Third-Party Content, Products, and Services Disclaimer

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

About this Document

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in the health insurance domain. It describes all screens related to these features and explains how to perform various tasks through these screens.

Intended Audience

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

Organization of the Document

Each insurance feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Leveraging User Experience Features	Describes various features that enhance the user experience.
Chapter 2	Fully-Insured Group Customer Management	Explains how to create customers and accounts for billing the fully-insured group health plans.
Chapter 3	Self-Funded Customer Management	Explains how to create customers and accounts for billing the self-funded plans.
Chapter 4	Health Insurance Business Management	Describes how to setup the pricing and billing engines for the following three lines of health insurance business - **Fully-Insured Group Health Insurance**, **Self-Funded Group Health Insurance**, and **Individual Health Insurance**.
Chapter 5	Fully-Insured Group Health Insurance	Explains how to design the pricing and billing models for the fully-insured group health insurance business in ORMB. It also explains how to create policies, plans, and memberships for the fully-insured group health insurance.
Chapter 6	Self-Funded Group Health Insurance	Explains how to design the pricing and billing models for the self-funded group health insurance business in ORMB. It also explains how to create policies for the self-funded group health insurance.
Chapter 7	Individual Health Insurance	Explains how to design the pricing and billing models for the individual health insurance business in ORMB. It also explains how to create health products, plans, and memberships for the individual health insurance.
Chapter 8	Customer Registration	Describes how to create a person, account, policy, and policy plan through a customer registration object.

Chapter Number	Chapter Name	Chapter Description
Chapter 9	Customer 360° View	Explains how to view in-depth information about the person, account, or policy in the **Customer 360° View** screen. It explains how to create sort records for bill groups and derivation and pricing parameters for bill groups. It explains how to view the pricing rules of a parent customer and the pricing rules defined for a policy of a bill group. It also explains how to define, edit, and delete the different types of pricing rules of a parent customer and bill group. In addition, it explains how to view the detailed information about the bill.
Chapter 10	Health Product 360° View	Explains how to view in-depth information about the health product or health plan in the **Health Product 360° View** screen.
Chapter 11	Pricing Management	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, and tiering criterion. It also explains how to define pricing for a price item, how to assign a price item to a price list, and how to assign a price list to a person or account.
Chapter 12	Division	Describes the different types of division. It also explains how to define a division.
Chapter 13	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 14	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 15	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 16	Transaction Feed Management	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 17	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 18	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund

Chapter Number	Chapter Name	Chapter Description
		adjustments when the review comments are received from the auto clearing house.
Chapter 19	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.
Chapter 20	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.
Chapter 21	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 22	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 23	Account Receivable Central	Explains how to use the **Account Receivable Central** screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 24	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 25	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.
Chapter 26	Refund/Write Off Request	Describes how to refund a payment or credit bill or bill line item and write off a debit bill or bill line item through a refund or write off request, respectively. It explains how to create the refund or write off request types and refund or write off requests in the system.
Chapter 27	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 28	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the **Delinquency Central** screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.
Chapter 29	Upload Request	Explains how to do the following through an upload request: • Update bill cycle of accounts • Update contract riders in contracts • Create hold requests, refund requests, write off requests, or billable charges • Reinstate the policies • Create sort records for bill groups • Create derivation and pricing parameters for bill groups

Chapter Number	Chapter Name	Chapter Description
Chapter 30	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the **GL Accounting Template** feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 31	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 32	Inbound Message	Explains how to create the customer and membership inbound messages through the web services. It explains the XML format in which the customer and membership data should be available while calling the respective web service. It also explains how to create the inbound message types and how to process the inbound messages in the system.
Chapter 33	Upload Lockbox Payment and Remittance Advices	Explains how to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. It also explains the format in which EDI 820 flat file should be uploaded in the system.
Chapter 34	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 35	Reconciliation	Describes how to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. It explains the CSV and EDI 820 file formats in which you can upload the pay instructions. It also explains how to create reconciliation types, reconciliations, discrepancy report types, and discrepancy reports in the system.
Chapter 36	Self-Funded Pricing	Explains how to create the following in the system: • Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, One-Time Flat Fees, Bill Period Based Recurring Flat Fees, Frequency Based Recurring Flat Fees, Ancillary, Discount, and Level-Funded pricing rule types • Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Ancillary, and Level-Funded pricing rules for the parent customers and the policies of the bill groups • One-Time Flat Fees, Bill Period Based Recurring Flat Fees, and Frequency Based Recurring Flat Fees pricing rules for the policies of the bill groups • Discount pricing rules for the parent customers
Chapter 37	Stop-Loss	Explains how to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them.

Copyright © 2025, Oracle and/or its affiliates.

Chapter Number	Chapter Name	Chapter Description
Chapter 38	Self-Funded Billing	Explains the billing process for the self-funded plans.
Chapter 39	Fully-Insured Pricing	Explains how to create the following in the system: • Age Based, Tier Based, and Pass-Through Billable Charge pricing rule types • Age Based and Tier Based pricing rules for the fully-insured group policy plans
Chapter 40	Fully-Insured Billing	Explains how the system creates the fully-insured pass-through billable charges.
Chapter 41	Off-Process Request	Describes how to amend the agreed limits, funds, or calculated amounts of the accumulation products within the policy period through an off-process request. It explains how to create the off-process request types and off-process requests in the system.
Chapter 42	Individual Health Insurance Pricing	Explains how to define the pricing for different services offered in a health plan.
Chapter 43	Individual Health Insurance Billing	Explains how the system calculates premium for an individual using the fully-insured pricing and new born business rules.
Chapter 44	Entity Audit	Explains how to use the entity audit framework to track various actions, such as add, update, and delete for an entity.
Chapter 45	Invoice Request	Describes how to create adhoc regular and trial bills for an account through an invoice request for the fully-insured group and fully-insured individual business. It explains how to create the invoice request types and invoice requests in the system.
Chapter 46	Hold Request Creation, Modification, Release, and View Through Inbound Web Service	Lists various business services using which you can create, edit, and release a hold request and view the details of a hold request.
Chapter 47	Hold Direct Debit Instruction	Describes how to hold a direct debit (i.e. automatic payment) for a bill until the confirmation is received from the customer. It explains how to create the auto pay request types and auto pay requests in the system.
Chapter 48	Garbling Customer Information	Explains how to garble the personal information of a customer, such as the customer name, address, email ID, social security number or any other identifier, birth date, gender, and so on, on receiving the data erasure request from the customer.
Chapter 49	Deleting Inactive Customer or Closed Account Information	Explains how to delete all records of a person or account from the system.
Chapter 50	Automatic Refund	Explains how the automatic refunds are created in the system.
Chapter 51	Payment Distribution	Explains how the system distributes payments against the unpaid bills of the account or statement.
Chapter 52	Mass Payment Transfer	Explains how the system facilitates mass payment transfer using the **File Upload Interface** utility.

Copyright © 2025, Oracle and/or its affiliates.

Chapter Number	Chapter Name	Chapter Description
Chapter 53	Reporting	Explains how to create reports in various formats using the Apache FOP (Formatting Objects Processor) framework. It also lists and describes various FOP reports that are shipped with the product.
Chapter 54	Automatic Refund/Write Off	Explains how to automatically refund/write off for an account when a fully-insured group policy or individual membership is terminated.
Chapter 55	Delinquency Management	Explains how to manage delinquency for the individual health care business.
Chapter 56	On Demand Billing	Explains how to generate adhoc bills using the on demand billing process. It explains how to create a file type and file group, how to upload a usage data file, how to generate adhoc bills for a file group, and how to freeze the adhoc bills of a file group.
Chapter 57	Accounts Payable Inbound and Outbound	Describes how to extract the accounts payable (i.e. refund adjustments) in a flat file. You can then share the flat file with an external system (i.e. Accounts Payable Processing System). The external system will then accordingly make the refund payments to the customers as appropriate.
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

Conventions

The following conventions are used across this document:

Convention	Meaning
boldface	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.
italic	Italic indicates a document or book title.
`Monospace`	Monospace indicates information that an end-user needs to enter in the application.

Document Name	Description
	addition, it contains a list of discontinued features, planned deprecation notices, customer bugs fixed or forward ported and known issues in the current release.
Oracle Utilities Application Framework Business Process Guide	Explains how to get acquainted with the user interface. It explains the different types of pages or portals that you may come across in the application. It explains how to set the user preferences and how to create, manage, assign, and complete a To Do in the application. It also explains how to submit reports and view historic reports in the application.
Oracle Utilities Application Framework Administrative Guide	Explains the general, security, user, designing, developing, and scripting options available in Oracle Utilities Application Framework (OUAF). It describes the user interface, database, configuration, and reporting tools available in OUAF. In addition, it provides information about the application viewer, how to configure incoming and outgoing messages, and how to integrate Lightweight Directory Access Protocol (LDAP), Oracle Identity Manager (OIM), and Batch Scheduler with Oracle Revenue Management and Billing (ORMB).
Oracle Revenue Management and Billing Business Process Guide	Explains how to maintain the demographic, geographic, and financial objects (i.e. accounts) of a customer. It explains how to manage a customer's bills, payments, adjustments, credits, collections processing, statements and deposits in Oracle Revenue Management and Billing (ORMB). It also describes the financial transactions, case management, sales and marketing functions, rates engine, quotations, loans, how to monitor and execute job streams, and how to manage workflows, notifications and overdue processing. In addition, it explains how to extract the data from the system using an extract template. The features listed and described in this document can be used in both financial services and health insurance domains.
Oracle Revenue Management and Billing Administrative Guide	Explains how to configure various features and functionalities in Oracle Revenue Management and Billing (ORMB). For example, billing, payments, adjustments, financial transactions, credits, collections processing, loans, service credits, background processes, quotations, case management, security, overdue processing, batch scheduler, workflow and notifications, etc. The information available in this document can be used in both financial services and health insurance domains.
Oracle Revenue Management and Billing TFM - Batch Execution Guide	Explains the sequence in which the batches should be executed while performing various tasks in the Transaction Feed Management (TFM) module. It provides detailed information about each TFM batch and its parameters. It also indicates the restart and multi-threading ability of each batch. In addition, it recommends values for various parameters which can be used for tuning batch performance as per the available hardware.
Oracle Revenue Management and Billing Batch Guide	Provides detailed information about various batches which are used in different modules, such as billing, payments, financial transaction, pricing management, funding request, offset request, hold request, upload request, inbound message, payment agreement request, accruals, earnings credit rate, ILM, deferred revenue recognition, reconciliation, garbling,

Chapter 1

Leveraging User Experience Features

Topics:

- Unified Search Feature
- Enabling Mandatory Field Indicator

This chapter describes how to use the following features that enhance the user experience:

- **Unified Search Feature** - Helps to quickly access the screens by eliminating number of clicks rather than using the navigation menus.
- **Enabling Mandatory Field Indicator** - Helps to identify the fields which are mandatory while defining the respective entity.

Unified Search Feature

The **Search** field in the **Application** toolbar allows you to search for business entities (such as persons and accounts) in addition to the standard search for menu items. For example, you can search for a person using its name or primary identifier and account using its primary identifier. The unified search feature is a simplified version of search that allows you to search for records using free form search text or hint codes. For more complex queries, you may navigate to the corresponding advanced search screens.

You can use the following hints to search for the respective entities:

Hint	Description	Example
/	Used to search for a menu item to navigate directly to the corresponding page or BPA script rather than using the menus to navigate to the desired page or script.	/Customer Registration
n:	Used to search for a customer using the person or customer name. Here, you can specify the percentage (%) symbol as a wildcard character. The customers that meet the search criteria are shown in the drop-down list. Once you select a customer from the list, the **Customer 360° Information** screen appears with the details of the respective customer.	n: james n: leo%do
id:	Used to search for a customer using its primary identifier. Here, you cannot specify the percentage (%) symbol as a wildcard character. The customers that meet the search criteria are shown in the drop-down list. Once you select a customer from the list, the **Customer 360° Information** screen appears with the details of the respective customer.	id: 344234423
aid:	Used to search for an account using its primary identifier. Here, you cannot specify the percentage (%) symbol as a wildcard character. The accounts that meet the search criteria are shown in the drop-down list. Once you select an account from the list, the **Customer 360° Information** screen appears with the details of the respective account.	aid: 0586096368

If you want to search for a person or account using any additional search criteria, you can directly access the **Customer 360° View** screen by clicking the **Advanced Search** link in the **Search** field.

Enabling Mandatory Field Indicator

Until now, the mandatory field indicator (i.e., the Asterisk symbol (*)) was not displayed in the user interfaces. This resulted in bad user experience and increased the lead time to complete a process in the application. Now, to overcome

Copyright © 2025, Oracle and/or its affiliates.

these issues, you can configure the system such that mandatory field indicator '*' is displayed for the required fields in the user interface.

To enable the mandatory field indicator for the required fields in the user interface, you need to set the `com.oracle.ouaf.ui.disableRequiredFieldIndicators` property in the `spl.template.properties` file to **False**. Note that, by default, the `com.oracle.ouaf.ui.disableRequiredFieldIndicators` property is set to **True**. On changing the value of this property from **True** to **False**, the mandatory field indicator (*) appears next to the required fields in the user interface.

On enabling the mandatory field indicator, the **Asterisk** (*) symbol appears corresponding to the required fields on almost all screens throughout the application. There is no way to disable it for a specific screen. However, there are some exceptions on enabling the mandatory field indicator:

- The **Asterisk** (*) symbol does not appear corresponding to the required fields in the **Search** portals or AWB pop-up windows.
- If a field is required for an algorithm program, the **Asterisk** (*) symbol does not appear corresponding to the respective field.
- The **Asterisk** (*) symbol does not appear corresponding to the required checkboxes whose data is stored as the Boolean value (i.e. True or False) in the database.
- There are some screens where the mandatory field indicator feature is not operational at present. We are working on such screens and it would be fixed in the upcoming releases. You can refer to the 36919824 bug for the list of such screens where the mandatory field indicator is not displayed at present.

Note:

This configuration works as expected only when the **Style Sheet** option type of the **C1_UICONFIG** feature configuration is set to **c1/c1_cisDisabled.css**.

At present, this feature is tested and certified only for those user interfaces which are accessible to the financial services domain.

Chapter 2

Fully-Insured Group Customer Management

Topics:

- Fully-Insured Entities

A fully-insured group health plan is the traditional way to structure an employer-sponsored health plan. In the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year, based on the number of employees enrolled in the plan each month. The monthly premium changes during the year when the number of enrolled employees in the plan changes. The insurance carrier collects the premiums and pays the health insurance claims based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

The system enables you to create customers and accounts for the fully-insured group health insurance business. This chapter explains how to create different entities involved in the fully-insured group health insurance business.

Parent Customer

The fully-insured employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer through a customer registration object or a health care inbound message.

Bill Groups

The system allows you to define one or more bill groups for a parent customer. The membership premium of the employees are billed to a bill group. Each bill group will handle the membership premium of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the membership premium should be billed in the system. You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. fully-insured employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. You can create a bill group through a customer registration object or a health care inbound message.

Related Topics

For more information on...	**See...**
Bill Group Derivation and Pricing Parameters	Bill Group Derivation and Pricing Parameters on page 3226
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4313

Bill Groups' Account

The membership premium of employees are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group through a customer registration object or a health care inbound message.

Depending on the employer's preference, the charges for one or more membership and price item combinations can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, MEDCARE1 and MEDCARE2) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

Note: At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type. Let us understand this with the help of an example.

The following table illustrates the accounts to which the P1 and P2 price items should be billed based on the given priority:

Price Item	**Priority**	**Invoice Type**	**Account**
P1	10	MEDCARE1	A1
	20	MEDCARE2	A2
P2	10	MEDCARE2	A2
	20	MEDCARE1	A1

Copyright © 2025, Oracle and/or its affiliates.

Now, when the effective pricing rule is derived for P1 on the policy plan, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE1** exists for the bill group. If so, it considers the account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE1** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE2** exists for the bill group. If so, it considers the account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **MEDCARE2** does not exist for the bill group, the status of the record in the **CI_REPRC_ENTITY_DTL** table is set to **Error (E)**.

Similarly, when the effective pricing rule is derived for P2 on the policy plan, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is set to **C1INVTYP**.

Related Topics

For more information on...	See...
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4313

Fully-Insured Group Policy

You can create a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group**. You can create a fully-insured group policy through a customer registration object or a health care inbound message. If the fully-insured group policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

However, if the fully-insured group policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

Note: At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

Policy Plans

A fully-insured group policy may cover various plans for medical, dental, or disability benefits. You can subscriber a person for one or more policy plans within or across policies. The system creates one membership for each person who is subscribed to the policy plan. You can then add dependent members in each membership whenever required.

While creating a policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received in an inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can only associate a pricing rule type where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**. If you associate an age based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the membership premium is calculated for eligible members. If you associate a tier based pricing rule type with the policy plan, the system creates the SQI based billable charge whenever the premium is calculated for membership. However,

Copyright © 2025, Oracle and/or its affiliates.

if you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer the pass-through billable charge pricing rule type which is associated with the policy plan.

Price Items

Each service offered in the fully-insured group health plan should be defined as a price item in the system. You can define a price item from the user interface. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the fully-insured group health plan through a health care inbound message:

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Age Based	Age Based	AGE_BASED
Tier Based	Tier Based	TIER_BASED
Pass-Through Billable Charge	Pass-Through Billable Charge	FI_PASSTBC

Note: You cannot define a pricing rule using a pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**.

Pricing Rules

The fully-insured group health plan may offer various services to the employer, such as medical insurance, dental insurance, vision care, life insurance, short-term and long-term disability benefits, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the fully-insured group health plan.

The following table lists the pricing rules which you can define for the following services offered in the fully-insured group health plan:

Service	Pricing Rule	Created for....
Medical Insurance, Dental Insurance, Vision Care, Life Insurance, Short-Term and Long-Term Disability Benefits, etc.	Age Based	Fully-Insured Group Policy Plan
	Tier Based	Fully-Insured Group Policy Plan

You can create the above mentioned pricing rules for the fully-insured group policy plans through a health care inbound message and not from the user interface. The system creates a price assignment for each pricing rule. In the age based pricing rules, you can define different premium fee for employees who belong different age band. You can also offer different premium fee for the employees with the same age band, but with the different set of attributes. The system also enables you to charge additional fee for the eligible member based on certain modifiers. For example, you can charge additional fee when the eligible member is alcoholic and/or consumes tobacco. However, in the tier based pricing rules, you can define different premium fee for employees who belong to different membership tier, such as Employee (E), Employee + Spouse (ES), Employee + Spouse + Children (F), and so on.

Copyright © 2025, Oracle and/or its affiliates.

The system searches for the pricing rule of a price item (i.e. service) on the policy plan to which the membership belongs. If the effective pricing rule for a price item is not available on the policy plan, the system does not consider the respective price item for billing.

Price Assignments

The system creates a price assignment for each fully-insured pricing rule. If different premium fee is defined for employees with different set of employee attributes, then the system creates a separate price component for each set of employee attributes. If the modifiers are used in the age based pricing rule, the system creates a price component for each modifier. In the price component, the age band or tier band parameter, the employee attributes, and modifiers are used to define the pricing eligibility criteria. Once the age based or tier based pricing rule is defined for a policy plan, the system creates a price item pricing and price list, and then assigns the price item pricing to the price list.

Chapter 3

Self-Funded Customer Management

Topics:

- Self-Funded Entities

Self-funded health insurance, also known as Administrative Services Only (ASO), is a self insurance arrangement whereby an employer provides health or disability benefits to employees using the company's own funds. In self-funded health plan, employers operate their own health plan. However, in the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured group health plan. However, self-insuring exposes the company to much larger risk in the event that more claims than expected must be paid.

Oracle Revenue Management and Billing (ORMB) supports the following types of self-funding approach:

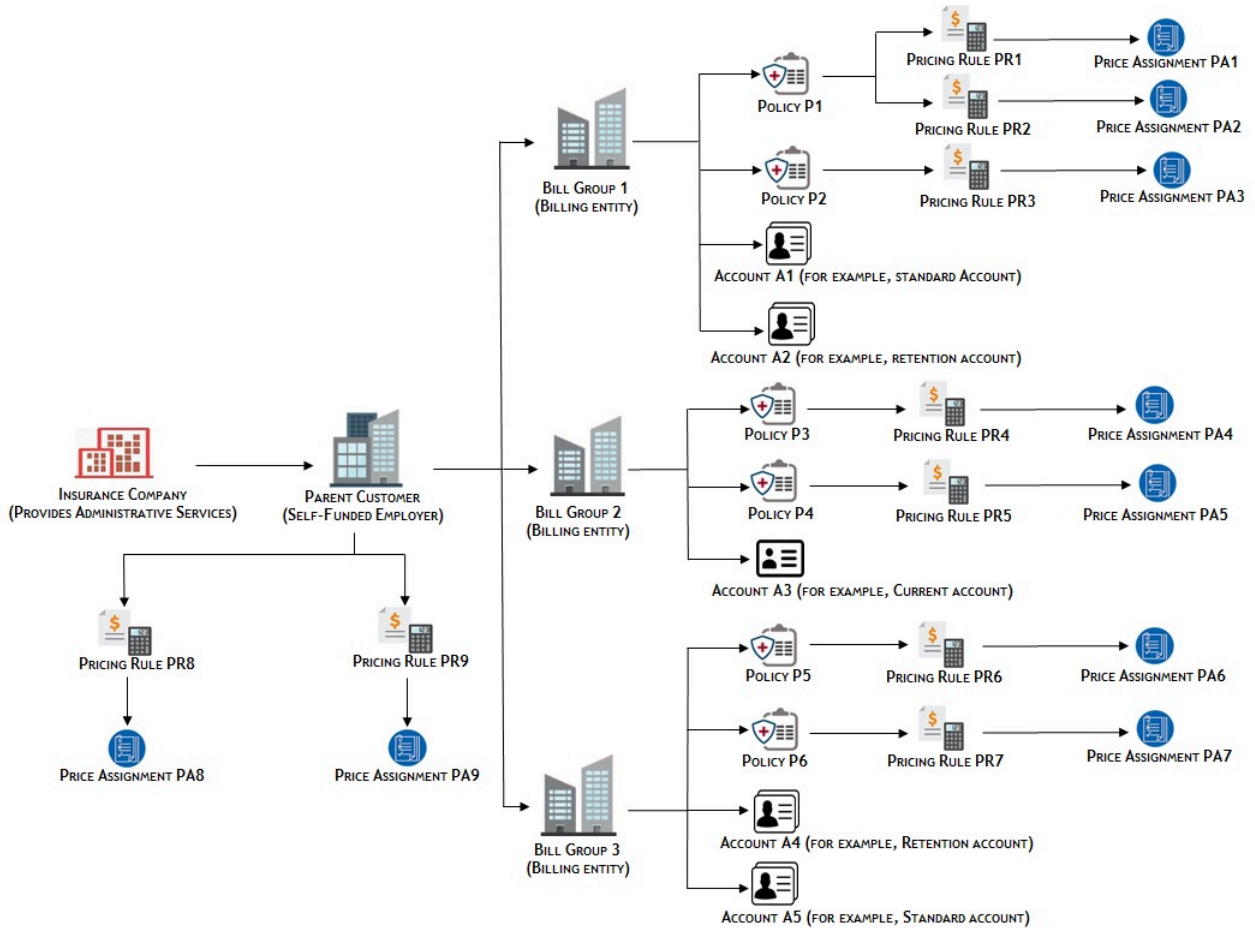
- **Fully Self-Funded** - In the fully self-funded approach, the employer retains all the risk and bears the claim costs irrespective of any limit.
- **Partially Self-Funded** - In the partially self-funded approach, the employer purchases reinsurance or stop loss coverage to pass the risk to insurance company.

The system enables you to create customers and accounts for the self-funded health insurance business. This chapter explains how to create different entities involved in the self-funded health insurance business.

For more information on...	See...
Self-Funded Entities	Self-Funded Entities on page 12

Self-Funded Entities

The following figure graphically represents the different entities involved in the self-funded health insurance business:



For more information on...	See...
Parent Customer	Parent Customer on page 13

Price Items	Price Items on page 14
Pricing Rule Types	Pricing Rule Types on page 14
Pricing Rules	Pricing Rules on page 15
Price Assignments	Price Assignments on page 16

Copyright © 2025, Oracle and/or its affiliates.

Parent Customer

The self-funded employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer through a customer registration object or a health care inbound message.

Bill Groups

The system allows you to define one or more bill groups for a parent customer. The claim, enrollment, and ancillary transactions of the employees are billed to a bill group. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the claim, enrollment, and ancillary charges should be billed in the system. The derived bill group is also used for billing the claim based fees, specific stop-loss credits, aggregate stop-loss credits, discount, and level funding charges.

You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. self-funded employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. You can create a bill group through a customer registration object or a health care inbound message.

Related Topics

For more information on...	See...
Bill Group Derivation and Pricing Parameters	Bill Group Derivation and Pricing Parameters on page 3226
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4313

Bill Group's Account

The claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level funding charges are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group through a customer registration object or a health care inbound message.

Depending on the employer's preference, the claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level funding charges can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, standard and retention) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

Note: At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type.

For example, the following table illustrates the accounts of different types to which the charges of P1 and P2 should be billed based on the given priority:

Price Item	Priority	Invoice Type	Account
	10	Standard	A1

Copyright © 2025, Oracle and/or its affiliates.

Price Item	Priority	Invoice Type	Account
	20	Retention	A2
	10	Retention	A2
	20	Standard	A1

Now, when a claim transaction is mapped to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, when a claim transaction is mapped to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is set to **C1INVTYP**.

Related Topics

For more information on...	See...
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4313

Self-Funded Policy

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. You can create a self-funded policy through a customer registration object or a health care inbound message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

Price Items

Each service offered in the self-funded plan should be defined as a price item in the system. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

You can define a price item and associate the required parameters with the price item from the user interface. You can use the price item parameters for defining multi parameter based pricing or for aggregating the transactions.

Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the self-funded plan from the user interface:

Copyright © 2025, Oracle and/or its affiliates.

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Claim	Claim	CLAIM
Retention Type Claim Based	Retention Type Claim Based	RETCLMBSD
Discount Share	Discount Arrangement	DISSHARE
Discount Guarantee	Discount Arrangement	DISGUAR
One-Time Flat Fees	Flat Fees	ONETIMEFLATFEES
Bill Period Based Recurring Flat Fees	Flat Fees	RECFLATFEES_BP
Frequency Based Recurring Flat Fees	Flat Fees	RECFLATFEES_FREQ
Retention Type Enrollment Based	Retention Type Enrollment Based	RETENRLBSD
Ancillary	Ancillary	ANCILLARY
Specific Stop-Loss	Specific Stop-Loss	SSL
Aggregate Stop-Loss	Aggregate Stop-Loss	ASL
Enrollment Based Premium	Level Funded	LVLENRLPRE
Flat Rate Based Premium	Level Funded	LVLFLATPRE

Pricing Rules

The self-funded plan may offer various services to the employer, such as claim administration, reinsurance or stop-loss, discount or level funding arrangement, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the self-funded plan. The below table lists the pricing rules which you can define for the following services offered in the self-funded plan:

Service	Pricing Rule	Created for....
Claim Administration	Claim	Parent Customer
Claim Administration	Claim	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Retention Type Claim Based	Parent Customer
Claim Administration	Retention Type Claim Based	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Discount Share	Parent Customer
Claim Administration	Discount Guarantee	Parent Customer
Claim Administration	One-Time Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Bill Period Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Frequency Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Enrollment	Retention Type Enrollment Based	Parent Customer

Copyright © 2025, Oracle and/or its affiliates.

Service	Pricing Rule	Created for....
Enrollment	Retention Type Enrollment Based	Bill Group's Policy where the Parent Customer is the Policy Holder
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Parent Customer
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Specific Stop-Loss	Parent Customer
Stop-Loss	Specific Stop-Loss	Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Aggregate Stop-Loss	Parent Customer
Stop-Loss	Aggregate Stop-Loss	Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Enrollment Based Premium	Parent Customer
Level Funding Arrangement	Enrollment Based Premium	Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Flat Rate Based Premium	Parent Customer
Level Funding Arrangement	Flat Rate Based Premium	Bill Group's Policy where the Parent Customer is the Policy Holder

You can create the above mentioned self-funded pricing rules for a parent customer or for the policy of the bill group from the user interface and not through a health care inbound message.

The system creates a price assignment for each pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system first searches for the pricing rule of a price item (i.e. service) at the bill group level. If the effective pricing rule for a price item is available at the bill group level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group level, the system searches for the pricing rule of a price item at the parent customer level. If the effective pricing rule for a price item is available at the parent customer level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group or parent customer level, the system does not consider the respective price item for billing.

Price Assignments

The system creates a price assignment for each self-funded pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system automatically creates a price assignment whenever you create a self-funded pricing rule. The system creates the price assignment in a price list and assigns the price list to the parent customer or bill group. The system creates multiple price assignments when you define a pricing rule for a policy of a bill group using a pricing group.

Chapter 4

Health Insurance Business Management

Topics:

- Policy Type
- Policy Person Role
- Contract Relationship Type
- Source System Extendable Lookup
- Extendable Lookup (Source System)
- Membership Identifier Type
- Pricing Parameters
- Geographic Rating Area
- Member Relationship Pricing Parameter
- Subscription Tier Pricing Parameter
- Membership Benefits
- Geographic Rating Area Preference
- Member Relationship and Subscription Tier Preference

Health insurance is a type of insurance coverage that typically pays for medical, surgical, prescription drug and sometimes dental expenses incurred by the insured. Health insurance can reimburse the insured for expenses incurred from illness or injury, or pay the care provider directly. It is often included in employer benefit packages as a means of enticing quality employees, with premiums partially covered by the employer but often also deducted from employee paychecks.

Oracle Revenue Management and Billing has extended its pricing and billing engines to meet the requirements of the following three lines of health insurance business:

- Fully-Insured Group Health Insurance on page 183
- Self-Funded Group Health Insurance on page 337
- Individual Health Insurance on page 383

To use the pricing and billing engines for the above three lines of health insurance business, you need to set the respective prerequisites:

Line of Business	Prerequisites
Fully-Insured Group Health Insurance	Refer to the Pre-requisites on page 184 section.
Self-Funded Group Health Insurance	Refer to the Pre-requisites on page 338 section.
Individual Health Insurance	Refer to the Pre-requisites on page 385 section.

Policy Type

Oracle Revenue Management and Billing enables you to define a policy type using which you can create a policy. The policy type helps the system to determine:

- **Policy Category** - The category implies the line of business in the health insurance domain for which the policy should be created using the policy type. The valid values are:
  - Fully-Insured Group
  - Fully-Insured Individual
  - Self-Funded

  Note: At present, the **Fully-Insured Individual** policy category is not supported in the system.
- **Policy Business Object** - The business object using which the policy should be created in the system. You can specify the **C1-POLICY** or **C1-ASOPolicy** business object depending on whether you want to create the policy type for the fully-insured group or self-funded health insurance business.

The **Policy Type** screen allows you to define, edit, copy, and delete a policy type. It contains the following zones:

- Policy Type List on page 20
- Policy Type on page 21

Policy Type List

The **Policy Type List** zone lists the policy types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Policy Type	Displays the policy type.
Description	Displays the description of the policy type.
Policy Category	Indicates the category to which the policy type belongs. The valid values are: • Self-Funded • Fully-Insured Group • Fully-Insured Individual
Edit	On clicking the **Edit** (✎) icon, the **Policy Type** screen appears where you can edit the details of the policy type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Policy Type** screen appears where you can define a new policy type using an existing policy type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the policy type. **Note:** You can delete a policy type when a policy is not created using the policy type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a policy type, the **Policy Type** zone appears with the details of the respective policy type.

You can filter the list using the **Policy Category** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Policy Type

The **Policy Type** zone displays the details of the policy type. It contains the following sections:

- **Main** - Displays basic information about the policy type. It contains the following fields:

Field Name	Field Description
Policy Type	Displays the policy type.
Policy Business Object	Indicates the business object using which the policy should be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the policy type.
Status	Indicates the status of the policy type. The valid values are: • Active • Inactive
Policy Category	Indicates the category to which the policy type belongs. The valid values are: • Self-Funded • Fully-Insured Group • Fully-Insured Individual
Detailed Description	Displays additional information about the policy type.

- **Characteristics** - Lists the characteristics defined for the policy type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy type.
Delete	Used to delete the policy type.

Copyright © 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: You can delete a policy type when a policy is not created using the policy type.
Duplicate	Used to create a new policy type using an existing policy type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the policy type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Policy Type** zone does not appear in the **Policy Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the policy type in the **Policy Type List** zone.

Defining a Policy Type

Prerequisites

To define a policy type, you should have:

- Required policy business object defined in the application

Note: The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To define a policy type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Policy Type** sub-menu.

   The **Policy Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the policy type.
   - **Characteristics** - Used to define the characteristics for the policy type.

Copyright © 2025, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: • Active • Inactive	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: • Fully-Insured Group • Fully-Insured Individual • Self-Funded **Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.	Yes
Detailed Description	Used to specify additional information about the policy type.	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy Type** screen.

4. Enter the required details in the **Main** section.

Note: If you want to create a policy type for the fully-insured group health insurance business, select the **C1-POLICY** business object from the **Policy Business Object** list and the **Fully-Insured Group** option from the **Policy Category** list. However, if you want to create a policy type for the self-funded health insurance business, select the **C1-ASOPolicy** business object from the **Policy Business Object** list and the **Self-Funded** option from the **Policy Category** list.

5. Define the characteristics for the policy type, if required.
6. Click **Save**.
   The policy type is defined.

Defining a Characteristic for a Policy Type

Prerequisites

To define a characteristic for a policy type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Type**).

Procedure

To define a characteristic for a policy type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a policy type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to the **Policy Type**.	**Note:** This field is required when you are defining a characteristic for the policy type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the policy type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy type, click the **Add** (+) icon and then repeat *step 2*.

> **Note:** However, if you want to remove a characteristic from the policy type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Policy Type

Prerequisites

To edit a policy type, you should have:

Copyright © 2025, Oracle and/or its affiliates.

- Required policy business object defined in the application

> **Note:** The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To edit a policy type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
   The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the policy type *w*hose details you want to edit.

   The **Policy Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the policy type.
   - **Characteristics** - Used to define the characteristics for the policy type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Displays the policy type.	Not applicable
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: • Active • Inactive	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: • Fully-Insured Group • Fully-Insured Individual • Self-Funded **Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.	Yes
Detailed Description	Used to specify additional information about the policy type.	No

> **Tip:** Alternatively, you can edit the details of a policy type by clicking the **Edit** button in the **Policy Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the policy type, if required.

Copyright © 2025, Oracle and/or its affiliates.

7. Click **Save**.
   The changes made to the policy type are saved.

Copying a Policy Type

Instead of creating a policy type from scratch, you can create a new policy type using an existing policy type. This is possible through copying a policy type. On copying a policy type, the details including the characteristics are copied to the new policy type. You can then edit the details, if required.

Prerequisites

To copy a policy type, you should have:

- Policy type (whose copy you want to create) defined in the application
- Required policy business object defined in the application

> **Note:** The **C1-POLICY** and **C1-ASOPolicy** business objects are shipped with the product. You can use the **C1-POLICY** business object to create a fully-insured group policy and the **C1-ASOPolicy** business object to create a self-funded policy.

Procedure

To copy a policy type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
   The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Duplicate**(⎘) icon in the **Duplicate** column corresponding to the *p*olicy type whose copy you want to create.

   The **Policy Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the policy type.
   - **Characteristics** - Used to define the characteristics for the policy type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes
Business Object	Indicates the business object using which you are defining the policy type.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Business Object	Used to indicate the business object using which you want to create a policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: • Active • Inactive	Yes
Policy Category	Used to indicate the category to which the policy type belongs. The valid values are: • Fully-Insured Group • Fully-Insured Individual • Self-Funded **Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.	Yes
Detailed Description	Used to specify additional information about the policy type.	No

Tip: Alternatively, you can copy a policy type by clicking the **Duplicate** button in the **Policy Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the policy type, if required.
7. Click **Save**.
   The new policy type is defined.

Deleting a Policy Type

Procedure

To delete a policy type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.
   The **Policy Type** screen appears.

Copyright © 2025, Oracle and/or its affiliates.

4. In the **Policy Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the policy type *t*hat you want to delete.
   A message appears confirming whether you want to delete the policy type.

   Note: You can delete a policy type when a policy is not created using the policy type.

   Tip: Alternatively, you can delete a policy type by clicking the **Delete** button in the **Policy Type** zone.
5. Click **OK**.
   The policy type is deleted.

Policy Person Role

Oracle Revenue Management and Billing enables you to specify the role of a person while associating the person to a policy. This helps to indicate whether the person is a policy holder, broker, underwriter, and so on in a policy. The **Policy Person Role** screen allows you to define, edit, and delete a policy person role. It contains the following zone:

- Policy Person Role List on page 29

Copyright © 2025, Oracle and/or its affiliates.

Policy Person Role List

The **Policy Person Role List** zone lists the roles which you can assign to a person in a policy. It contains the following columns:

Column Name	Column Description
Policy Person Role	Displays the policy person role.
Description	Displays the description of the policy person role.
Edit	On clicking the **Edit** (✎) icon, the **Policy Person Role** screen appears where you can edit the details of the policy person role.
Delete	On clicking the **Delete** (🗑) icon, you can delete the policy person role.
	Note: You can delete a policy person role when it is not used while associating a person with a policy.

You can define a new policy person role by clicking the **Add** link in the upper-right corner of this zone.

You can filter the list using various search criteria (such as **Policy Person Role** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper-right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306.

Contract Relationship Type

Oracle Revenue Management and Billing enables you to define various relationship types using which you can relate main subscriber and other dependent persons in a membership. The **Contract Relationship Type** screen allows you to define, edit, and delete such relationship types. It also allows you to filter the contract relationship types using various search criteria.

Filtering the Contract Relationship Types

Prerequisites

To filter the contract relationship types, you should have:

- Contract relationship types defined in the application

Procedure

To filter the contract relationship types:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Contract Relationship Type**.

   The **Contract Relationship Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Used to search a particular contract relationship type.	Yes

3. Enter the search criteria in the **Relationship Type** field.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   The search results are filtered based on the specified criteria.

Source System Extendable Lookup

Oracle Revenue Management and Billing enables you to track the external system from where the fully-insured group or self-funded policies are received for billing. Each external system must be defined in the system using the **Source System (C1-SourceSystemLookup)** extendable lookup.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 34

Copyright © 2025, Oracle and/or its affiliates.

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Searching for the Source System Extendable Lookup

Procedure

To search for the **Source System** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-SourceSystemLookup** in the **Business Object** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Extendable Lookup (Source System)

The **Extendable Lookup** screen allows you to view the values of the **Source System (C1-SourceSystemLookup)** extendable lookup. It also allows you to define, edit, copy, and delete a source system. It contains the following zones:

- Extendable Lookup Value List on page 35
- Extendable Lookup Value on page 36

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Source System** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the source system.
Description	Displays the description of the source system.
Owner	Indicates who has created the source system. The valid values are: • Framework

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Base • Customer Modification
Edit	On clicking the **Edit** (✎) icon, the **Extendable Lookup** screen appears where you can edit the details of the source system.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Extendable Lookup** screen appears where you can define a new source system using an existing source system.
Delete	On clicking the **Delete** (🗑) icon, you can delete the source system.
	Note: You can delete a source system when it is not yet used in the system.
Detailed Description	Displays additional information about the source system.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a source system, the **Extendable Lookup Value** zone appears with the details of the respective source system.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the source system. It contains the following sections:

- **Main** - Displays basic information about the source system. It contains the following fields:

Field Name	Field Description
Source System	Displays the source system.
Description	Displays the description of the source system.
Override Description	Displays the overridden description of the source system.
Detailed Description	Displays additional information about the source system.
Status	Indicates the status of the source system. The valid values are: • Active • Inactive

Copyright © 2025, Oracle and/or its affiliates.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the source system.
Delete	Used to delete the source system. **Note:** You can delete a source system when it is not yet used in the system.
Duplicate	Used to create a source system using an existing source system.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the source system is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the source system. The valid values are: • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the source system in the **Extendable Lookup Value List** zone.

Defining a Source System

Procedure

To define a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup *b*usiness object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Extendable Lookup** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the source system.

Copyright © 2025, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to specify the external system from where the policies are received for billing.	Yes
Description	Used to specify the description for the source system.	Yes
Override Description	Used when you want to override the description of the source system.	No
Detailed Description	Used to specify additional information about the source system.	No
Status	Used to indicate the status of the source system. The valid values are: • Active • Inactive **Note:** By default, the value is set to **Active**.	Yes

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The source system is added in the **C1-SourceSystemLookup** extendable lookup.

Editing a Source System

Procedure

To edit a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup *b*usiness object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *s*ource system whose details you want to edit.

   The **Extendable Lookup** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the source system.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Displays the source system.	Not applicable
Description	Used to specify the description for the source system.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Override Description	Used when you want to override the description of the source system.	No
Detailed Description	Used to specify additional information about the source system.	No
Status	Used to indicate the status of the source system. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can edit the details of a source system by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Click **Save**.
   The changes made to the source system are saved.

Copying a Source System

Instead of creating a source system from scratch, you can create a new source system using an existing source system. This is possible through copying a source system. On copying a source system, the details of the source system are copied to the new source system. You can then edit the details, if required.

Prerequisites

To copy a source system, you should have:

- Source system (whose copy you want to create) defined in the application

Procedure

To copy a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup *b*usiness object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the source system whose copy you want to create.

   The **Extendable Lookup** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the source system.

Copyright © 2025, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to specify the external system from where the policies are received for billing.	Yes
Description	Used to specify the description for the source system.	Yes
Override Description	Used when you want to override the description of the source system.	No
Detailed Description	Used to specify additional information about the source system.	No
Status	Used to indicate the status of the source system. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can copy a source system by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The new source system is added in the **C1-SourceSystemLookup** extendable lookup.

Deleting a Source System

Procedure

To delete a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup *b*usiness object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the source system that you want to delete.
   A message appears confirming whether you want to delete the source system.

Note: You can delete a source system when it is not yet used in the system.

Copyright © 2025, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can delete a source system by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The source system is deleted from the **C1-SourceSystemLookup** extendable lookup.

Viewing the Source System Details

Procedure

To view the details of a source system:

1. Search for the **Source System** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup *b*usiness object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the source system *w*hose details you want to view.
   The **Extendable Lookup Value** zone appears.
4. View the details of the source system in the **Extendable Lookup Value** zone.

Membership Identifier Type

Oracle Revenue Management and Billing enables you to define an identifier for the group and individual memberships using a membership identifier type. The **Membership Identifier Type** screen allows you to create, edit, delete, and copy a membership identifier type. It contains the following zones:

- Membership Identifier Type List on page 42
- Membership Identifier Type on page 43

Copyright © 2025, Oracle and/or its affiliates.

When you create or edit a group or individual membership through a health care inbound message or through the membership repricing inbound web service, you can define various identifiers (for example, beneficiary ID, exchange subscriber ID, and so on) associated with the membership using the membership identifier type.

Membership Identifier Type List

The **Membership Identifier Type List** zone lists the membership identifier types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Membership Identifier Type	Displays the membership identifier type.
Description	Displays the description of the membership identifier type.
Edit	On clicking the **Edit** ( ) icon, the **Membership Identifier Type** screen appears where you can edit the details of the membership identifier type.
Duplicate	On clicking the **Duplicate** ( ) icon, the **Membership Identifier Type** screen appears where you can define a new membership identifier type using an existing membership identifier type.
Delete	On clicking the **Delete** ( ) icon, you can delete the membership identifier type. **Note:** You can delete a membership identifier type when it is not yet used in the system.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** ( ) icon corresponding to a membership identifier type, the **Membership Identifier Type** zone appears with the details of the respective membership identifier type.

Membership Identifier Type

The **Membership Identifier Type** zone displays the details of the membership identifier type. It contains the following sections:

- **Main** - Displays the basic details of the membership identifier type. It contains the following fields:

Field Name	Field Description
Membership Identifier Type	Displays the membership identifier type.
Description	Displays the description of the membership identifier type.
Validation Algorithm	Indicates the algorithm which is used to validate the value of the membership identifier type.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.
Detailed Description	Displays additional information about the membership identifier type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the membership identifier type.
Delete	Used to delete the membership identifier type.
	Note: You can delete a membership identifier type when it is not yet used in the system.
Duplicate	Used to create a new membership identifier type using an existing membership identifier type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the membership identifier type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Membership Identifier Type** zone does not appear in the **Membership Identifier Type** screen. It appears only when you click the**Broadcast** ( ) icon corresponding to a membership identifier type in the **Membership Identifier Type List** zone.

Defining a Membership Identifier Type

Prerequisites

To define a membership identifier type, you should have:

- Validation algorithm defined in the application (in case you want to use it)

Note: No validation algorithm type for membership identifier type is shipped with the product. However, the **Membership Identifier Type - Validation** algorithm entity is available in the application. You can create the required custom validation algorithms for the **Membership Identifier Type - Validation** algorithm entity.

Procedure

To define a membership identifier type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Membership Identifier Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Membership Identifier Type** sub-menu.

   The **Membership Identifier Type** screen appears. It contains the following section:

   - **Main** - Used to specify the basic details of the membership identifier type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Identifier Type	Used to specify the membership identifier type.	Yes
Description	Used to specify the description for the membership identifier type.	Yes
Validation Algorithm	Used to indicate the algorithm using which you want to validate the value of the membership identifier type. It is triggered when you define an identifier for a membership using the membership identifier type.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** ( ) icon appears corresponding to the **Validation Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	
Detailed Description	Used to specify additional information about the membership identifier type.	No

Tip: Alternatively, you can access the **Membership Identifier Type** screen by clicking the **Add** button in the **Page Title** area of the **Membership Identifier Type** screen.

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The membership identifier type is defined.

Pricing Parameters

Oracle Revenue Management and Billing enables you to create new set of pricing parameters, such as, Geographic Rating Area, Member Relationship, and Subscription Tier for a fully-insured group and individual customers.

To create a geographic rating area pricing parameter the ORMB system uses the policy plan and geographical details (of a member person) to retrieve the appropriate rating area. This rating area is further used to obtain the rate information defined on the pricing rule that is eventually based on a particular geographical rating area. To create a member relationship pricing parameter, the ORMB system retrieves the appropriate member relationship through the post processing algorithm and stamps the retrieved member relationship on the member person belonging to a particular membership. However, to create a subscription tier pricing parameter, the ORMB system retrieves the subscription tier information through the post processing algorithm and stamps the tier information on the desired membership.

For more information on how to setup the **Pricing Parameters** feature, see Prerequisites on page 49

For more information on...	See...
Geographic Rating Area	Geographic Rating Area on page 51
Member Relationship Pricing Parameter	Member Relationship Pricing Parameter on page 65
Subscription Tier Pricing Parameter	Subscription Tier Pricing Parameter on page 79

Prerequisites

The following table lists the prerequisites for the pricing parameters feature:

If you want to...	Then...

Create a geographic rating area parameter	You need to do the following:
	• Ensure that the upstream system contains the geographic rating area details in **CSV** file.
	• Ensure that the **CSV** file is available at the desired path on the server, before the file upload batch is triggered.
	• Set the **C1-GeoRatingArea** business object validation soft parameter (**Include Plan Value Details**) to either include or exclude plan details (**Y/N**) before the file is uploaded.
	• Include the **C1GEORATINGARCSVUPLD** file request type for file upload purposes.
	• Ensure that **C1_GEO_RATING_AREA** and **C1_GEO_RATING_AREA_REL_OBJ** tables are populated before any memberships are created in the system for derivation purposes.
	• Configure the pricing parameter with the geographic rating area on the pricing rule.
	• Define the required **Address Source (C1-ADSRC)** and **Address Type (C1-ADTYP)** characteristic types in the system. Values for these characteristics can be defined either on the policy or plan characteristics level. The address source and address type can also be defined on the state of issue of the policy or plan.
	• Define the parent policy role in the **C1-ASOBLLNG** feature configuration.
	• Define the following billing preferences in the **Field Mapping** screen:
	  • Default Address Source
	  • Default Address Type
	  • Use Plan Details
	  • Address Source Value for Policy Holder
	  • Address Source Value for Main Subscriber
	  • Geographic Rating Area Characteristic Type
	  • Address Source Characteristic Type
	  • Address Type Characteristic Type
	• Define the default value for **Geographic Rating Area Characteristic Type** in the **Premium Billing Preference** screen.

Create a member role parameter	You need to do the following: • Define the pricing parameter with the member role. • The **Admin** user must define different types of member role structures for step or party, where all the member roles must be defined in the **Member**

Copyright © 2025, Oracle and/or its affiliates.

If you want to...	Then...

	Relationship/Subscription Tier Structure screen. These member roles must also exist in the **C1-ASOBLLNG** feature configuration.
	• Define the required characteristic types, such as, **Member Role Structure (C1-MRLST)**, **Member Role - Derivation Date Basis (C1-MRDDB)**, and **Age Calculation Date Basis (C1-AGCAL)** on the policy plan.
	• Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined:
	  • Max Age of Dependent
	  • Max Number of Dependents
	  • Order Priority
	  • Young Adult Max Age Limit
	  • Young Adult Inclusion Applicability
	• The above characteristic types along with the **Member Role (C1-MEMRL)** characteristic type would be stamped on member person, must be specified in the **Premium Billing Preferences** screen.

Create a subscription tier parameter	You need to do the following:
	• Define the pricing parameter with the subscription tier.
	• The **Admin** user must define different types of subscription tiers, where all the tiers must be defined in the **Member Relationship/Subscription Tier Structure** screen. These subscription tiers must also exist in the **C1-ASOBLLNG** feature configuration.
	• Define the required characteristic types, such as, **Subscription Tier Structure (C1-STRST)** and **Age Calculation Date Basis (C1-AGCAL)** on the policy plan.
	• Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined:
	  • Max Age of Dependent
	  • Max Number of Dependents
	  • Order Priority
	  • Young Adult Max Age Limit
	  • Young Adult Inclusion Applicability
	• The above characteristic types along with the **Subscription (C1-SUBST)** characteristic type would be stamped on member person, must be specified in the **Field Mapping** screen.

Geographic Rating Area

Oracle Revenue Management and Billing enables you to use the geographic rating area as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different geographic rating area.

The system enables you to add and edit a geographic rating area from the user interface. You can also add or edit a set of geographic rating areas at once using the **File Upload Interface** utility. However, note that while editing a geographic rating area, you can only change the end date to a far future date and the status from **Active** to **Inactive**.

While maintaining a geographic rating area in the system, you can also list the policy plans available in the geographic rating area. You can add the policy plan information for a geographic rating area from the user interface or through the **File Upload Interface** utility. But, you cannot edit the policy plan information of a geographic rating area through the **File Upload Interface** utility.

You can upload the geographic rating areas from the CSV file using the **C1GEORATINGARCSVUPLD** file request type through the **File Transformation and Upload (C1-FTRAN)** batch.

Note: You need to set the **Include Plan** Or **Product Details** parameter in the **C1-GEORAVALD** algorithm to Y or N. If the value for this parameter is set to Y, the system identifies the record using the State, Zip From, Zip Plus4 From, Zip To, Zip Plus4 To, Start Date, Policy Number, Plan Number, and Source System combination. However, if the value for this parameter is set to N, the system identifies the record using the State, Zip From, Zip Plus4 From, Zip To, Zip Plus4 To, and Start Date combination.

Once you define a geographic rating area, the system can derive the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. The system supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

On adding a membership to a policy plan, the system first derives the characteristic types from the **Address Source Characteristic Type** and **Address Type Characteristic Type** attributes of a geographic rating area preference. The system considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLLNG** feature configuration. Then, the system searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, the system derives the default address source and address type from the geographic rating area preference.

Note: By default, the **Address Source (C1-ADSRC)** and **Address Type (C1-ADTYP)** characteristic types are shipped with the product. You need to set these characteristic types in the respective attribute of the geographic rating area preference.

If the address source is set to **Policy Holder**, the system fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. The system then derives the person who is associated with the policy using the parent customer policy person role. Once the address source and address type are derived, the system fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is set to **Person Mailing**, the system fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, the system checks whether the zip code is a 9-digit code. If not, the system appends zeros to make it a 9-digit zip code. The system then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to **Y**, the system then derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to **N**, the system then derives a geographic rating area for the state and zip code combination. If the system could not derive the geographic rating area, the system derives the default

Copyright © 2025, Oracle and/or its affiliates.

geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, the system stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

The geographic rating area of the membership must be changed when the address of the policy holder or main subscriber is updated. Therefore, when an address of a person is change, the system identifies the following:

- Memberships of policies where the person is the policy holder
- Memberships where the person is the main customer

For each membership, the system searches for the **Address Source** and **Address Type** characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, the system derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, the system fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. The system then derives the person who is associated with the policy using the parent customer policy person role.

Once the address source and address type are derived, the system fetches the state and zip code from the address type of the address source. The system then derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination or for the state and zip code combination depending on the value defined for the **Use Plan Details** attribute. If the system could not derive the geographic rating area, the system derives the default geographic rating area from the geographic rating area preference. If the geographic rating area is different, the system creates a new characteristic to store the geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

To use the geographic rating area as a pricing parameter, you need to define the Geographic Rating Area parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Geographic Rating Area parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on geographic rating area to which the membership belongs.

A new screen named **Geographic Rating Area** is introduced in this release. It enables you to add, edit, and inactivate a geographic rating area.

Prerequisites

To create a geographic rating area pricing parameter, you need to do the following:

- Ensure that the upstream system contains the geographic rating area details in **CSV** file.
- Ensure that the **CSV** file is available at the desired path on the server, before the file upload batch is triggered.
- Set the **C1-GeoRatingArea** business object validation soft parameter (**Include Plan Value Details**) to either include or exclude plan details (**Y/N**) before the file is uploaded.
- Include the **C1GEORATINGARCSVUPLD** file request type for file upload purposes.

Copyright © 2025, Oracle and/or its affiliates.

- Ensure that **C1_GEO_RATING_AREA** and **C1_GEO_RATING_AREA_REL_OBJ** tables are populated before any memberships are created in the system for derivation purposes.
- Configure the pricing parameter with the geographic rating area on the pricing rule.
- Define the required **Address Source (C1-ADSRC)** and **Address Type (C1-ADTYP)** characteristic types in the system. Values for these characteristics can be defined either on the policy or plan characteristics level. The address source and address type can also be defined on the state of issue of the policy or plan.
- Define the parent policy role in the **C1-ASOBLLNG** feature configuration.
- Define the following billing preferences in the **Field Mapping** screen:
  - Default Address Source
  - Default Address Type
  - Use Plan Details
  - Address Source Value for Policy Holder
  - Address Source Value for Main Subscriber
  - Geographic Rating Area Characteristic Type
  - Address Source Characteristic Type
  - Address Type Characteristic Type
- Define the default value for **Geographic Rating Area Characteristic Type** in the **Field Mapping** screen.
- Define the required health plan in the system.

Uploading a Geographic Rating Area File in the CSV Format

To upload a geographic rating area file in the CSV format using the **File Upload Interface** utility, you need to do the following:

- Define a file request type for uploading geographic rating area in the CSV format. To define a file request type:

1. Click the **Admin** link in the **Application** toolbar.

   A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.

   A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.

   The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.

   The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Select the Upload and Process File Simultaneously option.
8. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
9. In the **Services** section, enter the required sequence number.

