB.
sasl.kerberos.ccname	File name of the Kerberos credentials (ticket) cache (`KRB5CCNAME`) of the Kafka cluster
sasl.kerberos.config	File name of the Kerberos configuration file (`krb5.conf`) of the Kafka cluster
sasl.kerberos.principal	Kafka client Kerberos principal name

Table 7-1 (Cont.) Initial Oracle SQL Access to Kafka (OSAK) Security Properties

Property Name	Description
`sasl.kerberos.service.name`	Primary name of the Kerberos principal, as specified in the Kafka Broker JAAS configuration file For example: The format of a typical Kerberos V5 principal is: *primary*/*instance*@*REALM*. Therefore, if the following is specified in the Kafka Broker JAAS configuration file: `principal="kafka/example.hostname.com@EXAMPLEREALM.COM"` Then the value of `sasl.kerberos.service.name` will be `kafka`.
`sasl.mechanism`	Simple Authentication and Security Layer (SASL) mechanism to use for authentication. This is an alias for the `sasl.mechanisms` property. The allowed values are `GSSAPI`, `PLAIN`, `SCRAM-SHA-256`, and `SCRAM-SHA-512`. Only one value is allowed. The default value is `GSSAPI`.
`sasl.mechanisms`	SASL mechanism to use for authentication. The allowed values are `GSSAPI`, `PLAIN`, `SCRAM-SHA-256`, and `SCRAM-SHA-512`. Only one value is allowed. The default value is `GSSAPI`.
`sasl.username`	User name for SASL authentication
`security.protocol`	Protocol used to communicate with Kafka brokers. The allowed values are `plaintext`, `ssl`, `sasl_plaintext`, and `sasl_ssl`. Only one value is allowed.
`ssl.ca.location`	File name of the Certificate Authority (CA) file for verifying the Kafka broker key
`ssl.certificate.location`	File name of the Kafka client certificate in Privacy-Enhanced Mail (PEM) format
`ssl.endpoint.identification.algorithm`	Endpoint identification algorithm to validate the Kafka broker host name using a Kafka broker certificate. The allowed values are `https` and `none`. The default value is `none`.
`ssl.key.location`	File name of the Kafka client private key

Note:

This view is available starting with Oracle Database 23ai.

Oracle Database Utilities for more information about the `osakafka.properties` file

7.192 DBMS_LOCK_ALLOCATED

`DBMS_LOCK_ALLOCATED` describes user-allocated locks.

Column	Datatype	NULL	Description
`NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the lock
`LOCKID`	`NUMBER(38)`		Lock identifier number

Column	Datatype	NULL	Description
EXPIRATION	DATE		Planned lock expiration date (updates whenever the allocation procedure is run)

7.193 DBMS_METADATA_PARSE_ITEMS

DBMS_METADATA_PARSE_ITEMS documents the valid parse items.

Column	Datatype	NULL	Description
OBJECT_TYPE	VARCHAR2(128)	NOT NULL	Object type name
PARSE_ITEM	VARCHAR2(124)		Parse item name
ALTER_XML	VARCHAR2(1)		Y: Can be used when generating ALTER_XML document
FETCH_XML_CLOB	VARCHAR2(1)		Y: Can be returned by FETCH_XML_CLOB
CONVERT	VARCHAR2(1)		Y: Can be returned by CONVERT or FETCH_DDL
DESCRIPTION	VARCHAR2(4000)		Description of the parse item

See Also:

- "DBMS_METADATA_TRANSFORM_PARAMS"
- "DBMS_METADATA_TRANSFORMS"

7.194 DBMS_METADATA_TRANSFORM_PARAMS

DBMS_METADATA_TRANSFORM_PARAMS documents the valid transform parameters for each transform.

Column	Datatype	NULL	Description
OBJECT_TYPE	VARCHAR2(128)	NOT NULL	Object type name
TRANSFORM	VARCHAR2(128)	NOT NULL	Transform name
PARAM	VARCHAR2(128)	NOT NULL	Parameter name
DATATYPE	VARCHAR2(11)		BOOLEAN, TEXT, NUMBER or UNSPECIFIED
DEFAULT_VAL	VARCHAR2(2000)		Default value of the transform parameter
CLIENT	VARCHAR2(1)		Indicates whether the transform parameter is available to the Data Pump client (Y) or not (N)
API	VARCHAR2(1)		Indicates whether the transform parameter is available to the Data Pump API (Y) or not (N)
DESCRIPTION	VARCHAR2(4000)		Description of the transform parameter

> **See Also:**
>
> - "DBMS_METADATA_PARSE_ITEMS"
> - "DBMS_METADATA_TRANSFORMS"

7.195 DBMS_METADATA_TRANSFORMS

DBMS_METADATA_TRANSFORMS documents the valid Oracle-supplied transforms.

Column	Datatype	NULL	Description
OBJECT_TYPE	VARCHAR2(128)	NOT NULL	Object type name
TRANSFORM	VARCHAR2(128)	NOT NULL	Transform name
INPUT_TYPE	VARCHAR2(24)		Type of input document
OUTPUT_TYPE	VARCHAR2(24)		Type of output document
DESCRIPTION	VARCHAR2(71)		Description of the transform

> **See Also:**
>
> - "DBMS_METADATA_PARSE_ITEMS"
> - "DBMS_METADATA_TRANSFORM_PARAMS"

7.196 DEPTREE

This view, created by utldtree.sql, contains information on the object dependency tree.

For user SYS, this view displays shared cursors (and only shared cursors) that depend on the object. For all other users, it displays objects other than shared cursors. Other users can access SYS.DEPTREE for information on shared cursors.

Column	Datatype	NULL	Description
NESTED_LEVEL	NUMBER		Nesting level in the dependency tree
TYPE	VARCHAR2(23)		Object type
SCHEMA	VARCHAR2(128)		Object schema
NAME	VARCHAR2(1002)		Object name
SEQ#	NUMBER		Sequence number in the dependency tree. Used for ordering queries. **See Also:** "IDEPTREE"

7.197 DICT

DICT is a synonym for DICTIONARY.

> **See Also:**
>
> "DICTIONARY"

7.198 DICT_COLUMNS

DICT_COLUMNS contains descriptions of columns in data dictionary tables and views.

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Name of the object that contains the column
COLUMN_NAME	VARCHAR2(128)		Name of the column
COMMENTS	VARCHAR2(4000)		Text comment on the column

7.199 DICTIONARY

DICTIONARY contains descriptions of data dictionary tables and views.

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Name of the object
COMMENTS	VARCHAR2(4000)		Text comment on the object

7.200 DICTIONARY_CREDENTIALS_ENCRYPT

DICTIONARY_CREDENTIALS_ENCRYPT indicates whether encryption of dictionary credentials is enforced or not. You can encrypt sensitive credential information, such as passwords that are stored in the data dictionary.

Column	Datatype	NULL	Description
ENFORCEMENT	VARCHAR2(8)		Enforcement status for encryption of dictionary credentials. Possible values: • ENABLED: Encryption of dictionary credentials is enforced • DISABLED: Encryption of dictionary credentials is not enforced

> **See Also:**
>
> *Oracle Database Security Guide* for information about encrypting sensitive credential information in the data dictionary

7.201 DM_USER_MODELS

`DM_USER_MODELS` displays information about the models in the user's schema.

Column	Datatype	NULL	Description
`NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the model
`FUNCTION_NAME`	`VARCHAR2(30)`		Model function: • `association` - Association is a descriptive mining function. An association model identifies relationships and the probability of their occurrence within a data set. • `attribute_importance` - Attribute Importance is a predictive mining function. An attribute importance model identifies the relative importance of an attribute in predicting a given outcome. • `classification` - Classification is a predictive mining function. A classification model uses historical data to predict new discrete or categorical data. The `classification` function can also be used for anomaly detection. In this case, the SVM algorithm with a null target is used (One-Class SVM). • `clustering` - Clustering is a descriptive mining function. A clustering model identifies natural groupings within a data set. • `feature_extraction` - Feature Extraction is a descriptive mining function. A feature extraction model creates an optimized data set on which to base a model. • `regression` - Regression is a predictive mining function. A regression model uses historical data to predict new continuous, numeric data.

Column	Datatype	NULL	Description
ALGORITHM_NAME	VARCHAR2(30)		Algorithm used by the model: • algo_name - Setting that specifies the algorithm used by the model. • asso_max_rule_length - Setting that specifies the maximum length of a rule used by an association model. • asso_min_confidence - Setting that specifies the minimum confidence for an association model. • asso_min_support - Setting that specifies the minimum support for an association model. • clas_cost_table_name - Setting that specifies the name of the cost matrix table for a classification model. • clas_priors_table_name - Setting that specifies the name of the prior probability table for NB and ABN models. Decision Tree is the only classification algorithm that does not use priors. For SVM classification models, this setting specifies the name of a table of weights. • clus_num_clusters - Setting that specifies the number of clusters for a clustering model. • feat_num_features - Setting that specifies the number of features for a feature selection model.
CREATION_DATE	DATE	NOT NULL	Date on which the model was created
BUILD_DURATION	NUMBER		Duration of the model build process
TARGET_ATTRIBUTE	VARCHAR2(128)		Attribute designated as the target of a classification model
MODEL_SIZE	NUMBER		Size of the model (in megabytes)

7.202 DOCUMENT_LINKS

DOCUMENT_LINKS provides system information about Oracle XML DB document links in Oracle XML DB Repository documents.

When an XML document that includes XLink or XInclude links is added to the repository, these links can be mapped to document links, which are tracked using view DOCUMENT_LINKS.

Column	Datatype	NULL	Description
SOURCE_ID	RAW(16)		The source resource OID
TARGET_ID	RAW(16)		The target resource OID
TARGET_PATH	VARCHAR2(4000)		This column is always NULL. It is reserved for future use.
LINK_TYPE	VARCHAR2(8)		The document link type: Hard or Weak
LINK_FORM	VARCHAR2(8)		Whether the original link was of form XLink or XInclude
SOURCE_TYPE	VARCHAR2(17)		Whether the link is contained in Resource Content or Resource Metadata

> **Note:**
>
> Oracle XML DB Repository is deprecated in Oracle Database 23ai. Oracle recommends that you replace any functionality used in Oracle XML DB Repository with alternative technologies.

> **See Also:**
>
> *Oracle XML DB Developer's Guide* for information about using this view

7.203 ERROR_SIZE

`ERROR_SIZE` is accessed to create `DBA_OBJECT_SIZE` and `USER_OBJECT_SIZE`.

> **See Also:**
>
> - "DBA_OBJECT_SIZE"
> - "USER_OBJECT_SIZE"

7.204 EXCEPTIONS

`EXCEPTIONS` contains information on violations of integrity constraints. This table is created by the `utlexcpt.sql` script.

Column	Datatype	NULL	Description
`ROW_ID`	`ROWID`		Row that caused the violation
`OWNER`	`VARCHAR2(128)`		Owner of the table
`TABLE_NAME`	`VARCHAR2(128)`		Name of the table
`CONSTRAINT`	`VARCHAR2(128)`		Integrity constraint that was violated

7.205 FLASHBACK_TRANSACTION_QUERY

`FLASHBACK_TRANSACTION_QUERY` displays information about all flashback transaction queries in the database.

The database must have at least minimal supplemental logging enabled to avoid unpredictable behavior.

Column	Datatype	NULL	Description
`XID`	`RAW(8)`		Transaction identifier
`START_SCN`	`NUMBER`		Transaction start system change number (SCN)

Column	Datatype	NULL	Description
START_TIMESTAMP	DATE		Transaction start timestamp
COMMIT_SCN	NUMBER		Transaction commit system change number; NULL for active transactions
COMMIT_TIMESTAMP	DATE		Transaction commit timestamp; NULL for active transactions
LOGON_USER	VARCHAR2(128)		Logon user for the transaction
UNDO_CHANGE#	NUMBER		Undo system change number (1 or higher)
OPERATION	VARCHAR2(32)		Forward-going DML operation performed by the transaction: • D - Delete • I - Insert • U - Update • B • UNKNOWN
TABLE_NAME	VARCHAR2(256)		Name of the table to which the DML applies
TABLE_OWNER	VARCHAR2(386)		Owner of the table to which the DML applies
ROW_ID	VARCHAR2(19)		Rowid of the row that was modified by the DML
UNDO_SQL	VARCHAR2(4000)		SQL to undo the DML indicated by OPERATION

See Also:

Oracle Database Utilities for information on how to enable minimal supplemental logging

7.206 GLOBAL_CONTEXT

GLOBAL_CONTEXT displays the values of global context attributes, which are accessible for the current session, based on the CLIENT_IDENTIFIER value.

GLOBAL_CONTEXT is similar to SESSION_CONTEXT, which lists the values of session (or local) context attributes set under the current session.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(31)		Namespace of the globally accessible context
ATTRIBUTE	VARCHAR2(31)		Attribute of the globally accessible context
VALUE	VARCHAR2(4000)		Value of the attribute of the globally accessible context
USERNAME	VARCHAR2(31)		Username for which globally accessible context value is applicable
CLIENT_IDENTIFIER	VARCHAR2(65)		Client identifier of the globally accessible context

> **See Also:**
>
> - "SESSION_CONTEXT"
> - *Oracle Database Security Guide* for more information about using global application contexts

7.207 GLOBAL_NAME

GLOBAL_NAME contains one row that displays the global name of the current database.

Column	Datatype	NULL	Description
GLOBAL_NAME	VARCHAR2(4000)		Global name of the database

7.208 HS_ALL_CAPS

HS_ALL_CAPS contains information about all of the capabilities (that is, features) associated with non-Oracle (FDS) data stores.

Column	Datatype	NULL	Description
CAP_NUMBER	NUMBER		Capability number
CONTEXT	NUMBER		Context in which this capability is applicable
TRANSLATION	VARCHAR2(255)		Valid for functions; contains translation to FDS dialect
ADDITIONAL_INFO	NUMBER		Flag for internal use
FDS_CLASS_NAME	VARCHAR2(30)		Name of the FDS Class
FDS_INST_NAME	VARCHAR2(30)		Name of the FDS instance

7.209 HS_ALL_DD

HS_ALL_DD contains data dictionary information about non-Oracle (FDS) data stores.

Column	Datatype	NULL	Description
DD_TABLE_NAME	VARCHAR2(128)		Data dictionary table name
TRANSLATION_TYPE	CHAR(1)		T = Translation, M = Mimic
TRANSLATION_TEXT	VARCHAR2(4000)		SQL statement containing the mapping
FDS_CLASS_NAME	VARCHAR2(30)		Name of the FDS Class
FDS_INST_NAME	VARCHAR2(30)		Name of the FDS instance
DD_TABLE_DESC	VARCHAR2(255)		Description of the Oracle data dictionary table

7.210 HS_ALL_INITS

HS_ALL_INITS contains initialization parameter information about non-Oracle (FDS) data stores.

Column	Datatype	NULL	Description
INIT_VALUE_NAME	VARCHAR2(64)		Name of the initialization parameter
INIT_VALUE	VARCHAR2(255)		Value of the initialization parameter
INIT_VALUE_TYPE	VARCHAR2(1)		Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable
FDS_CLASS_NAME	VARCHAR2(30)		Name of the FDS Class
FDS_INST_NAME	VARCHAR2(30)		Name of the FDS instance

7.211 HS_BASE_CAPS

HS_BASE_CAPS contains information about base capability (that is, base features) of the non-Oracle (FDS) data store.

Column	Datatype	NULL	Description
CAP_NUMBER	NUMBER	NOT NULL	Capability number
CAP_DESCRIPTION	VARCHAR2(255)		Description of the capability

7.212 HS_BASE_DD

HS_BASE_DD displays information from the base data dictionary translation table.

Column	Datatype	NULL	Description
DD_TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the Oracle data dictionary table
DD_TABLE_DESC	VARCHAR2(255)		Description of the Oracle data dictionary table
DD_TABLE_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.213 HS_CLASS_CAPS

HS_CLASS_CAPS contains information about the class-specific (driver) capabilities belonging to the non-Oracle (FDS) data store.

Column	Datatype	NULL	Description
CAP_NUMBER	NUMBER	NOT NULL	Capability number
CAP_DESCRIPTION	VARCHAR2(255)		Capability description
CONTEXT	NUMBER		Flag indicating the context in which the capability is enabled
TRANSLATION	VARCHAR2(255)		Valid for functions; contains translation to FDS dialect
ADDITIONAL_INFO	NUMBER		Additional flags for internal use
FDS_CLASS_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS Class
FDS_CLASS_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.214 HS_CLASS_DD

HS_CLASS_DD displays information from the non-Oracle data store (FDS) class-specific data dictionary translations.

Column	Datatype	NULL	Description
DD_TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the Oracle data dictionary table
DD_TABLE_DESC	VARCHAR2(255)		Description of the Oracle data dictionary table
TRANSLATION_TYPE	CHAR(1)	NOT NULL	T = Translation, M = Mimic
TRANSLATION_TEXT	VARCHAR2(4000)		SQL statement containing the mapping
FDS_CLASS_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS Class
DD_TABLE_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)
FDS_CLASS_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.215 HS_CLASS_INIT

HS_CLASS_INIT displays information about the non-Oracle (FDS) class-specific initialization parameters.

Column	Datatype	NULL	Description
INIT_VALUE_NAME	VARCHAR2(64)	NOT NULL	Name of the initialization parameter
INIT_VALUE	VARCHAR2(255)	NOT NULL	Value of the initialization parameter
INIT_VALUE_TYPE	VARCHAR2(1)	NOT NULL	Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable
FDS_CLASS_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS Class
FDS_CLASS_INIT_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)
FDS_CLASS_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.216 HS_FDS_CLASS

HS_FDS_CLASS contains information about legal non-Oracle (FDS) classes.

Column	Datatype	NULL	Description
FDS_CLASS_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS class (for example, ODBC, DB2)
FDS_CLASS _COMMENTS	VARCHAR2(255)		Text description of the non-Oracle class
FDS_CLASS_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.217 HS_FDS_INST

HS_FDS_INST contains information about non-Oracle (FDS) instances.

Column	Datatype	NULL	Description
FDS_INST_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS instance
FDS_INST_COMMENTS	VARCHAR2(255)		Text description of the non-Oracle instance
FDS_CLASS_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS class
FDS_INST_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)
FDS_CLASS_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.218 HS_INST_CAPS

HS_INST_CAPS contains information about instance-specific capabilities (that is, features).

Column	Datatype	NULL	Description
CAP_NUMBER	NUMBER	NOT NULL	Capability number
CAP_DESCRIPTION	VARCHAR2(255)		Capability description
CONTEXT	NUMBER		Context in which this capability is applicable
TRANSLATION	VARCHAR2(255)		Valid for functions; contains translation to FDS dialect
ADDITIONAL_INFO	NUMBER		Additional flags for internal use
FDS_CLASS_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS class (for example, ODBC, DB2)
FDS_INST_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS instance
FDS_CLASS_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)
FDS_INST_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.219 HS_INST_DD

HS_INST_DD displays information from the non-Oracle (FDS) instance-specific data dictionary translations.

Column	Datatype	NULL	Description
DD_TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the Oracle data dictionary table
DD_TABLE_DESC	VARCHAR2(255)		Description of the Oracle data dictionary table
TRANSLATION_TYPE	CHAR(1)	NOT NULL	T = Translation, M = Mimic
TRANSLATION_TEXT	VARCHAR2(4000)		SQL statement containing the mapping
FDS_CLASS_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS class (for example, ODBC, DB2)
FDS_INST_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS instance
DD_TABLE_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

Column	Datatype	NULL	Description
FDS_CLASS_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)
FDS_INST_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.220 HS_INST_INIT

HS_INST_INIT contains information about the non-Oracle (FDS) instance-specific initialization parameters.

Column	Datatype	NULL	Description
INIT_VALUE_NAME	VARCHAR2(64)	NOT NULL	Name of the initialization parameter
INIT_VALUE	VARCHAR2(255)	NOT NULL	Value of the initialization parameter
INIT_VALUE_TYPE	VARCHAR2(1)	NOT NULL	Environment variable (T or F). T means this is an environment variable; F means do not set as an environment variable
FDS_CLASS_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS class (for example: ODBC, DB2)
FDS_INST_NAME	VARCHAR2(30)	NOT NULL	Name of the FDS instance
FDS_INST_INIT_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)
FDS_CLASS_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)
FDS_INST_ID	NUMBER	NOT NULL	Sequence: a counter that is incremented for every row inserted (used internally)

7.221 IDEPTREE

This view, created by utldtree.sql, lists the indented dependency tree. It is a pre-sorted, pretty-print version of DEPTREE.

Column	Datatype	NULL	Description
NESTED_LEVEL	NUMBER		Nesting level in the dependency tree
TYPE	VARCHAR2(23)		Object type
OWNER	VARCHAR2(28)		Object schema
NAME	VARCHAR2(1002)		Object name

7.222 IND

IND is a synonym for USER_INDEXES.

> **See Also:**
>
> "USER_INDEXES"

7.223 INDEX_HISTOGRAM

INDEX_HISTOGRAM contains information from the ANALYZE INDEX ... VALIDATE STRUCTURE statement.

> **Note:**
>
> The ANALYZE INDEX ... VALIDATE STRUCTURE OFFLINE statement must be used to collect statistics.

Column	Datatype	NULL	Description
REPEAT_COUNT	NUMBER		Number of times that one or more index keys is repeated in the table
KEYS_WITH_REPEAT_COUNT	NUMBER		Number of index keys that are repeated that many times

7.224 INDEX_STATS

INDEX_STATS stores information from the last ANALYZE INDEX ... VALIDATE STRUCTURE statement.

> **Note:**
>
> The ANALYZE INDEX ... VALIDATE STRUCTURE OFFLINE statement must be used in order to collect statistics

Column	Datatype	NULL	Description
HEIGHT	NUMBER		Height of the B-Tree
BLOCKS	NUMBER	NOT NULL	Blocks allocated to the segment
NAME	VARCHAR2(128)	NOT NULL	Name of the index
PARTITION_NAME	VARCHAR2(128)		Name of the partition of the index which was analyzed. If the index is not partitioned, NULL is returned.
LF_ROWS	NUMBER		Number of leaf rows (values in the index)
LF_BLKS	NUMBER		Number of leaf blocks in the B-Tree
LF_ROWS_LEN	NUMBER		Sum of the lengths of all the leaf rows
LF_BLK_LEN	NUMBER		Usable space in a leaf block
BR_ROWS	NUMBER		Number of branch rows in the B-Tree
BR_BLKS	NUMBER		Number of branch blocks in the B-Tree
BR_ROWS_LEN	NUMBER		Sum of the lengths of all the branch blocks in the B-Tree
BR_BLK_LEN	NUMBER		Usable space in a branch block
DEL_LF_ROWS	NUMBER		Number of deleted leaf rows in the index

Column	Datatype	NULL	Description
DEL_LF_ROWS_LEN	NUMBER		Total length of all deleted rows in the index
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index (may include rows that have been deleted)
MOST_REPEATED_KEY	NUMBER		How many times the most repeated key is repeated (may include rows that have been deleted)
BTREE_SPACE	NUMBER		Total space currently allocated in the B-Tree
USED_SPACE	NUMBER		Total space that is currently being used in the B-Tree
PCT_USED	NUMBER		Percent of space allocated in the B-Tree that is being used
ROWS_PER_KEY	NUMBER		Average number of rows per distinct key (this figure is calculated without consideration of deleted rows)
BLKS_GETS_PER_ACCESS	NUMBER		Expected number of consistent mode block reads per row, assuming that a randomly chosen row is accessed using the index. Used to calculate the number of consistent reads that will occur during an index scan.
PRE_ROWS	NUMBER		Number of prefix rows (values in the index)
PRE_ROWS_LEN	NUMBER		Sum of lengths of all prefix rows
OPT_CMPR_COUNT	NUMBER		Optimal index compression length
OPT_CMPR_PCTSAVE	NUMBER		Corresponding space savings after an `ANALYZE`
DEL_LF_CMP_ROWS	NUMBER		Number of deleted rows that are within a compression unit (CU)
PRG_LF_CMP_ROWS	NUMBER		Number of purged rows that are within a CU
LF_CMP_ROWS	NUMBER		Number of rows that are in a CU or prefix compressed
LF_CMP_ROWS_LEN	NUMBER		Sum of lengths of all prefix rows and CUs
LF_UNCMP_ROWS	NUMBER		Number of rows that are neither in a CU nor prefix compressed
LF_UNCMP_ROWS_LEN	NUMBER		Sum of lengths of rows that are neither in a CU nor prefix compressed
LF_SUF_ROWS_LEN	NUMBER		Sum of lengths of suffix rows
LF_CMP_ROWS_UNCMP_LEN	NUMBER		Sum of the uncompressed lengths of rows that are in a CU or prefix compressed
LF_CMP_RECMP_COUNT	NUMBER		Sum of CU recompression counts
LF_CMP_LOCK_VEC_LEN	NUMBER		Sum of CU lock vector lengths
LF_CMP_BLKS	NUMBER		Number of blocks that have a CU or nonzero prefix column count
LF_UNCMP_BLKS	NUMBER		Number of blocks that do not have a CU and have a zero prefix column count
LF_CMP_ADVLO_BLKS	NUMBER		Number of blocks that are enabled for `COMPRESS ADVANCED LOW`
LF_CMP_ADVHI_BLKS	NUMBER		Number of blocks that are enabled for `COMPRESS ADVANCED HIGH`

7.225 LOGSTDBY_UNSUPPORTED_TABLES

LOGSTDBY_UNSUPPORTED_TABLES is a synonym for DBA_LOGSTDBY_UNSUPPORTED_TABLE.

> **See Also:**
>
> "DBA_LOGSTDBY_UNSUPPORTED_TABLE"

7.226 MAP_OBJECT

MAP_OBJECT is a global temporary table that displays the hierarchical arrangement of storage containers for objects. Each row in the table represents a level in the hierarchy.

Column	Datatype	NULL	Description
OBJECT_NAME	VARCHAR2(2000)		Name of the object
OBJECT_OWNER	VARCHAR2(2000)		Owner of the object
OBJECT_TYPE	VARCHAR2(2000)		Object type
FILE_MAP_IDX	NUMBER		File index (corresponds to FILE_MAP_IDX in V$MAP_FILE)
DEPTH	NUMBER		Element depth within the I/O stack
ELEM_IDX	NUMBER		Index corresponding to the element
CU_SIZE	NUMBER		Contiguous set of logical blocks of the file (in HKB units) that is resident contiguously on the element
STRIDE	NUMBER		Number of HKB between contiguous units (CU) in the file that are contiguous on this element. Used in RAID5 and striped files.
NUM_CU	NUMBER		Number of contiguous units that are adjacent to each other on this element that are separated by STRIDE HKB in the file. In RAID5, the number of contiguous units also include the parity stripes.
ELEM_OFFSET	NUMBER		Element offset (in HKB units)
FILE_OFFSET	NUMBER		Offset (in HKB units) from the start of the file to the first byte of the contiguous units
DATA_TYPE	VARCHAR2(2000)		Data type (DATA, PARITY, or DATA AND PARITY)
PARITY_POS	NUMBER		Position of the parity. Only for RAID5. This field is needed to distinguish the parity from the data part.
PARITY_PERIOD	NUMBER		Parity period. Only for RAID5.

7.227 NLS_DATABASE_PARAMETERS

NLS_DATABASE_PARAMETERS lists permanent NLS parameters of the database.

Column	Datatype	NULL	Description
PARAMETER	VARCHAR2(128)		Parameter name

Column	Datatype	NULL	Description
VALUE	VARCHAR2(64)		Parameter value

7.228 NLS_INSTANCE_PARAMETERS

NLS_INSTANCE_PARAMETERS lists NLS parameters of the instance.

Column	Datatype	NULL	Description
PARAMETER	VARCHAR2(30)		Parameter name
VALUE	VARCHAR2(64)		Parameter value

7.229 NLS_SESSION_PARAMETERS

NLS_SESSION_PARAMETERS lists NLS parameters of the user session.

Column	Datatype	NULL	Description
PARAMETER	VARCHAR2(30)		Parameter name
VALUE	VARCHAR2(64)		Parameter value

7.230 OBJ

OBJ is a synonym for USER_OBJECTS.

> **See Also:**
>
> "USER_OBJECTS"

7.231 PATH_VIEW

PATH_VIEW contains one row for each unique path to access a resource in Oracle XML DB Repository.

Column	Datatype	NULL	Description
PATH	VARCHAR2(1024)		An (absolute) path to repository resource RES
RES	XMLTYPE(XMLSchema "http://xmlns.oracle.com/xdb/XDBResource.xsd" Element "Resource")		The resource referred to by the PATH column
LINK	XMLTYPE		Link property
RESID	RAW(16)		Resource OID

> **Note:**
>
> Oracle XML DB Repository is deprecated in Oracle Database 23ai. Oracle recommends that you replace any functionality used in Oracle XML DB Repository with alternative technologies.

> **See Also:**
>
> *Oracle XML DB Developer's Guide* for information about using this view

7.232 PDB_ALERTS

PDB_ALERTS contains descriptions of reasons for PDB alerts.

Column	Datatype	NULL	Description
TIME	TIMESTAMP(6)	NOT NULL	Time when the violation happened
NAME	VARCHAR2(128)	NOT NULL	A name of a PDB or non-CDB to which this record applies
CAUSE_NO	NUMBER	NOT NULL	Number identifying a specific reason for a PDB alert
TYPE_NO	NUMBER	NOT NULL	Type of the violation
ERROR	NUMBER		Oracle error, if any, for this violation
LINE	NUMBER	NOT NULL	Line number for the violation message
MESSAGE	VARCHAR2(4000)	NOT NULL	Description of the violation
STATUS	NUMBER		Status of the violation
ACTION	VARCHAR2(4000)		Actions to take to resolve the violations

7.233 PDB_PLUG_IN_VIOLATIONS

PDB_PLUG_IN_VIOLATIONS displays information about incompatibilities between a PDB and the CDB to which it belongs.

This view is also used to display information generated by executing DBMS_PDB.CHECK_PLUG_COMPATIBILITY.

Column	Datatype	NULL	Description
TIME	TIMESTAMP(6)	NOT NULL	Time when a violation described by this row was discovered
NAME	VARCHAR2(128)	NOT NULL	The name of an existing PDB or a PDB intended to be created (if a row was entered as a result of running DBMS_PDB.CHECK_PLUG_COMPATIBILITY)
CAUSE	VARCHAR2(64)	NOT NULL	Attribute which was being checked
TYPE	VARCHAR2(9)	NOT NULL	ERROR or WARNING

Column	Datatype	NULL	Description
ERROR_NUMBER	NUMBER		Oracle error number, if any, encountered during a check
LINE	NUMBER	NOT NULL	Used to differentiate between violations which share a cause
MESSAGE	VARCHAR2(4000)	NOT NULL	Description of a violation
STATUS	VARCHAR2(9)		PENDING, RESOLVED, or IGNORE
ACTION	VARCHAR2(4000)		Description of an action to take to correct the violation
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_PDB package, which provides an interface for examining and manipulating data about PDBs

7.234 PLAN_TABLE

PLAN_TABLE is automatically created as a global temporary table to hold the output of an EXPLAIN PLAN statement for all users.

PLAN_TABLE is the default sample output table into which the EXPLAIN PLAN statement inserts rows describing execution plans.

While a PLAN_TABLE table is automatically set up for each user, you can use the SQL script utlxplan.sql to manually create a local PLAN_TABLE in your schema.

Column	Datatype	NULL	Description
STATEMENT_ID	VARCHAR2(30)		Value of the optional STATEMENT_ID parameter specified in the EXPLAIN PLAN statement
PLAN_ID	NUMBER		Unique identifier of a plan in the database
TIMESTAMP	DATE		Date and time when the EXPLAIN PLAN statement was generated

Column	Datatype	NULL	Description
REMARKS	VARCHAR2(4000)		Any comment (of up to 4000 bytes) you want to associate with each step of the explained plan. This column is used to indicate whether an outline or SQL Profile was used for the query. If you need to add or change a remark on any row of the PLAN_TABLE, then use the UPDATE statement to modify the rows of the PLAN_TABLE.
OPERATION	VARCHAR2(30)		Name of the internal operation performed in this step. In the first row generated for a statement, the column contains one of the following values: • DELETE STATEMENT • INSERT STATEMENT • SELECT STATEMENT • UPDATE STATEMENT
OPTIONS	VARCHAR2(255)		A variation on the operation described in the OPERATION column
OBJECT_NODE	VARCHAR2(128)		Name of the database link used to reference the object (a table name or view name). For local queries using parallel execution, this column describes the order in which output from operations is consumed.
OBJECT_OWNER	VARCHAR2(128)		Owner of the table or index
OBJECT_NAME	VARCHAR2(128)		Name of the table or index
OBJECT_ALIAS	VARCHAR2(261)		Unique alias of a table or view in a SQL statement. For indexes, it is the object alias of the underlying table.
OBJECT_INSTANCE	NUMBER(38)		Number corresponding to the ordinal position of the object as it appears in the original statement. The numbering proceeds from left to right, outer to inner with respect to the original statement text. View expansion results in unpredictable numbers.
OBJECT_TYPE	VARCHAR2(30)		Modifier that provides descriptive information about the object; for example, NON-UNIQUE for indexes
OPTIMIZER	VARCHAR2(255)		Current mode of the optimizer
SEARCH_COLUMNS	NUMBER		Not currently used
ID	NUMBER(38)		A number assigned to each step in the execution plan
PARENT_ID	NUMBER(38)		ID of the next execution step that operates on the output of the ID step
DEPTH	NUMBER(38)		Depth of the operation in the row source tree that the plan represents. The value can be used for indenting the rows in a plan table report.
POSITION	NUMBER(38)		For the first row of output, this indicates the optimizer's estimated cost of executing the statement. For the other rows, it indicates the position relative to the other children of the same parent.
COST	NUMBER(38)		Cost of the operation as estimated by the optimizer's query approach. Cost is not determined for table access operations. The value of this column does not have any particular unit of measurement; it is merely a weighted value used to compare costs of execution plans. The value of this column is a function of the CPU_COST and IO_COST columns.

Column	Datatype	NULL	Description
CARDINALITY	NUMBER(38)		Estimate by the query optimization approach of the number of rows accessed by the operation
BYTES	NUMBER(38)		Estimate by the query optimization approach of the number of bytes accessed by the operation
OTHER_TAG	VARCHAR2(255)		Describes the contents of the OTHER column: • SERIAL - Serial execution. Currently, SQL is not loaded in the OTHER column for this case. • SERIAL_FROM_REMOTE - Serial execution at a remote site. • PARALLEL_FROM_SERIAL - Serial execution. Output of step is partitioned or broadcast to parallel execution servers. • PARALLEL_TO_SERIAL - Parallel execution. Output of step is returned to serial query coordinator (QC) process. • PARALLEL_TO_PARALLEL - Parallel execution. Output of step is repartitioned to second set of parallel execution servers. • PARALLEL_COMBINED_WITH_PARENT - Parallel execution; Output of step goes to next step in same parallel process. No interprocess communication to parent. • PARALLEL_COMBINED_WITH_CHILD - Parallel execution. Input of step comes from prior step in same parallel process. No interprocess communication from child.
PARTITION_START	VARCHAR2(255)		Start partition of a range of accessed partitions: • *number* - Start partition has been identified by the SQL compiler, and its partition number is given by *number* • KEY - Start partition will be identified at run time from partitioning key values • ROW LOCATION - Start partition (same as the stop partition) will be computed at run time from the location of each record being retrieved. The record location is obtained from a user-specified ROWID or from a global index. • INVALID - Range of accessed partitions is empty
PARTITION_STOP	VARCHAR2(255)		Stop partition of a range of accessed partitions: • *number* - Stop partition has been identified by the SQL compiler, and its partition number is given by *number* • KEY - Stop partition will be identified at run time from partitioning key values • ROW LOCATION - Stop partition (same as the start partition) will be computed at run time from the location of each record being retrieved. The record location is obtained from a user-specified ROWID or from a global index. • INVALID - Range of accessed partitions is empty
PARTITION_ID	NUMBER(38)		Step that has computed the pair of values of the PARTITION_START and PARTITION_STOP columns

Column	Datatype	NULL	Description
OTHER	LONG		Other information that is specific to the execution step that a user might find useful (see the OTHER_TAG column)
OTHER_XML	CLOB		Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan • Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans
DISTRIBUTION	VARCHAR2(30)		Method used to distribute rows from producer query servers to consumer query servers
CPU_COST	NUMBER(38)		CPU cost of the operation as estimated by the query optimizer's approach. The value of this column is proportional to the number of machine cycles required for the operation. For statements that use the rule-based approach, this column is NULL.
IO_COST	NUMBER(38)		I/O cost of the operation as estimated by the query optimizer's approach. The value of this column is proportional to the number of data blocks read by the operation. For statements that use the rule-based approach, this column is NULL.
TEMP_SPACE	NUMBER(38)		Temporary space (in bytes) used by the operation as estimated by the query optimizer's approach. For statements that use the rule-based approach, or for operations that do not use any temporary space, this column is NULL.
ACCESS_PREDICATES	VARCHAR2(4000)		Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.
FILTER_PREDICATES	VARCHAR2(4000)		Predicates used to filter rows before producing them
PROJECTION	VARCHAR2(4000)		Expressions produced by the operation
TIME	NUMBER(38)		Elapsed time (in seconds) of the operation as estimated by query optimization. For statements that use the rule-based approach, this column is NULL.
QBLOCK_NAME	VARCHAR2(128)		Name of the query block (either system-generated or defined by the user with the QB_NAME hint)

7.235 PLUGGABLE_SET_CHECK

PLUGGABLE_SET_CHECK contains pluggable set checks.

Column	Datatype	NULL	Description
OBJ1_OWNER	VARCHAR2(128)		Owner of the object
OBJ1_NAME	VARCHAR2(128)		Object 1
OBJ1_SUBNAME	VARCHAR2(128)		SubObject1Name
OBJ1_TYPE	VARCHAR2(18)		Object Type
TS1_NAME	VARCHAR2(30)		Tablespace containing Object 1
OBJ2_NAME	VARCHAR2(128)		Object Name
OBJ2_SUBNAME	VARCHAR2(128)		SubObject2Name
OBJ2_TYPE	VARCHAR2(18)		Object Type
OBJ2_OWNER	VARCHAR2(128)		Object owner of second object
TS2_NAME	VARCHAR2(30)		Tablespace containing Object 1
CONSTRAINT_NAME	VARCHAR2(128)		Name of dependent constraint
REASON	VARCHAR2(86)		Reason for Pluggable check violation
MESG_ID	NUMBER		The message ID

7.236 PRODUCT_COMPONENT_VERSION

PRODUCT_COMPONENT_VERSION contains version and status information for component products.

Column	Datatype	NULL	Description
PRODUCT	VARCHAR2(129)		Product name
VERSION	VARCHAR2(129)		Version number
VERSION_FULL	VARCHAR2(258)		The version number with the new Oracle Database version scheme introduced in Oracle Database 18c. The version number is displayed only for the database component. All other components return a null value for this column.
STATUS	VARCHAR2(129)		Status of release

7.237 PROXY_USERS

PROXY_USERS describes the list of proxy users and the clients on whose behalf they can act.

Column	Datatype	NULL	Description
PROXY	VARCHAR2(128)	NOT NULL	Name of a proxy user
CLIENT	VARCHAR2(128)	NOT NULL	Name of the client user who the proxy user can act as
AUTHENTICATION	VARCHAR2(3)		Indicates whether the proxy is required to supply the client's authentication credentials (YES) or not (NO)
FLAGS	VARCHAR2(35)		Flags associated with the proxy/client pair: • PROXY MAY ACTIVATE ALL CLIENT ROLES • NO CLIENT ROLES MAY BE ACTIVATED • PROXY MAY ACTIVATE ROLE • PROXY MAY ACTIVATE ALL CLIENT ROLES • PROXY MAY NOT ACTIVATE ROLE

> **See Also:**
>
> "DBA_PROXIES" for information about all proxy connections in the database

7.238 PSTUBTBL

This table contains information on stubs generated by the PSTUB utility so that an Oracle Forms 3.0 client can call stored procedures in Oracle Database.

> **Note:**
>
> The contents of this table are intended only for use by the PSTUB utility.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Schema part of the identifier of a stored procedure
DBNAME	VARCHAR2(128)		Database link part of the identifier of a stored procedure
LUN	VARCHAR2(128)		Library unit name part of the identifier of a stored procedure
LUTYPE	VARCHAR2(3)		Type of the stored procedure
LINENO	NUMBER		Line number of the stub
LINE	VARCHAR2(1800)		Text of the stub

7.239 PUBLIC_DEPENDENCY

PUBLIC_DEPENDENCY lists dependencies to and from objects, by object number.

Column	Datatype	NULL	Description
OBJECT_ID	NUMBER	NOT NULL	Object number
REFERENCED_OBJECT_ID	NUMBER	NOT NULL	Referenced object (the parent object)

7.240 PUBLICSYN

PUBLICSYN contains information on public synonyms.

Column	Datatype	NULL	Description
SNAME	VARCHAR2(128)		Name of the synonym
CREATOR	VARCHAR2(128)		Owner of the synonym
TNAME	VARCHAR2(128)		Table of which this is a synonym
DATABASE	VARCHAR2(128)		Database in which the table resides
TABTYPE	VARCHAR2(10)		Type of table

7.241 QUEUE_PRIVILEGES

QUEUE_PRIVILEGES shows all Advanced Queuing object privileges granted to the session.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)	NOT NULL	Name of the user or role to whom access was granted
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
GRANTOR	VARCHAR2(128)	NOT NULL	Name of the user who performed the grant
ENQUEUE_PRIVILEGE	NUMBER		Permission to ENQUEUE to the queue
DEQUEUE_PRIVILEGE	NUMBER		Permission to DEQUEUE from the queue

7.242 RECYCLEBIN

RECYCLEBIN is a synonym for USER_RECYCLEBIN.

> **See Also:**
>
> "USER_RECYCLEBIN"

7.243 REDACTION_COLUMNS

REDACTION_COLUMNS describes all redacted columns in the database, giving the owner of the table or view within which the column resides, the object name, the column name, the type of redaction function, the parameters to the redaction function (if any), and an optional user-provided description of the redaction function that is performed on the column.

Column	Datatype	NULL	ullDescription
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object that is redacted
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object that is redacted
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column that is redacted
FUNCTION_TYPE	VARCHAR2(27)		Redaction function for this column
FUNCTION_PARAMETERS	VARCHAR2(1000)		Redaction function_parameters for this column
REGEXP_PATTERN	VARCHAR2(512)		Regular expression pattern to search for
REGEXP_REPLACE_STRING	VARCHAR2(4000)		Replacement string (up to 4000 characters in length) with up to 500 back-references to subexpressions in the form \n, (where n is a number from 1 to 9)
REGEXP_POSITION	NUMBER		Integer counting from 1, giving the position where the search should begin
REGEXP_OCCURRENCE	NUMBER		Either 0 (to replace all occurrences of the match), or a positive integer n (to replace the nth occurrence of the match)

Column	Datatype	NULL	ullDescription
REGEXP_MATCH_PARAMETER	VARCHAR2(10)		To change the default matching behavior, possible values are a combination of `i`, `c`, `n`, `m`, and `x`. See the documentation of the `match_parameter` in the `REGEXP_REPLACE` section of the *Oracle Database SQL Language Reference*.
COLUMN_DESCRIPTION	VARCHAR2(4000)		User-provided description of the redaction function that is performed on the column. For example, for a Social Security Number column, the description might be: "redact SSN to XXX-XX-(last 4 digits)".

> **See Also:**
>
> *Oracle Database Data Redaction Guide* for more information about Oracle Data Redaction

7.244 REDACTION_EXPRESSIONS

`REDACTION_EXPRESSIONS` shows all the Data Redaction named Policy Expressions in the database.

Column	Datatype	NULL	Description
POLICY_EXPRESSION_NAME	VARCHAR2(256)		Customer-specified name of the named Policy Expression
EXPRESSION	VARCHAR2(4000)		The SQL expression defined for this Data Redaction named Policy Expression
OBJECT_OWNER	VARCHAR2(128)		Owner of the table or view which this named Policy Expression is associated with
OBJECT_NAME	VARCHAR2(128)		Name of the table or view which this named Policy Expression is associated with
COLUMN_NAME	VARCHAR2(128)		Name of the column which this named Policy Expression is associated with
POLICY_EXPRESSION_DESCRIPTION	VARCHAR2(4000)		Description of this named Policy Expression

> **See Also:**
>
> *Oracle Database Data Redaction Guide* for more information about Oracle Data Redaction

7.245 REDACTION_POLICIES

`REDACTION_POLICIES` displays all redaction policies in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object with the policy
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object with the policy
POLICY_NAME	VARCHAR2(128)	NOT NULL	Name of the policy
EXPRESSION	VARCHAR2(4000)	NOT NULL	Expression for this policy
ENABLE	VARCHAR2(7)		Indicates whether the policy is enabled (YES) or not (NO)
POLICY_DESCRIPTION	VARCHAR2(4000)		Description of the policy

See Also:

Oracle Database Data Redaction Guide for more information about Oracle Data Redaction

7.246 REDACTION_VALUES_FOR_TYPE_FULL

REDACTION_VALUES_FOR_TYPE_FULL shows all of the current values for full redaction.

For example, if a redaction policy is applied to a column of type BINARY_DOUBLE and the redaction type is full redaction, that column will be redacted with the value shown in the BINARY_DOUBLE_VALUE column of this view.

Column	Datatype	NULL	Description
NUMBER_VALUE	NUMBER	NOT NULL	Redaction result for full redaction on NUMBER columns
BINARY_FLOAT_VALUE	BINARY_FLOAT	NOT NULL	Redaction result for full redaction on BINARY_FLOAT columns
BINARY_DOUBLE_VALUE	BINARY_DOUBLE	NOT NULL	Redaction result for full redaction on BINARY_DOUBLE columns
CHAR_VALUE	VARCHAR2(1)		Redaction result for full redaction on CHAR columns
VARCHAR_VALUE	VARCHAR2(1)		Redaction result for full redaction on VARCHAR2 columns
NCHAR_VALUE	NCHAR(1)		Redaction result for full redaction on NCHAR columns
NVARCHAR_VALUE	NVARCHAR2(1)		Redaction result for full redaction on NVARCHAR2 columns
DATE_VALUE	DATE	NOT NULL	Redaction result for full redaction on DATE columns
TIMESTAMP_VALUE	TIMESTAMP(6)	NOT NULL	Redaction result for full redaction on TIMESTAMP columns
TIMESTAMP_WITH_TIME_ZONE_VALUE	TIMESTAMP(6) WITH TIME ZONE	NOT NULL	Redaction result for full redaction on TIMESTAMP WITH TIME ZONE columns
BOOLEAN_VALUE[1]	BOOLEAN	NOT NULL	Redaction result for full redaction on BOOLEAN columns
BLOB_VALUE	BLOB		Redaction result for full redaction on BLOB columns
CLOB_VALUE	CLOB		Redaction result for full redaction on CLOB columns
NCLOB_VALUE	NCLOB		Redaction result for full redaction on NCLOB columns

1 This column is available starting with Oracle Database 23ai, Release Update 23.7, but it does not appear in this view by default. It is automatically added to this view when the value of the COMPATIBLE initialization parameter is 23.0.0 or higher, and a full redaction value for data type BOOLEAN is specified or a full redaction policy is defined on any column of BOOLEAN data type. See *Oracle Database Data Redaction Guide* for more information.

> **See Also:**
>
> *Oracle Database Data Redaction Guide* for more information about Oracle Data Redaction

7.247 REPORT_COMPONENTS

REPORT_COMPONENTS displays metadata about different database components offering reports in XML, HTML, or Text formats.

Reports are first generated in XML and can then be translated into HTML or Text formats, for supported report types. Each component generates one or more reports containing different types of content. You can request reports using the component's own PL/SQL interface (for example, DBMS_SQLTUNE for SQL Tuning Advisor).

Column	Datatype	NULL	Description
COMPONENT_ID	NUMBER	NOT NULL	ID number of the database component building the report
COMPONENT_NAME	VARCHAR2(128)	NOT NULL	Name of the database component building the report (for example, sqltune for SQL Tuning Advisor)
COMPONENT_DESCRIPTION	VARCHAR2(256)		Component description
REPORT_ID	NUMBER	NOT NULL	ID number of the report type
REPORT_NAME	VARCHAR2(128)	NOT NULL	Name of the report type
REPORT_DESCRIPTION	VARCHAR2(256)		Description of the report type
SCHEMA_FILENAME	VARCHAR2(500)		Filename of the XML schema for the report (optional)
SCHEMA_DATA	XMLTYPE		XML schema for this report (optional)

> **See Also:**
>
> *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SQLTUNE package

7.248 REPORT_FILES

REPORT_FILES displays data for all of the XML schema and XSLT files associated with reports for a given component.

Column	Datatype	NULL	Description
FILENAME	VARCHAR2(500)	NOT NULL	Name of the XSLT/XML schema file
DATA	XMLTYPE		XSLT/XML schema data

7.249 REPORT_FORMATS

REPORT_FORMATS displays metadata about the different output formats supported for reports.

Some reports are generated in XML only, in which case no data will appear in this view. When reports support HTML or Text formats (for example, the SQL Performance Analyzer reports), metadata about the format will appear in this view.

Column	Datatype	NULL	Description
COMPONENT_ID	NUMBER	NOT NULL	ID number of the database component building the report
COMPONENT_NAME	VARCHAR2(128)	NOT NULL	Name of the database component building the report (for example, sqltune for SQL Tuning Advisor)
REPORT_ID	NUMBER	NOT NULL	ID number of the report type
REPORT_NAME	VARCHAR2(128)	NOT NULL	Name of the report type
FORMAT_NAME	VARCHAR2(128)	NOT NULL	Name of the report format
DESCRIPTION	VARCHAR2(256)		Description of the report format
TYPE	VARCHAR2(6)		Format type: • XSLT - Reports generated by applying an XSLT style sheet to XML data (for example, HTML reports) • Text - Reports generated by first applying an XSLT style sheet to convert XML data to HTML, and then converting the HTML to formatted Text using the internal report HTML-to-text translation engine. • Custom - Custom formats implemented natively by report clients
XSLT_FILENAME	VARCHAR2(500)		Name of the XSLT used for this format (XSLT and Text format types only)
XSLT_DATA	XMLTYPE		XSLT data (XSLT and Text format types only)
TEXT_LINESIZE	NUMBER		Maximum line size of the formatted text report (Text format types only)

7.250 RESOURCE_COST

RESOURCE_COST lists the cost for each resource.

Column	Datatype	NULL	Description
RESOURCE_NAME	VARCHAR2(32)	NOT NULL	Name of the resource
UNIT_COST	NUMBER	NOT NULL	Cost of the resource

7.251 RESOURCE_MAP

RESOURCE_MAP describes resources. This table can be used to map resource names to resource numbers.

Column	Datatype	NULL	Description
RESOURCE#	NUMBER	NOT NULL	Numeric resource code
TYPE#	NUMBER	NOT NULL	Numeric type code
NAME	VARCHAR2(32)	NOT NULL	Name of the resource

7.252 RESOURCE_VIEW

RESOURCE_VIEW contains one row for each resource in Oracle XML DB Repository.

Column	Datatype	NULL	Description
RES	XMLTYPE(XMLSchema "http://xmlns.oracle.com/xdb/XDBResource.xsd" Element "Resource")		A resource in the repository
ANY_PATH	VARCHAR2(4000)		An (absolute) path to the resource
RESID	RAW(16)		Resource OID, which is a unique handle to the resource

Note:

Oracle XML DB Repository is deprecated in Oracle Database 23ai. Oracle recommends that you replace any functionality used in Oracle XML DB Repository with alternative technologies.

See Also:

Oracle XML DB Developer's Guide for information about using this view

7.253 ROLE_ROLE_PRIVS

ROLE_ROLE_PRIVS describes the roles granted to other roles.

Information is provided only about roles to which the user has access.

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)		Name of the role
GRANTED_ROLE	VARCHAR2(128)		Role that was granted
ADMIN_OPTION	VARCHAR2(3)		Signifies that the role was granted with ADMIN option

Column	Datatype	NULL	Description
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the role was granted commonly (CONTAINER=ALL was used) • NO if the role was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the role grant was inherited from another container (YES) or not (NO)

7.254 ROLE_SCHEMA_PRIVS

ROLE_SCHEMA_PRIVS describes schema privileges granted to roles.

Information is provided only about roles to which the user has access.

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)		Name of the role
PRIVILEGE	VARCHAR2(40)		Schema privilege granted to the role
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the role grant was inherited from another container (YES) or not (NO)

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

7.255 ROLE_SYS_PRIVS

ROLE_SYS_PRIVS describes system privileges granted to roles.

Information is provided only about roles to which the user has access.

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)		Name of the role
PRIVILEGE	VARCHAR2(40)		System privilege granted to the role
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)

Column	Datatype	NULL	Description
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the role grant was inherited from another container (YES) or not (NO)

7.256 ROLE_SYS_PRIVS_ALL

ROLE_SYS_PRIVS_ALL describes system privileges and schema privileges granted to roles.

Information is provided only about roles to which the user has access.

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)		Name of the role
PRIVILEGE	VARCHAR2(40)		Privilege granted to the role
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted For system privileges, the value of this column is null.
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the role grant was inherited from another container (YES) or not (NO)

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

7.257 ROLE_TAB_PRIVS

ROLE_TAB_PRIVS describes table privileges granted to roles. Information is provided only about roles to which the user has access.

> **Note:**
>
> When a user with the SYSDBA privilege queries this view, information is provided only about roles to which the user has been explicitly granted access. To view information about all roles, a user with the SYSDBA privilege can query the DBA_TAB_PRIVS view.

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)		Name of the role
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
COLUMN_NAME	VARCHAR2(128)		Name of the column, if applicable
PRIVILEGE	VARCHAR2(40)		Object privilege granted to the role
GRANTABLE	VARCHAR2(3)		YES if the role was granted with ADMIN OPTION; otherwise NO
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the role grant was inherited from another container (YES) or not (NO)

7.258 SCHEDULER_BATCH_ERRORS

SCHEDULER_BATCH_ERRORS displays the errors caused by each call in the batch after a Scheduler batch call (when the COMMIT_SEMANTICS argument has been set to ABSORB_ERRORS).

Column	Datatype	NULL	Description
ARRAY_INDEX	NUMBER		Index of the job in the batch
OBJECT_TYPE	VARCHAR2(30)		Object type: • JOB • LIGHTWEIGHT JOB • UNKNOWN
OBJECT_NAME	VARCHAR2(100)		Full name of the object (including schema)
ATTR_NAME	VARCHAR2(30)		Name of the attribute being set (if this is a batch set attribute call); NULL otherwise
ERROR_CODE	NUMBER		Top level error code
ERROR_MESSAGE	VARCHAR2(4000)		Complete error stack

Column	Datatype	NULL	Description
ADDITIONAL_INFO	VARCHAR2(4000)		Additional information (currently unused)

7.259 SCHEMA_EXPORT_OBJECTS

SCHEMA_EXPORT_OBJECTS lists simple path names for some of the object types belonging to a Data Pump schema export, which is invoked using the SCHEMAS parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

Column	Datatype	NULL	Description
OBJECT_PATH	VARCHAR2(200)	NOT NULL	Simple path name for the object type
COMMENTS	VARCHAR2(2000)		Comment on the object type
NAMED	CHAR(1)		Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters.

See Also:

- "DATABASE_EXPORT_OBJECTS"
- "TABLE_EXPORT_OBJECTS"
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the expdp command

7.260 SEQ

SEQ is a synonym for USER_SEQUENCES.

See Also:

"USER_SEQUENCES"

7.261 SESSION_CONTEXT

SESSION_CONTEXT describes the context attributes and their values set for the current session.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(128)		Namespace that the active attribute is in

Column	Datatype	NULL	Description
ATTRIBUTE	VARCHAR2(128)		Name of the active attribute
VALUE	VARCHAR2(4000)		Value of the active attribute

7.262 SESSION_PRIVS

SESSION_PRIVS describes the system privileges that are currently available to the user.

Column	Datatype	NULL	Description
PRIVILEGE	VARCHAR2(40)	NOT NULL	Name of the privilege

7.263 SESSION_PRIVS_ALL

SESSION_PRIVS_ALL describes the system privileges and schema privileges that are currently available to the user.

Column	Datatype	NULL	Description
PRIVILEGE	VARCHAR2(40)		Name of the privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted For system privileges, the value of this column is null.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

7.264 SESSION_SCHEMA_PRIVS

SESSION_SCHEMA_PRIVS describes the schema privileges that are currently available to the user.

Column	Datatype	NULL	Description
PRIVILEGE	VARCHAR2(40)	NOT NULL	Schema privilege
SCHEMA	VARCHAR2(128)	NOT NULL	Schema on which the privilege was granted

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

7.265 SESSION_ROLES

SESSION_ROLES describes the roles that are currently enabled to the user.

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)	NOT NULL	Name of the role

7.266 SHARD_RAFT_PARAMETERS

SHARD_RAFT_PARAMETERS displays Oracle Globally Distributed Database Raft replication parameters and their values.

This view displays the parameters that are set at the replication unit level on each shard.

Column	Datatype	NULL	Description
ORA_SHARD_ID	NUMBER		Shard identifier
RU_ID	NUMBER		Replication unit (RU) identifier
NAME	VARCHAR2(128)	NOT NULL	Parameter name
VALUE	VARCHAR2(4000)		Parameter value

Note:

This view is available starting with Oracle Database 23ai.

See Also:

Oracle Globally Distributed Database Guide for more information about Raft replication parameters

7.267 SOURCE_SIZE

Oracle accesses this view to create views about object size.

See Also:

"DBA_OBJECT_SIZE" and "USER_OBJECT_SIZE"

7.268 STMT_AUDIT_OPTION_MAP

STMT_AUDIT_OPTION_MAP describes auditing option type codes. This table can be used to map auditing option type numbers to type names.

> **Note:**
>
> This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12*c* auditing or unified auditing is enabled for the database.
>
> - See *Oracle Database Security Guide* for more information about unified auditing.
> - See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

> **Note:**
>
> The mapping explained in this view is valid for audit configuration from the DBA_STMT_AUDIT_OPTS view only, and such audit configurations can be made when unified auditing is not enabled.

Column	Datatype	NULL	Description
OPTION#	NUMBER	NOT NULL	Numeric auditing option type code
NAME	VARCHAR2(40)	NOT NULL	Name of the type of auditing option
PROPERTY	NUMBER	NOT NULL	Property flag of the auditing option

> **See Also:**
>
> "DBA_STMT_AUDIT_OPTS"

7.269 SYN

SYN is a synonym for USER_SYNONYMS.

> **See Also:**
>
> "ALL_SYNONYMS"

7.270 SYNONYMS

SYNONYMS is included for compatibility. Oracle recommends that you do not use this view.

7.271 SYS_OBJECTS

SYS_OBJECTS maps object IDs to object types and segment data block addresses.

Column	Datatype	NULL	Description
OBJECT_TYPE	VARCHAR2(18)		Type of the object
OBJECT_TYPE_ID	NUMBER		Type ID of the object
SEGMENT_TYPE_ID	NUMBER		Type of segment: TABLE, CLUSTER, INDEX, ROLLBACK, DEFERRED ROLLBACK, TEMPORARY, CACHE
OBJECT_ID	NUMBER		Object identifier
HEADER_FILE	NUMBER		ID of the file containing the segment header
HEADER_BLOCK	NUMBER		ID of the block containing the segment header
TS_NUMBER	NUMBER		The tablespace number

7.272 SYSCATALOG

SYSCATALOG is included for compatibility.

Oracle recommends that you do not use this view.

7.273 SYSFILES

SYSFILES is included for compatibility.

Oracle recommends that you do not use this view.

7.274 SYSSEGOBJ

SYSSEGOBJ is included for compatibility.

Oracle recommends that you do not use this view.

7.275 SYSTEM_PRIVILEGE_MAP

SYSTEM_PRIVILEGE_MAP describes privilege (auditing option) type codes.

This table can be used to map privilege (auditing option) type numbers to type names.

Column	Datatype	NULL	Description
PRIVILEGE	NUMBER	NOT NULL	Numeric privilege (auditing option) type code
NAME	VARCHAR2(40)	NOT NULL	Name of the type of privilege (auditing option). See *Oracle Database SQL Language Reference* for a list of valid system privileges.

Column	Datatype	NULL	Description
PROPERTY	NUMBER	NOT NULL	Property flag of the privilege (auditing option): • 0 - Indicates a privilege that can be granted with a SQL GRANT statement • 1 - Indicates a privilege that can only be granted using a PL/SQL package

7.276 TAB

TAB is included for compatibility.

Oracle recommends that you do not use this view.

7.277 TABLE_EXPORT_OBJECTS

TABLE_EXPORT_OBJECTS lists simple path names for some of the object types belonging to a Data Pump schema export, which is invoked using the TABLES parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

Column	Datatype	NULL	Description
OBJECT_PATH	VARCHAR2(200)	NOT NULL	Simple path name for the object type
COMMENTS	VARCHAR2(2000)		Comment on the object type
NAMED	CHAR(1)		Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters.

See Also:

- "DATABASE_EXPORT_OBJECTS"
- "SCHEMA_EXPORT_OBJECTS"
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the expdp command

7.278 TABLE_PRIVILEGE_MAP

TABLE_PRIVILEGE_MAP describes privilege (auditing option) type codes.

This table can be used to map privilege (auditing option) type numbers to type names.

Column	Datatype	NULL	Description
PRIVILEGE	NUMBER	NOT NULL	Numeric privilege (auditing option) type code

Column	Datatype	NULL	Description
NAME	VARCHAR2(40)	NOT NULL	Name of the type of privilege (auditing option)

7.279 TABQUOTAS

TABQUOTAS is included for compatibility.

Oracle recommends that you do not use this view.

7.280 TABS

TABS is a synonym for USER_TABLES.

> **See Also:**
>
> "USER_TABLES"

7.281 TRUSTED_SERVERS

TRUSTED_SERVERS displays whether a server is trusted or untrusted.

> **Note:**
>
> Enterprise User Security (EUS) is deprecated with Oracle Database 23ai.
>
> Oracle recommends that you migrate to using Centrally Managed Users (CMU). This feature enables you to directly connect with Microsoft Active Directory without an intervening directory service for enterprise user authentication and authorization to the database. If your Oracle Database is in the cloud, you can also choose to move to one of the newer integrations with a cloud identity provider.

Column	Datatype	NULL	Description
TRUST	VARCHAR2(9)		Trustedness of the server listed. Values can be TRUSTED or UNTRUSTED servers which are not listed in the NAME column have opposite trustedness.
NAME	VARCHAR2(128)		Server name. Can be a specific server name or ALL for all servers.

Table 7-2 shows examples of the values returned depending on the status of the servers.

Table 7-2 TRUSTED_SERVERS Values

Condition (If . . .)	TRUSTED column	NAME column
... all servers are trusted	Trusted	ALL

Table 7-2 (Cont.) TRUSTED_SERVERS Values

Condition (If . . .)	TRUSTED column	NAME column
... no servers are trusted	Untrusted	ALL
... all servers except DB1 are trusted	Untrusted	DB1
... all servers except DB1 are untrusted	Trusted	DB1

See Also:

- *Oracle Database PL/SQL Packages and Types Reference*
- *Oracle Database Enterprise User Security Administrator's Guide*

7.282 TS_PITR_CHECK

This view, created by `catpitr.sql`, provides information on any dependencies or restrictions that might prevent tablespace point-in-time recovery from proceeding.

This view applies only to the tablespace point-in-time recovery feature.

Column	Datatype	NULL	Description
OBJ1_OWNER	VARCHAR2(128)		The owner of the object preventing tablespace point-in-time recovery. See the REASON column for details.
OBJ1_NAME	VARCHAR2(128)		The name of the object preventing tablespace point-in-time recovery
OBJ1_SUBNAME	VARCHAR2(128)		Subordinate to OBJ1_NAME
OBJ1_TYPE	VARCHAR2(16)		The object type for the object preventing tablespace point-in-time recovery
TS1_NAME	VARCHAR2(30)		Name of the tablespace containing the object preventing tablespace point-in-time recovery
OBJ2_NAME	VARCHAR2(128)		The name of a second object which may be preventing tablespace point-in-time recovery. If NULL, object 1 is the only object preventing recovery.
OBJ2_SUBNAME	VARCHAR2(128)		Subordinate to OBJ2_NAME
OBJ2_TYPE	VARCHAR2(15)		The object type for the second object (will be NULL if OBJ2_NAME is NULL)
OBJ2_OWNER	VARCHAR2(128)		The owner of the second object (will be NULL if OBJ2_NAME is NULL)
TS2_NAME	VARCHAR2(30)		Name of the tablespace containing second object which may be preventing tablespace point-in-time recovery (-1 indicates not applicable)
CONSTRAINT_NAME	VARCHAR2(128)		Name of the constraint
REASON	VARCHAR2(81)		Reason why tablespace point-in-time recovery cannot proceed

> **See Also:**
>
> *Oracle Database Backup and Recovery User's Guide* for more information about tablespace point-in-time recovery

7.283 TS_PITR_OBJECTS_TO_BE_DROPPED

`TS_PITR_OBJECTS_TO_BE_DROPPED` lists all objects lost as a result of performing tablespace point-in-time recovery.

This view applies only to the tablespace point-in-time recovery feature.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	The owner of the object
NAME	VARCHAR2(128)	NOT NULL	The name of the object that will be lost as a result of undergoing tablespace point-in-time recovery
CREATION_TIME	DATE	NOT NULL	Creation timestamp of the object
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the object

> **See Also:**
>
> *Oracle Database Backup and Recovery User's Guide* for more information about tablespace point-in-time recovery

7.284 UNI_PLUGGABLE_SET_CHECK

`UNI_PLUGGABLE_SET_CHECK` contains pluggable check information.

Column	Datatype	NULL	Description
OBJ1_OWNER	VARCHAR2(128)		Owner of object
OBJ1_NAME	VARCHAR2(128)		Object 1
OBJ1_SUBNAME	VARCHAR2(128)		SubObject1Name
OBJ1_TYPE	VARCHAR2(18)		Object Type
TS1_NAME	VARCHAR2(30)		Tablespace containing Object 1
OBJ2_NAME	VARCHAR2(128)		Object Name
OBJ2_SUBNAME	VARCHAR2(128)		SubObject2Name
OBJ2_TYPE	VARCHAR2(18)		Object Type
OBJ2_OWNER	VARCHAR2(128)		Object owner of second object
TS2_NAME	VARCHAR2(30)		Tablespace containing Object 1
CONSTRAINT_NAME	VARCHAR2(128)		Name of dependent constraint
REASON	VARCHAR2(86)		Reason for Pluggable check violation
MESG_ID	NUMBER		The message ID

7.285 UNIFIED_AUDIT_TRAIL

When unified auditing is enabled in Oracle Database, the audit records are populated in this new audit trail.

This view displays audit records in tabular form by retrieving the audit records from the audit trail.

> **Note:**
>
> This view is populated only in an Oracle Database where unified auditing is enabled.
>
> - See *Oracle Database Security Guide* for more information about unified auditing.
> - See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
AUDIT_TYPE	VARCHAR2(64)		Type of auditing: • Database Vault • Datapump • Direct path API • FineGrainedAudit • KACL_AUDIT • Label Security • Protocol • RMAN_AUDIT • SQL Firewall • Standard • XS
SESSIONID	NUMBER		Audit session identifier
PROXY_SESSIONID	NUMBER		Audit session identifier of proxying session
OS_USERNAME	VARCHAR2(128)		Name of the operating system user for the database session
USERHOST	VARCHAR2(128)		Name of the host machine from which the session was spawned
TERMINAL	VARCHAR2(30)		The operating system terminal of the user session
INSTANCE_ID	NUMBER		Instance number as specified in the initialization parameter file, init.ora
DBID	NUMBER		Database identifier of the audited database
AUTHENTICATION_TYPE	VARCHAR2(1024)		Authentication information for the session user **See:** "AUTHENTICATION_TYPE Description"
DBUSERNAME	VARCHAR2(128)		Database user name of the user whose actions were audited
DBPROXY_USERNAME	VARCHAR2(128)		Proxying user name, in the case of proxy authentication
EXTERNAL_USERID	VARCHAR2(1024)		External user name, in the case of network or external authentication

Column	Datatype	NULL	Description
GLOBAL_USERID	VARCHAR2(32)		Global user identifier for the user, for a user logged in as an enterprise user
CLIENT_PROGRAM_NAME	VARCHAR2(84)		Name of the program used for the database session
DBLINK_INFO	VARCHAR2(4000)		Value of SYS_CONTEXT('USERENV','DBLINK_INFO'). Valid if the connection was via a database link.
XS_USER_NAME	VARCHAR2(128)		Name of the Real Application Security user
XS_SESSIONID	RAW(33)		Identifer of the Real Application Security session
ENTRY_ID	NUMBER		Numeric ID for each audit trail entry in the session
STATEMENT_ID	NUMBER		Numeric ID for each statement run (a statement may cause many actions)
EVENT_TIMESTAMP	TIMESTAMP(6)		Timestamp of the creation of the audit trail entry in the local time zone
EVENT_TIMESTAMP_UTC	TIMESTAMP(6)		Timestamp of the creation of the audit trail entry in UTC (Coordinated Universal Time)
ACTION_NAME	VARCHAR2(64)		Name of the action executed by the user. The name should be read in conjunction with the AUDIT_TYPE to understand the real action.
RETURN_CODE	NUMBER		Oracle error code generated by the action. Zero if the action succeeded
OS_PROCESS	VARCHAR2(16)		Operating system process identifier of the Oracle database process
TRANSACTION_ID	RAW(8)		Transaction identifier of the transaction in which the object is modified
SCN	NUMBER		System change number (SCN) of the creation of the audit trail entry
EXECUTION_ID	VARCHAR2(64)		Execution context identifier for each action
OBJECT_SCHEMA	VARCHAR2(128)		Schema name of object affected by the action
OBJECT_NAME	VARCHAR2(128)		Name of the object affected by the action
SQL_TEXT	CLOB		SQL associated with the event
SQL_BINDS	CLOB		List of bind variables, if any, associated with SQL_TEXT
APPLICATION_CONTEXTS	VARCHAR2(4000)		Semicolon-seperated list of Application Context Namespace, Attribute, Value information in (APPCTX_NSPACE,APPCTX_ATTRIBUTE=<value>) format
CLIENT_IDENTIFIER	VARCHAR2(64)		Client identifier in each Oracle session
NEW_SCHEMA	VARCHAR2(128)		The schema of the object named in the NEW_NAME column
NEW_NAME	VARCHAR2(128)		New name of object after RENAME, or name of underlying object (for example, CREATE INDEX owner.obj_name ON new_owner.new_name)
OBJECT_EDITION	VARCHAR2(128)		Name of the edition containing the audited object
SYSTEM_PRIVILEGE_USED	VARCHAR2(1024)		Comma-separated list of system privileges used to execute the action
SYSTEM_PRIVILEGE	VARCHAR2(40)		System privilege granted/revoked by a GRANT/ REVOKE statement
AUDIT_OPTION	VARCHAR2(40)		AUDIT/NOAUDIT SQL command

Column	Datatype	NULL	Description
OBJECT_PRIVILEGES	VARCHAR2(37)		Object privileges granted/revoked by a GRANT/ REVOKE statement
ROLE	VARCHAR2(128)		Roles granted or revoked or set by GRANT/ REVOKE/SET ROLE command
TARGET_USER	VARCHAR2(128)		User on whom the GRANT/REVOKE/AUDIT/NOAUDIT statement was executed
EXCLUDED_USER	VARCHAR2(128)		User who was excluded when the AUDIT/NOAUDIT statement was executed
EXCLUDED_SCHEMA	VARCHAR2(128)		Displays the schema of the excluded objects
EXCLUDED_OBJECT	VARCHAR2(128)		Displays object excluded from the action
CURRENT_USER	VARCHAR2(128)		Effective user for the statement execution
ADDITIONAL_INFO	VARCHAR2(4000)		Text comment on the audit trail entry, if any
UNIFIED_AUDIT_POLICIES	VARCHAR2(4000)		Lists the audit policies that caused the current audit record. For example, if `SELECT ON SCOTT.EMP` was configured from policy `SCOTT_EMP_POL`, for the `SELECT` event this column will display `SCOTT_EMP_POL`. If more than one policy was configured, the list of policies that caused the event to be recorded in the audit trail are displayed in a comma-separated list. This column has a NULL value for mandatory audit records. See *Oracle Database Security Guide* for information on activities that are mandatorily audited.
FGA_POLICY_NAME	VARCHAR2(128)		Fine-grained auditing (FGA) policy name that generated this FGA audit record
XS_INACTIVITY_TIMEOUT	NUMBER		Inactivity timeout of the Real Application Security session
XS_ENTITY_TYPE	VARCHAR2(32)		Type of the Real Application Security entity. Possible values are `USER`, `ROLE`, `ROLESET`, `SECURITYCLASS`, `ACL`, `DATASECURITY`, and `NSTEMPLATE`.
XS_TARGET_PRINCIPAL_NAME	VARCHAR2(128)		Target principal name in Real Application Security operations. Possible operations are set verifier, set password, add proxy, remove proxy, switch user, assign user, create session,and grant roles.
XS_PROXY_USER_NAME	VARCHAR2(128)		Name of the Real Application Security proxy user
XS_DATASEC_POLICY_NAME	VARCHAR2(128)		Name of the Real Application Security data security policy enabled or disabled
XS_SCHEMA_NAME	VARCHAR2(128)		Name of the schema in enable, disable data security policy and global callback operation
XS_CALLBACK_EVENT_TYPE	VARCHAR2(32)		Real Application Security global callback event type
XS_PACKAGE_NAME	VARCHAR2(128)		Real Application Security callback package name for the global callback
XS_PROCEDURE_NAME	VARCHAR2(128)		Real Application Security callback procedure name for the global callback
XS_ENABLED_ROLE	VARCHAR2(128)		The role that is enabled
XS_COOKIE	VARCHAR2(1024)		Real Application Security session cookie
XS_NS_NAME	VARCHAR2(128)		Name of the Real Application Security session namespace

Column	Datatype	NULL	Description
XS_NS_ATTRIBUTE	VARCHAR2(4000)		Name of the Real Application Security session namespace attribute
XS_NS_ATTRIBUTE_OLD_VAL	VARCHAR2(4000)		The old value of the Real Application Security session namespace attribute
XS_NS_ATTRIBUTE_NEW_VAL	VARCHAR2(4000)		The new value of the Real Application Security session namespace
DV_ACTION_CODE	NUMBER		Numeric action type code for Database Vault
DV_ACTION_NAME	VARCHAR2(128)		Name of the action whose numeric code appears in the DV_ACTION_CODE column
DV_EXTENDED_ACTION_CODE	NUMBER		Numeric action type code for Database Vault administration
DV_GRANTEE	VARCHAR2(128)		Name of the user whose Database Vault authorization was modified
DV_RETURN_CODE	NUMBER		Database Vault specific error code
DV_ACTION_OBJECT_NAME	VARCHAR2(128)		The unique name of the Database Vault object that was modified
DV_RULE_SET_NAME	VARCHAR2(128)		The unique name of the rule set that was executing and caused the audit event to trigger
DV_COMMENT	VARCHAR2(4000)		Text comment on the audit trail entry, providing more information about the statement audited
DV_FACTOR_CONTEXT	VARCHAR2(4000)		An XML document that contains all of the factor identifiers for the current session at the point when the audit event was triggered
DV_OBJECT_STATUS	VARCHAR2(1)		Indicates whether a particular Database Vault object is enabled or disabled. For example, if a Database Vault administrator enables or disables a realm, then this event will be audited and the DV_OBJECT_STATUS value will show the status of the realm after the event occurred. Possible values for this column are: • Y - The object is enabled • N - The object is disabled
OLS_POLICY_NAME	VARCHAR2(128)		Name of the Oracle Label Security (OLS) policy for which this audit record is generated
OLS_GRANTEE	VARCHAR2(1024)		Name of the user whose OLS authorization was modified
OLS_MAX_READ_LABEL	VARCHAR2(4000)		Maximum read label assigned to a user
OLS_MAX_WRITE_LABEL	VARCHAR2(4000)		Maximum write label assigned to a user
OLS_MIN_WRITE_LABEL	VARCHAR2(4000)		Minimum write label assigned to a user
OLS_PRIVILEGES_GRANTED	VARCHAR2(128)		OLS privileges assigned to a user or a trusted stored procedure
OLS_PROGRAM_UNIT_NAME	VARCHAR2(128)		Name of the trusted stored procedure whose authorization was modified or was executed
OLS_PRIVILEGES_USED	VARCHAR2(128)		OLS privileges used for an event
OLS_STRING_LABEL	VARCHAR2(4000)		String representation of the OLS label
OLS_LABEL_COMPONENT_TYPE	VARCHAR2(12)		Type of the OLS label component
OLS_LABEL_COMPONENT_NAME	VARCHAR2(30)		Name of the OLS label component
OLS_PARENT_GROUP_NAME	VARCHAR2(30)		Name of the parent of the OLS group

Column	Datatype	NULL	Description
OLS_OLD_VALUE	VARCHAR2(4000)		Old value for OLS ALTER events
OLS_NEW_VALUE	VARCHAR2(4000)		New value for OLS ALTER events
RMAN_SESSION_RECID	NUMBER		RMAN session identifier. Together with RMAN_SESSION_STAMP uniquely identifies an RMAN job (note that this is not same as user session ID; the value is a recid in controlfile that identifies RMAN job)
RMAN_SESSION_STAMP	NUMBER		Timestamp for the session
RMAN_OPERATION	VARCHAR2(20)		The RMAN operation executed by the job. One row will be added for each distinct operation within an RMAN session. For example, a backup job would contain BACKUP in the RMAN_OPERATION column.
RMAN_OBJECT_TYPE	VARCHAR2(20)		Type of objects involved for backup or restore/recover or change/delete/crosscheck commands. It contains one of the following values. If RMAN command does not satisfy one of them, then preference is given in order, from top to bottom of the list: • DB FULL • RECVR AREA • DB INCR • DATAFILE FULL • DATAFILE INCR • ARCHIVELOG • CONTROLFILE • SPFILE
RMAN_DEVICE_TYPE	VARCHAR2(5)		Device involved in the RMAN job. It may be DISK or SBT_TAPE or * (An * indicates that more than one location is involved). For a backup job, it will be the output device type. For other commands (such as restore or crosscheck), it will be the input device type.
DP_TEXT_PARAMETERS1	VARCHAR2(512)		Parameters during a Data Pump operation that have a text/string value. This may contain the values for: • ACCESS METHOD • DATA OPTIONS • DUMPER DIRECTORY • JOB_TYPE • JOB VERSION • MASTER TABLE • METADATA_JOB_MODE • PARTITION OPTIONS • REMOTE LINK • SCHEMA • TABLE EXISTS For descriptions and more information about the settings that can appear for these Data Pump text parameters, see Table 7-3.

Column	Datatype	NULL	Description
DP_BOOLEAN_PARAMETERS1	VARCHAR2(512)		Parameters during a Data Pump operation that have a boolean value. This may contain the values for: • DATA_ONLY - Boolean value for whether or not the operation processed data only (as opposed to metadata only, or metadata and data combined) • DUMPFILE_PRESENT - Denotes whether a dump file exists. Typically, it indicates whether a network export in which no dumpfile is required. • ENCRYPTED - Boolean value for whether or not encryption was used for the operation • JOB_RESTARTED - Boolean that indicates if the export or import job had to be restarted • MASTER_ONLY - Indicates whether the import job imported only the control job table and then stopped the job so that the contents of the control job table can be examined • METADATA_ONLY - Boolean value for whether or not the operation processed metadata only (as opposed to data only, or metadata and data combined)
DP_WARNINGS1	VARCHAR2(512)		Contains warnings issued during a Data Pump operation If no warnings were issued, this column contains WARNING(S) ISSUED: No warnings issued.
DIRECT_PATH_NUM_COLUMNS_LOADED	NUMBER		Shows the number of columns that were loaded using the SQL*Loader direct path load method
RLS_INFO	CLOB		Stores virtual private database (VPD), Oracle Label Security (OLS), Real Application Security (RAS), and redaction policy names and predicates separated by a delimiter. In the case of redaction policies, the policy expression is displayed in place of the predicate. To format the output into individual rows, use the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_UNI function.
KSACL_USER_NAME	VARCHAR2(128)		The connecting user name The value in this column is meaningful only when the UNIFIED_AUDIT_TRAIL.RETURN_CODE is 46981, which is the denial-of-service (DoS) error code.
KSACL_SERVICE_NAME	VARCHAR2(512)		The target database service name The value in this column is meaningful only when the UNIFIED_AUDIT_TRAIL.RETURN_CODE is 46981, which is the denial-of-service (DoS) error code.
KSACL_SOURCE_LOCATION	VARCHAR2(48)		The source location of the initiating connection The value in this column is meaningful only when the UNIFIED_AUDIT_TRAIL.RETURN_CODE is 46981, which is the denial-of-service (DoS) error code.
PROTOCOL_SESSION_ID	NUMBER		Oracle XML DB session ID The PROTOCOL_* columns in this view are meaningful when auditing Oracle XML DB protocol (HTTP or FTP) messages. You can use this column to identify audit records from the same Oracle XML DB session.

Column	Datatype	NULL	Description
PROTOCOL_RETURN_CODE	NUMBER		Return code for the Oracle XML DB protocol request This value is logged in the audit records for both the reply message containing the return code and its corresponding request message. For HTTP requests, a return code of `200 (OKAY)` or `304 (NOT-MODIFIED)` is considered successful, and a return code of `207` means the reply may have multiple components with separate return codes. All other HTTP return codes are considered unsuccessful.
PROTOCOL_ACTION_NAME	VARCHAR2(32)		Indicates the protocol and method for the Oracle XML DB protocol message This value is of the form *protocol-method*. Possible values for *protocol* are `HTTP` or `FTP`. Examples: `HTTP-GET` and `FTP-RETR`. Note that the HTTP `GET` and `HEAD` methods are both logged as `HTTP-GET`. Unrecognized methods are logged as `HTTP-UNKNOWN` or `FTP-UNKNOWN`.
PROTOCOL_USERHOST	VARCHAR2(128)		IP address of the client
PROTOCOL_MESSAGE	VARCHAR2(4000)		Text of the Oracle XML DB protocol message
DB_UNIQUE_NAME	VARCHAR2(257)		Unique database name of the audited database, which is defined by the `DB_UNIQUE_NAME` initialization parameter. This value is useful for differentiating between the primary and standby databases in an Oracle Data Guard configuration.
OBJECT_TYPE	VARCHAR2(23)		Object type of the object being audited
FW_ACTION_NAME	VARCHAR2(30)		For SQL Firewall audit actions, the name of the action
FW_RETURN_CODE	NUMBER		For SQL Firewall audit actions, return code of the SQL execution
SOURCE	VARCHAR2(8)		Source of the audit record: • `FILE` - Refers to records from the operating system spillover files in each database instance • `DATABASE` - Refers to records from the `AUDSYS.AUD$UNIFIED` table
SCHEMA	VARCHAR2(4000)		Schema name • If a schema privilege was used to execute the action, this column displays the schema and the `SYSTEM_PRIVILEGE_USED` column displays the privilege granted on the schema. • If a schema privilege was granted or revoked by a `GRANT` or `REVOKE` statement, this column displays the schema and the `SYSTEM_PRIVILEGE` column displays the privilege that was granted to or revoked from the schema. • Otherwise, the value of this column is null.
DP_CLOB_PARAMETERS1	CLOB		Parameters used by Data Pump export or import, in JSON format

Table 7-3 Data Pump Text Parameter Descriptions

Parameter	Description
ACCESS METHOD	The method used to load the data. Settings can be: • AUTOMATIC: Enables Oracle Data Pump to determine the optimal load method • DIRECT_PATH : Uses the direct path API to pass the data to be loaded. • EXTERNAL_TABLE: Loads data using the external tables option. • CONVENTIONAL: Loads the data using SQL INSERT statements
DATA OPTIONS	Indicates how certain types of data were handled during import operations. Settings are in bit-mask format, which are as follows: • 1 (SKIP_CONSTRAINT_ERRORS): Specifies that the import operation proceeded even if non-deferred constraint violations were encountered. • 8 (DISABLE_APPEND_HINT): The import operation did not use the APPEND hint while loading a data object. • 16 (REJECT_ROWS_WITH_REPL_CHAR): Warnings are issued when the replacement character may be used and an option was added to reject data rows where the replacement character was used during a Data Pump import. This situation can occur if different character sets are used for the export/import process
DUMPER DIRECTORY	Not in use
JOB_TYPE	Is either EXPORT or IMPORT
JOB VERSION	Specifies the version of database objects that were imported
MASTER TABLE	Indicates the name of the control job table. By default, it appears as follows for export operations: *schema_name*.SYS_EXPORT_TABLE_*n* For import operations, it appears as follows: *schema_name*.SYS_IMPORT_TABLE_*n* The *n* represents a numeric value of 01. If 01 is in use, the number is incremented with 02, 03, and so on.
METADATA_JOB_MODE	Type of export or import operation. For example a table export would be TABLE_EXPORT
PARTITION OPTIONS	Indicates how table partitions were created during an import operation. Settings can be: • NONE: The tables were created as they existed on the system from which the export operation was performed. • DEPARTITION: Each partition or subpartition was promoted to a new individual table. • MERGE: All partitions and subpartitions were merged into one table
REMOTE LINK	Indicates that the export was performed from a (source) database identified by a valid database link. The data from the source database instance was written to a dump file set on the connected database instance.
SCHEMA	Indicates the schema containing the data that was exported or imported
TABLE EXISTS	Indicates the action that was taken on an import operation when the target table already existed. The values are as follows: • REPLACE • TRUNCATE • SKIP • APPEND

AUTHENTICATION_TYPE Description

The `AUTHENTICATION_TYPE` column of `UNIFIED_AUDIT_TRAIL` displays authentication information for the session user.

The value of this column is a string with the following syntax:

```
(TYPE=(auth_string));(CLIENT ADDRESS=((PROTOCOL=protocol)
(HOST=client_ip_address)(PORT=client_port_number)));
[(LOGON_INFO=((VERIFIER=%s-%s)(CLIENT_CAPABILITIES=%s));]
```

- `(TYPE=(auth_string));`

  Indicates the type of authentication for the session user.

  Possible values for *`auth_string`*:

  - `DATABASE` - Username/password authentication
  - `DIRECTORY PASSWORD` - Directory-based user authentication
  - `NETWORK SERVICE` - Authentication was performed by Oracle Net Services or strong authentication
  - `OS` - Operating system external user authentication
  - `PROXY` - OCI proxy connection authentication

- `(CLIENT ADDRESS=((PROTOCOL=`*`protocol`*`)(HOST=`*`client_ip_address`*`)(PORT=`*`client_port_number`*`)));`

  Displays the protocol used by the client, such as `ipc`, `sdp`, `tcp`, or `tcps`, the client IP address, and the client port number.

- `(LOGON_INFO=((VERIFIER=`*`version-rollover_state`*`)(CLIENT_CAPABILITIES=`*`capability_list`*`));`

  This syntax is displayed only if authentication was completed during gradual database password rollover.

  The value of `VERIFIER` comprises the following two values, separated by a hyphen:

  - *`version`* - Indicates the password version (`11G` or `12C`)
  - *`rollover_state`* - Indicates whether the user was authenticated with the `OLD` password or the `NEW` password

  For `CLIENT_CAPABILITIES`, the value of *`capabilitiy_list`* is a comma-separated list of one or more of the following client capabilities: `O5L_NP`, `O7L_MR`, or `O8L_LI`. See *Oracle Database Net Services Reference* for more information about client capabilities.

> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_UNI` function

7.286 USABLE_EDITIONS

USABLE_EDITIONS describes the usable editions of the current user.

Column	Datatype	NULL	Description
EDITION_NAME	VARCHAR2(128)	NOT NULL	Name of the edition
PARENT_EDITION_NAME	VARCHAR2(128)		Name of the parent edition for this edition

> **See Also:**
>
> *Oracle Database Development Guide* for more information about editions

7.287 USER_ADDM_FDG_BREAKDOWN

USER_ADDM_FDG_BREAKDOWN describes the contribution for each finding from the different instances owned by the current user. Its columns are the same as those in DBA_ADDM_FDG_BREAKDOWN.

> **See Also:**
>
> "DBA_ADDM_FDG_BREAKDOWN"

7.288 USER_ADDM_FINDINGS

USER_ADDM_FINDINGS displays the ADDM findings discovered by the advisors owned by the current user.

Each row for ADDM tasks in the related USER_ADVISOR_FINDINGS view has a corresponding row in this view. Its columns (except for OWNER) are the same as those in DBA_ADDM_FINDINGS.

> **See Also:**
>
> "DBA_ADDM_FINDINGS"

7.289 USER_ADDM_INSTANCES

USER_ADDM_INSTANCES provides instance-level information for ADDM tasks that finished executing in all instances owned by the current user. Its columns are the same as those in DBA_ADDM_INSTANCES.

> **See Also:**
>
> "DBA_ADDM_INSTANCES"

7.290 USER_ADDM_TASK_DIRECTIVES

USER_ADDM_TASK_DIRECTIVES displays information about ADDM task directives owned by the current user. Its columns (except for USERNAME and SEQ_ID) are the same as those in DBA_ADDM_TASK_DIRECTIVES.

> **See Also:**
>
> "DBA_ADDM_TASK_DIRECTIVES"

7.291 USER_ADDM_TASKS

USER_ADDM_TASKS displays information about the ADDM tasks owned by the current user.

The view contains one row for each row in the related USER_ADVISOR_TASKS view that has ADVISOR_NAME=ADDM and STATUS=COMPLETED. Its columns (except for OWNER) are the same as those in DBA_ADDM_TASKS.

> **See Also:**
>
> "DBA_ADDM_TASKS"

7.292 USER_ADVISOR_ACTIONS

USER_ADVISOR_ACTIONS displays information about the actions associated with the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_ACTIONS.

> **See Also:**
>
> "DBA_ADVISOR_ACTIONS"

7.293 USER_ADVISOR_DIR_TASK_INST

USER_ADVISOR_DIR_TASK_INST displays information about all task directive instances owned by the current user. Its columns (except for SEQ_ID and USERNAME) are the same as those in DBA_ADVISOR_DIR_TASK_INST.

> **See Also:**
>
> "DBA_ADVISOR_DIR_TASK_INST"

7.294 USER_ADVISOR_EXEC_PARAMETERS

USER_ADVISOR_EXEC_PARAMETERS displays the parameter values used for past executions of tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_EXEC_PARAMETERS.

> **See Also:**
>
> "DBA_ADVISOR_EXEC_PARAMETERS"

7.295 USER_ADVISOR_EXECUTIONS

USER_ADVISOR_EXECUTIONS displays metadata information for tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_EXECUTIONS.

> **See Also:**
>
> "DBA_ADVISOR_EXECUTIONS"

7.296 USER_ADVISOR_FDG_BREAKDOWN

USER_ADVISOR_FDG_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task owned by the current user. Its columns are the same as those in DBA_ADVISOR_FDG_BREAKDOWN.

> **See Also:**
>
> "DBA_ADVISOR_FDG_BREAKDOWN"

7.297 USER_ADVISOR_FINDINGS

USER_ADVISOR_FINDINGS displays the findings discovered by the advisors owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_FINDINGS.

> **See Also:**
>
> "DBA_ADVISOR_FINDINGS"

7.298 USER_ADVISOR_JOURNAL

USER_ADVISOR_JOURNAL displays the journal entries for the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_JOURNAL.

> **See Also:**
>
> "DBA_ADVISOR_JOURNAL"

7.299 USER_ADVISOR_LOG

USER_ADVISOR_LOG displays information about the current state of the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_LOG.

> **See Also:**
>
> "DBA_ADVISOR_LOG"

7.300 USER_ADVISOR_OBJECTS

USER_ADVISOR_OBJECTS displays information about the objects currently referenced by the advisors owned by the current user. Its columns (except for OWNER, ATTR21, and ATTR22) are the same as those in DBA_ADVISOR_OBJECTS.

> **See Also:**
>
> "DBA_ADVISOR_OBJECTS"

7.301 USER_ADVISOR_PARAMETERS

USER_ADVISOR_PARAMETERS displays the task parameters and their current values for the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_PARAMETERS.

> **See Also:**
>
> "DBA_ADVISOR_PARAMETERS"

7.302 USER_ADVISOR_RATIONALE

USER_ADVISOR_RATIONALE displays information about the rationales for the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_RATIONALE.

> **See Also:**
>
> "DBA_ADVISOR_RATIONALE"

7.303 USER_ADVISOR_RECOMMENDATIONS

USER_ADVISOR_RECOMMENDATIONS displays the results of an analysis of the recommendations owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_RECOMMENDATIONS.

> **See Also:**
>
> "DBA_ADVISOR_RECOMMENDATIONS"

7.304 USER_ADVISOR_SQLA_REC_SUM

USER_ADVISOR_SQLA_REC_SUM displays recommendation rollup information for the workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLA_REC_SUM.

> **See Also:**
>
> "DBA_ADVISOR_SQLA_REC_SUM"

7.305 USER_ADVISOR_SQLA_TABLES

USER_ADVISOR_SQLA_TABLES displays cross references between the workload statements and the tables referenced in the statement for the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLA_TABLES.

> **See Also:**
>
> "DBA_ADVISOR_SQLA_TABLES"

7.306 USER_ADVISOR_SQLA_WK_MAP

USER_ADVISOR_SQLA_WK_MAP displays the workload references for the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLA_WK_MAP.

> **See Also:**
>
> "DBA_ADVISOR_SQLA_WK_MAP"

7.307 USER_ADVISOR_SQLA_WK_STMTS

USER_ADVISOR_SQLA_WK_STMTS displays information about the workload objects owned by the current user after an Access Advisor analysis operation. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLA_WK_STMTS.

> **See Also:**
>
> "DBA_ADVISOR_SQLA_WK_STMTS"

7.308 USER_ADVISOR_SQLPLANS

USER_ADVISOR_SQLPLANS displays the different SQL execution plans owned by the current user generated as part of an advisor analysis. Its columns are the same as those in DBA_ADVISOR_SQLPLANS.

> **See Also:**
>
> "DBA_ADVISOR_SQLPLANS"

7.309 USER_ADVISOR_SQLSTATS

USER_ADVISOR_SQLSTATS displays execution statistics owned by the current user for the test-execution of different SQL plans during the advisor analysis. Its columns are the same as those in DBA_ADVISOR_SQLSTATS.

> **See Also:**
>
> "DBA_ADVISOR_SQLSTATS"

7.310 USER_ADVISOR_SQLW_JOURNAL

USER_ADVISOR_SQLW_JOURNAL displays the journal entries for the workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLW_JOURNAL.

> **See Also:**
>
> "DBA_ADVISOR_SQLW_JOURNAL"

7.311 USER_ADVISOR_SQLW_PARAMETERS

USER_ADVISOR_SQLW_PARAMETERS displays the workload parameters and their current values owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLW_PARAMETERS.

> **See Also:**
>
> "DBA_ADVISOR_SQLW_PARAMETERS"

7.312 USER_ADVISOR_SQLW_STMTS

USER_ADVISOR_SQLW_STMTS displays rows that correspond to the statements in the workload owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLW_STMTS.

> **See Also:**
>
> "DBA_ADVISOR_SQLW_STMTS"

7.313 USER_ADVISOR_SQLW_SUM

USER_ADVISOR_SQLW_SUM displays an aggregated picture of the SQLWkld workload objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLW_SUM.

> **See Also:**
>
> "DBA_ADVISOR_SQLW_SUM"

7.314 USER_ADVISOR_SQLW_TABLES

USER_ADVISOR_SQLW_TABLES displays cross references between the workload statements and the tables referenced in the statement. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLW_TABLES.

> **See Also:**
>
> "DBA_ADVISOR_SQLW_TABLES"

7.315 USER_ADVISOR_SQLW_TEMPLATES

USER_ADVISOR_SQLW_TEMPLATES displays an aggregated picture of the SQLWkld template objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_SQLW_TEMPLATES.

> **See Also:**
>
> "DBA_ADVISOR_SQLW_TEMPLATES"

7.316 USER_ADVISOR_TASKS

USER_ADVISOR_TASKS displays information about the tasks owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_TASKS.

> **See Also:**
>
> "DBA_ADVISOR_TASKS"

7.317 USER_ADVISOR_TEMPLATES

USER_ADVISOR_TEMPLATES displays information about the templates owned by the current user. Its columns (except for OWNER) are the same as those in DBA_ADVISOR_TEMPLATES.

> **See Also:**
>
> "DBA_ADVISOR_TEMPLATES"

7.318 USER_ALL_TABLES

USER_ALL_TABLES describes the object tables and relational tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ALL_TABLES.

> **See Also:**
>
> "ALL_ALL_TABLES"

7.319 USER_ANALYTIC_VIEW_AGGR_DIMS

USER_ANALYTIC_VIEW_AGGR_DIMS describes the aggregation function dimensions of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_AGGR_DIMS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_AGGR_DIMS"

7.320 USER_ANALYTIC_VIEW_AGGR_FNS

USER_ANALYTIC_VIEW_AGGR_FNS describes the aggregation functions of the analytic views owned by the current user. Its columns (except for OWNER and ORIGIN_CON_ID) are the same as those in ALL_ANALYTIC_VIEW_AGGR_FNS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_AGGR_FNS"

7.321 USER_ANALYTIC_VIEW_AGGR_FNS_AE

USER_ANALYTIC_VIEW_AGGR_FNS_AE describes the aggregation functions of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER and ORIGIN_CON_ID) are the same as those in ALL_ANALYTIC_VIEW_AGGR_FNS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_AGGR_FNS_AE"

7.322 USER_ANALYTIC_VIEW_AGR_DIMS

USER_ANALYTIC_VIEW_AGR_DIMS describes the aggregation function dimensions of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_AGR_DIMS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_AGR_DIMS"

7.323 USER_ANALYTIC_VIEW_AGR_DIMS_AE

USER_ANALYTIC_VIEW_AGR_DIMS_AE describes the aggregation function dimensions of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_AGR_DIMS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_AGR_DIMS_AE"

7.324 USER_ANALYTIC_VIEW_ATTR_CLASS

USER_ANALYTIC_VIEW_ATTR_CLASS describes the attribute classifications of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_ATTR_CLASS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_ATTR_CLASS"

7.325 USER_ANALYTIC_VIEW_ATTR_CLS

`USER_ANALYTIC_VIEW_ATTR_CLS` is identical to `USER_ANALYTIC_VIEW_ATTR_CLASS`.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_ATTR_CLASS"

7.326 USER_ANALYTIC_VIEW_ATTR_CLS_AE

`USER_ANALYTIC_VIEW_ATTR_CLS_AE` describes the attribute classifications of the analytic views (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_ATTR_CLS_AE`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_ATTR_CLS_AE"

7.327 USER_ANALYTIC_VIEW_BAS_MEAS

`USER_ANALYTIC_VIEW_BAS_MEAS` is identical to `USER_ANALYTIC_VIEW_BASE_MEAS`.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_BASE_MEAS"

7.328 USER_ANALYTIC_VIEW_BAS_MEAS_AE

`USER_ANALYTIC_VIEW_BAS_MEAS_AE` describes the base measures in the analytic views (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_BAS_MEAS_AE`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_BAS_MEAS_AE"

7.329 USER_ANALYTIC_VIEW_BASE_MEAS

USER_ANALYTIC_VIEW_BASE_MEAS describes the base measures in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_BASE_MEAS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_BASE_MEAS"

7.330 USER_ANALYTIC_VIEW_CALC_MEAS

USER_ANALYTIC_VIEW_CALC_MEAS describes the calculated measures in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_CALC_MEAS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_CALC_MEAS"

7.331 USER_ANALYTIC_VIEW_CLASS

USER_ANALYTIC_VIEW_CLASS describes the classifications of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in USER_ANALYTIC_VIEW_CLASS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_CLASS"

7.332 USER_ANALYTIC_VIEW_CLASS_AE

USER_ANALYTIC_VIEW_CLASS_AE describes the classifications of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_CLASS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_CLASS_AE"

7.333 USER_ANALYTIC_VIEW_CLC_MEAS

USER_ANALYTIC_VIEW_CLC_MEAS is identical to USER_ANALYTIC_VIEW_CALC_MEAS.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_CALC_MEAS"

7.334 USER_ANALYTIC_VIEW_CLC_MEAS_AE

USER_ANALYTIC_VIEW_CLC_MEAS_AE describes the calculated measures in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_CLC_MEAS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_CLC_MEAS_AE"

7.335 USER_ANALYTIC_VIEW_COLUMNS

USER_ANALYTIC_VIEW_COLUMNS describes the columns of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_COLUMNS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_COLUMNS"

7.336 USER_ANALYTIC_VIEW_COLUMNS_AE

USER_ANALYTIC_VIEW_COLUMNS_AE describes the columns of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_COLUMNS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_COLUMNS_AE"

7.337 USER_ANALYTIC_VIEW_DIM_ATRS

USER_ANALYTIC_VIEW_DIM_ATRS is identical to USER_ANALYTIC_VIEW_DIM_ATTRS.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_DIM_ATTRS"

7.338 USER_ANALYTIC_VIEW_DIM_ATRS_AE

USER_ANALYTIC_VIEW_DIM_ATRS_AE describes the attributes of the attribute dimensions in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_DIM_ATRS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_DIM_ATRS_AE"

7.339 USER_ANALYTIC_VIEW_DIM_ATTRS

USER_ANALYTIC_VIEW_DIM_ATTRS describes the attributes of the attribute dimensions in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_DIM_ATTRS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_DIM_ATTRS"

7.340 USER_ANALYTIC_VIEW_DIM_CLASS

USER_ANALYTIC_VIEW_DIM_CLASS describes the classifications of the attribute dimensions in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_DIM_CLASS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_DIM_CLASS"

7.341 USER_ANALYTIC_VIEW_DIM_CLS

`USER_ANALYTIC_VIEW_DIM_CLS` is identical to `USER_ANALYTIC_VIEW_DIM_CLASS`.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_DIM_CLASS"

7.342 USER_ANALYTIC_VIEW_DIM_CLS_AE

`USER_ANALYTIC_VIEW_DIM_CLS_AE` describes the classifications of the attribute dimensions in the analytic views (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_DIM_CLS_AE`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_DIM_CLS_AE"

7.343 USER_ANALYTIC_VIEW_DIMENSIONS

`USER_ANALYTIC_VIEW_DIMENSIONS` describes the attribute dimensions in the analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_DIMENSIONS`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_DIMENSIONS"

7.344 USER_ANALYTIC_VIEW_DIMS

`USER_ANALYTIC_VIEW_DIMS` is identical to `USER_ANALYTIC_VIEW_DIMENSIONS`.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_DIMENSIONS"

7.345 USER_ANALYTIC_VIEW_DIMS_AE

`USER_ANALYTIC_VIEW_DIMS_AE` describes the attribute dimensions in the analytic views (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_DIMS_AE`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_DIMS_AE"

7.346 USER_ANALYTIC_VIEW_FACT_COLS

`USER_ANALYTIC_VIEW_FACT_COLS` describes the fact columns of the analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_FACT_COLS`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_FACT_COLS"

7.347 USER_ANALYTIC_VIEW_FCT_COLS

`USER_ANALYTIC_VIEW_FCT_COLS` is identical to `USER_ANALYTIC_VIEW_FACT_COLS`.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_FACT_COLS"

7.348 USER_ANALYTIC_VIEW_FCT_COLS_AE

`USER_ANALYTIC_VIEW_FCT_COLS_AE` describes the fact columns of the analytic views (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_FCT_COLS_AE`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_FCT_COLS_AE"

7.349 USER_ANALYTIC_VIEW_HIER_CLASS

USER_ANALYTIC_VIEW_HIER_CLASS describes the classifications of the hierarchies in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_HIER_CLASS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_HIER_CLASS"

7.350 USER_ANALYTIC_VIEW_HIER_CLS

USER_ANALYTIC_VIEW_HIER_CLS is identical to USER_ANALYTIC_VIEW_HIER_CLASS.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_HIER_CLASS"

7.351 USER_ANALYTIC_VIEW_HIER_CLS_AE

USER_ANALYTIC_VIEW_HIER_CLS_AE describes the classifications of the hierarchies in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_HIER_CLS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_HIER_CLS_AE"

7.352 USER_ANALYTIC_VIEW_HIERS

USER_ANALYTIC_VIEW_HIERS describes the hierarchies in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_HIERS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_HIERS"

7.353 USER_ANALYTIC_VIEW_HIERS_AE

USER_ANALYTIC_VIEW_HIERS_AE describes the hierarchies in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_HIERS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_HIERS_AE"

7.354 USER_ANALYTIC_VIEW_KEYS

USER_ANALYTIC_VIEW_KEYS describes the key columns of the attribute dimensions in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_KEYS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_KEYS"

7.355 USER_ANALYTIC_VIEW_KEYS_AE

USER_ANALYTIC_VIEW_KEYS_AE describes the key columns of the attribute dimensions in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_KEYS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_KEYS_AE"

7.356 USER_ANALYTIC_VIEW_LEVEL_CLASS

USER_ANALYTIC_VIEW_LEVEL_CLASS describes the level classifications of the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_LEVEL_CLASS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_LEVEL_CLASS"

7.357 USER_ANALYTIC_VIEW_LEVELS

USER_ANALYTIC_VIEW_LEVELS describes the levels in the hierarchies in the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_LEVELS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_LEVELS"

7.358 USER_ANALYTIC_VIEW_LEVELS_AE

USER_ANALYTIC_VIEW_LEVELS_AE describes the levels in the hierarchies in the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_LEVELS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_LEVELS_AE"

7.359 USER_ANALYTIC_VIEW_LVL_CLS

USER_ANALYTIC_VIEW_LVL_CLS is identical to USER_ANALYTIC_VIEW_LEVEL_CLASS.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_LEVEL_CLASS"

7.360 USER_ANALYTIC_VIEW_LVL_CLS_AE

USER_ANALYTIC_VIEW_LVL_CLS_AE describes the level classifications of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_LVL_CLS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_LVL_CLS_AE"

7.361 USER_ANALYTIC_VIEW_LVLGRPS

`USER_ANALYTIC_VIEW_LVLGRPS` describes the analytic view measure and level groups of the analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_LVLGRPS`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_LVLGRPS"

7.362 USER_ANALYTIC_VIEW_LVLGRPS_AE

`USER_ANALYTIC_VIEW_LVLGRPS_AE` describes the analytic view measure and level groups of the analytic views (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_LVLGRPS_AE`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_LVLGRPS_AE"

7.363 USER_ANALYTIC_VIEW_MEAS_CLASS

`USER_ANALYTIC_VIEW_MEAS_CLASS` describes the classifications of the measures of the analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ANALYTIC_VIEW_MEAS_CLASS`.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_MEAS_CLASS"

7.364 USER_ANALYTIC_VIEW_MEAS_CLS

`USER_ANALYTIC_VIEW_MEAS_CLS` is identical to `USER_ANALYTIC_VIEW_MEAS_CLASS`.

> **See Also:**
>
> "USER_ANALYTIC_VIEW_MEAS_CLASS"

7.365 USER_ANALYTIC_VIEW_MEAS_CLS_AE

USER_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEW_MEAS_CLS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEW_MEAS_CLS_AE"

7.366 USER_ANALYTIC_VIEWS

USER_ANALYTIC_VIEWS describes the analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEWS.

> **See Also:**
>
> "ALL_ANALYTIC_VIEWS"

7.367 USER_ANALYTIC_VIEWS_AE

USER_ANALYTIC_VIEWS_AE describes the analytic views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ANALYTIC_VIEWS_AE.

> **See Also:**
>
> "ALL_ANALYTIC_VIEWS_AE"

7.368 USER_ANNOTATION_VALUES

USER_ANNOTATION_VALUES displays the values for schema annotations owned by the current user. Its columns (except for ANNOTATION_OWNER) are the same as those in ALL_ANNOTATION_VALUES.

The annotation owner is the same as the owner of the annotated object.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_ANNOTATION_VALUES"

7.369 USER_ANNOTATIONS

`USER_ANNOTATIONS` displays schema annotations owned by the current user. Its columns (except for `ANNOTATION_OWNER`) are the same as those in `ALL_ANNOTATIONS`.

The annotation owner is the same as the owner of the annotated object.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_ANNOTATIONS"

7.370 USER_ANNOTATIONS_USAGE

`USER_ANNOTATIONS_USAGE` provides usage information about schema annotations owned by the current user. Its columns (except for `ANNOTATION_OWNER`) are the same as those in `ALL_ANNOTATIONS_USAGE`.

The annotation owner is the same as the owner of the annotated object.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_ANNOTATIONS_USAGE"

7.371 USER_APPLICATION_ROLES

`USER_APPLICATION_ROLES` describes all the roles for the current user that have authorization policy functions defined.

Its columns are the same as those in `DBA_APPLICATION_ROLES`.

> **See Also:**
>
> "DBA_APPLICATION_ROLES"

7.372 USER_APPLY_ERROR

`USER_APPLY_ERROR` displays information about the error transactions generated by apply processes visible to the current user. Its columns (except for `SOURCE_ROOT_NAME`) are the same as those in `ALL_APPLY_ERROR`.

> **See Also:**
>
> "ALL_APPLY_ERROR"

7.373 USER_AQ_AGENT_PRIVS

`USER_AQ_AGENT_PRIVS` displays information about the registered AQ agents that are mapped to the current user. Its columns (except for `DB_USERNAME`) are the same as those in `DBA_AQ_AGENT_PRIVS`.

> **See Also:**
>
> "DBA_AQ_AGENT_PRIVS"

7.374 USER_ARGUMENTS

`USER_ARGUMENTS` lists the arguments of the functions and procedures that are owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ARGUMENTS`.

> **See Also:**
>
> - "ALL_ARGUMENTS"
> - "USER_PROCEDURES" for information about the functions and procedures that are owned by the current user

7.375 USER_ASSEMBLIES

`USER_ASSEMBLIES` provides information about all assemblies owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ASSEMBLIES`.

> **See Also:**
>
> "ALL_ASSEMBLIES"

7.376 USER_ASSOCIATIONS

`USER_ASSOCIATIONS` describes user-defined statistics associated with objects owned by the current user. Its columns are the same as those in `ALL_ASSOCIATIONS`.

> **See Also:**
>
> "ALL_ASSOCIATIONS"

7.377 USER_ATTRIBUTE_DIM_ATTR_CLASS

`USER_ATTRIBUTE_DIM_ATTR_CLASS` describes the attribute classifications of the attribute dimensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ATTRIBUTE_DIM_ATTR_CLASS`.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_ATTR_CLASS"

7.378 USER_ATTRIBUTE_DIM_ATTR_CLS

`USER_ATTRIBUTE_DIM_ATTR_CLS` is identical to `USER_ATTRIBUTE_DIM_ATTR_CLASS`.

> **See Also:**
>
> "USER_ATTRIBUTE_DIM_ATTR_CLASS"

7.379 USER_ATTRIBUTE_DIM_ATTR_CLS_AE

USER_ATTRIBUTE_DIM_ATTR_CLS_AE describes the attribute classifications of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_ATTR_CLS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_ATTR_CLS_AE"

7.380 USER_ATTRIBUTE_DIM_ATTRS

USER_ATTRIBUTE_DIM_ATTRS describes the attributes of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_ATTRS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_ATTRS"

7.381 USER_ATTRIBUTE_DIM_ATTRS_AE

USER_ATTRIBUTE_DIM_ATTRS_AE describes the attributes of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_ATTRS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_ATTRS_AE"

7.382 USER_ATTRIBUTE_DIM_CLASS

USER_ATTRIBUTE_DIM_CLASS describes the classifications of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_CLASS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_CLASS"

7.383 USER_ATTRIBUTE_DIM_CLASS_AE

USER_ATTRIBUTE_DIM_CLASS_AE describes the classifications of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_CLASS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_CLASS_AE"

7.384 USER_ATTRIBUTE_DIM_JN_PTHS

USER_ATTRIBUTE_DIM_JN_PTHS is identical to USER_ATTRIBUTE_DIM_JOIN_PATHS.

> **See Also:**
>
> "USER_ATTRIBUTE_DIM_JOIN_PATHS"

7.385 USER_ATTRIBUTE_DIM_JN_PTHS_AE

USER_ATTRIBUTE_DIM_JN_PTHS_AE describes the join paths for the attribute dimensions (across all editions) owned by the current user. Its columns are the same as those in ALL_ATTRIBUTE_DIM_JN_PTHS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_JN_PTHS_AE"

7.386 USER_ATTRIBUTE_DIM_JOIN_PATHS

USER_ATTRIBUTE_DIM_JOIN_PATHS describes the join paths for the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_JOIN_PATHS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_JOIN_PATHS"

7.387 USER_ATTRIBUTE_DIM_KEYS

USER_ATTRIBUTE_DIM_KEYS describes the keys of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_KEYS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_KEYS"

7.388 USER_ATTRIBUTE_DIM_KEYS_AE

USER_ATTRIBUTE_DIM_KEYS_AE describes the keys of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_KEYS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_KEYS_AE"

7.389 USER_ATTRIBUTE_DIM_LEVEL_ATTRS

USER_ATTRIBUTE_DIM_LEVEL_ATTRS describes the attributes of the levels of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_LEVEL_ATTRS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_LEVEL_ATTRS"

7.390 USER_ATTRIBUTE_DIM_LEVELS

USER_ATTRIBUTE_DIM_LEVELS describes the levels of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_LEVELS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_LEVELS"

7.391 USER_ATTRIBUTE_DIM_LEVELS_AE

USER_ATTRIBUTE_DIM_LEVELS_AE describes the levels of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_LEVELS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_LEVELS_AE"

7.392 USER_ATTRIBUTE_DIM_LVL_ATRS

USER_ATTRIBUTE_DIM_LVL_ATRS is identical to USER_ATTRIBUTE_DIM_LEVEL_ATTRS.

> **See Also:**
>
> "USER_ATTRIBUTE_DIM_LEVEL_ATTRS"

7.393 USER_ATTRIBUTE_DIM_LVL_ATRS_AE

USER_ATTRIBUTE_DIM_LVL_ATRS_AE describes the attributes of the levels of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_LVL_ATRS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_LVL_ATRS_AE"

7.394 USER_ATTRIBUTE_DIM_LVL_CLASS

USER_ATTRIBUTE_DIM_LVL_CLASS describes the level classifications of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_LVL_CLASS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_LVL_CLASS"

7.395 USER_ATTRIBUTE_DIM_LVL_CLS

USER_ATTRIBUTE_DIM_LVL_CLS is identical to USER_ATTRIBUTE_DIM_LVL_CLASS.

> **See Also:**
>
> "USER_ATTRIBUTE_DIM_LVL_CLASS"

7.396 USER_ATTRIBUTE_DIM_LVL_CLS_AE

USER_ATTRIBUTE_DIM_LVL_CLS_AE describes the level classifications of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_LVL_CLS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_LVL_CLS_AE"

7.397 USER_ATTRIBUTE_DIM_ORD_ATRS

USER_ATTRIBUTE_DIM_ORD_ATRS is identical to USER_ATTRIBUTE_DIM_ORDER_ATTRS.

> **See Also:**
>
> "USER_ATTRIBUTE_DIM_ORDER_ATTRS"

7.398 USER_ATTRIBUTE_DIM_ORD_ATRS_AE

USER_ATTRIBUTE_DIM_ORD_ATRS_AE describes the order attributes of the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_ORD_ATRS_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_ORD_ATRS_AE"

7.399 USER_ATTRIBUTE_DIM_ORDER_ATTRS

USER_ATTRIBUTE_DIM_ORDER_ATTRS describes the order attributes of the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_ORDER_ATTRS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_ORDER_ATTRS"

7.400 USER_ATTRIBUTE_DIM_TABLES

USER_ATTRIBUTE_DIM_TABLES describes the tables used by the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_TABLES.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_TABLES"

7.401 USER_ATTRIBUTE_DIM_TABLES_AE

USER_ATTRIBUTE_DIM_TABLES_AE describes the tables used by the attribute dimensions (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIM_TABLES_AE.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIM_TABLES_AE"

7.402 USER_ATTRIBUTE_DIMENSIONS

USER_ATTRIBUTE_DIMENSIONS describes the attribute dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ATTRIBUTE_DIMENSIONS.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIMENSIONS"

7.403 USER_ATTRIBUTE_DIMENSIONS_AE

`USER_ATTRIBUTE_DIMENSIONS_AE` describes the attribute dimensions (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ATTRIBUTE_DIMENSIONS_AE`.

> **See Also:**
>
> "ALL_ATTRIBUTE_DIMENSIONS_AE"

7.404 USER_ATTRIBUTE_TRANSFORMATIONS

`USER_ATTRIBUTE_TRANSFORMATIONS` describes the transformation functions for the transformations owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_ATTRIBUTE_TRANSFORMATIONS`.

> **See Also:**
>
> "ALL_ATTRIBUTE_TRANSFORMATIONS"

7.405 USER_AUDIT_OBJECT

`USER_AUDIT_OBJECT` displays audit trail records for the objects accessible to the current user. Its columns are the same as those in `DBA_AUDIT_OBJECT`.

> **Note:**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

7.406 USER_AUDIT_POLICIES

`USER_AUDIT_POLICIES` describes the fine-grained auditing policies on the tables and views owned by the current user. Its columns (except for `OBJECT_SCHEMA`) are the same as those in `ALL_AUDIT_POLICIES`.

> **See Also:**
>
> "ALL_AUDIT_POLICIES"

7.407 USER_AUDIT_POLICY_COLUMNS

`USER_AUDIT_POLICY_COLUMNS` describes the fine-grained auditing policy columns on the tables and views owned by the current user. Its columns are the same as those in `ALL_AUDIT_POLICY_COLUMNS`.

> **See Also:**
>
> "ALL_AUDIT_POLICY_COLUMNS"

7.408 USER_AUDIT_SESSION

`USER_AUDIT_SESSION` displays the audit trail records concerning connections and disconnections of the current user. Its columns are the same as those in `DBA_AUDIT_SESSION`.

> **Note:**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

7.409 USER_AUDIT_STATEMENT

`USER_AUDIT_STATEMENT` displays audit trail entries for the `GRANT`, `REVOKE`, `AUDIT`, `NOAUDIT`, and `ALTER SYSTEM` statements issued by the current user.

Its columns are the same as those in "DBA_AUDIT_STATEMENT".

> **Note:**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

7.410 USER_AUDIT_TRAIL

`USER_AUDIT_TRAIL` displays the standard audit trail entries related to the current user.

Its columns are the same as those in "DBA_AUDIT_TRAIL".

The view displays audit records generated by actions performed by the user and audit records generated by actions performed on the user's schema objects.

> **Note:**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

7.411 USER_AVTUNE_ARCHIVE_CACHE_LEVELS

`USER_AVTUNE_ARCHIVE_CACHE_LEVELS` displays the levels of the cache used by archive queries of the auto-cache enabled analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_AVTUNE_ARCHIVE_CACHE_LEVELS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_ARCHIVE_CACHE_LEVELS"

7.412 USER_AVTUNE_ARCHIVE_QUERIES

USER_AVTUNE_ARCHIVE_QUERIES displays the query history used for auto tuning the auto-cache enabled analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_AVTUNE_ARCHIVE_QUERIES.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_ARCHIVE_QUERIES"

7.413 USER_AVTUNE_ARCHIVE_QUERY_LEVELS

USER_AVTUNE_ARCHIVE_QUERY_LEVELS displays levels of the query in the archives of the auto-cache enabled analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_AVTUNE_ARCHIVE_QUERY_LEVELS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_ARCHIVE_QUERY_LEVELS"

7.414 USER_AVTUNE_ARCHIVE_QUERY_MEASURES

USER_AVTUNE_ARCHIVE_QUERY_MEASURES displays measures selected by the query in the archives of the auto-cache enabled analytic views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_AVTUNE_ARCHIVE_QUERY_MEASURES.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_ARCHIVE_QUERY_MEASURES"

7.415 USER_AVTUNE_ARCHIVES

`USER_AVTUNE_ARCHIVES` displays information about archives of the auto-cache enabled analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_AVTUNE_ARCHIVES`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_ARCHIVES"

7.416 USER_AVTUNE_AV_AGG_CACHE_LEVELS

`USER_AVTUNE_AV_AGG_CACHE_LEVELS` displays individual aggregation cache levels for the auto-cache enabled analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_AVTUNE_AV_AGG_CACHE_LEVELS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_AV_AGG_CACHE_LEVELS"

7.417 USER_AVTUNE_AV_AGG_CACHES

`USER_AVTUNE_AV_AGG_CACHES` displays aggregation caches for the auto-cache enabled analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_AVTUNE_AV_AGG_CACHES`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_AV_AGG_CACHES"

7.418 USER_AVTUNE_CALLBACK_ARGS

`USER_AVTUNE_CALLBACK_ARGS` displays user-provided callback arguments for the auto-cache enabled analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_AVTUNE_CALLBACK_ARGS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_CALLBACK_ARGS"

7.419 USER_AVTUNE_ENABLED_AV_DIMENSIONS

`USER_AVTUNE_ENABLED_AV_DIMENSIONS` displays the enabled attribute dimensions for the auto-cache enabled analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_AVTUNE_ENABLED_AV_DIMENSIONS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_ENABLED_AV_DIMENSIONS"

7.420 USER_AVTUNE_ENABLED_AVS

`USER_AVTUNE_ENABLED_AVS` displays the auto-cache enabled analytic views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_AVTUNE_ENABLED_AVS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_ENABLED_AVS"

7.421 USER_AVTUNE_ENABLED_DIMENSIONS

`USER_AVTUNE_ENABLED_DIMENSIONS` displays the enabled attribute dimensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_AVTUNE_ENABLED_DIMENSIONS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai, Release Update 23.7.

> **See Also:**
>
> "ALL_AVTUNE_ENABLED_DIMENSIONS"

7.422 USER_AW_PS

USER_AW_PS describes the page spaces in the analytic workspaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL_AW_PS.

> **See Also:**
>
> "ALL_AW_PS"

7.423 USER_AWS

USER_AWS describes the analytic workspaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL_AWS.

> **See Also:**
>
> "ALL_AWS"

7.424 USER_BASE_TABLE_MVIEWS

USER_BASE_TABLE_MVIEWS describes the materialized views using materialized view logs owned by the current user. Its columns are the same as those in ALL_BASE_TABLE_MVIEWS.

> **See Also:**
>
> "ALL_BASE_TABLE_MVIEWS"

7.425 USER_BLOCKCHAIN_ROW_VERSION_COLS

USER_BLOCKCHAIN_ROW_VERSION_COLS displays information about row versioned columns in the blockchain tables owned by the current user. Its columns are the same as those in ALL_BLOCKCHAIN_ROW_VERSION_COLS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_BLOCKCHAIN_ROW_VERSION_COLS"

7.426 USER_BLOCKCHAIN_ROW_VERSION_HISTORY

`USER_BLOCKCHAIN_ROW_VERSION_HISTORY` provides a history of row versions in the blockchain tables owned by the current user. Its columns (except for `SCHEMA_NAME`) are the same as those in `ALL_BLOCKCHAIN_ROW_VERSION_HISTORY`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_BLOCKCHAIN_ROW_VERSION_HISTORY"

7.427 USER_BLOCKCHAIN_TABLE_CHAINS

`USER_BLOCKCHAIN_TABLE_CHAINS` displays system chain information for the blockchain tables owned by the current user. Its columns (except for `SCHEMA_NAME`) are the same as those in `ALL_BLOCKCHAIN_TABLE_CHAINS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_BLOCKCHAIN_TABLE_CHAINS"

7.428 USER_BLOCKCHAIN_TABLE_EPOCHS

USER_BLOCKCHAIN_TABLE_EPOCHS displays epoch information for the blockchain tables owned by the current user. Its columns (except for SCHEMA_NAME) are the same as those in ALL_BLOCKCHAIN_TABLE_EPOCHS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_BLOCKCHAIN_TABLE_EPOCHS"

7.429 USER_BLOCKCHAIN_TABLE_HASH_COL_ORDER

USER_BLOCKCHAIN_TABLE_HASH_COL_ORDER displays information about columns used to compute the cryptographic hash in the blockchain tables owned by the current user. Its columns (except for SCHEMA_NAME) are the same as those in ALL_BLOCKCHAIN_TABLE_HASH_COL_ORDER.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_BLOCKCHAIN_TABLE_HASH_COL_ORDER"

7.430 USER_BLOCKCHAIN_TABLES

USER_BLOCKCHAIN_TABLES describes the blockchain tables owned by the current user. Its columns (except for SCHEMA_NAME) are the same as those in ALL_BLOCKCHAIN_TABLES.

> **See Also:**
>
> "ALL_BLOCKCHAIN_TABLES"

7.431 USER_CATALOG

USER_CATALOG lists tables, views, clusters, synonyms, and sequences owned by the current user. Its columns are the same as those in ALL_CATALOG.

> **See Also:**
>
> "ALL_CATALOG"

7.432 USER_CERTIFICATES

USER_CERTIFICATES displays the certificates added by the current user which are used for signature verification for blockchain tables. Its columns (except USER_NAME) are the same as those in ALL_CERTIFICATES.

> **See Also:**
>
> "ALL_CERTIFICATES"

7.433 USER_CHANGE_NOTIFICATION_REGS

USER_CHANGE_NOTIFICATION_REGS describes the change notification registrations owned by the current user. Its columns (except for USERNAME) are the same as those in DBA_CHANGE_NOTIFICATION_REGS.

> **See Also:**
>
> "DBA_CHANGE_NOTIFICATION_REGS"

7.434 USER_CLU_COLUMNS

USER_CLU_COLUMNS maps columns in the current user's tables to cluster columns. Its columns are the same as those in DBA_CLU_COLUMNS.

> **See Also:**
>
> "DBA_CLU_COLUMNS"

7.435 USER_CLUSTER_HASH_EXPRESSIONS

`USER_CLUSTER_HASH_EXPRESSIONS` lists hash functions for the hash clusters owned by the current user. Its columns are the same as those in `ALL_CLUSTER_HASH_EXPRESSIONS`.

> **See Also:**
>
> "ALL_CLUSTER_HASH_EXPRESSIONS"

7.436 USER_CLUSTERING_DIMENSIONS

`USER_CLUSTERING_DIMENSIONS` describes dimension tables associated with tables with an attribute clustering clause owned by the user. Its columns (except for `OWNER`) are the same as those in `ALL_CLUSTERING_DIMENSIONS`.

> **See Also:**
>
> - "ALL_CLUSTERING_DIMENSIONS"
> - *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

7.437 USER_CLUSTERING_JOINS

`USER_CLUSTERING_JOINS` describes joins to the dimension tables associated with tables with an attribute clustering clause owned by the user. Its columns (except for `OWNER`) are the same as those in `ALL_CLUSTERING_JOINS`.

> **See Also:**
>
> - "ALL_CLUSTERING_JOINS"
> - *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

7.438 USER_CLUSTERING_KEYS

USER_CLUSTERING_KEYS describes clustering keys for tables with an attribute clustering clause owned by the user. Its columns are the same as those in ALL_CLUSTERING_KEYS.

> **See Also:**
>
> - "ALL_CLUSTERING_KEYS"
> - *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

7.439 USER_CLUSTERING_TABLES

USER_CLUSTERING_TABLES describes the tables with an attribute clustering clause owned by the user. Its columns are the same as those in ALL_CLUSTERING_TABLES.

> **See Also:**
>
> - "ALL_CLUSTERING_TABLES"
> - *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

7.440 USER_CLUSTERS

USER_CLUSTERS describes all the clusters owned by the current user. Its columns are the same as those in ALL_CLUSTERS.

> **See Also:**
>
> "ALL_CLUSTERS"

7.441 USER_CODE_ROLE_PRIVS

USER_CODE_ROLE_PRIVS describes all the roles that are associated with program units owned by current user. Its columns (except for OWNER) are the same as those in ALL_CODE_ROLE_PRIVS.

> **See Also:**
>
> "ALL_CODE_ROLE_PRIVS"

7.442 USER_COL_COMMENTS

USER_COL_COMMENTS displays comments on the columns of the tables and views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_COL_COMMENTS.

> **See Also:**
>
> "ALL_COL_COMMENTS"

7.443 USER_COL_PENDING_STATS

USER_COL_PENDING_STATS describes the pending statistics of the columns owned by the current user. Its columns (except for OWNER) are the same as those in ALL_COL_PENDING_STATS.

> **See Also:**
>
> "ALL_COL_PENDING_STATS"

7.444 USER_COL_PRIVS

USER_COL_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee. Its columns are the same as those in DBA_COL_PRIVS.

> **See Also:**
>
> "DBA_COL_PRIVS"

7.445 USER_COL_PRIVS_MADE

USER_COL_PRIVS_MADE describes the column object grants for which the current user is the object owner. Its columns (except for OWNER) are the same as those in ALL_COL_PRIVS_MADE.

> **See Also:**
>
> "ALL_COL_PRIVS_MADE"

7.446 USER_COL_PRIVS_RECD

USER_COL_PRIVS_RECD describes the column object grants for which the current user is the grantee. Its columns (except for GRANTEE) are the same as those in ALL_COL_PRIVS_RECD.

> **See Also:**
>
> "ALL_COL_PRIVS_RECD"

7.447 USER_COLL_TYPES

USER_COLL_TYPES describes named collection types (VARRAYs, nested tables, object tables, and so on) in the current user's schema. Its columns are the same as those in ALL_COLL_TYPES.

> **See Also:**
>
> "ALL_COLL_TYPES"

7.448 USER_COMPARISON

USER_COMPARISON displays information about the comparison objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA_COMPARISON.

> **See Also:**
>
> "DBA_COMPARISON"

7.449 USER_COMPARISON_COLUMNS

USER_COMPARISON_COLUMNS displays information about the columns for the comparison objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA_COMPARISON_COLUMNS.

> **See Also:**
>
> "DBA_COMPARISON_COLUMNS"

7.450 USER_COMPARISON_ROW_DIF

USER_COMPARISON_ROW_DIF displays information about the differing rows in the comparison scans owned by the current user. Its columns are the same as those in DBA_COMPARISON_ROW_DIF.

> **See Also:**
>
> "DBA_COMPARISON_ROW_DIF"

7.451 USER_COMPARISON_SCAN

USER_COMPARISON_SCAN displays information about the comparison scans owned by the current user. Its columns (except for OWNER) are the same as those in DBA_COMPARISON_SCAN.

> **See Also:**
>
> "DBA_COMPARISON_SCAN"

7.452 USER_COMPARISON_SCAN_VALUES

USER_COMPARISON_SCAN_VALUES displays information about the values for the comparison scans owned by the current user. Its columns (except for OWNER) are the same as those in DBA_COMPARISON_SCAN_VALUES.

> **See Also:**
>
> "DBA_COMPARISON_SCAN_VALUES"

7.453 USER_CONS_COLUMNS

USER_CONS_COLUMNS describes columns that are owned by the current user and that are specified in constraint definitions. Its columns are the same as those in ALL_CONS_COLUMNS.

> **See Also:**
>
> "ALL_CONS_COLUMNS"

7.454 USER_CONS_OBJ_COLUMNS

USER_CONS_OBJ_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CONS_OBJ_COLUMNS.

> **See Also:**
>
> "ALL_CONS_OBJ_COLUMNS"

7.455 USER_CONSTRAINTS

USER_CONSTRAINTS describes all constraint definitions on tables owned by the current user. Its columns are the same as those in ALL_CONSTRAINTS.

> **See Also:**
>
> "ALL_CONSTRAINTS"

7.456 USER_CQ_NOTIFICATION_QUERIES

USER_CQ_NOTIFICATION_QUERIES describes the registered queries for the CQ notifications owned by the current user. Its columns (except for USERNAME) are the same as those in DBA_CQ_NOTIFICATION_QUERIES.

> **See Also:**
>
> "DBA_CQ_NOTIFICATION_QUERIES"

7.457 USER_CREDENTIALS

USER_CREDENTIALS displays credentials owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CREDENTIALS.