Copyright © 2025, Oracle and/or its affiliates.

10. Select the **Business Object** option from the **Service Type** list.
11. Enter the **C1-GeoRatingArea** business object or custom price item business object in the **Service Name** field.
12. Select the **Add** or **Update** option from the **Operation** list depending on whether you want to create new geographic rating area details or edit the existing geographic rating area details using the file request type.
13. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes
Default Value	Used to specify the default value for the field.	No

14. Click **Save**.

    The file request type is defined for uploading the geographic rating area in the CSV format.

CSV File Format for Uploading Geographic Rating Areas

Before uploading a geographic rating area file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
GEO_RATING_AREA	Used to specify the geographic rating area.	Yes
STATE	Used to specify the state code which belongs to the geographical rating area.	Yes
ZIP_FROM	Used to specify the zip code from where the geographic rating area begins.	Yes
ZIP_PLUS4_FROM	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
ZIP_TO	Used to specify the zip code till where the geographic rating area ends.	Yes
ZIP_PLUS4_TO	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
START_DT	Used to specify the date from when the geographic rating area is effective.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Data	Description	Mandatory (Yes or No)
END_DT	Used to specify the date till when the geographic rating area is effective.	Yes
PLAN_NBR	Used to specify the plan number belonging to a particular geographical rating area.	No
HEALTH_PLAN_CD	Used to specify the health plan belonging to a particular geographical rating area.	No
POLICY_NBR	Used to specify the policy number belonging to a particular geographical rating area.	No
SOURCE_SYSTEM	Used to specify the source system from where the policy is originated.	No
STATUS	Used to indicate the status for the geographic rating area. The valid values are: • Active • Inactive	Yes

Related Topics

Sample CSV Format for Uploading Geographical Rating Area	Sample CSV Format for Uploading Geographic Rating Areas on page 55

Sample CSV Format for Uploading Geographic Rating Areas

Let us assume that a file request type with the below field transformation details is used for uploading the geographic rating area information in the system.

The following table illustrates the field transformation details used for uploading the geographic rating area information:

Sequence	Field Name	Map Field XPath
1	GEO_RATING_AREA	C1-GeoRatingArea/geoRatingArea
2	STATE	C1-GeoRatingArea/state
3	ZIP_FROM	C1-GeoRatingArea/zipFrom
4	ZIP_PLUS4_FROM	C1-GeoRatingArea/zipPlus4From
5	ZIP_TO	C1-GeoRatingArea/zipTo
6	ZIP_PLUS4_TO	C1-GeoRatingArea/zipPlus4To
7	START_DT	C1-GeoRatingArea/startDate
8	END_DT	C1-GeoRatingArea/endDate
9	PLAN_NBR	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/planNumber

Copyright © 2025, Oracle and/or its affiliates.

Sequence	Field Name	Map Field XPath
10	HEALTH_PLAN_CD	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/healthPlanCode
11	POLICY_NBR	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/policyNumber
12	SOURCE_SYSTEM_CD	C1-GeoRatingArea/0/geoRatingAreaRelatedObject/sourceSystem
13	STATUS	C1-GeoRatingArea/boStatus

In such case, you need to ensure that the sample CSV file contains records with comma-separated values in the sequence as mentioned in the above table.

Sample CSV

```
100,AR,15000,0,15000,10,02/02/2019,02/02/2030,45675767565,MED_PLN_01,7.87E
+11,SOURCE,ACTIVE
```

Geographic Rating Area (Used for Searching)

The **Geographic Rating Area** screen allows you to search for a geographic rating area using various search criteria. It also allows you to create a geographic rating area. This screen consists of the following zone:

- Search Geographic Rating Area on page 56

Search Geographic Rating Area

The **Search Geographic Rating Area** zone allows you to search for geographic rating area using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a geographic rating area detail record using the geographic rating area details or through policy or plan details. The valid values are: • Geographic Rating Area Details • Policy or Plan Details • Health Plan Details **Note:** By default, the **Geographic Rating Area Details** option is selected.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
State Code	Used to search the geographic rating area details belonging to a particular state code. **Note:** You must specify a state code which is already defined in the system.	No
Geographic Rating Area	Used to search the geographic rating area details based on a geographic rating area.	No
Zip Code From	Used to search the geographic rating area details which are effective from a particular zip code.	No
Zip Code To	Used to search the geographic rating area details which are effective till a particular zip code.	No
Start Date	Used to search the geographic rating area details which are effective from a particular date. **Note:** The geographic rating area start date cannot be later than the geographic rating area end date.	No
End Date	Used to search the geographic rating area details which are effective till a particular date. **Note:** The geographic rating area end date cannot be earlier than the geographic rating area start date	No
Status	Used to search the geographic rating area details based on a particular status. The valid values are: • Active • Inactive	No
Policy Number	Used to search the geographic rating area details with a particular policy number.	No
Plan Number	Used to search the geographic rating area details with a particular plan number.	No
Health Plan	Used to search the geographic rating area details which are associated with a health plan. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Health Plan Search** window appears. This field appears when the **Health Plan Details** option is selected from the **Search By** list.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Geographic Rating Area	Displays the geographic rating area.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
State Code	Displays the state code to which the geographic rating area belongs.
Zip Code From	Displays the zip code from where the geographic rating area is effective.
Zip Code Plus 4 From	Displays the zip code plus four additional digits which identify from where the geographic rating area is effective.
Zip Code To	Displays the zip code till where the geographic rating area is effective.
Zip Code Plus 4 To	Displays the zip code plus four additional digits which identify till where the geographic rating area is effective.
Start Date	Displays the date from when the geographic rating area is effective.
End Date	Displays the date till when the geographic rating area is effective.
Status	Indicates the status of the geographic rating area. The valid values are: • Active • Inactive

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **State Code**, **Geographic Rating Area**, **Zip Code From**, **Zip Code To**, **Start Date**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (▽) icon in the upper right corner of this zone.

Geographic Rating Area

The **Geographic Rating Area** zone displays the details of the geographic rating area. It contains the following sections:

- **Main** - Displays basic information about the geographic rating area. It contains the following fields:

Field Name	Field Description
Geographic Rating Area	Displays information about the geographic rating area.
State Code	Displays the state code to which the geographic rating area belongs.
Zip Code From	Displays the zip code from where the geographic rating area is effective.
Zip Code Plus 4 From	Displays the zip code plus four additional digits which identify from where the geographic rating area is effective.
Zip Code To	Displays the zip code till where the geographic rating area is effective.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Zip Code Plus 4 To	Displays the zip code plus four additional digits which identify till where the geographic rating area is effective.
Start Date	Displays the date from when the geographic rating area is effective.
End Date	Displays the date till when the geographic rating area is effective.
Status	Displays the status of the geographic rating area. The valid values are: • Active • Inactive

- **Plan Details** - Lists the plan information of the geographic rating area. It contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number which is associated with the geographic rating area.
Plan Number	Displays the plan number of the policy.
Health Plan	Indicates the health plan to which the geographic rating area is associated. **Note:** The data in this column appears only when the geographic rating area is specified for fully-insured individual.
Source System	Displays the name of the external system from where the policy is originated.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the geographic rating area. **Note:** The **Edit** button appears when the geographic rating area is in the **Active** status.
Inactive	Used to change the status of the geographic rating area. **Note:** The **Inactive** button appears when the geographic rating area is in the **Active** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the geographic rating area is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the geographic rating area status is updated.
Creation Date/Time	Displays the date and time when the geographic rating area is created.

Searching for a Geographic Rating Area

Prerequisites

To search for a geographic rating area, you should have:

- Geographic rating area defined in the application.
- Policy and plan defined in the application.

Procedure

To search for a geographic rating area:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **Geographic Rating Area**.
   The **Geographic Rating Area** screen appears.
3. Enter the search criteria in the **Search Geographic Rating Area** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of geographic rating area that meet the search criteria appears in the **Search Results** section.

Defining a Geographic Rating Area

Procedure

To define a geographic rating area

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **Geographic Rating Area**.
   The **Geographic Rating Area** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Geographic Rating Area** screen.

   The **Geographic Rating Area** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the geographic rating area.
   - **Plan Details** - Used to specify the plan details for the geographic rating area.

   The **Main** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Geographic Rating Area	Used to specify the geographic rating area.	Yes
State Code	Used to specify the state code which belongs to the geographical rating area. **Note:** You must specify a state code which is already defined in the system.	Yes
Zip Code From	Used to specify the zip code from where the geographic rating area begins.	Yes
Zip Code Plus 4 From	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
Zip Code To	Used to specify the zip code till where the geographic rating area ends.	Yes
Zip Code Plus 4 To	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
Start Date	Used to specify the date from when the geographic rating area is effective. **Note:** The geographic rating area start date cannot be later than the geographic rating area end date.	Yes
End Date	Used to specify the date till when the geographic rating area is effective. **Note:** The geographic rating area end date cannot be earlier than the geographic rating area start date	No
Status	Used to indicate the status for the geographic rating area. The valid values are: • Active • Inactive **Note:** You cannot assign an **Inactive** status to the geographic rating area record while you are defining a geographic rating area.	Yes

4. Enter the required details in the **Main** section.
5. Add the plan details for the geographic rating area, if required.
6. Click **Save**.
   The geographic rating area is defined in the **Active** status.

Adding the Plan Details for a Geographic Rating Area

Prerequisites

To add plan details for a geographic rating area, you should have:

- Policy and plan defined in the application.
- Source system defined in the application.
- Health plan defined in the application.

Procedure

To add plan details for a geographic rating area:

1. Ensure that the **Plan Details** section is expanded when you are defining or editing the geographic rating area information.

   Note: If you want to use the geographic rating area for a fully-insured group and individual businesses, you need to specify policy number, plan number, and source system fields. You can specify the health plan only when you want to use the geographic rating area for a fully-insured individual membership.

   The **Plan Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Policy Number	Used to specify the policy number which is associated with the geographic rating area.	No
Plan Number	Used to specify the plan number of the policy.	No
Health Plan	Used to specify the health plan which is associated with the geographic rating area. **Note:** You need to specify the health plan, if you want to use the geographic rating area for a fully-insured individual membership.	No
Source System	Used to specify the name of the external system from where the policy is originated.	No

2. Enter the required details in the **Plan Details** section.
3. If you want to define more than one plan information for the geographic rating area, click the **Add** (+) icon and then *r*epeat step *2*.

   Note: However, if you want to remove a plan information from the geographic rating area, click the **Delete** (🗑) icon corresponding to the policy number column.

Editing a Geographic Rating Area

Procedure

To edit a geographic rating area

1. Search for the geographic rating area in the **Geographic Rating Area** screen.

Copyright © 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the geographic rating area column whose details you want to view.
   The **Geographic Rating Area** zone appears.
3. Click the **Edit** button in the **Geographic Rating Area** screen.

   The **Geographic Rating Area** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the geographic rating area.
   - **Plan Details** - Used to specify the plan details for the geographic rating area.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Geographic Rating Area	Used to specify the geographic rating area.	Yes
State Code	Used to specify the state code which belongs to the geographical rating area. **Note:** You must specify a state code which is already defined in the system.	Yes
Zip Code From	Used to specify the zip code from where the geographic rating area begins.	Yes
Zip Code Plus 4 From	Used to specify the additional four digits after the zip code from where the geographic rating area begins.	Yes
Zip Code To	Used to specify the zip code till where the geographic rating area ends.	Yes
Zip Code Plus 4 To	Used to specify the additional four digits after the zip code till where the geographic rating area ends.	Yes
Start Date	Used to specify the date from when the geographic rating area is effective. **Note:** The geographic rating area start date cannot be later than the geographic rating area end date.	Yes
End Date	Used to specify the date till when the geographic rating area is effective. **Note:** The geographic rating area end date cannot be earlier than the geographic rating area start date	No
Status	Used to indicate the status for the geographic rating area. The valid values are: • Active • Inactive **Note:** You cannot assign an **Inactive** status to the geographic rating area record while you are defining a geographic rating area.	Yes

4. Modify the geographic rating area details, if required.
5. Define, edit, or remove plan details for the geographic rating area, if required.
6. Click **Save**.
   The changes made to the geographic rating area are saved.

Copyright © 2025, Oracle and/or its affiliates.

Member Relationship Pricing Parameter

Oracle Revenue Management and Billing enables you to use the member relationship (i.e. how a member is related to the main subscriber of the membership) as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different member relationship.

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, the system automatically derives member relationship for each member person of the membership from a member relationship structure. You can define a member relationship structure through a characteristic on the policy plan. While defining a member relationship structure for a policy plan, you must use the characteristic type specified in the **Member Relationship Structure Characteristic Type** attribute of a member relationship and subscription tier preference. The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

The system enables you to define two types of member relationship structure:

- **Step Member Relationship Structure** - A step member relationship structure helps the system to determine how each member person is related to the main subscriber of the membership. You can specify a list of member relationships in a step member relationship structure. A member relationship is derived for a member person depending on the following:
  - Whether the member person is a self, spouse, or dependent
  - Number of spouses, dependents, and young adults in the membership

  A relationship matrix indicates whether a member person with a particular relationship type should be considered as self, spouse, or dependent while deriving the member relationship. In a step member relationship structure, a spouse is never considered as a dependent. Only children are considered as dependents.

  For example, you can create a step member relationship structure named STEPEX1 as shown below:

Member Relationship	Self	Number of Spouses	Number of Dependents	Number of Young Adults
Self	1	0	0	0
Spouse 1	1	1	0	0
Spouse 2	1	2	0	0
Child 1	1	1	1	0
Young Adult 1	1	1	0	1
CD1 and YA1	1	1	1	1
Child 2	1	1	2	0
Young Adult 2	1	1	0	2
CD2 and YA2	1	1	2	2
Additional Dependent	1	3	3	3

Note: You can only define one member relationship in a step member relationship structure where the sum of self, number of spouses, number of dependents, and number of young adults exceeds the maximum member count specified in the step member relationship structure.

In addition, you can create a relationship matrix in the STEPEX1 member relationship structure as shown below:

Copyright © 2025, Oracle and/or its affiliates.

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Spouse
Spouse	Spouse	Spouse

- **Party Member Relationship Structure** - A party member relationship structure helps the system to determine how each member person is related to the main subscriber of the membership. You can specify a list of member relationships in a party member relationship structure. A member relationship is derived for a member person depending on the following:
  - Whether the member person is a self or dependent
  - Number of dependents in the membership

  A relationship matrix indicates whether a member person with a particular relationship type should be considered as self or dependent while deriving the member relationship. In a party member relationship structure, a spouse is always considered as a dependent. Also, children are not categorized as young adults.

  For example, you can create a party member relationship structure named PARTYEX1 as shown below:

Member Relationship	Self	Number of Spouses	Number of Dependents	Number of Young Adults
Self	1	0	0	0
Dependent 1	1	0	1	0
Dependent 2	1	0	2	0
Dependent 3	1	0	3	0
Additional Dependents	1	0	9	0

Note: You can only define one member relationship in a party member relationship structure where the sum of self and number of dependents exceeds the maximum member count specified in the party member relationship structure.

In addition, you can create a relationship matrix in the PARTYEX1 member relationship structure as shown below:

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Dependent
Spouse	Spouse	Dependent

Once the member relationship structure is derived from the policy plan, the system determines the member relationship for each member person in the membership. While determining the member relationship for a member person, the system derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis

Copyright © 2025, Oracle and/or its affiliates.

- Max Age Limit for Max Dependent Count
- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- Member Relationship Derivation Date
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

The system then derives these characteristics from the policy plan. If the **Member Relationship Derivation Date** characteristic type is set to **Enrollment Date**, the system derives the member relationship for each member person of the membership in order of the member start date. However, if the Member Relationship Derivation Date characteristic type is set to Date of Birth, the system derives the member relationship for each member person of the membership in order of the date of birth. For example, if a membership with the following member persons is added to a policy plan:

Member Start Date	Member End Date	Person Name	Main Subscriber	Relationship Type	Member	Date of Birth
1-Jan-18	31-Dec-20	Mark	Yes	Self	Yes	15-Jan-68
1-Jan-18	31-Dec-20	Nancy	No	Wife	Yes	20-Apr-72
1-Jan-18	31-Dec-20	Roger	No	Child	Yes	15-May-01
1-Jan-18	31-Dec-20	Tom	No	Child	Yes	16-May-04

Now, if the following characteristics are defined on the policy plan:

- Member Relationship Structure - STEPEX1
- Member Relationship Derivation Date - Date of Birth
- Age Calculation Date Basis - Enrollment Date
- Maximum Number of Dependents - 3
- Max Number of Dependents Order Priority - YOUNGEST

The system will consider the STEPEX1 member relationship structure and derives the member relationship for each member person as shown below:

Member Person	Effective Date	Characteristic Type	Characteristic Value
Mark	1-Jan-18	Member Relationship	Self
Nancy	1-Jan-18	Member Relationship	Spouse 1
Tom	1-Jan-18	Member Relationship	Child 1
Roger	1-Jan-18	Member Relationship	Child 2

Note that the member relationship of Tom is derived before Roger because he is youngest of all dependents. Now, assume if one more member person named Harry with the date of birth as 05-11-08 and relationship type as Child is added to the membership on 05-Jan-18, then the system derives the member relationship for each member person of the membership as shown below:

Effective Date	Member	Member Person Characteristics	Value
1-Jan-18	Mark	Member Relationship	Self
1-Jan-18	Nancy	Member Relationship	Spouse 1
5-Jan-18	Harry	Member Relationship	Child 1

Copyright © 2025, Oracle and/or its affiliates.

Effective Date	Member	Member Person Characteristics	Value
5-Jan-18	Tom	Member Relationship	Child 2
5-Jan-18	Roger	Member Relationship	Additional Dependent

The member relationship for Harry, Tom, and Roger is derived in the order of their age which is calculated from the enrollment date. Because the member relationship derived for Tom and Roger is different, the system creates a new characteristic to store the member relationship for Tom and Roger. Here, the effective date of the characteristics is set to the new member person's start date.

If a new born is added to the membership, the effective date of the new born's member relationship characteristic is calculated considering the gift days if applicable. If a member person is end dated, the system derives the member relationship of all other member persons once again. If the member relationship for a member person is different, the system creates a new characteristic to store the member relationship for the member person. The effective date of the new characteristic is set to member person's end date + 1. However, if a member person is inactivated, the system derives the member relationship of all other member persons once again. If the member relationship for a member person is different, the system updates the existing member relationship characteristic of the member person.

To use the member relationship as a pricing parameter, you need to define the Member Relationship parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership Person**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Member Relationship Characteristic Type** attribute of the member relationship and subscription tier preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Member Relationship parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on the member relationship.

A new screen named **Member Relationship/Subscription Tier Structure** is introduced in this release. It enables you to add, edit, copy, and delete the member relationship and subscription tier structures.

Prerequisites

To create a member relationship pricing parameter, you need to do the following:

- Define the pricing parameter with the member relationship.
- The **Admin** user must define different types of member relationship structures for step or party, where all the member relationships must be defined in the **Member Relationship/Subscription Tier Structure** screen. These member relationships must also exist in the **C1-ASOBLLNG** feature configuration.
- Define the required characteristic types, such as, **Member Relationship Structure (C1-MRLST)**, **Member Relationship - Derivation Date Basis (C1-MRDDB)**, and **Age Calculation Date Basis (C1-AGCAL)** on the policy plan.
- Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined:
  - Max Age of Dependent
  - Max Number of Dependents
  - Order Priority
  - Young Adult Max Age Limit
  - Young Adult Inclusion Applicability
- The above characteristic types along with the **Member Relationship (C1-MEMRL)** characteristic type would be stamped on the member person, must be specified in the **Field Mapping** screen.

Member Relationship/Subscription Tier Structure (Used for Searching)

The **Member Relationship/Subscription Tier Structure** screen allows you to search for a member relationship/subscription tier using various search criteria. It also allows you to create a member relationship/subscription tier. Through this screen, you can navigate to the following screen. It contains the following zone:

This screen consists of the following zone:

- Member Relationship/Subscription Tier Structure List on page 69
- Member Relationship/Subscription Tier Structure on page 70

Member Relationship/Subscription Tier Structure List

The **Member Relationship/Subscription Tier Structure List** zone displays the member relationship or subscription tier structure information. It contains the following columns:

Column Name	Column Description
Structure	Used to specify the structure code for the structure.
Description	Used to specify the description for the structure.
Edit	On clicking the **Edit** (✎) icon, the **Member Relationship/Subscription Tier Structure** screen appears where you can edit the structural details of the member relationship or subscription tier.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Member Relationship/Subscription Tier Structure** screen appears where you can define a new member relationship or subscription tier using an existing member relationship or subscription tier.
Delete	On clicking the **Delete** (🗑) icon, you can delete the member relationship or subscription tier structure.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Structure** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (▽) icon in the upper right corner of this zone.

Member Relationship/Subscription Tier Structure

The **Member Relationship/Subscription Tier Structure** zone displays the details of the member relationship or subscription tier structure. It contains the following sections:

- **Main** - Displays basic information about the member relationship or subscription tier structure. It contains the following fields:

Field Name	Field Description
Structure	Displays the type of structure.
Description	Displays the description of the structure.
Detailed Description	Displays additional information about the structure.
Maximum Member Count	Displays the maximum count of the members allowed in the structure.

- **Member Relationship/Subscription Tier Criteria** - Lists the criteria details of the member relationship or subscription tier. It contains the following columns:

Column Name	Column Description
Member Relationship/ Subscription Tier	Displays the criteria code for the member relationship or subscription tier.
Self	Displays the main subscriber who meets the member relationship or subscription tier criteria. **Note:** The total count in the **Self** column cannot exceed more than one.
Number of Spouses	Displays the total number of spouses in the membership who meet the member person relationship criteria.
Number of Dependents	Displays the total number of dependents in the membership who meet the member person relationship criteria.
Number of Young Adults	Displays the total number of young adults in the membership who meet the member person relationship criteria.

- **Relationship Matrix** - Lists the relationship matrix details defined for the member relationship or subscription tier structure. It contains the following columns:

Column Name	Column Description
Relation	Indicates an entity defined in the relationship matrix.
Relationship Type	Indicates how a member person is associated with the main subscriber using a relationship type.
Relationship	Indicates how a member person is associated with the relationship type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the structural details of the member relationship or subscription tier.
Delete	Used to delete the member relationship or subscription tier structure.

Copyright © 2025, Oracle and/or its affiliates.

Button Name	Button Description
Duplicate	Used to create a new member relationship or subscription tier structure using an existing structure.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the member relationship or subscription tier structure is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Defining a Member Relationship Structure

Procedure

To define a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   A sub-menu appears.
3. Click the **Add** option from the **Member Relationship/Subscription Tier Structure** sub-menu.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure.	Yes
	Note: You must specify a unique code name for the structure.	
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to zero (0).	

- **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the member relationship/subscription criteria.	No
Self	Used to specify the main subscriber for the member relationship. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No

Note: You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Member Relationship/Subscription Tier Structure** screen.

4. Enter the required details in the **Main** section.
5. Define a criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the member relationship structure, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the member relationship structure, click the **Add** (+) icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The member relationship structure is defined.

Editing a Member Relationship Structure

Procedure

To edit a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   The **Member Relationship/Subscription Tier Structure** screen appears.
3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the member relationship structure whose details you want to edit.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Displays the member relationship structure name.	Not applicable
Description	Used to specify the description for the structure.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

- **Member Relationship/Subscription Tier Criteria** - Used to define a criteria for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the member relationship/subscription criteria.	No
Self	Used to specify the main subscriber for the member relationship. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No

Note:

You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to define a relationship matrix for the member relationship. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can edit the details of a member relationship structure by clicking the **Edit** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Modify the details in the **Main** section.
5. Define, edit, or remove the criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the member relationship structure, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the member relationship structure, click the **Add** (+) icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The changes made to the member relationship structure are saved.

Copying a Member Relationship Structure

Procedure

To copy a member relationship structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   The **Member Relationship/Subscription Tier Structure** screen appears.

Copyright © 2025, Oracle and/or its affiliates.

3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the member relationship structure whose copy you want to create.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the member relationship structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure. **Note:** You must specify a unique code name for the structure.	Not applicable
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

   - **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the member relationship/subscription criteria.	No
Self	Used to specify the main subscriber for the member relationship. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the member relationship criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the member relationship criteria.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The value for this field must be a positive integer.	

Note:

You must specify at least one criteria for the member relationship structure. However, you can specify only a single member relationship criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the member relationship. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can copy a member relationship structure by clicking the **Duplicate** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Enter the required details in the **Main** section.
5. Define, edit, or remove a criteria (for the member relationship structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the member relationship structure, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a criteria from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove the relationship matrix (for the member relationship structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the member relationship structure, click the **Add** (+) icon and then repeat step 7.

Note: However, if you want to remove a relationship matrix from the member relationship structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The new member relationship structure is created.

Subscription Tier Pricing Parameter

Oracle Revenue Management and Billing enables you to use the subscription tier as a pricing parameter while defining the tier based pricing rules. This feature facilitates you to offer different rates for a price item based on different subscription tier.

On creating the bill period timelines, the system executes the **Derive Subscription Tier for Membership (C1-DERSUBTR)** algorithm attached to the **Account and Price Item Derivation Post-Processing** system event in the respective tier based pricing rule type. This algorithms determines the subscription tier of the membership for each bill period timeline. While determining the subscription tier for a membership, the system derives subscription tier for the membership from a subscription tier structure. Note that while deriving the subscription tier of a membership for a bill period timeline, the system refers the proration rules defined on the respective policy plan and accordingly derives the subscription tier for the membership. The system invokes the **C1-DERSUBTR** algorithm in the **C1-REPC1** batch.

You can define a subscription tier structure through a characteristic on the policy plan. While defining a subscription tier structure for a policy plan, you must use the characteristic type specified in the **Subscription Tier Structure Characteristic Type** attribute of a member relationship and subscription tier preference. The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

A subscription tier structure helps the system to determine the subscription tier to which the membership belongs. You can specify a list of subscription tiers in a subscription tier structure. A subscription tier is derived for a membership depending on the following:

- Whether the member person is a self, spouse, or dependent
- Number of spouses, dependents, and young adults in the membership in the respective bill period timeline

A relationship matrix indicates whether a member person with a particular relationship type should be considered as self, spouse, or dependent while deriving the subscription tier. In a subscription tier structure, a spouse is never considered as a dependent. Only children are considered as dependents.

Let us understand this with the help of an example.

The following table illustrates the structure of a subscription tier named STEX1:

Subscription Tier	Self	Number of Spouses	Number of Dependents	Number of Young Adults
E	1	0	0	0
ES	1	1	0	0
ESC1	1	1	1	0
ESC2	1	1	2	0
EC1	1	0	1	0
EC2	1	0	2	0

Copyright © 2025, Oracle and/or its affiliates.

Subscription Tier	Self	Number of Spouses	Number of Dependents	Number of Young Adults
EC3	1	0	3	0
F	1	9	9	9

Note: You can only define one subscription tier in a subscription tier structure where the sum of self, number of spouses, number of dependents, and number of young adults exceeds the maximum member count specified in the subscription tier structure.

In addition, you can create a relationship matrix for a subscription tier. Let us understand this with the help of an example.

The following table illustrates the relationship matrix defined for the STEX1 subscription tier:

Relation	Relationship Type	Relationship
Main Subscriber	Owner	Self
Main Subscriber	Member	Self
Children	Child	Dependent
Spouse	Wife	Spouse
Spouse	Spouse	Spouse

Once the subscription tier structure is derived from the policy plan, the system determines the subscription tier of the membership for the bill period timeline. While determining the subscription tier of a membership for the bill period timeline, the system derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis
- Max Age Limit for Max Dependent Count
- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

The system then derives these characteristics from the policy plan. Let us understand this with the help of an example.

The following table illustrates different member persons included in a membership that is defined for a policy plan:

Member Start Date	Member End Date	Person Name	Main Subscriber	Relationship Type	Member	Date of Birth
1-Jan-20	31-Dec-20	Mark	Yes	Self	Yes	15-Jan-68
1-Jan-20	31-Dec-20	Nancy	No	Wife	Yes	20-Apr-72
1-Jan-20	31-Dec-20	Roger	No	Child	Yes	15-May-01
1-Jan-20	31-Dec-20	Tom	No	Child	Yes	16-May-04

Now, if the following characteristics are defined on the policy plan:

- Subscription Tier Structure - STEX1
- Age Calculation Date Basis - Enrollment Date
- Maximum Number of Dependents - 3
- Max Number of Dependents Order Priority - ELDEST

Copyright © 2025, Oracle and/or its affiliates.

- Max Age Limit for Max Dependent Count - 21
- New Born Gift Days - 30
- New Born Gift Days Applicability - Y
- Young Adult Max Age Limit - 25
- Young Adult Max Age Limit Applicability - Y

The system considers the STEX1 subscription tier structure and derives the subscription tier of the membership for each bill period timeline. Let us understand this with the help of an example.

The following table illustrates the subscription tier derived for the respective bill period timeline:

Bill Period Timeline	**Characteristic Type**	**Characteristic Value**
1-Jan-20 to 31-Jan-20	Subscription Tier	ESC2
1-Feb-20 to 29-Feb-20	Subscription Tier	ESC2
1-Mar-20 to 31-Mar-20	Subscription Tier	ESC2
1-Apr-20 to 30-Apr-20	Subscription Tier	ESC2
1-May-20 to 31-May-20	Subscription Tier	ESC2
1-Jun-20 to 30-Jun-20	Subscription Tier	ESC2
1-Jul-20 to 31-Jul-20	Subscription Tier	ESC2
1-Aug-20 to 31-Aug-20	Subscription Tier	ESC2
1-Sep-20 to 30-Sep-20	Subscription Tier	ESC2
1-Oct-20 to 31-Oct-20	Subscription Tier	ESC2
1-Nov-20 to 30-Nov-20	Subscription Tier	ESC2
1-Dec-20 to 31-Dec-20	Subscription Tier	ESC2

Because the characteristic value is same across all bill period timelines, the system will create one subscription tier characteristic with the effective date as 01-Jan-2020. Now, assume if one more member person named Harry with the date of birth as 05-11-08 and relationship type as Child is added to the membership on 05-Mar-20, then the system derives the subscription tier of the membership for each bill period timeline. Let us understand this with the help of an example.

The following table illustrates the subscription tier derived for the respective bill period timeline:

Bill Period Timeline	**Characteristic Type**	**Characteristic Value**
5-Mar-20 to 31-Mar-20	Subscription Tier	F
1-Apr-20 to 30-Apr-20	Subscription Tier	F
1-May-20 to 31-May-20	Subscription Tier	F
1-Jun-20 to 30-Jun-20	Subscription Tier	F
1-Jul-20 to 31-Jul-20	Subscription Tier	F
1-Aug-20 to 31-Aug-20	Subscription Tier	F
1-Sep-20 to 30-Sep-20	Subscription Tier	F
1-Oct-20 to 31-Oct-20	Subscription Tier	F
1-Nov-20 to 30-Nov-20	Subscription Tier	F
1-Dec-20 to 31-Dec-20	Subscription Tier	F

Copyright © 2025, Oracle and/or its affiliates.

In this case, the system will have two subscription tier characteristics for the membership - one with the effective date as 01-Jan-2020 where the characteristic value is set to **ESC2** and another with the effective date as 05-Mar-2020 where the characteristic value is set to **F**.

If a new born is added to the membership, the effective date of the new subscription tier characteristic is calculated considering the gift days if applicable. If a member person is end dated, the system derives the subscription tier of the membership once again. If the subscription tier for the membership is different, the system creates a new characteristic to store the subscription tier for the membership. The effective date of the new characteristic is set according to the proration rule defined for the termination event. If a member person is inactivated, the system derives the subscription tier of the membership once again. In this case, if the subscription tier for the membership is different, the system updates the existing subscription tier characteristic of the membership.

To use the subscription tier as a pricing parameter, you need to define the Subscription Tier parameter where:

- **Value Type** is to **Adhoc**
- **Source Entity** is set to **Membership**
- **Source Type** is set to **Characteristic**
- **Source Type Code** is set to a characteristic type which is specified in the **Subscription Tier Characteristic Type** attribute of the member relationship and subscription tier preference
- **Parameter Usage** is set to **Price Item** and **Pricing Eligibility Criteria**

Once the Subscription Tier parameter is defined, you need to associate the parameter with the price items for which you want to define different rates in a pricing rule using the parameter. This helps to define different base fee for a price item based on the subscription tier.

A new screen named **Member Relationship/Subscription Tier Structure** is introduced in this release. It enables you to add, edit, copy, and delete the member relationship and subscription tier structures.

Prerequisites

To create a subscription tier pricing parameter, you need to do the following:

- Define the pricing parameter with the subscription tier.
- The **Admin** user must define different types of subscription tiers, where all the tiers must be defined in the **Member Relationship/Subscription Tier Structure** screen. These subscription tiers must also exist in the **C1-ASOBLLNG** feature configuration.
- Define the required characteristic types, such as, **Subscription Tier Structure (C1-STRST)** and **Age Calculation Date Basis (C1-AGCAL)** on the policy plan.
- Define the following set of characteristics while adding the characteristics for the policy plan and also when the premium billing preferences are defined:
  - Max Age of Dependent
  - Max Number of Dependents
  - Order Priority
  - Young Adult Max Age Limit
  - Young Adult Inclusion Applicability
- The above characteristic types along with the **Subscription (C1-SUBST)** characteristic type would be stamped on member person, must be specified in the **Field Mapping** screen.

Member Relationship/Subscription Tier Structure (Used for Searching)

The **Member Relationship/Subscription Tier Structure** screen allows you to search for a member relationship/subscription tier using various search criteria. It also allows you to create a member relationship/subscription tier. Through this screen, you can navigate to the following screen. It contains the following zone:

This screen consists of the following zone:

- Member Relationship/Subscription Tier Structure List on page 69
- Member Relationship/Subscription Tier Structure on page 70

Member Relationship/Subscription Tier Structure List

The **Member Relationship/Subscription Tier Structure List** zone displays the member relationship or subscription tier structure information. It contains the following columns:

Column Name	Column Description
Structure	Used to specify the structure code for the structure.
Description	Used to specify the description for the structure.
Edit	On clicking the **Edit** (✎) icon, the **Member Relationship/Subscription Tier Structure** screen appears where you can edit the structural details of the member relationship or subscription tier.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Member Relationship/Subscription Tier Structure** screen appears where you can define a new member relationship or subscription tier using an existing member relationship or subscription tier.
Delete	On clicking the **Delete** (🗑) icon, you can delete the member relationship or subscription tier structure.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Structure** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the Filters (▽) icon in the upper right corner of this zone.

Member Relationship/Subscription Tier Structure

The **Member Relationship/Subscription Tier Structure** zone displays the details of the member relationship or subscription tier structure. It contains the following sections:

- **Main** - Displays basic information about the member relationship or subscription tier structure. It contains the following fields:

Field Name	Field Description
Structure	Displays the type of structure.
Description	Displays the description of the structure.
Detailed Description	Displays additional information about the structure.
Maximum Member Count	Displays the maximum count of the members allowed in the structure.

- **Member Relationship/Subscription Tier Criteria** - Lists the criteria details of the member relationship or subscription tier. It contains the following columns:

Column Name	Column Description
Member Relationship/ Subscription Tier	Displays the criteria code for the member relationship or subscription tier.
Self	Displays the main subscriber who meets the member relationship or subscription tier criteria. **Note:** The total count in the **Self** column cannot exceed more than one.
Number of Spouses	Displays the total number of spouses in the membership who meet the member person relationship criteria.
Number of Dependents	Displays the total number of dependents in the membership who meet the member person relationship criteria.
Number of Young Adults	Displays the total number of young adults in the membership who meet the member person relationship criteria.

- **Relationship Matrix** - Lists the relationship matrix details defined for the member relationship or subscription tier structure. It contains the following columns:

Column Name	Column Description
Relation	Indicates an entity defined in the relationship matrix.
Relationship Type	Indicates how a member person is associated with the main subscriber using a relationship type.
Relationship	Indicates how a member person is associated with the relationship type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the structural details of the member relationship or subscription tier.
Delete	Used to delete the member relationship or subscription tier structure.
Duplicate	Used to create a new member relationship or subscription tier structure using an existing structure.

- **Record Information** - This section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the member relationship or subscription tier structure is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Defining a Subscription Tier Structure

Procedure

To define a subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   A sub-menu appears.
3. Click the **Add** option from the **Member Relationship/Subscription Tier Structure** sub-menu.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure. **Note:** You must specify a unique code name for the structure.	Yes
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

   - **Member Relationship/Subscription Tier Criteria** - Used to specify a criteria for the subscription tier. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the subscription tier criteria.	No
Self	Used to specify the main subscriber for the subscription tier. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No

Note: You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Member Relationship/Subscription Tier Structure** screen.

4. Enter the required details in the **Main** section.
5. Define a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.

Copyright © 2025, Oracle and/or its affiliates.

6. If you want to define more than one criteria for the subscription tier structure, click the **Add** (+) icon and then repeat step 5.

   Note: However, if you want to remove a criteria from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define a relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the subscription tier structure, click the **Add** (+) icon and then repeat step 7.

   Note: However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The subscription tier structure is defined.

Editing a Subscription Tier Structure

Procedure

To edit a subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   The **Member Relationship/Subscription Tier Structure** screen appears.
3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the subscription tier structure whose details you want to edit.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Displays the subscription tier structure name.	Not applicable
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure. **Note:** If you do not specify the value, by default, it is set to zero (0).	No

   - **Member Relationship/Subscription Tier Criteria** - Used to specify a criteria for the subscription tier. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the criteria.	No
Self	Used to specify the main subscriber for the subscription tier. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No

Note:

You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify a relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix.	No

Note: You must specify at least one relationship matrix.

Tip: Alternatively, you can edit the details of a member relationship structure by clicking the **Edit** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Modify the details in the **Main** section.
5. Define, edit, or remove a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.

Copyright © 2025, Oracle and/or its affiliates.

6. If you want to define more than one criteria for the subscription tier structure, click the **Add** (+) icon and then repeat step 5.

   Note: However, if you want to remove a criteria from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove a relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the subscription tier structure, click the **Add** (+) icon and then repeat step 7.

   Note: However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The changes made to the subscription tier structure are saved.

Copying a Subscription Tier Structure

Procedure

To copy a subscription tier structure:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **M** and then click **Member Relationship/Subscription Tier Structure**.
   The **Member Relationship/Subscription Tier Structure** screen appears.
3. In the **Member Relationship/Subscription Tier Structure List** zone, click the **Duplicate** (📋) icon in the **Duplicate** column *c*orresponding to the subscription tier structure whose copy you want to create.

   The **Member Relationship/Subscription Tier Structure** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the subscription tier structure. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Structure	Used to specify a code name for the structure. **Note:** You must specify a unique code name for the structure.	Not applicable
Description	Used to specify the description for the structure.	Yes
Detailed Description	Used to specify additional information about the structure.	No
Maximum Member Count	Used to specify the maximum number of members allowed in the structure.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to zero (0).	

- **Member Relationship/Subscription Tier Criteria** - Used to specify the criteria details for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Member Relationship/ Subscription Tier	Used to specify a code name for the criteria. **Note:** You must specify a unique code name for the member relationship/subscription criteria.	No
Self	Used to specify the main subscriber for the subscription tier. **Note:** The value for this field must be a positive integer.	No
Number of Spouses	Used to specify the total number of spouses in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Dependents	Used to specify the total number of dependents in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No
Number of Young Adults	Used to specify the total number of young adults in the membership who meet the subscription tier criteria. **Note:** The value for this field must be a positive integer.	No

Note:

You must specify at least one criteria for the subscription tier structure. However, you can specify only a single subscription tier criteria, if the maximum member count is set to zero (0) or one (1).

Relationship Matrix - Used to specify the relationship matrix for the subscription tier. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate an entity in the relationship matrix.	No
Relationship Type	Used to indicate how a member person is associated with the main subscriber using a relationship type.	No
Relationship	Used to indicate how the relation is associated with the relationship type in the relationship matrix	No

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** You must specify at least one relationship matrix.

> **Tip:** Alternatively, you can copy a member relationship structure by clicking the **Duplicate** button in the **Member Relationship/Subscription Tier Structure** zone.

4. Enter the required details in the **Main** section.
5. Define, edit, or remove a criteria (for the subscription tier structure) in the **Member Relationship/Subscription Tier Criteria** section.
6. If you want to define more than one criteria for the subscription tier structure, click the **Add** (+) icon and then repeat step 5.

> **Note:** However, if you want to remove a criteria from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Member Relationship/Subscription Tier** field.

7. Define, edit, or remove the relationship matrix (for the subscription tier structure) in the **Relationship Matrix** section.
8. If you want to define more than one relationship matrix for the subscription tier structure, click the **Add** (+) icon and then repeat step 7.

> **Note:** However, if you want to remove a relationship matrix from the subscription tier structure, click the **Delete** (🗑) icon corresponding to the **Relation** field.

9. Click **Save**.
   The new subscription tier structure is created.

Membership Benefits

Oracle Revenue Management and Billing enables you to maintain the following types of membership benefits for the fully-insured group and individual businesses:

- Medicare benefits, such as, Part A, Part B, Part D for which premium is calculated using the age-based or tier-based pricing rules
- Medicare benefits, such as Medicare Part D Low-Income Subsidy (LIS) and Medicare Part D Late Enrollment Penalty (LEP) for which charges are calculated using the benefit pricing rule type
- Advance Premium Tax Credit (APTC) benefits for which charges are calculated using the benefit pricing rule type

In addition, it enables you to setup the following Medicare membership benefits for the fully insured individual business:

Copyright © 2025, Oracle and/or its affiliates.

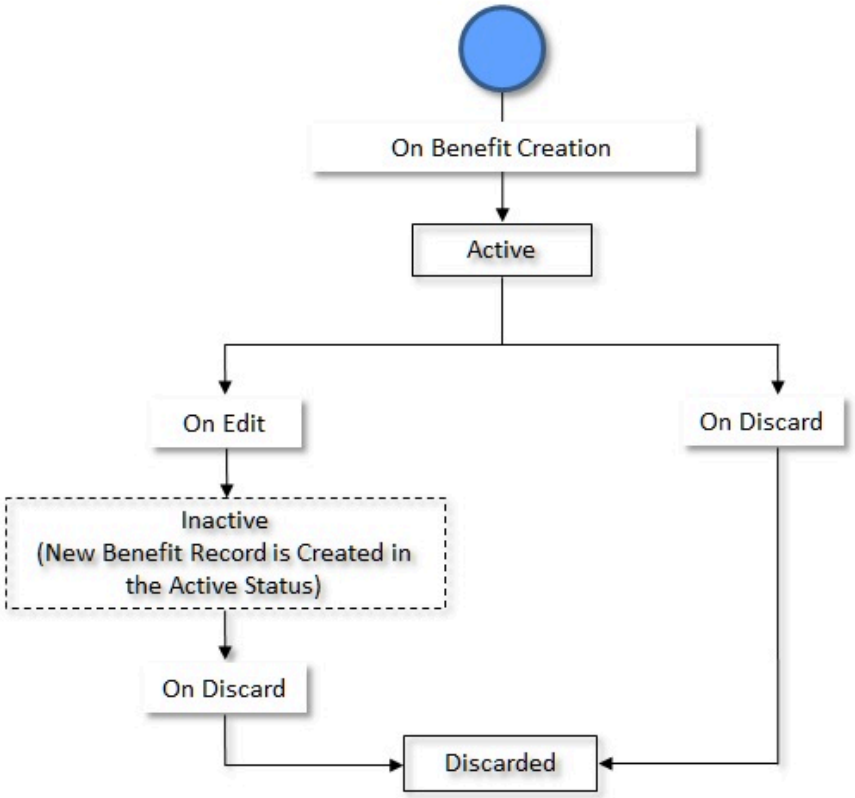
- PW (Premium with Hold)
- LEPWH (LEP with Hold)
- LEP (LEP Memo Only)
- LEPD (LEP Direct Pay)
- LIS

The system enables you to define a benefit at the membership level and not at the member person level. This is because the system assumes the following:

- There will be only one member person in the Medicare membership who will avail the Membership benefit.
- The other benefits such as APTC would be availed by all member persons of the group or individual membership.

Benefit Status Transition

The following figure graphically indicates how a membership benefit moves from one status to another in its lifecycle:



Membership Benefits (Such as Medicare, APTC, and Others)

The system enables you to define and edit the membership benefits from the user interface (i.e. through the **Benefit** screen), through a health care inbound message, or through the membership repricing inbound web service. While defining a membership benefit, you need to specify the following details:

- The date range for which the benefit is availed for the membership.

Copyright © 2025, Oracle and/or its affiliates.

- The source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are:
  - Centers for Medicare and Medicaid Services
  - State
- The type of benefit availed for the membership. The valid values are:
  - Commercial
  - Medicare Affiliated
- The benefit sub type that indicates whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
- The Medicare plan benefit package (i.e. 800 series plan) which is applicable for Medicare Part A, Part B, or Part D membership benefit.

  Note: You can define an Employer Group Waiver Plan (EGWP) (i.e. 800 series plan) as a Medicare plan benefit package in the system. While defining a Medicare Part A, Part B, or Part D membership benefit, you need to indicate the Medicare plan benefit package which is applicable for the membership benefit. You can then use the Medicare plan benefit package as a pricing parameter in the age-based or tier-based pricing rules using which the Medicare Part A, Part B, or Part D membership premium is calculated. In this way, the system enables you to offer different pricing for different EGWPs (i.e. 800 series plans).

  The system enables you to define, edit, delete, and copy a Medicare plan benefit package through the **Field Mapping** screen. For more information, refer to Medicare Plan Benefit Package on page 135.
- The pass-through amount for Medicare Part D LIS, Medicare Part D LEP or other benefits such as APTC.

Once the membership benefit is created, the status of the benefit is set to **Active**. You can also edit a membership benefit from the user interface (i.e. through the **Benefit** screen), through a health care inbound message, or through the membership repricing inbound web service. On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system also enables you to discard an active or inactive membership benefit from the user interface by clicking the **Discard** button or by changing its status through a health care inbound message or through the membership repricing inbound web service.

For more information on how to maintain the membership benefits through the **Benefit** screen, refer to Benefit (Used for Searching) on page 112. For more information on how to maintain the membership benefits through a health care inbound message, refer to Health Care Inbound Message on page 2188. For more information on how to maintain the membership benefits through the membership repricing inbound web service, refer to C1-MembershipRepricing Business Service on page 3427.

Membership Benefit Sub Type

You can create a membership benefit using the respective benefit sub type. Therefore, you need to create an appropriate benefit sub type for the following:

- **Medicare Part A, Part B, or Part D** - While creating a benefit sub type for Medicare Part A, Part B, or Part D membership benefits, you need to set the value type to **Not applicable**.
- **Medicare Part D LIS** - While creating a benefit sub type for Medicare Part D LIS, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is selected.
- **Medicare Part D LEP** - While creating a benefit sub type for Medicare Part D LEP, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is not selected.
- **APTC or Any Other Benefits** - While creating a benefit sub type for APTC or any other benefits, you need to set the value type to **Flat** and ensure that the **Charge Negatively** option is selected.

The **Charge Negatively** option indicates that you want to create a negative charge for the benefit amount. The system will then accordingly deduct the negative charge from the membership premium while billing.

Copyright © 2025, Oracle and/or its affiliates.

The system also enables you to create the reverse membership benefit charges on the benefit sponsor account (i.e. for the health benefit exchange; for example, CMS or State account who has offered the membership benefit). If you want to create the reverse membership benefit charges on the benefit sponsor account, you need to select the **Charge Benefit Sponsor** option and specify the benefit sponsor account while defining the benefit sub type. The system will then create a reverse charge on the membership benefit sponsor account. The reverse charge can then be used by the health insurance payer for reconciliation.

In the individual health insurance business, the benefit sponsor account for the membership benefits varies depending on the health benefit exchange through which the benefit is availed. Therefore, there arises a need to derive the benefit sponsor account for each individual membership. The system also provides the ability to derive the benefit sponsor account for the respective health benefit exchange. You can attach an algorithm to the **Sponsor Account Derivation Algorithm** field which will derive the benefit sponsor account for the respective health benefit exchange. The system will then create a reverse charge on the derived membership benefit sponsor account.

A new algorithm type named **C1-SPONSAC** is shipped with the product. You can create an algorithm using the **C1-SPONSAC** algorithm type and attach it to the **Sponsor Account Derivation Algorithm** field while defining a benefit sub type. This algorithm contains the following parameter:

- **Account Identifier Type** - Used to indicate that account identifier type that you want to use while deriving the benefit sponsor account.

The **C1-SPONSAC** algorithm validates the account identifier type and derives the membership exchange ID from the respective individual membership. It considers the membership exchange ID as the account identifier and derives the account using the account identifier type and membership exchange ID.

Note: If the **Charge Benefit Sponsor** option is selected while defining or editing a benefit sub type, you must either specify the benefit sponsor account or sponsor account derivation algorithm in the benefit sub type.

Algorithms Used in C1-Benefits

The following table lists the algorithms which are attached to the **C1-Benefits** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-FIAUDEV	C1-FIAUDEV	Refer to C1-FIAUDEV on page 95.
Post Processing	C1-BENP	C1-BENP	Refer to C1-BENP on page 96
Validation	C1-BENVAL	C1-BENVAL	Refer to C1-BENVAL on page 96

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership** (**C1-Membership**), **Individual Membership** (**C1-IndMembership**), **Benefit** (**C1-Benefits**), and **Person** (**C1_PERSON_BO**) business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Copyright © 2025, Oracle and/or its affiliates.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** - Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** - Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** - Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-BENP

This algorithm creates a log entry whenever the benefit amount or benefit end date of a membership benefit is updated. The log entry stores the old and new values of the benefit amount and the benefit end date (whichever is updated).

C1-BENVAL

This algorithm validates a membership benefit. It checks the following:

- Whether the membership benefit end date is not earlier than the membership benefit start date.
- Whether the membership details are specified while defining a membership benefit.
- Whether the benefit amount is specified in the membership benefit when the value type is set to **FLAT** in the respective benefit sub type.
- Whether the Medicare plan benefit package is specified in the membership benefit when the value type is set to **Not applicable** in the respective benefit sub type.

Copyright © 2025, Oracle and/or its affiliates.

While editing a membership benefit, this algorithm only allows you to edit the following information:

- Benefit Amount
- Benefit End Date
- Benefit Status
- Benefit Characteristics

Benefit Sub Type

The **Benefit Sub Type** screen enables you to create, edit, delete, and copy a benefit sub type. It contains the following zones:

- Benefit Sub Type List on page 97
- Benefit Sub Type on page 98

How to delete a benefit sub type	Deleting a Benefit Sub Type on page 111
How to view the details of a benefit sub type	Viewing the Details of a Benefit Sub Type on page 111

Benefit Sub Type List

The **Benefit Sub Type List** zone lists the benefit sub types that are already defined in the system. It contains the following columns:

Column Name	**Column Description**
Benefit Sub Type	Displays the benefit sub type.
Description	Displays the description of the benefit sub type.
Status	Indicates the status of the benefit sub type. The valid values are: • Active • Inactive
Value Type	Indicates the type of value that you want to store in the benefit sub type. The valid values are: • Flat • NA
Edit	On clicking the **Edit** ( ) icon, the **Benefit Sub Type** screen appears where you can edit the details of the benefit sub type. **Note:** The **Edit** icon appears only when the benefit sub type is not yet used.
Duplicate	On clicking the **Duplicate** ( ) icon, the **Benefit Sub Type** screen appears where you can define a benefit sub type using an existing benefit sub type.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Delete	On clicking the **Delete** ( ) icon, you can delete a benefit sub type.

You can filter the list using various search criteria (such as **Benefit Sub Type**, **Status**, **Description**, **Value Type**, **Reconciliation Required**, **Price**, and **Validate**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filter** ( ) icon in the upper right corner of this zone.

On clicking the **Broadcast** ( ) icon corresponding to the benefit sub type, the **Benefit Sub Type** zone appears with the details of the respective benefit sub type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Benefit Sub Type

The **Benefit Sub Type** zone displays the details of the benefit sub type. It contains the following sections:

- **Main** - Displays the basic information about the benefit sub type. It contains the following fields:

Field Name	Field Description
Benefit Sub Type	Displays the benefit sub type.
Description	Displays the description of the benefit sub type.
Status	Indicates the status of the benefit sub type. The valid values are: • **Active** • **Inactive**
Value Type	Indicates whether the benefit amount should be a flat or calculated amount. The valid values are: • **Flat** - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • **Not Applicable** - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.
Externally Priced	Indicates whether the benefit amount is calculated in the enrollment system. **Note:** This field appears when **Flat** option is selected from the **Value Type** list.
Validate External Price	Indicates that you want to validate whether the externally calculated benefit amount is within the threshold range.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Externally Priced** option is selected.
Validate Price Item	Indicates the price item using which you want to create the membership benefit charge for validation.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item. This field appears when the **Validate External Price** option is selected.
Charge Negatively	Indicates whether you want to create a negative charge for the benefit amount.
	Note: This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.
Benefit SQI	Indicates the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration.
	Note: This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.
Charge Benefit Sponsor	Indicates whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation.
	Note: This field appears when **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.
Benefit Sponsor Account	Indicates the account of sponsor on which you want to create the reverse charge.
	Note: This field appears when the **Charge Benefit Sponsor** option is selected.
Sponsor Account Derivation Algorithm	Indicates an algorithm using which the system can derive the sponsor account for the individual membership. The **C1-SPONSAC** algorithm is shipped with the product. For more information about the algorithm, refer to Membership Benefit Sub Type on page 94.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm. This field appears when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor Price Item	Indicates the price item using which you want to create the reverse charge.
	Note: This field appears when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor SQI	Indicates the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Charge Benefit Sponsor** option is selected.

- **Characteristics** - Lists the characteristics defined for the benefit sub type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the benefit sub type.
	Note: The **Edit** button appears only when the benefit sub type is not yet used.
Delete	Used to delete the benefit sub type.
Duplicate	Used to create a new benefit sub type using an existing benefit sub type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the benefit sub type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Benefit Sub Type** zone does not appear in the **Benefit Sub Type** screen. It appears only when you click the**Broadcast** ( ) icon corresponding to a benefit sub type in the **Benefit Sub Type List** zone.

Defining a Benefit Sub Type

Prerequisites

To define a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLLNG** feature configuration.
- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To define a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Benefit Sub Type** sub-menu.