> **See Also:**
>
> "ALL_CREDENTIALS"

7.458 USER_CUBE_ATTR_VISIBILITY

USER_CUBE_ATTR_VISIBILITY describes the OLAP attributes visible for the dimensions, hierarchies, and levels owned by the current user Its columns (except for OWNER) are the same as those in ALL_CUBE_ATTR_VISIBILITY.

> **See Also:**
>
> "ALL_CUBE_ATTR_VISIBILITY"

7.459 USER_CUBE_ATTRIBUTES

USER_CUBE_ATTRIBUTES describes the attributes for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_ATTRIBUTES.

> **See Also:**
>
> "ALL_CUBE_ATTRIBUTES"

7.460 USER_CUBE_BUILD_PROCESSES

USER_CUBE_BUILD_PROCESSES describes the OLAP build processes and maintenance scripts owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_BUILD_PROCESSES.

> **See Also:**
>
> "ALL_CUBE_BUILD_PROCESSES"

7.461 USER_CUBE_CALCULATED_MEMBERS

USER_CUBE_CALCULATED_MEMBERS describes the calculated members for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_CALCULATED_MEMBERS.

> **See Also:**
>
> "ALL_CUBE_CALCULATED_MEMBERS"

7.462 USER_CUBE_DIM_LEVELS

USER_CUBE_DIM_LEVELS describes the OLAP dimension levels owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_DIM_LEVELS.

> **See Also:**
>
> "ALL_CUBE_DIM_LEVELS"

7.463 USER_CUBE_DIM_MODELS

USER_CUBE_DIM_MODELS describes the models for the OLAP dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_DIM_MODELS.

> **See Also:**
>
> "ALL_CUBE_DIM_MODELS"

7.464 USER_CUBE_DIM_VIEW_COLUMNS

USER_CUBE_DIM_VIEW_COLUMNS describes the columns of the relational views of the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_DIM_VIEW_COLUMNS.

> **See Also:**
>
> "ALL_CUBE_DIM_VIEW_COLUMNS"

7.465 USER_CUBE_DIM_VIEWS

USER_CUBE_DIM_VIEWS describes the relational views of the OLAP dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_DIM_VIEWS.

> **See Also:**
>
> "ALL_CUBE_DIM_VIEWS"

7.466 USER_CUBE_DIMENSIONALITY

USER_CUBE_DIMENSIONALITY describes the dimension order for the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_DIMENSIONALITY.

> **See Also:**
>
> "ALL_CUBE_DIMENSIONALITY"

7.467 USER_CUBE_DIMENSIONS

USER_CUBE_DIMENSIONS describes the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_DIMENSIONS.

> **See Also:**
>
> "ALL_CUBE_DIMENSIONS"

7.468 USER_CUBE_HIER_LEVELS

USER_CUBE_HIER_LEVELS describes the hierarchy levels for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_HIER_LEVELS.

> **See Also:**
>
> "ALL_CUBE_HIER_LEVELS"

7.469 USER_CUBE_HIER_VIEW_COLUMNS

USER_CUBE_HIER_VIEW_COLUMNS describes the columns of the relational hierarchy views of the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_HIER_VIEW_COLUMNS.

> **See Also:**
>
> "ALL_CUBE_HIER_VIEW_COLUMNS"

7.470 USER_CUBE_HIER_VIEWS

USER_CUBE_HIER_VIEWS describes the hierarchies for the OLAP cube dimensions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_HIER_VIEWS.

> **See Also:**
>
> "ALL_CUBE_HIER_VIEWS"

7.471 USER_CUBE_HIERARCHIES

USER_CUBE_HIERARCHIES describes the OLAP dimension hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_HIERARCHIES.

> **See Also:**
>
> "ALL_CUBE_HIERARCHIES"

7.472 USER_CUBE_MEASURES

USER_CUBE_MEASURES describes the measures for the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_MEASURES.

> **See Also:**
>
> "ALL_CUBE_MEASURES"

7.473 USER_CUBE_NAMED_BUILD_SPECS

USER_CUBE_NAMED_BUILD_SPECS describes the OLAP cube named build specifications in the database that are owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_NAMED_BUILD_SPECS.

> **See Also:**
>
> "ALL_CUBE_NAMED_BUILD_SPECS"

7.474 USER_CUBE_SUB_PARTITION_LEVELS

USER_CUBE_SUB_PARTITION_LEVELS describes the OLAP secondary partition levels in the database that are owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_SUB_PARTITION_LEVELS.

> **See Also:**
>
> "ALL_CUBE_SUB_PARTITION_LEVELS"

7.475 USER_CUBE_VIEW_COLUMNS

USER_CUBE_VIEW_COLUMNS describes the columns of relational views of OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_VIEW_COLUMNS.

> **See Also:**
>
> "ALL_CUBE_VIEW_COLUMNS"

7.476 USER_CUBE_VIEWS

USER_CUBE_VIEWS describes the relational views of the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBE_VIEWS.

> **See Also:**
>
> "ALL_CUBE_VIEWS"

7.477 USER_CUBES

USER_CUBES describes the OLAP cubes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_CUBES.

> **See Also:**
>
> "ALL_CUBES"

7.478 USER_DATAPUMP_JOBS

USER_DATAPUMP_JOBS displays the Data Pump jobs owned by the current user. Its columns (except for OWNER_NAME) are the same as those in DBA_DATAPUMP_JOBS.

> **See Also:**
>
> "DBA_DATAPUMP_JOBS"

7.479 USER_DB_LINKS

USER_DB_LINKS describes the database links owned by the current user. Its columns are the same as those in ALL_DB_LINKS except that it does not have the OWNER column.

It also displays an additional column, PASSWORD, which is no longer used and for which nothing is returned. The PASSWORD column is maintained for backward compatibility only.

> **See Also:**
>
> "ALL_DB_LINKS"

7.480 USER_DBFS_HS

USER_DBFS_HS shows all Database File System (DBFS) hierarchical stores owned by the current user. Its columns (except for STOREOWNER) are the same as those in DBA_DBFS_HS.

> **See Also:**
>
> "DBA_DBFS_HS"

7.481 USER_DBFS_HS_COMMANDS

USER_DBFS_HS_COMMANDS shows all the registered store commands for all Database File system (DBFS) hierarchical stores owned by current user. Its columns (except for STOREOWNER) are the same as those in DBA_DBFS_HS_COMMANDS.

> **See Also:**
>
> "DBA_DBFS_HS_COMMANDS"

7.482 USER_DBFS_HS_FILES

USER_DBFS_HS_FILES displays files in the Database File System (DBFS) hierarchical store owned by the current user and their location on the back-end device.

Column	Datatype	NULL	Description
PATH	VARCHAR2(1024)		Path name of the file
SEQUENCENUMBER	NUMBER		Sequence number of this piece of the file
STARTOFFSET	NUMBER		Begin offset of this piece in the tarball
ENDOFFSET	NUMBER		End offset of this piece in the tarball
TARBALLID	NUMBER		Tarball ID
BACKUPFILENAME	VARCHAR2(256)		File on back end in which this tarball is located
TARSTARTOFFSET	NUMBER		Begin offset of this tarball in the backup file
TARENDOFFSET	NUMBER		End offset of this tarball in the backup file

7.483 USER_DBFS_HS_FIXED_PROPERTIES

USER_DBFS_HS_FIXED_PROPERTIES shows non-modifiable properties of all Databaase File System (DBFS) hierarchical stores owned by current user. Its columns (except for STORE_OWNER) are the same as those in DBA_DBFS_HS_FIXED_PROPERTIES.

> **See Also:**
>
> "DBA_DBFS_HS_FIXED_PROPERTIES"

7.484 USER_DBFS_HS_PROPERTIES

USER_DBFS_HS_PROPERTIES shows modifiable properties of all Database File System (DBFS) hierarchical stores owned by current user. Its columns (except for STOREOWNER) are the same as those in DBA_DBFS_HS_PROPERTIES.

> **See Also:**
>
> "DBA_DBFS_HS_PROPERTIES"

7.485 USER_DDL_REGS

`USER_DDL_REGS` displays DDL notification registrations that apply to tables owned by the current user. Its columns (except for `USERNAME`) are the same as those in `DBA_DDL_REGS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "DBA_DDL_REGS"

7.486 USER_DEPENDENCIES

`USER_DEPENDENCIES` describes dependencies between procedures, packages, functions, package bodies, and triggers owned by the current user, including dependencies on views created without any database links. Its columns are the same as those in `ALL_DEPENDENCIES`.

> **See Also:**
>
> "ALL_DEPENDENCIES"

7.487 USER_DIM_ATTRIBUTES

`USER_DIM_ATTRIBUTES` describes the relationship between dimension levels and functionally dependent columns in the current user's schema.

The level columns and the dependent column must be in the same table. This view's columns are the same as those in `ALL_DIM_ATTRIBUTES`.

> **See Also:**
>
> "ALL_DIM_ATTRIBUTES"

7.488 USER_DIM_CHILD_OF

USER_DIM_CHILD_OF describes a hierarchical relationship of 1 to *n* between pairs of levels in dimensions owned by the current user. Its columns are the same as those in ALL_DIM_CHILD_OF.

> **See Also:**
>
> "ALL_DIM_CHILD_OF"

7.489 USER_DIM_HIERARCHIES

USER_DIM_HIERARCHIES describes the dimension hierarchies owned by the current user. Its columns are the same as those in ALL_DIM_HIERARCHIES.

> **See Also:**
>
> "ALL_DIM_HIERARCHIES"

7.490 USER_DIM_JOIN_KEY

USER_DIM_JOIN_KEY describes the join between two dimension tables owned by the current user. The join is always specified between a parent dimension level column and a child column. This view's columns are the same as those in ALL_DIM_JOIN_KEY.

> **See Also:**
>
> "ALL_DIM_JOIN_KEY"

7.491 USER_DIM_LEVEL_KEY

USER_DIM_LEVEL_KEY describes columns of dimension levels owned by the current user. This view's columns are the same as those in ALL_DIM_LEVEL_KEY.

> **See Also:**
>
> "ALL_DIM_LEVEL_KEY"

7.492 USER_DIM_LEVELS

USER_DIM_LEVELS describes the levels of dimensions owned by the current user. All columns of a dimension level must come from the same relation. This view's columns are the same as those in ALL_DIM_LEVELS.

> **See Also:**
>
> "ALL_DIM_LEVELS"

7.493 USER_DIMENSIONS

USER_DIMENSIONS describes dimension objects in the user's schema. Its columns are the same as those in ALL_DIMENSIONS.

> **See Also:**
>
> "ALL_DIMENSIONS"

7.494 USER_DOMAIN_COLS

USER_DOMAIN_COLS describes columns of the data use case domains owned by the current user. Its columns are the same as those in ALL_DOMAIN_COLS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_DOMAIN_COLS"

7.495 USER_DOMAIN_CONSTRAINTS

USER_DOMAIN_CONSTRAINTS describes constraint definitions on the data use case domains owned by the current user. Its columns are the same as those in ALL_DOMAIN_CONSTRAINTS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_DOMAIN_CONSTRAINTS"

7.496 USER_DOMAINS

USER_DOMAINS describes the data use casedomains owned by the current user. Its columns are the same as those in ALL_DOMAINS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_DOMAINS"

7.497 USER_EDITIONED_TYPES

USER_EDITIONED_TYPES lists the types that are editioned by default for the current user. Its columns (except for SCHEMA) are the same as those in DBA_EDITIONED_TYPES.

> **See Also:**
>
> "DBA_EDITIONED_TYPES"

7.498 USER_EDITIONING_VIEW_COLS

USER_EDITIONING_VIEW_COLS describes the relationship between the columns of the editioning views owned by the current user and the table columns to which they map. Its columns (except for OWNER) are the same as those in ALL_EDITIONING_VIEW_COLS.

> **See Also:**
>
> "ALL_EDITIONING_VIEW_COLS"

7.499 USER_EDITIONING_VIEW_COLS_AE

USER_EDITIONING_VIEW_COLS_AE describes the relationship between the columns of the editioning views (across all editions) owned by the current user and the table columns to which they map. Its columns (except for OWNER) are the same as those in ALL_EDITIONING_VIEW_COLS_AE.

> **See Also:**
>
> "ALL_EDITIONING_VIEW_COLS_AE"

7.500 USER_EDITIONING_VIEWS

USER_EDITIONING_VIEWS describes the editioning views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_EDITIONING_VIEWS.

> **See Also:**
>
> "ALL_EDITIONING_VIEWS"

7.501 USER_EDITIONING_VIEWS_AE

USER_EDITIONING_VIEWS_AE describes the editioning views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_EDITIONING_VIEWS_AE.

> **See Also:**
>
> "ALL_EDITIONING_VIEWS_AE"

7.502 USER_ENCRYPTED_COLUMNS

USER_ENCRYPTED_COLUMNS maintains encryption algorithm information for all encrypted columns in all tables in the user's schema. Its columns (except for OWNER) are the same as those in ALL_ENCRYPTED_COLUMNS.

> **See Also:**
>
> "ALL_ENCRYPTED_COLUMNS"

7.503 USER_EPG_DAD_AUTHORIZATION

USER_EPG_DAD_AUTHORIZATION describes the DADs that are authorized to use the user's privileges. Its columns (except for USERNAME) are the same as those in DBA_EPG_DAD_AUTHORIZATION.

> **See Also:**
>
> "DBA_EPG_DAD_AUTHORIZATION"

7.504 USER_ERROR_TRANSLATIONS

USER_ERROR_TRANSLATIONS describes all error translations owned by the user. Its columns (except for OWNER) are the same as those in ALL_ERROR_TRANSLATIONS.

> **See Also:**
>
> "ALL_ERROR_TRANSLATIONS"

7.505 USER_ERRORS

USER_ERRORS describes the current errors on the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ERRORS.

> **See Also:**
>
> "ALL_ERRORS"

7.506 USER_ERRORS_AE

USER_ERRORS_AE describes the current errors on the stored objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_ERRORS_AE.

> **See Also:**
>
> "ALL_ERRORS_AE"

7.507 USER_EVALUATION_CONTEXT_TABLES

USER_EVALUATION_CONTEXT_TABLES describes the tables in the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION_CONTEXT_OWNER) are the same as those in ALL_EVALUATION_CONTEXT_TABLES.

> **See Also:**
>
> "ALL_EVALUATION_CONTEXT_TABLES"

7.508 USER_EVALUATION_CONTEXT_VARS

USER_EVALUATION_CONTEXT_VARS describes the variables in the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION_CONTEXT_OWNER) are the same as those in ALL_EVALUATION_CONTEXT_VARS.

> **See Also:**
>
> "ALL_EVALUATION_CONTEXT_VARS"

7.509 USER_EVALUATION_CONTEXTS

USER_EVALUATION_CONTEXTS describes the rule evaluation contexts owned by the current user. Its columns (except for EVALUATION_CONTEXT_OWNER) are the same as those in ALL_EVALUATION_CONTEXTS.

> **See Also:**
>
> "ALL_EVALUATION_CONTEXTS"

7.510 USER_EXPRESSION_STATISTICS

USER_EXPRESSION_STATISTICS provides expression usage tracking statistics for tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_EXPRESSION_STATISTICS.

> **See Also:**
>
> "ALL_EXPRESSION_STATISTICS"

7.511 USER_EXTENTS

USER_EXTENTS describes the extents comprising the segments owned by the current user's objects. Its columns (except for OWNER, FILE_ID, BLOCK_ID, and RELATIVE_FNO) are the same as those in DBA_EXTENTS.

> **See Also:**
>
> "DBA_EXTENTS"

7.512 USER_EXTERNAL_LOCATIONS

USER_EXTERNAL_LOCATIONS describes the locations (data sources) of the external tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_EXTERNAL_LOCATIONS.

> **See Also:**
>
> "ALL_EXTERNAL_LOCATIONS"

7.513 USER_EXTERNAL_TABLES

USER_EXTERNAL_TABLES describes the external tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_EXTERNAL_TABLES.

> **See Also:**
>
> "ALL_EXTERNAL_TABLES"

7.514 USER_FLASHBACK_ARCHIVE

`USER_FLASHBACK_ARCHIVE` describes flashback data archives, which consist of multiple tablespaces and historic data from all transactions against tracked tables.

The content of this view depends on the privileges of the user who queries it, as follows:

- If the user has the `FLASHBACK ARCHIVE ADMINISTER` system privilege, then `USER_FLASHBACK_ARCHIVE` describes the flashback archives for all users who have been granted the `FLASHBACK ARCHIVE` object privilege.
- If the user does not have the `FLASHBACK ARCHIVE ADMINISTER` system privilege, then `USER_FLASHBACK_ARCHIVE` describes flashback archives for which the current user has been granted the `FLASHBACK ARCHIVE` object privilege.

The columns of the `USER_FLASHBACK_ARCHIVE` view are the same as those in `DBA_FLASHBACK_ARCHIVE`.

> **See Also:**
>
> "DBA_FLASHBACK_ARCHIVE"

7.515 USER_FLASHBACK_ARCHIVE_TABLES

`USER_FLASHBACK_ARCHIVE_TABLES` displays information about the tables owned by the current user that are enabled for Flashback Archive. Its columns are the same as those in `DBA_FLASHBACK_ARCHIVE_TABLES`.

> **See Also:**
>
> "DBA_FLASHBACK_ARCHIVE_TABLES"

7.516 USER_FLASHBACK_TXN_REPORT

`USER_FLASHBACK_TXN_REPORT` displays information about the compensating transactions owned by the current user that have been committed in the database. Its columns (except for `USERNAME`) are the same as those in `DBA_FLASHBACK_TXN_REPORT`.

> **See Also:**
>
> "DBA_FLASHBACK_TXN_REPORT"

7.517 USER_FLASHBACK_TXN_STATE

`USER_FLASHBACK_TXN_STATE` displays information about the compensating status of the transactions owned by the current user. Its columns (except for `USERNAME`) are the same as those in `DBA_FLASHBACK_TXN_STATE`.

> **See Also:**
>
> "DBA_FLASHBACK_TXN_STATE"

7.518 USER_FREE_SPACE

`USER_FREE_SPACE` describes the free extents in the tablespaces accessible to the current user. Its columns are the same as those in `DBA_FREE_SPACE`.

> **See Also:**
>
> "DBA_FREE_SPACE"

7.519 USER_GOLDENGATE_PRIVILEGES

`USER_GOLDENGATE_PRIVILEGES` displays details about Oracle GoldenGate privileges. Its columns (except for `USERNAME`) are the same as those in `ALL_GOLDENGATE_PRIVILEGES`.

> **See Also:**
>
> "ALL_GOLDENGATE_PRIVILEGES"

7.520 USER_HEAT_MAP_SEG_HISTOGRAM

`USER_HEAT_MAP_SEG_HISTOGRAM` displays segment access information for segments owned by the user. Its columns (except for `OWNER`) are the same as those in `ALL_HEAT_MAP_SEG_HISTOGRAM`.

> **See Also:**
>
> "ALL_HEAT_MAP_SEG_HISTOGRAM"

7.521 USER_HEAT_MAP_SEGMENT

USER_HEAT_MAP_SEGMENT displays the latest segment access time for all segments owned by the user. Its columns (except for OWNER) are the same as those in ALL_HEAT_MAP_SEGMENT.

> **See Also:**
>
> "ALL_HEAT_MAP_SEGMENT"

7.522 USER_HIER_CLASS

USER_HIER_CLASS describes the classifications of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_CLASS.

> **See Also:**
>
> "ALL_HIER_CLASS"

7.523 USER_HIER_CLASS_AE

USER_HIER_CLASS_AE describes the classifications of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_CLASS_AE.

> **See Also:**
>
> "ALL_HIER_CLASS_AE"

7.524 USER_HIER_COLUMNS

USER_HIER_COLUMNS describes the columns of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_COLUMNS.

> **See Also:**
>
> "ALL_HIER_COLUMNS"

7.525 USER_HIER_COLUMNS_AE

`USER_HIER_COLUMNS_AE` describes the columns of the hierarchies (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_HIER_COLUMNS_AE`.

> **See Also:**
>
> "ALL_HIER_COLUMNS_AE"

7.526 USER_HIER_HIER_ATTR_CLASS

`USER_HIER_HIER_ATTR_CLASS` describes the classifications of the hierarchical attributes of the hierarchies owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_HIER_HIER_ATTR_CLASS`.

> **See Also:**
>
> "ALL_HIER_HIER_ATTR_CLASS"

7.527 USER_HIER_HIER_ATTR_CLASS_AE

`USER_HIER_HIER_ATTR_CLASS_AE` describes the classifications of the hierarchical attributes of the hierarchies (across all editions) owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_HIER_HIER_ATTR_CLASS_AE`.

> **See Also:**
>
> "ALL_HIER_HIER_ATTR_CLASS_AE"

7.528 USER_HIER_HIER_ATTRIBUTES

`USER_HIER_HIER_ATTRIBUTES` describes the hierarchical attributes of the hierarchies owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_HIER_HIER_ATTRIBUTES`.

> **See Also:**
>
> "ALL_HIER_HIER_ATTRIBUTES"

7.529 USER_HIER_HIER_ATTRIBUTES_AE

USER_HIER_HIER_ATTRIBUTES_AE describes the hierarchical attributes of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_HIER_ATTRIBUTES_AE.

> **See Also:**
>
> "ALL_HIER_HIER_ATTRIBUTES_AE"

7.530 USER_HIER_JOIN_PATHS

USER_HIER_JOIN_PATHS describes the join paths for the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_JOIN_PATHS.

> **See Also:**
>
> "ALL_HIER_JOIN_PATHS"

7.531 USER_HIER_JOIN_PATHS_AE

USER_HIER_JOIN_PATHS_AE describes the join paths for the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_JOIN_PATHS_AE.

> **See Also:**
>
> "ALL_HIER_JOIN_PATHS_AE"

7.532 USER_HIER_LEVEL_ID_ATTRS

USER_HIER_LEVEL_ID_ATTRS describes the attributes that uniquely identify members of the levels of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_LEVEL_ID_ATTRS.

> **See Also:**
>
> "ALL_HIER_LEVEL_ID_ATTRS"

7.533 USER_HIER_LEVEL_ID_ATTRS_AE

USER_HIER_LEVEL_ID_ATTRS_AE describes the attributes that uniquely identify members of the levels of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_LEVEL_ID_ATTRS_AE.

> **See Also:**
>
> "ALL_HIER_LEVEL_ID_ATTRS_AE"

7.534 USER_HIER_LEVELS

USER_HIER_LEVELS describes the levels of the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_LEVELS.

> **See Also:**
>
> "ALL_HIER_LEVELS"

7.535 USER_HIER_LEVELS_AE

USER_HIER_LEVELS_AE describes the levels of the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIER_LEVELS_AE.

> **See Also:**
>
> "ALL_HIER_LEVELS_AE"

7.536 USER_HIERARCHIES

USER_HIERARCHIES describes the hierarchies owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIERARCHIES.

> **See Also:**
>
> "ALL_HIERARCHIES"

7.537 USER_HIERARCHIES_AE

USER_HIERARCHIES_AE describes the hierarchies (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIERARCHIES_AE.

> **See Also:**
>
> "ALL_HIERARCHIES_AE"

7.538 USER_HIST_SAGAS

USER_HIST_SAGAS provides a history of the completed sagas owned by the current user. Its columns (except for OWNER) are the same as those in ALL_HIST_SAGAS.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

Completed sagas are retained in this view for the length of time specified by the SAGA_HIST_RETENTION initialization parameter. The default is 30 days.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "ALL_HIST_SAGAS"
> - "SAGA_HIST_RETENTION"

7.539 USER_HISTOGRAMS

USER_HISTOGRAMS is a synonym for USER_TAB_HISTOGRAMS.

> **See Also:**
>
> "USER_TAB_HISTOGRAMS"

7.540 USER_HIVE_COLUMNS

USER_HIVE_COLUMNS describes all Hive columns owned by the current user in a Hive metastore. Its columns are the same as those in ALL_HIVE_COLUMNS.

> **See Also:**
>
> "ALL_HIVE_COLUMNS"

7.541 USER_HIVE_DATABASES

USER_HIVE_DATABASES describes all the Hive schemas owned by the current user in a Hadoop cluster. Its columns are the same as those in ALL_HIVE_DATABASES.

> **See Also:**
>
> "ALL_HIVE_DATABASES"

7.542 USER_HIVE_PART_KEY_COLUMNS

USER_HIVE_PART_KEY_COLUMNS provides information about all Hive table partition columns owned by the current user in the database. Its columns are the same as those in ALL_HIVE_PART_KEY_COLUMNS.

> **See Also:**
>
> "ALL_HIVE_PART_KEY_COLUMNS"

7.543 USER_HIVE_TAB_PARTITIONS

USER_HIVE_TAB_PARTITIONS provides information about all Hive table partitions owned by the current user in the database. Its columns are the same as those in ALL_HIVE_TAB_PARTITIONS.

> **See Also:**
>
> "ALL_HIVE_TAB_PARTITIONS"

7.544 USER_HIVE_TABLES

USER_HIVE_TABLES provides information about all the Hive tables owned by the current user in the Hive metastore. Its columns are the same as those in ALL_HIVE_TABLES.

> **See Also:**
>
> "ALL_HIVE_TABLES"

7.545 USER_HOST_ACES

USER_HOST_ACES describes the status of access control entries for the current user to access network hosts through PL/SQL network utility packages.

Its columns (except for ACE_ORDER, START_DATE, END_DATE, GRANT_TYPE, INVERTED_PRINCIPAL, PRINCIPAL, PRINCIPAL_TYPE, and STATUS) are the same as those in DBA_HOST_ACES.

> **See Also:**
>
> "DBA_HOST_ACES"

7.546 USER_IDENTIFIERS

USER_IDENTIFIERS displays information about the identifiers in the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL_IDENTIFIERS.

> **See Also:**
>
> "ALL_IDENTIFIERS"

7.547 USER_ILMDATAMOVEMENTPOLICIES

USER_ILMDATAMOVEMENTPOLICIES contains information specific to data movement-related attributes of an Automatic Data Optimization policy for a user. Its columns are the same as those in DBA_ILMDATAMOVEMENTPOLICIES.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

> **See Also:**
>
> "DBA_ILMDATAMOVEMENTPOLICIES"

7.548 USER_ILMEVALUATIONDETAILS

`USER_ILMEVALUATIONDETAILS` displays details on evaluation of Automatic Data Optimization policies considered for Automatic Data Optimization tasks for a user.

It also shows the job name that executes the policy, in case the policy was selected for execution. If the policy was not selected for execution, this view provides a reason. Its columns are the same as those in `DBA_ILMEVALUATIONDETAILS`.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

> **See Also:**
>
> "DBA_ILMEVALUATIONDETAILS"

7.549 USER_ILMOBJECTS

`USER_ILMOBJECTS` displays all the Automatic Data Optimization policies and objects for a user.

Many objects inherit policies via their parent objects or because they were created in a particular tablespace. This view provides a mapping between the policies and objects and indicates whether a policy is inherited by an object or is directly specified on it. Its columns are the same as those in `DBA_ILMOBJECTS`.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

> **See Also:**
>
> "DBA_ILMOBJECTS"

7.550 USER_ILMPOLICIES

`USER_ILMPOLICIES` displays details about Automatic Data Optimization policies owned by the user.

The view contains common details relevant to all types of Automatic Data Optimization policies, not just details relevant to the data movement-related Automatic Data Optimization policies. Its columns are the same as those in `DBA_ILMPOLICIES`.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12c Release 2 multitenant environments.

> **See Also:**
>
> "DBA_ILMPOLICIES"

7.551 USER_ILMRESULTS

`USER_ILMRESULTS` displays information on data movement-related Automatic Data Optimization jobs for tasks created by the user.

Its columns are the same as those in `DBA_ILMRESULTS`.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

> **See Also:**
>
> "DBA_ILMRESULTS"

7.552 USER_ILMTASKS

USER_ILMTASKS displays information on Automatic Data Optimization tasks created by a user. Its columns are the same as those in DBA_ILMTASKS.

> **Note:**
>
> Automatic Data Optimization is supported in Oracle Database 12*c* Release 2 multitenant environments.

> **See Also:**
>
> "DBA_ILMTASKS"

7.553 USER_IM_EXPRESSIONS

USER_IM_EXPRESSIONS provides information about the list of expressions (SYS_IME virtual columns) that are currently enabled for in-memory storage in schemas owned by the current user. Its columns (except for OWNER) are the same as those in DBA_IM_EXPRESSIONS.

Typically, you can query this view after invoking the DBMS_INMEMORY_ADMIN.IME_CAPTURE_EXPRESSIONS PL/SQL procedure to see the list of hot expressions added to tables owned by you across the database.

Based on this view, you can:

- Populate expressions on a particular table immediately
- Drop certain expressions that are marked for in-memory but not desired by you

> **See Also:**
>
> "DBA_IM_EXPRESSIONS"

7.554 USER_IMMUTABLE_ROW_VERSION_COLS

USER_IMMUTABLE_ROW_VERSION_COLS displays information about row versioned columns in the immutable tables owned by the current user. Its columns are the same as those in ALL_IMMUTABLE_ROW_VERSION_COLS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_IMMUTABLE_ROW_VERSION_COLS"

7.555 USER_IMMUTABLE_ROW_VERSION_HISTORY

`USER_IMMUTABLE_ROW_VERSION_HISTORY` provides a history of row versions in the immutable tables owned by the current user. Its columns (except for `SCHEMA_NAME`) are the same as those in `ALL_IMMUTABLE_ROW_VERSION_HISTORY`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_IMMUTABLE_ROW_VERSION_HISTORY"

7.556 USER_IMMUTABLE_TABLE_COLUMNS

`USER_IMMUTABLE_TABLE_COLUMNS` displays information about columns valid in each epoch in the immutable tables owned by the current user. Its columns (except for `SCHEMA_NAME`) are the same as those in `ALL_IMMUTABLE_TABLE_COLUMNS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_IMMUTABLE_TABLE_COLUMNS"

7.557 USER_IMMUTABLE_TABLE_EPOCHS

USER_IMMUTABLE_TABLE_EPOCHS displays epoch information for the immutable tables owned by the current user. Its columns (except for SCHEMA_NAME) are the same as those in ALL_IMMUTABLE_TABLE_EPOCHS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_IMMUTABLE_TABLE_EPOCHS"

7.558 USER_IMMUTABLE_TABLES

USER_IMMUTABLE_TABLES describes the immutable tables owned by the current user. Its columns (except for SCHEMA_NAME) are the same as those in ALL_IMMUTABLE_TABLES.

> **See Also:**
>
> "ALL_IMMUTABLE_TABLES"

7.559 USER_INCOMPLETE_SAGAS

USER_INCOMPLETE_SAGAS describes the incomplete sagas owned by the current user. Its columns (except for OWNER) are the same as those in ALL_INCOMPLETE_SAGAS.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_INCOMPLETE_SAGAS"

7.560 USER_IND_COLUMNS

USER_IND_COLUMNS describes the columns of the indexes owned by the current user and columns of indexes on tables owned by the current user.

Its columns (except for INDEX_OWNER and TABLE_OWNER) are the same as those in "ALL_IND_COLUMNS".

7.561 USER_IND_EXPRESSIONS

USER_IND_EXPRESSIONS describes expressions of function-based indexes on tables owned by the current user. Its columns (except for INDEX_OWNER and TABLE_OWNER) are the same as those in ALL_IND_EXPRESSIONS.

> **See Also:**
>
> "ALL_IND_EXPRESSIONS"

7.562 USER_IND_PARTITIONS

USER_IND_PARTITIONS displays, for each index partition owned by the current user, the partition-level partitioning information, the storage parameters for the partition, and various partition statistics generated by the DBMS_STATS package. Its columns are the same as those in ALL_IND_PARTITIONS.

> **See Also:**
>
> "ALL_IND_PARTITIONS"

7.563 USER_IND_PENDING_STATS

USER_IND_PENDING_STATS describes pending statistics for all tables, partitions, and subpartitions owned by the current user and collected using the DBMS_STATS package. Its columns (except for OWNER) are the same as those in ALL_IND_PENDING_STATS.

> **See Also:**
>
> "ALL_IND_PENDING_STATS"

7.564 USER_IND_STATISTICS

USER_IND_STATISTICS displays optimizer statistics for the indexes on the tables owned by the current user and collected using the DBMS_STATS package. Its columns (except for OWNER) are the same as those in ALL_IND_STATISTICS.

> **See Also:**
>
> "ALL_IND_STATISTICS"

7.565 USER_IND_SUBPARTITIONS

USER_IND_SUBPARTITIONS displays, for each index subpartition owned by the current user, the subpartition-level partitioning information, the storage parameters for the subpartition, and various subpartition statistics generated by the DBMS_STATS package.

Its columns are the same as those in "ALL_IND_SUBPARTITIONS".

7.566 USER_INDEXES

USER_INDEXES describes indexes owned by the current user. To gather statistics for this view, use the DBMS_STATS package. This view supports parallel partitioned index scans. Its columns (except for OWNER) are the same as those in ALL_INDEXES.

> **See Also:**
>
> "ALL_INDEXES"

7.567 USER_INDEXTYPE_ARRAYTYPES

USER_INDEXTYPE_ARRAYTYPES displays information about the array types specified by the indextypes owned by the current user. Its columns are the same as those in ALL_INDEXTYPE_ARRAYTYPES.

> **See Also:**
>
> "ALL_INDEXTYPE_ARRAYTYPES"

7.568 USER_INDEXTYPE_COMMENTS

USER_INDEXTYPE_COMMENTS displays comments for the user-defined indextypes owned by the current user. Its columns are the same as those in ALL_INDEXTYPE_COMMENTS.

> **See Also:**
>
> "ALL_INDEXTYPE_COMMENTS"

7.569 USER_INDEXTYPE_OPERATORS

USER_INDEXTYPE_OPERATORS lists all the operators supported by indextypes owned by the current user. Its columns are the same as those in ALL_INDEXTYPE_OPERATORS.

> **See Also:**
>
> "ALL_INDEXTYPE_OPERATORS"

7.570 USER_INDEXTYPES

USER_INDEXTYPES describes the indextypes owned by the current user. Its columns are the same as those in ALL_INDEXTYPES.

> **See Also:**
>
> "ALL_INDEXTYPES"

7.571 USER_INTERNAL_TRIGGERS

USER_INTERNAL_TRIGGERS describes the internal triggers on all tables owned by the current user. Its columns are the same as those in ALL_INTERNAL_TRIGGERS.

> **See Also:**
>
> "ALL_INTERNAL_TRIGGERS".

7.572 USER_JAVA_ARGUMENTS

USER_JAVA_ARGUMENTS displays argument information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_ARGUMENTS.

> **See Also:**
>
> "ALL_JAVA_ARGUMENTS"

7.573 USER_JAVA_CLASSES

USER_JAVA_CLASSES displays class level information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_CLASSES.

> **See Also:**
>
> "ALL_JAVA_CLASSES"

7.574 USER_JAVA_COMPILER_OPTIONS

USER_JAVA_COMPILER_OPTIONS displays information about the native compiler options owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_COMPILER_OPTIONS.

> **See Also:**
>
> "ALL_JAVA_COMPILER_OPTIONS"

7.575 USER_JAVA_DERIVATIONS

USER_JAVA_DERIVATIONS displays mapping information about Java source objects and their derived Java class objects and Java resource objects for the Java classes owned by the current user.

Its columns (except for OWNER) are the same as those in ALL_JAVA_DERIVATIONS.

> **See Also:**
>
> "ALL_JAVA_DERIVATIONS"

7.576 USER_JAVA_FIELDS

USER_JAVA_FIELDS displays field information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_FIELDS.

> **See Also:**
>
> "ALL_JAVA_FIELDS"

7.577 USER_JAVA_IMPLEMENTS

USER_JAVA_IMPLEMENTS describes interfaces implemented by the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_IMPLEMENTS.

> **See Also:**
>
> "ALL_JAVA_IMPLEMENTS"

7.578 USER_JAVA_INNERS

USER_JAVA_INNERS displays information about inner classes referred to by the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_INNERS.

> **See Also:**
>
> "ALL_JAVA_INNERS"

7.579 USER_JAVA_LAYOUTS

USER_JAVA_LAYOUTS displays class layout information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_LAYOUTS.

> **See Also:**
>
> "ALL_JAVA_LAYOUTS"

7.580 USER_JAVA_METHODS

USER_JAVA_METHODS displays method information about the stored Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_METHODS.

> **See Also:**
>
> "ALL_JAVA_METHODS"

7.581 USER_JAVA_NCOMPS

USER_JAVA_NCOMPS displays ncomp-related information about the Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_NCOMPS.

> **See Also:**
>
> "ALL_JAVA_NCOMPS"

7.582 USER_JAVA_POLICY

USER_JAVA_POLICY describes Java security permissions for the current user. Its columns are the same as those in DBA_JAVA_POLICY.

> **See Also:**
>
> "DBA_JAVA_POLICY"

7.583 USER_JAVA_RESOLVERS

USER_JAVA_RESOLVERS displays information about resolvers of the Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_RESOLVERS.

> **See Also:**
>
> "ALL_JAVA_RESOLVERS"

7.584 USER_JAVA_THROWS

USER_JAVA_THROWS displays information about exceptions thrown from methods of the Java classes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_JAVA_THROWS.

> **See Also:**
>
> "ALL_JAVA_THROWS"

7.585 USER_JOBS

USER_JOBS describes the jobs owned by the current user. Its columns are the same as those in DBA_JOBS.

> **See Also:**
>
> "DBA_JOBS"

7.586 USER_JOIN_IND_COLUMNS

USER_JOIN_IND_COLUMNS describes all join conditions owned by the current user. Its columns are the same as those in ALL_JOIN_IND_COLUMNS.

> **See Also:**
>
> "ALL_JOIN_IND_COLUMNS"

7.587 USER_JOINGROUPS

USER_JOINGROUPS describes join groups belonging to the user. A join group is a user-created object that consists of two or more columns that can be meaningfully joined. The maximum number of columns that can be included in a join group is 255. The USER_JOINGROUPS columns (except for JOINGROUP_OWNER) are the same as those in DBA_JOINGROUPS.

In certain queries, join groups enable the database to eliminate the performance overhead of decompressing and hashing column values. Join groups require an In-Memory column store (IM column store).

See Also:

- "DBA_JOINGROUPS"
- *Oracle Database In-Memory Guide* for an introduction to join groups
- *Oracle Database SQL Language Reference* for information about creating a join group using the `CREATE INMEMORY JOIN GROUP` statement

7.588 USER_JSON_COLLECTION_TABLES

`USER_JSON_COLLECTION_TABLES` describes JSON collection tables owned by the current user. Its columns are the same as those in `ALL_JSON_COLLECTION_TABLES`.

Note:

This view is available starting with Oracle Database 23ai.

See Also:

"ALL_JSON_COLLECTION_TABLES"

7.589 USER_JSON_COLLECTION_VIEWS

`USER_JSON_COLLECTION_VIEWS` describes JSON collection views owned by the current user. Its columns are the same as those in `ALL_JSON_COLLECTION_VIEWS`.

Note:

This view is available starting with Oracle Database 23ai, Release Update 23.6.

See Also:

"ALL_JSON_COLLECTION_VIEWS"

7.590 USER_JSON_COLLECTIONS

USER_JSON_COLLECTIONS describes JSON collections owned by the current user. Its columns are the same as those in ALL_JSON_COLLECTIONS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_COLLECTIONS"

7.591 USER_JSON_COLUMNS

USER_JSON_COLUMNS provides information on the JavaScript Object Notation (JSON) columns for which the user is the owner. Its columns (except for OWNER) are the same as those in ALL_JSON_COLUMNS.

> **See Also:**
>
> - "ALL_JSON_COLUMNS"
> - *Oracle Database JSON Developer's Guide* for more information about using JSON with Oracle Database

7.592 USER_JSON_DATAGUIDE_FIELDS

USER_JSON_DATAGUIDE_FIELDS extracts the path and type information from all the data guides in the current user's schema, which are the data guides returned to the user by the USER_JSON_DATAGUIDE view. Its columns (except for OWNER) are the same as those in ALL_JSON_DATAGUIDE_FIELDS.

> **See Also:**
>
> "ALL_JSON_DATAGUIDE_FIELDS"

7.593 USER_JSON_DATAGUIDES

`USER_JSON_DATAGUIDES` provides information on the JavaScript Object Notation (JSON) columns owned by the current user that have data guide enabled. Its columns (except for `OWNER`) are the same as those in `ALL_JSON_DATAGUIDES`.

> **See Also:**
>
> "ALL_JSON_DATAGUIDES"

7.594 USER_JSON_DOMAIN_SCHEMA_COLUMNS

`USER_JSON_DOMAIN_SCHEMA_COLUMNS` describes JSON schema constraints on columns of data use case domains owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JSON_DOMAIN_SCHEMA_COLUMNS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DOMAIN_SCHEMA_COLUMNS"

7.595 USER_JSON_DUALITY_VIEW_LINKS

`USER_JSON_DUALITY_VIEW_LINKS` describes the links associated with the JSON-relational duality views owned by the current user. Its columns (except for `VIEW_OWNER`) are the same as those in `ALL_JSON_DUALITY_VIEW_LINKS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DUALITY_VIEW_LINKS"

7.596 USER_JSON_DUALITY_VIEW_TAB_COLS

`USER_JSON_DUALITY_VIEW_TAB_COLS` describes the table columns associated with the JSON-relational duality views owned by the current user. Its columns (except for `VIEW_OWNER`) are the same as those in `ALL_JSON_DUALITY_VIEW_TAB_COLS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DUALITY_VIEW_TAB_COLS"

7.597 USER_JSON_DUALITY_VIEW_TABS

`USER_JSON_DUALITY_VIEW_TABS` describes the tables associated with the JSON-relational duality views owned by the current user. Its columns (except for `VIEW_OWNER`) are the same as those in `ALL_JSON_DUALITY_VIEW_TABS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DUALITY_VIEW_TABS"

7.598 USER_JSON_DUALITY_VIEWS

`USER_JSON_DUALITY_VIEWS` describes the JSON-relational duality views owned by the current user. Its columns (except for `VIEW_OWNER`) are the same as those in `ALL_JSON_DUALITY_VIEWS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_DUALITY_VIEWS"

7.599 USER_JSON_INDEXES

`USER_JSON_INDEXES` describes indexes on JSON data that are owned by the current user. Its columns (except for `INDEX_OWNER`) are the same as those in `ALL_JSON_INDEXES`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_INDEXES"

7.600 USER_JSON_SCHEMA_COLUMNS

`USER_JSON_SCHEMA_COLUMNS` describes JSON schema constraints on columns in tables owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_JSON_SCHEMA_COLUMNS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_JSON_SCHEMA_COLUMNS"

7.601 USER_KAFKA_APPLICATIONS

`USER_KAFKA_APPLICATIONS` describes Oracle SQL Access to Kafka (OSAK) applications owned by the current user. Its columns (except for `OWNER` and `CLUSTER_ID`) are the same as those in `DBA_KAFKA_APPLICATIONS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "DBA_KAFKA_APPLICATIONS"
> - "DBMS_KAFKA_APPLICATIONS"

> **See Also:**
>
> "DBA_KAFKA_APPLICATIONS"

7.602 USER_KAFKA_CLUSTERS

`USER_KAFKA_CLUSTERS` describes the Oracle SQL Access to Kafka (OSAK) clusters that are owned by the current user or for which the current user has `READ` access. Its columns (except for `OWNER` and `GRANTEE`) are the same as those in `DBA_KAFKA_CLUSTERS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "DBA_KAFKA_CLUSTERS"
> - "DBMS_KAFKA_CLUSTERS" for information about viewing all registered OSAK clusters in the database

7.603 USER_KAFKA_LOAD_METRICS

USER_KAFKA_LOAD_METRICS displays metrics for DBMS_KAFKA.EXECUTE_LOAD_APP operations on tables owned by the current user. Its columns (except for OWNER and CLUSTER_ID) are the same as those in DBA_KAFKA_LOAD_METRICS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "DBA_KAFKA_LOAD_METRICS"
> - "DBMS_KAFKA_LOAD_METRICS"
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_KAFKA.EXECUTE_LOAD_APP procedure

7.604 USER_KAFKA_MESSAGES

USER_KAFKA_MESSAGES displays messages logged by Oracle SQL Access to Kafka (OSAK) applications owned by the current user.

Column	Datatype	NULL	Description
CLUSTER_NAME	VARCHAR2(30)	NOT NULL	Name of the OSAK cluster associated with the application
APPLICATION_NAME	VARCHAR2(30)		Application name (also used as the Kafka group name)
VIEW_NAME	VARCHAR2(128)		Name of the view associated with the application
MESSAGE_TYPE	VARCHAR2(20)		Message type. Possible values: • BADFILE • LOGFILE • NETWORK • ROLLBACK
MESSAGE_TS	TIMESTAMP(6)		Timestamp for when the message was logged
MESSAGE	VARCHAR2(4000)		Message text

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "DBMS_KAFKA_MESSAGES"

7.605 USER_KAFKA_OPS

`USER_KAFKA_OPS` describes operations for Oracle SQL Access to Kafka (OSAK) views owned by the current user. Its columns (except for `OWNER` and `CLUSTER_ID`) are the same as those in `DBA_KAFKA_OPS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "DBA_KAFKA_OPS"
> - "DBMS_KAFKA_OPS"

7.606 USER_KAFKA_OPS_RESULTS

`USER_KAFKA_OPS_RESULTS` displays the results of operations for Oracle SQL Access to Kafka (OSAK) views owned by the current user. Its columns (except for `OWNER`) are the same as those in `DBA_KAFKA_OPS_RESULTS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "DBA_KAFKA_OPS_RESULTS"
> - "DBMS_KAFKA_OPS_RESULTS"

7.607 USER_KAFKA_PARTITIONS

USER_KAFKA_PARTITIONS describes partitions for Kafka topics associated with Oracle SQL Access to Kafka (OSAK) views owned by the current user. Its columns (except for OWNER and CLUSTER_ID) are the same as those in DBA_KAFKA_PARTITIONS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> - "DBA_KAFKA_PARTITIONS"
> - "DBMS_KAFKA_PARTITIONS"

7.608 USER_LIBRARIES

USER_LIBRARIES describes the libraries owned by the current user. Its columns (except for OWNER) are the same as those in ALL_LIBRARIES.

> **See Also:**
>
> "ALL_LIBRARIES"

7.609 USER_LOB_PARTITIONS

USER_LOB_PARTITIONS displays the LOB partitions contained in the tables owned by the current user. Its columns are the same as those in ALL_LOB_PARTITIONS.

> **See Also:**
>
> "ALL_LOB_PARTITIONS"

7.610 USER_LOB_SUBPARTITIONS

USER_LOB_SUBPARTITIONS displays partition-level attributes of the LOB data subpartitions owned by the current user. Its columns are the same as those in ALL_LOB_SUBPARTITIONS.

DBA_LOB_TEMPLATES describes all LOB subpartition templates in the database.

> **See Also:**
>
> "ALL_LOB_SUBPARTITIONS"

7.611 USER_LOB_TEMPLATES

`USER_LOB_TEMPLATES` describes the LOB subpartition templates owned by the current user. Its columns (except for `USER_NAME`) are the same as those in `ALL_LOB_TEMPLATES`.

> **See Also:**
>
> "ALL_LOB_TEMPLATES"

7.612 USER_LOBS

`USER_LOBS` displays the user's CLOBs and BLOBs contained in the user's tables. BFILEs are stored outside the database, so they are not described by this view. This view's columns are the same as those in `ALL_LOBS`.

> **See Also:**
>
> "ALL_LOBS"

7.613 USER_LOG_GROUP_COLUMNS

`USER_LOG_GROUP_COLUMNS` describes columns that are owned by the current user and that are specified in log groups. Its columns are the same as those in `ALL_LOG_GROUP_COLUMNS`.

> **See Also:**
>
> "ALL_LOG_GROUP_COLUMNS"

7.614 USER_LOG_GROUPS

`USER_LOG_GROUPS` describes log group definitions on tables owned by the current user. Its columns are the same as those in `ALL_LOG_GROUPS`.

> **See Also:**
>
> "ALL_LOG_GROUPS"

7.615 USER_MEASURE_FOLDER_CONTENTS

USER_MEASURE_FOLDER_CONTENTS describes the contents of the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL_MEASURE_FOLDER_CONTENTS.

> **See Also:**
>
> "ALL_MEASURE_FOLDER_CONTENTS"

7.616 USER_MEASURE_FOLDER_SUBFOLDERS

USER_MEASURE_FOLDER_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL_MEASURE_FOLDER_SUBFOLDERS.

> **See Also:**
>
> "ALL_MEASURE_FOLDER_SUBFOLDERS"

7.617 USER_MEASURE_FOLDERS

USER_MEASURE_FOLDERS describes the OLAP measure folders owned by the current user. Its columns (except for OWNER) are the same as those in ALL_MEASURE_FOLDERS.

> **See Also:**
>
> "ALL_MEASURE_FOLDERS"

7.618 USER_METADATA_PROPERTIES

USER_METADATA_PROPERTIES describes OLAP metadata properties in the current user's schema. Its columns (except for OWNER) are the same as those in ALL_METADATA_PROPERTIES.

> **See Also:**
>
> "ALL_METADATA_PROPERTIES"

7.619 USER_METHOD_PARAMS

USER_METHOD_PARAMS describes the method parameters of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_METHOD_PARAMS.

> **See Also:**
>
> "ALL_METHOD_PARAMS"

7.620 USER_METHOD_RESULTS

USER_METHOD_RESULTS describes the method results of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_METHOD_RESULTS.

> **See Also:**
>
> "ALL_METHOD_RESULTS"

7.621 USER_MINING_MODEL_ATTRIBUTES

USER_MINING_MODEL_ATTRIBUTES describes the machine learning model attributes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_MINING_MODEL_ATTRIBUTES.

> **See Also:**
>
> "ALL_MINING_MODEL_ATTRIBUTES"

7.622 USER_MINING_MODEL_PARTITIONS

USER_MINING_MODEL_PARTITIONS describes the user's own model partitions. Its columns (except OWNER) are the same as those in ALL_MINING_MODEL_PARTITIONS.

> **Note:**
>
> The USER_MINING_MODEL_PARTITIONS view is available in Oracle Database 12*c* Release 2 and later.

> **See Also:**
>
> "ALL_MINING_MODEL_PARTITIONS"

7.623 USER_MINING_MODEL_SETTINGS

`USER_MINING_MODEL_SETTINGS` describes the machine learning model settings owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_MINING_MODEL_SETTINGS`.

> **See Also:**
>
> "ALL_MINING_MODEL_SETTINGS"

7.624 USER_MINING_MODEL_VIEWS

`USER_MINING_MODEL_VIEWS` describes the user's own model views. Its columns (except `OWNER`) are the same as those in `ALL_MINING_MODEL_VIEWS`.

> **See Also:**
>
> "ALL_MINING_MODEL_VIEWS"

7.625 USER_MINING_MODEL_XFORMS

`USER_MINING_MODEL_XFORMS` describes the user-specified transformations embedded with the user's own models. Its columns (except `OWNER`) are the same as those in `ALL_MINING_MODEL_XFORMS`.

> **See Also:**
>
> "ALL_MINING_MODEL_XFORMS"

7.626 USER_MINING_MODELS

USER_MINING_MODELS describes the machine learning models owned by the current user. Its columns (except for OWNER) are the same as those in ALL_MINING_MODELS.

> **See Also:**
>
> "ALL_MINING_MODELS"

7.627 USER_MLE_ENV_IMPORTS

USER_MLE_ENV_IMPORTS describes import name to module mappings in the Oracle Database Multilingual Engine (MLE) environments owned by the current user. Its columns (except for ENV_OWNER) are the same as those in ALL_MLE_ENV_IMPORTS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_MLE_ENV_IMPORTS"

7.628 USER_MLE_ENVS

USER_MLE_ENVS describes the Oracle Database Multilingual Engine (MLE) environments owned by the current user. Its columns (except for ENV_OWNER) are the same as those in ALL_MLE_ENVS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_MLE_ENVS"

7.629 USER_MLE_MODULES

USER_MLE_MODULES describes the Oracle Database Multilingual Engine (MLE) modules owned by the current user. Its columns (except for MODULE_OWNER) are the same as those in ALL_MLE_MODULES.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_MLE_MODULES"

7.630 USER_MLE_PROCEDURES

USER_MLE_PROCEDURES describes the Oracle Database Multilingual Engine (MLE) functions and procedures owned by the current user. Its columns (except for OWNER) are the same as those in ALL_MLE_PROCEDURES.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_MLE_PROCEDURES"

7.631 USER_MVIEW_AGGREGATES

USER_MVIEW_AGGREGATES describes the grouping functions (aggregated measures) that appear in the SELECT list of aggregated materialized views owned by the current user. Its columns are the same as those in ALL_MVIEW_AGGREGATES.

> **See Also:**
>
> "ALL_MVIEW_AGGREGATES"

7.632 USER_MVIEW_ANALYSIS

USER_MVIEW_ANALYSIS describes all materialized views owned by the current user that potentially support query rewrite and that provide additional information for analysis by applications. Its columns are the same as those in ALL_MVIEW_ANALYSIS.

> **Note:**
>
> This view excludes materialized views that reference remote tables or that include references to non-static values such as SYSDATE or USER. This view also excludes materialized views that were created as snapshots before Oracle8*i* and that were never altered to enable query rewrite.

> **See Also:**
>
> "ALL_MVIEW_ANALYSIS"

7.633 USER_MVIEW_COMMENTS

USER_MVIEW_COMMENTS displays comments on the materialized views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_MVIEW_COMMENTS.

> **See Also:**
>
> "ALL_MVIEW_COMMENTS"

7.634 USER_MVIEW_DETAIL_LOGICAL_PARTITION

USER_MVIEW_DETAIL_LOGICAL_PARTITION displays freshness information, with respect to logical partition change tracking (LPCT) detail partitions, for the materialized views owned by the current user. Its columns are the same as those in ALL_MVIEW_DETAIL_LOGICAL_PARTITION.

> **See Also:**
>
> "ALL_MVIEW_DETAIL_LOGICAL_PARTITION"

7.635 USER_MVIEW_DETAIL_PARTITION

USER_MVIEW_DETAIL_PARTITION displays freshness information, with respect to partition change tracking (PCT) detail partitions, for the materialized views owned by the current user. Its columns are the same as those in ALL_MVIEW_DETAIL_PARTITION.

> **See Also:**
>
> "ALL_MVIEW_DETAIL_PARTITION"

7.636 USER_MVIEW_DETAIL_RELATIONS

USER_MVIEW_DETAIL_RELATIONS represents the named detail relations that are either in the FROM list of a materialized view, or that are indirectly referenced through views in the FROM list. Its columns are the same as those in ALL_MVIEW_DETAIL_RELATIONS.

> **See Also:**
>
> "ALL_MVIEW_DETAIL_RELATIONS"

7.637 USER_MVIEW_DETAIL_SUBPARTITION

USER_MVIEW_DETAIL_SUBPARTITION displays freshness information, with respect to partition change tracking (PCT) detail subpartitions, for the materialized views owned by the current user. Its columns are the same as those in ALL_MVIEW_DETAIL_SUBPARTITION.

> **See Also:**
>
> "ALL_MVIEW_DETAIL_SUBPARTITION"

7.638 USER_MVIEW_JOINS

USER_MVIEW_JOINS describes a join between two columns in the WHERE clause of a subquery that defines a materialized view. Its columns are the same as those in ALL_MVIEW_JOINS.

> **See Also:**
>
> "ALL_MVIEW_JOINS"

7.639 USER_MVIEW_KEYS

USER_MVIEW_KEYS describes the columns or expressions in the SELECT list upon which materialized views in the current user's schema are based. Its columns are the same as those in ALL_MVIEW_KEYS.

> **See Also:**
>
> "ALL_MVIEW_KEYS"

7.640 USER_MVIEW_LOGS

USER_MVIEW_LOGS describes all materialized view logs owned by the current user. Its columns are the same as those in ALL_MVIEW_LOGS.

> **See Also:**
>
> "ALL_MVIEW_LOGS"

7.641 USER_MVIEW_REFRESH_TIMES

USER_MVIEW_REFRESH_TIMES describes refresh times of the materialized views owned by the current user. Its columns are the same as those in ALL_MVIEW_REFRESH_TIMES.

> **See Also:**
>
> "ALL_MVIEW_REFRESH_TIMES"

7.642 USER_MVIEWS

USER_MVIEWS describes all materialized views owned by the current user. Its columns are the same as those in ALL_MVIEWS.

> **See Also:**
>
> "ALL_MVIEWS"

7.643 USER_MVREF_CHANGE_STATS

USER_MVREF_CHANGE_STATS displays the change data load information on the master tables associated with a refresh run for all the materialized views in the database that are accessible to the current user. Its columns are the same as those in DBA_MVREF_CHANGE_STATS.

> **See Also:**
>
> "DBA_MVREF_CHANGE_STATS"

7.644 USER_MVREF_RUN_STATS

USER_MVREF_RUN_STATS has information about each refresh run for the materialized views accessible for the current database user, with each run being identified by the REFRESH_ID. The information includes timing statistics related to the run and the parameters specified in that run.

Its columns (except for RUN_OWNER) are the same as those in DBA_MVREF_RUN_STATS.

> **See Also:**
>
> "DBA_MVREF_RUN_STATS"

7.645 USER_MVREF_STATS

USER_MVREF_STATS shows the REFRESH_ID associated with each refresh run of each materialized view for the database that is accessible to the current user. It also provides some basic timing statistics related to that materialized view's refresh in that run.

Its columns (except for MV_OWNER) are the same as those in DBA_MVREF_STATS.

> **See Also:**
>
> "DBA_MVREF_STATS"

7.646 USER_MVREF_STATS_PARAMS

USER_MVREF_STATS_PARAMS displays the refresh statistics properties associated with each materialized view accessible to the current user. These properties can be modified with the DBMS_MVIEW_STATS.SET_MVREF_STATS_PARAMS procedure.

Its columns are the same as those in DBA_MVREF_STATS_PARAMS.

> **See Also:**
>
> "DBA_MVREF_STATS_PARAMS"

7.647 USER_MVREF_STATS_SYS_DEFAULTS

`USER_MVREF_STATS_SYS_DEFAULTS` displays the system-wide defaults for the refresh history statistics properties for materialized views accessible to the current user. These values can be altered with the `SET_SYSTEM_DEFAULTS` procedure by a database administrator.

Its columns are the same as those in `DBA_MVREF_STATS_SYS_DEFAULTS`.

This view contains exactly two rows corresponding to the collection-level and retention-period properties; their initial values are `TYPICAL` and `31` respectively.

> **See Also:**
>
> "DBA_MVREF_STATS_SYS_DEFAULTS"

7.648 USER_MVREF_STMT_STATS

`USER_MVREF_STMT_STATS` shows information associated with each refresh statement of a materialized view accessible to the current user in a refresh run.

Its columns are the same as those in `DBA_MVREF_STMT_STATS`.

> **See Also:**
>
> "DBA_MVREF_STMT_STATS"

7.649 USER_NESTED_TABLE_COLS

`USER_NESTED_TABLE_COLS` describes the columns of the nested tables owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_NESTED_TABLE_COLS`.

To gather statistics for this view, use the `DBMS_STATS` package.

> **See Also:**
>
> "ALL_NESTED_TABLE_COLS"

7.650 USER_NESTED_TABLES

USER_NESTED_TABLES describes the nested tables in tables owned by the current user. Its columns are the same as those in ALL_NESTED_TABLES.

> **See Also:**
>
> "ALL_NESTED_TABLES"

7.651 USER_NETWORK_ACL_PRIVILEGES

USER_NETWORK_ACL_PRIVILEGES describes the status of the network privileges for the current user to access network hosts.

> **Note:**
>
> This USER_NETWORK_ACL_PRIVILEGES view is deprecated in Oracle Database 12*c* Release 1 (12.1). Oracle recommends that you use the USER_HOST_ACES view, instead.

Column	Datatype	NULL	Description
HOST	VARCHAR2(1000)	NOT NULL	Network host
LOWER_PORT	NUMBER(5)		Lower bound of the port range
UPPER_PORT	NUMBER(5)		Upper bound of the port range
PRIVILEGE	CHAR(128)		Network privilege
STATUS	VARCHAR2(7)		Privilege status: • DENIED • GRANTED

> **See Also:**
>
> "USER_HOST_ACES"

7.652 USER_OBJ_AUDIT_OPTS

USER_OBJ_AUDIT_OPTS describes auditing options on all objects owned by the current user. Its columns (except for OWNER) are the same as those in DBA_OBJ_AUDIT_OPTS.

> **Note:**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle Database 23ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle Database Security Guide* for more information about how this desupport works.

> **See Also:**
>
> "DBA_OBJ_AUDIT_OPTS"

7.653 USER_OBJ_COLATTRS

USER_OBJ_COLATTRS describes object columns and attributes contained in the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_OBJ_COLATTRS.

> **See Also:**
>
> "ALL_OBJ_COLATTRS"

7.654 USER_OBJECT_SIZE

USER_OBJECT_SIZE lists the sizes, in bytes, of various PL/SQL objects. Its columns are the same as those in DBA_OBJECT_SIZE.

> **See Also:**
>
> "DBA_OBJECT_SIZE"

7.655 USER_OBJECT_TABLES

USER_OBJECT_TABLES describes the object tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_OBJECT_TABLES.

> **See Also:**
>
> "ALL_OBJECT_TABLES"

7.656 USER_OBJECT_USAGE

USER_OBJECT_USAGE displays statistics about index usage gathered from the database for the indexes owned by the current user.

You can use this view to monitor index usage. All indexes owned by the current user that have been used at least once can be monitored and displayed in this view. Its columns (except for OWNER) are the same as those in DBA_OBJECT_USAGE.

> **See Also:**
>
> "DBA_OBJECT_USAGE"

7.657 USER_OBJECTS

USER_OBJECTS describes all objects owned by the current user. Its columns (except for OWNER), are the same as those in ALL_OBJECTS.

> **See Also:**
>
> "ALL_OBJECTS"

7.658 USER_OBJECTS_AE

USER_OBJECTS_AE describes the objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_OBJECTS_AE.

> **See Also:**
>
> "ALL_OBJECTS_AE"

7.659 USER_OGG_AUTO_CAPTURED_TABLES

`USER_OGG_AUTO_CAPTURED_TABLES` describes the tables owned by the current user that are enabled for Oracle GoldenGate automatic capture. Its columns (except for `OWNER`) are the same as those in `DBA_OGG_AUTO_CAPTURED_TABLES`.

> **See Also:**
>
> "DBA_OGG_AUTO_CAPTURED_TABLES"

7.660 USER_OPANCILLARY

`USER_OPANCILLARY` provides ancillary information for operators owned by the current user. Its columns are the same as those in `ALL_OPANCILLARY`.

> **See Also:**
>
> "ALL_OPANCILLARY"

7.661 USER_OPARGUMENTS

`USER_OPARGUMENTS` provides argument information for operator bindings owned by the current user. Its columns are the same as those in `ALL_OPARGUMENTS`.

> **See Also:**
>
> "ALL_OPARGUMENTS"

7.662 USER_OPBINDINGS

`USER_OPBINDINGS` describes the binding functions and methods on the operators owned by the current user. Its columns are the same as those in `ALL_OPBINDINGS`.

> **See Also:**
>
> "ALL_OPBINDINGS"

7.663 USER_OPERATOR_COMMENTS

USER_OPERATOR_COMMENTS displays comments for the user-defined operators owned by the current user. Its columns are the same as those in ALL_OPERATOR_COMMENTS.

> **See Also:**
>
> "ALL_OPERATOR_COMMENTS"

7.664 USER_OPERATORS

USER_OPERATORS describes all operators owned by the current user. Its columns are the same as those in ALL_OPERATORS.

> **See Also:**
>
> "ALL_OPERATORS"

7.665 USER_OUTLINE_HINTS

USER_OUTLINE_HINTS describes the set of hints stored in the outlines owned by the current user. Its columns (except for OWNER) are the same as those in DBA_OUTLINE_HINTS.

> **See Also:**
>
> "DBA_OUTLINE_HINTS"

7.666 USER_OUTLINES

USER_OUTLINES describes the stored outlines owned by the current user. Its columns (except for OWNER) are the same as those in DBA_OUTLINES.

> **See Also:**
>
> "DBA_OUTLINES"

7.667 USER_PARALLEL_EXECUTE_CHUNKS

USER_PARALLEL_EXECUTE_CHUNKS displays the chunks for tasks created by the current user. Its columns (except for TASK_OWNER) are the same as those in DBA_PARALLEL_EXECUTE_CHUNKS.

> **See Also:**
>
> "DBA_PARALLEL_EXECUTE_CHUNKS"

7.668 USER_PARALLEL_EXECUTE_TASKS

USER_PARALLEL_EXECUTE_TASKS displays the tasks created by the current user. Its columns (except for TASK_OWNER) are the same as those in DBA_PARALLEL_EXECUTE_TASKS.

> **See Also:**
>
> "DBA_PARALLEL_EXECUTE_TASKS"

7.669 USER_PART_COL_STATISTICS

USER_PART_COL_STATISTICS displays column statistics and histogram information for the table partitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PART_COL_STATISTICS.

> **See Also:**
>
> "ALL_PART_COL_STATISTICS"

7.670 USER_PART_HISTOGRAMS

USER_PART_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on the table partitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PART_HISTOGRAMS.

> **See Also:**
>
> "ALL_PART_HISTOGRAMS"

7.671 USER_PART_INDEXES

USER_PART_INDEXES displays the object-level partitioning information for the partitioned indexes owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PART_INDEXES.

> **See Also:**
>
> "ALL_PART_INDEXES"

7.672 USER_PART_KEY_COLUMNS

USER_PART_KEY_COLUMNS describes the partitioning key columns for the partitioned objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PART_KEY_COLUMNS.

> **See Also:**
>
> "ALL_PART_KEY_COLUMNS"

7.673 USER_PART_LOBS

USER_PART_LOBS displays table-level information about the partitioned LOBs owned by the current user, including default attributes for LOB data partitions. Its columns (except for TABLE_OWNER) are the same as those in ALL_PART_LOBS.

> **See Also:**
>
> "ALL_PART_LOBS"

7.674 USER_PART_TABLES

USER_PART_TABLES displays the object-level partitioning information for the partitioned tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PART_TABLES.

> **See Also:**
>
> "ALL_PART_TABLES"

7.675 USER_PARTIAL_DROP_TABS

USER_PARTIAL_DROP_TABS describes all tables in the schema of the current user that have partially completed DROP COLUMN operations. Its columns are the same as those in ALL_PARTIAL_DROP_TABS.

> **See Also:**
>
> "ALL_PARTIAL_DROP_TABS"

7.676 USER_PASSWORD_LIMITS

USER_PASSWORD_LIMITS describes the password profile parameters that are assigned to the user.

Column	Datatype	NULL	Description
RESOURCE_NAME	VARCHAR2(32)	NOT NULL	Name of the password resource
LIMIT	VARCHAR2(40)		Value of the resource limit

7.677 USER_PENDING_CONV_TABLES

USER_PENDING_CONV_TABLES describes the pending conversion tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PENDING_CONV_TABLES.

> **See Also:**
>
> "ALL_PENDING_CONV_TABLES"

7.678 USER_PG_EDGE_RELATIONSHIPS

USER_PG_EDGE_RELATIONSHIPS describes edge relationships in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PG_EDGE_RELATIONSHIPS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_EDGE_RELATIONSHIPS"

7.679 USER_PG_ELEMENT_LABELS

`USER_PG_ELEMENT_LABELS` describes labels for the element tables in the property graphs owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_PG_ELEMENT_LABELS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_ELEMENT_LABELS"

7.680 USER_PG_ELEMENTS

`USER_PG_ELEMENTS` describes element tables in the property graphs owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_PG_ELEMENTS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_ELEMENTS"

7.681 USER_PG_KEYS

USER_PG_KEYS describes key columns in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PG_KEYS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_KEYS"

7.682 USER_PG_LABEL_PROPERTIES

USER_PG_LABEL_PROPERTIES describes properties in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PG_LABEL_PROPERTIES.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_LABEL_PROPERTIES"

7.683 USER_PG_LABELS

USER_PG_LABELS describes labels in the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PG_LABELS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_LABELS"

7.684 USER_PG_PROP_DEFINITIONS

`USER_PG_PROP_DEFINITIONS` describes columns and expressions exposed as properties in the property graphs owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_PG_PROP_DEFINITIONS`.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PG_PROP_DEFINITIONS"

7.685 USER_PLSQL_COLL_TYPES

`USER_PLSQL_COLL_TYPES` describes the user's own named PL/SQL collection types. Its columns (except for `OWNER` and `CHAR_USED`) are the same as those in `ALL_PLSQL_COLL_TYPES`.

> **See Also:**
>
> "ALL_PLSQL_COLL_TYPES"

7.686 USER_PLSQL_OBJECT_SETTINGS

`USER_PLSQL_OBJECT_SETTINGS` displays information about the compiler settings for the stored objects owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_PLSQL_OBJECT_SETTINGS`.

> **See Also:**
>
> "ALL_PLSQL_OBJECT_SETTINGS"

7.687 USER_PLSQL_TYPE_ATTRS

USER_PLSQL_TYPE_ATTRS describes the attributes of the user's own PL/SQL types. Its columns (except for OWNER and CHAR_USED) are the same as those in ALL_PLSQL_TYPE_ATTRS.

> **See Also:**
>
> "ALL_PLSQL_TYPE_ATTRS"

7.688 USER_PLSQL_TYPES

USER_PLSQL_TYPES describes the user's own PL/SQL types. Its columns (except for OWNER) are the same as those in ALL_PLSQL_TYPES.

> **See Also:**
>
> "ALL_PLSQL_TYPES"

7.689 USER_POLICIES

USER_POLICIES describes all Oracle Virtual Private Database (VPD) security policies associated with objects owned by the current user. Its columns (except for OBJECT_OWNER and EDITION_NAME) are the same as those in ALL_POLICIES.

> **See Also:**
>
> "ALL_POLICIES"

7.690 USER_POLICY_ATTRIBUTES

USER_POLICY_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared-context sensitive Oracle Virtual Private Database (VPD) policies for synonyms, tables, or views owned by the user.

Its columns are the same as those in ALL_POLICY_ATTRIBUTES.

> **See Also:**
>
> "ALL_POLICY_ATTRIBUTES"

7.691 USER_POLICY_CONTEXTS

USER_POLICY_CONTEXTS describes the driving contexts defined for the synonyms, tables, and views owned by the current user. Its columns (except for OBJECT_OWNER) are the same as those in ALL_POLICY_CONTEXTS.

> **See Also:**
>
> "ALL_POLICY_CONTEXTS"

7.692 USER_POLICY_GROUPS

USER_POLICY_GROUPS describes the policy groups defined for the synonyms, tables, and views owned by the current user. Its columns (except for OBJECT_OWNER) are the same as those in ALL_POLICY_GROUPS.

> **See Also:**
>
> "ALL_POLICY_GROUPS"

7.693 USER_PRIVATE_TEMP_TABLES

USER_PRIVATE_TEMP_TABLES describes the private temporary tables in the current session. Its columns (except for INST_ID) are the same as those in DBA_PRIVATE_TEMP_TABLES.

> **See Also:**
>
> "DBA_PRIVATE_TEMP_TABLES"

7.694 USER_PRIVILEGE_MAP

USER_PRIVILEGE_MAP shows privilege (auditing option) type codes for object privileges that can be granted on a user.

This table can be used to map privilege type numbers to type names.

Column	Datatype	NULL	Description
PRIVILEGE	NUMBER	NOT NULL	A numeric privilege (auditing option) type code
NAME	VARCHAR2(40)	NOT NULL	Name of the type of privilege (auditing option)

7.695 USER_PROCEDURES

USER_PROCEDURES lists all functions and procedures that are owned by the current user, along with their associated properties. Its columns (except OWNER) are the same as those in ALL_PROCEDURES.

> **See Also:**
>
> - "ALL_PROCEDURES"
> - "USER_ARGUMENTS" for information about the arguments of the functions and procedures owned by the current user

7.696 USER_PROPERTY_GRAPHS

USER_PROPERTY_GRAPHS describes the property graphs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_PROPERTY_GRAPHS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_PROPERTY_GRAPHS"

7.697 USER_PROXIES

USER_PROXIES displays information about connections the current user is allowed to proxy. Its columns (except for PROXY) are the same as those in DBA_PROXIES.

> **See Also:**
>
> "DBA_PROXIES"

7.698 USER_QUEUE_EVENT_STREAMS

USER_QUEUE_EVENT_STREAMS describes the Transactional Event Queue (TxEventQ) event streams owned by the current user. Its columns are the same as those in ALL_QUEUE_EVENT_STREAMS.

> **See Also:**
>
> "ALL_QUEUE_EVENT_STREAMS"

7.699 USER_QUEUE_SCHEDULES

USER_QUEUE_SCHEDULES describes the propagation schedules whose source queues are owned by the current user. Its columns (except for SCHEMA) are the same as those in ALL_QUEUE_SCHEDULES.

> **See Also:**
>
> "ALL_QUEUE_SCHEDULES"

7.700 USER_QUEUE_SUBSCRIBERS

USER_QUEUE_SUBSCRIBERS displays the list of subscribers on queues that are under the current user's schema. Its columns (except for OWNER) are the same as those in ALL_QUEUE_SUBSCRIBERS.

> **See Also:**
>
> "ALL_QUEUE_SUBSCRIBERS"

7.701 USER_QUEUE_TABLES

USER_QUEUE_TABLES describes the queues in the queue tables created in the current user's schema. Its columns (except for OWNER) are the same as those in ALL_QUEUE_TABLES.

> **See Also:**
>
> "ALL_QUEUE_TABLES"

7.702 USER_QUEUES

`USER_QUEUES` describes the operational characteristics of every queue in the user's schema. Its columns (except for `OWNER`) are the same as those in `ALL_QUEUES`.

> **See Also:**
>
> - "ALL_QUEUES"
> - *Oracle Database Advanced Queuing User's Guide* for more information about these views and Advanced Queuing

7.703 USER_RECYCLEBIN

`USER_RECYCLEBIN` displays information about the recycle bin owned by the current user. Its columns (except for `OWNER`) are the same as those in `DBA_RECYCLEBIN`.

> **See Also:**
>
> "DBA_RECYCLEBIN"

7.704 USER_REFRESH

`USER_REFRESH` describes all refresh groups owned by the current user. Its columns are the same as those in `ALL_REFRESH`.

> **See Also:**
>
> "ALL_REFRESH"

7.705 USER_REFRESH_CHILDREN

`USER_REFRESH_CHILDREN` lists all the objects in refresh groups owned by the current user. Its columns are the same as those in `ALL_REFRESH_CHILDREN`.

> **See Also:**
>
> "ALL_REFRESH_CHILDREN"

7.706 USER_REFS

USER_REFS describes the REF columns and REF attributes in the object type columns of tables owned by the current user. Its columns are the same as those in ALL_REFS.

> **See Also:**
>
> "ALL_REFS"

7.707 USER_REGISTERED_MVIEWS

USER_REGISTERED_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) owned by the current user. Its columns are the same as those in ALL_REGISTERED_MVIEWS.

> **See Also:**
>
> "ALL_REGISTERED_MVIEWS"

7.708 USER_REGISTRY

USER_REGISTRY displays information about the components owned by the current user that are loaded into the component registry. Its columns are the same as those in DBA_REGISTRY.

> **See Also:**
>
> "DBA_REGISTRY"

7.709 USER_RESOURCE_LIMITS

USER_RESOURCE_LIMITS displays the resource limits for the current user.

Column	Datatype	NULL	Description
RESOURCE_NAME	VARCHAR2(32)	NOT NULL	Name of the resource
LIMIT	VARCHAR2(40)		Limit placed on this resource

7.710 USER_RESUMABLE

USER_RESUMABLE displays the resumable statements executed by the current user. Its columns (except for USER_ID) are the same as those in DBA_RESUMABLE.

> **See Also:**
>
> "DBA_RESUMABLE"

7.711 USER_REWRITE_EQUIVALENCES

USER_REWRITE_EQUIVALENCES describes the rewrite equivalences owned by the current user. Its columns are the same as those in ALL_REWRITE_EQUIVALENCES.

> **See Also:**
>
> "ALL_REWRITE_EQUIVALENCES"

7.712 USER_ROLE_PRIVS

USER_ROLE_PRIVS describes the roles granted to the current user.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the user, or PUBLIC
GRANTED_ROLE	VARCHAR2(128)		Name of the role granted to the user
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN OPTION (YES) or not (NO)
DELEGATE_OPTION	VARCHAR2(3)		Indicates whether the grant was with the DELEGATE OPTION (YES) or not (NO)
DEFAULT_ROLE	VARCHAR2(3)		Indicates whether the role is designated as a DEFAULT ROLE for the user (YES) or not (NO)
OS_GRANTED	VARCHAR2(3)		Indicates whether the role was granted by the operating system (YES) or not (NO); occurs if the OS_ROLES initialization parameter is true
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the role was granted commonly (CONTAINER=ALL was used) • NO if the role was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the grant was inherited from another container (YES) or not (NO)

> **See Also:**
>
> "DBA_ROLE_PRIVS"

7.713 USER_RSRC_CONSUMER_GROUP_PRIVS

`USER_RSRC_CONSUMER_GROUP_PRIVS` displays information about the resource consumer groups to which the current user is assigned. Its columns (except for `GRANTEE`) are the same as those in `DBA_RSRC_CONSUMER_GROUP_PRIVS`.

> **See Also:**
>
> "DBA_RSRC_CONSUMER_GROUP_PRIVS"

7.714 USER_RSRC_MANAGER_SYSTEM_PRIVS

`USER_RSRC_MANAGER_SYSTEM_PRIVS` displays information about the users who are granted system privileges for the `DBMS_RESOURCE_MANAGER` package. Its columns (except for `GRANTEE`) are the same as those in `DBA_RSRC_MANAGER_SYSTEM_PRIVS`.

> **See Also:**
>
> "DBA_RSRC_MANAGER_SYSTEM_PRIVS"

7.715 USER_RULE_SET_RULES

`USER_RULE_SET_RULES` describes the rules in the rule sets owned by the current user. Its columns (except for `RULE_SET_OWNER`) are the same as those in `ALL_RULE_SET_RULES`.

> **See Also:**
>
> "ALL_RULE_SET_RULES"

7.716 USER_RULE_SETS

USER_RULE_SETS describes the rule sets owned by the current user. Its columns (except for RULE_SET_OWNER) are the same as those in ALL_RULE_SETS.

> **See Also:**
>
> "ALL_RULE_SETS"

7.717 USER_RULES

USER_RULES describes the rules owned by the current user. Its columns (except for RULE_OWNER) are the same as those in ALL_RULES.

> **See Also:**
>
> "ALL_RULES"

7.718 USER_SAGA_BROKERS

USER_SAGA_BROKERS displays the saga brokers owned by the current user. Its columns are the same as those in ALL_SAGA_BROKERS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_BROKERS"

7.719 USER_SAGA_DETAILS

USER_SAGA_DETAILS displays details for sagas owned by the current user. Its columns are the same as those in ALL_SAGA_DETAILS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_DETAILS"

7.720 USER_SAGA_ERRORS

`USER_SAGA_ERRORS` describes errors generated by the sagas owned by the current user. Its columns are the same as those in `ALL_SAGA_ERRORS`.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_ERRORS"

7.721 USER_SAGA_FINALIZATION

`USER_SAGA_FINALIZATION` displays information about pending finalization actions for sagas owned by the current user. Its columns are the same as those in `ALL_SAGA_FINALIZATION`.

This view displays one row for each unique reservable table updated as part of a participant transaction for sagas that were either initiated in the current PDB or joined by participants in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_FINALIZATION"

7.722 USER_SAGA_PARTICIPANT_SET

USER_SAGA_PARTICIPANT_SET displays information about saga participants for sagas owned by the current user. Its columns are the same as those in ALL_SAGA_PARTICIPANT_SET.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_PARTICIPANT_SET"

7.723 USER_SAGA_PARTICIPANTS

USER_SAGA_PARTICIPANTS describes the saga participants owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SAGA_PARTICIPANTS.

This view displays sagas that were either initiated in the current PDB or joined by participants or coordinators in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_PARTICIPANTS"

7.724 USER_SAGA_PENDING

USER_SAGA_PENDING describes the pending sagas owned by the current user. Its columns are the same as those in ALL_SAGA_PENDING.

This view displays sagas that were initiated in the current PDB.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGA_PENDING"

7.725 USER_SAGAS

`USER_SAGAS` describes the active sagas owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_SAGAS`.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

> **Note:**
>
> This view displays active sagas. Completed sagas are displayed in the USER_HIST_SAGAS view.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_SAGAS"

7.726 USER_SCHEDULER_CHAIN_RULES

`USER_SCHEDULER_CHAIN_RULES` displays information about the rules for the chains owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_SCHEDULER_CHAIN_RULES`.

> **See Also:**
>
> "ALL_SCHEDULER_CHAIN_RULES"

7.727 USER_SCHEDULER_CHAIN_STEPS

USER_SCHEDULER_CHAIN_STEPS displays information about the defined steps of the chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_CHAIN_STEPS.

> **See Also:**
>
> "ALL_SCHEDULER_CHAIN_STEPS"

7.728 USER_SCHEDULER_CHAINS

USER_SCHEDULER_CHAINS displays information about the chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_CHAINS.

> **See Also:**
>
> "ALL_SCHEDULER_CHAINS"

7.729 USER_SCHEDULER_CREDENTIALS

USER_SCHEDULER_CREDENTIALS displays information about the credentials owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_CREDENTIALS.

> **Note:**
>
> This view is deprecated in favor of the USER_CREDENTIALS view. Oracle recommends that you use USER_CREDENTIALS instead. USER_SCHEDULER_CREDENTIALS is retained for backward compatibility only.

> **See Also:**
>
> - "USER_CREDENTIALS"
> - "ALL_SCHEDULER_CREDENTIALS"

7.730 USER_SCHEDULER_DB_DESTS

USER_SCHEDULER_DB_DESTS displays information about the destination objects owned by the current user pointing to remote databases. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_DB_DESTS.

> **See Also:**
>
> "ALL_SCHEDULER_DB_DESTS"

7.731 USER_SCHEDULER_DESTS

USER_SCHEDULER_DESTS displays information about the destination objects for jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_DESTS.

> **See Also:**
>
> "ALL_SCHEDULER_DESTS"

7.732 USER_SCHEDULER_FILE_WATCHERS

USER_SCHEDULER_FILE_WATCHERS displays information about the Scheduler file watch requests owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_FILE_WATCHERS.

> **See Also:**
>
> "ALL_SCHEDULER_FILE_WATCHERS"

7.733 USER_SCHEDULER_GROUP_MEMBERS

USER_SCHEDULER_GROUP_MEMBERS displays information about the members of the Scheduler object groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_GROUP_MEMBERS.

> **See Also:**
>
> "ALL_SCHEDULER_GROUP_MEMBERS"

7.734 USER_SCHEDULER_GROUPS

USER_SCHEDULER_GROUPS displays information about the Scheduler object groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_GROUPS.

> **See Also:**
>
> "ALL_SCHEDULER_GROUPS"

7.735 USER_SCHEDULER_INCOMPAT_MEMBER

USER_SCHEDULER_INCOMPAT_MEMBER displays all Scheduler incompatibility resource objects members owned by the current user. Its columns are the same as those in ALL_SCHEDULER_INCOMPAT_MEMBER.

> **See Also:**
>
> "ALL_SCHEDULER_INCOMPAT_MEMBER"

7.736 USER_SCHEDULER_INCOMPATS

USER_SCHEDULER_INCOMPATS displays all Scheduler incompatibility resource objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_INCOMPATS.

> **See Also:**
>
> "ALL_SCHEDULER_INCOMPATS"

7.737 USER_SCHEDULER_JOB_ARGS

USER_SCHEDULER_JOB_ARGS displays information about the arguments of the Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_JOB_ARGS.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_ARGS"

7.738 USER_SCHEDULER_JOB_DESTS

USER_SCHEDULER_JOB_DESTS displays information about the state of the jobs owned by the current user at each of their destinations. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_JOB_DESTS.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_DESTS"

7.739 USER_SCHEDULER_JOB_LOG

USER_SCHEDULER_JOB_LOG displays log information for the Scheduler jobs owned by the current user. Its columns are the same as those in ALL_SCHEDULER_JOB_LOG.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_LOG"

7.740 USER_SCHEDULER_JOB_RUN_DETAILS

USER_SCHEDULER_JOB_RUN_DETAILS displays log run details for the Scheduler jobs owned by the current user. Its columns are the same as those in ALL_SCHEDULER_JOB_RUN_DETAILS.

> **See Also:**
>
> "ALL_SCHEDULER_JOB_RUN_DETAILS"

7.741 USER_SCHEDULER_JOBS

USER_SCHEDULER_JOBS displays information about the Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_JOBS.

> **See Also:**
>
> "ALL_SCHEDULER_JOBS"

7.742 USER_SCHEDULER_NOTIFICATIONS

USER_SCHEDULER_NOTIFICATIONS displays information about the E-mail notifications for the jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_NOTIFICATIONS.

> **See Also:**
>
> "ALL_SCHEDULER_NOTIFICATIONS"

7.743 USER_SCHEDULER_PROGRAM_ARGS

USER_SCHEDULER_PROGRAM_ARGS displays information about the arguments of the Scheduler programs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_PROGRAM_ARGS.

> **See Also:**
>
> "ALL_SCHEDULER_PROGRAM_ARGS"

7.744 USER_SCHEDULER_PROGRAMS

USER_SCHEDULER_PROGRAMS displays information about the Scheduler programs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_PROGRAMS.

> **See Also:**
>
> "ALL_SCHEDULER_PROGRAMS"

7.745 USER_SCHEDULER_REMOTE_JOBSTATE

USER_SCHEDULER_REMOTE_JOBSTATE displays information about the state of the jobs owned by the current user at remote databases. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_REMOTE_JOBSTATE.

> **See Also:**
>
> "ALL_SCHEDULER_REMOTE_JOBSTATE"

7.746 USER_SCHEDULER_RESOURCES

USER_SCHEDULER_RESOURCES displays all scheduler resource objects in the database from the schema of the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_RESOURCES.

> **See Also:**
>
> "ALL_SCHEDULER_RESOURCES"

7.747 USER_SCHEDULER_RSC_CONSTRAINTS

USER_SCHEDULER_RSC_CONSTRAINTS lists all Oracle Scheduler resource constraint members owned by the current user. Its columns are the same as those in ALL_SCHEDULER_RSC_CONSTRAINTS.

> **See Also:**
>
> "ALL_SCHEDULER_RSC_CONSTRAINTS"

7.748 USER_SCHEDULER_RUNNING_CHAINS

USER_SCHEDULER_RUNNING_CHAINS displays information about the chain steps of the running chains owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_RUNNING_CHAINS.

> **See Also:**
>
> "ALL_SCHEDULER_RUNNING_CHAINS"

7.749 USER_SCHEDULER_RUNNING_JOBS

USER_SCHEDULER_RUNNING_JOBS displays information about the running Scheduler jobs owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_RUNNING_JOBS.

> **See Also:**
>
> "ALL_SCHEDULER_RUNNING_JOBS"

7.750 USER_SCHEDULER_SCHEDULES

USER_SCHEDULER_SCHEDULES displays information about the Scheduler schedules owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SCHEDULER_SCHEDULES.

> **See Also:**
>
> "ALL_SCHEDULER_SCHEDULES"

7.751 USER_SCHEMA_PRIVS

USER_SCHEMA_PRIVS describes schema privileges granted to the current user.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the user, or PUBLIC
PRIVILEGE	VARCHAR2(40)		Schema privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the grant was inherited from another container (YES) or not (NO)

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "DBA_SCHEMA_PRIVS"

7.752 USER_SEC_RELEVANT_COLS

USER_SEC_RELEVANT_COLS describes the security relevant columns of the security policies for the tables and views owned by the current user. Its columns (except for OBJECT_OWNER) are the same as those in ALL_SEC_RELEVANT_COLS.

> **See Also:**
>
> "ALL_SEC_RELEVANT_COLS"

7.753 USER_SECONDARY_OBJECTS

USER_SECONDARY_OBJECTS provides information about secondary objects associated with domain indexes owned by the current user. Its columns are the same as those in ALL_SECONDARY_OBJECTS.

This view is only relevant in the context of domain indexes.

> **See Also:**
>
> "ALL_SECONDARY_OBJECTS"

7.754 USER_SEGMENTS

USER_SEGMENTS describes the storage allocated for the segments owned by the current user's objects. Its columns (except for OWNER, HEADER_FILE, HEADER_BLOCK, and RELATIVE_FNO) are the same as those in DBA_SEGMENTS.

> **See Also:**
>
> "DBA_SEGMENTS"

7.755 USER_SEQUENCES

USER_SEQUENCES describes all sequences owned by the current user. Its columns are the same as those in ALL_SEQUENCES.

> **See Also:**
>
> "ALL_SEQUENCES"

7.756 USER_SODA_COLLECTIONS

USER_SODA_COLLECTIONS describes the Simple Oracle Document Access (SODA) collections owned by the current user. Its columns (except for OWNER) are the same as those in DBA_SODA_COLLECTIONS.

> **See Also:**
>
> "DBA_SODA_COLLECTIONS"

7.757 USER_SOURCE

USER_SOURCE describes the text source of the stored objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SOURCE.

> **See Also:**
>
> "ALL_SOURCE"

7.758 USER_SOURCE_AE

USER_SOURCE_AE describes the text source of the stored objects (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SOURCE_AE.

> **See Also:**
>
> "ALL_SOURCE_AE"

7.759 USER_SQL_TRANSLATION_PROFILES

USER_SQL_TRANSLATION_PROFILES describes all SQL translation profiles owned by the user. Its columns (except for OWNER) are the same as those in ALL_SQL_TRANSLATION_PROFILES.

> **See Also:**
>
> "ALL_SQL_TRANSLATION_PROFILES"

7.760 USER_SQL_TRANSLATIONS

USER_SQL_TRANSLATIONS describes all SQL translations owned by the user. Its columns (except for OWNER) are the same as those in ALL_SQL_TRANSLATIONS.

> **See Also:**
>
> "ALL_SQL_TRANSLATIONS"

7.761 USER_SQLJ_TYPE_ATTRS

USER_SQLJ_TYPE_ATTRS describes the attributes of the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SQLJ_TYPE_ATTRS.

> **See Also:**
>
> "ALL_SQLJ_TYPE_ATTRS"

7.762 USER_SQLJ_TYPE_METHODS

USER_SQLJ_TYPE_METHODS describes the methods of the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SQLJ_TYPE_METHODS.

> **See Also:**
>
> "ALL_SQLJ_TYPE_METHODS"

7.763 USER_SQLJ_TYPES

USER_SQLJ_TYPES describes the SQLJ object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SQLJ_TYPES.

> **See Also:**
>
> "ALL_SQLJ_TYPES"

7.764 USER_SQLSET

`USER_SQLSET` displays information about the SQL tuning sets owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_SQLSET`.

> **See Also:**
>
> "ALL_SQLSET"

7.765 USER_SQLSET_BINDS

`USER_SQLSET_BINDS` displays the bind values associated with the SQL tuning sets owned by the current user. Its columns (except for `SQLSET_OWNER`) are the same as those in `ALL_SQLSET_BINDS`.

> **See Also:**
>
> "ALL_SQLSET_BINDS"

7.766 USER_SQLSET_PLANS

`USER_SQLSET_PLANS` describes captured plans for statements in the SQL tuning sets owned by the current user. Its columns (except for `SQLSET_OWNER`) are the same as those in `ALL_SQLSET_PLANS`.

> **See Also:**
>
> "ALL_SQLSET_PLANS"

7.767 USER_SQLSET_REFERENCES

`USER_SQLSET_REFERENCES` describes whether or not the SQL tuning sets owned by the current user are active. Its columns (except for `SQLSET_OWNER`) are the same as those in `ALL_SQLSET_REFERENCES`.

> **See Also:**
>
> "ALL_SQLSET_REFERENCES"

7.768 USER_SQLSET_STATEMENTS

`USER_SQLSET_STATEMENTS` displays information about the SQL statements, along with their statistics, that form the SQL tuning sets owned by the current user. Its columns (except for `SQLSET_OWNER`) are the same as those in `ALL_SQLSET_STATEMENTS`.

> **See Also:**
>
> "ALL_SQLSET_STATEMENTS"

7.769 USER_SQLTUNE_BINDS

`USER_SQLTUNE_BINDS` displays the bind values associated with the tuned SQL statements owned by the current user. Its columns are the same as those in `DBA_SQLTUNE_BINDS`.

> **See Also:**
>
> "DBA_SQLTUNE_BINDS"

7.770 USER_SQLTUNE_PLANS

`USER_SQLTUNE_PLANS` displays information about the execution plans generated for the SQL statements owned by the current user during a SQL tuning session. Its columns are the same as those in `DBA_SQLTUNE_PLANS`.

> **See Also:**
>
> "DBA_SQLTUNE_PLANS"

7.771 USER_SQLTUNE_RATIONALE_PLAN

`USER_SQLTUNE_RATIONALE_PLAN` displays the association between rationales and operations in the execution plan of the SQL statements owned by the current user. Its columns are the same as those in `DBA_SQLTUNE_RATIONALE_PLAN`.

> **See Also:**
>
> "DBA_SQLTUNE_RATIONALE_PLAN"

7.772 USER_SQLTUNE_STATISTICS

USER_SQLTUNE_STATISTICS displays statistics associated with the SQL statements owned by the current user. Its columns are the same as those in DBA_SQLTUNE_STATISTICS.

> **See Also:**
>
> "DBA_SQLTUNE_STATISTICS"

7.773 USER_SR_GRP_STATUS

USER_SR_GRP_STATUS provides information on the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA_SR_GRP_STATUS.

> **See Also:**
>
> "DBA_SR_GRP_STATUS"

7.774 USER_SR_GRP_STATUS_ALL

USER_SR_GRP_STATUS_ALL provides information on the refresh operations on the synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA_SR_GRP_STATUS_ALL.

> **See Also:**
>
> "DBA_SR_GRP_STATUS_ALL"

7.775 USER_SR_OBJ

USER_SR_OBJ provides information on the objects currently registered for synchronous refresh for current groups for the current user. Its columns are the same as those in DBA_SR_OBJ.

> **See Also:**
>
> "DBA_SR_OBJ"

7.776 USER_SR_OBJ_ALL

USER_SR_OBJ_ALL provides information on the objects registered for synchronous refresh for current and defunct groups for the current user. Its columns are the same as those in DBA_SR_OBJ_ALL.

> **See Also:**
>
> "DBA_SR_OBJ_ALL"

7.777 USER_SR_OBJ_STATUS

USER_SR_OBJ_STATUS provides information on the status of objects registered for synchronous refresh for the current refresh operations for the current synchronous refresh groups in the database which are owned by the current user. Its columns are the same as those in DBA_SR_OBJ_STATUS.

> **See Also:**
>
> "DBA_SR_OBJ_STATUS"

7.778 USER_SR_OBJ_STATUS_ALL

USER_SR_OBJ_STATUS_ALL provides information on the status of objects registered for synchronous refresh in the database which are owned by the current user. Its columns are the same as those in DBA_SR_OBJ_STATUS_ALL.

> **See Also:**
>
> "DBA_SR_OBJ_STATUS_ALL"

7.779 USER_SR_PARTN_OPS

USER_SR_PARTN_OPS provides information on the partition operations registered on the base tables of the materialized views registered for synchronous refresh belonging to the current user. Its columns are the same as those in DBA_SR_PARTN_OPS.

> **See Also:**
>
> "DBA_SR_PARTN_OPS"

7.780 USER_SR_STLOG_EXCEPTIONS

`USER_SR_STLOG_EXCEPTIONS` provides information on the exceptions in the staging logs for the tables belonging to the current user processed by `DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG`. Its columns are the same as those in `DBA_SR_STLOG_EXCEPTIONS`.

> **See Also:**
>
> "DBA_SR_STLOG_EXCEPTIONS"

7.781 USER_SR_STLOG_STATS

`USER_SR_STLOG_STATS` provides information on the statistics in the staging logs for the tables belonging to the current user processed by `DBMS_SYNC_REFRESH.PREPARE_STAGING_LOG`. Its columns are the same as those in `DBA_SR_STLOG_STATS`.

> **See Also:**
>
> "DBA_SR_STLOG_STATS"

7.782 USER_STAT_EXTENSIONS

`USER_STAT_EXTENSIONS` displays information about the optimizer statistics extensions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_STAT_EXTENSIONS`.

> **See Also:**
>
> "ALL_STAT_EXTENSIONS"

7.783 USER_STATEMENTS

`USER_STATEMENTS` SQL statements in stored PL/SQL objects accessible to the user. Its columns (except for `OWNER`) are the same as those in `ALL_STATEMENTS`.

> **See Also:**
>
> "ALL_STATEMENTS"

7.784 USER_STORED_SETTINGS

USER_STORED_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units, but only shows information about PL/SQL units owned by the current user.

USER_STORED_SETTINGS does not display the OWNER column. The rest of its columns are the same as those in ALL_STORED_SETTINGS.

> **See Also:**
>
> "ALL_STORED_SETTINGS"

7.785 USER_SUBPART_COL_STATISTICS

USER_SUBPART_COL_STATISTICS provides column statistics and histogram information for subpartitions of subpartitioned objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SUBPART_COL_STATISTICS.

> **See Also:**
>
> "ALL_SUBPART_COL_STATISTICS"

7.786 USER_SUBPART_HISTOGRAMS

USER_SUBPART_HISTOGRAMS lists actual histogram data (end-points per histogram) for histograms on table subpartitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_SUBPART_HISTOGRAMS.

> **See Also:**
>
> "ALL_SUBPART_HISTOGRAMS"

7.787 USER_SUBPART_KEY_COLUMNS

USER_SUBPART_KEY_COLUMNS lists subpartitioning key columns for composite-partitioned tables (and local indexes on composite-partitioned tables) owned by the current user. Its columns are the same as those in ALL_SUBPART_KEY_COLUMNS.

> **See Also:**
>
> "ALL_SUBPART_KEY_COLUMNS"

7.788 USER_SUBPARTITION_TEMPLATES

USER_SUBPARTITION_TEMPLATES describes the subpartition templates owned by the current user. Its columns (except for USER_NAME) are the same as those in ALL_SUBPARTITION_TEMPLATES.

> **See Also:**
>
> "ALL_SUBPARTITION_TEMPLATES"

7.789 USER_SUBSCR_REGISTRATIONS

USER_SUBSCR_REGISTRATIONS displays information about the subscription registrations owned by the current user. Its columns are the same as those in DBA_SUBSCR_REGISTRATIONS.

> **See Also:**
>
> "DBA_SUBSCR_REGISTRATIONS"

7.790 USER_SYNONYMS

USER_SYNONYMS describes the private synonyms (synonyms owned by the current user). Its columns (except for OWNER) are the same as those in ALL_SYNONYMS.

> **See Also:**
>
> "ALL_SYNONYMS"

7.791 USER_SYS_PRIVS

USER_SYS_PRIVS describes system privileges granted to the current user.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the user, or PUBLIC
PRIVILEGE	VARCHAR2(40)		System privilege
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)

Column	Datatype	NULL	Description
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the grant was inherited from another container (YES) or not (NO)

See Also:

"DBA_SYS_PRIVS"

7.792 USER_SYS_PRIVS_ALL

USER_SYS_PRIVS_ALL describes system privileges and schema privileges granted to the current user.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)		Name of the user, or PUBLIC
PRIVILEGE	VARCHAR2(40)		Privilege
SCHEMA	VARCHAR2(128)		Schema on which the privilege was granted For system privileges, the value of this column is null.
ADMIN_OPTION	VARCHAR2(3)		Indicates whether the grant was with the ADMIN option (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the grant was inherited from another container (YES) or not (NO)

Note:

This view is available starting with Oracle Database 23ai.

See Also:

"DBA_SYS_PRIVS_ALL"

7.793 USER_TAB_COL_STAT_MODELS

`USER_TAB_COL_STAT_MODELS` describes real-time statistics models for all tables owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_TAB_COL_STAT_MODELS`.

Real-time statistics models use machine learning algorithms to predict the number of distinct values (NDV) for table columns.

See Also:

"ALL_TAB_COL_STAT_MODELS"

7.794 USER_TAB_COL_STATISTICS

`USER_TAB_COL_STATISTICS` contains column statistics and histogram information extracted from `USER_TAB_COLUMNS`.

Its columns (except for `OWNER`) are the same as those in `ALL_TAB_COL_STATISTICS`.

See Also:

- "USER_TAB_COLUMNS"
- "ALL_TAB_COL_STATISTICS"

7.795 USER_TAB_COLS

`USER_TAB_COLS` describes the columns of the tables, views, and clusters owned by the current user.

Its columns (except for `OWNER`) are the same as those in `ALL_TAB_COLS`.

To gather statistics for this view, use the `DBMS_STATS` package.

This view differs from `USER_TAB_COLUMNS` in that system-generated hidden columns are not filtered out.

See Also:

- "ALL_TAB_COLS"
- "USER_TAB_COLUMNS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_STATS` package

7.796 USER_TAB_COLUMNS

USER_TAB_COLUMNS describes the columns of the tables, views, and clusters owned by the current user.

Its columns (except for OWNER) are the same as those in ALL_TAB_COLUMNS.

To gather statistics for this view, use the DBMS_STATS package.

This view filters out system-generated hidden columns. The USER_TAB_COLS view does not filter out system-generated hidden columns.

See Also:

- "ALL_TAB_COLUMNS"
- "USER_TAB_COLS"
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_STATS package

7.797 USER_TAB_COMMENTS

USER_TAB_COMMENTS displays comments on the tables and views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TAB_COMMENTS.

See Also:

"ALL_TAB_COMMENTS"

7.798 USER_TAB_HISTGRM_PENDING_STATS

USER_TAB_HISTGRM_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TAB_HISTGRM_PENDING_STATS.

See Also:

"ALL_TAB_HISTGRM_PENDING_STATS"

7.799 USER_TAB_HISTOGRAMS

USER_TAB_HISTOGRAMS describes histograms on columns of tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TAB_HISTOGRAMS.

> **See Also:**
>
> "ALL_TAB_HISTOGRAMS"

7.800 USER_TAB_IDENTITY_COLS

USER_TAB_IDENTITY_COLS describes all table identity columns. Its columns (except for OWNER) are the same as those in ALL_TAB_IDENTITY_COLS.

> **See Also:**
>
> "ALL_TAB_IDENTITY_COLS"

7.801 USER_TAB_MODIFICATIONS

USER_TAB_MODIFICATIONS describes modifications to all tables owned by the current user that have been modified since the last time statistics were gathered on the tables. Its columns are the same as those in ALL_TAB_MODIFICATIONS.

> **Note:**
>
> For performance reasons, Oracle Database does not populate this view immediately when the actual modifications occur.

> **See Also:**
>
> "ALL_TAB_MODIFICATIONS"

7.802 USER_TAB_PARTITIONS

USER_TAB_PARTITIONS describes partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS_STATS package for all partitions owned by the current user.

Its columns are the same as those in ALL_TAB_PARTITIONS.

> **See Also:**
>
> "ALL_TAB_PARTITIONS"

7.803 USER_TAB_PENDING_STATS

`USER_TAB_PENDING_STATS` describes pending statistics for tables, partitions, and subpartitions owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_TAB_PENDING_STATS`.

> **See Also:**
>
> "ALL_TAB_PENDING_STATS"

7.804 USER_TAB_PRIVS

`USER_TAB_PRIVS` describes the object grants for which the current user is the object owner, grantor, or grantee. Its columns are the same as those in `DBA_TAB_PRIVS`.

> **See Also:**
>
> "DBA_TAB_PRIVS"

7.805 USER_TAB_PRIVS_MADE

`USER_TAB_PRIVS_MADE` describes the object grants for which the current user is the object owner. Its columns (except for `OWNER`) are the same as those in `ALL_TAB_PRIVS_MADE`.

> **See Also:**
>
> "ALL_TAB_PRIVS_MADE"

7.806 USER_TAB_PRIVS_RECD

`USER_TAB_PRIVS_RECD` describes the object grants for which the current user is the grantee. Its columns (except for `GRANTEE`) are the same as those in `ALL_TAB_PRIVS_RECD`.

> **See Also:**
>
> "ALL_TAB_PRIVS_RECD"

7.807 USER_TAB_STAT_PREFS

USER_TAB_STAT_PREFS displays information about statistics preferences for the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TAB_STAT_PREFS.

> **See Also:**
>
> "ALL_TAB_STAT_PREFS"

7.808 USER_TAB_STATISTICS

USER_TAB_STATISTICS displays optimizer statistics for the tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TAB_STATISTICS.

> **See Also:**
>
> "ALL_TAB_STATISTICS"

7.809 USER_TAB_STATS_HISTORY

USER_TAB_STATS_HISTORY provides a history of table statistics modifications for all tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TAB_STATS_HISTORY.

> **See Also:**
>
> "ALL_TAB_STATS_HISTORY"

7.810 USER_TAB_SUBPARTITIONS

USER_TAB_SUBPARTITIONS describes, for each table subpartition owned by the current user, the subpartition name, name of the table and partition to which it belongs, and its storage attributes. Its columns are the same as those in ALL_TAB_SUBPARTITIONS.

> **See Also:**
>
> "ALL_TAB_SUBPARTITIONS"

7.811 USER_TABLE_ACCESS_STATS

USER_TABLE_ACCESS_STATS displays the scan count for tables and partitions owned by the current user. Its columns (except for TABLE_OWNER) are the same as those in ALL_TABLE_ACCESS_STATS.

> **Note:**
>
> The ALL_TABLE_ACCESS_STATS and DBA_TABLE_ACCESS_STATS views do not display data for Oracle-maintained schemas. You can view data for an Oracle-maintained schema by connecting to the schema and querying the USER_TABLE_ACCESS_STATS view.

> **See Also:**
>
> - "ALL_TABLE_ACCESS_STATS"
> - "DBA_TABLE_ACCESS_STATS"

7.812 USER_TABLE_VIRTUAL_COLUMNS

USER_TABLE_VIRTUAL_COLUMNS describes virtual columns in tables owned by the current user. Its columns are the same as those in ALL_TABLE_VIRTUAL_COLUMNS.

> **See Also:**
>
> "ALL_TABLE_VIRTUAL_COLUMNS"

7.813 USER_TABLES

USER_TABLES describes the relational tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TABLES.

To gather statistics for this view, use the DBMS_STATS package.

> **See Also:**
>
> "ALL_TABLES"

7.814 USER_TABLESPACES

USER_TABLESPACES describes the tablespaces accessible to the current user. Its columns (except for PLUGGED_IN) are the same as those in DBA_TABLESPACES.

> **See Also:**
>
> "DBA_TABLESPACES"

7.815 USER_TRANSFORMATIONS

USER_TRANSFORMATIONS displays information about the transformations owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TRANSFORMATIONS.

> **See Also:**
>
> "ALL_TRANSFORMATIONS"

7.816 USER_TRIGGER_COLS

USER_TRIGGER_COLS describes the use of columns in the triggers owned by the current user and in triggers on tables owned by the current user. Its columns are the same as those in ALL_TRIGGER_COLS.

> **See Also:**
>
> "ALL_TRIGGER_COLS"

7.817 USER_TRIGGER_ORDERING

USER_TRIGGER_ORDERING describes the triggers owned by the current user that have FOLLOWS or PRECEDES ordering. Its columns (except for TRIGGER_OWNER) are the same as those in ALL_TRIGGER_ORDERING.

> **See Also:**
>
> "ALL_TRIGGER_ORDERING"

7.818 USER_TRIGGERS

USER_TRIGGERS describes the triggers owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TRIGGERS.

> **See Also:**
>
> "ALL_TRIGGERS"

7.819 USER_TRIGGERS_AE

USER_TRIGGERS_AE describes the triggers (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TRIGGERS_AE.

> **See Also:**
>
> "ALL_TRIGGERS_AE"

7.820 USER_TS_QUOTAS

USER_TS_QUOTAS contains information about tablespace quotas for the current user. Its columns (except for USERNAME) the same as those in DBA_TS_QUOTAS.

> **See Also:**
>
> "DBA_TS_QUOTAS"

7.821 USER_TSTZ_TAB_COLS

USER_TSTZ_TAB_COLS displays information about the columns of the tables owned by the current user, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.

Its columns (except for OWNER, COLUMN_NAME, NESTED, VIRTUAL_COLUMN, SCALAR_COLUMN, and UNUSED_COLUMN) are the same as those in ALL_TSTZ_TAB_COLS.

> **See Also:**
>
> "ALL_TSTZ_TAB_COLS"

7.822 USER_TSTZ_TABLES

USER_TSTZ_TABLES displays information about the tables owned by the current user, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.

Its columns (except for OWNER) are the same as those in ALL_TSTZ_TABLES.

> **See Also:**
>
> "ALL_TSTZ_TABLES"

7.823 USER_TUNE_MVIEW

USER_TUNE_MVIEW displays the result of executing the DBMS_ADVISOR.TUNE_MVIEW procedure. Its columns (except for OWNER) are the same as those in DBA_TUNE_MVIEW.

> **See Also:**
>
> "DBA_TUNE_MVIEW"

7.824 USER_TXEVENTQ_MIGRATION_STATUS

USER_TXEVENTQ_MIGRATION_STATUS provides information about migrations from AQ classic queues to Transactional Event Queues (TxEventQs) owned by the current user. Its columns (except for SOURCE_SCHEMA_NAME) are the same as those in ALL_TXEVENTQ_MIGRATION_STATUS.

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

> **See Also:**
>
> "ALL_TXEVENTQ_MIGRATION_STATUS"

7.825 USER_TYPE_ATTRS

USER_TYPE_ATTRS describes the attributes of the object types owned by the current user. Its columns (except for OWNER and CHAR_USED) are the same as those in ALL_TYPE_ATTRS.

> **See Also:**
>
> "ALL_TYPE_ATTRS"

7.826 USER_TYPE_METHODS

USER_TYPE_METHODS describes the methods of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TYPE_METHODS.

> **See Also:**
>
> "ALL_TYPE_METHODS"

7.827 USER_TYPE_VERSIONS

USER_TYPE_VERSIONS describes the versions of the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TYPE_VERSIONS.

> **See Also:**
>
> "ALL_TYPE_VERSIONS"

7.828 USER_TYPES

USER_TYPES describes the object types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_TYPES.

> **See Also:**
>
> "ALL_TYPES"

7.829 USER_UNUSED_COL_TABS

USER_UNUSED_COL_TABS describes the tables owned by the current user that contain unused columns. Its columns (except for OWNER) are the same as those in ALL_UNUSED_COL_TABS.

> **See Also:**
>
> "ALL_UNUSED_COL_TABS"

7.830 USER_UPDATABLE_COLUMNS

USER_UPDATABLE_COLUMNS describes columns in a join view that can be updated by the current user, subject to appropriate privileges. Its columns are the same as those in ALL_UPDATABLE_COLUMNS.

> **See Also:**
>
> - "ALL_UPDATABLE_COLUMNS"
> - *Oracle Database Concepts* for information on updatable join views

7.831 USER_USERS

USER_USERS describes the current user.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user
USER_ID	NUMBER	NOT NULL	ID number of the user

Column	Datatype	NULL	Description
ACCOUNT_STATUS	VARCHAR2(32)	NOT NULL	Account status: • OPEN The account is open. • EXPIRED The password for the account is expired, either because the PASSWORD_LIFE_TIME limit was reached or because the password was expired by the ALTER USER ... PASSWORD EXPIRE command. The user can log in with the expired password, then change the password. • EXPIRED(GRACE) The password for the account is expired because the PASSWORD_LIFE_TIME limit was reached, but the password change grace period (PASSWORD_GRACE_TIME) has not yet elapsed. The user can log in with the expired password, but will receive an ORA-28002 warning as a reminder that the password must soon be changed. If the PASSWORD_GRACE_TIME elapses, the user can log in with the expired password, then change the password. • LOCKED The account is locked, either by the ALTER USER ... ACCOUNT LOCK command, or because the number of consecutive failed login attempts exceeded the FAILED_LOGIN_ATTEMPTS limit and the value of PASSWORD_LOCK_TIME is UNLIMITED. The account can be unlocked by the ALTER USER ... ACCOUNT UNLOCK command. • LOCKED(TIMED) The account is locked because the number of consecutive failed login attempts exceeded the FAILED_LOGIN_ATTEMPTS limit and the PASSWORD_LOCK_TIME has not yet elapsed. The account can be unlocked either by the ALTER USER ... ACCOUNT UNLOCK command or by waiting until the PASSWORD_LOCK_TIME has elapsed. • EXPIRED & LOCKED The password for the account is expired, as described for the EXPIRED account status, and the account is locked as described for the LOCKED account status. The account can first be unlocked as described for the LOCKED account status, then the password can be changed as described for the EXPIRED account status. • EXPIRED(GRACE) & LOCKED The password for the account is expired, as described for the EXPIRED(GRACE) account status, and the account is locked as described for the LOCKED account status. The account can first be unlocked as described for the LOCKED account status, then the password can be changed as described for the EXPIRED(GRACE) account status. • EXPIRED & LOCKED(TIMED) The password for the account is expired, as described for the EXPIRED account status, and the

Column	Datatype	NULL	Description
			account is locked as described for the `LOCKED(TIMED)` account status. The account can first be unlocked as described for the `LOCKED(TIMED)` account status, then the password can be changed as described for the `EXPIRED` account status. • `EXPIRED(GRACE) & LOCKED(TIMED)` The password for the account is expired, as described for the `EXPIRED(GRACE)` account status, and the account is locked as described for the `LOCKED(TIMED)` account status. The account can first be unlocked as described for the `LOCKED(TIMED)` account status, then the password can be changed as described for the `EXPIRED(GRACE)` account status. • `OPEN & IN ROLLOVER` The account is in the password rollover period. The user can log in with either the earlier password or the new password. However, at the time the user logs in, the server recalculates whether the account is still in its password rollover period. If the password rollover period has elapsed, then the login will succeed only if the new password was specified, and the account status will change to `OPEN`. • `EXPIRED & IN ROLLOVER` The account is in the password rollover period and the password is expired as described for the `EXPIRED` account status. The user can log in with either the earlier password or the new password. However, at the time the user logs in, the server recalculates whether the account is still in its password rollover period. If the password rollover period has elapsed, then the login will succeed only if the new password was specified, and the account status will change to `EXPIRED`. After logging in, the user will be prompted to change the password. • `LOCKED & IN ROLLOVER` The account is in the password rollover period and is also locked as described for the `LOCKED` account status. The account can be unlocked as described for the `LOCKED` account status, after which the user can log in as described for the `OPEN & IN ROLLOVER` account status. • `EXPIRED & LOCKED & IN ROLLOVER` The account is in the password rollover period, its password is expired as described for the `EXPIRED` account status, and the account is locked as described for the `LOCKED` account status. The account can be unlocked as described for the `LOCKED` account status, after which the user can log in as described for the `EXPIRED & IN ROLLOVER` account status. • `LOCKED(TIMED) & IN ROLLOVER` The account is in the password rollover period and is also locked as described for the

Column	Datatype	NULL	Description
			LOCKED(TIMED) account status. The account can be unlocked as described for the LOCKED(TIMED) account status, after which the user can log in with either the earlier password or the new password. However, at the time the user logs in, the server recalculates whether the account is still in its password rollover period. If the password rollover period has elapsed, then the login will succeed only if the new password was specified. • EXPIRED & LOCKED(TIMED) & IN ROL The account is in the password rollover period, its password is expired as described for the EXPIRED account status, and the account is locked as described for the LOCKED(TIMED) account status. The account can be unlocked as described for the LOCKED(TIMED) account status, after which the user can log in as described for the EXPIRED & IN ROLLOVER account status.
LOCK_DATE	DATE		Date the account was locked if account status was LOCKED
EXPIRY_DATE	DATE		Date of expiration of the account
DEFAULT_TABLESPACE	VARCHAR2(30)	NOT NULL	Default tablespace for data
TEMPORARY_TABLESPACE	VARCHAR2(30)	NOT NULL	Name of the default tablespace for temporary tables or the name of a tablespace group
LOCAL_TEMP_TABLESPACE	VARCHAR2(30)		Default local temporary tablespace for the user
CREATED	DATE	NOT NULL	User creation date
INITIAL_RSRC_CONSUMER_GROUP	VARCHAR2(128)		Initial resource consumer group for the user
EXTERNAL_NAME	VARCHAR2(4000)		User external name. For centrally managed users, if the database user mapping is an exclusive mapping, then this will be the directory service DN for the user. If this database user is a shared schema, it will be the DN of a group.
PROXY_ONLY_CONNECT	VARCHAR2(1)		Indicates whether a user can connect directly (N) or whether the account can only be proxied (Y) by users who have proxy privileges for this account (that is, by users who have been granted the "connect through" privilege for this account). **Note:** Setting PROXY_ONLY_CONNECT for users is deprecated in this release, and may be desupported in a future release. Oracle recommends that you instead use schema-only accounts. For more information about schema-only accounts, see *Oracle Database Security Guide*.
COMMON	VARCHAR2(3)		Indicates whether a given user is common. Possible values • YES if a user is common • NO if a user is local (not common)

Column	Datatype	NULL	Description
ORACLE_MAINTAINED	VARCHAR2(1)		Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
INHERITED	VARCHAR2(3)		Indicates whether the user definition was inherited from another container (YES) or not (NO)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the user's schema
IMPLICIT	VARCHAR2(3)		Indicates whether this user is a common user created by an implicit application (YES) or not (NO)
ALL_SHARD	VARCHAR2(3)		In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are: • YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog. • NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created. In a non-sharded database, the value in this column is always NO.
EXTERNAL_SHARD	VARCHAR2(3)		In a federated sharded database, the value in this column indicates whether the user is an external shard user (YES) or not (NO). In other types of databases, the value in this column is always NO.
PASSWORD_CHANGE_DATE	DATE		Date on which the user's password was last set This column is populated only when the value of the AUTHENTICATION_TYPE column is PASSWORD. Otherwise, this column is null.
MANDATORY_PROFILE_VIOLATION	VARCHAR2(3)		If the value in this column is YES, then the user account password violates the mandatory profile password complexity requirements and must be changed before the grace period expires. Otherwise, the value in this column is NO.
PROTECTED	VARCHAR2(3)		Indicates whether the user is a protected user (YES) or not (NO) A protected user can be managed only by another protected user or a common user.
READ_ONLY	VARCHAR2(3)		Indicates whether write privileges for the user are disabled (YES) or enabled (NO)
DICTIONARY_PROTECTED	VARCHAR2(3)		Indicates whether the user's schema is dictionary protected (YES) or not (NO) **See Also:** *Oracle Database Security Guide* for more information about dictionary-protected schemas

> **See Also:**
>
> - "DBA_USERS"
> - *Oracle Globally Distributed Database Guide* for more information about sharded database management

7.832 USER_USTATS

`USER_USTATS` describes the user-defined statistics collected on the tables and indexes owned by the current user. Its columns are the same as those in `ALL_USTATS`.

> **See Also:**
>
> "ALL_USTATS"

7.833 USER_VARRAYS

`USER_VARRAYS` describes the varrays owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_VARRAYS`.

> **See Also:**
>
> "ALL_VARRAYS"

7.834 USER_VIEWS

`USER_VIEWS` describes the views owned by the current user. Its columns (except for `OWNER`) are the same as those in `ALL_VIEWS`.

> **See Also:**
>
> "ALL_VIEWS"

7.835 USER_VIEWS_AE

USER_VIEWS_AE describes the views (across all editions) owned by the current user. Its columns (except for OWNER) are the same as those in ALL_VIEWS_AE.

> **See Also:**
>
> "ALL_VIEWS_AE"

7.836 USER_WALLET_ACES

USER_WALLET_ACES describes the status of access control entries for the current user to access wallets through PL/SQL network utility packages.

Its columns (except for ACE_ORDER, START_DATE, END_DATE, GRANT_TYPE, INVERTED_PRINCIPAL, PRINCIPAL, PRINCIPAL_TYPE, and STATUS) are the same as those in DBA_WALLET_ACES.

> **See Also:**
>
> "DBA_WALLET_ACES"

7.837 USER_WARNING_SETTINGS

USER_WARNING_SETTINGS displays information about the warning parameter settings for the objects owned by the current user. Its columns (except for OWNER) are the same as those in ALL_WARNING_SETTINGS.

> **See Also:**
>
> "ALL_WARNING_SETTINGS"

7.838 USER_XML_INDEXES

USER_XML_INDEXES describes the XML indexes owned by the current user. Its columns (except for INDEX_OWNER) are the same as those in ALL_XML_INDEXES.

> **See Also:**
>
> "ALL_XML_INDEXES"

7.839 USER_XML_NESTED_TABLES

USER_XML_NESTED_TABLES describes all the tables and their corresponding nested tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_NESTED_TABLES.

> **See Also:**
>
> "ALL_XML_NESTED_TABLES"

7.840 USER_XML_OUT_OF_LINE_TABLES

USER_XML_OUT_OF_LINE_TABLES describes all the out of line tables connected to a given root table for the same schema owned by the current user. Its columns (except for TABLE_OWNER) are the same as those in ALL_XML_OUT_OF_LINE_TABLES.

> **See Also:**
>
> "ALL_XML_OUT_OF_LINE_TABLES"

7.841 USER_XML_SCHEMA_ATTRIBUTES

USER_XML_SCHEMA_ATTRIBUTES describes all the attributes and their properties owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_SCHEMA_ATTRIBUTES.

> **See Also:**
>
> "ALL_XML_SCHEMA_ATTRIBUTES"

7.842 USER_XML_SCHEMA_COMPLEX_TYPES

USER_XML_SCHEMA_COMPLEX_TYPES describes all complex types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_SCHEMA_COMPLEX_TYPES.

> **See Also:**
>
> "ALL_XML_SCHEMA_COMPLEX_TYPES"

7.843 USER_XML_SCHEMA_ELEMENTS

USER_XML_SCHEMA_ELEMENTS describes all the elements and their properties owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_SCHEMA_ELEMENTS.

> **See Also:**
>
> "ALL_XML_SCHEMA_ELEMENTS"

7.844 USER_XML_SCHEMA_NAMESPACES

USER_XML_SCHEMA_NAMESPACES describes all the available namespaces owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_SCHEMA_NAMESPACES.

> **See Also:**
>
> "ALL_XML_SCHEMA_NAMESPACES"

7.845 USER_XML_SCHEMA_SIMPLE_TYPES

USER_XML_SCHEMA_SIMPLE_TYPES describes all simple types owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_SCHEMA_SIMPLE_TYPES.

> **See Also:**
>
> "ALL_XML_SCHEMA_SIMPLE_TYPES"

7.846 USER_XML_SCHEMA_SUBSTGRP_HEAD

USER_XML_SCHEMA_SUBSTGRP_HEAD describes the heads of substitution groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_SCHEMA_SUBSTGRP_HEAD.

> **See Also:**
>
> "ALL_XML_SCHEMA_SUBSTGRP_HEAD"

7.847 USER_XML_SCHEMA_SUBSTGRP_MBRS

USER_XML_SCHEMA_SUBSTGRP_MBRS describes all members of substitution groups owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_SCHEMA_SUBSTGRP_MBRS.

> **See Also:**
>
> "ALL_XML_SCHEMA_SUBSTGRP_MBRS"

7.848 USER_XML_SCHEMAS

USER_XML_SCHEMAS describes the registered XML schemas owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_SCHEMAS.

> **See Also:**
>
> "ALL_XML_SCHEMAS"

7.849 USER_XML_TAB_COLS

USER_XML_TAB_COLS describes the columns of the XML tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_TAB_COLS.

> **See Also:**
>
> "ALL_XML_TAB_COLS"

7.850 USER_XML_TABLES

USER_XML_TABLES describes the XML tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_TABLES.

> **See Also:**
>
> "ALL_XML_TABLES"

7.851 USER_XML_VIEW_COLS

USER_XML_VIEW_COLS describes the columns of the XML views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_VIEW_COLS.

> **See Also:**
>
> "ALL_XML_VIEW_COLS"

7.852 USER_XML_VIEWS

USER_XML_VIEWS describes the XML views owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XML_VIEWS.

> **See Also:**
>
> "ALL_XML_VIEWS"

7.853 USER_XTERNAL_LOC_PARTITIONS

USER_XTERNAL_LOC_PARTITIONS describes partition-level locations owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XTERNAL_LOC_PARTITIONS.

> **See Also:**
>
> "ALL_XTERNAL_LOC_PARTITIONS"

7.854 USER_XTERNAL_LOC_SUBPARTITIONS

USER_XTERNAL_LOC_SUBPARTITIONS describes subpartition-level locations owned by the current user. Its columns (except for TABLE_OWNER) are the same as those in ALL_XTERNAL_LOC_SUBPARTITIONS.

> **See Also:**
>
> "ALL_XTERNAL_LOC_SUBPARTITIONS"

7.855 USER_XTERNAL_PART_TABLES

USER_XTERNAL_PART_TABLES describes object-level information for partitioned external tables owned by the current user. Its columns (except for OWNER) are the same as those in ALL_XTERNAL_PART_TABLES.

> **See Also:**
>
> "ALL_XTERNAL_PART_TABLES"

7.856 USER_XTERNAL_TAB_PARTITIONS

USER_XTERNAL_TAB_PARTITIONS describes partition-level information for partitioned external tables owned by the current user. Its columns (except for TABLE_OWNER) are the same as those in ALL_XTERNAL_TAB_PARTITIONS.

> **See Also:**
>
> "ALL_XTERNAL_TAB_PARTITIONS"

7.857 USER_XTERNAL_TAB_SUBPARTITIONS

USER_XTERNAL_TAB_SUBPARTITIONS describes subpartition-level information for partitioned external tables owned by the current user. Its columns (except for TABLE_OWNER) are the same as those in ALL_XTERNAL_TAB_SUBPARTITIONS.

> **See Also:**
>
> "ALL_XTERNAL_TAB_SUBPARTITIONS"

7.858 USER_ZONEMAP_MEASURES

USER_ZONEMAP_MEASURES describes the measures for all the zone maps owned by the user. Its columns are the same as those in ALL_ZONEMAP_MEASURES.

> **Note:**
>
> This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

> **See Also:**
>
> - "ALL_ZONEMAP_MEASURES"
> - *Oracle Database Data Warehousing Guide* for more information about zone maps

7.859 USER_ZONEMAPS

`USER_ZONEMAPS` describes the zone maps owned by the user. Its columns are the same as those in `ALL_ZONEMAPS`.

> **Note:**
>
> This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

> **See Also:**
>
> - "ALL_ZONEMAPS"
> - *Oracle Database Data Warehousing Guide* for more information about zone maps

Part III
Dynamic Performance Views

This part describes the dynamic performance views, which are often referred to as `V$` views.

This part contains the following chapters:

- Dynamic Performance (V$) Views: V$ACCESS to V$HVMASTER_INFO
- Dynamic Performance (V$) Views: V$IM_COLUMN_LEVEL to V$RULE_SET_AGGREGATE_STATS
- Dynamic Performance (V$) Views: V$SCHEDULER_IN_MEMORY_TRACE to V$ZONEMAP_USAGE_STATS

> **Note:**
>
> Oracle also maintains tables and views that change only when a change is made to the data dictionary. These **static** tables and views are described in Static Data Dictionary Views .

> **Note:**
>
> A multitenant container database is the only supported architecture in Oracle Database 21c and later releases. While the documentation is being revised, legacy terminology may persist. In most cases, "database" and "non-CDB" refer to a CDB or PDB, depending on context. In some contexts, such as upgrades, "non-CDB" refers to a non-CDB from a previous release.

8

Dynamic Performance (V$) Views: V$ACCESS to V$HVMASTER_INFO

This chapter describes the first set (in alphabetical order) of dynamic performance views.

The remaining dynamic performance views appear in alphabetical order in Dynamic Performance (V$) Views: V$IM_COLUMN_LEVEL to V$RULE_SET_AGGREGATE_STATS through Dynamic Performance (V$) Views: V$SCHEDULER_IN_MEMORY_TRACE to V$ZONEMAP_USAGE_STATS.

This chapter contains the following topics:

- About Dynamic Performance Views
- Oracle Exadata Database Machine Views
- Dynamic Performance View Descriptions

8.1 About Dynamic Performance Views

Oracle contains a set of underlying views that are maintained by the database server and accessible to the database administrator user `SYS`. These views are called **dynamic performance views** because they are continuously updated while a database is open and in use, and their contents relate primarily to performance.
Although these views appear to be regular database tables, they are not. These views provide data on internal disk structures and memory structures. You can select from these views, but you can never update or alter them.

> **Note:**
>
> - You can query the dynamic performance views to extract information from them. However, only simple queries are supported. If sorts, joins, `GROUP BY` clauses and the like are needed, then you should copy the information from each `V$` view into a table (for example, using a `CREATE TABLE ... AS SELECT` statement), and then query from those tables.
> - Because the information in the `V$` views is dynamic, read consistency is not guaranteed for `SELECT` operations on these views.

The `catalog.sql` script contains definitions of the views and public synonyms for the dynamic performance views. You must run `catalog.sql` to create these views and synonyms. After installation, only user `SYS` or anyone with `SYSDBA` privilege has access to the dynamic performance tables. See *Oracle Database Administrator's Guide* for more information about running `catalog.sql`.

8.1.1 V$ Views

The actual dynamic performance views are identified by the prefix `V_$`. Public synonyms for these views have the prefix `V$`. Database administrators and other users should access only the `V$` objects, not the `V_$` objects.

The dynamic performance views are used by Oracle Enterprise Manager, which is the primary interface for accessing information about system performance. After an instance is started, the `V$` views that read from memory are accessible. Views that read data from disk require that the database be mounted, and some require that the database be open.

V$ views are `CONTAINER_DATA` objects. When a user connected to the root queries a V$ view, the query results will depend on the `CONTAINER_DATA` attribute for users for the view. The `CONTAINER_DATA` clause of the SQL `ALTER USER` statement is used to set and modify users' `CONTAINER_DATA` attribute.

V$ views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

See Also:

- *Oracle Database Security Guide* for more information about container data objects
- *Oracle Database SQL Language Reference* for more information about the `CONTAINER_DATA` clause for the SQL `ALTER USER` statement

8.1.2 GV$ Views

For almost every `V$` view described in this chapter, Oracle has a corresponding `GV$` (global `V$`) view. In Oracle Real Application Clusters, querying a `GV$` view retrieves the `V$` view information from all qualified instances. In addition to the `V$` information, each `GV$` view contains an extra column named `INST_ID` of data type `NUMBER`. The `INST_ID` column displays the instance number from which the associated `V$` view information was obtained. The `INST_ID` column can be used as a filter to retrieve `V$` information from a subset of available instances. For example, the following query retrieves the information from the `V$LOCK` view on instances 2 and 5:

```
SQL> SELECT * FROM GV$LOCK WHERE INST_ID = 2 OR INST_ID = 5;
```

See Also:

Oracle Real Application Clusters Installation and Configuration Guide for your operating system

GV$ views are CONTAINER_DATA objects. When a user connected to the root queries a GV$ view, the query results will depend on the CONTAINER_DATA attribute for users for the view. The CONTAINER_DATA clause of the SQL ALTER USER statement is used to set and modify users' CONTAINER_DATA attribute.

GV$ views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

See Also:

- *Oracle Database Security Guide* for more information about container data objects
- *Oracle Database SQL Language Reference* for more information about the CONTAINER_DATA clause for the SQL ALTER USER statement

8.2 Oracle Exadata Database Machine Views

Descriptions of Oracle Exadata Database Machine views are not provided in this manual.

See *Oracle Exadata System Software User's Guide* for descriptions of Oracle Exadata Database Machine views.

Note:

Oracle Exadata Database Machine view names begin with V$CELL.

8.3 Dynamic Performance View Descriptions

The remainder of this chapter describes the dynamic performance views in alphabetical order.

8.4 V$ACCESS

V$ACCESS displays information about locks that are currently imposed on library cache objects.

The locks are imposed to ensure that they are not aged out of the library cache while they are required for SQL execution.

Column	Datatype	Description
SID	NUMBER	Session number that is accessing an object
OWNER	VARCHAR2(64)	Owner of the object
OBJECT	VARCHAR2(1000)	Name of the object
TYPE	VARCHAR2(64)	Type identifier for the object

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.5 V$ACTIVE_INSTANCES

V$ACTIVE_INSTANCES displays the mapping between instance names and instance numbers for all instances that have the database currently mounted.

Column	Datatype	Description
INST_NUMBER	NUMBER	Instance number
INST_NAME	VARCHAR2(256)	Instance name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.6 V$ACTIVE_SERVICES

V$ACTIVE_SERVICES displays information about the active services in the database.

Column	Datatype	Description
SERVICE_ID	NUMBER	Service ID
NAME	VARCHAR2(64)	Name of the service
NAME_HASH	NUMBER	Service name hash
NETWORK_NAME	VARCHAR2(512)	Network name
CREATION_DATE	DATE	Creation date
CREATION_DATE_HASH	NUMBER	Creation date hash
GOAL	VARCHAR2(12)	Runtime Load Balancing Goal being used to create run-time load balancing and connection load balancing advice: • NONE • SERVICE_TIME - Connections are balanced by response time • THROUGHPUT - Connections are balanced by throughput

Column	Datatype	Description
DTP	VARCHAR2(1)	Indicates whether or not Distributed Transaction Processing is enabled for this service. When Distributed Transaction Processing is set to Y (YES), it means that the service is offered at exactly one instance at a time for XA affinity. Possible values: • Y - YES • N - NO
BLOCKED	CHAR(2)	Indicates whether a service on the specified instance is blocked from accepting new connections altogether (YES) or not (NO). If a service is blocked, then all connections will be directed to other instances (if any) that are hosting the desired service.
AQ_HA_NOTIFICATION	VARCHAR2(3)	Indicates whether FAN - Fast Application Notification for OCI connections is set (YES) or not (NO)
CLB_GOAL	VARCHAR2(5)	Connection load balancing goal used with statistics that are sent to the listeners to determine how new connections are distributed: • LONG • SHORT
COMMIT_OUTCOME	VARCHAR2(3)	For Transaction Guard and Database Native Transaction Guard, indicates whether the database service associated with the user session has the COMMIT_OUTCOME service attribute enabled (YES) or not (NO). This attribute applies on a per session basis and is set at connect time. When the value of this column is YES, the commit status is managed for all supported transaction types and the outcome of a COMMIT transaction is preserved after the COMMIT has executed. Refer to the COMMIT_OUTCOME_FASTPATH column to view the preferred method for preserving the commit outcome. **See Also:** *Oracle Database Development Guide* for information about preserving the commit outcome
RETENTION_TIME	NUMBER	For Transaction Guard and Database Native Transaction Guard, when COMMIT_OUTCOME = YES, this value indicates the amount of time (in seconds) that the commit outcome is retained in the database.
REPLAY_INITIATION_TIMEOUT	NUMBER	For Application Continuity, this option specifies the difference between the time (in seconds) of original execution of the first operation of a request and the time that the replay is ready to start after a successful reconnect. Application Continuity will not replay after the specified amount of time has passed. This option is intended to avoid the unintentional execution of a transaction when a system is recovered after a long period of time. The default is 5 minutes (300 seconds).
SESSION_STATE_CONSISTENCY	VARCHAR2(128)	Describes how non-transactional is changed during a request. This parameter is considered only if failover_type is set to TRANSACTION for Application Continuity. Examples of session state are NLS settings, optimizer preferences, event settings, PL/SQL global variables, temporary tables, advanced queues, LOBs, and result cache. If non-transactional values change after the request starts, the default value of DYNAMIC should be set. Almost all applications should use DYNAMIC mode. If you are unsure, use DYNAMIC mode.
GLOBAL	VARCHAR2(3)	Indicates whether the service is global. A global service is managed by Global Service Manager (GSM) and can be provided by multiple databases that contain replicated data. Possible values: • YES: Indicates the service is global • NO: Indicates the service is not global

Column	Datatype	Description
CON_NAME	VARCHAR2(128)	Container name of the object. The value of this column is NULL in non-CDBs.
SQL_TRANSLATION_PROFILE	VARCHAR2(261)	A non-NULL value specifies the initial SQL translation profile for subsequent database connections that use the service and do not specify a SQL translation profile. A NULL value has no effect.
MAX_LAG_TIME	VARCHAR2(128)	The maximum replication lag (in seconds) that is acceptable for a data replica to be used for providing the database service. Can only be specified for global services.
STOP_OPTION	VARCHAR2(128)	Stop option for sessions of this service for planned maintenance
FAILOVER_RESTORE	VARCHAR2(128)	Indicates whether sessions recover their commonly used session state (like NLS, schema) when they are failed over with TAF
DRAIN_TIMEOUT	NUMBER	Number of seconds to wait for sessions to be drained
TABLE_FAMILY_ID	NUMBER	Sharded table family ID associated with the service
PLACEMENT_TEMPLATE	VARCHAR2(64)	Reserved for future use
COMMIT_OUTCOME_FASTPATH	VARCHAR2(3)	For Transaction Guard and Database Native Transaction Guard, when COMMIT_OUTCOME = YES, the value of this column indicates the preferred method for preserving the commit outcome. Possible values: • YES - Database Native Transaction Guard is used. Each transaction is assigned a unique transaction identifier (DB XID) in the database. The DB XID and status of the corresponding transaction are maintained persistently in a transaction table. Note that if COMMIT_OUTCOME = YES, then the value of COMMIT_OUTCOME_FASTPATH defaults to YES. • NO - Transaction Guard is used. A logical transaction ID (LTXID) is set for each user session at login and at each successful commit. LTXIDs are used only when the commit is not in the same round-trip to the database as the start of the transaction. Moreover, some transaction types, such as commit on success transactions, DDL transactions, and PL/SQL transactions, will continue to use LTXIDs in the same round-trip. When Transaction Guard is used, the outcome of a COMMIT transaction is known. If there is an outage, the application can use DBMS_APP_CONT.GET_LTXID_OUTCOME to return a reliable status for the last in-flight work. **See Also:** *Oracle Real Application Clusters Administration and Deployment Guide* for information about logical transaction IDs
TRUE_CACHE_SERVICE	VARCHAR2(64)	True Cache service associated with this database service
PARENT_SERVICE	VARCHAR2(64)	Name of the parent service
TEMPLATE_TIMEOUT	NUMBER	Maximum number of seconds that can pass before templates for the service expire If the value of this column is 0, then template timeout is turned off.
FAILOVER_TYPE	VARCHAR2(128)	AUTO for Transparent Application Continuity, TRANSACTION for Application Continuity, SESSION or SELECT for TAF.
FAILOVER_METHOD	VARCHAR2(128)	TAF only for compatibility - BASIC or NONE
FAILOVER_RETRIES	NUMBER	For Application Continuity and TAF, when reconnecting after a failure, number of attempts to re-connect per incident
FAILOVER_DELAY	NUMBER	For Application Continuity and TAF, when reconnecting after a failure, delay between each connection retry (in seconds)
RESET_STATE	VARCHAR2(6)	Reset state for the service. Possible values: • LEVEL1 • NONE

Column	Datatype	Description
AUTO_CONNECTION_REBALANCE	VARCHAR2(7)	Drain setting for service load balancing. Possible values: • 0 - DEFAULT • 1 - NONE • 255 - AUTO
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.7 V$ACTIVE_SESS_POOL_MTH

V$ACTIVE_SESS_POOL_MTH displays available active session pool resource allocation methods.

Column	Datatype	Description
NAME	VARCHAR2(40)	Name of the active session pool resource allocation method
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.8 V$ACTIVE_SESSION_HISTORY

V$ACTIVE_SESSION_HISTORY displays sampled session activity in the database.

It contains snapshots of active database sessions taken once a second. A database session is considered active if it was on the CPU or was waiting for an event that didn't belong to the Idle wait class. Refer to the V$EVENT_NAME view for more information on wait classes.

This view contains one row for each active session per sample and returns the latest session sample rows first. A majority of the columns describing the session in the active session history are present in the V$SESSION view.

Column	Datatype	Description
SAMPLE_ID	NUMBER	ID of the sample
SAMPLE_TIME	TIMESTAMP(3)	Time at which the sample was taken
SAMPLE_TIME_UTC	TIMESTAMP(3)	Time at which the sample was taken in UTC (Coordinated Universal Time) time zone
USECS_PER_ROW	NUMBER	Time in microseconds since the last sample was taken

Column	Datatype	Description
IS_AWR_SAMPLE	VARCHAR2(1)	Indicates whether this sample has been flushed or will be flushed to the Automatic Workload Repository (DBA_HIST_ACTIVE_SESS_HISTORY) (Y) or not (N)
SESSION_ID	NUMBER	Session identifier; maps to V$SESSION.SID
SESSION_SERIAL#	NUMBER	Session serial number (used to uniquely identify a session's objects); maps to V$SESSION.SERIAL#
SESSION_TYPE	VARCHAR2(10)	Session type: • FOREGROUND • BACKGROUND
FLAGS	NUMBER	Reserved for future use
USER_ID	NUMBER	Oracle user identifier; maps to V$SESSION.USER#
SQL_ID	VARCHAR2(13)	SQL identifier of the SQL statement that the session was executing at the time of sampling
IS_SQLID_CURRENT	VARCHAR2(1)	Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)
SQL_CHILD_NUMBER	NUMBER	Child number of the SQL statement that the session was executing at the time of sampling
SQL_OPCODE	NUMBER	Indicates what phase of operation the SQL statement was in; maps to V$SESSION.COMMAND **See Also:** "V$SESSION" for information on interpreting this column
SQL_OPNAME	VARCHAR2(64)	SQL command name
FORCE_MATCHING_SIGNATURE	NUMBER	Signature used when the CURSOR_SHARING parameter is set to FORCE
TOP_LEVEL_SQL_ID	VARCHAR2(13)	SQL identifier of the top level SQL statement
TOP_LEVEL_SQL_OPCODE	NUMBER	Indicates what phase of operation the top level SQL statement was in
SQL_ADAPTIVE_PLAN_RESOLVED	NUMBER	Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not
SQL_FULL_PLAN_HASH_VALUE	NUMBER	Numerical representation of the complete SQL plan for the cursor being executed by this session
SQL_PLAN_HASH_VALUE	NUMBER	Numeric representation of the SQL plan for the cursor. This information might not be available for all session samples. V$SESSION does not contain this information.
SQL_PLAN_LINE_ID	NUMBER	SQL plan line ID
SQL_PLAN_OPERATION	VARCHAR2(30)	Plan operation name
SQL_PLAN_OPTIONS	VARCHAR2(30)	Plan operation options
SQL_EXEC_ID	NUMBER	SQL execution identifier
SQL_EXEC_START	DATE	Time when the execution of the SQL started
PLSQL_ENTRY_OBJECT_ID	NUMBER	Object ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.OBJECT_ID.
PLSQL_ENTRY_SUBPROGRAM_ID	NUMBER	Subprogram ID of the top-most PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.DATA_OBJECT_ID.
PLSQL_OBJECT_ID	NUMBER	Object ID of the currently executing PL/SQL subprogram. Maps to DBA_OBJECTS.OBJECT_ID.
PLSQL_SUBPROGRAM_ID	NUMBER	Subprogram ID of the currently executing PL/SQL object; NULL if executing SQL. Maps to DBA_OBJECTS.DATA_OBJECT_ID.

Column	Datatype	Description
QC_INSTANCE_ID	NUMBER	Query coordinator instance ID. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.
QC_SESSION_ID	NUMBER	Query coordinator session ID. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.
QC_SESSION_SERIAL#	NUMBER	Query coordinator session serial number. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.
PX_FLAGS	NUMBER	Reserved for internal use
EVENT	VARCHAR2(64)	If SESSION_STATE = WAITING, then the event for which the session was waiting for at the time of sampling. If SESSION_STATE = ON CPU, then this column is NULL. **See Also:** Oracle Wait Events
EVENT_ID	NUMBER	Identifier of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the EVENT column.
EVENT#	NUMBER	Number of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the EVENT column.
SEQ#	NUMBER	Sequence number that uniquely identifies the wait (incremented for each wait)
P1TEXT	VARCHAR2(64)	Text of the first additional parameter
P1	NUMBER	First additional parameter
P2TEXT	VARCHAR2(64)	Text of the second additional parameter
P2	NUMBER	Second additional parameter
P3TEXT	VARCHAR2(64)	Text of the third additional parameter
P3	NUMBER	Third additional parameter
WAIT_CLASS	VARCHAR2(64)	Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V$SESSION.WAIT_CLASS.
WAIT_CLASS_ID	NUMBER	Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V$SESSION.WAIT_CLASS_ID.
WAIT_TIME	NUMBER	Total wait time for the event for which the session last waited if the session was on the CPU when sampled; 0 if the session was waiting at the time of sampling **Note:** Whether or not WAIT_TIME = 0 is what is useful to find the SESSION_STATE at the time of sampling, rather than the actual value of WAIT_TIME itself. Maps to V$SESSION.WAIT_TIME.
SESSION_STATE	VARCHAR2(7)	Session state: • WAITING • ON CPU

Column	Datatype	Description
TIME_WAITED	NUMBER	If SESSION_STATE = WAITING, then the time that the session actually spent waiting for that event (in microseconds). This column is set for waits that were in progress at the time the sample was taken. If a wait event lasted for more than a second and was caught waiting in more than one session sample row, then the actual time spent waiting for that wait event will be populated in the last of those session sample rows. At any given time, this information will not be available for the latest session sample.
BLOCKING_SESSION_STATUS	VARCHAR2(11)	Status of the blocking session: • VALID • NO HOLDER • GLOBAL • NOT IN WAIT • UNKNOWN
BLOCKING_SESSION	NUMBER	Session identifier of the blocking session. Populated only if the blocker is on the same instance and the session was waiting for enqueues or a "buffer busy" wait. Maps to V$SESSION.BLOCKING_SESSION.
BLOCKING_SESSION_SERIAL#	NUMBER	Serial number of the blocking session
BLOCKING_INST_ID	NUMBER	Instance number of the blocker shown in BLOCKING_SESSION
BLOCKING_HANGCHAIN_INFO	VARCHAR2(1)	Indicates whether the information about BLOCKING_SESSION comes from the hang chain (Y) or not (N)
CURRENT_OBJ#	NUMBER	Object ID of the object that the session is referencing. This information is only available if the session was waiting for application, cluster, concurrency, and user I/O wait events. Maps to V$SESSION.ROW_WAIT_OBJ#.
CURRENT_FILE#	NUMBER	File number of the file containing the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V$SESSION.ROW_WAIT_FILE#.
CURRENT_BLOCK#	NUMBER	ID of the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V$SESSION.ROW_WAIT_BLOCK#.
CURRENT_ROW#	NUMBER	Row identifier that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V$SESSION.ROW_WAIT_ROW#.
TOP_LEVEL_CALL#	NUMBER	Oracle top level call number
TOP_LEVEL_CALL_NAME	VARCHAR2(64)	Oracle top level call name
CONSUMER_GROUP_ID	NUMBER	Consumer group ID
XID	RAW(8)	Transaction ID that the session was working on at the time of sampling. V$SESSION does not contain this information.
REMOTE_INSTANCE#	NUMBER	Remote instance identifier that will serve the block that this session is waiting for. This information is only available if the session was waiting for cluster events.
TIME_MODEL	NUMBER	Time model information
IN_CONNECTION_MGMT	VARCHAR2(1)	Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)
IN_PARSE	VARCHAR2(1)	Indicates whether the session was parsing at the time of sampling (Y) or not (N)

Column	Datatype	Description
IN_HARD_PARSE	VARCHAR2(1)	Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)
IN_SQL_EXECUTION	VARCHAR2(1)	Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)
IN_PLSQL_EXECUTION	VARCHAR2(1)	Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)
IN_PLSQL_RPC	VARCHAR2(1)	Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)
IN_PLSQL_COMPILATION	VARCHAR2(1)	Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)
IN_JAVA_EXECUTION	VARCHAR2(1)	Indicates whether the session was executing Java at the time of sampling (Y) or not (N)
IN_BIND	VARCHAR2(1)	Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)
IN_CURSOR_CLOSE	VARCHAR2(1)	Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)
IN_SEQUENCE_LOAD	VARCHAR2(1)	Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)
IN_INMEMORY_QUERY	VARCHAR2(1)	Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N)
IN_INMEMORY_POPULATE	VARCHAR2(1)	Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_PREPOPULATE	VARCHAR2(1)	Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_REPOPULATE	VARCHAR2(1)	Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_TREPOPULATE	VARCHAR2(1)	Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)
IN_TABLESPACE_ENCRYPTION	VARCHAR2(1)	Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)
CAPTURE_OVERHEAD	VARCHAR2(1)	Indicates whether the session is executing capture code (Y) or not (N)
REPLAY_OVERHEAD	VARCHAR2(1)	Indicates whether the session is executing replay code (Y) or not (N)
IS_CAPTURED	VARCHAR2(1)	Indicates whether the session is being captured (Y) or not (N)
IS_REPLAYED	VARCHAR2(1)	Indicates whether the session is being replayed (Y) or not (N)
IS_REPLAY_SYNC_TOKEN_HOLDER	VARCHAR2(1)	Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay
SPID	VARCHAR2(24)	Operating system process identifier
STID	VARCHAR2(24)	Operating system thread identifier
SERVICE_HASH	NUMBER	Hash that identifies the Service; maps to V$ACTIVE_SERVICES.NAME_HASH
PROGRAM	VARCHAR2(84)	Name of the operating system program
MODULE	VARCHAR2(64)	Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure
ACTION	VARCHAR2(64)	Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure

Column	Datatype	Description
CLIENT_ID	VARCHAR2(64)	Client identifier of the session; maps to V$SESSION.CLIENT_IDENTIFIER
CLIENT_INFO	VARCHAR2(64)	Client information for the session; maps to V$SESSION.CLIENT_INFO
MACHINE	VARCHAR2(64)	Client's operating system machine name
PORT	NUMBER	Client port number
ECID	VARCHAR2(64)	Execution context identifier (sent by Application Server)
DBREPLAY_FILE_ID	NUMBER	If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.
DBREPLAY_CALL_COUNTER	NUMBER	If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL.
TM_DELTA_TIME	NUMBER	Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated
TM_DELTA_CPU_TIME	NUMBER	Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds
TM_DELTA_DB_TIME	NUMBER	Amount of time spent by this session in database calls over the last TM_DELTA_TIME microseconds
DELTA_TIME	NUMBER	Time interval (in microseconds) since the last time this session was sampled or created, over which the next five statistics are accumulated
DELTA_READ_IO_REQUESTS	NUMBER	Number of read I/O requests made by this session over the last DELTA_TIME microseconds
DELTA_WRITE_IO_REQUESTS	NUMBER	Number of write I/O requests made by this session over the last DELTA_TIME microseconds
DELTA_READ_IO_BYTES	NUMBER	Number of I/O bytes read by this session over the last DELTA_TIME microseconds
DELTA_WRITE_IO_BYTES	NUMBER	Number of I/O bytes written by this session over the last DELTA_TIME microseconds
DELTA_INTERCONNECT_IO_BYTES	NUMBER	Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds
DELTA_READ_MEM_BYTES	NUMBER	Number of read bytes through the buffer cache
PGA_ALLOCATED	NUMBER	Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken
TEMP_SPACE_ALLOCATED	NUMBER	Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken
CON_DBID	NUMBER	The database ID of the pluggable database (PDB)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
DBOP_NAME	VARCHAR2(30)	Database operation name. If the type is SQL, the DBOP_NAME will be NULL.
DBOP_EXEC_ID	NUMBER	Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.

8.9 V$ACTIVITY_MVIEW

`V$ACTIVITY_MVIEW` describes the materialized view activity snapshots that are currently being taken by the Object Activity Tracking System (OATS).

Each row in this view represents one in-progress activity snapshot and describes the materialized view activity that has occurred so far during the snapshot interval.

Column	Datatype	Description
`MVIEW_NAME`	`VARCHAR2(128)`	Name of the materialized view for which the activity snapshot is being taken
`MVIEW_OWNER`	`VARCHAR2(128)`	Owner of the materialized view for which the activity snapshot is being taken
`USER_CLASS`	`VARCHAR2(7)`	Indicates whether the activity was performed by the RDBMS (`SYS`) or by a user (`NON-SYS`)
`COMPILES`	`NUMBER`	Number of times the materialized view was compiled This number includes: • Explicit compiles performed with the SQL statement `ALTER MATERIALIZED VIEW ... COMPILE` • Automatic compiles that occurred because the structure of an underlying base table changed
`REWRITES_TEXTMATCH`	`NUMBER`	Number of query rewrites that used the text match rewrite method
`REWRITES_GENERAL`	`NUMBER`	Number of query rewrites that used general rewrite methods
`REWRITES_PARTIAL`	`NUMBER`	Number of query rewrites that occurred when the view was partially stale This number includes: • `UNION ALL` operations involving rewritten queries that had one branch with the materialized view and the other branch with its underlying base tables (partial rewrites) • Single query block rewrites of the materialized view that involved a join back to its underlying base table
`REWRITES_DELTA`	`NUMBER`	Number of query rewrites that used stale data in the materialized view plus the delta information stored in the materialized view logs
`REWRITES_PCT`	`NUMBER`	Number of partition change tracking (PCT) rewrites
`REWRITES_HINTED`	`NUMBER`	Number of query rewrites that occurred because the materialized view was eligible for query rewrite and the `SELECT` statement contained the `REWRITE` hint with the name of the materialized view specified in the hint
`NOREWRITES_HINTED`	`NUMBER`	Reserved for future use

Column	Datatype	Description
NOREWRITES_STALE	NUMBER	Number of query executions that did not use query rewrite because the materialized view was eligible for query rewrite, but stale
REFRESHES_ON_DEMAND	NUMBER	Number of ON DEMAND refreshes This type of refresh is performed on materialized views that use the ON DEMAND refresh mode, which instructs the database to refresh the materialized view only when a manual refresh is launched by one of the three DBMS_MVIEW refresh procedures.
REFRESHES_ON_COMMIT	NUMBER	Number of ON COMMIT refreshes This type of refresh is performed on materialized views that use the ON COMMIT refresh mode, which instructs the database to refresh the materialized view whenever the database commits a transaction that operates on a master table of the materialized view.
REFRESHES_ON_STATEMENT	NUMBER	Number of ON STATEMENT refreshes This type of refresh is performed on materialized views that use the ON STATEMENT refresh mode, which instructs the database to perform an automatic refresh of the materialized view every time a DML operation is performed on any of the view's base tables.
REFRESHES_SCHEDULED	NUMBER	Number of scheduled refreshes
REFRESHES_AUTOMATIC	NUMBER	Number of automatic refreshes
REFRESHES_FAST	NUMBER	Number of incremental refreshes
REFRESHES_COMPLETE	NUMBER	Number of full refreshes
REFRESHES_PCT	NUMBER	Number of partition change tracking (PCT) refreshes
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

See Also:

"DBA_ACTIVITY_MVIEW" to view recently completed materialized view activity snapshots

8.10 V$ACTIVITY_TABLE

V$ACTIVITY_TABLE describes the table activity snapshots that are currently being taken by the Object Activity Tracking System (OATS).

Each row in this view represents one in-progress activity snapshot and describes the table activity that has occurred so far during the snapshot interval.

Column	Datatype	Description
TABLE_NAME	VARCHAR2(128)	Name of the table for which the activity snapshot is being taken
TABLE_OWNER	VARCHAR2(128)	Owner of the table for which the activity snapshot is being taken
USER_CLASS	VARCHAR2	Reserved for future use
SCANS	NUMBER	Number of table scans
LOADS	NUMBER	Number of table loads
LOAD_ROWS	NUMBER	Number of rows that were loaded into the table
INSERT_ROWS	NUMBER	Number of rows that were inserted into the table
DELETE_ROWS	NUMBER	Number of rows that were deleted from the table
UPDATE_ROWS	NUMBER	Number of table rows that were updated
TRUNCATES	NUMBER	Number of table truncations
TRUNCATED_ROWS	NUMBER	Number of table rows that were deleted due to table truncations
PARTITION_TRUNCATES	NUMBER	Number of table partition or subpartition truncations
PARTITION_TRUNCATED_ROWS	NUMBER	Number of table rows that were deleted due to table partition or subpartition truncations
PARTITION_CREATES	NUMBER	Number of table partitions or subpartitions that were created
PARTITION_DROPS	NUMBER	Number of table partition or subpartition drops
PARTITION_DROPS_ROWS	NUMBER	Number of table rows that were dropped due to table partition or subpartition drops
PARTITION_MOVES	NUMBER	Number of table partition or subpartition moves
PARTITION_MOVES_ROWS	NUMBER	Number of table rows that were moved due to table partition or subpartition moves
PARTITION_SPLITS	NUMBER	Number of table partition or subpartition splits
PARTITION_SPLITS_ROWS	NUMBER	Number of table rows that were split due to table partition or subpartition splits
PARTITION_MERGES	NUMBER	Number of table partition or subpartition merges
PARTITION_MERGES_ROWS	NUMBER	Number of table rows that were merged due to table partition or subpartition merges
PARTITION_COALESCES	NUMBER	Number of table partition or subpartition coalesces
PARTITION_COALESCE_ROWS	NUMBER	Number of table rows that were redistributed due to table partition or subpartition coalesces
PARTITION_EXCHANGES	NUMBER	Number of table partition or subpartition exchanges
PARTITION_EXCHANGES_ROWS	NUMBER	Number of table rows that were exchanged due to table partition or subpartition exchanges

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

Note:

This view does not contain information related to temporary tables or external tables.

"DBA_ACTIVITY_TABLE" to view recently completed table activity snapshots

8.11 V$ADVISOR_PROGRESS

V$ADVISOR_PROGRESS displays information about the progress of advisor execution.

Column	Datatype	Description
SID	NUMBER	Session ID
SERIAL#	NUMBER	Session serial number
USERNAME	VARCHAR2(128)	Oracle user name
OPNAME	VARCHAR2(64)	Operation name
ADVISOR_NAME	VARCHAR2(64)	Advisor name
TASK_ID	NUMBER	Task ID
TARGET_DESC	VARCHAR2(32)	Description of the target of the advisor
SOFAR	NUMBER	Amount of work done so far
TOTALWORK	NUMBER	Total work to be done
UNITS	VARCHAR2(32)	Units that the work is measured in
BENEFIT_SOFAR	NUMBER	Benefit obtained so far

Column	Datatype	Description
BENEFIT_MAX	NUMBER	Estimate of maximum benefit that could be obtained
FINDINGS	NUMBER	Number of findings so far
RECOMMENDATIONS	NUMBER	Number of recommendations so far
TIME_REMAINING	NUMBER	Estimate of time remaining for the completion of the task (in seconds)
START_TIME	DATE	Start time of the task
LAST_UPDATE_TIME	DATE	Last time progress was posted
ELAPSED_SECONDS	NUMBER	Elapsed time so far
ADVISOR_METRIC1	NUMBER	Value of the advisor-specific metric
METRIC1_DESC	VARCHAR2(64)	Description of the advisor-specific metric
EXECUTION_TYPE	VARCHAR2(64)	Type of the last execution. This information is optional for single-execution tasks.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.12 V$ALERT_TYPES

V$ALERT_TYPES displays information about server alert types.

Column	Datatype	Description
REASON_ID	NUMBER	ID of the alert reason
OBJECT_TYPE	VARCHAR2(64)	Object type
TYPE	VARCHAR2(9)	Alert type: • Stateful • Stateless
GROUP_NAME	VARCHAR2(64)	Group name
SCOPE	VARCHAR2(8)	Scope: • Database • Instance
INTERNAL_METRIC_CATEGORY	VARCHAR2(64)	Internal metric category
INTERNAL_METRIC_NAME	VARCHAR2(64)	Internal metric name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.13 V$ALL_ACTIVE_SESSION_HISTORY

V$ALL_ACTIVE_SESSION_HISTORY displays sampled session activity in the database.

> **Note:**
>
> V$ALL_ACTIVE_SESSION_HISTORY allows application developers to view their own session activity. It is similar to the V$ACTIVE_SESSION_HISTORY view, with the following exception:
>
> - When queried by a user with the SYSDBA privilege, the V$ALL_ACTIVE_SESSION_HISTORY view displays the same data as the V$ACTIVE_SESSION_HISTORY view.
> - When queried by any other user, the V$ALL_ACTIVE_SESSION_HISTORY view displays only data about sessions owned by that user.
>
> See also "V$ACTIVE_SESSION_HISTORY"

Column	Datatype	Description
SAMPLE_ID	NUMBER	ID of the sample
SAMPLE_TIME	TIMESTAMP(3)	Time at which the sample was taken
SAMPLE_TIME_UTC	TIMESTAMP(3)	Time at which the sample was taken in UTC (Coordinated Universal Time) time zone
USECS_PER_ROW	NUMBER	Time in microseconds since the last sample was taken
IS_AWR_SAMPLE	VARCHAR2(1)	Indicates whether this sample has been flushed or will be flushed to the Automatic Workload Repository (DBA_HIST_ACTIVE_SESS_HISTORY) (Y) or not (N)
SESSION_ID	NUMBER	Session identifier; maps to V$SESSION.SID
SESSION_SERIAL#	NUMBER	Session serial number (used to uniquely identify a session's objects); maps to V$SESSION.SERIAL#
SESSION_TYPE	VARCHAR2(10)	Session type: • FOREGROUND • BACKGROUND
FLAGS	NUMBER	Reserved for future use
USER_ID	NUMBER	Oracle user identifier; maps to V$SESSION.USER#
SQL_ID	VARCHAR2(13)	SQL identifier of the SQL statement that the session was executing at the time of sampling
IS_SQLID_CURRENT	VARCHAR2(1)	Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)
SQL_CHILD_NUMBER	NUMBER	Child number of the SQL statement that the session was executing at the time of sampling
SQL_OPCODE	NUMBER	Indicates what phase of operation the SQL statement was in; maps to V$SESSION.COMMAND **See Also:** "V$SESSION" for information on interpreting this column
SQL_OPNAME	VARCHAR2(64)	SQL command name
FORCE_MATCHING_SIGNATURE	NUMBER	Signature used when the CURSOR_SHARING parameter is set to FORCE

Column	Datatype	Description
TOP_LEVEL_SQL_ID	VARCHAR2(13)	SQL identifier of the top level SQL statement
TOP_LEVEL_SQL_OPCODE	NUMBER	Indicates what phase of operation the top level SQL statement was in
SQL_ADAPTIVE_PLAN_RESOLVED	NUMBER	Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not
SQL_FULL_PLAN_HASH_VALUE	NUMBER	Numerical representation of the complete SQL plan for the cursor being executed by this session
SQL_PLAN_HASH_VALUE	NUMBER	Numeric representation of the SQL plan for the cursor. This information might not be available for all session samples. V$SESSION does not contain this information.
SQL_PLAN_LINE_ID	NUMBER	SQL plan line ID
SQL_PLAN_OPERATION	VARCHAR2(30)	Plan operation name
SQL_PLAN_OPTIONS	VARCHAR2(30)	Plan operation options
SQL_EXEC_ID	NUMBER	SQL execution identifier
SQL_EXEC_START	DATE	Time when the execution of the SQL started
PLSQL_ENTRY_OBJECT_ID	NUMBER	Object ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.OBJECT_ID.
PLSQL_ENTRY_SUBPROGRAM_ID	NUMBER	Subprogram ID of the top-most PL/SQL subprogram on the stack. Maps to DBA_OBJECTS.DATA_OBJECT_ID.
PLSQL_OBJECT_ID	NUMBER	Object ID of the currently executing PL/SQL subprogram. Maps to DBA_OBJECTS.OBJECT_ID.
PLSQL_SUBPROGRAM_ID	NUMBER	Subprogram ID of the currently executing PL/SQL object; NULL if executing SQL. Maps to DBA_OBJECTS.DATA_OBJECT_ID.
PLSQL_CURRENT_ENTRY_OBJECT_ID	NUMBER	Object ID of the currently executing PL/SQL subprogram; NULL if executing SQL.
QC_INSTANCE_ID	NUMBER	Query coordinator instance ID. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.
QC_SESSION_ID	NUMBER	Query coordinator session ID. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.
QC_SESSION_SERIAL#	NUMBER	Query coordinator session serial number. This information is only available if the sampled session is a parallel query worker. For all other sessions, the value is 0.
PX_FLAGS	NUMBER	Reserved for internal use
EVENT	VARCHAR2(64)	If SESSION_STATE = WAITING, then the event for which the session was waiting for at the time of sampling. If SESSION_STATE = ON CPU, then this column is NULL. **See Also:** Oracle Wait Events
EVENT_ID	NUMBER	Identifier of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the EVENT column.
EVENT#	NUMBER	Number of the resource or event for which the session is waiting or for which the session last waited. Interpretation is similar to that of the EVENT column.
SEQ#	NUMBER	Sequence number that uniquely identifies the wait (incremented for each wait)

Column	Datatype	Description
P1TEXT	VARCHAR2(64)	Text of the first additional parameter
P1	NUMBER	First additional parameter
P2TEXT	VARCHAR2(64)	Text of the second additional parameter
P2	NUMBER	Second additional parameter
P3TEXT	VARCHAR2(64)	Text of the third additional parameter
P3	NUMBER	Third additional parameter
WAIT_CLASS	VARCHAR2(64)	Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V$SESSION.WAIT_CLASS.
WAIT_CLASS_ID	NUMBER	Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V$SESSION.WAIT_CLASS_ID.
WAIT_TIME	NUMBER	Total wait time for the event for which the session last waited if the session was on the CPU when sampled; 0 if the session was waiting at the time of sampling **Note:** Whether or not WAIT_TIME = 0 is what is useful to find the SESSION_STATE at the time of sampling, rather than the actual value of WAIT_TIME itself. Maps to V$SESSION.WAIT_TIME.
SESSION_STATE	VARCHAR2(7)	Session state: • WAITING • ON CPU
TIME_WAITED	NUMBER	If SESSION_STATE = WAITING, then the time that the session actually spent waiting for that event (in microseconds). This column is set for waits that were in progress at the time the sample was taken. If a wait event lasted for more than a second and was caught waiting in more than one session sample row, then the actual time spent waiting for that wait event will be populated in the last of those session sample rows. At any given time, this information will not be available for the latest session sample.
BLOCKING_SESSION_STATUS	VARCHAR2(11)	Status of the blocking session: • VALID • NO HOLDER • GLOBAL • NOT IN WAIT • UNKNOWN
BLOCKING_SESSION	NUMBER	Session identifier of the blocking session. Populated only if the blocker is on the same instance and the session was waiting for enqueues or a "buffer busy" wait. Maps to V$SESSION.BLOCKING_SESSION.
BLOCKING_SESSION_SERIAL#	NUMBER	Serial number of the blocking session
BLOCKING_INST_ID	NUMBER	Instance number of the blocker shown in BLOCKING_SESSION
BLOCKING_HANGCHAIN_INFO	VARCHAR2(1)	Indicates whether the information about BLOCKING_SESSION comes from the hang chain (Y) or not (N)
CURRENT_OBJ#	NUMBER	Object ID of the object that the session is referencing. This information is only available if the session was waiting for application, cluster, concurrency, and user I/O wait events. Maps to V$SESSION.ROW_WAIT_OBJ#.

Column	Datatype	Description
CURRENT_FILE#	NUMBER	File number of the file containing the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V$SESSION.ROW_WAIT_FILE#.
CURRENT_BLOCK#	NUMBER	ID of the block that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V$SESSION.ROW_WAIT_BLOCK#.
CURRENT_ROW#	NUMBER	Row identifier that the session is referencing. This information is only available if the session was waiting for cluster, concurrency, and user I/O wait events. Maps to V$SESSION.ROW_WAIT_ROW#.
TOP_LEVEL_CALL#	NUMBER	Oracle top level call number
TOP_LEVEL_CALL_NAME	VARCHAR2(64)	Oracle top level call name
CONSUMER_GROUP_ID	NUMBER	Consumer group ID
XID	RAW(8)	Transaction ID that the session was working on at the time of sampling. V$SESSION does not contain this information.
REMOTE_INSTANCE#	NUMBER	Remote instance identifier that will serve the block that this session is waiting for. This information is only available if the session was waiting for cluster events.
TIME_MODEL	NUMBER	Time model information
IN_CONNECTION_MGMT	VARCHAR2(1)	Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)
IN_PARSE	VARCHAR2(1)	Indicates whether the session was parsing at the time of sampling (Y) or not (N)
IN_HARD_PARSE	VARCHAR2(1)	Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)
IN_SQL_EXECUTION	VARCHAR2(1)	Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)
IN_PLSQL_EXECUTION	VARCHAR2(1)	Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)
IN_PLSQL_RPC	VARCHAR2(1)	Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)
IN_PLSQL_COMPILATION	VARCHAR2(1)	Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)
IN_JAVA_EXECUTION	VARCHAR2(1)	Indicates whether the session was executing Java at the time of sampling (Y) or not (N)
IN_BIND	VARCHAR2(1)	Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)
IN_CURSOR_CLOSE	VARCHAR2(1)	Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)
IN_SEQUENCE_LOAD	VARCHAR2(1)	Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)
IN_INMEMORY_QUERY	VARCHAR2(1)	Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N)
IN_INMEMORY_POPULATE	VARCHAR2(1)	Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_PREPOPULATE	VARCHAR2(1)	Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)

Column	Datatype	Description
IN_INMEMORY_REPOPULATE	VARCHAR2(1)	Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)
IN_INMEMORY_TREPOPULATE	VARCHAR2(1)	Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)
IN_TABLESPACE_ENCRYPTION	VARCHAR2(1)	Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)
CAPTURE_OVERHEAD	VARCHAR2(1)	Indicates whether the session is executing capture code (Y) or not (N)
REPLAY_OVERHEAD	VARCHAR2(1)	Indicates whether the session is executing replay code (Y) or not (N)
IS_CAPTURED	VARCHAR2(1)	Indicates whether the session is being captured (Y) or not (N)
IS_REPLAYED	VARCHAR2(1)	Indicates whether the session is being replayed (Y) or not (N)
IS_REPLAY_SYNC_TOKEN_HOLDER	VARCHAR2(1)	Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay
SERVICE_HASH	NUMBER	Hash that identifies the Service; maps to V$ACTIVE_SERVICES.NAME_HASH
PROGRAM	VARCHAR2(84)	Name of the operating system program
MODULE	VARCHAR2(64)	Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure
ACTION	VARCHAR2(64)	Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure
CLIENT_ID	VARCHAR2(64)	Client identifier of the session; maps to V$SESSION.CLIENT_IDENTIFIER
MACHINE	VARCHAR2(64)	Client's operating system machine name
PORT	NUMBER	Client port number
ECID	VARCHAR2(64)	Execution context identifier (sent by Application Server)
DBREPLAY_FILE_ID	NUMBER	If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.
DBREPLAY_CALL_COUNTER	NUMBER	If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL.
TM_DELTA_TIME	NUMBER	Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated
TM_DELTA_CPU_TIME	NUMBER	Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds
TM_DELTA_DB_TIME	NUMBER	Amount of time spent by this session in database calls over the last TM_DELTA_TIME microseconds
DELTA_TIME	NUMBER	Time interval (in microseconds) since the last time this session was sampled or created, over which the next five statistics are accumulated
DELTA_READ_IO_REQUESTS	NUMBER	Number of read I/O requests made by this session over the last DELTA_TIME microseconds
DELTA_WRITE_IO_REQUESTS	NUMBER	Number of write I/O requests made by this session over the last DELTA_TIME microseconds
DELTA_READ_IO_BYTES	NUMBER	Number of I/O bytes read by this session over the last DELTA_TIME microseconds
DELTA_WRITE_IO_BYTES	NUMBER	Number of I/O bytes written by this session over the last DELTA_TIME microseconds

Column	Datatype	Description
DELTA_INTERCONNECT_IO_BYTES	NUMBER	Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds
DELTA_READ_MEM_BYTES	NUMBER	Number of read bytes through the buffer cache
PGA_ALLOCATED	NUMBER	Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken
TEMP_SPACE_ALLOCATED	NUMBER	Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken
CON_DBID	NUMBER	The database ID of the pluggable database (PDB)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
DBOP_NAME	VARCHAR2(30)	Database operation name. If the type is SQL, the DBOP_NAME will be NULL.
DBOP_EXEC_ID	NUMBER	Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.

8.14 V$ALL_SQL_BIND_CAPTURE

V$ALL_SQL_BIND_CAPTURE displays information on bind variables used by SQL cursors.

> **Note:**
>
> V$ALL_SQL_BIND_CAPTURE allows application developers to view information about their own bind variables used by SQL cursors. It is similar to the V$SQL_BIND_CAPTURE view, with the following exception:
>
> - When queried by a user with the SYSDBA privilege, the V$ALL_SQL_BIND_CAPTURE view displays the same data as the V$SQL_BIND_CAPTURE view.
> - When queried by any other user, the V$ALL_SQL_BIND_CAPTURE view displays only data about bind variables used by the SQL cursors owned by that user.
>
> See also "V$SQL_BIND_CAPTURE"

Column	Datatype	Description
ADDRESS	RAW(4 | 8)	Address of the parent cursor
HASH_VALUE	NUMBER	Hash value of the parent cursor in the library cache. The hash value is a fixed index for the view and should always be used to speed up access to the view.
SQL_ID	VARCHAR2(13)	SQL identifier of the parent cursor in the library cache
CHILD_ADDRESS	RAW(4 | 8)	Address of the child cursor
CHILD_NUMBER	NUMBER	Child cursor number

Column	Datatype	Description
NAME	VARCHAR2(128)	Name of the bind variable
POSITION	NUMBER	Position of the bind variable in the SQL statement
DUP_POSITION	NUMBER	If the binding is performed by name and the bind variable is duplicated, then this column gives the position of the primary bind variable.
DATATYPE	NUMBER	Internal identifier for the bind data type. Beginning in Oracle Database 12*c*, a number representing a PL/SQL data type can appear in this column.
DATATYPE_STRING	VARCHAR2(15)	Textual representation of the bind data type. Beginning in Oracle Database 12*c*, a text representation of a PL/SQL-only data type can appear in this column. If the actual data type is a PL/SQL sub type, the name of the data type, not the sub type will be displayed.
CHARACTER_SID	NUMBER	National character set identifier
PRECISION	NUMBER	Precision (for numeric binds)
SCALE	NUMBER	Scale (for numeric binds)
MAX_LENGTH	NUMBER	Maximum bind length
WAS_CAPTURED	VARCHAR2(3)	Indicates whether the bind value was captured (YES) or not (NO)
LAST_CAPTURED	DATE	Date when the bind value was captured. Bind values are captured when SQL statements are executed. To limit the overhead, binds are captured at most every 15 minutes for a given cursor.
VALUE_STRING	VARCHAR2(4000)	Value of the bind represented as a string
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

This view is available starting with Oracle Database 23ai.

8.15 V$ALL_SQL_MONITOR

V$ALL_SQL_MONITOR displays SQL statements whose execution have been (or are being) monitored by Oracle.

> **Note:**
>
> V$ALL_SQL_MONITOR allows application developers to view information about their own SQL statements. It is similar to the V$SQL_MONITOR view, with the following exception:
>
> - When queried by a user with the SYSDBA privilege, the V$ALL_SQL_MONITOR view displays the same data as the V$SQL_MONITOR view.
> - When queried by any other user, the V$ALL_SQL_MONITOR view displays data only about SQL statements that were executed in sessions owned by that user.
>
> See also "V$SQL_MONITOR"

Column	Datatype	Description
KEY	NUMBER	Artificial join key to efficiently join V$ALL_SQL_MONITOR with its corresponding plan level monitoring statistics stored in V$ALL_SQL_PLAN_MONITOR
REPORT_ID	NUMBER	Unique ID of the XML report stored in Automatic Workload Repository (AWR) for this monitored entity
STATUS	VARCHAR2(19)	SQL execution status: • QUEUED - SQL statement is queued • EXECUTING - SQL statement is still executing • DONE (ERROR) - Execution terminated with an error • DONE (FIRST N ROWS) - Execution terminated by the application before all rows were fetched • DONE (ALL ROWS) - Execution terminated and all rows were fetched • DONE - Execution terminated (parallel execution)
USER#	NUMBER	User ID of the database user who issued the SQL being monitored
USERNAME	VARCHAR2(128)	User name of the database user who issued the SQL being monitored
MODULE	VARCHAR2(64)	Name of the executing module when sampled, as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure
ACTION	VARCHAR2(64)	Name of the executing action when sampled, as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure
SERVICE_NAME	VARCHAR2(64)	Service name of the user session
CLIENT_IDENTIFIER	VARCHAR2(64)	Client identifier from the user session
CLIENT_INFO	VARCHAR2(64)	Client information for the user session
PROGRAM	VARCHAR2(84)	Name of the operating system program that issued the monitored SQL
PLSQL_ENTRY_OBJECT_ID	NUMBER	Object ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack
PLSQL_ENTRY_SUBPROGRAM_ID	NUMBER	Subprogram ID of the top-most PL/SQL subprogram on the stack; NULL if there is no PL/SQL subprogram on the stack
PLSQL_OBJECT_ID	NUMBER	Object ID of the currently executing PL/SQL subprogram; NULL if executing SQL

Column	Datatype	Description
PLSQL_OWNER_ID	NUMBER	ID of the owner of the currently executing PL/SQL subprogram; NULL if executing SQL
PLSQL_SUBPROGRAM_ID	NUMBER	Subprogram ID of the currently executing PL/SQL object; NULL if executing SQL
FIRST_REFRESH_TIME	DATE	Time when monitoring of the SQL statement started, generally a few seconds after execution start time
LAST_REFRESH_TIME	DATE	Time when statistics in V$ALL_SQL_MONITOR were last updated for the SQL statement. Statistics are generally refreshed every second when the statement executes.
REFRESH_COUNT	NUMBER	Number of times V$ALL_SQL_MONITOR statistics have been refreshed (generally once every second when the SQL statement executes)
DBOP_EXEC_ID	NUMBER	Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.
DBOP_NAME	VARCHAR2(30)	Database operation name. If the type is SQL, the DBOP_NAME will be NULL.
SID	NUMBER	Session identifier executing (or having executed) the SQL statement being monitored
PROCESS_NAME	VARCHAR2(5)	Process name identifier executing (or having executed)the statement; ora if the process is foreground, else the background process name (for example, p001 for PX server p001)
SQL_ID	VARCHAR2(13)	SQL identifier of the statement being monitored
SQL_TEXT	VARCHAR2(2000)	Up to the first 2000 characters of the text of the SQL being monitored
IS_FULL_SQLTEXT	VARCHAR2(1)	Indicates whether the SQL_TEXT column has the entire SQL text (Y) or not (N)
SQL_EXEC_START	DATE	Time when the execution started
SQL_EXEC_ID	NUMBER	Execution identifier. Together, the three columns SQL_ID, SQL_EXEC_START, and SQL_EXEC_ID represent the execution key. The execution key is used to uniquely identify one execution of the SQL statement.
SQL_PLAN_HASH_VALUE	NUMBER	SQL plan hash value
SQL_FULL_PLAN_HASH_VALUE	NUMBER	Numeric representation of the complete SQL plan for this cursor. Comparing one SQL_FULL_PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line by line). Note that the SQL_FULL_PLAN_HASH_VALUE cannot be compared across databases releases. It is not backward compatible.
EXACT_MATCHING_SIGNATURE	NUMBER	Signature calculated on the normalized SQL text. The normalization includes the removal of white space and the uppercasing of all non-literal strings.
FORCE_MATCHING_SIGNATURE	NUMBER	Same as EXACT_MATCHING_SIGNATURE but literals in the SQL text are replaced by binds
SQL_CHILD_ADDRESS	RAW(8)	Address of the child cursor (can be used with SQL_ID to join with V$SQL)
SESSION_SERIAL#	NUMBER	Session serial number executing the statement being monitored
PX_IS_CROSS_INSTANCE	VARCHAR2(1)	Indicates whether the SQL statement ran parallel across multiple instances (Y) or not (N)
PX_MAXDOP	NUMBER	Maximum degree of parallelism for any plan operation executed on behalf of the monitored SQL
PX_MAXDOP_INSTANCES	NUMBER	Number of database instances touched at the maximum degree of parallelism

Column	Datatype	Description
PX_SERVERS_REQUESTED	NUMBER	Total number of parallel execution servers requested to execute the monitored SQL
PX_SERVERS_ALLOCATED	NUMBER	Actual number of parallel execution servers allocated to execute the query
PX_SERVER#	NUMBER	Logical parallel execution server process number executing (or having executed) the statement being monitored; NULL if this monitoring entry is not associated with an execution server. This is a logical number within the parallel server set (see SERVER# in V$PX_SESSION).
PX_SERVER_GROUP	NUMBER	Logical parallel execution server group number to which PX_SERVER# belongs (see SERVER_GROUP in V$PX_SESSION); NULL if this monitoring entry is not associated with a parallel execution server. This value is generally 1 unless the SQL statement has one or more parallel sub-queries.
PX_SERVER_SET	NUMBER	Number (1 or 2) of the logical set of parallel execution servers to which PX_SERVER# belongs (see SERVER_SET in V$PX_SESSION); NULL if this monitoring entry is not associated with a parallel execution server
PX_QCINST_ID	NUMBER	Instance identifier where the parallel execution coordinator runs; NULL if PX_SERVER# is NULL
PX_QCSID	NUMBER	Session identifier for the parallel execution coordinator; NULL if PX_SERVER# is NULL
ERROR_NUMBER	VARCHAR2(40)	Error number encountered in case a SQL fails to execute successfully (for example, 932 in case of ORA-00932)
ERROR_FACILITY	VARCHAR2(4)	Error facility in case a SQL fails to execute successfully (for example, ORA in case of ORA-00932)
ERROR_MESSAGE	VARCHAR2(256)	Detailed error message displayed corresponding to the error number and error facility when a SQL fails to execute successfully
BINDS_XML	CLOB	Information about bind variables used with the SQL, such as name, position, value, data type, and so on (stored in XML format)
OTHER_XML	CLOB	Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan • Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans
ELAPSED_TIME	NUMBER	Elapsed time (in microseconds); updated as the statement executes
QUEUING_TIME	NUMBER	Duration of time (in microseconds) spent by SQL in the statement queue
CPU_TIME	NUMBER	CPU time (in microseconds); updated as the statement executes
FETCHES	NUMBER	Number of fetches associated with the SQL statement; updated as the statement executes
BUFFER_GETS	NUMBER	Number of buffer get operations; updated as the statement executes

Column	Datatype	Description
DISK_READS	NUMBER	Number of disk reads; updated as the statement executes
DIRECT_WRITES	NUMBER	Number of direct writes; updated as the statement executes
IO_INTERCONNECT_BYTES	NUMBER	Number of I/O bytes exchanged between Oracle Database and the storage system
PHYSICAL_READ_REQUESTS	NUMBER	Number of physical read I/O requests issued by the monitored SQL
PHYSICAL_READ_BYTES	NUMBER	Number of bytes read from disks by the monitored SQL
PHYSICAL_WRITE_REQUESTS	NUMBER	Number of physical write I/O requests issued by the monitored SQL
PHYSICAL_WRITE_BYTES	NUMBER	Number of bytes written to disks by the monitored SQL
APPLICATION_WAIT_TIME	NUMBER	Application wait time (in microseconds); updated as the statement executes
CONCURRENCY_WAIT_TIME	NUMBER	Concurrency wait time (in microseconds); updated as the statement executes
CLUSTER_WAIT_TIME	NUMBER	Cluster wait time (in microseconds); updated as the statement executes
USER_IO_WAIT_TIME	NUMBER	User I/O Wait Time (in microseconds); updated as the statement executes
PLSQL_EXEC_TIME	NUMBER	PL/SQL execution time (in microseconds); updated as the statement executes
JAVA_EXEC_TIME	NUMBER	Java execution time (in microseconds); updated as the statement executes
RM_LAST_ACTION	VARCHAR2(48)	The most recent action that was taken on this SQL operation by Resource Manager. Its value is one of the following: • CANCEL_SQL • KILL_SESSION • LOG_ONLY • SWITCH TO <CG NAME> For the last value, <CG NAME> is the name of the consumer group that the SQL operation was switched to. If the Resource Plan has since been changed then <CG NAME> is the ID of the consumer group.
RM_LAST_ACTION_REASON	VARCHAR2(128)	The reason for the most recent action that was taken on this SQL operation by Resource Manager. Its value is one of the following: • SWITCH_CPU_TIME • SWITCH_IO_REQS • SWITCH_IO_MBS • SWITCH_ELAPSED_TIME • SWITCH_IO_LOGICAL
RM_LAST_ACTION_TIME	DATE	The time of the most recent action that was taken on this SQL operation by Resource Manager
RM_CONSUMER_GROUP	VARCHAR2(128)	The current consumer group for this SQL operation
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
CON_NAME	VARCHAR2(128)	Container name of the object. The value of this column is NULL in non-CDBs.

Column	Datatype	Description
ECID	VARCHAR2(64)	Execution context identifier (sent by Application Server)
IS_ADAPTIVE_PLAN	VARCHAR2(1)	Indicates whether the statistics are from an adaptive plan (Y) or not (N).
IS_FINAL_PLAN	VARCHAR2(1)	Indicates whether the statistics are from the final plan (Y) or not (N).
IN_DBOP_NAME	VARCHAR2(30)	If the SQL that is monitored was executed by a session that was also monitored by a database operation (DBOP), then this column specifies the name of that DBOP
IN_DBOP_EXEC_ID	NUMBER	If the SQL that is monitored was executed by a session that was also monitored by a database operation (DBOP), then this column specifies the execution ID of that DBO
IO_CELL_UNCOMPRESSED_BYTES	NUMBER	Number of uncompressed bytes (that is, size after decompression) that are offloaded to the Exadata cells **See Also:** Oracle Exadata Storage Server Software documentation for more information
IO_CELL_OFFLOAD_ELIGIBLE_BYTES	NUMBER	Number of I/O bytes which can be filtered by the Exadata storage system **See Also:** Oracle Exadata Storage Server Software documentation for more information
IO_CELL_OFFLOAD_RETURNED_BYTES	NUMBER	Number of filtered bytes returned by Exadata cells (that is, the number of bytes returned after processing has been offloaded on the Exadata cells) **See Also:** Oracle Exadata Storage Server Software documentation for more information
CURRENT_USER#	NUMBER	Unique number identifying the current user
CURRENT_USERNAME	VARCHAR2(128)	Username for the current user
PDB_REPORT_ID	NUMBER	Unique ID of the XML report of a PDB monitored entity that is stored in the CDB's Automatic Workload Repository (AWR) tables
PDB_ID	NUMBER	Container ID of the PDB
PARSING_SCHEMA#	NUMBER	Identifier of the parsing schema
PARSING_SCHEMA_NAME	VARCHAR2(128)	Name of the parsing schema

8.16 V$ALL_SQL_PLAN_MONITOR

V$ALL_SQL_PLAN_MONITOR displays plan level monitoring statistics for each SQL statement found in V$ALL_SQL_MONITOR.

> **Note:**
>
> V$ALL_SQL_PLAN_MONITOR allows application developers to view statistics about their own SQL statements. It is similar to the V$SQL_PLAN_MONITOR view, with the following exception:
>
> - When queried by a user with the SYSDBA privilege, the V$ALL_SQL_PLAN_MONITOR view displays the same data as the V$SQL_PLAN_MONITOR view.
> - When queried by any other user, the V$ALL_SQL_PLAN_MONITOR view displays data only about SQL statements that were executed in sessions owned by that user.
>
> See also "V$SQL_PLAN_MONITOR"

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
KEY	NUMBER	Foreign key to efficiently join V$ALL_SQL_PLAN_MONITOR with V$ALL_SQL_MONITOR (see V$ALL_SQL_MONITOR)
STATUS	VARCHAR2(19)	SQL execution status: • EXECUTING - SQL statement is still executing • DONE (ERROR) - Execution terminated with an error • DONE (FIRST N ROWS) - Execution terminated by the application before all rows were fetched • DONE (ALL ROWS) - Execution terminated and all rows were fetched • DONE - Execution terminated (parallel execution)
FIRST_REFRESH_TIME	DATE	Time when monitoring of the SQL statement started
LAST_REFRESH_TIME	DATE	Time when statistics were last updated for the SQL statement
FIRST_CHANGE_TIME	DATE	First time a row was produced by this operation
LAST_CHANGE_TIME	DATE	Last time a row was produced by this operation
REFRESH_COUNT	NUMBER	Number of times statistics have been refreshed
SID	NUMBER	Session identifier executing (or having executed) the SQL statement being monitored
PROCESS_NAME	VARCHAR2(5)	Process name identifier
SQL_ID	VARCHAR2(13)	SQL identifier
SQL_EXEC_START	DATE	Time when the execution started

Column	Datatype	Description
SQL_EXEC_ID	NUMBER	Execution identifier
SQL_PLAN_HASH_VALUE	NUMBER	SQL plan hash value
SQL_CHILD_ADDRESS	RAW(8)	Address of the child cursor
PLAN_PARENT_ID	NUMBER	ID of the next execution step that operates on the output of the current step
PLAN_LINE_ID	NUMBER	Plan line number for the entry
PLAN_OPERATION	VARCHAR2(30)	Plan operation name (from V$SQL_PLAN)
PLAN_OPTIONS	VARCHAR2(30)	Plan option name (from V$SQL_PLAN)
PLAN_OBJECT_OWNER	VARCHAR2(128)	Name of the user who owns the schema containing the table or index
PLAN_OBJECT_NAME	VARCHAR2(128)	Name of the table or index
PLAN_OBJECT_TYPE	VARCHAR2(20)	Type of the object
PLAN_DEPTH	NUMBER	Depth (or level) of the operation in the tree. It is not necessary to issue a CONNECT BY statement to get the level information, which is generally used to indent the rows from the PLAN_TABLE table. The root operation (statement) is level 0.
PLAN_POSITION	NUMBER	Order of processing for all operations that have the same PARENT_ID
PLAN_COST	NUMBER	Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
PLAN_CARDINALITY	NUMBER	Estimate, by the cost-based optimizer, of the number of rows produced by the operation
PLAN_BYTES	NUMBER	Estimate, by the cost-based optimizer, of the number of bytes produced by the operation
PLAN_TIME	NUMBER	Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
PLAN_PARTITION_START	VARCHAR2(64)	Start partition of a range of accessed partitions
PLAN_PARTITION_STOP	VARCHAR2(64)	Stop partition of a range of accessed partitions
PLAN_CPU_COST	NUMBER	CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
PLAN_IO_COST	NUMBER	I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
PLAN_TEMP_SPACE	NUMBER	Temporary space usage of the operation (sort or hash-join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
STARTS	NUMBER	Number of times this operation was executed. For example, an operation is executed multiple times when it is on the right side of a nested-loop join (once for each row of the left input of that nested-loop join).
OUTPUT_ROWS	NUMBER	Number of rows produced by this operation since the execution started. This number is cumulated for all executions of this operation. Divide by the value of the STARTS column to compute the average number of rows per execution of the operation. Note that the value in the STARTS column is equal to or higher than the value in the OUTPUT_ROWS column. The value will usually be equal, but depending on internal optimizations a higher value may be seen.

Column	Datatype	Description
IO_INTERCONNECT_BYTES	NUMBER	Number of I/O bytes exchanged between Oracle Database and the storage system. Maintained only after Oracle starts to monitor the execution.
PHYSICAL_READ_REQUESTS	NUMBER	Number of physical read I/O requests issued by the monitored SQL. Maintained only after Oracle starts to monitor the execution.
PHYSICAL_READ_BYTES	NUMBER	Number of bytes read from disks by the monitored SQL. Maintained only after Oracle starts to monitor the execution.
PHYSICAL_WRITE_REQUESTS	NUMBER	Number of physical write I/O requests issued by the monitored SQL. Maintained only after Oracle starts to monitor the execution.
PHYSICAL_WRITE_BYTES	NUMBER	Number of bytes written to disks by the monitored SQL. Maintained only after Oracle starts to monitor the execution.
WORKAREA_MEM	NUMBER	Amount of memory (in bytes) used by the operation when the query is executing; NULL if the execution is done. This applies only to operations using a work area, such as sort, hash-join, group-by, and so on.
WORKAREA_MAX_MEM	NUMBER	Maximum value (in bytes) for WORKAREA_MEM; NULL if the operation is not using a work area. When the execution is finished, this value will hold the maximum amount of memory consumed by this operation during the execution of the statement.
WORKAREA_TEMPSEG	NUMBER	Amount of temporary space (in bytes) used by the operation when the query is executing; NULL if the operation has not spilled to disk or if the execution is finished
WORKAREA_MAX_TEMPSEG	NUMBER	Maximum value (in bytes) for WORKAREA_TEMPSEG; NULL if this operation never spilled to disk. When the execution is done, this value will hold the maximum amount of temporary space consumed by this operation during the entire execution.
OTHERSTAT_GROUP_ID	NUMBER	Plan line statistic group identifier (see GROUP_ID column in V$SQL_MONITOR_STATNAME)
OTHERSTAT_1_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 1 of that plan line
OTHERSTAT_1_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_1_VALUE	NUMBER	Value of statistic number 1 of that plan line
OTHERSTAT_2_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 2 of that plan line
OTHERSTAT_2_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_2_VALUE	NUMBER	Value of statistic number 2 of that plan line
OTHERSTAT_3_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 3 of that plan line
OTHERSTAT_3_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_3_VALUE	NUMBER	Value of statistic number 3 of that plan line
OTHERSTAT_4_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 4 of that plan line
OTHERSTAT_4_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_4_VALUE	NUMBER	Value of statistic number 4 of that plan line
OTHERSTAT_5_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 5 of that plan line
OTHERSTAT_5_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_5_VALUE	NUMBER	Value of statistic number 5 of that plan line

Column	Datatype	Description
OTHERSTAT_6_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 6 of that plan line
OTHERSTAT_6_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_6_VALUE	NUMBER	Value of statistic number 6 of that plan line
OTHERSTAT_7_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 7 of that plan line
OTHERSTAT_7_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_7_VALUE	NUMBER	Value of statistic number 7 of that plan line
OTHERSTAT_8_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 8 of that plan line
OTHERSTAT_8_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_8_VALUE	NUMBER	Value of statistic number 8 of that plan line
OTHERSTAT_9_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 9 of that plan line
OTHERSTAT_9_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_9_VALUE	NUMBER	Value of statistic number 9 of that plan line
OTHERSTAT_10_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 10 of that plan line
OTHERSTAT_10_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_10_VALUE	NUMBER	Value of statistic number 10 of that plan line
OTHERSTAT_11_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 11 of that plan line
OTHERSTAT_11_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_11_VALUE	NUMBER	Value of statistic number 11 of that plan line
OTHERSTAT_12_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 12 of that plan line
OTHERSTAT_12_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_12_VALUE	NUMBER	Value of statistic number 12 of that plan line
OTHERSTAT_13_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 13 of that plan line
OTHERSTAT_13_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_13_VALUE	NUMBER	Value of statistic number 13 of that plan line
OTHERSTAT_14_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 14 of that plan line
OTHERSTAT_14_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_14_VALUE	NUMBER	Value of statistic number 14 of that plan line
OTHERSTAT_15_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 15 of that plan line
OTHERSTAT_15_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_15_VALUE	NUMBER	Value of statistic number 15 of that plan line
OTHERSTAT_16_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 16 of that plan line
OTHERSTAT_16_TYPE	NUMBER	Reserved for internal use

Column	Datatype	Description
OTHERSTAT_16_VALUE	NUMBER	Value of statistic number 16 of that plan line
OTHERSTAT_17_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 17 of that plan line
OTHERSTAT_17_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_17_VALUE	NUMBER	Value of statistic number 17 of that plan line
OTHERSTAT_18_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 18 of that plan line
OTHERSTAT_18_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_18_VALUE	NUMBER	Value of statistic number 18 of that plan line
OTHERSTAT_19_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 19 of that plan line
OTHERSTAT_19_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_19_VALUE	NUMBER	Value of statistic number 19 of that plan line
OTHERSTAT_20_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 20 of that plan line
OTHERSTAT_20_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_20_VALUE	NUMBER	Value of statistic number 20 of that plan line
OTHERSTAT_21_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 21 of that plan line
OTHERSTAT_21_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_21_VALUE	NUMBER	Value of statistic number 21 of that plan line
OTHERSTAT_22_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 22 of that plan line
OTHERSTAT_22_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_22_VALUE	NUMBER	Value of statistic number 22 of that plan line
OTHERSTAT_23_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 23 of that plan line
OTHERSTAT_23_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_23_VALUE	NUMBER	Value of statistic number 23 of that plan line
OTHERSTAT_24_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 24 of that plan line
OTHERSTAT_24_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_24_VALUE	NUMBER	Value of statistic number 24 of that plan line
OTHERSTAT_25_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 25 of that plan line
OTHERSTAT_25_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_25_VALUE	NUMBER	Value of statistic number 25 of that plan line
OTHERSTAT_26_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 26 of that plan line
OTHERSTAT_26_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_26_VALUE	NUMBER	Value of statistic number 26 of that plan line
OTHERSTAT_27_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 27 of that plan line

Column	Datatype	Description
OTHERSTAT_27_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_27_VALUE	NUMBER	Value of statistic number 27 of that plan line
OTHERSTAT_28_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 28 of that plan line
OTHERSTAT_28_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_28_VALUE	NUMBER	Value of statistic number 28 of that plan line
OTHERSTAT_29_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 29 of that plan line
OTHERSTAT_29_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_29_VALUE	NUMBER	Value of statistic number 29 of that plan line
OTHERSTAT_30_ID	NUMBER	Statistic identifier (see ID column in V$SQL_MONITOR_STATNAME) for statistic number 30 of that plan line
OTHERSTAT_30_TYPE	NUMBER	Reserved for internal use
OTHERSTAT_30_VALUE	NUMBER	Value of statistic number 30 of that plan line
OTHER_XML	CLOB	Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan • Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans
PLAN_OPERATION_INACTIVE	NUMBER	Indicates whether this plan operation was part of the final resolved plan
PDB_ID	NUMBER	Container ID of the PDB

8.17 V$AQ

V$AQ displays statistics for the queues in the database.

Column	Datatype	Description
QID	NUMBER	Unique queue identifier
WAITING	NUMBER	Number of messages in the queue in the state 'WAITING'
READY	NUMBER	Number of messages in the queue in the state 'READY'
EXPIRED	NUMBER	Number of messages in the queue the state 'EXPIRED'
AVERAGE_MSG_AGE	NUMBER	Average age of the messages in the queue'
TOTAL_WAIT	NUMBER	Total wait time of all 'READY' messages in the queue
AVERAGE_WAIT	NUMBER	Average wait time of 'READY' messages in the queue

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.18 V$AQ_BACKGROUND_COORDINATOR

V$AQ_BACKGROUND_COORDINATOR lists performance statistics for the Oracle Database Advanced Queueing primary background coordinator process (AQPC).

Column	Datatype	Description
PROCESS_ID	VARCHAR2(24)	Operating system process ID of the primary
PROCESS_NAME	VARCHAR2(48)	Operating system name of the primary
NUM_JOBS	NUMBER	Number of jobs started
JOB_LATENCY	NUMBER	Job start latency
NUM_COORDINATORS	NUMBER	Number of primaries started
CON_ID	NUMBER	The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB.

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.19 V$AQ_BMAP_NONDUR_SUBSCRIBERS

V$AQ_BMAP_NONDUR_SUBSCRIBERS can be used to get the available bit positions. The view is queried to get the free bit position during creation of a non-durable subscriber.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
USED_POS	RAW(128)	Stream of bits to identify used and available bit positions

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.20 V$AQ_CROSS_INSTANCE_JOBS

V$AQ_CROSS_INSTANCE_JOBS describes each of the cross process jobs.

Each job serves to forward messages for a shard from a source instance to a destination instance for a set of subscribers of a sharded queue.

> **Note:**
>
> AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
JOB_ID	NUMBER	Job ID within this coordinator
SCHEMA_NAME	VARCHAR2(128)	Source schema of the job
QUEUE_NAME	VARCHAR2(128)	Source queue name of the cross job
SHARD_ID	NUMBER	Source shard ID
START_SUBSHARD_ID	NUMBER	Start subshard ID of the job
DESTINATION_INSTANCE_ID	NUMBER	Destination instance of the cross job
COORDINATOR_ID	NUMBER	Index of the coordinator serving the job
DEST_SERVER_PROCESS_ID	NUMBER	Process ID of the destination server
JOB_STATE	VARCHAR2(13)	State of the job: • CRASHED • INACTIVE • PAUSED • REQUESTED • RUNNING • STOPPED

Column	Datatype	Description
FLOW_CONTROL	NUMBER	Indicates whether the job is flow controlled: • 0 - The job is not flow controlled • 1 - The job is flow controlled
MSGS_SENT	NUMBER	Messages sent during the job
BYTES_SENT	NUMBER	Bytes sent during the job
ACK_LATENCY	NUMBER	Latency for receiving ACK for the job
JOB_TYPE	VARCHAR2(26)	Cross instance job type. Values: • CROSS_STREAM : This job type is responsible for forwarding a shard from its owner instance to a destination dequeue instance for all subscribers performing dequeue from that shard at the destination dequeue instance. • DEQUEUE_AFFINITY_TO_REMOTE: This job type is responsible for switching a subscriber's dequeue affinity from a shard's owner instance to a remote dequeue instance. • DEQUEUE_AFFINITY_TO_LOCAL: This job type is responsible for switching back a subscriber's dequeue affinity from a remote dequeue instance to a shard's owner instance.
PRIORITY0_CROSS_LWM	NUMBER	Last priority 0 subshard received at DESTINATION_INSTANCE_ID
PRIORITY1_CROSS_LWM	NUMBER	Last priority 1 subshard received at DESTINATION_INSTANCE_ID
PRIORITY2_CROSS_LWM	NUMBER	Last priority 2 subshard received at DESTINATION_INSTANCE_ID
PRIORITY3_CROSS_LWM	NUMBER	Last priority 3 subshard received at DESTINATION_INSTANCE_ID
PRIORITY4_CROSS_LWM	NUMBER	Last priority 4 subshard received at DESTINATION_INSTANCE_ID
PRIORITY5_CROSS_LWM	NUMBER	Last priority 5 subshard received at DESTINATION_INSTANCE_ID
PRIORITY6_CROSS_LWM	NUMBER	Last priority 6 subshard received at DESTINATION_INSTANCE_ID
PRIORITY7_CROSS_LWM	NUMBER	Last priority 7 subshard received at DESTINATION_INSTANCE_ID
PRIORITY8_CROSS_LWM	NUMBER	Last priority 8 subshard received at DESTINATION_INSTANCE_ID
PRIORITY9_CROSS_LWM	NUMBER	Last priority 9 subshard received at DESTINATION_INSTANCE_ID
JOB_START_TIME	TIMESTAMP(3) WITH TIME ZONE	Start time of this job
SUBSCRIBER_ID	NUMBER	Subscriber ID whose affinity is being switched for the DEQUEUE_AFFINITY_TO_REMOTE and DEQUEUE_AFFINITY_TO_LOCAL job types
SUBSCRIBER_NAME	VARCHAR2(512)	Subscriber name whose affinity is being switched for the DEQUEUE_AFFINITY_TO_REMOTE and DEQUEUE_AFFINITY_TO_LOCAL job types. This column is NULL for the CROSS_STREAM job type.
OWNER_INSTANCE_ID	NUMBER	Owner instance of the shard
QUEUE_ID	NUMBER	Queue ID
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.21 V$AQ_IPC_ACTIVE_MSGS

`V$AQ_IPC_ACTIVE_MSGS` displays the information related to active IPC messages being processed by AQ background processes.

Column	Datatype	Description
`PROCESS_NAME`	`VARCHAR2(48)`	Worker process name
`PROCESS_ID`	`NUMBER`	Oracle process ID for this worker
`SLAVE_STATE`	`NUMBER`	Worker status: • `3`: Picked task • `4`: Running • `7`: Idle
`SLAVEOBJ_STATE`	`NUMBER`	Worker object status: • `0`: Invalid • `1`: Valid
`SEQUENCE_NUMBER`	`NUMBER`	Message sequence number
`MSG_CLASS_NAME`	`VARCHAR2(30)`	Message class name
`MSG_FLAGS`	`NUMBER`	Message flags: • `1`: This message needs ack • `2`: Short • `4`: Long • `8`: Priority • `10`: Special ack
`MSG_SUBMT_TIME`	`NUMBER`	Time this message was added into the IPC primary's list (in seconds)
`MSG_PICKD_TIME`	`NUMBER`	Time this message was picked by worker or primary for processing (in seconds)
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.22 V$AQ_IPC_MSG_STATS

`V$AQ_IPC_MSG_STATS` displays the statistics of each IPC message class, such as the total number of invocations of a message class, total pending message/processed message count,

and last failure related data. Information like total processed message count, average pending time/average processing time gives a real-time outline of AQ IPC background state.

Column	Datatype	Description
MSG_CLASS_NAME	VARCHAR2(30)	Message class name
TOTAL_MSG_CALLS	NUMBER	Total number of calls for this message class
TOTAL_ACTIVE_MSGS	NUMBER	Total number of active messages presently processed by workers and primary
TOTAL_PENDING_MSGS	NUMBER	Total number of pending messages in the primary's local context
TOTAL_PROCESSED_MSGS	NUMBER	Total number of processed messages
LAST_RECEIVED_TIME	TIMESTAMP(3) WITH TIME ZONE	Time when the last message of this type was received in the primary's context list
LAST_PROCESS_TIME	TIMESTAMP(3) WITH TIME ZONE	Time when the last message was picked for processing
LAST_DONE_TIME	TIMESTAMP(3) WITH TIME ZONE	Time when the last message was done processing
AVERAGE_PENDING_TIME	NUMBER	Average pending time for this message class (in seconds)
AVERAGE_PROCESSING_TIME	NUMBER	Average processing time for this message class (in seconds)
LAST_FAILURE_TIME	TIMESTAMP(3) WITH TIME ZONE	Time of the last failure for this message class
LAST_ERROR_MSG	VARCHAR2(512)	Last error message for this message class
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.23 V$AQ_IPC_PENDING_MSGS

V$AQ_IPC_PENDING_MSGS displays information about pending messages, present in the local primary context.

Column	Datatype	Description
SEQUENCE_NUMBER	NUMBER	Message sequence number
MSG_CLASS_NAME	VARCHAR2(30)	Message class name
MSG_FLAGS	NUMBER	Message flags: • 1: This message needs ack • 2: Short • 4: Long • 8: Priority • 10: Special ack
MSG_SUBMT_TIME	NUMBER	Time this message was added into the IPC primary's list (in seconds)

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.24 V$AQ_JOB_COORDINATOR

V$AQ_JOB_COORDINATOR lists performance statistics per coordinator, for every AQ coordinator controlled by the Oracle Database Advanced Queueing primary coordinator.

Column	Datatype	Description
COORDINATOR_ID	NUMBER	ID of the coordinator
PROCESS_ID	VARCHAR2(24)	Operating system process ID of the coordinator
PROCESS_NAME	VARCHAR2(48)	Operating system process name of the coordinator
JOB_NAME	VARCHAR2(32)	Name of the job handled
JOB_TYPE	NUMBER	Type of job handled
SERVER_COUNT	NUMBER	Number of servers active
MAX_SERVER_COUNT	NUMBER	Maximum server fanout achieved
CON_ID	NUMBER	The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB.

See Also:

Oracle Database Advanced Queuing User's Guide for more information about Oracle Database Advanced Queueing

8.25 V$AQ_MESSAGE_CACHE

V$AQ_MESSAGE_CACHE provides performance statistics of the message cache for sharded queues at the subshard level in the instance.

Note:

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
SHARD_ID	NUMBER	Shard ID
PRIORITY	NUMBER	Priority of the subshard for dequeue, range 0-9
SUBSHARD_ID	NUMBER	Subshard ID in the shard
PARTITION_ID	NUMBER	Partition id for the particular subshard
MAX_MSGS	NUMBER	Maximum number of messages of subshard
ENQUEUED_MSGS	NUMBER	Number of messages enqueued for the subshard
MSGS_MADE_EXPIRED	NUMBER	Number of messages made expired
CHUNK_SIZE	NUMBER	The size of the memory chunk for storing messages
NUM_CHUNKS	NUMBER	Number of chunks for the subshard
NUM_FREE_CHUNKS	NUMBER	Number of free chunks for the subshard
USED_MEMORY_SIZE	NUMBER	Total estimated size of memory in use (in bytes) for the subshard
STATE	VARCHAR2(13)	Subshard state. Possible values: • CACHED (in memory) • UNCACHED (on disk) • UNCACHED_FREE • CACHED_FREE • UNKNOWN
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.26 V$AQ_MESSAGE_CACHE_ADVICE

V$AQ_MESSAGE_CACHE_ADVICE shows simulated metrics for a range of potential message cache sizes. This view assists in cache sizing by providing information in the form of metrics as described below.

> **Note:**
>
> AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
SIZE_FOR_ESTIMATE	NUMBER	Cache size for simulation (in megabytes)
SIZE_FACTOR	NUMBER	Size factor with respect to the current cache size
ESTD_SIZE_TYPE	VARCHAR2(9)	Possible values: • MINIMUM: This cache size is required to have all dequeues in-memory (no uncached). • PREFERRED: This is the smallest message cache size required to eliminate 80% of unevictions that occur with a message cache size of MINIMUM for subscribers who keep up, that is, subscribers whose dequeue rate matches the enqueue rate. • MAXIMUM: This cache size is required to have zero evictions. • NULL: This is the value in all other cases.
ESTD_CACHED_SUBSHARDS	NUMBER	Estimated number of cached subshards for this size
ESTD_UNCACHED_SUBSHARDS	NUMBER	Estimated number of uncached subshards for this size
ESTD_EVICTIONS	NUMBER	Estimated number of subshards evicted for this size
ESTD_EVICTION_RATE	NUMBER	Estimated number of subshards getting evicted per minute
ESTD_FG_UNEVICTIONS	NUMBER	Estimated number of subshards unevicted by foreground processes
ESTD_FG_UNEVICTION_RATE	NUMBER	Estimated number of subshards getting unevicted by foreground processes
ESTD_BG_UNEVICTIONS	NUMBER	Estimated number of subshards unevicted by background processes
ESTD_BG_UNEVICTION_RATE	NUMBER	Estimated number of subshards getting unevicted by background processes
ESTD_BG_PROCESSES	NUMBER	Estimated number of background processes required for this size
TOTAL_ENQUEUE_RATE	NUMBER	Simulated number of messages being enqueued per second
TOTAL_DEQUEUE_RATE	NUMBER	Simulated number of messages being dequeued per second
AVG_SUBSHARD_SIZE	NUMBER	Simulated average number of messages per cached subshard
AVG_SUBSHARD_MEMORY	NUMBER	Simulated average memory per cached subshard (in megabytes)
AVG_EVICTION_TIME	NUMBER	Simulated average time to evict a cached subshard (in milliseconds)
AVG_UNEVICTION_TIME	NUMBER	Simulated average time to unevict a cached subshard (in milliseconds)
FLAGS	NUMBER	Reserved for internal use
SIMULATION_TIME	NUMBER	Amount of time that was simulated for (in minutes)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.27 V$AQ_MESSAGE_CACHE_STAT

V$AQ_MESSAGE_CACHE_STAT displays statistics about memory management for sharded queues in the Streams pool within the System Global Area (SGA). Sharded queues use the Streams

pool in units of subshards. Thus, columns of this view shows statistics at subshard level. This view shows statistics across all sharded queues.

> **Note:**
>
> AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
NUM_EVICTED	NUMBER	Number of evicted subshards across all sharded queues
NUM_PREFETCHED	NUMBER	Number of subshards pre-fetched by AQ background process
NUM_UNEVICTION	NUMBER	Number of subshards un-evicted by foreground process (like dequeue process)
NUM_UNCACHED	NUMBER	Number of subshards stored as uncached
NUM_TRACKED	NUMBER	Number of subshards which are actively tracking dequeue rates
NUM_CACHED	NUMBER	Number of subshards stored as cached
MAX_SUBSH_SIZE	NUMBER	Maximum subshard size seen till now, in terms of number of messages per subshard
MIN_SUBSH_SIZE	NUMBER	Minimum subshard size seen till now, in terms of number of messages per subshard
MEAN_SUBSH_SIZE	NUMBER	Mean subshard size seen till now, in terms of number of messages per subshard
AVG_EVICTION_RATE	NUMBER	Average number subshards evicted per second
AVG_LOAD_RATE	NUMBER	Average number of subshards pre-fetched or un-evicted per second
AVG_EVICTION_TIME	NUMBER	Average time taken to evict one subshard (in milliseconds)
AVG_LOAD_TIME	NUMBER	Average time taken to un-evict one subshard (in milliseconds)
AVG_MISS_RATIO	NUMBER	Average ratio of number of foreground un-evictions versus background pre-fetch
AVG_THRASH_RATIO	NUMBER	Average ratio of number of subshard pre-fetched by background without dequeue attempt versus total number of subshards prefetched
MANDATORY_AFF_SWITCH_ATTEMPTS	NUMBER	An affinity switch is a change in dequeue instance for a shard-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that shard-subscriber pair. This column shows the number of times mandatory affinity switches were attempted across all instances. Populated at the smallest instance id only.
OPTIONAL_AFF_SWITCH_ATTEMPTS	NUMBER	Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were attempted across all instances. Populated at the smallest instance id only.
MIN_EVICT_PERCENT	NUMBER	Percentage of `streams_pool` memory beyond which sharded queue subshard eviction is triggered
LAST_AVG_CACHED_HORIZON	NUMBER	Last average number of cached subshards seen in sharded queue memory manager horizon
LAST_AVG_MEMORY_HORIZON	NUMBER	Last average memory of cached subshards seen in sharded queue memory manager horizon

Column	Datatype	Description
LAST_AVG_SUBSHARD_HORIZON	NUMBER	Last average number of subshards seen in sharded queue memory manager horizon
LAST_LEEWAY_SHIFT	NUMBER	Internal leeway for memory threshold
AVG_OPTTIME_DRIFT	NUMBER	Average drift of opt_time for all subshards. A drift is defined as a difference between opt_time as set on a subshard and the actual time at which subshard is first dequeueed after prefetch/uneviction.
NUM_THRESHOLD_DRIFT	NUMBER	Number of times drift value has gone over threshold time. A typical threshold time can be horizon_time/2.
MAX_OPT_TIME_DRIFT	NUMBER	Maximum drift till now
MIN_OPT_TIME_DRIFT	NUMBER	Minimum drift till now
AVG_OPT_TIME_ERROR	NUMBER	An opt_time error occurs when a cached subshard is unevicted by a foreground process (instead of being prefetched by the aq background). Thus, opt_time error is the difference between the actual opt_time set for a sharded queue subshard and the absolute time at which foreground unevicts the same subshard. This column represents average time of this error.
MAX_OPT_TIME_ERROR	NUMBER	Maximum opt_time error
MIN_OPT_TIME_ERROR	NUMBER	Minimum opt_time error
NUM_FG_RELOADED	NUMBER	Number of subshards reloaded from disk into message cache by foreground processes
NUM_PRERELOADED	NUMBER	Number of subshards reloaded from disk into message cache in advance by background processes
AVG_RELOAD_TIME	NUMBER	Average time to reload a subshard from disk into message cache (in milliseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.28 V$AQ_NONDUR_REGISTRATIONS

V$AQ_NONDUR_REGISTRATIONS provides information about non-durable subscriptions.

Column	Datatype	Description
REG_ID	NUMBER	Registration ID
SUBSCRIPTION	VARCHAR2(128)	Subscription name
LOCATION	VARCHAR2(256)	Location name
USER#	NUMBER	User ID
USER_CONTEXT	RAW(32)	Context the user provided
CONTEXT_SIZE	NUMBER	Size of the context
NAMESPACE	NUMBER	Subscription namespace
VERSION	NUMBER	Database version number

Column	Datatype	Description
STATE	NUMBER	State of the registration: • ENABLED: The registration is enabled for notification • STOPPING: The registration is in a transient state before it becomes DISABLED • DISABLED: The registration is disabled for notification • DEAD: The registration does not exist any more, and it is marked for deferred cleanup.
QOS	NUMBER	Quality of service
REG_TIME	TIMESTAMP(3) WITH TIME ZONE	Time of registration
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Advanced Queuing User's Guide for more information about Oracle Database Advanced Queueing

8.29 V$AQ_NONDUR_SUBSCRIBER

V$AQ_NONDUR_SUBSCRIBER provides information about the non-durable subscriptions on sharded queues.

Note:

AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
SUBSCRIBER_ID	NUMBER	ID of the non-durable subscriber
SUBSCRIBER_NAME	VARCHAR2(128)	Subscriber name
RULE_CONDITION	VARCHAR2(4000)	Rule condition of the subscriber
TRANSFORMATION_OWNER	VARCHAR2(128)	Owner of the transformation (for JMS queues)
TRANSFORMATION_NAME	VARCHAR2(128)	Name of the transformation (for JMS queues)
CREATION_TIME	TIMESTAMP(1) WITH TIME ZONE	Non-durable subscriber creation time

Column	Datatype	Description
FLAGS	NUMBER	Property of the subscriber: • 0x0001 – Persistent subscriber • 0x0002 – Buffered subscriber • 0x0004 – JMS subscriber • 0x0008 – Rule-based subscriber • 0x0010 – Subscriber has transformation • 0x0020 – Notification-only non-durable subscriber subscriber
SUBSCRIBER_TYPE	NUMBER	Type of subscriber: • 1 – JMS non-durable subscriber • 2 – Service layer dummy non-durable subscriber • 3 – Notification-only non-durable subscriber
BITPOS	NUMBER	Position of subscriber in subscriber bitmap
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.30 V$AQ_NONDUR_SUBSCRIBER_LWM

V$AQ_NONDUR_SUBSCRIBER_LWM projects the low watermarks (LWMs) of non-durable subscribers in a sharded queue. The LWM of a non-durable subscriber is a combination of shard, priority and LWM (subshard).

> **Note:**
>
> AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
SUBSCRIBER_ID	NUMBER	ID of the non-durable subscriber
SHARD_ID	NUMBER	Shard ID
PRIORITY	NUMBER	Priority of the shard

Column	Datatype	Description
LWM	NUMBER	Lower watermark (in a subshard) of the non-durable subscriber
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.31 V$AQ_NOTIFICATION_CLIENTS

V$AQ_NOTIFICATION_CLIENTS displays performance statistics for secure OCI client connections.

Column	Datatype	Description
CLIENT_ID	VARCHAR2(29)	Internally generated client ID for secure notification clients
EMON_ID	NUMBER	Emon ID serving the client
NOTIFICATION_STATE	NUMBER	Notification state: • ACTIVE – Sending notification • WAIT_FOR_ACK – Waiting for client acknowledgment • INACTIVE - Idle connection
NUM_MESSAGE_SENT	NUMBER	Number of messages sent on the connection
NUM_BYTES_SENT	NUMBER	Number of bytes sent on the connection
NUM_MESSAGE_RECEIVED	NUMBER	Number of messages successfully received by the client
LAST_SEND_TIME	TIMESTAMP(3) WITH TIME ZONE	Time when the last message was sent on the connection
LAST_RECEIVE_TIME	TIMESTAMP(3) WITH TIME ZONE	Time when the last message was received over the connection
CONNECT_TIME	TIMESTAMP(3) WITH TIME ZONE	Time at which the client connected
DISCONNECT_TIME	TIMESTAMP(3) WITH TIME ZONE	Time at which the client disconnected
LAST_ERROR	NUMBER	The last error that occurred on the client connection

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.32 V$AQ_PARTITION_STATS

V$AQ_PARTITION_STATS displays usage statistics for the queue partition cache and the dequeue log partition cache.

> **Note:**
>
> AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
INST_ID	NUMBER	Current instance ID
QUEUE_ID	NUMBER	Queue ID
QUEUE_TABLE_ID	NUMBER	Queue table object ID
QUEUE_SCHEMA	VARCHAR2(128)	Queue schema name
QUEUE_NAME	VARCHAR2(128)	Queue name
PT_TUNED_SIZ_QT	NUMBER	Current tuned size of the queue partition cache, expressed in number of partition cache elements
PT_CACHED_PTNS_QT	NUMBER	Current number of cached partitions in the queue partition cache
PT_OVER_CACHED_PTNS_QT	NUMBER	Current number of over-cached partitions in the queue partition cache, that is, the number of cached partitions whose partition cache elements exceed the current tuned size of the queue partition cache
PT_TOTAL_UPTUNE_QT	NUMBER	Total amount of space added to the queue partition cache due to tune-ups, since the cache was initialized, expressed in number of partition cache elements
PT_NO_OF_UPTUNES_QT	NUMBER	Total number of times a tune-up was triggered on the queue partition cache, since the cache was initialized

Column	Datatype	Description
PT_TOTAL_DOWNTUNE_QT	NUMBER	Total amount of space removed from the queue partition cache due to tune-downs, since the cache was initialized, expressed in number of partition cache elements
PT_NO_OF_DOWNTUNES_QT	NUMBER	Total number of times a tune-down was triggered on the queue partition cache, since the cache was initialized
PT_CACHE_MISS_QT	NUMBER	Total number of cache misses during partition lookups on the queue partition cache
PT_CACHE_HIT_QT	NUMBER	Total number of cache hits during partition lookups on the queue partition cache
PT_TOTAL_CACH_GET_QT	NUMBER	Total number of successful fetches from the queue partition cache
PT_TOTAL_CACH_PUT_QT	NUMBER	Total number of caching operations that occurred on the queue partition cache
PT_UNBOUNDINGS_QT	NUMBER	Total number of times queue partitions were unbounded
PT_TUNED_SIZ_DQ	NUMBER	Current tuned size of the dequeue log partition cache, expressed in number of partition cache elements
PT_CACHED_PTNS_DQ	NUMBER	Current number of cached partitions in the dequeue log partition cache
PT_OVER_CACHED_PTNS_DQ	NUMBER	Current number of over-cached partitions in the dequeue log partition cache, that is, the number of cached dequeue log partitions whose partition cache elements exceed the current tuned size of the dequeue log partition cache
PT_TOTAL_UPTUNE_DQ	NUMBER	Total amount of space added to the dequeue log partition cache due to tune-ups, since the cache was initialized, expressed in number of partition cache elements
PT_NO_OF_UPTUNES_DQ	NUMBER	Total number of times a tune-up was triggered on the dequeue log partition cache, since the cache was initialized
PT_TOTAL_DOWNTUNE_DQ	NUMBER	Total amount of space removed from the dequeue log partition cache due to tune-downs, since the cache was initialized, expressed in number of partition cache elements
PT_NO_OF_DOWNTUNES_DQ	NUMBER	Total number of times a tune-down was triggered on the dequeue log partition cache, since the cache was initialized
PT_CACHE_MISS_DQ	NUMBER	Total number of cache misses during partition lookups on the dequeue log partition cache
PT_CACHE_HIT_DQ	NUMBER	Total number of cache hits during partition lookups on the dequeue log partition cache
PT_TOTAL_CACH_GET_DQ	NUMBER	Total number of successful fetches from the dequeue log partition cache
PT_TOTAL_CACH_PUT_DQ	NUMBER	Total number of caching operations that occurred on the dequeue log partition cache
PT_UNBOUNDINGS_DQ	NUMBER	Total number of times dequeue log partitions were unbounded
ADD_PARTITION_FG_QT	NUMBER	Total number of queue partitions created inline during foreground AQ enqueue operations
ADD_PARTITION_BG_QT	NUMBER	Total number of queue partitions created asynchronously by the AQ partitioning background process
ADD_PARTITION_FG_DQLOG	NUMBER	Total number of dequeue log partitions created inline during foreground AQ dequeue operations
ADD_PARTITION_BG_DQLOG	NUMBER	Total number of dequeue log partitions created asynchronously by the AQ partitioning background process
TRUNC_PARTITION_QT	NUMBER	Total number of truncated and recycled queue partitions

Column	Datatype	Description
TRUNC_PARTITION_DQLOG	NUMBER	Total number of truncated and recycled dequeue log partitions
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.33 V$AQ_REMOTE_DEQUEUE_AFFINITY

V$AQ_REMOTE_DEQUEUE_AFFINITY lists the dequeue affinity instance of the subscribers not dequeuing locally from the shard's owner instance. Cross instance message forwarding is used for these subscribers.

> **Note:**
>
> AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
SHARD_ID	NUMBER	Shard ID which is being forwarded from SOURCE_INSTANCE to INST_ID for the subscriber
SOURCE_INSTANCE_ID	NUMBER	Owner instance ID from where the shard is being forwarded
SUBSCRIBER_ID	NUMBER	Subscriber ID
QUEUE_SCHEMA	VARCHAR2(128)	Queue schema name
QUEUE_NAME	VARCHAR2(128)	Queue name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.34 V$AQ_SERVER_POOL

V$AQ_SERVER_POOL lists performance statistics for all the servers in the pool.

Column	Datatype	Description
COORDINATOR_ID	NUMBER	ID of the coordinator

Column	Datatype	Description
COORDINATOR_INSTANCE_ID	NUMBER	Instance of the coordinator
PROCESS_ID	VARCHAR2(24)	Operating system process ID of the server
PROCESS_NAME	VARCHAR2(48)	Operating system process name of the server
JOB_NAME	VARCHAR2(32)	Name of the job handled
POOL_STATE	VARCHAR2(20)	State of the pool: • REMOTE • IDLE • ACTIVE
CON_ID	NUMBER	The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB.

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Database Advanced Queueing

8.35 V$AQ_SHARDED_SUBSCRIBER_STAT

V$AQ_SHARDED_SUBSCRIBER_STAT displays basic statistical information about the subscribers of sharded queues. There is one row per queue per shard per subscriber.

> **Note:**
>
> AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue identifier
SUBSCRIBER_ID	NUMBER	Subscriber identifier
SHARD_ID	NUMBER	Shard identifier
PRIORITY	NUMBER	Priority value of the shard
MSG_SN	NUMBER	Message serial number
DEQUEUE_SUBSHARD	NUMBER	Last known dequeue position in this shard
ENQUEUED_MSGS	NUMBER	Number of enqueued messages
DEQUEUED_MSGS	NUMBER	Number of dequeued messages
ELAPSED_DEQUEUE_TIME	NUMBER	Amount of time spent performing dequeues (in seconds)
CPU_DEQUEUE_TIME	NUMBER	Actual amount of CPU time spent performing dequeues (in seconds)
DEQUEUE_RATE	NUMBER	Number of messages dequeued per second

Column	Datatype	Description
DEQUEUE_POSITION	RAW(16)	Message ID at the dequeue position of the subscriber in this shard A NULL value indicates that either the shard is empty or no dequeues have been done on this shard.
TIME_SINCE_LAST_DEQUEUE	NUMBER	Time since last dequeue activity (in seconds)
ESTD_TIME_TO_DRAIN	NUMBER	Estimated amount of time to drain the shard (in seconds) with current enqueue and dequeue rates. Null, if the enqueue rate is greater than the dequeue rate.
ESTD_TIME_TO_DRAIN_NO_ENQ	NUMBER	Estimated amount of time to drain the shard (in seconds) with no new enqueues
MESSAGE_LATENCY_1	NUMBER	Message latency within the last 5 minutes (in milliseconds). Null if no message is consumed or it is delay dequeue.
MESSAGE_LATENCY_2	NUMBER	Message latency within the last 1 hour (in milliseconds). Null if no message is consumed or it is delay dequeue.
MESSAGE_LATENCY_3	NUMBER	Message latency within the last 5 hours (in milliseconds). Null if no message is consumed or it is delay dequeue.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.36 V$AQ_SUBSCRIBER_LOAD

V$AQ_SUBSCRIBER_LOAD describes the load of all subscribers of sharded queues in terms of latency at every instance in an Oracle RAC environment.

Latency denotes the predicted amount of time (in seconds) required from the current time to drain all the messages for that subscriber at each respective instance. The latency calculation considers past enqueue/dequeue rates and future enqueue/dequeue rates based on history.

> **Note:**
>
> AQ sharded queues are deprecated in Oracle Database 21c. Oracle recommends that you instead use Transactional Event Queues (TxEventQs) for higher throughput and better performance.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
QUEUE_SCHEMA	VARCHAR2(128)	Queue schema
QUEUE_NAME	VARCHAR2(128)	Queue name
SUBSCRIBER_ID	NUMBER	Subscriber ID
SUBSCRIBER_NAME	VARCHAR2(128)	Subscriber name

Column	Datatype	Description
LATENCY_STATE	VARCHAR2(8)	Possible values: • FINITE - The subscriber will be able to dequeue all the messages in a finite amount of time • INFINITE - The subscriber's dequeue rate may not catch up to the enqueue rate • UNKNOWN - Latency is not yet known
LATENCY	NUMBER	Latency (in seconds). Valid only when LATENCY_STATE is FINITE.
DEQUEUE_REQUESTS	NUMBER	Approximate number of dequeue requests noted recently
ACTIVE_SHARDS	NUMBER	Number of queue shards that have messages for this subscriber
ACTIVE_LISTENER	VARCHAR2(5)	Indicates whether the subscriber is actively listening at this instance for messages (TRUE) or not (FALSE)
DEQUEUE_SESSIONS	NUMBER	Displays the number of active dequeue sessions for this subscriber
FLAGS	NUMBER	For internal use only
MANDATORY_AFF_SWITCHES	NUMBER	An affinity switch is a change in the dequeue instance for a shard-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that shard-subscriber pair. This column shows the number of times mandatory affinity switches were needed from this instance to another for this subscriber.
OPTIONAL_AFF_SWITCHES	NUMBER	Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were needed from this instance to another for this subscriber.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Advanced Queuing User's Guide for more information about Oracle Database Advanced Queueing

8.37 V$ARCHIVE

V$ARCHIVE displays information about redo log files in need of archiving.

Each row displays information for one thread. This information is also available in V$LOG. Oracle recommends that you use V$LOG.

> **See Also:**
>
> "V$LOG"

Column	Datatype	Description
GROUP#	NUMBER	Log file group number
THREAD#	NUMBER	Log file thread number
SEQUENCE#	NUMBER	Log file sequence number
ISCURRENT	VARCHAR2(3)	This is the current online redo log
CURRENT	VARCHAR2(3)	This column is obsolete and maintained for backward compatibility. The value of this column is always equal to the value in ISCURRENT.
FIRST_CHANGE#	NUMBER	First SCN stored in the current log
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.38 V$ARCHIVE_DEST

V$ARCHIVE_DEST displays, for the current instance, all of the destinations in the Data Guard configuration, including each destination's current value, mode, and status.

Column	Datatype	Description
DEST_ID	NUMBER	Log archive destination parameter identifier (1 to 31)
DEST_NAME	VARCHAR2(256)	Log archive destination parameter name
STATUS	VARCHAR2(9)	Identifies the current status of the destination: • VALID - Initialized and available • INACTIVE - No destination information • DEFERRED - Manually disabled by the user • ERROR - Error during open or copy • DISABLED - Disabled after error • BAD PARAM - Parameter has errors • ALTERNATE - Destination is available as an alternate • FULL - Exceeded quota size for the destination
BINDING	VARCHAR2(9)	Specifies how failure will affect the archival operation: • MANDATORY - Successful archival is required • OPTIONAL - Successful archival is not required (depends on LOG_ARCHIVE_MIN_SUCCEED_DEST)
NAME_SPACE	VARCHAR2(7)	Identifies the scope of parameter setting: • SYSTEM - System definition • SESSION - Session definition

Column	Datatype	Description
TARGET	VARCHAR2(7)	For a primary database, this column specifies whether the archive destination is local or remote to the primary database: • PRIMARY - local • STANDBY - remote For a standby database, this column specifies whether the archive destination is local or remote to the standby database: • LOCAL - local • REMOTE - remote
ARCHIVER	VARCHAR2(10)	Identifies the archiver process relative to the database where the query is issued: • ARC*n* • FOREGROUND • LGWR • RFS
SCHEDULE	VARCHAR2(8)	Indicates whether the archival of this destination is INACTIVE, PENDING, ACTIVE, or LATENT
DESTINATION	VARCHAR2(256)	Specifies the location where the archived redo logs are to be archived
LOG_SEQUENCE	NUMBER	Identifies the sequence number of the last archived redo log to be archived
REOPEN_SECS	NUMBER	Identifies the retry time (in seconds) after error
DELAY_MINS	NUMBER	Identifies the delay interval (in minutes) before the archived redo log is automatically applied to a standby database
NET_TIMEOUT	NUMBER	Number of seconds the log writer process will wait for status from the network server of a network operation issued by the log writer process
PROCESS	VARCHAR2(10)	Identifies the archiver process relative to the primary database, even if the query is issued on the standby database: • ARC*n* • FOREGROUND • LGWR
REGISTER	VARCHAR2(3)	Indicates whether the archived redo log is registered in the remote destination control file (YES) or not (NO). If the archived redo log is registered, it is available to log apply services.
FAIL_DATE	DATE	Date and time of last error
FAIL_SEQUENCE	NUMBER	Sequence number of the archived redo log being archived when the last error occurred
FAIL_BLOCK	NUMBER	Block number of the archived redo log being archived when the last error occurred
FAILURE_COUNT	NUMBER	Current number of contiguous archival operation failures that have occurred for the destination
MAX_FAILURE	NUMBER	Allows you to control the number of times log transport services will attempt to reestablish communication and resume archival operations with a failed destination
ERROR	VARCHAR2(256)	Displays the error text
ALTERNATE	VARCHAR2(256)	Alternate destination, if any
DEPENDENCY	VARCHAR2(256)	Reserved for future use
REMOTE_TEMPLATE	VARCHAR2(256)	Specifies the template to be used to derive the location to be recorded
QUOTA_SIZE	NUMBER	Destination quotas, expressed in bytes

Column	Datatype	Description
QUOTA_USED	NUMBER	Size of all the archived redo logs currently residing on the specified destination
MOUNTID	NUMBER	Instance mount identifier
TRANSMIT_MODE	VARCHAR2(12)	Specifies network transmission mode: • SYNCHRONOUS • PARALLELSYNC • ASYNCHRONOUS
ASYNC_BLOCKS	NUMBER	Number of blocks specified for the ASYNC attribute
AFFIRM	VARCHAR2(3)	Specifies disk I/O mode
TYPE	VARCHAR2(7)	Indicates whether the archived log destination definition is PUBLIC or PRIVATE. Only PUBLIC destinations can be modified at run time using the ALTER SYSTEM SET or ALTER SESSION SET statements. By default, all archived log destinations are PUBLIC.
VALID_NOW	VARCHAR2(16)	Indicates whether the destination is valid right now for archival operations: • YES - Redo log type and database role for this destination are valid for the current database • WRONG VALID_TYPE - Redo log type specified for this destination is not valid for the current database role. For example, WRONG VALID_TYPE would be returned if a destination specified with the VALID_FOR=(STANDBY_LOGFILE,STANDBY_ROLE) attribute is running in the standby database role but does not have standby redo logs implemented. • WRONG VALID_ROLE - Database role specified for this destination is not the role in which the database is currently running. For example, the WRONG VALID_ROLE would be returned when a destination defined with the VALID_FOR=(ONLINE_LOGFILE,STANDBY_ROLE) attribute is running in the primary database role. • INACTIVE - Destination is inactive, probably due to an error
VALID_TYPE	VARCHAR2(15)	Redo log type or types that are valid for the destination: • ONLINE_LOGFILE • STANDBY_LOGFILE • ALL_LOGFILES
VALID_ROLE	VARCHAR2(12)	Database role or roles that are valid for the destination: • PRIMARY_ROLE • STANDBY_ROLE • ALL_ROLES
DB_UNIQUE_NAME	VARCHAR2(30)	Unique database name
VERIFY	VARCHAR2(3)	Indicates whether the value of the VERIFY attribute on the LOG_ARCHIVE_DEST_*n* parameter is verified (YES) or not verified (NO)

Column	Datatype	Description
COMPRESSION	VARCHAR2(7)	Indicates whether network compression is ENABLED or DISABLED, or whether the ZLIB or LZO algorithm is in use. These values correspond to the values accepted by the COMPRESSION attribute for the database initialization parameter LOG_ARCHIVE_DEST_n. The possible values include: • DISABLE: Compression is disabled. • ENABLE: Compression is enabled. The ZLIB compression algorithm is used. • ZLIB: ZLIB compression is used. • LZO: LZO compression is used.
APPLIED_SCN	NUMBER	For a destination that corresponds to a physical or logical standby database, the SCN of the last applied redo. For a destination that corresponds to a snapshot standby database, the SCN of the last redo applied before conversion to a snapshot standby database. This column is only valid for enabled and active standby database destinations on a primary or cascading standby database.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
ENCRYPTION	VARCHAR2(7)	Indicates whether encryption of the redo stream sent to Zero Data Loss Recovery Appliance (Recovery Appliance) is enabled (ENABLED) or not (DISABLED)
ROLE	VARCHAR2(9)	Role of the destination: • DATACACHE • FARSYNC • LOCAL • LOGICAL • PHYSICAL • PRIMARY • SNAPSHOT

See Also:

- *Zero Data Loss Recovery Appliance Administrator's Guide* for introductory information about Recovery Appliance
- "LOG_ARCHIVE_DEST" and "LOG_ARCHIVE_DEST_*n*"
- "LOG_ARCHIVE_DUPLEX_DEST" and "LOG_ARCHIVE_DEST_STATE_*n*"
- "LOG_ARCHIVE_MIN_SUCCEED_DEST"

8.39 V$ARCHIVE_DEST_STATUS

V$ARCHIVE_DEST_STATUS displays run time and configuration information for the archived redo log destinations.

The information in this view does not persist across an instance shutdown.

Column	Datatype	Description
DEST_ID	NUMBER	Identifies the log archive destination parameter (1 to 31)
DEST_NAME	VARCHAR2(256)	Log archive destination parameter name
STATUS	VARCHAR2(9)	Current status of the destination: • VALID - Initialized and available • INACTIVE - No destination information • DEFERRED - Manually disabled by the user • ERROR - Error during open or copy • DISABLED - Disabled after error • BAD PARAM - Parameter has errors • ALTERNATE - Destination is in an alternate state • FULL - Exceeded quota size for the destination
TYPE	VARCHAR2(14)	Type of archival destination database: • LOCAL - Local to primary database • PHYSICAL - Physical standby • CROSS-INSTANCE - An instance of the primary • LOGICAL - Logical standby • SNAPSHOT - Snapshot standby database • DOWNSTREAM - Streams downstream capture database • FAR SYNC - Far Sync Instance
DATABASE_MODE	VARCHAR2(15)	Current mode of the archival destination database: • STARTED - Instance started, not mounted • MOUNTED - Mounted • MOUNTED-STANDBY - Mounted standby • OPEN - Open read/write • OPEN_READ-ONLY - Open read-only

Column	Datatype	Description
RECOVERY_MODE	VARCHAR2(23)	Current apply mode at the archival destination: • IDLE - Managed recovery is not active • MANAGED - Managed recovery is active. This value is used when the standby database is mounted. In this recovery mode, users cannot query data on the standby. • MANAGED WITH QUERY - Managed recovery is active in this recovery mode. In a non-CDB, this value is used when the database is open, and users can query data on the standby. In a CDB, this value is used when one or more PDBs in the CDB are open, and users can query data on the standby. • MANAGED REAL TIME APPLY - In this recovery mode, log apply services recover redo data from standby redo logs at the same time the logs are being written to, as opposed to recovering redo from archived redo logs when a log switch occurs. In this recovery mode, users cannot query data on the standby. • MANAGED REAL TIME APPLY WITH QUERY - In this recovery mode, log apply services recover redo data from standby redo logs at the same time the logs are being written to, as opposed to recovering redo from archived redo logs when a log switch occurs. In a non-CDB, this mode is used when the database is open, and users can query data on the standby. In a CDB, this value is used when one or more PDBs in the CDB are open, and users can query data on the standby. • LOGICAL REAL TIME APPLY - Real time SQL Apply • LOGICAL APPLY - SQL Apply
PROTECTION_MODE	VARCHAR2(20)	Indicates whether the database is protected: • MAXIMUM PROTECTION • MAXIMUM AVAILABILITY • RESYNCHRONIZATION • MAXIMUM PERFORMANCE • UNPROTECTED
DESTINATION	VARCHAR2(256)	Specifies the location where the redo data is to be archived
STANDBY_LOGFILE_COUNT	NUMBER	Indicates the total number of standby redo logs created on the standby database
STANDBY_LOGFILE_ACTIVE	NUMBER	Indicates the total number of standby redo logs on the standby database that are active and contain primary database online redo log information
ARCHIVED_THREAD#	NUMBER	Identifies the thread number of the most recent archived redo log received at the destination
ARCHIVED_SEQ#	NUMBER	Identifies the log sequence number of the most recent archived redo log received at the destination
APPLIED_THREAD#	NUMBER	Identifies the thread number of the most recent applied redo log received at the destination
APPLIED_SEQ#	NUMBER	Identifies the log sequence number of the most recent applied redo log received at the destination
ERROR	VARCHAR2(256)	Displays the error text
SRL	VARCHAR2(3)	Indicates whether standby redo logfiles are used on the standby database (YES) or not (NO)
DB_UNIQUE_NAME	VARCHAR2(30)	Specifies the unique database name of the current instance that was defined with the DB_UNIQUE_NAME attribute on the LOG_ARCHIVE_DEST_*n* parameter

Column	Datatype	Description
SYNCHRONIZATION_STATUS	VARCHAR2(22)	Possible values for this column are as follows: • CHECK CONFIGURATION - Synchronization with this destination is not possible because this database is either not in MAXIMUM PROTECTION or MAXIMUM AVAILABILITY data protection mode, or the LOG_ARCHIVE_DEST_*n* parameter associated with this destination has not been configured with the SYNC and AFFIRM attributes. • CHECK STANDBY REDO LOG - The standby redo log at this destination is configured improperly. • CHECK NETWORK - One or more instances of this database cannot send redo data to this destination. • DESTINATION HAS A GAP - This destination is missing redo data needed for synchronization with this database. • OK - This destination is synchronized with this database. • NOT AVAILABLE - Synchronization status is not available. **See Also:** *Oracle Data Guard Concepts and Administration* for more information about redo transport configuration
SYNCHRONIZED	VARCHAR2(3)	Possible values are: • YES - This destination is synchronized with the primary database. • NO - The destination is not synchronized with the primary database. • UNKNOWN - The synchronization status of this destination cannot be determined.
GAP_STATUS	VARCHAR2(24)	Redo gap status: • NO GAP - Destination does not have a redo gap. • LOG SWITCH GAP - Destination has not yet received all of the redo from the previous log file. • RESOLVABLE GAP - Destination has a redo gap that can be automatically resolved by fetching the missing redo from this database. • UNRESOLVABLE GAP - Destination has a redo gap that cannot be automatically resolved by fetching the missing redo from this database and there are no other destinations from which redo can be fetched. • LOCALLY UNRESOLVABLE GAP - Destination has a redo gap that cannot be automatically resolved by fetching the missing redo from this database. It may be possible to resolve the gap by fetching the missing redo from another destination.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.40 V$ARCHIVE_GAP

V$ARCHIVE_GAP displays information about archive gaps on a standby database. This view can be used to find out the current archive gap that is blocking recovery for the current recovery incarnation.

Column	Datatype	Description
THREAD#	NUMBER	Thread number of the missing archived redo log files. The number is 1 for a single instance. For Oracle Real Application Clusters, this column will contain different numbers.
LOW_SEQUENCE#	NUMBER	Lowest sequence number of the log files received on the standby system
HIGH_SEQUENCE#	NUMBER	Highest sequence number of the log files received on the standby system
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.41 V$ARCHIVE_PROCESSES

V$ARCHIVE_PROCESSES displays the state of the various ARCH processes for the instance.

Column	Datatype	Description
PROCESS	NUMBER	Identifier for the ARCH process for the instance, numbered from 0-9
STATUS	VARCHAR2(10)	Status of the ARCH process, displayed as a keyword. Possible values are: STOPPED, SCHEDULED, STARTING, ACTIVE, STOPPING, and TERMINATED.
LOG_SEQUENCE	NUMBER	This is the online redo log sequence number currently being archived, if STATE="BUSY"
STATE	VARCHAR2(4)	This is the current state of the ARCH process, displayed as a keyword. Possible keywords are IDLE or BUSY.
ROLES	VARCHAR2(36)	The list of roles assigned to the archive process. The roles include: HEART_BEAT, NO_FAL, NO_SRL, CLEAR_LOGS
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.42 V$ARCHIVED_LOG

V$ARCHIVED_LOG displays archived log information from the control file, including archive log names.

An archive log record is inserted after the online redo log is successfully archived or cleared (name column is NULL if the log was cleared). If the log is archived twice, there will be two archived log records with the same THREAD#, SEQUENCE#, and FIRST_CHANGE#, but with a different name. An archive log record is also inserted when an archive log is restored from a backup set or a copy and whenever a copy of a log is made with the RMAN COPY command.

Column	Datatype	Description
RECID	NUMBER	Archived log record ID
STAMP	NUMBER	Archived log record stamp
NAME	VARCHAR2(513)	Archived log file name. If set to NULL, either the log file was cleared before it was archived or an RMAN backup command with the "delete input" option was executed to back up archivelog all (RMAN> backup archivelog all delete input;).
DEST_ID	NUMBER	Original destination from which the archive log was generated. The value is 0 if the destination identifier is not available.
THREAD#	NUMBER	Redo thread number
SEQUENCE#	NUMBER	Redo log sequence number
RESETLOGS_CHANGE#	NUMBER	Resetlogs change number of the database when the log was written
RESETLOGS_TIME	DATE	Resetlogs time of the database when the log was written
RESETLOGS_ID	NUMBER	Resetlogs identifier associated with the archived redo log
FIRST_CHANGE#	NUMBER	First change number in the archived log
FIRST_TIME	DATE	Timestamp of the first change
NEXT_CHANGE#	NUMBER	First change in the next log
NEXT_TIME	DATE	Timestamp of the next change
BLOCKS	NUMBER	Size of the archived log (in blocks)
BLOCK_SIZE	NUMBER	Redo log block size. This is the logical block size of the archived log, which is the same as the logical block size of the online log from which the archived log was copied. The online log logical block size is a platform-specific value that is not adjustable by the user.
CREATOR	VARCHAR2(7)	Creator of the archivelog: • ARCH - Archiver process • FGRD - Foreground process • RMAN - Recovery Manager • SRMN - RMAN at standby • LGWR - Logwriter process
REGISTRAR	VARCHAR2(7)	Registrar of the entry: • RFS - Remote File Server process • ARCH - Archiver process • FGRD - Foreground process • RMAN - Recovery manager • SRMN - RMAN at standby • LGWR - Logwriter process
STANDBY_DEST	VARCHAR2(3)	Indicates whether the entry is an archivelog destination (YES) or not (NO)
ARCHIVED	VARCHAR2(3)	Indicates whether the online redo log was archived (YES) or whether RMAN only inspected the log and created a record for future application of redo logs during recovery (NO).

Column	Datatype	Description
APPLIED	VARCHAR2(9)	Indicates whether an archived redo log file has been applied to the corresponding physical standby database. The value is always NO for local destinations. This column is meaningful on a physical standby database for rows where REGISTRAR = RFS: • If REGISTRAR = RFS and APPLIED = NO, then the log file has been received but has not yet been applied. • If REGISTRAR = RFS and APPLIED = IN-MEMORY, then the log file has been applied in memory, but the data files have not yet been updated. • If REGISTRAR = RFS and APPLIED = YES, then the log file has been applied and the data files have been updated. This column can be used to identify log files that can be backed up and deleted. When used for this purpose, the value IN-MEMORY should be treated as if it were NO.
DELETED	VARCHAR2(3)	Indicates whether an RMAN DELETE command has physically deleted the archived log file from disk, as well as logically removing it from the control file of the target database and from the recovery catalog (YES) or not (NO)
STATUS	VARCHAR2(1)	Status of the archived log: A - Available D - Deleted U - Unavailable X - Expired
COMPLETION_TIME	DATE	Time when the archiving completed
DICTIONARY_BEGIN	VARCHAR2(3)	Indicates whether the log contains the start of a LogMiner dictionary (YES) or not (NO)
DICTIONARY_END	VARCHAR2(3)	Indicates whether the log contains the end of a LogMiner dictionary (YES) or not (NO)
END_OF_REDO	VARCHAR2(3)	Indicates whether the archived redo log contains the end of all redo information from the primary database (YES) or not (NO)
BACKUP_COUNT	NUMBER	Indicates the number of times this file has been backed up. Values range from 0-15. If the file has been backed up more than 15 times, the value remains 15.
ARCHIVAL_THREAD#	NUMBER	Redo thread number of the instance that performed the archival operation. This column differs from the THREAD# column only when a closed thread is archived by another instance.
ACTIVATION#	NUMBER	Number assigned to the database instantiation
IS_RECOVERY_DEST_FILE	VARCHAR2(3)	Indicates whether the file was created in the fast recovery area (YES) or not (NO)
COMPRESSED	VARCHAR2(3)	Reserved for internal use
FAL	VARCHAR2(3)	Indicates whether the archive log was generated as the result of a FAL request (YES) or not (NO)

Column	Datatype	Description
END_OF_REDO_TYPE	VARCHAR2(10)	Possible values are as follows: • SWITCHOVER - Shows archived redo log files that are produced at the end of a switchover • TERMINAL - Shows archived redo log files produced after a failover • RESETLOGS - Shows online redo log files archived on the primary database after an ALTER DATABASE OPEN RESETLOGS statement is issued • ACTIVATION - Shows any log files archived on a physical standby database after an ALTER DATABASE ACTIVATE STANDBY DATABASE statement is issued • "empty string" - Any empty string implies that the log is just a normal archival and was not archived due to any of the other events
BACKED_BY_VSS	VARCHAR2(3)	Whether or not the file has been backed up by Volume Shadow Copy Service (VSS). This column is reserved for internal use.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.43 V$ASM_ACFS_ENCRYPTION_INFO

V$ASM_ACFS_ENCRYPTION_INFO displays encryption information for every mounted Oracle ACFS.

Column	Datatype	Description
FS_NAME	VARCHAR2(1024)	File system mount point (foreign key to V$ASM_FILESYSTEM)
VOL_DEVICE	VARCHAR2(256)	Name of the Oracle ADVM device
SET_STATUS	VARCHAR2(7)	Indicates whether encryption parameters have been set on the file system (YES) or not (NO); otherwise UNKNOWN.
ENABLED_STATUS	VARCHAR2(8)	Indicates whether file system level encryption is enabled (ENABLED) or not (DISABLED); otherwise UNKNOWN.
ALGORITHM	VARCHAR2(7)	Encryption algorithm used. AES is the only supported algorithm.
KEY_LENGTH	VARCHAR2(7)	Key length used for the encryption key
LAST_REKEY_TIME	DATE	Time that the volume was last rekeyed
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

See Also:

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Advanced Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

8.44 V$ASM_ACFSAUTORESIZE

`V$ASM_ACFSAUTORESIZE` displays the auto-resize settings for each mounted Oracle ACFS file system.

Column	Datatype	Description
`FS_NAME`	`VARCHAR2(1024)`	Full path name of the Oracle ACFS file system mount point
`RESIZE_INCREMENT`	`NUMBER`	Auto-resize increment (in megabytes)
`RESIZE_MAXIMUM`	`NUMBER`	Auto-resize maximum (in megabytes)
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

> **Note:**
>
> To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

8.45 V$ASM_ACFSREPL

V$ASM_ACFSREPL displays information for Oracle ACFS file systems that are initialized for replication.

Column	Datatype	Description
FSNAME	VARCHAR2(1024)	File system mount point (foreign key to V$ASM_FILESYSTEM)
VOLDEV	VARCHAR2(256)	Name of the Oracle ADVM device
SITE	VARCHAR2(7)	Replication site role: • PRIMARY - File system is initialized as a primary • STANDBY - File system is initialized as a standby
LAG	VARCHAR2(128)	Amount of time standby is behind primary in hours:minutes:seconds (primary only)
STATUS	VARCHAR2(12)	Replication primary or standby status: • ONLINE - Replication is initialized and processing real-time changes • PAUSED - The primary is not sending logs to the standby or the standby is not applying logged changes
INITSTATUS	VARCHAR2(11)	This column is not maintained.
DIRSSCAN	NUMBER	This column is not maintained.
PERCENT	NUMBER	This column is not maintained.
LASTSYNC	DATE	Time of last apply on the standby site (standby only)
CRSRUN	NUMBER	Number of Cluster Ready Services replication daemons currently running
CRSTOTAL	NUMBER	Number of Cluster Ready Services replication daemons expected to be running
PMNTPT	VARCHAR2(1024)	Replication primary site mount point
SMNTPT	VARCHAR2(1024)	Replication standby site mount point
PSVCNAME	VARCHAR2(1024)	This column is not maintained.
SSVCNAME	VARCHAR2(1024)	This column is not maintained.
PHOST	VARCHAR2(1024)	A replication primary cluster host name
SHOST	VARCHAR2(1024)	A replication standby cluster host name
REMALIAS	VARCHAR2(4000)	This column is not maintained.
TAGS	NUMBER	TRUE (1) if replicating tagged files
COMPRESSION	VARCHAR2(3)	This column is not maintained.
DBGLVL	NUMBER	Replication trace log debug level

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

Note:

For Oracle ASM releases 12.2 or later, this view contains records only for storage locations that are file systems (and not for storage locations that are snapshots). The following columns in this view are no longer maintained: INITSTATUS, DIRSCAN, PERCENT, PSVCNAME, SSVCNAME, REMALIAS, and COMPRESSION.

See Also:

- *Oracle Automatic Storage Management Administrator's Guide* for more information about Oracle Advanced Cluster File System (Oracle ACFS)
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

8.46 V$ASM_ACFSREPLTAG

V$ASM_ACFSREPLTAG displays replicated tag information for Oracle ACFS file systems that are initialized for replication.

Column	Datatype	Description
FSNAME	VARCHAR2(1024)	File system mount point (foreign key to V$ASM_FILESYSTEM)
VOLDEV	VARCHAR2(256)	Name of the Oracle ADVM device

Column	Datatype	Description
TAG	VARCHAR2(32)	Tag name that is being replicated
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

Note:

This view only contains records for Oracle ASM releases prior to Oracle Database 12*c* Release 2 (12.2.0.1). To display Oracle ACFS replication information for Oracle Database 12*c* Release 2 (12.2.0.1) or higher, use the `acfsutil repl info` command.

See Also:

- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

8.47 V$ASM_ACFSSNAPSHOTS

`V$ASM_ACFSSNAPSHOTS` displays snapshot information for every mounted Oracle ACFS.

Column	Datatype	Description
FS_NAME	VARCHAR2(1024)	File system mount point (foreign key to `V$ASM_FILESYSTEM`)

Column	Datatype	Description
VOL_DEVICE	VARCHAR2(256)	Name of the Oracle ADVM device
SNAP_NAME	VARCHAR2(1024)	Name of the snapshot
CREATE_TIME	DATE	Time when the snapshot was created
TYPE	VARCHAR2(2)	Snapshot type. Possible types are read-only (RO) or read/write (RW).
PARENT	VARCHAR2(1024)	Parent name used to create the snapshot. If the snapshot was created using the mount point as a base, parent name will be NULL. If the snapshot was created using an existing snapshot as the base, the parent name will be the name of the snapshot passed to the `acfsutil snap create -p` operation.
LINK	VARCHAR2(1024)	If link has been set, the path of the link. If unset, NULL.
ADDITIONAL_STORAGE	NUMBER	Equivalent to "storage added to snapshot" output
QUOTA	NUMBER	Value of quota. If unset, NULL.
REPL	VARCHAR2(5)	Indicates whether the snapshot is being used for replication (`TRUE`) or not (`FALSE`)
STATE	VARCHAR2(14)	The state of the snapshot: • `AVAILABLE` - Default • `DELETE_WAITING` - Maps to "delete waiting for last close" • `DELETE_IN_PROGRESS` - Maps to "delete in progress"
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always `0`.

Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

8.48 V$ASM_ACFSTAG

V$ASM_ACFSTAG displays every file or directory that has a tag and its tag name for every mounted Oracle ACFS.

Column	Datatype	Description
TAG_NAME	VARCHAR2(32)	Tag name on file or directory
FS_NAME	VARCHAR2(1024)	File system mount point
PATH_NAME	VARCHAR2(4096)	Complete file path name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

See Also:

- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

8.49 V$ASM_ACFSVOLUMES

V$ASM_ACFSVOLUMES displays information about mounted Oracle ACFS volumes, correlated with V$ASM_FILESYSTEM.

Column	Datatype	Description
FS_NAME	VARCHAR2(1024)	File system mount point (foreign key to V$ASM_FILESYSTEM)
VOL_DEVICE	VARCHAR2(256)	Name of the Oracle ADVM device

Column	Datatype	Description
VOL_LABEL	VARCHAR2(64)	Volume label (optional name) assigned through mkfs/acfsformat; NULL if no name exists
PRIMARY_VOL	VARCHAR2(5)	Indicates whether the volume is the primary volume for the file system (TRUE) or not (FALSE)
TOTAL_MB	NUMBER	Size of the volume device (in megabytes)
FREE_MB	NUMBER	Available space on the volume device (in megabytes)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

See Also:

- "V$ASM_FILESYSTEM"

- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle Advanced Cluster File System (Oracle ACFS) and Oracle ASM Dynamic Volume Manager (Oracle ADVM) information

Note:

To display information about Oracle ACFS file systems or volumes that are located on nodes in an Oracle Flex ASM configuration, you must connect to the Oracle ASM proxy instance instead of the local Oracle ASM instance. For information about Oracle Flex ASM, refer to *Oracle Automatic Storage Management Administrator's Guide*.

8.50 V$ASM_ALIAS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V$ASM_ALIAS displays one row for every alias present in every disk group mounted by the Oracle ASM instance.

Column	Datatype	Description
NAME	VARCHAR2(70)	Oracle ASM alias or alias directory name
GROUP_NUMBER	NUMBER	Owning disk group number of the alias (foreign key to the V$ASM_DISKGROUP view)

Column	Datatype	Description
FILE_NUMBER	NUMBER	Oracle ASM file number of the alias (foreign key to the V$ASM_FILE view)
FILE_INCARNATION	NUMBER	Oracle ASM file incarnation number for the alias
ALIAS_INDEX	NUMBER	Alias entry number for the alias
ALIAS_INCARNATION	NUMBER	Incarnation number for the parent of the alias
PARENT_INDEX	NUMBER	A 32-bit number consisting of a disk group number in the high-order 8 bits and an alias entry number in the low-order 24 bits (number of the directory containing the alias)
REFERENCE_INDEX	NUMBER	A 32-bit number consisting of a disk group number in the high-order 8 bits and an alias entry number in the low-order 24 bits (number of the directory describing the current entry)
ALIAS_DIRECTORY	VARCHAR2(1)	Indicates whether the alias is to a directory (Y) or to an Oracle ASM file (N)
SYSTEM_CREATED	VARCHAR2(1)	Indicates whether the alias is system created (Y) or user created (N)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.51 V$ASM_ATTRIBUTE

V$ASM_ATTRIBUTE displays one row for each attribute defined. In addition to attributes specified by CREATE DISKGROUP and ALTER DISKGROUP statements, the view may show other attributes that are created automatically.

Note that attributes are only displayed for disk groups where COMPATIBLE.ASM is set to 11.1 or higher.

Column	Datatype	Description
NAME	VARCHAR2(256)	Full name of the attribute
VALUE	VARCHAR2(256)	Value of the attribute
GROUP_NUMBER	NUMBER	Number of the disk group in which this attribute exists (composite primary key)
ATTRIBUTE_INDEX	NUMBER	Number of this attribute in the disk group (composite primary key)
ATTRIBUTE_INCARNATION	NUMBER	Incarnation number for this attribute (composite primary key)

Column	Datatype	Description
READ_ONLY	VARCHAR2(7)	Indicates whether the attribute is read-only (Y) or not (N)
SYSTEM_CREATED	VARCHAR2(7)	Indicates whether this is a system-created attribute (Y) or not (N)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

Note:

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

See Also:

- *Oracle Automatic Storage Management Administrator's Guide* for more information about viewing Oracle ASM disk group attributes using this view
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.52 V$ASM_AUDIT_CLEANUP_JOBS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V$ASM_AUDIT_CLEANUP_JOBS displays information about the configured audit trail purge jobs.

In a database instance, V$ASM_AUDIT_CLEANUP_JOBS displays no rows.

Column	Datatype	Description
JOB_NAME	VARCHAR2(64)	Name of the audit trail purge job
JOB_STATUS	VARCHAR2(64)	Current status of the audit trail purge job (ENABLED) or (DISABLED)
AUDIT_TRAIL	VARCHAR2(64)	Audit trail for which the audit trail purge job is configured: OS AUDIT TRAIL and UNIFIED AUDIT TRAIL
JOB_FREQUENCY	NUMBER	Frequency at which the audit trail purge job runs
USE_TIMESTAMP	VARCHAR2(64)	Indicates whether the audit trail purge job is configured to use the last archive timestamp (TRUE) or not (FALSE)

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.53 V$ASM_AUDIT_CONFIG_PARAMS

In an Oracle Automatic Storage Management (Oracle ASM) instance, V$ASM_AUDIT_CONFIG_PARAMS displays information about the currently configured audit trail properties that are used by the DBMS_AUDIT_MGMT package.

In a database instance, V$ASM_AUDIT_CONFIG_PARAMS displays no rows.

Column	Datatype	Description
PARAMETER_NAME	VARCHAR2(64)	Name of the property
PARAMETER_VALUE	VARCHAR2(64)	Value of the property
AUDIT_TRAIL	VARCHAR2(64)	Audit trails for which the property is configured: OS AUDIT TRAIL and UNIFIED AUDIT TRAIL
PARAMETER_UNIT	VARCHAR2(64)	Provides description of units of audit properties (file size in KB and file age in day(s))
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

See Also:

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_AUDIT_MGMT` package
- *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.54 V$ASM_AUDIT_LAST_ARCH_TS

In an Oracle Automatic Storage Management (Oracle ASM) instance, `V$ASM_AUDIT_LAST_ARCH_TS` displays information about the last archive timestamps set for audit trail cleanup or purges.

In a database instance, `V$ASM_AUDIT_LAST_ARCH_TS` displays no rows.

Column	Datatype	Description
`AUDIT_TRAIL`	`VARCHAR2(64)`	Audit trail for which the last archive timestamp applies: `OS AUDIT TRAIL` and `UNIFIED AUDIT TRAIL`
`LAST_ARCHIVE_TS`	`TIMESTAMP(6) WITH TIME ZONE`	Timestamp of the last audit file that has been archived
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always `0`.

See Also:

Oracle Automatic Storage Management Administrator's Guide for additional information about using views to display Oracle ASM information

8.55 V$ASM_CLIENT

In an Oracle Automatic Storage Management (Oracle ASM) instance, `V$ASM_CLIENT` identifies databases using disk groups managed by the Oracle ASM instance.

In a database instance, `V$ASM_CLIENT` displays information about the Oracle ASM instance if the database has any open Oracle ASM files.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Number of the disk group being used by the database instance (foreign key to the V$ASM_DISKGROUP view). When a client is connected to an Oracle ASM instance, but is not currently using any disk groups, V$ASM_CLIENT.GROUP_NUMBER contains 0. When the Cluster Ready Services Daemon (CRSD) or Cluster Synchronization Services (OCSSD) connects to the Oracle ASM instance, this will represent the number of the disk group used for their OCR and voting files respectively.
INSTANCE_NAME	VARCHAR2(64)	Identifier for the database instance client When CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance, this will contain the node name where CRSD or OCSSD is running.
DB_NAME	VARCHAR2(8)	Unique database name of the database client instance When CRSD has opened the Oracle Cluster Registry (OCR) file in the disk group mounted by the Oracle ASM instance, DB_NAME will contain _OCR. When OCSSD has opened the voting file in the disk group mounted by the Oracle ASM instance, DB_NAME will contain _CSS.
CLUSTER_NAME	VARCHAR2(31)	Name of the cluster
STATUS	VARCHAR2(12)	Status of the client connection: • CONNECTED - Database instance client has an active connection to the Oracle ASM instance • DISCONNECTED - Database instance client normally ended its connection to the Oracle ASM instance • BROKEN - Connection with the database instance client terminated in a nonstandard way When CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance, it will report Connected as status.
SOFTWARE_VERSION	VARCHAR2(60)	Software version number of the database or Oracle ASM instance for the selected disk group connection
COMPATIBLE_VERSION	VARCHAR2(60)	Compatibility setting of the database or Oracle ASM instance for the selected disk group connection The value will be - when CRSD or OCSSD has opened its files in the disk group mounted by the Oracle ASM instance.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

Note:

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.56 V$ASM_DBCLONE_INFO

`V$ASM_DBCLONE_INFO` shows the relationship between the parent database and point-in-time database clones.