   The **Benefit Sub Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the benefit sub type. It contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Benefit Sub Type	Used to specify the benefit sub type.	Yes
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. • **Active** • **Inactive**	Yes
Value Type	Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are: • **Flat** - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • **Not Applicable** - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.	Yes
Externally Priced	Used to indicate whether the benefit amount is calculated in the enrollment system. **Note:** This field appears when **Flat** option is selected from the **Value Type** list.	No
Validate External Price	Used when you want to validate whether the externally calculated benefit amount is within the threshold range. **Note:** This field appears when the **Externally Priced** option is selected.	No
Validate Price Item	Used to indicate the price item using which you want to create the membership benefit charge for validation. **Note:** The **Search** (🔍) icon appears corresponding to the **Validate Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Validate External Price** option is selected.	Yes (Conditional) **Note:** This field is required when the **Validate External Price** option is selected.
Charge Negatively	Used to indicate whether you want to create a negative charge for the benefit amount.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	
Benefit SQI	Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Charge Benefit Sponsor	Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation. **Note:** This field appears when **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit Sponsor Account	Used to indicate the account of sponsor on which you want to create the reverse charge. **Note:** The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Account** field. On clicking the **Search** icon, the **Search** window appears. On specifying the benefit sponsor amount, the description of the benefit sponsor amount appears corresponding to the **Benefit Sponsor Account** field. This field appears when the **Charge Benefit Sponsor** option is selected.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected and the value is not specified in the **Sponsor Account Derivation Algorithm** field.
Sponsor Account Derivation Algorithm	Used to attach an algorithm using which the system can derive the sponsor account for the individual membership. The **C1-SPONSAC** algorithm is shipped with the product.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	For more information about the algorithm, refer to Membership Benefit Sub Type on page 94. **Note:** The **Search** (🔍) icon appears corresponding to the **Sponsor Account Derivation Algorithm** field. On clicking the **Search** icon, the **Search** window appears. On specifying the sponsor account derivation algorithm, the description of the sponsor account derivation algorithm appears corresponding to the **Sponsor Account Derivation Algorithm** field. This field appears when the **Charge Benefit Sponsor** option is selected.	**Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor Price Item	Used to indicate the price item using which you want to create the reverse charge. **Note:** The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Charge Benefit Sponsor** option is selected.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Charge Benefit Sponsor** option is selected.	No

Note: If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

Tip: Alternatively, you can access the **Benefit Sub Type** screen by clicking the **Add** button in the **Page Title** area of the **Benefit Sub Type** screen.

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The benefit sub type is defined.

How to define a characteristic for a benefit sub type	Defining a Characteristic for a Benefit Sub Type on page 104

Defining a Characteristic for a Benefit Sub Type

To define a characteristic for a benefit sub type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Benefit Sub Type**)

Procedure

To define a characteristic for a benefit sub type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a benefit *s*ub type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Benefit Sub Type**.	**Note:** This field is required when you are defining the characteristics for a benefit sub type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining the characteristics for a benefit sub type.

2. Enter the required characteristic in the **Characteristics** section.
3. If you want to define more than one characteristic for the benefit sub type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the benefit sub type, click the **Delete** ( ) icon corresponding to the characteristic

4. Click **Save**.
   The characteristic is defined for the benefit sub type.

Editing a Benefit Sub Type

Prerequisites

To edit a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLLNG** feature configuration.

Copyright © 2025, Oracle and/or its affiliates.

- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

To edit a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Benefit Sub Type** sub-menu.
   The **Benefit Sub Type** screen appears.
4. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the benefit sub *t*ype whose details you want to edit.

> **Note:** The Edit icon appears only when a benefit is not defined using the benefit sub type.

The **Benefit Sub Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the benefit sub type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sub Type	Displays the benefit sub type.	Not applicable
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. • **Active** • **Inactive**	Yes
Value Type	Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are: • **Flat** - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • **Not Applicable** - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.	Yes
Externally Priced	Used to indicate whether the benefit amount is calculated in the enrollment system. **Note:** This field appears when **Flat** option is selected from the **Value Type** list.	No
Validate External Price	Used when you want to validate whether the externally calculated benefit amount is within the threshold range. **Note:** This field appears when the **Externally Priced** option is selected.	No
Validate Price Item	Used to indicate the price item using which you want to create the membership benefit charge for validation.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Validate Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Validate External Price** option is selected.	**Note:** This field is required when the **Validate External Price** option is selected.
Charge Negatively	Used to indicate whether you want to create a negative charge for the benefit amount. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit SQI	Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** check box is not selected.	No
Charge Benefit Sponsor	Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation. **Note:** This field appears when **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit Sponsor Account	Used to indicate the account of sponsor on which you want to create the reverse charge. **Note:** The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Account** field. This field appears when the **Charge Benefit Sponsor** option is selected.	**Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor Price Item	Used to indicate the price item using which you want to create the reverse charge. **Note:** The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Charge Benefit Sponsor** option is selected.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Charge Benefit Sponsor** option is selected.	No

Note: If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

Tip: Alternatively, you can edit the details of a benefit sub type by clicking the **Edit** button in the **Benefit Sub Type** zone.

5. Modify the required details in the **Main** section, if required.
6. Define, edit, or remove characteristics of the benefit sub type, if required
7. Click **Save**.
   The changes made to the benefit sub type are saved.

Copying a Benefit Sub Type

Instead of creating a benefit sub type from scratch, you can create a new benefit sub type using an existing benefit sub type. This is possible through copying a benefit sub type. On copying a benefit sub type, the details are copied to the new benefit sub type. You can then edit the details, if required.

Prerequisites

To define a benefit sub type, you should have:

- Value defined for the **Proration SQI** option type in the **C1-ASOBLLNG** feature configuration.
- Required price items and SQIs defined in the application.
- Sponsor account defined in the application.

Procedure

To copy a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Benefit Sub Type** sub-menu.
   The **Benefit Sub Type** screen appears.
4. In the **Search Results** section, click the **Duplicate** (⎘) icon in the **Duplicate** column corresponding to the benefit sub *t*ype whose details you want to edit.

   The **Benefit Sub Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the benefit sub type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Benefit Sub Type	Used to specify the benefit sub type.	Yes
Description	Used to specify the description for the benefit sub type.	Yes
Status	Used to indicate the status of the benefit sub type. • **Active** • **Inactive**	Yes
Value Type	Used to indicate whether the benefit amount should be a flat or calculated amount. The valid values are: • **Flat** - Used when you want to specify the pass-through amount while creating a membership benefit for Medicare Part D LIS, Medicare Part D LEP, APTC, etc. • **Not Applicable** - Used when you to want the system to calculate the benefit amount for the availed Medicare Part A, Part B, or Part D membership benefit.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Externally Priced	Used to indicate whether the benefit amount is calculated in the enrollment system. **Note:** This field appears when **Flat** option is selected from the **Value Type** list.	No
Validate External Price	Used when you want to validate whether the externally calculated benefit amount is within the threshold range. **Note:** This field appears when the **Externally Priced** option is selected.	No
Validate Price Item	Used to indicate the price item using which you want to create the membership benefit charge for validation. **Note:** The **Search** (🔍) icon appears corresponding to the **Validate Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Validate External Price** option is selected.	Yes (Conditional) **Note:** This field is required when the **Validate External Price** option is selected.
Charge Negatively	Used to indicate whether you want to create a negative charge for the benefit amount. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit SQI	Used to specify the SQI using which you want to create an SQI based billable charge for the membership benefit. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Flat** option is selected from the **Value Type** list and the **Externally Priced** check box is not selected.	No
Charge Benefit Sponsor	Used to indicate whether you want to create a reverse charge for the benefit sponsor. The reverse charge can then be used by the health insurance payer for reconciliation. **Note:** This field appears when **Flat** option is selected from the **Value Type** list and the **Externally Priced** option is not selected.	No
Benefit Sponsor Account	Used to indicate the account of sponsor on which you want to create the reverse charge.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Account** field. On clicking the **Search** icon, the **Search** window appears. On specifying the benefit sponsor amount, the description of the benefit sponsor amount appears corresponding to the **Benefit Sponsor Account** field. This field appears when the **Charge Benefit Sponsor** option is selected.	**Note:** This field is required when the **Charge Benefit Sponsor** option is selected and the value is not specified in the **Sponsor Account Derivation Algorithm** field.
Sponsor Account Derivation Algorithm	Used to attach an algorithm using which the system can derive the sponsor account for the individual membership. The **C1-SPONSAC** algorithm is shipped with the product. For more information about the algorithm, refer to Membership Benefit Sub Type on page 94.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
	Note: The **Search** (🔍) icon appears corresponding to the **Sponsor Account Derivation Algorithm** field. On clicking the **Search** icon, the **Search** window appears. On specifying the sponsor account derivation algorithm, the description of the sponsor account derivation algorithm appears corresponding to the **Sponsor Account Derivation Algorithm** field. This field appears when the **Charge Benefit Sponsor** option is selected.	
Benefit Sponsor Price Item	Used to indicate the price item using which you want to create the reverse charge.	Yes (Conditional) **Note:** This field is required when the **Charge Benefit Sponsor** option is selected.
	Note: The **Search** (🔍) icon appears corresponding to the **Benefit Sponsor Price Item** field. On clicking the **Search** icon, the **Search** window appears. This field appears when the **Charge Benefit Sponsor** option is selected.	
Benefit Sponsor SQI	Used to specify the SQI using which you want to create a reverse SQI based billable charge for the benefit sponsor. If you do not specify the value, the system will derive the SQI from the **Proration SQI** option type of the **C1-ASOBLLNG** feature configuration. **Note:** This field appears when the **Charge Benefit Sponsor** option is selected.	No

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** If the **Charge Benefit Sponsor** option is selected, you need to specify the value in either the **Benefit Sponsor Account** or **Sponsor Account Derivation Algorithm** field.

> **Tip:** Alternatively, you can copy a benefit sub type by clicking the **Duplicate** button in the **Benefit Sub Type** zone.

5. Define, edit or remove the required details in the **Main** section, if required.
6. Click **Save**.
   The new benefit sub type is saved.

Deleting a Benefit Sub Type

Procedure

To delete a benefit sub type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **B** and then click **Benefit Sub Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Benefit Sub Type** sub-menu.
   The **Benefit Sub Type** screen appears.
4. In the **Benefit Sub Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to *t*he benefit sub type that you want to delete.

   A message appears confirming whether you want to delete the benefit sub type.
5. Click **OK**.
   The benefit sub type is deleted.

> **Note:** You can delete a benefit sub type only when a benefit is not defined using the benefit sub type.

> **Tip:** Alternatively, you can delete a benefit sub type by clicking the **Delete** button in the **Benefit Sub Type** zone.

Benefit (Used for Searching)

The **Benefit** screen allows you to search for a membership benefit using various search criteria. It also allows you to create a membership benefit, such as Medicare Part A, Medicare Part B, Medicare Part D, Medicare Part D LIS, Medicare Part D LEP, APTC, etc. It contains the following zone:

- Search Benefit on page 112

Search Benefit

The **Search Benefit** zone allows you to search for a membership benefit using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a membership benefit using the benefit, policy, or person details. The valid values are: • Benefit Details • Policy Details • Person Details **Note:** By default, the **Benefit Details** option is selected.	Yes
Benefit ID	Used to search a particular membership benefit. **Note:** This field appears when the **Benefit Details** option is selected from the **Search By** list.	No
Membership ID	Used to search membership benefits of a particular membership.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Membership ID** field. On clicking the **Search** icon, the **Membership Search** window appears.	
Start Date	Used to specify the date from when the benefit is availed for the membership.	No
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list. The start date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit start date cannot be later than the membership benefit end date.	
End Date	Used to specify the date till when the benefit is availed for the membership.	No
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list. The end date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit end date cannot be earlier than the membership benefit start date.	
Status	Used to search membership benefits with a particular status. The valid values are: • Active • Discarded • Inactive	No
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list.	
Benefit Type	Used to indicate the type of benefit availed for the membership. The valid values are: • Commercial • Medicare Affiliated	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Benefit Details** option is selected from the **Search By** list. The list includes the values which are defined in the **BENEFIT_TYPE_FLG** lookup field. At present, the **Commercial** benefit type is not supported. The implementation team can build the custom logic based on the business requirements.	
Benefit Sub Type	Used to indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit. **Note:** This field appears when the **Benefit Details** option is selected from the **Search By** list. The list includes those benefit types which are defined through the **Benefit Sub Type** screen.	No
Benefit Source	Used to indicate the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State **Note:** This field appears when the **Benefit Details** option is selected from the **Search By** list. The list includes the values which are defined in the **BENEFIT_TYPE_FLG** lookup field.	No
Policy ID	Used to search membership benefits which are availed for the memberships that belong to a particular fully-insured group policy. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Policy ID** field. On clicking the **Search** icon, the **Policy Search** window appears.	No
Policy Plan ID	Used to search membership benefits which are availed for the memberships that belong to a particular policy plan.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Policy Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Policy Plan ID** field. On clicking the **Search** icon, the **Policy Plan Search** window appears.	
External Medicare Beneficiary ID	Used to search membership benefits using an external Medicare beneficiary ID. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Person Name	Used to search membership benefits which are availed by a particular person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Person Identifier Type	Used to indicate the person identifier type. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search membership benefits which are availed by a particular person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Relationship Type	Used to search membership benefits which are availed by persons with a particular relationship type. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for a membership benefit.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Benefit Information	Displays information about the membership benefit.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Benefit** screen appears where you can view the details of the respective benefit.
Membership Information	Indicates the membership for which the benefit is availed.
	Note: It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Member Person Information	Indicates the main subscriber of the membership. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective member person.
Status	Indicates the status of the membership benefit. The valid values are: • Active • Discarded • Inactive
Benefit Source	Indicates the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State
Benefit Type	Indicates the type of benefit availed for the membership. The valid values are: • Commercial • Medicare Affiliated
Benefit Sub Type	Indicates indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
Benefit Amount	Displays the pass-through amount for the availed membership benefit.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Membership Benefit

Prerequisites

Copyright © 2025, Oracle and/or its affiliates.

To search for a membership benefit, you should have:

- Required benefit sub types defined in the application

Procedure

To search for a membership benefit:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Benefit**.
   The **Benefit** screen appears.
3. Enter the search criteria in the **Search Benefit** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of membership benefits that meet the search criteria appears in the **Search Results** section.

Defining a Membership Benefit

Prerequisites

To define a membership benefit, you should have:

- Required benefit sub types defined in the application
- Required Medicare plan benefit package defined in the application

Procedure

To define a membership benefit:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Benefit**.
   A sub-menu appears.
3. Click the **Add** option from the **Benefit** sub-menu.

   The **Benefit** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the membership benefit.
   - **Characteristics** - Used to define the characteristics for the membership benefit.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Used to indicate the membership for which the benefit is availed.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** icon appears corresponding to the **Membership ID** field. On clicking the **Search** icon, the **Membership Search** window appears. On specifying the membership information, the membership details appears corresponding to the **Membership Information** field.	
Benefit Source	Used to indicate the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State **Note:** The list includes the values which are defined in the **BENEFIT_SRC_FLG** lookup field.	Yes
Benefit Type	Used to indicate the type of benefit availed for the membership. The valid value is: • Commercial • Medicare Affiliated **Note:** The list includes the values which are defined in the **BENEFIT_TYPE_FLG** lookup field.	Yes
Benefit Sub Type	Used to indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit. **Note:** The list includes only those benefit types which are defined through the **Benefit Sub Type** screen.	Yes
Medicare Plan Benefit Package	Used to indicate the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit. **Note:** The list includes those Medicare plan benefit packages which are defined using the **Medicare Plan Benefit** preference category through the **Field Mapping** screen. This field appears only when the value type in the benefit sub type is set to **Not Applicable**.	Yes (Conditional) **Note:** This field is required while creating the Medicare Part A, Part B, or Part D membership benefit.
Start Date	Used to specify the date from when the benefit is availed for the membership.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The start date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit start date cannot be later than the membership benefit end date.	
End Date	Used to specify the date till when the benefit is availed for the membership. **Note:** The end date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit end date cannot be earlier than the membership benefit start date.	No
Benefit Amount	Used to specify the pass-through amount for the availed membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Flat**.	Yes (Conditional) **Note:** This field is required while creating the Medicare Part D LIS, Medicare Part D LEP, APTC, or other membership benefits.

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Benefit** screen.

4. Enter the required details in the **Main** section.
5. Define characteristics for the membership benefit, if required.
6. Click **Save**.
   The membership benefit is defined for the member person in the **Active** status.

Note: You cannot define more than one membership benefit for the same membership, member person, benefit source, benefit type, and benefit sub type combination.

Defining a Characteristic for a Membership Benefit

Prerequisites

To define a characteristic for a membership benefit, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Benefits**)

Procedure

To define a characteristic for a membership benefit:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a membership benefit.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the membership benefit.	Yes (Conditional) **Note:** This field is required while defining a characteristic for a membership benefit.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Benefits**.	Yes (Conditional) **Note:** This field is required while defining a characteristic for a membership benefit.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required while defining a characteristic for a membership benefit.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the membership benefit, click the **Add** (+) icon and then *r*epeat step *2*.

   Note: However, if you want to remove a characteristic of the membership benefit, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the membership benefit.

Benefit (Used for Viewing)

Once you create a membership benefit, the **Benefit** screen allows you to:

- View the details of the membership benefit
- Edit the details of the membership benefit
- Discard the membership benefit
- View the log of the membership benefit
- Add a log entry for the membership benefit

It consists of the following tabs:

- Benefit - Main on page 121
- Benefit - Log on page 123

Benefit - Main

The **Main** tab displays information about the membership benefit. It contains the following zones:

- Benefit on page 121
- Benefit Characteristics on page 123

Benefit

The **Benefit** zone displays the details of the membership benefit. It contains the following sections:

- **Main** - Displays basic information about the membership benefit. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Benefit Information	Displays information about the membership benefit.
Membership Information	Indicates the membership for which the benefit is availed. **Note:** It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Benefit Source	Indicates the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State
Benefit Type	Indicates the type of benefit availed for the membership. The valid values are: • Commercial • Medicare Affiliated
Benefit Sub Type	Indicates whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
Medicare Plan Benefit Package	Indicates the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Not Applicable**.
Start Date	Displays the date from when the benefit is availed for the membership.
End Date	Displays the date till when the benefit is availed for the membership.
Status	Indicates the status of the membership benefit. The valid values are: • Active • Discarded • Inactive
Benefit Amount	Displays the pass-through amount for the availed membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Flat**.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the membership benefit. **Note:** The **Edit** button appears when the membership benefit are in the **Active** status.
Discard	Used to discard a membership benefit. **Note:** The **Discard** button appears when the benefit is in the **Active** or **Inactive** status.

- **Record Information** - This section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the membership benefit is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the membership benefit status is updated.
Create Date/Time	Displays the date and time when the membership benefit is created.

Benefit Characteristics

The **Benefit Characteristics** zone lists the characteristics of the membership benefit. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the membership benefit.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Benefit - Log

The **Log** tab contains the following zone:

- Benefit Log on page 123

Benefit Log

The **Benefit Log** zone lists the complete trail of actions performed on the membership benefit. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the membership benefit.
Details	Displays the details about the action performed on the membership benefit.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
User	Indicates the user who has performed the action on the membership benefit.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the membership benefit.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the membership benefit is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the membership benefit by clicking the **Add Log Entry** link in the upper right corner of the **Benefit Log** zone.

Editing a Membership Benefit

You can only edit the characteristics of a membership benefit from the user interface. On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

Procedure

To edit a membership benefit:

1. Search for the membership benefit in the **Benefit** screen.
2. In the **Search Results** section, click the link in the **Benefit Information** column corresponding to the membership benefit *w*hose details you want to edit.
   The **Benefit** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Benefit** zone.

   The **Benefit** screen appears. It contains the following sections:

   - **Main** - Displays basic details of the membership benefit.
   - **Characteristics** - Used to define the characteristics for the membership benefit.

   The **Main** section contains the following fields:

Field Name	Field Description
Benefit Information	Displays information about the membership benefit.
Membership Information	Indicates the membership for which the benefit is availed.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Benefit Source	Indicates the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • Centers for Medicare and Medicaid Services • State
Benefit Type	Indicates the type of benefit availed for the membership. The valid values are: • Commercial • Medicare Affiliated
Benefit Sub Type	Indicates whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.
Medicare Plan Benefit Package	Indicates the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Not Applicable**.
Start Date	Displays the date from when the benefit is availed for the membership.
End Date	Displays the date till when the benefit is availed for the membership. **Note:** The system enables you to edit the end date of a membership benefit through a health care inbound message or through the membership repricing inbound web service.
Benefit Amount	Displays the pass-through amount for the availed membership benefit. **Note:** This field appears only when the value type in the benefit sub type is set to **Flat**. The system enables you to edit the amount of a membership benefit through a health care inbound message or through the membership repricing inbound web service.

Note: The **Edit** button appears when the membership benefit is in the **Active** status.

5. Define, edit, or remove characteristics of the membership benefit, if required.
6. Click **Save**.
   The changes made to the membership benefit are saved.

Discarding a Membership Benefit

Procedure

To discard a membership benefit:

1. Search for the membership benefit in the **Benefit** screen.
2. In the **Search Results** section, click the link in the **Benefit Information** column corresponding to the *m*embership benefit that you want to discard.
   The **Benefit** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Discard** button in the **Benefit** zone.
   The status of the membership benefit is changed to **Discarded**.

> **Note:** The **Discard** button appears when the membership benefit is in **Active** or **Inactive** status.

Adding a Log Entry for a Membership Benefit

Procedure

To add a log entry for a membership benefit:

Copyright © 2025, Oracle and/or its affiliates.

1. Search for the membership benefit in the **Benefit** screen.
2. In the **Search Results** section, click the link in the **Benefit Information** column corresponding to *t*he membership benefit whose log you want to edit.
   The **Benefit** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Benefit Log** zone.

   The **Add Benefit Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Benefit Information	Displays information about the membership benefit.	Not applicable
Log Details	Used to specify additional comments for the membership benefit.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Benefit Log** zone.

Medicare Preference

The Medicare preference enables you to set the attributes which are used while creating charges for Medicare Part D Low Income Subsidy (LIS) and Late Enrollment Penalty (LEP). While deriving the LIS and LEP details, the system uses the following attributes from the medicare preference:

- Late Enrollment Penalty
- Low Income Subsidy
- Medicare Prescription Drug Coverage

For more information about these attributes, see Defining a Medicare Preference on page 128.

The system considers the medicare preference which is specified in the **Medicare** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a medicare preference through the **Field Mapping** screen.

Searching for a Medicare Preference

Prerequisites

To search for a medicare preference, you should have:

Copyright © 2025, Oracle and/or its affiliates.

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a medicare preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Medicare** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
6. Click **Search**.
   A list of medicare preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Medicare Preference Details

Procedure

To view the details of a medicare preference:

1. Search for the medicare preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the medicare preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the medicare preference in the **Field Mapping** zone.

Defining a Medicare Preference

Prerequisites

To define a medicare preference, you should have:

- Values defined in the **MAP_ENTITY_FLG** lookup field
- Value defined for the **Medicare** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To define a medicare preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.

Copyright © 2025, Oracle and/or its affiliates.

3. Click the **Add** option from the **Field Mapping** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the billing preference. The valid values are: • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the billing preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the billing preference.	Yes
Description	Used to specify the description for the billing preference.	Yes
Detailed Description	Used to specify additional information about the billing preference.	No
Status	Used to indicate the status of the billing preference. The valid values are: • Active • Inactive	Yes

   - **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct	Yes

   - **Preference Settings** - Used to set the attributes in the billing preference. It contains the following fields in a grid:

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Attribute</td><td>Used to indicate the attribute which you want to set in the medicare preference. The valid values are:
Late Enrollment Penalty - Used when you want to indicate the benefit sub type for Medicare Part D LEP in the medicare preference.
Low Income Subsidy - Used when you want to indicate the benefit sub type for Medicare Part D LIS in the medicare preference.
Medicare Prescription Drug Coverage - Used when you want to indicate the benefit sub type for Medicare Part D in the medicare preference.</td><td>Yes (Conditional)
Note: This field is required while setting an attribute in the medicare preference.</td></tr>
<tr><td>Value</td><td>Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the billing preference:<table><tr><th>If the attribute is set to...</th><th>Then, this field is...</th></tr><tr><td>Late Enrollment Penalty</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP.</td></tr><tr><td>Low Income Subsidy</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS.</td></tr><tr><td>Medicare Prescription Drug Coverage</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D.</td></tr></table></td><td>Yes (Conditional)
Note: This field is required while setting an attribute in the medicare preference.</td></tr>
<tr><td>Entity Type</td><td>Used to indicate the type of entity for which the attribute is applicable. The valid values are:
Account
Billable Charge
Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</td><td>No</td></tr>
</table>

Note: While defining a medicare preference, you must set at least one attribute in the billing preference.

6. Select the **Medicare** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the medicare preference, click the **Add** (+) icon and then repeat step 8.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** However, if you want to remove an attribute from the medicare preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The medicare preference is defined.

Editing a Medicare Preference

Prerequisites

To edit a medicare preference, you should have:

- Values defined in the **MAP_ENTITY_FLG** lookup field
- Value defined for the **Medicare** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To edit a medicare preference:

1. Search for the medicare preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the medicare preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the medicare preference.	Not applicable
Description	Used to specify the description for the medicare preference.	Yes
Detailed Description	Used to specify additional information about the medicare preference.	No
Status	Used to indicate the status of the medicare preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Medicare	Not applicable

   - **Preference Settings** - Used to set the attributes in the medicare preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the medicare preference. The valid values are: • **Late Enrollment Penalty** - Used when you want to indicate the benefit sub type for Medicare Part D LEP in the medicare preference. • **Low Income Subsidy** - Used when you want to indicate the benefit sub type for Medicare Part D LIS in the medicare preference.	Yes (Conditional) **Note:** This field is required while setting an attribute in the medicare preference.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• Medicare Prescription Drug Coverage - Used when you want to indicate the benefit sub type for Medicare Part D in the medicare preference.</td><td></td></tr>
<tr><td>Value</td><td>Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the billing preference:
<table><tr><th>If the attribute is set to...</th><th>Then, this field is...</th></tr><tr><td>Late Enrollment Penalty</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP.</td></tr><tr><td>Low Income Subsidy</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS.</td></tr><tr><td>Medicare Prescription Drug Coverage</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D.</td></tr></table></td><td>Yes (Conditional)
Note: This field is required while setting an attribute in the medicare preference.</td></tr>
<tr><td>Entity Type</td><td>Used to indicate the type of entity for which the attribute is applicable. The valid values are:
• Account
• Billable Charge
Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</td><td>No</td></tr>
</table>

Tip: Alternatively, you can edit the details of a medicare preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the medicare preference, if required.

Note: You must set at least one attribute in a medicare preference.

5. Click **Save**.
   The changes made to the medicare preference are saved.

Copying a Medicare Preference

Instead of creating a medicare preference from scratch, you can create a new medicare preference using an existing medicare preference. This is possible through copying a medicare preference. On copying a medicare preference, the details including the attributes are copied to the new medicare preference. You can then edit the details, if required.

Prerequisites

To copy a medicare preference, you should have:

- Medicare preference (whose copy you want to create) defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field
- Value defined for the **Medicare** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To copy a medicare preference:

1. Search for the medicare preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the medicare preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the medicare preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the medicare preference.	Yes
Description	Used to specify the description for the medicare preference.	Yes
Detailed Description	Used to specify additional information about the medicare preference.	No
Status	Used to indicate the status of the medicare preference. The valid values are: • Active • Inactive	Yes
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Medicare	Not applicable

   - **Preference Settings** - Used to set the attributes in the medicare preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the medicare preference. The valid values are: • **Late Enrollment Penalty** - Used when you want to indicate the benefit sub type for Medicare Part D LEP in the medicare preference. • **Low Income Subsidy** - Used when you want to indicate the benefit sub type for Medicare Part D LIS in the medicare preference.	Yes (Conditional) **Note:** This field is required while setting an attribute in the medicare preference.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• Medicare Prescription Drug Coverage - Used when you want to indicate the benefit sub type for Medicare Part D in the medicare preference.</td><td></td></tr>
<tr><td>Value</td><td>Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the billing preference:
<table><tr><th>If the attribute is set to...</th><th>Then, this field is...</th></tr><tr><td>Late Enrollment Penalty</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LEP.</td></tr><tr><td>Low Income Subsidy</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D LIS.</td></tr><tr><td>Medicare Prescription Drug Coverage</td><td>Used to specify the benefit sub type that you want to use while creating charges for Medicare Part D.</td></tr></table></td><td>Yes (Conditional)
Note: This field is required while setting an attribute in the medicare preference.</td></tr>
<tr><td>Entity Type</td><td>Used to indicate the type of entity for which the attribute is applicable. The valid values are:

Medicare Plan Benefit Package

You can define an Employer Group Waiver Plan (EGWP) (i.e. 800 series plan) as a Medicare plan benefit package in the system. While defining a Membership benefit of a member person for Medicare Part A, Part B, and Part D, you need to indicate the Medicare plan benefit package which is applicable for the Membership benefit. You can then use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. In this way, the system enables you to offer different pricing for different EGWPs (i.e. 800 series plans).

The system enables you to define, edit, delete, and copy a Medicare plan benefit package through the **Field Mapping** screen.

Searching for a Medicare Plan Benefit Package

Prerequisites

To search for a Medicare plan benefit package, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a Medicare plan benefit package:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Medicare Plan Benefit** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of Medicare plan benefit packages that meet the search criteria appears in the **Search Results** section.

Viewing the Medicare Plan Benefit Package Details

Procedure

To view the details of a Medicare plan benefit package:

1. Search for the Medicare plan benefit package in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the Medicare plan benefit package whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the Medicare plan benefit package in the **Field Mapping** zone.

Geographic Rating Area Preference

Oracle Revenue Management and Billing enables you to use the geographic rating area as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different geographic rating area.

Once you define a geographic rating area, the system can derive the geographic rating area for a membership. While deriving the geographic rating area for a membership, the system uses the following attributes from the geographic rating area preference:

- Address Source Characteristic Type
- Address Type Characteristic Type
- Default Address Source
- Default Address Type
- Default Geographic Rating Area
- Geographic Rating Area Characteristic Type
- Use Plan Details

For more information about these attributes, see Defining a Geographic Rating Area Preference on page 140.

The system considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a geographic rating area preference through the **Field Mapping** screen.

	plan number, and source system combination. • **No** - Used when you want to derive the geographic rating area using the state and zip code combination.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Billable Charge **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a geographic rating area preference, you must set at least one attribute in the geographic rating area preference.

6. Select the **Geographic Rating Area** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the geographic rating area preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the geographic rating area preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The geographic rating area preference is defined.

Editing a Geographic Rating Area Preference

Prerequisites

To edit a geographic rating area preference, you should have:

- Values defined in the **ADDRESS_SRC_FLG**, **ADDRESS_TYPE_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Geographic rating areas defined in the application

Procedure

To edit a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the geographical rating area preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the geographic rating area preference. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the geographic rating area preference.	Not applicable
Description	Used to specify the description for the geographic rating area preference.	Yes
Detailed Description	Used to specify additional information about the geographic rating area preference.	No
Status	Used to indicate the status of the geographic rating area preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Geographic Rating Area	Not applicable

- **Preference Settings** - Used to set the attributes in the geographic rating area preference. It contains the following fields in a grid:

Copying a Geographic Rating Area Preference

Instead of creating a geographic rating area preference from scratch, you can create a new geographic rating area preference using an existing geographic rating area preference. This is possible through copying a geographic rating area preference. On copying a geographic rating area preference, the details including the attributes are copied to the new geographic rating area preference. You can then edit the details, if required.

Prerequisites

To copy a geographic rating area preference, you should have:

- Geographic rating area preference (whose copy you want to create) defined in the application
- Values defined in the **ADDRESS_SRC_FLG**, **ADDRESS_TYPE_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Geographic rating areas defined in the application

Procedure

To copy a geographic rating area preference:

1. Search for the geographic rating area preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the geographical rating area preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the geographic rating area preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the geographic rating area preference.	Yes
Description	Used to specify the description for the geographic rating area preference.	Yes
Detailed Description	Used to specify additional information about the geographic rating area preference.	No
Status	Used to indicate the status of the geographic rating area preference. The valid values are: • Active • Inactive	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Geographic Rating Area	Not applicable

- **Preference Settings** - Used to set the attributes in the geographic rating area preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the geographic rating area preference. The valid values are: • **Address Source Characteristic Type** - Used when the system derives the geographic rating area for a membership.	Yes (Conditional) **Note:** This field is required while setting an attribute in the geographic rating area preference.

	• **Address Type Characteristic Type** - Used when the system derives the geographic rating area for a membership.
	• **Default Address Source** - Used when the address source characteristic is not defined for any of the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
	  • State where the Policy is Issued
	• **Default Address Type** - Used when the address type characteristic is not defined for any of the following entities:
	  • Policy Plan
	  • State where the Policy Plan is Issued
	  • Policy
	  • State where the Policy is Issued
	• **Default Geographic Rating Area** - Used when the system is unable to derive the geographic rating area for the following combination:
	  • State and zip code (this combination is considered when the **Use Plan Details** attribute is set to **No**)
	  • State, zip code, policy number, plan number, and source system (this combination is considered when the **Use Plan Details** attribute is set to **Yes**)
	• **Geographic Rating Area Characteristic Type** - Used when the system stores the geographic rating area for a membership.
	• **Use Plan Details** - Used to indicate whether the policy number, plan number, and source system should be considered while deriving the geographic rating area for a membership.

Member Relationship and Subscription Tier Preference

Oracle Revenue Management and Billing enables you to use the member relationship (i.e. how a member is related to the main subscriber of the membership) as a pricing parameter while defining the age based, tier based, and additional fee pricing rules. This feature facilitates you to offer different rates for a price item based on different member relationship.

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, the system automatically derives the member relationship for each member person of the membership from a member relationship structure. While deriving the member relationship for a member person, the system uses the following attributes from the member relationship and subscription tier preference:

- Age Calculation Date Basis Characteristic Type
- Max Age Limit for Max Dependent Count Characteristic Type
- Max Number of Dependents Order Priority Characteristic Type
- Member Relationship Characteristic Type
- Maximum Number of Dependents Characteristic Type
- Member Relationship Derivation Date Characteristic Type
- Member Relationship Structure Characteristic Type
- New Born Gift Days Characteristic Type
- New Born Gift Days Applicability Characteristic Type
- Young Adult Max Age Limit Characteristic Type
- Young Adult Max Age Limit Applicability Characteristic Type

For more information about these attributes, see Defining a Member Relationship and Subscription Tier Preference on page 157.

Similarly, the system enables you to use the membership subscription tier as a pricing parameter while defining the tier based pricing rules. This feature facilitates you to offer different rates for a price item based on different membership subscription tier.

Copyright © 2025, Oracle and/or its affiliates.

While determining the subscription tier for a membership, the system derives the subscription tier for the membership from a subscription tier structure. While deriving the subscription tier for a membership, the system uses the following attributes from the member relationship and subscription tier preference:

- Age Calculation Date Basis Characteristic Type
- Max Age Limit for Max Dependent Count Characteristic Type
- Max Number of Dependents Order Priority Characteristic Type
- Maximum Number of Dependents Characteristic Type
- New Born Gift Days Characteristic Type
- New Born Gift Days Applicability Characteristic Type
- Subscription Tier Structure Characteristic Type
- Subscription Tier Characteristic Type
- Young Adult Max Age Limit Characteristic Type
- Young Adult Max Age Limit Applicability Characteristic Type

For more information about these attributes, see Defining a Member Relationship and Subscription Tier Preference on page 157.

The system considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a member relationship and subscription tier preference through the **Field Mapping** screen.

Searching for a Member Relationship and Subscription Tier Preference

Prerequisites

To search for a member relationship and subscription tier preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a member relationship and subscription tier preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Member Relationship and Subscription Tier Preferences** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
6. Click **Search**.

Copyright © 2025, Oracle and/or its affiliates.

A list of member relationship and subscription tier preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Member Relationship and Subscription Tier Preference Details

Procedure

To view the details of a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the member relationship and subscription tier preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the member relationship and subscription tier preference in the **Field Mapping** zone.

Defining a Member Relationship and Subscription Tier Preference

Prerequisites

To define a member relationship and subscription tier preference, you should have:

- Required characteristic types defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To define a member relationship and subscription tier preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the member relationship and subscription tier preference. The valid values are: • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.

Copyright © 2025, Oracle and/or its affiliates.

5. Click **OK**.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member relationship and subscription tier preference.	Yes
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: • Active • Inactive	Yes

   - **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct	Yes

   - **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are: • **Age Calculation Date Basis Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • **Max Age Limit for Max Dependent Count Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member relationship and subscription tier preference.

Field Name	Field Description	Mandatory (Yes or No)
	This type of characteristic can be defined for the following entities: • Policy Plan • Policy Here, you must specify a characteristic type where the characteristic entity is set to **Policy Plan** and **Policy**.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Billable Charge **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a member relationship and subscription tier preference, you must set at least one attribute in the member relationship and subscription tier preference.

6. Select the **Member Relationship and Subscription Tier Preferences** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the member relationship and subscription tier preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the member relationship and subscription tier preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The member relationship and subscription tier preference is defined.

Editing a Member Relationship and Subscription Tier Preference

Prerequisites

To edit a member relationship and subscription tier preference, you should have:

- Required characteristic types defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To edit a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the member relationship and subscription tier preference whose details you want to edit.

Copyright © 2025, Oracle and/or its affiliates.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the member relationship and subscription tier preference.	Not applicable
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Member Relationship and Subscription Tier	Not applicable

- **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are: • **Age Calculation Date Basis Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • **Max Age Limit for Max Dependent Count Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • **Max Number of Dependents Order Priority Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member relationship and subscription tier preference.
	• **Member Relationship Characteristic Type** - Used when the system stores the member relationship for a member person. • **Maximum Number of Dependents Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • **Member Relationship Derivation Date Characteristic Type** - Used when the system

Copying a Member Relationship and Subscription Tier Preference

Instead of creating a member relationship and subscription tier preference from scratch, you can create a new member relationship and subscription tier preference using an existing member relationship and subscription tier preference. This is possible through copying a member relationship and subscription tier preference. On copying a member relationship and subscription tier preference, the details including the attributes are copied to the new member relationship and subscription tier preference. You can then edit the details, if required.

Prerequisites

To copy a member relationship and subscription tier preference, you should have:

- Member relationship and subscription tier preference (whose copy you want to create) defined in the application
- Required characteristic types defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To copy a member relationship and subscription tier preference:

1. Search for the member relationship and subscription tier preference in the **Field Mapping** screen.

Copyright © 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the member relationship and subscription tier preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the member relationship and subscription tier preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member relationship and subscription tier preference.	Yes
Description	Used to specify the description for the member relationship and subscription tier preference.	Yes
Detailed Description	Used to specify additional information about the member relationship and subscription tier preference.	No
Status	Used to indicate the status of the member relationship and subscription tier preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Member Relationship and Subscription Tier	Not applicable

   - **Preference Settings** - Used to set the attributes in the member relationship and subscription tier preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member relationship and subscription tier preference. The valid values are: • **Age Calculation Date Basis Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • **Max Age Limit for Max Dependent Count Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • **Max Number of Dependents Order Priority Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • **Member Relationship Characteristic Type** - Used when the system stores the member relationship for a member person. • **Maximum Number of Dependents Characteristic Type** - Used when the system derives the member relationship for a member person and the subscription tier for a membership. • **Member Relationship Derivation Date Characteristic Type** - Used when the system	Yes (Conditional) **Note:** This field is required while setting an attribute in the member relationship and subscription tier preference.

Chapter 5

Fully-Insured Group Health Insurance

Topics:

- Pre-requisites
- Fully-Insured Group Policy
- Fully-Insured Group Policy Status Transition
- Membership Status Transition
- Types of Policy Plan
- Types of Membership
- Algorithms Used in C1-POLICY
- Algorithms Used in C1-PolicyPlan
- Algorithms Used in C1-Membership
- Late Setup Notification
- To Do Creation for Manual Refund/Write Off on Direct Billed Group Membership Cancellation
- Policy (Used for Searching)
- Policy (Used for Viewing)
- Policy Plan (Used for Viewing)
- Membership (Used for Searching)
- Membership (Used for Viewing)

Group insurance health plans provide coverage to a group of members, usually comprised of company employees or members of an organization. Among all types of group insurance health plans, the fully-insured plan is one of the traditional way to structure an employer-sponsored health plan. It is also commonly known as fully-insured employee health insurance.

In the fully-insured group health plan, the employer contracts an insurance company to cover the employees and their dependents. The employer pays a premium to the insurance carrier. The premium rates are fixed for a year based on the number of employees which are enrolled in the plan. The monthly premium changes during the year when the number of enrolled employees change in the plan. The insurance carrier collects the premium from the employer and pays the health insurance claims to the employees based on the coverage benefits outlined in the policy. The covered persons (i.e. employees and dependents) are responsible to pay any deductible amounts or co-payments required for covered services under the policy.

Oracle Revenue Management and Billing (ORMB) provides specialized methodologies for calculating premium for the employees and their dependents and then bill the total premium to the employer (known as the parent customer in ORMB) or to its logical designed billing entities (known as the bill groups in ORMB). The system enables you to offer different rates for a covered service depending on the following:

- Age of the employee or dependent
- How dependent person is related to the main subscriber
- Membership subscription tier
- Geographic rating area
- Membership or member person attributes

Oracle Revenue Management and Billing (ORMB) enables you to use the pricing methodologies and the billing engine for the fully-insured group health insurance business. To design the pricing and billing models for the fully-insured group health insurance business, you need to create the following entities in ORMB:

- Parent Customer
- Bill Groups
- Bill Group's Account
- Fully-Insured Group Policy
- Policy Plans
- Price Items (for each covered service in the policy)
- Pricing Rule Types
- Pricing Rules

Pre-requisites

To set the billing system for a fully-insured group customer, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the status reasons for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the status reasons for the **Reinstated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the required price items in the system.
- Define the required age based, tier based, pass-through billable charge, additional fee, and/or benefit pricing rule types.
- Define the required characteristic types where the characteristic entity is set to **Policy Plan**.
- Define the required contract relationship types in the system.
- Define the required characteristic types where the characteristic entity is set to **Membership**.
- Define the required characteristic types where the characteristic entity is set to **Membership Person**.
- Define the required characteristic types where the characteristic entity is set to **Benefits**.
- Define the required contracts (which you want to associate with a membership) in the system.
- Define the values for the **BILL_TO_TYPE_FLG**, **BENEFIT_TYPE_FLG**, **BENEFIT_SUB_TYPE_FLG**, and **BENEFIT_SRC_FLG** lookup fields
- Define the required parameter values in the following algorithm which is attached to the **C1-POLICY** business object:
  - C1-POLBOVAL
- Define the required parameter values in the following algorithms which are used in the lifecycle of the **C1-POLICY** business object:
  - C1-EVCSTSTAT
  - C1-PLCYTRMRQ
  - C1-POLCYTERM
  - C1-DELTRMLTR
  - C1-PLCYREIRQ
  - C1-POLCYREIN
  - C1-CCPOLRE1
- Define a predefined characteristic type named **Active Employee Coverage Billing Arrangement** with the following characteristic values:

Characteristic Value	**Description**
DRT	Direct Billing
GRP	Group Billing

  You must set the characteristic entity of the **Active Employee Coverage Billing Arrangement** characteristic type to **Person**.
- Define a predefined characteristic type named **Benefit Billing Arrangement** with the following characteristic values:

Characteristic Value	**Description**
DRT	Direct Billing

Copyright © 2025, Oracle and/or its affiliates.

Characteristic Value	Description
GRP	Group Billing

You must set the characteristic entity of the **Benefit Billing Arrangement** characteristic type to **Person**, **Policy**, and **Policy Plan**.

- Define a predefined characteristic type named **COBRA Billing Arrangement** with the following characteristic values:

Characteristic Value	Description
DRT	Direct Billing
GRP	Group Billing
TPA	TPA Billing

You must set the characteristic entity of the **COBRA Billing Arrangement** characteristic type to **Person**, **Policy**, and **Policy Plan**.

- Define the required person relationship types and account relationship types in the system.
- Define the required geographic rating areas in the system.
- Define the required member relationship/subscription tier structures in the system.
- Define the required geographic rating area preference and member relationship and subscription tier preference through the **Field Mapping** screen.
- Define the required Medicare plan benefit packages in the system.
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
  - Bill Group Person Type
  - Parent Person Type
  - TPA Person Type
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Membership ID Characteristic for Billable Charge
  - Parent Customer Policy Person Role
  - Bill Group Policy Person Role
  - Membership Inactive Status
  - Membership Person Inactive Status
  - Rating Area Field Mapping for Group
  - Relation Structure Code Field Mapping
  - Billing Arrangement
  - Benefit Billing Arrangement
  - Cobra Billing Arrangement
  - TPA Person Relationship Type
  - TPA Account Relationship Type
  - TPA Policy Person Role

Fully-Insured Group Policy

You can create a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. The policy type indicates the business object using which the fully-insured group policy should be created in the system.

Note: At present, the **Fully-Insured Individual** policy category is not yet supported in the system.

As per the fully-insured group health insurance business, the system enables you to create a fully-insured group policy for the following:

- A parent customer (where a bill group is not associated)
- A bill group (where the parent customer is the policy holder)

You can create or edit a fully-insured group policy from the **Policy** screen. In addition, you can create or edit a fully-insured group policy through a customer registration object or a health care inbound message. If the fully-insured group policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

However, if the fully-insured group policy information is given for a parent customer in a health care inbound message, the system does the following:

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

A fully-insured group policy encapsulates the following information:

- **Policy Persons** - While creating a fully-insured group policy, you need to associate the person who is the main customer of the policy. While associating a person with a fully-insured group policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a fully-insured group policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Plans** - You can define different types of plans in a fully-insured group policy. For more information, refer to Types of Policy Plan on page 215.
- **Memberships** - You can define different types of memberships for a fully-insured group policy plan. For more information, refer to Types of Membership on page 216.
- **Member Persons** - While adding a person to a membership, you need to specify whether the person is the main subscriber of the membership, whether the person is financially responsible for the membership, and how the person is related to the main subscriber. At a time, only one person can be the main subscriber of the membership. You cannot remove a member person, who is the main subscriber, from the membership. You can inactivate a member

Copyright © 2025, Oracle and/or its affiliates.

person whenever required. If you inactivate a member person who is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership.

- **Membership Contracts** - You can associate one or more contracts with a membership. At present, the system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. The system does not use the membership contracts for billing the membership premium.
- **Policy Plan Contracts** - The system creates or updates contracts of a policy plan when you do either of the following:
  - Create or Edit a Policy Plan from the User Interface or through an Inbound Message
  - Create or Edit an Account from the User Interface or through an Inbound Message

  The system uses the contract created for a policy plan on the accounts of the parent customer or bill group for billing the respective membership premium. For more information, refer to Single Contract Creation Across Fully-Insured Group Policies and Plans on page 189 and Policy Plan Specific Contract Creation on page 203.

On defining a fully-insured group policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a fully-insured group policy is activated, you can terminate, reinstate, or renew the policy whenever required.

Fully-Insured Group Policy Activation

You can activate a fully-insured group policy by clicking the **Activate** button in the **Policy** screen. On activating a fully-insured group policy, the status of the policy is set to **In Force/Active**.

Note: If a fully-insured group policy is created through a customer registration object or a health care inbound message, the status of the policy is directly set to **In Force/Active**

Once a fully-insured group policy is activated, you can terminate, reinstate, or renew the policy whenever required.

Fully-Insured Group Policy Termination

The system enables you to terminate a fully-insured group policy whenever required. There are two ways in which you can terminate a fully-insured group policy:

- **Initiate Policy Termination Process** - In this method, you can initiate the policy termination process from the user interface. To initiate the termination process, you need to specify the termination date and termination reason. On initiating the termination process, the status of the policy is changed to **Pending Termination**. In addition, the system creates an outbound message which request for confirmation whether the policy should be terminated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Terminated**.
- **Terminate Policy** - In this method, you can directly terminate a fully-insured group policy. To terminate a fully-insured group policy, you need to specify the termination reason. You can directly terminate the policy from the user interface or through a health care inbound message. On clicking the **Terminate** button, the system will terminate the fully-insured group policy on the system date. However, when you terminate a fully-insured group policy through a health care inbound message, the policy is terminated when the health care inbound message is processed in the system. On terminating a fully-insured group policy, the status of the policy is changed to **Terminated**.

Once the status of the policy is changed to **Terminated**, the system sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)

  Note: The system does not consider those persons associated with policy whose start date is later than the termination date or whose end date is earlier than the termination date.
- Policy Plan (when the termination date falls within the date range of the policy plan)

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** The system does not consider those policy plans whose start date is later than the termination date or whose end date is earlier than the termination date.

- Membership (when the termination date falls within the date range of the membership)

> **Note:** The system does not consider those memberships whose start date is later than the termination date or whose end date is earlier than the termination date.

- Member Person (when the termination date falls within the date range in which the person is associated with the membership)

> **Note:** The system does not consider those member persons whose start date is later than the termination date or whose end date is earlier than the termination date.

- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

> **Note:** The system does not consider those contracts whose start date is later than the termination date or whose end date is earlier than the termination date.

The system also changes the status of all memberships to **Terminated** irrespective of whether it is effective on the termination date or not. On terminating a membership, the system creates an audit event for the membership. For each audit event, the system identifies the policy plan to which the membership belongs and the active pricing rules defined on the policy plan. It then identifies the pricing rule types using which these active pricing rules are created in the system. An entry for each membership, pricing rule type, and effective date combination is created in the **Pending (P)** status in the **CI_REPRC_ENTITY_DTL** table. For more information, see Audit Framework for Fully-Insured Billing on page 3380.

Fully-Insured Group Policy Reinstatement

The system enables you to reinstate the terminated policy whenever required. There are two ways in which you can reinstate a fully-insured group policy:

- **Initiate Policy Reinstatement Process** - In this method, you can initiate the policy reinstatement process from the user interface. To initiate the reinstatement process, you need to specify the reinstatement reason. On initiating the reinstatement process, the status of the policy is changed to **Pending Reinstatement**. In addition, the system creates an outbound message which request for confirmation whether the policy should be reinstated. This outbound message can be sent to the policy processing system via custom mechanism. On receiving confirmation from the policy processing system through a health care inbound message, the system changes the status of the policy to **Reinstated**.
- **Reinstate Policy** - In this method, you can directly reinstate a fully-insured group policy. To reinstate a fully-insured group policy, you need to specify the reinstatement reason. You can directly reinstate the policy from the user interface or through a health care inbound message. On clicking the **Reinstate** button, the system will reinstate the fully-insured group policy on the system date. However, when you reinstate a fully-insured group policy through a health care inbound message, the policy is reinstated when the health care inbound message is processed in the system. On reinstating a fully-insured group policy, the status of the policy is changed to **Reinstated**.

Once the status of the policy is changed to **Reinstated**, the system updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

Copyright © 2025, Oracle and/or its affiliates.

Note:

The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

Finally, the system automatically transitions the fully-insured group policy from **Reinstated** to **In Force/Active**.

Fully-Insured Group Policy Renewal

You can renew a fully-insured group policy only through a health care inbound message and not from the user interface. If you want to renew a fully-insured group policy, you must sent the renewal date along with the new policy end date through a health care inbound message. On processing the health care inbound message, the fully-insured group policy is renewed. The renewal date is stamped on the fully-insured group policy. The policy end date is extended as mentioned in the health care inbound message. The policy plan and membership information for the renewed period must be sent in the subsequent health care inbound messages.

Note: You can renew a fully-insured group policy when it is in the **In Force/Active** status.

Single Contract Creation Across Fully-Insured Group Policies and Plans

The system automatically creates a contract for a fully-insured group policy plan on the parent customer and/or bill group accounts. The system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** - The system creates a contract in either of the following ways:
  - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
  - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

    If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans - PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items - PI1, PI2, and PI3, and PRT2 contains three price items - PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

  The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with different price items, and if these price items are added on different pricing rule types, and if these pricing rule types are associated with different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Example 1 - Contract Creation for a Parent Customer

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one contract using each contract type on each account of the parent customer and bill groups. Let us assume that…

- PC1 has two bill groups - BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with two plans - PP1 and PP2 - is created for PC1 (where none of the bill groups are associated)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains three price items - PI1, PI3, and PI4
- PRT3 contains three price items - PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1, A2, A3, and A4 accounts in the above stated scenario:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)
A1	PP1	PRTI	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019)	01-01-2019
		PRT2	PI1	CT1	A1C1	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019
			PI3	CT3	A1C3	PP1 (01-01-2019) and PP2 (03-01-2019)	01-01-2019

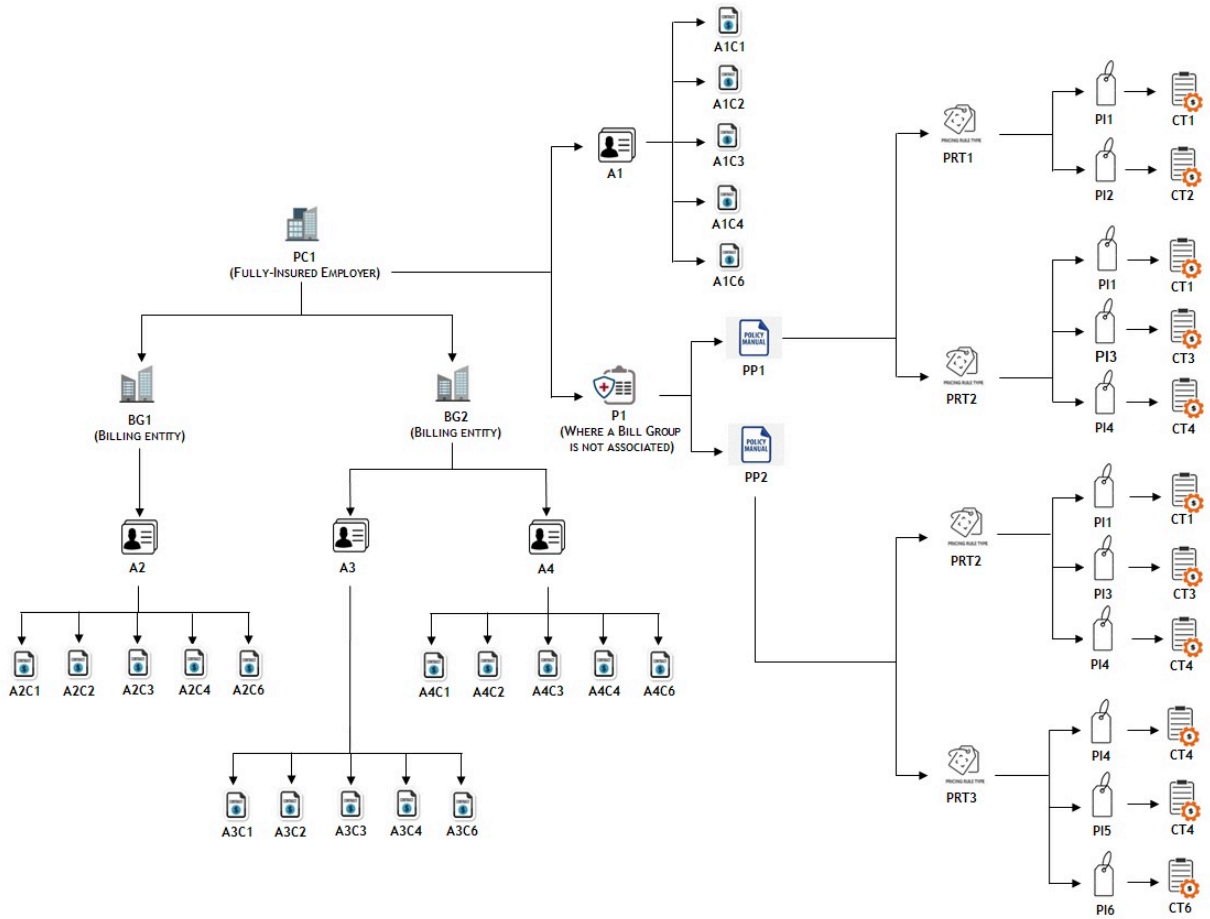
The following figure graphically illustrates the example 1:



Example 2 - Contract Creation for a Bill Group

Copyright © 2025, Oracle and/or its affiliates.