Column	Datatype	Description
`GROUP_NUMBER`	`NUMBER`	Disk group number
`DBCLONE_NAME`	`VARCHAR2(128)`	Name of the point-in-time database clone
`MIRRORCOPY_NAME`	`VARCHAR2(128)`	Name of the mirror copy associated with the database clone
`DBCLONE_STATUS`	`VARCHAR2(128)`	Status of the database clone. Possible values: • `PREPARING` — The process to prepare the database for splitting has started, but the database is not yet ready to be split. • `PREPARED` — The preparation process is complete and the database is ready to be split. • `SPLITTING` — The process to split the database files has started. • `SPLIT COMPLETED` — The database has been split. • `DROPPING` — The process to drop the prepared database clone has started. • `FAILED` — The clone operation has failed. The incomplete clone will be dropped.
`PARENT_DBNAME`	`VARCHAR2(128)`	Name of the parent database
`PARENT_FILEGROUP_NAME`	`VARCHAR2(128)`	Name of the file group associated with the parent database
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for information about point-in-time database clones

8.57 V$ASM_DISK

`V$ASM_DISK` displays one row for every disk discovered by the Oracle Automatic Storage Management (Oracle ASM) instance, including disks that are not part of any disk group.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Number of the disk group containing the disk (foreign key to the V$ASM_DISKGROUP view)
DISK_NUMBER	NUMBER	Number assigned to the disk within its disk group
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a disk group number in the high-order 8 bits and a disk number in the low-order 24 bits (for efficient access to the view)
INCARNATION	NUMBER	Incarnation number for the disk
MOUNT_STATUS	VARCHAR2(7)	Per-instance status of the disk relative to group mounts: • MISSING - Oracle ASM metadata indicates that the disk is known to be part of the Oracle ASM disk group but no disk in the storage system was found with the indicated name • CLOSED - Disk is present in the storage system but is not being accessed by Oracle ASM • OPENED - Disk is present in the storage system and is being accessed by Oracle ASM. This is the normal state for disks in a database instance which are part of a disk group being actively used by the instance. • CACHED - Disk is present in the storage system and is part of a disk group being accessed by the Oracle ASM instance. This is the normal state for disks in an Oracle ASM instance which are part of a mounted disk group. • IGNORED - Disk is present in the system but is ignored by Oracle ASM because of one of the following: – The disk is detected by the system library but is ignored because an Oracle ASM library discovered the same disk – Oracle ASM has determined that the membership claimed by the disk header is no longer valid • CLOSING - Oracle ASM is in the process of closing this disk
HEADER_STATUS	VARCHAR2(12)	Per-instance status of the disk as seen by discovery: • UNKNOWN - Oracle ASM disk header has not been read • CANDIDATE - Disk is not part of a disk group and may be added to a disk group with the ALTER DISKGROUP statement • INCOMPATIBLE - Version number in the disk header is not compatible with the Oracle ASM software version • PROVISIONED - Disk is not part of a disk group and may be added to a disk group with the ALTER DISKGROUP statement. The PROVISIONED header status is different from the CANDIDATE header status in that PROVISIONED implies that an additional platform-specific action has been taken by an administrator to make the disk available for Oracle ASM. • MEMBER - Disk is a member of an existing disk group. No attempt should be made to add the disk to a different disk group. The ALTER DISKGROUP statement will reject such an addition unless overridden with the FORCE option. • FORMER - Disk was once part of a disk group but has been dropped cleanly from the group. It may be added to a new disk group with the ALTER DISKGROUP statement. • CONFLICT - Oracle ASM disk was not mounted due to a conflict • FOREIGN - Disk contains data created by an Oracle product other than Oracle ASM. This includes data files, logfiles, and OCR disks.

Column	Datatype	Description
MODE_STATUS	VARCHAR2(7)	Global status about which kinds of I/O requests are allowed to the disk: • ONLINE - Disk is online and operating normally. Reads and writes are attempted when the disk is mounted. Reads are attempted as part of disk discovery. • OFFLINE - Disk is offline and access to data is not permitted. Reads and writes are not attempted. An offline disk remains logically part of its disk group. • SYNCING - Disk is offline for reads, but online for writes. Oracle ASM is resyncing stale data on the disk. See V$ASM_OPERATION to view resync progress.
STATE	VARCHAR2(8)	Global state of the disk with respect to the disk group: • UNKNOWN - Oracle ASM disk state is not known (typically the disk is not mounted) • NORMAL - Disk is online and operating normally • ADDING - Disk is being added to a disk group, and is pending validation by all instances that have the disk group mounted • DROPPING - Disk has been manually taken offline and space allocation or data access for the disk halts. Rebalancing will commence to relocate data off the disks to other disks in the disk group. Upon completion of the rebalance, the disk is expelled from the group. • HUNG - Disk drop operation cannot continue because there is insufficient space to relocate the data from the disk being dropped • FORCING - Disk is being removed from the disk group without attempting to offload its data. The data will be recovered from redundant copies, where possible.
REDUNDANCY	VARCHAR2(7)	Hardware redundancy of the disk: • UNKNOWN • UNPROT • MIRROR • PARITY **Note:** This column is valid only if an ASMLIB is present that supports returning hardware redundancy information. This column is not related to the redundancy of the disk group of which the disk is a member.
LIBRARY	VARCHAR2(64)	Name of the library that discovered the disk
OS_MB	NUMBER	Size of the disk (in megabytes) as reported by the host operating system
TOTAL_MB	NUMBER	Total capacity of the disk (in megabytes)
FREE_MB	NUMBER	Unused capacity of the disk (in megabytes)
HOT_USED_MB[1]	NUMBER	Number of used megabytes in the hot region
COLD_USED_MB[1]	NUMBER	Number of used megabytes in the cold region
NAME	VARCHAR2(30)	Name of the disk
FAILGROUP	VARCHAR2(30)	Name of the failure group containing the disk
LABEL	VARCHAR2(31)	Disk label portion of the name returned by discovery
PATH	VARCHAR2(256)	Operating system path name portion of the name returned by discovery
UDID	VARCHAR2(64)	Unique Device ID portion of the name returned by discovery
PRODUCT	VARCHAR2(32)	Name of the manufacturer and the name of the product. All disks with the same product id will have the same performance and reliability characteristics.

Column	Datatype	Description
CREATE_DATE	DATE	Date and time when the disk was added to the disk group
MOUNT_DATE	DATE	Date and time when the disk was mounted by the first instance
REPAIR_TIMER	NUMBER	Seconds remaining until the disk is automatically dropped (0 if not failed)
READS	NUMBER	Total number of I/O read requests for the disk
WRITES	NUMBER	Total number of I/O write requests for the disk
READ_ERRS	NUMBER	Total number of failed I/O read requests for the disk
WRITE_ERRS	NUMBER	Total number of failed I/O write requests for the disk
READ_TIMEOUT	NUMBER	Number of read I/Os that are timed out
WRITE_TIMEOUT	NUMBER	Number of write I/Os that are timed out
READ_TIME	NUMBER	Total I/O time (in seconds) for read requests for the disk if the TIMED_STATISTICS initialization parameter is set to true (0 if set to false)
WRITE_TIME	NUMBER	Total I/O time (in seconds) for write requests for the disk if the TIMED_STATISTICS initialization parameter is set to true (0 if set to false)
BYTES_READ	NUMBER	Total number of bytes read from the disk
BYTES_WRITTEN	NUMBER	Total number of bytes written to the disk
PREFERRED_READ	VARCHAR2(1)	Status of the preferred read failure group: • U - Disk group has no preferred read failure group • Y - Disk is a preferred read disk • N - Disk is not a preferred read disk For a disk group with one or more preferred read failure groups, if the disk is in one of the preferred read failure groups, the value of this column is Y; otherwise it is N.
HASH_VALUE	NUMBER	A unique hash value for an Oracle ASM disk, computed using the Oracle ASM disk name (as specified by NAME column in v$asm_disk) and the Oracle ASM disk group name (as specified by NAME column in v$asm_diskgroup).
HOT_READS[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_WRITES[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_BYTES_READ[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_BYTES_WRITTEN[1]	NUMBER	This column is not meaningful and its value is always 0
COLD_READS[1]	NUMBER	Number of reads from the disk
COLD_WRITES[1]	NUMBER	Number of writes to the disk
COLD_BYTES_READ[1]	NUMBER	Number of bytes read from the disk
COLD_BYTES_WRITTEN[1]	NUMBER	Number of bytes written to the disk
VOTING_FILE	VARCHAR2(1)	Indicates whether the disk contains a voting file (Y) or not (N)
SECTOR_SIZE	NUMBER	Physical block size (in bytes)
LOGICAL_SECTOR_SIZE	NUMBER	Shows the logical sector size value of the disk in bytes. This is the smallest possible I/O that can be done by the disk. If the value of the LOGICAL_SECTOR_SIZE column is 512, while the value in the SECTOR_SIZE column is 4096, then the disk supports 512 sector size emulation. This means the disk can be used for both 512 native and 4096 native disk groups.

Column	Datatype	Description
FAILGROUP_TYPE	VARCHAR2(7)	Type of the failure group: • REGULAR • QUORUM
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.
THIN_PROVISION_CAPABLE	VARCHAR2(1)	Indicates whether the disk supports Storage Thin Provisioning (Y) or not (N)
DATA_INTEGRITY_CAPABLE	VARCHAR2(1)	Indicates whether the disk supports the Data Integrity feature (Y) or not (N)
SITE_NAME	VARCHAR2(30)	The name of the site to which the specific disk belongs
SITE_GUID	VARCHAR2(33)	The GUID for the site to which the specific disk belongs
FAILGROUP_LABEL	VARCHAR2(30)	This is the suggested name for the failure group to which the disk belongs, as returned by discovery
SITE_LABEL	VARCHAR2(30)	This is the suggested name for the site to which the disk belongs, as returned by discovery
SITE_STATUS	VARCHAR2(11)	This column is populated only for disks in Oracle ASM extended disk groups. The site status is computed after every Partnership and Status Table (PST) refresh or when the PST is read from disks into memory. The possible states include: • UNKNOWN: This is the state before any checks have been performed. • UNAVAILABLE: This is the state when all the disks in the site are offline. • COMPROMISED: The state when enough disks or PST copies are offline, such that the site can no longer provide data availability. • AVAILABLE: The state when there is enough redundancy within the site to provide data availability in case another site becomes compromised or unavailable.

[1] Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the individual values for the HOT_USED_MB and COLD_USED_MB columns are not meaningful. However, the sum of the HOT_USED_MB and COLD_USED_MB values represents the total number of used megabytes on the disk. Also, the HOT_READS, HOT_WRITES, HOT_BYTES_READ, and HOT_BYTES_WRITTEN columns are no longer meaningful and always return 0, and the COLD_READS, COLD_WRITES, COLD_BYTES_READ, and COLD_BYTES_WRITTEN columns return statistics for the entire disk.

Note:

The GROUP_NUMBER and DISK_NUMBER columns will only be valid if the disk is part of a disk group which is currently mounted by the instance. Otherwise, GROUP_NUMBER will be 0, and DISK_NUMBER will be a unique value with respect to the other disks that also have a group number of 0.

> **Note:**
>
> In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

> **Note:**
>
> This view performs disk discovery every time it is queried. Because performing disk discovery is very resource intensive, Oracle recommends against using this view for monitoring scripts. Instead, use the less expensive view V$ASM_DISK_STAT.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.58 V$ASM_DISK_IOSTAT

`V$ASM_DISK_IOSTAT` displays information about disk I/O statistics for each Oracle Automatic Storage Management (Oracle ASM) client.

If this view is queried from the database instance, only the rows for that instance are shown.

Column	Datatype	Description
INSTNAME	VARCHAR2(64)	Identifier for the DB/ADVM instance client
DBNAME	VARCHAR2(8)	Unique database name (DB_UNIQUE_NAME)
CLUSTERNAME	VARCHAR2(31)	Name of the cluster
GROUP_NUMBER	NUMBER	Number of the disk group containing the disk
DISK_NUMBER	NUMBER	Number assigned to the disk within its disk group
FAILGROUP	VARCHAR2(30)	Name of the failure group to which the disk belongs
SITE_NAME	VARCHAR2(30)	This is the name of the site to which the disk belongs
READS	NUMBER	Total number of I/O read requests for the disk
WRITES	NUMBER	Total number of I/O write requests for the disk
READ_ERRS	NUMBER	Total number of failed I/O read requests for the disk
WRITE_ERRS	NUMBER	Total number of failed I/O write requests for the disk
READ_TIMEOUT	NUMBER	Number of read I/Os that are timed out
WRITE_TIMEOUT	NUMBER	Number of write I/Os that are timed out
READ_TIME	NUMBER	Total I/O time (in seconds) for read requests for the disk if the TIMED_STATISTICS initialization parameter is set to TRUE (0 if set to FALSE).
WRITE_TIME	NUMBER	Total I/O time (in seconds) for write requests for the disk if the TIMED_STATISTICS initialization parameter is set to TRUE (0 if set to FALSE)

Column	Datatype	Description
BYTES_READ	NUMBER	Total number of bytes read from the disk
BYTES_WRITTEN	NUMBER	Total number of bytes written from the disk
HOT_READS[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_WRITES[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_BYTES_READ[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_BYTES_WRITTEN[1]	NUMBER	This column is not meaningful and its value is always 0
COLD_READS[1]	NUMBER	Number of reads from the disk
COLD_WRITES[1]	NUMBER	Number of writes to the disk
COLD_BYTES_READ[1]	NUMBER	Number of bytes read from the disk
COLD_BYTES_WRITTEN[1]	NUMBER	Number of bytes written to the disk
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

1 Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the HOT_READS, HOT_WRITES, HOT_BYTES_READ, and HOT_BYTES_WRITTEN columns are no longer meaningful and always return 0, and the COLD_READS, COLD_WRITES, COLD_BYTES_READ, and COLD_BYTES_WRITTEN columns return statistics for the entire disk.

Note:

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

See Also:

Oracle Automatic Storage Management Administrator's Guide for additional information about using views to display Oracle ASM information

8.59 V$ASM_DISK_STAT

V$ASM_DISK_STAT displays performance statistics in the same way that V$ASM_DISK does, but without performing discovery of new disks

This results in a less expensive operation. However, since discovery is not performed, the output of this view does not include any data about disks that are new to the system.

The columns for V$ASM_DISK_STAT are the same as those for V$ASM_DISK.

> **Note:**
>
> In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

> **See Also:**
>
> "V$ASM_DISK"

8.60 V$ASM_DISKGROUP

V$ASM_DISKGROUP displays one row for every Oracle Automatic Storage Management (Oracle ASM) disk group discovered by the Oracle ASM instance on the node.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Cluster-wide number assigned to the disk group (primary key)
NAME	VARCHAR2(30)	Name of the disk group
SECTOR_SIZE	NUMBER	Physical block size (in bytes)
LOGICAL_SECTOR_SIZE	NUMBER	This column represents the logical sector size value of the disk group in bytes. This is the smallest possible I/O that can be done in this disk group. Any I/O smaller than the logical sector size will cause an assert in the code. If the value of the LOGICAL_SECTOR_SIZE column is 512, while the value in the SECTOR_SIZE column is 4096, then the disk group supports 512 sector size emulation. This means that I/O operations can be both 512 or 4096 aligned. For example, this means that you can have redo log files with a file block size of 512 bytes in this disk group that can be both read and written to, as well as create new redo log files with a file block size of 4096 bytes.
BLOCK_SIZE	NUMBER	Oracle ASM metadata block size (in bytes)
ALLOCATION_UNIT_SIZE	NUMBER	Size of the allocation unit (in bytes)
STATE	VARCHAR2(11)	State of the disk group relative to the instance: • BROKEN - Database instance lost connectivity to the Oracle ASM instance that mounted the disk group • CONNECTED - Disk group is in use by the database instance • DISMOUNTED - Disk group was cleanly dismounted by the Oracle ASM instance following a successful mount • MOUNTED - Instance is successfully serving the disk group to its database clients • QUIESCING - CRSCTL utility attempted to dismount a disk group that contains the Oracle Cluster Registry (OCR). The disk group cannot be dismounted until Cluster Ready Services (CRS) exits, because the disk group contains the OCR. • RESTRICTED - A disk group mounted in this mode can only be seen by this Oracle ASM instance for maintenance purposes • UNKNOWN - Oracle ASM instance has never attempted to mount the disk group

Column	Datatype	Description
TYPE	VARCHAR2(6)	Redundancy type for the disk group: • EXTEND • EXTERN • FLEX • HIGH • NORMAL
TOTAL_MB	NUMBER	Total capacity of the disk group, excluding that of quorum disks (in megabytes)
FREE_MB	NUMBER	Unused capacity of the disk group (in megabytes)
HOT_USED_MB[1]	NUMBER	Number of used megabytes in the hot region
COLD_USED_MB[1]	NUMBER	Number of used megabytes in the cold region
REQUIRED_MIRROR_FREE_MB	NUMBER	Amount of space that is required to be available in a given disk group in order to restore redundancy after one or more disk failures. The amount of space displayed in this column takes mirroring effects into account.
USABLE_FILE_MB	NUMBER	Amount of free space that can be safely utilized taking mirroring into account and yet be able to restore redundancy after a disk failure
OFFLINE_DISKS	NUMBER	Number of disks in the disk group that are currently offline
COMPATIBILITY	VARCHAR2(60)	Minimum software version required for an Oracle ASM instance to mount this disk group
DATABASE_COMPATIBILITY	VARCHAR2(60)	Minimum software version required for a database instance to use files in this disk group
VOTING_FILES	VARCHAR2(1)	Indicates whether the disk contains voting files (Y) or not (N)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

[1] Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the individual values for the HOT_USED_MB and COLD_USED_MB columns are not meaningful. However, the sum of the HOT_USED_MB and COLD_USED_MB values represents the total number of used megabytes in the disk group.

> **Note:**
>
> The GROUP_NUMBER, TOTAL_MB, and FREE_MB columns are only meaningful if the disk group is mounted by the instance. Otherwise, their values will be 0.

> **Note:**
>
> This view performs disk discovery every time it is queried. Because performing disk discovery is very resource intensive, Oracle recommends against using this view for monitoring scripts. Instead, use the less expensive view V$ASM_DISKGROUP_STAT.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.61 V$ASM_DISKGROUP_STAT

`V$ASM_DISKGROUP_STAT` displays performance statistics in the same way that `V$ASM_DISKGROUP` does, but without performing discovery of new disk groups.

This results in a less expensive operation. However, since discovery is not performed, the output of this view does not include any data about disk groups that are new to the system.

The columns for `V$ASM_DISKGROUP_STAT` are the same as those for `V$ASM_DISKGROUP`.

> **See Also:**
>
> "V$ASM_DISKGROUP"

8.62 V$ASM_ESTIMATE

`V$ASM_ESTIMATE` displays an estimate of the work involved in execution plans for Oracle Automatic Storage Management (Oracle ASM) disk group rebalance and resync operations.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Oracle ASM disk group number
STATEMENT_ID	VARCHAR2(30)	Value of the optional STATEMENT_ID parameter specified in the EXPLAIN WORK statement
TIMESTAMP	DATE	Date and time when the EXPLAIN WORK statement was issued
EST_WORK	NUMBER	Estimated number of Allocation Units that have to be moved by the operation

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.63 V$ASM_FILE

In an Oracle Automatic Storage Management (Oracle ASM) instance, V$ASM_FILE displays one row for each file in each disk group mounted by the Oracle ASM instance.

For example, if there are three disk groups and five files in each, fifteen rows are displayed (unless the query is qualified with a WHERE clause).

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Number of the disk group containing the file (composite primary key)
FILE_NUMBER	NUMBER	Number of the file within the disk group (composite primary key)
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a disk group number in the high-order 8 bits and a file number in the low-order 24 bits (for efficient access to the view)
INCARNATION	NUMBER	Incarnation number for the file (composite primary key)
BLOCK_SIZE	NUMBER	Block size of the file (in bytes)
BLOCKS	NUMBER	Number of blocks in the file
BYTES	NUMBER	Number of bytes in the file
SPACE	NUMBER	Number of bytes allocated to the file

Column	Datatype	Description
TYPE	VARCHAR2(64)	Type of the file. Possible values are as follows: • ARCHIVELOG • AUTOBACKUP • BACKUPSET • CHANGETRACKING • CONTROLFILE • DATAFILE • DATAGUARDCONFIG • DUMPSET • FLASHBACK • ONLINELOG • PARAMETERFILE • TEMPFILE • XTRANSPORT
REDUNDANCY	VARCHAR2(6)	Redundancy of the file: • HIGH • MIRROR • PARITY • UNPROT
STRIPED	VARCHAR2(6)	Indicates how the file is striped: • FINE • COARSE
CREATION_DATE	DATE	Date on which the file was created
MODIFICATION_DATE	DATE	Date of the last open/close for writing, rounded back to the nearest hour
REDUNDANCY_LOWERED	VARCHAR2(1)	Indicates whether a file has lower redundancy than what was expected (Y) or not (N). Redundancy is said to have been lowered for a file when one or more data extents in that file are not mirrored at the level specified by the administrator. In case of unprotected files, data extents could be missing altogether. Another possible value for this column is (U), which means that it is unknown. This column is deprecated, and it always displays a value of U.
PERMISSIONS	VARCHAR2(16)	Access permissions of the file, in order of user, group, and other
USER_NUMBER	NUMBER	User number
USER_INCARNATION	NUMBER	Incarnation number of the user
USERGROUP_NUMBER	NUMBER	User group number
USERGROUP_INCARNATION	NUMBER	Incarnation number of the user group
PRIMARY_REGION[1]	VARCHAR2(4)	Region used for allocating primary extents: • HOT • COLD
MIRROR_REGION[1]	VARCHAR2(4)	Region for allocating mirrored extents: • HOT • COLD
HOT_READS[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_WRITES[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_BYTES_READ[1]	NUMBER	This column is not meaningful and its value is always 0
HOT_BYTES_WRITTEN[1]	NUMBER	This column is not meaningful and its value is always 0
COLD_READS[1]	NUMBER	Number of reads from the file

Column	Datatype	Description
COLD_WRITES[1]	NUMBER	Number of writes to the file
COLD_BYTES_READ[1]	NUMBER	Number of bytes read from the file
COLD_BYTES_WRITTEN[1]	NUMBER	Number of bytes written to the file
FILEGROUP_NUMBER	NUMBER	Shows the number of the associated file group
FILEGROUP_INCARNATION	NUMBER	The incarnation number for the file group the file belongs to in a flex redundancy disk group
REMIRROR	VARCHAR2(1)	This column has the value Y when rebalance is needed for the file after a redundancy change in a flex redundancy disk group, N otherwise. A redundancy change can occur when the file is moved to a file group with a different redundancy, or when the redundancy property of the file group is changed. After rebalance is run for the file, the value changes to N.
PARENT_FILNUM	NUMBER	For internal use only.
PARENT_FILNUMINC	NUMBER	For internal use only.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

1 Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the PRIMARY_REGION and MIRROR_REGION columns are no longer meaningful. Also, the HOT_READS, HOT_WRITES, HOT_BYTES_READ, and HOT_BYTES_WRITTEN columns are no longer meaningful and always return 0, and the COLD_READS, COLD_WRITES, COLD_BYTES_READ, and COLD_BYTES_WRITTEN columns return statistics for the entire file.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.64 V$ASM_FILEGROUP

V$ASM_FILEGROUP describes the properties of the Oracle Automatic Storage Management (Oracle ASM) File Groups.

In both Oracle ASM and Oracle Database instances, V$ASM_FILEGROUP displays one row for every File Group present in every Disk Group mounted by the Oracle ASM instance. File Groups are only displayed for Disk Groups where COMPATIBLE.ASM is set to 12.2 or higher.

> **Note:**
>
> There will not be an entry for the default File Group.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Number of the Disk Group in which this File Group exists (composite primary key)
FILEGROUP_NUMBER	NUMBER	Number associated to the File Group within its Disk Group (composite primary key)
INCARNATION	NUMBER	Incarnation number for the File Group (composite primary key)
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a Disk Group number in the high-order 8 bits and a File Group number in the low-order 24 bits (for efficient access to the view)
NAME	VARCHAR2(128)	Name of the File Group
CLIENT_TYPE	NUMBER	Type of client that the File Group is associated to: • DATABASE • CLUSTER • VOLUME
CLIENT_NAME	VARCHAR2(128)	Name of the client (database, PDB, CDB, cluster, or volume) that the File Group is associated to
GUID	VARCHAR2(32)	If the CLIENT_TYPE is DATABASE: • In a CDB environment, it is the GUID of the PDB or CDB associated with the file group, the same value as the GUID in V$CONTAINERS. • In a non-CDB environment it is the database identifier (DBID) of the database associated with that file group. If the CLIENT_TYPE is VOLUME or CLUSTER, the GUID column is empty.
QUOTAGROUP_NUMBER	NUMBER	Number of the quota group associated with this File Group (foreign key to the V$ASM_QUOTAGROUP view)
QUOTAGROUP_INCARNATION	NUMBER	Incarnation number for the Quota Group
USED_QUOTA_MB	NUMBER	Used quota of the quota group in GB
USER_NUMBER	NUMBER	User number
USER_INCARNATION	NUMBER	Incarnation number of the user
USERGROUP_NUMBER	NUMBER	User group number
USERGROUP_INCARNATION	NUMBER	Incarnation number of the user group
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$ASM_FILEGROUP_PROPERTY"

8.65 V$ASM_FILEGROUP_FILE

V$ASM_FILEGROUP_FILE lists all the Oracle Automatic Storage Management (Oracle ASM) files associated with each File Group.

In both Oracle ASM and Oracle Database instances, V$ASM_FILEGROUP_FILE will display one row for every file associated with a File Group contained in every Disk Group mounted by the instance.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Number of the Disk Group in which this File Group exists
FILEGROUP_NUMBER	NUMBER	Number associated to the File Group within its Disk Group
FILEGROUP_INCARN	NUMBER	Incarnation number for the File Group
FILE_NUMBER	NUMBER	Number associated to the ASM File (same file number as in V$ASM_FILE)
INCARNATION	NUMBER	Incarnation number for the ASM File
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a Disk Group number in the high-order 8 bits and a File number in the low-order 24 bits (for efficient access to the view)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> - "V$ASM_FILE"
> - "V$ASM_FILEGROUP"

8.66 V$ASM_FILEGROUP_PROPERTY

V$ASM_FILEGROUP_PROPERTY describes all the properties of every Oracle Automatic Storage Management (Oracle ASM) File Group.

In both Oracle ASM and Oracle Database instances, V$ASM_FILEGROUP_PROPERTY will display one row for every property of every file type of every File Group contained in every Disk Group mounted by the instance.

File Group properties are only displayed for File Groups on Disk Groups where COMPATIBLE.ASM is set to 12.2 or higher.

> **Note:**
>
> There will not be an entry for the default File Group.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Number of the Disk Group in which this File Group exists (composite primary key)
FILEGROUP_NUMBER	NUMBER	Number associated to the File Group within its Disk Group (composite primary key)
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a Disk Group number in the high-order 8 bits and a Property Number in the low-order 24 bits (for efficient access to the view)
PROPERTY_INDEX	NUMBER	Number of this property in the Disk Group for the File Group (composite primary key)
INCARNATION	NUMBER	Incarnation number for this property (composite primary key)
FILE_TYPE	VARCHAR2(30)	Type of file the property will be applied to: • ARCHIVELOG • ASMPARAMETERFILE • ASMVDRL • ASMVOL • AUDIT_SPILLFILES • AUTOBACKUP • BACKUPSET • CHANGETRACKING • CONTAINER • CONTROLFILE • DATAFILE • DATAGUARDCONFIG • DUMPSET • FLASHBACK • FLASHFILE • KEY_STORE • OCRBACKUP • OCRFILE • ONLINELOG • PARAMETERFILE • TEMPFILE • VOTINGFILE • XTRANSPORT The value can be NULL for properties with a File Group granularity.

Column	Datatype	Description
NAME	VARCHAR2(64)	Full name of the property. Possible values: • COMPATIBLE.CLIENT • DBCLONE_STATUS • OWNER • PARENT_FILEGROUP_NUMBER • POWER_LIMIT • PRIORITY • REDUNDANCY • STRIPING • USER_GROUP
VALUE	VARCHAR2(256)	Value of the property See *Oracle Automatic Storage Management Administrator's Guide* for information about file group property values.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$ASM_FILEGROUP"

8.67 V$ASM_FILESYSTEM

V$ASM_FILESYSTEM displays information for every mounted Oracle ACFS.

Column	Datatype	Description
FS_NAME	VARCHAR2(1024)	Mount point (primary key)
AVAILABLE_TIME	DATE	Mount time or the time that the file system became available again; NULL if the file system is not available
BLOCK_SIZE	NUMBER	File system block size (in kilobytes)
STATE	VARCHAR2(13)	File system status:: • NOT AVAILABLE • AVAILABLE • OFFLINE - Either the Oracle ASM instance is down, the disk group has been forced dismounted, or less commonly, a metadata I/O failure occurred or serious metadata corruption was detected. In the case of a metadata I/O failure, the file system is also marked as corrupt. An offline file system can only be unmounted; other attempts at access result in errors.
CORRUPT	VARCHAR2(5)	Indicates whether the file system needs the fixer (fsck, acfschkdsk) to be run (TRUE) or not (FALSE)

Column	Datatype	Description
NUM_VOL	NUMBER	Number of volumes in the file system
TOTAL_SIZE	NUMBER	Total capacity of the file system (in megabytes)
TOTAL_FREE	NUMBER	Total free space in the file system (in megabytes)
TOTAL_SNAP_SPACE_USAGE	NUMBER	Total space used by snapshots (in megabytes)
REPLSTATE	VARCHAR2(7)	Replication status: • NO REPL - Replication is not initialized • PRIMARY - File system is initialized for replication as a primary • STANDBY - File system is initialized for replication as a standby
RESIZE_STATE	VARCHAR2(5)	Possible resize states: • NONE - AutoResize not configured • AUTO - Equivalent to AutoResizeEnabled flag • ERROR - Equivalent to AutoResizeError flag
COMPRESS_STATE	VARCHAR2(7)	Compression status of the file system. Possible values: • DISABLED - Compression is not active • ENABLED - Compression is active • PARTIAL - Compression is disabled, but the file system may contain compressed files
FROZEN_STATE	VARCHAR2(5)	Indicates whether the filesystem is frozen (TRUE) or not (FALSE)
ACFS_COMPATIBILITY	VARCHAR2(60)	Oracle Release streams where Oracle ACFS has shipped
METADATA_BLOCK_SIZE	NUMBER	Metadata block size of the file system. Possible values: • 512 • 4096
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.68 V$ASM_OPERATION

In an Oracle Automatic Storage Management (Oracle ASM) instance, V$ASM_OPERATION displays one row for every active Oracle ASM long running operation executing in the Oracle ASM instance.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Disk group number (primary key). This is the foreign key to the V$ASM_DISKGROUP view.
OPERATION	CHAR(5)	Type of the operation: • REBAL - Rebalance pending for this group. The disk group is rebalancing. • REMIRROR - Remirror is pending for this group. • SCRUB - Scrubbing is pending for this group. Starting with Oracle Database 12*c*, new queries should use the PASS column instead of this column.
PASS	VARCHAR2(9)	Type of the operation: • COMPACT - Oracle ASM is moving user data closer together, which improves performance by reducing seek distance • PREPARE - Completing work corresponding to the prepare SQL operation. This phase is enabled only for FLEX or EXTENDED redundancy disk groups and COMPATIBLE.ASM must be set to 12.2 or higher. • REBALANCE - Rebalance pending for this group. The disk group is rebalancing. • REBUILD - Restoring the redundancy of forcing disks. Forcing disks are those disks that have been dropped with the FORCE option. • RESILVER - This value appears in Oracle Exadata environments when WriteBack FlashCache is enabled • RESYNC - Resync operation in progress to bring one or more Oracle ASM disks online • SCRUBBING - The disk group is scrubbing. Starting with Oracle Database 12*c*, new queries should use this column instead of the OPERATION column.
STATE	VARCHAR2(4)	State of the operation: • WAIT - No operations running for the group • EST - An estimate is computed on the amount of work to be done for the rebalance • RUN - Operation running for the group • REAP - Operation is being run down • DONE - Displayed for a pass that is complete • ERRS - Operation halted by errors Estimates are computed in parallel in the background while the work is being executed. Thus, the transition from the EST to the RUN state may be extremely fast.
POWER	NUMBER	Power requested for the operation as specified by the ASM_POWER_LIMIT initialization parameter or command syntax. Or, power requested for the operation as specified by the power option of the scrubbing SQL syntax.
ACTUAL	NUMBER	Power allocated to the operation
SOFAR	NUMBER	Number of Allocation Units that are being moved per minute by the operation. Or, the number of Allocation Units that have been scrubbed so far.
EST_WORK	NUMBER	Estimated number of Allocation Units that have to be moved by the operation. Or, the estimated number of Allocation Units that have to be scrubbed by the scrubbing operation.
EST_RATE	NUMBER	Estimated number of Allocation Units that are being moved per minute by the operation

Column	Datatype	Description
EST_MINUTES	NUMBER	Estimated amount of time (in minutes) that the remainder of the operation is expected to take
ERROR_CODE	VARCHAR2(44)	Oracle external error code; NULL if no error
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.69 V$ASM_QUOTAGROUP

V$ASM_QUOTAGROUP displays one row for every Oracle Automatic Storage Management (Oracle ASM) quota group discovered by the Oracle ASM instance on the node.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Number of the disk group containing the quota group (composite primary key)
QUOTAGROUP_NUMBER	NUMBER	Number of the quota group within the disk group (composite primary key)
INCARNATION	NUMBER	Incarnation of the quota group (composite primary key)
NAME	VARCHAR2(30)	Name of the quota group
USED_QUOTA_MB	NUMBER	Used quota of the quota group in GB
QUOTA_LIMIT_MB	NUMBER	Quota limit (capacity) of the quota group in GB
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.70 V$ASM_TEMPLATE

In an Oracle Automatic Storage Management (Oracle ASM) instance, V$ASM_TEMPLATE displays one row for every template present in every disk group mounted by the Oracle ASM instance.

In a database instance, V$ASM_TEMPLATE displays one row for every template present in every disk group mounted by the Oracle ASM instance with which the database instance communicates.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Owning disk group number (foreign key to the V$ASM_DISKGROUP view)
ENTRY_NUMBER	NUMBER	Template number (primary key)
REDUNDANCY	VARCHAR2(6)	Redundancy of the template: • HIGH • MIRROR • PARITY • UNPROT
STRIPE	VARCHAR2(6)	Indicates how the template is striped: • FINE • COARSE
SYSTEM	VARCHAR2(1)	Indicates whether the template is a system template (Y) or not (N)
NAME	VARCHAR2(30)	Name of the template
PRIMARY_REGION[1]	VARCHAR2(4)	Region used for allocating primary extents: • HOT • COLD
MIRROR_REGION[1]	VARCHAR2(4)	Region for allocating mirrored extents: • HOT • COLD
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

1 Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the PRIMARY_REGION and MIRROR_REGION columns are no longer meaningful.

> **Note:**
>
> In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.71 V$ASM_USER

V$ASM_USER displays the effective operating system user names of connected database instances and of file owners.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Oracle ASM disk group number
USER_NUMBER	NUMBER	Oracle ASM internal unique user number
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a disk group number in the high-order 8 bits and a user number in the low-order 24 bits (for efficient access to the view)
INCARNATION	NUMBER	Incarnation number of the user
CLUSTER_ID	VARCHAR2(128)	Oracle ASM cluster ID. The CLUSTER_ID and OS_NAME pair can be used to uniquely identify a user.
OS_ID	VARCHAR2(128)	Operating system user ID
OS_NAME	VARCHAR2(33)	Operating system user name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

> **Note:**
>
> In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.72 V$ASM_USERGROUP

V$ASM_USERGROUP displays the creator for each Oracle Automatic Storage Management (Oracle ASM) File Access Control group.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Oracle ASM disk group number
USERGROUP_NUMBER	NUMBER	Number of the user group
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a disk group number in the high-order 8 bits and a user group number in the low-order 24 bits (for efficient access to the view)
INCARNATION	NUMBER	Incarnation number of the user group
OWNER_NUMBER	NUMBER	User group owner identified by a unique number
OWNER_INCARNATION	NUMBER	Incarnation number of the user group owner
NAME	VARCHAR2(64)	User group name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

Note:

In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

Oracle Automatic Storage Management Administrator's Guide for additional information about using views to display Oracle ASM information

8.73 V$ASM_USERGROUP_MEMBER

V$ASM_USERGROUP_MEMBER displays the members for each Oracle Automatic Storage Management (Oracle ASM) File Access Control group.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Oracle ASM disk group number
MEMBER_NUMBER	NUMBER	Number of the user group member
MEMBER_INCARNATION	NUMBER	Incarnation number of the user group member
USERGROUP_NUMBER	NUMBER	User group number
USERGROUP_INCARNATION	NUMBER	Incarnation number of the user group

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

> **Note:**
>
> In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.74 V$ASM_VOLUME

In an Oracle Automatic Storage Management (Oracle ASM) instance, V$ASM_VOLUME displays information about each Oracle ADVM volume.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Cluster-wide number assigned to the disk group (composite primary key)
VOLUME_NAME	VARCHAR2(30)	Name of the volume
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a disk group number in the high-order 8 bits and a volume number in the low-order 24 bits (for efficient access to the view)
SIZE_MB	NUMBER	Size of the volume (in megabytes)
VOLUME_NUMBER	NUMBER	Number of the Volume within the disk group (composite primary key)
REDUNDANCY	VARCHAR2(6)	Redundancy type for the volume: • UNPROT • HIGH • MIRROR
STRIPE_COLUMNS	NUMBER	Number of columns in a stripe set
STRIPE_WIDTH_K	NUMBER	Stripe width of the volume (in kilobytes)
STATE	VARCHAR2(8)	Indicates whether the volume is enabled (ENABLED), disabled (DISABLED), or remote (REMOTE)
FILE_NUMBER	NUMBER	Volume file number

Column	Datatype	Description
INCARNATION	NUMBER	Volume file incarnation number
DRL_FILE_NUMBER	NUMBER	Volume Dirty Region Logging (DRL) file used for mirrored volumes
RESIZE_UNIT_MB	NUMBER	Volume allocation unit (in megabytes) that a volume can be created
USAGE	VARCHAR2(30)	Optional usage string for the volume
VOLUME_DEVICE	VARCHAR2(256)	OSD path for the volume device
MOUNTPATH	VARCHAR2(1024)	Optional mount path string for the volume
PRIMARY_REGION[1]	VARCHAR2(4)	Region used for allocating primary extents: • HOT • COLD
MIRROR_REGION[1]	VARCHAR2(4)	Region used for allocating mirrored extents: • HOT • COLD
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

1 Intelligent Data Placement is desupported starting with Oracle Database 21c. As a result, the PRIMARY_REGION and MIRROR_REGION columns are no longer meaningful.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.75 V$ASM_VOLUME_STAT

In an Oracle Automatic Storage Management (Oracle ASM) instance, V$ASM_VOLUME_STAT displays information about statistics for each Oracle ADVM volume.

Column	Datatype	Description
GROUP_NUMBER	NUMBER	Cluster-wide number assigned to the disk group (composite primary key)
VOLUME_NAME	VARCHAR2(30)	Name of the volume
COMPOUND_INDEX	NUMBER	A 32-bit number consisting of a disk group number in the high-order 8 bits and a volume number in the low-order 24 bits (for efficient access to the view)
VOLUME_NUMBER	NUMBER	Number of the Volume within the disk group (composite primary key)
READS	NUMBER	Total number of read requests for this volume
WRITES	NUMBER	Total number of write requests for this volume

Column	Datatype	Description
READ_ERRS	NUMBER	Total number of failed read I/O operations for this volume
WRITE_ERRS	NUMBER	Total number of failed write I/O operations for this volume
READ_TIME	NUMBER	Total I/O time (in seconds) for read requests for this volume
WRITE_TIME	NUMBER	Total I/O time (in seconds) for write requests for this volume
BYTES_READ	NUMBER	Total number of bytes read for this volume
BYTES_WRITTEN	NUMBER	Total number of bytes written for this volume
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data For this view, the value is always 0.

> **See Also:**
>
> *Oracle Automatic Storage Management Administrator's Guide* for additional information about using views to display Oracle ASM information

8.76 V$AUTHPOOL_STATS

V$AUTHPOOL_STATS displays statistics for the authentication pool. This pool authenticates user connections when client applications connect to Database Resident Connection Pooling (DRCP).

Column	Datatype	Description
NUM_SRVS	NUMBER	Total number of servers in the authentication pool
NUM_BUSY	NUMBER	Number of busy servers in the authentication pool
NUM_FREE	NUMBER	Number of free servers in the authentication pool
NUM_WAITERS	NUMBER	Number of connections waiting for a server in the authentication pool to become available
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.77 V$AUTO_IM_FEATURES

V$AUTO_IM_FEATURES describes the In-Memory Column Store performance features that are optimized by Automatic In-Memory (AIM).

Column	Datatype	Description
FEATURE_ID	NUMBER	Unique feature ID
DESCRIPTION	VARCHAR2(64)	Feature description. Possible values: • Autonomous Bloom Filter Optimization • Autonomous Join Groups • Autonomous Optimized Arithmetic • Autonomous Vector Optimization
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

8.78 V$AW_AGGREGATE_OP

V$AW_AGGREGATE_OP displays the aggregation operators available in analytic workspaces. You can use this view in an application to provide a list of choices.

Column	Datatype	Description
NAME	VARCHAR2(14)	Keyword for the aggregation operator
LONGNAME	VARCHAR2(30)	Descriptive name for the operator
DEFAULT_WEIGHT	NUMBER	Default weight factor for weighted operators
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.79 V$AW_ALLOCATE_OP

V$AW_ALLOCATE_OP displays the allocation operators available in analytic workspaces. You can use this view in an application to provide a list of choices.

Column	Datatype	Description
NAME	VARCHAR2(14)	Keyword for the allocation operator
LONGNAME	VARCHAR2(30)	Descriptive name for the operator
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.80 V$AW_CALC

V$AW_CALC reports on the effectiveness of various caches used by Oracle OLAP during dynamic aggregation.

Column	Datatype	Description
SESSION_ID	NUMBER	A unique numeric identifier for the session.
AGGREGATE_CACHE_HITS	NUMBER	The number of times a dimension member is found in the aggregate cache (a hit). The number of hits for run-time aggregation can be increased by fetching data across the dense dimension
AGGREGATE_CACHE_MISSES	NUMBER	The number of times a dimension member is not found in the aggregate cache and must be read from disk (a miss).
SESSION_CACHE_HITS	NUMBER	The number of times the data is found in the session cache (a hit).
SESSION_CACHE_MISSES	NUMBER	The number of times the data is not found in the session cache (a miss).
POOL_HITS	NUMBER	The number of times the data is found in a page in the OLAP page pool (a hit).
POOL_MISSES	NUMBER	The number of times the data is not found in the OLAP page pool (a miss).
POOL_NEW_PAGES	NUMBER	The number of newly created pages in the OLAP page pool that have not yet been written to the workspace LOB.
POOL_RECLAIMED_PAGES	NUMBER	The number of previously unused pages that have been recycled with new data.
CACHE_WRITES	NUMBER	The number of times the data from the OLAP page pool has been written to the database cache.
POOL_SIZE	NUMBER	The number of kilobytes in the OLAP page pool.
CURR_DML_COMMAND	VARCHAR2(64)	The command currently being executed.
PREV_DML_COMMAND	VARCHAR2(64)	The command most recently completed.

Column	Datatype	Description
AGGR_FUNC_LOGICAL_NA	NUMBER	The number of times the aggregation engine returns a logical NA because the AGGINDEX option is on and the composite tuple does not exist.
AGGR_FUNC_PRECOMPUTE	NUMBER	The number of times the aggregation engine finds a value in a position that it was called to calculate.
AGGR_FUNC_CALCS	NUMBER	The number of times the aggregation engine calculates a parent value based on the values of its children.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.81 V$AW_LONGOPS

V$AW_LONGOPS displays status information about active SQL cursors initiated in an analytic workspace.

Column	Datatype	Description
SESSION_ID	NUMBER	Identifier for the session in which the fetch is executing. This table can be joined with V$SESSION to obtain the user name.
CURSOR_NAME	VARCHAR2(64)	Name assigned to the cursor
COMMAND	VARCHAR2(17)	Command that is actively fetching data from relational tables: • QUERY • FETCH • IMPORT • EXECUTE • UPDATE • SOLVE • CLEAR • LOAD CUBE • LOAD DIMENSION • DIMENSION COMPILE
STATUS	VARCHAR2(9)	Status of the current operation: • EXECUTING - Command has begun executing • FETCHING - Data is being fetched into the analytic workspace • FINISHED - Command has finished executing. This status appears very briefly before the record disappears from the table.
ROWS_PROCESSED	NUMBER	Number of rows already inserted, updated, or deleted
SEQ_NUMBER	NUMBER	Sequence number in the Cube Build log
SQL_ID	VARCHAR2(13)	SQL ID of the statement
TARGET	VARCHAR2(64)	Operated object name
TARGET_DESC	VARCHAR2(64)	A brief description of the operated object
START_TIME	DATE	Time the command started executing

Column	Datatype	Description
LAST_UPDATE_TIME	DATE	Last updated time
ELAPSED_SECONDS	NUMBER	Number of seconds between START_TIME and LAST_UPDATE_TIME
SOFAR	NUMBER	Number of units so far
TOTALWORK	NUMBER	Total number of units
UNITS	VARCHAR2(6)	Units description: • ROWS • NODES • VALUES
MESSAGE	VARCHAR2(512)	Message for the user
USERNAME	VARCHAR2(32)	User name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.82 V$AW_OLAP

V$AW_OLAP provides a record of active sessions and their use with analytic workspaces.

A row is generated whenever an analytic workspace is created or attached. The first row for a session is created when the first command is issued. It identifies the SYS.EXPRESS workspace, which is attached automatically to each session. Rows related to a particular analytic workspace are deleted when the workspace is detached from the session or the session ends.

Column	Datatype	Description
SESSION_ID	NUMBER	A unique numeric identifier for a session
AW_NUMBER	NUMBER	A unique numeric identifier for an analytic workspace. To get the name of the analytic workspace, join this column to the AW_NUMBER column of the USER_AWS view or to the AWSEQ# column of the AW$ table.
ATTACH_MODE	VARCHAR2(10)	READ ONLY or READ WRITE
GENERATION	NUMBER	The generation of an analytic workspace. Each UPDATE creates a new generation. Sessions attaching the same workspace between UPDATE commands share the same generation.
TEMP_SPACE_PAGES	NUMBER	The number of pages stored in temporary segments for the analytic workspace.
TEMP_SPACE_READS	NUMBER	The number of times data has been read from a temporary segment and not from the page pool.
LOB_READS	NUMBER	The number of times data has been read from the table where the analytic workspace is stored (the permanent LOB).
POOL_CHANGED_PAGES	NUMBER	The number of pages in the page pool that have been modified in this analytic workspace.
POOL_UNCHANGED_PAGES	NUMBER	The number of pages in the page pool that have not been modified in this analytic workspace.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.83 V$AW_SESSION_INFO

V$AW_SESSION_INFO provides information about each active session.

A transaction is a single exchange between a client session and Oracle OLAP. Multiple commands can execute within a single transaction.

Column	Datatype	Description
SESSION_ID	NUMBER	A unique numeric identifier for a session
CLIENT_TYPE	VARCHAR2(64)	OLAP
SESSION_STATE	VARCHAR2(64)	TRANSACTING, NOT_TRANSACTING, EXCEPTION_HANDLING, CONSTRUCTING, CONSTRUCTED, DECONSTRUCTING, or DECONSTRUCTED
SESSION_HANDLE	NUMBER	The session identifier
USERID	VARCHAR2(64)	The database user name under which the session opened
TOTAL_TRANSACTION	NUMBER	The total number of transactions executed within the session; this number provides a general indication of the level of activity in the session
TRANSACTION_TIME	NUMBER	The elapsed time in milliseconds of the mostly recently completed transaction
TOTAL_TRANSACTION_TIME	NUMBER	The total elapsed time in milliseconds in which transactions were being executed
AVERAGE_TRANSACTION_TIME	NUMBER	The average elapsed time in milliseconds to complete a transaction
TRANSACTION_CPU_TIME	NUMBER	The total CPU time in milliseconds used to complete the most recent transaction
TOTAL_TRANSACTION_CPU_TIME	NUMBER	The total CPU time used to execute all transactions in this session; this total does not include transactions that are currently in progress
AVERAGE_TRANSACTION_CPU_TIME	NUMBER	The average CPU time to complete a transaction; this average does not include transactions that are currently in progress
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.84 V$BACKUP

V$BACKUP displays the backup status of all online data files.

Column	Datatype	Description
FILE#	NUMBER	File identifier
STATUS	VARCHAR2(18)	File status: NOT ACTIVE, ACTIVE (backup in progress), OFFLINE NORMAL, or description of an error. NOT ACTIVE indicates that the file is not currently in backup mode (that is, an ALTER TABLESPACE ... BEGIN BACKUP or ALTER DATABASE BEGIN BACKUP statement has not been issued), whereas ACTIVE indicates that the file is currently in backup mode.
CHANGE#	NUMBER	System change number when backup started
TIME	DATE	Time the backup started
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.85 V$BACKUP_ARCHIVELOG_DETAILS

V$BACKUP_ARCHIVELOG_DETAILS contains information about all restorable archive logs.

It will include all archived logs backed up in a backup set or proxy copies.

Column	Datatype	Description
BTYPE	CHAR(9)	Backup type container, either BACKUPSET or PROXYCOPY
BTYPE_KEY	NUMBER	Unique identifier for the backup type. For BACKUPSET, it is BS_KEY.
SESSION_KEY	NUMBER	Session identifier
SESSION_RECID	NUMBER	Session recid
SESSION_STAMP	NUMBER	Session stamp
ID1	NUMBER	If BACKUPSET, it contains SET_STAMP If PROXYCOPY, it is RECID from the control file
ID2	NUMBER	If BACKUPSET, it contains SET_COUNT If PROXYCOPY, it is STAMP
THREAD#	NUMBER	Thread number
SEQUENCE#	NUMBER	Sequence number
RESETLOGS_CHANGE#	NUMBER	Resetlogs change SCN
RESETLOGS_TIME	DATE	Resetlogs change time
FIRST_CHANGE#	NUMBER	First change SCN
FIRST_TIME	DATE	First change time
NEXT_CHANGE#	NUMBER	Next change SCN

Column	Datatype	Description
NEXT_TIME	DATE	Next change time
FILESIZE	NUMBER	File size
COMPRESSION_RATIO	NUMBER	The ratio between the total blocks in the archive log and the blocks that RMAN backed up. This is *not* the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.
FILESIZE_DISPLAY	VARCHAR2(4000)	Same value as the FILESIZE column, but converted to a user-displayable format, for example *n*M, *n*G, *n*T, *n*P, and so on
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.86 V$BACKUP_ARCHIVELOG_SUMMARY

V$BACKUP_ARCHIVELOG_SUMMARY provides archive log summary information based on archive logs in the backup set or on proxy copies.

Column	Datatype	Description
NUM_FILES_BACKED	NUMBER	Number of files backed up
NUM_DISTINCT_FILES_BACKED	NUMBER	Number of distinct archive log files backed up
MIN_FIRST_CHANGE#	NUMBER	Lowest SCN range value
MAX_NEXT_CHANGE#	NUMBER	Highest SCN range value
MIN_FIRST_TIME	DATE	Lowest SCN range time
MAX_NEXT_TIME	DATE	Highest SCN range time
INPUT_BYTES	NUMBER	Total input bytes read
OUTPUT_BYTES	NUMBER	Output size of backups
COMPRESSION_RATIO	NUMBER	The ratio between the total blocks in the archive log and the blocks that RMAN backed up. This is *not* the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.
INPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for input bytes
OUTPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for output bytes
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.87 V$BACKUP_ASYNC_IO

V$BACKUP_ASYNC_IO displays performance information about ongoing and recently completed RMAN backups and restores.

For each backup, it contains one row for each input data file, one row for the aggregate total performance of all data files, and one row for the output backup piece. This data is not stored persistently, and is not preserved when the instance is re-started.

Column	Datatype	Description
SID	NUMBER	Oracle SID of the session doing the backup or restore
SERIAL	NUMBER	Use count for the SID doing the backup or restore
USE_COUNT	NUMBER	A counter that can be used to identify rows from different backup sets
RMAN_STATUS_RECID	NUMBER	Owning V$RMAN_STATUS record ID
RMAN_STATUS_STAMP	NUMBER	Owning V$RMAN_STATUS record stamp
DEVICE_TYPE	VARCHAR2(17)	Device type where the file is located
TYPE	VARCHAR2(9)	INPUT, OUTPUT, or AGGREGATE
STATUS	VARCHAR2(11)	NOT STARTED, IN PROGRESS, or FINISHED
FILENAME	VARCHAR2(513)	Name of the backup file being read or written
SET_COUNT	NUMBER	Set count of the backup set being read or written
SET_STAMP	NUMBER	Set stamp of the backup set being read or written
BUFFER_SIZE	NUMBER	Size of the buffers being used to read/write the file, in bytes
BUFFER_COUNT	NUMBER	Number of buffers being used to read/write the file
TOTAL_BYTES	NUMBER	Total number of bytes that will be read or written for the file, if known. If not known, this column will be null
OPEN_TIME	DATE	Time the file was opened. If TYPE='AGGREGATE', then this is the time that the first file in the aggregate was opened
CLOSE_TIME	DATE	Time the file was closed. If TYPE='AGGREGATE', then this is the time that the last file in the aggregate was closed
ELAPSED_TIME	NUMBER	Time, in hundredths of a second, that the file was open
MAXOPENFILES	NUMBER	Number of concurrently open DISK files. This value is only present in rows where TYPE='AGGREGATE'.
BYTES	NUMBER	Number of bytes read or written so far
EFFECTIVE_BYTES_PER_SECOND	NUMBER	I/O rate that was achieved with this device during this backup
IO_COUNT	NUMBER	Number of I/Os that were performed to this file
READY	NUMBER	Number of asynchronous requests for which a buffer was immediately ready for use
SHORT_WAITS	NUMBER	Number of times that a buffer was not immediately available, but a buffer became available after doing a nonblocking poll for I/O completion
SHORT_WAIT_TIME_TOTAL	NUMBER	Total time, in hundredths of a second, taken by nonblocking polls for I/O completion
SHORT_WAIT_TIME_MAX	NUMBER	Maximum time taken for a nonblocking poll for I/O completion, in hundredths of a second

Column	Datatype	Description
LONG_WAITS	NUMBER	The number of times that a buffer was not immediately available, and only became available after a blocking wait was issued
LONG_WAIT_TIME_TOTAL	NUMBER	The total time, in hundredths of a second, taken by blocking waits for I/O completion
LONG_WAIT_TIME_MAX	NUMBER	The maximum time taken for a blocking wait for I/O completion, in hundredths of a second
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.88 V$BACKUP_CONTROLFILE_DETAILS

V$BACKUP_CONTROLFILE_DETAILS contains information about restorable control files.

It will include all the control files backed up in the backup set, image copies, and proxy copies.

Column	Datatype	Description
BTYPE	CHAR(9)	Backup type container. Possible values are BACKUPSET, IMAGECOPY, PROXYCOPY.
BTYPE_KEY	NUMBER	Unique identifier for the backup type, either BS_KEY or COPY_KEY.
SESSION_KEY	NUMBER	Session identifier
SESSION_RECID	NUMBER	Session recid
SESSION_STAMP	NUMBER	Session stamp
ID1	NUMBER	If BACKUPSET, it contains SET_STAMP If IMAGECOPY or PROXYCOPY, it is RECID from the control file
ID2	NUMBER	If BACKUPSET, it contains SET_COUNT If IMAGECOPY or PROXYCOPY, it is STAMP
CREATION_TIME	DATE	File creation time
RESETLOGS_CHANGE#	NUMBER	Resetlogs change SCN
RESETLOGS_TIME	DATE	Resetlogs change time
CHECKPOINT_CHANGE#	NUMBER	Checkpoint change SCN
CHECKPOINT_TIME	DATE	Checkpoint change time
FILESIZE	NUMBER	File size, in bytes, for the output of backing up this control file
COMPRESSION_RATIO	NUMBER	The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is *not* the the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.
FILESIZE_DISPLAY	VARCHAR2(4000)	Same value as the FILESIZE column, but converted to a user-displayable format, for example *n*M, *n*G, *n*T, *n*P, and so on

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.89 V$BACKUP_CONTROLFILE_SUMMARY

V$BACKUP_CONTROLFILE_SUMMARY provides control file summary information, based on either a backup set of files, image copies, or proxy copies.

Column	Datatype	Description
NUM_FILES_BACKED	NUMBER	Number of files backed up for specific criteria
NUM_DISTINCT_FILES_BACKED	NUMBER	Number of distinct files backed up
MIN_CHECKPOINT_CHANGE#	NUMBER	Minimum checkpoint change number of the data file for specified criteria
MAX_CHECKPOINT_CHANGE#	NUMBER	Maximum checkpoint change number of the data file for specified criteria
MIN_CHECKPOINT_TIME	DATE	Minimum checkpoint time of the data file for specified criteria
MAX_CHECKPOINT_TIME	DATE	Maximum checkpoint time of the data file for specified criteria
INPUT_BYTES	NUMBER	Total input bytes of files read
OUTPUT_BYTES	NUMBER	Total output bytes written
COMPRESSION_RATIO	NUMBER	The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is *not* the the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.
INPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for input bytes
OUTPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for output bytes
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.90 V$BACKUP_COPY_DETAILS

V$BACKUP_COPY_DETAILS contains information about all available control file and data file copies.

Column	Datatype	Description
SESSION_KEY	NUMBER	Session identifier

Column	Datatype	Description
SESSION_RECID	NUMBER	Session recid
SESSION_STAMP	NUMBER	Session stamp
COPY_KEY	NUMBER	Unique identifier for this data file or control file copy
FILE#	NUMBER	Absolute data file number
NAME	VARCHAR2(513)	File name of the data file copy. The maximum length of the name is dependent on your operating system.
TAG	VARCHAR2(32)	Data file copy tag
CREATION_CHANGE#	NUMBER	Data file creation change number
CREATION_TIME	DATE	Data file creation timestamp
CHECKPOINT_CHANGE#	NUMBER	Checkpoint change number of the data file when the copy was made
CHECKPOINT_TIME	DATE	Checkpoint timestamp of the data file when the copy was made
MARKED_CORRUPT	NUMBER	Number of blocks marked corrupt by this copy operation. That is, blocks that were not marked corrupted in the source data file, but were detected and marked as corrupted during the copy operation.
OUTPUT_BYTES	NUMBER	Total output bytes written
COMPLETION_TIME	DATE	Time when the copy was completed
CONTROLFILE_TYPE	VARCHAR2(1)	Type of control file. B indicates normal copies. S indicates standby copies.
KEEP	VARCHAR2(3)	(YES|NO) Indicates whether or not this backup set has a retention policy that is different than the value for the configure retention policy
KEEP_UNTIL	DATE	If specified, this is the date after which the backup becomes obsolete. If this column is null, then the backup never expires.
KEEP_OPTIONS	VARCHAR2(11)	Lists additional retention options for this backup set. Possible values are: • LOGS - The logs needed to recover this backup set are kept • NOLOGS - The logs needed to recover this backup set are not kept
IS_RECOVERY_DEST_FILE	VARCHAR2(3)	Indicates whether the file was created in the fast recovery area (YES) or not (NO)
SPARSE_BACKUP	VARCHAR2(3)	Indicates whether the file is sparse (YES) or not (NO)
OUTPUT_BYTES_DISPLAY	VARCHAR2(4000)	Size of backup set to display
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.91 V$BACKUP_COPY_SUMMARY

V$BACKUP_COPY_SUMMARY provides summary information for the output data file and control file copy.

Column	Datatype	Description
NUM_COPIES	NUMBER	Number of copies created
NUM_DISTINCT_COPIES	NUMBER	Number of distinct copies (that contain data files with different checkpoints)
MIN_CHECKPOINT_CHANGE#	NUMBER	Minimum checkpoint change SCN
MAX_CHECKPOINT_CHANGE#	NUMBER	Maximum checkpoint change SCN
MIN_CHECKPOINT_TIME	DATE	Minimum checkpoint change time
MAX_CHECKPOINT_TIME	DATE	Maximum checkpoint change time
OUTPUT_BYTES	NUMBER	Total number of output bytes
OUTPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for output bytes
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.92 V$BACKUP_CORRUPTION

V$BACKUP_CORRUPTION displays information about corrupt block ranges in data file backups from the control file.

Note that corruptions are not tolerated in the control file and archived redo log backups.

Column	Datatype	Description
RECID	NUMBER	Backup corruption record ID
STAMP	NUMBER	Backup corruption record stamp
SET_STAMP	NUMBER	Backup set stamp
SET_COUNT	NUMBER	Backup set count
PIECE#	NUMBER	backup piece that contains this corrupt block
FILE#	NUMBER	Absolute file number of the data file that contains the corrupt blocks
BLOCK#	NUMBER	Block number of the first corrupt block in the range of corrupted blocks
BLOCKS	NUMBER	Number of corrupted blocks found starting with BLOCK#
CORRUPTION_CHANGE#	NUMBER	Change number at which the logical corruption was detected. Set to 0 to indicate media corruption.
MARKED_CORRUPT	VARCHAR2(3)	Indicates whether this corruption was not previously detected by the Oracle Database (YES) or the Oracle Database had already discovered this corrupt block and marked it as corrupt (NO). Note that when a corrupt block is encountered in a backup, and was not already marked corrupt by the Oracle Database, then the backup process does not mark the block as corrupt in the production data file. Thus, this field may be YES for the same block in more than one backup set.

Column	Datatype	Description
CORRUPTION_TYPE	VARCHAR2(9)	Type of block corruption in the data file: • ALL ZERO - Block header on disk contained only zeros. The block may be valid if it was never filled and if it is in an Oracle7 file. The buffer will be reformatted to the Oracle8 standard for an empty block. • FRACTURED - Block header looks reasonable, but the front and back of the block are different versions. • CHECKSUM - optional check value shows that the block is not self-consistent. It is impossible to determine exactly why the check value fails, but it probably fails because sectors in the middle of the block are from different versions. • CORRUPT - Block is wrongly identified or is not a data block (for example, the data block address is missing) • LOGICAL - Block is logically corrupt • NOLOGGING - Block does not have redo log entries (for example, NOLOGGING operations on primary database can introduce this type of corruption on a physical standby)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.93 V$BACKUP_DATAFILE

V$BACKUP_DATAFILE displays information about control files and data files in backup sets from the control file.

Column	Datatype	Description
RECID	NUMBER	Backup data file record ID
STAMP	NUMBER	Backup data file record stamp
SET_STAMP	NUMBER	Backup set stamp
SET_COUNT	NUMBER	Backup set count
FILE#	NUMBER	Data file number; set to 0 for control file
CREATION_CHANGE#	NUMBER	Creation system change number (SCN) of the data file
CREATION_TIME	DATE	Creation timestamp of the data file
RESETLOGS_CHANGE#	NUMBER	Resetlogs system change number (SCN) of the data file when it was backed up
RESETLOGS_TIME	DATE	Resetlogs timestamp of the data file when it was backed up
INCREMENTAL_LEVEL	NUMBER	Normal full backups have a NULL value, level 0 incremental backups have a value of 0, and level 1 incremental backups have a value of 1
INCREMENTAL_CHANGE#	NUMBER	All blocks changed after the incremental change number is included in this backup; set to 0 for a full backup
CHECKPOINT_CHANGE#	NUMBER	All changes up to the checkpoint change number are included in this backup

Column	Datatype	Description
CHECKPOINT_TIME	DATE	Timestamp of the checkpoint
ABSOLUTE_FUZZY_CHANGE#	NUMBER	Highest change number in this backup
MARKED_CORRUPT	NUMBER	Number of blocks marked corrupt
MEDIA_CORRUPT	NUMBER	Number of blocks media corrupt
LOGICALLY_CORRUPT	NUMBER	Number of blocks logically corrupt
DATAFILE_BLOCKS	NUMBER	Size of the data file in blocks at backup time. This value is also the number of blocks taken by the data file restarted from this backup.
BLOCKS	NUMBER	Size of the backup data file (in blocks). Unused blocks are not copied to the backup.
BLOCK_SIZE	NUMBER	Block size
OLDEST_OFFLINE_RANGE	NUMBER	RECID of the oldest offline range record in this backup control file. 0 for data file backups.
COMPLETION_TIME	DATE	Time completed
CONTROLFILE_TYPE	VARCHAR2(1)	B - Normal copies S - Standby copies
USED_CHANGE_TRACKING	VARCHAR2(3)	Indicates whether change tracking data was used to accelerate this incremental backup (YES) or whether change tracking data was not used (NO)
BLOCKS_READ	NUMBER	Number of blocks that were scanned while taking this backup. If this was an incremental backup, and change tracking was used to optimize the backup, then the value of this column will be smaller than DATAFILE_BLOCKS. Otherwise, the value of this column will be the same as DATAFILE_BLOCKS. Even when change tracking data is used, the value of this column may be larger than BLOCKS, because the data read by change tracking is further refined during the process of creating an incremental backup.
USED_OPTIMIZATION	VARCHAR2(3)	Indicates whether backup optimization was applied (YES) or not (NO)
FOREIGN_DBID	NUMBER	Foreign DBID of the database from which this data file was transported. The value is 0 if the file backed up is not a foreign database file.
PLUGGED_READONLY	VARCHAR2(3)	YES if this is a backup of a transported read-only foreign file; otherwise NO.
PLUGIN_CHANGE#	NUMBER	SCN at which the foreign data file was transported into the database. The value is 0 if this file is not a foreign database file.
PLUGIN_RESETLOGS_CHANGE#	NUMBER	The SCN of the RESETLOGS operation for the incarnation into which this foreign file was transported. The value is 0 if this file is not a foreign database file.
PLUGIN_RESETLOGS_TIME	DATE	The time of the RESETLOGS operation for the incarnation into which this foreign file was transported. The value is 0 if this file is not a foreign database file.
SECTION_SIZE	NUMBER	Specifies the number of blocks in each section of a multisection backup. Value is 0 for whole file backups.
UNDO_OPTIMIZED	VARCHAR2(3)	Indicates whether undo blocks were ignored when creating the backup data file (YES) or not (NO)
BLOCKS_SKIPPED_IN_CELL	NUMBER	Number of blocks that were not backed up because they were skipped by the Exadata cell **See Also:** Oracle Exadata Storage Server Software documentation for more information

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
BACKED_BY_PDB	VARCHAR2(3)	Recovery Manager (RMAN) allows a PDB to be backed up in two ways. The value in this column indicates how the PDB backup was taken: • YES: The backup was taken when connected to the PDB • NO: The backup was taken when connected to the root container
SPARSE_BACKUP	VARCHAR2(3)	Indicates whether the file is sparse (YES) or not (NO)
GUID	RAW(16)	The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.

8.94 V$BACKUP_DATAFILE_DETAILS

V$BACKUP_DATAFILE_DETAILS contains information about restorable data files.

It will include all data files backed in the backup set, image copies, and proxy copies.

Column	Datatype	Description
BTYPE	CHAR(9)	Backup type container. Possible values are: BACKUPSET, IMAGECOPY, PROXYCOPY.
BTYPE_KEY	NUMBER	Unique identifier for the backup type. For BACKUPSET, it is BS_KEY.
SESSION_KEY	NUMBER	Session identifier
SESSION_RECID	NUMBER	Session record ID
SESSION_STAMP	NUMBER	Session stamp
ID1	NUMBER	If BACKUPSET, it contains SET_STAMP. If IMAGECOPY or PROXYCOPY, it is RECID from the control file.
ID2	NUMBER	If BACKUPSET, it contains SET_COUNT. If IMAGECOPY or PROXYCOPY, it is STAMP.
FILE#	NUMBER	File number
CREATION_CHANGE#	NUMBER	File creation change SCN
CREATION_TIME	DATE	File creation time
RESETLOGS_CHANGE#	NUMBER	Resetlogs change SCN
RESETLOGS_TIME	DATE	Resetlogs change time
INCREMENTAL_LEVEL	NUMBER	Normal full backups have a NULL value, level 0 incremental backups have a value of 0, and level 1 incremental backups have a value of 1
INCREMENTAL_CHANGE#	NUMBER	Incremental change SCN
CHECKPOINT_CHANGE#	NUMBER	Checkpoint change SCN
CHECKPOINT_TIME	DATE	Checkpoint change time
MARKED_CORRUPT	NUMBER	Number of blocks marked corrupt
FILESIZE	NUMBER	File size, in bytes

Column	Datatype	Description
COMPRESSION_RATIO	NUMBER	The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is *not* the the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.
SPARSE_BACKUP	VARCHAR2(3)	Indicates whether the file is sparse (YES) or not (NO)
TS#	NUMBER	Tablespace number
TSNAME	VARCHAR2(30)	Tablespace name
FILESIZE_DISPLAY	VARCHAR2(4000)	Same value as the FILESIZE column, but converted to a user-displayable format, for example *n*M, *n*G, *n*T, *n*P, and so on
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.95 V$BACKUP_DATAFILE_SUMMARY

V$BACKUP_DATAFILE_SUMMARY provides summary information for a specific criteria set, based on a backup job, a time range applicable to jobs, or a specific data file).

Column	Datatype	Description
NUM_FILES_BACKED	NUMBER	Number of files backed up for specified criteria
NUM_DISTINCT_FILES_BACKED	NUMBER	Number of distinct files backed up
NUM_DISTINCT_TS_BACKED	NUMBER	Number of distinct tablespaces backed up
MIN_CHECKPOINT_CHANGE#	NUMBER	Minimum checkpoint change number of the data file for specified criteria
MAX_CHECKPOINT_CHANGE#	NUMBER	Maximum checkpoint change number of the data file for specified criteria
MIN_CHECKPOINT_TIME	DATE	Minimum checkpoint time of the data file for specified criteria
MAX_CHECKPOINT_TIME	DATE	Maximum checkpoint time of the data file for specified criteria
INPUT_BYTES	NUMBER	Total input bytes of files read
OUTPUT_BYTES	NUMBER	Total output bytes written
COMPRESSION_RATIO	NUMBER	The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is *not* the the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.
INPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for input bytes
OUTPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for output bytes

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.96 V$BACKUP_DEVICE

V$BACKUP_DEVICE displays information about supported backup devices.

If a device type does not support named devices, then one row with the device type and a null device name is returned for that device type. If a device type supports named devices then one row is returned for each available device of that type. The special device type DISK is not returned by this view because it is always available.

Column	Datatype	Description
DEVICE_TYPE	VARCHAR2(17)	Type of the backup device
DEVICE_NAME	VARCHAR2(513)	Name of the backup device
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.97 V$BACKUP_FILES

V$BACKUP_FILES displays information about all RMAN backups (both image copies and backup sets) and archived logs.

This view simulates the LIST BACKUP and LIST COPY RMAN commands. This view requires that the database be set using the DBMS_RCVMAN.SETDATABASE procedure.

Column	Datatype	Description
PKEY	NUMBER	Primary key for the backup
BACKUP_TYPE	VARCHAR2(32)	Type of the backup: • BACKUP SET • COPY • PROXY COPY

Column	Datatype	Description
FILE_TYPE	VARCHAR2(32)	Type of the file: • DATAFILE • CONTROLFILE • SPFILE • REDO LOG • ARCHIVED LOG • COPY (for an image copy backup) • PIECE (for a backup piece)
KEEP	VARCHAR2(3)	Indicates whether the backup has a retention policy different from the value for CONFIGURE RETENTION POLICY (YES) or not (NO)
KEEP_UNTIL	DATE	If the KEEP UNTIL TIME clause of the BACKUP command was specified, then this column shows the date after which the backup becomes obsolete. If the column is null and KEEP_OPTIONS is not null, the backup never becomes obsolete.
KEEP_OPTIONS	VARCHAR2(13)	KEEP options for the backup: • LOGS - RMAN keeps the logs needed to recover the backup • NOLOGS - RMAN does not keep the logs needed to recover the backup If this column is null, then the backup has no KEEP options and will be made obsolete based on the retention policy.
STATUS	VARCHAR2(16)	Status of the backup: • AVAILABLE • UNAVAILABLE • EXPIRED • OTHER
FNAME	VARCHAR2(1024)	Name of the file
TAG	VARCHAR2(32)	Tag of the piece, copy, or proxy copy
MEDIA	VARCHAR2(80)	Media ID of the piece or proxy copy
RECID	NUMBER	Recid of the record in the control file
STAMP	NUMBER	Stamp of the record in the control file
DEVICE_TYPE	VARCHAR2(255)	Type of media device that stores the backup
BLOCK_SIZE	NUMBER	Block size for the backup (in bytes)
COMPLETION_TIME	DATE	Time when the backup completed
COMPRESSED	VARCHAR2(3)	Indicates whether the backup piece is compressed (YES) or not (NO); valid only if FILE_TYPE is PIECE. Image copies cannot be compressed.
OBSOLETE	VARCHAR2(3)	Indicates whether the backup piece or copy is obsolete (YES) or not (NO); valid only if FILE_TYPE is PIECE or COPY
BYTES	NUMBER	Size of the file (in bytes)
BS_KEY	NUMBER	Primary key of the backup set (valid only if BACKUP_TYPE is BACKUP SET)
BS_COUNT	NUMBER	Count of the backup set from the control file record (valid only if BACKUP_TYPE is BACKUP SET)
BS_STAMP	NUMBER	Stamp of the backup set from the control file record (valid only if BACKUP_TYPE is BACKUP SET)
BS_TYPE	VARCHAR2(32)	Type of the backup set (valid only if BACKUP_TYPE is BACKUP SET): • DATAFILE • ARCHIVED LOG

Column	Datatype	Description
BS_INCR_TYPE	VARCHAR2(32)	Incremental type of the backup set (valid only if BACKUP_TYPE is BACKUP SET)
BS_PIECES	NUMBER	Number of backup pieces in the backup set (valid only if BACKUP_TYPE is BACKUP SET)
BS_COPIES	NUMBER	Number of copies of the backup set (valid only if FILE_TYPE is PIECE and BACKUP_TYPE is BACKUP SET)
BS_COMPLETION_TIME	DATE	Completion time of the backup set (valid only if BACKUP_TYPE is BACKUP SET)
BS_STATUS	VARCHAR2(16)	Status of the backup set (valid only if BACKUP_TYPE is BACKUP SET): • AVAILABLE • UNAVAILABLE • EXPIRED • OTHER - Pieces which are part of the backup set do not have uniform status (that is, some of them are available, some not)
BS_BYTES	NUMBER	Sum of all backup piece sizes in the backup set (valid only if BACKUP_TYPE is BACKUP SET)
BS_COMPRESSED	VARCHAR2(3)	Indicates whether the backup pieces of the backup set are compressed (YES) or not (NO); valid only if BACKUP_TYPE is BACKUP SET
BS_TAG	VARCHAR2(1024)	Tags of the backup set. If pieces have different tags, then all piece tags are concatenated and separated by commas. Valid only if BACKUP_TYPE is BACKUP SET)
BS_DEVICE_TYPE	VARCHAR2(255)	Device type of the backup set. If there is more than one device type, then they are separated by commas. Valid only if BACKUP_TYPE is BACKUP SET
BP_PIECE#	NUMBER	Number of pieces inside the backup set (valid only if FILE_TYPE is PIECE and BACKUP_TYPE is BACKUP SET)
BP_COPY#	NUMBER	Number of copies of the backup set (valid only if FILE_TYPE is PIECE and BACKUP_TYPE is BACKUP SET)
DF_FILE#	NUMBER	Absolute file number of the data file (valid only if FILE_TYPE is DATAFILE)
DF_TABLESPACE	VARCHAR2(30)	Tablespace name of the data file (valid only if FILE_TYPE is DATAFILE)
DF_RESETLOGS_CHANGE#	NUMBER	System change number (SCN) of the most recent RESETLOGS when the control file or data file was created (valid only if FILE_TYPE is DATAFILE)
DF_CREATION_CHANGE#	NUMBER	Creation SCN of the control file or data file (valid only if FILE_TYPE is CONTROLFILE or DATAFILE)
DF_CHECKPOINT_CHANGE#	NUMBER	System change number (SCN) of the most recent control file or data file checkpoint (valid only if FILE_TYPE is CONTROLFILE or DATAFILE)
DF_CKP_MOD_TIME	DATE	Modification time in case of SPFILE, otherwise time when the control file or data file was checkpointed (valid only if FILE_TYPE is SPFILE, CONTROLFILE, or DATAFILE)
RL_THREAD#	NUMBER	Redo log thread number of the archived log (valid only if FILE_TYPE is REDO LOG)
RL_SEQUENCE#	NUMBER	Redo log sequence number of the archived log (valid only if FILE_TYPE is REDO LOG)
RL_RESETLOGS_CHANGE#	NUMBER	System change number (SCN) of the most recent RESETLOGS when the record was created (valid only if FILE_TYPE is REDO LOG)
RL_FIRST_CHANGE#	NUMBER	First SCN of the redo log (valid only if FILE_TYPE is REDO LOG)

Column	Datatype	Description
RL_FIRST_TIME	DATE	Time when the Oracle Database switched into the redo log (valid only if FILE_TYPE is REDO LOG)
RL_NEXT_CHANGE#	NUMBER	First SCN of the next redo log in the thread (valid only if FILE_TYPE is REDO LOG)
RL_NEXT_TIME	DATE	First timestamp of the next redo log in the thread (valid only if FILE_TYPE is REDO LOG)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Backup and Recovery User's Guide for more information about the DBMS_RCVMAN.SETDATABASE procedure

8.98 V$BACKUP_NONLOGGED

V$BACKUP_NONLOGGED displays information about nonlogged block ranges in data file backups, recorded in the control file.

Column	Datatype	Description
RECID	NUMBER	Nologged backup record ID
STAMP	NUMBER	Nonlogged backup record stamp
SET_STAMP	NUMBER	Backup set stamp
SET_COUNT	NUMBER	Backup set count
PIECE#	NUMBER	Backup piece that contains the range of nonlogged blocks
FILE#	NUMBER	Absolute file number of the data file that contains this range of nonlogged blocks
BLOCK#	NUMBER	Block number of the first nonlogged block in the range of nologged blocks
BLOCKS	NUMBER	Number of nonlogged blocks found starting with BLOCK#
NONLOGGED_CHANGE#	NUMBER	The smallest SCN on which any block in this block range became nonlogged. NULL if unknown.
NONLOGGED_TIME	VARCHAR2	The time that corresponds to NONLOGGED_CHANGE#. NULL if unknown.
RESETLOGS_CHANGE#	VARCHAR2	The resetlogs SCN of the incarnation on which this block range was first marked as nonlogged. NULL if unknown.
RESETLOGS_TIME	VARCHAR2	The resetlogs time of the incarnation on which this block range was first marked as nologged. NULL if unknown.

Column	Datatype	Description
OBJECT#	VARCHAR2	The object ID this range belongs to. If this field is NULL, the object number is unknown.
REASON	CHAR(7)	The reason why this block range appears in this list, for example, primary file offline, could not talk to primary, non-standby recovery, and so on. For Oracle Database 12*c* and later releases, it is always UNKNOWN.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.99 V$BACKUP_PIECE

V$BACKUP_PIECE displays information about backup pieces from the control file. Each backup set consists of one or more backup pieces.

Column	Datatype	Description
RECID	NUMBER	Backup piece record ID
STAMP	NUMBER	Backup piece record stamp
SET_STAMP	NUMBER	Backup set stamp
SET_COUNT	NUMBER	Backup set count
PIECE#	NUMBER	Backup piece number (1-N)
COPY#	NUMBER	Indicates the copy number for backup pieces created with duplex enabled. 1 if the backup piece is not duplexed.
DEVICE_TYPE	VARCHAR2(17)	Type of the device on which the backup piece resides. Set to DISK for backup sets on disk. **See Also:** V$BACKUP_DEVICE
HANDLE	VARCHAR2(513)	Backup piece handle identifies the backup piece on restore
COMMENTS	VARCHAR2(64)	Comment returned by the operating system or storage subsystem. Set to NULL for backup pieces on disk. This value is informational only; not needed for restore.
MEDIA	VARCHAR2(65)	Name of the media on which the backup piece resides. This value is informational only; not needed for restore.
MEDIA_POOL	NUMBER	The media pool in which the copy resides. This is the same value that was entered in the POOL operand of the Recovery Manager BACKUP command.
CONCUR	VARCHAR2(3)	(YES | NO) Indicates whether the piece on a media that can be accessed concurrently
TAG	VARCHAR2(32)	Backup piece tag. The tag is specified at backup set level, but stored at piece level.
STATUS	VARCHAR2(1)	Indicates the status of the piece: A (available), D (deleted), or X (expired)
START_TIME	DATE	Starting time
COMPLETION_TIME	DATE	Completion time

Column	Datatype	Description
ELAPSED_SECONDS	NUMBER	Number of elapsed seconds
DELETED	VARCHAR2(3)	(YES/NO) NO indicates that the file still exists. YES indicates the file no longer exists because it has been deleted.
BYTES	NUMBER	Size of the backup piece (in bytes)
IS_RECOVERY_DEST_FILE	VARCHAR2(3)	Indicates whether the file was created in the fast recovery area (YES) or not (NO)
RMAN_STATUS_RECID	NUMBER	Owning V$RMAN_STATUS record ID
RMAN_STATUS_STAMP	NUMBER	Owning V$RMAN_STATUS record stamp
COMPRESSED	VARCHAR2(3)	Indicates whether the backup piece is compressed (YES) or not (NO)
BACKED_BY_VSS	VARCHAR2(3)	Whether or not the file has been backed up by Volume Shadow Copy Service (VSS). This column is reserved for internal use.
ENCRYPTED	VARCHAR2(3)	A value of YES means an encrypted backup, otherwise not an encrypted backup.
BACKED_BY_OSB	VARCHAR2(3)	A value of YES means the backup was done to Oracle Secure Backup. Otherwise, backed up by other third party tape library.
FOR_XTTS	VARCHAR2(3)	Indicates whether this is a cross platform backup piece: • YES: This is a cross platform backup piece. • NO: This is not a cross platform backup piece.
SAME_ENDIAN	VARCHAR2(3)	If the value of FOR_XTTS is YES, then this column indicates whether the backup piece has the same endianess as the current database (YES) or not (NO); otherwise NULL.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
GUID	RAW(16)	The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.

8.100 V$BACKUP_PIECE_DETAILS

V$BACKUP_PIECE_DETAILS displays information about all available backup pieces.

Column	Datatype	Description
SESSION_KEY	NUMBER	Session identifier
SESSION_RECID	NUMBER	Session recid
SESSION_STAMP	NUMBER	Session stamp
BS_KEY	NUMBER	Backup set identifier
BP_KEY	NUMBER	Backup piece key
RECID	NUMBER	Backup piece record ID
STAMP	NUMBER	Backup piece record stamp
SET_STAMP	NUMBER	Backup set stamp

Column	Datatype	Description
SET_COUNT	NUMBER	Backup set count
PIECE#	NUMBER	Backup piece number (1-N)
COPY#	NUMBER	Indicates the copy number for backup pieces created with duplex enabled. The value is 1 if the backup piece is not duplexed.
DEVICE_TYPE	VARCHAR2(17)	Type of device on which the backup piece resides. Set to DISK for backup sets on disk.
HANDLE	VARCHAR2(513)	Backup piece handle identifies the backup piece on restore
COMMENTS	VARCHAR2(64)	Comments returned by the operating system or storage subsystem. Set to NULL for backup pieces on disk. This value is informational only. It is not needed for restore.
MEDIA	VARCHAR2(65)	Name of the media on which the backup piece resides. This value is informational only. It is not needed for restore.
MEDIA_POOL	NUMBER	The media pool in which the copy resides. This is the same value that was entered in the POOL operand of the Recovery Manager BACKUP command.
CONCUR	VARCHAR2(3)	(YES|NO) indicates whether or not the piece is on a media that can be accessed concurrently
TAG	VARCHAR2(32)	Backup piece tag. The tag is specified at backup set level, but stored at piece level.
STATUS	VARCHAR2(1)	Indicates the status of the piece: A (available), D (deleted), or X (expired)
START_TIME	DATE	Starting time
COMPLETION_TIME	DATE	Completion time
ELAPSED_SECONDS	NUMBER	Number of elapsed seconds
DELETED	VARCHAR2(3)	NO indicates that the file still exists. YES indicates that the file no longer exists because it has been deleted.
BYTES	NUMBER	Size of the backup piece, in bytes
IS_RECOVERY_DEST_FILE	VARCHAR2(3)	Indicates whether or not the file was created in the fast recovery area (YES) or not (NO)
RMAN_STATUS_RECID	NUMBER	Owning V$RMAN_STATUS record ID
RMAN_STATUS_STAMP	NUMBER	Owning V$RMAN_STATUS record stamp
COMPRESSED	VARCHAR2(3)	Indicates whether the backup piece is compressed (YES) or not (NO)
BACKED_BY_VSS	VARCHAR2(3)	Whether or not the file has been backed up by Volume Shadow Copy Service (VSS). This column is reserved for internal use.
ENCRYPTED	VARCHAR2(3)	A value of YES means an encrypted backup, otherwise not an encrypted backup.
BACKED_BY_OSB	VARCHAR2(3)	A value of YES means the backup was done to Oracle Secure Backup. Otherwise, backed up by other third party tape library.
FOR_XTTS	VARCHAR2(3)	Indicates whether this is a cross platform backup piece: • YES: This is a cross platform backup piece. • NO: This is not a cross platform backup piece.
SAME_ENDIAN	VARCHAR2(3)	If the value of FOR_XTTS is YES, then this column indicates whether the backup piece has the same endianess as the current database (YES) or not (NO); otherwise NULL.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
PIECES_PER_SET	NUMBER	Number of backup pieces per set
SIZE_BYTES_DISPLAY	VARCHAR2(4000)	Size (in bytes) of the backup piece to display

8.101 V$BACKUP_REDOLOG

V$BACKUP_REDOLOG displays information about archived logs in backup sets from the control file.

Note that online redo logs cannot be backed up directly; they must be archived first to disk and then backed up. An archive log backup set can contain one or more archived logs.

Column	Datatype	Description
RECID	NUMBER	Record ID for this row; it is an integer that identifies this row
STAMP	NUMBER	Timestamp used with RECID to uniquely identify this row
SET_STAMP	NUMBER	One of the foreign keys for the row of the V$BACKUP_SET table that identifies this backup set
SET_COUNT	NUMBER	One of the foreign keys for the row of the V$BACKUP_SET table that identifies this backup set
THREAD#	NUMBER	Thread number for the log
SEQUENCE#	NUMBER	Log sequence number
RESETLOGS_CHANGE#	NUMBER	Change number of the last resetlogs before the log was written
RESETLOGS_TIME	DATE	Change time of the last resetlogs before the log was written. These will be the same for all logs in a backup set.
FIRST_CHANGE#	NUMBER	SCN when the log was switched into. The redo in the log is at this SCN and greater.
FIRST_TIME	DATE	Time allocated when the log was switched into
NEXT_CHANGE#	NUMBER	SCN when the next log in this thread was switched into. The redo in the log is below this SCN.
NEXT_TIME	DATE	Time when the next log in this thread was switched into
BLOCKS	NUMBER	Size of the log in logical blocks including the header block
BLOCK_SIZE	NUMBER	Size of the log blocks in bytes
TERMINAL	VARCHAR2(3)	Indicates whether this record corresponds to a terminal archived redo log, as defined in V$ARCHIVED_LOG (YES) or not (NO)
SECTION_SIZE	NUMBER	Number of blocks in each section of a multisection log. The value is 0 for whole file logs.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.102 V$BACKUP_SET

V$BACKUP_SET displays information about backup sets from the control file.

A backup set record is inserted after the backup set is successfully completed.

Column	Datatype	Description
RECID	NUMBER	Backup set record ID
STAMP	NUMBER	Backup set record stamp
SET_STAMP	NUMBER	Backup set stamp. The backup set stamp and count uniquely identify the backup set. Primary key for the V$BACKUP_SET table, and the foreign key for the following tables: V$BACKUP_PIECE, V$BACKUP_DATAFILE, V$BACKUP_REDOLOG, V$BACKUP_CORRUPTION.
SET_COUNT	NUMBER	Backup set count. The backup set count is incremented by one every time a new backup set is started (if the backup set is never completed the number is "lost"). If the control file is re-created then the count is reset to 1. Therefore the count must be used with the stamp to uniquely identify a backup set. Primary key for the V$BACKUP_SET table, and the foreign key for the following tables: V$BACKUP_PIECE, V$BACKUP_DATAFILE, V$BACKUP_REDOLOG, V$BACKUP_CORRUPTION
BACKUP_TYPE	VARCHAR2(1)	Type of files that are in this backup. If the backup contains archived redo logs, the value is L. If this is a data file full backup, the value is D. If this is an incremental backup, the value is I.
CONTROLFILE_INCLUDED	VARCHAR2(3)	Provides information about the control file in the backup set: • YES: The control file included is a primary control file. • SBY: The control file included is a standby control file. • NO: A control file is not included.
INCREMENTAL_LEVEL	NUMBER	Location where this backup set fits into the database's backup strategy. Set to NULL for full datafile, archivelog, controlfile, and spfile backups, set to 0 for incremental level 0 datafile backups, and set to 1 for incremental level 1 datafile backups.
PIECES	NUMBER	Number of distinct backup pieces in the backup set
START_TIME	DATE	Starting time
COMPLETION_TIME	DATE	Time that this backup set completed
ELAPSED_SECONDS	NUMBER	The number of elapsed seconds
BLOCK_SIZE	NUMBER	Block size of the backup set

Column	Datatype	Description
INPUT_FILE_SCAN_ONLY	VARCHAR2(3)	YES indicates no actual backup is performed, but the data files are read. NO indicates a normal backup is performed.
KEEP	VARCHAR2(3)	(YES/NO) Indicates whether or not this backup set has a retention policy that is different than the value for the configure retention policy
KEEP_UNTIL	DATE	If KEEP_UNTIL_TIME is specified, this is the date after which the backup becomes obsolete. If this column is null, then the backup never expires.
KEEP_OPTIONS	VARCHAR2(11)	Lists additional retention options for this backup set. Possible values are: LOGS - The logs need to recover this backup are kept NOLOGS - The logs needed to recover this backup will not be kept BACKUP_LOGS - An archive log backup exists to support this backup set
MULTI_SECTION	VARCHAR2(3)	Indicates whether or not this backup set is a multi-section backup. Valid values are YES and NO. A multi-section backup is a backup in which multiple backup pieces are produced independently in parallel by multiple channels.
FOR_XTTS	VARCHAR2(3)	Indicates whether this is a cross platform backup set: • YES: This is a cross platform backup set. • NO: This is not a cross platform backup set.
SAME_ENDIAN	VARCHAR2(3)	If the value of FOR_XTTS is YES, then this column indicates whether the backup set has the same endianess as the current database (YES) or not (NO); otherwise NULL.
INC_DMPFILE	VARCHAR2(3)	If the value of FOR_XTTS is YES, then this column indicates whether the backup set includes a Data Pump export file of the backed up data files (YES) or not (NO), otherwise NULL.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
GUID	RAW(16)	The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.

8.103 V$BACKUP_SET_DETAILS

V$BACKUP_SET_DETAILS provides detailed information about the backup set.

This view will contain an extra row for each backup session that invokes BACKUP BACKUPSET (that is, creates new copies for the same backup set or copies backup set information from disk to tape). However, the remaining values of other columns belong to the complete backup set.

Column	Datatype	Description
SESSION_KEY	NUMBER	Session identifier
SESSION_RECID	NUMBER	Identifies the job, together with SESSION_STAMP.
SESSION_STAMP	NUMBER	Identifies the job, together with SESSION_RECID

Column	Datatype	Description
BS_KEY	NUMBER	Backup set identifier
RECID	NUMBER	RECID from V$BACKUP_SET record
STAMP	NUMBER	Stamp from V$BACKUP_SET record
SET_STAMP	NUMBER	Backup set stamp
SET_COUNT	NUMBER	Backup count number
BACKUP_TYPE	VARCHAR2(1)	Type of backup (same as in V$BACKUP_SET)
CONTROLFILE_INCLUDED	VARCHAR2(3)	Control file included in backup set (same as in V$BACKUP_SET)
INCREMENTAL_LEVEL	NUMBER	Incremental level (same as in V$BACKUP_SET)
PIECES	NUMBER	Number of pieces (same as in V$BACKUP_SET)
START_TIME	DATE	Start time of the backup set (same as in V$BACKUP_SET)
COMPLETION_TIME	DATE	Completion time of the backup set (same as in V$BACKUP_SET)
ELAPSED_SECONDS	NUMBER	Time taken for backup set creation (same as in V$BACKUP_SET)
BLOCK_SIZE	NUMBER	Block size (same as in V$BACKUP_SET)
KEEP	VARCHAR2(3)	Keep value (same as in V$BACKUP_SET)
KEEP_UNTIL	DATE	Keep Until time (same as in V$BACKUP_SET)
KEEP_OPTIONS	VARCHAR2(11)	Keep options (same as in V$BACKUP_SET)
DEVICE_TYPE	VARCHAR2(17)	Type of device. If the backup set exists on more than one device type, an * is indicated here.
COMPRESSED	VARCHAR2(3)	YES, if backup is compressed
NUM_COPIES	NUMBER	Number of identical copies
OUTPUT_BYTES	NUMBER	Size of the backup set
ORIGINAL_INPUT_BYTES	NUMBER	Amount of data backed up when the backup set was created
COMPRESSION_RATIO	NUMBER	The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is *not* the the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.
STATUS	CHAR(1)	The status of the backup set. It is always A (all backup pieces available), because this view only reflects available backup sets.
ORIGINAL_INPRATE_BYTES	NUMBER	Number of bytes read per second when backup set was initially created
OUTPUT_RATE_BYTES	NUMBER	Number of bytes written per second when the backup set was initially created
ORIGINAL_INPUT_BYTES_DISPLAY	VARCHAR2(4000)	Input rate to display
OUTPUT_BYTES_DISPLAY	VARCHAR2(4000)	Size of backup set to display
ORIGINAL_INPRATE_BYTES_DISPLAY	VARCHAR2(4000)	Input rate per second for display
OUTPUT_RATE_BYTES_DISPLAY	VARCHAR2(4000)	Output rate per second for display
TIME_TAKEN_DISPLAY	VARCHAR2(4000)	Elapsed time in hh:mm:ss format
ENCRYPTED	VARCHAR2(3)	A value of YES means an encrypted backup, otherwise not an encrypted backup.
BACKED_BY_OSB	VARCHAR2(3)	A value of YES means the backup was done to Oracle Secure Backup. Otherwise, backed up by other third party tape library.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$BACKUP_SET"

8.104 V$BACKUP_SET_SUMMARY

V$BACKUP_SET_SUMMARY provides summary information for a backup set.

Column	Datatype	Description
NUM_BACKUPSETS	NUMBER	Total number of backup sets created
OLDEST_BACKUP_TIME	DATE	Oldest backup start time
NEWEST_BACKUP_TIME	DATE	Newest backup start time
OUTPUT_BYTES	NUMBER	Number of output bytes (not including multiple copies)
ORIGINAL_INPUT_BYTES	NUMBER	Number of input bytes when backup sets were created
ORIGINAL_INPRATE_BYTES	NUMBER	Average input rate
OUTPUT_RATE_BYTES	NUMBER	Average output rate
COMPRESSION_RATIO	NUMBER	The ratio between the total blocks in the datafile and the blocks that RMAN backed up. This is *not* the the ratio from the AS COMPRESSED BACKUPSET clause of the BACKUP command.
ORIGINAL_INPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for input bytes
OUTPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for output bytes
ORIGINAL_INPRATE_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for input rate
OUTPUT_RATE_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for output rate
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.105 V$BACKUP_SPFILE

V$BACKUP_SPFILE displays information about server parameter files in backup sets from the control file.

Column	Datatype	Description
RECID	NUMBER	Backup SPFILE record ID
STAMP	NUMBER	Backup SPFILE record stamp
SET_STAMP	NUMBER	Backup set stamp (of the set which contains this SPFILE backup)
SET_COUNT	NUMBER	Backup set count (of the set which contains this SPFILE backup)
MODIFICATION_TIME	DATE	Time when the SPFILE was last modified (this also includes creation time)
BYTES	NUMBER	Size of the SPFILE (in bytes)
COMPLETION_TIME	DATE	Time when the backup of the SPFILE completed
DB_UNIQUE_NAME	VARCHAR2(30)	Unique database name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
GUID	RAW(16)	The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.

8.106 V$BACKUP_SPFILE_DETAILS

V$BACKUP_SPFILE_DETAILS displays information about all restorable SP files backed up in the backup set.

Column	Datatype	Description
SESSION_KEY	NUMBER	Session identifier
SESSION_RECID	NUMBER	Session recid
SESSION_STAMP	NUMBER	Session stamp
BS_KEY	NUMBER	Unique backup set identifier
SET_STAMP	NUMBER	Backup set stamp
SET_COUNT	NUMBER	Backup set count
MODIFICATION_TIME	DATE	Time the backup set was modified
FILESIZE	NUMBER	Size, in bytes, of the SPFILE that was backed up
FILESIZE_DISPLAY	VARCHAR2(4000)	Same value as the FILESIZE column, but converted to a user-displayable format, for example *n*M, *n*G, *n*T, *n*P, and so on

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.107 V$BACKUP_SPFILE_SUMMARY

V$BACKUP_SPFILE_SUMMARY provides summary information for input SP file, based on either a backup job or time range applicable to jobs.

Column	Datatype	Description
NUM_FILES_BACKED	NUMBER	Number of files backed up
NUM_DISTINCT_FILES_BACKED	NUMBER	Number of distinct SP files backed up (with modification timestamp)
MIN_MODIFICATION_TIME	DATE	Minimum modification time
MAX_MODIFICATION_TIME	DATE	Maximum modification time
INPUT_BYTES	NUMBER	Total input bytes for all SP files backed up
INPUT_BYTES_DISPLAY	VARCHAR2(4000)	Displayable format for all input bytes
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.108 V$BACKUP_SYNC_IO

V$BACKUP_SYNC_IO displays performance information about ongoing and recently completed RMAN backups and restores.

For each backup, it contains one row for each input data file, one row for the aggregate total performance of all data files, and one row for the output backup piece. This data is not stored persistently, and is not preserved when the instance is re-started.

Column	Datatype	Description
SID	NUMBER	The Oracle SID of the session doing the backup or restore
SERIAL	NUMBER	The use count for the SID doing the backup or restore
USE_COUNT	NUMBER	A counter that can be used to identify rows from different backup sets
RMAN_STATUS_RECID	NUMBER	Owning V$RMAN_STATUS record ID
RMAN_STATUS_STAMP	NUMBER	Owning V$RMAN_STATUS record stamp

Column	Datatype	Description
DEVICE_TYPE	VARCHAR2(17)	The device type where the file is located
TYPE	VARCHAR2(9)	INPUT, OUTPUT, or AGGREGATE
STATUS	VARCHAR2(11)	NOT STARTED, IN PROGRESS, or FINISHED
FILENAME	VARCHAR2(513)	The name of the backup file being read or written
SET_COUNT	NUMBER	The set count of the backup set being read or written
SET_STAMP	NUMBER	The set stamp of the backup set being read or written
BUFFER_SIZE	NUMBER	The size of the buffers being used to read/write this file, in bytes
BUFFER_COUNT	NUMBER	The number of buffers being used to read/write this file
TOTAL_BYTES	NUMBER	The total number of bytes that will be read or written for this file, if known. If not known, this column will be null.
OPEN_TIME	DATE	The time this file was opened. If TYPE='AGGREGATE', then this is the time that the first file in the aggregate was opened.
CLOSE_TIME	DATE	The time this file was closed. If TYPE='AGGREGATE', then this is the time that the last file in the aggregate was closed.
ELAPSED_TIME	NUMBER	The time, in hundredths of a second, that the file was open
MAXOPENFILES	NUMBER	The number of concurrently open DISK files. This value is only present in rows where TYPE='AGGREGATE'.
BYTES	NUMBER	The number of bytes read or written so far
EFFECTIVE_BYTES_PER_SECOND	NUMBER	The I/O rate that was achieved with this device during this backup
IO_COUNT	NUMBER	The number of I/Os that were performed to this file
IO_TIME_TOTAL	NUMBER	The total time, in hundredths of a second, taken to do I/O for this file
IO_TIME_MAX	NUMBER	The maximum time taken for a single I/O request
DISCRETE_BYTES_PER_SECOND	NUMBER	The average transfer rate for this file
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.109 V$BGPROCESS

V$BGPROCESS displays information about the background processes.

Column	Datatype	Description
PADDR	RAW(4 | 8)	Address of the process state object
PSERIAL#	NUMBER	Process state object serial number
NAME	VARCHAR2(5)	Name of this background process
DESCRIPTION	VARCHAR2(64)	Description of the background process
ERROR	NUMBER	Error encountered

Column	Datatype	Description
ATTRIBUTES	VARCHAR2(512)	Attributes of the background process, in JSON format
TYPE	VARCHAR2(5)	This column has a value of SLAVE for all background worker processes, otherwise it is null.
PRIORITY	VARCHAR2(8)	Lists the current priority with which the process is running. This column has string values based on the operating system. On Linux, the values that can appear in this column are: • TS: Time sharing • RT: Real time priority
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.110 V$BH

V$BH displays the status and number of pings for every buffer in the SGA. This is an Oracle Real Application Clusters view.

Column	Datatype	Description
FILE#	NUMBER	Data file identifier number (to find the file name, query DBA_DATA_FILES or V$DBFILE)
BLOCK#	NUMBER	Block number
CLASS#	NUMBER	Class number
STATUS	VARCHAR2(10)	Status of the buffer: • cr - Consistent read • flashcur - A current flash cache buffer • flashfree - A free flash cache buffer • free - Not currently in use • irec - In instance recovery mode • mrec - In media recovery mode • pi - A past image in RAC mode • pmemfree - A free PMEM buffer • pmemcr - pmemcr - A consistent-read/previous version of a PMEM buffer • pmemcur - A current PMEM buffer • read - Being read from disk • scur - Shared current • securefile - A secured file buffer • xcur - Exclusive
XNC	NUMBER	This column is obsolete. Its value is hard-coded to 0.
FORCED_READS	NUMBER	This column is obsolete. Its value is hard-coded to 0.
FORCED_WRITES	NUMBER	This column is obsolete. Its value is hard-coded to 0.

Column	Datatype	Description
LOCK_ELEMENT_ADDR	RAW(4 | 8)	Address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
LOCK_ELEMENT_NAME	NUMBER	The address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
LOCK_ELEMENT_CLASS	NUMBER	The address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
DIRTY	VARCHAR2(1)	Y - block modified
TEMP	VARCHAR2(1)	Y - temporary block
PING	VARCHAR2(1)	Y - block pinged
STALE	VARCHAR2(1)	Y - block is stale
DIRECT	VARCHAR2(1)	Y - direct block
NEW	CHAR(1)	Always set to N. This column is obsolete and maintained for backward compatibility.
OBJD	NUMBER	Database object number of the block that the buffer represents
TS#	NUMBER	Tablespace number of block
LOBID	NUMBER	If the buffer belongs to a SecureFiles object, the value in this column is the unique identifier for the SecureFiles object. For other buffer types, the value in this column is meaningless.
CACHEHINT	NUMBER	Numeric representation of the values in the FLASH_CACHE and CELL_FLASH_CACHE columns. See the descriptions and possible values for the FLASH_CACHE and CELL_FLASH_CACHE columns in this view.
FLASH_CACHE	VARCHAR2(7)	Database Smart Flash Cache hint to be used for segment blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)	Cell flash cache hint to be used for segment blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
XCUR_PIN_HOLDER	NUMBER	ID of the Oracle process that holds the exclusive pin You can join this column with the PID column of the V$PROCESS and V$WAIT_CHAINS views to obtain details about the process.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.111 V$BLOCK_CHANGE_TRACKING

V$BLOCK_CHANGE_TRACKING displays the status of block change tracking for the database.

Column	Datatype	Description
STATUS	VARCHAR2(10)	Status of block change tracking in the database: • DISABLED - Block change tracking is disabled • TRANSITION - Block change tracking is in the process of transitioning between the enabled and disabled states. The TRANSITION state should usually never be observed, because it only exists while enabling or disabling block change tracking. This state might be observed if the instance crashed while enabling or disabling block change tracking, in which case it will be cleaned up automatically the next time that the database is opened. • ENABLED - Block change tracking is enabled
FILENAME	VARCHAR2(513)	Name of the block change tracking file for the database
BYTES	NUMBER	Size of the block change tracking file (in bytes)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Backup and Recovery User's Guide for information on setting up block change tracking

8.112 V$BLOCKING_QUIESCE

V$BLOCKING_QUIESCE indicates if a session is blocking, or would block, a quiesce operation.

Column	Datatype	Description
SID	NUMBER	Session identifier
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.113 V$BT_SCAN_CACHE

V$BT_SCAN_CACHE shows the parameters and status of the big table cache section.

Column	Datatype	Description
BT_CACHE_ALLOC	NUMBER	Current ratio of the big table cache section to the buffer cache
BT_CACHE_TARGET	NUMBER	Target ratio of the big table cache section to the buffer cache
OBJECT_COUNT	NUMBER	Number of objects tracked by the big table cache section
MEMORY_BUF_ALLOC	NUMBER	Number of memory buffers allocated by the big table cache section to objects
MIN_CACHED_TEMP	NUMBER	Minimum temperature of any object that is allowed to be cached by the big table cache section
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "DB_BIG_TABLE_CACHE_PERCENT_TARGET" for more information about enabling the big table cache

8.114 V$BT_SCAN_OBJ_TEMPS

V$BT_SCAN_OBJ_TEMPS shows the active objects currently tracked by the big table cache.

Column	Datatype	Description
TS#	NUMBER	Tablespace number
DATAOBJ#	NUMBER	Data object number (objd)
SIZE_IN_BLKS	NUMBER	Size of the object being scanned on this instance, in blocks
TEMPERATURE	NUMBER	Temperature of this object
POLICY	VARCHAR2(10)	Caching policy of this object. Possible values: • MEM_ONLY: This object will be fully cached in memory. • MEM_PART: This object will be partially cached in memory and some portion will remain on disk and will not be cached. • DISK: this object will not be cached in memory or flash for the scan at all. • INVALID: The caching policy is not valid.
CACHED_IN_MEM	NUMBER	The number of blocks that are cached/allocated in memory for this object

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "DB_BIG_TABLE_CACHE_PERCENT_TARGET" for more information about enabling the big table cache

8.115 V$BUFFER_POOL

V$BUFFER_POOL displays information about all buffer pools available for the instance.

Column	Datatype	Description
ID	NUMBER	Buffer pool identifier number
NAME	VARCHAR2(20)	Name of the buffer pool: • DEFAULT • KEEP • RECYCLE **Note:** Currently, KEEP and RECYCLE pools only exist for the standard block size. All nonstandard block size pools are DEFAULT.
BLOCK_SIZE	NUMBER	Block size (in bytes) for buffers in this pool. Possible values: the standard block size, the power of 2 nonstandard block sizes, 2048, 4096, 8192, 16384, 32768.
RESIZE_STATE	VARCHAR2(10)	Current state of the resize operation: STATIC - Not being resized ALLOCATING - Memory is being allocated (can be canceled by the user) ACTIVATING - New buffers are being created (user cannot cancel) SHRINKING - Buffers are being deleted (can be canceled by the user)
CURRENT_SIZE	NUMBER	Present size of the sub-cache (in megabytes)
BUFFERS	NUMBER	Current instantaneous number of buffers
TARGET_SIZE	NUMBER	If a resize is in progress (state is not STATIC), records new target size (in megabytes). If the pool is STATIC, the value in this column is the same as the current size of the pool.
TARGET_BUFFERS	NUMBER	If a resize is in progress, records new target size in terms of buffers. Otherwise, the value in this column is the same as the current number of buffers.
PREV_SIZE	NUMBER	Previous buffer pool size. If the buffer pool has never been resized, the previous size is zero.

Column	Datatype	Description
PREV_BUFFERS	NUMBER	Previous number of buffers in the buffer pool. Value is zero if the buffer pool has never been resized.
LO_BNUM	NUMBER	Obsolete column
HI_BNUM	NUMBER	Obsolete column
LO_SETID	NUMBER	Obsolete column
HI_SETID	NUMBER	Obsolete column
SET_COUNT	NUMBER	Obsolete column
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

"DB_BLOCK_SIZE"

8.116 V$BUFFER_POOL_STATISTICS

V$BUFFER_POOL_STATISTICS displays statistics about all buffer pools available for the instance.

Column	Datatype	Description
ID	NUMBER	Buffer pool identifier number
NAME	VARCHAR2(20)	Name of the buffer pool
BLOCK_SIZE	NUMBER	Block size (in bytes) for buffers in this pool. Possible values: the standard block size, the power of 2 nonstandard block sizes, 2048, 4096, 8192, 16384, 32768.
SET_MSIZE	NUMBER	Buffer pool maximum set size
CNUM_REPL	NUMBER	Number of buffers on replacement list
CNUM_WRITE	NUMBER	Number of buffers on write list
CNUM_SET	NUMBER	Number of buffers in set
BUF_GOT	NUMBER	Number of buffers gotten by the set
SUM_WRITE	NUMBER	Number of buffers written by the set
SUM_SCAN	NUMBER	Number of buffers scanned in the set
FREE_BUFFER_WAIT	NUMBER	Free buffer wait statistic
WRITE_COMPLETE_WAIT	NUMBER	Write complete wait statistic
BUFFER_BUSY_WAIT	NUMBER	Buffer busy wait statistic
FREE_BUFFER_INSPECTED	NUMBER	Free buffer inspected statistic
DIRTY_BUFFERS_INSPECTED	NUMBER	Dirty buffers inspected statistic

Column	Datatype	Description
DB_BLOCK_CHANGE	NUMBER	Database blocks changed statistic
DB_BLOCK_GETS	NUMBER	Database blocks gotten statistic
CONSISTENT_GETS	NUMBER	Consistent gets statistic
PHYSICAL_READS	NUMBER	Physical reads statistic
PHYSICAL_WRITES	NUMBER	Physical writes statistic
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

"DB_CACHE_SIZE"

8.117 V$BUFFERED_PUBLISHERS

V$BUFFERED_PUBLISHERS displays information about all buffered publishers in the instance.

There is one row per queue per sender. The values are reset to zero when the database (or instance in an Oracle RAC environment) restarts.

Column	Datatype	Description
QUEUE_ID	NUMBER	Identifier for the queue
QUEUE_SCHEMA	VARCHAR2(128)	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	Name of the queue
SENDER_NAME	VARCHAR2(128)	Name of the agent enqueuing the message (the Streams name assigned for a capture process)
SENDER_ADDRESS	VARCHAR2(1024)	Queue name and database name of the source (last propagating) queue; database name is not specified if the source queue is in the local database
SENDER_PROTOCOL	NUMBER	Protocol used by the sender's address
NUM_MSGS	NUMBER	Current number of messages that have yet to be dequeued from the buffer queue
CNUM_MSGS	NUMBER	Cumulative total number of messages enqueued into the buffered queue since the database last started
LAST_ENQUEUED_MSG	NUMBER	Most recently enqueued message identifier
UNBROWSED_MSGS	NUMBER	Number of messages that have been enqueued but not browsed
OVERSPILLED_MSGS	NUMBER	Number of messages that have been spilled but not browsed
MEMORY_USAGE	NUMBER	Percentage of the Streams pool that is being used (or 0 if there is no Streams pool)

Column	Datatype	Description
ELAPSED_ENQUEUE_TIME	NUMBER	Total time spent in enqueue (in hundredths of a second)
ENQUEUE_CPU_TIME	NUMBER	Total CPU time for enqueue (in hundredths of a second)
LAST_ENQUEUE_TIME	TIMESTAMP(3) WITH TIME ZONE	Last message enqueue time
PUBLISHER_STATE	VARCHAR2(59)	State of the publisher: • IN FLOW CONTROL: TOO MANY UNBROWSED MESSAGES • IN FLOW CONTROL: OVERSPILLED MESSAGES • IN FLOW CONTROL: INSUFFICIENT MEMORY AND UNBROWSED MESSAGES • PUBLISHING MESSAGES - Normal
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.118 V$BUFFERED_QUEUES

V$BUFFERED_QUEUES displays information about all buffered queues in the instance. There is one row per queue.

Column	Datatype	Description
QUEUE_ID	NUMBER	Identifier for the queue
QUEUE_SCHEMA	VARCHAR2(128)	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	Name of the queue
STARTUP_TIME	DATE	Startup time
NUM_MSGS	NUMBER	Total number of messages currently in the buffered queue
SPILL_MSGS	NUMBER	Current number of overflow messages spilled to disk from the buffered queue
CNUM_MSGS	NUMBER	Cumulative total number of messages enqueued into the buffered queue since the database last started
CSPILL_MSGS	NUMBER	Cumulative total number of overflow messages spilled to disk from the buffered queue since the database last started
EXPIRED_MSGS	NUMBER	Number of expired messages
OLDEST_MSGID	RAW(16)	Message ID of the oldest message
OLDEST_MSG_ENQTM	TIMESTAMP(3)	Enqueue time of the oldest message
QUEUE_STATE	VARCHAR2(25)	Indicates whether the queue is in recovery mode (QUEUE IS IN RECOVERY MODE) or not (NORMAL)
ELAPSED_ENQUEUE_TIME	NUMBER	Total time spent in enqueue (in hundredths of a second)
ELAPSED_DEQUEUE_TIME	NUMBER	Total time spent in dequeue (in hundredths of a second)
ELAPSED_TRANSFORMATION_TIME	NUMBER	Total time for evaluating transformations (in hundredths of a second)

Column	Datatype	Description
ELAPSED_RULE_EVALUATION_TIME	NUMBER	Total time for rule evaluations (in hundredths of a second)
ENQUEUE_CPU_TIME	NUMBER	Total CPU time for enqueue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER	Total CPU time for dequeue (in hundredths of a second)
AVG_MSG_AGE	NUMBER	Average age of messages in the queue
LAST_ENQUEUE_TIME	TIMESTAMP(3) WITH TIME ZONE	Last message enqueue time
LAST_DEQUEUE_TIME	TIMESTAMP(3) WITH TIME ZONE	Last message dequeue time
QUEUE_SIZE	NUMBER	Size of queue, which is the total number of bytes allocated for all messages and metadata
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.119 V$BUFFERED_SUBSCRIBERS

V$BUFFERED_SUBSCRIBERS displays information about the subscribers for all buffered queues in the instance. There is one row per subscriber per queue.

Column	Datatype	Description
QUEUE_ID	NUMBER	Identifier for the queue
QUEUE_SCHEMA	VARCHAR2(128)	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	Name of the queue
SUBSCRIBER_ID	NUMBER	Internal subscriber number (for identification)
SUBSCRIBER_NAME	VARCHAR2(512)	Name of the subscriber
SUBSCRIBER_ADDRESS	VARCHAR2(1024)	Address of the subscribing agent
PROTOCOL	NUMBER	Protocol of the subscribing agent
SUBSCRIBER_TYPE	VARCHAR2(128)	Type of the subscriber: • PROXY - Proxy subscriber • SUBSCRIBER
STARTUP_TIME	DATE	Startup time
LAST_BROWSED_SEQ	NUMBER	Sequence number of the most recently browsed message for the subscriber (comparable to the number of messages in the V$STREAMS_APPLY_READER view)
LAST_BROWSED_NUM	NUMBER	Internal Message number for the most recently browsed message for the subscriber
LAST_DEQUEUED_SEQ	NUMBER	Sequence number of the most recently dequeued message for the subscriber (comparable to the number of messages in the V$STREAMS_APPLY_COORDINATOR view)

Column	Datatype	Description
LAST_DEQUEUED_NUM	NUMBER	Internal Message number for the most recently dequeued message for the subscriber
CURRENT_ENQ_SEQ	NUMBER	Current sequence number of the most recently enqueued message for the subscriber
NUM_MSGS	NUMBER	Total number of outstanding messages currently enqueued in the buffered queue for the subscriber (includes the count of the messages overflowed to disk)
CNUM_MSGS	NUMBER	Cumulative total number of messages enqueued for the subscriber since the database last started
TOTAL_DEQUEUED_MSG	NUMBER	Total number of messages dequeued by the subscriber
TOTAL_SPILLED_MSG	NUMBER	Total number of spilled messages for the subscriber
EXPIRED_MSGS	NUMBER	Number of expired messages
MESSAGE_LAG	NUMBER	Message lag of the subscriber
ELAPSED_DEQUEUE_TIME	NUMBER	Total time spent in dequeue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER	Total CPU time for dequeue (in hundredths of a second)
AVG_MSG_AGE	NUMBER	Average age of messages currently enqueued in the buffered queue for the subscriber
LAST_DEQUEUE_TIME	TIMESTAMP(3) WITH TIME ZONE	Last message dequeue time
OLDEST_MSGID	RAW(16)	Message ID of the oldest message
OLDEST_MSG_ENQTM	TIMESTAMP(3)	Enqueue time of the oldest message
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.120 V$CACHE

V$CACHE displays information from the block header of each block in the SGA of the current instance as related to particular database objects. This is an Oracle Real Application Clusters view.

Column	Datatype	Description
FILE#	NUMBER	Data file identifier number (to find the file name, query DBA_DATA_FILES or V$DBFILE)
BLOCK#	NUMBER	Block number
CLASS#	NUMBER	Class number

Column	Datatype	Description
STATUS	VARCHAR2(10)	Status of the block: • free - Not currently in use • xcur - Exclusive • scur - Shared current • cr - Consistent read • read - Being read from disk • mrec - In media recovery mode • irec - In instance recovery mode
XNC	NUMBER	Number of PCM x to null lock conversions due to contention with another instance. This column is obsolete and maintained for backward compatibility.
FORCED_READS	NUMBER	Number of times the block had to be reread from the cache because another instance has forced it out of this instance's cache by requesting the lock on the block in exclusive mode
FORCED_WRITES	NUMBER	Number of times GCS had to write this block to cache because this instance had used the block and another instance had requested the lock on the block in a conflicting mode
NAME	VARCHAR2(128)	Name of the database object containing the block
PARTITION_NAME	VARCHAR2(128)	Name of the partition (null for nonpartitioned objects)
KIND	VARCHAR2(15)	Type of the database object: • INDEX • TABLE • CLUSTER • VIEW • SYNONYM • SEQUENCE • PROCEDURE • FUNCTION • PACKAGE • NON-EXISTENT • PACKAGE BODY • TRIGGER • TYPE • TYPE BODY • TABLE PARTITION • INDEX PARTITION • LOB • LIBRARY • JAVA SOURCE • JAVA CLASS • JAVA RESOURCE • JAVA DATA • UNDO
OWNER#	NUMBER	Owner number
LOCK_ELEMENT_ADDR	RAW(4 | 8)	Address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
LOCK_ELEMENT_NAME	NUMBER	Name of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.121 V$CACHE_FUSION_HISTOGRAM

V$CACHE_FUSION_HISTOGRAM displays a breakdown of various processing latencies in the Global Cache Service processes (LMS) used in cache fusion.

This view is a superset of the V$CURRENT_BLOCK_SERVER view, which reports just pin and flush statistics.

Column	Datatype	Description
STATISTIC_NAME	VARCHAR2(34)	Name of the statistic
TOTAL	NUMBER	Total histogram count for the statistic
BKT10US	NUMBER	Histogram count for values taking less than 10 microseconds
BKT100US	NUMBER	Histogram count for values taking 10 to 100 microseconds
BKT1MS	NUMBER	Histogram count for values taking 100 microseconds to 1 millisecond
BKT10MS	NUMBER	Histogram count for values taking 1 to 10 milliseconds
BKT100MS	NUMBER	Histogram count for values taking 10 to 100 milliseconds
BKT1S	NUMBER	Histogram count for values taking 100 milliseconds to 1 second
BKT10S	NUMBER	Histogram count for values taking 1 to 10 seconds
BKTOVERFLOW	NUMBER	Histogram count for values taking more than 10 seconds
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

This view is available starting with Oracle Database 23ai, Release Update 23.8.

> "V$CURRENT_BLOCK_SERVER"

8.122 V$CACHE_LOCK

V$CACHE_LOCK is deprecated. The information that was provided in this view is now provided in the V$INSTANCE_CACHE_TRANSFER and V$SEGMENT_STATISTICS views.

Column	Datatype	Description
FILE#	NUMBER	Data file identifier number (to find file name, query DBA_DATA_FILES or V$DBFILE)
BLOCK#	NUMBER	Block number
STATUS	VARCHAR2(10)	Status of the block: • free - Not currently in use • xcur - Exclusive • scur - Shared current • cr - Consistent read • read - Being read from disk • mrec - In media recovery mode • irec - In instance recovery mode
XNC	NUMBER	Number of parallel cache management (PCM) lock conversions due to contention with another instance
FORCED_READS	NUMBER	Number of times the block had to be reread from the cache because another instance has forced it out of this instance's cache by requesting the lock on the block in exclusive mode
FORCED_WRITES	NUMBER	Number of times GCS had to write this block to cache because this instance had used the block and another instance had requested the lock on the block in a conflicting mode
NAME	VARCHAR2(128)	Name of the database object containing the block

Column	Datatype	Description
KIND	VARCHAR2(15)	Type of database object: • 1 - Index • 2 - Table • 3 - Cluster • 4 - View • 5 - Synonym • 6 - Sequence • 7 - Procedure • 8 - Function • 9 - Package • 10 - Nonexistent • 11 - Package body • 12 - Trigger • 13 - Type • 14 - Type body • 19 - Table partition • 20 - Index partition • 21 - LOB • 22 - Library • Null - Unknown
OWNER#	NUMBER	Owner number
LOCK_ELEMENT_ADDR	RAW(4 | 8)	Address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
LOCK_ELEMENT_NAME	NUMBER	Address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
INDX	NUMBER	Platform-specific lock manager identifier
CLASS	NUMBER	Platform-specific lock manager identifier
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.123 V$CACHE_TRANSFER

V$CACHE_TRANSFER is identical to the V$CACHE view but only displays blocks that have been pinged at least once.

This view contains information from the block header of each block in the SGA of the current instance as related to particular database objects. This is an Oracle Real Application Clusters view.

Column	Datatype	Description
FILE#	NUMBER	Data file identifier number (to find the file name, query DBA_DATA_FILES or V$DBFILE)
BLOCK#	NUMBER	Block number
CLASS#	NUMBER	Class number
STATUS	VARCHAR2(10)	Status of the block: • free - Not currently in use • xcur - Exclusive • scur - Shared current • cr - Consistent read • read - Being read from disk • mrec - In media recovery mode • irec - In instance recovery mode
XNC	NUMBER	Number of PCM lock conversions due to contention with another instance. This column is obsolete and maintained for backward compatibility.
FORCED_READS	NUMBER	Number of times the block had to be reread from the cache because another instance has forced it out of this instance's cache by requesting the lock on the block in exclusive mode
FORCED_WRITES	NUMBER	Number of times GCS had to write this block to cache because this instance had used the block and another instance had requested the lock on the block in a conflicting mode
NAME	VARCHAR2(128)	Name of the database object containing the block
PARTITION_NAME	VARCHAR2(128)	NULL for nonpartitioned objects
KIND	VARCHAR2(15)	Type of database object **See Also:** Table 9-1
OWNER#	NUMBER	Owner number
LOCK_ELEMENT_ADDR	RAW(4 | 8)	Address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
LOCK_ELEMENT_NAME	NUMBER	The name of the lock that contains the PCM lock that is covering the buffer
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$CACHE"

8.124 V$CHUNK_METRIC

V$CHUNK_METRIC displays the metric values captured for the most recent 30-second intervals for the workload against each chunk available on the database.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
CHUNK_ID	NUMBER	Chunk number (internal)
CALLSPERSEC	NUMBER	Number of user calls per second to the chunks
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$SERVICE_REGION_METRIC"

8.125 V$CIRCUIT

V$CIRCUIT contains information about virtual circuits, which are user connections to the database through dispatchers and servers.

Column	Datatype	Description
CIRCUIT	RAW(4 | 8)	Circuit address
DISPATCHER	RAW(4 | 8)	Current dispatcher process address
SERVER	RAW(4 | 8)	Current server process address
WAITER	RAW(4 | 8)	Address of the server process that is waiting for the (currently busy) circuit to become available
SADDR	RAW(4 | 8)	Address of the session bound to the circuit
STATUS	VARCHAR2(16)	Status of the circuit: • BREAK - currently interrupted • EOF - about to be removed • OUTBOUND - an outward link to a remote database • NORMAL - normal circuit into the local database

Column	Datatype	Description
QUEUE	VARCHAR2(16)	Queue the circuit is currently on: • COMMON - on the common queue, waiting to be picked up by a server process • DISPATCHER - waiting for the dispatcher • SERVER - currently being serviced • NONE - idle circuit
MESSAGE0	NUMBER	Size in bytes of the messages in the first message buffer
MESSAGE1	NUMBER	Size in bytes of the messages in the second message buffer
MESSAGE2	NUMBER	Size in bytes of the messages in the third message buffer
MESSAGE3	NUMBER	Size in bytes of the messages in the fourth message buffer
MESSAGES	NUMBER	Total number of messages that have gone through this circuit
BYTES	NUMBER	Total number of bytes that have gone through this circuit
BREAKS	NUMBER	Total number of breaks (interruptions) for this circuit
PRESENTATION	VARCHAR2(257)	Presentation protocol used by the client and server
PCIRCUIT	RAW(4 | 8)	Address of the parent circuit
BOUND_TIME	NUMBER	Time that a circuit and shared server have been bound (in centiseconds)
BOUND_REASON	VARCHAR2(32)	Provides a reason (a short explanation) for why a shared server and circuit could not be unbound. This column is empty when a circuit is not bound to a server. When the server starts serving a circuit, BOUND_REASON is empty and remains empty unless the server tries unsuccessfully to unbind the circuit (after it finishes serving the current request). When this column is not empty, it will be cleared once the server and circuit are unbound (that is, once the resources preventing the session migration to another shared server are released).
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.126 V$CLASS_CACHE_TRANSFER

V$CLASS_CACHE_TRANSFER is deprecated. The information that was provided in this view is now provided in the V$INSTANCE_CACHE_TRANSFER and V$SEGMENT_STATISTICS views.

Column	Datatype	Description
CLASS	CHAR(10)	Block class; always data block
X_2_NULL	NUMBER	Number of blocks with Exclusive-to-NULL conversions; always 0
X_2_NULL_FORCED_WRITE	NUMBER	Number of Exclusive-to-NULL forced writes; always 0
X_2_NULL_FORCED_STALE	NUMBER	Number of Exclusive-to-NULL blocks converted to CR; always 0
X_2_S	NUMBER	Number of blocks with Exclusive-to-Shared conversions; always 0

Column	Datatype	Description
X_2_S_FORCED_WRITE	NUMBER	Number of Exclusive-to-Shared forced writes; always 0
S_2_NULL	NUMBER	Number of blocks with Shared-to-NULL conversions; always 0
S_2_NULL_FORCED_STALE	NUMBER	Number of Shared-to-NULL blocks converted to CR; always 0
NULL_2_X	NUMBER	Number of blocks with NULL-to-Exclusive conversions; always 0
S_2_X	NUMBER	Number of blocks with Shared-to-Exclusive conversions; always 0
NULL_2_S	NUMBER	Number of blocks with NULL-to-Shared conversions; always 0
CR_TRANSFER	NUMBER	Number of CR blocks transferred; always 0
CURRENT_TRANSFER	NUMBER	Number of current blocks transferred; always 0
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$INSTANCE_CACHE_TRANSFER"
- "V$SEGMENT_STATISTICS"

8.127 V$CLEANUP_PROCESS

V$CLEANUP_PROCESS provides information on the PMON processes.

Column	Datatype	Description
NAME	VARCHAR2(5)	Name of the cleanup process (PMON, CLMN, CL**)
PADDR	RAW(8)	Process pointer for the cleanup process (can join with V$PROCESS)
SADDR	RAW(8)	Session pointer for the cleanup process (can join with V$SESSION)
STATE	VARCHAR2(4)	Cleanup process state: • IDLE: Not currently performing cleanup • BUSY: Currently performing cleanup
DEAD_IN_CLEANUP	RAW(8)	Pointer to the root of the tree in cleanup (can join with ROOT_ADDR in V$DEAD_CLEANUP)
CLEANUP_TIME	NUMBER	If STATE = BUSY, the time spent in the current cleanup attempt (in seconds). Otherwise, 0.
TIME_SINCE_LAST_CLEANUP	NUMBER	If STATE = IDLE, time since last needed to perform cleanup (in seconds). Otherwise, 0.
NUM_CLEANED	NUMBER	Number of trees cleaned up by the cleanup process. Increased by one every time a root tree is attempted.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$DEAD_CLEANUP"

8.128 V$CLIENT_SECRETS

V$CLIENT_SECRETS lists the secrets that are present in the keystore.

Only SYS, SYSKM, and users with the ADMINISTER KEY MANAGEMENT privilege can access this view.

Column	Datatype	Description
CLIENT	VARCHAR2(2000)	Name provided by the client
SECRET_TAG	VARCHAR2(4000)	Associated information with the client
CREATION_TIME	TIMESTAMP(6) WITH TIME ZONE	Time when the secret was created
ACTIVATION_TIME	TIMESTAMP(6) WITH TIME ZONE	Time when the secret was actually put to use
OWNER	VARCHAR2(128)	User who created the secret
OWNER_ID	NUMBER	User ID of the user who created the secret
KEYSTORE_TYPE	VARCHAR2(17)	Type of keystore in which the secret is stored: • OKV - Oracle Key Vault • SOFTWARE KEYSTORE • UNDEFINED - This value is shown if the database has no information about the type of keystore where the master key resides
BACKED_UP	VARCHAR2(9)	Indicates whether the secret has been backed up or not
OWNER_DBNAME	VARCHAR2(128)	Database that created the secret
OWNER_DBID	NUMBER	Database ID where the secret was created
OWNER_INSTANCE_NAME	VARCHAR2(30)	Instance name of the instance where the secret was created
OWNER_INSTANCE_NUMBER	NUMBER	Instance number of the instance where the secret was created
OWNER_INSTANCE_SERIAL	NUMBER	Serial number of the instance where the secret was created
OWNER_PDBNAME	VARCHAR2(128)	Pluggable database (PDB) where the secret was created
OWNER_PDBID	NUMBER	PDB ID where the secret was created

Column	Datatype	Description
OWNER_PDBUID	NUMBER	PDB UID where the secret was created
OWNER_PDBGUID	RAW(16)	PDB GUID where the secret was created
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Transparent Data Encryption Guide for information about keystore management

8.129 V$CLIENT_STATS

V$CLIENT_STATS displays measures for all sessions that are active for the client identifier per instance.

The statistics available in this view are a subset of those available in V$SESSTAT and V$SESS_TIME_MODEL.