If a policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one contract using each contract type on each account of the parent customer and the bill group. Let us assume that…

- PC1 has two bill groups - BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with three plans - PP1, PP2, and PP3 - is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains three price items - PI1, PI3, and PI4
- PRT3 contains three price items - PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1 and A2 accounts in the above stated scenario:

Account	**Plan**	**Pricing Rule Type**	**Price Item**	**Contract Type**	**Contract**	**Plans for which the contract is created…**	**Contract Start Date (i.e. Earliest Plan Date)**
A1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019
			PI2	CT2	A1C2	PP1 (01-01-2019) and PP3 (06-01-2019)	01-01-2019
		PRT2	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (03-01-2019), and PP3 (06-01-2019)	01-01-2019

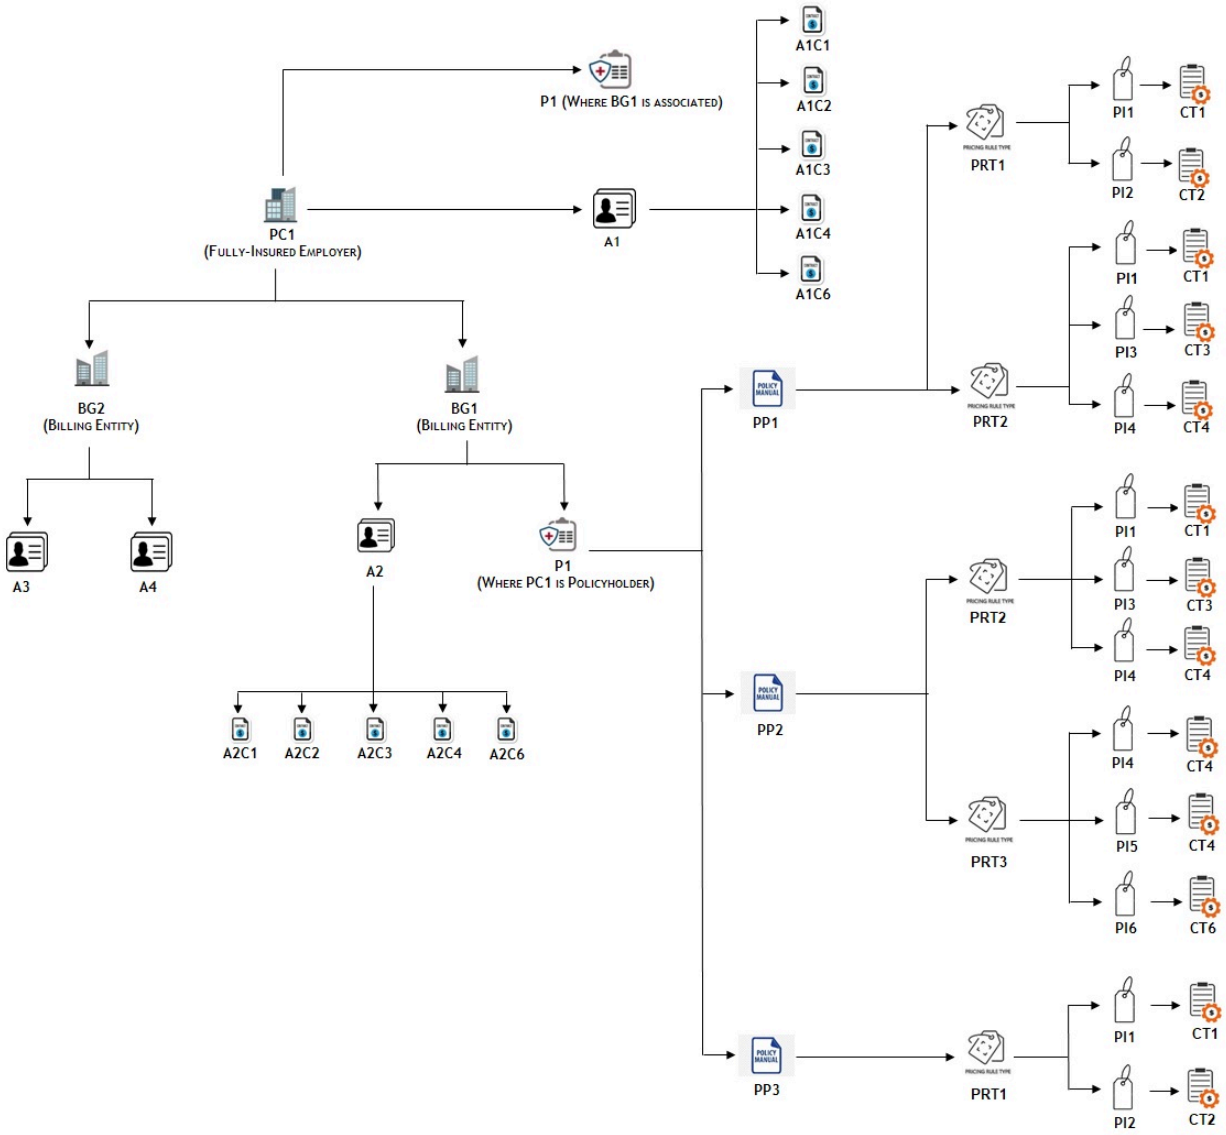
The following figure graphically illustrates the example 2:

Copyright © 2025, Oracle and/or its affiliates.



Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

- **Create or Edit an Account from the User Interface or through an Inbound Message** - The system creates a contract when either of the following condition is met:
  - The main customer of the account is a parent customer and holds a policy (where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
  - The main customer of the account is a parent customer and holds a policy (where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
  - The main customer of the account is a bill group and holds a policy (where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

  The system creates a contract in either of the following ways:

Copyright © 2025, Oracle and/or its affiliates.

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

  If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans - PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items - PI1, PI2, and PI3, and PRT2 contains three price items - PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create five contracts - C1 using CT1, C2 using CT2, C3 using CT3, C4 using CT4, and C5 using CT5. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with different price items, and if these price items are added on different pricing rule types, and if these pricing rule types are associated with different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Example 3 - Contract Creation for an Account of a Parent Customer

If you create an account for a parent customer who holds polices (where a bill group may or may not be associated), the system will create one contract using each contract type for all parent customer's policies on the account. Let us assume…

- PC1 has two bill groups - BG1 and BG2
- PC1 has two policies - a policy named P1 (where a bill group is not associated) and a policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder
- An account named A1 is added for PC1
- P1 has two plans - PP1 and PP2
- P2 has two plans - PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains two price items - PI3 and PI4
- PRT3 contains two price items - PI1 and PI5
- PRT4 contains two price items - PI6 and PI7
- PRT111 contains two price items - PI11 and PI12
- PRT112 contains two price items - PI1 and PI5
- PRT113 contains two price items - PI13 and PI14
- PRT114 contains two price items - PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type,

Copyright © 2025, Oracle and/or its affiliates.

PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)
A1	P1	PP1	PRT1	PI1	CT1	A1C1	PP1 (01-01-2019), PP2 (06-01-2019), and PP11 (05-01-2019)	01-01-2019

Example 4 - Contract Creation for an Account of a Bill Group

If you create an account for a bill group who holds policies and its parent customer holds policies (where a bill group may or may not be associated), the system will create one contract using each contract type for the bill group's polices and parent customer's polices (where a bill group is not associated) on the account. Let us assume…

- PC1 has two bill groups - BG1 and BG2
- PC1 has two policies - a policy named P2 (where a bill group is not associated) and a policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans - PP11 and PP12
- P2 has two plans - PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains two price items - PI3 and PI2
- PRT3 contains two price items - PI3 and PI4
- PRT4 contains two price items - PI5 and PI6
- PRT11 contains two price items - PI111 and PI112
- PRT12 contains two price items - PI1 and PI6
- PRT13 contains two price items - PI113 and PI114
- PRT14 contains two price items - PI115 and PI5

Copyright © 2025, Oracle and/or its affiliates.

- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

The following table indicates the distinct contracts that would be created across policy plans on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Plans for which the contract is created…	Contract Start Date (i.e. Earliest Plan Date)

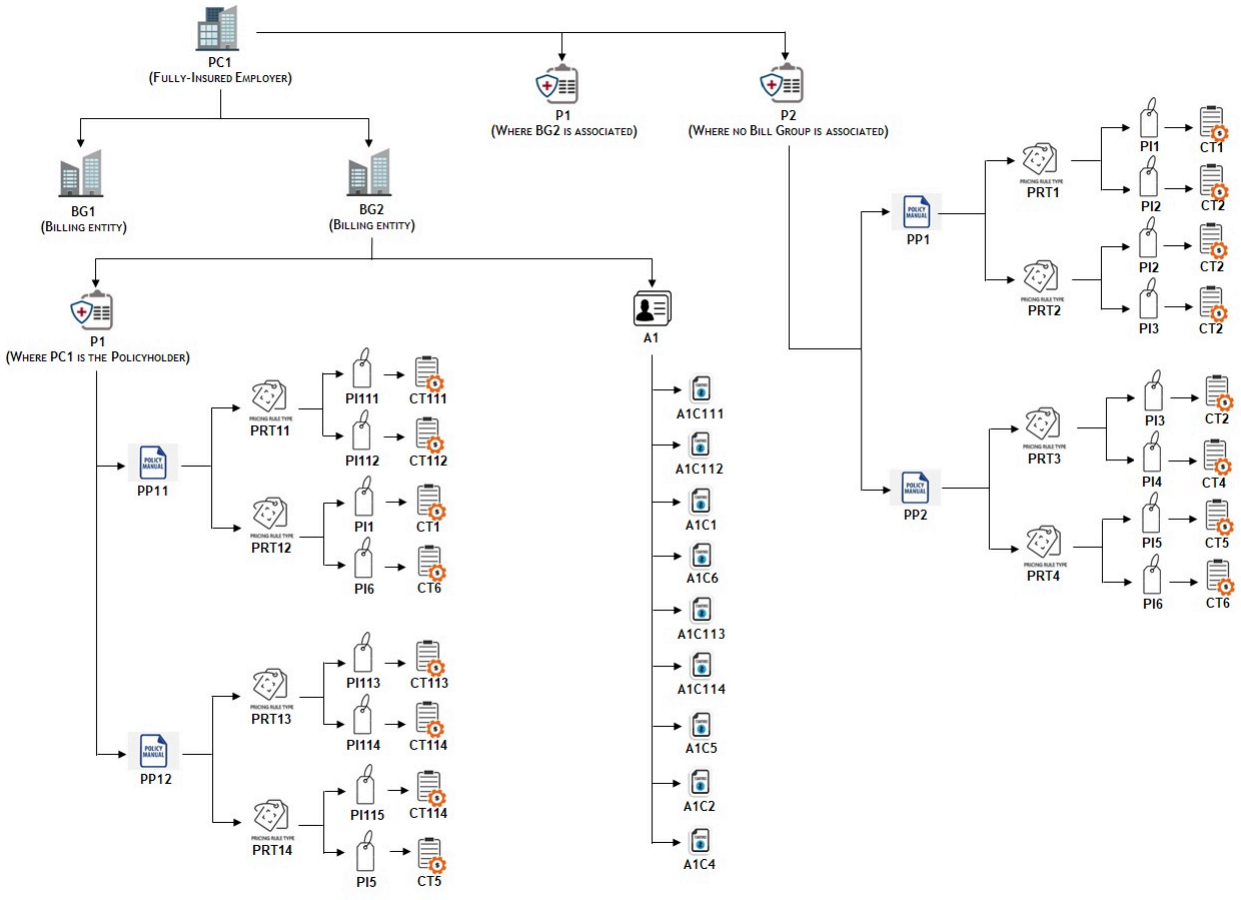
The following figure graphically illustrates the example 4:



Copyright © 2025, Oracle and/or its affiliates.

Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

Policy Plan Specific Contract Creation

In the Single Contract Creation Across Fully-Insured Group Policies and Plans on page 189 section, we have seen how the system creates one contract across fully-insured group policies and plans on the parent customer and/or bill group accounts. Alternatively, the system enables you to create a plan-specific contract (i.e. a contract using a contract type for each plan) on the parent customer and/or bill group accounts. You can opt for the plan-specific contract creation feature when you want to implement plan-specific business rules. For example, different payment priorities for your medical and dental plans. Under such conditions, you can create different contract types for different plans, say Medical and Dental and enable creation of different contracts using these contract types for billing different plans.

You can configure the plan-specific contract creation feature for the fully-insured group health insurance business by setting the following option types in the **C1-ASOBLLNG** feature configuration:

- **Plan ID Characteristic Type** - Used to specify the characteristic type where you want to store the plan for which the contract is created. During the plan-specific contract creation, this characteristic is defined on the contract. Here, you must specify a characteristic type where the characteristic entity is set to **Contract**.
- **Plan Based Contract Creation Eligibility** - Used to indicate whether the system should create plan-specific contract on the account. The valid value is **Yes**.

Alternatively, you can also configure the plan-specific contract creation feature for specific persons (i.e. main customers of the policy) based on the business requirement. This is possible by setting the following option types in the **C1-ASOBLLNG** feature configuration:

- **Plan Based Contract Characteristic Type** - Used to specify the characteristic type which helps the system to determine whether plan-specific contracts should be created on the account. This characteristic must be defined on the person for whom you want to create plan-specific contracts on the accounts. Here, you must specify a characteristic type where the characteristic entity is set to **Person**.
- **Plan Based Contract Characteristic Value** - Used to specify the characteristic value which indicates that the system should create plan-specific contracts on the accounts.
- **Plan ID Characteristic Type** - Used to specify the characteristic type where you want to store the plan for which the contract is created. During the plan-specific contract creation, this characteristic is defined on the contract. Here, you must specify a characteristic type where the characteristic entity is set to **Contract**.

Here, the system creates or updates contracts of a policy plan when you do either of the following:

- **Create or Edit a Policy Plan from the User Interface or through an Inbound Message** - The system creates a contract in either of the following ways:
  - If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
  - If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

Copyright © 2025, Oracle and/or its affiliates.

If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans - PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items - PI1, PI2, and PI3, and PRT2 contains three price items - PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create six contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, C3PP1 using CT3 for PP1, C4PP2 using CT4 for PP2, and C5PP2 using CT5 for PP2. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create four contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, and C2PP2 using CT2 for PP2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date. The characteristic type, which is specified in the **Plan ID Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration, is defined for each contract. It stores the plan ID which indicates the plan for which the contract is created.

Example 1 - Plan-Specific Contract Creation for a Parent Customer

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one plan-specific contract using each contract type on each account of the parent customer and bill groups. Let us assume that…

- PC1 has two bill groups - BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts
- A policy named P1 with two plans - PP1 and PP2 - is created for PC1 (where none of the bill groups are associated)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains three price items - PI1, PI3, and PI4
- PRT3 contains three price items - PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1, A2, A3, and A4 accounts in the above stated scenario:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	PP1	PRTI	PI1	CT1	A1C1PP1	01-01-2019
			PI2	CT2	A1C2PP1	01-01-2019

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
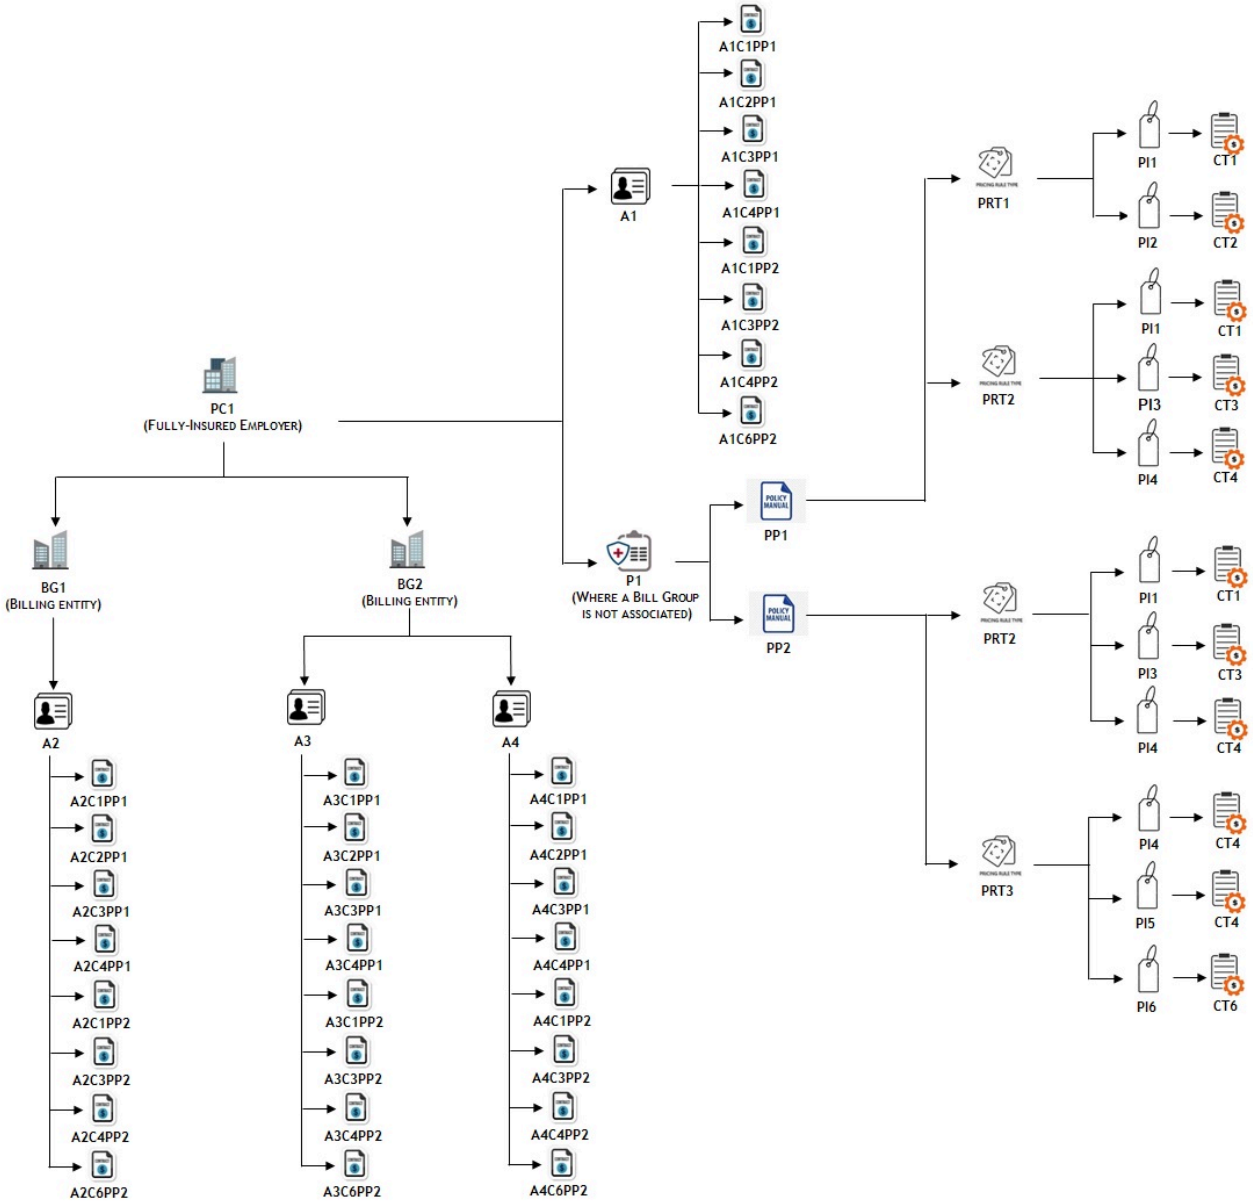
			PI5	CT4	A4C4PP2	03-01-2019
			PI6	CT6	A4C6PP2	03-01-2019

The following figure graphically illustrates the example 1:



Example 2 - Plan-Specific Contract Creation for a Bill Group

If the policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one plan-specific contract using each contract type on each account of the parent customer and the bill group. Let us assume that…

- PC1 has two bill groups - BG1 and BG2
- PC1 has A1 account, BG1 has A2 account, and BG2 has A3 and A4 accounts

Copyright © 2025, Oracle and/or its affiliates.

- A policy named P1 with three plans - PP1, PP2, and PP3 - is created for BG1 (where PC1 is the policy holder)
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 03-01-2019) is associated with PRT2 and PRT3
- PP3 (with the start date as 06-01-2019) is associated with PRT1
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains three price items - PI1, PI3, and PI4
- PRT3 contains three price items - PI4, PI5, and PI6
- PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 and PI5 are associated with the CT4 contract type, and PI6 is associated with the CT6 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 and A2 accounts in the above stated scenario:

Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
			PI2	CT2	A1C2PP1	01-01-2019
		PRT2	PI1	CT1	A1C1PP1	01-01-2019
			PI3	CT3	A1C3PP1	01-01-2019
			PI4	CT4	A1C4PP1	01-01-2019

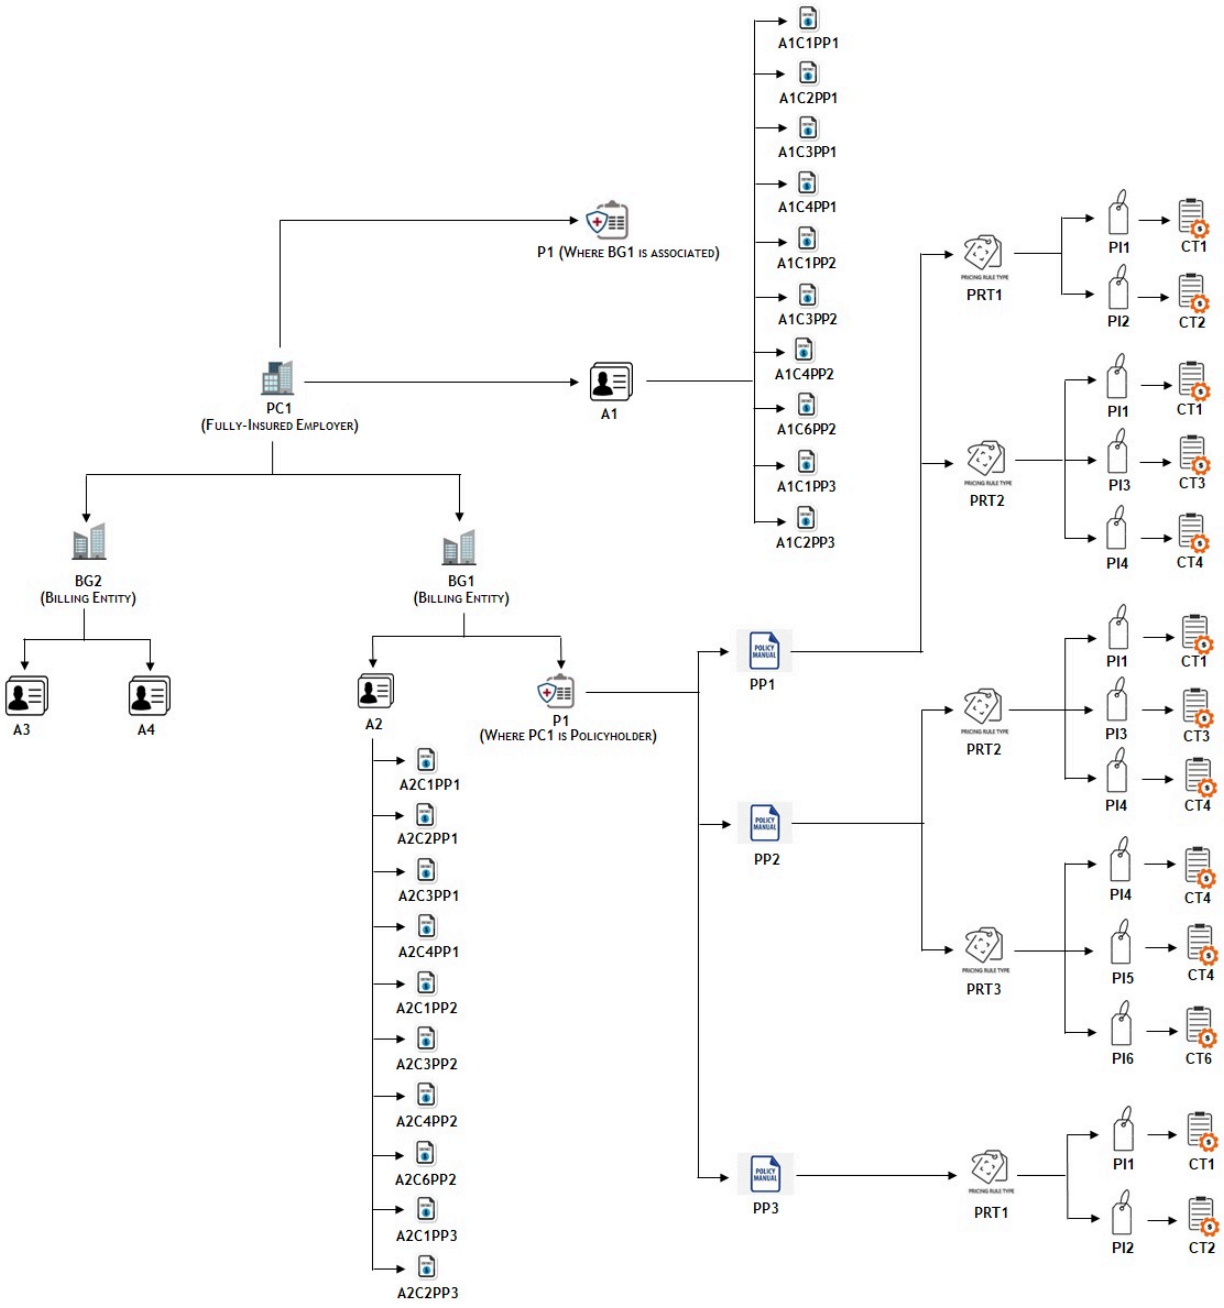
Account	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
			PI2	CT2	A2C2PP3	06-01-2019

The following figure graphically illustrates the example 2:



Note: The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

- **Create or Edit an Account from the User Interface or through an Inbound Message** - The system creates a contract when either of the following condition is met:
  - The main customer of the account is a parent customer and holds a policy (where a bill group is not associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

Copyright © 2025, Oracle and/or its affiliates.

- The main customer of the account is a parent customer and holds a policy (where a bill group is associated) which is created using the policy type where the policy category is set to **Fully-Insured Group**.
- The main customer of the account is a bill group and holds a policy (where the parent customer is the policy holder) which is created using the policy type where the policy category is set to **Fully-Insured Group**.

The system creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that a pricing rule type named PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two contracts - C1 using CT1 and C2 using CT2.

  If a policy has two or more plans, multiple pricing rule types are associated with each policy plan and each pricing rule type contains multiple price items, it creates one plan-specific contract using each contract type which may be associated with one or more price items. Let us assume that P1 has two plans - PP1 and PP2, PRT1 is associated with PP1, PRT2 is associated with PP2, PRT1 contains three price items - PI1, PI2, and PI3, and PRT2 contains three price items - PI1, PI4, and PI5. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, PI3 is associated with the CT3 contract type, PI4 is associated with the CT4 contract type, and PI5 is associated with the CT5 contract type, the system will create six contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, C3PP1 using CT3 for PP1, C4PP2 using CT4 for PP2, and C5PP2 using CT5 for PP2. However, if PI1, PI2, and PI5 are associated with the CT1 contract type and PI3 and PI4 are associated with the CT2 contract type, the system will create four contracts - C1PP1 using CT1 for PP1, C1PP2 using CT1 for PP2, C2PP1 using CT2 for PP1, and C2PP2 using CT2 for PP2.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date. The characteristic type, which is specified in the **Plan ID Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration, is defined for each contract. It stores the plan ID which indicates the plan for which the contract is created.

Example 3 - Plan-Specific Contract Creation for an Account of a Parent Customer

If you create an account for a parent customer who holds polices (where a bill group may or may not be associated), the system will create one plan-specific contract using each contract type for all parent customer's policies on the account. Let us assume…

- PC1 has two bill groups - BG1 and BG2
- PC1 has two policies - a policy named P1 (where a bill group is not associated) and a policy named P2 (where BG1 is associated)
- BG1 has one policy named P2 where PC1 is the policy holder
- An account named A1 is added for PC1
- P1 has two plans - PP1 and PP2
- P2 has two plans - PP11 and PP12
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 06-01-2019) is associated with PRT2, PRT3, and PRT4
- PP11 (with the start date as 05-01-2019) is associated with PRT111 and PRT112
- PP12 (with the start date as 09-01-2019) is associated with PRT113 and PRT114
- PRT1 contains two price items - PI1 and PI2
- PRT2 contains two price items - PI3 and PI4
- PRT3 contains two price items - PI1 and PI5
- PRT4 contains two price items - PI6 and PI7

Copyright © 2025, Oracle and/or its affiliates.

- PRT111 contains two price items - PI11 and PI12
- PRT112 contains two price items - PI1 and PI5
- PRT113 contains two price items - PI13 and PI14
- PRT114 contains two price items - PI7 and PI15
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI7 is associated with the CT7 contract type, PI11 is associated with the CT11 contract type, PI12 is associated with the CT12 contract type, PI13 is associated with the CT13 contract type, PI14 is associated with the CT14 contract type, and PI15 is associated with the CT15 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	P1	PP1	PRT1	PI1	CT1	A1C1PP1	01-01-2019
				PI2	CT2	A1C2PP1	01-01-2019
			PRT2	PI3	CT2	A1C2PP1	01-01-2019
				PI4	CT4	A1C4PP1	01-01-2019
		PP2	PRT2	PI3	CT2	A1C2PP2	06-01-2019
				PI4	CT4	A1C4PP2	06-01-2019
			PRT3	PI1	CT1	A1C1PP2	06-01-2019
				PI5	CT5	A1C5PP2	06-01-2019
			PRT4	PI6	CT6	A1C6PP2	06-01-2019
				PI7	CT7	A1C7PP2	06-01-2019
	P2	PP11	PRT111	PI11	CT11	A1C11PP11	05-01-2019
				PI12	CT12	A1C12PP11	05-01-2019
			PRT112	PI1	CT1	A1C1PP11	05-01-2019
				PI5	CT5	A1C5PP11	05-01-2019
		PP12	PRT113	PI13	CT13	A1C13PP12	09-01-2019
				PI14	CT14	A1C14PP12	09-01-2019
			PRT114	PI7	CT7	A1C7PP12	09-01-2019
				PI15	CT15	A1C15PP12	09-01-2019

The following figure graphically illustrates the example 3:

Example 4 - Plan-Specific Contract Creation for an Account of a Bill Group

If you create an account for a bill group who holds policies and its parent customer holds policies (where a bill group may or may not be associated), the system will create one plan-specific contract using each contract type for the bill group's polices and parent customer's polices (where a bill group is not associated) on the account. Let us assume…

- PC1 has two bill groups - BG1 and BG2
- PC1 has two policies - a policy named P2 (where a bill group is not associated) and a policy named P1 (where BG2 is associated)
- BG2 has one policy named P1 where PC1 is the policy holder
- An account named A1 is added for BG2
- P1 has two plans - PP11 and PP12
- P2 has two plans - PP1 and PP2
- PP1 (with the start date as 01-01-2019) is associated with PRT1 and PRT2
- PP2 (with the start date as 04-01-2019) is associated with PRT3 and PRT4
- PP11 (with the start date as 07-01-2019) is associated with PRT11 and PRT12
- PP12 (with the start date as 11-01-2019) is associated with PRT13 and PRT14
- PRT1 contains two price items - PI1 and PI2

Copyright © 2025, Oracle and/or its affiliates.

- PRT2 contains two price items - PI3 and PI2
- PRT3 contains two price items - PI3 and PI4
- PRT4 contains two price items - PI5 and PI6
- PRT11 contains two price items - PI111 and PI112
- PRT12 contains two price items - PI1 and PI6
- PRT13 contains two price items - PI113 and PI114
- PRT14 contains two price items - PI115 and PI5
- PI1 is associated with the CT1 contract type, PI2 and PI3 are associated with the CT2 contract type, PI4 is associated with the CT4 contract type, PI5 is associated with the CT5 contract type, PI6 is associated with the CT6 contract type, PI111 is associated with the CT111 contract type, PI112 is associated with the CT112 contract type, PI113 is associated with the CT113 contract type, and PI114 and PI115 is associated with the CT114 contract type

The following table indicates the distinct plan-specific contracts that would be created on the A1 account in the above stated scenario:

Account	Policy	Plan	Pricing Rule Type	Price Item	Contract Type	Contract	Contract Start Date
A1	P1	PP11	PRT11	PI111	CT111	A1C111PP11	07-01-2019
				PI112	CT112	A1C112PP11	07-01-2019
			PRT12	PI1	CT1	A1C1PP11	07-01-2019
				PI6	CT6	A1C6PP11	07-01-2019
		PP12	PRT13	PI113	CT113	A1C113PP12	11-01-2019

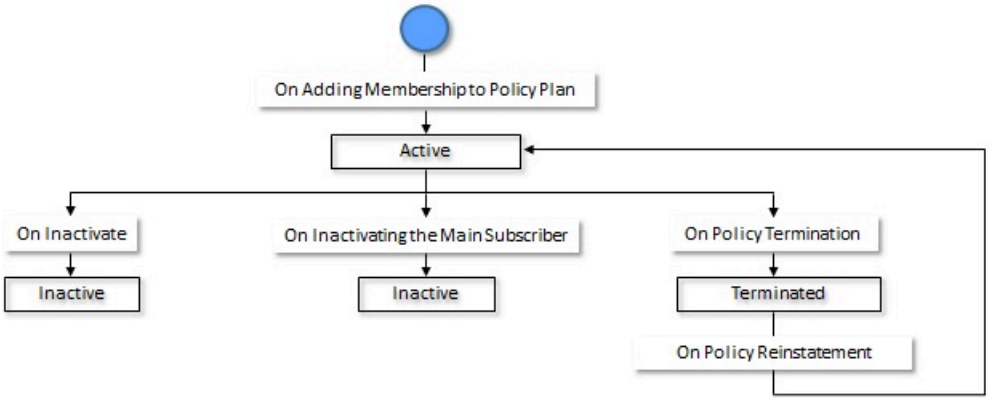
Membership Status Transition

The following figure graphically indicates how a membership moves from one status to another in its lifecycle:



Copyright © 2025, Oracle and/or its affiliates.

Types of Policy Plan

Oracle Revenue Management and Billing enables you to create different types of plan for a fully-insured group policy:

- Commercial Plans on page 215
- Medicare Affiliated Plans on page 216

Commercial Plans

A commercial plan is a health insurance plan which is offered and administered by non-governmental entities (i.e. insurance companies). It can cover medical or dental expenses and disability income for the insured. Two of the most popular types of commercial health insurance plans are:

- **Preferred Provider Organization (PPO)** - A Preferred Provider Organization (PPO) is a medical care arrangement in which medical professionals and facilities provide services to subscribed clients at reduced rates.
- **Health Maintenance Organization (HMO)** - A Health Maintenance Organization (HMO) is an insurance structure that provides coverage through a network of physicians at a fixed annual fee.

A commercial health insurance plan can be offered to the individual or group customers. Usually, the insurance companies design special commercial health plans for fully-insured group customers and provide cost-effective health coverage for the employees and their family members (at an additional cost).

The system enables you to create and edit a policy plan from the user interface or through a health care inbound message. While creating a Commercial policy plan, you must set the benefit type to **Commercial**. While defining a Commercial policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received through a health care inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can associate the age based, tier based, pass-through billable charge, and/or additional fee pricing rule types with a Commercial policy plan. If you associate an age based pricing rule type with the policy plan, the system calculates the active employee coverage or COBRA membership premium for eligible members using the age based pricing rule type. If you associate a tier based pricing rule type with the policy plan, the system calculates the active employee coverage or COBRA membership premium using the tier based pricing rule type. The active employee coverage and COBRA membership premium are then charged through the SQI based billable charges. In case of an active employee coverage membership, the charge is billed to the bill group of the fully-insured group customer. However, in case of a COBRA membership, the charge is billed to either of the following depending on the billing arrangement which is defined for the COBRA membership:

- Bill Group of the Fully-Insured Group Customer
- TPA Person
- Financially Responsible Member Person

If you associate an additional fee pricing rule type (which is a related pricing rule type) with the policy plan, the system derives the flat or percentage based additional fee for the COBRA membership using the additional fee pricing rule type. This additional fee is charged along with the COBRA membership premium through an SQI based billable charge

If you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information of a health care inbound message, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer to the pass-through billable charge pricing rule type which is associated with the policy plan.

The system enables you to prorate the membership premium using the proration rules defined for the fully-insured group policy plan. A proration rule indicates how you want to prorate the membership premium on various events, such as enrollment, termination, etc. For more information, refer to Premium Proration Rules on page 3392.

Copyright © 2025, Oracle and/or its affiliates.

Medicare Affiliated Plans

A Group Medicare Advantage plan, also known as Employer Group Waiver Plan (EGWP), is a type of Medicare Advantage plan offered by some employers to their retired or retiring employees. It may offer more benefits than traditional Medicare Advantage plans. EGWP are provided by private insurance companies who manage fully-insured large group customer's retiree Membership benefits. The different parts of Medicare that EGWPs cover are:

- **Part A** - Medicare Part A insurance is the portion that pays for hospital costs, such as inpatient hospital care or rehabilitation facility care related to illness or injury.
- **Part B** - Medicare Part B is the Medicare portion that pays for doctor visits and related medical costs, including emergency care when you are not admitted.
- **Part D** - Medicare Part D is the prescription drug coverage portion of Medicare. Most prescription drug coverage plans involve different "tiers" of medications where you may pay little to no costs for generic medications and a greater portion of costs for name-brand medicines.

The system enables you to create and edit a policy plan from the user interface or through a health care inbound message. While creating a Medicare Affiliated policy plan, you must set the benefit type to **Medicare Affiliated**. While defining a Medicare Affiliated policy plan, you need to specify either a price item or at least one pricing rule type. The price item given in the policy plan is used to create a pass-through billable charge for pre-calculated premium amount which is received through a health care inbound message.

Alternatively, you can associate a pricing rule type with a policy plan. You can associate the age based, tier based, pass-through billable charge, and/or benefit pricing rule types with a Medicare Affiliated policy plan. If you associate an age based pricing rule type with the policy plan, the system calculates the Medicare premium for Part A, Part B, and/or Part D for eligible members using the age based pricing rule type. If you associate a tier based pricing rule type with the policy plan, the system calculates the Medicare membership premium for Part A, Part B, and Part D using the tier based pricing rule type. This membership premium is then charged through the SQI based billable charge. The charge is billed to either of the following depending on the billing arrangement which is defined for the Medicare membership:

- Bill Group of the Fully-Insured Group Customer
- Financially Responsible Member Person

The system considers the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium. If you associate a benefit pricing rule type with the policy plan, the system determines the price items through which LIS and LEP should be charged.

If you associate a pass-through billable charge pricing rule type with the policy plan, the system creates an SQI based billable charge using the pass-through billable charge pricing rule type whenever the price item information is given, but the account information is not given in a health care inbound message. Note that if both the price item and account details are given in the billable charge information of a health care inbound message, the system directly creates the SQI based billable charge for the pre-calculated premium and does not refer to the pass-through billable charge pricing rule type which is associated with the policy plan.

The system enables you to prorate the Medicare premium using the proration rules defined for the fully-insured group policy plan. A proration rule indicates how you want to prorate the membership premium on various events, such as enrollment, termination, etc. For more information, refer to Premium Proration Rules on page 3392.

Types of Membership

Oracle Revenue Management and Billing enables you to create different types of membership for a fully-insured individual membership:

- Medicare Membership on page 218
- Retiree Membership on page 222

Copyright © 2025, Oracle and/or its affiliates.

Active Employee Coverage Membership

Oracle Revenue Management and Billing enables you to maintain an active employee coverage membership for the group insurance health plans and charge age based or tier based premium for the active employee coverage membership. An active employee coverage membership includes the employee or member of the organization who is covered under the group health insurance plan. Here, the covered employee or member is known as the main subscriber of the membership.

If the health insurance coverage is extended to the immediate family and/or other dependents of group members for an extra cost, the active employee coverage membership may include dependents who are related to the main subscriber. The system enables you to define various relationship types using which you can relate main subscriber and other dependent persons in a membership. You can define and edit relationship types through the **Contract Relationship Type** screen. The dependents can be members or non-members in an active employee coverage membership. The system calculates age based premium for both eligible members and non-members in an active employee coverage membership. If you select the **Skip Non-Members** option in the age based pricing rule type, the system will only consider the eligible members and not non-members of the active employee coverage membership during age based premium calculation.

The system enables you to create and edit an active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating an active employee coverage membership, you must not set the membership type of the membership (i.e. leave the **Membership Type** field blank). Ideally, you must define an active employee coverage membership on a Commercial policy plan. However, at present, the system does not validate whether an active employee coverage membership is defined only on a Commercial policy plan and not on a Medicare Affiliated policy plan.

You can create an active employee coverage membership when you specify the main subscriber of the membership. Ideally, the main subscriber and dependent persons should exist as persons in the system before creating the active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber, dependent persons, and active employee coverage membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person records for the main subscriber and dependent persons and then create the active employee coverage membership.

On creating an active employee coverage membership, the status of the membership and main subscriber is set to **Active**. On adding a dependent person to a membership, the status of the dependent person is set to **Active**. You can inactivate an active employee coverage membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating the main subscriber of an active employee coverage membership, the system automatically inactivates the membership and all other member persons which are included in the membership. The status of the active employee coverage membership, main subscriber, and other member persons (if any) is set to **Inactive**. In addition, the system does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

Copyright © 2025, Oracle and/or its affiliates.

You can also inactivate a member person, who is not the main subscriber of an active employee coverage membership, from the user interface, through a health care inbound message, or through the membership repricing inbound web service. On inactivating the member person, the status of the member person is set to **Inactive**.

On terminating a fully-insured group policy, the status of all active employee coverage memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all active employee coverage memberships on the respective policy plans is set to **Active**.

The system requires the following information to create charges for an active employee coverage membership:

- Whom to bill the active employee coverage membership charges
- Age based or tier based pricing rules using which the premium should be calculated for the active employee coverage membership
- Respective age based or tier based pricing rule type associated with the respective policy plan

The system supports the following billing arrangements for an active employee coverage membership:

- **Group Billing** - Here, an active employee coverage membership is billed to a bill group which is derived for the active employee coverage membership.
- **Direct Billing** - Here, an active employee coverage membership is billed to the member who is financially responsible for the active employee coverage membership.

You can indicate the billing arrangement for the active employee coverage memberships by defining a characteristic on the bill group or parent customer. The system searches for the characteristic which is specified in the **Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Bill Group
2. Parent Customer

Note: If the billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the active employee coverage membership premium to the bill group.

The system requires the bill group and its account to bill the active employee coverage memberships when the billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the active employee coverage membership when the billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the active employee coverage membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Medicare Membership

Oracle Revenue Management and Billing enables you to maintain an employer sponsored group medicare membership (800 series plans) for a fully-insured large group customer and create age based or tier based premium charges for the Medicare Part A, Part B, and Part D. A Medicare beneficiary may qualify for a low income subsidy (LIS) for Medicare Part D or may incur late enrollment penalty (LEP) for Medicare Part D. In such case, the system enables you to consider the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium.

The system enables you to create and edit a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a Medicare membership, you must set the membership type to **Medicare**. Ideally, you must define a Medicare membership on a Medicare Affiliated policy

Copyright © 2025, Oracle and/or its affiliates.

plan. However, at present, the system does not validate whether a Medicare membership is defined only on a Medicare Affiliated policy plan and not on a Commercial policy plan.

You can create a Medicare membership when you specify the main subscriber of the membership. A Medicare membership should have only one member person who is covered for Medicare and who is financially responsible for the membership. Ideally, the main subscriber should exists as a person in the system before creating the Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber and Medicare membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person record for the main subscriber and then create the Medicare membership.

On creating a Medicare membership, the status of the membership and main subscriber is set to **Active**. You can inactivate a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating a Medicare membership, the system does the following:

- Set the status of the membership and main subscriber to **Inactive**
- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

On terminating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Active**.

The system enables you to maintain the Membership benefits (such as, Part A, Part B, Part D, Part D LIS, and Part D LEP) of a member person through the **Benefit** screen. The system enables you to define and edit the Membership benefits from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While defining a Membership benefit of a member person for Part A, Part B, and Part D, you need to specify a Medicare plan benefit package (i.e. 800 series plan) which is applicable for the Membership benefit. The system enables you to define and edit a Medicare plan benefit package through the **Field Mapping** screen. You can use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. While defining a Membership benefit of a member person for Part D LIS and Part D LEP, you need to specify the benefit amount (i.e. subsidy or penalty amount).

While editing a Membership benefit of a member person from the user interface, you can only edit the characteristics of the Membership benefit. However, while editing a Membership benefit of a member person through a health care inbound message or through the membership repricing inbound web service, you can edit the end date, benefit amount, and characteristics of the Membership benefit. On editing a Membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system enables you to discard an active or inactive Membership benefit from the user interface by clicking the **Discard** button. You can also discard an active or inactive Membership benefit through a health care inbound message or through the membership repricing inbound web service by changing its status to **Discarded**.

The system requires the following information to create charges for a Medicare membership:

- Whom to bill the Medicare membership (i.e. billing arrangement details)

Copyright © 2025, Oracle and/or its affiliates.

- Age based or tier based pricing rules using which the premium should be calculated for the Medicare Part A, Part B, and Part D.
- Respective age based, tier based, and benefit pricing rule types associated with the respective policy plan

The system supports the following billing arrangements for a Medicare membership:

- **Group Billing** - Here, a Membership benefit is billed to a bill group which is derived for the Medicare membership.
- **Direct Billing** - Here, a Membership benefit is billed to a member person who is financially responsible for the Medicare membership.

You can indicate the billing arrangement for the Medicare memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Benefit Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Note: If the benefit billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the Medicare membership premium to the bill group.

The system requires the bill group and its account to bill the Medicare memberships when the benefit billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the Medicare membership when the benefit billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the Medicare membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

COBRA Membership

Oracle Revenue Management and Billing enables you to maintain a COBRA membership and charge age based or tier based premium and administration fee for the COBRA membership. In COBRA membership, an employer provides temporary continuation of group health coverage in certain situations where it would otherwise be terminated. This may be include situations, such as:

- Death of the covered employee
- Reduction in the hours or termination of the covered employee's employment
- Covered employee becoming entitled for Medicare
- Divorce or legal separation from the covered employee
- A dependent child ceasing to be a dependent in an active employee coverage membership

The system enables you to create and edit a COBRA membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a COBRA membership, you must set the membership type to **COBRA**. Ideally, you must define a COBRA membership on a Commercial policy plan. However, at present, the system does not validate whether a COBRA membership is defined only on a Commercial policy plan and not on a Medicare Affiliated policy plan.

Through a health care inbound message, the system must receive the end date of the active employee coverage membership along with the details of the COBRA membership. You can create a COBRA membership when you specify the main subscriber of the membership. Here, the main subscriber can be an employee or member of the organization

Copyright © 2025, Oracle and/or its affiliates.

or a family member who is covered through the COBRA membership. In a COBRA membership, you need to specify the member person who is financially responsible for the COBRA membership. Note that, at a time, only one member person can be financially responsible for the COBRA membership.

On creating a COBRA membership, the status of the membership and main subscriber is set to **Active**. On adding a dependent person to a membership, the status of the dependent person is set to **Active**. You can inactivate a COBRA membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating the main subscriber of a COBRA membership, the system automatically inactivates the membership and all other member persons which are included in the membership. The status of the COBRA membership, main subscriber, and other member persons (if any) is set to **Inactive**. In addition, the system does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

You can also inactivate a member person, who is not the main subscriber of a COBRA membership, from the user interface, through a health care inbound message, or through the membership repricing inbound web service. On inactivating a member person, the status of the member person is set to **Inactive**.

On terminating a fully-insured group policy, the status of all COBRA memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all COBRA memberships on the respective policy plans is set to **Active**.

The system requires the following information to create charges for a COBRA membership:

- Whom to bill the COBRA membership (i.e. billing arrangement details)
- Age based or tier based pricing rules using which the premium should be calculated for the COBRA membership
- Respective age based or tier based pricing rule type associated with the respective policy plan
- Additional fee pricing rule using which the administration fee should be calculated for the COBRA membership
- Respective additional fee pricing rule type associated with the respective policy plan

The system supports the following billing arrangements for a COBRA membership:

- **Group Billing** - Here, a COBRA membership is billed to a bill group which is derived for the COBRA membership.
- **TPA Billing** - Here, a COBRA membership is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** - Here, a COBRA membership is billed to the member who is financially responsible for the COBRA membership.

You can indicate the billing arrangement for the COBRA memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Cobra Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Copyright © 2025, Oracle and/or its affiliates.

Note: If the Cobra billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the COBRA membership premium to the bill group.

The system requires the bill group and its account to bill the COBRA memberships when the COBRA billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the third party administrator (i.e. TPA person) and its account to bill the COBRA memberships when the COBRA billing arrangement is set to **TPA Billing**. You can create a third party administrator (i.e. TPA person) and its accounts through a health care inbound message. While sending the details of a TPA person through an inbound message, you must specify the parent of the TPA person and its account details. The system associates the parent customer with the TPA person using the relationship type which is specified in the **TPA Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. If the person type specified in the health care inbound message matches the person type specified in the **TPA Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the TPA person and its account through a customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **TPA Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the TPA person and its accounts directly and not through a customer registration object.

The system associates the TPA person with the TPA account using the relationship type which is specified in the **TPA Account Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. On creating an account for a TPA person, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the COBRA membership when the COBRA billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the COBRA membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Retiree Membership

An employer may offer a retirement health plan coverage to its retired employees through a fully-insured group policy or an individual can independently opt for a government sponsored retirement health plan coverage. Oracle Revenue Management and Billing enables you to maintain a retiree membership for both the fully-insured group and individual business. The system enables you to maintain a flat or percentage based contribution of employer or sponsor for a retiree membership.

The system enables you to create and edit a retiree membership through a health care inbound message or through membership repricing inbound web service. While creating a retiree membership, the membership type must be set to **Retiree**. The system requires the following information to create charges for a retiree membership:

- Whom to bill the premium for the retiree membership (i.e. retiree billing arrangement details)
- Whom to bill the employer or sponsor contribution (i.e. sponsor billing arrangement details)
- Age based or tier based pricing rule using which the premium should be calculated for the retiree membership
- Discount charge pricing rule using which the employer or sponsor contribution should be calculated for the retiree membership

In case of the fully-insured individual business, the premium for a retiree membership is billed to the member who is financially responsible for the retiree membership. However, in case of the fully-insured group business, the system supports the following billing arrangements for the retiree membership:

Copyright © 2025, Oracle and/or its affiliates.

- **Group Billing** - Here, the premium is billed to a bill group which is derived for the retiree membership.
- **TPA Billing** - Here, the premium is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** - Here, the premium is billed to the member who is financially responsible for the retiree membership.

You can indicate the billing arrangement for a retiree membership in the fully-insured group business by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Retiree Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

The system enables you to maintain a flat or percentage based contribution of employer or sponsor through a discount charge pricing rule. A field named **Sponsored** is available in the **Price Items** section while defining or editing a discount charge pricing rule type. If the **Sponsored** option is selected for a price item, the system creates and bills the charge for the price item as per the sponsor billing arrangement. The system searches for the characteristic which is specified in the **Sponsors Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

In the fully-insured group and individual business, the system supports the following sponsor billing arrangements for the retiree membership:

- **Group Billing** - Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **TPA Billing** - Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **Direct Billing** - Here, the system creates a memo only charge for the employer or sponsor contribution against the beneficiary account. A bill message code is derived from the **Retiree Bill Message Code** option type of the **C1-ASOBLLNG** feature configuration and stamped against the beneficiary account.

In case of the group and TPA billing, the system derives the characteristic types which are specified in the **Sponsor Account Identifier Type Char Type** and **Sponsor Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration. The system then checks whether these characteristics are defined on any of the following entity in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

If these characteristics are defined on any of the above entity, the system derives the sponsor account for the bill group. The system then bills the employer or sponsor contribution charges to the sponsor account.

However, if the **Sponsored** option is not selected for a price item in a discount charge pricing rule type, the system creates and bills the charge for the price item as per the retiree billing arrangement.

Algorithms Used in C1-POLICY

The following table lists the algorithms which are attached to the **C1-POLICY** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-REAUDEVNT	C1-REAUDEVNT	Refer to C1-REAUDEVNT on page 224.

Copyright © 2025, Oracle and/or its affiliates.

System Event	Algorithm	Algorithm Type	Description
Validation	C1-POLBOVAL	C1-POLBOVAL	Refer to C1-POLBOVAL on page 225.

The following table lists the algorithms which are used in the lifecycle of the **C1-POLICY** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-TRNDFLSYS	C1-TRNDFLSYS	Refer to C1-TRNDFLSYS on page 226.
Activate	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 226.
In Force/Active	Enter	C1-EVCSTSTAT	C1-EVCSTSTAT	Refer to C1-EVCSTSTAT on page 226.
Pending Termination	Enter	C1-PLCYTRMRQ	C1-PLCYTRMRQ	Refer to C1-PLCYTRMRQ on page 226.
Terminated	Enter	C1-POLCYTERM	C1-POLCYTERM	Refer to C1-POLCYTERM on page 227.
	Enter	C1-DELTRMLTR	C1-CRTCUSCNT	Refer to C1-DELTRMLTR on page 227.
	Enter	C1-EVCSTSTAT	C1-EVCSTSTAT	Refer to C1-EVCSTSTAT on page 226.
Pending Reinstatement	Enter	C1-PLCYREIRQ	C1-PLCYREIRQ	Refer to C1-PLCYREIRQ on page 228.
Reinstated	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 226.
	Enter	C1-POLCYREIN	C1-POLCYREIN	Refer to C1-POLCYREIN on page 228.
	Enter	C1-CCPOLRE1	C1-CRTCUSCNT	Refer to C1-CCPOLRE1 on page 229.
Renewed	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 226.
Pending Cancellation	-	-	-	-
Canceled	-	-	-	-

C1-REAUDEVNT

If this algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Defining an entity when the **Add Action** option is selected in the audit event type.
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section.
- Deleting an entity when the **Delete Action** option is selected in the audit event type.

Copyright © 2025, Oracle and/or its affiliates.

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event

At present, this algorithm is designed to work with the business objects of the following maintenance objects:

- C1-POLICY
- C1-ASOPolicy
- C1-Membership
- C1-PolicyPlan
- C1_PERSON_BO
- C1-PricingRuleTierBased
- C1-PricingRuleAgeBased

In case, you want to create audit event for any other maintenance objects, you need to create a custom algorithm type.

It contains the following parameters:

- **Audit Event Business Object** - Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** - Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** - Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-POLBOVAL

This algorithm validates a fully-insured group policy throughout its lifecycle. It checks the following:

- Whether the policy end date is not earlier than the policy start date.
- Whether the policy person end date is not earlier than the policy person start date.
- Whether the policy person start date is not earlier than the policy start date or later than policy end date.
- Whether the policy person end date is not earlier than the policy start date or later than policy end date.