Column	Datatype	Description
CLIENT_IDENTIFIER	VARCHAR2(64)	Client identifier
STAT_ID	NUMBER	Statistic identifier
STAT_NAME	VARCHAR2(64)	Derived statistic name from V$STATNAME and V$SESS_TIME_MODEL
VALUE	NUMBER	Cumulative value (in microseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$SESSTAT"
- "V$SESS_TIME_MODEL"

8.130 V$CLONEDFILE

`V$CLONEDFILE` provides CloneDB file information.

Column	Datatype	Description
`SNAPSHOTFILENAME`	`VARCHAR2(513)`	Snapshot file name. This file is the snapshot file from the snapshot database. The snapshot file is also sometimes referred to as the srcfile.
`CLONEFILENAME`	`VARCHAR2(513)`	CloneDB file name. This file is the cloned file (of the snapshot file) which resides in the current (cloned database). The cloned file is sometimes referred to as the destfile.
`SNAPSHOTBLKREAD`	`NUMBER`	Number of blocks reads to the snapshot file
`SNAPSHOTREQUEST`	`NUMBER`	Number of read requests to the snapshot file
`FILENUMBER`	`NUMBER`	File number of the cloned file
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
`BLOCKS_ALLOCATED`	`NUMBER`	Amount of space allocated in blocks in the file system. This is less than or equal to the actual file size.

Note:

When this view is queried in an Oracle Database environment, rows are returned for every opened file, even those without a parent file backing them (in those cases the column is empty/NULL).

In an Oracle ASM environement, rows are returned for files that an Oracle ASM instance has mounted in disk groups only if those files are children (a clonefile) of a parent snapshot file.

8.131 V$CLUSTER_INTERCONNECTS

`V$CLUSTER_INTERCONNECTS` displays one or more interconnects that are being used for cluster communication.

Column	Datatype	Description
`NAME`	`VARCHAR2(15)`	Name of the interconnect (such as `eth0`)
`IP_ADDRESS`	`VARCHAR2(46)`	IP address of the interconnect

Column	Datatype	Description
IS_PUBLIC	VARCHAR2(3)	If the value is YES, the interface is known to the public. If the value is NO, the interface is known to be private. Note that if the CLUSTER_INTERCONNETS initialization parameter is also specified, then it is expected that the interconnect is private. Oracle expects cluster traffic to be run on private interconnects only. f the value is empty, it is unknown whether the interface is public or private. Oracle recommends that you set the interface for Oracle Real Application Clusters (Oracle RAC) communication in the Oracle Cluster Registry (OCR).
SOURCE	VARCHAR2(31)	Indicates where this interface was picked up from: • Oracle Cluster Registry - Interface was configured in the OCR and Oracle Database found the interface in the OCR • Operating-system dependent software - Oracle Database automatically detects this • CLUSTER_INTERCONNECTS parameter - This initialization parameter was set
PNAME	VARCHAR2(15)	Name of the physical interface of the interconnect This value may differ from the NAME value if the IP address is bound to a device alias. For example, if NAME is eth0:1, then PNAME is eth0.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.132 V$CODE_CLAUSE

V$CODE_CLAUSE contains the supported clause names and parameter names for the Oracle Data Vault ALTER SYSTEM and ALTER SESSION commands.

Column	Datatype	Description
CODE_ID#	NUMBER	The OCT code ID: • 42: For ALTER SESSION • 49: For ALTER SYSTEM
CLAUSE_ID#	NUMBER	Clause ID
CLAUSE_NAME	VARCHAR2(100)	The clause name that is supported by the Oracle Data Vault command rule (for example, SET or ADVICE)
PARAMETER_NAME	VARCHAR2(100)	The parameter name that is supported by the Oracle Data Vault command rule. For example, for ALTER SYSTEM SET EVENTS, EVENTS is the parameter.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.133 V$CON_EVENT_HISTOGRAM_MICRO

V$CON_EVENT_HISTOGRAM_MICRO displays a histogram of the number of waits, the maximum wait, and total wait time on an event basis for a container, in microseconds. The histogram has buckets of time intervals from < 1 us, < 2 us, < 4 us, < 8 us, ... < 2^{31} us, < 2^{32} us, and >= 2^{32} us.

The histogram will not be filled unless the TIMED_STATISTICS initialization parameter is set to true.

Column	Datatype	Description
EVENT#	NUMBER	Event number
EVENT	VARCHAR2(64)	Name of the event
WAIT_TIME_FORMAT	VARCHAR2(30)	A human readable time string which is converted from WAIT_TIME_MICRO. When WAIT_TIME_MICRO < 1 millisecond, WAIT_TIME_FORMAT is shown in microseconds. When WAIT_TIME_MICRO < 1 second, WAIT_TIME_FORMAT is shown in milliseconds. When WAIT_TIME_MICRO < 1 minute, WAIT_TIME_FORMAT is shown in seconds. When WAIT_TIME_MICRO > 1 minute, WAIT_TIME_FORMAT is shown in minutes and seconds.
WAIT_TIME_MICRO	NUMBER	Amount of time the bucket represents (in microseconds). If the duration = num, then this column represents waits of duration < num that are not included in any smaller bucket.
WAIT_COUNT	NUMBER	Number of waits of the duration belonging to the bucket of the histogram
LAST_UPDATE_TIME	VARCHAR2(73)	Indicates the last time the bucket was updated (the ending timestamp of the last wait falling into the bucket's duration)
CON_ID	NUMBER	When queried from a non-CDB, the wait event data in that instance are returned, and the CON_ID value is 0. When queried from the root of a CDB, the wait event data in every container is returned, and the CON_ID value indicates the container to which the wait event data belong. When queried from a PDB, wait event data in that PDB are returned, and the CON_ID value is the container ID for that PDB.

8.134 V$CON_SYS_TIME_MODEL

V$CON_SYS_TIME_MODEL displays the systemwide accumulated times for various operations for the container from which it is queried.

The time reported is the total elapsed or CPU time (in microseconds). Any timed operation will buffer at most 5 seconds of time data. Specifically, this means that if a timed operation (such as SQL execution) takes a long period of time to perform, the data published to this view is at most missing 5 seconds of the time accumulated for the operation.

The time values are 8-byte integers and can therefore hold approximately 580,000 years worth of time before wrapping. Background process time is not included in a statistic value unless the statistic is specifically for background processes.

Column	Datatype	Description
STAT_ID	NUMBER	Statistic identifier for the time statistic
STAT_NAME	VARCHAR2(64)	Name of the statistic (see Table 10-1)
VALUE	NUMBER	Amount of time (in microseconds) that the system has spent in this operation
CON_ID	NUMBER	When queried from a non-CDB, the accumulated times for operations in that instance are returned, and the CON_ID value is 0. When queried from the root of a CDB, accumulated times for operations in every container are returned, and the CON_ID value indicates the container to which the times belong. When queried from a PDB, accumulated times for operations in that PDB are returned, and the CON_ID value is the container ID for that PDB.

8.135 V$CON_SYSMETRIC

V$CON_SYSMETRIC displays the system metric values captured for the most current time interval for the PDB long duration (60-second) system metrics.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	Metric group ID
METRIC_ID	NUMBER	Metric ID
METRIC_NAME	VARCHAR2(64)	Metric name
VALUE	NUMBER	Metric value
METRIC_UNIT	VARCHAR2(64)	Metric unit description

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. • When queried from the root of a CDB, the statistics for every container are returned, and the CON_ID value indicates the container to which the statistics belong. • When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

See Also:

- "DBA_HIST_CON_SYS_TIME_MODEL"
- "DBA_HIST_SYS_TIME_MODEL"
- "V$SYSMETRIC"

8.136 V$CON_SYSMETRIC_HISTORY

V$CON_SYSMETRIC_HISTORY displays all PDB long duration (60-second with 1 hour history) system metric values available in the database.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	Metric group ID
METRIC_ID	NUMBER	Metric ID
METRIC_NAME	VARCHAR2(64)	Metric name
VALUE	NUMBER	Metric value
METRIC_UNIT	VARCHAR2(64)	Metric unit description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • When queried from a non-CDB, the statistics for that instance are returned, and the CON_ID value is 0. • When queried from the root of a CDB, the statistics for every container are returned, and the CON_ID value indicates the container to which the statistics belong. • When queried from a PDB, statistics from that PDB are returned, and the CON_ID value is the container ID for that PDB.

See Also:

- "DBA_HIST_CON_SYSMETRIC_HIST"
- "DBA_HIST_SYSMETRIC_HISTORY"
- "V$SYSMETRIC_HISTORY"

8.137 V$CON_SYSMETRIC_SUMMARY

`V$CON_SYSMETRIC_SUMMARY` displays a summary of all system metric values for the PDB long-duration system metrics. The average, maximum value, minimum value, and the value of one standard deviation for the last hour are displayed for each metric item.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	Metric group ID
METRIC_ID	NUMBER	Metric ID
METRIC_NAME	VARCHAR2(64)	Metric name
NUM_INTERVAL	NUMBER	Number of intervals observed
MAXVAL	NUMBER	Maximum value observed
MINVAL	NUMBER	Minimum value observed
AVERAGE	NUMBER	Average value over the period
STANDARD_DEVIATION	NUMBER	One standard deviation
METRIC_UNIT	VARCHAR2(64)	Metric unit description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • When queried from a non-CDB, the statistics for that instance are returned, and the `CON_ID` value is `0`. • When queried from the root of a CDB, the statistics for every container are returned, and the `CON_ID` value indicates the container to which the statistics belong. • When queried from a PDB, statistics from that PDB are returned, and the `CON_ID` value is the container ID for that PDB.

See Also:

- "V$SYSMETRIC_HISTORY"
- "DBA_HIST_SYSMETRIC_SUMMARY"
- "V$SYSMETRIC_SUMMARY"

8.138 V$CON_SYSSTAT

V$CON_SYSSTAT displays system statistics, including OLAP kernel statistics for the container from which it is queried. To find the name of the statistic associated with each statistic number (STATISTIC#), query the V$STATNAME view.

Column	Datatype	Description
STATISTIC#	NUMBER	Statistic number **Note:** Statistics numbers are not guaranteed to remain constant from one release to another. Therefore, you should rely on the statistics name rather than its number in your applications.
NAME	VARCHAR2(64)	Statistic name. You can get a complete listing of statistic names by querying the V$STATNAME view.
CLASS	NUMBER	A number representing one or more statistics class. The following class numbers are additive: • 1 - User • 2 - Redo • 4 - Enqueue • 8 - Cache • 16 - OS • 32 - Real Application Clusters • 64 - SQL • 128 - Debug • 256 - Instance level
VALUE	NUMBER	Statistic value
STAT_ID	NUMBER	Identifier of the statistic
CON_ID	NUMBER	When queried from a non-CDB, the statistics in that instance are returned, and the CON_ID value is 0. When queried from the root of a CDB, the statistics in every container are returned, and the CON_ID value indicates the container to which the statistics belong. When queried from a PDB, statistics in that PDB are returned, and the CON_ID value is the container ID for that PDB.

See Also:

"V$STATNAME" and " Statistics Descriptions"

8.139 V$CON_SYSTEM_EVENT

V$CON_SYSTEM_EVENT displays information on total waits for an event in a container.

Note that the TIME_WAITED and AVERAGE_WAIT columns will contain a value of zero on those platforms that do not support a fast timing mechanism. If you are running on one of these platforms and you want this column to reflect true wait times, then you must set TIMED_STATISTICS to TRUE in the parameter file; doing this will have a small negative effect on system performance.

> **See Also:**
>
> "TIMED_STATISTICS"

Column	Datatype	Description
EVENT	VARCHAR2(64)	Name of the wait event; derived statistic name from V$EVENT_NAME **See Also:** " Oracle Wait Events"
TOTAL_WAITS	NUMBER	Total number of waits for the event
TOTAL_TIMEOUTS	NUMBER	Total number of timeouts for the event
TIME_WAITED	NUMBER	Total amount of time waited for the event (in hundredths of a second)
AVERAGE_WAIT	NUMBER	Average amount of time waited for the event (in hundredths of a second)
TIME_WAITED_MICRO	NUMBER	Total amount of time waited for the event (in microseconds)
CPU	NUMBER	Total amount of CPU time consumed while implementing the wait event itself (in microseconds)
TOTAL_WAITS_FG	NUMBER	Total number of waits for the event, from foreground sessions
TOTAL_TIMEOUTS_FG	NUMBER	Total number of timeouts for the event, from foreground sessions
TIME_WAITED_FG	NUMBER	Total amount of time waited for the event, from foreground sessions (in hundredths of a second)
AVERAGE_WAIT_FG	NUMBER	Average amount of time waited for the event, from foreground sessions (in hundredths of a second)
TIME_WAITED_MICRO_FG	NUMBER	Total amount of time waited for the event, from foreground sessions (in microseconds)
CPU_FG	NUMBER	Total amount of CPU time consumed while implementing the wait event itself, from foreground sessions (in microseconds)
EVENT_ID	NUMBER	Identifier of the wait event
WAIT_CLASS_ID	NUMBER	Identifier of the wait class of the wait event
WAIT_CLASS#	NUMBER	Number of the wait class of the wait event
WAIT_CLASS	VARCHAR2(64)	Name of the wait class of the wait event
CON_ID	NUMBER	When queried from a non-CDB, the wait event data in that instance are returned, and the CON_ID value is 0. When queried from the root of a CDB, the wait event data in every container is returned, and the CON_ID value indicates the container to which the wait event data belong. When queried from a PDB, wait event data in that PDB are returned, and the CON_ID value is the container ID for that PDB.

8.140 V$CON_SYSTEM_WAIT_CLASS

V$CON_SYSTEM_WAIT_CLASS displays the time totals for each registered wait class in a container.

Column	Datatype	Description
WAIT_CLASS_ID	NUMBER	Identifier of the wait class
WAIT_CLASS#	NUMBER	Number of the wait class
WAIT_CLASS	VARCHAR2(64)	Name of the wait class

Column	Datatype	Description
TOTAL_WAITS	NUMBER	Total number of waits from this wait class
TIME_WAITED	NUMBER	Total amount of time spent in waits from this wait class (in hundredths of a second)
TIME_WAITED_MICRO	NUMBER	Total amount of time spent in waits from this wait class (in microseconds)
CPU	NUMBER	Total amount of CPU time consumed while implementing waits from this wait class (in microseconds)
TOTAL_WAITS_FG	NUMBER	Total number of waits from this wait class, from foreground sessions
TIME_WAITED_FG	NUMBER	Total amount of time spent in waits from this wait class, from foreground sessions (in hundredths of a second)
TIME_WAITED_MICRO_FG	NUMBER	Total amount of time spent in waits from this wait class, from foreground sessions (in microseconds)
CPU_FG	NUMBER	Total amount of CPU time consumed while implementing waits from this wait class, from foreground sessions (in microseconds)
CON_ID	NUMBER	When queried from a non-CDB, time totals for each registered wait class in that instance are returned, and the CON_ID value is 0. When queried from the root of a CDB, time totals for each registered wait class in every container is returned, and the CON_ID value indicates the container to which the time total belong. When queried from a PDB, time totals for each registered wait class in that PDB are returned, and the CON_ID value is the container ID for that PDB.

8.141 V$CONFIGURED_INTERCONNECTS

V$CONFIGURED_INTERCONNECTS displays all the interconnects that Oracle is aware of. This view attempts to answer the question of where Oracle found the information about a specific interconnect.

Column	Datatype	Description
NAME	VARCHAR2(15)	Name of the interconnect (such as eth0)
IP_ADDRESS	VARCHAR2(64)	IP address of the interconnect
IS_PUBLIC	VARCHAR2(3)	If the value is YES, the interface is known to the public. If the value is NO, the interface is known to be private. Note that if the CLUSTER_INTERCONNECTS initialization parameter is also specified, then it is expected that the interconnect is private. Oracle expects cluster traffic to be run on private interconnects only. If the value is empty, it is unknown whether the interface is public or private. Oracle recommends that you set the interface for Oracle Real Application Clusters (Oracle RAC) communication in the Oracle Cluster Registry (OCR).

Column	Datatype	Description
SOURCE	VARCHAR2(31)	Indicates where this interface was picked up from: • Oracle Cluster Registry - Interface was configured in the OCR and Oracle Database found the interface in the OCR • Operating-system dependent software - Oracle Database automatically detects this • CLUSTER_INTERCONNECTS parameter - This initialization parameter was set
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.142 V$CONTAINER_TOPOLOGY

V$CONTAINER_TOPOLOGY displays information about the containers associated with the current instance.

Column	Datatype	Description
INSTANCE_NUMBER	NUMBER	Instance number, as specified by the INSTANCE_NUMBER initialization parameter for the database in which the container resides
CON_NAME	VARCHAR2(128)	Container name
OPEN_MODE	VARCHAR2(10)	Open mode for the container: • MIGRATE • MOUNTED • READ ONLY • READ WRITE
CPU_COUNT	NUMBER	CPU count, as specified by the CPU_COUNT initialization parameter for the container
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
RESTRICTED	VARCHAR2(3)	Indicates whether a user connecting to the container is required to have the RESTRICTED SESSION privilege (YES) or not (NO)
IS_HYBRID_READ_ONLY	VARCHAR2(3)	Indicates whether the container is in hybrid read-only mode (YES) or not (NO)

8.143 V$CONTAINERS

V$CONTAINERS displays information about PDBs and the root associated with the current instance.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
DBID	NUMBER	PDB identifier calculated when the PDB is created and stored in all file headers associated with the PDB
CON_UID	NUMBER	Unique identifier associated with the PDB
GUID	RAW(16)	Globally unique identifier (GUID) of this PDB
NAME	VARCHAR2(128)	Name of the PDB
OPEN_MODE	VARCHAR2(10)	Open mode information. Possible values: • MOUNTED • READ WRITE • READ ONLY • MIGRATE
RESTRICTED	VARCHAR2(3)	Indicates whether only users possessing RESTRICTED SESSION privilege can connect to the PDB
OPEN_TIME	TIMESTAMP(3)	Date and time when the database was last opened
CREATE_SCN	NUMBER	System change number (SCN) for the creation of this PDB
TOTAL_SIZE	NUMBER	If a PDB is opened, disk space (in bytes) used by the container, including both data and temp files. If a PDB is closed, will be set to 0.
BLOCK_SIZE	NUMBER	The current block size for the PDB
RECOVERY_STATUS	VARCHAR2(26)	Shows the recovery status for the PDB. Possible values: • DISABLED: The PDB is offline. This is similar to all files belonging to this PDB being offline, except that all files to be added to this PDB in the future will also be offline to begin with. • DISABLED AUTOMATIC RECOVER: Same as DISABLED, except that standby Active Data Guard recovery will automatically attempt to spawn PDB recovery isolation for the PDB and transition the PDB into ENABLED. • ENABLED: The PDB is not offline at the PDB level. Individual files in the PDB may be online or offline at the file level.
SNAPSHOT_PARENT_CON_ID	NUMBER	This column shows the container ID of the PDB that this PDB is a snapshot clone of. This column shows a nonzero value only if the PDB is a snapshot clone. For all other cases, it shows a value of 0.
APPLICATION_ROOT	VARCHAR2(3)	Indicates whether the PDB is an application root
APPLICATION_PDB	VARCHAR2(3)	Indicates whether the PDB is an application PDB
APPLICATION_SEED	VARCHAR2(3)	Indicates whether the PDB is an application seed (an application seed is also an application PDB)

Column	Datatype	Description
APPLICATION_ROOT_CON_ID	NUMBER	If this PDB is an application PDB, the container ID of an application root to which this application PDB belongs. If this PDB is an application root clone, the container ID of an application root to which this application root clone belongs. Otherwise, NULL.
APPLICATION_ROOT_CLONE	VARCHAR2(3)	Indicates whether this PDB is an application root clone (YES) or not (NO)
PROXY_PDB	VARCHAR2(3)	Indicates whether this PDB is a proxy PDB (YES) or not (NO)
LOCAL_UNDO	NUMBER	Shows whether the PDB is in local undo. Possible values: • 1 – PDB is in local undo mode • 0 – PDB is in shared undo mode This column is not relevant for CDB$ROOT.
UNDO_SCN	NUMBER	System change number (SCN) at which the PDB was last converted from shared to local undo, or from local to shared undo. This column is not relevant for CDB$ROOT.
UNDO_TIMESTAMP	DATE	Date and time at which the PDB was last converted from shared to local undo, or from local to shared undo. This column is not relevant for CDB$ROOT.
CREATION_TIME	DATE	Date and time at which the PDB was created.
PDB_COUNT	NUMBER	The number of user-created PDBs belonging to a given application root or CDB$ROOT. For all other containers, its value is 0.
AUDIT_FILES_SIZE	NUMBER	Shows the current disk space usage (in bytes) by Unified Audit files (.bin format) in the container
MAX_SIZE	NUMBER	Shows the maximum amount of disk space (in bytes) that can be used by data and temp files in the container
MAX_DIAGNOSTICS_SIZE	NUMBER	Shows the maximum amount of disk space (in bytes) that can be used by diagnostic traces generated in the container
MAX_AUDIT_SIZE	NUMBER	Shows the maximum amount of disk space (in bytes) that can be used by Unified Audit files (.bin format) in the container
LAST_CHANGED_BY	VARCHAR2(11)	Indicates what type of user last changed the PDB. Possible values: • COMMON USER • LOCAL USER
MEMBER_CDB	VARCHAR2(3)	Indicates whether the row corresponds to a Member CDB part of the CDB Fleet (YES) or not (NO). This column is only meaningful in the Lead CDB of a CDB Fleet, which keeps track of other CDBs as containers in the CDB Fleet.
TENANT_ID	VARCHAR2(256)	Pluggable database tenant key
UPGRADE_LEVEL	NUMBER	For internal use only
GUID_BASE64	VARCHAR2(30)	The GUID of the PDB, encoded in base64
CLOUD_IDENTITY	VARCHAR2(32767)	Cloud identifier for the PDB
CLOSE_TIME	TIMESTAMP(3)	Date and time when the database was last closed
BACKUP_STATUS	VARCHAR2(8)	Reserved for future use

8.144 V$CONTEXT

V$CONTEXT displays set attributes in the current session.

Column	Datatype	Description
NAMESPACE	VARCHAR2(31)	Namespace that the attribute is in
ATTRIBUTE	VARCHAR2(31)	Name of the attribute
VALUE	VARCHAR2(4000)	Value of the attribute
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.145 V$CONTROLFILE

V$CONTROLFILE displays the names of the control files.

Column	Datatype	Description
STATUS	VARCHAR2(7)	INVALID if the name cannot be determined (which should not occur); NULL if the name can be determined
NAME	VARCHAR2(513)	Name of the control file
IS_RECOVERY_DEST_FILE	VARCHAR2(3)	Indicates whether the file was created in the fast recovery area (YES) or not (NO)
BLOCK_SIZE	NUMBER	Control file block size
FILE_SIZE_BLKS	NUMBER	Control file size (in blocks)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.146 V$CONTROLFILE_RECORD_SECTION

V$CONTROLFILE_RECORD_SECTION displays information about the control file record sections.

Column	Datatype	Description
TYPE	VARCHAR2(28)	Identifies the type of record section: • DATABASE • CKPT PROGRESS • REDO THREAD • REDO LOG • DATAFILE • FILENAME • TABLESPACE • TEMPORARY FILENAME • RMAN CONFIGURATION • LOG HISTORY • OFFLINE RANGE • ARCHIVED LOG • BACKUP SET • BACKUP PIECE • BACKUP DATAFILE • BACKUP REDOLOG • DATAFILE COPY • BACKUP CORRUPTION • COPY CORRUPTION • DELETED OBJECT • PROXY COPY • BACKUP SPFILE • DATABASE INCARNATION • FLASHBACK LOG • RECOVERY DESTINATION • INSTANCE SPACE RESERVATION • REMOVABLE RECOVERY FILES • RMAN STATUS • THREAD INSTANCE NAME MAPPING • MTTR • DATAFILE HISTORY • PLUGGED IN DATAFILE
RECORD_SIZE	NUMBER	Record size in bytes
RECORDS_TOTAL	NUMBER	Number of records allocated for the section
RECORDS_USED	NUMBER	Number of records used in the section
FIRST_INDEX	NUMBER	Index (position) of the first record
LAST_INDEX	NUMBER	Index of the last record
LAST_RECID	NUMBER	Record ID of the last record
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.147 V$COPY_CORRUPTION

V$COPY_CORRUPTION displays information about data file copy corruptions from the control file.

Column	Datatype	Description
RECID	NUMBER	Copy corruption record ID
STAMP	NUMBER	Copy corruption record stamp
COPY_RECID	NUMBER	Data file copy record ID
COPY_STAMP	NUMBER	Data file copy record stamp
FILE#	NUMBER	Data file number
BLOCK#	NUMBER	First block of the corrupted range
BLOCKS	NUMBER	Number of contiguous blocks in the corrupted range
CORRUPTION_CHANGE#	NUMBER	Change number at which the logical corruption was detected. Set to 0 to indicate media corruption.
MARKED_CORRUPT	VARCHAR2(3)	(YES | NO) If set to YES the blocks were not marked corrupted in the data file, but were detected and marked as corrupted while making the data file copy
CORRUPTION_TYPE	VARCHAR2(9)	Type of block corruption in the data file: • ALL ZERO - Block header on disk contained only zeros. The block may be valid if it was never filled and if it is in an Oracle7 file. The buffer will be reformatted to the Oracle8 standard for an empty block. • FRACTURED - Block header looks reasonable, but the front and back of the block are different versions. • CHECKSUM - optional check value shows that the block is not self-consistent. It is impossible to determine exactly why the check value fails, but it probably fails because sectors in the middle of the block are from different versions. • CORRUPT - Block is wrongly identified or is not a data block (for example, the data block address is missing) • LOGICAL - Block is logically corrupt • NOLOGGING - Block does not have redo log entries (for example, NOLOGGING operations on primary database can introduce this type of corruption on a physical standby)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.148 V$COPY_NONLOGGED

V$COPY_NONLOGGED displays information about nonlogged block ranges in data file copy blocks, recorded in the control file.

Column	Datatype	Description
INST_ID	NUMBER	Instance ID
RECID	NUMBER	Nonlogged copy record ID
STAMP	NUMBER	Nonlogged copy record stamp
COPY_RECID	NUMBER	Data file copy record ID
COPY_STAMP	NUMBER	Data file copy record stamp
FILE#	NUMBER	Absolute file number of the data file that contains this range of nonlogged blocks
BLOCK#	NUMBER	Block number of the first nonlogged block in the range of nologged blocks
BLOCKS	NUMBER	Number of nonlogged blocks found starting with BLOCK#
NONLOGGED_CHANGE#	NUMBER	The smallest SCN on which any block in this block range became nonlogged. NULL if unknown.
NONLOGGED_TIME	VARCHAR2	The time that corresponds to NONLOGGED_CHANGE#. NULL if unknown.
RESETLOGS_CHANGE#	VARCHAR2	The resetlogs SCN of the incarnation on which this block range was first marked as nonlogged. NULL if unknown.
RESETLOGS_TIME	VARCHAR2	The resetlogs time of the incarnation on which this block range was first marked as nologged. NULL if unknown.
OBJECT#	VARCHAR2	The object ID this range belongs to. If this field is NULL, the object number is unknown.
REASON	CHAR(7)	The reason why this block range appears in this list, for example, primary file offline, could not talk to primary, non-standby recovery, and so on. For Oracle Database 12*c* and later releases, it is always UNKNOWN.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.149 V$CORRUPT_XID_LIST

V$CORRUPT_XID_LIST displays all corrupted XIDs.

Column	Datatype	Description
CORRUPT_XID	VARCHAR2(256)	Name of corrupt XID
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.150 V$CPOOL_CC_INFO

V$CPOOL_CC_INFO displays information about the pool-to-connection class mapping for the Database Resident Connection Pool per instance.

Column	Datatype	Description
POOL_NAME	VARCHAR2(1024)	Name of the Database Resident Connection Pool
CCLASS_NAME	VARCHAR2(1024)	Name of the connection class
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.151 V$CPOOL_CC_STATS

V$CPOOL_CC_STATS displays information about the connection class level statistics for the Database Resident Connection Pool per instance.

Column	Datatype	Description
POOL_NAME	VARCHAR2(1024)	Name of the Database Resident Connection Pool
CCLASS_NAME	VARCHAR2(1024)	Name of the connection class
NUM_REQUESTS	NUMBER	Number of session requests
NUM_HITS	NUMBER	Total number of times a session that matches with the request was found in the pool
NUM_MISSES	NUMBER	Total number of times an exact match to the request was not found in the pool and a new session had to be created
NUM_WAITS	NUMBER	Total number of times session requests had to wait before getting served
WAIT_TIME	NUMBER	Reserved for future use
CLIENT_REQ_TIMEOUTS	NUMBER	Reserved for future use
NUM_AUTHENTICATIONS	NUMBER	Total number of authentications of clients done by the pool
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view returns data only when queried from a CDB root. When queried from a PDB, this view returns 0 rows.

8.152 V$CPOOL_CONN_INFO

V$CPOOL_CONN_INFO displays connection information about each connection to the connection broker.

Column	Datatype	Description
CMON_ADDR	RAW(4 | 8)	Address of the connection broker
SESSION_ADDR	RAW(4 | 8)	Address of the session associated with the connection; NULL if the connection does not have an associated session
CONNECTION_ADDR	RAW(4 | 8)	Address of the connection
POOL_NAME	VARCHAR2(1024)	Name of the Database Resident Connection Pool
USERNAME	VARCHAR2(1024)	Name of the user associated with the connection
PROXY_USER	VARCHAR2(1024)	Name of the proxy user
CCLASS_NAME	VARCHAR2(1024)	Connection class associated with the connection
PURITY	VARCHAR2(1024)	Purity used to create the connection (can be SELF or NEW)
TAG	VARCHAR2(1024)	Tag, if specified, at connection creation time
SERVICE	VARCHAR2(64)	TNS service name for the connection
PROCESS_ID	VARCHAR2(24)	Client process ID of the process which created the connection
PROGRAM	VARCHAR2(84)	Program name of the client process which created the connection
MACHINE	VARCHAR2(64)	Machine name of the client process which created the connection
TERMINAL	VARCHAR2(30)	Terminal identifier of the client process which created the connection
CONNECTION_MODE	VARCHAR2(1024)	Reserved for internal use
CONNECTION_STATUS	VARCHAR2(10)	Status of the connection: • NONE • CONNECTING • ACTIVE: A pooled server has been mapped to this connection. • WAITING: The connection is waiting for a pooled server based on the client request. • IDLE: No pooled server has been mapped to this connection and there is no request to map one. • CLOSING
CLIENT_REGID	NUMBER	Query cache registration ID sent by the client
CURSTATUS_TIME	NUMBER	Time in microseconds spent in the current state. See CONNECTION_STATUS above.
IDLE_TIME	NUMBER	Total time in IDLE state for the connection (in microseconds)
ACTIVE_TIME	NUMBER	Total time in ACTIVE state for the connection (in microseconds)
WAIT_TIME	NUMBER	Total time in WAITING state for the connection (in microseconds)
THINK_TIME	NUMBER	Total think time for the connection assigned to the pooled server, but not doing any database activity (in microseconds)
LAST_IDLE_TIME	NUMBER	Time in last IDLE state for this connection (in microseconds)

Column	Datatype	Description
LAST_ACTIVE_TIME	NUMBER	Time in last ACTIVE state for this connection (in microseconds)
LAST_WAIT_TIME	NUMBER	Time in last WAITING state for this connection (in microseconds)
LAST_THINK_TIME	NUMBER	Time for the connection assigned to the pooled server, but not doing any database activity during the last ACTIVE state (in microseconds)
NUMGETS	NUMBER	Total number of requests at the connection level
NUMHITS	NUMBER	Total number of hits at the connection level
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.153 V$CPOOL_STATS

V$CPOOL_STATS displays information about the Database Resident Connection Pool statistics for an instance.

Column	Datatype	Description
POOL_NAME	VARCHAR2(1024)	Name of the Database Resident Connection Pool
NUM_OPEN_SERVERS	NUMBER	Total number of busy and free servers in the pool (including the authentication servers)
NUM_BUSY_SERVERS	NUMBER	Total number of busy servers in the pool (not including the authentication servers)
NUM_AUTH_SERVERS	NUMBER	Number of authentication servers in the pool
NUM_REQUESTS	NUMBER	Number of client requests
NUM_HITS	NUMBER	Total number of times client requests found matching pooled servers in the pool
NUM_MISSES	NUMBER	Total number of times client requests could not find a matching pooled server in the pool
NUM_WAITS	NUMBER	Total number of client requests that had to wait due to non-availability of free pooled servers
WAIT_TIME	NUMBER	Reserved for future use
CLIENT_REQ_TIMEOUTS	NUMBER	Reserved for future use
NUM_AUTHENTICATIONS	NUMBER	Total number of authentications of clients done by the pool
NUM_PURGED	NUMBER	Total number of sessions purged by the pool
HISTORIC_MAX	NUMBER	Maximum size that the pool has ever reached

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view returns data only when queried from a CDB root. When queried from a PDB, this view returns 0 rows.

8.154 V$CR_BLOCK_SERVER

V$CR_BLOCK_SERVER displays statistics on the Global Cache Service processes (LMS) used in cache fusion.

Column	Datatype	Description
CR_REQUESTS	NUMBER	Number of CR blocks served due to remote CR block requests
CURRENT_REQUESTS	NUMBER	Number of current blocks served due to remote CR block requests CR_REQUESTS + CURRENT_REQUESTS = global cache CR clocks served (from V$SYSSTAT).
DATA_REQUESTS	NUMBER	Number of current or CR requests for data blocks
UNDO_REQUESTS	NUMBER	Number of CR requests for undo blocks
TX_REQUESTS	NUMBER	Number of CR requests for undo segment header blocks
OTHER_REQUESTS	NUMBER	Number of CR requests for other types of blocks DATA_REQUESTS + UNDO_REQUESTS + TX_REQUESTS + OTHER_REQUESTS = total number of requests handled by the LMS processes
CURRENT_RESULTS	NUMBER	Number of requests for which no changes were rolled out of the block returned to the requesting instance
PRIVATE_RESULTS	NUMBER	Number of requests for which changes were rolled out of the block returned to the requesting instance, and only the requesting transaction can use the resulting CR block
ZERO_RESULTS	NUMBER	Number of requests for which changes were rolled out of the block returned to the requesting instance. Only zero-XID transactions can use the block.
DISK_READ_RESULTS	NUMBER	Number of requests for which the requesting instance had to read the requested block from disk
FAIL_RESULTS	NUMBER	Number of requests that failed; the requesting transaction must reissue the request
STALE	NUMBER	Number of requests for which the disk read of the requested block was stale

Column	Datatype	Description
FAIRNESS_DOWN_CONVERTS	NUMBER	Number of times an instance receiving a request has down-converted an X lock on a block because it was not modifying the block
FAIRNESS_CLEARS	NUMBER	Number of times the "fairness counter" was cleared. This counter tracks the number of times a block was modified after it was served.
FREE_GC_ELEMENTS	NUMBER	Number of times a request was received from another instance and the X lock had no buffers
FLUSHES	NUMBER	Number of times the log has been flushed by an LMS process
FLUSHES_QUEUED	NUMBER	Number of flushes queued by an LMS process
FLUSH_QUEUE_FULL	NUMBER	Number of times the flush queue was full
FLUSH_MAX_TIME	NUMBER	Maximum time for flush
LIGHT_WORKS	NUMBER	Number of times the light-work rule was evoked. This rule prevents the LMS processes from going to disk while responding to CR requests for data, undo, or undo segment header blocks. This rule can prevent the LMS process from completing its response to the CR request.
ERRORS	NUMBER	Number of times an error was signalled by an LMS process
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view contains internal diagnostic information for use by Oracle Support Services. It is subject to change without notice.

8.155 V$CURRENT_BLOCK_SERVER

V$CURRENT_BLOCK_SERVER displays statistics on the Global Cache Service processes (LMS) used in cache fusion.

Column	Datatype	Description
PINUNDER[1]	NUMBER	Pins taking less than 10 microseconds
PIN0	NUMBER	Pins taking 10 to 100 microseconds
PIN1	NUMBER	Pins taking 100 microseconds to 1 millisecond
PIN10	NUMBER	Pins taking 1 to 10 milliseconds
PIN100	NUMBER	Pins taking 10 to 100 milliseconds
PIN1000	NUMBER	Pins taking 100 to 1000 milliseconds
PIN10000	NUMBER	Pins taking 1000 to 10000 milliseconds
PINOVER	NUMBER	Pins taking more than 10000 milliseconds
FLUSHUNDER[1]	NUMBER	Flushes taking less than 10 microseconds

Column	Datatype	Description
FLUSH0	NUMBER	Flushes taking 10 to 100 microseconds
FLUSH1	NUMBER	Flushes taking 100 microseconds to 1 millisecond
FLUSH10	NUMBER	Flushes taking 1 to 10 milliseconds
FLUSH100	NUMBER	Flushes taking 10 to 100 milliseconds
FLUSH1000	NUMBER	Flushes taking 100 to 1000 milliseconds
FLUSH10000	NUMBER	Flushes taking 1000 to 10000 milliseconds
FLUSHOVER	NUMBER	Flushes taking more than 10000 milliseconds
CLEANDC	NUMBER	Reserved for internal use
RCVDC	NUMBER	Number of lock down-converts to S (shared) caused by instance recovery
QUEUEDC	NUMBER	Number of queued lock down-converts to NULL
EVICTDC	NUMBER	Number of lock down-converts to NULL caused by an SGA shrink
WRITEDC	NUMBER	Number of dirty blocks in read-mostly objects which were written and the X (exclusive) lock down-converted to S (shared) locks
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

[1] This column is available starting with Oracle Database 23ai, Release Update 23.8.

8.156 V$DATABASE

V$DATABASE displays information about the database from the control file.

Column	Datatype	Description
DBID	NUMBER	Database identifier calculated when the database is created and stored in all file headers
NAME	VARCHAR2(9)	Name of the database
CREATED	DATE	Creation date of the database. If the control file was re-created using the CREATE CONTROLFILE statement, then this column displays the date that the control file was re-created.
RESETLOGS_CHANGE#	NUMBER	System change number (SCN) at open resetlogs
RESETLOGS_TIME	DATE	Timestamp of open resetlogs
PRIOR_RESETLOGS_CHANGE#	NUMBER	SCN at prior resetlogs
PRIOR_RESETLOGS_TIME	DATE	Timestamp of prior resetlogs
LOG_MODE	VARCHAR2(12)	Archive log mode: • NOARCHIVELOG • ARCHIVELOG • MANUAL
CHECKPOINT_CHANGE#	NUMBER	Last SCN checkpointed

Column	Datatype	Description
ARCHIVE_CHANGE#	NUMBER	Database force archiving SCN. Any redo log with a start SCN below this will be forced to archive out.
CONTROLFILE_TYPE	VARCHAR2(10)	Type of control file: • BACKUP | CREATED - Indicates the database is being recovered using a backup or created control file • CLONE - Indicates a clone database • CURRENT - Indicates that the database is available for general use • FARSYNC - Indicates that the instance is a Far Sync instance • STANDBY - Indicates that the database is in standby mode • TRUE CACHE - Indicates that the instance is a True Cache
CONTROLFILE_CREATED	DATE	Creation date of the control file
CONTROLFILE_SEQUENCE#	NUMBER	Control file sequence number incremented by control file transactions
CONTROLFILE_CHANGE#	NUMBER	Last SCN in backup control file; null if the control file is not a backup
CONTROLFILE_TIME	DATE	Last timestamp in backup control file; null if the control file is not a backup
OPEN_RESETLOGS	VARCHAR2(11)	(NOT ALLOWED | ALLOWED | REQUIRED) Indicates whether the next database open allows or requires the resetlogs option
VERSION_TIME	DATE	Version time
OPEN_MODE	VARCHAR2(20)	Open mode information: • MOUNTED • READ WRITE • READ ONLY • READ ONLY WITH APPLY - A physical standby database is open in real-time query mode
PROTECTION_MODE	VARCHAR2(20)	Protection mode currently in effect for the database: • MAXIMUM PROTECTION - Database is running in maximized protection mode • MAXIMUM AVAILABILITY - Database is running in maximized availability mode • RESYNCHRONIZATION - Database is running in resynchronization mode • MAXIMUM PERFORMANCE - Database is running in maximized performance mode • UNPROTECTED - Database is unprotected (this normally occurs when the primary database is mounted and not open)
PROTECTION_LEVEL	VARCHAR2(20)	Aggregated protection mode currently in effect for the database: • MAXIMUM PROTECTION - Database is running in maximized protection mode • MAXIMUM AVAILABILITY - Database is running in maximized availability mode • RESYNCHRONIZATION - Database is running in resynchronization mode • MAXIMUM PERFORMANCE - Database is running in maximized performance mode • UNPROTECTED - Database is unprotected (this normally occurs when the primary database is mounted and not open) **Note:** This column is an aggregation of the PROTECTION_MODE of all standby archive log destinations.
REMOTE_ARCHIVE	VARCHAR2(8)	Value of the REMOTE_ARCHIVE_ENABLE initialization parameter

Column	Datatype	Description
ACTIVATION#	NUMBER	Number assigned to the database instantiation
SWITCHOVER#	NUMBER	Number assigned to the database switchover
DATABASE_ROLE	VARCHAR2(16)	Current role of the database: • SNAPSHOT STANDBY • LOGICAL STANDBY • PHYSICAL STANDBY • PRIMARY • FAR SYNC
ARCHIVELOG_CHANGE#	NUMBER	Highest NEXT_CHANGE# (from the V$ARCHIVED_LOG view) for an archive log
ARCHIVELOG_COMPRESSION	VARCHAR2(8)	Status of the archive log compression (ENABLED) or (DISABLED)

Column	Datatype	Description
SWITCHOVER_STATUS	VARCHAR2(20)	Indicates whether switchover is allowed: • NOT ALLOWED - On a primary database, this status indicates that there are no valid and enabled standby databases. On a standby database, this status indicates that a switchover request has not been received from the primary database. • SESSIONS ACTIVE - The database has active sessions. On a physical standby database, the WITH SESSION SHUTDOWN SQL clause must be specified to perform a role transition while in this state. On a logical standby database, a role transition can be performed while in this state, but the role transition will not complete until all current transactions have committed. • SWITCHOVER PENDING - On a physical standby database, this status indicates that a switchover request has been received from the primary database and is being processed. A physical standby database cannot switch to the primary role while in this transient state. • SWITCHOVER LATENT - On a physical standby database, this status indicates that a switchover request was pending, but the original primary database has been switched back to the primary role. • TO PRIMARY - The database is ready to switch to the primary role. • TO STANDBY - The database is ready to switch to either the physical or logical standby role. • TO LOGICAL STANDBY - The database has received a data dictionary from a logical standby database and is ready to switch to the logical standby role. • RECOVERY NEEDED - On a physical standby database, this status indicates that additional redo must be applied before the database can switch to the primary role. • PREPARING SWITCHOVER - On a primary database, this status indicates that a data dictionary is being received from a logical standby database in preparation for switching to the logical standby role. On a logical standby database, this status indicates that the data dictionary has been sent to the primary database and other standby databases. • PREPARING DICTIONARY - On a logical standby database, this status indicates that the data dictionary is being sent to the primary database and other standby databases in preparation for switching to the primary role. • FAILED DESTINATION - On a primary database, this status indicates that one or more standby destinations are in an error state. • RESOLVABLE GAP - On a primary database, this status indicates that one or more standby databases have a redo gap that can be automatically resolved by fetching the missing redo from the primary database or from another standby database. • UNRESOLVABLE GAP - On a primary database, this status indicates that one or more standby databases have a redo gap that cannot be automatically resolved by fetching the missing redo from the primary database or from another standby database. • LOG SWITCH GAP - On a primary database, this status indicates that one or more standby databases are missing redo due to a recent log switch.

Column	Datatype	Description
DATAGUARD_BROKER	VARCHAR2(8)	Data Guard broker information: • ENABLED - Database is part of a broker configuration and broker management of the database is enabled • DISABLED - Database is part of a broker configuration and broker management of the database is disabled. This value is displayed if the user disabled broker management of the database or configuration, or if broker management was disabled due to a role change (for example, the old primary was disabled after a failover operation).
GUARD_STATUS	VARCHAR2(7)	Protects data from being changed: • ALL - Indicates all users other than SYS are prevented from making changes to any data in the database. • STANDBY - Indicates all users other than SYS are prevented from making changes to any database object being maintained by logical standby. • NONE - Indicates normal security for all data in the database.
SUPPLEMENTAL_LOG_DATA_MIN	VARCHAR2(8)	Ensures that LogMiner (and any products building on LogMiner technology) will have sufficient information to support chained rows and various storage arrangements such as cluster tables: • NO - None of the database-wide supplemental logging directives are enabled. In a CDB, a value of NO means that minimal supplemental logging is not enabled in all of the PDBs in the CDB. • IMPLICIT - Minimal supplemental logging is enabled because all or a combination of primary key, unique key, and foreign key supplemental logging is enabled • YES - Minimal supplemental logging is enabled through an ALTER DATABASE ADD SUPPLEMENTAL LOG DATA statement. In a CDB, a value of YES means that minimal supplemental logging is enabled in all of the PDBs in the CDB. **See Also:** *Oracle Database SQL Language Reference* for additional information about the ALTER DATABASE ADD SUPPLEMENTAL LOG DATA statement
SUPPLEMENTAL_LOG_DATA_PK	VARCHAR2(3)	For all tables with a primary key, indicates whether all columns of the primary key are placed into the redo log whenever an update is performed (YES) or not (NO). When a value of YES appears in a CDB, it means that primary key supplemental logging is enabled in all of the PDBs in the CDB. When a value of NO appears in a CDB, query the PRIMARY_KEY column in the DBA_SUPPLEMENTAL_LOGGING view for each PDB in the CDB to see whether primary key supplemental logging is enabled in the PDB. **See Also:** *Oracle Database SQL Language Reference* for more information about the ALTER DATABASE ADD SUPPLEMENTAL LOG *supplemental_id_key_clause* statement

Column	Datatype	Description
SUPPLEMENTAL_LOG_DATA_UI	VARCHAR2(3)	For all tables with a unique key, indicates whether all other columns belonging to the unique key are placed into the redo log if any of the unique key columns are modified (YES) or not (NO). When a value of YES appears in a CDB, it means that this value is enabled in all of the PDBs in the CDB. When a value of NO appears in a CDB, query the UNIQUE_INDEX column in the DBA_SUPPLEMENTAL_LOGGING view for each PDB in the CDB to see whether unique column supplemental logging is enabled in the PDB. **See Also:** *Oracle Database SQL Language Reference* for more information about the ALTER DATABASE ADD SUPPLEMENTAL LOG *supplemental_id_key_clause* statement
FORCE_LOGGING	VARCHAR2(39)	Indicates the type of logging mode that is currently in force. The valid values and their meanings are: • NO - This value means that no logging mode has been enabled for the database • YES - This value means that FORCE LOGGING mode has been enabled for the database • STANDBY NOLOGGING FOR LOAD PERFORMANCE - This value is used when this is the current mode for the database • STANDBY NOLOGGING FOR DATA AVAILABILITY - This value is used when this is the current mode for the database
PLATFORM_ID	NUMBER	Platform identification number of the database
PLATFORM_NAME	VARCHAR2(101)	Platform name of the database
RECOVERY_TARGET_INCARNATION#	NUMBER	The incarnation number to which all datafiles would be recovered by the RECOVER DATABASE command
LAST_OPEN_INCARNATION#	NUMBER	Record number of the incarnation in V$DATABASE_INCARNATION that was last opened successfully
CURRENT_SCN	NUMBER	Current SCN; null if the database is not currently open. For a standby database, it is the checkpoint SCN of the mounted physical standby database during media recovery and is always less than the last applied SCN tracked in V$RECOVERY_PROGRESS.
FLASHBACK_ON	VARCHAR2(18)	Possible values are as follows: • YES - Flashback is on • NO - Flashback is off • RESTORE POINT ONLY - Flashback is on but one can only flashback to guaranteed restore points
SUPPLEMENTAL_LOG_DATA_FK	VARCHAR2(3)	For all tables with a foreign key, indicates whether all other columns belonging to the foreign key are placed into the redo log if any foreign key columns are modified (YES) or not (NO). When a value of YES appears in a CDB, it means that foreign key supplemental logging is enabled in all of the PDBs in the CDB. When a value of NO appears in a CDB, query the FOREIGN_KEY column in the DBA_SUPPLEMENTAL_LOGGING view for each PDB in the CDB to see whether foreign key supplemental logging is enabled in the PDB. **See Also:** *Oracle Database SQL Language Reference* for more information about the ALTER DATABASE ADD SUPPLEMENTAL LOG *supplemental_id_key_clause* statement

Column	Datatype	Description
SUPPLEMENTAL_LOG_DATA_ALL	VARCHAR2(3)	For all columns, indicates whether all the fixed-length maximum size columns of that row are placed into the redo log (YES) or not (NO). When a value of YES appears in a CDB, it means that all column supplemental logging is enabled in all of the PDBs in the CDB. When a value of NO appears in a CDB, query the ALL_COLUMN column in the DBA_SUPPLEMENTAL_LOGGING view for each PDB in the CDB to see whether all column supplemental logging is enabled in the PDB. **See Also:** *Oracle Database SQL Language Reference* for more information about the ALTER DATABASE ADD SUPPLEMENTAL LOG *supplemental_id_key_clause* statement
DB_UNIQUE_NAME	VARCHAR2(30)	Unique database name
STANDBY_BECAME_PRIMARY_SCN	NUMBER	SCN at which a physical standby database became a primary database. This SCN is useful for converting a failed primary database into a physical standby database after a forced failover. **See Also:** *Oracle Data Guard Concepts and Administration* for more information about Oracle Data Guard.
FS_FAILOVER_MODE[1]	VARCHAR2(19)	Displays the current fast-start failover mode. Possible values are: • DISABLED - Fast-start failover is disabled. • OBSERVE-ONLY - Fast-start failover is enabled in test drive mode. • ZERO DATA LOSS - Fast-start failover is enabled and a fast-start failover cannot incur any data loss. • POTENTIAL DATA LOSS - Fast-start failover is enabled and a fast-start failover can incur data loss within FastStartFailoverLagLimit seconds. **See Also:** *Oracle Data Guard Broker* for more information about the FastStartFailoverLagLimit configuration property
FS_FAILOVER_STATUS[1]	VARCHAR2(22)	Fast-start failover status: • DISABLED • BYSTANDER • SYNCHRONIZED • UNSYNCHRONIZED • SUSPENDED • STALLED • LOADING DICTIONARY • PRIMARY UNOBSERVED • REINSTATE REQUIRED • REINSTATE FAILED • TARGET OVER LAG LIMIT • TARGET UNDER LAG LIMIT **See Also:** *Oracle Data Guard Broker* for detailed descriptions of these values **Note:** If the value of this column is DISABLED, then the values for the FS_FAILOVER_CURRENT_TARGET, FS_FAILOVER_THRESHOLD, FS_FAILOVER_OBSERVER_PRESENT, and FS_FAILOVER_OBSERVER_HOST columns in this table are not meaningful.
FS_FAILOVER_CURRENT_TARGET[1]	VARCHAR2(30)	DB_UNIQUE_NAME of the standby that is the current fail-safe failover observer target standby for the Data Guard configuration
FS_FAILOVER_THRESHOLD[1]	NUMBER	Time (in seconds) that the observer will attempt to reconnect with a disconnected primary before attempting fail-safe failover observer with the target standby

Column	Datatype	Description
FS_FAILOVER_OBSERVER_PRESENT[1]	VARCHAR2(7)	Indicates whether the master observer is currently connected to the local database (YES) or not (NO) **Note:** This column is consistent throughout an Oracle RAC environment; that is, if the observer is connected to any instance, then all instances will show a value of YES.
FS_FAILOVER_OBSERVER_HOST[1]	VARCHAR2(512)	Machine name that is currently hosting the master observer process, if fast-start failover is enabled. If fast-start failover is not enabled, this column returns a NULL string.
CONTROLFILE_CONVERTED	VARCHAR2(3)	Indicates whether the control file was implicitly converted from its original type during restore (YES) or not (NO) This column will be set to YES when RMAN restores a standby control file from a backup of the control file taken at the primary database or restores a backup control file from a backup taken at the physical standby database. This column will change to NO when the file names are fixed using information in the recovery catalog schema.
PRIMARY_DB_UNIQUE_NAME	VARCHAR2(30)	For any Standby database (Physical, Logical, or Snapshot), this column will contain the DB_UNIQUE_NAME of the Primary database that this Standby last received current redo from. If this standby has not received any current redo since last being started, then this column will be null. For a Primary database that had previously been a Standby, this column will contain the DB_UNIQUE_NAME of the last Primary that this database received current redo from while acting as a Standby. For a Primary database that has never been a Standby, this column will be null.
SUPPLEMENTAL_LOG_DATA_PL	VARCHAR2(3)	Indicates whether additional information is logged in the redo log (YES) or not (NO) during invocation of procedures in Oracle-supplied packages for which procedural replication is supported. When a value of YES appears in a CDB, it means that supplemental logging for procedural replication is enabled in all of the PDBs in the CDB. When a value of NO appears in a CDB, query the PROCEDURAL column in the DBA_SUPPLEMENTAL_LOGGING view for each PDB in the CDB to see whether supplemental logging for procedural replication is supported in the PDB. **See Also:** *Oracle Data Guard Concepts and Administration* for a list of Oracle-supplied packages that are procedurally replicated to a logical standby database
MIN_REQUIRED_CAPTURE_CHANGE#	NUMBER	Minimum REQUIRED_CHECKPOINT_SCN for all local capture processes on the database
CDB	VARCHAR2(3)	Possible values are: • YES if the database is a CDB • NO if the database is not a CDB

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
PENDING_ROLE_CHANGE_TASKS	VARCHAR2(512)	Tasks remaining after an Oracle Data Guard role change. Possible values: • NONE: No pending tasks remain • NOT APPLICABLE: The database is either standby or is not a DG_CONFIG member • BUILD_PENDING: The database was formerly a logical standby and has not yet taken a snapshot of its data dictionary into the redo stream • SRL_ARCHIVE_PENDING: The database was formerly a logical standby and the standby redo logs associated with the earlier failover operation have not yet been archived • ERROR: The database was formerly a logical standby and the snapshot of the dictionary failed • UNKNOWN: The database is not open or the query failed
CON_DBID	NUMBER	The database ID of the PDB
FORCE_FULL_DB_CACHING	VARCHAR2(3)	Indicates the status of the force full database caching feature in the database. Possible values: • YES - The database is in force full database caching mode. • NO - The database is not in force full database caching mode. **See Also**: *Oracle Database SQL Language Reference* for information about the FORCE FULL DATABASE CACHING clause for the ALTER DATABASE statement
SUPPLEMENTAL_LOG_DATA_SR	VARCHAR2(3)	Indicates whether the database is enabled for subset database replication (YES) or not (NO). If the database is enabled for subset database replication, then redo overhead and feature restriction for tables without column data supplemental logging will be reduced.
GOLDENGATE_BLOCKING_MODE	VARCHAR2(8)	Reserved for future use

[1] Oracle Database 23ai introduces the V$FAST_START_FAILOVER_CONFIG view, which contains configuration details about Oracle Data Guard fast-start failover. As a result, the FS_FAILOVER_* columns in the V$DATABASE view are deprecated. Instead, use the corresponding columns in the V$FAST_START_FAILOVER_CONFIG view. See "V$FAST_START_FAILOVER_CONFIG" for more information.

> **See Also:**
>
> "DBA_SUPPLEMENTAL_LOGGING" for more information about supplemental logging in a PDB

8.157 V$DATABASE_BLOCK_CORRUPTION

V$DATABASE_BLOCK_CORRUPTION displays information about database blocks that were corrupted after the last backup.

Column	Datatype	Description
FILE#	NUMBER	Absolute file number of the data file that contains the corrupt blocks
BLOCK#	NUMBER	Block number of the first corrupt block in the range of corrupted blocks
BLOCKS	NUMBER	Number of corrupted blocks found starting with BLOCK#
CORRUPTION_CHANGE#	NUMBER	Change number at which the logical corruption was detected. Set to 0 to indicate media corruption.
CORRUPTION_TYPE	VARCHAR2(9)	Type of block corruption in the data file: • ALL ZERO - Block header on disk contained only zeros. The block may be valid if it was never filled and if it is in an Oracle7 file. The buffer will be reformatted to the Oracle8 standard for an empty block. • FRACTURED - Block header looks reasonable, but the front and back of the block are different versions. • CHECKSUM - optional check value shows that the block is not self-consistent. It is impossible to determine exactly why the check value fails, but it probably fails because sectors in the middle of the block are from different versions. • CORRUPT - Block is wrongly identified or is not a data block (for example, the data block address is missing) • LOGICAL - Block is logically corrupt
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$NONLOGGED_BLOCK" for information about nonlogged blocks

8.158 V$DATABASE_INCARNATION

V$DATABASE_INCARNATION displays information about all database incarnations.

Oracle creates a new incarnation whenever a database is opened with the RESETLOGS option. Records about the current and immediately previous incarnation are also contained in the V$DATABASE view.

Column	Datatype	Description
INCARNATION#	NUMBER	Record ID for the branch record in the control file

Column	Datatype	Description
RESETLOGS_CHANGE#	NUMBER	Resetlogs system change number (SCN) for the incarnation of the current row
RESETLOGS_TIME	DATE	Resetlogs timestamp for the incarnation of the current row
PRIOR_RESETLOGS_CHANGE#	NUMBER	Resetlogs SCN for the previous incarnation
PRIOR_RESETLOGS_TIME	DATE	Resetlogs timestamp for the previous incarnation
STATUS	VARCHAR2(7)	Incarnation status: • ORPHAN - Orphan incarnation • CURRENT - Current incarnation of the database • PARENT - Parent of the current incarnation
RESETLOGS_ID	NUMBER	Branch ID for the incarnation of the current row (used by user-managed recovery/RMAN restore to get unique names for archived logs across incarnations)
PRIOR_INCARNATION#	NUMBER	Parent incarnation record ID if nonzero
FLASHBACK_DATABASE_ALLOWED	VARCHAR2(26)	Indicate whether or not Flashback Database can be performed into SCNs or timestamps in the incarnation. A value of YES means that you can flashback to some point in that incarnation. A value of NO indicates that you cannot flashback into the incarnation.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$DATABASE"

8.159 V$DATABASE_KEY_INFO

V$DATABASE_KEY_INFO provides the information of the default database key used to encrypt data blocks. Oracle uses the database key to encrypt sensitive information in SYSTEM, UNDO, and TEMP tablespaces when such data has dependency from encrypted tablespaces or encrypted columns

V$DATABASE_KEY_INFO reflects the database key information stored in the control file. Generally it is the same as the system tablespace key recorded in the system tablespace. If the system tablespace is encrypted, it will also appear in V$ENCRYPTED_TABLESPACES. If the system tablespace is not encrypted, this is the only view providing this information.

Column	Datatype	Description
ENCRYPTIONALG	VARCHAR2(7)	Encryption algorithm: • NONE • 3DES168 • AES128 • AES192 • AES256 AES256 is the default encryption algorithm.
ENCRYPTEDKEY	RAW(48)	Encrypted version of the database key
MASTERKEYID	RAW(16)	ID of the master key that was used to encrypt the database key
MASTER_ACTIVATED	VARCHAR2(3)	Indicates whether the master key has been set (YES) or not (NO) for this database or container in the Oracle Key Store. In other words, indicates whether Transparent Data Encryption (TDE) has been activated for this database or container
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.160 V$DATAFILE

V$DATAFILE displays datafile information from the control file.

> **See Also:**
>
> "V$DATAFILE_HEADER", which displays information from data file headers

Column	Datatype	Description
FILE#	NUMBER	Absolute file number
CREATION_CHANGE#	NUMBER	Change number at which the data file was created
CREATION_TIME	DATE	Timestamp of the data file creation
TS#	NUMBER	Tablespace number
RFILE#	NUMBER	Tablespace relative data file number
STATUS	VARCHAR2(7)	Type of file (system or user) and its status. Values: OFFLINE, ONLINE, SYSTEM, RECOVER, SYSOFF (an offline file from the SYSTEM tablespace)

Column	Datatype	Description
ENABLED	VARCHAR2(10)	Describes how accessible the file is from SQL: • DISABLED - No SQL access allowed • READ ONLY - No SQL updates allowed • READ WRITE - Full access allowed • UNKNOWN - Unknown whether SQL updates would be allowed or not
CHECKPOINT_CHANGE#	NUMBER	SCN at last checkpoint
CHECKPOINT_TIME	DATE	Timestamp of the checkpoint#
UNRECOVERABLE_CHANGE#	NUMBER	Last unrecoverable change number made to this data file. If the database is in ARCHIVELOG mode, then this column is updated when an unrecoverable operation completes. If the database is not in ARCHIVELOG mode, this column does not get updated.
UNRECOVERABLE_TIME	DATE	Timestamp of the last unrecoverable change. This column is updated only if the database is in ARCHIVELOG mode.
LAST_CHANGE#	NUMBER	Last change number made to this data file (null if the data file is being changed)
LAST_TIME	DATE	Timestamp of the last change
OFFLINE_CHANGE#	NUMBER	Offline change number of the last offline range. This column is updated only when the data file is brought online.
ONLINE_CHANGE#	NUMBER	Online change number of the last offline range
ONLINE_TIME	DATE	Online timestamp of the last offline range
BYTES	NUMBER	Current data file size (in bytes); 0 if inaccessible
BLOCKS	NUMBER	Current data file size (in blocks); 0 if inaccessible
CREATE_BYTES	NUMBER	Size when created (in bytes)
BLOCK_SIZE	NUMBER	Block size of the data file
NAME	VARCHAR2(513)	Name of the data file
PLUGGED_IN	NUMBER	Describes whether the tablespace is plugged in. The value is 1 if the tablespace is plugged in and has not been made read/write, 0 if not.
BLOCK1_OFFSET	NUMBER	Offset from the beginning of the file to where the Oracle generic information begins. The exact length of the file can be computed as follows: BYTES + BLOCK1_OFFSET.
AUX_NAME	VARCHAR2(513)	Auxiliary name that has been set for this file via CONFIGURE AUXNAME
FIRST_NONLOGGED_SCN	NUMBER	First nonlogged SCN (check in standby database)
FIRST_NONLOGGED_TIME	DATE	First nonlogged time (check in standby database)
FOREIGN_DBID	NUMBER	Foreign DBID from which this data file came from. The value is 0 if this file is not a foreign database file.
FOREIGN_CREATION_CHANGE#	NUMBER	Creation SCN of a foreign data file. The value is 0 if this file is not a foreign database file.
FOREIGN_CREATION_TIME	DATE	Creation time of a foreign data file. The value is 0 if this file is not a foreign database file.
PLUGGED_READONLY	VARCHAR2(3)	YES if this is a transported read-only foreign file; otherwise NO.
PLUGIN_CHANGE#	NUMBER	SCN at which the foreign data file was transported into the database. The value is 0 if this file is not a foreign database file.
PLUGIN_RESETLOGS_CHANGE#	NUMBER	The SCN of the RESETLOGS operation for the incarnation into which this foreign file was transported. The value is 0 if this file is not a foreign database file.

Column	Datatype	Description
PLUGIN_RESETLOGS_TIME	DATE	The time of the RESETLOGS operation for the incarnation into which this foreign file was transported. The value is 0 if this file is not a foreign database file.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.161 V$DATAFILE_COPY

V$DATAFILE_COPY displays data file copy information from the control file.

Column	Datatype	Description
RECID	NUMBER	Data file copy record ID
STAMP	NUMBER	Data file copy record stamp
NAME	VARCHAR2(513)	File name of the data file copy. The maximum length of the name is operating system dependent.
TAG	VARCHAR2(32)	Data file copy tag
FILE#	NUMBER	Absolute data file number
RFILE#	NUMBER	Tablespace relative data file number
CREATION_CHANGE#	NUMBER	Data file creation change#
CREATION_TIME	DATE	Data file creation timestamp
RESETLOGS_CHANGE#	NUMBER	Resetlogs change number of the data file when the copy was made
RESETLOGS_TIME	DATE	Resetlogs timestamp of the data file when the copy was made
INCREMENTAL_LEVEL	NUMBER	Normal full backups have a NULL value, level 0 incremental backups have a value of 0, and level 1 incremental backups have a value of 1
CHECKPOINT_CHANGE#	NUMBER	Checkpoint change number of the data file when the copy was made
CHECKPOINT_TIME	DATE	Checkpoint timestamp of the data file when the copy was made
ABSOLUTE_FUZZY_CHANGE#	NUMBER	Highest change seen when the data file was copied
RECOVERY_FUZZY_CHANGE#	NUMBER	Highest change written to the file by media recovery
RECOVERY_FUZZY_TIME	DATE	Timestamp of the highest change written to the file by media recovery
ONLINE_FUZZY	VARCHAR2(3)	(YES|NO) If set to YES, this is a copy taken using an operating system utility after a crash or offline immediate (or an invalid copy taken while data file was online and the database open). Recovery will need to apply all redo up to the next crash recovery marker to make the file consistent.
BACKUP_FUZZY	VARCHAR2(3)	(YES|NO) If set to YES, this is a copy taken using the BEGIN BACKUP/END BACKUP technique. Recovery will need to apply all redo up to the end backup marker to make this copy consistent.

Column	Datatype	Description
MARKED_CORRUPT	NUMBER	Number of blocks marked corrupt by this copy operation. That is, blocks that were not marked corrupted in the source data file, but were detected and marked as corrupted during the copy operation.
MEDIA_CORRUPT	NUMBER	Total number of media corrupt blocks. For example, blocks with checksum errors are marked media corrupt.
LOGICALLY_CORRUPT	NUMBER	Total number of logically corrupt blocks. For example, applying redo for unrecoverable operations will mark affected blocks logically corrupt.
BLOCKS	NUMBER	Size of the data file copy in blocks (also the size of the data file when the copy was made)
BLOCK_SIZE	NUMBER	Block size of the data file
OLDEST_OFFLINE_RANGE	NUMBER	RECID of the oldest offline range record in this control file copy; 0 for data file copies
DELETED	VARCHAR2(3)	(YES|NO) If set to YES the data file copy has been deleted or overwritten
STATUS	VARCHAR2(1)	Identifies the status of this data file copy. Possible values are: A - Available D - Deleted U - Unavailable X - Expired
COMPLETION_TIME	DATE	Time when the copy was completed
CONTROLFILE_TYPE	VARCHAR2(1)	B indicates normal copies S indicates standby copies
KEEP	VARCHAR2(3)	(YES/NO) Indicates whether or not this backup set has a retention policy that is different than the value for the configure retention policy
KEEP_UNTIL	DATE	If KEEP_UNTIL is specified, this is the date after which the backup becomes obsolete. If this column is null, then the backup never expires.
KEEP_OPTIONS	VARCHAR2(11)	Lists additional retention options for this backup set. Possible values are: LOGS - The logs need to recover this backup are kept NOLOGS - The logs needed to recover this backup will not be kept
SCANNED	VARCHAR2(3)	Indicates whether RMAN scanned the file (YES) or not (NO)
IS_RECOVERY_DEST_FILE	VARCHAR2(3)	Indicates whether the file was created in the fast recovery area (YES) or not (NO)
RMAN_STATUS_RECID	NUMBER	Owning V$RMAN_STATUS record ID
RMAN_STATUS_STAMP	NUMBER	Owning V$RMAN_STATUS record stamp
CONVERTED_FILE	VARCHAR2(3)	(YES/NO) Indicates whether or not the data file copy was created using the RMAN CONVERT command
SAME_ENDIAN	VARCHAR2(3)	If the value of the CONVERTED_FILE column is YES, then this column indicates whether the data file copy has the same endianness as the source data file (YES) or not (NO); otherwise NULL
FOREIGN_DBID	NUMBER	Foreign DBID from which this data file came from. The value is 0 if this file is not a foreign database file.
PLUGGED_READONLY	VARCHAR2(3)	YES if this is a transported read-only foreign file; otherwise NO.
PLUGIN_CHANGE#	NUMBER	SCN at which the foreign data file was transported into the database. The value is 0 if this file is not a foreign database file.

Column	Datatype	Description
PLUGIN_RESETLOGS_CHANGE#	NUMBER	The SCN of the RESETLOGS operation for the incarnation into which this foreign file was transported. The value is 0 if this file is not a foreign database file.
PLUGIN_RESETLOGS_TIME	DATE	The time of the RESETLOGS operation for the incarnation into which this foreign file was transported. The value is 0 if this file is not a foreign database file.
BACKED_BY_VSS	VARCHAR2(3)	Whether or not the file has been backed up by Volume Shadow Copy Service (VSS). This column is reserved for internal use.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
BACKED_BY_PDB	VARCHAR2(3)	Recovery Manager (RMAN) allows a PDB to be backed up in two ways. The value in this column indicates how the PDB backup was taken: • YES: The backup was taken when connected to the PDB • NO: The backup was taken when connected to the root container
SPARSE_BACKUP	VARCHAR2(3)	Indicates whether the file is sparse (YES) or not (NO)
GUID	RAW(16)	The GUID of the PDB to which the backup belongs. This is useful after the PDB is dropped to identify which PDB the backup belongs to.

8.162 V$DATAFILE_HEADER

V$DATAFILE_HEADER displays data file information from the data file headers.

Column	Datatype	Description
FILE#	NUMBER	Data file number (from control file)
STATUS	VARCHAR2(7)	ONLINE | OFFLINE (from control file)
ERROR	VARCHAR2(18)	NULL if the data file header read and validation were successful. If the read failed then the rest of the columns are NULL. If the validation failed then the rest of columns may display invalid data. If there is an error then usually the data file must be restored from a backup before it can be recovered or used.
FORMAT	NUMBER	Indicates the format for the header block. The possible values are 6, 7, 8, 10 or 0. 6 - indicates Oracle Version 6 7 - indicates Oracle Version 7 8 - indicates Oracle Version 8 10 - indicates Oracle Version 10 0 - indicates the format could not be determined (for example, the header could not be read)
RECOVER	VARCHAR2(3)	File needs media recovery (YES | NO)
FUZZY	VARCHAR2(3)	File is fuzzy (YES | NO)
CREATION_CHANGE#	NUMBER	Data file creation change#

Column	Datatype	Description
CREATION_TIME	DATE	Data file creation timestamp
TABLESPACE_NAME	VARCHAR2(30)	Tablespace name
TS#	NUMBER	Tablespace number
RFILE#	NUMBER	Tablespace relative data file number
RESETLOGS_CHANGE#	NUMBER	Resetlogs change#
RESETLOGS_TIME	DATE	Resetlogs timestamp
CHECKPOINT_CHANGE#	NUMBER	Data file checkpoint change#
CHECKPOINT_TIME	DATE	Data file checkpoint timestamp
CHECKPOINT_COUNT	NUMBER	Data file checkpoint count
BYTES	NUMBER	Current data file size in bytes
BLOCKS	NUMBER	Current data file size in blocks
NAME	VARCHAR2(513)	Data file name
SPACE_HEADER	VARCHAR2(40)	Represents the block address of a space file header block of a locally managed data file
LAST_DEALLOC_CHANGE#	VARCHAR2(16)	Last deallocated SCN
UNDO_OPT_CURRENT_CHANGE#	VARCHAR2(40)	For internal use only
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
IS_SPARSE	VARCHAR2(3)	Indicates whether the file is sparse (YES) or not (NO)
ENCRYPTED	VARCHAR2(3)	After file encryption is completed, this column indicates whether the file is encrypted (YES) or not (NO). When file encryption is still in progress, this column has a value of NO.

8.163 V$DATAGUARD_CONFIG

V$DATAGUARD_CONFIG displays the unique database names defined with the DB_UNIQUE_NAME and LOG_ARCHIVE_CONFIG initialization parameters, providing a view of the Oracle Data Guard environment from any database in the configuration.

The first row of the view lists the unique database name of the current database that was specified with the DB_UNIQUE_NAME initialization parameter. Additional rows reflect the unique database names of the other databases in the configuration that were specified with the DG_CONFIG keyword of the LOG_ARCHIVE_CONFIG initialization parameter.

Column	Datatype	Description
DB_UNIQUE_NAME	VARCHAR2(30)	Unique database name

Column	Datatype	Description
PARENT_DBUN	VARCHAR2(30)	DB_UNIQUE_NAME of the parent database, also known as the database that supplies live redo to the destination. For example, suppose Boston is the DB_UNIQUE_NAME of the primary database, Chicago is the DB_UNIQUE_NAME of the Far Sync Instance, and Seattle is the DB_UNIQUE_NAME of the terminal standby database. Since Boston is the primary database, it has no parent database so the PARENT_DBUN for Boston will be NULL. Since Boston services Chicago, the PARENT_DBUN of Chicago will be Boston. Since Chicago services Seattle, Chicago will be the PARENT_DBUN for Seattle.
DEST_ROLE	VARCHAR2(17)	Type of archival destination database: • LOCAL - Local to primary database • PHYSICAL - Physical standby • FAR SYNC INSTANCE - Far Sync Instance • CROSS-INSTANCE - An instance of the primary • LOGICAL - Logical standby • SNAPSHOT - Snapshot standby database • DOWNSTREAM - Streams downstream capture database
CURRENT_SCN	NUMBER	The SCN up to which the specified database has applied redo
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "DB_UNIQUE_NAME"
- "LOG_ARCHIVE_CONFIG"

8.164 V$DATAGUARD_PROCESS

V$DATAGUARD_PROCESS displays one row for each Oracle Data Guard process that is currently running.

Column	Datatype	Description
NAME	VARCHAR2(5)	Name of the process whose information is being reported. Some of the possible values include: • ARC*n* - Archiver process • DTS - Data transport process • FAL - File/announce process • LGWR - Log Writer Process • MRP0 - Detached recovery server process • NSS*n* - SYNC Redo Transport process • ORA - Foreground process • RFS - Remote file server • RMI - Remote message process • TMON - Redo Transport Process monitor • TT*nn* - Redo Transport Worker Process
PID	VARCHAR2(24)	Operating system process identifier of the process
TYPE	VARCHAR2(3)	Indicates which Oracle subsystem created the process. Possible values: • KSB • KSV • NET • UNK

Column	Datatype	Description
ROLE	VARCHAR2(31)	Role of the process. Possible values: • test • async ORL multi • async ORL single • async SRL multi • async SRL single • log writer • sync • archive redo • archive local • archive gap • RFS async • RFS sync • RFS archive • RFS gap • RFS SMON • data transport • data receive • redo transport monitor • heartbeat redo informer • process kill • post role transition • gap manager • update TMI • RFS ping • FAL gap • FAL announce • failover • switchover • remote failover • remote switchover • redo transport timer • announce request • managed recovery PSBY BG • managed recovery PSBY FG • controlfile update • broker monitor • broker worker • broker net worker • broker instance worker • fast-start failover ping • recovery coordinator • recovery logmerger • recovery applier • recovery sender • recovery receiver • redo transport test • temporary • datafile pre-create • redo log management • managed recovery DGPDB BG • managed recovery DGPDB FG

Column	Datatype	Description
		• compress ORL master • compress ORL worker • compress SRL master • compress SRL worker • archive ORL master • archive ORL worker • archive SRL master • archive SRL worker • collect information • clear SRL • True Cache data request receive • True Cache data request send • True Cache data block receive • True Cache data block send • DGPDB query SCN • True Cache control • RMI thread info • RMI • UNKNOWN
PROC_TIME	TIMESTAMP(0)	Timestamp of when the process started or registered for inclusion in this fixed view
TASK_TIME	TIMESTAMP(0)	Timestamp of when the first task of the process was requested
TASK_DONE	VARCHAR2(1)	Indicates whether the task performed by the process is done (Y) or not (N)
ACTION	VARCHAR2(20)	Current action of the process. Possible values can include: • ANNOUNCING • APPLYING_LOG • ATTACHED • CLOSING • CONNECTED • ERROR • IDLE • OPENING • PROCESSING • RECEIVING • REGISTERING • STARTING • TERMINATING • UNKNOWN • UNUSED • WAIT_FOR_GAP • WAIT_FOR_LOG • WAIT_FOR_NEW_PRIMARY • WRITING
CLIENT_PID	NUMBER	For RFS and DTS processes, the PID of the process communicating with this process
CLIENT_ROLE	VARCHAR2(31)	For RFS and DTS processes, the role of the process communicating with this process
GROUP#	NUMBER	Group number of the log that the process is operating upon
RESETLOG_ID	NUMBER	Resetlog ID (branch) of the log that the process is operating upon

Column	Datatype	Description
THREAD#	NUMBER	Thread number that the process is operating upon
SEQUENCE#	NUMBER	Sequence number that the process is operating upon
BLOCK#	NUMBER	Starting block number that the process is operating upon
BLOCK_COUNT	NUMBER	Number of blocks that the process is operating upon
DELAY_MINS	NUMBER	Archived redo log delay interval in minutes
DEST_ID	NUMBER	Destination ID that the process is currently operating upon
DEST_MASK	NUMBER	Mask of all destination IDs that the process will operate upon, where: Bit 0 is LOG_ARCHIVE_DEST1 Bit 1 is LOG_ARCHIVE_DEST2 Bit 2 is LOG_ARCHIVE_DEST3 and so on.
TENANT_KEY	NUMBER	Unique identifier assigned to each customer in the Oracle Cloud If the database is not in the cloud, then the value of this columns is 0. The combination of TENANT_KEY and DBID can be used to uniquely identify a database.
DBID	NUMBER	Database ID of the redo that the process is operating upon
DGID	NUMBER	Data Guard ID that the process must communicate with
INSTANCE	NUMBER	Instance number that the process must communicate with at the specified DGID
STOP_STATE	VARCHAR2(7)	Indicates the method by which the process has been requested to stop: • NOW - Requested to stop immediately and exit • SOON - Requested to stop on next log and exit • COMMIT - Requested to write remaining redo and exit • N/A - No request to stop
APPLY	NUMBER	SCN at which the database has applied redo
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> Oracle recommends that you use this view instead of V$MANAGED_STANDBY.

8.165 V$DATAGUARD_STATS

V$DATAGUARD_STATS displays information about Oracle Data Guard metrics when queried on a target database. No rows are returned when queried on a primary database. In the descriptions in this section, the originating database that is generating the redo is either a primary database or a logical standby database.

Column	Datatype	Description
SOURCE_DBID	NUMBER	Database ID of the originating database
SOURCE_DB_UNIQUE_NAME	VARCHAR2(32)	DB unique name of the originating database
NAME	VARCHAR2(32)	Name of the metric: • APPLY FINISH TIME - An estimate of the time needed to apply all received, but unapplied redo from the originating database. If there are one or more redo gaps on the target database, an estimate of the time needed to apply all received, but unapplied redo up to the end of the last archived redo log before the beginning of the earliest redo gap. • APPLY LAG - Apply lag is a measure of the degree to which the data in a target database lags behind the data in the originating database, due to delays in propagating and applying redo to the target database. This value is relevant only to the applying instance. • TRANSPORT LAG - Transport lag is a measure of the degree to which the transport of redo to the target database lags behind the generation of redo on the originating database. If there are one or more redo gaps on the target database, the transport lag is calculated as if no redo has been received after the beginning of the earliest redo gap. • ESTIMATED STARTUP TIME - An estimate of the time needed to start and open the database.
VALUE	VARCHAR2(64)	Value of the metric
UNIT	VARCHAR2(30)	Unit of measurement
TIME_COMPUTED	VARCHAR2(30)	Local time at the target database when the metric was computed
DATUM_TIME	VARCHAR2(30)	Local time at the target database when the data used to compute the metric was received The APPLY LAG and TRANSPORT LAG metrics are computed based on data that is periodically received from the source database. An unchanging value in this column across multiple queries indicates that the target database is not receiving data from the source database.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.166 V$DATAGUARD_STATUS

V$DATAGUARD_STATUS displays messages recently written to the alert log or server process trace files that concern physical standby databases or redo transport services for all standby database types.

Column	Datatype	Description
FACILITY	VARCHAR2(24)	Facility that encountered the event: • Crash Recovery • Log Transport Services • Log Apply Services • Role Management Services • Remote File Server • Fetch Archive Log • Data Guard • Network Services
SEVERITY	VARCHAR2(13)	Severity of the event: • Informational - Informational message • Warning - Warning message • Error - Indicates the process has failed • Fatal • Control - An expected change in state such as the start or completion of an archival, log recovery, or switchover operation
DEST_ID	NUMBER	Destination ID number to which the event pertains. If the event does not pertain to a particular destination, then the value is 0.
MESSAGE_NUM	NUMBER	A chronologically increasing number giving each event a unique number
ERROR_CODE	NUMBER	Error ID pertaining to the event
CALLOUT	VARCHAR2(3)	Reserved for future use
TIMESTAMP	DATE	Message date
MESSAGE	VARCHAR2(256)	A text message describing the event
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.167 V$DATAPUMP_PROCESS_INFO

V$DATAPUMP_PROCESS_INFO displays information about currently active Oracle Data Pump processes.

Column	Datatype	Description
CUR_DATE	VARCHAR2(19)	Date and time at which process information was gathered
PROGRAM	VARCHAR2(84)	Operating system program name
SESSIONID	NUMBER	Session identifier

Column	Datatype	Description
STATUS	VARCHAR2(8)	Status of the session: • ACTIVE - Session currently executing SQL • INACTIVE - Session which is inactive and either has no configured limits or has not yet exceeded the configured limits • KILLED - Session marked to be terminated • CACHED - Session temporarily cached for use by Oracle*XA • SNIPED - An inactive session that has exceeded some configured limits (for example, resource limits specified for the resource manager consumer group or idle_time specified in the user's profile). Such sessions will not be allowed to become active again.
USERNAME	VARCHAR2(128)	Oracle user name
JOBNAME	VARCHAR2(128)	User-supplied name for the job (or the default name generated by the server)
SPID	VARCHAR2(24)	Operating system process identifier The Oracle multiprocess/multithread feature is available for UNIX systems. When the Oracle multiprocess/multithread feature is enabled, RDBMS processes are mapped to threads running in operating system processes, and the SPID identifier is not unique for RDBMS processes. When the Oracle multiprocess/multithread feature is not enabled on UNIX systems, the SPID identifier is unique for RDBMS processes.
SERIALNUMBER	NUMBER	Session serial number
PROCESSID	NUMBER	Oracle process identifier
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

8.168 V$DATAPUMP_SESSIONWAIT_INFO

V$DATAPUMP_SESSIONWAIT_INFO displays information about the current or last wait for each session attached to a Data Pump job.

Column	Datatype	Description
WAITING_SESSION	NUMBER	Session identifier; maps to V$SESSION.SID
SERIAL_NUMBER	NUMBER	Session serial number (used to uniquely identify a session's objects); maps to V$SESSION.SERIAL#

Column	Datatype	Description
SEQ_NUMBER	NUMBER	A number that uniquely identifies the current or last wait (incremented for each wait)
EVENT	VARCHAR2(64)	If the session is currently waiting, then the resource or event for which the session is waiting. If the session is not in a wait, then the resource or event for which the session most recently waited. **See Also:** " Oracle Wait Events"
DP_WAITTIME	NUMBER	If the session is currently waiting, then the value is 0. If the session is not in a wait, then the value is as follows: • > 0 - Value is the duration of the last wait in hundredths of a second • -1 - Duration of the last wait was less than a hundredth of a second • -2 - Parameter TIMED_STATISTICS was set to false
DP_SECONDS_IN_WAIT	NUMBER	If the session is currently waiting, then the value is the amount of time waited for the current wait. If the session is not in a wait, then the value is the amount of time since the start of the last wait.
DP_STATE_IN_WAIT	VARCHAR2(19)	Wait state of the Data Pump session: • WAITING - Session is currently waiting • WAITED UNKNOWN TIME - Duration of the last wait is unknown; this is the value when the parameter TIMED_STATISTICS is set to false • WAITED SHORT TIME - Last wait was less than a hundredth of a second • WAITED KNOWN TIME - Duration of the last wait is specified in the DP_WAITTIME column
DP_P1TEXT	VARCHAR2(64)	Description of the first wait event parameter
DP_P1	NUMBER	First wait event parameter (in decimal)
DP_P2TEXT	VARCHAR2(64)	Description of the second wait event parameter
DP_P2	NUMBER	Second wait event parameter (in decimal)
DP_P3TEXT	VARCHAR2(64)	Description of the third wait event parameter
DP_P3	NUMBER	Third wait event parameter (in decimal)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

This view is available starting with Oracle Database 23ai.

8.169 V$DB_CACHE_ADVICE

V$DB_CACHE_ADVICE contains rows that predict the number of physical reads for the cache size corresponding to each row.

The rows also compute a "physical read factor," which is the ratio of the number of estimated reads to the number of reads actually performed by the real buffer cache during the measurement interval.

> **See Also:**
>
> "DB_CACHE_ADVICE"

Column	Datatype	Description
ID	NUMBER	Buffer pool identifier (ranges from 1 to 8)
NAME	VARCHAR2(20)	Buffer pool name
BLOCK_SIZE	NUMBER	Block size in bytes for buffers in this pool. Possible values: the standard block size, the power of 2 nonstandard block sizes, 2048, 4096, 8192, 16384, 32768.
ADVICE_STATUS	VARCHAR2(3)	Status of the advisory. ON indicates it is currently running; OFF indicates it is disabled (in this case the estimates are historical and calculated when last enabled).
SIZE_FOR_ESTIMATE	NUMBER	Cache size for prediction (in megabytes)
SIZE_FACTOR	NUMBER	Size factor with respect to the current cache size
BUFFERS_FOR_ESTIMATE	NUMBER	Cache size for prediction (in terms of buffers)
ESTD_PHYSICAL_READ_FACTOR	NUMBER	Physical read factor for this cache size, which is the ratio of the number of estimated physical reads to the number of reads in the real cache. If there are no physical reads in the real cache, the value of this column is null.
ESTD_PHYSICAL_READS	NUMBER	Estimated number of physical reads for this cache size
ESTD_PHYSICAL_READ_TIME	NUMBER	Estimated disk read time (in seconds)
ESTD_PCT_OF_DB_TIME_FOR_READS	NUMBER	Estimated disk time as a percentage of the total time
ESTD_CLUSTER_READS	NUMBER	Estimated total number of blocks foreground processes read from the global cache (Oracle Real Application Clusters only)
ESTD_CLUSTER_READ_TIME	NUMBER	Estimated total amount of time, in seconds, foreground processes read from global cache (Oracle Real Application Clusters only)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.170 V$DB_OBJECT_CACHE

V$DB_OBJECT_CACHE displays database objects that are cached in the library cache. Objects include tables, indexes, clusters, synonym definitions, PL/SQL procedures and packages, and triggers.

Column	Datatype	Description
OWNER	VARCHAR2(64)	Owner of the object
NAME	VARCHAR2(1000)	Name of the object
DB_LINK	VARCHAR2(64)	Database link name, if any
NAMESPACE	VARCHAR2(64)	Library cache namespace of the object: TABLE/PROCEDURE, BODY, TRIGGER, INDEX, CLUSTER, OBJECT
TYPE	VARCHAR2(64)	Type of the object: INDEX, TABLE, CLUSTER, VIEW, SET, SYNONYM, SEQUENCE, PROCEDURE, FUNCTION, PACKAGE, PACKAGE BODY, TRIGGER, CLASS, OBJECT, USER, DBLINK
SHARABLE_MEM	NUMBER	Amount of sharable memory in the shared pool consumed by the object
LOADS	NUMBER	Number of times the object has been loaded. This count also increases when an object has been invalidated.
EXECUTIONS	NUMBER	Not used **See Also:** "V$SQLAREA" to see actual execution counts
LOCKS	NUMBER	Number of users currently locking this object
PINS	NUMBER	Number of users currently pinning this object
KEPT	VARCHAR2(3)	(YES | NO) Depends on whether this object has been "kept" (permanently pinned in memory) with the PL/SQL procedure DBMS_SHARED_POOL.KEEP
CHILD_LATCH	NUMBER	Child latch number that is protecting the object. This column is obsolete and maintained for backward compatibility.
INVALIDATIONS	NUMBER	Total number of times objects in the namespace were marked invalid because a dependent object was modified
HASH_VALUE	NUMBER	Hash value of the object
LOCK_MODE	VARCHAR2(9)	Current lock mode of the object
PIN_MODE	VARCHAR2(9)	Current pin mode of the object
STATUS	VARCHAR2(19)	Status of the object
TIMESTAMP	VARCHAR2(19)	Timestamp for the specification of the object
PREVIOUS_TIMESTAMP	VARCHAR2(19)	Previous timestamp for the specification of the object
LOCKED_TOTAL	NUMBER	Total number of times the object has been locked
PINNED_TOTAL	NUMBER	Total number of times the object has been pinned
PROPERTY	VARCHAR2(80)	Property of the object. Possible values include HOT or HOTCOPY when the library cache hot copy feature is used using DBMS_SHARED_POOL.MARKHOT.
FULL_HASH_VALUE	VARCHAR2(32)	Full hash value of the object

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
CON_NAME	VARCHAR2(64)	Container name of the object. The value of this column is NULL in non-CDBs.
ADDR	RAW(8)	Address of the handle for this object
EDITION	VARCHAR2(138)	Edition name

See Also:

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SHARED_POOL.KEEP procedure
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_SHARED_POOL.MARKHOT procedure

8.171 V$DB_PIPES

V$DB_PIPES displays the pipes that are currently represented in the shared pool for this instance.

Column	Datatype	Description
OWNERID	NUMBER	Owner ID of the owner (if this is a private pipe), else NULL
NAME	VARCHAR2(1000)	Name of the pipe (for example, SCOTT.PIPE)
TYPE	VARCHAR2(7)	Type of the pipe: • PUBLIC • PRIVATE
PIPE_SIZE	NUMBER	Amount of memory the pipe uses **Note:** The value of this column may be larger than maxpipesize because of an internal algorithm.
SINGLETON	VARCHAR2(3)	Indicates whether the pipe is a singleton pipe (YES) or not (NO)
SHELFLIFE	NUMBER	The shelf life time (in seconds) for a message in a singleton pipe If the pipe is not a singleton pipe, then the value of this column is 0.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
CON_NAME	VARCHAR2(64)	Container name of the object. The value of this column is NULL in non-CDBs.

8.172 V$DB_TRANSPORTABLE_PLATFORM

V$DB_TRANSPORTABLE_PLATFORM displays all platforms to which the database can be transported using the RMAN CONVERT DATABASE command.

The transportable database feature only supports transports of the same endian platform. Therefore, V$DB_TRANSPORTABLE_PLATFORM displays fewer rows than V$TRANSPORTABLE_PLATFORM.

Column	Datatype	Description
PLATFORM_ID	NUMBER	Platform identification number
PLATFORM_NAME	VARCHAR2(101)	Platform name
ENDIAN_FORMAT	VARCHAR2(14)	Platform endian format: • Big • Little • UNKNOWN FORMAT
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$TRANSPORTABLE_PLATFORM"

8.173 V$DBFILE

V$DBFILE displays all data files making up the database. This view is retained for historical compatibility. Use of V$DATAFILE is recommended instead.

Column	Datatype	Description
FILE#	NUMBER	File identifier
NAME	VARCHAR2(513)	Name of the file
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$DATAFILE"

8.174 V$DBLINK

V$DBLINK describes all database links (links with IN_TRANSACTION = YES) opened by the session issuing the query on V$DBLINK. These database links must be committed or rolled back before being closed.

Column	Datatype	Description
DB_LINK	VARCHAR2(128)	Name of the database link
OWNER_ID	NUMBER	Owner of the database link UID
LOGGED_ON	VARCHAR2(3)	Whether the database link is currently logged on
HETEROGENEOUS	VARCHAR2(3)	Whether the database link is heterogeneous
PROTOCOL	VARCHAR2(6)	Communication protocol for the database link
OPEN_CURSORS	NUMBER	Whether there are open cursors for the database link
IN_TRANSACTION	VARCHAR2(3)	Whether the database link is currently in a transaction
UPDATE_SENT	VARCHAR2(3)	Whether there has been an update on the database link
COMMIT_POINT_STRENGTH	NUMBER	Commit point strength of the transactions on the database link
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.175 V$DEAD_CLEANUP

V$DEAD_CLEANUP shows the terminated processes and sessions present in the instance and their cleanup status.

Column	Datatype	Description
TYPE	VARCHAR2(64)	Indicates whether a row contains a DEAD PROCESS or KILLED SESSION
PADDR	RAW(8)	Process pointer. Can be joined with V$PROCESS. For a KILLED SESSION, this is the owner of the session, which can be NULL.
SADDR	RAW(8)	Session pointer. Can be joined with V$SESSION. For a DEAD PROCESS, this is the user session.
ROOT_ADDR	RAW(8)	Pointer to the root of the tree
CLEANUP_OWNER	VARCHAR2(64)	Indicates which process is responsible for cleanup of this tree: • CLEANUP PROCESS - a cleanup process is responsible • OWNER PROCESS - the root owner is responsible
STATE	VARCHAR2(64)	Cleanup state: • CLEANUP PENDING - Occurs for a DEAD PROCESS or KILLED SESSION that can be cleaned up, but PMON has not yet made an attempt • IN PROGRESS - A cleanup attempt is currently in progress • RESOURCES FREED - Occurs for a DEAD PROCESS or KILLED SESSION where all children have been freed, but the process or session itself is not yet freed • PARTIAL CLEANUP - Occurs if some of the children have been cleaned up
DEAD_TIME	NUMBER	Time since the DEAD PROCESS or KILLED SESSION was marked as such (in seconds)
CLEANUP_ATTEMPTS	NUMBER	Number of times PMON has attempted cleanup
LAST_ATTEMPT	NUMBER	How long ago the last cleanup attempt occurred (in seconds)
CLEANUP_PROCESS	RAW(8)	Process pointer for the cleanup process currently cleaning up this tree (can join with V$CLEANUP_PROCESS). It will be NULL if cleanup is not currently in progress or if the owner is responsible for cleanup.
CLEANUP_TIME	NUMBER	Total amount of time PMON has spent on cleanup of the process/session (in seconds)
NUM_BLOCKED	NUMBER	Number of sessions blocked on cleanup of this session
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$CLEANUP_PROCESS"

8.176 V$DELETED_OBJECT

V$DELETED_OBJECT displays information about deleted archived logs, data file copies and backup pieces from the control file.

The only purpose of this view is to optimize the recovery catalog resync operation. When an archived log, data file copy, or backup piece is deleted, the corresponding record is marked deleted.

Column	Datatype	Description
RECID	NUMBER	Deleted object record ID
STAMP	NUMBER	Deleted object record stamp
TYPE	VARCHAR2(26)	Identifies the type of deleted object: • ARCHIVED LOG • BACKUP PIECE • DATAFILE COPY • PROXY COPY • BACKUP PIECE AVAILABLE • BACKUP PIECE EXPIRED • PROXY COPY AVAILABLE • PROXY COPY EXPIRED • BACKUP PIECE UNAVAILABLE • PROXY COPY UNAVAILABLE • DATAFILE COPY AVAILABLE • DATAFILE COPY EXPIRED • DATAFILE COPY UNAVAILABLE • ARCHIVED LOG AVAILABLE • ARCHIVED LOG EXPIRED • ARCHIVED LOG UNAVAILABLE • BACKUP SET KEEP OPTIONS • BACKUP SET KEEP UNTIL • PROXY COPY KEEP OPTIONS • PROXY COPY KEEP UNTIL • DATAFILE COPY KEEP OPTIONS • DATAFILE COPY KEEP UNTIL • DATAFILE RENAME ON RESTORE
OBJECT_RECID	NUMBER	Record ID of the deleted object
OBJECT_STAMP	NUMBER	Record timestamp of the deleted object
OBJECT_DATA	NUMBER	Displays additional internal information related to this deleted object. For internal Oracle use only.
SET_STAMP	NUMBER	Set stamp of the deleted object
SET_COUNT	NUMBER	Set count of the deleted object
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.177 V$DG_BROKER_CONFIG

V$DG_BROKER_CONFIG provides a summary of an Oracle Data Guard broker configuration.

This is similar to the DGMGRL CLI's SHOW CONFIGURATION command. It provides a view of the entire Oracle Data Guard broker configuration from any database in the configuration.

Column	Datatype	Description
DATABASE	VARCHAR2(30)	Database unique name
CONNECT_IDENTIFIER	VARCHAR2(512)	Net connect identifier used to reach the database
DATAGUARD_ROLE	VARCHAR2(20)	Oracle Data Guard role of the database: • FAR SYNC INSTANCE • LOGICAL STANDBY • PHYSICAL STANDBY • RECOVERY APPLIANCE • REMOTE CONFIG MEMBER • PRIMARY • SNAPSHOT STANDBY
REDO_SOURCE	VARCHAR(30)	The database unique name of the redo source
ENABLED	VARCHAR2(5)	TRUE or FALSE to denote whether or not the database is managed by Oracle Data Guard broker
STATUS	NUMBER	An Oracle error number denoting the database's current status
SEVERITY	VARCHAR2(30)	Severity of the Oracle error. Possible values: • FAILURE • SUCCESS • WARNING
STATUS_MESSAGE	VARCHAR2(256)	Error message associated with the Oracle error number in the STATUS column
VERSION	VARCHAR2(30)	Version of the broker configuration
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.178 V$DG_BROKER_ROLE_CHANGE

V$DG_BROKER_ROLE_CHANGE displays information about the last ten role changes across a Data Guard broker configuration.

Column	Datatype	Description
EVENT	VARCHAR2(30)	Type of role change: • Failover • Fast-Start Failover • Immediate Failover • Switchover
STANDBY_TYPE	VARCHAR2(30)	Type of standby database: • Logical • Physical
OLD_PRIMARY	VARCHAR2(30)	Database unique name of the old primary database, that is, the primary database before the role change occurred
NEW_PRIMARY	VARCHAR2(30)	Database unique name of the new primary database, that is, the primary database after the role change occurred
FS_FAILOVER_REASON	VARCHAR2(255)	If the role change was a fast-start failover, then this column displays the reason for the fast-start failover. For example, the primary database became disconnected. Otherwise, the value of this column is null.
BEGIN_TIME	TIMESTAMP(9)	Begin time of the role change • If the role change was a failover, then this column displays the time at which the ALTER DATABASE FAILOVER statement was issued on the target standby. • If the role change was a switchover, then this column displays the time at which the ALTER DATABASE SWITCHOVER statement was issued on the old primary database.
END_TIME	TIMESTAMP(9)	End time of the role change For both failover and switchover role changes, this column displays the time at which the ALTER DATABASE OPEN operation was completed on the first instance of the new primary database.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

8.179 V$DIAG_ALERT_EXT

V$DIAG_ALERT_EXT shows the contents of the XML-based alert log in the Automatic Diagnostic Repository (ADR) for the current container (PDB).

Column	Datatype	Description
ORIGINATING_TIMESTAMP	TIMESTAMP(9) WITH TIME ZONE	Date and time when the message was generated
NORMALIZED_TIMESTAMP	TIMESTAMP(9) WITH TIME ZONE	Date and time when the message originated, normalized for clock drift to the Oracle Enterprise Manager repository time
ORGANIZATION_ID	VARCHAR2(67)	ID of the organization that wrote the originating component, usually the domain of the organization
COMPONENT_ID	VARCHAR2(67)	ID of the product or component that originated the message
HOST_ID	VARCHAR2(67)	DNS hostname of originating host
HOST_ADDRESS	VARCHAR2(49)	IP of other network address of the originating host for the mesaage
MESSAGE_TYPE	NUMBER	Type of the message, indicating that a different type of response is required. Possible values include: • 1 - UNKNOWN: Essentially the NULL type • 2 - INCIDENT_ERROR: The program has encountered an error for some internal or unexpected reason, and it must be reported to Oracle Support • 3 - ERROR: An error of some kind has occurred • 4 - WARNING: An action occurred or a condition was discovered that should be reviewed and may require action • 5 - NOTIFICATION: Reports a normal action or event. This could be a user action such as "logon completed." • 6 - TRACE: Output of a diagnostic trace
MESSAGE_LEVEL	NUMBER	Level the message belongs to. Lower level values imply higher severity for errors. Possible values include: • 1 - CRITICAL: Critical errors • 2 - SEVERE: Severe errors • 8 - IMPORTANT: Important message • 16 - NORMAL: Normal message
MESSAGE_ID	VARCHAR2(67)	ID of the message
MESSAGE_GROUP	VARCHAR2(67)	Name of the group to which the message belongs
CLIENT_ID	VARCHAR2(67)	ID of the client or security group that the message relates to
MODULE_ID	VARCHAR2(67)	ID of the module that originated the message. This value is unique within a component.
PROCESS_ID	VARCHAR2(35)	ID of the process that originated the message
THREAD_ID	VARCHAR2(67)	ID of the thread of the process that originated the message
USER_ID	VARCHAR2(131)	ID of the user that originated the message
INSTANCE_ID	VARCHAR2(67)	For internal use only
DETAILED_LOCATION	VARCHAR2(163)	Absolute pathname of supplemental detail file on the originating host
UPSTREAM_COMP_ID	VARCHAR2(103)	ID of a component that the originating component is working with on the upstream (client) side
DOWNSTREAM_COMP_ID	VARCHAR2(103)	ID of a component that the originating component is working with on the downstream (server) side
EXECUTION_CONTEXT_ID	VARCHAR2(103)	Identifies the thread of execution that the originating component participates in
EXECUTION_CONTEXT_SEQUENCE	NUMBER	Execution sequence of the thread that the originating component participates in
ERROR_INSTANCE_ID	NUMBER	ID of the instance where error occurred
ERROR_INSTANCE_SEQUENCE	NUMBER	Instance sequence where error occurred

Column	Datatype	Description
MESSAGE_TEXT	VARCHAR2(2051)	Fully formed and localized text of the message
MESSAGE_ARGUMENTS	VARCHAR2(515)	Arguments to be bound with the generic text of the message
SUPPLEMENTAL_ATTRIBUTES	VARCHAR2(515)	Supplemental attributes that are specific to a message. This field contains the impacts for an incident type error message.
SUPPLEMENTAL_DETAILS	VARCHAR2(515)	Supplemental data that is specific to a particular program and error message required to complete the diagnosis. Similar to the extra detail referred to in DETAILED_LOCATION but short enough to simply provide in the message itself
PARTITION	NUMBER	Segment number of physical file
RECORD_ID	NUMBER	Record number for the message (this value is same as the row number)
FILENAME	VARCHAR2(515)	Physical file on disk
LOG_NAME	VARCHAR2(67)	For internal use only
PROBLEM_KEY	VARCHAR2(553)	Describes the key for the current problem that the message is associated with
VERSION	NUMBER	ARB version number for the message
CON_UID	NUMBER	The unique ID of the container to which the data pertains
CONTAINER_ID	NUMBER	The ID of the container to which the data pertains
CONTAINER_NAME	VARCHAR2(67)	Name of the container to which the data pertains
ATTENTION_ID	NUMBER	Unique ID for the message This column is used primarily for attention messages. Alert messages may or may not have an ID. If the same attention message is triggered multiple times, it will have the same ID each time.
ID_SUFFIX	VARCHAR2(67)	Reserved for future use
OPERATION_ID	VARCHAR2(67)	Reserved for future use
CAUSE_TEXT	VARCHAR2(2051)	Cause of the message
ACTION_TEXT	VARCHAR2(2051)	Recommended action to resolve the issue triggering the message
ORACLE_PROCESS_ID	NUMBER	ID of the Oracle process triggering the message
DATABASE_ID	VARCHAR2(33)	Database identifier, as specified by the DB_NAME initialization parameter
SQL_ID	VARCHAR2(16)	Identifier of the SQL statement being processed when the message was triggered
SESSION_ID	VARCHAR2(19)	Identifier of the session in which the message was triggered
IMPACT_ID	VARCHAR2(35)	Reserved for future use

Column	Datatype	Description
IMPACT_SCOPE	VARCHAR2(35)	Scope of impact of the issue triggering the message: • ASM CLUSTER - The extent of damage or influence encompasses Oracle ASM at the cluster level. • ASM INSTANCE (TRANSIENT) - The extent of damage or influence is limited to a specific Oracle ASM instance. • CDB CLUSTER - The extent of damage or influence encompasses the entire CDB and its cluster. • CDB Instance (TRANSIENT) - The extent of damage or influence encompasses the entire CDB. The issue is not permanent and can be resolved, for example, by an instance restart. • CDB (PERSISTENT) - The extent of damage or influence encompasses the entire CDB. The issue is persistent, for example, an issue with persistent storage, and typically cannot be resolved by an instance restart. • DISK GROUP - The extent of damage or influence is limited to the disk group. • ORACLE INSTANCE - The extent of damage or influence is limited to the Oracle instance. For example, an Oracle database instance or an Oracle ASM instance. • PDB Instance (TRANSIENT) - The extent of damage or influence encompasses the PDB. The issue is not permanent and can be resolved, for example, by a PDB restart. • PDB (PERSISTENT) - The extent of damage or influence encompasses the PDB. The issue is persistent, for example, an issue with persistent storage, and typically cannot be resolved by a PDB restart. • PROCESS - The extent of damage or influence is limited to the process in which the error happened. If the affected process terminates or restarts, the impact of the error will not be felt. • SESSION - The extent of damage or influence is limited to the session in which the message was triggered. The issue will not be experienced in other sessions executing concurrently in the system.
TARGET_USER	VARCHAR2(35)	User at whom the message is targeted: • APP-DEV • CDB-ADMIN • CLUSTER-ADMIN • DATAOPS-ADMIN • NET-ADMIN • PDB-ADMIN • SEC-ADMIN • SERVER-ADMIN • STORAGE-ADMIN
CALL_STACK	VARCHAR2(1027)	Function call stack This column is populated when the MESSAGE_TYPE value is 2 (INCIDENT_ERROR), 3 (ERROR), or 4 (WARNING).
FLAGS	NUMBER	Reserved for internal use

Column	Datatype	Description
URGENCY	VARCHAR2(19)	Time criticality of the message Possible values, ordered from highest urgency to lowest urgency: • IMMEDIATE - The issue must be looked at immediately by administrators. Examples: Database down, data corruption, instance down, or a memory leak that could cause a crash. • SOON - The issue should be looked at in a reasonably short time frame, that is, the same day, but does not require immediate action. Examples: Isolated internal error or a disk filling up. • DEFERABLE - The issue should be looked at, but it is acceptable to look at it later. Example: Configuration advice. • INFO - Used mostly for notifications and does not require administrator attention. Example: Instance started. Frequently occurring messages are upgraded to higher urgency values.
START_VERSION	VARCHAR2(19)	Version of the product for which this message first starts being used This column is populated only for messages that are registered, that is, messages that have a MESSAGE_ID.
SECURITY_LABEL	VARCHAR2(19)	Reserved for internal use
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$DIAG_ATTENTION" to view only attention messages found in the alert log in the Automatic Diagnostic Repository (ADR)

8.180 V$DIAG_APP_TRACE_FILE

V$DIAG_APP_TRACE_FILE contains information about all trace files present in the Automatic Diagnostic Repository (ADR) for the current container (PDB) which contain application trace data (SQL_TRACE or OPTIMIZER_TRACE event data). This view also supports GV$ global views.

Column	Datatype	Description
ADR_HOME	VARCHAR2(444)	Path to the current ADR home
TRACE_FILENAME	VARCHAR2(68)	Displays the name of the process trace file
CHANGE_TIME	TIMESTAMP(3) WITH TIME ZONE	Displays the change time timestamp of the process trace fiile
MODIFY_TIME	TIMESTAMP(3) WITH TIME ZONE	Displays the last modification timestamp of the process trace file

Column	Datatype	Description
SQL_TRACE	VARCHAR2(1)	Identifies if the process trace file contains SQL_TRACE data. Possible values include: • Y: This value is used when the process trace file contains SQL_TRACE event data • N: This value indicates that the process trace does not contain SQL_TRACE data
OPTIMIZER_TRACE	VARCHAR2(1)	Identifies if the process trace file contains OPTIMIZER_TRACE data. Possible values include: • Y: This value is used when the process trace file contains OPTIMIZER_TRACE event data • N: This value indicates that the process trace does not contain OPTIMIZER_TRACE data
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.181 V$DIAG_ATTENTION

V$DIAG_ATTENTION displays attention messages in the XML-based alert log in the Automatic Diagnostic Repository (ADR) for the current container (PDB).

Column	Datatype	Description
ORIGINATING_TIMESTAMP	TIMESTAMP(9) WITH TIME ZONE	Date and time when the message was generated
NORMALIZED_TIMESTAMP	TIMESTAMP(9) WITH TIME ZONE	Date and time when the message originated, normalized for clock drift to the Oracle Enterprise Manager repository time
ORGANIZATION_ID	VARCHAR2(67)	ID of the organization that wrote the originating component, usually the domain of the organization
COMPONENT_ID	VARCHAR2(67)	ID of the product or component that originated the message
HOST_ID	VARCHAR2(67)	DNS hostname of originating host
HOST_ADDRESS	VARCHAR2(49)	IP of other network address of the originating host for the mesaage
MESSAGE_TYPE	NUMBER	Type of the message, indicating that a different type of response is required. Possible values include: • 1 - UNKNOWN: Essentially the NULL type • 2 - INCIDENT_ERROR: The program has encountered an error for some internal or unexpected reason, and it must be reported to Oracle Support • 3 - ERROR: An error of some kind has occurred • 4 - WARNING: An action occurred or a condition was discovered that should be reviewed and may require action • 5 - NOTIFICATION: Reports a normal action or event. This could be a user action such as "logon completed." • 6 - TRACE: Output of a diagnostic trace

Column	Datatype	Description
MESSAGE_LEVEL	NUMBER	Level the message belongs to. Lower level values imply higher severity for errors. Possible values include: • 1 - CRITICAL: Critical errors • 2 - SEVERE: Severe errors • 8 - IMPORTANT: Important message • 16 - NORMAL: Normal message
MESSAGE_ID	VARCHAR2(67)	ID of the message
MESSAGE_GROUP	VARCHAR2(67)	Name of the group to which the message belongs
CLIENT_ID	VARCHAR2(67)	ID of the client or security group that the message relates to
MODULE_ID	VARCHAR2(67)	ID of the module that originated the message. This value is unique within a component.
PROCESS_ID	VARCHAR2(35)	ID of the process that originated the message
THREAD_ID	VARCHAR2(67)	ID of the thread of the process that originated the message
USER_ID	VARCHAR2(131)	ID of the user that originated the message
INSTANCE_ID	VARCHAR2(67)	For internal use only
DETAILED_LOCATION	VARCHAR2(163)	Absolute pathname of supplemental detail file on the originating host
UPSTREAM_COMP_ID	VARCHAR2(103)	ID of a component that the originating component is working with on the upstream (client) side
DOWNSTREAM_COMP_ID	VARCHAR2(103)	ID of a component that the originating component is working with on the downstream (server) side
EXECUTION_CONTEXT_ID	VARCHAR2(103)	Identifies the thread of execution that the originating component participates in
EXECUTION_CONTEXT_SEQUENCE	NUMBER	Execution sequence of the thread that the originating component participates in
ERROR_INSTANCE_ID	NUMBER	ID of the instance where error occurred
ERROR_INSTANCE_SEQUENCE	NUMBER	Instance sequence where error occurred
MESSAGE_TEXT	VARCHAR2(2051)	Fully formed and localized text of the message
MESSAGE_ARGUMENTS	VARCHAR2(515)	Arguments to be bound with the generic text of the message
SUPPLEMENTAL_ATTRIBUTES	VARCHAR2(515)	Supplemental attributes that are specific to a message. This field contains the impacts for an incident type error message.
SUPPLEMENTAL_DETAILS	VARCHAR2(515)	Supplemental data that is specific to a particular program and error message required to complete the diagnosis. Similar to the extra detail referred to in DETAILED_LOCATION but short enough to simply provide in the message itself
PARTITION	NUMBER	Segment number of physical file
RECORD_ID	NUMBER	Record number for the message (this value is same as the row number)
FILENAME	VARCHAR2(515)	Physical file on disk
LOG_NAME	VARCHAR2(67)	For internal use only
PROBLEM_KEY	VARCHAR2(553)	Describes the key for the current problem that the message is associated with
VERSION	NUMBER	ARB version number for the message
CON_UID	NUMBER	The unique ID of the container to which the data pertains
CONTAINER_ID	NUMBER	The ID of the container to which the data pertains
CONTAINER_NAME	VARCHAR2(67)	Name of the container to which the data pertains

Column	Datatype	Description
ATTENTION_ID	NUMBER	Unique ID for the message This column is used primarily for attention messages. Alert messages may or may not have an ID. If the same attention message is triggered multiple times, it will have the same ID each time.
ID_SUFFIX	VARCHAR2(67)	Reserved for future use
OPERATION_ID	VARCHAR2(67)	Reserved for future use
CAUSE_TEXT	VARCHAR2(2051)	Cause of the message
ACTION_TEXT	VARCHAR2(2051)	Recommended action to resolve the issue triggering the message
ORACLE_PROCESS_ID	NUMBER	ID of the Oracle process triggering the message
DATABASE_ID	VARCHAR2(33)	Database identifier, as specified by the DB_NAME initialization parameter
SQL_ID	VARCHAR2(16)	Identifier of the SQL statement being processed when the message was triggered
SESSION_ID	VARCHAR2(19)	Identifier of the session in which the message was triggered
IMPACT_ID	VARCHAR2(35)	Reserved for future use
IMPACT_SCOPE	VARCHAR2(35)	Scope of impact of the issue triggering the message: • ASM CLUSTER - The extent of damage or influence encompasses Oracle ASM at the cluster level. • ASM INSTANCE (TRANSIENT) - The extent of damage or influence is limited to a specific Oracle ASM instance. • CDB CLUSTER - The extent of damage or influence encompasses the entire CDB and its cluster. • CDB Instance (TRANSIENT) - The extent of damage or influence encompasses the entire CDB. The issue is not permanent and can be resolved, for example, by an instance restart. • CDB (PERSISTENT) - The extent of damage or influence encompasses the entire CDB. The issue is persistent, for example, an issue with persistent storage, and typically cannot be resolved by an instance restart. • DISK GROUP - The extent of damage or influence is limited to the disk group. • ORACLE INSTANCE - The extent of damage or influence is limited to the Oracle instance. For example, an Oracle database instance or an Oracle ASM instance. • PDB Instance (TRANSIENT) - The extent of damage or influence encompasses the PDB. The issue is not permanent and can be resolved, for example, by a PDB restart. • PDB (PERSISTENT) - The extent of damage or influence encompasses the PDB. The issue is persistent, for example, an issue with persistent storage, and typically cannot be resolved by a PDB restart. • PROCESS - The extent of damage or influence is limited to the process in which the error happened. If the affected process terminates or restarts, the impact of the error will not be felt. • SESSION - The extent of damage or influence is limited to the session in which the message was triggered. The issue will not be experienced in other sessions executing concurrently in the system.

Column	Datatype	Description
TARGET_USER	VARCHAR2(35)	User at whom the message is targeted: • APP-DEV • CDB-ADMIN • CLUSTER-ADMIN • DATAOPS-ADMIN • NET-ADMIN • PDB-ADMIN • SEC-ADMIN • SERVER-ADMIN • STORAGE-ADMIN
CALL_STACK	VARCHAR2(1027)	Function call stack This column is populated when the MESSAGE_TYPE value is 2 (INCIDENT_ERROR), 3 (ERROR), or 4 (WARNING).
FLAGS	NUMBER	Reserved for internal use
URGENCY	VARCHAR2(19)	Time criticality of the message Possible values, ordered from highest urgency to lowest urgency: • IMMEDIATE - The issue must be looked at immediately by administrators. Examples: Database down, data corruption, instance down, or a memory leak that could cause a crash. • SOON - The issue should be looked at in a reasonably short time frame, that is, the same day, but does not require immediate action. Examples: Isolated internal error or a disk filling up. • DEFERABLE - The issue should be looked at, but it is acceptable to look at it later. Example: Configuration advice. • INFO - Used mostly for notifications and does not require administrator attention. Example: Instance started. Frequently occurring messages are upgraded to higher urgency values.
START_VERSION	VARCHAR2(19)	Version of the product for which this message first starts being used This column is populated only for messages that are registered, that is, messages that have a MESSAGE_ID.
SECURITY_LABEL	VARCHAR2(19)	Reserved for internal use
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

This view is available starting with Oracle Database 23ai.

8.182 V$DIAG_INCIDENT

V$DIAG_INCIDENT contains information about all incident metadata records present in the Automatic Diagnostic Repository (ADR) for the current container (PDB).

Column	Datatype	Description
INCIDENT_ID	NUMBER	ID for the current incident
PROBLEM_ID	NUMBER	ID for the problem that the incident is associated with
CREATE_TIME	TIMESTAMP(9) WITH TIME ZONE	Displays the date and time when the incident was created
CLOSE_TIME	TIMESTAMP(9) WITH TIME ZONE	Displays the date and time when the incident was closed
STATUS	NUMBER	Describes the current status for the incident. Possible values include: • 1: Incident is inflight • 2: Incident is ready • 3: Incident is tracked • 4: Incident is closed • 5: Incident data is removed • 6: Incident has been purged • 7: Incident is incomplete
FLAGS	NUMBER	For internal use only
FLOOD_CONTROLLED	NUMBER	Describes the flood control status for the current incident. Possible values include: • 0: Incident is not flood-controlled • 1: Incident is fully flood controlled (no dumps)
ERROR_FACILITY	VARCHAR2(12)	Displays the error facility for the current incident
ERROR_NUMBER	NUMBER	Displays the error number for the current incident
ERROR_ARG1	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG2	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG3	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG4	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG5	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG6	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG7	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG8	VARCHAR2(66)	Displays error-arguments associated with the given incident
SIGNALLING_COMPONENT	VARCHAR2(66)	Signalling component for the given incident
SIGNALLING_SUBCOMPONENT	VARCHAR2(66)	Signalling sub-component for the given incident
SUSPECT_COMPONENT	VARCHAR2(66)	Displays the suspect component for the given incident
SUSPECT_SUBCOMPONENT	VARCHAR2(66)	Displays the suspect sub-component for the given incident

Column	Datatype	Description
ECID	VARCHAR2(66)	Execution context ID for the current incident
IMPACT	NUMBER	Describes the internal representation of the incident impact for the given incident
ERROR_ARG9	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG10	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG11	VARCHAR2(66)	Displays error-arguments associated with the given incident
ERROR_ARG12	VARCHAR2(66)	Displays error-arguments associated with the given incident
CON_UID	NUMBER	Describes the container unique ID to which the data pertains
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.183 V$DIAG_INCIDENT_FILE_CONTENTS

V$DIAG_INCIDENT_FILE_CONTENTS contains trace data that is present in the incident trace files that are part of the current Automatic Diagnostic Repository (ADR).

Column	Datatype	Description
INCIDENT_ID	NUMBER	ID for the current incident
ADR_HOME	VARCHAR2(444)	Path to current ADR home
TRACE_FILENAME	VARCHAR2(68)	Displays the name of the process trace file
RECORD_LEVEL	NUMBER	Displays the level of the trace record
PARENT_LEVEL	NUMBER	Displays the top parent level of the trace record
RECORD_TYPE	NUMBER	Displays the type of the trace record. Possible values include: • 1: Regular trace record • 2: Freeform trace record • 3: Begin Section trace record • 4: Begin Dump trace record • 5: Bucket Dump Begin trace record • 6: Section End trace record • 7: Dump End trace record • 8: Bucket Dump End trace record
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE	Displays the timestamp when the trace record was produced
PAYLOAD	VARCHAR2(4000)	Describes the trace record payload (contents)
SECTION_ID	NUMBER	Displays the section ID / dump ID of the trace record
SECTION_NAME	VARCHAR2(64)	Displays the section name / dump name of the trace record
COMPONENT_NAME	VARCHAR2(64)	Displays the component name which produced the trace record
OPERATION_NAME	VARCHAR2(64)	Displays the operation name which produced the trace record

Column	Datatype	Description
FILE_NAME	VARCHAR2(64)	Displays the name of the code file where this trace record is produced
FUNCTION_NAME	VARCHAR2(64)	Displays the function which produced this trace record
LINE_NUMBER	NUMBER	Displays the line number in the code file which produced this trace record
THREAD_ID	VARCHAR2(64)	Displays the operating system thread ID of the process which produced the trace record
SESSION_ID	NUMBER	Displays the user session ID which generated the trace record
SERIAL#	NUMBER	Displays the user session serial number which produced the trace record
SECURITY_LABEL	VARCHAR2(16)	Displays the trace record security label classification. Possible values: • ALGORITHM • CONFIG • DATA • INTERNAL • KEYS • METADATA • NONE • PROGRAM • STATIC • UNKNOWN
CON_UID	NUMBER	Displays the container unique ID where the trace record was produced
CONTAINER_NAME	VARCHAR2(64)	Displays the container name where the trace record was produced
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

8.184 V$DIAG_INFO

V$DIAG_INFO describes the state of Automatic Diagnostic Repository (ADR) functionality using NAME=VALUE pairs.

Column	Datatype	Description
INST_ID	NUMBER	Instance ID

Column	Datatype	Description
NAME	VARCHAR2(64)	Identifies a piece of data that reflects the state of ADR, such as whether it is enabled, where the directories and files are located, and how many ongoing issues (incidents and problems) there are. Possible values include: • Diag Enabled: Indicates whether ADR is enabled or not • ADR Base through Health Monitor: Display different directories (ADR base, ADR home, and then subdirectories within the ADR home) • Default Trace File: Specifies the current default trace file for the current process • Active Problem Count and Active Incident Count: Specify how many problems/incidents there are in this ADR that *either* happened in the last 24 hours *or* have a piece of metadata set indicating that it is a persistent error (like a disk corruption)
VALUE	VARCHAR2(512)	Describes the current state of the piece of data identified in the NAME column
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.185 V$DIAG_OPT_TRACE_RECORDS

V$DIAG_OPT_TRACE_RECORDS contains all optimizer trace event data that is present in the trace files that are part of the current Automatic Diagnostic Repository (ADR). This view also supports GV$ global views.

Column	Datatype	Description
ADR_HOME	VARCHAR2(444)	Path to current ADR home
TRACE_FILENAME	VARCHAR2(68)	Displays the name of the process trace file
RECORD_LEVEL	NUMBER	Displays the level of the trace record
PARENT_LEVEL	NUMBER	Displays the top parent level of the trace record
RECORD_TYPE	NUMBER	Displays the type of the trace record. Possible values include: • 1: Regular trace record • 2: Freeform trace record • 3: Begin Section trace record • 4: Begin Dump trace record • 5: Bucket Dump Begin trace record • 6: Section End trace record • 7: Dump End trace record • 8: Bucket Dump End trace record
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE	Displays the timestamp when the trace record was produced
PAYLOAD	VARCHAR2(4000)	Describes the trace record payload (contents)

Column	Datatype	Description
SECTION_ID	NUMBER	Displays the section ID / dump ID of the trace record
SECTION_NAME	VARCHAR2(64)	Displays the section name / dump name of the trace record
COMPONENT_NAME	VARCHAR2(64)	Displays the component name which produced the trace record
OPERATION_NAME	VARCHAR2(64)	Displays the operation name which produced the trace record
FILE_NAME	VARCHAR2(64)	Displays the name of the code file where this trace record is produced
FUNCTION_NAME	VARCHAR2(64)	Displays the function which produced this trace record
LINE_NUMBER	NUMBER	Displays the line number in the code file which produced this trace record
THREAD_ID	VARCHAR2(64)	Displays the operating system thread ID of the process which produced the trace record
SESSION_ID	NUMBER	Displays the user session ID which generated the trace record
SERIAL#	NUMBER	Displays the user session serial number which produced the trace record
SECURITY_LABEL	VARCHAR2(16)	Displays the trace record security label classification. Possible values: • ALGORITHM • CONFIG • DATA • INTERNAL • KEYS • METADATA • NONE • PROGRAM • STATIC • UNKNOWN
CON_UID	NUMBER	Displays the container unique ID where the trace record was produced
CONTAINER_NAME	VARCHAR2(64)	Displays the container name where the trace record was produced
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.186 V$DIAG_PROBLEM

V$DIAG_PROBLEM contains information about all problem metadata records present in the Automatic Diagnostic Repository (ADR) for the current container (PDB).

Column	Datatype	Description
PROBLEM_ID	NUMBER	Displays the ID for the current problem
PROBLEM_KEY	VARCHAR2(552)	Displays the problem key for the current problem
FIRST_INCIDENT	NUMBER	Displays the first incident ID for the current problem

Column	Datatype	Description
FIRSTINC_TIME	TIMESTAMP(9) WITH TIME ZONE	Displays the timestamp when the first incident occurred for the current problem
LAST_INCIDENT	NUMBER	Displays the last incident ID for the current problem
LASTINC_TIME	TIMESTAMP(9) WITH TIME ZONE	Displays the timestamp when the last incident occurred for the current problem
IMPACT1	NUMBER	Displays the first impact for the current problem
IMPACT2	NUMBER	Displays the second impact for the current problem
IMPACT3	NUMBER	Displays the third impact for the current problem
IMPACT4	NUMBER	Displays the fourth impact for the current problem
SERVICE_REQUEST	VARCHAR2(66)	Displays the service request number for the current problem, if a number has been entered in Support Workbench
BUG_NUMBER	VARCHAR2(66)	Displays the bug number for the current problem, if a number has been entered in Support Workbench
CON_UID	NUMBER	Displays the container unique ID to which the data pertains
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.187 V$DIAG_SESS_OPT_TRACE_RECORDS

V$DIAG_SESS_OPT_TRACE_RECORDS contains all optimizer trace event data that is present in the trace files for the current user session that is part of the current Automatic Diagnostic Repository (ADR).

Column	Datatype	Description
ADR_HOME	VARCHAR2(444)	Path to current ADR home
TRACE_FILENAME	VARCHAR2(68)	Displays the name of the process trace file
RECORD_LEVEL	NUMBER	Displays the level of the trace record
PARENT_LEVEL	NUMBER	Displays the top parent level of the trace record
RECORD_TYPE	NUMBER	Displays the type of the trace record. Possible values include: • 1: Regular trace record • 2: Freeform trace record • 3: Begin Section trace record • 4: Begin Dump trace record • 5: Bucket Dump Begin trace record • 6: Section End trace record • 7: Dump End trace record • 8: Bucket Dump End trace record
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE	Displays the timestamp when the trace record was produced

Column	Datatype	Description
PAYLOAD	VARCHAR2(4000)	Displays the trace record payload (contents)
SECTION_ID	NUMBER	Displays the section ID / dump ID of the trace record
SECTION_NAME	VARCHAR2(64)	Displays the section name / dump name of the trace record
COMPONENT_NAME	VARCHAR2(64)	Displays the component name which produced the trace record
OPERATION_NAME	VARCHAR2(64)	Displays the operation name which produced the trace record
FILE_NAME	VARCHAR2(64)	Displays the name of the code file where this trace record is produced
FUNCTION_NAME	VARCHAR2(64)	Displays the function which produced this trace record
LINE_NUMBER	NUMBER	Displays the line number in the code file which produced this trace record
THREAD_ID	VARCHAR2(64)	Displays the operating system thread ID of the process which produced the trace record
SESSION_ID	NUMBER	Displays the user session ID which generated the trace record
SERIAL#	NUMBER	Displays the user session serial number which produced the trace record
SECURITY_LABEL	VARCHAR2(16)	Displays the trace record security label classification. Possible values: • ALGORITHM • CONFIG • DATA • INTERNAL • KEYS • METADATA • NONE • PROGRAM • STATIC • UNKNOWN
CON_UID	NUMBER	Displays the container unique ID where the trace record was produced
CONTAINER_NAME	VARCHAR2(64)	Displays the container name where the trace record was produced
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.188 V$DIAG_SESS_SQL_TRACE_RECORDS

V$DIAG_SESS_SQL_TRACE_RECORDS contains all SQL_TRACE data that is present in the trace files for the current user session that is part of the current Automatic Diagnostic Repository (ADR).

Column	Datatype	Description
ADR_HOME	VARCHAR2(444)	Path to current ADR home
TRACE_FILENAME	VARCHAR2(68)	Displays the name of the process trace file

Column	Datatype	Description
RECORD_LEVEL	NUMBER	Displays the level of the trace record
PARENT_LEVEL	NUMBER	Displays the top parent level of the trace record
RECORD_TYPE	NUMBER	Displays the type of the trace record. Possible values include: • 1: Regular trace record • 2: Freeform trace record • 3: Begin Section trace record • 4: Begin Dump trace record • 5: Bucket Dump Begin trace record • 6: Section End trace record • 7: Dump End trace record • 8: Bucket Dump End trace record
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE	Displays the timestamp when the trace record was produced
PAYLOAD	VARCHAR2(4000)	Displays the trace record payload (contents)
SECTION_ID	NUMBER	Displays the section ID / dump ID of the trace record
SECTION_NAME	VARCHAR2(64)	Displays the section name / dump name of the trace record
COMPONENT_NAME	VARCHAR2(64)	Displays the component name which produced the trace record
OPERATION_NAME	VARCHAR2(64)	Displays the operation name which produced the trace record
FILE_NAME	VARCHAR2(64)	Displays the name of the code file where this trace record is produced
FUNCTION_NAME	VARCHAR2(64)	Displays the function which produced this trace record
LINE_NUMBER	NUMBER	Displays the line number in the code file which produced this trace record
THREAD_ID	VARCHAR2(64)	Displays the operating system thread ID of the process which produced the trace record
SESSION_ID	NUMBER	Displays the user session ID which generated the trace record
SERIAL#	NUMBER	Displays the user session serial number which produced the trace record
SECURITY_LABEL	VARCHAR2(16)	Displays the trace record security label classification. Possible values: • ALGORITHM • CONFIG • DATA • INTERNAL • KEYS • METADATA • NONE • PROGRAM • STATIC • UNKNOWN
CON_UID	NUMBER	Displays the container unique ID where the trace record was produced
CONTAINER_NAME	VARCHAR2(64)	Displays the container name where the trace record was produced

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.189 V$DIAG_SQL_TRACE_RECORDS

V$DIAG_SQL_TRACE_RECORDS contains all SQL_TRACE data that is present in the trace files that are part of the current Automatic Diagnostic Repository (ADR). This view also supports GV$ global views.

Column	Datatype	Description
ADR_HOME	VARCHAR2(444)	Path to current ADR home
TRACE_FILENAME	VARCHAR2(68)	Displays the name of the process trace file
RECORD_LEVEL	NUMBER	Displays the level of the trace record
PARENT_LEVEL	NUMBER	Displays the top parent level of the trace record
RECORD_TYPE	NUMBER	Displays the type of the trace record. Possible values include: • 1: Regular trace record • 2: Freeform trace record • 3: Begin Section trace record • 4: Begin Dump trace record • 5: Bucket Dump Begin trace record • 6: Section End trace record • 7: Dump End trace record • 8: Bucket Dump End trace record
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE	Displays the timestamp when the trace record was produced
PAYLOAD	VARCHAR2(4000)	Displays the trace record payload (contents)
SECTION_ID	NUMBER	Displays the section ID / dump ID of the trace record
SECTION_NAME	VARCHAR2(64)	Displays the section name / dump name of the trace record
COMPONENT_NAME	VARCHAR2(64)	Displays the component name which produced the trace record
OPERATION_NAME	VARCHAR2(64)	Displays the operation name which produced the trace record
FILE_NAME	VARCHAR2(64)	Displays the name of the code file where this trace record is produced
FUNCTION_NAME	VARCHAR2(64)	Displays the function which produced this trace record
LINE_NUMBER	NUMBER	Displays the line number in the code file which produced this trace record
THREAD_ID	VARCHAR2(64)	Displays the operating system thread ID of the process which produced the trace record
SESSION_ID	NUMBER	Displays the user session ID which generated the trace record
SERIAL#	NUMBER	Displays the user session serial number which produced the trace record

Column	Datatype	Description
SECURITY_LABEL	VARCHAR2(16)	Displays the trace record security label classification. Possible values: • ALGORITHM • CONFIG • DATA • INTERNAL • KEYS • METADATA • NONE • PROGRAM • STATIC • UNKNOWN
CON_UID	NUMBER	Displays the container unique ID where the trace record was produced
CONTAINER_NAME	VARCHAR2(64)	Displays the container name where the trace record was produced
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.190 V$DIAG_TRACE_FILE

V$DIAG_TRACE_FILE contains information about all trace files present in the Automatic Diagnostic Repository (ADR) for the current container (PDB). This view also supports GV$ global views.