  Note: The above validation is done when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter to **TERMINATED**, the system will not perform the above validation when the status of the policy is changed to **Terminated**.
- Whether the person who is the main customer is associated with the policy.
- Whether the policy person role is specified while associating a person with the policy.

It contains the following parameter:

- **Skip Status for Policy Person End Date Validation** - Used to specify the policy status in which you do not want to validate the policy person end date. You can specify comma-separated values for this parameter.

Copyright © 2025, Oracle and/or its affiliates.

C1-TRNDFLSYS

This algorithm checks whether the fully-insured group policy is created from the user interface or through an inbound message. If a fully-insured group policy is created through an inbound message, the system will automatically transition the fully-insured group policy to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-EVCSTSTAT

This algorithm updates the **Customer Status** characteristic of the main customer of the policy. This characteristic indicates whether the customer is active or inactive. If the customer owns at least one active policy, the customer status is set to **Active**. However, if the customer does not own any active policy, the customer status is set to **Inactive**.

It is invoked while activating or terminating a fully-insured group policy. It contains the following parameters:

- **Customer Status Characteristic Type** - Used to specify the characteristic type whose value should be updated whenever the policy is activated or terminated. You must specify a characteristic type where the characteristic entity is set to **Person**.
- **Active Customer Status Characteristic Value** - Used to specify the characteristic value which should be used when the main customer owns at least one active policy.
- **Inactive Customer Status Characteristic Value** - Used to specify the characteristic value which should be used when the main customer does not own any active policy (in other words, when all policies of the main customer are terminated).
- **Policy Active Status** - Used to specify the status in which at least one policy should exist to indicate that the main customer is active.

All the above parameters are mandatory.

C1-PLCYTRMRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy termination process from the user interface. While creating the outbound message, the system identifies the account using the characteristic type specified in the **Main Customer Characteristic Type** parameter. The system checks whether this characteristic type is set to the main customer's ID on any account. If so, the system considers the account and then fetches the value of the account identifier type specified in the **Account Identifier Type** parameter.

In addition, it stores the details of the outbound message (which is created) in the log of the policy. It contains the following parameters:

- **Outbound Message Type** - Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.

Copyright © 2025, Oracle and/or its affiliates.

- **Source System** - Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.
- **Account Identifier Type** - Used to specify the account identifier type whose value you want to use in the outbound message. You must specify an account identifier type which is already defined in the system.
- **Main Customer Characteristic Type** - Used to specify the characteristic type using which you want to identify the account of the main customer. You must specify a characteristic type where the characteristic entity is set to **Person**.

All the above parameters are mandatory.

C1-POLCYTERM

This algorithm sets the end date of the following entities to the termination date when the respective condition is met:

- Policy (when the termination date is not earlier than the policy start date or later than the policy end date)
- Policy Person (when the termination date falls within the date range in which the person is associated with the policy)
- Policy Plan (when the termination date falls within the date range of the policy plan)
- Membership (when the termination date falls within the date range of the membership)
- Member Person (when the termination date falls within the date range in which the person is added to the membership)
- Contracts Associated with the Membership (when the termination date falls within the date range of the contract)

It contains the following parameters:

- **Membership Old Status** - Used to specify the status from which you want to transition the membership when the policy is terminated.
- **Membership New Status** - Used to specify the status to which you want to transition the membership when the policy is terminated.

C1-DELTRMLTR

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **TERMINATED** status, it creates a customer contact whenever the policy is terminated. You can create a customer contact while terminating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while terminating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** - Used when you want to create a customer contact when the policy is terminated for a particular reason. The valid values are:
  - **Y** - Used to indicate that the system should create a customer contact when a particular status reason is specified while terminating a policy.
  - **N** - Used to indicate that the system should create a customer contact while terminating a policy irrespective of the status reason.
- **Policy Status Reason Codes** - Used to specify the status reason defined for the **TERMINATED** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** - Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** - Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** - Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:

Copyright © 2025, Oracle and/or its affiliates.

- **Y** - If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
- **N** - If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

Note: If you do not specify the value for this parameter, by default, it is set to **N**.

- **Policy ID Characteristic Type** - Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** - Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.
- **Status To Skip Process** - Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

C1-PLCYREIRQ

This algorithm creates an outbound message using the outbound message type whenever you initiate the policy reinstatement process from the user interface. In addition, it stores the details of the outbound message (which is created) in the log of the policy.

It contains the following parameters:

- **Outbound Message Type** - Used to specify the outbound message type using which you want to create the outbound message. You must specify an outbound message type which is already defined in the system.
- **Source System** - Used to specify the source system that you want to use in the outbound message. You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup.

All the above parameters are mandatory.

C1-POLCYREIN

This algorithm updates the end date of the following entities to the respective original end date:

- Policy
- Policy Person
- Policy Plan
- Membership
- Member Person
- Contracts Associated with the Membership

Note: The system stores the original end date of the above listed entities when you define or edit a policy, policy plan, or membership.

Here, the assumption is that the pass-through billable charges information for the membership will be sent again through an inbound message along with the reinstatement reason. And, therefore the exiting billable charges will not be extended.

It contains the following parameters:

- **Membership Old Status** - Used to specify the status from which you want to transition the membership when the policy is reinstated.
- **Membership New Status** - Used to specify the status to which you want to transition the membership when the policy is reinstated. This field is mandatory.

Copyright © 2025, Oracle and/or its affiliates.

C1-CCPOLRE1

This algorithm creates a customer contact whenever the policy is transition to the status where it is attached. For example, if this algorithm is attached to the **REINSTATE** status, it creates a customer contact whenever the policy is reinstated. You can create a customer contact while reinstating a policy. Optionally, you can configure the algorithm such that a customer contact is created when a particular status reason is specified while reinstating a policy.

Once a customer contact is created, the policy for which the customer contact is created is stored as a characteristic on the customer contact. In addition, the customer contact which is created for the policy is stored as a characteristic in the log of the policy.

It contains the following parameters:

- **Check Policy Status Reason** - Used when you want to create a customer contact when the policy is reinstated for a particular reason. The valid values are:
  - **Y** - Used to indicate that the system should create a customer contact when a particular status reason is specified while reinstating a policy.
  - **N** - Used to indicate that the system should create a customer contact while reinstating a policy irrespective of the status reason.
- **Policy Status Reason Codes** - Used to specify the status reason defined for the **REINSTATE** status. You can specify comma-separated values for this parameter.
- **Customer Contact Class** - Used to specify the customer contact class using which you want to create the customer contact. This field is mandatory.
- **Customer Contact Type** - Used to specify the customer contact type using which you want to create the customer contact. This field is mandatory.
- **Consolidate Customer Contact** - Used to indicate whether the system should update the existing customer contact or create a new customer contact for the main customer of the policy. The valid values are:
  - **Y** - If this parameter is set to **Y**, the system checks whether a customer contact is already created for the main customer of the policy on the system date. If so, the system does not create a new customer contact. Instead, it updates the existing customer contact of the main customer of the policy. However, if the customer contact is not already created on the system date, the system creates a new customer contact for the main customer of the policy.
  - **N** - If this parameter is set to **N**, the system creates a new customer contact for the main customer of the policy and does not update the existing customer contact, if any.

  Note: If you do not specify the value for this parameter, by default, it is set to **N**.
- **Policy ID Characteristic Type** - Used to specify the characteristic type which you want to define for the customer contact. This characteristic indicates the policy for which the customer contact is created. You must specify a characteristic type where the characteristic entity is set to **Customer Contact**. This field is mandatory.
- **Customer Contact Characteristic Type** - Used to specify the characteristic type which you want to use in the log of the policy. This characteristic indicates the customer contact which is created for the policy. You must specify a characteristic type where the characteristic entity is set to **Policy**. This field is mandatory.
- **Status To Skip Process** - Used when you do not want to create the customer contact when the policy is transition to a particular status. You can specify comma-separated values for this parameter.

Algorithms Used in C1-PolicyPlan

The following table lists the algorithms which are attached to the **C1-PolicyPlan** business object:

System Event	Algorithm	Algorithm Type	Description
Audit	C1-PPCONCRE	C1-PPCONCRE	Refer to C1-PPCONCRE on page 230.
Validation	C1-VALPPBO	C1-VALPPBO	Refer to C1-VALPPBO on page 230.

Copyright © 2025, Oracle and/or its affiliates.

C1-PPCONCRE

This algorithm is invoked when you create or edit a policy plan from the user interface or through an inbound message. It creates a contract in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

  Let us assume that PRT1 is associated with the policy plan and it contains three price items - P1, P2, and P3. Now, if the P1 is associated with the CT1 contract type, P2 is associated with the CT2 contract type, and P3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the P1 and P3 are associated with the CT1 contract type and P2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

  If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

If a policy plan belongs to a policy of the parent customer (where a bill group is not associated), the system will create one contract using each contract type on each account of the parent customer and bill groups. If a policy plan belongs to a policy of a bill group (where the parent customer is the policy holder), the system will create one contract using each contract type on each account of the parent customer and the bill group.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans, the contract start date is set to the start date of the earliest plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

If the same contract type is associated with the same or different price items on the same or different pricing rule types of different plans on different policies, the contract start date is set to the start date of the earliest plan across policies.

C1-VALPPBO

This algorithm validates a policy plan. It checks the following:

- Whether the policy plan end date is not earlier than the policy plan start date.
- Whether the policy plan start date is not earlier than the policy start date or later than policy end date.
- Whether the policy plan end date is not earlier than the policy start date or later than policy end date.
- Whether the price item or at least one pricing rule type is associated with the policy plan.

Algorithms Used in C1-Membership

The following table lists the algorithms which are attached to the **C1-Membership** business object:

Copyright © 2025, Oracle and/or its affiliates.

Validation	C1-VALMEMBO	C1-VALMEMBO	Refer to C1-VALMEMBO on page 234.

The following table lists the algorithms which are used in the lifecycle of the **C1-Membership** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Active	-	-	-	-
Inactive	Enter	C1-MEMINACT	C1-MEMINACT	Refer to C1-MEMINACT on page 235.
Terminated	-	-	-	-

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership** (**C1-Membership**), **Individual Membership** (**C1-IndMembership**), **Benefit** (**C1-Benefits**), and **Person** (**C1_PERSON_BO**) business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

Copyright © 2025, Oracle and/or its affiliates.

- **Audit Event Business Object** - Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** - Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** - Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-RTAREAMEM

This algorithm derives the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. It supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

On adding a membership to a policy plan, this algorithm derives the characteristic types from the **Address Source Characteristic Type** and **Address Type Characteristic Type** attributes of a geographic rating area preference. This algorithm considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLLNG** feature configuration. Then, it searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, this algorithm derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, this algorithm fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. It then derives the person who is associated with the policy using the parent customer policy person role. Once the address source and address type are derived, this algorithm fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is set to **Person Mailing**, this algorithm fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, this algorithm checks whether the zip code is a 9-digit code. If not, it appends zeros to make it a 9-digit zip code. It then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to**Y**, this algorithm derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to**N**, this algorithm derives a geographic rating area for the state and zip code combination. If the geographic rating area is not derived for the specified combination, this algorithm derives the default geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, this algorithm stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the

Copyright © 2025, Oracle and/or its affiliates.

geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

C1-MEMRLSUBT

While adding a membership to a policy plan or while adding or inactivating a member person in a membership, this algorithm derives the member relationship for each member person of the membership from a member relationship structure. It considers the member relationship structure which is defined as a characteristic for the policy plan. While deriving the member relationship structure of the policy plan, it considers the characteristic which is defined using a characteristic type specified in the **Member Relationship Structure Characteristic Type** attribute of a member relationship and subscription tier preference. It considers the member relationship and subscription tier preference which is specified in the **Relation Structure Code Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

The member relationship structure helps to determine how each member person is related to the main subscriber of the membership. A member relationship is derived for a member person depending on the following:

- Whether the member person is a self, spouse, or dependent
- Number of spouses, dependents, and young adults in the membership

While determining the member relationship for a member person, this algorithm derives the following characteristic types from the respective attributes of the member relationship and subscription tier preference:

- Age Calculation Date Basis
- Max Age Limit for Max Dependent Count
- Max Number of Dependents Order Priority
- Maximum Number of Dependents
- Member Relationship Derivation Date
- New Born Gift Days
- New Born Gift Days Applicability
- Young Adult Max Age Limit
- Young Adult Max Age Limit Applicability

It then derives these characteristics from the policy plan. Based on these characteristics defined for the policy plan, it derives the member relationship for each member person from the member relationship structure. If the **Member Relationship Derivation Date** characteristic type is set to **Enrollment Date**, this algorithm derives the member relationship for each member person of the membership in order of the member start date. However, if the **Member Relationship Derivation Date** characteristic type is set to **Date of Birth**, this algorithm derives the member relationship for each member person of the membership in order of the date of birth.

Once the member relationship is derived for a member person, this algorithm stores the member relationship for the member person. The characteristic type specified in the **Member Relationship Characteristic Type** attribute of the member relationship and subscription tier preference is used to store member relationship for the member person. On adding a membership to a policy plan or on adding a member person to a membership, the effective date of the member relationship characteristic is set to the member person's start date. If a new born is added to the membership, the effective date of the new born's member relationship characteristic is calculated considering the gift days if applicable.

If a member person is end dated, this algorithm derives the member relationship of all other member persons once again. If the member relationship for a member person is different, it creates a new characteristic to store the member relationship for the member person. The effective date of the new characteristic is set to the member person's end date + 1. For example, if the end date of a member person is set to 06-30-2021, then the effective date of the new characteristic for the remaining member persons is set to 07-01-2021. Similarly, if a member person is inactivated, this algorithm derives the member relationship of all other member persons once again. In this case, if the member relationship for a member person is different, it updates the existing member relationship characteristic of the member person and does not create a new member relationship characteristic for the member person.

Copyright © 2025, Oracle and/or its affiliates.

C1-MPCONCREA

This algorithm is invoked when the following conditions are met:

- A member person who is financially responsible for the membership is added to the membership
- One or more accounts already exist for the member person in the system

If the above conditions are met, this algorithm derives the membership in which the member person is added. It then derives the policy plan to which the membership belongs. It creates contracts for each account of the member person in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

  Let us assume that PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, this algorithm will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, this algorithm will create two distinct contracts - C1 using CT1 and C2 using CT2.

  If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

C1-MEMSTPRE

Once the status of the main subscriber is changed to **Inactive**, this algorithm changes the status of the membership to the value specified in the **Membership Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. In addition, it does not allow you to add a member person in the **Inactive** status to a membership.

C1-VALMEMBO

This algorithm validates a membership. It checks the following:

- Whether the membership end date is not earlier than the membership start date.
- Whether the membership start date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the membership end date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the policy plan for which you want to define the membership is specified.
- Whether the person who is the main subscriber is added to the membership.
- Whether the relationship type is specified while adding a person to the membership.

Copyright © 2025, Oracle and/or its affiliates.

C1-MEMINACT

This algorithm changes the status of the member person to the value specified in the **Membership Person Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

Late Setup Notification

Oracle Revenue Management and Billing enables you to create a To Do notification when the details to include a member person in a group or individual membership is received in ORMB beyond the late setup threshold days from the member person start date. This notification can help the billing analyst to take appropriate actions, such as giving premium waiver to the member person if required.

To enable this feature, you need to set the following option types in the **C1-ASOBLLNG** feature configuration:

- **Monitor Late Setup** - Used to indicate whether you want to enable the late setup notification feature. The valid values are - **Y** and **N**. By default, the value is set to **N**.
- **Late Setup Threshold in Days** - Used to indicate the number of threshold days for late setup notification. This option type is required when the **Monitor Late Setup** option type is set to **Y**. The value must be greater than zero.

For example, if the system receives the information to add a member person with the start date as **01-15-2021** to an individual membership on **02-15-2021** and the late setup threshold days in the **C1-ASOBLLNG** feature configuration is set to **15**. In this case, the number of days between the member person start date and member person creation date is greater than late setup threshold days, and therefore a To Do is created using the To Do type which is specified in the **C1-LATESET** algorithm attached to the group or individual membership business object, respectively.

To implement this business requirement, the system stores the member person creation date (which was not done in the previous releases) while adding a member person to a group or individual membership. A new batch named **C1-LSUB** is introduced in this release. It derives the creation date for all member persons in the existing group and individual memberships and stamps it against the corresponding record in the **CRE_DTTM** column of the **CI_MEMBERSHIP_PER** table. This batch must be executed only once after upgrading to Oracle Revenue Management and Billing Version 3.1.0.0.0. For more information, refer to *Oracle Revenue Management and Billing Version 3.1.0.0.0 Upgrade Guide.*

To Do Creation for Manual Refund/Write Off on Direct Billed Group Membership Cancellation

Oracle Revenue Management and Billing facilitates you with the following on cancelling a direct billed group membership:

- Automatically cancel any refund and/or write off requests which are systematically created through refund/write off instruction via the **Automatic Refund/Write Off** feature.
- Create a To Do for refund and/or write off requests which are manually created for the account via the **Refund/Write Off Request** feature.

To implement this feature, the following changes are made to the system:

Copyright © 2025, Oracle and/or its affiliates.

- A new algorithm type named **C1-WOCANMCN** is introduced in this release. An algorithm created using the **C1-WOCANMCN** algorithm type is attached to the **Canceled** status in the lifecycle of the **C1-Membership** business object.
- The **C1-RFRQC** and **C1-WORQC** To Do types are newly introduced in this release.

On cancelling a group membership, the system checks whether the billing arrangement characteristic is defined on the group membership. The system considers the characteristic type which is specified in the **Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration. If the billing arrangement characteristic is defined on the group membership, the system checks whether the characteristic value is set to **DRCT** (i.e., Direct Billing). If so, the system derives the financially responsible person's account from the system. However, if the billing arrangement characteristic is not defined on the group membership or if its characteristic value is not set to **DRCT** (i.e., Direct Billing), the system will skip the group membership and will take no actions against it.

Once the account is derived for a direct billed group membership, the system checks whether there is any refund/write off request created for the account. If so, the system checks whether the refund/write off request is systematically created through refund/write off instruction via the **Automatic Refund/Write Off** feature. If so, the system automatically cancels the refund/write off request of the account. However, if the refund/write off request is not systematically created through refund/write off instruction, the system creates a To Do using the respective To Do type specified in the **C1-WOCANMCN** algorithm. You can then refer this To Do and manually cancel such refund/write off request of the account.

Policy (Used for Searching)

The **Policy** screen allows you to search for a policy using various search criteria. It also allows you to define a policy. It contains the following zone:

- Search Policy on page 236

Through this screen, you can navigate to the following screen:

- Policy (Used for Viewing) on page 248

Search Policy

The **Search Policy** zone allows you to search for a policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a policy using the policy or person details. The valid values are: • Policy Date/Policy Type/Status • Source System/Policy Number/Description • Person Name/Person Identifier • Policy Characteristics **Note:** By default, the **Policy Date/Policy Type/Status** option is selected.	Yes
Policy Type	Used to search policies which are created using a particular policy type.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	
Start Date	Used to search policies which are effective from a particular date. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Status	Used to search policies with a particular status. The valid values are: • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
End Date	Used to search policies which are effective till a particular date. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Source System	Used to search policies which originated from a particular external system. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No
Policy Number	Used to search a policy with a particular policy number. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No
Description	Used to search policies with a particular description. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No
Person Name	Used to search policies to which a particular person is associated. **Note:** This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	No
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	**Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search policies to which a person is associated.	Yes (Conditional)
	Note: This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	**Note:** If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Characteristic Type	Used to search policies for which a particular characteristic type is defined.	Yes (Conditional)
	Note: This field appears when the **Policy Characteristics** option is selected from the **Search By** list. The list includes only those characteristic types where the characteristic entity is set to **Policy**.	**Note:** This field is required when you are searching for a policy using a characteristic.
Characteristic Value	Used to search policies with a particular characteristic value.	Yes (Conditional)
	Note: This field appears when the characteristic type is selected. If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are searching for a policy using a characteristic.

Note: You must specify at least one search criterion while searching for a policy.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Policy Information	Displays additional information about the policy.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td></td><td>Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.</td></tr>
<tr><td>Source System</td><td>Indicates the external system from where the policy is originated.</td></tr>
<tr><td>Description</td><td>Displays the description of the policy.</td></tr>
<tr><td>Start Date</td><td>Displays the date from when the policy is effective.</td></tr>
<tr><td>End Date</td><td>Displays the date till when the policy is effective.</td></tr>
<tr><td>Status</td><td>Indicates the status of the policy. If the policy is created using the C1-POLICY business object, the valid values are:
Pending
In Force/Active
Pending Cancellation
Canceled
Pending Reinstatement
Reinstated
Pending Termination
Terminated
However, if the policy is created using the C1-ASOPolicy business object, the valid values are:
Pending
In Force/Active
Runout
Post Runout</td></tr>
<tr><td>Main Customer</td><td>This column displays different data depending on whether you search for a policy using the policy or person details. The following table describes this column:<table>
<tr><th>If you search for a policy using...</th><th>Then...</th></tr>
<tr><td>The Policy Date/Policy Type/ Status, Source System/Policy Number/ Description, or Policy Characteristics option</td><td>The Main Customer column displays the name of the person who is the main customer of the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.
Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</td></tr>
<tr><td>The Person Name/Person Identifier option</td><td>The Main Customer column indicates whether the person is the main customer of the policy. The valid values are:
Yes
No</td></tr>
</table></td></tr>
<tr><td>Person Information</td><td>Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.</td></tr>
</table>

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and person identifier types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy** sub-menu.
   The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

Copyright © 2025, Oracle and/or its affiliates.

A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the Policy Details

Procedure

To view the details of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to view.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the policy in the **Policy** zone.

Defining a Policy

Oracle Revenue Management and Billing enables you to define a policy for the fully-insured and self-funded health insurance business. You can define a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, you can define a self-funded policy using a policy type where the policy category is set to **Self-Funded**.

Note: At present, the **Fully-Insured Individual** policy category is not supported in the system.

Prerequisites

To define a policy, you should have:

- Policy types defined in the application.
- Values defined for the **C1-SourceSystemLookup** extendable lookup.

  Note: This prerequisite is applicable only when you want to define a fully-insured group policy.
- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field.

  Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To define a policy:

Copyright © 2025, Oracle and/or its affiliates.

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
   A sub-menu appears.
3. Click the **Add** option from the **Policy** sub-menu.

   The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to create a policy. **Note:** If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to **Self-Funded**.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy** screen.

4. Select the required policy type from the respective field.
5. Click **OK**.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field appears when you are defining a policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date.	Yes
End Date	Used to specify the date till when the policy is effective.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The policy end date cannot be earlier than the policy start date.	
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends. **Note:** The runout end date cannot be earlier than or equal to the policy end date. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	No
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	No
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for the advance billing feature of level funding. **Note:** This is a read-only field. By default, the value is set to **No**. You can edit the advance level funding eligibility only through a health care inbound message. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Advance Deposit Applicability	Used to indicate whether the advance deposit is applicable for the policy.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this field is not mandatory. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Amount	Used to specify the advance deposit amount that will be parked at the policy level. **Note:** You must specify a positive value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e., grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022. **Note:** You must specify an integer value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Account	Used to indicate the account of the parent customer where the advance deposit is parked for the policy.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4338. The **Search** (🔍) icon appears corresponding to the **Advance Deposit Account** field. On clicking the **Search** icon, the **Account Search** window appears.	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.

6. Enter the required details in the **Main** section.
7. Associate the required persons with the policy.

> **Note:** While defining a policy, you must associate a person who is the main customer of the policy.

8. Define the characteristics for the policy, if required.
9. Click **Save**.
   The policy is defined and its status is set to **Pending**.

How to define a characteristic for a policy	Defining a Characteristic for a Policy on page 247

Associating a Person with a Policy

Prerequisites

To associate a person with a policy, you should have:

- Required persons defined in the application
- Required policy person roles defined in the application

Procedure

To associate a person with a policy:

1. Ensure that the **Persons** section is expanded when you are defining or editing a policy.

   The **Persons** section contains the following fields in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person	Used to indicate the person that you want to associate with the policy. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears. On specifying the person ID, the person name appears corresponding to the **Person** field.	Yes
Sequence	Used to specify the sequence number for the associated person.	Yes
Policy Person Role	Used to indicate the role of a person in the policy.	Yes
Main Customer	Used to indicate whether the person is the main customer of the policy. **Note:** At a time, only one person can be the main customer of the policy.	Yes (Conditional) **Note:** You must select this option while associating a person who is the main customer of the policy.
Start Date	Used to specify the date from when the person is associated with the policy. **Note:** The start date cannot be later than the end date. The start date cannot be earlier than the policy start date and later than the policy end date.	Yes
End Date	Used to specify the date till when the person is associated with the policy. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the policy start date and later than the policy end date. This validation is done when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter of the **C1-POLBOVAL** algorithm. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter of the **C1-POLBOVAL** algorithm to **TERMINATED**, the system will not perform this validation when the status of the policy is changed to **Terminated**.	No

2. Enter the required details in the **Persons** section.

Note: While associating the persons with a policy, you must always ensure that one person is the main customer of the policy.

Copyright © 2025, Oracle and/or its affiliates.

3. If you want to associate more than one person with the policy, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to dissociate a person from the policy, click the **Delete** (🗑) icon corresponding to the person.

4. Click **Save**.
   The persons are associated with the policy.

Defining a Characteristic for a Policy

Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a characteristic for a policy:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a policy.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy. **Note:** The effective date cannot be earlier than the policy start date and later than the policy end date.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Policy**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.

Copyright © 2025, Oracle and/or its affiliates.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy, click the **Add** (+) icon and then *r*epeat step 2.

> **Note:** However, if you want to remove a characteristic from the policy, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the policy.

Policy (Used for Viewing)

The **Policy** screen allows you to:

- View the details of a fully-insured group or self-funded policy
- Edit the details of a fully-insured group or self-funded policy
- Activate a fully-insured group or self-funded policy
- Add or edit plans in a fully-insured group policy
- Add memberships to a fully-insured group policy plan
- Initiate the termination process for a fully-insured group policy
- Terminate a fully-insured group policy
- Initiate the cancellation process for a fully-insured group policy
- Cancel a fully-insured group policy
- Initiate the reinstatement process for a fully-insured group policy
- Reinstate a fully-insured group policy
- View the log of a fully-insured group or self-funded policy
- Add a log entry for a fully-insured group or self-funded policy

It consists of the following tabs:

- Policy - Main on page 248
- Policy - Plan on page 255
- Policy - Log on page 258

Policy - Main

The **Main** tab displays information about the policy. It contains the following zones:

- Policy on page 248
- Policy Characteristics on page 255

Policy

The **Policy** zone displays the details of the fully-insured group or self-funded policy. It contains the following sections:

- **Main** - Displays basic information about the policy. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Base Policy Information	Displays information about the base policy. **Note:** This field appears when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to **Self-Funded**.
Policy Information	Displays information about the policy.
Policy Type	Indicates the policy type using which the policy is created. **Note:** It has a link. On clicking the link, the **Policy Type** screen appears where you can view the details of the respective policy type.
Status	Indicates the status of the policy. If the policy is created using the **C1-POLICY** business object, the valid values are: • Pending • Activate • In Force/Active • Pending Termination • Terminated • Pending Reinstatement • Reinstated • Renewed • Pending Cancellation • Canceled However, if the policy is created using the **C1-ASOPolicy** business object, the valid values are: • Pending • In Force/Active • Runout • Post Runout
Status Reason	Indicates the reason why the policy is terminated. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective termination reason. This field appears when you are viewing the details of a terminated or reinstated policy which is created using a policy type where the policy category is set to **Fully-Insured Group**.
Policy Number	Displays the policy number.
Description	Displays the description of the policy. **Note:** This field appears when you are viewing the details of a policy where the policy category is set to **Self-Funded**.
Source System	Indicates the external system from where the policy is originated.
Start Date	Displays the date from when the policy is effective.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th></tr>
<tr><td>End Date</td><td>Displays the date till when the policy is effective.</td></tr>
<tr><td>Renewal Date</td><td>Displays the date when the policy is renewed.

Note: This field appears when you are viewing the details of a policy which is renewed.</td></tr>
<tr><td>Paid Through Date</td><td>Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.

Note:
This field appears when the following conditions are met:
• When you are viewing the details of a policy which is created using a policy type where the policy category is set to Fully-Insured Group.
• When the paid through date is calculated at the policy level.

The paid through date is calculated while freezing or canceling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:
<table>
<tr><th>Entity</th><th>System Event</th><th>Algorithm</th></tr>
<tr><td>Customer Class</td><td>Payment Freeze</td><td>C1-PSPTDCAL</td></tr>
<tr><td>Customer Class</td><td>Payment Cancellation</td><td>C1-PXPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Freeze</td><td>C1-ADPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Cancellation</td><td>C1-AXPTDCAL</td></tr>
</table>
The following table indicates when the paid through date is calculated at the policy and/or membership level:
<table>
<tr><th>If the Paid Through Date Calculation Level parameter is set to…</th><th>If the following characteristics are defined for the billable charge or adjustment…</th><th>Then…</th></tr>
<tr><td>P</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>M</td><td>C1-POLID</td><td>Paid through date is not calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>
<tr><td>P, M</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
</table>
</td></tr>
</table>

<table>
<tr><th>If the Paid Through Date Calculation Level parameter is set to…</th><th>If the following characteristics are defined for the billable charge or adjustment…</th><th>Then…</th></tr>
<tr><td>P, M</td><td>C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr>
<tr><td>P, M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr>
</table>
</td></tr>
<tr><td>Runout End Date</td><td>Displays the date when the runout period of the self-funded policy ends.

Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Runout Administration Fees</td><td>Indicates whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:
• None
• Percentage of Claim

Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Advance Level Funding Eligibility</td><td>Indicates whether the self-funded policy is eligible for advance billing feature of level funding.

Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Advance Deposit Applicability</td><td>Indicates whether the advance deposit is applicable for the policy.

Note: This field appears only when the policy is created using a policy type where the policy category is set to Fully-Insured Group.</td></tr>
<tr><td>Advance Deposit Amount</td><td>Displays the advance deposit amount.

Note: This field appears only when the Advance Deposit Applicability option is selected.</td></tr>
<tr><td>Advance Deposit Grace Days</td><td>Displays the grace days used for calculating the advance deposit grace period.

Note: This field appears only when the Advance Deposit Applicability option is selected.</td></tr>
<tr><td>Advance Deposit Account</td><td>Indicates the account of the parent customer where the advance deposit is parked for the policy. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears only when the **Advance Deposit Applicability** option is selected. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

- **Persons** - Lists the persons which are associated with the policy. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Sequence	Displays the sequence number of the associated person.
Policy Person Role	Indicates the role of the person in the policy.
Main Customer	Indicates whether the person is the main customer of the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the fully-insured group or self-funded policy. **Note:** The **Edit** button appears only when a policy of the respective category is in either of the following status:
Activate	Used to activate the fully-insured group or self-funded policy.

Policy Category	Status
Fully-Insured Group	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	• In Force/Active • Pending • Runout

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Button Name</th><th>Button Description</th></tr>
<tr><td></td><td>Note:
The Activate button appears when a policy of the respective category is in either of the following status:
<table><tr><th>Policy Category</th><th>Status</th></tr><tr><td>Fully-Insured Group</td><td>• Pending
• Pending Termination</td></tr><tr><td>Self-Funded</td><td>• Pending</td></tr></table></td></tr>
<tr><td>Initiate Cancellation</td><td>Used to initiate the cancellation process for the fully-insured group policy.
Note: The Initiate Cancellation button appears when the fully-insured group policy is in the In Force/Active status.</td></tr>
<tr><td>Cancel</td><td>Used to cancel the fully-insured group policy.
Note: The Cancel button appears when the fully-insured group policy is in the Pending Cancellation status.</td></tr>
<tr><td>Initiate Termination</td><td>Used to initiate the termination process for the fully-insured group policy.
Note: The Initiate Termination button appears when the fully-insured group policy is in the In Force/Active status.</td></tr>
<tr><td>Terminate</td><td>Used to terminate the fully-insured group policy.
Note: The Terminate button appears when the fully-insured group policy is in the In Force/Active, Pending Reinstatement, or Pending Termination status.</td></tr>
<tr><td>Initiate Reinstatement</td><td>Used to initiate the reinstatement process for the terminated policy.
Note: The Initiate Reinstatement button appears when the fully-insured group policy is in the Terminated status.</td></tr>
<tr><td>Reinstate</td><td>Used to reinstate the terminated policy.
Note: The Reinstate button appears when the fully-insured group policy is in the Pending Reinstatement or Terminated status.</td></tr>
<tr><td>Runout</td><td>Used to transition the self-funded policy to the Runout status.</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Runout** button appears when the self-funded policy is in the **In Force/Active** status. You cannot transition a self-funded policy to the **Runout** status when: • The self-funded policy is renewed. • The runout end date is not specified. • The policy end date is earlier than the system date.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the policy status is updated.
Create Date/Time	Displays the date and time when the policy is created.

- **Termination Information** - Displays the termination details of the fully-insured group policy. It appears when the policy is in the **Pending Termination** status. It contains the following fields:

Field Name	Field Description
Terminate Date	Displays the date when you want to terminate the policy.
Terminate Reason	Indicates the reason why the termination process is initiated for the policy. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective termination reason.

- **Reinstate Information** - Displays the reinstatement details of the terminated policy. It appears when the policy is in the **Pending Reinstatement** status. It contains the following fields:

Field Name	Field Description
Reinstate Reason	Indicates the reason why you want to reinstate the fully-insured group policy. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective reinstatement reason.

Policy Characteristics

The **Policy Characteristics** zone lists the characteristics of the fully-insured group or self-funded policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Policy - Plan

The **Plan** tab lists the plans defined for the policy and memberships defined for each policy plan. It contains the following zones:

- Plans on page 255
- Memberships on page 257

Plans

The **Plans** zone lists the plans which are defined in the policy. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Plan Information	Displays information about the policy plan. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Price Item Information	Indicates the price item to which the policy plan is directly associated. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Benefit Type	Indicates the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Edit	On clicking the **Edit** (✎) icon, the **Plan** screen appears where you can edit the details of the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new policy plan by clicking the **Add** link in the upper-right corner of this zone. On clicking the **Broadcast** (📡) icon corresponding to a policy plan, the **Memberships** zone appears.

Note: Ideally, you define plans in a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.

You can filter the list using various search criteria (such as, **Price Item**, **Plan Number**, and **Effective From**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper-right corner of this zone.

Memberships

The **Memberships** zone lists the memberships which are defined for the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Information	Displays information about the membership. **Note:** It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: • Active • Inactive • Terminated
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree
Benefits	On clicking the **Benefits** (🔗) icon, the **Benefit** screen appears where you can view the Membership benefits of the member persons who belong to the membership. **Note:** The **Benefits** icon appears when a Membership benefit is defined for a member person who belongs to the membership.
Membership ID	Displays the membership ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306

Policy - Log

The **Log** tab contains the following zone:

- Policy Log on page 258

Policy Log

The **Policy Log** zone lists the complete trail of actions performed on the policy. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the policy.
Details	Displays the details about the action performed on the policy.
User	Indicates the user who has performed the action on the policy.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the policy. **Note:** It contains a link. On clicking the link, the screen appears where you can view the details of the respective related object.
Status Reason	Indicates the reason why the status of the policy is changed.

Note: You can manually add a log entry for the policy by clicking the **Add Log Entry** link in the upper right corner of the **Policy Log** zone.

Activating a Policy

Procedure

To activate a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to activate.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Activate** button in the **Policy** zone.
   The status of the policy is changed to **In Force/Active**.

Copyright © 2025, Oracle and/or its affiliates.

Note:

The **Activate** button appears only when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	• Pending • Pending Termination
Self-Funded	• Pending

Editing a Policy

Prerequisites

To edit a policy, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

  Note: This prerequisite is applicable only when you want to define a fully-insured group policy.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field

  Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To edit a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to edit.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Policy** zone.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which the policy is defined.	Not applicable
Status	Indicates the status of the policy. The valid values are: • Pending • In Force/Active • Runout • Post Runout **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date. You cannot change the start date of a self-funded policy when it is in the **In Force/Active**, **Runout**, or **Post Runout** status.	Yes
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date. You cannot change the end date when the self-funded policy is in the **Runout** status. You cannot set the end date of a self-funded policy to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status. You cannot change the end date when the policy is renewed.	Yes
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**. The runout end date cannot be earlier than or equal to the policy end date. The runout end date cannot be earlier than or equal to the system date when the policy is in the **Runout** status. You cannot remove the runout end date when the policy is in the **Runout** or **Post Runout** status. You cannot set the runout end date to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status. You cannot set the runout end date to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.	
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**.	No
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for the advance billing feature of level funding. **Note:** This is a read-only field. By default, the value is set to **No**. You can edit the advance level funding eligibility only through a health care inbound message. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Advance Deposit Applicability	Used to indicate whether the advance deposit is applicable for the policy.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this field is not mandatory. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Amount	Used to specify the advance deposit amount.	Yes (Conditional)
	Note: You must specify a positive value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group** .	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e., grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
	Note: You must specify an integer value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Account	Used to indicate the account of the parent customer where the advance deposit is parked for the policy.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4338. The **Search** (🔍) icon appears corresponding to the **Advance Deposit Account** field. On clicking the **Search** icon, the **Account Search** window appears.	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.

Note:

The **Edit** button appears when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	• In Force/Active • Pending • Runout

5. Modify the required details in the **Main** section.
6. Associate the persons with the policy, if required.

Note: While editing a policy, you must ensure that one person is associated as the main customer of the policy.

7. Define, edit, or remove characteristics of the policy, if required.
8. Click **Save**.
   The changes made to the policy are saved.

Initiating the Termination Process for a Fully-Insured Group Policy

Prerequisites

To initiate the termination process for a fully-insured group policy, you should have:

- Reasons defined for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen

Procedure

To initiate the termination process for a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for *w*hich you want to initiate the termination process.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Initiate Termination** button in the **Policy** zone.

   The **Termination Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Terminate Reason	Used to indicate the reason why you want to initiate the termination process for the fully-insured group policy.	Yes
Terminate Date	Used to specify the date when you want to terminate the policy. **Note:** The terminate date cannot be earlier than the policy start date or later than the policy end date.	Yes

Note: The **Initiate Termination** button appears when the fully-insured group policy is in the **In Force/Active** status.

5. Enter the required details in the **Termination Information** window.
6. Click **Save**.
   The status of the fully-insured group policy is changed to **Pending Termination**.

Terminating a Fully-Insured Group Policy

Prerequisites

To terminate a fully-insured group policy, you should have:

- Reasons defined for the **Terminated** status of the **C1-POLICY** business object in the **Status Reason** screen

Procedure

To terminate a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to terminate.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Terminate** button in the **Policy** zone.

   The **Status Reason** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Terminate Reason	Used to indicate the reason why you want to terminate the fully-insured group policy.	No
Terminate Date	Used to specify the date to terminate the fully-insured group policy.	No

> **Note:** The **Terminate** button appears when the fully-insured group policy is in the **In Force/Active**, **Pending Reinstatement**, or **Pending Termination** status.

5. Select the terminate reason from the respective field.
6. Click **Save**.
   The status of the policy is changed to **Terminated**.

> **Note:** You cannot terminate a fully-insured group policy which is in the **Pending Termination** status when the terminate date is earlier than the system date.

Defining a Plan for a Fully-Insured Group Policy

Prerequisites

To define a plan for a fully-insured group policy, you should have:

- Policy plan business objects defined in the application
- Price items defined in the application

Procedure

To define a plan for a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy for *w*hich you want to define a plan.
   The **Policy** screen appears.
3. Click the **Plan** tab.
   The **Plan** tab appears.
4. Click the **Add** link in the upper right corner of the **Plans** zone.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Business Object	Used to indicate the business object using which you want to create a plan for a fully-insured group policy.	Yes

> **Tip:** Alternatively, you can access this screen by clicking the **Add** link in the upper right corner of the **Policy Plan** zone in the **Policy Plan** screen.

> **Note:** The **Select Business Object** screen appears when there are multiple policy plan business objects defined in the application. If there is only one policy plan business object defined in the application, the **Plan** screen appears.

5. Select the required policy plan business object from the respective field.
6. Click **OK**.

   The **Policy Plan** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy plan.
   - **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
   - **Proration Rules** - Used to define the proration rules for the policy plan.
   - **Characteristics** - Used to define the characteristics for the policy plan.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Indicates the fully-insured group policy for which you want to create the policy plan.	Not applicable
Price Item	Used to indicate the price item which you want to directly associate with the policy plan.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Price Item Search** window appears. On specifying the price item, the description of the price item appears corresponding to the **Price Item** field.	**Note:** You must either specify the price item or associate at least one pricing rule type with the policy plan.
Plan Number	Used to specify the plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Benefit Type	Used to indicate the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated	No
Start Date	Used to specify the date from when the policy plan is effective. **Note:** The policy plan start date cannot be earlier than the policy start date and later than the policy end date. The policy plan start date cannot be later than the policy plan end date.	Yes
End Date	Used to specify the date till when the policy plan is effective. **Note:** The policy plan end date cannot be earlier than the policy start date and later than the policy end date. The policy plan end date cannot be earlier than the policy plan start date.	No

7. Enter the required details in the **Main** section.
8. Associate the pricing rule types with the fully-insured group policy plan, if required.

> **Note:** You must associate at least one pricing rule type with the policy plan when the price item is not specified in the fully-insured group policy plan.

9. Define the proration rules for the fully-insured group policy plan, if required.
10. Define the characteristics for the fully-insured group policy plan, if required.
11. Click **Save**.
    The plan is defined for the fully-insured group policy.

Defining a Proration Rule for a Fully-Insured Group Policy Plan

Procedure

To define a proration rule for a fully-insured group policy plan:

1. Ensure that the **Proration Rules** section is expanded when you are defining or editing a fully-insured group policy plan.

   The **Proration Rules** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the proration rule is effective for the policy plan. **Note:** The system considers the latest proration rule and not the effective proration rule while prorating the membership premium. The effective date cannot be earlier than the plan start date and later than the plan end date.	Yes (Conditional) **Note:** This field is required when you are defining a proration rule for the policy plan.
Proration Event Type	Used to indicate the event when you want to prorate the membership premium. The valid values are: • **Enrollment** - Used when you want to prorate the membership premium on enrolling a member person. • **Termination** - Used when you want to prorate the membership premium on terminating a member person. • **New Born** - Used when you want to prorate the membership premium on enrolling a new born. • **Same Month Enrollment and Termination** - Used when you want to prorate the membership premium on enrolling and terminating a member person in the same month.	Yes (Conditional) **Note:** This field is required when you are defining a proration rule for the policy plan.
Proration Type	Used to indicate how you want to prorate the membership premium. The valid values are:	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Daily** - Used when you want to prorate the membership premium from the day the proration event has occurred. • **Mid-Month** - Used when you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula: `Bill Period Start Date + Specified ' Number of Days` For example, if the bill period start date is 1st of every month and number of days is 15, then the proration date would be 15th of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person is terminated from the membership before the proration date, the system will not charge the premium for the member person. • **Full Month** - Used when the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person.	**Note:** This field is required when you are defining a proration rule for the policy plan.
	• **Waiver** - Used when the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership. • **Coverage Days** - Used when you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person. **Note:** You can use this proration type when the proration event is set to **Same Month Enrollment and Termination**.	
	• **Enrollment** - Used when you want to prorate the premium for a member person using the proration type of the enrollment event. **Note:** You can use this proration type when the proration event is set to **Same Month Enrollment and Termination**.	

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Termination** - Used when you want to prorate the premium for a member person using the proration type of the termination event. **Note:** You can use this proration type only when the proration event is set to **Same Month Enrollment and Termination**.	
Number of Days	Used to specify the number of days to determine the cutoff date.	Yes (Conditional) **Note:** This field is required when the proration type is set to **Mid-Month** or **Coverage Days**.

2. Enter the required details in the **Proration Rules** section.
3. If you want to define more than one proration rule for the fully-insured group policy plan, click the **Add** (+) icon and then *r*epeat step 2.

Note: However, if you want to remove a proration rule of the fully-insured group policy plan, click the **Delete** ( ) icon corresponding to the proration rule.

4. Click **Save**.
   The proration rules are defined for the fully-insured group policy plan.

Associating a Pricing Rule Type with a Fully-Insured Group Policy Plan

You can define a pricing rule using a pricing rule type for a fully-insured group policy plan when the pricing rule type is associated with the fully-insured group policy plan. You can associate a pricing rule type with a fully-insured group policy plan either from the user interface or through a health care inbound message.

Prerequisites

To associate a pricing rule type with a fully-insured group policy plan, you should have:

- Pricing rule types defined in the application (where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**)

Procedure

To associate a pricing rule type with a fully-insured group policy plan:

1. Ensure that the **Pricing Rule Types** section is expanded when you are defining or editing a fully-insured group policy *p*lan.

   The **Pricing Rule Types** section contains the following field in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type that you want to associate with the fully-insured group policy plan. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Pricing Rule Type Search** window appears. On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field. Here, you can only specify a pricing rule type where the pricing rule type category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.	Yes (Conditional) **Note:** You must either specify the price item or associate at least one pricing rule type with the policy plan.

2. Enter the required details in the **Pricing Rule Types** section.
3. If you want to associate more than one pricing rule type with the fully-insured group policy plan, click the **Add** (+) *i*con and then repeat step 2.

> **Note:** However, if you want to dissociate a pricing rule type from the fully-insured group policy plan, click the **Delete** (🗑) icon corresponding to the pricing rule type.

4. Click **Save**.
   The pricing rule types are associated with the fully-insured group policy plan.

Defining a Characteristic for a Fully-Insured Group Policy Plan

Prerequisites

To define a characteristic for a fully-insured group policy plan, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**).

Procedure

To define a characteristic for a fully-insured group policy plan:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a fully-insured group policy *p*lan.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the fully-insured group policy plan.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The effective date cannot be earlier than the policy plan start date and later than the policy plan end date.	**Note:** This field is required when you are defining a characteristic for the fully-insured group policy plan.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Policy Plan**.	**Note:** This field is required when you are defining a characteristic for the fully-insured group policy plan.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the fully-insured group policy plan.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the fully-insured group policy plan, click the **Add** (+) icon and *t*hen repeat step 2.

Note: However, if you want to remove a characteristic from the fully-insured group policy plan, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the fully-insured group policy plan.

Editing a Plan of a Fully-Insured Group Policy

Prerequisites

To edit a plan of a fully-insured group policy, you should have:

- Price items defined in the application

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To edit a plan of a fully-insured group policy:

1. Search for the fully-insured group policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to edit.
   The **Policy** screen appears.
3. Click the **Plan** tab.
   The **Plan** tab appears.
4. In the **Plans** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the policy plan whose details *y*ou want to edit.

   The **Policy Plan** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the fully-insured group policy plan.
   - **Pricing Rule Types** - Used to associate the pricing rule types with the fully-insured group policy plan.
   - **Proration Rules** - Used to define the proration rules for the fully-insured group policy plan.
   - **Characteristics** - Used to define the characteristics for the fully-insured group policy plan.

   The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Plan Information	Displays information about the fully-insured group policy plan.	Not applicable
Policy Information	Indicates the fully-insured group policy for which the policy plan is created.	Not applicable
Price Item	Used to indicate the price item which you want to directly associate with the fully-insured group policy plan. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Price Item Search** window appears. On specifying the price item, the description of the price item appears corresponding to the **Price Item** field.	Yes (Conditional) **Note:** You must either specify the price item or associate at least one pricing rule type with the policy plan.
Plan Number	Used to specify the plan number.	Yes
Plan Name	Used to specify the description for the fully-insured group policy plan.	No
Benefit Type	Used to indicate the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated	No
Start Date	Used to specify the date from when the fully-insured group policy plan is effective.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The fully-insured group policy plan start date cannot be earlier than the policy start date and later than the policy end date. The fully-insured group policy plan start date cannot be later than the policy plan end date.	
End Date	Used to specify the date till when the fully-insured group policy plan is effective. **Note:** The fully-insured group policy plan end date cannot be earlier than the policy start date and later than the policy end date. The fully-insured group policy plan end date cannot be earlier than the policy plan start date.	No

Tip: Alternatively, you can edit the details of a fully-insured group policy plan by clicking the **Edit** button in the **Policy Plan** zone of the **Policy Plan** screen.

5. Modify the required details in the **Main** section.
6. Associate the pricing rule types with the fully-insured group policy plan, if required.

Note: You must associate at least one pricing rule type with the policy plan when the price item is not specified in the fully-insured group policy plan.

7. Define, edit, or remove the proration rules of the fully-insured group policy plan, if required.
8. Define, edit, or remove characteristics of the fully-insured group policy plan, if required.
9. Click **Save**.
   The changes made to the fully-insured group policy plan are saved.

Policy Plan (Used for Viewing)

The **Policy Plan** screen allows you to:

- View the details of a fully-insured group policy plan
- View the characteristics of a fully-insured group policy plan
- Add and edit a fully-insured group policy plan
- Add a membership to a fully-insured group policy plan

It contains the following zones:

- Policy Plan on page 280
- Plan Characteristics on page 282
- Memberships on page 257

Policy Plan

The **Policy Plan** zone displays the details of the policy plan. It contains the following sections:

- **Main** - Displays the basic information about the policy plan. It contains the following fields:

Field Name	Field Description
Plan Information	Displays information about the policy plan.
Policy Information	Displays information about the policy. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Price Item Information	Indicates the price item to which the policy plan is directly associated. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Benefit Type	Indicates the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the benefit type is set to **COBRA** or **Medicare Affiliated**.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.

- **Pricing Rule Types** - Lists the pricing rule types which are associated with the policy plan. It contains the following column:

Column Name	Column Description
Pricing Rule Type	Indicates the pricing rule type which is associated with the policy plan.
	Note: It has a link. On clicking the link, the **Pricing Rule Type** screen appears where you can view the details of the respective pricing rule type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy plan.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the policy plan is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Proration Rules** - Lists the proration rules defined for the policy plan. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the proration rule is effective for the policy plan.
Proration Event Type	Indicates the event when the membership premium should be prorated. The valid values are: • Enrollment • Termination • New Born • Same Month Enrollment and Termination
Proration Type	Indicates how the membership premium should be prorated. The valid values are: • Daily • Mid-Month • Full Month • Waiver • Coverage Days • Enrollment • Termination

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Number of Days	Displays the number of days using which the cutoff date is calculated. **Note:** The data appears in this column when the proration type is set to **Mid-Month** or **Coverage Days**.
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree

You can define a new policy plan by clicking the **Add** link in the upper right corner of this zone.

Plan Characteristics

The **Plan Characteristics** zone lists the characteristics of the fully-insured group policy plan. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy plan.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Memberships

The **Memberships** zone lists the memberships which are defined for the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Membership Information	Displays information about the membership. **Note:** It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: • Active • Inactive • Terminated
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree
Benefits	On clicking the **Benefits** (🔗) icon, the **Benefit** screen appears where you can view the Membership benefits of the member persons who belong to the membership. **Note:** The **Benefits** icon appears when a Membership benefit is defined for a member person who belongs to the membership.
Membership ID	Displays the membership ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306

Membership (Used for Searching)

The **Membership** screen allows you to search for an individual or group membership using various search criteria. It also allows you to define an individual or group membership. It contains the following zone:

- Search Membership on page 287

Through this screen, you can navigate to the following screen:

- Membership (Used for Viewing) on page 299

Search Membership

The **Search Membership** zone allows you to search for a fully-insured individual or group membership using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Search By	Used to indicate whether you want to search for a membership using the membership, policy plan, member person, or health plan details. The valid values are: • Membership Details • Policy Plan Details • Person Details • Health Plan Details **Note:** By default, **Membership Details** option is selected.	No
Membership ID	Used to search a particular membership. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No
External Membership ID	Used to search a membership with a particular external membership ID. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to search memberships which are effective from a particular date onwards. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No
End Date	Used to search memberships which are effective till a particular date. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No
Status	Used to search memberships with a particular status. The valid values are: • Active • Canceled • Draft • Pending Effectuation • Terminated **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list.	No
Membership Type	Used to search memberships of a particular type. The valid values are: • COBRA • Medicare • Retiree **Note:** If you want to search for an active employee coverage membership, you must leave this field blank. This field appears when the **Membership Details** or **Policy Plan Details** or **Person Details**, or **Health Plan Details** option is selected from the **Search By** list.	No
Benefit Type	Used to search memberships where a member person has availed for a particular type of benefit. The valid values are: • Commercial • Medicare Affiliated **Note:** This field appears when the **Membership Details** or **Person Details** option is selected from the **Search By** list.	No
Benefit Sub Type	Used to search memberships where a member person has availed for a particular membership benefit.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Membership Details** or **Person Details** option is selected from the **Search By** list. The list includes only those benefit types which are defined through the **Benefit Sub Type** screen.	
Membership Identifier Type	Used to search memberships which are associated with a membership identifier type. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list. You can only search individual memberships, if you are specifying the membership identifier type.	Yes (Conditional) **Note:** This field is required when you are searching for a membership using a membership identifier type.
Membership Identifier	Used to search memberships with a particular identifier. **Note:** This field appears when the **Membership Details** option is selected from the **Search By** list. You can only search individual memberships, if you are specifying the membership identifier.	Yes (Conditional) **Note:** This field is required when you are searching for a membership using a membership identifier.
Rate Guarantee Start Date	Used to specify the date from when the rate guarantee is available for the individual membership. **Note:** This field appears when the **Membership Details** or **Health Plan Details** option is selected from the **Search By** list.	Yes
Rate Guarantee End Date	Used to specify the date till when the rate guarantee is available for the individual membership. **Note:** This field appears when the **Membership Details** or **Health Plan Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This data is required if you have specified the rate guarantee start date while defining the individual membership.
Late Setup	Used to indicate whether the member person details should be included in an individual or group membership once the membership is created. **Note:** This field appears when the **Membership Details** or **Policy Plan Details** or **Health Plan Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required to provide premium waiver to the member person if required.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search memberships for which a particular characteristic type is defined. **Note:** This field appears when the **Membership Details** or **Person Details** option is selected from the **Search By** list. The list includes only those characteristic types where the characteristic entity is set to **Membership**.	Yes (Conditional) **Note:** This field is required when you are searching for a membership using a characteristic.
Characteristic Value	Used to search memberships with a particular characteristic value. **Note:** This field appears when the characteristic type is selected. If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are searching for a membership using a characteristic.
Policy ID	Used to search memberships which belong to the plans of a particular policy. **Note:** The **Search**(🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Policy Search** window appears. This field appears when the **Policy Plan Details** option is selected from the **Search By** list.	No
Price Item	Used to search memberships of a particular plan which is directly associated with price item. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Price Item Search** window appears. This field appears when the **Policy Plan Details** option is selected from the **Search By** list.	No
Plan ID	Used to search memberships of a particular plan.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Policy Plan Search** window appears. This field appears when the **Policy Plan Details** option is selected from the **Search By** list.	
Person Name	Used to search memberships with a particular member person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Relationship Type	Used to search memberships where the member person is related to the main subscriber. **Note:** This field appears only when the **Person Details** option is selected from the **Search By** list. The list includes only those contract relationship types which are already defined in the system.	No
Person Identifier Type	Used to search memberships which are associated with a person identifier type. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Person Identifier	Used to search memberships with a particular person identifier. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Health Plan	Used to search memberships associated with a particular health plan. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Health Plan Search** window appears. This field appears when the **Health Plan Details** option is selected from the **Search By** list. You can only search the individual memberships, if you are specifying a health plan.	No

Note: You must specify at least one search criteria while searching for a membership.