Column	Datatype	Description
ADR_HOME	VARCHAR2(444)	Path to the current ADR home
TRACE_FILENAME	VARCHAR2(68)	Displays the name of the process trace file
CHANGE_TIME	TIMESTAMP(3) WITH TIME ZONE	Displays the change time timestamp of the process trace file
MODIFY_TIME	TIMESTAMP(3) WITH TIME ZONE	Displays the last modification timestamp of the process trace file
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.191 V$DIAG_TRACE_FILE_CONTENTS

V$DIAG_TRACE_FILE_CONTENTS contains trace data that is present in the trace files that are part of the current Automatic Diagnostic Repository (ADR). This view also supports GV$ global views.

Column	Datatype	Description
ADR_HOME	VARCHAR2(444)	Path to the current ADR home
TRACE_FILENAME	VARCHAR2(68)	Displays the name of the process trace file
RECORD_LEVEL	NUMBER	Displays the level of the trace record
PARENT_LEVEL	NUMBER	Displays the top parent level of the trace record
RECORD_TYPE	NUMBER	Displays the type of the trace record. Possible values include: • 1: Regular trace record • 2: Freeform trace record • 3: Begin Section trace record • 4: Begin Dump trace record • 5: Bucket Dump Begin trace record • 6: Section End trace record • 7: Dump End trace record • 8: Bucket Dump End trace record
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE	Displays the timestamp when the trace record was produced
PAYLOAD	VARCHAR2(4000)	Displays the trace record payload (contents)
SECTION_ID	NUMBER	Displays the section ID / dump ID of the trace record
SECTION_NAME	VARCHAR2(64)	Displays the section name / dump name of the trace record
COMPONENT_NAME	VARCHAR2(64)	Displays the component name which produced the trace record
OPERATION_NAME	VARCHAR2(64)	Displays the operation name which produced the trace record
FILE_NAME	VARCHAR2(64)	Displays the name of the code file where this trace record is produced
FUNCTION_NAME	VARCHAR2(64)	Displays the function which produced this trace record
LINE_NUMBER	NUMBER	Displays the line number in the code file which produced this trace record
THREAD_ID	VARCHAR2(64)	Displays the operating system thread ID of the process which produced the trace record
SESSION_ID	NUMBER	Displays the user session ID which generated the trace record
SERIAL#	NUMBER	Displays the user session serial number which produced the trace record
SECURITY_LABEL	VARCHAR2(16)	Displays the trace record security label classification. Possible values: • ALGORITHM • CONFIG • DATA • INTERNAL • KEYS • METADATA • NONE • PROGRAM • STATIC • UNKNOWN

Column	Datatype	Description
CON_UID	NUMBER	Displays the container unique ID where the trace record was produced
CONTAINER_NAME	VARCHAR2(64)	Displays the container name where the trace record was produced
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.192 V$DISPATCHER

V$DISPATCHER displays information about the dispatcher processes.

Column	Datatype	Description
NAME	VARCHAR2(4)	Name of the dispatcher process
NETWORK	VARCHAR2(1024)	Network address of the dispatcher
PADDR	RAW(4 | 8)	Process address
STATUS	VARCHAR2(16)	Status of the dispatcher: • WAIT - Idle • SEND - Sending a message • RECEIVE - Receiving a message • CONNECT - Establishing a connection • DISCONNECT - Handling a disconnect request • BREAK - Handling a break • TERMINATE - In the process of terminating • ACCEPT - Accepting connections (no further information available) • REFUSE - Rejecting connections (no further information available)
ACCEPT	VARCHAR2(3)	Indicates whether the dispatcher is accepting new connections (YES) or not (NO)
MESSAGES	NUMBER	Number of messages processed by the dispatcher
BYTES	NUMBER	Size (in bytes) of messages processed by the dispatcher
BREAKS	NUMBER	Number of breaks occurring in the connection
OWNED	NUMBER	Number of circuits owned by the dispatcher
CREATED	NUMBER	Number of circuits created by the dispatcher
IDLE	NUMBER	Total idle time for the dispatcher (in hundredths of a second)
BUSY	NUMBER	Total busy time for the dispatcher (in hundredths of a second)
CPU	NUMBER	Total CPU time for the dispatcher (in millionths of a second)
LISTENER	NUMBER	Most recent Oracle error number the dispatcher received from the listener
CONF_INDX	NUMBER	Zero-based index of the DISPATCHERS configuration used by the dispatcher

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.193 V$DISPATCHER_CONFIG

V$DISPATCHER_CONFIG displays information about the dispatcher configurations and their attributes.

Column	Datatype	Description
CONF_INDX	NUMBER	Zero-based index of the DISPATCHERS configuration
NETWORK	VARCHAR2(1024)	Network protocol or listening address of dispatchers (may be truncated)
DISPATCHERS	NUMBER	Number of dispatchers to maintain for the configuration
CONNECTIONS	NUMBER	Maximum number of concurrent connections per dispatcher
SESSIONS	NUMBER	Maximum number of concurrent sessions per dispatcher
MULTIPLEX	VARCHAR2(4)	Indicates whether Session Multiplexing is on: • IN • OUT • BOTH • OFF
LISTENER	VARCHAR2(1200)	Listeners to register dispatchers with (may be truncated)
SERVICE	VARCHAR2(512)	Service names supported (may be truncated)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.194 V$DISPATCHER_RATE

V$DISPATCHER_RATE displays rate statistics for a number of activities performed by the dispatcher processes.

Collected samples have an activity-specific "time-to-live" (TTL_* columns). Statistics are reported over the following two types of time intervals:

- Current statistics (CUR_ columns)

  Current statistics use samples collected over the most recent time-to-live interval.
- Historical statistics (AVG_ and most of the MAX_ columns)

Historical statistics make use of all samples that are no longer current.

At the time of collection, a sample is current. After the time-to-live has elapsed, the sample becomes historical. Each type of activity has a specific scale (represented by the SCALE_* columns) at which the statistics are reported.

Column	Datatype	Description
NAME	VARCHAR2(4)	Name of the dispatcher process
PADDR	RAW(4 | 8)	Address of the dispatcher process
CUR_LOOP_RATE	NUMBER	Rate at which the dispatcher has been iterating through its dispatching loop, reported over the past TTL_LOOPS, in iterations/SCALE_LOOPS
CUR_EVENT_RATE	NUMBER	Rate at which the dispatcher has been processing dispatcher events, reported over the past TTL_LOOPS, in events/SCALE_LOOPS. Such dispatcher events include network events and shared server requests.
CUR_EVENTS_PER_LOOP	NUMBER	Average number of events the dispatcher has been processing in each iteration through its dispatching loop, reported over the past TTL_LOOPS, in events/iteration
CUR_MSG_RATE	NUMBER	Rate at which the dispatcher has been relaying messages between clients and shared servers, reported over the past TTL_MSG, in messages/SCALE_MSG
CUR_SVR_BUF_RATE	NUMBER	Rate at which the dispatcher has been relaying buffers to shared servers, reported over the past TTL_SVR_BUF, in messages/ SCALE_SVR_BUF
CUR_SVR_BYTE_RATE	NUMBER	Rate at which the dispatcher has been relaying data to shared servers, reported over the past TTL_SVR_BUF, in bytes/SCALE_SVR_BUF
CUR_SVR_BYTE_PER_BUF	NUMBER	Average number of data types in each buffer relayed to shared servers, reported over the past TTL_SVR_BUF, in bytes/buffer
CUR_CLT_BUF_RATE	NUMBER	Rate at which the dispatcher has been relaying buffers to clients, reported over the past TTL_CLT_BUF, in buffers/SCALE_CLT_BUF
CUR_CLT_BYTE_RATE	NUMBER	Rate at which the dispatcher has been relaying data to clients, reported over the past TTL_CLT_BUF, in bytes/SCALE_CLT_BUF
CUR_CLT_BYTE_PER_BUF	NUMBER	Average number of data bytes in each buffer relayed to clients, reported over the past TTL_CLT_BUF, in bytes/buffer
CUR_BUF_RATE	NUMBER	Rate at which the dispatcher has been relaying buffers to either clients or shared servers, reported over the past TTL_BUF, in bytes/SCALE_BUF
CUR_BYTE_RATE	NUMBER	Rate at which the dispatcher has been relaying data to either clients or shared servers, reported over the past TTL_BUF, in bytes/SCALE_BUF
CUR_BYTE_PER_BUF	NUMBER	Average number of data bytes in each buffer relayed to either clients or shared servers, reported over the past TTL_BUF, in bytes/buffer
CUR_IN_CONNECT_RATE	NUMBER	Rate at which the dispatcher has been accepting incoming client connections, reported over the past TTL_IN_CONNECT, in connections/ SCALE_IN_CONNECT
CUR_OUT_CONNECT_RATE	NUMBER	Rate at which the dispatcher has been establishing outbound connections, reported over the past TTL_OUT_CONNECT, in connections/ SCALE_OUT_CONNECT
CUR_RECONNECT_RATE	NUMBER	In a connection pooling setup, the rate at which clients have been reconnecting to the dispatcher, reported over the past TTL_RECONNECT, in reconnections/SCALE_RECONNECT
MAX_LOOP_RATE	NUMBER	Maximum rate at which the dispatcher has ever iterated through its dispatching loop, reported in iterations/SCALE_LOOPS, over the dispatcher's lifetime excluding the past TTL_LOOPS

Column	Datatype	Description
MAX_EVENT_RATE	NUMBER	Maximum rate at which the dispatcher has ever processed dispatcher events, reported in events/SCALE_LOOPS, over the dispatcher's lifetime excluding the past TTL_LOOPS
MAX_EVENTS_PER_LOOP	NUMBER	Maximum number of events the dispatcher has ever processed in one iteration through its dispatching loop, reported in events/iteration, over the dispatcher's lifetime
MAX_MSG_RATE	NUMBER	Maximum rate at which the dispatcher has ever relayed messages between clients and shared servers, reported in messages/SCALE_MSG, over the dispatcher's lifetime excluding the past TTL_MSG
MAX_SVR_BUF_RATE	NUMBER	Maximum rate at which the dispatcher has ever relayed buffers to shared servers, reported in buffers/SCALE_SVR_BUF, over the dispatcher's lifetime excluding the past TTL_SVR_BUF
MAX_SVR_BYTE_RATE	NUMBER	Maximum rate at which the dispatcher has ever relayed data to shared servers, reported in bytes/SCALE_SVR_BUF, over the dispatcher's lifetime excluding the past TTL_SVR_BUF
MAX_SVR_BYTE_PER_BUF	NUMBER	Maximum number of data bytes the dispatcher has ever relayed in one buffer to a client, reported in bytes/buffer, over the dispatcher's lifetime
MAX_CLT_BUF_RATE	NUMBER	Maximum rate at which the dispatcher has ever relayed buffers to either clients or shared servers, reported in buffers/SCALE_CLT_BUF, over the dispatcher's life time excluding the past TTL_CLT_BUF
MAX_CLT_BYTE_RATE	NUMBER	Maximum rate at which the dispatcher has ever relayed buffers to clients, reported in bytes/SCALE_CLT_BUF, over the dispatcher's lifetime excluding the last TTL_CLT_BUF
MAX_CLT_BYTE_PER_BUF	NUMBER	Maximum number of data bytes the dispatcher has ever relayed in one buffer to a client, reported in bytes/buffer, over the dispatcher's lifetime
MAX_BUF_RATE	NUMBER	Maximum rate at which the dispatcher has ever relayed buffers to either clients or shared servers, reported in buffers/SCALE_BUF, over the dispatcher's lifetime, excluding the past TTL_BUF
MAX_BYTE_RATE	NUMBER	Maximum rate at which the dispatcher has ever relayed data to either clients or shared servers, reported in bytes/SCALE_BUF, over the dispatcher's lifetime excluding the past TTL_BUF
MAX_BYTE_PER_BUF	NUMBER	Maximum number of data bytes the dispatcher has ever relayed in one buffer to either a client or a shared server, reported in bytes/buffer, over the dispatcher's lifetime
MAX_IN_CONNECT_RATE	NUMBER	Maximum rate at which the dispatcher has ever accepted incoming client connections, reported in connections/SCALE_IN_CONNECT, over the dispatcher's lifetime excluding the past TTL_IN_CONNECT
MAX_OUT_CONNECT_RATE	NUMBER	Maximum rate at which the dispatcher has ever established outbound connections, reported in connections/SCALE_OUT_CONNECT, over the dispatcher's lifetime excluding the past TTL_OUT_CONNECT
MAX_RECONNECT_RATE	NUMBER	In a connection pooling setup, the maximum rate at which clients have ever reconnected to this dispatcher, reported in reconnections/ SCALE_RECONNECT, over the dispatcher's lifetime excluding the past TTL_RECONNECT
AVG_LOOP_RATE	NUMBER	Historical average rate at which the dispatcher has iterated through its dispatching loop, reported in iterations/SCALE_LOOPS, over the dispatcher's lifetime excluding the past TTL_LOOPS
AVG_EVENT_RATE	NUMBER	Historical average rate at which the dispatcher has processed dispatcher events, reported in events/SCALE_LOOPS, over the dispatcher's lifetime excluding the past TTL_LOOPS

Column	Datatype	Description
AVG_EVENTS_PER_LOOP	NUMBER	Historical average number of events the dispatcher has processed in one iteration through its dispatching loop, reported in events/iteration, over the dispatcher's lifetime excluding the past TTL_LOOPS
AVG_MSG_RATE	NUMBER	Historical average rate at which the dispatcher has relayed messages between clients and shared servers, reported in messages/SCALE_MSG, over the dispatcher's lifetime excluding the past TTL_MSG
AVG_SVR_BUF_RATE	NUMBER	Historical average rate at which the dispatcher has relayed buffers to shared servers, reported in buffers/SCALE_SVR_BUF, over the dispatcher's lifetime excluding the past TTL_SVR_BUF
AVG_SVR_BYTE_RATE	NUMBER	Historical average rate at which the dispatcher has relayed data to shared servers, reported in bytes/SCALE_SVR_BUF, over the dispatcher's lifetime excluding the past TTL_SVR_BUF
AVG_SVR_BYTE_PER_BUF	NUMBER	Historical average number of data bytes per buffer the dispatcher has relayed to shared servers, reported in bytes/buffer, over the dispatcher's lifetime excluding the past TTL_SVR_BUF
AVG_CLT_BUF_RATE	NUMBER	Historical average rate at which the dispatcher has relayed buffers to clients, reported in buffers/SCALE_CLT_BUF, over the dispatcher's lifetime excluding the past TTL_CLT_BUF
AVG_CLT_BYTE_RATE	NUMBER	Historical average rate at which the dispatcher has relayed data to clients, reported in bytes/SCALE_CLT_BUF, over the dispatcher's lifetime excluding the past TTL_CLT_BUF
AVG_CLT_BYTE_PER_BUF	NUMBER	Historical average number of data bytes per buffer the dispatcher has relayed to clients, reported in bytes/buffer, over the dispatcher's lifetime excluding the past TTL_CLT_BUF
AVG_BUF_RATE	NUMBER	Historical average rate at which the dispatcher has relayed buffers to either clients or shared servers, reported in buffers/SCALE_BUF, over the dispatcher's lifetime excluding the past TTL_BUF
AVG_BYTE_RATE	NUMBER	Historical average rate at which the dispatcher has relayed data to either clients or shared servers, reported in bytes/SCALE_BUF, over the dispatcher's lifetime excluding the past TTL_BUF
AVG_BYTE_PER_BUF	NUMBER	Historical average number of data bytes per buffer the dispatcher has relayed to either clients or shared servers, reported in bytes/buffer, over the dispatcher's lifetime excluding the past TTL_BUF
AVG_IN_CONNECT_RATE	NUMBER	Historical average rate at which the dispatcher has accepted incoming client connections, reported in connections/SCALE_IN_CONNECT, over the dispatcher's lifetime excluding the past TTL_IN_CONNECT
AVG_OUT_CONNECT_RATE	NUMBER	Historical average rate at which the dispatcher has established outbound connections, reported in connections/SCALE_OUT_CONNECT, over the dispatcher's lifetime excluding the past TTL_OUT_CONNECT
AVG_RECONNECT_RATE	NUMBER	In a connection pooling setup, the historical average rate at which clients have reconnected to this dispatcher, reported in reconnections/ SCALE_RECONNECT, over the dispatcher's lifetime excluding the past TTL_RECONNECT
TTL_LOOPS	NUMBER	Time-to-live for "loops" samples, reported in hundredths of a second. Default is 10 minutes.
TTL_MSG	NUMBER	Time-to-live for "messages" samples, reported in hundredths of a second. Default is 10 seconds.
TTL_SVR_BUF	NUMBER	Time-to-live for "buffers to servers" samples, reported in hundredths of a second. Default is 1 second.

Column	Datatype	Description
TTL_CLT_BUF	NUMBER	Time-to-live for "buffers to clients" samples, reported in hundredths of a second. Default is 1 second.
TTL_BUF	NUMBER	Time-to-live for "buffers to clients/servers" samples, reported in hundredths of a second. Default is 1 second.
TTL_IN_CONNECT	NUMBER	Time-to-live for "inbound connections" samples, reported in hundredths of a second. Default is 10 minutes.
TTL_OUT_CONNECT	NUMBER	Time-to-live for "outbound connections" samples, reported in hundredths of a second. Default is 10 minutes.
TTL_RECONNECT	NUMBER	Time-to-live for "reconnections" samples, reported in hundredths of a second. Default is 10 minutes.
SCALE_LOOPS	NUMBER	Scale for "loops" statistics, reported in hundredths of a second. Default is 1 minute.
SCALE_MSG	NUMBER	Scale for "messages" statistics, reported in hundredths of a second. Default is 1 second.
SCALE_SVR_BUF	NUMBER	Scale for "buffers to servers" statistics, reported in hundredths of a second. Default is 1/10 second.
SCALE_CLT_BUF	NUMBER	Scale for "buffers to clients" statistics, reported in hundredths of a second. Default is 1/10 second.
SCALE_BUF	NUMBER	Scale for "buffers to clients/servers" statistics, reported in hundredths of a second. Default is 1/10 second.
SCALE_IN_CONNECT	NUMBER	Scale for "inbound connections" statistics, reported in hundredths of a second. Default is 1 minute.
SCALE_OUT_CONNECT	NUMBER	Scale for "outbound connections" statistics, reported in hundredths of a second. Default is 1 minute.
SCALE_RECONNECT	NUMBER	Scale for "reconnections" statistics, reported in hundredths of a second. Default is 1 minute.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.195 V$DNFS_CHANNELS

V$DNFS_CHANNELS displays information about the Oracle process connections (channels) open to NFS servers.

Column	Datatype	Description
PNUM	NUMBER	Oracle process number
SVRNAME	VARCHAR2(255)	NFS server name
PATH	VARCHAR2(255)	Network path to the NFS server specified by IP address or by name
LOCAL	VARCHAR2(255)	Local path on the database host specified by IP address or by name
CH_ID	NUMBER	Direct NFS channel identifier

Column	Datatype	Description
SVR_ID	NUMBER	Direct NFS server identifier
SENDS	NUMBER	Send operations over the channel since the last select
RECVS	NUMBER	Receive operations over the channel since the last select
PINGS	NUMBER	Ping operations over the channel since the last select
SPRECO	NUMBER	Reconnects for the channel on the same port since the last select, given that the reconnect occurred during the first series of reconnect attempts. If the first series of reconnect attempts fails and the reconnect process on that channel times out for 5 minutes, the next reconnect on that channel will not increment either the SPRECO or DPRECO columns, regardless of the port connected to.
DPRECO	NUMBER	Reconnects for the channel on a different port since the last select, given that the reconnect occurred during the first series of reconnect attempts. If the first series of reconnect attempts fails and the reconnect process on that channel times out for 5 minutes, the next reconnect on that channel will not increment either the SPRECO or DPRECO columns, regardless of the port connected to.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
RDMA	NUMBER	Indicates whether RDMA is enabled for the channel or not. Possible values: • 0: RDMA is not enabled for the channel • 1: RDMA is enabled for the channel
RDMA_CREDITS	NUMBER	The number of RDMA credits supported by the server
CLIENTPORT	NUMBER	The client port to which the channel is bounded
ACTIVE_SPEED	NUMBER	The active speed of the HCA card present (in Gb/second)
PEAK_FMR	NUMBER	The size of fast memory registration (FMR) memory registered by the channel (in bytes)
CURRENT_FMR	NUMBER	The current FMR memory registered (in bytes)
FMRREG_COUNT	NUMBER	The number of FMR memory registration calls for the channel

> **Note:**
>
> RDMA functionality is enabled only for the Exadata environment

8.196 V$DNFS_FILES

V$DNFS_FILES displays information about the Oracle process files open through Direct NFS.

Column	Datatype	Description
FILENAME	VARCHAR2(513)	File name
FILESIZE	NUMBER	File Size
PNUM	NUMBER	Oracle process number which opened the file
SVR_ID	NUMBER	Direct NFS server identifier which identifies the server the file is open on
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.197 V$DNFS_SERVERS

V$DNFS_SERVERS displays information about the Direct NFS servers accessed by Direct NFS.

Column	Datatype	Description
ID	NUMBER	Direct NFS server identifier
SVRNAME	VARCHAR2(255)	NFS server name
DIRNAME	VARCHAR2(1024)	Mounted directory
MNTPORT	NUMBER	NFS mount port
NFSPORT	NUMBER	NFS port
NFSVERSION	VARCHAR2(8)	NFS version
WTMAX	NUMBER	WTMAX exported by the NFS server
RTMAX	NUMBER	RTMAX exported by the NFS server
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
RDMAENABLE	VARCHAR2(16)	Indicates whether the server is RDMA enabled. Possible values: • YES: The server is RDMA enabled. • NO: The server is not RDMA enabled.
RDMAPORT	NUMBER	The port number for RDMA communications on the server. The value is always 20049.
SECURITY	VARCHAR2(32)	NFS RPC authentication method used for the given NFS export

> **Note:**
>
> RDMA functionality is enabled only for the Exadata environment

8.198 V$DNFS_STATS

`V$DNFS_STATS` displays information about the Oracle process NFS operation statistics issued by Direct NFS.

Column	Datatype	Description
PNUM	NUMBER	Oracle process number that statistics are relevant to
NFS_NULL	NUMBER	Null
NFS_GETATTR	NUMBER	Get attributes
NFS_SETATTR	NUMBER	Set attributes
NFS_LOOKUP	NUMBER	Lookup object
NFS_ACCESS	NUMBER	Access object
NFS_READLINK	NUMBER	Read link
NFS_READ	NUMBER	Read file
NFS_WRITE	NUMBER	Write file
NFS_CREATE	NUMBER	Create file
NFS_MKDIR	NUMBER	Make directory
NFS_SYMLINK	NUMBER	Symbolic link
NFS_MKNOD	NUMBER	Make node
NFS_REMOVE	NUMBER	Remove file
NFS_RMDIR	NUMBER	Remove directory
NFS_RENAME	NUMBER	Rename
NFS_LINK	NUMBER	Link
NFS_READDIR	NUMBER	Read directory
NFS_READDIRPLUS	NUMBER	Read directory plus
NFS_FSSTAT	NUMBER	File system status
NFS_FSINFO	NUMBER	File system information
NFS_PATHCONF	NUMBER	Path configuration
NFS_COMMIT	NUMBER	Commit
NFS_MOUNT	NUMBER	Mount
NFS_READBYTES	NUMBER	Number of bytes read from NFS server
NFS_WRITEBYTES	NUMBER	Number of bytes written to NFS server
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.199 V$DYNAMIC_REMASTER_STATS

V$DYNAMIC_REMASTER_STATS displays statistical information about the dynamic remastering process of object affinity and read-mostly. All times are given in hundredths of a second, except where otherwise noted, and total values reflect what has been collected since instance startup.

Column	Datatype	Description
REMASTER_TYPE	VARCHAR2(11)	Remaster process type. Possible values: • AFFINITY: This value is used for the row containing statistics that pertain to dynamic remastering activity on object affinity. • READ-MOSTLY: This value is used for the row containing statistics that pertain to dynamic remastering activity on read-mostly objects.
REMASTER_OPS	NUMBER	Total number of dynamic remastering operations
REMASTER_TIME	NUMBER	Total dynamic remastering time
REMASTERED_OBJECTS	NUMBER	Total number of objects dynamically remastered due to affinity
PERSISTENT_OBJECTS	NUMBER	Current number of objects that are marked persistent read-mostly in the cluster
QUIESCE_TIME	NUMBER	Total quiesce step time
FREEZE_TIME	NUMBER	Total freeze step time
CLEANUP_TIME	NUMBER	Total cleanup step time
REPLAY_TIME	NUMBER	Total replay step time
FIXWRITE_TIME	NUMBER	Total fixwrite step time
SYNC_TIME	NUMBER	Total synchronization step time
RESOURCES_CLEANED	NUMBER	Total number of resources cleaned in the cleanup steps
REPLAYED_LOCKS_SENT	NUMBER	Total number of locks replayed to other instances in the replay steps
REPLAYED_LOCKS_RECEIVED	NUMBER	Total number of locks received from other instances in the replay steps
CURRENT_OBJECTS	NUMBER	Current number of objects remastered on this instance due to affinity or the current number of objects that are marked read-mostly in the cluster
REMASTERED_BUFFERS	NUMBER	Total sum of the sizes (number of buffers) of all dynamically remastered objects The size of a buffer is specified by the DB_BLOCK_SIZE initialization parameter. The default is 8192 bytes.
AVG_BUFFER_AGE	NUMBER	Average time (in seconds) that buffers spent in the request queue, waiting to be processed
FILTERED_OBJECTS	NUMBER	Number of requests that were filtered (not processed)
FILTERED_BUFFERS	NUMBER	Total sum of the sizes (number of buffers) of all requests that were filtered The size of a buffer is specified by the DB_BLOCK_SIZE initialization parameter. The default is 8192 bytes.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.200 V$EDITIONABLE_TYPES

V$EDITIONABLE_TYPES lists all the editionable types based on the current compatibility setting. The SELECT privilege on V$EDITIONABLE_TYPES will be granted to PUBLIC.

The database compatibility setting will determine the set of editionable types.

With compatibility set to 11.2 or 12, this set includes FUNCTION, LIBRARY, PACKAGE, PACKAGE BODY, PROCEDURE, SYNONYM, TRIGGER, TYPE, TYPE BODY, and VIEW. With compatibility set to 12, the set will include these types as well as the SQL TRANSLATION PROFILE.

Column	Datatype	Description
EDITIONABLE_TYPE	VARCHAR2(64)	The name of the type that is editionable
TYPE#	NUMBER	The number of the type that is editionable
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

For more information about edition-based redefinitions, see *Oracle Database Development Guide*.

8.201 V$EMON

V$EMON displays performance statistics per event monitor (EMON) worker for diagnosability of notifications. All processing time and latency is in seconds.

Column	Datatype	Description
EMON#	NUMBER	EMON identifier (0 - 9)
SID	NUMBER	Session identifier

Column	Datatype	Description
STARTUP_TIME	TIMESTAMP(3) WITH TIME ZONE	Time when this EMON worker was started
SERVER_TYPE	VARCHAR2(8)	Notification quality of the service provided by EMON: • REGULAR • RELIABLE
STATUS	VARCHAR2(6)	EMON status: • IDLE • ACTIVE
STATUS_CHANGE_TIME	TIMESTAMP(3) WITH TIME ZONE	Time at which EMON switched to the current STATUS
NUM_NTFNS	NUMBER	Total number of notifications (including grouping notifications)
NUM_GROUPING_NTFNS	NUMBER	Number of grouping notifications
NUM_NTFNS_ALL_GROUPS	NUMBER	Total number of events in all notification groups
NUM_OCI_NTFNS	NUMBER	Number of OCI notifications
NUM_PLSQL_NTFNS	NUMBER	Number of PL/SQL notifications
NUM_EMAIL_NTFNS	NUMBER	Number of E-mail notifications
NUM_HTTP_NTFNS	NUMBER	Number of HTTP notifications
NUM_EVENTS_PROCESSED	NUMBER	Number of events posted by a publisher for which notifications have been delivered
NUM_EVENTS_PENDING	NUMBER	Number of events posted by a publisher for which notifications are not yet delivered
NUM_ANONYMOUS_NTFNS	NUMBER	Number of anonymous notifications
NUM_AQ_NTFNS	NUMBER	Number of AQ notifications
NUM_DBCHANGE_NTFNS	NUMBER	Number of DBChange notifications
TOTAL_ANONYMOUS_NTFN_TIME	NUMBER	Total time to process Anonymous notifications
TOTAL_AQ_NTFN_TIME	NUMBER	Total time to process AQ notifications
TOTAL_DBCHANGE_NTFN_TIME	NUMBER	Total time to process dbchange notifications
TOTAL_PLSQL_NTFN_TIME	NUMBER	Total time to process PL/SQL notifications
TOTAL_OCI_NTFN_TIME	NUMBER	Total time to process OCI notifications
TOTAL_EMAIL_NTFN_TIME	NUMBER	Total time to process E-mail notifications
TOTAL_HTTP_NTFN_TIME	NUMBER	Total time to process HTTP notifications
TOTAL_EMON_LATENCY	NUMBER	Total latency in processing events
REGISTRATIONS_EXPIRED	NUMBER	Number of expired registrations
REGISTRATIONS_PURGED	NUMBER	Number of purged registrations
REGISTRATIONS_INVALID	NUMBER	Number of registrations invalidated due to notification delivery failure
LAST_UPDATE_TIME	TIMESTAMP(3) WITH TIME ZONE	Time when statistics were last updated
CON_ID	NUMBER	The ID of the container to which the data pertains. The CON_ID value in this view is always 0. The rows pertain to the entire CDB or to the non-CDB.

8.202 V$ENABLEDPRIVS

V$ENABLEDPRIVS displays the system privileges that have been granted to the current user directly or through the currently enabled roles.

Column	Datatype	Description
PRIV_NUMBER	NUMBER	Numeric identifier of the system privilege The matching privilege name for each PRIV_NUMBER can be found in the table SYSTEM_PRIVILEGE_MAP.
SCOPE	VARCHAR2(11)	Indicates the scope with which a privilege was granted. Possible values: • COMMON • APPLICATION • LOCAL
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"SYSTEM_PRIVILEGE_MAP"

8.203 V$ENABLEDSCHEMAPRIVS

V$ENABLEDSCHEMAPRIVS displays the schema privileges that have been granted to the current user directly or through the currently enabled roles.

Column	Datatype	Description
PRIV_NUMBER	NUMBER	Numeric identifier of the schema privilege The matching privilege name for each PRIV_NUMBER can be found in the table SYSTEM_PRIVILEGE_MAP.
SCHEMA	NUMBER	Schema on which the privilege was granted
SCOPE	VARCHAR2(11)	Indicates the scope with which the privilege was granted. Possible values: • COMMON • APPLICATION • LOCAL

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

8.204 V$ENCRYPTED_TABLESPACES

V$ENCRYPTED_TABLESPACES displays information about tablespaces that are encrypted.

The information displayed by this view is meaningful only for tablespaces in open containers and for the data files that are online. This is because the information is derived after the file headers making up a tablespace have been examined during the open operation.

During an encryption or decryption operation, the encryption or decryption progress can be obtained by comparing the values of the BLOCKS_ENCRYPTED and BLOCKS_DECRYPTED columns in this view with the value of the BLOCKS column in the DBA_DATA_FILES view.

Column	Datatype	Description
TS#	NUMBER	Tablespace number
ENCRYPTIONALG	VARCHAR2(7)	Encryption algorithm: • NONE • 3DES168 • AES128 • AES192 • AES256
ENCRYPTEDTS	VARCHAR2(3)	Indicates whether the tablespace is encrypted (YES) or not (NO)
ENCRYPTEDKEY	RAW(32)	Encrypted version of the tablespace key for the encrypted tablespace
MASTERKEYID	RAW(16)	ID of the master key that was used to encrypt the tablespace key
BLOCKS_ENCRYPTED	NUMBER	Number of tablespace blocks that have been encrypted during the lifetime of this instance
BLOCKS_DECRYPTED	NUMBER	Number of tablespace blocks that have been decrypted during the lifetime of this instance
KEY_VERSION	NUMBER	Every encrypt/decrypt/rekey of a tablespace adds a carnation/version of the tablespace key, and the key version is incremented. A decrypted tablespace could still have a none-zero key version. In certain scenarios, however, the tablespace key version might reset to 0; for example, when a tablespace or a pluggable database (PDB) is plugged into a foreign database, or if the control file is recreated.

Column	Datatype	Description
STATUS	VARCHAR2(10)	Shows the status of a tablespace. Possible values: • NORMAL: Used when the tablespace is not in one of the other statuses. • REKEYING: Used when a rekey operation is taking place • ENCRYPTING: Used when an encrypt operation is taking place • DECRYPTING: Used when a decrypt operation is taking place • UNKNOWN: Used when the database is mounted but not open (before the datafile is online and the key is known to the database) **Note:** The REKEYING, ENCRYPTING, and DECRYPTING values can also be reported after a datafile, whose encryption state is different from the tablespace definition, is restored. In such cases, the value represents the operation that is required to make all datafiles in the tablespace consistent by using the FINISH clause of the ALTER TABLESPACE ENCRYPTION statement. See *Oracle Database Transparent Data Encryption Guide* for information about changing the encryption state of a tablespace.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$DATABASE_KEY_INFO"

8.205 V$ENCRYPTION_KEYS

V$ENCRYPTION_KEYS displays master key description attributes.

Note that, even if Transparent Data Encryption (TDE) is not configured in the database, a query of V$ENCRYPTION_KEYS checks for TDE configuration validity and may print warnings in alert log.

Column	Datatype	Description
KEY_ID	VARCHAR2(78)	Master key identifier
HEX_MKID	VARCHAR2(78)	Master key identifier, in hex format
TAG	VARCHAR2(4000)	Associated user-defined Information with the master key
CREATION_TIME	TIMESTAMP(6) WITH TIME ZONE	Time that the master key was created
ACTIVATION_TIME	TIMESTAMP(6) WITH TIME ZONE	Time that the master key was put into use
CREATOR	VARCHAR2(128)	User that created the master key
CREATOR_ID	NUMBER	User ID that created the master key

Column	Datatype	Description
USER	VARCHAR2(128)	User that activated the master key
USER_ID	NUMBER	User ID that activated the master key
KEY_USE	VARCHAR2(10)	Indicates whether the master key is used for TDE operations in a PDB or not
KEYSTORE_TYPE	VARCHAR2(17)	Type of keystore in which the master key is stored: • OKV - Oracle Key Vault • SOFTWARE KEYSTORE • UNDEFINED - This value is shown if the database has no information about the type of keystore where the master key resides
ORIGIN	VARCHAR2(41)	Provides information about the origin of the master key: • LOCAL - The master key was created locally in this database • IMPORTED - The master key was imported from another database • IMPORTED BUT KEY METADATA CREATED LOCALLY - The master key was imported from another database, but the key metadata was created locally due to activation • UNKNOWN BUT KEY METADATA CREATED LOCALLY - It is unknown whether the master key was imported from another database or created locally, but the key metadata was created locally due to activation • UNDEFINED - The status of the master key is unknown
BACKED_UP	VARCHAR2(9)	Indicates whether the key has been backed up or not
CREATOR_DBNAME	VARCHAR2(128)	Database that created the key
CREATOR_DBID	NUMBER	Database ID where the key was created
CREATOR_INSTANCE_NAME	VARCHAR2(30)	Instance name of the instance where the key was created
CREATOR_INSTANCE_NUMBER	NUMBER	Instance number of the instance where the key was created
CREATOR_INSTANCE_SERIAL	NUMBER	Serial number of the instance where the key was created
CREATOR_PDBNAME	VARCHAR2(128)	PDB where the key was created
CREATOR_PDBID	NUMBER	PDB ID where the key was created
CREATOR_PDBUID	NUMBER	PDB UID where the key was created
CREATOR_PDBGUID	RAW(16)	PDB GUID where the key was created
ACTIVATING_DBNAME	VARCHAR2(128)	Database that activated the key
ACTIVATING_DBID	NUMBER	Database ID where the key was activated
ACTIVATING_INSTANCE_NAME	VARCHAR2(30)	Instance name of the instance where the key was activated
ACTIVATING_INSTANCE_NUMBER	NUMBER	Instance number of the instance where the key was activated
ACTIVATING_INSTANCE_SERIAL	NUMBER	Serial number of the instance where the key was activated
ACTIVATING_PDBNAME	VARCHAR2(128)	PDB where the key was activated
ACTIVATING_PDBID	NUMBER	PDB ID where the key was activated
ACTIVATING_PDBUID	NUMBER	PDB UID where the key was activated
ACTIVATING_PDBGUID	RAW(16)	PDB GUID where the key was activated
ALGORITHM	VARCHAR2(9)	Master key encryption algorithm

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

> *Oracle Database Transparent Data Encryption Guide* for information about keystore management

8.206 V$ENCRYPTION_WALLET

V$ENCRYPTION_WALLET displays information on the status of the wallet and the wallet location for Transparent Data Encryption (TDE).

In a multitenant container database (CDB), this view displays information on the wallets for all pluggable database (PDBs) when queried from CDB$ROOT. When queried from a PDB, this view only displays wallet details of that PDB.

Note that, even if TDE is not configured in the database, a query of V$ENCRYPTION_WALLET checks for TDE configuration validity and may print warnings in alert log.

Column	Datatype	Description
WRL_TYPE	VARCHAR2(20)	Type of the wallet resource locator (for example, FILE)
WRL_PARAMETER	VARCHAR2(4000)	Parameter of the wallet resource locator (for example, absolute directory location of the wallet or keystore, if WRL_TYPE = FILE)
STATUS	VARCHAR2(30)	Status of the wallet. Possible values: • CLOSED: The wallet is closed • NOT_AVAILABLE: The wallet is not available in the location specified by the WALLET_ROOT initialization parameter • OPEN: The wallet is open • OPEN_NO_MASTER_KEY: The wallet is open, but no master key is set • OPEN_UNKNOWN_MASTER_KEY_STATUS: The wallet is open, but the database could not determine whether the master key is set. This situation can occur when the database is in the mounted state and cannot check if the master key for a hardware keystore is set because the data dictionary is not available. • UNDEFINED: The database could not determine the status of the wallet
WALLET_TYPE	VARCHAR2(20)	Displays the type of keystore being used, FILE or OKV If the keystore was created with the mkstore utility, then the WALLET_TYPE is UNKNOWN. Oracle recommends that you create keystores with the ADMINISTER KEY MANAGEMENT statement.

Column	Datatype	Description
WALLET_ORDER	VARCHAR2(9)	Possible values: • SINGLE - This value is displayed: – When only a single wallet is configured – In an auto-login OKV configuration. In this case, TDE_CONFIGURATION = OKV|FILE, and the SINGLE value is displayed for both the OKV and FILE keystores. • PRIMARY - When more than one wallet is configured, this value indicates that the wallet is primary (holds the current master key). • SECONDARY - When more than one wallet is configured, this value indicates that the wallet is secondary (holds old keys). The lookup of master keys happens in the primary keystore first, and then in the secondary keystore, if required. If there is only one type of keystore being used, then SINGLE will appear. If both types are used, then the value in this column shows the order in which each keystore will be looked up.
KEYSTORE_MODE	VARCHAR2(8)	Displays the keystore mode: • NONE: This value is seen when this column is queried from the CDB$ROOT, or when the database is a non-CDB. The keystore mode does not apply in these cases. • UNITED: The PDB is configured to use the wallet of the CDB$ROOT. To open the wallet in this configuration, the password of the wallet of the CDB$ROOT must be used. • ISOLATED: The PDB is configured to use its own wallet. To open the wallet in this configuration, the password of the isolated wallet must be used.
FULLY_BACKED_UP	VARCHAR2(9)	Indicates whether all the keys in the keystore have been backed up
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.207 V$ENQUEUE_LOCK

V$ENQUEUE_LOCK displays all locks owned by enqueue state objects. The columns in this view are identical to the columns in V$LOCK.

> **See Also:**
>
> "V$LOCK"

Column	Datatype	Description
ADDR	RAW(4 | 8)	Address of lock state object
KADDR	RAW(4 | 8)	Address of lock
SID	NUMBER	Identifier for session holding or acquiring the lock
TYPE	VARCHAR2(2)	Type of lock. Lists user and system types that can have locks.
ID1	NUMBER	Lock identifier #1 (depends on type)
ID2	NUMBER	Lock identifier #2 (depends on type)
LMODE	NUMBER	Lock mode in which the session holds the lock: • 0 - none • 1 - null (NULL) • 2 - row-S (SS) • 3 - row-X (SX) • 4 - share (S) • 5 - S/Row-X (SSX) • 6 - exclusive (X)
REQUEST	NUMBER	Lock mode in which the process requests the lock: • 0 - none • 1 - null (NULL) • 2 - row-S (SS) • 3 - row-X (SX) • 4 - share (S) • 5 - S/Row-X (SSX) • 6 - exclusive (X)
CTIME	NUMBER	Time since current mode was granted
BLOCK	NUMBER	The lock is blocking another lock
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.208 V$ENQUEUE_STAT

V$ENQUEUE_STAT displays statistics on the number of enqueue (lock) requests for each type of lock.

Column	Datatype	Description
INST_ID	NUMBER	ID of the instance
EQ_TYPE	VARCHAR2(2)	Type of enqueue requested
TOTAL_REQ#	NUMBER	Total number of enqueue requests or enqueue conversions for this type of enqueue
TOTAL_WAIT#	NUMBER	Total number of times an enqueue request or conversion resulted in a wait
SUCC_REQ#	NUMBER	Number of times an enqueue request or conversion was granted
FAILED_REQ#	NUMBER	Number of times an enqueue request or conversion failed
CUM_WAIT_TIME	NUMBER	Total amount of time (in milliseconds) spent waiting for the enqueue or enqueue conversion
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.209 V$ENQUEUE_STATISTICS

V$ENQUEUE_STATISTICS displays statistics on the number of enqueue (lock) requests for each type of lock.

V$ENQUEUE_STATISTICS encompasses V$ENQUEUE_STAT and gives more detailed information (several rows for same enqueues with different reasons).

Column	Datatype	Description
EQ_NAME	VARCHAR2(64)	Name of the enqueue request
EQ_TYPE	VARCHAR2(2)	Type of enqueue requested
REQ_REASON	VARCHAR2(64)	Reason for the enqueue request
TOTAL_REQ#	NUMBER	Total number of enqueue requests or enqueue conversions for this type of enqueue
TOTAL_WAIT#	NUMBER	Total number of times an enqueue request or conversion resulted in a wait
SUCC_REQ#	NUMBER	Number of times an enqueue request or conversion was granted
FAILED_REQ#	NUMBER	Number of times an enqueue request or conversion failed
CUM_WAIT_TIME	NUMBER	Total amount of time (in milliseconds) spent waiting for the enqueue or enqueue conversion
REQ_DESCRIPTION	VARCHAR2(4000)	Description of the enqueue request
EVENT#	NUMBER	Event number

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$ENQUEUE_STAT"

8.210 V$EQ_CACHED_PARTITIONS

V$EQ_CACHED_PARTITIONS describes all cached Transactional Event Queue (TxEventQ) event stream partitions.

Column	Datatype	Description
QUEUE	NUMBER	Queue ID
EVENT_STREAM_ID	NUMBER	Event stream ID
PRIORITY	NUMBER	Priority of the event stream partition
EVENT_STREAM_PARTITION_ID	NUMBER	Event stream partition ID
OPT_STATE	VARCHAR2(19)	Current message cache optimizer state of the event stream partition. Possible values: • EMPTY • READY • EVICTION_PROGRESS • EVICTED • UNEVICTION_PROGRESS • PREFETCH_PROGRESS • NEED_RELOAD • RELOAD_PROGRESS • NA: Error in the message cache optimizer state of the event stream partition
OPT_TIME	TIMESTAMP(3) WITH TIME ZONE	The predicted absolute time when the event stream partition could be accessed in future
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Transactional Event Queues and Advanced Queuing

8.211 V$EQ_CROSS_INSTANCE_JOBS

`V$EQ_CROSS_INSTANCE_JOBS` describes Transactional Event Queue (TxEventQ) cross-instance jobs.

Each job forwards messages for an event stream from a source instance to a destination instance for a set of subscribers of a TxEventQ.

Column	Datatype	Description
JOB_ID	NUMBER	Job ID within this coordinator
SCHEMA_NAME	VARCHAR2(128)	Source schema of the job
QUEUE_NAME	VARCHAR2(128)	Source queue name of the job
EVENT_STREAM_ID	NUMBER	Source event stream ID
START_EVENT_STREAM_PARTITION_ID	NUMBER	Start event stream partition ID of the job
DESTINATION_INSTANCE_ID	NUMBER	Destination instance of the job
COORDINATOR_ID	NUMBER	Index of the coordinator serving the job
DEST_SERVER_PROCESS_ID	NUMBER	Process ID of the destination server
JOB_STATE	VARCHAR2(13)	State of the job. Possible values: • CRASHED • INACTIVE • PAUSED • REQUESTED • RUNNING • STOPPED
FLOW_CONTROL	NUMBER	Indicates whether the job is flow controlled. Possible values: • 0 - The job is not flow controlled • 1 - The job is flow controlled
MSGS_SENT	NUMBER	Number of messages sent during the job
BYTES_SENT	NUMBER	Number of bytes sent during the job
ACK_LATENCY	NUMBER	Latency for receiving ACK for the job
JOB_TYPE	VARCHAR2(26)	Job type. Possible values: • CROSS_STREAM: This job type is responsible for forwarding an event stream from its owner instance to a destination dequeue instance for all subscribers performing dequeue from that event stream at the destination dequeue instance. • DEQUEUE_AFFINITY_TO_REMOTE: This job type is responsible for switching a subscriber's dequeue affinity from an event stream's owner instance to a remote dequeue instance. • DEQUEUE_AFFINITY_TO_LOCAL: This job type is responsible for switching back a subscriber's dequeue affinity from a remote dequeue instance to an event stream's owner instance.

Column	Datatype	Description
PRIORITY0_CROSS_LWM	NUMBER	ID of last priority 0 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY1_CROSS_LWM	NUMBER	ID of last priority 1 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY2_CROSS_LWM	NUMBER	ID of last priority 2 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY3_CROSS_LWM	NUMBER	ID of last priority 3 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY4_CROSS_LWM	NUMBER	ID of last priority 4 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY5_CROSS_LWM	NUMBER	ID of last priority 5 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY6_CROSS_LWM	NUMBER	ID of last priority 6 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY7_CROSS_LWM	NUMBER	ID of last priority 7 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY8_CROSS_LWM	NUMBER	ID of last priority 8 event stream partition received at DESTINATION_INSTANCE_ID
PRIORITY9_CROSS_LWM	NUMBER	ID of last priority 9 event stream partition received at DESTINATION_INSTANCE_ID
JOB_START_TIME	TIMESTAMP(3) WITH TIME ZONE	Start time of this job
SUBSCRIBER_ID	NUMBER	ID of the subscriber whose affinity is being switched for the DEQUEUE_AFFINITY_TO_REMOTE and DEQUEUE_AFFINITY_TO_LOCAL job types
SUBSCRIBER_NAME	VARCHAR2(512)	Name of subscriber whose affinity is being switched for the DEQUEUE_AFFINITY_TO_REMOTE and DEQUEUE_AFFINITY_TO_LOCAL job types. This column is NULL for the CROSS_STREAM job type.
OWNER_INSTANCE_ID	NUMBER	ID of the instance that owns the event stream
QUEUE_ID	NUMBER	Queue ID
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Advanced Queuing User's Guide for more information about Oracle Transactional Event Queues and Advanced Queuing

8.212 V$EQ_INACTIVE_PARTITIONS

V$EQ_INACTIVE_PARTITIONS describes all inactive Transactional Event Queue (TxEventQ) event stream partitions.

Column	Datatype	Description
QUEUE	NUMBER	Queue ID
EVENT_STREAM_ID	NUMBER	Event stream ID
PRIORITY	NUMBER	Priority of the event stream partition
EVENT_STREAM_PARTITION_ID	NUMBER	Event stream partition ID
OPT_STATE	VARCHAR2(19)	Current message cache optimizer state of the event stream partition. Possible values: • EMPTY • CACHED • EVICTION_PROGRESS • EVICTED • UNEVICTION_PROGRESS • PREFETCH_PROGRESS • NA: Error in the message cache optimizer state of the event stream partition
OPT_TIME	TIMESTAMP(3) WITH TIME ZONE	The predicted absolute time when the event stream partition could be accessed in future
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Advanced Queuing User's Guide for more information about Oracle Transactional Event Queues and Advanced Queuing

8.213 V$EQ_MESSAGE_CACHE

V$EQ_MESSAGE_CACHE provides performance statistics of the message cache for Transactional Event Queues (TxEventQs) at the event stream partition level in the instance.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
EVENT_STREAM_ID	NUMBER	Event stream ID
PRIORITY	NUMBER	Priority of the event stream partition for dequeue, range 0 - 9

Column	Datatype	Description
EVENT_STREAM_PARTITION_ID	NUMBER	Event stream partition ID
PARTITION_ID	NUMBER	Queue partition ID
MAX_MSGS	NUMBER	Maximum number of messages for the event stream partition
ENQUEUED_MSGS	NUMBER	Number of messages enqueued for the event stream partition
MSGS_MADE_EXPIRED	NUMBER	Number of messages made expired
CHUNK_SIZE	NUMBER	The size of the memory chunk for storing messages
NUM_CHUNKS	NUMBER	Number of chunks for the event stream partition
NUM_FREE_CHUNKS	NUMBER	Number of free chunks for the event stream partition
USED_MEMORY_SIZE	NUMBER	Total estimated size of memory in use (in bytes) for the event stream partition
STATE	VARCHAR2(13)	Event stream partition state. Possible values: • CACHED (in memory) • UNCACHED (on disk) • UNCACHED_FREE • CACHED_FREE • UNKNOWN
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Transactional Event Queues and Advanced Queuing

8.214 V$EQ_MESSAGE_CACHE_ADVICE

V$EQ_MESSAGE_CACHE_ADVICE shows simulated metrics for a range of potential message cache sizes for Transactional Event Queues (TxEventQs). This view assists in cache sizing by providing information in the form of metrics as described below.

Column	Datatype	Description
SIZE_FOR_ESTIMATE	NUMBER	Cache size for simulation (in megabytes)
SIZE_FACTOR	NUMBER	Size factor with respect to the current cache size

Column	Datatype	Description
ESTD_SIZE_TYPE	VARCHAR2(9)	Possible values: • MINIMUM: This cache size is required to have all dequeues in-memory (no uncached). • CURRENT: This is the current size of the message cache. • MAXIMUM: This cache size is required to have zero evictions. • NULL: This is the value in all other cases.
ESTD_CACHED_PARTITIONS	NUMBER	Estimated number of cached event stream partitions for this size
ESTD_UNCACHED_PARTITIONS	NUMBER	Estimated number of uncached event stream partitions for this size
ESTD_EVICTIONS	NUMBER	Estimated number of event stream partitions evicted for this size
ESTD_EVICTION_RATE	NUMBER	Estimated number of event stream partitions getting evicted per minute
ESTD_FG_UNEVICTIONS	NUMBER	Estimated number of event stream partitions unevicted by foreground processes
ESTD_FG_UNEVICTION_RATE	NUMBER	Estimated number of event stream partitions getting unevicted by foreground processes
ESTD_BG_UNEVICTIONS	NUMBER	Estimated number of event stream partitions unevicted by background processes
ESTD_BG_UNEVICTION_RATE	NUMBER	Estimated number of event stream partitions getting unevicted by background processes
ESTD_BG_PROCESSES	NUMBER	Estimated number of background processes required for this size
TOTAL_ENQUEUE_RATE	NUMBER	Simulated number of messages being enqueued per second
TOTAL_DEQUEUE_RATE	NUMBER	Simulated number of messages being dequeued per second
AVG_PARTITION_SIZE	NUMBER	Simulated average number of messages per cached event stream partitions
AVG_PARTITION_MEMORY	NUMBER	Simulated average memory per cached event stream partition (in megabytes)
AVG_EVICTION_TIME	NUMBER	Simulated average time to evict a cached event stream partition (in milliseconds)
AVG_UNEVICTION_TIME	NUMBER	Simulated average time to unevict a cached event stream partition (in milliseconds)
FLAGS	NUMBER	Reserved for internal use
SIMULATION_TIME	NUMBER	Amount of time that was simulated for (in minutes)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Advanced Queuing User's Guide for more information about Oracle Transactional Event Queues and Advanced Queuing

8.215 V$EQ_MESSAGE_CACHE_STAT

V$EQ_MESSAGE_CACHE_STAT displays statistics about memory management for Transactional Event Queues (TxEventQs) in the Streams pool within the System Global Area (SGA). TxEventQs use the Streams pool in units of event queue partitions. Thus, columns of this view shows statistics at the event queue partition level. This view shows statistics across all TxEventQs.

Column	Datatype	Description
NUM_EVICTED	NUMBER	Number of evicted event queue partitions across all TxEventQs
NUM_PREFETCHED	NUMBER	Number of event queue partitions pre-fetched by an AQ background process
NUM_UNEVICTION	NUMBER	Number of event queue partitions unevicted by a foreground process, such as the dequeue process
NUM_UNCACHED	NUMBER	Number of event queue partitions stored as uncached
NUM_TRACKED	NUMBER	Number of event queue partitions which are actively tracking dequeue rates
NUM_CACHED	NUMBER	Number of event queue partitions stored as cached
MAX_SUBSH_SIZE	NUMBER	Maximum event queue partition size seen till now, in terms of number of messages per event queue partition
MIN_SUBSH_SIZE	NUMBER	Minimum event queue partition size seen till now, in terms of number of messages per event queue partition
MEAN_SUBSH_SIZE	NUMBER	Mean event queue partition size seen till now, in terms of number of messages per event queue partition
AVG_EVICTION_RATE	NUMBER	Average number of event queue partitions evicted per second
AVG_LOAD_RATE	NUMBER	Average number of event queue partitions pre-fetched or unevicted per second
AVG_EVICTION_TIME	NUMBER	Average time taken to evict one event queue partition (in milliseconds)
AVG_LOAD_TIME	NUMBER	Average time taken to un-evict one event queue partition (in milliseconds)
AVG_MISS_RATIO	NUMBER	Average ratio of number of foreground un-evictions versus background pre-fetch
AVG_THRASH_RATIO	NUMBER	Average ratio of number of event queue partitions pre-fetched by background without dequeue attempt versus total number of event queue partitions prefetched
MANDATORY_AFF_SWITCH_ATTEMPTS	NUMBER	An affinity switch is a change in dequeue instance for a TxEventQ-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that TxEventQ-subscriber pair. This column shows the number of times mandatory affinity switches were attempted across all instances. Populated at the smallest instance ID only.
OPTIONAL_AFF_SWITCH_ATTEMPTS	NUMBER	Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were attempted across all instances. Populated at the smallest instance ID only.
MIN_EVICT_PERCENT	NUMBER	Percentage of streams_pool memory beyond which event queue partition eviction is triggered

Column	Datatype	Description
LAST_AVG_CACHED_HORIZON	NUMBER	Last average number of cached event queue partitions seen in TxEventQ memory manager horizon
LAST_AVG_MEMORY_HORIZON	NUMBER	Last average memory of cached event queue partitions seen in TxEventQ memory manager horizon
LAST_AVG_SUBSHARD_HORIZON	NUMBER	Last average number of event queue partitions seen in TxEventQ memory manager horizon
LAST_LEEWAY_SHIFT	NUMBER	Internal leeway for memory threshold
AVG_OPTTIME_DRIFT	NUMBER	Average drift of opt_time for all event queue partitions. A drift is defined as a difference between opt_time as set on an event queue partition and the actual time at which an event queue partition is first dequeueed after prefetch/uneviction.
NUM_THRESHOLD_DRIFT	NUMBER	Number of times drift value has gone over threshold time. A typical threshold time can be horizon_time/2.
MAX_OPT_TIME_DRIFT	NUMBER	Maximum drift until now
MIN_OPT_TIME_DRIFT	NUMBER	Minimum drift until now
AVG_OPT_TIME_ERROR	NUMBER	An opt_time error occurs when a cached event queue partition is unevicted by a foreground process (instead of being prefetched by the AQ background). Thus, opt_time error is the difference between the actual opt_time set for an event queue partition and the absolute time at which foreground unevicts the same event queue partition. This column represents the average time of this error.
MAX_OPT_TIME_ERROR	NUMBER	Maximum opt_time error
MIN_OPT_TIME_ERROR	NUMBER	Minimum opt_time error
NUM_FG_RELOADED	NUMBER	Number of event stream partitions reloaded from disk into message cache by foreground processes
NUM_PRERELOADED	NUMBER	Number of event stream partitions reloaded from disk into message cache in advance by background processes
AVG_RELOAD_TIME	NUMBER	Average time to reload an event stream partition from disk into message cache (in milliseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Oracle Database Advanced Queuing User's Guide for more information about Oracle Transactional Event Queues and Advanced Queuing

8.216 V$EQ_NONDUR_SUBSCRIBER

V$EQ_NONDUR_SUBSCRIBER provides information about the non-durable subscriptions on Transactional Event Queues (TxEventQs).

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
SUBSCRIBER_ID	NUMBER	ID of the non-durable subscriber
SUBSCRIBER_NAME	VARCHAR2(128)	Subscriber name
RULE_CONDITION	VARCHAR2(4000)	Rule condition of the subscriber
TRANSFORMATION_OWNER	VARCHAR2(128)	Owner of the transformation (for JMS queues)
TRANSFORMATION_NAME	VARCHAR2(128)	Name of the transformation (for JMS queues)
CREATION_TIME	TIMESTAMP(1) WITH TIME ZONE	Non-durable subscriber creation time
FLAGS	NUMBER	Property of the subscriber. Possible values: • 0x0001 – Persistent subscriber • 0x0002 – Buffered subscriber • 0x0004 – JMS subscriber • 0x0008 – Rule-based subscriber • 0x0010 – Subscriber has transformation • 0x0020 – Notification-only non-durable subscriber subscriber
SUBSCRIBER_TYPE	NUMBER	Type of subscriber. Possible values: • 1 – JMS non-durable subscriber • 2 – Service layer dummy non-durable subscriber • 3 – Notification-only non-durable subscriber
BITPOS	NUMBER	Position of subscriber in subscriber bitmap
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Advanced Queuing User's Guide for more information about Oracle Transactional Event Queues and Advanced Queuing

8.217 V$EQ_NONDUR_SUBSCRIBER_LWM

V$EQ_NONDUR_SUBSCRIBER_LWM projects the low watermarks (LWMs) of non-durable subscribers in a Transactional Event Queue (TxEventQ). The LWM of a non-durable subscriber is a combination of event stream, priority, and LWM (event queue partition).

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
SUBSCRIBER_ID	NUMBER	ID of the non-durable subscriber
EVENT_STREAM_ID	NUMBER	Event stream ID
PRIORITY	NUMBER	Priority of the event stream
LWM	NUMBER	Lower watermark (in an event stream partition) of the non-durable subscriber
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Advanced Queuing User's Guide for more information about Oracle Transactional Event Queues and Advanced Queuing

8.218 V$EQ_PARTITION_STATS

V$EQ_PARTITION_STATS displays usage statistics for the Transactional Event Queue (TxEventQ) queue partition cache and the dequeue log partition cache.

Column	Datatype	Description
INST_ID	NUMBER	Current instance ID
QUEUE_ID	NUMBER	Queue ID
QUEUE_TABLE_ID	NUMBER	Queue table object ID
QUEUE_SCHEMA	VARCHAR2(128)	Queue schema name
QUEUE_NAME	VARCHAR2(128)	Queue name
PT_TUNED_SIZ_QT	NUMBER	Current tuned size of the queue partition cache, expressed in number of partition cache elements
PT_CACHED_PTNS_QT	NUMBER	Current number of cached partitions in the queue partition cache
PT_OVER_CACHED_PTNS_QT	NUMBER	Current number of over-cached partitions in the queue partition cache, that is, the number of cached partitions whose partition cache elements exceed the current tuned size of the queue partition cache

Column	Datatype	Description
PT_TOTAL_UPTUNE_QT	NUMBER	Total amount of space added to the queue partition cache due to tune-ups, since the cache was initialized, expressed in number of partition cache elements
PT_NO_OF_UPTUNES_QT	NUMBER	Total number of times a tune-up was triggered on the queue partition cache, since the cache was initialized
PT_TOTAL_DOWNTUNE_QT	NUMBER	Total amount of space removed from the queue partition cache due to tune-downs, since the cache was initialized, expressed in number of partition cache elements
PT_NO_OF_DOWNTUNES_QT	NUMBER	Total number of times a tune-down was triggered on the queue partition cache, since the cache was initialized
PT_CACHE_MISS_QT	NUMBER	Total number of cache misses during partition lookups on the queue partition cache
PT_CACHE_HIT_QT	NUMBER	Total number of cache hits during partition lookups on the queue partition cache
PT_TOTAL_CACH_GET_QT	NUMBER	Total number of successful fetches from the queue partition cache
PT_TOTAL_CACH_PUT_QT	NUMBER	Total number of caching operations that occurred on the queue partition cache
PT_UNBOUNDINGS_QT	NUMBER	Total number of times queue partitions were unbounded
PT_TUNED_SIZ_DQ	NUMBER	Current tuned size of the dequeue log partition cache, expressed in number of partition cache elements
PT_CACHED_PTNS_DQ	NUMBER	Current number of cached partitions in the dequeue log partition cache
PT_OVER_CACHED_PTNS_DQ	NUMBER	Current number of over-cached partitions in the dequeue log partition cache, that is, the number of cached dequeue log partitions whose partition cache elements exceed the current tuned size of the dequeue log partition cache
PT_TOTAL_UPTUNE_DQ	NUMBER	Total amount of space added to the dequeue log partition cache due to tune-ups, since the cache was initialized, expressed in number of partition cache elements
PT_NO_OF_UPTUNES_DQ	NUMBER	Total number of times a tune-up was triggered on the dequeue log partition cache, since the cache was initialized
PT_TOTAL_DOWNTUNE_DQ	NUMBER	Total amount of space removed from the dequeue log partition cache due to tune-downs, since the cache was initialized, expressed in number of partition cache elements
PT_NO_OF_DOWNTUNES_DQ	NUMBER	Total number of times a tune-down was triggered on the dequeue log partition cache, since the cache was initialized
PT_CACHE_MISS_DQ	NUMBER	Total number of cache misses during partition lookups on the dequeue log partition cache
PT_CACHE_HIT_DQ	NUMBER	Total number of cache hits during partition lookups on the dequeue log partition cache
PT_TOTAL_CACH_GET_DQ	NUMBER	Total number of successful fetches from the dequeue log partition cache
PT_TOTAL_CACH_PUT_DQ	NUMBER	Total number of caching operations that occurred on the dequeue log partition cache
PT_UNBOUNDINGS_DQ	NUMBER	Total number of times dequeue log partitions were unbounded
ADD_PARTITION_FG_QT	NUMBER	Total number of queue partitions created inline during foreground AQ enqueue operations
ADD_PARTITION_BG_QT	NUMBER	Total number of queue partitions created asynchronously by the AQ partitioning background process

Column	Datatype	Description
ADD_PARTITION_FG_DQLOG	NUMBER	Total number of dequeue log partitions created inline during foreground AQ dequeue operations
ADD_PARTITION_BG_DQLOG	NUMBER	Total number of dequeue log partitions created asynchronously by the AQ partitioning background process
TRUNC_PARTITION_QT	NUMBER	Total number of truncated and recycled queue partitions
TRUNC_PARTITION_DQLOG	NUMBER	Total number of truncated and recycled dequeue log partitions
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.219 V$EQ_REMOTE_DEQUEUE_AFFINITY

V$EQ_REMOTE_DEQUEUE_AFFINITY lists the for Transactional Event Queue (TxEventQ) dequeue affinity instance of the subscribers not dequeuing locally from the event streams's owner instance. Cross-instance message forwarding is used for these subscribers.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
EVENT_STREAM_ID	NUMBER	Event stream ID, which is being forwarded from SOURCE_INSTANCE to INST_ID for the subscriber
SOURCE_INSTANCE_ID	NUMBER	Owner instance ID from which the event stream is being forwarded
SUBSCRIBER_ID	NUMBER	Subscriber ID
QUEUE_SCHEMA	VARCHAR2(128)	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	Queue name
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Transactional Event Queues and Advanced Queuing

8.220 V$EQ_SUBSCRIBER_LOAD

`V$EQ_SUBSCRIBER_LOAD` describes the load of all subscribers of Transactional Event Queue (TxEventQ) event streams in terms of latency at every instance in an Oracle RAC environment.

Latency denotes the predicted amount of time (in seconds) required from the current time to drain all the messages for that subscriber at each respective instance. The latency calculation considers past enqueue/dequeue rates and future enqueue/dequeue rates based on history.

Column	Datatype	Description
`QUEUE_ID`	`NUMBER`	Queue ID
`QUEUE_SCHEMA`	`VARCHAR2(128)`	Queue schema
`QUEUE_NAME`	`VARCHAR2(128)`	Queue name
`SUBSCRIBER_ID`	`NUMBER`	Subscriber ID
`SUBSCRIBER_NAME`	`VARCHAR2(128)`	Subscriber name
`LATENCY_STATE`	`VARCHAR2(8)`	Latency state. Possible values: • `FINITE` - The subscriber will be able to dequeue all the messages in a finite amount of time • `INFINITE` - The subscriber's dequeue rate may not catch up to the enqueue rate • `UNKNOWN` - Latency is not yet known
`LATENCY`	`NUMBER`	Latency (in seconds). Valid only when `LATENCY_STATE` is `FINITE`.
`DEQUEUE_REQUESTS`	`NUMBER`	Approximate number of dequeue requests noted recently
`ACTIVE_EVENT_STREAM_ID`	`NUMBER`	Number of event streams that have messages for this subscriber
`ACTIVE_LISTENER`	`VARCHAR2(5)`	Indicates whether the subscriber is actively listening at this instance for messages (`TRUE`) or not (`FALSE`)
`DEQUEUE_SESSIONS`	`NUMBER`	Displays the number of active dequeue sessions for this subscriber
`FLAGS`	`NUMBER`	For internal use only
`MANDATORY_AFF_SWITCHES`	`NUMBER`	An affinity switch is a change in the dequeue instance for an event stream-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that event stream-subscriber pair. This column shows the number of times mandatory affinity switches were needed from this instance to another for this subscriber.
`OPTIONAL_AFF_SWITCHES`	`NUMBER`	Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were needed from this instance to another for this subscriber.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Transactional Event Queues and Advanced Queuing

8.221 V$EQ_SUBSCRIBER_STAT

V$EQ_SUBSCRIBER_STAT displays basic statistical information about the subscribers of Transactional Event Queue (TxEventQ) event streams. There is one row per queue per event stream per subscriber.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue identifier
SUBSCRIBER_ID	NUMBER	Subscriber identifier
EVENT_STREAM_ID	NUMBER	Event stream identifier
PRIORITY	NUMBER	Priority value of the event stream
MSG_SN	NUMBER	Message serial number
DEQUEUE_PARTITION_ID	NUMBER	Last known dequeue position in this event stream
ENQUEUED_MSGS	NUMBER	Number of enqueued messages
DEQUEUED_MSGS	NUMBER	Number of dequeued messages
ELAPSED_DEQUEUE_TIME	NUMBER	Amount of time spent performing dequeues (in seconds)
CPU_DEQUEUE_TIME	NUMBER	Actual amount of CPU time spent performing dequeues (in seconds)
DEQUEUE_RATE	NUMBER	Number of messages dequeued per second
DEQUEUE_POSITION	RAW(16)	Message ID at the dequeue position of the subscriber in this event stream A NULL value indicates that either the event stream is empty or no dequeues have been done on this event stream.
TIME_SINCE_LAST_DEQUEUE	NUMBER	Time since last dequeue activity (in seconds)
ESTD_TIME_TO_DRAIN	NUMBER	Estimated amount of time to drain the event stream (in seconds) with current enqueue and dequeue rates. Null, if the enqueue rate is greater than the dequeue rate.
ESTD_TIME_TO_DRAIN_NO_ENQ	NUMBER	Estimated amount of time to drain the event stream (in seconds) with no new enqueues

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Transactional Event Queues and Advanced Queuing

8.222 V$EQ_UNCACHED_PARTITIONS

V$EQ_UNCACHED_PARTITIONS describes all uncached Transactional Event Queue (TxEventQ) event stream partitions.

Column	Datatype	Description
QUEUE_ID	NUMBER	Queue ID
EVENT_STREAM_ID	NUMBER	Event stream ID
PRIORITY	NUMBER	Priority of the event stream partition
EVENT_STREAM_PARTITION_ID	NUMBER	Event stream partition ID
OPT_STATE	VARCHAR2(19)	Current message cache optimizer state of the event stream partition. Possible values: • EMPTY • READY • EVICTION_PROGRESS • EVICTED • UNEVICTION_PROGRESS • PREFETCH_PROGRESS • NEED_RELOAD • RELOAD_PROGRESS • NA: Error in the message cache optimizer state of the event stream partition
OPT_TIME	TIMESTAMP(3) WITH TIME ZONE	The predicted absolute time when the event stream partition could be accessed in future
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Advanced Queuing User's Guide* for more information about Oracle Transactional Event Queues and Advanced Queuing

8.223 V$EVENT_HISTOGRAM

`V$EVENT_HISTOGRAM` displays a histogram of the number of waits, the maximum wait, and total wait time on an event basis, in milliseconds. The histogram has buckets of time intervals from < 1 ms, < 2 ms, < 4 ms, < 8 ms, ... < 2^{21} ms, < 2^{22} ms, and >= 2^{22} ms.

The histogram will not be filled unless the `TIMED_STATISTICS` initialization parameter is set to `true`.

Column	Datatype	Description
`EVENT#`	`NUMBER`	Event number
`EVENT`	`VARCHAR2(64)`	Name of the event
`WAIT_TIME_MILLI`	`NUMBER`	Amount of time the bucket represents (in milliseconds). If the duration = *num*, then this column represents waits of duration < *num* that are not included in any smaller bucket.
`WAIT_COUNT`	`NUMBER`	Number of waits of the duration belonging to the bucket of the histogram
`LAST_UPDATE_TIME`	`VARCHAR2(64)`	Indicates the last time the bucket was updated (the ending timestamp of the last wait falling into the bucket's duration)
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "TIMED_STATISTICS"

8.224 V$EVENT_HISTOGRAM_MICRO

`V$EVENT_HISTOGRAM_MICRO` displays a histogram of the number of waits, the maximum wait, and total wait time on an event basis, in microseconds. The histogram has buckets of time intervals from < 1 us, < 2 us, < 4 us, < 8 us, ... < 2^{31} us, < 2^{32} us, and >= 2^{32} us.

The histogram will not be filled unless the `TIMED_STATISTICS` initialization parameter is set to `true`.

Column	Datatype	Description
EVENT#	NUMBER	Event number
EVENT	VARCHAR2(64)	Name of the event
WAIT_TIME_FORMAT	VARCHAR2(30)	A human readable time string which is converted from WAIT_TIME_MICRO. When WAIT_TIME_MICRO < 1 millisecond, WAIT_TIME_FORMAT is shown in microseconds. When WAIT_TIME_MICRO < 1 second, WAIT_TIME_FORMAT is shown in milliseconds. When WAIT_TIME_MICRO < 1 minute, WAIT_TIME_FORMAT is shown in seconds. When WAIT_TIME_MICRO > 1 minute, WAIT_TIME_FORMAT is shown in minutes and seconds.
WAIT_TIME_MICRO	NUMBER	Amount of time the bucket represents (in microseconds). If the duration = num, then this column represents waits of duration < num that are not included in any smaller bucket.
WAIT_COUNT	NUMBER	Number of waits of the duration belonging to the bucket of the histogram
LAST_UPDATE_TIME	VARCHAR2(64)	Indicates the last time the bucket was updated (the ending timestamp of the last wait falling into the bucket's duration)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.225 V$EVENT_NAME

V$EVENT_NAME displays information about wait events.

Column	Datatype	Description
EVENT#	NUMBER	Number of the wait event
EVENT_ID	NUMBER	Identifier of the wait event
NAME	VARCHAR2(64)	Name of the wait event. Names that appear in this column remain stable across Oracle Database releases, and they can be relied on by customer scripts.
PARAMETER1	VARCHAR2(64)	Description of the first parameter for the wait event
PARAMETER2	VARCHAR2(64)	Description of the second parameter for the wait event
PARAMETER3	VARCHAR2(64)	Description of the third parameter for the wait event
WAIT_CLASS_ID	NUMBER	Identifier of the class of the wait event
WAIT_CLASS#	NUMBER	Number of the class of the wait event
WAIT_CLASS	VARCHAR2(64)	Name of the class of the wait event **See Also:** "Classes of Wait Events" for a description of the different wait event classes

Column	Datatype	Description
DISPLAY_NAME	VARCHAR2(64)	A clearer and more descriptive name for the wait event that appears in the NAME column. Names that appear in the DISPLAY_NAME column can change across Oracle Database releases, therefore customer scripts should not rely on names that appear in the DISPLAY_NAME column across releases.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.226 V$EVENTMETRIC

V$EVENTMETRIC displays values of wait event metrics for the most recent 60-second interval.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
EVENT#	NUMBER	Number of the event
EVENT_ID	NUMBER	Identifier of the event
NUM_SESS_WAITING	NUMBER	Number of sessions waiting at the end of the interval
TIME_WAITED	NUMBER	Time waited (in hundredths of a second)
WAIT_COUNT	NUMBER	Number of times waited
TIME_WAITED_FG	NUMBER	Time waited (in hundredths of a second), from foreground sessions
WAIT_COUNT_FG	NUMBER	Number of times waited, from foreground sessions
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.227 V$EXADIRECT_ACL

V$EXADIRECT_ACL monitors current ACLs propagated to the database instance.

Column	Datatype	Description
SERVICE_NAME	VARCHAR2(512)	Database service name
SGID	VARCHAR2(39)	Identifier of the VM allowed access to the specified service name

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.228 V$EXECUTION

V$EXECUTION displays information on parallel execution.

Column	Datatype	Description
PID	NUMBER	Session ID
DEPTH	NUMBER	The depth
FUNCTION	VARCHAR2(10)	Session serial number
TYPE	VARCHAR2(7)	Name of the OBJECT_NODE in plan table
NVALS	NUMBER	Elapsed time for OBJECT_NODE
VAL1	NUMBER	The value for number 1
VAL2	NUMBER	The value for number 2
SEQH	NUMBER	A sequence
SEQL	NUMBER	A sequence
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.229 V$EXP_STATS

V$EXP_STATS stores the expression tracking statistics of recently executed queries.

Column	Datatype	Description
EXPID	NUMBER	Expression ID of the current expression
OBJNUM	NUMBER	The object number contained in the expression
DYNCOST	NUMBER	Optimizer dynamic cost of evaluating the expression
EVALCNT	NUMBER	Number of times the expression has been evaluated

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

- "DBA_EXPRESSION_STATISTICS"
- "ALL_EXPRESSION_STATISTICS"

8.230 V$FALSE_PING

V$FALSE_PING is deprecated. The information that was provided in this view is now provided in the V$INSTANCE_CACHE_TRANSFER and V$SEGMENT_STATISTICS views.

Column	Datatype	Description
FILE#	NUMBER	Data file identifier number (to find the file name, query DBA_DATA_FILES or V$DBFILE)
BLOCK#	NUMBER	Block number
STATUS	VARCHAR2(10)	Status of the block: • free - Not currently in use • xcur - Exclusive • scur - Shared current • cr - Consistent read • read - Being read from disk • mrec - In media recovery mode • irec - In instance recovery mode
XNC	NUMBER	Number of PCM lock conversions from Exclusive mode due to contention with another instance. This column is obsolete and maintained for backward compatibility.
FORCED_READS	NUMBER	Number of times the block had to be reread from the cache because another instance has forced it out of this instance's cache by requesting the lock on the block in exclusive mode
FORCED_WRITES	NUMBER	Number of times GCS had to write this block to cache because this instance had used the block and another instance had requested the lock on the block in a conflicting mode
NAME	VARCHAR2(128)	Name of the database object containing the block
PARTITION_NAME	VARCHAR2(128)	NULL for nonpartitioned objects
KIND	VARCHAR2(15)	Type of database object

Column	Datatype	Description
OWNER#	NUMBER	Owner number
LOCK_ELEMENT_ADDR	RAW(4 | 8)	Address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
LOCK_ELEMENT_NAME	NUMBER	Name of the lock that contains the PCM lock that is covering the buffer
CLASS#	NUMBER	Lock element class
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$INSTANCE_CACHE_TRANSFER"
- "V$SEGMENT_STATISTICS"

8.231 V$FAST_START_FAILOVER_CONFIG

V$FAST_START_FAILOVER_CONFIG displays configuration details about Oracle Data Guard fast-start failover.

Column	Datatype	Description
FAST_START_FAILOVER_MODE	VARCHAR2(19)	Displays the current fast-start failover mode. Possible values are: • DISABLED - Fast-start failover is disabled. • OBSERVE-ONLY - Fast-start failover is enabled in test drive mode. • POTENTIAL DATA LOSS - Fast-start failover is enabled and a fast-start failover can incur data loss within FastStartFailoverLagLimit seconds. • ZERO DATA LOSS - Fast-start failover is enabled and a fast-start failover cannot incur any data loss.

Column	Datatype	Description
STATUS	VARCHAR2(22)	Fast-start failover status: • BYSTANDER • DISABLED • LOADING DICTIONARY • PRIMARY UNOBSERVED • REINSTATE FAILED • REINSTATE REQUIRED • STALLED • SUSPENDED • SYNCHRONIZED • TARGET OVER LAG LIMIT • TARGET UNDER LAG LIMIT • UNSYNCHRONIZED **See Also:** *Oracle Data Guard Broker* for detailed descriptions of these values **Note:** If the value of this column is DISABLED, then the values for the CURRENT_TARGET, THRESHOLD, OBSERVER_PRESENT, and OBSERVER_HOST columns in this table are not meaningful.
CURRENT_TARGET	VARCHAR2(30)	DB_UNIQUE_NAME of the standby that is the current fail-safe failover observer target standby for the Data Guard configuration
THRESHOLD	NUMBER	Time (in seconds) that the observer will attempt to reconnect with a disconnected primary before attempting fail-safe failover observer with the target standby
OBSERVER_PRESENT	VARCHAR2(7)	Indicates whether the master observer is currently connected to the local database (YES) or not (NO) **Note:** This column is consistent throughout an Oracle RAC environment; that is, if the observer is connected to any instance, then all instances will show a value of YES.
OBSERVER_HOST	VARCHAR2(512)	Machine name that is currently hosting the master observer process, if fast-start failover is enabled. If fast-start failover is not enabled, this column returns a NULL string.
PING_INTERVAL	NUMBER	ObserverPingInterval value for the fast-start failover configuration This value specifies how frequently the observer must ping the primary database (in milliseconds). **See Also:** *Oracle Data Guard Broker* for more information about the ObserverPingInterval configuration property
PING_RETRY	NUMBER	ObserverPingRetry value for the fast-start failover configuration This value specifies the number of times that the observer retries a failed ping before it initiates a failover to the target standby database. **See Also:** *Oracle Data Guard Broker* for more information about the ObserverPingRetry configuration property
PROTECTION_MODE	VARCHAR2(120)	Protection mode for the fast-start failover configuration: • MAXAVAILABILITY • MAXPERFORMANCE • MAXPROTECTION **See Also:** *Oracle Data Guard Broker* for more information about protection modes

Column	Datatype	Description
LAG_LIMIT	NUMBER	FastStartFailoverLagLimit value for the fast-start failover configuration This value establishes an acceptable limit (in seconds) that the standby is allowed to fall behind the primary in terms of redo applied. **See Also:** *Oracle Data Guard Broker* for more information about the FastStartFailoverLagLimit configuration property
AUTO_REINSTATE	VARCHAR2(5)	FastStartFailoverAutoReinstate value (TRUE or FALSE) for the fast-start failover configuration This value specifies whether the former primary database is to be automatically reinstated if a fast-start failover was initiated because the primary database was either isolated or had crashed. **See Also:** *Oracle Data Guard Broker* for more information about the FastStartFailoverAutoReinstate configuration property
OBSERVER_RECONNECT	NUMBER	ObserverReconnect value for the fast-start failover configuration This value specifies how often (in seconds) the observer establishes a new connection to the primary database. **See Also:** *Oracle Data Guard Broker* for more information about the ObserverReconnect configuration property
OBSERVER_OVERRIDE	VARCHAR2(5)	ObserverOverride value (TRUE or FALSE) for the fast-start failover configuration This value specifies whether an automatic failover is allowed to occur when the observer has lost connectivity to the primary. **See Also:** *Oracle Data Guard Broker* for more information about the ObserverOverride configuration property
SHUTDOWN_PRIMARY	VARCHAR2(5)	FastStartFailoverPmyShutdown value (TRUE or FALSE) for the fast-start failover configuration This value specifies whether the primary database should shut down under certain conditions. **See Also:** *Oracle Data Guard Broker* for more information about the FastStartFailoverPmyShutdown configuration property
LAG_TYPE	VARCHAR2(4000)	FastStartFailoverLagType value (APPLY or TRANSPORT) for the fast-start failover configuration This value specifies the type of lag (apply lag or transport lag) that is used to specify the data loss threshold. **See Also:** *Oracle Data Guard Broker* for more information about the FastStartFailoverLagType configuration property
LAG_GRACE_TIME	NUMBER	FastStartFailoverLagGraceTime value for the fast-start failover configuration This value specifies the maximum amount of time (in seconds) that can pass before the lag limit (FastStartFailoverLagLimit) is reached when the primary database requests permission to move to the lagging state. **See Also:** *Oracle Data Guard Broker* for more information about the FastStartFailoverLagGraceTime configuration property

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

8.232 V$FAST_START_SERVERS

V$FAST_START_SERVERS provides information about all the recovery workers performing parallel transaction recovery.

Column	Datatype	Description
STATE	VARCHAR2(11)	State of the server (IDLE or RECOVERING)
UNDOBLOCKSDONE	NUMBER	Number of undo blocks done so far
PID	NUMBER	Process ID
XID	RAW(8)	Transaction ID
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.233 V$FAST_START_TRANSACTIONS

V$FAST_START_TRANSACTIONS displays information about the progress of the transactions that Oracle is recovering.

This view displays only transactions recovered in parallel. Recovery progress for serial transactions is not displayed.

Column	Datatype	Description
USN	NUMBER	Undo segment number of the transaction
SLT	NUMBER	Slot within the rollback segment
SEQ	NUMBER	Incarnation number of the slot

Column	Datatype	Description
STATE	VARCHAR2(16)	State of the transaction (may be TO BE RECOVERED, RECOVERED, or RECOVERING)
UNDOBLOCKSDONE	NUMBER	Number of undo blocks completed on the transaction
UNDOBLOCKSTOTAL	NUMBER	Total number of undo blocks that need recovery
PID	NUMBER	ID of the current server it has been assigned to
CPUTIME	NUMBER	Time for which recovery has progressed (in seconds)
PARENTUSN	NUMBER	Undo segment number of the parent transaction in PDML
PARENTSLT	NUMBER	Slot of the parent transaction in PDML
PARENTSEQ	NUMBER	Sequence number of the parent transaction in PDML
XID	RAW(8)	Transaction ID
PXID	RAW(8)	Parent transaction ID
RCVSERVERS	NUMBER	Number of servers used in the last recovery
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.234 V$FILE_CACHE_TRANSFER

V$FILE_CACHE_TRANSFER is deprecated. The information that was provided in this view is now provided in the V$INSTANCE_CACHE_TRANSFER and V$SEGMENT_STATISTICS views.

Column	Datatype	Description
FILE_NUMBER	NUMBER	Number of the data file
X_2_NULL	NUMBER	Number of blocks with Exclusive-to-NULL conversions; always 0
X_2_NULL_FORCED_WRITE	NUMBER	Number of Exclusive-to-NULL forced writes; always 0
X_2_NULL_FORCED_STALE	NUMBER	Number of Exclusive-to-NULL blocks converted to CR; always 0
X_2_S	NUMBER	Number of blocks with Exclusive-to-Shared conversions; always 0
X_2_S_FORCED_WRITE	NUMBER	Number of Exclusive-to-Shared forced writes; always 0
S_2_NULL	NUMBER	Number of blocks with Shared-to-NULL conversions; always 0
S_2_NULL_FORCED_STALE	NUMBER	Number of Shared-to-NULL blocks converted to CR; always 0
RBR	NUMBER	Number of reuse blocks cross-instance calls; always 0
RBR_FORCED_WRITE	NUMBER	Number of blocks written due to reuse blocks cross-instance calls; always 0
RBR_FORCED_STALE	NUMBER	Number of blocks marked as flushed due to reuse blocks cross-instance calls; always 0
NULL_2_X	NUMBER	Number of blocks with NULL-to-Exclusive conversions; always 0
S_2_X	NUMBER	Number of blocks with Shared-to-Exclusive conversions; always 0

Column	Datatype	Description
NULL_2_S	NUMBER	Number of blocks with NULL-to-Shared conversions; always 0
CR_TRANSFERS	NUMBER	Number of CR blocks received; always 0
CUR_TRANSFERS	NUMBER	Number of current blocks received; always 0
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$INSTANCE_CACHE_TRANSFER"
- "V$SEGMENT_STATISTICS"

8.235 V$FILE_HISTOGRAM

V$FILE_HISTOGRAM displays a histogram of all synchronous single block reads on a per-file basis (for data files). The histogram has buckets of time intervals from < 1 ms, < 2 ms, < 4 ms, < 8 ms, ... < 2^{21} ms, < 2^{22} ms, and >= 2^{22} ms.

The histogram will not be filled unless the STATISTICS_LEVEL initialization parameter is set to ALL.

Column	Datatype	Description
FILE#	NUMBER	File number
SINGLEBLKRDTIM_MILLI	NUMBER	Amount of time the bucket represents (in milliseconds). If the duration = *num*, then this column represents waits of duration < *num* that are not included in any smaller bucket.
SINGLEBLKRDS	NUMBER	Number of waits of the duration belonging to the bucket of the histogram
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.236 V$FILEMETRIC

V$FILEMETRIC displays values of file metrics for the most recent 10-minute interval. A history of the last one hour will be kept in the system.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
FILE_ID	NUMBER	File number
CREATION_TIME	NUMBER	Timestamp of the file creation
AVERAGE_READ_TIME	NUMBER	Average file read time (in hundredths of a second)
AVERAGE_WRITE_TIME	NUMBER	Average file write time (in hundredths of a second)
PHYSICAL_READS	NUMBER	Number of physical reads
PHYSICAL_WRITES	NUMBER	Number of physical writes
PHYSICAL_BLOCK_READS	NUMBER	Number of physical block reads
PHYSICAL_BLOCK_WRITES	NUMBER	Number of physical block writes
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.237 V$FILEMETRIC_HISTORY

V$FILEMETRIC_HISTORY displays values of file metrics for all intervals in the last one hour.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
FILE_ID	NUMBER	File number
CREATION_TIME	NUMBER	Timestamp of the file creation
AVERAGE_READ_TIME	NUMBER	Average file read time (in hundredths of a second)
AVERAGE_WRITE_TIME	NUMBER	Average file write time (in hundredths of a second)
PHYSICAL_READS	NUMBER	Number of physical reads
PHYSICAL_WRITES	NUMBER	Number of physical writes
PHYSICAL_BLOCK_READS	NUMBER	Number of physical block reads
PHYSICAL_BLOCK_WRITES	NUMBER	Number of physical block writes

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.238 V$FILESPACE_USAGE

V$FILESPACE_USAGE summarizes space allocation information of each data file and temp file.

Column	Datatype	Description
TABLESPACE_ID	NUMBER	ID of the tablespace to which the file belongs
RFNO	NUMBER	Relative file number of the file
ALLOCATED_SPACE	NUMBER	Total allocated space in the file
FILE_SIZE	NUMBER	Current file size
FILE_MAXSIZE	NUMBER	Maximum file size
CHANGESCN_BASE	NUMBER	SCN base of the last change to the file
CHANGESCN_WRAP	NUMBER	SCN wrap of the last change to the file
CHANGESCN8	NUMBER	The 8–byte representation of the SCN at which the last change happened to the file
FLAG	NUMBER	Flags for file attributes
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.239 V$FILESTAT

V$FILESTAT displays the number of physical reads and writes done and the total number of single-block and multiblock I/Os done at file level.

As of Oracle Database 10g Release 2 (10.2), this view also includes reads done by RMAN processes for backup operations.

Column	Datatype	Description
FILE#	NUMBER	Number of the file
PHYRDS	NUMBER	Number of physical reads done
PHYWRTS	NUMBER	Number of times DBWR is required to write
PHYBLKRD	NUMBER	Number of physical blocks read

Column	Datatype	Description
OPTIMIZED_PHYBLKRD	NUMBER	Number of physical reads from Database Smart Flash Cache blocks
PHYBLKWRT	NUMBER	Number of blocks written to disk, which may be the same as PHYWRTS if all writes are single blocks
SINGLEBLKRDS	NUMBER	Number of single block reads
READTIM	NUMBER	Time (in hundredths of a second) spent doing reads if the TIMED_STATISTICS parameter is true; 0 if false
WRITETIM	NUMBER	Time (in hundredths of a second) spent doing writes if the TIMED_STATISTICS parameter is true; 0 if false
SINGLEBLKRDTIM	NUMBER	Cumulative single block read time (in hundredths of a second)
AVGIOTIM	NUMBER	Average time (in hundredths of a second) spent on I/O, if the TIMED_STATISTICS parameter is true; 0 if false
LSTIOTIM	NUMBER	Time (in hundredths of a second) spent doing the last I/O, if the TIMED_STATISTICS parameter is true; 0 if false
MINIOTIM	NUMBER	Minimum time (in hundredths of a second) spent on a single I/O, if the TIMED_STATISTICS parameter is true; 0 if false
MAXIORTM	NUMBER	Maximum time (in hundredths of a second) spent doing a single read, if the TIMED_STATISTICS parameter is true; 0 if false
MAXIOWTM	NUMBER	Maximum time (in hundredths of a second) spent doing a single write, if the TIMED_STATISTICS parameter is true; 0 if false
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.240 V$FIXED_TABLE

V$FIXED_TABLE displays all dynamic performance tables, views, and derived tables in the database.

Some V$ tables (for example, V$ROLLNAME) refer to real tables and are therefore not listed.

Column	Datatype	Description
NAME	VARCHAR2(128)	Name of the object
OBJECT_ID	NUMBER	Identifier of the fixed object
TYPE	VARCHAR2(5)	Object type (TABLE | VIEW)
TABLE_NUM	NUMBER	Number that identifies the dynamic performance table if it is of type TABLE

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.241 V$FIXED_VIEW_DEFINITION

V$FIXED_VIEW_DEFINITION contains the definitions of all the fixed views (views beginning with V$).

Use this table with caution. Oracle tries to keep the behavior of fixed views the same from release to release, but the definitions of the fixed views can change without notice. Use these definitions to optimize your queries by using indexed columns of the dynamic performance tables.

Column	Datatype	Description
VIEW_NAME	VARCHAR2(128)	Name of the fixed view
VIEW_DEFINITION	VARCHAR2(4000)	Definition of the fixed view
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.242 V$FLASHBACK_DATABASE_LOG

V$FLASHBACK_DATABASE_LOG displays information about the flashback data. Use this view to help estimate the amount of flashback space required for the current workload.

Column	Datatype	Description
OLDEST_FLASHBACK_SCN	NUMBER	Lowest system change number (SCN) in the flashback data, for any incarnation
OLDEST_FLASHBACK_TIME	DATE	Time of the lowest SCN in the flashback data, for any incarnation
RETENTION_TARGET	NUMBER	Target retention time (in minutes)
FLASHBACK_SIZE	NUMBER	Current size (in bytes) of the flashback data
ESTIMATED_FLASHBACK_SIZE	NUMBER	Estimated size of flashback data needed (in bytes) for the current target retention

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.243 V$FLASHBACK_DATABASE_LOGFILE

V$FLASHBACK_DATABASE_LOGFILE displays information about the flashback log files.

Column	Datatype	Description
NAME	VARCHAR2(513)	Name of the log file
LOG#	NUMBER	Log file number
THREAD#	NUMBER	Log file thread number
SEQUENCE#	NUMBER	Log file sequence number
BYTES	NUMBER	Log file size (in bytes)
FIRST_CHANGE#	NUMBER	Lowest system change number (SCN) in the log file
FIRST_TIME	DATE	Time of the first SCN in the log file
TYPE	VARCHAR2(9)	Log type: • NORMAL • RESERVED • FREE • TO DELETE
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.244 V$FLASHBACK_DATABASE_STAT

V$FLASHBACK_DATABASE_STAT displays statistics for monitoring the I/O overhead of logging flashback data. This view also displays the estimated flashback space needed based on previous workloads.

Column	Datatype	Description
BEGIN_TIME	DATE	Beginning of the time interval
END_TIME	DATE	End of the time interval
FLASHBACK_DATA	NUMBER	Number of bytes of flashback data written during the interval
DB_DATA	NUMBER	Number of bytes of database data read and written during the interval

Column	Datatype	Description
REDO_DATA	NUMBER	Number of bytes of redo data written during the interval
ESTIMATED_FLASHBACK_SIZE	NUMBER	Value of ESTIMATED_FLASHBACK_SIZE in V$FLASHBACK_DATABASE_LOG at the end of the time interval
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.245 V$FLASHBACK_LOG_DEST

V$FLASHBACK_LOG_DEST displays information about the disk quota and current disk usage for the flashback database log storage area.

Column	Datatype	Description
NAME	VARCHAR2(513)	Location of the flashback database log storage area This value is specified by the DB_FLASHBACK_LOG_DEST initialization parameter.
SPACE_LIMIT	NUMBER	Maximum amount of disk space (in bytes) that the database can use for the flashback database log storage area This is the value specified by the DB_FLASHBACK_LOG_DEST_SIZE initialization parameter.
SPACE_USED	NUMBER	Amount of disk space (in bytes) currently used by flashback database log files in the flashback database log storage area
NUMBER_OF_FILES	NUMBER	Number of files currently in the flashback database log storage area
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

This view is available starting with Oracle Database 23ai.

> - "DB_FLASHBACK_LOG_DEST_SIZE"

8.246 V$FLASHBACK_TXN_GRAPH

V$FLASHBACK_TXN_GRAPH displays a tabular representation of the transaction dependency graph. For each dependency edge, there could be multiple rows, one for each conflicting operation.

This view is relevant AFTER a compensating transaction has been started through the DBMS_FLASHBACK.TRANSACTION_BACKOUT() set of functions, and is no longer relevant once the compensating transaction is either committed or rolled back. It also provides a tabular representation of the undo SQL that is not available through the CLOB XML construct in the DBA_FLASHBACK_TXN_REPORT view.

Column	Datatype	Description
COMPENSATING_XID	RAW(8)	Transaction ID of the compensating transaction
COMPENSATING_TXN_NAME	VARCHAR2(255)	Name of the compensating transaction
XID	RAW(8)	Transaction ID of a relevant transaction found in memory
TXN_NAME	VARCHAR2(255)	Name of the transaction with XID as the transaction ID; NULL if none
PARENT_XID	RAW(8)	Parent transaction ID (for a PDML transaction)
INTERESTING	NUMBER	If the transaction is in the transaction dependency graph
ORIGINAL	NUMBER	If the transaction is part of the input set provided
BACKOUT_SEQ	NUMBER	Order in which the transaction has been backed out
NUM_PREDS	NUMBER	Number of predecessors of the transaction specified by XID in the transaction graph
NUM_SUCCS	NUMBER	Number of successors of the transaction specified by XID in the transaction graph
DEP_XID	RAW(8)	One dependent transaction ID of the transaction specified by XID. This is a particular child of XID.
DEP_TXN_NAME	VARCHAR2(255)	Transaction name, if any, for the transaction specified by DEP_XID
TXN_CONF_SQL_ID	NUMBER	SQL ID of undo SQL executed in the context of XID which conflicts with the dependent transaction
DEP_TXN_CONF_SQL_ID	NUMBER	SQL ID of undo SQL executed in the context of DEP_XID which conflicts with XID
CONFLICT_TYPE	VARCHAR2(32)	The type of conflict that the conflict resolution method is used to resolve: delete, uniqueness, or update
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_FLASHBACK.TRANSACTION_BACKOUT` procedures

8.247 V$FLASHBACK_TXN_MODS

`V$FLASHBACK_TXN_MODS` displays the individual modifications of all the transactions in memory.

This view is relevant AFTER a compensating transaction has been started through the `DBMS_FLASHBACK.TRANSACTION_BACKOUT()` set of functions, and is no longer relevant once the compensating transaction is either committed or rolled back. It also provides a tabular representation of the undo SQL that is not available through the CLOB XML construct in the `DBA_FLASHBACK_TXN_REPORT` view.

Column	Datatype	Description
COMPENSATING_XID	RAW(8)	Transaction ID of the compensating transaction
COMPENSATING_TXN_NAME	VARCHAR2(255)	Name of the compensating transaction
XID	RAW(8)	Transaction ID of a relevant transaction found in memory
TXN_NAME	VARCHAR2(255)	Name of the transaction with `XID` as the transaction ID; NULL if none
PARENT_XID	RAW(8)	Parent transaction ID (for a PDML transaction)
INTERESTING	NUMBER	If the transaction is in the transaction dependency graph
ORIGINAL	NUMBER	If the transaction is part of the input set provided
BACKOUT_SEQ	NUMBER	Order in which the transaction has been backed out
UNDO_SQL	VARCHAR2(4000)	Undo SQL for the modification
UNDO_SQL_SQN	NUMBER	Order in which the given SQL has been executed to back out this transaction
UNDO_SQL_SUB_SQN	NUMBER	If the undo SQL is greater than 4000 bytes, then a sequence number, starting from `1`, of a 4000-byte division of the undo SQL
BACKOUT_SQL_ID	NUMBER	SQL ID of the undo SQL (used only for this compensating transaction)
OPERATION	VARCHAR2(128)	Operation (such as insert/update/delete) performed by the forward-going operation
BACKEDOUT	NUMBER	Indicates whether the transaction has been backed out as of now
CONFLICT_MOD	NUMBER	If the concerned modification is causing a conflict
MODS_PER_LCR	NUMBER	Sometimes an LCR could cause multiple modifications (for example, an update of an IOT could actually be a delete followed by an insert)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> - "DBA_FLASHBACK_TXN_REPORT"
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_FLASHBACK.TRANSACTION_BACKOUT` procedures

8.248 V$FLASHFILESTAT

`V$FLASHFILESTAT` displays statistics about Database Smart Flash Cache.

By taking snapshots of `SINGLEBLKRDS` and `SINGLEBLKRDTIM_MICRO`, you can easily calculate the average latency of all the flash files in a given time period

Column	Datatype	Description
`FLASHFILE#`	`NUMBER`	The file number of the flash file
`NAME`	`VARCHAR2(513)`	Name and path of the flash file
`BYTES`	`NUMBER`	Size of the flash file, in bytes
`ENABLED`	`NUMBER`	Indicates whether this flash file is enabled or not
`SINGLEBLKRDS`	`NUMBER`	Number of reads to the flash file
`SINGLEBLKRDTIM_MICRO`	`NUMBER`	Cumulative latency of reading blocks from this particular flash file/ device, in microseconds
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> *Oracle Database Administrator's Guide* for more information about configuring Database Smart Flash Cache

8.249 V$FOREIGN_ARCHIVED_LOG

`V$FOREIGN_ARCHIVED_LOG` can be queried on a logical standby database to find out the list of foreign archived logs received by a database.

No rows are returned for this view on a physical standby database.

Column	Datatype	Description
`RECID`	`NUMBER`	Archived log record ID
`STAMP`	`NUMBER`	Archived log record stamp

Column	Datatype	Description
NAME	VARCHAR2(513)	Archived log file name. If set to NULL, either the log file was cleared before it was archived or an RMAN BACKUP command with the delete input option was executed to back up archivelog all (RMAN> backup archivelog all delete input;).
DEST_ID	NUMBER	Original destination from which the archive log was generated. The value is 0 if the destination identifier is not available
THREAD#	NUMBER	Redo thread number
SEQUENCE#	NUMBER	Redo log sequence number
RESETLOGS_CHANGE#	NUMBER	Resetlogs change number of the database when the log was written
RESETLOGS_TIME	DATE	Resetlogs time of the database when the log was written
RESETLOGS_ID	NUMBER	Resetlogs identifier associated with the archived redo log
FIRST_CHANGE#	NUMBER	First change number in the archived log
FIRST_TIME	DATE	Timestamp of the first change
NEXT_CHANGE#	NUMBER	First change in the next log
NEXT_TIME	DATE	Timestamp of the next change
BLOCKS	NUMBER	Size of the archived log (in blocks)
BLOCK_SIZE	NUMBER	Redo log block size. This is the logical block size of the archived log, which is the same as the logical block size of the online log from which the archived log was copied. The online log logical block size is a platform-specific value that is not adjustable by the user.
CREATOR	VARCHAR2(7)	Creator of the archive log: ARCH - Archiver process FGRD - Foreground process RMAN - Recovery Manager SRMN - RMAN at standby LGWR - Logwriter process
REGISTRAR	VARCHAR2(7)	Registrar of the entry: RFS - Remote File Server process ARCH - Archiver process FGRD - Foreground process RMAN - Recovery Manager SRMN - RMAN at standby LGWR - Logwriter process
ARCHIVED	VARCHAR2(3)	Indicates whether the online redo log was archived (YES) or whether RMAN only inspected the log and created a record for future application of redo logs during recovery (NO).
APPLIED	VARCHAR2(3)	Indicates whether the archivelog has been applied to its corresponding standby database (YES) or not (NO). The value is always NO for local destinations. This column is meaningful at the standby site for the ARCHIVED_LOG entries with REGISTRAR='RFS' (which means this log is shipped from the primary to the standby database). If REGISTRAR='RFS' and APPLIED is NO, then the log has arrived at the standby but has not yet been applied. If REGISTRAR='RFS' and APPLIED is YES, the log has arrived and been applied at the standby database. You can use this field to identify archivelogs that can be backed up and removed from disk.

Column	Datatype	Description
DELETED	VARCHAR2(3)	Indicates whether an RMAN DELETE command has physically deleted the archived log file from disk, as well as logically removing it from the control file of the target database and from the recovery catalog (YES) or not (NO)
STATUS	VARCHAR2(1)	Status of the archived log: A - Available D - Deleted U - Unavailable X - Expired
COMPLETION_TIME	DATE	Time when the archiving completed
DICTIONARY_BEGIN	VARCHAR2(3)	Indicates whether the log contains the start of a LogMiner dictionary (YES) or not (NO)
DICTIONARY_END	VARCHAR2(3)	Indicates whether the log contains the end of a LogMiner dictionary (YES) or not (NO)
END_OF_REDO	VARCHAR2(3)	Indicates whether the archived redo log contains the end of all redo information from the primary database () or not ()
ARCHIVAL_THREAD#	NUMBER	Redo thread number of the instance that performed the archival operation. This column differs from the THREAD# column only when a closed thread is archived by another instance.
IS_RECOVERY_DEST_FILE	VARCHAR2(3)	Indicates whether the file was created in the fast recovery area (YES) or not (NO)
COMPRESSED	VARCHAR2(3)	Reserved for internal use
FAL	VARCHAR2(3)	Indicates whether the archive log was generated as the result of a FAL request (YES) or not (NO)
END_OF_REDO_TYPE	VARCHAR2(10)	Possible values are as follows: SWITCHOVER - Shows archived redo log files that are produced at the end of a switchover TERMINAL - Shows archived redo log files produced after a failover RESETLOGS - Shows online redo log files archived on the primary database after an ALTER DATABASE OPEN RESETLOGS statement is issued ACTIVATION - Shows any log files archived on a physical standby database after an ALTER DATABASE ACTIVATE STANDBY DATABASE statement is issued "empty string" - Any empty string implies that the log is just a normal archival and was not archived due to any of the other events
SOURCE_DBID	NUMBER	Database ID of the source database that generated this archived log
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.250 V$FS_FAILOVER_OBSERVERS

V$FS_FAILOVER_OBSERVERS provides information about fast-start failover observers.

If you are querying on the primary database, this view returns three rows, each describing one observer. However, only a row having an non-empty value in column NAME corresponds to a started observer. If you are querying on a non-primary database, the behavior of this view is not defined.

Column	Datatype	Description
NAME	VARCHAR2(513)	The fast-start failover observer name
REGISTERED	VARCHAR2(4)	Indicates if this observer is registered (YES) or not (NO). Note that the observer is registered *only* if HOST is not NULL.
HOST	VARCHAR2(513)	The name of the host where this observer is running
ISMASTER	VARCHAR2(4)	Indicates if this observer is the master observer (YES) or not (NO)
TIME_SELECTED	TIMESTAMP(9)	Shows when this observer became master observer, if ISMASTER is YES; otherwise the following constant appears: 1990-01-01 00:00:00.00
PINGING_PRIMARY	VARCHAR2(4)	Possible values: • YES: Observer is currently connected to the primary database • NO: Observer is not connected to the primary database **Note**: This field is consistent throughout an Oracle Real Application Clusters (Oracle RAC) environment; that is, if the observer is connected to any instance of the primary database in the Oracle RAC environment, all instances will show a value of YES.
PINGING_TARGET	VARCHAR2(4)	Possible values: • YES: Observer is currently connected to the target standby database • NO: Observer is not connected to the target standby database **Note**: This field is consistent throughout an Oracle Real Application Clusters (Oracle RAC) environment; that is, if the observer is connected to any instance of the target standby database in the Oracle RAC environment, all instances will show a value of YES.
LAST_PING_PRIMARY	NUMBER	Amount of time (in seconds) since the observer last pinged the primary database
LAST_PING_TARGET	NUMBER	Amount of time (in seconds) since the observer last pinged the target standby database
LOG_FILE	VARCHAR2(513)	Full path to the observer log file
STATE_FILE	VARCHAR2(513)	Full path to the observer runtime data file
CURRENT_TIME	TIMESTAMP(9)	Date and time at which this view was queried
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.251 V$FS_FAILOVER_STATS

V$FS_FAILOVER_STATS displays statistics about fast-start failovers occurring on the system.

Column	Datatype	Description
LAST_FAILOVER_TIME	VARCHAR2(20)	Timestamp of the last fast-start failover
LAST_FAILOVER_REASON	VARCHAR2(255)	Reason for the last fast-start failover
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is deprecated in Oracle Database 23ai. Oracle recommends that you instead use the V$DG_BROKER_ROLE_CHANGE view. V$FS_FAILOVER_STATS displays one row with limited information about the most recent fast-start failover. The data is available in the primary database only, and is not persisted across database restarts. V$DG_BROKER_ROLE_CHANGE contains detailed information about the ten most recent role changes, including switchover, failover, and reinstate, across the Data Guard broker configuration, and provides richer information than V$FS_FAILOVER_STATS. See "V$DG_BROKER_ROLE_CHANGE" for more information.

8.252 V$FS_OBSERVER_HISTOGRAM

V$FS_OBSERVER_HISTOGRAM displays statistics that are based on the frequency of successful pings between the observer and primary database for different time intervals. The wait event in this histogram is the observer's wait until pings to the primary succeed.

The histogram displays only when there were ping failures between the observer and the primary database.

No rows are shown in this view for unregistered observers.

These statistics can be used to select an appropriate value for the FastStartFailoverThreshold configuration property for your environment.

Column	Datatype	Description
OBSERVER_NAME	VARCHAR2(513)	The Fast-Start Failover observer name
OBSERVER_HOST	VARCHAR2(513)	The name of the host where this observer is running

Column	Datatype	Description
WAIT_TIME	NUMBER	The time interval between a pair of successful observer pings (ping-pairs) to this instance. Note that the values in this column are the upper bound of the inter-ping interval samples represented by a given histogram bucket. If WAIT_TIME = *number*, then this column represents inter-ping intervals <= *number* that are not included in any smaller bucket. The value in this column is the time (in seconds) that a ping failure lasted.
WAIT_COUNT	NUMBER	The number of ping-pairs with an inter-ping interval that corresponds with this histogram bucket. If all pings have been successful so far, this column has a value of 0.
LAST_UPDATE_TIME	VARCHAR2(20)	The last time this row was updated
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Data Guard Broker for more information about the FastStartFailoverThreshold configuration property

Example

Assume that the following shows the status of observer's pings to the primary:

```
Ping time   Ping result
---------  -----------
1:00:00    SUCCESS
1:00:03    FAIL
1:00:06    FAIL
1:00:09    SUCCESS   => Wait time of 6 seconds
1:00:12    SUCCESS
1:00:15    FAIL
1:00:18    FAIL
1:00:21    SUCCESS   => Wait time of 6 seconds
1:00:24    SUCCESS
1:00:27    FAIL
1:00:30    SUCCESS   => Wait time of 3 seconds
```

These ping results will result in the histogram view below:

```
WAIT_TIME   WAIT_COUNT   LAST_UPDATE_TIME
  3         1            1:00:30

  6         2            1:00:21

  9         0
```

```
 12          0

...
```

In this case, the `FastStartFailoverThreshold` value should be set to larger than 6 because communication between the observer and the primary sometimes fails for 6 seconds.

8.253 V$GC_ELEMENT

`V$GC_ELEMENT` displays one entry for each global cache resource that is used by the buffer cache. The name of the global cache resource that corresponds to a lock element is {'BL', indx, class}. This is an Oracle Real Application Clusters view.

Column	Datatype	Description
GC_ELEMENT_ADDR	RAW(4 | 8)	Address of the lock element that contains the PCM lock that is covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.
INDX	NUMBER	Platform specific lock manager identifier
CLASS	NUMBER	Platform specific lock manager identifier
GC_ELEMENT_NAME	NUMBER	Name of the lock that contains the PCM lock that is covering the buffer
MODE_HELD	NUMBER	Platform dependent value for lock mode held; often: 3 = share; 5 = exclusive
BLOCK_COUNT	NUMBER	Number of blocks covered by PCM lock
RELEASING	NUMBER	Nonzero if PCM lock is being downgraded
ACQUIRING	NUMBER	Nonzero if PCM lock is being upgraded
WRITING	NUMBER	If the GC_ELEMENT is being written, the write status
RECOVERING	NUMBER	If the GC_ELEMENT is being recovered, the recovery status
LOCAL	NUMBER	Zero if the GC_ELEMENT is local, one if it is global
FLAGS	NUMBER	Process level flags for the lock element
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.254 V$GC_ELEMENTS_WITH_COLLISIONS

`V$GC_ELEMENTS_WITH_COLLISIONS` is deprecated. The information that was provided in this view is now provided in the `V$INSTANCE_CACHE_TRANSFER` and `V$SEGMENT_STATISTICS` views.

Column	Datatype	Description
GC_ELEMENT_ADDR	RAW(4 | 8)	Address of the lock element that contains the PCM lock covering the buffer. If more than one buffer has the same address, then these buffers are covered by the same PCM lock.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$INSTANCE_CACHE_TRANSFER"
- "V$SEGMENT_STATISTICS"

8.255 V$GCR_ACTIONS

V$GCR_ACTIONS displays information about the current status of the actions defined to the GCR component that runs under the LMHB background process to detect and mitigate potential issues in the cluster instances.

Column	Datatype	Description
ACTION_ID	NUMBER	Action identification number as used internally to refer to the metric
ACTION_NAME	VARCHAR2(40)	Name of the action
ENVIRONMENT	NUMBER	Environment that the action should run in: • 0: Nowhere (do not run) • 1: Oracle ASM instance only • 2: Oracle Database instance only • 3: Oracle ASM and Oracle Database instance • 4: Standby instance • 5: Oracle ASM and Standby instance • 6: Oracle Database and Standby instance • 7: Oracle Database, Oracle ASM, and Standby instance • 15: All instance types
FLAGS	NUMBER	Various flags describing the action. Used only by Oracle for diagnosis.
ACTIVE	VARCHAR2(9)	Whether the action is active or not: • ACTIVE: Action is active. • INACTIVE: Action is disabled.
STATUS_CHANGE_TIME	TIMESTAMP(6)	Time of last action change of status
LAST_RAN_ITERATION	NUMBER	Iteration of the last time the action ran
LAST_RAN_TIME	TIMESTAMP(6)	Time of last run

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.256 V$GCR_LOG

V$GCR_LOG provides information on the last 30 significant events that have occurred in GCR in the recent past.

Column	Datatype	Description
INST_ID	NUMBER	Instance identier
ITERATION	NUMBER	GCR internal iteration count
TIME	TIMESTAMP(6)	Timestamp of record
TYPE	VARCHAR2(14)	Type of record: • METRIC • METRIC ENABLE • METRIC DISABLE • GLOBAL METRIC • ACTION RAN • RESET RAN
DESCRIPTION	VARCHAR2(40)	Description of function
RESULT	VARCHAR2(7)	Result: • OK • FAIL
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data.

8.257 V$GCR_METRICS

V$GCR_METRICS displays information about the current status of the metrics defined to the GCR component that runs under the LMHB background process to detect and mitigate potential issues in the cluster instances.

Column	Datatype	Description
METRIC_ID	NUMBER	Metric identification number as used internally to refer to the metric

Column	Datatype	Description
METRIC_NAME	VARCHAR2(40)	Name of the metric
ENVIRONMENT	NUMBER	Environment that the metric should run in: • 0: Nowhere (do not run) • 1: Oracle ASM instance only • 2: Oracle Database instance only • 3: Oracle ASM and Oracle Database instance • 4: Standby instance • 5: Oracle ASM and Standby instance • 6: Oracle Database and Standby instance • 7: Oracle Database, Oracle ASM, and Standby instance • 15: All instance types
FREQUENCY	NUMBER	How often the metric runs, in seconds
SCOPE	NUMBER	The scope of sharing of the metric: • 0: The metric does not have associated data • 1: Global - shared with all other instances in the cluster • 2: Local - used only locally (not shared) • 4: Node Global - shared with other instances in the cluster on the same node only • 8: DB Only - Shared with other instances of the same database only
DATA_TYPE	VARCHAR2(7)	The type of the data associated with this metric: • 0: None • 1: Boolean • 2: Numeric • 3: Process
STATUS	VARCHAR2(9)	Indicates the status of the metric: • ACTIVE: Indicates that the metric is active. • INACTIVE: Indicates that the metric is turned off.
STATUS_CHANGE_TIME	TIMESTAMP(6)	Time of last metric change of status
LAST_RAN_ITERATION	NUMBER	Iteration of the last time the metric ran
LAST_RAN_TIME	TIMESTAMP(6)	Time of last run
LAST_PASS_ITERATION	NUMBER	Iteration of last time the metric passed
LAST_PASS_TIME	TIMESTAMP(6)	Time of last metric pass
TOTAL_PASSES	NUMBER	Total number of times the metric passed since start of LMHB
LAST_FAIL_ITERATION	NUMBER	Iteration of last time the metric failed
LAST_FAIL_TIME	TIMESTAMP(6)	Time of last metric failure
TOTAL_FAILS	NUMBER	Total number of times the metric has failed since start of LMHB
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.258 V$GCR_STATUS

V$GCR_STATUS provides information on the current GCR status, what metrics ran and their result. It records the last 100 events.

Column	Datatype	Description
INST_ID	NUMBER	Instance identifier
ITERATION	NUMBER	GCR internal iteration count
TIME	TIMESTAMP(6)	Timestamp of record
TYPE	VARCHAR2(14)	Type of record: • METRIC • GLOBAL METRIC • ACTION RAN • RESET RAN
DESCRIPTION	VARCHAR2(40)	Description of function
RESULT	VARCHAR2(7)	Result: • OK • FAIL
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data.

8.259 V$GCSHVMASTER_INFO

V$GCSHVMASTER_INFO describes the current and previous master instances and the number of re-masterings of Global Cache Service resources except those belonging to files mapped to a particular master.

Column	Datatype	Description
HV_ID	NUMBER	PCM hash value ID
CURRENT_MASTER	NUMBER	Master instance of this PCM hash value ID
PREVIOUS_MASTER	NUMBER	Previous master instance of this PCM hash value ID
REMASTER_CNT	NUMBER	Number of times this has been remastered
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.260 V$GCSPFMASTER_INFO

V$GCSPFMASTER_INFO describes the current and previous master instances and the number of re-masterings of Global Cache Service resources belonging to files mapped to instances.

Column	Datatype	Description
FILE_ID	NUMBER	File number
DATA_OBJECT_ID	NUMBER	Data object ID
GC_MASTERING_POLICY	VARCHAR2(11)	Data object type. The possible values are Affinity or Read mostly.
CURRENT_MASTER	NUMBER	Master instance of this file
PREVIOUS_MASTER	NUMBER	Previous master instance of this file
REMASTER_CNT	NUMBER	Number of times this has been remastered
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.261 V$GES_BLOCKING_ENQUEUE

V$GES_BLOCKING_ENQUEUE describes all locks currently known to lock manager that are being blocked or blocking others.

The output of this view is a subset of the output from V$GES_ENQUEUE. This is an Oracle Real Application Clusters view.

> **See Also:**
>
> "V$GES_ENQUEUE" for a description of all locks known to the lock manager

Column	Datatype	Description
HANDLE	RAW(4 | 8)	Lock pointer
GRANT_LEVEL	VARCHAR2(9)	Granted level of the lock
REQUEST_LEVEL	VARCHAR2(9)	Requested level of the lock
RESOURCE_NAME1	VARCHAR2(30)	Resource name for the lock
RESOURCE_NAME2	VARCHAR2(30)	Resource name for the lock
PID	NUMBER	Process identifier which holds the lock
TRANSACTION_ID0	NUMBER	Lower 4 bytes of the transaction identifier where the lock belongs to
TRANSACTION_ID1	NUMBER	Upper 4 bytes of the transaction identifier where the lock belongs to
GROUP_ID	NUMBER	Group identifier for the lock

Column	Datatype	Description
OPEN_OPT_DEADLOCK	NUMBER	1 if DEADLOCK open option is set, otherwise 0
OPEN_OPT_PERSISTENT	NUMBER	1 if PERSISTENT open option is set, otherwise 0
OPEN_OPT_PROCESS_OWNED	NUMBER	1 if PROCESS_OWNED open option is set, otherwise 0
OPEN_OPT_NO_XID	NUMBER	1 if NO_XID open option is set, otherwise 0
CONVERT_OPT_GETVALUE	NUMBER	1 if GETVALUE convert option is set, otherwise 0
CONVERT_OPT_PUTVALUE	NUMBER	1 if PUTVALUE convert option is set, otherwise 0
CONVERT_OPT_NOVALUE	NUMBER	1 if NOVALUE convert option is set, otherwise 0
CONVERT_OPT_DUBVALUE	NUMBER	1 if DUBVALUE convert option is set, otherwise 0
CONVERT_OPT_NOQUEUE	NUMBER	1 if NOQUEUE convert option is set, otherwise 0
CONVERT_OPT_EXPRESS	NUMBER	1 if EXPRESS convert option is set, otherwise 0
CONVERT_OPT_NODEADLOCKWAIT	NUMBER	1 if NODEADLOCKWAIT convert option is set, otherwise 0
CONVERT_OPT_NODEADLOCKBLOCK	NUMBER	1 if NODEADLOCKBLOCK convert option is set, otherwise 0
WHICH_QUEUE	NUMBER	Which queue the lock is currently located. 0 for NULL queue; 1 for GRANTED queue; 2 for CONVERT queue.
STATE	VARCHAR2(64)	State of lock as owner sees it
AST_EVENT0	NUMBER	Last AST event
OWNER_NODE	NUMBER	Node identifier
BLOCKED	NUMBER	1 if this lock request is blocked by others, otherwise 0
BLOCKER	NUMBER	1 if this lock is blocking others, otherwise 0
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.262 V$GES_CONVERT_LOCAL

V$GES_CONVERT_LOCAL displays statistics for local GES enqueue operations. This view records average convert times, count information, and timed statistics for global enqueue requests.

Column	Datatype	Description
INST_ID	NUMBER	ID of the instance

Column	Datatype	Description
CONVERT_TYPE	VARCHAR2(16)	Conversion type: • NULL -> SS - NULL mode to subshared mode • NULL -> SX - NULL mode to shared exclusive mode • NULL -> S - NULL mode to shared mode • NULL -> SSX - NULL mode to subshared exclusive mode • NULL -> X - NULL mode to exclusive mode • SS -> SX - Subshared mode to shared exclusive mode • SS -> S - Subshared mode to shared mode • SS -> SSX - Subshared mode to subshared exclusive mode • SS -> X - Subshared mode to exclusive mode • SX -> S - Shared exclusive mode to shared mode • SX -> SSX - Shared exclusive mode to subshared exclusive mode • SX -> X - Shared exclusive mode to exclusive mode • S -> SX - Shared mode to shared exclusive mode • S -> SSX - Shared mode to subshared exclusive mode • S -> X - Shared mode to exclusive mode • SSX -> X - Sub-shared exclusive mode to exclusive mode
AVERAGE_CONVERT_TIME	NUMBER	Average conversion time for each type of lock operation (in hundredths of a second)
CONVERT_COUNT	NUMBER	Number of operations
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.263 V$GES_CONVERT_REMOTE

V$GES_CONVERT_REMOTE displays values for remote GES enqueue conversions. This view records average convert times, count information, and timed statistics for global enqueue requests.

Column	Datatype	Description
INST_ID	NUMBER	ID of the instance

Column	Datatype	Description
CONVERT_TYPE	VARCHAR2(16)	Conversion type: • NULL -> SS - NULL mode to subshared mode • NULL -> SX - NULL mode to shared exclusive mode • NULL -> S - NULL mode to shared mode • NULL -> SSX - NULL mode to subshared exclusive mode • NULL -> X - NULL mode to exclusive mode • SS -> SX - Subshared mode to shared exclusive mode • SS -> S - Subshared mode to shared mode • SS -> SSX - Subshared mode to subshared exclusive mode • SS -> X - Subshared mode to exclusive mode • SX -> S - Shared exclusive mode to shared mode • SX -> SSX - Shared exclusive mode to subshared exclusive mode • SX -> X - Shared exclusive mode to exclusive mode • S -> SX - Shared mode to shared exclusive mode • S -> SSX - Shared mode to subshared exclusive mode • S -> X - Shared mode to exclusive mode • SSX -> X - Sub-shared exclusive mode to exclusive mode
AVERAGE_CONVERT_TIME	NUMBER	Average conversion time for each type of lock operation (in hundredths of a second)
CONVERT_COUNT	NUMBER	Number of operations
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.264 V$GES_ENQUEUE

V$GES_ENQUEUE describes all locks currently known to lock manager. This is an Oracle Real Application Clusters view.

> **See Also:**
>
> "V$GES_BLOCKING_ENQUEUE" for a description of all such locks that are currently blocking or being blocked

Column	Datatype	Description
HANDLE	RAW(4 | 8)	Lock pointer
GRANT_LEVEL	VARCHAR2(9)	Granted level of the lock
REQUEST_LEVEL	VARCHAR2(9)	Requested level of the lock
RESOURCE_NAME1	VARCHAR2(30)	Resource name for the lock
RESOURCE_NAME2	VARCHAR2(30)	Resource name for the lock

Column	Datatype	Description
PID	NUMBER	Process identifier which holds the lock
TRANSACTION_ID0	NUMBER	Lower 4 bytes of the transaction identifier to which the lock belongs
TRANSACTION_ID1	NUMBER	Upper 4 bytes of the transaction identifier to which the lock belongs
GROUP_ID	NUMBER	Group identifier for the lock
OPEN_OPT_DEADLOCK	NUMBER	1 if DEADLOCK open option is set, otherwise 0
OPEN_OPT_PERSISTENT	NUMBER	1 if PERSISTENT open option is set, otherwise 0
OPEN_OPT_PROCESS_OWNED	NUMBER	1 if PROCESS_OWNED open option is set, otherwise 0
OPEN_OPT_NO_XID	NUMBER	1 if NO_XID open option is set, otherwise 0
CONVERT_OPT_GETVALUE	NUMBER	1 if GETVALUE convert option is set, otherwise 0
CONVERT_OPT_PUTVALUE	NUMBER	1 if PUTVALUE convert option is set, otherwise 0
CONVERT_OPT_NOVALUE	NUMBER	1 if NOVALUE convert option is set, otherwise 0
CONVERT_OPT_DUBVALUE	NUMBER	1 if DUBVALUE convert option is set, otherwise 0
CONVERT_OPT_NOQUEUE	NUMBER	1 if NOQUEUE convert option is set, otherwise 0
CONVERT_OPT_EXPRESS	NUMBER	1 if EXPRESS convert option is set, otherwise 0
CONVERT_OPT_NODEADLOCKWAIT	NUMBER	1 if NODEADLOCKWAIT convert option is set, otherwise 0
CONVERT_OPT_NODEADLOCKBLOCK	NUMBER	1 if NODEADLOCKBLOCK convert option is set, otherwise 0
WHICH_QUEUE	NUMBER	Which queue the lock is currently located. 0 for NULL queue; 1 for GRANTED queue; 2 for CONVERT queue.
STATE	VARCHAR2(64)	State of the lock as the owner sees it
AST_EVENT0	NUMBER	Last AST event
OWNER_NODE	NUMBER	Node identifier
BLOCKED	NUMBER	1 if this lock request is blocked by others, otherwise 0
BLOCKER	NUMBER	1 if this lock is blocking others, otherwise 0
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.265 V$GES_LATCH

V$GES_LATCH is deprecated.

> **See Also:**
>
> "V$LATCH" for statistics about GES latch performance

8.266 V$GES_RESOURCE

V$GES_RESOURCE is an Oracle Real Application Clusters view. It displays information of all resources currently known to the lock manager.

Column	Datatype	Description
RESP	RAW(4 | 8)	Resource pointer
RESOURCE_NAME	VARCHAR2(30)	Resource name in hexadecimal for the lock
ON_CONVERT_Q	NUMBER	1 if on convert queue, 0 otherwise
ON_GRANT_Q	NUMBER	1 if on granted queue, 0 otherwise
PERSISTENT_RES	NUMBER	1 if it is a persistent resource, 0 otherwise
MASTER_NODE	NUMBER	Primary node ID
NEXT_CVT_LEVEL	VARCHAR2(9)	Next lock level to convert on global convert queue
VALUE_BLK_STATE	VARCHAR2(32)	State of the value block
VALUE_BLK	VARCHAR2(64)	First 64 bytes of the value block
CACHE_LEVEL	NUMBER	Level at which the resource is cached (0, 1, or 2; 255 if not on cache)
PDBSCOPE	NUMBER	Indicates whether an enqueue is PDB-scoped (1) or not (0)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.267 V$GES_STATISTICS

V$GES_STATISTICS displays miscellaneous GES statistics.

Column	Datatype	Description
STATISTIC#	NUMBER	Statistic number
NAME	VARCHAR2(38)	Name of the statistic
VALUE	NUMBER	Value associated with the statistic
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.268 V$GG_APPLY_COORDINATOR

V$GG_APPLY_COORDINATOR displays information about each GoldenGate apply process coordinator.

The coordinator for an apply process gets transactions from the apply process reader and passes them to apply servers. An apply process coordinator is a subcomponent of an apply process used by Oracle GoldenGate Integrated Replicat.

Column	Datatype	Description
SID	NUMBER	Session ID of the coordinator's session
SERIAL#	NUMBER	Serial number of the coordinator's session
STATE	VARCHAR2(21)	State of the coordinator: • INITIALIZING - Starting up • IDLE - Performing no work • APPLYING - Passing transactions to apply servers • SHUTTING DOWN CLEANLY - Stopping without an error • ABORTING - Stopping because of an apply error
APPLY#	NUMBER	Apply process number. An apply process coordinator is an Oracle background process, prefixed by ap.
APPLY_NAME	VARCHAR2(128)	Name of the apply process
TOTAL_APPLIED	NUMBER	Total number of transactions applied by the apply process since the apply process was last started
TOTAL_WAIT_DEPS	NUMBER	Number of times since the apply process was last started that an apply server waited to apply a logical change record (LCR) in a transaction until another apply server applied a transaction because of a dependency between the transactions
TOTAL_WAIT_COMMITS	NUMBER	Number of times since the apply process was last started that an apply server waited to commit a transaction until another apply server committed a transaction to serialize commits
TOTAL_ADMIN	NUMBER	Number of administrative jobs issued since the apply process was last started
TOTAL_ASSIGNED	NUMBER	Number of transactions assigned to apply servers since the apply process was last started
TOTAL_RECEIVED	NUMBER	Total number of transactions received by the coordinator process since the apply process was last started
TOTAL_IGNORED	NUMBER	Number of transactions which were received by the coordinator but were ignored because they had been previously applied
TOTAL_ROLLBACKS	NUMBER	Number of transactions which were rolled back due to unexpected contention
TOTAL_ERRORS	NUMBER	Number of transactions applied by the apply process that resulted in an apply error since the apply process was last started
UNASSIGNED_COMPLETE_TXNS	NUMBER	Total number of complete transactions that the coordinator has not assigned to any apply servers
LWM_TIME	DATE	Time when the message with the lowest message number was recorded. The creation time of the message with the lowest message number was also recorded at this time.

Column	Datatype	Description
LWM_MESSAGE_NUMBER	NUMBER	Number of the message corresponding to the low watermark. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number also may have been applied.
LWM_MESSAGE_CREATE_TIME	DATE	For captured messages, creation time at the source database of the message corresponding to the low watermark. For user-enqueued messages, time when the message corresponding to the low watermark was enqueued into the queue at the local database.
HWM_TIME	DATE	Time when the message with the highest message number was recorded. The creation time of the message with the highest message number was also recorded at this time.
HWM_MESSAGE_NUMBER	NUMBER	Number of the message corresponding to the high watermark. That is, no messages with a commit message number greater than this message number have been applied.
HWM_MESSAGE_CREATE_TIME	DATE	For captured messages, creation time at the source database of the message corresponding to the high watermark. For user-enqueued messages, time when the message corresponding to the high watermark was enqueued into the queue at the local database.
STARTUP_TIME	DATE	Time when the apply process was last started
ELAPSED_SCHEDULE_TIME	NUMBER	Time elapsed (in hundredths of a second) scheduling messages since the apply process was last started
ELAPSED_IDLE_TIME	NUMBER	Elapsed idle time
LWM_POSITION	RAW(64)	Position of the low-watermark LCR
HWM_POSITION	RAW(64)	Position of the high-watermark LCR
PROCESSED_MESSAGE_NUMBER	NUMBER	Message number currently processed by the apply coordinator
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
ACTIVE_SERVER_COUNT	NUMBER	Active server count

Note:

The ELAPSED_SCHEDULE_TIME column is only populated if the TIMED_STATISTICS initialization parameter is set to true, or if the STATISTICS_LEVEL initialization parameter is set to TYPICAL or ALL.

See Also:

- "TIMED_STATISTICS"
- "STATISTICS_LEVEL"

8.269 V$GG_APPLY_READER

V$GG_APPLY_READER displays information about each GoldenGate apply reader.

The apply reader is a process which reads (dequeues) messages from the queue, computes message dependencies, and builds transactions. It passes the transactions on to the coordinator in commit order for assignment to the apply servers. An apply reader is a subcomponent of an apply process used by Oracle GoldenGate Integrated Replicat.