Searching for a Membership

Prerequisites

To search for a membership, you should have:

- Membership types, membership identifier, and membership identifier types defined in the application
- Health plan defined in the application

> **Note:** You must define a health plan only when you want to search individual memberships.

- Benefit types and benefit sub types defined in the application
- Person, person identifier, and person identifier types defined in the application
- Price item, policy, and policy plan defined in the application
- Contract relationship types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Membership**)

Procedure

To search for a membership:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Membership**.
   A sub-menu appears.
3. Click the **Search** option from the **Membership** sub-menu
   The **Membership** screen appears.
4. Enter the search criteria in the **Search Membership** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of memberships that meet the search criteria appears in the **Search Results** section.

Defining a Membership for a Fully-Insured Group Policy Plan

Prerequisites

To define a membership for a fully-insured group policy plan, you should have:

- Policy and policy plan defined in the application.
- Person, person identifier, and person identifier types defined in the application.
- Characteristic types where the characteristic entity is set to **Policy Plan** and **Membership Person**.
- Membership and membership identifier types defined in the application.
- Values defined for the **MEMBERSHIP_TYPE_FLG** lookup field.
- Contract relationship types defined in the application.

Procedure

To define a membership for a fully-insured group policy plan:

1. Do either of the following:

If you want to...	**Then...**
Define a membership for a fully-insured group policy plan from the Policy screen	**a.** Search for the fully-insured group policy in the **Policy** screen. **b.** In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to edit. The **Policy** screen appears. **c.** Click the **Plan** tab. The **Plan** tab appears. **d.** In the **Plans** zone, click the **Broadcast** (ᯤ) icon corresponding to the policy plan for which you want to define a membership. The **Memberships** zone appears. **e.** Click the **Add** link in the upper right corner of the **Memberships** zone.
Define a membership for a fully-insured group policy plan from the Membership screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Customer Management** and then click **Membership**. A sub menu appears. **c.** Click the **Add** option from the **Membership** sub-menu.

Copyright © 2025, Oracle and/or its affiliates.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Membership Business Object	Used to indicate the business object using which you want to create a fully-insured individual membership or fully-insured group membership.	Yes

Note: The **Select Business Object** screen appears when there are multiple membership business objects defined in the application. If there is only one membership business object defined in the application, the **Membership** screen appears.

The **Membership** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the membership.
- **Membership Identifiers** - Used to define the identifiers for the membership.
- **Characteristics** - Used to define the characteristics for the membership.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Plan Information	Used to indicate the fully-insured group policy plan for which you want to create the membership. **Note:** The **Search**(🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Policy Plan Search** window appears. On specifying the policy plan, the description of the policy plan appears corresponding to the **Plan Information** field. If you are defining a membership for a fully-insured group policy plan through the **Plan** tab, then the respective plan ID associated with the fully-insured group policy appears in the **Plan Information** field.	Yes
Start Date	Used to specify the date from when the membership is effective for a fully-insured group policy plan. **Note:** The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
End Date	Used to specify the date till when the membership is effective for a fully-insured group policy plan.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The membership end date cannot be earlier than the membership start date. The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.	
Membership Type	Used to indicate the type of membership. The valid values are: • COBRA • Medicare • Retiree **Note:** If you want to define an active employee coverage membership, you must leave this field blank.	No
Main Subscriber	Used to indicate the person who is the main subscriber of the membership. **Note:** The **Search**(🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears. On specifying the person, the description of the person appears corresponding to the **Main Subscriber** field.	Yes
Relationship Type	Used to indicate how the main subscriber is related to the membership.	No
External Membership ID	Used to specify the external membership ID. **Note:** Here, you need to specify a membership ID which is maintained in the external source system.	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Membership** screen.

2. Enter the required details in the **Main** section.
3. Define characteristics for the membership, if required.
4. Click the **Save**.
   The membership is defined for the fully-insured group policy plan. The status of the membership and the main subscriber is set to **Active**.

Defining a Characteristic for a Membership

Prerequisites

To define a characteristic for a membership, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Membership**)

Procedure

To define a characteristic for a membership:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a membership.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the membership. **Note:** The effective date cannot be earlier than the membership start date and later than the membership end date.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the membership.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Membership**	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the membership.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the membership.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the membership, click the **Add** (+) icon and then *r*epeat step 2.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a characteristic from the membership, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the membership.

Membership (Used for Viewing)

The **Membership** screen allows you to:

- View the details of a membership
- Edit the details of a membership
- Inactivate a membership
- Inactivate a member person
- Add or remove a person from a membership
- View the other plans of the main subscriber
- Associate or disassociate a contract from a membership
- View the billable charges created for a membership
- View the bill segments generated for a membership billable charge
- View the timeline details of a membership billable charge
- Viewing the pricing calculation details of a timeline
- View the log of a membership
- Add a log entry for a membership

It consists of the following tabs:

- Membership - Main on page 299
- Membership - Charges on page 306
- Membership - Log on page 317

Membership - Main

The **Main** tab displays information about the membership. It also lists the persons which are included in the membership and other plans (within or across policies) where the main subscriber is associated. It contains the following zones:

- Membership on page 300
- Membership Characteristics on page 304
- Member Persons on page 304
- Member Person Characteristics on page 305
- Other Plans of Main Subscriber on page 306

Copyright © 2025, Oracle and/or its affiliates.

Membership

The **Membership** zone displays the details of the membership. It contains the following sections:

- **Main** - Displays basic information about the membership. It contains the following fields:

Field Name	Field Description
Membership Information	Displays information about the membership.
Health Plan	Displays the health plan for which the main subscriber has enrolled.
	Note: It has a link. On clicking the link, the **Health Plan 360° Information** screen appears where you can view the details of the respective health plan. This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Plan Information	Displays the policy plan for which the membership is defined.
	Note: It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Status	Indicates the status of the membership. The valid values are: • Active • Canceled • Draft • Pending Effectuation • Terminated
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree
External Membership ID	Displays the corresponding membership ID which is maintained in the external source system.
Paid Through Date	Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th></tr>
<tr><td></td><td>
Note:
This field appears when the paid through date is calculated at the membership level.
The paid through date is calculated while freezing or canceling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:
<table>
<tr><th>Entity</th><th>System Event</th><th>Algorithm</th></tr>
<tr><td>Customer Class</td><td>Payment Freeze</td><td>C1-PSPTDCAL</td></tr>
<tr><td>Customer Class</td><td>Payment Cancellation</td><td>C1-PXPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Freeze</td><td>C1-ADPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Cancellation</td><td>C1-AXPTDCAL</td></tr>
</table>
The following table indicates when the paid through date is calculated at the policy and/or membership level:
<table>
<tr><th>If the Paid Through Date Calculation Level parameter is set to…</th><th>If the following characteristics are defined for the bill charge or adjustment…</th><th>Then…</th></tr>
<tr><td>P</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>M</td><td>C1-POLID</td><td>Paid through date is not calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>
<tr><td>P, M</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P, M</td><td>C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr>
<tr><td>P, M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr>
</table>
</td></tr>
</table>

Field Name	Field Description
Automatic Renewal	Indicates whether the individual membership should be automatically renewed or not. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Exchange	Indicates whether the individual membership is purchased from the exchange. The valid values are • On • Off **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Exchange ID	Displays the identification number of the exchange from where the individual membership is purchased. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Renewal Period	Displays the period (i.e. number of months) for which you want to automatically renew the individual membership. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Reprice After Date	Displays the date after which repricing must take place for the individual membership. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.
Status Reason	Indicates the reason why the status of the individual membership is changed. **Note:** This field appears only when a membership is created using the **Individual Membership (C1-IndividualMembership)** business object.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the membership. **Note:** The **Edit** button appears when the membership is in the **Active**, **Canceled**, or **Terminated** status.
Inactivate	Used to inactivate the membership.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the membership is created. In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the membership status is updated
Create Date/Time	Displays the date and time when the membership is created.

- **Associated Membership** - This section displays the another individual membership that is associated with the individual membership for the add-on health insurance plan. This section contains the following fields:

Field Name	Field Description
Membership Identifier Type	Displays the membership identifier type of the associated individual membership.
Membership Identifier	Displays the membership identifier value of the associated individual membership.

Note: This section appears when you are viewing the details of an individual membership.

- **Binder Payment Details** - This section displays the binder payment details for an individual membership. This section contains the following fields:

Field Name	Field Description
Binder Payment Applicability	Indicates whether the binder payment is received or not before activating the individual membership.
Grace Days	Displays the grace date that is calculated for the individual membership.
Threshold Percentage	Displays the threshold percentage using which the threshold amount is calculated.
Binder Liability Amount	Displays the binder liability amount.
Threshold Amount	Displays the amount which is calculated for the binder payment using the binder liability amount and threshold percentage.
Hold Billing	Indicates whether you want to hold the bill generation process for the individual membership until the binder payment is received.

Note: This section appears when you are viewing the details of an individual membership.

- **Membership Identifiers** - This section contains the following fields:

Column Name	Column Description
Membership Identifier Type	Displays the membership identifier type.
Membership Identifier	Displays the value of the membership identifier.

Membership Characteristics

The **Membership Characteristics** zone lists the characteristics of the membership. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the membership.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Member Persons

The **Member Persons** zone lists the persons who are added to the membership. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the person is added to the membership.
End Date	Displays the date till when the person is added to the membership.
Person Information	Indicates the person who is added to the membership. In addition, it has the context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Relationship Type	Indicates how the person is related to the main subscriber.
Main Subscriber	Indicates whether the person is the main subscriber of the membership. The valid values are: • Yes • No
Financially Responsible	Indicates whether the person is financially responsible for the membership. The valid values are: • Yes • No
Status	Indicates the status of the person in the membership. The valid values are: • Active • Inactive • Canceled • Pending Effectuation
Status Reason	Indicates the reason why the status of the member person is changed.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears only when a membership is created using the **Individual Membership** (i.e.,**C1-IndividualMembership**) business object.
Member	Indicates the identity of the person in the membership. The valid values are: • Yes • No
External Medicare Beneficiary ID	Displays the medicare beneficiary identifier of the person who has availed the membership benefit.
Date of Birth	Displays the date when the person was born.
Edit	On clicking the **Edit** (✎) icon, the **Member Person** screen appears where you can edit the membership details of the respective person.

Note:

By default, the **Member Persons** zone displays those member persons which are in **Active** status.

You can add a person to the membership by clicking the **Add Person** link in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to a member person, the **Member Person Characteristics** zone appears where you can view the characteristics of the respective member person.

You can filter the list using various search criteria (such as, **Status** and **Status Reason**) available in the Filter area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306.

Membership - Charges

The **Charges** tab lists the following:

Copyright © 2025, Oracle and/or its affiliates.

- Contracts associated with the membership
- Billable charges created for the membership
- Bill segments generated for each billable charge
- Timeline generated for each billable charge
- Premium calculated for each eligible member person when an age based pricing is used during the membership premium calculation
- Premium calculated for the membership when a tier based pricing is used during the membership premium calculation
- Sponsor Billable Charges created for the membership
- Sponsor Bill Segment Details generated for each sponsor billable charge
- Timeline Details generated for each Sponsor Billable Charge
- Premium calculated for each member based on sponsor pricing details

It contains the following zones:

- Membership Contracts on page 307
- Billable Charges on page 308
- Bill Segment Details on page 309
- Billable Charge Timeline Details on page 310
- Pricing Calculation Details on page 311

Membership Contracts

The **Membership Contracts** zone lists the contracts which are associated with the membership. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the contract is associated with the membership.
End Date	Displays the date till when the contract is associated with the membership.
Bill To	Indicates the entity against whom the corresponding charges are billed. The valid values are: • Federal • State • Group • Individual
Contract ID	Displays the contract ID. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Account Information	Indicates the account for which the contract is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Delete	On clicking the **Delete** (🗑) icon, you can disassociate the contract from the membership.
Edit	On clicking the **Edit** (✎) icon, the **Associate Contract with Membership** screen appears where you can edit the contract association details of the membership.

Copyright © 2025, Oracle and/or its affiliates.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can associate a contract with the membership by clicking the **Add Contract** link in the upper-right corner of this zone.

You can filter the list using the **Bill To** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper-right corner of this zone.

Pricing Calculation Details

The **Pricing Calculation Details** zone indicates how the amount is calculated for the timeline. If the age based pricing is used during the membership premium calculation, this zone lists the premium calculated for each eligible member of the membership. It also displays the base fee and modifier fee which are applicable for each eligible member. However, if the tier based pricing is used during the membership premium calculation, this zone lists the premium calculated at the membership level. It contains the following columns:

Column Name	Column Description
Entity Information	If the age based pricing is used during the membership premium calculation, this column indicates the eligible member for whom the premium amount is calculated. However, if the tier based pricing is used during the membership premium calculation, this column indicates the main subscriber of the membership.
Description on Bill	Displays the description of the rate component for which the price component is created in the age based or tier based pricing.
Pricing Parameter	Indicates the pricing eligibility criteria which is satisfied while deriving the base fee.
Amount	Displays the base fee or applicable modifier fee.
Proration Factor	Indicates the proration factor which is derived using the proration rules defined for the fully-insured group policy plan. **Note:** The data appears in this column when the proration rule for the respective event is defined for the fully-insured group policy plan.
Distributed Amount	Displays the premium amount which is calculated for the non-skip billing periods.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when the **9/10 Billing (Skip Months)** feature is enabled for the account. If the age based pricing is used during the membership premium calculation, this column displays the distributed amount for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the distributed amount for the membership.
No. of Billing Periods	Indicates the number of the non-skip billing periods of the account.
	Note: The data appears in this column when the **9/10 Billing (Skip Months)** feature is enabled for the account.
Total Contract Period Amount	Displays the premium which should be paid for the entire contract period (in other words, total premium for the skip and non-skip billing periods).
	Note: The data appears in this column when the **9/10 Billing (Skip Months)** feature is enabled for the account. If the age based pricing is used during the membership premium calculation, this column displays the total contract period amount for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the total contract period amount for the membership.
Comments	Displays additional information about the premium calculation for an eligible member.
Total Amount	If the age based pricing is used during the membership premium calculation, this column displays the sum total of the base fee and modifier fee (if any) for the eligible member. However, if the tier based pricing is used during the membership premium calculation, this column displays the base fee applicable for the membership.

By default, the **Pricing Calculation Details** zone does not appear in the **Charges** tab of the **Membership** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a timeline in the **Billable Charge Timeline Details** zone.

Editing a Membership of a Fully-Insured Group Policy Plan

Procedure

To edit a membership of a fully-insured group policy plan:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership whose details you want to edit.
   The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Membership** zone.

   The **Membership** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the membership.
   - **Characteristics** - Used to define the characteristics for the membership.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Displays information about the membership.	Not applicable
Policy Information	Displays information about the policy.	Not applicable
Plan Information	Indicates the policy plan for which the membership is defined.	Not applicable
Start Date	Used to specify the date from when the membership is effective for a fully-insured group policy plan. **Note:** The membership start date cannot be later than the membership end date. The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes
End Date	Used to specify the date till when the membership is effective for a fully-insured group policy plan. **Note:** The membership end date cannot be earlier than the membership start date. The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Membership Type	Used to indicate the type of membership. The valid values are: • COBRA • Medicare • Retiree	No
External Membership ID	Used to specify the external membership ID. **Note:** Here, you need to specify a membership ID which is maintained in the external source system.	No

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the membership, if required.
7. Click **Save**.
   The changes made to the membership are saved.

Adding a Person to a Membership

The system enables you to add a member person to a membership when the membership is in the **Active** status. However, you can only add a member person in the **Active** status and not in the **Inactive** status.

Prerequisites

To add a person to a membership, you should have:

- Required persons defined in the application
- Contract relationship types defined in the application

Procedure

To add a person to a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership to which you want to add a person.
   The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Add Person** link in the upper right corner of the **Member Persons** zone.

   The **Member Person** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic membership details of the person.
   - **Characteristics** - Used to define the characteristics for the member person.

Copyright © 2025, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to add a person.	Not applicable
Person ID	Used to indicate the person whom you want to add to the membership. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes
Relationship Type	Used to indicate how the person is related to the main subscriber. **Note:** The list includes only those contract relationship types which are already defined in the system.	Yes
Financially Responsible	Used to indicate whether the person is financially responsible for the membership.	No
Main Subscriber	Used to indicate whether the person is the main subscriber of the membership.	No
Member	Used to indicate whether the person is a member or a non-member in the membership.	No
Start Date	Used to specify the date from when you want to add the person to the membership. **Note:** The member person start date cannot be later than the member person end date. The member person start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to add the person to the membership. **Note:** The member person end date cannot be earlier than the member person start date. The member person end date cannot be earlier than the membership start date or later than the membership end date.	No
External Medicare Beneficiary ID	Used to specify the medicare beneficiary identifier of the person who has availed the medicare benefit.	No
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: • Active • Inactive • Canceled	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Pending Effectuation	
	Note: By default, the **Active** option is selected.	

5. Enter the required details in the **Main** section.
6. Define the characteristics for the member person, if required.
7. Click **Save**.
   The person is added to the membership.

Defining a Characteristic for a Member Person

Prerequisites

To define a characteristic for a member person, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Membership Person**)

Procedure

To define a characteristic for a member person:

1. Ensure that the **Characteristics** section is expanded when you are adding a person to a membership or editing *t*he membership details of a person.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the characteristic is effective for the member person.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the member person.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Membership Person**.	**Note:** This field is required when you are defining a characteristic for the member person.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the member person.
Description	Used to specify the description for the characteristic value.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the member person.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the member person, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a characteristic from the member person, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the member person.

Inactivating a Member Person

The system enables you to inactivate a member person of a membership. If the member person is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To inactivate a member person of a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership whose details you want to edit.
   The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. In the **Member Persons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the member *p*erson whom you want to inactivate.
   The **Add/Edit Member Person** screen appears.
5. Select the **Inactive** option from the **Membership Person Status** list.
   The status of the member person is changed to **Inactive**.

Editing the Membership Details of a Person

Prerequisites

To edit the membership details of a person, you should have:

- Contract relationship types defined in the application
- Required persons defined in the application

Procedure

To edit the membership details of a person:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership whose details you want to edit.
   The **Membership** screen appears.
3. Ensure that the **Main** tab is selected.
4. In the **Member Persons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the member person *w*hose details you want to edit.

   The **Member Person** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic membership details of a person.
   - **Characteristics** - Used to define the characteristics for a member person.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which the person is added.	Not applicable
Person ID	Indicates the person who is added to the membership.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the Person ID field. On clicking the Search icon, the **Person Search** window appears.	
Relationship Type	Used to indicate how the person is related to the main subscriber. **Note:** The list includes only those contract relationship types which are already defined in the system.	Yes
Financially Responsible	Used to indicate whether the person is financially responsible for the membership.	No
Main Subscriber	Used to indicate whether the person is the main subscriber of the membership.	No
Member	Used to indicate whether the person is a member or a non-member in the membership.	No
Start Date	Used to specify the date from when you want to add the person to the membership. **Note:** The member person start date cannot be later than the member person end date. The member person start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to add the person to the membership. **Note:** The member person end date cannot be earlier than the member person start date. The member person end date cannot be earlier than the membership start date or later than the membership end date.	No
External Medicare Beneficiary ID	Used to specify the Medicare beneficiary identifier of the person who has availed the Medicare benefit.	No
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: • Active • Canceled • Inactive • Pending Effectuation	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you inactivate a member person who is the main subscriber, the system automatically inactivates the membership and all other member persons which are included in the membership. You cannot change the status of the member person to **Active** when the membership is in the **Inactive** status.	

5. Modify the required details in the **Main** section.
6. Define, edit, or remove the characteristics from the member person, if required.
7. Click **Save**.
   The changes made to the membership details of the person are saved.

Associating a Contract with a Membership

Prerequisites

To associate a contract with a membership, you should have:

- Contracts defined in the application
- Values defined for the **BILL_TO_TYPE_FLG** lookup field

Procedure

To associate a contract with a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Membership Information** column corresponding to the *m*embership to which you want to associate a contract.
   The **Membership** screen appears.
3. Click the **Contracts and Charges** tab.
   The **Contracts and Charges** tab appears.
4. Click the **Add Contract** link in the upper right corner of the **Membership Contracts** zone.

   The **Associate Contract with Membership** screen appears. It contains the following section:

   - **Main** - Used to associate a contract with the membership. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Indicates the membership to which you want to associate a contract.	Not applicable
Contract ID	Used to indicate the contract that you want to associate with the membership. **Note:** The **Search** (🔍) icon appears corresponding to the **Contract ID** field. On clicking the **Search** icon, the **Contract Search** window appears.	Yes
Bill To	Used to indicate the entity against whom the corresponding charges should be billed. The valid values are: • Federal • State • Group • Individual **Note:** You cannot associate multiple contracts with the membership using the same bill to option. For example, you cannot associate C1 and C2 with M1 by selecting the **Group** option from the **Bill To** field.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when you want to associate the contract with the membership. **Note:** The start date cannot be later than end date. The start date cannot be earlier than the membership start date or later than the membership end date.	Yes
End Date	Used to specify the date till when you want to associate the contract with the membership. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the membership start date or later than the membership end date.	No

5. Enter the required details in the **Main** section.
6. Click **Save**.
   The contract is associated with the membership.

Self-Funded Group Health Insurance

Topics:

- Pre-requisites
- Self-Funded Policy
- Self-Funded Policy Status Transition
- Algorithms Used in C1-ASOPolicy
- Policy (Used for Searching)
- Policy (Used for Viewing)

Self-funded group health insurance, also known as Administrative Services Only (ASO), is a self insurance arrangement whereby an employer provides health or disability benefits to employees using the company's own funds. A self-insured employer will set up a special trust fund to earmark money (corporate and employee contributions) to pay incurred claims. It is also commonly known as self-funded employee health insurance.

In the self-funded group health plan, employers operate their own health plan. However, in the fully-insured group health plan, the employer contracts an insurance company to cover the employees and dependents. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured group health plan. However, self-insuring exposes the company to much larger risk when more claims than expected must be paid.

Oracle Revenue Management and Billing (ORMB) supports the following types of self-funding approach:

- **Fully Self-Funded** - In the fully self-funded approach, the employer retains all the risk and bears the claim costs irrespective of any limit.
- **Partially Self-Funded** - In the partially self-funded approach, the employer purchases reinsurance or stop loss coverage to pass the risk to insurance company.

Oracle Revenue Management and Billing (ORMB) provides specialized methodologies for calculating claim amount with or without markups, enrollment fees, claim fees, specific stop-loss credits, aggregate stop-loss credits, non-recurring or recurring flat fees for covered services, network discounts, and fixed or enrollment based premium funds. Once the charges are calculated, the system bills the amount to the employer (known as the parent customer in ORMB) or to its logical designed billing entities (known as the bill groups in ORMB).

Oracle Revenue Management and Billing (ORMB) enables you to use the pricing methodologies and the billing engine for the self-funded group health insurance business. To design the pricing and billing models for the self-funded group health insurance business, you need to create the following entities in ORMB:

- Parent Customer
- Bill Groups
- Bill Group's Account
- Self-Funded Policy
- Price Items (for each covered service in the policy)
- Pricing Rule Types
- Pricing Rules

Pre-requisites

To set the billing system for a self-funded group customer, you need to do the following:

- Define the required policy types in the system.
- Define the required policy person roles in the system.
- Define the values for the **RUNOUT_ADM_OPT_FLG** lookup field.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the required parameter values in the following algorithm which is attached to the **C1-ASOPolicy** business object:
  - C1-ASOBOPOSP
- Define the required parameter values in the following algorithm which is used in the lifecycle of the **C1-ASOPolicy** business object:
  - C1-ASOPOLMOA
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Parent Customer Policy Person Role
  - Bill Group Policy Person Role
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
  - Bill Group Person Type
  - Parent Person Type
- Set the batch control type of the **Policy Periodic Monitor (C1-POLPR)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4313

Self-Funded Policy

You can create a self-funded policy using a policy type where the policy category is set to **Self-Funded**. The policy type indicates the business object using which the self-funded policy should be created in the system.

As per the self-funded health insurance business, the system enables you to create a self-funded policy for a bill group where the parent customer is the policy holder. You can create or edit a self-funded policy from the **Policy** screen. In addition, you can create or edit a self-funded policy through a customer registration object or a health care inbound message. If the self-funded policy information is given for a bill group in a health care inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

Copyright © 2025, Oracle and/or its affiliates.

- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

A self-funded policy encapsulates the following information:

- **Policy Persons** - While creating a self-funded policy, you need to associate the person who is the main customer of the policy. While associating a person with a self-funded policy, you need to specify the policy person role which indicates the role of the person in the policy. For example, whether the person associated with the policy is the policy holder, broker, or underwriter. You can associate multiple persons with a self-funded policy using the same or different policy person role. However, at a time, only one person can be the main customer of the policy.
- **Policy Contracts** - The system creates a contract for a self-funded policy when the policy is created either from the user interface or through an inbound message. For more information, refer to Self-Funded Policy Contract Creation on page 342.

On defining a self-funded policy, the status of the policy is set to **Pending**. You can then edit, delete or activate a policy. Once a self-funded policy is activated, you can renew the policy whenever required.

Note: If a self-funded policy is created through a customer registration object or a health care inbound message, the status of the policy is set to **Pending**.

In a self-funded policy, you can specify the policy period as well as the runout period. Here, the policy period means the period between the policy start and end dates when the policy is active. And, the runout period means the period between the runout start and end dates when the policy is no more active. Note that the system sets the runout start date to the policy end date + 1 Day when you specify the runout end date.

The system enables you to create a self-funded policy for the following contract types which are used in the self-funded health insurance business:

Contract Type	**Policy (Example)**	**Policy Period (i.e. Period when Policy will be in the Active Status)**	**Runout Period (i.e. Period when Policy will be in the Runout Status)**	**Comments**
12/12 (Claims Incurred and Paid During the Policy Period)	P1	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-funded policy (i.e. P1).
12/15 (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P2	01-01-2019 to 12-31-2019	01-01-2020 to 03-31-2020	Here, the runout period is derived when you set the runout end date of the self-funded policy (i.e. P2) to 03-31-2020.
12/18 (Claims Incurred During the Policy Period and Paid During the Policy and Runout Periods)	P3	01-01-2019 to 12-31-2019	01-01-2020 to 06-30-2020	Here, the runout period is derived when you set the runout end date of the self-funded policy (i.e. P3) to 06-30-2020.
15/12 (Claims Incurred Three Months Prior to the Policy Start Date and During	P4	01-01-2019 to 12-31-2019	-	Here, you will not specify the runout end date for the self-

Contract Type	Policy (Example)	Policy Period (i.e. Period when Policy will be in the Active Status)	Runout Period (i.e. Period when Policy will be in the Runout Status)	Comments
the Policy Period and Paid During the Policy Period)				funded policy (i.e. P4).

The system enables you to offer different pricing for different policy periods, such as active, runout, and post runout.

Self-Funded Policy Activation

A self-funded policy can be activated manually from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can activate a self-funded policy by clicking the **Activate** button in the **Policy** screen. On clicking the **Activate** button, the system checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Note: The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Active** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment Based
- Ancillary
- Flat Fees
- Level Funded

Transition of Self-Funded Policy to Runout Status

A self-funded policy can be transitioned to the **Runout** status from the user interface or through the **Policy Periodic Monitor (C1-POLPR)** batch. You can transition a self-funded policy to the **Runout** status by clicking the **Runout** button in the **Policy** screen. On clicking the **Runout** button, the system checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

Copyright © 2025, Oracle and/or its affiliates.

Note: The status of the policy is not changed from **In Force/Active** to **Runout** when either of the following condition is met:

- The runout end date is not specified.
- The system date is earlier than or equal to the policy end date.
- The policy is renewed.

On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Ancillary
- Flat Fees
- Level Funded

Transition of Self-Funded Policy to Post Runout Status

A self-funded policy can be transitioned to the **Post Runout** status only through the **Policy Periodic Monitor (C1-POLPR)** batch. On executing the **Policy Periodic Monitor (C1-POLPR)** batch, the system does the following:

- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter (of an algorithm created using the **C1-ASOPOLMOA** algorithm type).
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

You can define pricing rules using the pricing rule types of the following categories for a self-funded policy of a bill group which is in the **Post Runout** status:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Retention Type Claim Based
- Ancillary

Self-Funded Policy Renewal

You can renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy only when it is in the **In Force/Active** status and which is not yet renewed. You can renew a self-funded policy only from the user interface and not through a health care inbound message.

Copyright © 2025, Oracle and/or its affiliates.

On renewing a self-funded policy, a new policy is created in the **Pending** status. The renewal date is stamped in the base policy. The information from the base policy is copied to the renewed policy. The start date of the renewed policy is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.

While renewing a self-funded policy, you cannot disassociate persons (from the renewed policy) who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.

While renewing a self-funded policy, the system enables you to copy the following pricing rules of the base policy and thereby create new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

Once a policy is renewed, you cannot edit the base policy's end date or manually change the status of the base policy to **Runout**. The system automatically changes the status of the base policy to **Runout** when the status of the latest renewed policy is changed to **Runout**.

Self-Funded Policy Contract Creation

The system automatically creates contracts when a self-funded policy is created either from the user interface or through a health care inbound message. It creates a contract for a self-funded policy on each account of the bill group. It creates a contract using the contract type which is specified in the **Contract Type** parameter of an algorithm which is created using the **C1-ASOBOPOSP** algorithm type. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to `CT1`. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11, P12, and P13 for BG2 through a health care inbound message, the system will create a set of contracts on the respective accounts as mentioned below.

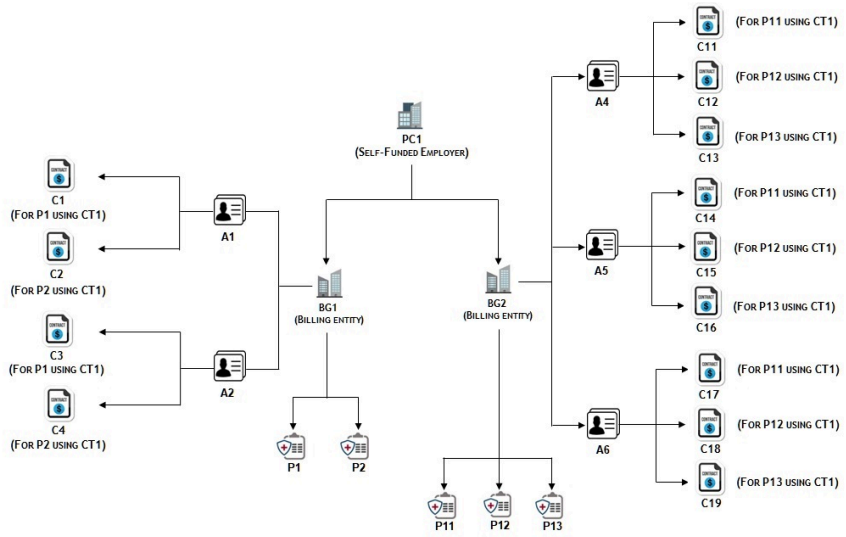
The following table indicates the number of contracts that are created for a self-funded policy on each account of a bill group:

Bill Group	**Account**	**Contract**
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P2 using the CT1 contract type)
	A2	C3 (for P1 using the CT1 contract type)
		C4 (for P2 using the CT1 contract type)
BG2	A4	C11 (for P11 using the CT1 contract type)
		C12 (for P12 using the CT1 contract type)
		C13 (for P13 using the CT1 contract type)
	A5	C14 (for P11 using the CT1 contract type)
		C15 (for P12 using the CT1 contract type)
		C16 (for P13 using the CT1 contract type)
	A6	C17 (for P11 using the CT1 contract type)

Copyright © 2025, Oracle and/or its affiliates.

Bill Group	Account	Contract
		C18 (for P12 using the CT1 contract type)
		C19 (for P13 using the CT1 contract type)

The following figure graphically represents the above example:



You can also specify comma-separated values for the **Contract Type** parameter. The system will then create a contract using each contract type for each self-funded policy on each account of the bill group. Let us assume that the **Contract Type** parameter in the **C1-ASOBOPOSP** algorithm is set to `CT1, CT2`. Now, when you create the self-funded policies named P1 and P2 for BG1 and P11 and P12 for BG2 through a health care inbound message, the system will create a set of contracts on the respective accounts as mentioned below.

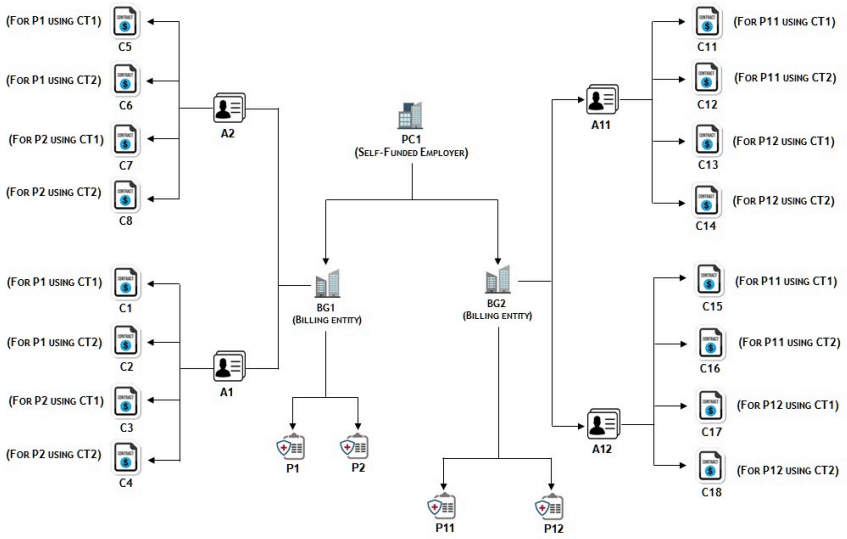
The following table indicates the number of contracts that are created for a self-funded policy on each account of a bill group:

Bill Group	Account	Contract
BG1	A1	C1 (for P1 using the CT1 contract type)
		C2 (for P1 using the CT2 contract type)
		C3 (for P2 using the CT1 contract type)
		C4 (for P2 using the CT2 contract type)
	A2	C5 (for P1 using the CT1 contract type)
		C6 (for P1 using the CT2 contract type)
		C7 (for P2 using the CT1 contract type)
		C8 (for P2 using the CT2 contract type)
BG2	A11	C11 (for P11 using the CT1 contract type)
		C12 (for P11 using the CT2 contract type)
		C13 (for P12 using the CT1 contract type)
		C14 (for P12 using the CT2 contract type)
	A12	C15 (for P11 using the CT1 contract type)

Copyright © 2025, Oracle and/or its affiliates.

Bill Group	Account	Contract
		C16 (for P11 using the CT2 contract type)
		C18 (for P12 using the CT1 contract type)
		C19 (for P12 using the CT2 contract type)

The following figure graphically represents the above example:



Self-Funded Policy Status Transition

The following figure graphically indicates how a self-funded policy moves from one status to another in its lifecycle:

Post Runout	-	-	-	-

C1-ASOPOLVAL

This algorithm validates a self-funded policy throughout its lifecycle. It checks the following:

- The policy end date is not earlier than the policy start date.
- The runout end date is later than the policy end date.
- The runout end date is later than the system date while editing the policy which is in the **Runout** status.
- The runout end date is not removed when the policy is in the **Runout** or **Post Runout** status.
- The policy end date is not modified when the policy is in the **Runout** status.
- The policy end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status.
- The runout end date is not set to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status.
- The runout end date is not set to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.
- The policy is not edited when it is in the **Post Runout** status.
- The policy start date is not modified when the policy is in the **In Force/Active**, **Runout**, or **Post Runout** status.
- The policy person end date is not earlier than the policy person start date.
- The policy person role is specified while associating a person with the policy.
- One of the policy persons is set as the main customer of the policy.
- The policy end date is not changed when the policy is renewed.

C1-ASOBOPOSP

This algorithm is invoked when you create a self-funded policy either from the user interface or through an inbound message. It creates a contract of the specified contract type for the self-funded policy on each account of the bill group. For example, if you create a self-funded policy named P1 for a bill group who has two accounts - A1 and A2, the system will create two contracts for P1 - one on the A1 account and another on the A2 account.

It contains the following parameter:

Copyright © 2025, Oracle and/or its affiliates.

- **Contract Type** - Used to indicate the contract type whose contract you want to create for the self-funded policy on each account of the bill group. You can also specify comma-separated values for this parameter. It will then create a contract of each contract type for the self-funded policy on each account of the bill group.

C1-ASOPRUCPY

This algorithm is invoked when the **Copy Pricing Rules** option is selected while renewing a self-funded policy. It copies the following pricing rules of the base policy and creates new pricing rules for the renewed policy:

- Claim
- Retention Type Claim Based
- Retention Type Enrollment Based
- Recurring Flat Fees
- Ancillary

While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.

C1-ASOPOLMOA

This algorithm is invoked when the **Policy Periodic Monitor (C1-POLPR)** batch is executed. It does the following:

- If the self-funded policy is in the **Pending** status and the policy start date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Pending Status** parameter.
- If the start date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Pending Status** parameter is completed, it changes the status of the self-funded policy from **Pending** to **In Force/Active**.
- If the self-funded policy is in the **In Force/Active** status and the policy end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Active Status** parameter.
- If the end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Active Status** parameter is completed, it changes the status of the self-funded policy from **In Force/Active** to **Runout**.
- If the self-funded policy is in the **Runout** status and the runout end date - X days is earlier than or equal to the system date, it creates a To Do using the To Do type which is specified in the **To Do Type for Runout Status** parameter.
- If the runout end date of the self-funded policy is earlier than or equal to the system date and the To Do created using the To Do type specified in the **To Do Type for Runout Status** parameter is completed, it changes the status of the self-funded policy from **Runout** to **Post Runout**.

It contains the following parameters:

- **To Do Type for Pending Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy start date.
- **To Do Type for Active Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the policy end date.
- **To Do Type for Runout Status** - Used to indicate the To Do type using which you want to create the To Do, X days prior to the runout end date.
- **X Days** - Used to specify the number of days prior to which you want to create a To Do for the self-funded policy.

All these parameters are mandatory.

Copyright © 2025, Oracle and/or its affiliates.

C1-ASOPOLREN

This algorithm is invoked when you renew a self-funded policy. Once the new policy is created in the **Pending** status, it stamps the renewal date on the base policy.

C1-ASOPCKTD

This algorithm is invoked when you click the **Activate** and **Runout** buttons in the **Policy** screen. On clicking the **Activate** button, it checks whether the To Do created for the **Pending** status is completed. If the To Do created for the **Pending** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **Pending** to **In Force/Active**.

Similarly, on clicking the **Runout** button, it checks whether the To Do created for the **In Force/Active** status is completed. If the To Do created for the **In Force/Active** status is not completed, it completes the To Do and then changes the status of the self-funded policy from **In Force/Active** to **Runout**.

It also validates the following:

- The status of the policy is not changed from **Pending** to **In Force/Active** until the system date is later than or equal to the policy start date.
- The status of the policy is not changed from **In Force/Active** to **Runout** when the runout end date is not specified.
- The status of the policy is not changed from **In Force/Active** to **Runout** until the system date is later than the policy end date.
- The status of the policy is not changed to **Runout** if it is renewed.

In addition, it also changes the status of the base policies to **Runout** when the status of the latest renewed policy is changed to **Runout**.

Policy (Used for Searching)

The **Policy** screen allows you to search for a policy using various search criteria. It also allows you to define a policy. It contains the following zone:

- Search Policy on page 236

Through this screen, you can navigate to the following screen:

- Policy (Used for Viewing) on page 248

Search Policy

The **Search Policy** zone allows you to search for a policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a policy using the policy or person details. The valid values are: • Policy Date/Policy Type/Status • Source System/Policy Number/Description • Person Name/Person Identifier	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Policy Characteristics **Note:** By default, the **Policy Date/Policy Type/Status** option is selected.	
Policy Type	Used to search policies which are created using a particular policy type. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Start Date	Used to search policies which are effective from a particular date. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Status	Used to search policies with a particular status. The valid values are: • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
End Date	Used to search policies which are effective till a particular date. **Note:** This field appears when the **Policy Date/Policy Type/Status** option is selected from the **Search By** list.	No
Source System	Used to search policies which originated from a particular external system. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No
Policy Number	Used to search a policy with a particular policy number. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No
Description	Used to search policies with a particular description. **Note:** This field appears when the **Source System/Policy Number/ Description** option is selected from the **Search By** list.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search policies to which a particular person is associated. **Note:** This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	No
Person Identifier Type	Used to indicate the person identifier type. **Note:** This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search policies to which a person is associated. **Note:** This field appears when the **Person Name/Person Identifier** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Characteristic Type	Used to search policies for which a particular characteristic type is defined. **Note:** This field appears when the **Policy Characteristics** option is selected from the **Search By** list. The list includes only those characteristic types where the characteristic entity is set to **Policy**.	Yes (Conditional) **Note:** This field is required when you are searching for a policy using a characteristic.
Characteristic Value	Used to search policies with a particular characteristic value. **Note:** This field appears when the characteristic type is selected. If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are searching for a policy using a characteristic.

Note: You must specify at least one search criterion while searching for a policy.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>Policy Number</td><td>Displays the policy number.</td></tr>
<tr><td>Policy Information</td><td>Displays additional information about the policy.

Note: It has a link. On clicking the link, the Policy screen appears where you can view the details of the respective policy.</td></tr>
<tr><td>Source System</td><td>Indicates the external system from where the policy is originated.</td></tr>
<tr><td>Description</td><td>Displays the description of the policy.</td></tr>
<tr><td>Start Date</td><td>Displays the date from when the policy is effective.</td></tr>
<tr><td>End Date</td><td>Displays the date till when the policy is effective.</td></tr>
<tr><td>Status</td><td>Indicates the status of the policy. If the policy is created using the C1-POLICY business object, the valid values are:
• Pending
• In Force/Active
• Pending Cancellation
• Canceled
• Pending Reinstatement
• Reinstated
• Pending Termination
• Terminated
However, if the policy is created using the C1-ASOPolicy business object, the valid values are:
• Pending
• In Force/Active
• Runout
• Post Runout</td></tr>
<tr><td>Main Customer</td><td>This column displays different data depending on whether you search for a policy using the policy or person details. The following table describes this column:
<table><tr><th>If you search for a policy using...</th><th>Then...</th></tr><tr><td>The Policy Date/Policy Type/ Status, Source System/Policy Number/ Description, or Policy Characteristics option</td><td>The Main Customer column displays the name of the person who is the main customer of the policy. In addition, this column has a context menu which helps in navigating to other screens in the application.

Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</td></tr><tr><td>The Person Name/Person Identifier option</td><td>The Main Customer column indicates whether the person is the main customer of the policy. The valid values are:
• Yes</td></tr></table></td></tr>
</table>

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and person identifier types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
   A sub-menu appears.
3. Click the **Search** option from the **Policy** sub-menu.
   The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the Policy Details

Procedure

To view the details of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy *w*hose details you want to view.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the policy in the **Policy** zone.

Defining a Policy

Oracle Revenue Management and Billing enables you to define a policy for the fully-insured and self-funded health insurance business. You can define a fully-insured group policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, you can define a self-funded policy using a policy type where the policy category is set to **Self-Funded**.

> **Note:** At present, the **Fully-Insured Individual** policy category is not supported in the system.

Prerequisites

To define a policy, you should have:

- Policy types defined in the application.
- Values defined for the **C1-SourceSystemLookup** extendable lookup.

> **Note:** This prerequisite is applicable only when you want to define a fully-insured group policy.

Copyright © 2025, Oracle and/or its affiliates.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field.

Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To define a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Policy**.
   A sub-menu appears.
3. Click the **Add** option from the **Policy** sub-menu.

   The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to create a policy. **Note:** If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to **Self-Funded**.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Policy** screen.

4. Select the required policy type from the respective field.
5. Click **OK**.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field appears when you are defining a policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The policy start date cannot be later than the policy end date.	
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date.	Yes
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends. **Note:** The runout end date cannot be earlier than or equal to the policy end date. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	No
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	No
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for the advance billing feature of level funding. **Note:** This is a read-only field. By default, the value is set to **No**. You can edit the advance level funding eligibility only through a health care inbound message. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Advance Deposit Applicability	Used to indicate whether the advance deposit is applicable for the policy.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this field is not mandatory. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Amount	Used to specify the advance deposit amount that will be parked at the policy level. **Note:** You must specify a positive value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e., grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022. **Note:** You must specify an integer value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Account	Used to indicate the account of the parent customer where the advance deposit is parked for the policy.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4338. The **Search** (🔍) icon appears corresponding to the **Advance Deposit Account** field. On clicking the **Search** icon, the **Account Search** window appears.	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.

6. Enter the required details in the **Main** section.
7. Associate the required persons with the policy.

Note: While defining a policy, you must associate a person who is the main customer of the policy.

8. Define the characteristics for the policy, if required.
9. Click **Save**.
   The policy is defined and its status is set to **Pending**.

Associating a Person with a Policy

Prerequisites

To associate a person with a policy, you should have:

- Required persons defined in the application
- Required policy person roles defined in the application

Procedure

To associate a person with a policy:

1. Ensure that the **Persons** section is expanded when you are defining or editing a policy.

   The **Persons** section contains the following fields in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person	Used to indicate the person that you want to associate with the policy. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears. On specifying the person ID, the person name appears corresponding to the **Person** field.	Yes
Sequence	Used to specify the sequence number for the associated person.	Yes
Policy Person Role	Used to indicate the role of a person in the policy.	Yes
Main Customer	Used to indicate whether the person is the main customer of the policy. **Note:** At a time, only one person can be the main customer of the policy.	Yes (Conditional) **Note:** You must select this option while associating a person who is the main customer of the policy.
Start Date	Used to specify the date from when the person is associated with the policy. **Note:** The start date cannot be later than the end date. The start date cannot be earlier than the policy start date and later than the policy end date.	Yes
End Date	Used to specify the date till when the person is associated with the policy. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the policy start date and later than the policy end date. This validation is done when the policy is transition to the status which is not specified in the **Skip Status for Policy Person End Date Validation** parameter of the **C1-POLBOVAL** algorithm. For example, if you set the **Skip Status for Policy Person End Date Validation** parameter of the **C1-POLBOVAL** algorithm to **TERMINATED**, the system will not perform this validation when the status of the policy is changed to **Terminated**.	No

2. Enter the required details in the **Persons** section.

Note: While associating the persons with a policy, you must always ensure that one person is the main customer of the policy.

Copyright © 2025, Oracle and/or its affiliates.

3. If you want to associate more than one person with the policy, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to dissociate a person from the policy, click the **Delete** (🗑) icon corresponding to the person.

4. Click **Save**.
   The persons are associated with the policy.

Defining a Characteristic for a Policy

Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a characteristic for a policy:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a policy.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy. **Note:** The effective date cannot be earlier than the policy start date and later than the policy end date.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Policy**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the policy.

Copyright © 2025, Oracle and/or its affiliates.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy, click the **Add** (+) icon and then *r*epeat step 2.

> **Note:** However, if you want to remove a characteristic from the policy, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the policy.

Policy (Used for Viewing)

The **Policy** screen allows you to:

- View the details of a fully-insured group or self-funded policy
- Edit the details of a fully-insured group or self-funded policy
- Activate a fully-insured group or self-funded policy
- Add or edit plans in a fully-insured group policy
- Add memberships to a fully-insured group policy plan
- Initiate the termination process for a fully-insured group policy
- Terminate a fully-insured group policy
- Initiate the cancellation process for a fully-insured group policy
- Cancel a fully-insured group policy
- Initiate the reinstatement process for a fully-insured group policy
- Reinstate a fully-insured group policy
- View the log of a fully-insured group or self-funded policy
- Add a log entry for a fully-insured group or self-funded policy

It consists of the following tabs:

- Policy - Main on page 248
- Policy - Plan on page 255
- Policy - Log on page 258

Policy - Main

The **Main** tab displays information about the policy. It contains the following zones:

- Policy on page 248
- Policy Characteristics on page 255

Policy

The **Policy** zone displays the details of the fully-insured group or self-funded policy. It contains the following sections:

- **Main** - Displays basic information about the policy. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Base Policy Information	Displays information about the base policy. **Note:** This field appears when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to **Self-Funded**.
Policy Information	Displays information about the policy.
Policy Type	Indicates the policy type using which the policy is created. **Note:** It has a link. On clicking the link, the **Policy Type** screen appears where you can view the details of the respective policy type.
Status	Indicates the status of the policy. If the policy is created using the **C1-POLICY** business object, the valid values are: • Pending • Activate • In Force/Active • Pending Termination • Terminated • Pending Reinstatement • Reinstated • Renewed • Pending Cancellation • Canceled However, if the policy is created using the **C1-ASOPolicy** business object, the valid values are: • Pending • In Force/Active • Runout • Post Runout
Status Reason	Indicates the reason why the policy is terminated. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective termination reason. This field appears when you are viewing the details of a terminated or reinstated policy which is created using a policy type where the policy category is set to **Fully-Insured Group**.
Policy Number	Displays the policy number.
Description	Displays the description of the policy. **Note:** This field appears when you are viewing the details of a policy where the policy category is set to **Self-Funded**.
Source System	Indicates the external system from where the policy is originated.
Start Date	Displays the date from when the policy is effective.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th></tr>
<tr><td>End Date</td><td>Displays the date till when the policy is effective.</td></tr>
<tr><td>Renewal Date</td><td>Displays the date when the policy is renewed.

Note: This field appears when you are viewing the details of a policy which is renewed.</td></tr>
<tr><td>Paid Through Date</td><td>Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.

Note:
This field appears when the following conditions are met:
• When you are viewing the details of a policy which is created using a policy type where the policy category is set to Fully-Insured Group.
• When the paid through date is calculated at the policy level.

The paid through date is calculated while freezing or canceling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:
<table>
<tr><th>Entity</th><th>System Event</th><th>Algorithm</th></tr>
<tr><td>Customer Class</td><td>Payment Freeze</td><td>C1-PSPTDCAL</td></tr>
<tr><td>Customer Class</td><td>Payment Cancellation</td><td>C1-PXPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Freeze</td><td>C1-ADPTDCAL</td></tr>
<tr><td>Adjustment Type</td><td>Adjustment Cancellation</td><td>C1-AXPTDCAL</td></tr>
</table>
The following table indicates when the paid through date is calculated at the policy and/or membership level:
<table>
<tr><th>If the Paid Through Date Calculation Level parameter is set to…</th><th>If the following characteristics are defined for the billable charge or adjustment…</th><th>Then…</th></tr>
<tr><td>P</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>P</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr>
<tr><td>M</td><td>C1-POLID</td><td>Paid through date is not calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>
<tr><td>M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr>
<tr><td>P, M</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr>
</table>
</td></tr>
</table>

<table>
<tr><th>Field Name</th><th>Field Description</th></tr>
<tr><td></td><td>
<table>
<tr><th>If the Paid Through Date Calculation Level parameter is set to…</th><th>If the following characteristics are defined for the billable charge or adjustment…</th><th>Then…</th></tr>
<tr><td>P, M</td><td>C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr>
<tr><td>P, M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr>
</table>
</td></tr>
<tr><td>Runout End Date</td><td>Displays the date when the runout period of the self-funded policy ends.

Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Runout Administration Fees</td><td>Indicates whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are:
• None
• Percentage of Claim

Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Advance Level Funding Eligibility</td><td>Indicates whether the self-funded policy is eligible for advance billing feature of level funding.

Note: This field appears when you are viewing the details of a policy which is created using a policy type where the policy category is set to Self-Funded.</td></tr>
<tr><td>Advance Deposit Applicability</td><td>Indicates whether the advance deposit is applicable for the policy.

Note: This field appears only when the policy is created using a policy type where the policy category is set to Fully-Insured Group.</td></tr>
<tr><td>Advance Deposit Amount</td><td>Displays the advance deposit amount.

Note: This field appears only when the Advance Deposit Applicability option is selected.</td></tr>
<tr><td>Advance Deposit Grace Days</td><td>Displays the grace days used for calculating the advance deposit grace period.

Note: This field appears only when the Advance Deposit Applicability option is selected.</td></tr>
<tr><td>Advance Deposit Account</td><td>Indicates the account of the parent customer where the advance deposit is parked for the policy. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears only when the **Advance Deposit Applicability** option is selected. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

- **Persons** - Lists the persons which are associated with the policy. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person who is associated with the policy. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Sequence	Displays the sequence number of the associated person.
Policy Person Role	Indicates the role of the person in the policy.
Main Customer	Indicates whether the person is the main customer of the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the fully-insured group or self-funded policy. **Note:** The **Edit** button appears only when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	• In Force/Active • Pending • Runout

Activate	Used to activate the fully-insured group or self-funded policy.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Button Name</th><th>Button Description</th></tr>
<tr><td></td><td>Note:
The Activate button appears when a policy of the respective category is in either of the following status:
<table><tr><th>Policy Category</th><th>Status</th></tr><tr><td>Fully-Insured Group</td><td>• Pending
• Pending Termination</td></tr><tr><td>Self-Funded</td><td>• Pending</td></tr></table></td></tr>
<tr><td>Initiate Cancellation</td><td>Used to initiate the cancellation process for the fully-insured group policy.</td></tr>
<tr><td></td><td>Note: The Initiate Cancellation button appears when the fully-insured group policy is in the In Force/Active status.</td></tr>
<tr><td>Cancel</td><td>Used to cancel the fully-insured group policy.</td></tr>
<tr><td></td><td>Note: The Cancel button appears when the fully-insured group policy is in the Pending Cancellation status.</td></tr>
<tr><td>Initiate Termination</td><td>Used to initiate the termination process for the fully-insured group policy.</td></tr>
<tr><td></td><td>Note: The Initiate Termination button appears when the fully-insured group policy is in the In Force/Active status.</td></tr>
<tr><td>Terminate</td><td>Used to terminate the fully-insured group policy.</td></tr>
<tr><td></td><td>Note: The Terminate button appears when the fully-insured group policy is in the In Force/Active, Pending Reinstatement, or Pending Termination status.</td></tr>
<tr><td>Initiate Reinstatement</td><td>Used to initiate the reinstatement process for the terminated policy.</td></tr>
<tr><td></td><td>Note: The Initiate Reinstatement button appears when the fully-insured group policy is in the Terminated status.</td></tr>
<tr><td>Reinstate</td><td>Used to reinstate the terminated policy.</td></tr>
<tr><td></td><td>Note: The Reinstate button appears when the fully-insured group policy is in the Pending Reinstatement or Terminated status.</td></tr>
<tr><td>Runout</td><td>Used to transition the self-funded policy to the Runout status.</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Runout** button appears when the self-funded policy is in the **In Force/Active** status. You cannot transition a self-funded policy to the **Runout** status when: • The self-funded policy is renewed. • The runout end date is not specified. • The policy end date is earlier than the system date.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the policy status is updated.
Create Date/Time	Displays the date and time when the policy is created.

- **Termination Information** - Displays the termination details of the fully-insured group policy. It appears when the policy is in the **Pending Termination** status. It contains the following fields:

Field Name	Field Description
Terminate Date	Displays the date when you want to terminate the policy.
Terminate Reason	Indicates the reason why the termination process is initiated for the policy. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective termination reason.

- **Reinstate Information** - Displays the reinstatement details of the terminated policy. It appears when the policy is in the **Pending Reinstatement** status. It contains the following fields:

Field Name	Field Description
Reinstate Reason	Indicates the reason why you want to reinstate the fully-insured group policy. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective reinstatement reason.

Policy Characteristics

The **Policy Characteristics** zone lists the characteristics of the fully-insured group or self-funded policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Effective Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Policy - Plan

The **Plan** tab lists the plans defined for the policy and memberships defined for each policy plan. It contains the following zones:

- Plans on page 255
- Memberships on page 257

Plans

The **Plans** zone lists the plans which are defined in the policy. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Plan Information	Displays information about the policy plan. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Price Item Information	Indicates the price item to which the policy plan is directly associated. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number.
Plan Name	Displays the description of the policy plan.
Benefit Type	Indicates the type of health insurance plan. The valid values are: • Commercial • Medicare Affiliated
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Edit	On clicking the **Edit** (✎) icon, the **Plan** screen appears where you can edit the details of the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new policy plan by clicking the **Add** link in the upper-right corner of this zone. On clicking the **Broadcast** (📡) icon corresponding to a policy plan, the **Memberships** zone appears.

Note: Ideally, you define plans in a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.

You can filter the list using various search criteria (such as, **Price Item**, **Plan Number**, and **Effective From**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper-right corner of this zone.

Memberships

The **Memberships** zone lists the memberships which are defined for the policy plan. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the membership is effective.
End Date	Displays the date till when the membership is effective.
Membership Information	Displays information about the membership. **Note:** It has a link. On clicking the link, the **Membership** screen appears where you can view the details of the respective membership.
Enrolled Members	Displays the number of members who have enrolled in the policy plan.
Status	Indicates the status of the membership. The valid values are: • Active • Inactive • Terminated
Membership Type	Indicates the type of membership. The valid values are: • COBRA • Medicare • Retiree
Benefits	On clicking the **Benefits** (🔗) icon, the **Benefit** screen appears where you can view the Membership benefits of the member persons who belong to the membership. **Note:** The **Benefits** icon appears when a Membership benefit is defined for a member person who belongs to the membership.
Membership ID	Displays the membership ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Plan** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the policy plan in the **Plans** zone.

You can filter the list using various search criteria (such as, **External Membership ID**, **Effective From**, **Person Name**, **Effective Till**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306

Policy - Log

The **Log** tab contains the following zone:

- Policy Log on page 258

Policy Log

The **Policy Log** zone lists the complete trail of actions performed on the policy. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the policy.
Details	Displays the details about the action performed on the policy.
User	Indicates the user who has performed the action on the policy.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the policy. **Note:** It contains a link. On clicking the link, the screen appears where you can view the details of the respective related object.
Status Reason	Indicates the reason why the status of the policy is changed.

Note: You can manually add a log entry for the policy by clicking the **Add Log Entry** link in the upper right corner of the **Policy Log** zone.

Activating a Policy

Procedure

To activate a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy that you want to activate.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Activate** button in the **Policy** zone.
   The status of the policy is changed to **In Force/Active**.

Copyright © 2025, Oracle and/or its affiliates.

Note:

The **Activate** button appears only when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	• Pending • Pending Termination
Self-Funded	• Pending

Editing a Policy

Prerequisites

To edit a policy, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

  Note: This prerequisite is applicable only when you want to define a fully-insured group policy.

- Values defined for the **RUNOUT_ADM_OPT_FLG** lookup field

  Note: This prerequisite is applicable when you want to define a self-funded policy.

Procedure

To edit a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the policy whose details you want to edit.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Policy** zone.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Information	Displays information about the policy.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which the policy is defined.	Not applicable
Status	Indicates the status of the policy. The valid values are: • Pending • In Force/Active • Runout • Post Runout **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date. You cannot change the start date of a self-funded policy when it is in the **In Force/Active**, **Runout**, or **Post Runout** status.	Yes
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date. You cannot change the end date when the self-funded policy is in the **Runout** status. You cannot set the end date of a self-funded policy to a date which is later than or equal to the start date of a pricing rule which is defined for the **Runout** status. You cannot change the end date when the policy is renewed.	Yes
Runout End Date	Used to specify the date when the runout period of the self-funded policy ends.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**. The runout end date cannot be earlier than or equal to the policy end date. The runout end date cannot be earlier than or equal to the system date when the policy is in the **Runout** status. You cannot remove the runout end date when the policy is in the **Runout** or **Post Runout** status. You cannot set the runout end date to a date which is later than or equal to the start date of a pricing rule which is defined for the **Post Runout** status. You cannot set the runout end date to a date which is earlier than the end date of a pricing rule which is defined for the **Runout** status.	
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This field appears when you are editing a policy which is created using a policy type where the policy category is set to **Self-Funded**.	No
Advance Level Funding Eligibility	Indicates whether the self-funded policy is eligible for the advance billing feature of level funding. **Note:** This is a read-only field. By default, the value is set to **No**. You can edit the advance level funding eligibility only through a health care inbound message. This field appears when you are defining a policy using a policy type where the policy category is set to **Self-Funded**.	Not applicable
Advance Deposit Applicability	Used to indicate whether the advance deposit is applicable for the policy.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this field is not mandatory. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Amount	Used to specify the advance deposit amount.	Yes (Conditional)
	Note: You must specify a positive value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group** .	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.
Advance Deposit Grace Days	Used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e., grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022.	Yes (Conditional) **Note:** This field is required when the **Advance Deposit Applicability** option is selected.
	Note: You must specify an integer value in this field. This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	
Advance Deposit Account	Used to indicate the account of the parent customer where the advance deposit is parked for the policy.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4338. The **Search** (🔍) icon appears corresponding to the **Advance Deposit Account** field. On clicking the **Search** icon, the **Account Search** window appears.	**Note:** This field is required when the **Advance Deposit Applicability** option is selected.

Note:

The **Edit** button appears when a policy of the respective category is in either of the following status:

Policy Category	Status
Fully-Insured Group or Fully-Insured Individual	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Terminated
Self-Funded	• In Force/Active • Pending • Runout

5. Modify the required details in the **Main** section.
6. Associate the persons with the policy, if required.

Note: While editing a policy, you must ensure that one person is associated as the main customer of the policy.

7. Define, edit, or remove characteristics of the policy, if required.
8. Click **Save**.
   The changes made to the policy are saved.

Manually Changing the Status of a Self-Funded Policy to Runout

Prerequisites

To manually change the status of a self-funded policy to **Runout**, you should have:

- Runout end date specified in the self-funded policy.

Procedure

To manually change the status of a self-funded policy to **Runout**:

1. Search for the self-funded policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Policy Information** column corresponding to the *s*elf-funded policy whose status you want to change.
   The **Policy** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Runout** button in the **Policy** zone.
   The status of the self-funded policy is changed to **Runout**.

> **Note:**
>
> The **Runout** button appears when the self-funded policy is in the **In Force/Active** status.
>
> You cannot transition a self-funded policy to the **Runout** status when:
>
> - The self-funded policy is renewed.
> - The runout end date is not specified.
> - The policy end date is earlier than the system date.

Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy when it is in the **In Force/Active** status and is not yet renewed. For more information, see Self-Funded Policy Renewal on page 341.

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To renew a self-funded policy of a bill group:

1. Search for the bill group who is associated with the self-funded policy (which you want to renew) in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose details you want *t*o view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. In the **Bill Group Self-Funded Policy Information** zone, click the **Renew** (📋) icon in the **Renew** column *c*orresponding to the self-funded policy which you want to renew.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the renewed policy.
   - **Persons** - Used to associate or disassociate persons from the renewed policy.

     Note: You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.
   - **Characteristics** - Used to define the characteristics for the renewed policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	Yes
Start Date	Used to specify the date from when the renewed policy is effective. **Note:** By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019. The start date cannot be later than the end date. The start date cannot be earlier than or equal to the base policy's end date.	Yes
End Date	Used to specify the date till when the renewed policy is effective. **Note:** The end date cannot be earlier than the start date.	Yes
Runout End Date	Used to specify the date when the runout period of the renewed policy ends.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The runout end date cannot be earlier than or equal to the renewed policy's end date.	
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.	No
Copy Pricing Rules	Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the **Copy Pricing Rules** option, the system copies the following pricing rules of the base policy: • Claim • Retention Type Claim Based • Retention Type Enrollment Based • Recurring Flat Fees • Ancillary **Note:** While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.	No
Copy Advance Level Funding Eligibility	Used to indicate whether you want to copy the advance level funding eligibility value of the base policy to the renewed policy. **Note:** If the **Copy Advance Level Funding Eligibility** option is set to **Y** in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date. This field appears only when you want to renew a self-funded policy.	No

Note: The **Renew** icon appears when the policy is in the **In Force/Active** status and it is not yet renewed.

Copyright © 2025, Oracle and/or its affiliates.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.
7. Define, edit, or remove characteristics of the renewed policy, if required.
8. Click **Save**.
   The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group Self-Funded Policy Information** zone.

Chapter 7

Individual Health Insurance

Topics:

- Pre-requisites
- Support Open Ended Health Plans, Pricing Rules, and Individual Memberships
- Individual Membership
- Individual Membership Termination
- Individual Membership Renewal
- Automatic Contract Creation for Individual Membership
- Rate Guarantee for Individual Membership
- Late Setup Notification
- Young Adult Coverage in an Individual Membership
- Individual Membership Preference
- Binder Payment for Individual Membership
- Membership Status Reason Preference
- To Do Creation for Manual Refund/Write Off on Individual Membership Cancellation

Individual health insurance is a coverage that an individual purchase on its own, on an individual or family basis, as opposed to obtaining through an employer. An individual can buy a generic, Medicare, Medicaid, or CHIP health insurance plan from a health insurance payer or from an insurance exchange.

A health insurance payer and insurance exchange sells different plans from the health products to an individual. A health product is a discrete package of health insurance coverage benefits that are offered using a particular product network type (such as health maintenance organization, preferred provider organization, exclusive provider organization, point of service, or indemnity) within a service area.

A health product can include multiple health benefit plans which may cover medical expenses, hospitalization, doctor and hospital visits, prescription drugs, wellness care, etc. A health benefit plan can be a primary or add-on plan. A primary health benefit plan is a standalone plan, which is sold directly. For example, Medical Insurance is a primary health insurance plan.

An add-on plan is also known as supplemental plan. An add-on plan can be an ancillary or rider plan. An add-on plan is not a standalone plan and hence it is not sold directly. For example, the Dental, Vision, Accidental Death, Disability, Critical Illness, Long-Term Care, and Life Insurance plans can be sold as add-on health insurance plans.

Oracle Revenue Management and Billing enables you to create and edit the following entities for a fully-insured individual business:

- Health Products
- Health Plans
- Individual Memberships
- Member Persons
- Medicare or Other Benefits
- Accounts
- Contracts
- Price Items (offered as services)
- Pricing Rule Types
- Pricing Rules
- Price Assignments
- Billable Charges

Two new business objects named **C1-HealthcareProduct** and **C1-HealthPlan** are introduced in this release. The **C1-HealthcareProduct** business object enables you to create a health product. You can define and edit a health product through a health product and plan inbound message. While defining a health product, you need to specify the following details - product type, product sub type, product category, product LOB, product LOB category, start date, end

date, status, etc. A health product can be a bundled or non-bundled product. A bundled product means it includes one or more health products. You can define characteristics for a health product. A health product should be associated with a division (i.e. service area). You can associate a health product to one or more divisions and one division can have one or more health products.

The **C1-HealthPlan** business object enables you to create a health plan for a health product. You can define and edit a health plan through a health product and plan inbound message. While defining a health plan, you need to specify the following details - health product, start date, end date, status, etc. In addition, you need to indicate whether the health plan is a charitable plan, standard plan, grandfather plan, qualified from exchange, ancillary plan, rider plan, add-on plan, etc. You can define characteristics for a health plan.

A health product can have one or more health plans. On inactivating a health product, the system will not automatically inactivate the respective health plans. An individual can subscribe for one or more health plans. The system creates an individual membership for each subscribed health plan. An individual membership can have one or more member persons. One member person in an individual membership must be the main subscriber. You can add one or more dependent persons in the individual membership. One member person in an individual membership should be financially responsible for the individual membership. For more information, see the Individual Membership on page 386 section.

If an individual subscribe for an add-on health plan along with a primary health plan, the system enables you to indirectly link a primary health plan with an add-on health plan by associating the primary individual membership with the add-on individual membership. At present, you can associate only one add-on individual membership with the primary individual membership. The system creates the billable charges for both primary and add-on individual memberships independently.

On terminating the primary individual membership, the system provides a facility to automatically terminate the individual membership on the add-on health plan. For more information, see the Individual Membership Termination on page 401 section. However, on canceling, reinstating, or renewing a primary individual membership, the system does not automatically cancel, reinstate, or renew the individual membership on the add-on health plan. To cancel, reinstate, or renew an individual membership on the add-on health plan, the system must receive the required information for the individual membership from the enrollment system.

Copyright © 2025, Oracle and/or its affiliates.

Pre-requisites

Information will be available soon!

Support Open Ended Health Plans, Pricing Rules, and Individual Memberships

Oracle Revenue Management and Billing enables you to maintain open-ended health plans, pricing rules, and individual memberships wherein you can specify far-fetched end dates for them. To support the open-ended individual memberships, the following changes are made to the system:

- All the individual memberships would be auto renewed by the system based on the given renewal period.
- Two new option types are added in the **C1-ASOBLLNG** feature configuration:
  - **Number of months in advance for Open-Ended Renewal** - Used to indicate the number of months in advance you want to automatically renew the individual memberships. You must specify a positive value for this option type.
  - **Renewal period for Open-Ended Membership** – Used to indicate the period (i.e. number of months) for which you want to automatically renew the individual memberships. You must specify a positive value for this option type. The system will then set the end date of the individual memberships to the membership start date + renewal period – number of months in advance for open-ended renewal.
- A new column named **ENRL_END_DT** is introduced in the **CI_MEMBERSHIP**, **CI_MEMBERSHIP_PER**, and **C1_BENEFITS** tables.
- A new column named **OPEN_ENDED_SW** is introduced in the **CI_MEMBERSHIP_PROCESS** table.
- The **enrlEndDate** tag is added for membership and membership person in the **C1-Membership** business object schema.
- The **autoRenew** and **contractPeriod** tags are added for membership in the **C1-Membership** business object schema.
- The **enrlEndDate** tag is added for membership and membership person in the **C1-IndMembership** business object schema.
- The **enrlEndDate** tag is added for benefit in the **C1-Benefits** business object schema.
- A new parameter named **Open Ended Membership** is added in the **C1-MEPRC** batch. It is optional. It is used when you want to process only open-ended memberships and automatically renew them for the given renewal period.

From now onwards, the end date of the individual membership received from the source system through an inbound message will be stored in the **ENRL_END_DT** column. The system will stamp the auto renewal end date in the **END_DT** column and will use it for the membership premium calculation. The system will display the date from the **ENRL_END_DT** column for the membership and membership person in the **Membership** screen.

Now, when an individual membership is created through a health care inbound message, the system checks whether the renewal period for open-ended membership (specified in the **C1-ASOBLLNG** feature configuration) is less than the membership period. If so, the system does the following:

- Sets the end date of the membership and membership person to individual membership start date + renewal period – number of months in advance for open-ended renewal.
- Sets the enrolment end date to the date specified in the **endDate** tag of the inbound message.
- Sets the **AUTO_RENEW_SW** field to **Y** and the **CONTRACT_PERIOD** field to the renewal period.
- Sets the **PROCESS_DT** column of the **CI_MEMBERSHIP_PROCESS** table to the end date of the membership.
- Sets the **OPEN_ENDED_SW** column of the **CI_MEMBERSHIP_PROCESS** table to **Y**.

On executing the **C1-MEPRC** batch, the system considers the membership records whose the **OPEN_ENDED_SW** column is set to **Y** and whose the processing date is earlier than the batch business date. It then recalculates the end date of the membership and membership person and accordingly updates the processing date of the corresponding record in the **CI_MEMBERSHIP_PROCESS** table.

Copyright © 2025, Oracle and/or its affiliates.

However, if the renewal period for open-ended membership (specified in the **C1-ASOBLLNG** feature configuration) is equal to or greater than the membership period, the system sets the end date of the membership and membership person to the enrolment end date.

Individual Membership

Oracle Revenue Management and Billing enables you to create and edit individual memberships from the user interface and through a health care inbound message or membership repricing inbound web service. Note that the user interface for adding and editing individual memberships is not yet well-designed and should only be used by the presales and sales teams for learning and demo purposes and not by the customers.

A new business object for individual membership named **C1-IndMembership** is introduced in this release. While creating an individual membership through a health care inbound message, you need to specify the following details:

- **Health Plan** - Used to indicate the health plan for which the main subscriber has enrolled.
- **Member Person Status** - Used to indicate the main subscriber or dependent person's status.
- **Status Reason** - Used to indicate the reason why you want to change the status of the main subscriber or dependent person.
- **Auto Renew** - Used to indicate whether the individual membership should be automatically renewed.
- **Contract Period** - Used to indicate the period (in months) for which the individual membership should be automatically renewed.
- **Membership Renewal Date** - Used to indicate the date when the individual membership should be renewed. It is required for manual renewal of the individual membership. In case of automatic renewal, the membership renewal date is calculated by the system.
- **Associated Membership Details** - Used to associate the individual membership with another individual membership which is created for the add-on health insurance plan.
- **Member Identifiers** - Used to specify one or more identifiers for the individual membership.
- **Exchange Details** - Used to indicate whether the individual membership is purchased from the exchange. If the individual membership is purchased from the exchange, you need to specify the exchange ID.
- **Binder Payment Details** - Used to indicate whether the binder payment is required for the individual membership. If so, you need to specify the following details:
  - Grace Days
  - Binder Liability Amount (if required)
  - Threshold Percentage (if required)
  - Hold Billing

  For more information about the binder payments, see the Binder Payment for Individual Membership on page 413 section.

Note: On creating an individual membership for a health plan, the membership category is set to **INDV**. However, on creating a group membership for a policy plan, the membership category is set to **GRUP**.

The following table lists the statuses introduced in the lifecycle of the **C1-IndMembership** business object:

Individual Membership Status	**Description**
Draft	An individual membership is created in the **Draft** status and then transitioned to either the **Pending Effectuation** or **Active** status as mentioned in the health care inbound message or membership repricing incoming message.
Pending Effectuation	If the main subscriber status is set to **Pending Effectuation**, the system sets the status of the individual membership to **Pending Effectuation**. The system determines the individual membership status reason using the membership status

Copyright © 2025, Oracle and/or its affiliates.

Individual Membership Status	**Description**
	reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. The system monitors whether the binder payments (if required) are received for the individual membership in the **Pending Effectuation** status. If the binder payments are received, the status of the individual membership is not automatically transitioned to **Active**. The status of the individual membership is changed from **Pending Effectuation** to **Active** only when the main subscriber status update information is received through a health care inbound message or membership repricing inbound web service.
Active	If the main subscriber status is set to **Active**, the system sets the status of the individual membership to **Active**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. If the binder payments are not required for the individual membership, you can directly set the status of main subscriber to **Active**. In addition, if you want to reinstate the individual membership, you must set the status of main subscriber to **Active**. The system will then change the status of the individual membership from **Terminated** to **Active**. In case of reinstatement of the individual membership, the status of the dependent persons is not changed automatically from **Inactive** to **Active** unless the dependent person status update information is received through a health care inbound message or membership repricing inbound web service.
Terminated	If the main subscriber status is set to **Inactive**, the system sets the status of the individual membership to **Terminated**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. Once the status of the individual membership is set to **Terminated**, the system automatically changes the status of the dependent persons to **Inactive**. Note that while inactivating the dependent persons, the system only considers the dependent persons who are in the **Active** status. The system determines the dependent person status reason using the membership status reason preference. The system also updates the end date of the individual membership, main subscriber, and dependent persons. For more information, see the Individual Membership Termination on page 401 section.
Canceled	If the main subscriber status is set to **Canceled**, the system sets the status of the individual membership to **Canceled**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. Once the status of the individual membership is set to **Canceled**, the system automatically changes the status of the dependent persons to **Canceled**. The system determines the dependent person status reason using the membership status reason preference. The system will also cancel the billable charges and bill segment (if any) created for the individual membership or financially responsible member person account.

Copyright © 2025, Oracle and/or its affiliates.

The system also enables you to change the status of a dependent person in the individual membership through a health care inbound message or membership repricing inbound web service. On changing the status of a member person to **Pending Effectuated** or **Active**, the system considers the member person during premium calculation.

On changing the status of the individual membership and member person, the system creates an audit event to trigger the repricing feature. The **C1-IndMembership** business object is configured for the entity audit framework. However, the repricing is triggered only when an active audit event type for the **C1-IndMembership** business object is created in the system.

The system creates appropriate log entries during the individual membership and member person status transition. You can view the status transition logs of individual membership in the **Log** tab of the **Membership (Used for Viewing)** screen. A new zone named **Member Person Log** is introduced in the **Main** tab of the **Membership (Used for Viewing)** screen. It enables you to view the log entries generated on the member person status transition.

You can define individual membership status reasons through the **Status Reason** screen. A new lookup field named **MEMB_PERS_STAT_RSN_FLG** is introduced in this release. Here, you can add the status reasons for the member person.

Types of Membership

Oracle Revenue Management and Billing enables you to create different types of membership for a fully-insured individual membership:

- Medicare Membership on page 218
- Retiree Membership on page 222

Medicare Membership

Oracle Revenue Management and Billing enables you to maintain an employer sponsored group medicare membership (800 series plans) for a fully-insured large group customer and create age based or tier based premium charges for the Medicare Part A, Part B, and Part D. A Medicare beneficiary may qualify for a low income subsidy (LIS) for Medicare Part D or may incur late enrollment penalty (LEP) for Medicare Part D. In such case, the system enables you to consider the low income subsidy (LIS) and late enrollment penalty (LEP) while calculating the Medicare Part D premium.

The system enables you to create and edit a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While creating a Medicare membership, you must set the membership type to **Medicare**. Ideally, you must define a Medicare membership on a Medicare Affiliated policy plan. However, at present, the system does not validate whether a Medicare membership is defined only on a Medicare Affiliated policy plan and not on a Commercial policy plan.

You can create a Medicare membership when you specify the main subscriber of the membership. A Medicare membership should have only one member person who is covered for Medicare and who is financially responsible for the membership. Ideally, the main subscriber should exists as a person in the system before creating the Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. The system enables you to create the main subscriber and Medicare membership through the same health care inbound message or through the same membership repricing request. In such case, the system will first create the person record for the main subscriber and then create the Medicare membership.

On creating a Medicare membership, the status of the membership and main subscriber is set to **Active**. You can inactivate a Medicare membership from the user interface, through a health care inbound message, or through the membership repricing inbound web service. There are two ways in which you can inactivate the membership from the user interface:

- On clicking the **Inactivate** button
- On inactivating the main subscriber of the membership

However, through a health care inbound message or through the membership repricing inbound web service, you can inactivate the membership only by inactivating the main subscriber of the membership. On inactivating a Medicare membership, the system does the following:

Copyright © 2025, Oracle and/or its affiliates.

- Set the status of the membership and main subscriber to **Inactive**
- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

On terminating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Terminated**. Similarly, on reinstating a fully-insured group policy, the status of all Medicare memberships on the respective policy plans is set to **Active**.

The system enables you to maintain the Membership benefits (such as, Part A, Part B, Part D, Part D LIS, and Part D LEP) of a member person through the **Benefit** screen. The system enables you to define and edit the Membership benefits from the user interface, through a health care inbound message, or through the membership repricing inbound web service. While defining a Membership benefit of a member person for Part A, Part B, and Part D, you need to specify a Medicare plan benefit package (i.e. 800 series plan) which is applicable for the Membership benefit. The system enables you to define and edit a Medicare plan benefit package through the **Field Mapping** screen. You can use the Medicare plan benefit package as a pricing parameter in the age based or tier based pricing rules using which the Medicare premium is calculated. While defining a Membership benefit of a member person for Part D LIS and Part D LEP, you need to specify the benefit amount (i.e. subsidy or penalty amount).

While editing a Membership benefit of a member person from the user interface, you can only edit the characteristics of the Membership benefit. However, while editing a Membership benefit of a member person through a health care inbound message or through the membership repricing inbound web service, you can edit the end date, benefit amount, and characteristics of the Membership benefit. On editing a Membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**.

The system enables you to discard an active or inactive Membership benefit from the user interface by clicking the **Discard** button. You can also discard an active or inactive Membership benefit through a health care inbound message or through the membership repricing inbound web service by changing its status to **Discarded**.

The system requires the following information to create charges for a Medicare membership:

- Whom to bill the Medicare membership (i.e. billing arrangement details)
- Age based or tier based pricing rules using which the premium should be calculated for the Medicare Part A, Part B, and Part D.
- Respective age based, tier based, and benefit pricing rule types associated with the respective policy plan

The system supports the following billing arrangements for a Medicare membership:

- **Group Billing** - Here, a Membership benefit is billed to a bill group which is derived for the Medicare membership.
- **Direct Billing** - Here, a Membership benefit is billed to a member person who is financially responsible for the Medicare membership.

You can indicate the billing arrangement for the Medicare memberships by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Benefit Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Note: If the benefit billing arrangement characteristic is not defined for any of the above listed entities, the system, by default, charges the Medicare membership premium to the bill group.

Copyright © 2025, Oracle and/or its affiliates.

The system requires the bill group and its account to bill the Medicare memberships when the benefit billing arrangement is set to **Group Billing**. You can create a bill group and its account from the user interface or through a health care inbound message. On creating an account for a bill group, the system automatically creates a contract on the account using distinct contract types for all policy plans of the parent customer and bill group policies. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the policy plans of the parent customer and bill group policies.

The system requires the member person's account to bill the Medicare membership when the benefit billing arrangement is set to **Direct Billing**. You can create an account for a member person who is financially responsible for the Medicare membership through a health care inbound message. On creating an account for a member person, the system automatically creates a contract on the account using distinct contract types for the respective policy plan. While creating a contract, the system considers all price items in all pricing rule types (including the related pricing rule types) which are associated with the respective policy plan.

Retiree Membership

An employer may offer a retirement health plan coverage to its retired employees through a fully-insured group policy or an individual can independently opt for a government sponsored retirement health plan coverage. Oracle Revenue Management and Billing enables you to maintain a retiree membership for both the fully-insured group and individual business. The system enables you to maintain a flat or percentage based contribution of employer or sponsor for a retiree membership.

The system enables you to create and edit a retiree membership through a health care inbound message or through membership repricing inbound web service. While creating a retiree membership, the membership type must be set to **Retiree**. The system requires the following information to create charges for a retiree membership:

- Whom to bill the premium for the retiree membership (i.e. retiree billing arrangement details)
- Whom to bill the employer or sponsor contribution (i.e. sponsor billing arrangement details)
- Age based or tier based pricing rule using which the premium should be calculated for the retiree membership
- Discount charge pricing rule using which the employer or sponsor contribution should be calculated for the retiree membership

In case of the fully-insured individual business, the premium for a retiree membership is billed to the member who is financially responsible for the retiree membership. However, in case of the fully-insured group business, the system supports the following billing arrangements for the retiree membership:

- **Group Billing** - Here, the premium is billed to a bill group which is derived for the retiree membership.
- **TPA Billing** - Here, the premium is billed to the third party administrator (i.e. TPA person).
- **Direct Billing** - Here, the premium is billed to the member who is financially responsible for the retiree membership.

You can indicate the billing arrangement for a retiree membership in the fully-insured group business by defining a characteristic on the policy plan, policy, or parent customer. The system searches for the characteristic which is specified in the **Retiree Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

The system enables you to maintain a flat or percentage based contribution of employer or sponsor through a discount charge pricing rule. A field named **Sponsored** is available in the **Price Items** section while defining or editing a discount charge pricing rule type. If the **Sponsored** option is selected for a price item, the system creates and bills the charge for the price item as per the sponsor billing arrangement. The system searches for the characteristic which is specified in the **Sponsors Billing Arrangement** option type of the **C1-ASOBLLNG** feature configuration on the following entities in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

Copyright © 2025, Oracle and/or its affiliates.

In the fully-insured group and individual business, the system supports the following sponsor billing arrangements for the retiree membership:

- **Group Billing** - Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **TPA Billing** - Here, the system creates a negative charge for the employer or sponsor contribution against the beneficiary account and a positive charge for the employer or sponsor contribution against the sponsor account.
- **Direct Billing** - Here, the system creates a memo only charge for the employer or sponsor contribution against the beneficiary account. A bill message code is derived from the **Retiree Bill Message Code** option type of the **C1-ASOBLLNG** feature configuration and stamped against the beneficiary account.

In case of the group and TPA billing, the system derives the characteristic types which are specified in the **Sponsor Account Identifier Type Char Type** and **Sponsor Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration. The system then checks whether these characteristics are defined on any of the following entity in the specified sequence:

1. Policy Plan
2. Policy
3. Parent Customer

If these characteristics are defined on any of the above entity, the system derives the sponsor account for the bill group. The system then bills the employer or sponsor contribution charges to the sponsor account.

However, if the **Sponsored** option is not selected for a price item in a discount charge pricing rule type, the system creates and bills the charge for the price item as per the retiree billing arrangement.

Individual Membership Status Transition

The following figure graphically indicates how an individual membership goes through various statuses in its lifecycle:

Copyright © 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Canceled	Enter	C1-MEMINACT	C1-MEMINACT	Refer to C1-MEMINACT on page 235
		C1-INVRQIMCN	C1-INVRQIMCN	Refer to C1-INVRQIMCN on page 401

C1-FIAUDEV

If this algorithm is attached to the **Audit** system event of the **Group Membership** (**C1-Membership**), **Individual Membership** (**C1-IndMembership**), **Benefit** (**C1-Benefits**), and **Person** (**C1_PERSON_BO**) business objects, it is invoked whenever you define, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event whenever a group membership is added to a policy plan, an individual membership is added to a health plan, member person is added to a group or individual membership, and a membership benefit is added for a group or individual membership. It also creates the audit event whenever the group or individual membership, member person, and membership benefit details are updated. However, note that the audit events are created in the update scenario when the element listed for auditing in the age-based, tier-based, or benefit pricing rule type is updated. The system considers only those pricing rule types whose pricing rules are effective during the respective entity (i.e. group or individual membership, member person, or membership benefit whichever is updated) date range.

It creates one or more audit events in the **Pending** status. The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table.

Note:

The system creates an audit event whenever the group or individual membership start and end dates and member person's start and end dates are changed in the system irrespective of whether these fields are listed for auditing or not in the age-based or tier-based pricing rule types.

Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

For each audit event, this algorithm derives the group or individual memberships on the policy or health plan, respectively, which is impacted and the pricing rule types whose pricing rules are defined on the respective policy or health plan. A repricing entity detail record is then created for each membership, pricing rule type, and effective date combination in the **CI_REPRC_ENTITY_DTL** table. The status of the repricing entity detail record is set to **Pending**. Once the repricing entity detail records are created successfully, the status of the audit event is changed to **Complete**.

It contains the following parameters:

- **Audit Event Business Object** - Used to specify the business object using which you want to create the audit event.
- **Audit Event Pending Status** - Used to specify the status in which you want to create the audit event. This parameter is also used for determining whether an audit event for the entity ID already exists in the system.
- **Audit Event Error Status** - Used to specify the status in which an audit event is transitioned when an error occurs while processing the audit event. This parameter is used for determining whether an audit event for the entity ID already exists in the system.

All the above parameters are mandatory.

C1-MEMRLAUD

This algorithm defines an eligible member role for each and every member person involved in the membership. It derives the **Member Role Structure** attribute defined in the policy plan in a group membership or from the health plan in an individual membership. This attribute is used to identify the member person details that are to be stamped based on the member person relationship. A member person relationship is derived from the member person depending on whether the member person is:

- Self
- Spouse
- Children
- Dependents

This algorithm derives the member person relationship through the **Member Person Relationship** table, as a common reference. Once the member person relationship is derived, in case of a group membership, the algorithm derives the characteristics, which are mapped on the policy plan, for member role mapping purposes. Whereas in case of an individual membership, the algorithm derives the characteristics, which are defined in the business rules, for member role mapping purposes.

C1-DTCAGEIM

This algorithm would be used for the calculation of a date that is further used for age-based calculations of the members in the fully-insured Individual Membership when the specific conditions are present.

- This algorithm is plugged-in in the system event Audit present in the Algorithms Tab of the BO Individual Membership
- It gets invoked whenever there is an update in the Individual Membership entity to perform date calculation and store the calculated date in the BO_DATA_AREA of this individual membership.

The essential pre-requisite for this algorithm to work as intended is as follows:

- If an individual has continuous coverage on different Medical Health Plans with the same first 5-digit of HIOS (legal entity) within the same plan year window, then age at the time of enrolment into the first plan is used throughout the plan year.
- The business rule category - 'Fully-Insured Pricing Rules' for this individual membership will have the criteria:

```
AGE CALCULATION DATE = Member Enrollment Date
and
AGE RECALCULATION DATE = Membership Renewal Date
```

When the above conditions are configured in the system, the algorithm works as follows:

- It lists out the enrollment start date of all memberships having the same main subscriber person and same account for the identified plan year window.

Copyright © 2025, Oracle and/or its affiliates.

- It then determines the oldest date among the enrollment start date such that there is continuous coverage between the consecutive memberships.
- The calculated date is then stored in the BO_DATA_AREA column in the Membership table in the format:

```
<calculatedDateMemberAgeContCoverage>YYYY-MM-DD</
calculatedDateMemberAgeContCoverage>
```

The corresponding algorithms responsible for member age calculation, that are present in the pricing rule type of the health plan for this membership entity, will fetch the value of the calculated date available in the BO_DATA_AREA column and determine the age for the member-person in the membership.

Parameter:

- **Healthcare Coverage Class** - This parameter is mandatory where the value indicates the valid value for Medical present in lookup Product Healthcare Category.
- **Plan Year Start Month** - This parameter is mandatory where the numeric value represents the month in a calendar year. For example, 1-Jan, 3-March, 6-June, etc.

C1-MPCONCREA

This algorithm is invoked when the following conditions are met:

- A member person who is financially responsible for the membership is added to the membership
- One or more accounts already exist for the member person in the system

If the above conditions are met, this algorithm derives the membership in which the member person is added. It then derives the policy plan to which the membership belongs. It creates contracts for each account of the member person in either of the following ways:

- If a price item is associated with the policy plan, it creates a contract using the contract type which is associated with the price item.
- If a pricing rule type is associated with the policy plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item.

  Let us assume that PRT1 is associated with the policy plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, this algorithm will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, this algorithm will create two distinct contracts - C1 using CT1 and C2 using CT2.

  If multiple pricing rule types are associated with the policy plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item on each pricing rule type.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

C1-THRSHDAMT

This algorithm works when the individual Membership Status is Pending Effectuation and status reason is Awaiting Binder Payment (configurable on field mapping).

Copyright © 2025, Oracle and/or its affiliates.

- If Binder Applicability is not available at the membership level, it invokes Business Rule service to fetch Binder Payment Business Rule.
- If Binder Payment Business Rule is not available, then it updates membership status reason as per configured value and creates a TO DO.
- If the Binder Applicability switch is 'Y', it calculates the binder payment threshold amount based on the binder liability amount and the binder payment threshold percentage.
- It also holds / releases the billable charges based on the 'Hold billing' configuration.

C1-RTAREAMEM

This algorithm derives the geographic rating area for a membership using the **Address Source** and **Address Type** characteristic types. It supports two address sources named **Policy Holder** and **Main Subscriber** and three address types named **Person Mailing**, **Person Seasonal**, and **Account Override**.

On adding a membership to a policy plan, this algorithm derives the characteristic types from the **Address Source Characteristic Type** and **Address Type Characteristic Type** attributes of a geographic rating area preference. This algorithm considers the geographic rating area preference which is specified in the **Rating Area Field Mapping for Group** option type of the **C1-ASOBLLNG** feature configuration. Then, it searches for these characteristics on the following entities in the specified sequence:

1. Policy Plan
2. State where the Policy Plan is Issued
3. Policy
4. State where the Policy is Issued

If these characteristics are not defined for any of the above listed entities, this algorithm derives the default address source and address type from the geographic rating area preference. If the address source is set to **Policy Holder**, this algorithm fetches the value from the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. It then derives the person who is associated with the policy using the parent customer policy person role. Once the address source and address type are derived, this algorithm fetches the state and zip code from the address type of the address source. For example, if the address source is set to **Policy Holder** and address type is set to **Person Mailing**, this algorithm fetches the state and zip code from the policy holder's mailing address. Once the state and zip code are fetched from the address, this algorithm checks whether the zip code is a 9-digit code. If not, it appends zeros to make it a 9-digit zip code. It then derives the value of the **Use Plan Details** attribute from the geographic rating area preference. If the attribute is set to**Y**, this algorithm derives a geographic rating area for the state, zip code, policy number, plan number, and source system combination. However, if the attribute is set to**N**, this algorithm derives a geographic rating area for the state and zip code combination. If the geographic rating area is not derived for the specified combination, this algorithm derives the default geographic rating area from the geographic rating area preference. Once the geographic rating area is derived, this algorithm stores the geographic rating area for the membership. The characteristic type specified in the **Geographic Rating Area Characteristic Type** attribute of the geographic rating area preference is used to store geographic rating area for the membership. The effective date of the characteristic is set to effective date of the address.

C1-MEMSTSUP

This Algorithm cascades the status, status-reason and end-date of the dependent member-person in the membership for any change in status of the main member person.

Logs are created for dependent member person status changes.

When Termination request is sent for a membership, Its associated membership (if it is in Active status) for add-on plan will also get terminated.

Soft Parameter:

- Valid values for Cascade Associate Membership should be Y or N.
- This flag will indicate whether to cascade the changes to associate membership.

Copyright © 2025, Oracle and/or its affiliates.

C1-LATESET

This algorithm is used to send Late Setup Notification when difference between member person start date and creation data is greater than or equal to 'Late Setup Threshold'.

Parameter:

- To Do Type: Notification will be created using this To Do Type
- To Do Role: If It's not blank then this To Do Role will be used in To Do Type Notification otherwise default will be used.

C1-MEMRTGRNT

This algorithm check rate guarantee details are receive at membership level, If not then it invoke Business Rule service by providing Business Rule Category as Rate Guarantee, Membership Id, and Effective date as Membership Start Date to derive rate guarantee from business rule if any rate guarantee business rule applicable.

If data is not available then it will add the Rate guarantee details into CI_ MEMBERSHIP_RATE_GRNT and C1_ENT_BUS_RULE table else it will update existing records.

C1-VALMEMBO

This algorithm validates a membership. It checks the following:

- Whether the membership end date is not earlier than the membership start date.
- Whether the membership start date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the membership end date is not earlier than the policy plan start date or later than policy plan end date.
- Whether the policy plan for which you want to define the membership is specified.
- Whether the person who is the main subscriber is added to the membership.
- Whether the relationship type is specified while adding a person to the membership.

C1-BNDRH

This algorithm is invoked during the membership activation process. It checks whether the binder payment is received for the membership. If the binder payment is received, the membership status is changed from **Pending Effectuation** to **Active**.

Note: At present, this algorithm is invoked only during the membership enrollment and not for membership reinstatement, where the membership status is changed from **Terminated** to **Active**.

This algorithm is invoked using the following scenario:

If...	**Then...**
The membership is in the **Active** status and the binder payment attributes like the **Consider Binder Liability Amount Flag** is configured as **N** along with the **Membership Status Reason when Binder Payment Received** is configured as **Binder Payment Received** in the **Field Mapping** screen	The system checks whether the hold billing switch in the **CI_MEMBERSHIP** table contains any value. If any value exists, the system releases the billable charges which are kept on hold for the membership. In addition, the system performs the following operations: • Retrieves the account (of the financial responsible person) for the membership. • Retrieves the non-binder payment contracts for the accounts from the **CI_SA** table. • Retrieves the billable charges present on the non-binder payment contracts where the membership ID is stamped as a characteristic.

Copyright © 2025, Oracle and/or its affiliates.

If...	Then...
	• Checks whether the bill after date of each billable charge contains a future date. If the bill after date contains a future date then it is changed to the system date minus one.

C1-IMRI-INS

The algorithm will update instruction record for Refund/Write-off Instruction on individual membership reinstatement

C1-INVRQIMEN

This algorithm would be configured on full-insured Individual Membership enrolment process.

It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type Value) mentioned in the Individual Membership Characteristic section on its enrollment.

If the newly enrolled Individual Membership has the account details for the main subscriber and is financially responsible person of the Individual Membership as well as the Membership Characteristics section has the characteristic 'Eligible For Invoice Request Creation = Yes' , then it will create the invoice request for the specific account for new enrollment. Else, for the events of reinstatement of the individual membership, the system will validate that this membership Id already exists and check if the previous status of the Membership is 'Terminated' to process the invoice request creation on individual Membership reinstatement. Also, if the parameter 'Termination Reason' is provided along with the parameter 'Invoice Request Type for Individual Membership Reinstatement', then the algorithm will evaluate to create the invoice request based on the list of values against the membership status reason provided for previous status ='Terminated'.

Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

Parameters:

- Invoice Request Type for Individual Membership New Enrollment - This is an mandatory parameter to fetch configurations related to invoice Request creation for event of Individual Membership New Enrollment.
- Invoice Request Type for Individual Membership Reinstatement - This is an optional parameter to fetch configurations related to invoice Request creation for event of Individual Membership Reinstatement
- Termination Reason - This is an optional parameter to determine whether invoice request needs to be created for event of Individual Membership Reinstatement and for the list of the status reasons mapped to the previous status event 'Terminated'. The size of the list is maximum 5 comma-separated values.

C1-INDACCT

This algorithm evaluates the individual membership to determine the account to associate it with. If the membership is already associated with an account, no further action is required. If the membership is not yet associated with an account, new account creation rules are assessed and if met, a new account is created for the main subscriber and linked to the membership. Otherwise, the account linked to the prior membership of the individual for the same health coverage class is used.

A new account is created for an individual's first enrollment to a health coverage class. If the individual subsequently changes plans within a health coverage class, a new account is created if there is a gap in coverage from the prior enrollment or one of the configurable health plan characteristic criteria is met, that is:

1. If a health plan char type is provided as a parameter and the old and new values are also provided, a new account is created if the health plan char value from the prior membership = old value and the health plan char value from the current membership = new value.
2. If a health plan char type is provided as a parameter and the old and new values are not provided, a new account is created if the health plan char value from the prior membership <> health plan char value from the current membership.

Copyright © 2025, Oracle and/or its affiliates.

C1-IMTR-INS

This algorithm is used to initiate the process of automatic refund/write-off creation on individual membership termination. It identifies the account linked to financial responsible person of the individual membership.

It contains the following parameter:

- **Wait Days** - Used to specify the days after which the account balance is retrieved.

> **Note:**
>
> If you do not specify the value, by default, it is set to zero (0).
>
> You must specify a numeric value greater than zero.

C1-INVRQIMTM

This algorithm would be configured on full-insured Individual Membership termination process. It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type Value) mentioned in the Individual Membership Characteristic section on its termination. If the terminated Individual Membership has the account details for the main subscriber and is financially responsible person of the Individual Membership, then it will create the invoice request for the specific account. Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

C1-MEMINACT

This algorithm changes the status of the member person to the value specified in the **Membership Person Inactive Status** option type of the **C1-ASOBLLNG** feature configuration. It also does the following:

- Cancels the billable charges which are created for the membership
- Cancels the corresponding bill segments (if any)

If an audit event exists for the membership which is inactivated, the **BO_STATUS_CD** column corresponding to the record in the **C1_AUDIT_EVENT**, **C1_AUDIT_EVENT_LOG**, and **CI_PRCE_CALC** tables is set to **INVALID**. If a repricing entity detail record exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_ENTITY_DTL** table is set to **COMPLETE**. If a repricing request exists for the membership in the **PENDING** or **ERROR** status, then the **BO_STATUS_CD** column corresponding to the record in the **CI_REPRC_REQ_DTL** table is set to **COMPLETE**.

C1-INVRQIMCN

This algorithm would be configured on full-insured Individual Membership cancelation process. It is used to create Automatic Invoice Request on the account details (Account Identifier Type and Account Identifier Type Value) mentioned in the Individual Membership Characteristic section on its cancelation. If the canceled Individual Membership has the account details for the main subscriber (and is financially responsible person) present in the Individual Membership Characteristics section, then it will create the invoice request for the specific account. Before creating any invoice request, it will check whether any invoice request exists in final status with the specified account and If yes, then it will create new invoice request for the eligible account. The details of the invoice request created and its associated validation is available in the log tab of the Membership screen.

Individual Membership Termination

To terminate an individual membership, you need to change the status of the main subscriber to **Inactive** through a health care inbound message or membership repricing inbound web service. Along with the main subscriber status, you need to specify the status reason and end date for the main subscriber. If the end date is earlier than or equal to the inbound

Copyright © 2025, Oracle and/or its affiliates.

processing date, the system updates the status, status reason, and end date of the main subscriber and then changes the status of the individual membership to **Terminated**. The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.

Once the status of the individual membership is set to **Terminated**, the system automatically changes the status of the dependent persons to **Inactive**. Note that while inactivating the dependent persons, the system only considers the dependent persons who are in the **Active** status. The system determines the dependent person status reason using the membership status reason preference.

If the main subscriber end date is later than the inbound processing date, the system creates a record in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. The system stores the following information in the record:

- Membership ID
- Member Person ID
- Whether the member person is a main subscriber
- Processing date (it is set to future dated end date of the member person)
- Required action (is set to **Terminate**)

A new batch named **C1-MEPRC** is introduced in this release. On the **C1-MEPRC** batch execution, the system checks whether there are any records in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. If so, the system checks whether the processing date of the record is earlier than or equal to the system date. If so, the system determines the required action to be taken for the individual membership from the record. If the **MEMB_PROCESS_FLG** column of the record is set to **Terminate** and the **MAIN_CUST_SW** column is set to **N**, the system changes the status of the dependent person to Inactive and updates the end date of the dependent person.

However, if the **MEMB_PROCESS_FLG** column of the record is set to **Terminate** and the **MAIN_CUST_SW** column is set to **Y**, the system updates the status and end date of the main subscriber and then changes the status of the individual membership to **Terminated**. Once the status of the individual membership is set to **Terminated**, the system automatically changes the status of the dependent persons to **Inactive**. The system also updates the end date of the individual membership and dependent persons.

The system enables you to configure whether the individual membership on the add-on health insurance plan should be automatically terminated when the primary individual membership is terminated. If the **Cascade Associate Membership** parameter in the **C1-MEMSTSUP** algorithm is set to **Y**, the system changes the status of the associated individual membership to **Terminated**. Once the status of the associated individual membership is set to **Terminated**, the system automatically changes the status of its main subscriber and dependent persons to **Inactive**. The system also updates the end date of the associated individual membership, its main subscriber and its dependent persons.

Once the required action is completed for the record in the **CI_MEMBERSHIP_PROCESS** table, the system changes the status of the record to **Complete**. However, if the system receives a reinstatement request for an individual membership before processing the termination request, the system changes the status of the record in the **CI_MEMBERSHIP_PROCESS** table to **Canceled**.

Individual Membership Renewal

Oracle Revenue Management and Billing enables you to renew an individual membership in the following two ways:

- Manually
- Automatically

While creating or editing an individual membership through a health care inbound message or membership repricing inbound web service, you must set the **Auto Renew** option for the individual membership to either **Y** or **N**.

If the **Auto Renew** option for an individual membership is set to **N**, you need to specify the following details in a health care inbound message or membership repricing incoming message:

- Membership renewal date

Copyright © 2025, Oracle and/or its affiliates.

- Status, status reason, and end date of the main subscriber
- Status, status reason, and end date of the dependent person

The enrollment system can send the renewal information either during the enrollment period or after the enrollment period. Irrespective of when the renewal information is received, the membership renewal date must be set to the membership end date + 1. For example, if the enrollment period is from 01-01-2021 to 12-31-2021, then the system must receive the membership renewal date as 01-01-2022. On renewing an individual membership, the dependent person in the individual membership is not automatically activated unless the activation information is received for the dependent person from the enrollment system. The associated membership for an add-on health insurance plan is not automatically renewed unless the renewal information is received for the respective membership from the enrollment system.

If the **Auto Renew** option for an individual membership is set to **Y**, you need to specify the contract period for which the individual membership should be automatically renewed. The system then creates a record in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. The system stores the following information in the record:

- Membership ID
- Main Subscriber ID
- Whether the member person is a main subscriber
- Processing date (it is set to the membership end date)
- Required action (is set to **Renew**)

On the **C1-MEPRC** batch execution, the system checks whether there are any records in the **CI_MEMBERSHIP_PROCESS** table with the **Pending** status. If so, the system checks whether the processing date of the record is earlier than or equal to the system date. If so, the system determines the required action to be taken for the individual membership from the record. If the **MEMB_PROCESS_FLG** column of the record is set to **Renew** and the **MAIN_CUST_SW** column is set to **Y**, the system calculates the renewal date and new end date for the individual membership.

The renewal date for the individual membership is set to membership end date + 1. For example, if the enrollment period is from 01-01-2021 to 12-31-2021, the system sets the renewal date to 01-01-2022 (i.e. 12-31-2021 + 1). The new membership end date is calculated using the renewal date and contract period. For example, if the renewal date is 01-01-2022 and contract period is 12 months, the system sets the end date of membership, main subscriber, and dependent persons to 12-31-2022. The associated membership for an add-on health insurance plan is not automatically renewed during the individual membership renewal.

The automatic renewal request for an individual membership must be received during the enrollment period. If the automatic renewal request for an individual membership is received after the enrollment period, the system will not renew the individual membership automatically.

Once the membership end date is changed, the system will trigger the repricing feature and accordingly create or extend the billable charge for the renewed period.

Automatic Contract Creation for Individual Membership

Oracle Revenue Management and Billing automatically creates contracts for each account of the financially responsible member person when:

- Person is added to an individual membership
- Account is added for a financially responsible member person
- Health plan is added or edited in the system

In the former two scenarios, the system derives the individual membership where the person is financially responsible for the membership. Once the individual membership is derived, the system derives the health plan for which the individual membership is enrolled.

Once the health plan is derived, the system checks whether the pricing rule types are associated with the health plan. If a pricing rule type is associated with the health plan and the pricing rule type contains one or more price items, it creates a contract using a distinct contract type which is associated with each price item. Let us assume that PRT1 is

Copyright © 2025, Oracle and/or its affiliates.

associated with the health plan and it contains three price items - PI1, PI2, and PI3. Now, if the PI1 is associated with the CT1 contract type, PI2 is associated with the CT2 contract type, and PI3 is associated with the CT3 contract type, the system will create three contracts - C1 using CT1, C2 using CT2, and C3 using CT3. However, if the PI1 and PI3 are associated with the CT1 contract type and PI2 is associated with the CT2 contract type, the system will create two distinct contracts - C1 using CT1 and C2 using CT2.

If multiple pricing rule types are associated with the health plan and each pricing rule type contains multiple price items, it creates a contract using a distinct contract type which is associated with each price item of each pricing rule type.

The status of each contract is set to **Active**. The contract start date is set to the start date of the respective individual membership. If the same contract type is associated with the same or different price items on the same or different pricing rule types of different health plans, the contract start date is set to the start date of the earliest health plan. The default rate schedule specified on the respective contract type is added to the contract in the rate information and its effective date is set to the contract start date.

Note:

The system creates a contract using a contract type for an account only when the division to which the account and contract type belongs is same.

If a contract of a contract type is already present on the account, the system will not create a new contract. Instead, it will update the start date of the existing contract, if required.

Rate Guarantee for Individual Membership

At times, the insurance carriers provide rate guarantee health plans to a fully-insured individual wherein the insurance rate does not change for the rate guarantee period (i.e. lock-in period). Oracle Revenue Management and Billing enables you to configure guaranteed rate for one or more health insurance services offered to an individual person. Unless, there are some qualifying life events (QLE), the system will calculate the premium on the same rate for the next coverage period until the rate guarantee period is over.

The system enables you to maintain the rate guarantee details for each individual membership through a health care inbound message or through membership repricing inbound web service. It enables you to capture the following details:

- **Rate Guarantee Start Date** - Used to specify the date from when the rate guarantee is available for the individual membership.
- **Rate Guarantee End Date** - Used to specify the date till when the rate guarantee is available for the individual membership.
- **Rate Guarantee Status** - Used to indicate the status of the rate guarantee period. The valid values are - **Active** and **Inactive**.

You can send the rate guarantee details for an individual membership during enrollment (i.e. on membership creation), during coverage period, or during membership renewal. While sending the rate guarantee details of an individual membership, ensure that the active rate guarantee records do not have overlapping date range.

The system enables you to define the rate guarantee business rules. If the rate guarantee details are not specified for an individual membership during enrollment, the system derives the rate guarantee details for the individual membership through a rate guarantee business rule. The rate guarantee business rule indicates the following:

- **Rate Guarantee Applicability** - Used to indicate whether the rate guarantee is available for the individual membership.
- **Rate Guarantee Period** - Used to derive the rate guarantee start and end dates. The system sets the rate guarantee start date to the membership start date and the rate guarantee end date to the rate guarantee start date + rate guarantee period.

There might be situations wherein the rate guarantee details are received for an individual membership later during the coverage period or during membership renewal through a health care inbound message. In such scenarios, the system will then give precedence to the rate guarantee details which are received through a health care inbound message and

Copyright © 2025, Oracle and/or its affiliates.

will not derive the rate guarantee details from the rate guarantee business rule which is stamped against the individual membership.

A new column named **Rate Guarantee** is available in the **Price Items** section while defining or editing an age based or tier based pricing rule type. While creating a charge for an individual membership, the system checks whether the **Rate Guarantee** option is selected for the price item in the respective pricing rule type and whether the billable charge timeline falls within the rate guarantee period. If so, the system derives the rate guarantee pricing rule for the price items where the **Rate Guarantee** option is selected.

The system stores the pricing rule which is effective for such price items on the rate guarantee start date as the rate guarantee pricing rule. Until the rate guarantee period is over, the system considers the rate guarantee pricing rule for the individual membership during premium calculation. This ensures that the same rate is charged for a health insurance service even when the rate has increased for the health insurance service in the system.

The Entity Audit framework is configured for the Rate Guarantee feature. The system will create audit events when the rate guarantee records are added or updated for an individual membership.

Late Setup Notification

Oracle Revenue Management and Billing enables you to create a To Do notification when the details to include a member person in a group or individual membership is received in ORMB beyond the late setup threshold days from the member person start date. This notification can help the billing analyst to take appropriate actions, such as giving premium waiver to the member person if required.

To enable this feature, you need to set the following option types in the **C1-ASOBLLNG** feature configuration:

- **Monitor Late Setup** - Used to indicate whether you want to enable the late setup notification feature. The valid values are - **Y** and **N**. By default, the value is set to **N**.
- **Late Setup Threshold in Days** - Used to indicate the number of threshold days for late setup notification. This option type is required when the **Monitor Late Setup** option type is set to **Y**. The value must be greater than zero.

For example, if the system receives the information to add a member person with the start date as **01-15-2021** to an individual membership on **02-15-2021** and the late setup threshold days in the **C1-ASOBLLNG** feature configuration is set to **15**. In this case, the number of days between the member person start date and member person creation date is greater than late setup threshold days, and therefore a To Do is created using the To Do type which is specified in the **C1-LATESET** algorithm attached to the group or individual membership business object, respectively.