Column	Datatype	Description
SID	NUMBER	Session ID of the reader's session
SERIAL#	NUMBER	Serial number of the reader's session
APPLY#	NUMBER	Apply process number. An apply process is an Oracle background process, prefixed by ap.
APPLY_NAME	VARCHAR2(128)	Name of the apply process
STATE	VARCHAR2(36)	Shows the state of the apply reader and the hash server. The possible values include: • INITIALIZING - Starting up • IDLE - Performing no work • DEQUEUE MESSAGES - Dequeuing messages from the queue • SCHEDULE MESSAGES - Computing dependencies between messages and assembling messages into transactions • SPILLING - Spilling unapplied messages from memory to hard disk • PAUSED - WAITING FOR DDL TO COMPLETE - Waiting for a data definition language (DDL) logical change record (LCR) to be applied The state of the apply reader is displayed first, followed by the state of the hash server. A semicolon separates the apply reader state from the hash server state.
TOTAL_MESSAGES_DEQUEUED	NUMBER	Total number of messages dequeued since the apply process was last started
TOTAL_MESSAGES_SPILLED	NUMBER	Number of messages spilled by the reader since the apply process was last started
DEQUEUE_TIME	DATE	Time when the last message was received
DEQUEUED_MESSAGE_CREATE_TIME	DATE	For captured messages, creation time at the source database of the last message received. For user-enqueued messages, time when the message was enqueued into the queue at the local database.
SGA_USED	NUMBER	Amount (in bytes) of SGA memory used by the apply process since it was last started
ELAPSED_DEQUEUE_TIME	NUMBER	Time elapsed (in hundredths of a second) dequeuing messages since the apply process was last started
ELAPSED_SCHEDULE_TIME	NUMBER	Time elapsed (in hundredths of a second) scheduling messages since the apply process was last started. Scheduling includes computing dependencies between messages and assembling messages into transactions.
ELAPSED_SPILL_TIME	NUMBER	Elapsed time (in hundredths of a second) spent spilling messages since the apply process was last started
SPILL_LWM_SCN	NUMBER	Spill low-watermark SCN

Column	Datatype	Description
PROXY_SID	NUMBER	When the apply process uses combined capture and apply, the session ID of the propagation receiver that is responsible for direct communication between capture and apply. If the apply process does not use combined capture and apply, then this column is 0.
PROXY_SERIAL	NUMBER	When the apply process uses combined capture and apply, the serial number of the propagation receiver that is responsible for direct communication between capture and apply. If the apply process does not use combined capture and apply, then this column is 0.
PROXY_SPID	VARCHAR2(12)	When the apply process uses combined capture and apply, the process identification number of the propagation receiver that is responsible for direct communication between capture and apply. If the apply process does not use combined capture and apply, then this column is 0.
BYTES_RECEIVED	NUMBER	When the apply process uses combined capture and apply, the number of bytes received by the apply process from the capture process since the apply process last started. If the apply process does not use combined capture and apply, then this column is not populated.
DEQUEUED_POSITION	RAW(64)	Dequeued position. This column is populated only for an apply process that is functioning as a GoldenGate inbound server.
SPILL_LWM_POSITION	RAW(64)	Spill low-watermark position. This column is populated only for an apply process that is functioning as a GoldenGate inbound server.
OLDEST_TRANSACTION_ID	VARCHAR2(128)	Oldest transaction ID
TOTAL_LCRS_WITH_DEP	NUMBER	Total number of LCRs with row-level dependencies since the apply process last started
TOTAL_LCRS_WITH_WMDEP	NUMBER	Total number of LCRs with watermark dependencies since the apply process last started. A watermark dependency occurs when an apply process must wait until the apply process's low watermark reaches a particular threshold.
TOTAL_IN_MEMORY_LCRS	NUMBER	Total number of LCRs currently in memory
SGA_ALLOCATED	NUMBER	The total amount of shared memory (in bytes) allocated from the GoldenGate pool for the apply process since the apply process last started
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

The ELAPSED_SCHEDULE_TIME column is only populated if the TIMED_STATISTICS initialization parameter is set to true, or if the STATISTICS_LEVEL initialization parameter is set to TYPICAL or ALL.

> **See Also:**
>
> - "TIMED_STATISTICS"
> - "STATISTICS_LEVEL"

8.270 V$GG_APPLY_RECEIVER

V$GG_APPLY_RECEIVER displays information about the message receiver of the Replicat process.

The values are reset to zero when the database (or instance in an Oracle Real Application Clusters (Oracle RAC) environment) restarts and when the Replicat process is stopped.

Column	Datatype	Description
SID	NUMBER	Session ID of the apply receiver
SERIAL#	NUMBER	Serial number of the apply receiver
APPLY_NAME	VARCHAR2(128)	Name of the apply process
STARTUP_TIME	DATE	Startup time of the apply process
SOURCE_DATABASE_NAME	VARCHAR2(128)	Name of the source database
ACKNOWLEDGEMENT	NUMBER	acknowledgment of the messages received by the receiver
LAST_RECEIVED_MSG	NUMBER	Last received message
TOTAL_MESSAGES_RECEIVED	NUMBER	Total number of messages received
TOTAL_AVAILABLE_MESSAGES	NUMBER	Number of available messages
STATE	VARCHAR2(46)	State of the apply receiver: • Initializing • Sending unapplied txns • Waiting for message from client • Receiving LCRs • Evaluating rules • Enqueueing LCRS • Waiting for memory • Waiting for apply to read • Waiting for message from Replicat • Waiting for Replicat flush request to complete • Waiting for Replicat commit to complete
LAST_RECEIVED_MSG_POSITION	VARCHAR2(64)	Last received message position
ACKNOWLEDGEMENT_POSITION	VARCHAR2(64)	acknowledgment position of the messages received by the receiver. Corresponds to ACKNOWLEDGEMENT, except the value is in position rather than SCN.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Column	Datatype	Description
OS_PROCESS_ID	VARCHAR2(12)	The OS process ID of the apply receiver process
CURRENT_POSITION	VARCHAR2(81)	The trail position of the current record processed by the apply receiver
TOTAL_TRANSACTIONS	NUMBER	The total number of transactions processed by the apply receiver
TOTAL_COMMITS	NUMBER	The total number of commits executed by the apply receiver
TOTAL_ERRORS	NUMBER	The total number of errors encountered by the apply receiver

8.271 V$GG_APPLY_SERVER

V$GG_APPLY_SERVER displays information about each GoldenGate apply server and its activities.

An apply server receives messages from the apply coordinator for an apply process. For each message received, an apply server either applies the message or sends the message to the appropriate apply handler. An apply server is a subcomponent of an apply process used by Oracle GoldenGate Integrated Replicat.

Column	Datatype	Description
SID	NUMBER	Session ID of the apply server's session
SERIAL#	NUMBER	Serial number of the apply server's session
APPLY#	NUMBER	Apply process number. An apply process is an Oracle background process, prefixed by ap.
APPLY_NAME	VARCHAR2(128)	Name of the apply process
SERVER_ID	NUMBER	Parallel execution server number of the apply server

Column	Datatype	Description
STATE	VARCHAR2(20)	State of the apply server: • INITIALIZING - Starting up • IDLE - Performing no work • RECORD LOW-WATERMARK - Performing an administrative job that maintains information about the apply progress, which is used in the ALL_APPLY_PROGRESS and DBA_APPLY_PROGRESS data dictionary views • ADD PARTITION - Performing an administrative job that adds a partition that is used for recording information about in-progress transactions • DROP PARTITION - Performing an administrative job that purges rows that were used to record information about in-progress transactions • EXECUTE TRANSACTION - Applying a transaction • WAIT COMMIT - Waiting to commit a transaction until all other transactions with a lower commit SCN are applied. This state is possible only if the COMMIT_SERIALIZATION apply process parameter is set to a value other than DEPENDENT_TRANSACTIONS and the PARALLELISM apply process parameter is set to a value greater than 1. • WAIT DEPENDENCY - Waiting to apply a logical change record (LCR) in a transaction until another transaction, on which it has a dependency, is applied. This state is possible only if the PARALLELISM apply process parameter is set to a value greater than 1. • ROLLBACK TRANSACTION - Rolling back a transaction • TRANSACTION CLEANUP - Cleaning up an applied transaction, which includes removing LCRs from the apply process's queue • WAIT FOR CLIENT - Waiting for an XStream client application to request more LCRs • WAIT FOR NEXT CHUNK - Waiting for the next set of LCRs for a large transaction
XIDUSN	NUMBER	Transaction ID undo segment number of the transaction currently being applied
XIDSLT	NUMBER	Transaction ID slot number of the transaction currently being applied
XIDSQN	NUMBER	Transaction ID sequence number of the transaction currently being applied
COMMITSCN	NUMBER	Commit system change number (SCN) of the transaction currently being applied
DEP_XIDUSN	NUMBER	Transaction ID undo segment number of a transaction on which the transaction being applied by this apply server depends
DEP_XIDSLT	NUMBER	Transaction ID slot number of a transaction on which the transaction being applied by this apply server depends
DEP_XIDSQN	NUMBER	Transaction ID sequence number of a transaction on which the transaction being applied by this apply server depends
DEP_COMMITSCN	NUMBER	Commit system change number (SCN) of the transaction on which this apply server depends
MESSAGE_SEQUENCE	NUMBER	Number of the current message being applied by the apply server. This value is reset to 1 at the beginning of each transaction.
TOTAL_ASSIGNED	NUMBER	Total number of transactions assigned to the apply server since the apply process was last started

Column	Datatype	Description
TOTAL_ADMIN	NUMBER	Total number of administrative jobs done by the apply server since the apply process was last started. See the STATE information in this view for the types of administrative jobs.
TOTAL_ROLLBACKS	NUMBER	Number of transactions assigned to this server which were rolled back
TOTAL_MESSAGES_APPLIED	NUMBER	Total number of messages applied by this apply server since the apply process was last started
APPLY_TIME	DATE	Time the last message was applied
ELAPSED_APPLY_TIME	NUMBER	Time elapsed (in hundredths of a second) applying messages since the apply process was last started
COMMIT_POSITION	RAW(64)	Commit position of the transaction. This column is populated only for an apply process that is functioning as a GoldenGate Integrated Replicat.
DEP_COMMIT_POSITION	RAW(64)	Commit position of the transaction the worker depends on. This column is populated only for an apply process that is functioning as a GoldenGate inbound server.
LAST_APPLY_POSITION	RAW(64)	For inbound servers, the position of the last message applied; for outbound servers, the position of the last message sent to the XStream client application. This column is populated only for an apply process that is functioning as a GoldenGate outbound server or inbound server.
TRANSACTION_ID	VARCHAR2(128)	Transaction ID that the worker is applying. This column is populated only for an apply process that is functioning as a GoldenGate inbound server.
DEP_TRANSACTION_ID	VARCHAR2(128)	Transaction ID of the transaction the worker depends on. This column is populated only for an apply process that is functioning as a GoldenGate inbound server.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
TOTAL_LCRS_RETRIED	NUMBER	Total number of LCRs retried by this server
LCR_RETRY_ITERATION	NUMBER	Retry iteration for this transaction by this server
TOTAL_TXNS_RETRIED	NUMBER	Total transactions retried by this server
TXN_RETRY_ITERATION	NUMBER	Retry iteration for this transaction by this server
TOTAL_TXNS_RECORDED	NUMBER	Total transactions recorded in error queue by this server

Note:

The ELAPSED_SCHEDULE_TIME column is only populated if the TIMED_STATISTICS initialization parameter is set to true, or if the STATISTICS_LEVEL initialization parameter is set to TYPICAL or ALL.

> **See Also:**
>
> - "TIMED_STATISTICS"
> - "STATISTICS_LEVEL"

8.272 V$GLOBAL_BLOCKED_LOCKS

V$GLOBAL_BLOCKED_LOCKS displays global blocked locks.

Column	Datatype	Description
ADDR	RAW(4 | 8)	Address of lock state object
KADDR	RAW(4 | 8)	Address of lock
SID	NUMBER	Identifier of session holding the lock (number)
TYPE	VARCHAR2(2)	Resource type (char)
ID1	NUMBER	Resource identifier #1 (number)
ID2	NUMBER	Resource identifier #2 (number)
LMODE	NUMBER	Lock mode held (number)
REQUEST	NUMBER	Lock mode requested (number)
CTIME	NUMBER	Time since current mode was granted
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.273 V$GLOBAL_TRANSACTION

V$GLOBAL_TRANSACTION displays information on the currently active global transactions.

Column	Datatype	Description
FORMATID	NUMBER	Format identifier of the global transaction
GLOBALID	RAW(64)	Global transaction identifier of the global transaction
BRANCHID	RAW(64)	Branch qualifier of the global transaction
BRANCHES	NUMBER	Total number of branches in the global transaction
REFCOUNT	NUMBER	Number of siblings for the global transaction (must be the same as branches)
PREPARECOUNT	NUMBER	Number of branches of the global transaction that have prepared

Column	Datatype	Description
STATE	VARCHAR2(38)	State of the branch of the global transaction: • ACTIVE • COLLECTING • FINALIZED • FAILED • RECOVERING • UNASSOCIATED • FORGOTTEN • READY FOR RECOVERY • NO-READONLY FAILED • SIBLING INFO WRITTEN • [ORACLE COORDINATED]ACTIVE • [ORACLE COORDINATED]COLLECTING • [ORACLE COORDINATED]FINALIZED • [ORACLE COORDINATED]FAILED • [ORACLE COORDINATED]RECOVERING • [ORACLE COORDINATED]UNASSOCIATED • [ORACLE COORDINATED]FORGOTTEN • [ORACLE COORDINATED]READY FOR RECOVERY • [ORACLE COORDINATED]NO-READONLY FAILED • [MULTINODE]ACTIVE • [MULTINODE]COLLECTING • [MULTINODE]FINALIZED • [MULTINODE]FAILED • [MULTINODE]RECOVERING • [MULTINODE]UNASSOCIATED • [MULTINODE]FORGOTTEN • [MULTINODE]READY FOR RECOVERY • [MULTINODE]NO-READONLY FAILED • [MULTINODE]SIBLING INFO WRITTEN • COMBINATION
FLAGS	NUMBER	The numeric representation of the state
COUPLING	VARCHAR2(15)	Indicates whether the branches are free (FREE), loosely coupled (LOOSELY COUPLED), or tightly coupled (TIGHTLY COUPLED)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.274 V$GOLDENGATE_CAPABILITIES

V$GOLDENGATE_CAPABILITIES displays information about the usage of various Oracle GoldenGate features, as well as database features used by Oracle GoldenGate.

Column	Datatype	Description
NAME	VARCHAR2(22)	Feature name. Possible values: • AUTOCDR • DBENCRYPTION • DDLTRIGGEROPTIMIZATION • DELETECASCADEHINT • GGSESSION • PROCREPLICATION • SUPPLEMENTALLOG • TRANSIENTDUPLICATE • TRIGGERSUPPRESSION
COUNT	NUMBER	Number of times the feature has been used since instance startup
LAST_USED	DATE	Date on which the feature was last used
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.275 V$GOLDENGATE_CAPTURE

V$GOLDENGATE_CAPTURE displays information about each capture process that sends LCRs to an Oracle GoldenGate outbound server.

Column	Datatype	Description
SID	NUMBER	Session identifier of the capture process
SERIAL#	NUMBER	Session serial number of the capture process session
CAPTURE#	NUMBER	Capture process number. A capture process is an Oracle background process prefixed by cp
CAPTURE_NAME	VARCHAR2(128)	Name of the capture process
LOGMINER_ID	NUMBER	Session ID of the Oracle LogMiner session associated with the capture process
STARTUP_TIME	DATE	Time when the capture process was last started

Column	Datatype	Description
STATE	VARCHAR2(589)	State of the capture process and state of the network. The two states are separated by a semicolon. The possible values are: • INITIALIZING - Starting up. • WAITING FOR DICTIONARY REDO - Waiting for redo log files containing the dictionary build related to the first SCN to be added to the capture process session. A capture process cannot begin to scan the redo log files until all of the log files containing the dictionary build have been added. • DICTIONARY INITIALIZATION - Processing a dictionary build. • MINING (PROCESSED SCN = *scn_value*) - Mining a dictionary build at the SCN *scn_value*. • LOADING (step *X* of *Y*) - Processing information from a dictionary build and currently at step *X* in a process that involves *Y* steps, where *X* and *Y* are numbers. • CAPTURING CHANGES - Scanning the redo log for changes that satisfy the capture process rule sets. • WAITING FOR REDO - Waiting for new redo log files to be added to the capture process session. The capture process has finished processing all of the redo log files added to its session. This state is possible if there is no activity at a source database. For a downstream capture process, this state is possible if the capture process is waiting for new log files to be added to its session. • EVALUATING RULE - Evaluating a change against a capture process rule set. • CREATING LCR - Converting a change into an LCR. • ENQUEUING MESSAGE - Enqueuing an LCR that satisfies the capture process rule sets into the capture process queue. • PAUSED FOR FLOW CONTROL - Unable to enqueue LCRs either because of low memory or because propagations and outbound servers are consuming messages slower than the capture process is creating them. This state indicates flow control that is used to reduce spilling of captured LCRs when propagation or apply has fallen behind or is unavailable. • WAITING FOR THE BUFFERED QUEUE TO SHRINK - Waiting for the buffered queue to change to a smaller size. The buffered queue shrinks when there is a memory limitation or when an administrator reduces its size. • WAITING FOR *n* SUBSCRIBER(S) INITIALIZING - Waiting for outbound servers that receive LCRs from the capture process to start, where *n* is the number of apply processes. • WAITING FOR TRANSACTION - Waiting for LogMiner to provide more transactions. • WAITING FOR INACTIVE DEQUEUERS - Waiting for the capture process's queue subscribers to start. The capture process stops enqueuing LCRs if there are no active subscribers to the queue. • SUSPENDED FOR AUTO SPLIT/MERGE - Waiting for a merge operation to complete. • SHUTTING DOWN - Stopping. • ABORTING - Terminating.
TOTAL_PREFILTER_DISCARDED	NUMBER	Total number of prefiltered messages discarded
TOTAL_PREFILTER_KEPT	NUMBER	Total number of prefiltered messages kept
TOTAL_PREFILTER_EVALUATIONS	NUMBER	Total number of prefilter evaluations

Column	Datatype	Description
TOTAL_MESSAGES_CAPTURED	NUMBER	Total number of redo entries passed by LogMiner to the capture process for detailed rule evaluation since the capture process last started. A capture process converts a redo entry into a message and performs detailed rule evaluation on the message when capture process prefiltering cannot discard the change.
CAPTURE_TIME	DATE	Time when the most recent message was captured
CAPTURE_MESSAGE_NUMBER	NUMBER	Number of the most recently captured message
CAPTURE_MESSAGE_CREATE_TIME	DATE	Creation time of the most recently captured message
TOTAL_MESSAGES_CREATED	NUMBER	Count associated with ELAPSED_LCR_TIME to calculate rate
TOTAL_FULL_EVALUATIONS	NUMBER	Count associated with ELAPSED_RULE_TIME to calculate rate
TOTAL_MESSAGES_ENQUEUED	NUMBER	Total number of messages enqueued since the capture process was last started
ENQUEUE_TIME	DATE	Time when the last message was enqueued
ENQUEUE_MESSAGE_NUMBER	NUMBER	Number of the last enqueued message
ENQUEUE_MESSAGE_CREATE_TIME	DATE	Creation time of the last enqueued message
AVAILABLE_MESSAGE_NUMBER	NUMBER	For local capture, the last redo SCN flushed to the log files. For downstream capture, the last SCN added to LogMiner through the archived redo log files.
AVAILABLE_MESSAGE_CREATE_TIME	DATE	For local capture, the time the SCN was written to the log file. For downstream capture, the time the most recent archived redo log file (containing the most recent SCN) was added to LogMiner.
ELAPSED_CAPTURE_TIME	NUMBER	Elapsed time (in hundredths of a second) scanning for changes in the redo log since the capture process was last started
ELAPSED_RULE_TIME	NUMBER	Elapsed time (in hundredths of a second) evaluating rules since the capture process was last started
ELAPSED_ENQUEUE_TIME	NUMBER	Elapsed time (in hundredths of a second) enqueuing messages since the capture process was last started
ELAPSED_LCR_TIME	NUMBER	Elapsed time (in hundredths of a second) creating LCRs since the capture process was last started
ELAPSED_REDO_WAIT_TIME	NUMBER	Elapsed time (in hundredths of a second) spent by the capture process in the WAITING FOR REDO state
ELAPSED_PAUSE_TIME	NUMBER	Elapsed flow control pause time (in hundredths of a second)
STATE_CHANGED_TIME	DATE	Time at which the state of the capture process changed
SGA_USED	NUMBER	The total amount of shared memory used (in bytes) by the capture process
SGA_ALLOCATED	NUMBER	The total amount of shared memory (in bytes) allocated from the Streams pool for the capture process
BYTES_OF_REDO_MINED	VARCHAR2(64)	The total amount of redo data mined (in bytes) since the capture process last started
SESSION_RESTART_SCN	VARCHAR2(64)	The SCN from which the capture process started mining redo data when it was last started

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
SPID	VARCHAR2(12)	Operating system process identifier of the capture process
EXTRACT_NAME	VARCHAR2(128)	Name of the extract process
SERVER_SID	NUMBER	Session ID of the capture server
SERVER_SERIAL#	NUMBER	Session serial number of the capture server
SERVER_SPID	VARCHAR2(12)	Operating system process identifier of the capture server
TOTAL_MESSAGES_SENT	NUMBER	Total number of LCRs sent by the capture process to the GoldenGate extract process since the last time the extract attached to the capture
SEND_TIME	DATE	Time the last LCR was sent by the capture process to the extract process
LAST_SENT_MESSAGE_NUMBER	NUMBER	Message number of the last LCR sent by the capture process to the extract process
LAST_SENT_MESSAGE_CREATE_TIME	DATE	Creation time at the source database of the last LCR sent by the capture process to the extract process
ELAPSED_SEND_TIME	NUMBER	Time elapsed (in hundredths of a second) sending LCRs to the extract process since the last time the extract process attached to the capture process
BYTES_SENT	NUMBER	Total number of bytes sent by the capture process to the extract process since the last time the extract process attached to the capture process

8.276 V$GOLDENGATE_MESSAGE_TRACKING

V$GOLDENGATE_MESSAGE_TRACKING displays information about LCRs tracked through the stream that are processed by Oracle GoldenGate components.

You can track an LCR through a stream using one of the following methods:

- Set the message_tracking_frequency apply process parameter to 1 or another relatively low value via the Oracle GoldenGate DBOPTIONS INTEGRATEDPARAMS parameter.
- Use the DBMS_XSTREAM_ADM.SET_MESSAGE_TRACKING procedure to specify a tracking label that becomes part of each LCR generated by the current session.

  When the actions parameter in the DBMS_XSTREAM_ADM.SET_MESSAGE_TRACKING procedure is set to DBMS_XSTREAM_ADM.ACTION_MEMORY, information about the LCRs is tracked in memory, and this view is populated with information about the LCRs. Currently, DBMS_XSTREAM_ADM.ACTION_MEMORY is the only valid setting for the actions parameter in the procedure.

Column	Datatype	Description
TRACKING_LABEL	VARCHAR2(128)	User-specified tracking label

Column	Datatype	Description
TAG	RAW(128)	First 128 bytes of the tag of the LCR
COMPONENT_NAME	VARCHAR2(128)	Name of the component that processed the LCR
COMPONENT_TYPE	VARCHAR2(128)	Type of the component that processed the LCR
ACTION	VARCHAR2(50)	Action performed on the LCR
ACTION_DETAILS	VARCHAR2(312)	Details of the action
TIMESTAMP	TIMESTAMP(9) WITH TIME ZONE	Time when the action was performed
MESSAGE_CREATION_TIME	DATE	Time when the message was created
MESSAGE_NUMBER	NUMBER	SCN of the message
TRACKING_ID	RAW(16)	Globally unique OID of the LCR
SOURCE_DATABASE_NAME	VARCHAR2(128)	Name of the source database
OBJECT_OWNER	VARCHAR2(128)	Owner of the object
OBJECT_NAME	VARCHAR2(128)	Name of the object
XID	VARCHAR2(128)	Transaction ID
COMMAND_TYPE	VARCHAR2(128)	Command type of the LCR
MESSAGE_POSITION	RAW(64)	Position of the message
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database PL/SQL Packages and Types Reference for more information about the DBMS_XSTREAM_ADM.SET_MESSAGE_TRACKING procedure

8.277 V$GOLDENGATE_PROCEDURE_STATS

V$GOLDENGATE_PROCEDURE_STATS displays procedural replication statistics processed by each Oracle GoldenGate apply server.

Column	Datatype	Description
APPLY_NAME	VARCHAR2(128)	Name of the apply process
SERVER_ID	NUMBER	Parallel apply server worker ID
PROCEDURE_OWNER	VARCHAR2(128)	Owner of the replicated procedure
PACKAGE_NAME	VARCHAR2(128)	Replicated procedure package
PROCEDURE_NAME	VARCHAR2(128)	Replicated procedure name
LAST_UPDATE	DATE	Time of the last update of the statistics

Column	Datatype	Description
TOTAL_EXECUTIONS	NUMBER	Number of executions of the procedure by this apply server
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.278 V$GOLDENGATE_TABLE_STATS

V$GOLDENGATE_TABLE_STATS displays table statistics for all the tables used by each Oracle GoldenGate apply server.

Column	Datatype	Description
APPLY_NAME	VARCHAR2(128)	Name of the apply process
SERVER_ID	NUMBER	Parallel apply server worker ID
SOURCE_TABLE_OWNER	VARCHAR2(128)	Source owner of the captured or replicated table
SOURCE_TABLE_NAME	VARCHAR2(128)	Source name of the captured or replicated table
DESTINATION_TABLE_OWNER	VARCHAR2(128)	Target owner of the captured or replicated table
DESTINATION_TABLE_NAME	VARCHAR2(30)	Target name of the captured or replicated table
LAST_UPDATE	DATE	Time of the last update of the statistics
TOTAL_INSERTS	NUMBER	Number of insert operations on this table processed by this apply server
TOTAL_UPDATES	NUMBER	Number of update operations on this table processed by this apply server
TOTAL_DELETES	NUMBER	Number of delete operations on this table processed by this apply server
INSERT_COLLISIONS	NUMBER	Number of insert collisions on this table encountered by this apply server
UPDATE_COLLISIONS	NUMBER	Number of update collisions on this table encountered by this apply server
DELETE_COLLISIONS	NUMBER	Number of delete collisions on this table encountered by this apply server
REPERROR_RECORDS	NUMBER	Number of change records that resulted in an error that were recorded on this table by this apply server
REPERROR_IGNORES	NUMBER	Number of change records that resulted in an error that were ignored on this table by this apply server
WAIT_DEPENDENCIES	NUMBER	Number of waits for this table due to dependency

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
CDR_INSERT_ROW_EXISTS	NUMBER	Number of conflicts where an insert gets an ORA-00001 error
CDR_UPDATE_ROW_EXISTS	NUMBER	Number of conflicts where an update gets an ORA-26786 error
CDR_UPDATE_ROW_MISSING	NUMBER	Number of conflicts where an update gets an ORA-26787 error
CDR_DELETE_ROW_EXISTS	NUMBER	Number of conflicts where a delete gets an ORA-26786 error
CDR_DELETE_ROW_MISSING	NUMBER	Number of conflicts where a delete gets an ORA-26787 error
CDR_SUCCESSFUL_RESOLUTIONS	NUMBER	Number of successfully resolved conflicts
CDR_FAILED_RESOLUTIONS	NUMBER	Number of conflicts that could not be resolved due to an error during resolution
LOB_OPERATIONS	NUMBER	The number of LOB updates (LOB writes, LOB trims, and LOB erases) applied by the inbound server.

8.279 V$GOLDENGATE_TRANSACTION

V$GOLDENGATE_TRANSACTION displays information about transactions that are being processed by Oracle GoldenGate capture processes, outbound servers, and inbound servers.

This view can identify long running transactions and display how many LCRs are being processed in each transaction. This view only contains information about captured LCRs. It does not contain information about user-enqueued LCRs or user messages.

This view only shows information about LCRs that are being processed because they satisfied the rule sets for the component at the time of the query. For capture processes, this view only shows information about changes in transactions that the capture process has converted into LCRs. It does not show information about all the active transactions present in the redo log.

For outbound servers, this view only shows information about LCRs that the outbound server has dequeued. It does not show information about LCRs in the outbound server's queue. For outbound servers, information about a transaction remains in the view until the transaction is sent to the Oracle GoldenGate client application.

For inbound servers, information about a transaction remains in the view until the transaction commits or until the entire transaction is rolled back.

Column	Datatype	Description
COMPONENT_NAME	VARCHAR2(138)	Name of the component
COMPONENT_TYPE	VARCHAR2(20)	Type of component • CAPTURE - Capture process • APPLY - Apply reader subcomponent in an outbound server or inbound server • PROPAGATION_SENDER - Propagation sender that sends LCRs from a capture process to an outbound server

Column	Datatype	Description
XIDUSN	NUMBER	Transaction ID undo segment number of the transaction
XIDSLT	NUMBER	Transaction ID slot number of the transaction
XIDSQN	NUMBER	Transaction ID sequence number of the transaction
BATCH_XIDUSN	NUMBER	Transaction ID undo segment number of the batch parent transaction. When using BATCHSQL mode in Oracle GoldenGate Integrated Replicat the BATCH_XID columns identify the parent transaction of the batch the current transaction belongs to. The parent transaction is the first transaction of each batch. This column is populated only if COMPONENT_TYPE is APPLY and BATCHSQL mode is enabled.
BATCH_XIDSLT	NUMBER	Transaction ID slot number of the batch parent transaction. When using BATCHSQL mode in Oracle GoldenGate Integrated Replicat the BATCH_XID columns identify the parent transaction of the batch the current transaction belongs to. The parent transaction is the first transaction of each batch. This column is populated only if COMPONENT_TYPE is APPLY and BATCHSQL mode is enabled.
BATCH_XIDSQN	NUMBER	Transaction ID sequence number of the batch parent transaction. When using BATCHSQL mode in Oracle GoldenGate Integrated Replicat the BATCH_XID columns identify the parent transaction of the batch the current transaction belongs to. The parent transaction is the first transaction of each batch. This column is populated only if COMPONENT_TYPE is APPLY and BATCHSQL mode is enabled.
CUMULATIVE_MESSAGE_COUNT	NUMBER	Number of LCRs processed in the transaction. If a component is restarted while the transaction is being processed, then this column shows the number of LCRs processed in the transaction since the component was started.
TOTAL_MESSAGE_COUNT	NUMBER	Total number of LCRs processed in the transaction by an outbound server or inbound server. This column does not pertain to capture processes.
FIRST_MESSAGE_TIME	DATE	Time stamp of the first LCR processed in the transaction. If a capture process is restarted while the transaction is being processed, then this column shows the time stamp of the first LCR processed after the capture process was started.
FIRST_MESSAGE_NUMBER	NUMBER	SCN of the first message in the transaction. If a capture process is restarted while the transaction is being processed, then this column shows the SCN of the first message processed after the capture process was started.
LAST_MESSAGE_TIME	DATE	Time stamp of the last LCR processed in the transaction
LAST_MESSAGE_NUMBER	NUMBER	SCN of the most recent message encountered for the transaction
FIRST_MESSAGE_POSITION	RAW(64)	Position of the first message seen by an XStream inbound server This column is populated only for an apply process that is functioning as an Oracle GoldenGate inbound server.
LAST_MESSAGE_POSITION	RAW(64)	Position of the last message seen by an Oracle GoldenGate inbound server This column is populated only for an apply process that is functioning as an Oracle GoldenGate inbound server.

Column	Datatype	Description
TRANSACTION_ID	VARCHAR2(128)	Transaction ID for an Oracle GoldenGate inbound server This column is populated only for an apply process that is functioning as an Oracle GoldenGate inbound server.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.280 V$HANG_INFO

V$HANG_INFO displays information about hangs found on the cluster.

A hang can be an open wait chain or closed wait chain (cycle or deadlock). A wait chain is a series of sessions that are blocking one another. Each row represents a hang and describes how severe the hang is. This view also includes the victim or final blocker of the hang.

Column	Datatype	Description
HANG_ID	NUMBER	A number identifying the hang
HANG_CHAIN_SESSIONS	NUMBER	Indicates how many sessions are in the main wait chain of the hang
TOTAL_HUNG_SESSIONS	NUMBER	Indicates how many total sessions are affected by the hang, including the main wait chain and any wait chains branching off of the main wait chain
HANG_TYPE	VARCHAR2(18)	Is set to Hang if this is an open wait chain or Deadlock if this is a cycle or closed wait chain
HANG_STATUS	VARCHAR2(20)	Status of the hang. Possible values: • Invalid - The hang is about to be removed because its hung status has become in doubt • Pending Resolution - The hang or deadlock has been marked for resolution and will be resolved shortly • Reconfiguration - A reconfiguration occurred and the hang or deadlock must be re-detected and verified before any action can be taken toward resolution • Requires Verification - The hang is about to be verified to confirm if its sessions are still hung • Resolved - The hang or deadlock was resolved by terminating the final blocker (or root) or, if necessary, by terminating the instance • Self-Resolved - The hang was detected but resolved on its own without Blocker Resolver intervention • Unresolvable - The hang was determined to be a special case that is not resolvable • Valid - The hang or deadlock was detected but not yet verified • Verified Hung - The hang has been verified and a decision will be made soon on whether the hang will be resolved or ignored • Victim Selected - A victim has been selected. If the hang is marked for resolution, the victim will be terminated.
HANG_CREATE_TIME	VARCHAR2(20)	Date and time that the hang was detected

Column	Datatype	Description
HANG_RESOLVE_TIME	VARCHAR2(20)	Time that the hang may be automatically resolved
IGNORED_HANG	VARCHAR2(1)	Y - Hang was ignored and will not be automatically resolved at this time N - The hang has not yet been verified
RESOLUTION_ATTEMPTED	VARCHAR2(1)	Y - An attempt was made to resolve the hang N - No attempt was made to resolve the hang
GLOBAL_HANG	VARCHAR2(1)	Y - The hang spans multiple nodes in the cluster N - All of the sessions in the hang reside on a single instance
ESCALATED_HANG	VARCHAR2(1)	Y - An attempt was made to resolve the hang but was unsuccessful, and the hang is becoming more severe. Another resolution attempt will be made. N - The first resolution attempt was successful and it was not necessary to escalate the hang to a higher resolution level.
RESOLUTION_STATUS	VARCHAR2(45)	Contains the reason why the hang was resolved or ignored
VICTIM_INSTANCE	NUMBER	Instance number of the instance on which the victim or final blocker session resides
VICTIM_SESSION_ID	NUMBER	Victim or final blocker's Oracle session ID
VICTIM_SERIAL#	NUMBER	Victim or final blocker's Oracle session serial number
VICTIM_OSPID	VARCHAR2(24)	Victim or final blocker's operating system process ID
FATAL_BACKGROUND	VARCHAR2(1)	Y - Victim or final blocker is a critical background process N - Victim or final blocker is not a critical background process
PNAME	VARCHAR2(5)	Name of the victim or final blocker process
VICTIM_PDB_ID	NUMBER	Victim or final blocker's container ID or PDB ID
WAIT_EVENT_TEXT	VARCHAR2(64)	Resource or event for which the victim or final blocker is waiting; set to `not in a wait` if the session is not waiting on a resource
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$HANG_SESSION_INFO"
- "V$HANG_STATISTICS"
- "DBA_BLOCKER_RESOLVER_PARAMETERS"

8.281 V$HANG_SESSION_INFO

V$HANG_SESSION_INFO displays information about sessions involved in hangs described by V$HANG_INFO.

Each row with the same HANG_ID describes a session that is in the hang wait chain described by the row with the same HANG_ID in V$HANG_INFO. This session is blocked by the victim or final blocker of that hang.

Column	Datatype	Description
HANG_ID	NUMBER	A number identifying the hang including this session. This column can be used to join V$HANG_INFO with V$HANG_SESSION_INFO.
INSTANCE	NUMBER	Instance number of the instance on which this session resides
SID	NUMBER	Oracle session ID of this session
SERIAL#	NUMBER	Oracle session serial number of this session
OSPID	VARCHAR2(24)	Operating system process ID of this session
FATAL_BACKGROUND	VARCHAR2(1)	Y - Session is a critical background process N - Session is not a critical background process
ROOT	VARCHAR2(1)	Y - This session is the victim or final blocker of the hang N - This session is not the victim or final blocker of the hang
PNAME	VARCHAR2(5)	Name of the victim or final blocker process
PDB_ID	NUMBER	Oracle session's container ID or PDB ID
WAIT_EVENT_TEXT	VARCHAR2(64)	Resource or event for which this session is waiting; set to not in a wait if the session is not waiting on a resource
WAIT_TIME	NUMBER	Time spent in wait for this session (in seconds). If the value of WAIT_EVENT_TEXT is not in a wait, then this column returns the number of seconds since the last wait.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$HANG_INFO"
- "V$HANG_STATISTICS"
- "DBA_BLOCKER_RESOLVER_PARAMETERS"

8.282 V$HANG_STATISTICS

V$HANG_STATISTICS displays statistics about hangs found on the cluster.

Column	Datatype	Description
STATISTIC#	NUMBER	Statistic number
NAME	VARCHAR2(45)	Name of the statistic
VALUE	NUMBER	Value associated with the statistic
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$HANG_INFO"
- "V$HANG_SESSION_INFO"
- "DBA_BLOCKER_RESOLVER_PARAMETERS"

8.283 V$HEAT_MAP_SEGMENT

V$HEAT_MAP_SEGMENT displays real-time segment access information.

Column	Datatype	Description
OBJECT_NAME	VARCHAR2(128)	Name of the object
SUBOBJECT_NAME	VARCHAR2(128)	Name of the subobject
OBJ#	NUMBER	Object number
DATAOBJ#	NUMBER	Data object number
TS#	NUMBER	ID of the tablespace containing the segment whose heat map is tracked
TRACK_TIME	DATE	Timestamp of current activity tracking
SEGMENT_WRITE	VARCHAR2(3)	Indicates whether the segment has write access: (YES or NO)
SEGMENT_READ	VARCHAR2(3)	Indicates whether the segment has read access: (YES or NO)
FULL_SCAN	VARCHAR2(3)	Indicates whether the segment has full table scan: (YES or NO)
LOOKUP_SCAN	VARCHAR2(3)	Indicates whether the segment has lookup scan: (YES or NO)
N_SEGMENT_WRITE	NUMBER	Number of segment writes
N_FULL_SCAN	NUMBER	Number of table scans
N_LOOKUP_SCAN	NUMBER	Number of lookup scans
N_FASTFULLINDEX_SCAN	NUMBER	Number of fast full index scans
N_RANGEINDEX_SCAN	NUMBER	Number of range index scans
N_DML_SCAN	NUMBER	Number of scans originating from DMLs

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "ALL_HEAT_MAP_SEGMENT"

8.284 V$HM_CHECK

V$HM_CHECK displays information about all the checks registered with Health Monitor. Each check is uniquely identified by a name or an ID.

Column	Datatype	Description
ID	NUMBER	Health check ID
NAME	VARCHAR2(64)	Health check name
NAME_NLS	VARCHAR2(1024)	Internationalized names of the health checks
CLSID	NUMBER	Class ID to which this check belongs
CLS_NAME	VARCHAR2(15)	Class name of the check: • GENERIC • PERSISTENT_DATA
FLAGS	NUMBER	Reserved for internal use
INTERNAL_CHECK	VARCHAR2(1)	Internal check
OFFLINE_CAPABLE	VARCHAR2(1)	Ability to run when database is not open yet (Y or N)
DESCRIPTION	VARCHAR2(1024)	Description of what the check does
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.285 V$HM_CHECK_PARAM

V$HM_CHECK_PARAM displays information about the input parameters of all Health Monitor checks.

Column	Datatype	Description
ID	NUMBER	Parameter ID
NAME	VARCHAR2(64)	Parameter name
CHECK_ID	NUMBER	ID of the check to which this parameter belongs
TYPE	VARCHAR2(20)	Data type of the input parameter: • DBKH_PARAM_UB4 • DBKH_PARAM_UB8 • DBKH_PARAM_TEXT • DBKH_PARAM_DATE • DBKH_PARAM_UB4_LIST • DBKH_PARAM_UB8_LIST • DBKH_PARAM_TEXT_LIST • DBKH_PARAM_DATE_LIST
DEFAULT_VALUE	VARCHAR2(64)	Default value for this parameter
FLAGS	NUMBER	Reserved for internal use
DESCRIPTION	VARCHAR2(1024)	Description of the parameter
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.286 V$HM_FINDING

V$HM_FINDING displays information about all the findings of various Health Monitor runs.

Column	Datatype	Description
FINDING_ID	NUMBER	Unique ID to represent the finding
RUN_ID	NUMBER	ID of the run that created this finding
NAME	VARCHAR2(32)	Name of the finding
PARENT_ID	NUMBER	Parent finding ID for this finding
CHILD_COUNT	NUMBER	Number of active (open) child findings, if this finding is a parent finding type
CLASS_NAME	VARCHAR2(32)	Name of the class to which this finding belongs
TIME_DETECTED	TIMESTAMP(6)	Time this finding was detected
MODIFIED	TIMESTAMP(6)	Time that this finding was last modified
PRIORITY	VARCHAR2(8)	Priority of the finding: • LOW, • HIGH • CRITICAL
STATUS	VARCHAR2(12)	Status of the finding: • OPEN • CLOSED

Column	Datatype	Description
TYPE	VARCHAR2(13)	Type of the finding: • INFORMATIONAL • FAILURE
DESCRIPTION	VARCHAR2(1024)	Description of the finding
DAMAGE_DESCRIPTION	VARCHAR2(1024)	Possible damage description of the finding
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.287 V$HM_INFO

V$HM_INFO displays information about Health Monitor runs, findings, and recommendations.

The information for a run/finding/recommendation is organized as a name, value pair.

If the type of information is RUN, then the data represents the input parameters for that run. If the type of information is FINDING or RECOMMENDATION, then the data represents the information about that particular finding/recommendation.

Column	Datatype	Description
ID	NUMBER	Unique identifier of the information
TYPE	VARCHAR2(14)	Type of the information: • RUN • RUN-RESUME • FINDING • RECOMMENDATION
NAME	VARCHAR2(32)	Information parameter name
VALUE	VARCHAR2(513)	Information parameter value
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.288 V$HM_RECOMMENDATION

V$HM_RECOMMENDATION displays information about all the recommendations made to various Health Monitor findings.

Column	Datatype	Description
RECOMMENDATION_ID	NUMBER	Unique ID to represent the recommendation
FDG_ID	NUMBER	Unique ID to represent either the finding ID or the finding set ID for which the recommendation was made
RUN_ID	NUMBER	ID of the run that may have generated the recommendation If the ID is 0, then the recommendations were generated by RMAN.
NAME	VARCHAR2(32)	Name of the recommendation
TYPE	VARCHAR2(7)	Type of the recommendation: • MANUAL • REPAIR
RANK	NUMBER	Rank of the recommendation
TIME_DETECTED	TIMESTAMP(6)	Time that the recommendation was made
EXECUTED	TIMESTAMP(6)	Time that the recommendation (repair) was implemented
STATUS	VARCHAR2(7)	Status of the recommendation (repair) execution: • NOT RUN • RUNNING • SUCCESS • FAILED
DESCRIPTION	VARCHAR2(1024)	Description of the recommendation
REPAIR_SCRIPT	VARCHAR2(512)	Location of the repair script file
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.289 V$HM_RUN

V$HM_RUN displays information about all Health Monitor checks and their status.

Column	Datatype	Description
RUN_ID	NUMBER	Unique ID to represent the run
NAME	VARCHAR2(32)	Unique name used to identify the run
CHECK_NAME	VARCHAR2(32)	Name of the check
RUN_MODE	VARCHAR2(8)	Mode of the run: • MANUAL • REACTIVE • AUTO
TIMEOUT	NUMBER	Number of seconds allowed for this run to complete before it is terminated
START_TIME	TIMESTAMP(6)	Start time of the run
LAST_RESUME_TIME	TIMESTAMP(6)	Last resumed time for the run
END_TIME	TIMESTAMP(6)	End time of the run

Column	Datatype	Description
MODIFIED_TIME	TIMESTAMP(6)	Last modified time of the run record
STATUS	VARCHAR2(11)	Status of the run: • INITIAL • EXECUTING • INTERRUPTED • TIMEDOUT • CANCELLED • COMPLETED • ERROR
SRC_INCIDENT	NUMBER	Source incident ID that activated this run
NUM_INCIDENT	NUMBER	Number of incidents created by this run
ERROR_NUMBER	NUMBER	Error number if the run failed to complete because of an error
PROBLEM_ID	NUMBER	Problem ID of the source incident ID that may have activated this Run
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.290 V$HS_AGENT

V$HS_AGENT displays the set of HS agents currently running on a given host. There is one row per agent process.

Column	Datatype	Description
AGENT_ID	NUMBER	Oracle Net session identifier used for connections to the agent (the identifier used in the LISTENER.ORA file)
MACHINE	VARCHAR2(64)	Operating system machine name
PROCESS	VARCHAR2(9)	Operating system process identifier of the agent
PROGRAM	VARCHAR2(48)	Program name of the agent
OSUSER	VARCHAR2(128)	Operating system user
STARTTIME	DATE	Starting time
AGENT_TYPE	NUMBER	Type of the agent
FDS_CLASS_ID	NUMBER	ID of the Foreign Data Store class
FDS_INST_ID	NUMBER	Instance name of the Foreign Data Store
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.291 V$HS_PARAMETER

V$HS_PARAMETER describes the initialization parameters in use by the server and agent.

Column	Datatype	Description
HS_SESSION_ID	NUMBER	Unique HS session identifier (maps to the HS_SESSION_ID column of V$HS_SESSION)
PARAMETER	VARCHAR2(128)	Name of the parameter
VALUE	VARCHAR2(64)	Value of the parameter
SOURCE	VARCHAR2(1)	Indicates whether the parameter was defined in the agent (A) or server (S)
ENV	VARCHAR2(1)	Indicates whether the parameter was set as an environment variable in the agent (T) or elsewhere (F)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.292 V$HS_SESSION

V$HS_SESSION describes the current HS session.

Column	Datatype	Description
HS_SESSION_ID	NUMBER	Unique HS session identifier
AGENT_ID	NUMBER	Oracle Net session identifier used for connections to the agent (maps to the AGENT_ID column of V$HS_AGENT)
SID	NUMBER	User session identifier (maps to the SID column of V$SESSION)
DB_LINK	VARCHAR2(128)	Server database link name used to access the agent; blank if no database link is used (for example, when using external procedures)
DB_LINK_OWNER	NUMBER	Owner of the database link in DB_LINK
STARTTIME	DATE	Time the connection was initiated
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

8.293 V$HVMASTER_INFO

V$HVMASTER_INFO describes the current and previous master instances and the number of re-masterings of Global Enqueue Service resources.

Column	Datatype	Description
HV_ID	NUMBER	Hash value ID
CURRENT_MASTER	NUMBER	Master instance of this hash value ID
PREVIOUS_MASTER	NUMBER	Previous master instance of this hash value ID
REMASTER_CNT	NUMBER	Number of times this has been remastered
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9

Dynamic Performance (V$) Views: V$IM_COLUMN_LEVEL to V$RULE_SET_AGGREGATE_STATS

This chapter contains the dynamic performance views `V$IM_COLUMN_LEVEL` to `V$RULE_SET_AGGREGATE_STATS`.

9.1 V$IM_COLUMN_LEVEL

`V$IM_COLUMN_LEVEL` presents the selective column compression levels that are defined using the `inmemory_memcompress` clause of the `inmemory_column_clause` of the `CREATE TABLE` statement.

This view returns no rows for a table which has no associated selective column compression levels.

Column	Datatype	Description
`INST_ID`	`NUMBER`	Instance ID
`OWNER`	`VARCHAR2(31)`	Username of the table owner
`OBJ_NUM`	`NUMBER`	Table object number
`TABLE_NAME`	`VARCHAR2(31)`	Table name
`SEGMENT_COLUMN_ID`	`NUMBER`	Segment column number
`COLUMN_NAME`	`VARCHAR2(31)`	Column name
`INMEMORY_COMPRESSION`	`VARCHAR2(26)`	Column compression level. Possible values: • `DEFAULT`: This value appears for physical columns of a table that do not have a selective column clause. It also appears when a virtual column has been explicitly enabled for in-memory storage using `ALTER TABLE` *table-name* `INMEMORY(VC)`. • `UNSPECIFIED`: This value appears for virtual columns of a table that do not have a selective column clause. If the `INMEMORY_VIRTUAL_COLUMNS` initialization parameter is set to `MANUAL`, a virtual column with a `DEFAULT INMEMORY_COMPRESSION` clause will be materialized while a virtual column with an `UNSPECIFIED` value will not be.
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> The SYS_IME hidden virtual columns automatically added by the In-Memory Expression (IME) infrastructure will not be shown in this view.

> **See Also:**

> - "INMEMORY_CLAUSE_DEFAULT"
> - "V$IM_SEGMENTS"
> - "V$IM_USER_SEGMENTS"
> - *Oracle Database In-Memory Guide* for an introduction to the IM column store
> - *Oracle Database SQL Language Reference* for more information about the `inmemory_column_clause` of the SQL `CREATE TABLE` statement

9.2 V$IM_SEGMENTS

`V$IM_SEGMENTS` presents information about all the in-memory segments in the database.

Only segments that have an in-memory representation are displayed. If a segment is marked for the In-Memory Column Store (IM column store) but is not populated, no corresponding row for that segment is displayed in this view.

Column	Datatype	Description
OWNER	VARCHAR2(128)	User name of the segment owner
SEGMENT_NAME	VARCHAR2(128)	Name of the segment, if any
PARTITION_NAME	VARCHAR2(128)	Object partition name (set to NULL for non-partitioned objects)
SEGMENT_TYPE	VARCHAR2(18)	Type of segment: • TABLE • TABLE PARTITION • TABLE SUBPARTION
TABLESPACE_NAME	VARCHAR2(30)	Name of the tablespace containing the segment
INMEMORY_SIZE	NUMBER	Size of the in-memory version of the segment, in bytes
BYTES	NUMBER	Number of on-disk data bytes for the segment that could be represented in memory (no space metadata blocks)
BYTES_NOT_POPULATED	NUMBER	Size of the portion of the on-disk segment that is not populated in memory, in bytes.
POPULATE_STATUS	VARCHAR2(13)	Status of segment population: • STARTED: A populate task for the segment has started • COMPLETED: There are no populate tasks pending for the segment • OUT OF MEMORY: A populate task for the segment failed due to lack of space in the IM column store

Column	Datatype	Description
INMEMORY_PRIORITY	VARCHAR2(8)	Indicates the priority for IM column store population: • LOW • MEDIUM • HIGH • CRITICAL • NONE
INMEMORY_DISTRIBUTE	VARCHAR2(15)	Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION
INMEMORY_DUPLICATE	VARCHAR2(13)	Indicates the duplicate setting for the IM column store in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
INMEMORY_COMPRESSION	VARCHAR2(17)	Compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO
INMEMORY_SERVICE	VARCHAR2(12)	Specifies how the IM-enabled table is populated on various instances: • DEFAULT: Pre-Oracle Database 12c Release 2 (12.2.0.1) behavior • NONE: Do not populate on any instance • ALL: Populate on all instances • USER_DEFINED: Populate only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2(129)	Specifies the service name on which the IM-enabled table should be populated. This column has a value only when the corresponding INMEMORY_SERVICE column has a value of USER_DEFINED.
IS_EXTERNAL	VARCHAR2(5)	Indicates whether the IM segment is for an external table. Possible values: • TRUE: The IM segment is for an external table. • FALSE: The IM segment is not for an external table.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "INMEMORY_CLAUSE_DEFAULT"
- "V$IM_COLUMN_LEVEL"
- "V$IM_USER_SEGMENTS"
- *Oracle Database In-Memory Guide* for an introduction to the IM column store

9.3 V$IM_USER_SEGMENTS

`V$IM_USER_SEGMENTS` presents information about the in-memory segments for the current user in the database.

Only segments that have an in-memory representation are displayed. If a segment is marked for the In-Memory Column Store (IM column store) but is not populated, no corresponding row for that segment is displayed in this view.

Column	Datatype	Description
SEGMENT_NAME	VARCHAR2(128)	Name of the segment, if any
PARTITION_NAME	VARCHAR2(128)	Object partition name (set to NULL for non-partitioned objects)
SEGMENT_TYPE	VARCHAR2(18)	Type of segment: • TABLE • TABLE PARTITION • TABLE SUBPARTION
TABLESPACE_NAME	VARCHAR2(30)	Name of the tablespace containing the segment
INMEMORY_SIZE	NUMBER	Size of the in-memory version of the segment, in bytes
BYTES	NUMBER	Total size of the on-disk segment, in bytes
BYTES_NOT_POPULATED	NUMBER	Size of the portion of the on-disk segment that is not populated in memory, in bytes
POPULATE_STATUS	VARCHAR2(13)	Status of segment population: • STARTED: A populate task for the segment has started • COMPLETED: There are no populate tasks pending for the segment • OUT OF MEMORY: A populate task for the segment failed due to lack of space in the IM column store
INMEMORY_PRIORITY	VARCHAR2(8)	Indicates the priority for IM column store population: • LOW • MEDIUM • HIGH • CRITICAL • NONE
INMEMORY_DISTRIBUTE	VARCHAR2(15)	Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION

Column	Datatype	Description
INMEMORY_DUPLICATE	VARCHAR2(13)	Indicates the duplicate setting for the IM column store in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
INMEMORY_COMPRESSION	VARCHAR2(17)	Compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO
INMEMORY_SERVICE	VARCHAR2(12)	Specifies how the IM-enabled table is populated on various instances: • DEFAULT: Pre-Oracle Database 12c Release 2 (12.2.0.1) behavior • NONE: Do not populate on any instance • ALL: Populate on all instances • USER_DEFINED: Populate only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2(129)	Specifies the service name on which the IM-enabled table should be populated. This column has a value only when the corresponding INMEMORY_SERVICE column has a value of USER_DEFINED.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.4 V$INDEX_USAGE_INFO

V$INDEX_USAGE_INFO keeps track of index usage since the last flush. A flush occurs every 15 minutes. After each flush, ACTIVE_ELEM_COUNT is reset to 0 and LAST_FLUSH_TIME is updated to the current time.

Column	Datatype	Description
INDEX_STATS_ENABLED	NUMBER	Indicates whether the index usage statistics are enabled. Possible values: • 0: Index statistics are disabled • 1: Index statistics are enabled
INDEX_STATS_COLLECTION_TYPE	NUMBER	Indicates the type of collection used for the index usage statistics. Possible values: • 0: Indicates the ALL collection type. With this type of collection, the statistics are collected for each execution that has index access. Selecting this statistics collection type may have some impact on performance. • 1: Indicates the SAMPLED collection type. With this type of collection, the statistics are collected based on sampling (only a few of the executions are considered when collecting the statistics). This is the default statistics collection type. Index statistics collected with the SAMPLED collection type are less accurate than index statistics collected with the ALL collection type.
ACTIVE_ELEM_COUNT	NUMBER	The number of active indexes since the last flush
ALLOC_ELEM_COUNT	NUMBER	The number of index entries allocated
MAX_ELEM_COUNT	NUMBER	The maximum number of active indexes that can be tracked
FLUSH_COUNT	NUMBER	Number of successful flushes since the database started
TOTAL_FLUSH_DURATION	NUMBER	Cumulative elapsed time taken to complete the index usage statistics flush since the database start
LAST_FLUSH_TIME	TIMESTAMP(3)	The time of the last flush
STATUS_MSG	VARCHAR2(256)	Status messages, if any. Flush errors are reported here.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This row is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"DBA_INDEX_USAGE"

9.5 V$INDEXED_FIXED_COLUMN

V$INDEXED_FIXED_COLUMN displays the columns in dynamic performance tables that are indexed (X$ tables).

The X$ tables can change without notice. Use this view only to write queries against fixed views (V$ views) more efficiently.

Column	Datatype	Description
TABLE_NAME	VARCHAR2(128)	Name of the dynamic performance table that is indexed
INDEX_NUMBER	NUMBER	Number that distinguishes to which index a column belongs
COLUMN_NAME	VARCHAR2(128)	Name of the column that is being indexed
COLUMN_POSITION	NUMBER	Position of the column in the index key (this is mostly relevant for multicolumn indexes)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.6 V$INMEMORY_AREA

V$INMEMORY_AREA contains information on the space allocation inside the In-Memory Area.

The In-Memory Area is sub-divided into three pools:

- 1MB POOL - stores the actual column formatted data populated into memory
- 64K POOL - stores metadata about the objects that are populated into the In-Memory Column Store (IM column store)
- IM POOL METADATA - contains information about In-Memory Compression Unit (IMCU) to data block mappings

The amount of available memory in each pool is visible in the V$INMEMORY_AREA view. The relative size of the three pools is determined by internal heuristics. The majority of the In-Memory Area memory is allocated to the 1MB POOL

Column	Datatype	Description
POOL	VARCHAR2(26)	Name of the pools in the In-Memory Area
ALLOC_BYTES	NUMBER	Total amount of memory allocated to this pool
USED_BYTES	NUMBER	Amount of memory currently used in this pool
POPULATE_STATUS	VARCHAR2(26)	Shows the status of the IM column store, for example, whether it is currently being populated or if it is done
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.7 V$INMEMORY_FASTSTART_AREA

`V$INMEMORY_FASTSTART_AREA` provides information about the In-Memory FastStart (IM FastStart) area.

Column	Datatype	Description
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
`TABLESPACE_NAME`	`VARCHAR2(128)`	IM FastStart tablespace name. When IM FastStart is not enabled, the value of `TABLESPACE_NAME` is `INVALID_TABLESPACE` and the value of `STATUS` is `DISABLE`.
`STATUS`	`VARCHAR2(10)`	IM FastStart status. Possible values include: • `ENABLE`: An IM FastStart tablespace has been specified and the content of the IM column is being periodically checkpointed to disk. • `ENABLING`: An IM FastStart tablespace has been specified and the database is creating the IM FastStart area. • `DISABLE`: An IM FastStart tablespace has not been specified. This is the default. • `MIGRATING`: A user has requested the IM FastStart area be migrated from one tablespace to another. • `DISABLING`: A user has requested IM FastStart to be disabled.
`ALLOCATED_SIZE`	`NUMBER`	The allocated size of an IM FastStart tablespace in bytes
`USED_SIZE`	`NUMBER`	The currently used size of an IM FastStart area (in bytes) within the tablespace.
`LAST_CHECKPOINT_TIME`	`TIMESTAMP(6)`	The time when the last IMCU was checkpointed to the IM FastStart area
`LAST_POPULATE_TIME`	`TIMESTAMP(6)`	The time of the last population from the IM FastStart area
`NUM_DEFERRED_WRITES`	`NUMBER`	The number of pending deferred writes to the IM FastStart area

9.8 V$INMEMORY_SIZE_ADVICE

V$INMEMORY_SIZE_ADVICE estimates usage and performance statistics for different simulated sizes of the In-Memory Column Store (IM Column Store).

Column	Datatype	Description
IM_POOL_SIZE_FOR_ESTIMATE	NUMBER	Simulated size of the IM Column Store (in megabytes)
SIZE_FACTOR	NUMBER	Size factor with respect to the current IM Column Store size
ESTD_IM_USED_SIZE	NUMBER	Estimated amount of space the IM Column Store would use for this simulation (in megabytes)
ESTD_IM_SCAN_TIME	NUMBER	Estimated in-memory scan time for this simulation (in seconds)
ESTD_TOTAL_DB_TIME	NUMBER	Estimated total database time for this simulation (in seconds) This value estimates the cumulative time spent by the database on processing user requests. It includes the wait time and CPU time of all non-idle user sessions.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

9.9 V$INSTANCE

V$INSTANCE displays the state of the current instance.

Column	Datatype	Description
INSTANCE_NUMBER	NUMBER	Instance number used for instance registration (corresponds to the INSTANCE_NUMBER initialization parameter) **See Also:** "INSTANCE_NUMBER"
INSTANCE_NAME	VARCHAR2(16)	Name of the instance
HOST_NAME	VARCHAR2(64)	Name of the host machine
VERSION	VARCHAR2(17)	Database version
VERSION_LEGACY	VARCHAR2(17)	The legacy database version used before Oracle Database 18c. This column displays the same value as the VERSION column
VERSION_FULL	VARCHAR2(17)	The version string with the new Oracle Database version scheme introduced in Oracle Database 18c.

Column	Datatype	Description
STARTUP_TIME	DATE	Time when the instance was started
STATUS	VARCHAR2(12)	Status of the instance: • STARTED - After STARTUP NOMOUNT • MOUNTED - After STARTUP MOUNT or ALTER DATABASE CLOSE • OPEN - After STARTUP or ALTER DATABASE OPEN • OPEN MIGRATE - After ALTER DATABASE OPEN { UPGRADE | DOWNGRADE }
PARALLEL	VARCHAR2(3)	Indicates whether the instance is mounted in cluster database mode (YES) or not (NO)
THREAD#	NUMBER	Redo thread opened by the instance
ARCHIVER	VARCHAR2(7)	Automatic archiving status: • STOPPED • STARTED • FAILED - Archiver failed to archive a log last time but will try again within 5 minutes
LOG_SWITCH_WAIT	VARCHAR2(15)	Event that log switching is waiting for: • ARCHIVE LOG • CLEAR LOG • CHECKPOINT • NULL - ALTER SYSTEM SWITCH LOGFILE is hung but there is room in the current online redo log
LOGINS	VARCHAR2(10)	Indicates whether the instance is in unrestricted mode, allowing logins by all users (ALLOWED, or in restricted mode, allowing logins by database administrators only (RESTRICTED)
SHUTDOWN_PENDING	VARCHAR2(3)	Indicates whether a shutdown is pending (YES) or not (NO)
DATABASE_STATUS	VARCHAR2(17)	Status of the database: • ACTIVE • SUSPENDED • INSTANCE RECOVERY
INSTANCE_ROLE	VARCHAR2(18)	Indicates whether the instance is an active instance (PRIMARY_INSTANCE) or an inactive secondary instance (SECONDARY_INSTANCE), or UNKNOWN if the instance has been started but not mounted

Column	Datatype	Description
ACTIVE_STATE	VARCHAR2(9)	Quiesce state of the instance: • NORMAL - Database is in a normal state. • QUIESCING - ALTER SYSTEM QUIESCE RESTRICTED has been issued: no new user transactions, queries, or PL/SQL statements are processed in this instance. User transactions, queries, or PL/SQL statements issued before the ALTER SYSTEM QUIESCE RESTRICTED statement are unaffected. DBA transactions, queries, or PL/SQL statements are also unaffected. • QUIESCED - ALTER SYSTEM QUIESCE RESTRICTED has been issued: no user transactions, queries, or PL/SQL statements are processed. DBA transactions, queries, or PL/SQL statements are unaffected. User transactions, queries, or PL/ SQL statements issued after the ALTER SYSTEM QUIESCE RESTRICTED statement are not processed. A single ALTER SYSTEM QUIESCE RESTRICTED statement quiesces all instances in an Oracle RAC environment. After this statement has been issued, some instances may enter into a quiesced state before other instances; the system is quiesced when all instances enter the quiesced state.
BLOCKED	VARCHAR2(3)	Indicates whether all services are blocked (YES) or not (NO)
CON_ID	NUMBER	The ID of the container to which the data pertains: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
INSTANCE_MODE	VARCHAR2(11)	The instance mode of the current instance: • REGULAR: A regular Oracle RAC instance. This value is also always used for any non-Oracle RAC instance. • READ MOSTLY: An Oracle RAC instance that performs very few database writes • READ ONLY: A read-only Oracle RAC instance
EDITION	VARCHAR2(7)	The edition of the database: • PO: Personal Edition • FREE: Oracle Database Free • SE2: Standard Edition or Standard Edition 2 • EE: Enterprise Edition • HP: Enterprise Edition - High Performance • XP: Enterprise Edition - Extreme Performance
FAMILY	VARCHAR2(80)	For internal use only.
DATABASE_TYPE	VARCHAR2(15)	Database type: • RAC: If the database is a regular Oracle RAC database which may have multiple instances. • RACONENODE: If the database is Oracle RAC, but allows only one instance to run at any time - the RAC One Node mode. • SINGLE: If the database is running as a single instance. • UNKNOWN: If the database's type can't be determined. This might happen when the database is registered as a DB resource with CRS but the CRS service has failed to return valid database type information. Typically, this indicates that either the CRS service is down or it is in a faulty state.

9.10 V$INSTANCE_CACHE_TRANSFER

V$INSTANCE_CACHE_TRANSFER displays statistics for the cache blocks transferred among instances.

Oracle keeps multiple versions of data buffered in the buffer cache. The current buffer (or block), CURRENT_BLOCK, is the most up-to-date copy, containing all recent modifications. A consistent read buffer (or block), CR_BLOCK, contains the version of the data at a particular time prior to the current buffer. It is read-consistent (that is, all the data shown in that buffer are consistent for the start time of a query).

Therefore, for the same data block there can be multiple copies in the buffer cache: one current copy, and one or more consistent read copies with data consistent as of different snapshot times.

Column	Datatype	Description
INSTANCE	NUMBER	Instance from which the blocks are transferred
CLASS	VARCHAR2(18)	Class of the cache block
LOST	NUMBER	The number of blocks that were sent by a particular instance but that never arrived in this instance
LOST_TIME	NUMBER	The time waited for blocks that were sent by a particular instance but that never arrived in this instance
CR_BLOCK	NUMBER	CR Block transfers not affected by remote processing delays
CR_BLOCK_TIME	NUMBER	Total time waited for CR blocks from a particular instance (includes the other times)
CR_2HOP	NUMBER	The count of CR blocks which were received by this instance from a particular instance after a 2-way round-trip
CR_2HOP_TIME	NUMBER	The time waited for CR blocks which were received by this instance from a particular instance after a 2-way round-trip
CR_3HOP	NUMBER	The count of CR blocks which were received by this instance from a particular instance after a 3-way round-trip
CR_3HOP_TIME	NUMBER	The time waited for CR blocks which were received by this instance from a particular instance after a 3-way round-trip
CR_RDMA	NUMBER	The count of CR Blocks which were directly read from a remote instance via RDMA
CR_RDMA_TIME	NUMBER	Total time waited to directly read CR blocks from a remote instance via RDMA (in centiseconds)
CR_BUSY	NUMBER	CR Block transfers affected by remote contention
CR_BUSY_TIME	NUMBER	The time waited for CR blocks which were received by this instance from a particular instance and which were delayed by a log flushed on the sending instance
CR_CONGESTED	NUMBER	CR Block transfers affected by remote system load
CR_CONGESTED_TIME	NUMBER	The time waited for CR blocks which were received by this instance from a particular instance and which were delayed because LMS was busy
CURRENT_BLOCK	NUMBER	Current block transfers not affected by remote processing delays
CURRENT_BLOCK_TIME	NUMBER	Total time waited for current blocks from a particular instance (includes the other times

Column	Datatype	Description
CURRENT_2HOP	NUMBER	The count of current blocks which were received by this instance from a particular instance after a 2-way round-trip
CURRENT_2HOP_TIME	NUMBER	The time waited for current blocks which were received by this instance from a particular instance after a 2-way round-trip
CURRENT_3HOP	NUMBER	The count of current blocks which were received by this instance from a particular instance after a 3-way round-trip
CURRENT_3HOP_TIME	NUMBER	The time waited for current blocks which were received by this instance from a particular instance after a 3-way round-trip
CURRENT_RDMA	NUMBER	The count of current blocks which were directly read from a remote instance via RDMA
CURRENT_RDMA_TIME	NUMBER	Total time waited to directly read current blocks from a remote instance via RDMA (in centiseconds)
CURRENT_BUSY	NUMBER	Current block transfers affected by remote contention
CURRENT_BUSY_TIME	NUMBER	The time waited for current blocks which were received by this instance from a particular instance and which were delayed by a log flushed on the sending instance
CURRENT_CONGESTED	NUMBER	Current block transfers affected by remote system load
CURRENT_CONGESTED_TIME	NUMBER	The time waited for current blocks which were received by this instance from a particular instance and which were delayed because LMS was busy
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.11 V$INSTANCE_PING

V$INSTANCE_PING provides information about measured latency of the interconnect for all instances in an Oracle Real Application Clusters (Oracle RAC) environment.

In an Oracle RAC environment, every few seconds the PING process of each instance checks the response of the interconnect to all instances of the same database.

It sends two messages. One message is 500 bytes in size (referred to in the column descriptions as 500B), and the other is 8 kilobytes in size (referred to in column descriptions as 8K).

For each message sent to each instance, the amount of time it took to get a response back is measured (in microseconds). The view records the latest measurements as well as cumulative data since instance startup.

Column	Datatype	Description
INSTANCE	NUMBER	The instance communicated with. In the V$ view for each instance, there is one row for that instance, and in the GV$ view for each instance, there is also one row for that instance, so there are n^2 rows for *n* instances.

Column	Datatype	Description
CURRENT_500B	NUMBER	The latest response time for the 500B message (in microseconds)
AVERAGE_500B	NUMBER	The average response time for the 500B messages since instance startup (in microseconds). Note that AVERAGE_500B should be the same as WAIT_TIME_500B/COUNT_500B.
MAX_500B	NUMBER	The maximal response time for the 500B messages since instance startup (in microseconds)
COUNT_500B	NUMBER	The number of measurements for the 500B messages since instance startup
WAIT_TIME_500B	NUMBER	The sum of all response times for the 500B messages since instance startup (in microseconds)
WAIT_TIME_SQUARED_500B	NUMBER	The sum of the response time squared for 500B messages since instance startup. The unit is in microseconds squared and divided by 1000.
CURRENT_8K	NUMBER	The latest response time for the 8K message (in microseconds)
AVERAGE_8K	NUMBER	The average response time for the 8K messages since instance startup (in microseconds). Note that AVERAGE_8K should be the same as WAIT_TIME_8K/COUNT_8K.
MAX_8K	NUMBER	The maximal response time for the 8K messages since instance startup (in microseconds)
COUNT_8K	NUMBER	The number of measurements for the 8K messages since instance startup
WAIT_TIME_8K	NUMBER	The sum of all response times for the 8K messages since instance startup (in microseconds)
WAIT_TIME_SQUARED_8K	NUMBER	The sum of the response time squared for 8K messages since instance startup. The unit is in microseconds squared and divided by 16.
CON_ID	NUMBER	The ID of the container to which the data pertains. For this view, the possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.

9.12 V$INSTANCE_RECOVERY

V$INSTANCE_RECOVERY monitors the mechanisms available to users to limit recovery I/O. Those mechanisms are:

- Set the LOG_CHECKPOINT_TIMEOUT initialization parameter
- Set the LOG_CHECKPOINT_INTERVAL initialization parameter
- Set the FAST_START_MTTR_TARGET initialization parameter
- Set the size of the smallest redo log

Column	Datatype	Description
RECOVERY_ESTIMATED_IOS	NUMBER	Number of dirty buffers in the buffer cache.
ACTUAL_REDO_BLKS	NUMBER	Current actual number of redo blocks required for recovery
TARGET_REDO_BLKS	NUMBER	Current target number of redo blocks that must be processed for recovery. This value is the minimum value of the following 3 columns, and identifies which of the 3 user-defined limits determines checkpointing.

Column	Datatype	Description
LOG_FILE_SIZE_REDO_BLKS	NUMBER	Maximum number of redo blocks required to guarantee that a log switch does not occur before the checkpoint completes.
LOG_CHKPT_TIMEOUT_REDO_BLKS	NUMBER	Number of redo blocks that need to be processed during recovery to satisfy the LOG_CHECKPOINT_TIMEOUT parameter. The value displayed is not meaningful unless that parameter has been set.
LOG_CHKPT_INTERVAL_REDO_BLKS	NUMBER	Number of redo blocks that need to be processed during recovery to satisfy the LOG_CHECKPOINT_INTERVAL parameter. The value displayed is not meaningful unless that parameter has been set.
FAST_START_IO_TARGET_REDO_BLKS	NUMBER	This column is obsolete and maintained for backward compatibility. The value of this column is always null.
TARGET_MTTR	NUMBER	Effective MTTR (mean time to recover) target value in seconds. The TARGET_MTTR value is calculated based on the value of the FAST_START_MTTR_TARGET parameter (the TARGET_MTTR value is used internally), and is usually an approximation of the parameter's value. However, if the FAST_START_MTTR_TARGET parameter value is very small (for example, one second), or very large (for example, 3600 seconds), the calculation will produce a target value dictated by system limitations. In such cases, the TARGET_MTTR value will be the shortest calculated time, or the longest calculated time that recovery is expected to take.
ESTIMATED_MTTR	NUMBER	Current estimated mean time to recover (MTTR) based on the number of dirty buffers and log blocks. Basically, this value tells you how long you could expect recovery to take based on the work your system is doing right now.
CKPT_BLOCK_WRITES	NUMBER	Number of blocks written by checkpoint writes
OPTIMAL_LOGFILE_SIZE	NUMBER	Redo log file size (in megabytes) that is considered optimal based on the current setting of FAST_START_MTTR_TARGET. It is recommended that the user configure all online redo logs to be at least this value. Note that redo log files must be at least 4 megabytes in size; otherwise an error is generated.
ESTD_CLUSTER_AVAILABLE_TIME	NUMBER	Estimated time (in seconds) that the cluster would become partially available should this instance fail. This column is only meaningful in an Oracle Real Application Clusters (Oracle RAC) environment. In a non-Oracle RAC environment, the value of this column is null.
WRITES_MTTR	NUMBER	Number of writes driven by the FAST_START_MTTR_TARGET initialization parameter
WRITES_LOGFILE_SIZE	NUMBER	Number of writes driven by the smallest redo log file size
WRITES_LOG_CHECKPOINT_SETTINGS	NUMBER	Number of writes driven by the LOG_CHECKPOINT_INTERVAL or LOG_CHECKPOINT_TIMEOUT initialization parameter
WRITES_OTHER_SETTINGS	NUMBER	Number of writes driven by other reasons (such as the deprecated FAST_START_IO_TARGET initialization parameter)
WRITES_AUTOTUNE	NUMBER	Number of writes due to auto-tune checkpointing
WRITES_FULL_THREAD_CKPT	NUMBER	Number of writes due to full thread checkpoints
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.13 V$IO_CALIBRATION_STATUS

V$IO_CALIBRATION_STATUS displays the status of I/O calibration in the instance.

Column	Datatype	Description
STATUS	VARCHAR2(13)	Calibration status: • IN PROGRESS - Calibration in Progress (Results from a previous calibration run are displayed, if available) • READY Results are ready and available from an earlier run • NOT AVAILABLE Calibration results are not available
CALIBRATION_TIME	TIMESTAMP(3)	End time of the last calibration run
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.14 V$IO_OUTLIER

V$IO_OUTLIER contains entries corresponding to I/Os that have taken a long time (more than 500 ms) to complete. Use this view to see if there any occasional delays in serving disk I/O requests by the storage subsystem.

Column	Datatype	Description
FUNCTION_NAME	VARCHAR2(18)	I/O function name of the delayed I/O
IO_SIZE	NUMBER	Size of the I/O in bytes
WAIT_EVENT	VARCHAR2(64)	Wait event name that was used to track the I/O
FILE_NAME	VARCHAR2(513)	Name of the file to which the I/O was targeted
IO_LATENCY	NUMBER	Time taken to complete the I/O (in milliseconds)
DISK1_NAME	VARCHAR2(255)	For Oracle ASM, the name of the first disk to which the I/O was issued
DISK1_LATENCY	NUMBER	Latency seen on the first disk (in milliseconds)
DISK2_NAME	VARCHAR2(255)	For Oracle ASM, the name of the second disk to which the I/O was issued
DISK2_LATENCY	NUMBER	Latency seen on the second disk (in milliseconds)
DISK3_NAME	VARCHAR2(255)	For Oracle ASM, the name of the third disk to which the I/O was issued
DISK3_LATENCY	NUMBER	Latency seen on the third disk (in milliseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> - "V$KERNEL_IO_OUTLIER"
> - "V$LGWRIO_OUTLIER"

9.15 V$IOFUNCMETRIC

`V$IOFUNCMETRIC` displays I/O statistics information by database function for the most recent time interval period.

Column	Datatype	Description
`BEGIN_TIME`	`DATE`	Begin time of the interval
`END_TIME`	`DATE`	End time of the interval
`INTSIZE_CSEC`	`NUMBER`	Interval size (in hundredths of a second)
`FUNCTION_ID`	`NUMBER`	Function ID
`FUNCTION_NAME`	`VARCHAR2(18)`	Function name
`SMALL_READ_MBPS`	`NUMBER`	Single block megabytes read per second
`SMALL_WRITE_MBPS`	`NUMBER`	Single block megabytes written per second
`LARGE_READ_MBPS`	`NUMBER`	Multiblock megabytes read per second
`LARGE_WRITE_MBPS`	`NUMBER`	Multiblock megabytes written per second
`SMALL_READ_IOPS`	`NUMBER`	Single block read requests per second
`SMALL_WRITE_IOPS`	`NUMBER`	Single block write requests per second
`LARGE_READ_IOPS`	`NUMBER`	Multiblock read requests per second
`LARGE_WRITE_IOPS`	`NUMBER`	Multiblock write requests per second
`AVG_WAIT_TIME`	`NUMBER`	Average wait time (in milliseconds)
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.16 V$IOFUNCMETRIC_HISTORY

`V$IOFUNCMETRIC_HISTORY` displays a recent history of the I/O statistics information by database function for the most recent time interval period.

The columns for `V$IOFUNCMETRIC_HISTORY` are the same as those for `V$IOFUNCMETRIC`.

> **See Also:**
>
> "V$IOFUNCMETRIC"

9.17 V$IOS_CLIENT

V$IOS_CLIENT provides more information about IO Server clients.

Column	Datatype	Description
CLIENT_ID	NUMBER	The unique ID for this client instance
CLUSTER_ID	VARCHAR2(33)	The GUID of the cluster where the client instance is running
CLUSTER_NAME	VARCHAR2(16)	When the query is executed on an Oracle IOServer (IOS) instance, this column shows the name of the cluster where the client (database) instance is running. When the query is executed on a database instance, this column shows the name of the cluster where the IOS instance that the database is connected to is running.
NODE	NUMBER	Number of the node within the cluster where the client instance is running
INSTANCE_NAME	VARCHAR2(64)	Instance name of the database client instance
DB_NAME	VARCHAR2(64)	Database name of the database client instance
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> In an Oracle Database instance, this view returns 0 rows when queried from a PDB.

9.18 V$IOSTAT_CONSUMER_GROUP

V$IOSTAT_CONSUMER_GROUP displays disk I/O statistics for consumer groups.

If the resource manager is enabled, then I/O statistics for all consumer groups that are part of the currently enabled resource plan are captured.

Column	Datatype	Description
CONSUMER_GROUP_ID	NUMBER	Consumer group ID
SMALL_READ_MEGABYTES	NUMBER	Number of single block megabytes read

Column	Datatype	Description
SMALL_WRITE_MEGABYTES	NUMBER	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	Number of multiblock megabytes written
SMALL_READ_REQS	NUMBER	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	Number of single block write requests
LARGE_READ_REQS	NUMBER	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	Number of multiblock write requests
NUMBER_OF_WAITS	NUMBER	Number of I/O waits by consumer group
WAIT_TIME	NUMBER	Total wait time (in milliseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.19 V$IOSTAT_FILE

V$IOSTAT_FILE displays information about disk I/O statistics of database files (including data files, temp files, and other types of database files).

I/O statistics for Data files and Temp files are provided for each file. All other file types (for example, control files, log files, archive logs, and so on) have their statistics consolidated into one entry in the view.

Column	Datatype	Description
FILE_NO	NUMBER	File identification number
FILETYPE_ID	NUMBER	Type of file (for example, log file, data file, and so on)
FILETYPE_NAME	VARCHAR2(28)	Name of the file, in the case of a data file or temp file. For all other files, a corresponding string to be displayed (for example, ARCHIVELOG).
SMALL_READ_MEGABYTES	NUMBER	Number of single block megabytes read
SMALL_WRITE_MEGABYTES	NUMBER	Number of single block megabytes written
LARGE_READ_MEGABYTES	NUMBER	Number of multiblock megabytes read
LARGE_WRITE_MEGABYTES	NUMBER	Number of multiblock megabytes written
SMALL_READ_REQS	NUMBER	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	Number of single block write requests
SMALL_SYNC_READ_REQS	NUMBER	Number of synchronous single block read requests
LARGE_READ_REQS	NUMBER	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	Number of multiblock write requests
SMALL_READ_SERVICETIME	NUMBER	Total service time (in milliseconds) for single block read requests
SMALL_WRITE_SERVICETIME	NUMBER	Total service time (in milliseconds) for single block write requests
SMALL_SYNC_READ_LATENCY	NUMBER	Latency for single block synchronous reads (in milliseconds)

Column	Datatype	Description
LARGE_READ_SERVICETIME	NUMBER	Total service time (in milliseconds) for multiblock read requests
LARGE_WRITE_SERVICETIME	NUMBER	Total service time (in milliseconds) for multiblock write requests
ASYNCH_IO	VARCHAR2(9)	Indicates whether asynchronous I/O is available for the file (ASYNC_ON) or not (ASYNC_OFF)
ACCESS_METHOD	VARCHAR2(11)	I/O library used to access the file. Possible values include: • OS_LIB - Operating system calls are used to access the file • ODM_LIB - Oracle Disk Manager library is used to access the file • ASM_MANAGED - The file is managed and accessed though ASM • DNFS_LIB - The file is accessed through Direct NFS library
RETRIES_ON_ERROR	NUMBER	Number of read retries on error
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.20 V$IOSTAT_FUNCTION

V$IOSTAT_FUNCTION displays disk I/O statistics for database functions (such as the LGWR and DBWR).

Column	Datatype	Description
FUNCTION_ID	NUMBER	Function ID
FUNCTION_NAME	VARCHAR2(18)	Function name: • RMAN • DBWR • LGWR • ARCH • XDB • Streams AQ • Data Pump • Recovery • Buffer Cache Reads • Direct Reads • Direct Writes • Smart Scan • Archive Manager • Others
SMALL_READ_MEGABYTES	NUMBER	Number of megabytes read via single block read requests
SMALL_WRITE_MEGABYTES	NUMBER	Number of megabytes written via single block write requests
LARGE_READ_MEGABYTES	NUMBER	Number of megabytes read via multiblock read requests
LARGE_WRITE_MEGABYTES	NUMBER	Number of megabytes written via multiblock write requests
SMALL_READ_REQS	NUMBER	Number of single block read requests

Column	Datatype	Description
SMALL_WRITE_REQS	NUMBER	Number of single block write requests
LARGE_READ_REQS	NUMBER	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	Number of multiblock write requests
NUMBER_OF_WAITS	NUMBER	Number of synchronous I/O waits by functionality
WAIT_TIME	NUMBER	Total synchronous I/O wait time (in milliseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.21 V$IOSTAT_FUNCTION_DETAIL

V$IOSTAT_FUNCTION_DETAIL displays disk I/O statistics for database functions (such as the LGWR and DBWR), broken down by file type.

Column	Datatype	Description
FUNCTION_ID	NUMBER	Function ID
FUNCTION_NAME	VARCHAR2(18)	Function name: • RMAN • DBWR • LGWR • ARCH • XDB • Streams AQ • Data Pump • Recovery • Buffer Cache Reads • Direct Reads • Direct Writes • Smart Scan • Archive Manager • Others
FILETYPE_ID	NUMBER	File type ID

Column	Datatype	Description
FILETYPE_NAME	VARCHAR2(28)	File type name: • Control File • Data File • Log File • Archive Log • Temp File • Data File Backup • Data File Incremental Backup • Archive Log Backup • Data File Copy • Flashback Log • Data Pump Dump File • Other
SMALL_READ_MEGABYTES	NUMBER	Number of megabytes read via single block read requests
SMALL_WRITE_MEGABYTES	NUMBER	Number of megabytes written via single block write requests
LARGE_READ_MEGABYTES	NUMBER	Number of megabytes read via multiblock read requests
LARGE_WRITE_MEGABYTES	NUMBER	Number of megabytes written via multiblock write requests
SMALL_READ_REQS	NUMBER	Number of single block read requests
SMALL_WRITE_REQS	NUMBER	Number of single block write requests
LARGE_READ_REQS	NUMBER	Number of multiblock read requests
LARGE_WRITE_REQS	NUMBER	Number of multiblock write requests
NUMBER_OF_WAITS	NUMBER	Number of synchronous I/O waits by functionality
WAIT_TIME	NUMBER	Total synchronous I/O wait time (in milliseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.22 V$IOSTAT_NETWORK

V$IOSTAT_NETWORK displays information about network I/O statistics that were caused by accessing files on a remote database instance.

Column	Datatype	Description
CLIENT	VARCHAR2(32)	Database client name initiating the network I/O (for example, RMAN or PL/SQL)
READS#	NUMBER	Number of read operations issued
WRITES#	NUMBER	Number of write operations issued
KBYTES_READ	NUMBER	Total number of kilobytes read
KBYTES_WRITTEN	NUMBER	Total number of kilobytes written
READ_LATENCY	NUMBER	Total read wait time (in milliseconds)

Column	Datatype	Description
WRITE_LATENCY	NUMBER	Total write wait time (in milliseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.23 V$IP_ACL

V$IP_ACL provides information about access control to database services from network hosts.

Column	Datatype	Description
SERVICE_NAME	VARCHAR2(512)	The database service name
HOST	VARCHAR2(64)	The host being granted access to the SERVICE_NAME. The host can be a hostname, dotted-decimal IPv4 or heximal IPv6 address. Wildcard "*" for IPv4 and Classless Inter-Domain Routing (CIDR) format is allowed.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs • 1: This value is used for rows containing data that pertain only to the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.24 V$JAVA_LIBRARY_CACHE_MEMORY

V$JAVA_LIBRARY_CACHE_MEMORY displays information about memory allocated to library cache memory objects in different namespaces for Java objects.

A memory object is an internal grouping of memory for efficient management. A library cache object may consist of one or more memory objects.

Column	Datatype	Description
LC_NAMESPACE	VARCHAR2(15)	Library cache namespace
LC_INUSE_MEMORY_OBJECTS	NUMBER	Number of library cache memory objects currently in use in the Java pool
LC_INUSE_MEMORY_SIZE	NUMBER	Total size of library cache in-use memory objects (in megabytes)
LC_FREEABLE_MEMORY_OBJECTS	NUMBER	Number of freeable library cache memory objects in the Java pool
LC_FREEABLE_MEMORY_SIZE	NUMBER	Size of library cache freeable memory objects (in megabytes)

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.25 V$JAVA_POOL_ADVICE

V$JAVA_POOL_ADVICE displays information about estimated parse time in the Java pool for different pool sizes.

The sizes range from 10% of the current Java pool size or the amount of pinned Java library cache memory (whichever is higher) to 200% of the current Java pool size, in equal intervals. The value of the interval depends on the current size of the Java pool.

Parse time saved refers to the amount of time saved by keeping library cache memory objects in the Java pool, as opposed to having to reload these objects.

Column	Datatype	Description
JAVA_POOL_SIZE_FOR_ESTIMATE	NUMBER	Java pool size for the estimate (in megabytes)
JAVA_POOL_SIZE_FACTOR	NUMBER	Size factor with respect to the current Java pool size
ESTD_LC_SIZE	NUMBER	Estimated memory in use by the library cache (in megabytes)
ESTD_LC_MEMORY_OBJECTS	NUMBER	Estimated number of library cache memory objects in the Java pool of the specified size
ESTD_LC_TIME_SAVED	NUMBER	Estimated elapsed parse time saved (in seconds), owing to library cache memory objects being found in a Java pool of the specified size. This is the time that would have been spent in reloading the required objects in the Java pool had they been aged out due to insufficient amount of available free memory.
ESTD_LC_TIME_SAVED_FACTOR	NUMBER	Estimated parse time saved factor with respect to the current Java pool size
ESTD_LC_LOAD_TIME	NUMBER	Estimated elapsed time (in seconds) for parsing in a Java pool of the specified size
ESTD_LC_LOAD_TIME_FACTOR	NUMBER	Estimated load time factor with respect to the current Java pool size
ESTD_LC_MEMORY_OBJECT_HITS	NUMBER	Estimated number of times a library cache memory object was found in a Java pool of the specified size
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.26 V$KERNEL_IO_OUTLIER

V$KERNEL_IO_OUTLIER contains entries corresponding to I/Os that have taken a long time (more than 500 ms) to complete.

Use this view to see the individual kernel components of I/Os for which there are any occasional delays in serving disk I/O requests by the storage subsystem.

> **Note:**
>
> Although this view exists on all platforms in Oracle Database 12*c*, it is only populated on the Solaris platform.

Column	Datatype	Description
TIMESTAMP	NUMBER	Number of seconds elapsed since 00:00 UTC, January 1, 1970
IO_SIZE	NUMBER	Size of the I/O, in KB.
IO_OFFSET	NUMBER	Offset into the device of the I/O
DEVICE_NAME	VARCHAR2(513)	Name of the device to which the I/O was targeted
PROCESS_NAME	VARCHAR2(64)	Name of the process that issued the I/O
TOTAL_LATENCY	NUMBER	Total time the I/O spent in the kernel (in milliseconds)
SETUP_LATENCY	NUMBER	Time spent during initial I/O setup before sending to SCSI target device driver (in milliseconds)
QUEUE_TO_HBA_LATENCY	NUMBER	Time spent in the SCSI target device driver before being sent to the Host Bus Adaptor (in milliseconds)
TRANSFER_LATENCY	NUMBER	Time spent in the Host Bus Adaptor and physically transferring the I/O to the storage device (in milliseconds)
CLEANUP_LATENCY	NUMBER	Time spent freeing resources used by the completed I/O (in milliseconds)
PID	NUMBER	Process ID that issued the I/O
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> - "V$IO_OUTLIER"
> - "V$LGWRIO_OUTLIER"

9.27 V$KEY_VECTOR

V$KEY_VECTOR provides debugging information related to the data structures used by in-memory aggregation for current and recent queries using key vectors.

Column	Datatype	Description
SESSION_ID	NUMBER	Session ID
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
TRANSLATE_ID	NUMBER	Translation vector ID
SQL_ID	VARCHAR2(13)	SQL ID that uses the translation vector
SQL_EXEC_START	DATE	Time when the execution of the SQL started
SQL_EXEC_ID	NUMBER	SQL execution identifier
PROCESS	VARCHAR2(64)	Operating system client process ID
STATE	VARCHAR2(9)	State of the in-memory aggregation operation: • BYPASS Refers to key vectors that are currently in use by queries that have undergone the vector transform. • BYPASSED This is a historical entry for key vectors whose queries have already finished. • FINISHED This is a historical entry for key vectors whose queries have already finished. • RUNNING Refers to key vectors that are currently in use by queries that have undergone the vector transform. One query will probably have multiple key vectors if it has gone through the vector transform. Also, if the query is operating in parallel, there may be multiple entries per PX server. The PROCESS column can be joined to V$SESSION to differentiate these cases.
TYPE	VARCHAR2(9)	Type of translation vector created: • DOUBLEIND • PAGED • SIMPLE • INDIRECT • HASH • OFFSET

Column	Datatype	Description
WIDTH	NUMBER	Width (number of bits) of DOUBLEIND, SIMPLE, INDIRECT, or OFFSETvector translation array: • 1 • 4 • 8 • 16 • 32
KEY_DATA_TYPE	VARCHAR2(13)	The internal join column key data type of either DOUBLEIND, SIMPLE, INDIRECT, or OFFSET translation vectors: • BINARY • BINARY_FLOAT • NUMBER • PACKED_BINARY • PACKED_DATE • PACKED_NUMBER Also, a value of NULL is displayed for HASH translation vectors with non-numeric data types and for HASH translation vectors with more than one join key column.
JOIN_COLUMN_COUNT	NUMBER	Number of join columns. PAGED and HASHED are the only types which can have greater than one join column.
JOIN_KEY_COUNT	NUMBER	Number of join key values used to build translation vector
DUP_JOIN_KEY_COUNT	NUMBER	Indicates the number of key values in the key vector that have more than one parent value
MIN_JOIN_KEY	NUMBER	Min join key value in translation vector
MAX_JOIN_KEY	NUMBER	Max join key value in translation vector
GROUP_KEY_COUNT	NUMBER	Max dense grouping key value. This value is computed while the data that creates the translation vector is processed.
FILTERED	NUMBER	Number of rows filtered by translation vector
PROBED	NUMBER	Number of rows that probed the translation vector in key vector use row source
ACTIVE	NUMBER	Number of active translation vectors used as filters across all workers
DISABLED	NUMBER	Number of translation vector filters across all workers that were disabled
MEMORY_ALLOCATED	NUMBER	Amount of memory allocated for the key vector
JOIN_STRUCTURE_SIZE	NUMBER	Amount of memory used out of the allocated space
FACT_OWNER	VARCHAR2(128)	The owner of the fact table. Null when the fact table is null.
FACT_NAME	VARCHAR2(128)	The table that contains measure data. May be null if more than one fact table is used in the query.
DIMENSION_OWNER	VARCHAR2(128)	When a single table is used to construct the key vector, the table owner will appear in this column. If multiple tables are joined to serve as the dimension (more of a snowflake than a star schema shape, for one example), then this column will be null.
DIMENSION_NAME	VARCHAR2(128)	The table that contains attribute data and is joined to the fact table. May be null if two or more tables are used (for example, snowflake style dimension tables).
CREATION_DURATION	NUMBER	Records the total time in seconds that it took to create the key vector
PAYLOAD_COLUMN_COUNT	NUMBER	The number of columns being carried from the dimension table to the fact table scan for processing without joinback

Column	Datatype	Description
OFFLOADED	VARCHAR2(10)	Indicates whether and how the key vector has been sent to an Exadata cell. Possible values: • NO: The key vector has not been sent to an Exadata cell. • YES: The key vector was fully sent to an Exadata cell. • COMPRESSED: The key vector was fully sent to an Exadata cell and was compressed. • EFILTER: The key vector could not be sent to an Exadata cell due to the size of another constraint. Instead, a bloom filter-like data structure was sent to aid filtration.
COMPRESSED_SIZE	NUMBER	If the value of OFFLOADED is COMPRESSED, then this column displays the compressed size of metadata transmitted to the Exadata cell (in bytes)
EFILTER_SIZE	NUMBER	If the value of OFFLOADED is EFILTER, then this column displays the size of the data structure sent to the Exadata cell (in bytes)

Oracle Database SQL Tuning Guide for more information about in-memory aggregation

9.28 V$LATCH

V$LATCH displays aggregate latch statistics for both parent and child latches, grouped by latch name.

Individual parent and child latch statistics are broken down in the views V$LATCH_PARENT and V$LATCH_CHILDREN.

Column	Datatype	Description
ADDR	RAW(4 | 8)	Address of the latch object
LATCH#	NUMBER	Latch number
LEVEL#	NUMBER	Latch level
NAME	VARCHAR2(64)	Latch name
HASH	NUMBER	Latch hash
GETS	NUMBER	Number of times the latch was requested in willing-to-wait mode
MISSES	NUMBER	Number of times the latch was requested in willing-to-wait mode and the requester had to wait
SLEEPS	NUMBER	Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch
IMMEDIATE_GETS	NUMBER	Number of times a latch was requested in no-wait mode
IMMEDIATE_MISSES	NUMBER	Number of times a no-wait latch request did not succeed (that is, missed)
WAITERS_WOKEN	NUMBER	This column has been deprecated and is present only for compatibility with previous releases of Oracle. No data is accumulated for this column; it will always have a value of zero.

Column	Datatype	Description
WAITS_HOLDING_LATCH	NUMBER	This column has been deprecated and is present only for compatibility with previous releases of Oracle. No data is accumulated for this column; it will always have a value of zero.
SPIN_GETS	NUMBER	Willing-to-wait latch requests which missed the first try but succeeded while spinning
SLEEP[1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11]	NUMBER	These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero. As a substitute for these columns you can query the appropriate rows of the V$EVENT_HISTOGRAM view where the EVENT column has a value of latch free or latch:%.
WAIT_TIME	NUMBER	Elapsed time spent waiting for the latch (in microseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$LATCH_CHILDREN"
- "V$LATCH_PARENT"

9.29 V$LATCH_CHILDREN

V$LATCH_CHILDREN displays statistics about child latches.

This view includes all columns of V$LATCH plus the CHILD# column. Note that child latches have the same parent if their LATCH# columns match each other.

Column	Datatype	Description
ADDR	RAW(4 | 8)	Address of the latch object
LATCH#	NUMBER	Latch number of the parent latch
CHILD#	NUMBER	Child latch number (unique only to each parent latch)
LEVEL#	NUMBER	Latch level
NAME	VARCHAR2(64)	Latch name
HASH	NUMBER	Latch hash
GETS	NUMBER	Number of times the latch was requested in willing-to-wait mode
MISSES	NUMBER	Number of times the latch was requested in willing-to-wait mode and the requester had to wait
SLEEPS	NUMBER	Number of times a willing-to-wait latch request resulted in a session sleeping while waiting for the latch

Column	Datatype	Description
IMMEDIATE_GETS	NUMBER	Number of times a latch was requested in no-wait mode
IMMEDIATE_MISSES	NUMBER	Number of times a no-wait latch request did not succeed (that is, missed)
WAITERS_WOKEN	NUMBER	This column has been deprecated and is present only for compatibility with previous releases of Oracle. No data is accumulated for this column; it will always have a value of zero.
WAITS_HOLDING_LATCH	NUMBER	This column has been deprecated and is present only for compatibility with previous releases of Oracle. No data is accumulated for this column; it will always have a value of zero.
SPIN_GETS	NUMBER	Willing-to-wait latch requests which missed the first try but succeeded while spinning
SLEEP[1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11]	NUMBER	These columns have been deprecated and are present only for compatibility with previous releases of Oracle. No data is accumulated for these columns; they will always have a value of zero. As a substitute for these columns you can query the appropriate rows of the V$EVENT_HISTOGRAM view where the EVENT column has a value of latch free or latch:%.
WAIT_TIME	NUMBER	Elapsed time spent waiting for the latch (in microseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$LATCH"

9.30 V$LATCH_MISSES

V$LATCH_MISSES displays statistics about missed attempts to acquire a latch.

Column	Datatype	Description
PARENT_NAME	VARCHAR2(64)	Latch name of a parent latch
WHERE	VARCHAR2(80)	This column is obsolete and maintained for backward compatibility. The value of this column is always equal to the value in LOCATION.
NWFAIL_COUNT	NUMBER	Number of times that no-wait acquisition of the latch failed
SLEEP_COUNT	NUMBER	Number of times that acquisition attempts caused sleeps
WTR_SLP_COUNT	NUMBER	Number of times a waiter slept
LONGHOLD_COUNT	NUMBER	Number of times someone held a latch for the entire duration of someone else's sleep
LOCATION	VARCHAR2(80)	Location that attempted to acquire the latch

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.31 V$LATCH_PARENT

V$LATCH_PARENT displays statistics about parent latches.

\ The columns for V$LATCH_PARENT are the same as those for V$LATCH.

> **See Also:**
>
> "V$LATCH"

9.32 V$LATCHHOLDER

V$LATCHHOLDER displays information about the current latch holders.

Column	Datatype	Description
PID	NUMBER	Identifier of the process holding the latch
SID	NUMBER	Identifier of the session that owns the latch
LADDR	RAW(4 | 8)	Latch address
NAME	VARCHAR2(64)	Name of the latch being held
GETS	NUMBER	Number of times that the latch was obtained in either wait mode or no-wait mode
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.33 V$LATCHNAME

V$LATCHNAME displays information about decoded latch names for the latches shown in V$LATCH.

The rows of V$LATCHNAME have a one-to-one correspondence to the rows of V$LATCH.

Column	Datatype	Description
LATCH#	NUMBER	Latch number
NAME	VARCHAR2(64)	Latch name
DISPLAY_NAME	VARCHAR2(64)	A clearer and more descriptive name for the latch that appears in the NAME column. Names that appear in the DISPLAY_NAME column can change across Oracle Database releases, therefore customer scripts should not rely on names that appear in the DISPLAY_NAME column across releases.
HASH	NUMBER	Latch hash
TYPE	VARCHAR2(4)	Type of the latch (SGA, PDB, or OSP):
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$LATCH"

9.34 V$LCR_CACHE

V$LCR_CACHE displays information about entries in the logical change record (LCR) cache.

Column	Datatype	Description
LCR_TYPE	CHAR(12)	Indicates whether the LCR is INTERNAL or EXTERNAL
COMPONENT_NAME	VARCHAR2(128)	Component name
COMPONENT_TYPE	VARCHAR2(40)	Component type. Possible values: • APPLY COORDINATOR • APPLY READER • APPLY SERVER • CAPTURE COORDINATOR • CAPTURE READER • CAPTURE SERVER
NUM_COLUMNS	NUMBER	Number of columns in the LCR
FREE_COUNT	NUMBER	Number of available LCRs
REQUEST_COUNT	NUMBER	Total request count
CACHE_HITS	NUMBER	Cache hit count
ALT_CACHE_HITS	NUMBER	Hit count from an alternate LCR cache entry
PURGED_COUNT	NUMBER	Cache purge count
SID	NUMBER	Session ID of the component process

Column	Datatype	Description
SERIAL#	NUMBER	Session serial number of the component process
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.35 V$LGWRIO_OUTLIER

V$LGWRIO_OUTLIER contains entries corresponding to Log Writer (LGWR) process I/Os that have taken a long time (more than 500 ms) to complete. Use this view to see if there any occasional delays in serving disk I/O requests by the storage subsystem.

Column	Datatype	Description
FUNCTION_NAME	VARCHAR2(18)	I/O function name of the delayed I/O
IO_SIZE	NUMBER	Size of the I/O in bytes
WAIT_EVENT	VARCHAR2(64)	Wait event name that was used to track the I/O
FILE_NAME	VARCHAR2(513)	Name of the file to which the I/O was targeted
IO_LATENCY	NUMBER	Time taken to complete the I/O (in milliseconds)
DISK1_NAME	VARCHAR2(255)	For Oracle ASM, the name of the first disk to which the I/O was issued
DISK1_LATENCY	NUMBER	Latency seen on the first disk (in milliseconds)
DISK2_NAME	VARCHAR2(255)	For Oracle ASM, the name of the second disk to which the I/O was issued
DISK2_LATENCY	NUMBER	Latency seen on the second disk (in milliseconds)
DISK3_NAME	VARCHAR2(255)	For Oracle ASM, the name of the third disk to which the I/O was issued
DISK3_LATENCY	NUMBER	Latency seen on the third disk (in milliseconds)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$IO_OUTLIER"
- "V$KERNEL_IO_OUTLIER"

9.36 V$LIBCACHE_LOCKS

V$LIBCACHE_LOCKS displays information about the library cache locks and pins. Locks and pins are distinguished based on the value of the TYPE column.

Column	Datatype	Description
TYPE	VARCHAR2(4)	LOCK or PIN
ADDR	RAW(4 | 8)	Address of the lock/pin
HOLDING_USER_SESSION	RAW(4 | 8)	User session holding this lock/pin
HOLDING_SESSION	RAW(4 | 8)	Session holding this lock/pin
OBJECT_HANDLE	RAW(4 | 8)	Handle address for which the lock/pin is acquired
LOCK_HELD	RAW(4 | 8)	If the type is LOCK, then LOCK_HELD represents the pin that is pinning the object. If the type is PIN, then LOCK_HELD represents the lock that is locking the object.
REFCOUNT	NUMBER	Reference count for this lock/pin
MODE_HELD	NUMBER	Lock/pin mode held: • 0 - No lock/pin held • 1 - Null mode • 2 - Share mode • 3 - Exclusive mode
MODE_REQUESTED	NUMBER	Lock/pin mode requested: • 0 - No lock/pin requested • 1 - Null mode • 2 - Share mode • 3 - Exclusive mode
SAVEPOINT_NUMBER	NUMBER	Kernel transaction savepoint number at the time the lock/pin was acquired
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.37 V$LIBRARY_CACHE_MEMORY

V$LIBRARY_CACHE_MEMORY displays information about memory allocated to library cache memory objects in different namespaces.

A memory object is an internal grouping of memory for efficient management. A library cache object may consist of one or more memory objects.

Column	Datatype	Description
LC_NAMESPACE	VARCHAR2(15)	Library cache namespace

Column	Datatype	Description
LC_INUSE_MEMORY_OBJECTS	NUMBER	Number of library cache memory objects currently in use in the shared pool
LC_INUSE_MEMORY_SIZE	NUMBER	Total size of library cache in-use memory objects (in megabytes)
LC_FREEABLE_MEMORY_OBJECTS	NUMBER	Number of freeable library cache memory objects in the shared pool
LC_FREEABLE_MEMORY_SIZE	NUMBER	Size of library cache freeable memory objects (in megabytes)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.38 V$LIBRARYCACHE

V$LIBRARYCACHE contains statistics about library cache performance and activity.

Column	Datatype	Description
NAMESPACE	VARCHAR2(64)	Library cache namespace
GETS	NUMBER	Number of times a lock was requested for objects of this namespace
GETHITS	NUMBER	Number of times an object's handle was found in memory
GETHITRATIO	NUMBER	Ratio of GETHITS to GETS
PINS	NUMBER	Number of times a PIN was requested for objects of this namespace
PINHITS	NUMBER	Number of times all of the metadata pieces of the library object were found in memory
PINHITRATIO	NUMBER	Ratio of PINHITS to PINS
RELOADS	NUMBER	Any PIN of an object that is not the first PIN performed since the object handle was created, and which requires loading the object from disk
INVALIDATIONS	NUMBER	Total number of times objects in this namespace were marked invalid because a dependent object was modified
DLM_LOCK_REQUESTS	NUMBER	Number of GET requests lock instance locks
DLM_PIN_REQUESTS	NUMBER	Number of PIN requests lock instance locks
DLM_PIN_RELEASES	NUMBER	Number of release requests PIN instance locks
DLM_INVALIDATION_REQUESTS	NUMBER	Number of GET requests for invalidation instance locks
DLM_INVALIDATIONS	NUMBER	Number of invalidation pings received from other instances
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.39 V$LICENSE

V$LICENSE displays information about license limits.

Column	Datatype	Description
SESSIONS_MAX	NUMBER	Maximum number of concurrent user sessions allowed for the instance
SESSIONS_WARNING	NUMBER	Warning limit for concurrent user sessions for the instance
SESSIONS_CURRENT	NUMBER	Current number of concurrent user sessions
SESSIONS_HIGHWATER	NUMBER	Highest number of concurrent user sessions since the instance started
USERS_MAX	NUMBER	Maximum number of named users allowed for the database
CPU_COUNT_CURRENT	NUMBER	Current number of logical CPUs or processors on the system
CPU_CORE_COUNT_CURRENT	NUMBER	Current number of CPU cores on the system (includes subcores of multicore CPUs, as well as single-core CPUs)
CPU_SOCKET_COUNT_CURRENT	NUMBER	Current number of CPU sockets on the system (represents an absolute count of CPU chips on the system, regardless of multithreading or multicore architectures)
CPU_COUNT_HIGHWATER	NUMBER	Highest number of logical CPUs or processors on the system since the instance started
CPU_CORE_COUNT_HIGHWATER	NUMBER	Highest number of CPU cores on the system since the instance started (includes subcores of multicore CPUs, as well as single-core CPUs)
CPU_SOCKET_COUNT_HIGHWATER	NUMBER	Highest number of CPU sockets on the system since the instance started (represents an absolute count of CPU chips on the system, regardless of multithreading or multicore architectures)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> The availability of the CPU core count and CPU socket count statistics is subject to the operating system platform on which the Oracle Database is running. If a statistic is unavailable, the view will return NULL for the statistic value.

9.40 V$LOADISTAT

V$LOADISTAT contains errors that occurred when updating indexes on a table during a load using the Direct Path API.

Column	Datatype	Description
OWNER	VARCHAR2(31)	Schema name

Column	Datatype	Description
TABNAME	VARCHAR2(31)	Table name
INDEXNAME	VARCHAR2(31)	Index name
SUBNAME	VARCHAR2(31)	Index sub name
MESSAGE_NUM	NUMBER	Error message number
MESSAGE	VARCHAR2(4000)	Error message
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.41 V$LOADPSTAT

V$LOADPSTAT contains statistics about the number of rows loaded into a partition, or subpartition, during a load using the Direct Path API.

Column	Datatype	Description
OWNER	VARCHAR2(31)	Schema name
TABNAME	VARCHAR2(31)	Table name
PARTNAME	VARCHAR2(31)	Partition name
LOADED	NUMBER	Number of rows loaded
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.42 V$LOCK

V$LOCK lists the locks currently held by the Oracle Database and outstanding requests for a lock or latch.

Column	Datatype	Description
ADDR	RAW(4 | 8)	Address of lock state object
KADDR	RAW(4 | 8)	Address of lock
SID	NUMBER	Identifier for session holding or acquiring the lock

Column	Datatype	Description
TYPE	VARCHAR2(2)	Type of user or system lock The locks on the user types are obtained by user applications. Any process that is blocking others is likely to be holding one of these locks. The user type locks are: TM - DML enqueue TX - Transaction enqueue UL - User supplied The system type locks are listed in Table 9-1. Be aware that not all types of locks are documented. To find a complete list of locks for the current release, query the V$LOCK_TYPE data dictionary view, described on "V$LOCK_TYPE".
ID1	NUMBER	Lock identifier #1 (depends on type)
ID2	NUMBER	Lock identifier #2 (depends on type)
LMODE	NUMBER	Lock mode in which the session holds the lock: • 0 - none • 1 - null (NULL) • 2 - row-S (SS) • 3 - row-X (SX) • 4 - share (S) • 5 - S/Row-X (SSX) • 6 - exclusive (X)
REQUEST	NUMBER	Lock mode in which the process requests the lock: • 0 - none • 1 - null (NULL) • 2 - row-S (SS) • 3 - row-X (SX) • 4 - share (S) • 5 - S/Row-X (SSX) • 6 - exclusive (X)
CTIME	NUMBER	Time since current mode was granted
BLOCK	NUMBER	Indicates whether the lock in question is blocking other processes. The possible values are: • 0 - The lock is not blocking any other processes • 1 - The lock is blocking other processes • 2 - The lock is not blocking any blocked processes on the local node, but it may or may not be blocking processes on remote nodes. This value is used only in Oracle Real Application Clusters (Oracle RAC) configurations (not in single instance configurations).
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Table 9-1 Values for the TYPE Column: System Types

System Type	Description	System Type	Description
AE	Edition enqueue	MR	Media recovery
AT	Lock held for the ALTER TABLE statement	NA..NZ	Library cache pin instance (A..Z = namespace)
BL	Buffer hash table instance	PF	Password File
CF	Control file schema global enqueue	PI, PS	Parallel operation
CI	Cross-instance function invocation instance	PR	Process startup
CU	Cursor bind	QA..QZ	Row cache instance (A..Z = cache)
DF	datafile instance	RT	Redo thread global enqueue
DL	Direct loader parallel index create	SC	System change number instance
DM	Mount/startup db primary/secondary instance	SM	SMON
DR	Distributed recovery process	SN	Sequence number instance
DX	Distributed transaction entry	SQ	Sequence number enqueue
FS	File set	SS	Sort segment
HW	Space management operations on a specific segment	ST	Space transaction enqueue
IN	Instance number	SV	Sequence number value
IR	Instance recovery serialization global enqueue	TA	Generic enqueue
IS	Instance state	TS	Temporary segment enqueue (ID2=0)
IV	Library cache invalidation instance	TS	New block allocation enqueue (ID2=1)
JQ	Job queue	TT	Temporary table enqueue
KK	Thread kick	UN	User name
LA .. LP	Library cache lock instance lock (A..P = namespace)	US	Undo segment DDL
MM	Mount definition global enqueue	WL	Being-written redo log instance

9.43 V$LOCK_ACTIVITY

V$LOCK_ACTIVITY is deprecated. The information that was provided in this view is now provided in the V$INSTANCE_CACHE_TRANSFER and V$SEGMENT_STATISTICS views.

Column	Datatype	Description
FROM_VAL	CHAR(4)	Global Cache Resource initial state; always NULL
TO_VAL	CHAR(1)	Global Cache Resource initial state; always S
ACTION_VAL	CHAR(21)	Description of the conversion; always Lock buffers for read
COUNTER	NUMBER	Number of times the lock operation executed

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$INSTANCE_CACHE_TRANSFER"
- "V$SEGMENT_STATISTICS"

9.44 V$LOCK_TYPE

V$LOCK_TYPE describes the type of locks available.

Column	Datatype	Description
TYPE	VARCHAR2(64)	A two-letter internal resource identifier
NAME	VARCHAR2(64)	Resource type name. This is a short (less than 32 characters) enqueue type name.
ID1_TAG	VARCHAR2(64)	Description of the enqueue type.
ID2_TAG	VARCHAR2(64)	Further description of the enqueue type.
IS_USER	VARCHAR2(3)	User enqueue. These are enqueues that are acquired as a direct result of a SQL statement. Applications may get deadlocks on these enqueues. Such deadlocks are considered application errors.
IS_RECYCLE	VARCHAR2(3)	Indicates whether the enqueue requires caching of the associated resource in the DLM's resource cache. Possible values: • NO: Means the enqueue requires caching of the associated resource in the DLM's resource cache • YES: Means the enqueue does not require caching of the associated resource in the DLM's resource cache
DESCRIPTION	VARCHAR2(4000)	Explanation of how or for what purpose the enqueue is used.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.45 V$LOCKDOWN_RULES

V$LOCKDOWN_RULES displays information about lockdown profile rules that are applicable in the pluggable database (PDB) where this view is queried.

Column	Datatype	Description
RULE_TYPE	VARCHAR2(128)	Type of the rule: • STATEMENT • FEATURE • OPTION
RULE	VARCHAR2(128)	Rule to be enabled or disabled
CLAUSE	VARCHAR2(128)	Clause of the statement
CLAUSE_OPTION	VARCHAR2(128)	Option of the clause
STATUS	VARCHAR2(7)	Status of the lockdown profile: • ENABLE • DISABLE • EMPTY
USERS	VARCHAR2(6)	Type of users affected by the rule: • ALL • LOCAL • COMMON
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs • 1: This value is used for rows containing data that pertain to only the root. • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

Oracle Database Security Guide for more information about PDB lockdown profiles

9.46 V$LOCKED_OBJECT

V$LOCKED_OBJECT lists all locks acquired by every transaction on the system. It shows which sessions are holding DML locks (that is, TM-type enqueues) on what objects and in what mode.

Column	Datatype	Description
XIDUSN	NUMBER	Undo segment number
XIDSLOT	NUMBER	Slot number
XIDSQN	NUMBER	Sequence number

Column	Datatype	Description
OBJECT_ID	NUMBER	Object ID being locked
SESSION_ID	NUMBER	Session ID
ORACLE_USERNAME	VARCHAR2(128)	Oracle user name
OS_USER_NAME	VARCHAR2(128)	Operating system user name
PROCESS	VARCHAR2(24)	Operating system process ID
LOCKED_MODE	NUMBER	Lock mode. The numeric values for this column map to these text values for the lock modes for table locks: • 0 - NONE: lock requested but not yet obtained • 1 - NULL • 2 - ROWS_S (SS): Row Share Lock • 3 - ROW_X (SX): Row Exclusive Table Lock • 4 - SHARE (S): Share Table Lock • 5 - S/ROW-X (SSX): Share Row Exclusive Table Lock • 6 - Exclusive (X): Exclusive Table Lock **See Also:** *Oracle Database Concepts* for more information about lock modes for table locks
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.47 V$LOG

V$LOG displays log file information from the control file.

Column	Datatype	Description
GROUP#	NUMBER	Log group number
THREAD#	NUMBER	Log thread number
SEQUENCE#	NUMBER	Log sequence number
BYTES	NUMBER	Size of the log (in bytes)
BLOCKSIZE	NUMBER	Block size of the logfile (512 or 4096)
MEMBERS	NUMBER	Number of members in the log group
ARCHIVED	VARCHAR2(3)	Archive status (YES) or (NO)

Column	Datatype	Description
STATUS	VARCHAR2(16)	Log status: • UNUSED - Online redo log has never been written to. This is the state of a redo log that was just added, or just after a RESETLOGS, when it is not the current redo log. • CURRENT - Current redo log. This implies that the redo log is active. The redo log could be open or closed. • ACTIVE - Log is active but is not the current log. It is needed for crash recovery. It may be in use for block recovery. It may or may not be archived. • CLEARING - Log is being re-created as an empty log after an ALTER DATABASE CLEAR LOGFILE statement. After the log is cleared, the status changes to UNUSED. • CLEARING_CURRENT - Current log is being cleared of a closed thread. The log can stay in this status if there is some failure in the switch such as an I/O error writing the new log header. • INACTIVE - Log is no longer needed for instance recovery. It may be in use for media recovery. It may or may not be archived.
FIRST_CHANGE#	NUMBER	Lowest system change number (SCN) in the log
FIRST_TIME	DATE	Time of the first SCN in the log
NEXT_CHANGE#	NUMBER	Highest change number (SCN) in the log When STATUS=CURRENT, NEXT_CHANGE# is set to the highest possible SCN, 9295429630892703743.
NEXT_TIME	DATE	Time of the highest SCN in the log. When STATUS=CURRENT, NEXT_TIME is set to NULL.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.48 V$LOG_HISTORY

V$LOG_HISTORY displays log history information from the control file.

Column	Datatype	Description
RECID	NUMBER	Control file record ID
STAMP	NUMBER	Control file record stamp
THREAD#	NUMBER	Thread number of the archived log
SEQUENCE#	NUMBER	Sequence number of the archived log
FIRST_CHANGE#	NUMBER	Lowest system change number (SCN) in the log
FIRST_TIME	DATE	Time of the first entry (lowest SCN) in the log
NEXT_CHANGE#	NUMBER	Highest SCN in the log
RESETLOGS_CHANGE#	NUMBER	Resetlogs change number of the database when the log was written
RESETLOGS_TIME	DATE	Resetlogs time of the database when the log was written

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.49 V$LOGFILE

V$LOGFILE contains information about redo log files.

Column	Datatype	Description
GROUP#	NUMBER	Redo log group identifier number
STATUS	VARCHAR2(7)	Status of the log member: • INVALID - File is inaccessible • STALE - File's contents are incomplete • DELETED - File is no longer used • null - File is in use
TYPE	VARCHAR2(7)	Type of the logfile: • ONLINE • STANDBY
MEMBER	VARCHAR2(513)	Redo log member name
IS_RECOVERY_DEST_FILE	VARCHAR2(3)	Indicates whether the file was created in the fast recovery area (YES) or not (NO)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.50 V$LOGHIST

V$LOGHIST contains log history information from the control file. This view is retained for historical compatibility. Oracle recommends that you use V$LOG_HISTORY instead.

> **See Also:**
>
> "V$LOG_HISTORY"

Column	Datatype	Description
THREAD#	NUMBER	Log thread number
SEQUENCE#	NUMBER	Log sequence number
FIRST_CHANGE#	NUMBER	Lowest SCN in the log
FIRST_TIME	DATE	Time of first SCN in the log
SWITCH_CHANGE#	NUMBER	SCN at which the log switch occurred; one more than highest SCN in the log
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.51 V$LOGMNR_CONTENTS

V$LOGMNR_CONTENTS contains log history information. To query this view, you must have the LOGMINING privilege.

When a SELECT statement is executed against the V$LOGMNR_CONTENTS view, the archive redo log files are read sequentially. Translated records from the redo log files are returned as rows in the V$LOGMNR_CONTENTS view. This continues until either the filter criteria specified at startup (EndTime or endScn) are met or the end of the archive log file is reached.

When this view is queried from a PDB, it returns only redo generated by that PDB.

Column	Datatype	Description
SCN	NUMBER	System change number (SCN) when the database change was made
START_SCN	NUMBER	System change number (SCN) when the transaction that contains this change started; only meaningful if the COMMITTED_DATA_ONLY option was chosen in a DBMS_LOGMNR.START_LOGMNR() invocation, NULL otherwise. This column may also be NULL if the query is run over a time/SCN range that does not contain the start of the transaction.
COMMIT_SCN	NUMBER	System change number (SCN) when the transaction committed; only meaningful if the COMMITTED_DATA_ONLY option was chosen in a DBMS_LOGMNR.START_LOGMNR() invocation
TIMESTAMP	DATE	Timestamp when the database change was made
START_TIMESTAMP	DATE	Timestamp when the transaction that contains this change started; only meaningful if the COMMITTED_DATA_ONLY option was chosen in a DBMS_LOGMNR.START_LOGMNR() invocation, NULL otherwise. This column may also be NULL if the query is run over a time/SCN range that does not contain the start of the transaction.
COMMIT_TIMESTAMP	DATE	Timestamp when the transaction committed; only meaningful if the COMMITTED_DATA_ONLY option was chosen in a DBMS_LOGMNR.START_LOGMNR() invocation
XIDUSN	NUMBER	Transaction ID undo segment number of the transaction that generated the change
XIDSLT	NUMBER	Transaction ID slot number of the transaction that generated the change

Column	Datatype	Description
XIDSQN	NUMBER	Transaction ID sequence number of the transaction that generated the change
XID	RAW(8)	Raw representation of the transaction identifier
PXIDUSN	NUMBER	Parent transaction ID undo segment number of a parallel transaction
PXIDSLT	NUMBER	Parent transaction ID slot number of a parallel transaction
PXIDSQN	NUMBER	Parent transaction ID sequence number of a parallel transaction
PXID	RAW(8)	Raw representation of the parent transaction identifier
TX_NAME	VARCHAR2(256)	Name of the transaction that made the change; only meaningful if the transaction is a named transaction
OPERATION	VARCHAR2(32)	User level SQL operation that made the change: • INTERNAL - Change was caused by internal operations initiated by the database • INSERT - Change was caused by an insert statement • DELETE - Change was caused by a delete statement • UPDATE - Change was caused by an update statement • DDL - Change was caused by a DDL statement • START - Change was caused by the start of a transaction • COMMIT - Change was caused by the commit of a transaction • SEL_LOB_LOCATOR - Operation was a SELECT statement that returned a LOB locator • LOB_WRITE - Change was caused by an invocation of DBMS_LOB.WRITE • LOB_TRIM - Change was caused by an invocation of DBMS_LOB.TRIM • LOB_ERASE - Change was caused by an invocation of DBMS_LOB.ERASE • MISSING_SCN - LogMiner encountered a gap in the redo records. This is most likely because not all redo logs were registered with LogMiner. • ROLLBACK - Change was caused by a full rollback of a transaction • XML DOC BEGIN - Beginning of a change to an XMLType column or table • XML DOC WRITE - Data for an XML document • XML DOC END - End of the Data for an XML document • UNSUPPORTED - Change was caused by operations not currently supported by LogMiner (for example, changes made to nested tables) The OPERATION and OPERATION_CODE columns in this view are available for top-level user operations, for example, DML and DDL. Values that are not documented for these columns are internal to LogMiner or the RDBMS and do not reflect user operations.

Column	Datatype	Description
OPERATION_CODE	NUMBER	Number of the operation code: • 0 - INTERNAL • 1 - INSERT • 2 - DELETE • 3 - UPDATE • 5 - DDL • 6 - START • 7 - COMMIT • 9 - SELECT_LOB_LOCATOR • 10 - LOB_WRITE • 11 - LOB_TRIM • 29 - LOB_ERASE • 34 - MISSING_SCN • 36 - ROLLBACK • 68 - XML DOC BEGIN • 70 = XML DOC WRITE • 71 = XML DOC END • 255 - UNSUPPORTED
ROLLBACK	NUMBER	1 = if the redo record was generated because of a partial or a full rollback of the associated transaction 0 = otherwise
SEG_OWNER	VARCHAR2(386)	Owner of the modified data segment
SEG_NAME	VARCHAR2(256)	Name of the modified data segment
TABLE_NAME	VARCHAR2(386)	Name of the modified table (in case the redo pertains to a table modification)
SEG_TYPE	NUMBER	Type of the modified data segment: • 0 - UNKNOWN • 1 - INDEX • 2 - TABLE • 19 - TABLE PARTITION • 20 - INDEX PARTITION • 34 - TABLE SUBPARTITION • All other values - UNSUPPORTED
SEG_TYPE_NAME	VARCHAR2(32)	Segment type name: • INDEX • INDEX PARTITION • TABLE • TABLE PARTITION • TABLE SUBPARTITION • UNKNOWN • UNSUPPORTED
TABLE_SPACE	VARCHAR2(92)	Name of the tablespace containing the modified data segment. This column is not populated for rows where the value of the OPERATION column is DDL. This is because DDL may operate on more than one tablespace.
ROW_ID	VARCHAR2(18)	Row ID of the row modified by the change (only meaningful if the change pertains to a DML). This will be NULL if the redo record is not associated with a DML.
USERNAME	VARCHAR2(384)	Name of the user who executed the transaction

Column	Datatype	Description
OS_USERNAME	VARCHAR2(4000)	Name of the operating system user
MACHINE_NAME	VARCHAR2(4000)	Machine from which the user connected to the database
AUDIT_SESSIONID	NUMBER	Audit session ID associated with the user session making the change
SESSION#	NUMBER	Session number of the session that made the change
SERIAL#	NUMBER	Serial number of the session that made the change
SESSION_INFO	VARCHAR2(4000)	Information about the database session that executed the transaction. Contains process information, machine name from which the user logged in, and so on. A possible SESSION_INFO column may contain the following: • login_username = HR • client_info = • OS_username = jkundu • Machine_name = nirvan • OS_terminal = pts/31 • OS_program_name = sqlplus@nirvan (TNS V1-V3)
THREAD#	NUMBER	Number of the thread that made the change to the database
SEQUENCE#	NUMBER	Sequence number of the SQL statement within the transaction. If you are mining without the COMMITED_DATA_ONLY option set, then this value is 1.
RBASQN	NUMBER	Sequence# associated with the Redo Block Address (RBA) of the redo record associated with the change
RBABLK	NUMBER	RBA block number within the log file
RBABYTE	NUMBER	RBA byte offset within the block
UBAFIL	NUMBER	Undo Block Address (UBA) file number identifying the file containing the undo block
UBABLK	NUMBER	UBA block number for the undo block
UBAREC	NUMBER	UBA record index within the undo block
UBASQN	NUMBER	UBA undo block sequence number
ABS_FILE#	NUMBER	Data block absolute file number of the block changed by the transaction
REL_FILE#	NUMBER	Data block relative file number. The file number is relative to the tablespace of the object.
DATA_BLK#	NUMBER	Data block number within the file
DATA_OBJ#	NUMBER	Data block object number identifying the object
DATA_OBJV#	NUMBER	Version number of the table being modified
DATA_OBJD#	NUMBER	Data block data object number identifying the object within the tablespace
SQL_REDO	VARCHAR2(4000)	Reconstructed SQL statement that is equivalent to the original SQL statement that made the change. Refer to *Oracle Database Utilities* before executing SQL_REDO to your database. LogMiner does not generate SQL redo for temporary tables. In such a case, this column will contain the string "/* No SQL_REDO for temporary tables */".

Column	Datatype	Description
SQL_UNDO	VARCHAR2(4000)	Reconstructed SQL statement that can be used to undo the effect of the original statement that made the change. DDL statements have no corresponding SQL_UNDO. Refer to *Oracle Database Utilities* before executing SQL_UNDO to your database. LogMiner does not generate SQL undo for temporary tables. In such a case, this column will contain the string "/* No SQL_UNDO for temporary tables */".
RS_ID	VARCHAR2(32)	Record set ID. The tuple (RS_ID, SSN) together uniquely identifies a logical row change. This will usually mean one row from V$LOGMNR_CONTENTS, but could be more than one row if a single SQL statement for either the Redo or Undo would be too large to fit within the respective columns SQL_UNDO or SQL_REDO. RS_ID uniquely identifies the redo record that generated the row.
SSN	NUMBER	SQL sequence number. Used in conjunction with RS_ID, this uniquely identifies a logical row change, shown as one or more rows from the V$LOGMNR_CONTENTS view.
CSF	NUMBER	Continuation SQL flag. Possible values are: • 0 - Indicates SQL_REDO and SQL_UNDO is contained within the same row • 1 - Indicates that either SQL_REDO or SQL_UNDO is greater than 4000 bytes in size and is continued in the next row returned by the view
INFO	VARCHAR2(64)	Informational message about the row. For instance, the string "USER DDL" indicates that the DDL statement returned in the SQL_REDO column was the top-level DDL executed by the user and the string "INTERNAL DDL" indicates that the DDL statement returned in the SQL_REDO column was executed internally by the RDBMS.
STATUS	NUMBER	A value of 0 indicates that the reconstructed SQL statements as shown in the SQL_REDO and SQL_UNDO columns are valid executable SQL statements. Otherwise, the reconstructed SQL statements are not executable. This may be because no data dictionary was provided to LogMiner for the analysis, or that the data dictionary provided did not have the definition of the object being mined. A value of 5 indicates that this row is part of a change to an XMLType column or table and the XML document must be assembled before being applied.
REDO_VALUE	NUMBER	Used as input to the DBMS_LOGMNR.MINE_VALUE() and DBMS_LOGMNR.COLUMN_PRESENT() functions
UNDO_VALUE	NUMBER	Used as input to the DBMS_LOGMNR.MINE_VALUE() and DBMS_LOGMNR.COLUMN_PRESENT() functions
SAFE_RESUME_SCN	NUMBER	Reserved for future use
CSCN	NUMBER	This column is deprecated in favor of the COMMIT_SCN column
OBJECT_ID	RAW(16)	Object identifier for DMLs to XMLType tables. For changes to non-typed tables, this column is NULL.
EDITION_NAME	VARCHAR2(384)	Identifies the edition in which a DDL statement was executed
CLIENT_ID	VARCHAR2(64)	Client identifier in the session that performed the operation, if available.
SRC_CON_NAME	VARCHAR2(384)	Contains the pluggable database (PDB) name. This information will only be available when mining with a current LogMiner dictionary.
SRC_CON_ID	NUMBER	Contains the PDB ID (the PDB_ID column from the DBA_PDBS view). This information will be available only with a current LogMiner dictionary.

Column	Datatype	Description
SRC_CON_UID	NUMBER	Contains the PDB UID (the CON_UID column from the DBA_PDBS view). This information will be available with or without a current LogMiner dictionary.
SRC_CON_DBID	NUMBER	Contains the PDB identifier (the DBID column from the DBA_PDBS view). This information will only be available when mining with a current LogMiner dictionary.
SRC_CON_GUID	RAW(16)	Contains the GUID associated with the PDB (the GUID column from the DBA_PDBS view). This information will only be available when mining with a current LogMiner dictionary.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root

See Also:

- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_LOGMNR package
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_LOB package

9.52 V$LOGMNR_DICTIONARY

V$LOGMNR_DICTIONARY contains log history information.

Column	Datatype	Description
DB_NAME	VARCHAR2(9)	Name of the database
DB_ID	NUMBER	Database ID
DB_CREATED	DATE	Creation date of the source database (corresponds to the CREATED column in the V$DATABASE view)
TIMESTAMP	DATE	Date when the dictionary was created
RESET_SCN	NUMBER	Reset log SCN when the dictionary was created
RESET_SCN_TIME	DATE	Timestamp of the reset log SCN when the dictionary was created
DB_VERSION_TIME	DATE	Version time for the source database (corresponds to the VERSION_TIME column in the V$DATABASE view)
DB_CHARACTER_SET	VARCHAR2(30)	Character set of the source database
DB_VERSION	VARCHAR2(64)	This column is deprecated.
DB_STATUS	VARCHAR2(64)	This column is deprecated.
DICTIONARY_SCN	NUMBER	Database checkpoint SCN at which the dictionary was created
ENABLED_THREAD_MAP	RAW(16)	This column is deprecated.
DB_TXN_SCN	NUMBER	SCN at which the dictionary was created

Column	Datatype	Description
FILENAME	VARCHAR2(512)	Dictionary file name
INFO	VARCHAR2(32)	Informational/Status message BAD_DATE indicates that the SCN of the dictionary file does not match the SCN range of the log files
STATUS	NUMBER	A NULL indicates a valid dictionary file for the list of log files. A non-NULL value indicates further information is contained in the INFO column as a text string.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.53 V$LOGMNR_DICTIONARY_LOAD

V$LOGMNR_DICTIONARY_LOAD displays information about LogMiner dictionaries for all active LogMiner sessions on the system.

Each query of this view will return one row for each attached LogMiner session. This view will not show valid information for LogMiner adhoc query clients.

Column	Datatype	Description
SESSION_ID	NUMBER	LogMiner session ID
LOGMNR_UID	NUMBER	LogMiner dictionary UID
ACTION#	NUMBER	Reserved for internal use
OPCODE	NUMBER	Reserved for internal use
COMMAND	VARCHAR2(161)	Current command being executed
CURRENT_STATE	VARCHAR2(32)	Summary information if LOADED=ACTIVE
COMPLETED_ACTIONS	NUMBER	The steps completed so far
TOTAL_ACTIONS	NUMBER	Total steps to complete
LOADED	VARCHAR2(7)	Status of the dictionary load: • YES - dictionary has been loaded • NO - dictionary has not been loaded • ACTIVE - dictionary is in the process of being loaded
PERCENT_DONE	NUMBER	Percentage of the dictionary that has been loaded
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.54 V$LOGMNR_LATCH

V$LOGMNR_LATCH can be joined with the V$LATCH and the V$LATCH_CHILDREN views to obtain statistics about different latches used by active LogMiner persistent sessions.

A persistent LogMiner session is created either by starting Data Guard SQL Apply on a logical standby database for the first time or by creating a Replication capture.

Column	Datatype	Description
SESSION_ID	NUMBER	Unique identifier of the LogMiner persistent session
NAME	VARCHAR2(32)	Name of the Latch: • LogMiner internal state - Identifies the latch that protects communications between the LogMiner READER, PREPARER, and BUILDER processes • LogMiner memory allocation - Identifies the latch that protects all memory allocation and deallocation inside LogMiner • LogMiner transaction list - Identifies the latch that protects interaction between the LogMiner layer and its clients during Data Guard SQL Apply on a logical standby database
CHILD_ADDR	RAW(4 | 8)	Address of the child latch object. This column matches the corresponding ADDR column in the V$LATCH_CHLDREN view
STATE	VARCHAR2(6)	State of the Latch: • UNINIT - The latch structure is uninitialized; that is, it is not currently assigned to any LogMiner persistent session • READY - The latch structure is being used by a persistent LogMiner session
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$LATCH"
- "V$LATCH_CHILDREN"

9.55 V$LOGMNR_LOGS

V$LOGMNR_LOGS contains log information.

Column	Datatype	Description
LOG_ID	NUMBER	This column is deprecated.
FILENAME	VARCHAR2(512)	Name of the log file

Column	Datatype	Description
LOW_TIME	DATE	Oldest date of any records in the file
HIGH_TIME	DATE	Most recent date of any records in the file
DB_ID	NUMBER	Database ID
DB_NAME	VARCHAR2(8)	Name of the database
RESET_SCN	NUMBER	Resetlogs SCN of the database incarnation that generated the log file
RESET_SCN_TIME	DATE	Resetlogs timestamp of the database incarnation that generated the log file
COMPATIBLE	VARCHAR2(17)	The setting of the database COMPATIBLE initialization parameter at the time the log file was generated
THREAD_ID	NUMBER	Thread number
THREAD_SQN	NUMBER	Thread sequence number
LOW_SCN	NUMBER	SCN allocated when log switched into
NEXT_SCN	NUMBER	SCN after this log. Low SCN of the next log.
DICTIONARY_BEGIN	VARCHAR2(3)	Indicates whether dictionary dumped to redo logs starts in this redo log (YES) or not (NO)
DICTIONARY_END	VARCHAR2(3)	Indicates whether dictionary dumped to redo logs ends in this redo log (YES) or not (NO)
TYPE	VARCHAR2(7)	Redo log file type: • ARCHIVED • ONLINE
BLOCKSIZE	NUMBER	Database block size
FILESIZE	NUMBER	Size of the redo file (in bytes)
INFO	VARCHAR2(32)	Informational message. A value of MISSING_LOGFILE will be assigned to a row entry where a needed log file is missing from the list of log files.
STATUS	NUMBER	Status of the redo log file: • 0 - Will be read • 1 - First to be read • 2 - Not needed • 4 - Missing log file
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.56 V$LOGMNR_PARAMETERS

V$LOGMNR_PARAMETERS contains log information.

Column	Datatype	Description
START_DATE	DATE	Date to start the search
REQUIRED_START_DATE	DATE	Required date to start the search if DDL tracking is enabled

Column	Datatype	Description
END_DATE	DATE	Date to end the search
START_SCN	NUMBER	System change number to start the search
REQUIRED_START_SCN	NUMBER	Required system change number to start the search if DDL tracking is enabled
END_SCN	NUMBER	System change number to end the search
OPTIONS	NUMBER	Options specified for the current LogMiner session
INFO	VARCHAR2(32)	This column is always null.
STATUS	NUMBER	This column is always 0.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.57 V$LOGMNR_PROCESS

V$LOGMNR_PROCESS identifies all processes attached to an active LogMiner persistent session.

(A persistent LogMiner session is created either by starting Data Guard SQL Apply on a logical standby database for the first time or by creating Replication capture.) This view can be joined with either the V$SESSION view or the V$PROCESS view to gather process-specific information.

Column	Datatype	Description
SESSION_ID	NUMBER	Unique identifier for the LogMiner persistent session
PID	NUMBER	Oracle process identifier for the SQL Apply or Replication capture process (same as the V$PROCESS.PID)
SPID	VARCHAR2(24)	Operating system process identifier (same as the V$PROCESS.SPID)
ROLE	VARCHAR2(32)	Identifies the role of the active LogMiner process: READER, PREPARER, BUILDER, COORDINATOR, or APPLY SERVER
USERNAME	VARCHAR2(15)	Operating system process user name that is connected to the database
SID	NUMBER	Session identifier for the V$SESSION.SID process
SERIAL#	NUMBER	Session serial number associated with the V$SESSION.SERIAL process
LATCHWAIT	VARCHAR2(16)	Address of the latch the process is waiting for; NULL if none
LATCHSPIN	VARCHAR2(16)	This column is obsolete
WORK_MICROSEC	VARCHAR2(21)	Microseconds spent by the process doing useful work
OVERHEAD_MICROSEC	VARCHAR2(21)	Microseconds spent by the process doing overhead tasks or simply waiting/idling

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$SESSION"
- "V$PROCESS"

9.58 V$LOGMNR_SESSION

V$LOGMNR_SESSION displays information about active LogMiner persistent sessions.

(A LogMiner persistent session is created either by starting Data Guard SQL Apply on a logical standby database for the first time or by creating Replication capture.) Transient LogMiner sessions (those created as a result of querying the V$LOGMNR_CONTENTS view) do not show up in the V$LOGMNR_SESSION view. The statistics shown in this view correspond to snapshots of the system and are not cumulative in nature.

Column	Datatype	Description
SESSION_ID	NUMBER	Unique identifier for the LogMiner persistent session
SESSION_NAME	VARCHAR2(32)	Unique session name
SESSION_STATE	VARCHAR2(9)	Current state of the LogMiner persistent session: • READY - Client has created the LogMiner persistent session and added the relevant archived redo log files, but has not loaded the initial LogMiner dictionary • STARTED - The LogMiner dictionary has been loaded • ACTIVE - The LogMiner persistent session is mining the redo stream • DETACHED - The LogMiner persistent session is not currently active, and it is in the process of becoming inactive • DISCARDED - Client is about to destroy the LogMiner persistent session
DB_NAME	VARCHAR2(128)	Global database name for the source database
DB_ID	NUMBER	Database identifier of the source database
RESET_SCN	NUMBER	System change number (SCN) when the session started
RESET_TIMESTAMP	NUMBER	Time of the RESETLOGs when the LogMiner persistent session started
RESET_TIME	DATE	The time when the session started
NUM_PROCESS	NUMBER	Number of processes allocated to this session
CHUNK_SIZE	NUMBER	Amount of memory allocated for this chunk

Column	Datatype	Description
START_SCN	NUMBER	System change number (SCN) at start of the session
END_SCN	NUMBER	System change number (SCN) at end of the session
SPILL_SCN	NUMBER	In the event of a restart, redo records with an SCN lower than this will not be read from the archived redo log files
PROCESSED_SCN	NUMBER	The BUILDER process has successfully mined redo records up to this SCN
PROCESSED_TIME	DATE	The BUILDER process has successfully mined redo records up to this time
PREPARED_SCN	NUMBER	The PREPARER processes have successfully transformed all redo records below this SCN into logical change records (LCRs). However the LCRs may not have been grouped into transactions or merged in case they pertain to chained rows or LOB updates.
READ_SCN	NUMBER	The READER process has read all redo records below this SCN
LOW_MARK_SCN	NUMBER	LogMiner has delivered all transactions that committed below this SCN to the client
CONSUMED_SCN	NUMBER	Client has consumed and released all transactions that committed below this SCN.
MAX_MEMORY_SIZE	NUMBER	Maximum amount of shared memory (in bytes) that LogMiner is allowed to consume
USED_MEMORY_SIZE	NUMBER	Amount of shared memory (in bytes) actually consumed by LogMiner
BUILDER_WORK_SIZE	NUMBER	Amount of redo (in bytes) in the current work unit being processed by the BUILDER process.
PREPARED_WORK_SIZE	NUMBER	Amount of redo (in bytes) that has been prepared by LogMiner
AVAILABLE_WORK_SIZE	NUMBER	Amount of redo records (in bytes) that are ready, but are yet to be consumed by the client
AVAILABLE_TXN	NUMBER	Number of transaction chunks ready for consumption
AVAILABLE_COMMITTED_TXN	NUMBER	Number of committed transactions ready for consumption. This is less than, or equal to, AVAILABLE_TXN.
DELIVERED_TXN	NUMBER	Number of transaction chunks that the client currently has in its possession
DELIVERED_COMMITTED_TXN	NUMBER	Number of committed transaction chunks that the client is currently working on. This is less than, or equal to, the value of the DELIVERED_TXN column.
PINNED_TXN	NUMBER	Number of transactions pinned (the client is actively working on)
PINNED_COMMITTED_TXN	NUMBER	Number of committed transactions pinned (the client is actively working on)
CHECKPOINT_INTERVAL	NUMBER	Checkpoint interval
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> "V$LOGMNR_CONTENTS"

9.59 V$LOGMNR_STATS

V$LOGMNR_STATS displays the activity currently being performed by the active LogMiner persistent sessions.

Column	Datatype	Description
SESSION_ID	NUMBER	Unique identifier for the LogMiner persistent sessions

Column	Datatype	Description
NAME	VARCHAR2(64)	Name of the LogMiner statistic, state, or status, including: • Bytes of Redo Processed - Cumulative count of bytes processed by SQL Apply • Redo Records Processed - Count of redo records processed by SQL Apply • Txns Delivered to Client - Count of SQL transactions processed by SQL Apply • DML txns delivered - Count of DML transactions processed by SQL Apply • DDL txns delivered - Count of DDL transactions processed by SQL Apply • CTAS txns delivered - Count of `CREATE TABLE AS SELECT` (CTAS) transactions processed by SQL Apply • Recursive txns delivered - Count of recursive transactions processed by SQL Apply • Rolled back txns seen • LCRs delivered to client - Number of logical change records (LCRs) processed by SQL Apply • Bytes paged out - Cumulative count of bytes that have been paged out. LogMiner pages out memory from the LCR cache to accommodate certain ill-behaved workloads or under-configured systems. The ratio of bytes paged out to bytes of redo processed should be low. If this ratio is high (10% or higher), try increasing the `MAX_SGA` allocated to SQL Apply. • Microsecs spent in pageout - Time spent by LogMiner paging out memory from the LCR cache • Bytes checkpointed - Keeps track of the amount of bytes checkpointed. The mining engine takes periodic checkpoints, whereby it writes out logical change records (LCRs) pertaining to long-running transactions. The ratio of `Bytes Checkpointed` to `Bytes of Redo Processed` should be low. A high ratio (10% or higher) indicates an ill-behaved workload. • Microsecs spent in checkpoint - Time spent by the mining engine taking checkpoints, whereby it writes out logical change records (LCRs) pertaining to long-running transactions. • Bytes rolled back - Cumulative value of the number of bytes rolled back by LogMiner. There are times that LogMiner needs to backtrack and reprocess a section of the redo stream. In this case, it will roll back work it has already done. The ratio of `Bytes Rolled Back` to `Bytes of Redo Processed` should be low. If this ratio is high (10% or higher), reduce the number of `PREPARER` processes allocated to SQL Apply. • Microsecs spent in rollback - Time spent rolling back transactions already applied to the logical standby database
VALUE	VARCHAR2(64)	The corresponding metric value
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.60 V$LOGSTDBY

V$LOGSTDBY is deprecated.

Column	Datatype	Description
SERIAL#	NUMBER	SQL Session serial number. This data is used when joining this view with the V$SESSION and V$PX_SESSION views.
LOGSTDBY_ID	NUMBER	Parallel query worker ID
PID	VARCHAR2(24)	Process ID of the SQL apply process
TYPE	VARCHAR2(128)	Indicates the task being performed by the process (COORDINATOR, APPLIER, ANALYZER, READER, PREPARER, or BUILDER)
STATUS_CODE	NUMBER	Status number (or Oracle error code) belonging to the STATUS message
STATUS	VARCHAR2(256)	Description of the current activity of the process
HIGH_SCN	NUMBER	Highest system change number (SCN) seen by the process. This column is used to confirm the progress of the individual process.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.61 V$LOGSTDBY_PROCESS

V$LOGSTDBY_PROCESS displays dynamic information about what is happening to the Data Guard log apply services.

This view is helpful when diagnosing performance problems during the logical application of archived redo logs to the standby database, and it can be helpful for other problems. This view is for logical standby databases only.

Column	Datatype	Description
SID	NUMBER	Session id of the associated session. This matches the SID column of the corresponding row in the V$SESSION view.
SERIAL#	NUMBER	Serial number of the associated session. Together, (SID,SERIAL#) uniquely identify the session in the current database instance.
LOGSTDBY_ID	NUMBER	Parallel query worker ID
SPID	VARCHAR2(24)	This corresponds to the SPID value of the row corresponding to this process in the V$PROCESS view

Column	Datatype	Description
TYPE	VARCHAR2(128)	Role that the process plays in the context of SQL Apply: • COORDINATOR • APPLIER • ANALYZER • READER • PREPARER • BUILDER
STATUS_CODE	NUMBER	Operation code identifying the current action of the process: • 16111 - SQL Apply process is initializing • 16112 - SQL Apply process is cleaning up as apply and mining processes are stopping based on a user command • 16116 - SQL Apply process is idle • 16117 - SQL Apply process is busy and is not waiting on any interesting event • 16110 - APPLIER process has invoked a user-provided stored procedure in order to inspect a DDL statement prior to it being processed • 16113 - APPLIER process is applying DML changes to some user object or to a sequence • 16114 - APPLIER process is applying a DDL change • 16115 - COORDINATOR process is loading the LogMiner dictionary from the redo stream • 16243 - BUILDER process is paging out memory to free up space in lcr cache • 16240 - READER process idle waiting for additional logfile to be available • 16241 - READER process is idle waiting for the logfile to fill the log sequence gap • 16242 - READER process is processing a logfile
STATUS	VARCHAR2(256)	Description of the current action of the process
HIGH_SCN	NUMBER	Identifies the highest redo record/LCR processed by this process
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.62 V$LOGSTDBY_PROGRESS

V$LOGSTDBY_PROGRESS displays the progress of log apply services on the logical standby database. This view is for logical standby databases only.

Column	Datatype	Description
APPLIED_SCN	NUMBER	All the transactions with COMMIT SCN lower than or equal to this SCN have been applied
APPLIED_TIME	DATE	The time and date of APPLIED_SCN

Column	Datatype	Description
RESTART_SCN	NUMBER	During an apply restart, LogMiner does not read any log file with a NEXT_CHANGE# lower than this SCN.
RESTART_TIME	DATE	The time and date of RESTART_SCN
LATEST_SCN	NUMBER	The highest SCN of all redo records that Logical Standby has encountered
LATEST_TIME	DATE	The time and date of LATEST_SCN
MINING_SCN	NUMBER	The SCN of the latest redo record processed by the builder process
MINING_TIME	DATE	The time and date of MINING_SCN
RESETLOGS_ID	NUMBER	A redo branch is identified by resetlogs SCN and resetlogs timestamp. The RESETLOGS_ID column contents are the same as resetlogs timestamp converted to a number.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.63 V$LOGSTDBY_STATE

V$LOGSTDBY_STATE provides consolidated information from V$LOGSTDBY and V$LOGSTDBY_STATS about the running state of Logical Standby.

Column	Datatype	Description
PRIMARY_DBID	NUMBER	Database ID (DBID) of the primary database
PRIMARY_CON_DBID	NUMBER	This column indicates the DBID of the source database or source PDB corresponding to the database (or CDB) from which this column is queried.For a non-CDB and the root of a CDB, this column matches the PRIMARY_DBID column.For a maintained PDB, this column indicates the DBID for the corresponding PDB at the source.For a skipped PDB or a local PDB, this column would be NULL.
SESSION_ID	NUMBER	LogMiner session ID allocated to SQL Apply.
REALTIME_APPLY	VARCHAR2(64)	Y indicates that SQL Apply is running in real-time apply mode. If a standby redo log is configured, SQL Apply applies changes as they are written to the standby redo log files. N indicates that SQL Apply applies changes as each archived redo log file is received.

Column	Datatype	Description
STATE	VARCHAR2(64)	• INITIALIZING: LogMiner session has been created and coordinator has attached to it • LOADING DICTIONARY: SQL Apply is loading the LogMiner dictionary • WAITING ON GAP: SQL Apply is waiting for a log file to be sent from the primary database • APPLYING: SQL Apply is actively mining or applying transactions • WAITING FOR DICTIONARY LOGS: SQL Apply is waiting for the archived logs containing the LogMiner dictionary to be shipped from the primary database • IDLE: SQL Apply has applied all changes available at the logical standby, and is caught up with the primary database
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "V$LOGSTDBY"
- "V$LOGSTDBY_STATS"

9.64 V$LOGSTDBY_STATS

V$LOGSTDBY_STATS displays statistics, current state, and status information related to SQL Apply.

No rows are returned from this view when SQL Apply is not running. This view is only meaningful in the context of a logical standby database.

All statistics shown in this view are reinitialized at each SQL Apply start.

Column	Datatype	Description
NAME	VARCHAR2(64)	Name of the statistic, state, or status: **Note:** Many of the following statistics are subject to change or deletion; programmers should write application code to tolerate missing or extra statistics. • id of the logminer session used by SQL Apply to mine the redo logs. • number of preparers • number of appliers • server processes in use for SQL Apply • maximum SGA (in MBytes) for LCR cache • whether SQL Apply is preserving the commit order seen at the primary database while applying changes • maximum events recorded in the DBA_LOGSTDBY_EVENTS table • whether SQL Apply is logging errors that are skipped in the DBA_LOGSTDBY_EVENTS table • whether SQL Apply is logging DDLs that are skipped in the DBA_LOGSTDBY_EVENTS table • whether SQL Apply is logging DDLs that are applied in the DBA_LOGSTDBY_EVENTS table • whether SQL Apply is logging unsupported operations that are encountered in the DBA_LOGSTDBY_EVENTS table • whether or not real time apply is on • value of apply delay (in minutes) • coordinator state • coordinator uptime in seconds • time of the most recent start of SQL Apply • number of transactions mined and made available for apply • number of transactions applied • number of rolled back transactions mined • number of DDL txns mined • number of CTAS (Create Table as Select) txns mined • number of thread enable events encountered in the redo stream • number of thread disable events encountered in the redo stream • bytes of redo records mined • bytes paged out • seconds spent in pageout activity • bytes checkpointed • seconds spent in checkpointing activity • seconds SQL Apply is idle • number of times a complete standby redo logs are mined without having to mine the corresponding archived log • number of times SQL Apply had to switch from a standby redo log to the corresponding archived log • number of times SQL Apply mined redo from the archived logs • number of archived logs that arrived at the standby via gap fetch mechanism (gap fetched logs mined) • number of failed attempts to open a logfile • amount of time spent in waiting for the current gap to resolve if SQL Apply is running in real time mode (current logfile wait)[1] • time spent in waiting for gap to resolve if SQL Apply is running in real time mode (total logfile wait)[2]
VALUE	VARCHAR2(64)	Value of the statistic or state information

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

1 In case SQL Apply is not running in real time mode, this may not reflect time spent in gap resolution, but simply the time spent waiting for the most recent archived log to show up at the logical standby.
2 In case SQL Apply is not running in real time mode, this will include time that SQL Apply spent every time it finished processing all archived logs registered with it, and waited for the next log to be archived.

9.65 V$LOGSTDBY_TRANSACTION

V$LOGSTDBY_TRANSACTION displays all transactions that are actively being processed by SQL Apply.

The transaction identifiers shown in this view are those mined from the redo stream and correspond to transaction identifiers assigned at the primary database, and do not correspond to the transactions that are active at the logical standby database. For information regarding transactions active in the logical standby database, including those created as part of SQL Apply, query the V$TRANSACTION view at the logical standby database.

Column	Datatype	Description
PRIMARY_XIDUSN	NUMBER	Undo segment number of the transaction
PRIMARY_XIDSLT	NUMBER	Slot number of the transaction
PRIMARY_XIDSQN	NUMBER	Sequence number of the transaction
PRIMARY_XID	RAW(8)	Transaction ID
PRIMARY_START_SCN	NUMBER	Start system change number (SCN) base
PRIMARY_START_TIME	DATE	Start time
PRIMARY_PARENT_XIDUSN	NUMBER	Undo segment number of the parent transaction
PRIMARY_PARENT_XIDSLT	NUMBER	Slot number of the parent transaction
PRIMARY_PARENT_XIDSQN	NUMBER	Sequence number of the parent transaction
PRIMARY_PARENT_XID	RAW(8)	Transaction ID of the parent transaction (PDML)
TYPE	VARCHAR2(32)	Type: • PL/SQL - Transaction was done as part of a supported PL/SQL procedure • Direct Path Load - Transaction is a direct path load • CTAS - Transaction contains at least one CREATE TABLE ... AS SELECT operation • DDL - Transaction contains one or more DDL operations • PDML Child - Transaction is a child transaction • DML - Transaction contains only DML operations

Column	Datatype	Description
MINING_STATUS	VARCHAR2(32)	Mining status: • ACTIVE - Transaction is still being mined by LogMiner. At least part of this transaction is ready to be applied or has already been applied. • COMPLETE - Transaction is complete and ready to be applied. LogMiner has finished mining.
SRC_CON_ID	NUMBER	Contains the PDB ID (the PDB_ID column from the DBA_PDBS view) of the source database that generated the change for this transaction.
APPLY_STATUS	VARCHAR2(6)	• ACTIVE - Transaction has been assigned to an apply server. It is in one of the following states: - The transaction is being actively applied - The transaction is being held by an apply server waiting for certain events to occur - The transaction is being held by an apply server waiting for subsequent parts of this transaction • NONE - Transaction has not yet been assigned to an apply server
SID	NUMBER	Session ID of the apply server's session; Null if APPLY_STATUS is NONE
SERIAL#	NUMBER	Serial number of the apply server's session; Null if APPLY_STATUS is NONE
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

"V$TRANSACTION"

9.66 V$MANAGED_STANDBY

V$MANAGED_STANDBY displays current status information for some Oracle Database processes related to physical standby databases in the Data Guard environment. This view does not persist after an instance shutdown.

Column	Datatype	Description
PROCESS	VARCHAR2(9)	Type of the process whose information is being reported: • RFS - Remote file server • MRP0 - Detached recovery server process • MR(fg) - Foreground recovery session • ARCH - Archiver process • DGRD - Generic Oracle Data Guard process • FGRD • LGWR • RFS(FAL) • RFS(NEXP) • LNS - ASYNC Redo Transport process
PID	VARCHAR2(24)	Operating system process identifier of the process
STATUS	VARCHAR2(20)	Current process status: • ALLOCATED - Process is active but not currently connected to a primary database • ANNOUNCING - Process is announcing the existence of a potential dependent archived redo log • APPLYING_LOG - Process is actively applying the archived redo log to the standby database • ATTACHED - Process is actively attached and communicating to a primary database • CLOSING - Process has completed archival and is closing the archived redo log • CONNECTED - Network connection established to a primary database • ERROR - Process has failed • IDLE - Process is not performing any activities • OPENING - Process is opening the archived redo log • RECEIVING - Process is receiving network communication • REGISTERING - Process is registering the existence of a completed dependent archived redo log • UNUSED - No active process • WAIT_FOR_GAP - Process is waiting for the archive gap to be resolved • WAIT_FOR_LOG - Process is waiting for the archived redo log to be completed • WAIT_FOR_NEW_PRIMARY - Process is waiting for a new primary (source PDB) to register itself with this container database • WRITING - Process is actively writing redo data to the archived redo log
CLIENT_PROCESS	VARCHAR2(8)	Identifies the corresponding primary database process: • Archival - Foreground (manual) archival process (SQL) • ARCH - Background ARC*n* process • LGWR - Background LGWR process
CLIENT_PID	VARCHAR2(40)	Operating system process identifier of the client process
CLIENT_DBID	VARCHAR2(40)	Database identifier of the primary database
GROUP#	VARCHAR2(40)	Standby redo log group
RESETLOG_ID	NUMBER	Resetlogs identifier of the archived redo log
THREAD#	NUMBER	Archived redo log thread number
SEQUENCE#	NUMBER	Archived redo log sequence number

Column	Datatype	Description
BLOCK#	NUMBER	Last processed archived redo log block number
BLOCKS	NUMBER	Count (in 512-byte blocks) of the last write to a redo log, or for a recovery process, the expected final read count
DELAY_MINS	NUMBER	Archived redo log delay interval in minutes
KNOWN_AGENTS	NUMBER	Total number of standby database agents processing an archived redo log
ACTIVE_AGENTS	NUMBER	Number of standby database agents actively processing an archived redo log
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

This view is deprecated in Oracle Database 12*c* Release 2 (12.2.0.1) and may be desupported in a future release. The V$DATAGUARD_PROCESS view should be used, instead.

See Also:

"V$DATAGUARD_PROCESS"

9.67 V$MAP_COMP_LIST

V$MAP_COMP_LIST displays supplementary information for all element mapping structures.

Column	Datatype	Description
ELEM_IDX	NUMBER	Index corresponding to the element
NUM_COMP	NUMBER	Number of components (maximum is 5)
COMP1_NAME	VARCHAR2(256)	Name of the first component
COMP1_VAL	VARCHAR2(256)	Value of the first component
COMP2_NAME	VARCHAR2(256)	Name of the second component
COMP2_VAL	VARCHAR2(256)	Value of the second component
COMP3_NAME	VARCHAR2(256)	Name of the third component
COMP3_VAL	VARCHAR2(256)	Value of the third component
COMP4_NAME	VARCHAR2(256)	Name of the fourth component
COMP4_VAL	VARCHAR2(256)	Value of the fourth component

Column	Datatype	Description
COMP5_NAME	VARCHAR2(256)	Name of the fifth component
COMP5_VAL	VARCHAR2(256)	Value of the fifth component
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.68 V$MAP_ELEMENT

V$MAP_ELEMENT displays a list of all element mapping structures in the SGA of the instance.

Column	Datatype	Description
ELEM_NAME	VARCHAR2(256)	Element name
ELEM_IDX	NUMBER	Index corresponding to the element
ELEM_CFGID	VARCHAR2(256)	Configuration ID (N/A if configuration ID is not supported)
ELEM_TYPE	VARCHAR2(12)	Element type: • MIRROR • STRIPE • RAID5 • CONCATENATED • PARTITION • DISK • NONE
ELEM_SIZE	NUMBER	Element Size in HKB
ELEM_NSUBELEM	NUMBER	Number of Subelements
ELEM_DESCR	VARCHAR2(256)	Element Description
STRIPE_SIZE	NUMBER	Stripe Size in HKB for RAID-5 and STRIPE elements, 0 for the remaining types
LIB_IDX	NUMBER	Index of the library which claims ownership of the element
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.69 V$MAP_EXT_ELEMENT

V$MAP_EXT_ELEMENT displays supplementary information for all element mapping structures.

Column	Datatype	Description
ELEM_IDX	NUMBER	Index corresponding to the element
NUM_ATTRB	NUMBER	Number of Attributes (maximum is 5)
ATTRB1_NAME	VARCHAR2(256)	Name of the first Attribute
ATTRB1_VAL	VARCHAR2(256)	Value of the first attribute
ATTRB2_NAME	VARCHAR2(256)	Name of the second attribute
ATTRB2_VAL	VARCHAR2(256)	Value of the second attribute
ATTRB3_NAME	VARCHAR2(256)	Name of the third attribute
ATTRB3_VAL	VARCHAR2(256)	Value of the third attribute
ATTRB4_NAME	VARCHAR2(256)	Name of the fourth attribute
ATTRB4_VAL	VARCHAR2(256)	Value of the fourth attribute
ATTRB5_NAME	VARCHAR2(256)	Name of the fifth attribute
ATTRB5_VAL	VARCHAR2(256)	Value of the fifth attribute
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.70 V$MAP_FILE

V$MAP_FILE displays a list of all file mapping structures in the shared memory of the instance.

Column	Datatype	Description
FILE_MAP_IDX	NUMBER	Index corresponding to the file
FILE_CFGID	VARCHAR2(256)	Configuration ID (N/A if configuration ID is not supported)
FILE_STATUS	VARCHAR2(7)	Status of the mapping information: • VALID - File mapping information is latest • INVALID - Mapping must be refreshed
FILE_NAME	VARCHAR2(256)	Absolute file name
FILE_TYPE	VARCHAR2(11)	File type: • DATAFILE • SPFILE • TEMPFILE • CONTROLFILE • LOGFILE • ARCHIVEFILE
FILE_STRUCTURE	VARCHAR2(9)	File structure: • FILE • RAWVOLUME • RAWDEVICE • NONE
FILE_SIZE	NUMBER	File size in HKB (half KB)

Column	Datatype	Description
FILE_NEXTS	NUMBER	Number of file extents in the file (not necessarily the same as the number of file extents mapped)
LIB_IDX	NUMBER	Index of mapping library claiming ownership of the file
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.71 V$MAP_FILE_EXTENT

V$MAP_FILE_EXTENT displays a list of all file extent mapping structures in the shared memory of the instance.

Column	Datatype	Description
FILE_MAP_IDX	NUMBER	File index (corresponds to FILE_MAP_IDX in V$MAP_FILE)
EXT_NUM	NUMBER	File extent number
EXT_ELEM_OFF	NUMBER	Element offset in HKB
EXT_SIZE	NUMBER	File extent size in HKB
EXT_FILE_OFF	NUMBER	File Offset in HKB
EXT_TYPE	VARCHAR2(6)	File Extent Type: • DATA • PARITY • NONE
ELEM_IDX	NUMBER	Index in V$MAP_ELEMENT corresponding to the element where the file extent resides
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.72 V$MAP_FILE_IO_STACK

V$MAP_FILE_IO_STACK displays the hierarchical arrangement of storage containers for files. Each row in the view represents a level in the hierarchy.

Column	Datatype	Description
FILE_MAP_IDX	NUMBER	File index (corresponds to FILE_MAP_IDX in V$MAP_FILE)
DEPTH	NUMBER	Element depth within the I/O stack

Column	Datatype	Description
ELEM_IDX	NUMBER	Index corresponding to the element
CU_SIZE	NUMBER	Contiguous set of logical blocks of the file (in HKB units) that is resident contiguously on the element
STRIDE	NUMBER	Number of HKB between contiguous units (CU) in the file that are contiguous on this element. Used in RAID5 and striped files.
NUM_CU	NUMBER	Number of contiguous units that are adjacent to each other on this element that are separated by STRIDE HKB in the file. In RAID5, the number of contiguous units also include the parity stripes.
ELEM_OFFSET	NUMBER	Element offset in HKB units
FILE_OFFSET	NUMBER	Offset in HKB units from the start of the file to the first byte of the contiguous units
DATA_TYPE	VARCHAR2(15)	Datatype: • DATA • PARITY • DATA AND PARITY
PARITY_POS	NUMBER	Position of the parity. Only for RAID5. This column is needed to distinguish the parity from the data part.
PARITY_PERIOD	NUMBER	Parity period. Only for RAID5.
ID	NUMBER	Unique identifier
PARENT_ID	NUMBER	Parent identifier
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.73 V$MAP_LIBRARY

V$MAP_LIBRARY displays a list of all mapping libraries dynamically loaded by the external process.

Column	Datatype	Description
LIB_IDX	NUMBER	Index corresponding to the library
LIB_NAME	VARCHAR2(256)	Absolute library name
VENDOR_NAME	VARCHAR2(64)	Name of the vendor implementing the library
PROTOCOL_NUM	NUMBER	Mapping protocol that the library supports
VERSION_NUM	VARCHAR2(32)	Version number
PATH_NAME	VARCHAR2(4000)	Path name
MAP_FILE	VARCHAR2(1)	Indicates whether the library supports mapping files (Y) or not (N)
FILE_CFGID	VARCHAR2(13)	Type of configuration ID supported for files: • NONE - Not supported • PERSISTENT • NONPERSISTENT

Column	Datatype	Description
MAP_ELEM	VARCHAR2(1)	Indicates whether the library supports mapping elements (Y) or not (N)
ELEM_CFGID	VARCHAR2(13)	Type of configuration id supported for elements: • NONE - Not supported • PERSISTENT • NONPERSISTENT
MAP_SYNC	VARCHAR2(1)	Indicates whether the library needs to be explicitly synchronized so that future mappings reflect the most recent changes (Y) or not (N). Note that configuration IDs cannot be supported if the library needs to be explicitly synced.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.74 V$MAP_SUBELEMENT

V$MAP_SUBELEMENT displays a list of all subelement mapping structures in the shared memory of the instance.

Column	Datatype	Description
CHILD_IDX	NUMBER	Index in V$MAP_ELEMENT corresponding to the child element
PARENT_IDX	NUMBER	Index in V$MAP_ELEMENT corresponding to the parent element
SUB_NUM	NUMBER	Subelement number
SUB_SIZE	NUMBER	Subelement size in HKB
ELEM_OFFSET	NUMBER	Offset in HKB on the child element
SUB_FLAGS	NUMBER	Subelement flags (currently unused)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.75 V$MAPPED_SQL

V$MAPPED_SQL lists the SQL statements that are translated and mapped in memory to a different SQL statement for execution.

Column	Datatype	Description
SQL_TEXT	VARCHAR2(1000)	First 1000 characters of the original SQL text

Column	Datatype	Description
SQL_FULLTEXT	CLOB	Full text for the original SQL statement
SQL_ID	VARCHAR2(13)	SQL identifier of the original SQL statement
HASH_VALUE	NUMBER	Hash value of the original SQL statement
MAPPED_SQL_TEXT	VARCHAR2(1000)	First 1000 characters of the mapped SQL text
MAPPED_SQL_FULLTEXT	CLOB	Full text for the mapped SQL statement
MAPPED_SQL_ID	VARCHAR2(13)	SQL identifier of the mapped SQL statement
MAPPED_HASH_VALUE	NUMBER	Hash value of the mapped SQL statement
SQL_TRANSLATION_PROFILE_ID	NUMBER	A non-NULL value specifies the object ID of the SQL translation profile used to translate the SQL statement into the mapped SQL statement
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
TRANSLATION_TIMESTAMP	DATE	Time this SQL statement was translated
TRANSLATION_CPU_TIME	NUMBER	CPU time used to translate this SQL statement
TRANSLATION_ELAPSED_TIME	NUMBER	Elapsed time used to translate this SQL statement
TRANSLATION_METHOD	VARCHAR2(10)	Method used to translate this SQL statement
DICTIONARY_SQL_ID	VARCHAR2(13)	SQL ID of SQL text in custom translation dictionary used to translate this SQL statement
USE_COUNT	NUMBER	Number of times this translation has been used

9.76 V$MEMOPTIMIZE_WRITE_AREA

V$MEMOPTIMIZE_WRITE_AREA displays information about fast ingest data in the large pool.

Column	Datatype	Description
TOTAL_SIZE	NUMBER	Total amount of memory allocated for fast ingest data in the large pool (in bytes)
USED_SPACE	NUMBER	Total amount of memory currently used by fast ingest data in the large pool (in bytes)
FREE_SPACE	NUMBER	Total amount of memory currently free for storing fast ingest data in the large pool (in bytes)
NUM_WRITES	NUMBER	Number of fast ingest insert operations for which data is still in the large pool and is yet to be written to disk
NUM_WRITERS	NUMBER	Number of clients currently using fast ingest for inserting data into the database

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.77 V$MEMORY_CURRENT_RESIZE_OPS

V$MEMORY_CURRENT_RESIZE_OPS displays information about memory resize operations (both automatic and manual) which are currently in progress.

An operation can be a grow or a shrink of a dynamic memory component. All sizes are expressed in bytes.

Column	Datatype	Description
COMPONENT	VARCHAR2(64)	Component name
OPER_TYPE	VARCHAR2(13)	Operation type: • STATIC • INITIALIZING • DISABLED • GROW • SHRINK • SHRINK_CANCEL
OPER_MODE	VARCHAR2(9)	Operation mode: • MANUAL • DEFERRED • IMMEDIATE
PARAMETER	VARCHAR2(80)	Name of the parameter for the resize operation
INITIAL_SIZE	NUMBER	Parameter value at the start of the operation
TARGET_SIZE	NUMBER	Desired value of the parameter after the resize
CURRENT_SIZE	NUMBER	Current value of the parameter
START_TIME	DATE	Start time of the operation
LAST_UPDATE_TIME	DATE	Last time progress was made for the operation
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.78 V$MEMORY_DYNAMIC_COMPONENTS

V$MEMORY_DYNAMIC_COMPONENTS displays information about the dynamic SGA components.

This view summarizes information based on all completed SGA resize operations since instance startup. All sizes are expressed in bytes.

Column	Datatype	Description
COMPONENT	VARCHAR2(64)	Component name
CURRENT_SIZE	NUMBER	Current size of the component
MIN_SIZE	NUMBER	Minimum size of the component since instance startup
MAX_SIZE	NUMBER	Maximum size of the component since instance startup
USER_SPECIFIED_SIZE	NUMBER	Value of the user parameter for the component
OPER_COUNT	NUMBER	Number of operations since instance startup
LAST_OPER_TYPE	VARCHAR2(13)	Last completed operation for the component: • STATIC • INITIALIZING • DISABLED • GROW • SHRINK • SHRINK_CANCEL
LAST_OPER_MODE	VARCHAR2(9)	Mode of the last completed operation: • MANUAL • DEFERRED • IMMEDIATE
LAST_OPER_TIME	DATE	Start time of the last completed operation
GRANULE_SIZE	NUMBER	Granularity of the GROW or SHRINK operation
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.79 V$MEMORY_RESIZE_OPS

V$MEMORY_RESIZE_OPS displays information about the last 800 completed memory resize operations (both automatic and manual). This does not include in-progress operations. All sizes are expressed in bytes.

Column	Datatype	Description
COMPONENT	VARCHAR2(64)	Component name

Column	Datatype	Description
OPER_TYPE	VARCHAR2(13)	Operation type: • STATIC • INITIALIZING • DISABLED • GROW • SHRINK • SHRINK_CANCEL
OPER_MODE	VARCHAR2(9)	Operation mode: • MANUAL • DEFERRED • IMMEDIATE
PARAMETER	VARCHAR2(80)	Name of the parameter for the resize operation
INITIAL_SIZE	NUMBER	Parameter value at the start of the operation
TARGET_SIZE	NUMBER	Requested value of the parameter after the resize
FINAL_SIZE	NUMBER	Real value of the parameter after the resize
RECEIVED_SIZE	NUMBER	Amount of memory that became available as a result of the resize
STATUS	VARCHAR2(9)	Completion status of the operation: • INACTIVE • PENDING • COMPLETE • CANCELLED • ERROR
START_TIMESTAMP	TIMESTAMP(6)	Timestamp for the start time of the operation
END_TIMESTAMP	TIMESTAMP(6)	Timestamp for the end time of the operation
START_TIME	DATE	Start time of the operation
END_TIME	DATE	End time of the operation
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.80 V$MEMORY_TARGET_ADVICE

V$MEMORY_TARGET_ADVICE provides information about how the MEMORY_TARGET parameter should be sized based on current sizing and satisfaction metrics.

Column	Datatype	Description
MEMORY_SIZE	NUMBER	If the MEMORY_SIZE_FACTOR column has a value of 1, then this column shows the current size of memory, as set by the MEMORY_TARGET initialization parameter. If the value of the MEMORY_SIZE_FACTOR column is less than or greater than 1, then this column shows a proposed memory size.

Column	Datatype	Description
MEMORY_SIZE_FACTOR	NUMBER	A multiplier for the current memory size. Possible values are 0.25, 0.5, 0.75, 1, 1.5, 1.75, and 2. This multiplier times the current memory size equals the value of the MEMORY_SIZE column.
ESTD_DB_TIME	NUMBER	For current memory size (MEMORY_SIZE_FACTOR = 1), the amount of database time required to complete the current workload. For a proposed memory size, the estimated amount of database time that would be required if the MEMORY_TARGET parameter were changed to the proposed size.
ESTD_DB_TIME_FACTOR	NUMBER	For a proposed memory size, ratio of estimated database time to current database time
VERSION	NUMBER	Version number of this recommendation (this snapshot of the V$MEMORY_TARGET_ADVICE view)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Table 9-2 shows how the information provided in V$MEMORY_TARGET_ADVICE could be used to improve performance. The data indicates that if current memory size is 380M, and you were to increase it to 760M (2x), the current workload would take 80525 units of DBtime as opposed to 115475 units of DBtime, which is a significant improvement in performance.

Table 9-2 Example of Using V$MEMORY_TARGET_ADVICE

MEMORY_SIZE	MEMORY_SIZE_FACTOR	ESTD_DB_TIME	ESTD_DB_TIME_FACTOR	VERSION
380	1	115475	1	3
95	.25	200500	1.7	3
190	.5	125600	1.1	3
760	2	80525	0.7	3

9.81 V$METRIC

V$METRIC displays the most recent statistic values for the complete set of metrics captured by the Automatic Workload Repository (AWR) infrastructure.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval

Column	Datatype	Description
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	Metric Group ID. Refer to the V$METRICNAME view for the name of the group.
ENTITY_ID	NUMBER	Entity ID for the metric in question. The value of the Entity ID depends upon the metric group. (See the following table for an explanation of possible values.)
ENTITY_SEQUENCE	NUMBER	Entity Sequence number for the metric in question. The value of the Entity Sequence depends upon the metric group. (See the following table for an explanation of possible values.)
METRIC_ID	NUMBER	Metric ID
METRIC_NAME	VARCHAR2(64)	Metric Name. This is the statistic that is captured for the entity.
VALUE	NUMBER	Value of the statistic between BEGIN_TIME and END_TIME
METRIC_UNIT	VARCHAR2(64)	Unit for the VALUE
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

The following table describes what the ENTITY_ID and ENTITY_SEQUENCE are for each metric group:

GID	Group NAME	Entity ID	Entity Sequence
0	Event Metrics	Event#	N/A
1	Event Class Metrics	Wait Class ID	N/A
2	System Metrics Long Duration	N/A	N/A
3	System Metrics Short Duration	N/A	N/A
4	Session Metrics Long Duration	Session ID	Serial#
5	Session Metrics Short Duration	Session ID	Serial#
6	Service Metrics	N/A	Service Hash
7	File Metrics Long Duration	File#	Creation Change#
9	Tablespace Metrics Long Duration	Tablespace#	N/A
10	Service Metrics (Short)	N/A	Service Hash

9.82 V$METRICGROUP

V$METRICGROUP displays information about the metric group for each of the four major Replication components: capture, propagation, apply, and queue.

Column	Datatype	Description
GROUP_ID	NUMBER	Internal ID associated with each group
NAME	VARCHAR2(64)	External name of the group
INTERVAL_SIZE	NUMBER	How often to collect statistics
MAX_INTERVAL	NUMBER	Total number of intervals over which statistics should be collected
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.83 V$METRIC_HISTORY

V$METRIC_HISTORY displays all the available statistic values for the complete set of metrics captured by the Automatic Workload Repository (AWR) infrastructure.

Column	Datatype	Description
BEGIN_TIME	DATE	Begin time of the interval
END_TIME	DATE	End time of the interval
INTSIZE_CSEC	NUMBER	Interval size (in hundredths of a second)
GROUP_ID	NUMBER	Metric Group ID. Refer to the V$METRICNAME view for the name of the group.
ENTITY_ID	NUMBER	Entity ID for the metric in question. The value of the Entity ID depends upon the metric group. (See the table in the description of V$METRIC for an explanation of possible values.)
ENTITY_SEQUENCE	NUMBER	Entity Sequence number for the metric in question. The value of the Entity Sequence depends upon the metric group. (See the table in the description of V$METRIC for an explanation of possible values.)
METRIC_ID	NUMBER	Metric ID
METRIC_NAME	VARCHAR2(64)	Metric Name. This is the statistic that is captured for the entity.
VALUE	NUMBER	Value of the statistic between BEGIN_TIME and END_TIME
METRIC_UNIT	VARCHAR2(64)	Unit for the VALUE
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.84 V$METRICNAME

V$METRICNAME displays the mapping of the name of metrics to their metric ID.

Column	Datatype	Description
GROUP_ID	NUMBER	Metric group ID
GROUP_NAME	VARCHAR2(64)	Metric group name
METRIC_ID	NUMBER	Metric ID
METRIC_NAME	VARCHAR2(64)	Metric name
METRIC_UNIT	VARCHAR2(64)	Unit of measurement
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.85 V$MTTR_TARGET_ADVICE

V$MTTR_TARGET_ADVICE displays rows that predict the number of physical I/Os for the MTTR corresponding to each row.

The rows also compute a physical I/O factor, which is the ratio of the number of estimated I/Os to the number of I/Os actually performed by the current MTTR setting during the measurement interval.

The content of the view is empty if MTTR advisory has not been turned on since database startup. Otherwise, it returns the advisory information collected. If advisory is currently off, then this information comes from the last time MTTR advisory was on. FAST_START_MTTR_TARGET must be set to a nonzero value if the STATISTICS_LEVEL parameter is dynamically modified to turn MTTR advisory on.

If the FAST_START_MTTR_TARGET parameter is changed while MTTR advisory is on, then MTTR advisory is temporarily turned off until the new FAST_START_MTTR_TARGET setting takes effect. During this transition period, the contents of V$MTTR_TARGET_ADVICE reflect the simulation result for the old MTTR setting.

Column	Datatype	Description
MTTR_TARGET_FOR_ESTIMATE	NUMBER	MTTR setting being simulated. Equal to the current MTTR setting if this is the first row of the view.
ADVICE_STATUS	VARCHAR2(5)	Current status of MTTR simulation: • ON • READY • OFF
DIRTY_LIMIT	NUMBER	Dirty buffer limit derived from the MTTR being simulated
ESTD_CACHE_WRITES	NUMBER	Estimated number of cache physical writes under this MTTR
ESTD_CACHE_WRITE_FACTOR	NUMBER	Estimated cache physical write ratio under this MTTR. It is the ratio of the estimated number of cache writes to the number of cache writes under the current MTTR setting.
ESTD_TOTAL_WRITES	NUMBER	Estimated total number of physical writes under this MTTR

Column	Datatype	Description
ESTD_TOTAL_WRITE_FACTOR	NUMBER	Estimated total physical write ratio under this MTTR. It is the ratio of the estimated total number of physical writes to the total number of physical writes under the current MTTR setting.
ESTD_TOTAL_IOS	NUMBER	Estimated total number of I/Os under this MTTR
ESTD_TOTAL_IO_FACTOR	NUMBER	Estimated total I/O ratio under this MTTR. It is the ratio of the estimated total number of I/Os to the total number of I/Os under the current MTTR setting.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

See Also:

- "FAST_START_MTTR_TARGET"
- "STATISTICS_LEVEL"

9.86 V$MUTEX_SLEEP

V$MUTEX_SLEEP shows the wait time, and the number of sleeps for each combination of mutex type and location.

Column	Datatype	Description
MUTEX_TYPE	VARCHAR2(32)	Type of action/object the mutex protects
LOCATION	VARCHAR2(40)	The code location where the waiter slept for the mutex
SLEEPS	NUMBER	Number of sleeps for this MUTEX_TYPE and LOCATION
WAIT_TIME	NUMBER	Wait time in microseconds
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.87 V$MUTEX_SLEEP_HISTORY

V$MUTEX_SLEEP_HISTORY displays time-series data.

Each row in this view is for a specific time, mutex type, location, requesting session and blocking session combination. That is, it shows data related to a specific session (requesting session) that slept while requesting a specific mutex type and location, because it was being held by a specific blocking session. The data in this view is contained within a circular buffer, with the most recent sleeps shown.

Column	Datatype	Description
MUTEX_IDENTIFIER	NUMBER	Mutex ID
SLEEP_TIMESTAMP	TIMESTAMP(6)	The last date/time this MUTEX_TYPE and LOCATION was slept for by the REQUESTING_SESSION, while being held by the BLOCKING_SESSION.
MUTEX_TYPE	VARCHAR2(32)	Type of action/object the mutex protects
GETS	NUMBER	The total number of gets since the mutex was created and up until the time of the wait (and from all sessions past and present)
SLEEPS	NUMBER	The number of times the requester had to sleep before obtaining the mutex
REQUESTING_SESSION	NUMBER	The SID of a session requesting the mutex
BLOCKING_SESSION	NUMBER	The SID of a session holding the mutex
LOCATION	VARCHAR2(40)	The code location where the waiter slept for the mutex
MUTEX_VALUE	RAW(4 | 8)	If the mutex is held in exclusive (X) mode, this column shows the SID of the blocking session, else it shows the number of sessions referencing the mutex in S mode.
P1	NUMBER	Reserved for internal use
P1RAW	RAW(4 | 8)	Reserved for internal use
P2	NUMBER	Reserved for internal use
P3	NUMBER	Reserved for internal use
P4	NUMBER	Reserved for internal use
P5	VARCHAR2(64)	Reserved for internal use
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.88 V$MVREFRESH

V$MVREFRESH displays information about the materialized views currently being refreshed.

Column	Datatype	Description
SID	NUMBER	Session identifier

Column	Datatype	Description
SERIAL#	NUMBER	Session serial number, which is used to uniquely identify a session's objects. Guarantees that session-level commands are applied to the correct session objects if the session ends with, and another session begins with, the same session ID.
CURRMVOWNER	VARCHAR2(31)	Owner of the materialized view currently being refreshed. The materialized view resides in this user's schema.
CURRMVNAME	VARCHAR2(31)	Name of the materialized view currently being refreshed
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.89 V$MYSTAT

V$MYSTAT contains statistics on the current session.

Column	Datatype	Description
SID	NUMBER	ID of the current session
STATISTIC#	NUMBER	Number of the statistic
VALUE	NUMBER	Value of the statistic
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.90 V$NFS_CLIENTS

V$NFS_CLIENTS displays information about NFS clients currently connected to the XML DB NFS Server.

Column	Datatype	Description
CLIENTID	NUMBER	A number identifying the client
PRINCIPAL	VARCHAR2(2000)	User string denoting the principal that set the client ID (SetClientId)
CLIENTOPAQUEIDENTIFIER	VARCHAR2(1000)	Opaque string presented as identification by the client to the NFS server
VERIFIER	RAW(8)	Verifier presented by the client
LEASEEXPIRY	NUMBER	Number of seconds in which the lease expires for the client
CLIENTADDR	VARCHAR2(2000)	Address of the client

Column	Datatype	Description
CONFIRMED	VARCHAR2(5)	TRUE if the client is confirmed; otherwise FALSE
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.91 V$NFS_LOCKS

V$NFS_LOCKS displays information about byte range locks held on different files by NFS clients.

Column	Datatype	Description
OPENSTATEID	RAW(16)	Open state ID of the open owner
OPENSEQUENCEID	NUMBER	Open Sequence ID of the open owner
LOCKSTATEID	RAW(16)	Lock state ID of the lock owner
LOCKSEQUENCEID	NUMBER	Lock sequence ID of the lock owner
LOCKOWNER	VARCHAR2(2000)	Opaque string presented as identification by the lock owner to the NFS server
OFFSET	NUMBER	Byte Offset from which lock starts
LENGTH	NUMBER	Length of the lock
LOCKTYPE	VARCHAR2(20)	Type of the lock
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.92 V$NFS_OPEN_FILES

V$NFS_OPEN_FILES displays information about all the files currently opened by clients at the NFS server.

Column	Datatype	Description
CLIENTID	NUMBER	Number identifying the client
OPENOWNEROPAQUE	VARCHAR2(2000)	All the files currently opened by clients at the NFS server
OPENSTATEID	RAW(16)	Open state ID of the open owner
FILEHANDLE	RAW(32)	FileHandle of the file that has been opened
OPENSEQUENCEID	NUMBER	Open sequence ID of open owner
OPENREAD	VARCHAR2(5)	TRUE if the file is open for READ operations; otherwise FALSE

Column	Datatype	Description
OPENWRITE	VARCHAR2(5)	TRUE if the file is open for WRITE operations; otherwise FALSE
SHAREACCESS	VARCHAR2(15)	Sharing mode of the file (SharedReadWrite, SharedRead, SharedWrite)
SHAREDENY	VARCHAR2(13)	Deny mode of the file (DenyReadWrite, DenyRead, DenyWrite)
CONFIRMED	VARCHAR2(5)	TRUE if open is confirmed; otherwise FALSE
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.93 V$NLS_PARAMETERS

V$NLS_PARAMETERS contains current values of NLS parameters.

Column	Datatype	Description
PARAMETER	VARCHAR2(64)	Parameter names are as follows: NLS_CALENDAR, NLS_CHARACTERSET, NLS_COMP, NLS_CURRENCY, NLS_DATE_FORMAT, NLS_DATE_LANGUAGE, NLS_DUAL_CURRENCY, NLS_ISO_CURRENCY, NLS_LANGUAGE, NLS_LENGTH_SEMANTICS, NLS_NCHAR_CHARACTERSET, NLS_NCHAR_CONV_EXCP, NLS_NUMERIC_CHARACTERS, NLS_SORT, NLS_TERRITORY, NLS_TIMESTAMP_FORMAT, and NLS_TIMESTAMP_TZ_FORMAT. Two additional parameters, NLS_TIME_FORMAT and NLS_TIME_TZ_FORMAT, are currently used for internal purposes only.
VALUE	VARCHAR2(64)	NLS parameter value
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.94 V$NLS_VALID_VALUES

V$NLS_VALID_VALUES lists all valid values for NLS parameters.

Column	Datatype	Description
PARAMETER	VARCHAR2(64)	Parameter name (LANGUAGE | SORT | TERRITORY | CHARACTERSET)
VALUE	VARCHAR2(64)	NLS parameter value
ISDEPRECATED	VARCHAR2(5)	Indicates whether the parameter has been deprecated (TRUE) or not (FALSE)

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.95 V$NONLOGGED_BLOCK

V$NONLOGGED_BLOCK displays ranges of nonlogged datafile blocks recorded in the control file.

Prior to Oracle Database 12*c*, the presence of any nonlogged blocks in a data file was recorded in the file header via the FIRST_NONLOGGED_SCN column of the V$DATAFILE view. Now with 12*c*, in addition to the file header data, the ranges themselves are recorded in the control file. A control file range is a superset of the actual nonlogged blocks, meaning that small ranges can be merged to form larger ranges, even when there are some valid blocks between the smaller ranges.

The information in the view is maintained by RMAN VALIDATE, RMAN RESTORE, RMAN RECOVER, and Flashback Database and Media Recovery. A non RMAN-based restore will cause the data to become invalid, and it will be purged the next time any of those tasks are invoked and involve the file. As a result of space reuse, it is possible for ranges to no longer contain any nonlogged blocks. An RMAN VALIDATE command can be used to synchronize the ranges with the actual nonlogged blocks found from a scan of the data file.

Column	Datatype	Description
FILE#	NUMBER	Absolute file number of the data file that contains the nonlogged blocks
BLOCK#	NUMBER	Block number of the first nonlogged block in the range of nologged blocks
BLOCKS	NUMBER	Number of nonlogged blocks found starting with BLOCK#
NONLOGGED_START_CHANGE#	NUMBER	The smallest SCN on which any block in this block range became nonlogged. NULL if unknown.
NONLOGGED_START_TIME	DATE	The time that corresponds to NONLOGGED_START_CHANGE#. NULL if unknown.
NONLOGGED_END_CHANGE#	NUMBER	The largest SCN on which any block in this block range became nonlogged. NULL if unknown.
NONLOGGED_END_TIME	DATE	The time that corresponds to NONLOGGED_END_CHANGE#. NULL if unknown.
RESETLOGS_CHANGE#	NUMBER	The resetlogs SCN of the incarnation on which this block range was first marked as nonlogged. NULL if unknown.
RESETLOGS_TIME	DATE	The resetlogs time of the incarnation on which this block range was first marked as nologged. NULL if unknown.
OBJECT#	VARCHAR2(40)	The object ID this range belongs to. If this field is NULL, the object number is unknown.

Column	Datatype	Description
REASON	VARCHAR2(9)	The reason why this block range appears in this list, for example, primary file offline, could not talk to primary, non-standby recovery, and so on. For Oracle Database 12*c* and later releases, it is always UNKNOWN.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.96 V$OBJECT_DEPENDENCY

V$OBJECT_DEPENDENCY displays the objects depended on by a package, procedure, or cursor that is currently loaded in the shared pool. For example, together with V$SESSION and V$SQL, this view can be used to determine which tables are used in the SQL statement that a user is currently executing.

> **See Also:**
>
> "V$SESSION" and "V$SQL"

Column	Datatype	Description
FROM_ADDRESS	RAW(4 | 8)	Address of a procedure, package, or cursor that is currently loaded in the shared pool
FROM_HASH	NUMBER	Hash value of a procedure, package, or cursor that is currently loaded in the shared pool
TO_OWNER	VARCHAR2(64)	Owner of the object that is depended on
TO_NAME	VARCHAR2(1000)	Name of the object that is depended on
TO_ADDRESS	RAW(4 | 8)	Address of the object that is depended on. These can be used to look up more information on the object in V$DB_OBJECT_CACHE.
TO_HASH	NUMBER	Hash value of the object that is depended on. These can be used to look up more information on the object in V$DB_OBJECT_CACHE.
TO_TYPE	NUMBER	Type of the object that is depended on
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.97 V$OBJECT_PRIVILEGE

V$OBJECT_PRIVILEGE displays information about privileges associated with an object.

Column	Datatype	Description
OBJECT_TYPE_NAME	VARCHAR2(64)	Name of the object type
OBJECT_TYPE_ID	NUMBER	ID of the object type
PRIVILEGE_ID	NUMBER	ID of the privilege
PRIVILEGE_NAME	VARCHAR2(64)	Name of the privilege
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.98 V$OBSOLETE_BACKUP_FILES

V$OBSOLETE_BACKUP_FILES displays all obsolete backups, copies, and archived logs according to the current retention policy.

This view requires that the database is set using the DBMS_RCVMAN.SETDATABASE procedure.

Column	Datatype	Description
PKEY	NUMBER	Primary key for the backup
BACKUP_TYPE	VARCHAR2(32)	Type of the backup: • BACKUP SET • COPY • PROXY COPY
FILE_TYPE	VARCHAR2(32)	Type of the file: • DATAFILE • CONTROLFILE • SPFILE • REDO LOG • PIECE
KEEP	VARCHAR2(3)	Indicates whether the backup has a retention policy different from the value for CONFIGURE RETENTION POLICY (YES) or not (NO)
KEEP_UNTIL	DATE	If the KEEP UNTIL TIME clause of the BACKUP command was specified, then this column shows the date after which the backup becomes obsolete. If the column is null and KEEP_OPTIONS is not null, the backup never becomes obsolete.
KEEP_OPTIONS	VARCHAR2(13)	KEEP options for the backup: • LOGS - RMAN keeps the logs needed to recover the backup • NOLOGS - RMAN does not keep the logs needed to recover the backup If this column is null, then the backup has no KEEP options and will be made obsolete based on the retention policy.

Column	Datatype	Description
STATUS	VARCHAR2(16)	Status of the backup: • AVAILABLE • UNAVAILABLE • EXPIRED • OTHER
FNAME	VARCHAR2(1024)	Name of the file
TAG	VARCHAR2(32)	Tag of the piece, copy, or proxy copy
MEDIA	VARCHAR2(80)	Media ID of the piece or proxy copy
RECID	NUMBER	Recid of the record in the controlfile
STAMP	NUMBER	Stamp of the record in the controlfile
DEVICE_TYPE	VARCHAR2(255)	Type of media device that stores the backup
BLOCK_SIZE	NUMBER	Block size for the backup (in bytes)
COMPLETION_TIME	DATE	Time when the backup completed
BS_KEY	NUMBER	Primary key of the backup set (valid only when BACKUP_TYPE is BACKUP SET)
BS_COUNT	NUMBER	Count of the backup set from the controlfile record (valid only when BACKUP_TYPE is BACKUP SET)
BS_STAMP	NUMBER	Stamp of the backup set from the controlfile record (valid only when BACKUP_TYPE is BACKUP SET)
BS_TYPE	VARCHAR2(32)	Type of the backup set (valid only when BACKUP_TYPE is BACKUP SET): • DATAFILE • ARCHIVED LOG
BS_INCR_TYPE	VARCHAR2(32)	Incremental level of the backup set (valid only when BACKUP_TYPE is BACKUP SET)
BS_PIECES	NUMBER	Number of backup pieces in the backup set (valid only when BACKUP_TYPE is BACKUP SET)
BS_COMPLETION_TIME	DATE	Completion time of the backup set (valid only when BACKUP_TYPE is BACKUP SET)
BP_PIECE#	NUMBER	Number of the backup piece (valid only when FILE_TYPE is PIECE and BACKUP_TYPE is BACKUP SET)
BP_COPY#	NUMBER	Copy number of the backup piece (valid only when FILE_TYPE is PIECE and BACKUP_TYPE is BACKUP SET)
DF_FILE#	NUMBER	Absolute file number of the datafile (valid only when FILE_TYPE is DATAFILE)
DF_RESETLOGS_CHANGE#	NUMBER	System change number (SCN) of the most recent RESETLOGS when the control file or datafile was created (valid only when FILE_TYPE is DATAFILE)
DF_CREATION_CHANGE#	NUMBER	Creation SCN of the control file or datafile (valid only when FILE_TYPE is DATAFILE)
DF_CHECKPOINT_CHANGE#	NUMBER	System change number (SCN) of the most recent control file or datafile checkpoint (valid only when FILE_TYPE is DATAFILE)
DF_CKP_MOD_TIME	DATE	Modification time in case of SPFILE, otherwise time when the control file or datafile was checkpointed (valid only when FILE_TYPE is DATAFILE)
RL_THREAD#	NUMBER	Number of the redo thread (valid only when FILE_TYPE is REDO LOG)

Column	Datatype	Description
RL_SEQUENCE#	NUMBER	Log sequence number (valid only when FILE_TYPE is REDO LOG)
RL_RESETLOGS_CHANGE#	NUMBER	System change number (SCN) of the most recent RESETLOGS when the record was created (valid only when FILE_TYPE is REDO LOG)
RL_FIRST_CHANGE#	NUMBER	First SCN of the redo log (valid only when FILE_TYPE is REDO LOG)
RL_FIRST_TIME	DATE	Time when Oracle switched into the redo log (valid only when FILE_TYPE is REDO LOG)
RL_NEXT_CHANGE#	NUMBER	First SCN of the next redo log in the thread (valid only when FILE_TYPE is REDO LOG)
RL_NEXT_TIME	DATE	First timestamp of the next redo log in the thread (valid only when FILE_TYPE is REDO LOG)

9.99 V$OBSOLETE_PARAMETER

V$OBSOLETE_PARAMETER displays information about obsolete initialization parameters. If any row of the view contains TRUE in the ISSPECIFIED column, then you should examine why.

Column	Datatype	Description
NAME	VARCHAR2(64)	Name of the parameter
ISSPECIFIED	VARCHAR2(5)	Indicates whether the parameter was specified in the parameter file (TRUE) or not (FALSE)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.100 V$OFFLINE_RANGE

V$OFFLINE_RANGE displays datafile offline information from the control file.

Note that the last offline range of each datafile is kept in the DATAFILE record.

An offline range is created for a datafile when its tablespace is first altered to be OFFLINE NORMAL or READ ONLY, and then subsequently altered to be ONLINE or read/write. Note that no offline range is created if the datafile itself is altered to be OFFLINE or if the tablespace is altered to be OFFLINE IMMEDIATE.

> **See Also:**
>
> "V$DATAFILE"

Column	Datatype	Description
RECID	NUMBER	Record ID
STAMP	NUMBER	Record stamp
FILE#	NUMBER	Datafile number
OFFLINE_CHANGE#	NUMBER	SCN at which offlined
ONLINE_CHANGE#	NUMBER	SCN at which onlined
ONLINE_TIME	DATE	Time of offline SCN
RESETLOGS_CHANGE#	NUMBER	Resetlogs change number of the record
RESETLOGS_TIME	DATE	Resetlogs timestamp of the record
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.101 V$OFS_STATS

V$OFS_STATS displays performance statistics for various Oracle File System operations. These statistics are maintained at per mount level.

Column	Datatype	Description
OFS_MNTPNT	VARCHAR2(4096)	Mount point
OFS_LOOKUP	NUMBER	Number of lookup operations performed
OFS_FORGET	NUMBER	Number of forget operations performed
OFS_GETATTR	NUMBER	Number of getattr operations
OFS_SETATTR	NUMBER	Number of setattr operations
OFS_READLINK	NUMBER	Number of readlink operations
OFS_SYMLINK	NUMBER	Number of symlink operations
OFS_MKNOD	NUMBER	Number of mknod operations
OFS_MKDIR	NUMBER	Number of mkdir operations
OFS_UNLINK	NUMBER	Number of remove file operations
OFS_RMDIR	NUMBER	Number of remove directory operations
OFS_RENAME	NUMBER	Number of file rename operations
OFS_LINK	NUMBER	Number of hard link operations
OFS_OPEN	NUMBER	Number of file open operations
OFS_READ	NUMBER	Number of file read operations

Column	Datatype	Description
OFS_WRITE	NUMBER	Number of file write operations
OFS_STATFS	NUMBER	Number of statfs operations performed
OFS_RELEASE	NUMBER	Number of release operations
OFS_FSYNC	NUMBER	Number of file sync operations
OFS_SETXATTR	NUMBER	Number of set extended attributes operations
OFS_GETXATTR	NUMBER	Number of get extended attributes
OFS_LISTXATTR	NUMBER	Number of list extended attributes
OFS_REMOVEXATTR	NUMBER	Number of remove extended attributes
OFS_FLUSH	NUMBER	Number of flush operations
OFS_INIT	NUMBER	Number of init operations
OFS_OPENDIR	NUMBER	Number of opendir operations
OFS_READDIR	NUMBER	Number of readdir operations
OFS_RELEASEDIR	NUMBER	Number of releasedir operations
OFS_FSYNCDIR	NUMBER	Number of directory sync operations
OFS_GETLK	NUMBER	Number of file get lock operations
OFS_SETLK	NUMBER	Number of file lock operations
OFS_SETLKW	NUMBER	Number of file lock operation with wait option
OFS_ACCESS	NUMBER	Number of access operations
OFS_CREATE	NUMBER	Number of create operations
OFS_INTERRUPT	NUMBER	Number of interrupt operations received on the mount
OFS_BMAP	NUMBER	Number of block map operations received
OFS_DESTROY	NUMBER	Number of destroy operations
OFS_BYTES_READ	NUMBER	Total number of bytes read on the mount point
OFS_BYTES_WRITTEN	NUMBER	Total number of bytes written to the mount point
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Note:

This database view is supported only on the Linux operating system.

See Also:

"V$OFSMOUNT"

9.102 V$OFS_THREADS

V$OFS_THREADS displays information about Oracle file system (OFS) threads.

Column	Datatype	Description
PDBID	NUMBER	ID of the PDB in which the thread was created
FSID	NUMBER	ID of the mounted file system on which the thread is working
FSNAME	VARCHAR2(1024)	Name of the mounted file system on which the thread is working
FILE_NAME	VARCHAR2(1024)	File, directory, or filesystem on which the thread is working The value of this column depends on the value of the REQ_TYPE column: • If REQ_TYPE = SYSREQ, this column displays the path to the mount point of the filesystem on which the thread is working. • If REQ_TYPE = FILEREQ, this column displays the name of the file or directory on which the thread is working. • If REQ_TYPE = NONE, the value of this column is null.
THREADID	VARCHAR2(24)	ID of the thread
THREAD_TYPE	VARCHAR2(24)	Type of thread: • WORKER - The thread is used for executing file, directory, or filesystem requests. • RECEIVER - The thread receives requests from all OFS mounted file systems.
THREAD_NAME	VARCHAR2(24)	Name of the thread
REQ_TYPE	VARCHAR2(1024)	Type of request: • SYSREQ • FILEREQ • NONE
OPCODE	VARCHAR2(1024)	Type of operation on which the thread is working The value of this column depends on the value of the REQ_TYPE column: • If REQ_TYPE = SYSREQ, this column displays a DBMS_FS operation. • If REQ_TYPE = FILEREQ, this column displays any type of file operation. • If REQ_TYPE = NONE, the value of this column is null.
ELAPSED_TIME_MICRO	NUMBER	If REQ_TYPE = SYSREQ, the amount of time (in microseconds) that has elapsed since the current request was queued
SYSRQ_COUNT	NUMBER	Total number of REQ_TYPE = SYSREQ requests completed since the instance was started
FREQ_COUNT	NUMBER	Total number of REQ_TYPE = FILEREQ requests completed since the instance was started
WAIT_EVENT	VARCHAR2(64)	Event on which the thread is waiting
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> This view is available starting with Oracle Database 23ai.

9.103 V$OFSMOUNT

`V$OFSMOUNT` provides information about the file systems that are mounted by Oracle File System.

Column	Datatype	Description
`OFS_MNTPATH`	`VARCHAR2(1024)`	Mount path where the file system is mounted
`OFS_FSPATH`	`VARCHAR2(1024)`	File system path
`OFS_MNTOPTS`	`VARCHAR2(1024)`	Mount options used to mount the file system
`OFS_MNTFLAGS`	`VARCHAR2(7)`	Flags to specify if the file system is mounted. A value of 1 indicates that the file system is mounted.
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
`OFS_NODENM`	`VARCHAR2(255)`	Node name
`OFS_FSID`	`NUMBER`	Unique ID that identifies the mounted file system
`OFS_FSTYPE`	`VARCHAR2(255)`	Oracle file system type. This is the value that is passed to the `dbms_fs.mount_oracle_fs()` procedure. Some of the expected values are `dbfs` and `ofs`.

> **Note:**
>
> This database view is supported only on the Linux operating system.

> **See Also:**
>
> - "V$OFS_STATS"
> - *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_FS.MOUNT_ORACLE_FS` procedure

9.104 V$ONLINE_REDEF

`V$ONLINE_REDEF` provides information about the status of currently running online redefinitions.

Column	Datatype	Description
SID	NUMBER	Session identifier
SERIAL#	NUMBER	Session serial number, which is used to uniquely identify a session's objects
REDEFINITION_ID	NUMBER	Redefinition identifier
TABLE_OWNER	VARCHAR2(129)	Owner of the table currently being redefined. The table resides in this user's schema.
ORIGINAL_TABLE_NAME	VARCHAR2(129)	Name of the original table
INTERIM_TABLE_NAME	VARCHAR2(1024)	Interim table currently being redefined
PARTITION_NAME	VARCHAR2(1024)	Partition of the table currently being redefined. The table resides in this user's schema.
OPERATION	VARCHAR2(128)	Operations during the redefining process: • start_redef_table • sync_interim_table • copy_table_dependents • finish_redef_table • abort_redef_table
SUBOPERATION	VARCHAR2(128)	Sub operation during the redefining process
DETAILED_MESSAGE	VARCHAR2(1024)	Details of operations during redefining process. This can include details such as the number of DML being processed, execution start_time, and partition_name
PROGRESS	VARCHAR2(128)	Percentage of completion of each operation
REFRESH_STATEMENT_SQL_ID	VARCHAR2(128)	The SQL ID for the statement in the REFRESH_STATEMENT column
REFRESH_STATEMENT	VARCHAR2(4000)	A refresh statement executed during a refresh operation in some online redefinition procedures. When refresh is a sub operation in the SUBOPERATION column, there will be a refresh statement in this REFRESH_STATEMENT column.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.105 V$OPEN_CURSOR

V$OPEN_CURSOR lists cursors that each user session currently has opened and parsed, or cached.

Column	Datatype	Description
SADDR	RAW(4 | 8)	Session address
SID	NUMBER	Session identifier
USER_NAME	VARCHAR2(128)	User that is logged in to the session
ADDRESS	RAW(4 | 8)	Used with HASH_VALUE to uniquely identify the SQL statement being executed in the session

Column	Datatype	Description
HASH_VALUE	NUMBER	Used with ADDRESS to uniquely identify the SQL statement being executed in the session
SQL_ID	VARCHAR2(13)	SQL identifier of the SQL statement being executed in the session
SQL_TEXT	VARCHAR2(60)	First 60 characters of the SQL statement that is parsed into the open cursor
LAST_SQL_ACTIVE_TIME	DATE	Time when this cursor was last executed
SQL_EXEC_ID	NUMBER	If the open cursor is executing, then the SQL execution identifier for that execution (see V$SQL_MONITOR)
CURSOR_TYPE	VARCHAR2(64)	Type of cursor: • OPEN PL/SQL - Open PL/SQL cursors • OPEN - Other open cursors • SESSION CURSOR CACHED - Cursors cached in the generic session cursor cache • OPEN-RECURSIVE - Open recursive cursors • DICTIONARY LOOKUP CURSOR CACHED - Cursors cached in the dictionary lookup cursor cache • BUNDLE DICTIONARY LOOKUP CACHED - Cursors cached in the bundled dictionary lookup cursor cache • JAVA NAME TRANSLATION CURSOR CACHED - Cursors cached in the Java name translation cursor cache • REPLICATION TRIGGER CURSOR CACHED - Cursors cached in the replication trigger cursor cache • CONSTRAINTS CURSOR CACHED - Cursors cached in the constraints cursor cache • PL/SQL CURSOR CACHED - Cursors cached in the PL/SQL cursor cache
CHILD_ADDRESS	RAW(4 | 8)	Address of the child cursor
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.106 V$OPTIMIZER_PROCESSING_RATE

V$OPTIMIZER_PROCESSING_RATE displays the processing rates used by the optimizer to compute degree of parallelism.

> **Note:**
>
> You can manipulate these rates using these procedures for the DBMS_STATS package:
>
> - SET_PROCESSING_RATE
> - DELETE_PROCESSING_RATE
> - GATHER_PROCESSING_RATE
>
> See *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_STATS package.

Column	Datatype	Description
ADDRESS	RAW(4| 8)	Address of the handle to the parent for this cursor
OPERATION_NAME	VARCHAR2(64)	Name of the operation. The possible values are AGGR, ALL, CPU, CPU_ACCESS, CPU_AGGR, CPU_BYTES_PER_SEC, CPU_FILTER, CPU_GBY, CPU_HASH_JOIN, CPU_JOIN, CPU_NL_JOIN, CPU_RANDOM_ACCESS, CPU_ROWS_PER_SEC, CPU_SEQUENTIAL_ACCESS, CPU_SM_JOIN, CPU_SORT, HASH, IO, IO_ACCESS, IO_BYTES_PER_SEC, IO_RANDOM_ACCESS, IO_ROWS_PER_SEC, IO_SEQUENTIAL_ACCESS, MEMCMP, MEMCPY
MANUAL_VALUE	VARCHAR2(10)	Value of the operation set manually by the user
CALIBRATION_VALUE	VARCHAR2(10)	Value of the operation obtained from calibration (by running the GATHER_PROCESSING_RATE procedure)
DEFAULT_VALUE	VARCHAR2(10)	Default value of the operation
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.107 V$OPTION

V$OPTION displays Oracle Database options and features.

Typically, although not always, options must be separately licensed, whereas features come with the product and are enabled based on the product that is running (for example, Enterprise Edition).

Column	Datatype	Description
PARAMETER	VARCHAR2(64)	Name of the option (or feature)

Column	Datatype	Description
VALUE	VARCHAR2(64)	Indicates whether the option (or feature) is installed (TRUE) or not (FALSE)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

> *Oracle Database Licensing Information User Manual* for more information about Oracle Database options and features

9.108 V$OSSTAT

V$OSSTAT displays system utilization statistics from the operating system. One row is returned for each system statistic.

Column	Datatype	Description
STAT_NAME	VARCHAR2(64)	Name of the statistic (see Table 9-3)
VALUE	NUMBER	Instantaneous statistic value
OSSTAT_ID	NUMBER	Statistic ID
COMMENTS	VARCHAR2(64)	Any additional operating system-specific clarifications for the statistic
CUMULATIVE	VARCHAR2(3)	Indicates whether the statistic is cumulative (that is, accumulates over time) (YES) or not (NO)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Table 9-3 V$OSSTAT Statistics

Statistic Name	Description
NUM_CPUS	Number of CPUs or processors available
IDLE_TIME	Number of hundredths of a second that a processor has been idle, totalled over all processors
BUSY_TIME	Number of hundredths of a second that a processor has been busy executing user or kernel code, totalled over all processors

Table 9-3 (Cont.) V$OSSTAT Statistics

Statistic Name	Description
USER_TIME	Number of hundredths of a second that a processor has been busy executing user code, totalled over all processors
SYS_TIME	Number of hundredths of a second that a processor has been busy executing kernel code, totalled over all processors
IOWAIT_TIME	Number of hundredths of a second that a processor has been waiting for I/O to complete, totalled over all processors
NICE_TIME	Number of hundredths of a second that a processor has been busy executing low-priority user code, totalled over all processors
AVG_IDLE_TIME	Number of hundredths of a second that a processor has been idle, averaged over all processors
AVG_BUSY_TIME	Number of hundredths of a second that a processor has been busy executing user or kernel code, averaged over all processors
AVG_USER_TIME	Number of hundredths of a second that a processor has been busy executing user code, averaged over all processors
AVG_SYS_TIME	Number of hundredths of a second that a processor has been busy executing kernel code, averaged over all processors
AVG_IOWAIT_TIME	Number of hundredths of a second that a processor has been waiting for I/O to complete, averaged over all processors
AVG_NICE_TIME	Number of hundredths of a second that a processor has been busy executing low-priority user code, averaged over all processors
OS_CPU_WAIT_TIME	Total number of hundredths of a second that processes have been in a ready state, waiting to be selected by the operating system scheduler to run
RSRC_MGR_CPU_WAIT_TIME	Total number of hundredths of a second that Oracle processes have been in a ready state, waiting for CPU to be available for their consumer group in the currently active resource plan
VM_IN_BYTES	Total number of bytes of data that have been paged in due to virtual memory paging
VM_OUT_BYTES	Total number of bytes of data that have been paged out due to virtual memory paging
PHYSICAL_MEMORY_BYTES	Total number of bytes of physical memory
LOAD	Current number of processes that are either running or in the ready state, waiting to be selected by the operating-system scheduler to run. On many platforms, this statistic reflects the average load over the past minute.
NUM_CPU_CORES	Number of CPU cores available (includes subcores of multicore CPUs as well as single-core CPUs)
NUM_CPU_SOCKETS	Number of CPU sockets available (represents an absolute count of CPU chips on the system, regardless of multithreading or multi-core architectures)
NUM_VCPUS	Number of virtual CPUs available
NUM_LCPUS	Number of logical CPUs available (includes hardware threads if hardware threading is turned on)
TCP_SEND_SIZE_MIN	Minimum size of the TCP send buffer
TCP_SEND_SIZE_DEFAULT	Default size of the TCP send buffer
TCP_SEND_SIZE_MAX	Maximum size of the TCP send buffer
TCP_RECEIVE_SIZE_MIN	Minimum size of the TCP receive buffer
TCP_RECEIVE_SIZE_DEFAULT	Default size of the TCP receive buffer
TCP_RECEIVE_SIZE_MAX	Maximum size of the TCP receive buffer

Table 9-3 (Cont.) V$OSSTAT Statistics

Statistic Name	Description
GLOBAL_SEND_SIZE_MAX	Maximum size of the global send buffer
GLOBAL_RECEIVE_SIZE_MAX	Maximum size of the global receive buffer

> **Note:**
>
> The availability of all statistics except for `NUM_CPUS` and `RSRC_MGR_CPU_WAIT_TIME` is subject to the operating system platform on which the Oracle Database is running.

9.109 V$PARALLEL_DEGREE_LIMIT_MTH

`V$PARALLEL_DEGREE_LIMIT_MTH` displays all available parallel degree limit resource allocation methods.

Column	Datatype	Description
`NAME`	`VARCHAR2(40)`	Name of the parallel degree limit resource allocation method
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.110 V$PARAMETER

`V$PARAMETER` displays information about the initialization parameters that are currently in effect for the session. A new session inherits parameter values from the instance-wide values displayed by the `V$SYSTEM_PARAMETER` view.

Column	Datatype	Description
`NUM`	`NUMBER`	Parameter number
`NAME`	`VARCHAR2(80)`	Name of the parameter
`TYPE`	`NUMBER`	Parameter type: • `1` - Boolean • `2` - String • `3` - Integer • `4` - Parameter file • `5` - Reserved • `6` - Big integer
`VALUE`	`VARCHAR2(4000)`	Parameter value for the session (if modified within the session); otherwise, the instance-wide parameter value

Column	Datatype	Description
DISPLAY_VALUE	VARCHAR2(4000)	Parameter value in a user-friendly format. For example, if the VALUE column shows the value 262144 for a big integer parameter, then the DISPLAY_VALUE column will show the value 256K.
DEFAULT_VALUE	VARCHAR2(255)	The default value for this parameter. This is the value of the parameter if a value is not explicitly specified for the parameter.
ISDEFAULT	VARCHAR2(9)	Indicates whether the parameter is set to the default value (TRUE) or the parameter value was specified in the parameter file (FALSE). The database sets the value of the ISDEFAULT column to TRUE for parameters that are not specified in the init.ora or server parameter file (SPFILE).
ISSES_MODIFIABLE	VARCHAR2(5)	Indicates whether the parameter can be changed with ALTER SESSION (TRUE) or not (FALSE)
ISSYS_MODIFIABLE	VARCHAR2(9)	Indicates whether the parameter can be changed with ALTER SYSTEM and when the change takes effect: • IMMEDIATE - Parameter can be changed with ALTER SYSTEM regardless of the type of parameter file used to start the instance. The change takes effect immediately. • DEFERRED - Parameter can be changed with ALTER SYSTEM regardless of the type of parameter file used to start the instance. The change takes effect in subsequent sessions. • FALSE - Parameter cannot be changed with ALTER SYSTEM unless a server parameter file was used to start the instance. The change takes effect in subsequent instances.
ISPDB_MODIFIABLE	VARCHAR2(5)	Indicates whether the parameter can be modified inside a PDB (TRUE) or not (FALSE)
ISINSTANCE_MODIFIABLE	VARCHAR2(5)	For parameters that can be changed with ALTER SYSTEM, indicates whether the value of the parameter can be different for every instance (TRUE) or whether the parameter must have the same value for all Real Application Clusters instances (FALSE). If the ISSYS_MODIFIABLE column is FALSE, then this column is always FALSE.
ISMODIFIED	VARCHAR2(10)	Indicates whether the parameter has been modified after instance startup: • MODIFIED - Parameter has been modified with ALTER SESSION • SYSTEM_MOD - Parameter has been modified with ALTER SYSTEM (which causes all the currently logged in sessions' values to be modified) • FALSE - Parameter has not been modified after instance startup
ISADJUSTED	VARCHAR2(5)	Indicates whether Oracle adjusted the input value to a more suitable value (for example, the parameter value should be prime, but the user input a non-prime number, so Oracle adjusted the value to the next prime number)
ISDEPRECATED	VARCHAR2(5)	Indicates whether the parameter has been deprecated (TRUE) or not (FALSE)
ISBASIC	VARCHAR2(5)	Indicates whether the parameter is a basic parameter (TRUE) or not (FALSE)
DESCRIPTION	VARCHAR2(255)	Description of the parameter
UPDATE_COMMENT	VARCHAR2(255)	Comments associated with the most recent update
HASH	NUMBER	Hash value for the parameter name

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Examples

The following query returns the default value for the ALLOW_GLOBAL_DBLINKS initialization parameter:

```
SQL> SELECT name, default_value FROM v$parameter
  2  WHERE name = 'allow_global_dblinks';

NAME
--------------------------------------------------------------
DEFAULT_VALUE
--------------------------------------------------------------
allow_global_dblinks
FALSE

SQL>
```

The following query shows that the ALLOW_GLOBAL_DBLINKS initialization parameter is not modifiable in a PDB:

```
SQL> SELECT name, ispdb_modifiable FROM v$parameter
  2  WHERE name = 'allow_global_dblinks';

NAME
--------------------------------------------------------------
ISPDB
-----
allow_global_dblinks
FALSE

SQL>
```

> **See Also:**
>
> "V$SYSTEM_PARAMETER"

9.111 V$PARAMETER_VALID_VALUES

V$PARAMETER_VALID_VALUES displays a list of valid values for list parameters.

Column	Datatype	Description
NUM	NUMBER	Parameter number
NAME	VARCHAR2(64)	Parameter name
ORDINAL	NUMBER	Ordinal number in the list (1-based)
VALUE	VARCHAR2(255)	Parameter value at ordinal
ISDEFAULT	VARCHAR2(64)	Indicates whether the given ordinal value is the default value for the parameter
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.112 V$PARAMETER2

V$PARAMETER2 displays information about the initialization parameters that are currently in effect for the session, with each list parameter value appearing as a row in the view. A new session inherits parameter values from the instance-wide values displayed in the V$SYSTEM_PARAMETER2 view.

Presenting the list parameter values in this format enables you to quickly determine the values for a list parameter. For example, if a parameter value is a, b, then the V$PARAMETER view does not tell you if the parameter has two values (both a and b) or one value (a, b). V$PARAMETER2 makes the distinction between the list parameter values clear.

Column	Datatype	Description
NUM	NUMBER	Parameter number
NAME	VARCHAR2(80)	Name of the parameter
TYPE	NUMBER	Parameter type: • 1 - Boolean • 2 - String • 3 - Integer • 4 - Parameter file • 5 - Reserved • 6 - Big integer
VALUE	VARCHAR2(4000)	Parameter value for the session (if modified within the session); otherwise, the instance-wide parameter value
DISPLAY_VALUE	VARCHAR2(4000)	Parameter value in a user-friendly format. For example, if the VALUE column shows the value 262144 for a big integer parameter, then the DISPLAY_VALUE column will show the value 256K.
ISDEFAULT	VARCHAR2(6)	Indicates whether the parameter is set to the default value (TRUE) or the parameter value was specified in the parameter file (FALSE)

Column	Datatype	Description
ISSES_MODIFIABLE	VARCHAR2(5)	Indicates whether the parameter can be changed with ALTER SESSION (TRUE) or not (FALSE)
ISSYS_MODIFIABLE	VARCHAR2(9)	Indicates whether the parameter can be changed with ALTER SYSTEM and when the change takes effect: • IMMEDIATE - Parameter can be changed with ALTER SYSTEM regardless of the type of parameter file used to start the instance. The change takes effect immediately. • DEFERRED - Parameter can be changed with ALTER SYSTEM regardless of the type of parameter file used to start the instance. The change takes effect in subsequent sessions. • FALSE - Parameter cannot be changed with ALTER SYSTEM unless a server parameter file was used to start the instance. The change takes effect in subsequent instances.
ISPDB_MODIFIABLE	VARCHAR2(5)	Indicates whether the parameter can be modified inside a PDB (TRUE) or not (FALSE). In a non-CDB, the value of this column is NULL.
ISINSTANCE_MODIFIABLE	VARCHAR2(5)	For parameters that can be changed with ALTER SYSTEM, indicates whether the value of the parameter can be different for every instance (TRUE) or whether the parameter must have the same value for all Real Application Clusters instances (FALSE). If the ISSYS_MODIFIABLE column is FALSE, then this column is always FALSE.
ISMODIFIED	VARCHAR2(10)	Indicates whether the parameter has been modified after instance startup: • MODIFIED - Parameter has been modified with ALTER SESSION • SYSTEM_MOD - Parameter has been modified with ALTER SYSTEM (which causes all the currently logged in sessions' values to be modified) • FALSE - Parameter has not been modified after instance startup
ISADJUSTED	VARCHAR2(5)	Indicates whether Oracle adjusted the input value to a more suitable value (for example, the parameter value should be prime, but the user input a non-prime number, so Oracle adjusted the value to the next prime number)
ISDEPRECATED	VARCHAR2(5)	Indicates whether the parameter has been deprecated (TRUE) or not (FALSE)
ISBASIC	VARCHAR2(5)	Indicates whether the parameter is a basic parameter (TRUE) or not (FALSE)
DESCRIPTION	VARCHAR2(255)	Description of the parameter
ORDINAL	NUMBER	Position (ordinal number) of the parameter value. Useful only for parameters whose values are lists of strings.
UPDATE_COMMENT	VARCHAR2(255)	Comments associated with the most recent update
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**
>
> - "V$SYSTEM_PARAMETER"
> - "V$PARAMETER"

9.113 V$PASSWORDFILE_INFO

V$PASSWORDFILE_INFO provides information about the database password file.

This view can be queried from the root or from a pluggable database (PDB) in a multitenant container database (CDB). When queried, this view always returns one row.

Column	Datatype	Description
FILE_NAME	VARCHAR2(513)	Fully qualified password file name/location.
FORMAT	VARCHAR2(6)	Shows the format of the password file: • LEGACY • 12 • 12.2
IS_ASM	VARCHAR2(5)	Indicates whether the password file is stored in Oracle ASM. Possible values: • TRUE: The password file is stored in Oracle ASM. • FALSE: The password file is stored in Oracle Exascale or in the operating system file system.
IS_EXC	VARCHAR2(5)	Indicates whether the password file is stored in Oracle Exascale. Possible values: • TRUE: The password file is stored in Oracle Exascale. • FALSE: The password file is stored in Oracle ASM or in the operating system file system.
CON_ID	NUMBER	The ID of the container to which the data pertains. Because there is only one password file for a CDB that is common for the entire CDB, the only value possible for CON_ID is 0 for this view.

> **Note:**
>
> If the database password file name or location was recently changed, and you do not see the change reflected in this view, you can run the following SQL statement:
>
> ```
> SQL> ALTER SYSTEM FLUSH PASSWORDFILE_METADATA_CACHE;
> ```
>
> This statement flushes the metadata cache and updates the database to use the new password file. It also updates this view with the current password file information.

9.114 V$PATCHES

V$PATCHES shows the patches applied on an Oracle ASM instance and the list of patches applied to an Oracle Grid infrastructure home directory.

> **Note:**
>
> If this view is queried in an RDBMS instance, no patch information is returned.

Column	Datatype	Description
PATCH_ID	NUMBER	Patch identifier
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.115 V$PDB_INCARNATION

V$PDB_INCARNATION displays information about all PDB incarnations. Oracle creates a new PDB incarnation whenever a PDB is opened with the RESETLOGS option.

Column	Datatype	Description
DB_INCARNATION#	NUMBER	Database incarnation number
PDB_INCARNATION#	NUMBER	PDB incarnation number
STATUS	VARCHAR2(7)	Incarnation status: • ORPHAN: Orphan incarnation • CURRENT: Current incarnation of the PDB • PARENT: Parent of the current incarnation
INCARNATION_SCN	NUMBER	The SCN to flashback or recover to for this PDB incarnation
INCARNATION_TIME	DATE	The point in time recovered to for this PDB incarnation
BEGIN_RESETLOGS_SCN	NUMBER	The SCN at the beginning of PDB resetlogs
BEGIN_RESETLOGS_TIME	DATE	The time at the beginning of PDB resetlogs
END_RESETLOGS_SCN	NUMBER	The SCN at the end of PDB resetlogs
END_RESETLOGS_TIME	DATE	The time at the end of PDB resetlogs
PRIOR_DB_INCARNATION#	NUMBER	Parent database incarnation number
PRIOR_PDB_INCARNATION#	VARCHAR2(40)	Parent PDB incarnation number
FLASHBACK_DATABASE_ALLOWED	VARCHAR2(3)	Indicates whether the PDB can be flashbacked to this incarnation as part of a flashback database operation for the CDB

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.116 V$PDBS

V$PDBS displays information about PDBs associated with the current instance.

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
DBID	NUMBER	PDB identifier calculated when the PDB is created and stored in all file headers associated with the PDB
CON_UID	NUMBER	Unique identifier associated with the PDB
GUID	RAW(16)	Globally unique identifier (GUID) of this PDB
NAME	VARCHAR2(128)	Name of the PDB
OPEN_MODE	VARCHAR2(10)	Open mode information. Possible values: • MOUNTED • READ WRITE • READ ONLY • MIGRATE
RESTRICTED	VARCHAR2(3)	Indicates whether only users possessing RESTRICTED SESSION privilege can connect to the PDB. Possible values: • YES • NO • NULL
OPEN_TIME	TIMESTAMP(3) WITH TIME ZONE	Date and time when the database was last opened
CREATE_SCN	NUMBER	System change number (SCN) for the creation of this PDB
TOTAL_SIZE	NUMBER	Shows the disk space (in bytes) used by the PDB, including both data and temp files.
BLOCK_SIZE	NUMBER	The current block size for the PDB

Column	Datatype	Description
RECOVERY_STATUS	VARCHAR2(26)	Shows the recovery status for the PDB. Possible values: • DISABLED: The PDB is offline. This is similar to all files belonging to this PDB being offline, except that all files to be added to this PDB in the future will also be offline to begin with. • DISABLED AUTOMATIC RECOVER: Same as DISABLED, except that standby Active Data Guard recovery will automatically attempt to spawn PDB recovery isolation for the PDB and transition the PDB into ENABLED. • ENABLED: The PDB is not offline at the PDB level. Individual files in the PDB may be online or offline at the file level.
SNAPSHOT_PARENT_CON_ID	NUMBER	This column shows the container ID of the PDB that this PDB is a snapshot clone of. This column shows a nonzero value only if the PDB is a snapshot clone. For all other cases, it shows a value of 0.
APPLICATION_ROOT	VARCHAR2(3)	Indicates whether the PDB is an application root
APPLICATION_PDB	VARCHAR2(3)	Indicates whether the PDB is an application PDB
APPLICATION_SEED	VARCHAR2(3)	Indicates whether the PDB is an application seed (an application seed is also an application PDB)
APPLICATION_ROOT_CON_ID	NUMBER	If this PDB is an application PDB, the container ID of an application root to which this application PDB belongs. If this PDB is an application root clone, the container ID of an application root to which this application root clone belongs. Otherwise, NULL.
APPLICATION_ROOT_CLONE	VARCHAR2(3)	Indicates whether this PDB is an application root clone (YES) or not (NO)
PROXY_PDB	VARCHAR2(3)	Indicates whether this PDB is a proxy PDB (YES) or not (NO)
LOCAL_UNDO	NUMBER	Shows whether the PDB is in local undo. Possible values: • 1 – PDB is in local undo mode • 0 – PDB is in shared undo mode This column is not relevant for CDB$ROOT.
UNDO_SCN	NUMBER	System change number (SCN) at which the PDB was last converted from shared to local undo, or from local to shared undo. This column is not relevant for CDB$ROOT.
UNDO_TIMESTAMP	DATE	Date and time at which the PDB was last converted from shared to local undo, or from local to shared undo. This column is not relevant for CDB$ROOT.
CREATION_TIME	DATE	Date and time at which the PDB was created.
DIAGNOSTICS_SIZE	NUMBER	Shows the current disk space usage (in bytes) of the diagnostic traces generated in the PDB, which is represented by the CON_ID column of the row
PDB_COUNT	NUMBER	The number of user-created PDBs belonging to a given application root or CDB$ROOT. For all other containers, its value is 0.
AUDIT_FILES_SIZE	NUMBER	Shows the current disk space usage (in bytes) by Unified Audit files (.bin format) in the current PDB.
MAX_SIZE	NUMBER	Shows the maximum amount of disk space (in bytes) that can be used by data and temp files in the PDB
MAX_DIAGNOSTICS_SIZE	NUMBER	Shows the maximum amount of disk space (in bytes) that can be used by diagnostic traces generated in the PDB
MAX_AUDIT_SIZE	NUMBER	Shows the maximum amount of disk space (in bytes) that can be used by Unified Audit files (.bin format) in the PDB

Column	Datatype	Description
LAST_CHANGED_BY	VARCHAR2(11)	Indicates what type of user last changed the PDB. Possible values: • COMMON USER • LOCAL USER
TEMPLATE	VARCHAR2(3)	For internal use only
TENANT_ID	VARCHAR2(256)	Pluggable database tenant key
UPGRADE_LEVEL	NUMBER	For internal use only
GUID_BASE64	VARCHAR2(30)	The GUID of the PDB, encoded in base64
RECOVERY_TARGET_PDB_INCARNATION#	NUMBER	The incarnation number to which all datafiles belonging to the PDB would be recovered by the RECOVER PLUGGABLE DATABASE command
CLOUD_IDENTITY	VARCHAR2(32767)	Cloud identifier for the PDB
CLOSE_TIME	TIMESTAMP(3) WITH TIME ZONE	Date and time when the database was last closed
PRIORITY	NUMBER	The priority of the PDB when performing an OPEN or SAVE STATE operation on multiple PDBs with a single ALTER PLUGGABLE DATABASE or ALTER DATABASE statement If a priority is not assigned to the PDB, then the value of this column is null. An operation is performed first on the PDB with the lowest PRIORITY number, then on the PDB with the second lowest PRIORITY number, and so on. The operation is then performed on PDBs with no assigned priority, if any, in no particular order.
BACKUP_SIZE	NUMBER	Reserved for future use
BACKUP_STATUS	VARCHAR2(8)	Reserved for future use

9.117 V$PERSISTENT_PUBLISHERS

V$PERSISTENT_PUBLISHERS displays information about all active publishers of the persistent queues in the database. There is one row per instance per queue per publisher. The rows are deleted when the database (or instance in an Oracle RAC environment) restarts.

Column	Datatype	Description
QUEUE_ID	NUMBER	Identifier for the queue
QUEUE_SCHEMA	VARCHAR2(128)	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	Name of the queue
PUBLISHER_NAME	VARCHAR2(128)	Name of the agent enqueuing the message
PUBLISHER_ADDRESS	VARCHAR2(1024)	Address of the publisher agent
PROTOCOL	NUMBER	Protocol used by the publisher's address
ENQUEUED_MSGS	NUMBER	Number of messages that have been enqueued
ELAPSED_ENQUEUE_TIME	NUMBER	Total time spent doing enqueue (in hundredths of a second)
ENQUEUE_CPU_TIME	NUMBER	Total CPU time for enqueue (in hundredths of a second)
LAST_ENQUEUE_TIME	TIMESTAMP(6)	Last enqueue message timestamp
ENQUEUE_TRANSACTIONS	NUMBER	Number of enqueue transactions

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.118 V$PERSISTENT_QMN_CACHE

V$PERSISTENT_QMN_CACHE displays detailed information and statistics about the background activities for all queue tables in the system. There is one row per queue table. The rows are deleted when the database (or instance in an Oracle RAC environment) restarts.

Column	Datatype	Description
QUEUE_TABLE_ID	NUMBER	Queue table object ID
TYPE	VARCHAR2(32)	Type of the queue table's queue monitor cache
STATUS	NUMBER	Status of the queue table's queue monitor cache
NEXT_SERVICE_TIME	TIMESTAMP(3) WITH TIME ZONE	Time when the queue table should be serviced by QMON servers
WINDOW_END_TIME	TIMESTAMP(3) WITH TIME ZONE	Time manager activity period for non-owner queue table operations
TOTAL_RUNS	NUMBER	Total number of times this queue table is served
TOTAL_LATENCY	NUMBER	Cumulative latency in serving the queue table (in hundredths of a second)
TOTAL_ELAPSED_TIME	NUMBER	Total time spent in processing this queue table (in seconds)
TOTAL_CPU_TIME	NUMBER	Cumulative CPU time for serving the queue table (in hundredths of a second)
TMGR_ROWS_PROCESSED	NUMBER	Number of time manager entries processed
TMGR_ELAPSED_TIME	NUMBER	Cumulative time for time management activities (in hundredths of a second)
TMGR_CPU_TIME	NUMBER	Cumulative CPU time for time management activities (in hundredths of a second)
LAST_TMGR_PROCESSING_TIME	TIMESTAMP(3) WITH TIME ZONE	Last timer manager processing time
DEQLOG_ROWS_PROCESSED	NUMBER	Number of dequeue log entries processed
DEQLOG_PROCESSING_ELAPSED_TIME	NUMBER	Total time for processing dequeue log entries (in hundredths of a second)
DEQLOG_PROCESSING_CPU_TIME	NUMBER	Total CPU time for processing dequeue log entries (in hundredths of a second)
LAST_DEQLOG_PROCESSING_TIME	TIMESTAMP(3) WITH TIME ZONE	Last dequeue log processing time
DEQUEUE_INDEX_BLOCKS_FREED	NUMBER	Number of dequeue index blocks freed
HISTORY_INDEX_BLOCKS_FREED	NUMBER	Number of history index blocks freed

Column	Datatype	Description
TIME_INDEX_BLOCKS_FREED	NUMBER	Number of time manager index blocks freed
INDEX_CLEANUP_COUNT	NUMBER	Number of times index block cleanup was attempted
INDEX_CLEANUP_ELAPSED_TIME	NUMBER	Total time for index block cleanup (in hundredths of a second)
INDEX_CLEANUP_CPU_TIME	NUMBER	Total CPU time for index block cleanup (in hundredths of a second)
LAST_INDEX_CLEANUP_TIME	TIMESTAMP(3) WITH TIME ZONE	Last index block cleanup time
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.119 V$PERSISTENT_QUEUES

V$PERSISTENT_QUEUES displays information about all active persistent queues in the database since the queues' first activity time. There is one row per queue. The rows are deleted when the database (or instance in an Oracle RAC environment) restarts.

Column	Datatype	Description
QUEUE_ID	NUMBER	Identifier for the queue
QUEUE_TABLE_ID	NUMBER	Queue table identifier
QUEUE_SCHEMA	VARCHAR2(128)	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	Name of the queue
FIRST_ACTIVITY_TIME	TIMESTAMP(6)	First queue activity time since database startup
ENQUEUED_MSGS	NUMBER	Number of messages enqueued
DEQUEUED_MSGS	NUMBER	Number of messages dequeued **Note:** This column will not be incremented until all the subscribers of the message have dequeued the message and its retention time has elapsed.
BROWSED_MSGS	NUMBER	Number of messages that have been browsed
ELAPSED_ENQUEUE_TIME	NUMBER	Total time (in hundredths of a second) spent doing enqueue
ELAPSED_DEQUEUE_TIME	NUMBER	Total time (in hundredths of a second) spent doing dequeue
ENQUEUE_CPU_TIME	NUMBER	Total CPU time for enqueue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER	Total CPU time for dequeue (in hundredths of a second)
AVG_MSG_AGE	NUMBER	Average age of messages in the queue
DEQUEUED_MSG_LATENCY	NUMBER	Last dequeued message latency (in seconds)
ELAPSED_TRANSFORMATION_TIME	NUMBER	Total time (in hundredths of a second) spent doing transformation
ELAPSED_RULE_EVALUATION_TIME	NUMBER	Total time (in hundredths of a second) spent doing rule evaluation
ENQUEUED_EXPIRY_MSGS	NUMBER	Number of messages enqueued with expiry

Column	Datatype	Description
ENQUEUED_DELAY_MSGS	NUMBER	Number of messages enqueued with delay
MSGS_MADE_EXPIRED	NUMBER	Number of messages expired by time manager
MSGS_MADE_READY	NUMBER	Number of messages made ready by time manager
LAST_ENQUEUE_TIME	TIMESTAMP(6)	Last message enqueue time
LAST_DEQUEUE_TIME	TIMESTAMP(6)	Last message dequeue time
LAST_TM_EXPIRY_TIME	TIMESTAMP(6)	Last time message was expired by time manager
LAST_TM_READY_TIME	TIMESTAMP(6)	Last time message was made ready by time manager
ENQUEUE_TRANSACTIONS	NUMBER	Number of enqueue transactions
DEQUEUE_TRANSACTIONS	NUMBER	Number of dequeue transactions
EXECUTION_COUNT	NUMBER	Number of executions of the dequeue cursor
OLDEST_MSGID	RAW(16)	Message ID of the oldest message in the queue
OLDEST_MSG_ENQTM	TIMESTAMP(6)	Enqueue time of the oldest message in the queue
MANDATORY_AFF_SWITCHES_OUT	NUMBER	An affinity switch is a change in dequeue instance for a shard-subscriber pair. A mandatory affinity switch is when there are local enqueues in the queue at the instance but no local dequeues present, so the dequeue affinity is switched to another instance for that shard-subscriber pair. This column shows the number of times mandatory affinity switches were needed from this instance to another for this queue.
OPTIONAL_AFF_SWITCHES_OUT	NUMBER	Optional affinity switches are affinity switches that are not mandatory. Optional affinity switches are done for global load balancing across the Oracle Real Application Clusters (Oracle RAC) database. This column shows the number of times optional affinity switches were needed from this instance to another for this queue.
AFF_SWITCHES_BACK_IN	NUMBER	The number of times dequeue affinities have come back from other instances to this instance. (MANDATORY_AFF_SWITCHES_OUT + OPTIONAL_AFF_SWITCHES_OUT - AFF_SWITCHES_BACK_IN) is the number of cross instance affinities present across all shard-subscriber pair for shards owned by this instance for this queue.
CROSS_STREAM_JOBS	NUMBER	The number of times a shard is being forwarded to another instance due to cross instance dequeues for this queue
RESTORE_BITMAP_JOBS	NUMBER	The number of times subscribers used existing shard forwarding to have cross instance dequeues for this queue
SHADOW_AFF_SWITCHES_IN	NUMBER	The number of affinity switches for this queue where this instance is the dequeue instance for a shard-subscriber pair where the shard is being enqueued at another instance
SHADOW_AFF_SWITCHES_OUT	NUMBER	The number of affinity switches for this queue where shadow affinity is switched back to source instance of the shard. (SHADOW_AFF_SWITCHES_IN - SHADOW_AFF_SWITCHES_OUT) is the number of dequeue affinities which are performing cross instance dequeues from non-local shards.
SHADOW_SHARDS_RECEIVED	NUMBER	The number of times a shard is being forwarded from another instance to this instance due to cross instance dequeues for this queue
SHADOW_SHARDS_FREED	NUMBER	The number of times a forwarded shard to this instance was stopped due to removal of cross instance dequeues for this queue
SHADOW_EVENT_STREAMS_RECEIVED	NUMBER	The number of times an event stream is being forwarded from another instance to this instance due to cross instance dequeues for this queue

Column	Datatype	Description
SHADOW_EVENT_STREAMS_FREED	NUMBER	The number of times a forwarded event stream to this instance was stopped due to removal of cross instance dequeues for this queue
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note:**
>
> For sharded queues, only the following columns in this view contain accurate information: FIRST_ACTIVITY_TIME, BROWSED_MSGS, LAST_ENQUEUE_TIME, LAST_DEQUEUE_TIME, ENQUEUE_TRANSACTIONS, and DEQUEUE_TRANSACTIONS. The rest of the columns in this view should be ignored when querying information about sharded queues.

9.120 V$PERSISTENT_SUBSCRIBERS

V$PERSISTENT_SUBSCRIBERS displays information about all active subscribers of the persistent queues in the database.

There is one row per instance per queue per subscriber. The rows are deleted when the database (or instance in an Oracle RAC environment) restarts.

> **Note:**
>
> This view does not display information about sharded queues. For information about sharded queues, refer to the "V$AQ_SHARDED_SUBSCRIBER_STAT" view.

Column	Datatype	Description
QUEUE_ID	NUMBER	Identifier for the queue
QUEUE_SCHEMA	VARCHAR2(128)	Owner of the queue
QUEUE_NAME	VARCHAR2(128)	Name of the queue
SUBSCRIBER_ID	NUMBER	Internal subscriber number
SUBSCRIBER_NAME	VARCHAR2(512)	Name of the subscriber
SUBSCRIBER_ADDRESS	VARCHAR2(1024)	Address of the subscribing agent
PROTOCOL	NUMBER	Protocol of the subscribing agent
SUBSCRIBER_TYPE	VARCHAR2(128)	Type of the subscriber: • PROXY - Propagation subscriber • SUBSCRIBER - Normal subscriber • RECIPIENT - Recipient
FIRST_ACTIVITY_TIME	TIMESTAMP(6)	First subscriber activity time since database startup

Column	Datatype	Description
ENQUEUED_MSGS	NUMBER	Number of messages enqueued since FIRST_ACTIVITY_TIME
DEQUEUED_MSGS	NUMBER	Number of messages dequeued since FIRST_ACTIVITY_TIME
AVG_MSG_AGE	NUMBER	Average age of messages in the queue
BROWSED_MSGS	NUMBER	Number of messages that have been browsed
EXPIRED_MSGS	NUMBER	Number of messages expired since FIRST_ACTIVITY_TIME
DEQUEUED_MSG_LATENCY	NUMBER	Last dequeued message latency (in seconds)
LAST_ENQUEUE_TIME	TIMESTAMP(6)	Timestamp of the last enqueued message
LAST_DEQUEUE_TIME	TIMESTAMP(6)	Timestamp of the last dequeued message
ELAPSED_DEQUEUE_TIME	NUMBER	Total time spent in dequeue (in hundredths of a second)
DEQUEUE_CPU_TIME	NUMBER	Total CPU time for dequeue (in hundredths of a second)
DEQUEUE_TRANSACTIONS	NUMBER	Number of dequeue transactions
EXECUTION_COUNT	NUMBER	Number of executions of the dequeue index cursor
DEQUEUE_MEMORY_LOCKS	NUMBER	Number of dequeue transactions that obtained memory locks
DEQUEUE_DISK_LOCKS	NUMBER	Number of dequeue transactions that obtained disk locks
DEQUEUE_DISK_DELETES	NUMBER	Number of dequeue transactions that deleted index-organized table entries
OLDEST_MSGID	RAW(16)	Message ID of the oldest message
OLDEST_MSG_ENQTM	TIMESTAMP(6)	Enqueue time of the oldest message
PARENT_SUBSCRIBER_ID	NUMBER	Subscriber ID of the parent durable subscriber
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.121 V$PGA_TARGET_ADVICE

V$PGA_TARGET_ADVICE predicts how the cache hit percentage and over allocation count statistics displayed by the V$PGASTAT performance view would be impacted if the value of the PGA_AGGREGATE_TARGET parameter is changed.

The prediction is performed for various values of the PGA_AGGREGATE_TARGET parameter, selected around its current value. The advice statistic is generated by simulating the past workload run by the instance.

The content of the view is empty if PGA_AGGREGATE_TARGET is not set. In addition, the content of this view is not updated if the STATISTICS_LEVEL parameter is set to BASIC. Base statistics for this view are reset at instance startup and when the value of the PGA_AGGREGATE_TARGET initialization parameter is dynamically modified.

Column	Datatype	Description
PGA_TARGET_FOR_ESTIMATE	NUMBER	Value of PGA_AGGREGATE_TARGET for this prediction (in bytes)

Column	Datatype	Description
PGA_TARGET_FACTOR	NUMBER	PGA_TARGET_FOR_ESTIMATE / the current value of the PGA_AGGREGATE_TARGET parameter
ADVICE_STATUS	VARCHAR2(3)	Indicates whether the advice is enabled (ON) or disabled (OFF) depending on the value of the STATISTICS_LEVEL parameter
BYTES_PROCESSED	NUMBER	Total bytes processed by all the work areas considered by this advice (in bytes)
ESTD_TIME	NUMBER	Time (in seconds) required to process the bytes
ESTD_EXTRA_BYTES_RW	NUMBER	Estimated number of extra bytes which would be read or written if PGA_AGGREGATE_TARGET was set to the value of the PGA_TARGET_FOR_ESTIMATE column. This number is derived from the estimated number and size of work areas which would run in one-pass (or multi-pass) for that value of PGA_AGGREGATE_TARGET.
ESTD_PGA_CACHE_HIT_PERCENTAGE	NUMBER	Estimated value of the cache hit percentage statistic when PGA_AGGREGATE_TARGET equals PGA_TARGET_FOR_ESTIMATE. This column is derived from the above two columns and is equal to BYTES_PROCESSED / (BYTES_PROCESSED + ESTD_EXTRA_BYTES_RW)
ESTD_OVERALLOC_COUNT	NUMBER	Estimated number of PGA memory over-allocations if the value of PGA_AGGREGATE_TARGET is set to PGA_TARGET_FOR_ESTIMATE. A nonzero value means that PGA_TARGET_FOR_ESTIMATE is not large enough to run the work area workload. Hence, the DBA should not set PGA_AGGREGATE_TARGET to PGA_TARGET_FOR_ESTIMATE since Oracle will not be able to honor that target.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.122 V$PGA_TARGET_ADVICE_HISTOGRAM

V$PGA_TARGET_ADVICE_HISTOGRAM predicts how statistics displayed by the V$SQL_WORKAREA_HISTOGRAM dynamic view would be impacted if the value of the PGA_AGGREGATE_TARGET parameter is changed.

This prediction is performed for various values of the PGA_AGGREGATE_TARGET parameter, selected around its current value. The advice statistic is generated by simulating the past workload run by the instance.

The content of the view is empty if PGA_AGGREGATE_TARGET is not set. In addition, the content of this view is not updated when the STATISTICS_LEVEL initialization parameter is set to BASIC. Base statistics for this view are reset at instance startup or when the value of the PGA_AGGREGATE_TARGET initialization parameter is dynamically modified.

Column	Datatype	Description
PGA_TARGET_FOR_ESTIMATE	NUMBER	Value of PGA_AGGREGATE_TARGET for this prediction (in bytes)
PGA_TARGET_FACTOR	NUMBER	PGA_TARGET_FOR_ESTIMATE / the current value of the PGA_AGGREGATE_TARGET parameter
ADVICE_STATUS	VARCHAR2(3)	Indicates whether the advice is enabled (ON) or disabled (OFF) depending on the value of the STATISTICS_LEVEL parameter
LOW_OPTIMAL_SIZE	NUMBER	Lower bound for the optimal memory requirement of work areas included in this row (in bytes)
HIGH_OPTIMAL_SIZE	NUMBER	Upper bound for the optimal memory requirement of work areas included in this row (in bytes)
ESTD_OPTIMAL_EXECUTIONS	NUMBER	Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which are predicted to run optimal given a value of PGA_AGGREGATE_TARGET equal to PGA_TARGET_FOR_ESTIMATE
ESTD_ONEPASS_EXECUTIONS	NUMBER	Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which are predicted to run one-pass given a value of PGA_AGGREGATE_TARGET equal to PGA_TARGET_FOR_ESTIMATE
ESTD_MULTIPASSES_EXECUTIONS	NUMBER	Number of work areas with an optimal memory requirement comprised between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE which are predicted to run multi-pass given a value of PGA_AGGREGATE_TARGET equal to PGA_TARGET_FOR_ESTIMATE
ESTD_TOTAL_EXECUTIONS	NUMBER	Sum of ESTD_OPTIMAL_EXECUTIONS, ESTD_ONEPASS_EXECUTIONS, and ESTD_MULTIPASSES_EXECUTIONS
IGNORED_WORKAREAS_COUNT	NUMBER	Number of work areas with optimal memory requirement between LOW_OPTIMAL_SIZE and HIGH_OPTIMAL_SIZE ignored in the advice generation due to memory and CPU constraints
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **See Also:**

> - "V$SQL_WORKAREA_HISTOGRAM"
> - "PGA_AGGREGATE_TARGET"
> - "STATISTICS_LEVEL"
> - *Oracle Database Performance Tuning Guide* for information on tuning the PGA_AGGREGATE_TARGET initialization parameter using the PGA advice views

9.123 V$PGASTAT

V$PGASTAT displays PGA memory usage statistics as well as statistics about the automatic PGA memory manager when it is enabled (that is, when PGA_AGGREGATE_TARGET is set). Cumulative values in V$PGASTAT are accumulated since instance startup.

Column	Datatype	Description
NAME	VARCHAR2(64)	Name of the statistic (see Table 9-4)
VALUE	NUMBER	Statistic value
UNIT	VARCHAR2(12)	Unit for the value: • bytes • microseconds • percent
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

Table 9-4 V$PGASTAT Statistics

Statistic Name	Description
aggregate PGA auto target	Amount of PGA memory the Oracle Database can use for work areas running in automatic mode. This amount is dynamically derived from the value of the PGA_AGGREGATE_TARGET initialization parameter and the current work area workload, and continuously adjusted by the Oracle Database. If this value is small compared to the value of PGA_AGGREGATE_TARGET, then a large amount of PGA memory is used by other components of the system (for example, PL/SQL or Java memory) and little is left for work areas. The DBA must ensure that enough PGA memory is left for work areas running in automatic mode.
aggregate PGA target parameter	Current value of the PGA_AGGREGATE_TARGET initialization parameter. If this parameter is not set, then its value is 0 and automatic management of PGA memory is disabled.
bytes processed	Number of bytes processed by memory intensive SQL operators, cumulated since instance startup.

Table 9-4 (Cont.) V$PGASTAT Statistics

Statistic Name	Description
cache hit percentage	A metric computed by the Oracle Database to reflect the performance of the PGA memory component, cumulative since instance startup. A value of 100% means that all work areas executed by the system since instance startup have used an optimal amount of PGA memory. When a work area cannot run optimal, one or more extra passes is performed over the input data. This will reduce the cache hit percentage in proportion to the size of the input data and the number of extra passes performed.
extra bytes read/written	Number of bytes processed during extra passes of the input data, cumulated since instance startup. When a work area cannot run optimal, one or more of these extra passes is performed.
global memory bound	Maximum size of a work area executed in automatic mode. This value is continuously adjusted by the Oracle Database to reflect the current state of the work area workload. The global memory bound generally decreases when the number of active work areas is increasing in the system. If the value of the global bound decreases below 1 MB, then the value of `PGA_AGGREGATE_TARGET` should be increased.
max processes count	Maximum number of processes active at any one time since instance startup.
maximum PGA allocated	Maximum number of bytes of PGA memory allocated at one time since instance startup.
maximum PGA used for auto workareas	Maximum amount of PGA memory consumed at one time by work areas running under the automatic memory management mode since instance startup.
maximum PGA used for manual workareas	Maximum amount of PGA memory consumed at one time by work areas running under the manual memory management mode since instance startup.
over allocation count	This statistic is cumulative since instance startup. Over allocating PGA memory can happen if the value of `PGA_AGGREGATE_TARGET` is too small. When this happens, the Oracle Database cannot honor the value of `PGA_AGGREGATE_TARGET` and extra PGA memory needs to be allocated. If over allocation occurs, then increase the value of `PGA_AGGREGATE_TARGET` using the information provided by the `V$PGA_TARGET_ADVICE` view.
PGA memory freed back to OS	Number of bytes of PGA memory freed back to the operating system, cumulated since instance startup.
process count	Number of processes active within up to the last 3 seconds.
recompute count (total)	Number of times the instance bound, which is a cap on the maximum size of each active work area, has been recomputed since instance startup. Generally, the instance bound is recomputed in the background every 3 seconds, but it could be recomputed by a foreground process when the number of work areas changes rapidly in a short period of time.
total freeable PGA memory	Number of bytes of PGA memory in all processes that could be freed back to the operating system.
total PGA allocated	Current amount of PGA memory allocated by the instance. The Oracle Database attempts to keep this number below the value of the `PGA_AGGREGATE_TARGET` initialization parameter. However, it is possible for the PGA allocated to exceed that value by a small percentage and for a short period of time when the work area workload is increasing very rapidly or when `PGA_AGGREGATE_TARGET` is set to a small value.
total PGA inuse	Indicates how much PGA memory is currently consumed by work areas. This number can be used to determine how much memory is consumed by other consumers of the PGA memory (for example, PL/SQL or Java).

Table 9-4 (Cont.) V$PGASTAT Statistics

Statistic Name	Description
total PGA used for auto workareas	Indicates how much PGA memory is currently consumed by work areas running under the automatic memory management mode. This number can be used to determine how much memory is consumed by other consumers of the PGA memory (for example, PL/SQL or Java).
total PGA used for manual workareas	Indicates how much PGA memory is currently consumed by work areas running under the manual memory management mode. This number can be used to determine how much memory is consumed by other consumers of the PGA memory (for example, PL/SQL or Java).

> **See Also:**
>
> "PGA_AGGREGATE_TARGET"

9.124 V$PKCS11_PATH

`V$PKCS11_PATH` displays all processes that are using a PKCS#11 library for Transparent Data Encryption (TDE).

The SQL command `ADMINISTER KEY MANAGEMENT SWITCHOVER TO LIBRARY` instructs the database to switch over from the current PKCS#11 library to a new PKCS#11 library, without incurring system downtime. After you issue this command, foreground and background processes are gradually switched over to the new library. You can use this view to monitor the PKCS#11 library being used by each process. When you determine that all processes have switched over to the new library, you can safely remove the old library from disk.

Column	Datatype	Description
`PID`	`NUMBER`	ID of the process
`PNAME`	`VARCHAR2(5)`	Name of the process
`PKCS11_LIB_PATH`	`VARCHAR2(4000)`	Full operating system path for the PKCS#11 library being used by the process
`CON_ID`	`NUMBER`	The ID of the container to which the data pertains. Possible values include: • `0`: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • `1`: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.125 V$PLSQL_DEBUGGABLE_SESSIONS

`V$PLSQL_DEBUGGABLE_SESSIONS` shows the current sessions of all users that the current user has privileges to debug with a PL/SQL debugger.

Column	Datatype	Description
SID	NUMBER	Session identifier
SERIAL#	NUMBER	Session serial number
LOGON_TIME	DATE	Time of logon
USER#	NUMBER	Oracle user identifier
USERNAME	VARCHAR2(128)	Oracle user name
OSUSER	VARCHAR2(128)	Operating system client user name
PROCESS	VARCHAR2(24)	Operating system client process ID
MACHINE	VARCHAR2(64)	Operating system client machine name
PORT	NUMBER	Operating system client port number
TERMINAL	VARCHAR2(30)	Operating system client terminal name
PROGRAM	VARCHAR2(84)	Operating system client program name
TYPE	VARCHAR2(10)	Session type
SERVICE_NAME	VARCHAR2(64)	Service name of the session
PLSQL_DEBUGGER_CONNECTED	VARCHAR2(5)	Indicates whether the session is connected to a PL/SQL debugger. Possible values: • TRUE • FALSE
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.126 V$PMEM_FILESTORE

V$PMEM_FILESTORE displays information about Persistent Memory Filestores (PMEM Filestores).

Column	Datatype	Description
NAME	VARCHAR2(65)	PMEM Filestore name
MOUNT_POINT	VARCHAR2(513)	Operating system directory path for the mount point of the PMEM Filestore
BACKING_FILE	VARCHAR2(513)	Operating system file path for the backing file of the PMEM Filestore
BLOCK_SIZE	NUMBER	Block size of the PMEM Filestore (in bytes)
TOTAL_BYTES	NUMBER	Current size of the PMEM Filestore (in bytes)
AUTOEXTENSIBLE	VARCHAR2(4)	Indicates whether the PMEM Filestore is autoextensible (YES) or not (NO)
INCREMENT_BY	NUMBER	If the PMEM Filestore is autoextensible, then this column displays the size of an autoextension increment (in bytes) If the PMEM Filestore is not autoextensible, then the value of this column is 0

Column	Datatype	Description
MAX_BYTES	NUMBER	Maximum autoextend size (in bytes)
AVAILABLE_BYTES	NUMBER	Amount of free space currently available in the PMEM Filestore (in bytes)
USED_BYTES	NUMBER	Amount of space currently allocated to data and metadata in the PMEM Filestore (in bytes)
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.127 V$PQ_SESSTAT

V$PQ_SESSTAT lists session statistics for parallel queries.

After you have run a query or DML operation, you can use the information derived from V$PQ_SESSTAT to view the number of PX (Parallel Execution) servers used, and other information for the session and system.

Column	Datatype	Description
STATISTIC	VARCHAR2(30)	Name of the statistic: • Allocation Height - Requested number of PX servers per instance • Allocation Width - Requested number of instances • DDL Parallelized - Number of DDL operations run in parallel • DFO Trees - Number of executed DFO trees • DML Parallelized - Number of DML operations run in parallel • DOP - Degree of parallelism used for the last statement • Distr Msgs Recv'd - Number of remote (inter-instance) messages received • Distr Msgs Sent - Number of remote (inter-instance) messages sent • Local Msgs Recv'd - Number of local (intra-instance) messages received • Local Msgs Sent - Number of local (intra-instance) messages sent • Queries Parallelized - Number of queries run in parallel • Server Sets - Maximum number of PX server sets used at the same time for the last statement • Server Sets Released Early - Total number of PX server sets released proactively • Servers - Maximum number of PX servers used at the same time • Servers Released Early - Total number of PX servers released proactively • Total Servers Released - Total number of PX servers acquired and released
LAST_QUERY	NUMBER	Value of the statistic for the last operation

Column	Datatype	Description
SESSION_TOTAL	NUMBER	Value of the statistic for the entire session to this point in time The value of the statistic for the entire session to this point in time is not maintained for the DOP, Servers, Allocation Height, Allocation Width, Server Sets, Total Servers Released, Servers Released Early, and Server Sets Released Early statistics.
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.128 V$PQ_SLAVE

V$PQ_SLAVE lists statistics for each of the active PX (Parallel Execution) servers on an instance.

> **Note:**
>
> This view is deprecated. Oracle recommends that you instead use the V$PX_SERVER view.

> **See Also:**
>
> "V$PX_SERVER"

9.129 V$PQ_SYSSTAT

V$PQ_SYSSTAT lists system statistics for parallel queries.

After you have run a query or DML operation, you can use the information derived from V$PQ_SYSSTAT to view the number of PX (Parallel Execution) servers used, and other information for the system.

Column	Datatype	Description
STATISTIC	VARCHAR2(30)	Name of the statistic: • DDL Initiated - Total number of parallel DDL operations that were initiated • DDL Initiated (IPQ) - Total number of parallel DDL operations that were initiated for Internode Parallel Query • DFO Trees - Total number of DFO trees executed on this instance • DML Initiated - Total number of parallel DML operations that were initiated • DML Initiated (IPQ) - Total number of parallel DML operations that were initiated for Internode Parallel Query • Distr Msgs Recv'd - Total number of remote (inter-instance) messages received on this instance • Distr Msgs Sent - Total number of remote (inter-instance) messages sent on this instance • Local Msgs Recv'd - Total number of remote (inter-instance) messages received on this instance • Local Msgs Sent - Total number of local (intra-instance) messages sent on this instance • Queries Initiated - Total number of parallel queries initiated on this instance • Queries Initiated (IPQ) - Total number of parallel queries initiated on this instance for Internode Parallel Query • Queries Queued - Total number of queued queries on this instance • Server Sessions - Total number of operations executed in all PX servers on this instance • Servers Busy - Number of currently busy PX servers on this instance • Servers Cleaned Up - Total number of PX servers on this instance cleaned up due to process death • Servers Highwater - Number of active PX servers on this instance that have partaken in >= 1 operation so far • Servers Idle - Number of currently idle PX servers on this instance • Servers Shutdown - Total number of PX servers shutdown on this instance • Servers Started - Total number of PX servers started on this instance • Sessions Active - Total number of active sessions on this instance
VALUE	NUMBER	Value of the statistic
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.130 V$PQ_TQSTAT

`V$PQ_TQSTAT` contains statistics on parallel execution operations.

The statistics are compiled after the query completes and only remain for the duration of the session. It displays the number of rows processed through each PX (Parallel Execution) server at each stage of the execution tree. This view can help determine skew problems in a query's execution. (Note that for PDML, information from `V$PQ_TQSTAT` is available only after a commit or rollback operation.)

Column	Datatype	Description
DFO_NUMBER	NUMBER	Data flow operator (DFO) tree number to differentiate queries
TQ_ID	NUMBER	Table queue ID within the query, which represents the connection between two DFO nodes in the query execution tree
SERVER_TYPE	VARCHAR2(10)	The role in table queue - producer/consumer/ranger
NUM_ROWS	NUMBER	The number of rows produced/consumed
BYTES	NUMBER	The number of bytes produced/consumed
OPEN_TIME	NUMBER	Time (seconds) the table queue remained open
AVG_LATENCY	NUMBER	Time (minutes) for a message to be dequeued after it enters the queue
WAITS	NUMBER	The number of waits encountered during dequeue
TIMEOUTS	NUMBER	The number of timeouts when waiting for a message
PROCESS	VARCHAR2(6)	Process ID
INSTANCE	NUMBER	Instance ID
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.131 V$PROCESS

`V$PROCESS` displays information about the currently active processes.

Column	Datatype	Description
ADDR	RAW(4 | 8)	Address of the process state object
PID	NUMBER	Oracle process identifier
SOSID	VARCHAR2(24)	Operating system (process, thread) identifier. This identifier is unique whether the Oracle multiprocess/multithread feature is enabled or not.

Column	Datatype	Description
SPID	VARCHAR2(24)	Operating system process identifier. The Oracle multiprocess/multithread feature is available for UNIX systems. When the Oracle multiprocess/multithread feature is enabled, RDBMS processes are mapped to threads running in operating system processes, and the SPID identifier is not unique for RDBMS processes. When the Oracle multiprocess/multithread feature is not enabled on UNIX systems, the SPID identifier is unique for RDBMS processes.
STID	VARCHAR2(24)	Operating system thread identifier. The Oracle multiprocess/multithread feature is available for UNIX systems. When the Oracle multiprocess/multithread feature is enabled, RDBMS processes are mapped to threads running in operating system processes, and the SPID and STID together uniquely identify an RDBMS process. The STID is not unique on Solaris. The STID is unique on Linux, AIX, and Microsoft Windows.
EXECUTION_TYPE	VARCHAR2(10)	Operating system execution type
PNAME	VARCHAR2(5)	Name of this process
USERNAME	VARCHAR2(15)	Operating system process username
SERIAL#	NUMBER	Process serial number
TERMINAL	VARCHAR2(30)	Operating system terminal identifier
PROGRAM	VARCHAR2(84)	Program in progress
TRACEID	VARCHAR2(255)	Trace file identifier
TRACEFILE	VARCHAR2(513)	Trace file name of the process
BACKGROUND	VARCHAR2(1)	1 for a SYSTEM background process; NULL for foreground processes or non-SYSTEM background processes
ATTRIBUTES	VARCHAR2(512)	Attributes of the process, in JSON format
LATCHWAIT	VARCHAR2(16)	Address of the latch the process is waiting for; NULL if none
LATCHSPIN	VARCHAR2(16)	This column is obsolete
PGA_USED_MEM	NUMBER	PGA memory currently used by the process (in bytes)
PGA_ALLOC_MEM	NUMBER	PGA memory currently allocated by the process (including free PGA memory not yet released to the operating system by the server process), in bytes
PGA_FREEABLE_MEM	NUMBER	Allocated PGA memory which can be freed (in bytes)
PGA_MAX_MEM	NUMBER	Maximum PGA memory ever allocated by the process (in bytes)
NUMA_DEFAULT	NUMBER	The NUMA processor group of this process at initialization time
NUMA_CURR	NUMBER	The NUMA processor group of this process currently
CPU_USED	NUMBER	Tracks the CPU used by this process (in microseconds) from the time it was spawned

Column	Datatype	Description
CON_ID	NUMBER	The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

9.132 V$PROCESS_MEMORY

V$PROCESS_MEMORY displays dynamic PGA memory usage by named component categories for each process.

Column	Datatype	Description