To implement this business requirement, the system stores the member person creation date (which was not done in the previous releases) while adding a member person to a group or individual membership. A new batch named **C1-LSUB** is introduced in this release. It derives the creation date for all member persons in the existing group and individual memberships and stamps it against the corresponding record in the **CRE_DTTM** column of the **CI_MEMBERSHIP_PER** table. This batch must be executed only once after upgrading to Oracle Revenue Management and Billing Version 3.1.0.0.0. For more information, refer to *Oracle Revenue Management and Billing Version 3.1.0.0.0 Upgrade Guide.*

Young Adult Coverage in an Individual Membership

Oracle Revenue Management and Billing enables you to calculate premium for the young adults who are covered in an individual membership. While creating or editing an individual membership, or while adding, editing, or inactivating a member person in an individual membership through a health care inbound message or through membership repricing inbound web service, the system derives the fully-insured pricing business rule for the individual membership. The system enables you to define the following young adult related output parameters in the fully-insured pricing business rules:

- **Young Adult Applicability** - Used to indicate whether you want to consider the young adults during the premium calculation. The valid values are - **Yes** and **No**.

Copyright © 2025, Oracle and/or its affiliates.

- **Young Adult Max Age Limit** - Used to indicate the maximum age limit for young adults who are eligible for premium calculation. This output parameter is mandatory when the **Young Adult Applicability** parameter is set to **Yes**.

While deriving member relationship for each member person of the individual membership from a member relationship structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Similarly, while deriving subscription tier for the individual membership from a subscription tier structure, the system considers the following information from the fully-insured pricing business rule of the individual membership:

- Young Adult Applicability
- Young Adult Max Age Limit

Thus, while calculating the premium for an individual membership using an age based or tier based pricing rule, the system considers the young adult for the premium calculation based on the above two parameters set in the fully-insured pricing business rule.

Individual Membership Preference

The Individual Membership Preference enables you to set the attributes which are used during the creation of an individual membership. While deriving the details for an individual membership, the system uses the following attributes from the individual membership preference:

- Health Plan Characteristics

You can define, edit, delete, and copy an individual membership preference through the **Field Mapping** screen.

Searching for an Individual Membership Preference

Prerequisites

To search for an individual membership preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for an individual membership preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Individual Membership** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

Copyright © 2025, Oracle and/or its affiliates.

A list of individual membership preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Individual Membership Preference Details

Procedure

To view the details of an individual membership preference:

1. Search for the individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the individual membership preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the individual membership preference in the **Field Mapping** zone.

Related Topics

How to search for an individual membership preference	Searching for an Individual Membership Preference on page 406

Defining an Individual Membership Preference

Prerequisites

To define an individual membership preference, you should have:

- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup fields
- Required characteristic type defined for the health plan in the application.

Procedure

To define an individual membership preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the billing preference. The valid values are: • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.

Copyright © 2025, Oracle and/or its affiliates.

5. Click **OK**.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the billing preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the individual membership preference.	Yes
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the billing preference. The valid values are: • Active • Inactive	Yes

   - **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct	Yes

   - **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: • **Health Plan Characteristics** - Used when you want to derive the health plan ID for an individual membership.	Yes (Conditional) **Note:** This field is required while setting an attribute in the individual membership preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the billing preference:	Yes (Conditional) **Note:** This field is required while setting an attribute in the individual membership preference.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>
<table>
<tr><th>If the attribute is set to...</th><th>Then, this field is...</th></tr>
<tr><td>Health Plan Characteristics</td><td>Used to specify the characteristic type which indicates the plan ID of the health plan. This characteristic type is defined for a health plan. The system uses this plan ID to create a health plan specific contract. The system then uses this characteristic type to determine the account of the financial responsible person for whom the billable charges should be generated.

Note: The list includes only those characteristics which are already defined in the system.</td></tr>
</table>
</td><td></td></tr>
<tr><td>Entity Type</td><td>Used to indicate the type of entity for which the attribute is applicable. The valid values are:
Account
Billable Charge
Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the MAP_ENTITY_FLG lookup field.</td><td>No</td></tr>
</table>

Note: While defining an individual membership preference, you must set at least one attribute in the individual membership preference.

6. Select the **Individual Membership** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the individual membership preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the individual membership preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The individual membership preference is defined.

Editing an Individual Membership Preference

Prerequisites

Copyright © 2025, Oracle and/or its affiliates.

To edit an individual membership preference, you should have:

- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup fields
- Required characteristic type defined for the health plan in the application.

Procedure

To edit an individual membership preference:

1. Search for an individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the individual membership preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the individual membership preference.	Not applicable
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the individual membership preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Individual Membership	Not applicable

   - **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: • **Health Plan Characteristics** - Used when you want to derive the additional information of a health plan for an individual membership.	Yes (Conditional) **Note:** This field is required while setting an attribute in the individual membership preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the individual membership preference:	Yes (Conditional) **Note:** This field is required while setting an attribute in the individual membership preference.

If the attribute is set to...	Then, this field is...
Health Plan Characteristics	Used to specify the health plan characteristics.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description		Mandatory (Yes or No)
	If the attribute is set to...	**Then, this field is...**	
		Note: The list includes only those characteristics which are already defined in the system.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Billable Charge		No
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.		

Note: Alternatively, you can edit the details of an individual membership by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the individual membership, if required.

Note: You must set at least one attribute in an individual membership preference.

5. Click **Save**.
   The changes made to the individual membership are saved.

Copying an Individual Membership Preference

Instead of creating an individual membership preference from scratch, you can create a new individual membership preference using an existing individual membership preference. This is possible through copying an individual membership preference. On copying an individual membership preference, the details including the attributes are copied to the new individual membership preference. You can then edit the details, if required.

Prerequisites

To copy an individual membership preference, you should have:

- Individual membership preference (whose copy you want to create) defined in the application
- Values defined in the **FIELD_CAT_FLG** and **FIELD_NAME_FLG** lookup fields
- Required characteristic type defined for the health plan in the application.

Procedure

To copy an individual membership preference:

Copyright © 2025, Oracle and/or its affiliates.

1. Search for the individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⎘) icon in the **Duplicate** column *c*orresponding to the individual membership preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the individual membership preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the individual membership preference.	Yes
Description	Used to specify the description for the individual membership preference.	Yes
Detailed Description	Used to specify additional information about the individual membership preference.	No
Status	Used to indicate the status of the billing preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid values are: • Individual Membership	Not applicable

   - **Preference Settings** - Used to set the attributes in the individual membership preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the individual membership preference. The valid values are: • **Health Plan Characteristics** - Used when you want to derive the additional information of a health plan for an individual membership.	Yes (Conditional) **Note:** This field is required while setting an attribute in the individual membership preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the billing preference: **If the attribute is set to...** / **Then, this field is...** Health Plan Characteristics / Used to specify the health plan characteristics. **Note:** The list includes only those characteristics which are already defined in the system.	Yes (Conditional) **Note:** This field is required while setting an attribute in the individual membership preference.
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Billable Charge **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	

Note: While defining an individual membership preference, you must set at least one attribute in the individual membership preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the individual membership preference, if required.
5. Click **Save**.
   The new individual membership preference is defined.

Deleting an Individual Membership Preference

Procedure

To delete an individual membership preference:

1. Search for the individual membership preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the individual membership preference that you want to delete.
   A message appears confirming whether you want to delete the individual membership preference.

Tip: Alternatively, you can delete an individual membership preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.
   The individual membership preference is deleted.

Binder Payment for Individual Membership

On enrolling for an individual health insurance plan, the financial responsible member person needs to pay first month's premium often called as binder payment to complete the enrollment process. The individual membership enrollment is effectuated when the binder payment is received. The binder payment should be received by the billing system and not by the enrollment system. The binder payment is not required during individual membership renewal and reinstatement.

Copyright © 2025, Oracle and/or its affiliates.

Few health insurance payers send bills to collect the binder payment, whereas few do not send bills to collect the binder payment. In other words, the bill generation process for individual membership is kept on hold by some health insurance payers until the binder payment is received.

Oracle Revenue Management and Billing enables you to create binder payments for an individual membership. For more information on how to create a binder payment, see the Binder Payment Creation on page 425 section. While creating an individual membership through a health care inbound message or through a membership repricing inbound web service, you must set the **Binder Payment Applicability** option for the individual membership to either **Y** or **N**. You can set the **Binder Payment Applicability** option to **Y** only when the following conditions are met:

- Individual membership status is set to the value specified in the **Membership Status Code for Pending Effectuation** attribute of the binder payment preference.
- Membership status reason is set to the value specified in the **Membership Status Reason when Awaiting Binder Payment** attribute of the binder payment preference.

The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

If the **Binder Payment Applicability** option is set to **Y** for an individual membership, it means that the system should monitor whether the binder payment is received before activating the individual membership. On receiving the binder payment for the individual membership, the system only changes the membership and its member persons' status reason and not the membership and its member person' status. The membership and its member persons' status is changed only when the system receives the main subscriber's status update information from the enrollment system through a health care inbound message. However, if the **Binder Payment Applicability** option is set to **N** for an individual membership, it means that binder payment is not required for activating the individual membership. For more information about the binder payment monitor process, see the Binder Payment Monitoring on page 425 section.

If the **Binder Payment Applicability** option is set to **Y** for an individual membership, you need to specify the following binder payment details through a health care inbound message:

- **Grace Days** - Used to calculate the grace date for the individual membership.
- **Binder Liability Amount** - Used to specify the binder liability amount. This data is required when the **Consider Binder Liability Amount** attribute is set to **Y** in the binder payment preference.
- **Threshold Percentage** - Used to specify the threshold percentage using which the threshold amount should be calculated.
- **Hold Billing** - Used to indicate whether you want to hold the bill generation process for the individual membership until the binder payment is received.

The system facilitates you to validate binder payment against the threshold amount. If the **Consider Binder Liability Amount** attribute is set to **Y** in the binder payment preference, the system calculates the threshold amount for the binder payment using the binder liability amount and threshold percentage. For example, if the binder liability amount is set to 50 and threshold percentage is set to 20, the system sets the threshold amount to 10 (i.e. (50*20)/100). The system can receive one or more binder payments for an individual membership. If the **Consider Binder Liability Amount** attribute is set to **Y**, the system must receive the binder payments whose sum is equal to or greater than the threshold amount. However, if the **Consider Binder Liability Amount** attribute is set to **N**, the system does not calculate the threshold amount for the binder payment. In such case, the system must receive a binder payment with the amount greater than zero.

On editing the binder liability amount and threshold percentage for an individual membership, the system recalculates the threshold amount for the binder payment. On creating a billable charge for an individual membership where the **Hold Billing** option is set to **Y**, the system will set the bill after date in the billable charge to a far future date (i.e. 12-31-2099).

Prerequisites

To setup the binder payment process, you need to do the following:

- Define the binder payment identification characteristic type for the payment in the system.
- Define the required status reason for the membership in the system.
- Define the required configurations for the following binder payment fields in the system.

Copyright © 2025, Oracle and/or its affiliates.

  - Binder Payment Applicability
  - Hold Billing
  - Threshold Percentage
  - Grace Days
- Define the binder payment field mapping preference in the system.
- Values defined for binder payment in the **FIELD_CAT_FLG** lookup field
- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Binder Payment Field Mapping
- Attach an algorithm of the **C1-THRSHDAMT** algorithm type to the **Post-Processing** system event of the **C1-IndMembership** business object.
- Attach an algorithm of the **C1-BNDRH** algorithm type to the **Enter** system event of the **C1-IndMembership** business object where the status is **Active**.
- Attach an algorithm of the **C1-FICRETBC** algorithm type to the **Billable Charge Creation Post Processing** system event of the **Fully Insured Age Based** and **Fully Insured Tier Based** pricing rule type.
- Attach an algorithm of the **C1-BNFTODO** algorithm type and attach it as a soft parameter in the **C1-BPMNT** batch.
- Define the values in the parameter of the **C1-CCPYTSADS** algorithm.
- Lockbox tender types defined in the **C1_LBX_TENDER_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1_LBX_820_RECORD_TYPE**, **C1_LBX_REF_IDQ_LKP**, and **C1_LBX_RMR_ID_TYPE** lookup fields respectively.

To Do Notification on Binder Payment Cancellation

Oracle Revenue Management and Billing enables you to generate a To Do notification when a binder payment for an individual membership is canceled. To generate the To Do notification when a binder payment is canceled, you need to do the following setup:

- Add the following value in the **MEMB_PERS_STAT_RSN_FLG** lookup field:
  - Binder Payment Canceled
- Add the following status reason for the **Active** status of the **C1-IndMembership** business object:
  - Membership is active but binder payment is canceled
- Add the following the status reason mapping in the preference which is defined using the **Membership Status Reason Mapping** (**C1-MemStatusReasonMapping**) business object:

Member Person Status	**Member Person Status Reason**	**Membership Status Reason**
Active	Binder Payment Canceled	Membership is active but binder payment is canceled

- Define the following attributes in the preference which is defined using the **C1-FieldMapping** (**C1-FieldMapping**) business object and where the preference category is set to **Binder Payment**:

Attribute	**Value**	**Entity Type**
Membership Status Reason when Binder Payment Cancelled	Membership Status Reason Code (of the**Membership is active but binder payment is canceled** status)	Membership
To Do Type for Binder Payment Cancelled	C1-BPCNC	Membership

A new To Do type named **C1-BPCNC** and algorithm type named **C1-BNDPYCNCL** are introduced in this release. To generate the To Do notification during binder payment cancelation, you need to attach an algorithm created using the

Copyright © 2025, Oracle and/or its affiliates.

C1-BNDPYCNCL algorithm type to the **Payment Cancellation** system event of the required customer class. If the **C1-BNDPYCNCL** algorithm is attached on the customer class, the system checks whether the cancel reason specified while canceling a payment is listed as a value of the **Binder Payment Cancel Reason List** parameter in the algorithm. If so, the system then validates whether the payment is a binder payment using the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference. If the payment is a binder payment, the system then determines the individual membership whose binder payment is canceled.

Note:

If a payment contains a membership identifier value characteristic that is specified in the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference, the system considers the payment as a binder payment.

The system derives the individual membership using the membership identifier value characteristic on the binder payment and the **Binder Payment Identification ID Type** attribute of the binder payment preference.

Once the individual membership is derived, the system fetches the binder payment applicability flag for the individual membership. If the binder payment applicability flag of the individual membership is set to **No**, the system will not generate the To Do notification when the binder payment is canceled.

However, if the binder payment applicability flag of the individual membership is set to **Yes**, the system will derive the binder payment threshold amount for the respective membership. If the binder payment threshold amount is equal to zero, the system will not generate the To Do notification when the binder payment is canceled.

If the binder payment threshold amount is greater than zero, the system will calculate the grace date (Membership Start Date + (Binder Payment Grace Days -1)) and the total binder payment amount until the grace date. If the **Consider Binder Liability Amount** attribute in the binder payment preference is set to **Y**, the system checks whether the total binder payment amount until the grace date is less than the threshold amount. If the total binder payment amount until the grace date is less than the threshold amount, the system does the following:

- Updates the member person status reason to **Binder Payment Canceled** and the membership status reason to **Membership is active but binder payment is canceled**
- A To Do using the **C1-BPCNC** To Do type is created

However, if the total binder payment amount until the grace date is greater than or equal to the threshold amount, the system neither changes the member person and membership status reasons nor creates a To Do notification when the binder payment is canceled.

If the **Consider Binder Liability Amount** attribute in the binder payment preference is set to **N**, the system checks whether the total binder payment amount until the grace date is equal to zero. If the total binder payment amount until the grace date is equal to zero, the system does the following:

- Updates the member person status reason to **Binder Payment Canceled** and the membership status reason to **Membership is active but binder payment is canceled**
- A To Do using the **C1-BPCNC** To Do type is created

However, if the total binder payment amount until the grace date is greater than zero, the system neither changes the member person and membership status reasons nor creates a To Do notification when the binder payment is canceled.

This algorithm contains the following parameters:

- **Membership Business Object** - Used to specify the individual membership business object. The system will then consider only those individual memberships which are created using the specified business object. Here, you must set the value to **C1-IndMembership**.
- **Algorithm for TO DO Creation** - Used to specify the algorithm using which you want to create a To Do notification during binder payment cancellation. Here, you must set the value to an algorithm which is created using the **C1-BNDTODO** algorithm type.
- **Binder Payment Cancel Reason List** - Used to specify a comma-separated list of payment cancel reasons that the system should consider while To Do generation on payment cancelation. You can specify maximum five comma-separated values for this parameter. Here, you must specify a payment cancel reason which is already defined in the system.

Copyright © 2025, Oracle and/or its affiliates.

All the above parameters are mandatory.

Note that the system will update the membership status to **Pending Effectuation** only when the inbound message is received to change the membership status to **Pending Effectuation**. Until then, the member person and membership statuses will not change even if the respective binder payment is canceled.

Transfer Binder Payment from General Suspense Account to Individual Membership Account

Usually, in a fully insured individual business, the binder payments received before the individual membership enrollment are parked in the general suspense account. Oracle Revenue Management and Billing enables you to transfer the binder payments of an individual membership from the general suspense account to the individual member's account after the individual membership enrollment information is received through an inbound message.

To transfer the binder payment from general suspense account to individual membership account, you need to set the value for the following option type in the **C1_CMO** feature configuration:

- **Suspense Contract Type** - Used to indicate the suspense contract type whose suspense contracts' payments you want to transfer to the individual membership account.

A new batch control named **C1-PYTRS** is introduced in this release. It fetches the suspense contracts of the contract type which is specified in the **Suspense Contract Type** option type of the **C1_CMO** feature configuration. Once all suspense contracts are derived, the batch fetches the unmatched frozen payments which are made against the suspense contracts. The batch then checks whether the characteristic type specified in the **Payment Identifier Characteristic Type** parameter is defined on the payment. If the specified characteristic type is defined on the payment, the system considers the payment as the binder payment. If the specified characteristic type is not defined on the payment, the system does not consider the payment as the binder payment.

The batch then derives the individual membership for which the binder payment is made. While deriving the individual membership, the batch uses the membership identifier value characteristic defined on the binder payment and the value specified in the **Membership Identifier Type** parameter. You can specify a comma-separated list of membership identifier types in the **Membership Identifier Type** parameter. The batch then checks whether an individual membership exists with either of the membership identifier type and value combination in the system. Once the individual membership is derived, the batch fetches the individual member's account using the account identifier type and value characteristics which are defined on the individual membership.

Note:

While deriving the account identifier type and value characteristics, the system considers the characteristic types which are specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration.

If multiple individual memberships are derived with the membership identifier type and value combination, the system will not consider the binder payment for transfer and will accordingly add an appropriate log entry to such binder payments.

Once the individual member's account is derived, the batch transfers the binder payment from the suspense contract to either the unpaid bills or on account contract of the account depending on the following:

- If the match type is specified in the **Bill Match Type** parameter, the batch will transfer the binder payment from the suspense contract against the unpaid bills of the account. While transferring the binder payment against the unpaid bills of the account, the system will do either of the following:
    - If the **C1-MD-ACCT** manual distribution algorithm is attached to the match type, the system will distribute the binder payment against the unpaid bills of the account in the ascending order of the due date. If there are multiple bills with the same due date, the system will consider the unpaid bill in the ascending order of the unpaid amount. However, if there are multiple bills with the same due date and amount, the system will randomly consider the unpaid bill for payment. If there is any excess credit, the system will apply the excess credit amount on the on

Copyright © 2025, Oracle and/or its affiliates.

account contract of the individual member's account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.

- If a manual distribution algorithm is not attached to the match type, the system will distribute the binder payment against the unpaid bills of the account in the ascending order of the due date. If there is any excess credit, the system will apply the excess credit amount on the on account contract of the individual member's account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.

- If the match type is not specified in the **Bill Match Type** parameter, the batch will transfer the binder payment from the suspense contract to the on account contract of the individual member's account. Note that the on account contract is derived using the match type specified in the **On Account Match Type** parameter.

While transferring the binder payment from the suspense contract to either the unpaid bills or on account contract, the system cancels the old payment on the suspense contract and creates a new payment against the unpaid bills or on account contract of the individual member's account. While canceling the old payment, the system uses the cancel reason specified in the **Payment Cancel Reason for Transfer** parameter. While creating a new binder payment, the system copies all characteristics from the old payment before changing its status to **Frozen**.

This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. This batch contains the following parameters:

Parameter Name	Mandatory (Yes or No)	Description
Payment Identifier Characteristic Type	Yes	Used to specify the characteristic type which stores the membership identifier value. The system then considers a payment as a binder payment if the specified characteristic type is defined on the payment. **Note:** You must specify the characteristic type where the characteristic entity is set to **Payment**.
Membership Identifier Type	Yes	Used to indicate the membership identifier type using which you want to derive the individual membership. If you specify multiple membership identifier types separated by comma, the system will derive the individual membership using either of the membership identifier type and value combinations. **Note:** You must specify a membership identifier type which is already defined in the system. You can specify maximum twenty comma-separated values for this parameter.
Bill Match Type	No	Used to indicate the match type using which you want to transfer the binder payment from the suspense contract to the unpaid bills of the individual member's account. **Note:** You must specify a match type where the entity type is set to **Account**.
On Account Match Type	Yes	Used to indicate the match type using which you want to transfer the binder payment from the suspense contract to the on account contract of the individual member's account.

Copyright © 2025, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
Payment Cancel Reason for Transfer	Yes	Used to indicate the payment cancel reason that you want to use while canceling the binder payment on the suspense contract. **Note:** You must specify a payment cancel reason which is already defined in the system.
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch.

Once the binder payment is transferred from the suspense contract to either the unpaid bills or on account contract of the individual membership's account, the payor account details on the tender is updated to the individual membership's account. Let us understand this with the help of an example.

The following table lists the details of a binder payment which is made against the general suspense account:

Payment Event ID	Account	Payment Amount	Payment Char Type	Payment Char Value	Payment Date	Account Type
PAY_ID1	SUS ACT 1	300	Payment Reference ID	M001	01-Nov-2023	General Suspense Account

Now, when you execute the **C1-PYTRS** batch after the individual membership inbound is received in ORMB, the system derives the individual membership for which binder payment is made and transfers the binder payment from the general suspense account to the individual membership's account. The following table illustrates two payments - one on the general suspense account and another on the individual membership account.

Payment Event ID	Payment ID	Account	Payment Amount	Payment Char Type	Payment Char Value	Payment Date	Payment Match Entity	Status
PAY_ID1	P1	SUS ACT 1	300	Payment Reference ID	M001	01-Nov-2023	General Suspense Account	CANCELLED
PAY_ID1	P2	ACT 1	300	Payment Reference ID	M001	01-Nov-2023	Member Account	FROZEN

Once the payment is created on the individual membership's account, the system updates the payor account on the tender from SUS ACT 1 to ACT 1.

Algorithms Used in Binder Payment

The following table lists the algorithms which are used in the binder payment:

Algorithm	Algorithm Type	Description
C1-THRSHDAMT	C1-THRSHDAMT	Refer to C1-THRSHDAMT on page 424
C1-BNDRH	C1-BNDRH	Refer to C1-BNDRH on page 399
C1-FICRETBC	C1-FICRETBC	Refer to C1-FICRETBC on page 423
C1-CCPYTSADS	C1-CCPYTSADS	Refer to C1-CCPYTSADS on page 421

Copyright © 2025, Oracle and/or its affiliates.

Algorithm	Algorithm Type	Description
C1-BNFTODO	C1-BNFTODO	Refer to C1-BNFTODO on page 420

C1-BNDRH

This algorithm is invoked during the membership activation process. It checks whether the binder payment is received for the membership. If the binder payment is received, the membership status is changed from **Pending Effectuation** to **Active**.

Note: At present, this algorithm is invoked only during the membership enrollment and not for membership reinstatement, where the membership status is changed from **Terminated** to **Active**.

This algorithm is invoked using the following scenario:

If...	Then...
The membership is in the **Active** status and the binder payment attributes like the **Consider Binder Liability Amount Flag** is configured as **N** along with the **Membership Status Reason when Binder Payment Received** is configured as **Binder Payment Received** in the **Field Mapping** screen	The system checks whether the hold billing switch in the **CI_MEMBERSHIP** table contains any value. If any value exists, the system releases the billable charges which are kept on hold for the membership. In addition, the system performs the following operations: • Retrieves the account (of the financial responsible person) for the membership. • Retrieves the non-binder payment contracts for the accounts from the **CI_SA** table. • Retrieves the billable charges present on the non-binder payment contracts where the membership ID is stamped as a characteristic. • Checks whether the bill after date of each billable charge contains a future date. If the bill after date contains a future date then it is changed to the system date minus one.

C1-BNFTODO

This algorithm is invoked from the **C1-BNDMNTR** binder payment monitoring batch, specifically for creating a To Do. This algorithm considers the following scenarios:

Scenario	System Behavior
The binder payment is received within the grace days	The algorithm creates a To Do and updates either the membership or corresponding member's status reason to **Binder Payment Received**.
The binder payment is not received within the grace days	The algorithm creates a To Do and updates either the membership or corresponding member's status reason to **Binder Payment not Received**.
The **Consider Binder Liability Amount Flag** attribute is set to **Y** and the binder payment amount is received.	The algorithm retrieves the value of the **To Do Type for Binder Payment Received** attribute from the **Field Mapping** screen and creates the To Do with the message, **Binder Payment of Amount [%1] Received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]**
The **Consider Binder Liability Amount Flag** attribute is set to **N** and at least a single binder payment is received.	The algorithm retrieves the value of the **To Do Type for Binder Payment Received** attribute from the **Field Mapping** screen and creates the To Do with the message, **Binder Payment of Amount [%1] Received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]**
The **Consider Binder Liability Amount Flag** attribute is set to	The algorithm retrieves the value of the **To Do Type for Binder Payment Not Received** attribute from the **Field Mapping** screen and creates the To Do with

Copyright © 2025, Oracle and/or its affiliates.

Scenario	System Behavior
Y and the binder payment is not received.	the message, **Binder Payment of expected amount [%1] not received for Membership with Binder Payment Identifier [%2] and Health Plan [%3]**
The **Consider Binder Liability Amount Flag** attribute is set to **N** and not even a single binder payment is received.	The algorithm retrieves the value of the **To Do Type for Binder Payment Not Received** attribute from the **Field Mapping** screen and creates the To Do with the message, **Binder Payment is not received for Membership with Binder Payment Identifier [%1] and Health Plan [%2]**

Note:

- [%1] refers to the total payment amount, comprising of all the payments made till date.
- [%2] refers to the binder payment identifier.
- [%3] refers to the specific health plan.

The **Consider Binder Liability Amount Flag** attribute is configured in the **Field Mapping** screen whereas the **To Do Creation** process happens when the **C1-BNFTODO** algorithm is attached as a soft parameter on the **C1-BNDMNTR** batch.

C1-CCPYTSADS

This algorithm is invoked when it is attached to the **Payment Tender Staging Distribution** system event of the customer class to which the account belongs. In addition, it checks whether the payment received is the first payment for the account. If the payment happens to be the first payment for the account, the payment is applied against the binder contract, which is created using the contract type specified in the payment distribution algorithm of the**Binder Payment** match type.

This algorithm introduces the following new parameters which are used for individual binder payment functionality:

- **Check Binder Payment For Individual** - Used when you want to transfer the payment to the binder contract. The valid values are:
  - **Y**
  - **N**
- **Membership Status Reason** - Used to notify the status reason of the binder payment for the membership. The valid value is:
  - **Awaiting Binder Payment**
- **Exchange Assigned Subscriber Number Characteristic** - Used while creating payment staging characteristic.
- **Exchange Assigned Subscriber Number Id Type** - Used when you want to identify the membership from the membership identifier (**CI_MEMBERSHIP_IDENTIFIER**) table.

This algorithm considers the following scenarios:

If...	Then...
The **Check Promise To Pay** parameter is set to **Y**	The algorithm checks whether there is an active promise to pay for the account. If an active promise to pay exists, the payment is applied against the contract which is created using the contract type specified in the payment distribution algorithm of the **On Account** match type.
The **Check Payment Agreement Request** parameter is set to **Y**	The algorithm checks whether there is an active payment agreement request for the account. If an active payment agreement exists, the payment is applied against the contract which is created using the contract type specified in the payment distribution algorithm of the **On Account** match type.

Copyright © 2025, Oracle and/or its affiliates.

If...	Then...
The **Check Promise To Pay** and **Check Payment Agreement Request** parameters are set to **N**	The payment is applied to the account's unpaid bills in the order of the due date. If the payment amount is greater than the sum total of the account's billed balance plus the overpayment threshold amount, the entire payment amount is applied against the excess credit contract of the account.
The payment amount is greater than the account's billed balance, but less than the sum total of the account's billed balance plus the overpayment threshold amount	The payment is first applied against the unpaid bills of the account and the overpayment amount is then applied against the excess credit contract of the account.
The **Check Binder Payment for Individual** parameter is set to **Y**	The algorithm retrieves the membership by using the binder payment identification value which is received in the payment characteristics from the **EDI 820** file.
The **Membership Status Code for Pending Effectuation** attribute is set to **Pending Effectuation** and the **Membership Status Reason Hold / Awaiting Binder Payment** attribute is set to**Awaiting Binder Payment** in the **Field Mapping** screen	The algorithm performs the following steps: **1.** Retrieves the **Binder Contract Type** attribute and its value from the **Field Mapping** screen. **2.** If the contract information is not found in the **Binder Contract Type** attribute then a new contract Id of the type **Binder Contract** is created on the account. If the contract information is found, the contract Id of the account is retrieved using the **Binder Contract Type** attribute. **3.** Creates a payment staging record using the **Binder Payment Match Type** soft parameter and the value as the binder contract Id of the account, retrieved using the **Binder Contract Type** attribute. **4.** Stores the binder payment identification value as a characteristic on the payment.
If the **Membership Status Code for Pending Effectuation** attribute is not **Pending Effectuation** and the **Membership Status Reason Hold / Awaiting Binder Payment** attribute is not **Awaiting Binder Payment** in the **Field Mapping** screen	The algorithm performs the following steps: **1.** The payment is applied against the bill. **2.** The binder payment identification value is added as a characteristic on the payment when the payment is received from the **EDI 820** file against the bill Id. **3.** The already existing soft parameters related to binder payment are removed and the binder related parameters are retrieved from the **Field Mapping** screen.

It contains the following parameters:

- **Check Binder Payment** - Used when you want to check whether the payment is the first payment for the account and the tender used for the payment is not an automatic payment. The valid values are:
  - **Y**
  - **N**
- **Check Promise To Pay** - Used when you want to check whether there is an active promise to pay for the account. The valid values are:
  - **Y**
  - **N**
- **Check Payment Agreement Request** - Used when you want to check whether there is an active payment agreement request for the account. The valid values are:
  - **Y**

Copyright © 2025, Oracle and/or its affiliates.

  - **N**
- **Overpayment Threshold Amount** - Used to specify the overpayment threshold amount.
- **Bill Match Type** - Used to specify the match type using which you want to apply the payment against the unpaid bills of the account.
- **Binder Payment Match Type** - Used to specify the match type using which you want to apply the first non-automatic payment against the contract of the account.
- **On Account Match Type** - Used to specify the match type using which you want to apply the payment against the contract of the account.
- **Payment Review Reason Characteristic Type** - Used to specify the characteristic type which you want to use to store the payment reason.
- **Payment Review Reason for Active Promise To Pay** - Used to specify the characteristic value that must be specified when there is an active promise to pay for the account.
- **Payment Review Reason for Active Payment Agreement Request** - Used to specify the characteristic value that must be specified when there is an active payment agreement request for the account.
- **Payment Review Reason for Overpayment** - Used to specify the characteristic value that must be specified when the payment amount is greater than the sum total of account's billed balance plus overpayment threshold amount.
- **Excess Credit Contract Type** - Used to specify the contract type using which the excess credit contract should be created if it does not exist for the account.

C1-FICRETBC

Prerequisites

- Define the values for the option types **CTME (Characteristic Type For Membership Id)** and **PRSQ (Proration SQI)** in the **C1-ASOBLLNG** feature configuration.
- Define the price item which is passed (as a billable charge data) through a health care inbound message.
- Define the pass-through billable charge pricing rule type on the policy plan.

This algorithm is invoked to create SQI (Service Quantity Identifier) based billable charges for fully-insured services. This algorithm creates the following set of SQI based billable charges:

- **Pre-calculated Premium Amount** - SQI based billable charges which are created for pre-calculated premium amount received through a healthcare inbound message.
- **Calculated Premium Amount** - Price items for which the SQI based billable charges are created using the pricing rules defined on the policy plan level.

This algorithm also performs the following operations:

- Creation of the new billable charges.
- Cancellation of the existing billable charges.
- End Date modification of the existing billable charges.

This algorithm is invoked in the following scenarios:

If...	**Then...**
A billable charge exists for a specific date range where the **Billable Charge Status** field is set to **Billable** option which is yet to be processed with the same start date, price item, and membership information	The algorithm modifies only the end date information of that specific billable charge.
The membership is in the **Pending Effectuation** status and the status reason is **Awaiting Binder Payment**, where the status reason is mapped with the attribute value of the **Membership Status Reason Hold / Awaiting Binder Payment** attribute field in **Field Mapping** screen	The algorithm retrieves the values of the binder payment applicability and hold billing switch from the **CI_MEMBERSHIP** table. If the binder payment applicability and the hold billing switch is set to **Y**, the algorithm updates the bill after date information on the billable charge to **31-Dec-2099**.

Copyright © 2025, Oracle and/or its affiliates.

If...	Then...
The billable charge for a particular price item and membership appear in the proposed date range and either of them have a different start date or amount	The algorithm cancels the billable charge.

Note:

Billable charges which are created or updated for calculated charges, are updated accordingly in the **PriceCalculationDetail** entity in the **CI_PRCE_CALC** table. Further, those billable charge entries are marked as **Completed**. The Pricing rule type corresponding to the price item (during the processing of the inbound billable charge information) is fetched from the **PricingRuleTypePriceitem** entity in the **C1_PRC_RULE_TYPE_PRICEITEM** table on the first found basis.

The inbound billable charge information is processed as per the latest billable charge data. Once the inbound message is invoked, the algorithm assumes the following conditions:

- The billable charge line characteristics are not available.
- Every billable charge line has the same currency code.

In the case of modification or cancellation of the existing billable charges, its corresponding bill segments go through the following conditions:

- If the billable charge end date is updated, the algorithm checks for all the bill segments where the date range exceeds the billable charge end date. If the date range exceeds the billable charge end date, then only those billable charges are either canceled or deleted based on the status of the bill segment.
- If the billable charge is canceled, then all the bill segments within that billable charge are either canceled or deleted based on the status of the bill segment.

Finally, the billable charges are stamped with the following information:

- Price Item
- SQI (derived from the **C1-ASOBLLNG** feature configuration)
- Pass-through billable charge entries in the **MEMO ONLY** state.
- Aggregated amount is stamped as service quantity.
- Additional information, if any...

It contains the following parameter:

- **Bill To Type Flag** - This flag is used when the **Contract ID** is added in the **MEMBERSHIP_SA** table.

C1-THRSHDAMT

This algorithm is invoked when the membership is in the **Pending Effectuation** status and the status reason is **Awaiting Binder Payment**, as per the binder payment preference configuration done in the **Field Mapping** screen. It monitors or checks the memberships from whom the binder payment is yet to be received.

This algorithm's behavior is shown as follows:

Scenario	System Behavior
If the **BINDER_PAY_APPL_SW** field (also known as the **Binder Payment Applicability** flag) from the **CI_MEMBERSHIP** table is set to **Y**	The algorithm retrieves the **BINDER_LIABILITY_AMT** from the **CI_MEMBERSHIP** table.
If the **Consider Binder Liability Amount Flag** is set to **Y**, and the **Binder Liability Amount** is blank or the **Binder Liability Amount** is less than zero	The algorithm generates an error, **Binder Liability Amount can’t be blank or less than zero if the Consider Liability Amount is Y**.

Copyright © 2025, Oracle and/or its affiliates.

Scenario	System Behavior
If the **BINDER_LIABILITY_AMT** field from the **CI_MEMBERSHIP** table is not blank and greater than zero	The algorithm calculates the threshold amount using the following formula, `CI_MEMBERSHIP.THRESHOLD_AMT = ' CI_MEMBERSHIP.BINDER_LIABILITY_AMT * ' (CI_MEMBERSHIP.BINDER_PAY_THRES %)` For example, Let's assume that the binder liability amount is $100 and binder payment threshold percentage is 90%. The algorithm uses the above formula to derive the threshold amount which is $100 * 90% = 90. The calculated threshold amount is added in the **CI_MEMBERSHIP.THRESHOLD_AMT** field for the membership which is in **Pending Effectuation** status where the status reason is **Awaiting Binder Payment**.

Note: The threshold amount is updated whenever the binder liability amount or binder threshold percentage value changes for the membership which is in the **Pending Effectuation** status.

Binder Payment Creation

Oracle Revenue Management and Billing considers a payment as a binder payment when a characteristic is defined for the payment using the characteristic type specified in the **Binder Payment Identification Characteristics Type** attribute of the binder payment preference. The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration. This type of characteristic must be defined when the binder payment is created. It stores the membership identifier to indicate the individual membership for which the binder payment is received.

You can create a binder payment through the following features or interfaces:

- Payment Web Service
- Payment Upload
- Payment Upload Staging
- Payment Request
- Payment Event
- EDI 820 File Upload

While creating a payment through any of the above mechanism except the latter one, you need to ensure that the binder payment identification characteristic is defined for the payment. However, in case of EDI 820 File Upload, the system will extract the data stored in the NM1 tag and store it in the payment characteristics staging table. This is done when the **C1-PUPSG** batch is executed.

You can view the binder payments received for the membership or financial responsible member person's account through the **Payment Event Summary** and **Customer 360° Information** screens.

Binder Payment Monitoring

A new batch named **C1-BPMNT** is introduced to monitor the binder payments for the individual memberships. It checks whether there are any individual memberships where:

- Individual membership status is set to the value specified in the **Membership Status Code for Pending Effectuation** attribute of the binder payment preference.
- Membership status reason is set to the value specified in the **Membership Status Reason when Awaiting Binder Payment** attribute of the binder payment preference.

Copyright © 2025, Oracle and/or its affiliates.

Note: The batch considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration.

If so, the batch checks whether the **Binder Payment Applicability** option is set to **Y** for the individual membership. If so, the system calculates grace date using the membership start date and grace days. If the grace date is equal to or earlier than system date, the batch derives the account for the individual membership. While deriving the account for the individual membership, the system checks whether the characteristic types specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration are defined for the individual membership. If so, the system derives the account using these characteristics defined for the individual membership. If these characteristics are not defined for the individual membership, the system derives the account of financially responsible member person. The system checks whether a payment with the binder payment identification characteristic exists against any contract of the account. If so, the system derives the value from the **Binder Payment Identification ID Type** attribute of the binder payment preference. The system then checks whether the binder payments are received for the individual membership using the values from the following:

- Binder Payment Identification Characteristic
- Binder Payment Identification ID Type attribute of the binder payment preference

If the binder payments are received for the individual membership, the system does the following:

If the Consider Binder Lability Amount set to…	**Then...**
Y	The system validates whether the sum of binder payments is equal to or greater than the threshold amount. If so, the system does the following: • Creates a To Do using the To Do type which is specified in the **To Do Type for Binder Payment Received** attribute of the binder payment preference. • Updates the membership status reason to the value specified in the **Membership Status Reason when Binder Payment Received** attribute of the binder payment preference. • Updates the member person status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration. • Changes the bill after date of the billable charges when the **Hold Billing** option for the individual membership is set to **Y**.
N	The system does not validate the binder payment against the threshold amount. If the binder payment amount is greater than zero, the system does the following: • Creates a To Do using the To Do type which is specified in the **To Do Type for Binder Payment Received** attribute of the binder payment preference. • Updates the membership status reason to the value specified in the **Membership Status Reason when Binder Payment Received** attribute of the binder payment preference. • Updates the member person status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.
	Note: In this case, the system does not update the bill after date of the billable charges when the **Hold Billing** option for the individual membership is set to **Y**. The system updates the bill after date of the billable charges when the status of the individual membership is changed to **Active** through a health care inbound message.

Copyright © 2025, Oracle and/or its affiliates.

If the grace date is later than the system date, the batch does the following irrespective of whether the **Consider Binder Lability Amount** attribute is set to **Y** or **N**:

- Creates a To Do using the To Do type which is specified in the **To Do Type for Binder Payment Not Received** attribute of the binder payment preference.
- Updates the membership status reason to the value specified in the **Membership Status Reason when Binder Payment Not Received** attribute of the binder payment preference.
- Updates the member person status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.

Binder Payment Preference

The Binder Payment Preference enables you to set the attributes which are used during binder payment creation and monitoring. While deriving the binder payment details for a membership, the system uses the following attributes from the binder payment preference:

- Binder Contract Type
- Binder Payment Identification Characteristics Type
- Binder Payment Identification ID Type
- Consider Binder Liability Amount
- Membership Status Code for Active
- Membership Status Code for Pending Effectuation
- Membership Status Reason on Activating Membership
- Membership Status Reason when Awaiting Binder Payment
- Membership Status Reason when Binder Payment Not Received
- Membership Status Reason when Binder Payment Received
- To Do Type for Binder Payment Not Received
- To Do Type for Binder Payment Received

For more information about these attributes, see Defining a Binder Payment Preference on page 428.

The system considers the binder payment preference which is specified in the **Binder Payment Field Mapping** option type of the **C1-ASOBLLNG** feature configuration. You can define, edit, delete, and copy a binder payment preference through the **Field Mapping** screen.

Searching for a Binder Payment Preference

Prerequisites

To search for a binder payment preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a binder payment preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.

Copyright © 2025, Oracle and/or its affiliates.

3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Binder Payment** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of binder payment preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Binder Payment Preference Details

Procedure

To view the details of a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the binder payment preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the binder payment preference in the **Field Mapping** zone.

Defining a Binder Payment Preference

Prerequisites

To define a binder payment preference, you should have:

- Field mapping business objects defined in the application.
- Values defined for the **Binder Payment Field Mapping** option type in the **C1-ASOBLLNG** feature configuration.
- Values defined in the **FIELD_CAT_FLG** and **MAP_ENTITY_FLG** lookup fields.

Procedure

To define a binder payment preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create a binder payment preference. The valid values are:	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Bill Route Method - Contact Method Mapping • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.	

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the binder payment preference.	Yes
Description	Used to specify the description for the binder payment preference.	Yes
Detailed Description	Used to specify additional information about the binder payment preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the binder payment preference. The valid values are: • Active • Inactive	Yes

- **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/ Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count **Note:** The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select **Binder Payment** option as the preference category while creating a binder payment preference.	

- **Preference Settings** - Used to define the settings for the binder payment preference.

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the binder payment preference. The valid values are: • **Binder Contract Type** - Used when you want to identify the binder contract in the binder payment preference. • **Bill Period for Hold Billing** - • **Consider Binder Liability Amount** - Used when you want to set the consider binder liability amount once the binder payment is received in the binder payment preference. • **Binder Payment Identification Characteristics Type** - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • **Binder Payment Identification ID Type** - Used when you want to identify the membership type in the binder payment preference. • **Membership Status Code for Active** - Used when you want to define the status code when the membership is in the **Active** status in the binder payment preference. • **Membership Status Reason when Binder Payment Canceled** - • **Membership Status Code for Pending Effectuation** - Used when you want to define the status code when the membership is in the **Pending Effectuation** status in the binder payment preference. • **Membership Status Reason on Activating Membership** - Used when you want to define the status reason code once the binder payment is received and the membership status is changed to **Active** for the binder payment preference.	Yes (Conditional) **Note:** This field is required while defining the settings for a binder payment preference.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Membership Status Reason Binder Business Rule Config Invalid** - • **Membership Status Reason when Awaiting Binder Payment** - Used when you want to define the status reason code as **Awaiting Binder Payment** when the binder payment is not yet received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Received** - Used when you want to define the status reason code as **Binder Payment Not Received** when the binder payment is not received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Expected** - • **Membership Status Reason when Binder Payment Received** - Used when you want to define the status reason code as **Binder Payment Received** when the binder payment is received for the membership in the binder payment preference. • **To Do Type for Binder configuration not available** - • **To Do Type for Binder Payment not received** - Used when you want to specify a To Do type when the binder payment is not received for the membership in the binder payment preference. • **To Do Type for Binder Payment received** - Used when you want to specify a To Do type when the binder payment is received for the membership in the binder payment preference. • **To Do Type for Binder Payment Canceled** - • **To Do Type for Binder Payment is not expected** -	

Value	Used to specify the attribute value. The list varies depending on the attribute you want to set in the binder payment preference. Below is the list of conditions:
	• If the attribute is set to **Bill Period for Hold Billing** then the list includes only those bill periods for hold billing which are already defined in the system.
	• If the attribute is set to **Consider Binder Liability Amount Flag** then the list includes the following values:
	  • Yes (Y)
	  • No (N)
	Note:
	If the value is set to **Yes (Y)** then the system considers binder liability amount to calculate the threshold amount.
	If the value is set to **No (N)** then the system does not calculate the threshold amount.
	• If the attribute is set to **Binder Payment Identification ID Type** then the list includes only those binder payment
		Yes (Conditional)
		Note: This field is required while defining the settings for a binder payment preference.

</table>

Note: While defining a binder payment preference, you must set at least one attribute in the binder payment preference.

6. Select the **Binder Payment** option from the **Preference Category** list.

Copyright © 2025, Oracle and/or its affiliates.

7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the binder payment preference, click the **Add** (+) icon and then repeat step 8.

> **Note:** However, if you want to remove an attribute from the binder payment preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The binder payment preference is defined.

Editing a Binder Payment Preference

Prerequisites

To edit a binder payment preference, you should have:

- Values defined in the **MAP_ENTITY_FLG** lookup field.

Procedure

To edit a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the binder payment preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the binder payment preference.	Not applicable
Description	Used to specify the description for the binder payment preference.	Yes
Detailed Description	Used to specify additional information about the binder payment preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the binder payment preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the binder payment category to which the preference belongs.	Not applicable

   - **Preference Settings** - Used to edit the settings for the binder payment preference.

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the binder payment preference. The valid values are:	Yes (Conditional)

Field Name	Field Description	Mandatory (Yes or No)
	• **Binder Contract Type** - Used when you want to identify the binder contract in the binder payment preference. • **Bill Period for Hold Billing** - • **Consider Binder Liability Amount** - Used when you want to set the consider binder liability amount once the binder payment is received in the binder payment preference. • **Binder Payment Identification Characteristics Type** - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • **Binder Payment Identification ID Type** - Used when you want to identify the membership type in the binder payment preference. • **Membership Status Code for Active** - Used when you want to define the status code when the membership is in the **Active** status in the binder payment preference. • **Membership Status Reason when Binder Payment Canceled** - • **Membership Status Code for Pending Effectuation** - Used when you want to define the status code when the membership is in the **Pending Effectuation** status in the binder payment preference. • **Membership Status Reason on Activating Membership** - Used when you want to define the status reason code once the binder payment is received and the membership status is changed to **Active** for the binder payment preference. • **Membership Status Reason Binder Business Rule Config Invalid** - • **Membership Status Reason when Awaiting Binder Payment** - Used when you want to define the status reason code as **Awaiting Binder Payment** when the binder payment is not yet received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Received** - Used when you want to define the status reason code as **Binder Payment Not Received** when the binder payment is not received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Expected** - • **Membership Status Reason when Binder Payment Received** - Used when you want to define the status reason code as **Binder Payment Received** when the binder payment is received for the membership in the binder payment preference. • **To Do Type for Binder configuration not available** - • **To Do Type for Binder Payment not received** - Used when you want to specify a To Do type when the binder payment is not received for the membership in the binder payment preference.	**Note:** This field is required while editing the settings for a binder payment preference.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• To Do Type for Binder Payment received - Used when you want to specify a To Do type when the binder payment is received for the membership in the binder payment preference.
• To Do Type for Binder Payment Canceled -
• To Do Type for Binder Payment is not expected -</td><td></td></tr>
<tr><td>Value</td><td>Used to specify the attribute value. The list varies depending on the attribute you want to set in the binder payment preference:
• If the attribute is set to Bill Period for Hold Billing then the list includes only those bill periods for hold billing which are already defined in the system.
• If the attribute is set to Consider Binder Liability Amount Flag then The list includes the following values:
  • Yes (Y)
  • No (N)
Note:
If the value is set to Yes (Y) then the system considers binder liability amount to calculate the threshold amount.
If the value is set to No (N) then The system does not calculate the threshold amount.
• If the attribute is set to Binder Payment Identification ID Type then the list includes only those binder payment identification ID types which are already defined in the system.
<table>

How to search for a binder payment preference	Searching for a Binder Payment Preference on page 427

Copying a Binder Payment Preference

Instead of creating a binder payment preference from scratch, you can create a new binder payment preference using an existing binder payment preference. This is possible through copying a binder payment preference. On copying a binder payment preference, the details including the attributes are copied to the new binder payment preference. You can then edit the details, if required.

Prerequisites

To copy a binder payment preference, you should have:

- Binder Payment preference (whose copy you want to create) defined in the application
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To copy a binder payment preference:

1. Search for the binder payment preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the binder payment preference whose copy yo want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the binder payment preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the binder payment preference.	Yes
Description	Used to specify the description for the binder payment preference.	Yes
Detailed Description	Used to specify additional information about the binder payment preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⤡) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the binder payment preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the binder payment category to which the preference belongs.	Not applicable

   - **Preference Settings** - Used to set the attributes in the binder payment preference.

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the binder payment preference. The valid values are:	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Binder Contract Type** - Used when you want to identify the binder contract in the binder payment preference. • **Bill Period for Hold Billing** - • **Consider Binder Liability Amount** - Used when you want to set the consider binder liability amount once the binder payment is received in the binder payment preference. • **Binder Payment Identification Characteristics Type** - Used when you want to identify the membership for whom the payment is received in the binder payment preference. • **Binder Payment Identification ID Type** - Used when you want to identify the membership type in the binder payment preference. • **Membership Status Code for Active** - Used when you want to define the status code when the membership is in the **Active** status in the binder payment preference. • **Membership Status Reason when Binder Payment Canceled** - • **Membership Status Code for Pending Effectuation** - Used when you want to define the status code when the membership is in the **Pending Effectuation** status in the binder payment preference. • **Membership Status Reason on Activating Membership** - Used when you want to define the status reason code once the binder payment is received and the membership status is changed to **Active** for the binder payment preference. • **Membership Status Reason Binder Business Rule Config Invalid** - • **Membership Status Reason when Awaiting Binder Payment** - Used when you want to define the status reason code as **Awaiting Binder Payment** when the binder payment is not yet received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Received** - Used when you want to define the status reason code as **Binder Payment Not Received** when the binder payment is not received for the membership in the binder payment preference. • **Membership Status Reason when Binder Payment Not Expected** - • **Membership Status Reason when Binder Payment Received** - Used when you want to define the status reason code as **Binder Payment Received** when the binder payment is received for the membership in the binder payment preference. • **To Do Type for Binder configuration not available** - • **To Do Type for Binder Payment not received** - Used when you want to specify a To Do type when the binder payment is not received for the membership in the binder payment preference.	**Note:** This field is required while defining the settings for a binder payment preference.

Membership Status Reason Preference

The Membership Status Reason preference enables you to map a member person status and status reason with an individual membership status reason. This mapping is used during:

- **Membership Status Transition** - When the member person status and status reason are received through a health care inbound message or membership repricing inbound web service
- **Member Person Status Transition** - When the binder payment is monitored for the individual membership

The system enables you to define, edit, delete, and copy a membership status reason preference through the **Field Mapping** screen. You can derive the member person status and member person status reason mapping attributes from the values specified in the **MEMBER_PER_STATUS_FLG** and **MEMB_PERS_STAT_RSN_FLG** lookup fields, where as the mapping attributes of the membership status reason can be derived from the **Status Reason** screen.

The system determines the individual membership status reason using the membership status reason preference which is specified in the **Status Reason Mapping** option type of the **C1-ASOBLLNG** feature configuration.

Searching for a Membership Status Reason Preference

Prerequisites

To search for a membership status reason preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a membership status reason preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Membership Status Reason** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Copyright © 2025, Oracle and/or its affiliates.

6. Click **Search**.
   A list of membership status reason preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Membership Status Reason Preference Details

Procedure

To view the details of a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the membership status reason whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the membership status reason in the **Field Mapping** zone.

Defining a Membership Status Reason Preference

Prerequisites

To define a membership status reason preference, you should have:

- Values defined in the **MEMBER_PER_STATUS_FLG** and **MEMB_PERS_STAT_RSN_FLG** lookup field
- Membership status reason defined in the application.

Procedure

To define a membership status reason preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the billing preference. The valid values are: • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Membership Status Reason Mapping** option from the **Field Mapping Business Object** list.

Copyright © 2025, Oracle and/or its affiliates.

5. Click **OK**.

The **Membership Status Reason Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the membership status reason preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the membership status reason preference.	Yes
Description	Used to specify the description for the membership status reason preference.	Yes

- **Status Reason Mapping** - Used to create the mappings in the membership status reason preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: • Active • Canceled • Inactive • Pending Effectuation **Note:** This list includes only those statuses which are defined in the **MEMBER_PER_STATUS_FLG** lookup field.	Yes (Conditional) **Note:** This field is required while creating a mapping in the membership status reason preference.
Member Person Status Reason	Used to indicate the reason why the status of the member person is changed. The valid values are: • Awaiting Binder Payment • Binder Payment Not Received • Binder Payment Received • Binder payment notification send to upstream • Member is added by mistake • Employee Left organization • New Enrollment • Membership is re-instated • Spouse legally separated • Membership is Terminated **Note:** This list includes only those status reasons which are defined in the **MEMB_PERS_STAT_RSN_FLG** lookup field.	Yes (Conditional) **Note:** This field is required while creating a mapping in the membership status reason preference.
Membership Status Reason	Used to indicate the reason why the status of the membership is changed. **Note:** You must specify a membership status reason which is already defined in the system.	Yes (Conditional) **Note:** This field is required while creating a mapping in the membership status reason preference.

Note: While defining a membership status reason preference, you must create at least one mapping in the membership status reason preference.

Copyright © 2025, Oracle and/or its affiliates.

6. Enter the required details in the **Main** section.
7. Select the required status reason mapping from the respective fields.
8. If you want to set more than one status reason mapping in the membership status reason preference, click the **Add** (+) icon and then repeat step 8.

   Note: However, if you want to remove a status reason mapping from the membership status reason preference, click the **Delete** (🗑) icon corresponding to the status reason mapping.
9. Click **Save**.
   The membership status reason preference is defined.

Editing a Membership Status Reason Preference

Prerequisites

To edit a membership status reason preference, you should have:

- Values defined in the **MEMBER_PER_STATUS_FLG** and **MEMB_PERS_STAT_RSN_FLG** lookup field
- Membership status reason defined in the application.

Procedure

To edit a membership status reason preference:

1. Search for the membership status reason preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the membership status reason preference whose details you want to edit.

   The **Membership Status Reason Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the membership status reason preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the membership status reason preference.	Not applicable
Description	Used to specify the description for the membership status reason preference.	Yes

   - **Status Reason Mapping** - Used to create or edit the mappings in the membership status reason preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Member Person Status	Used to indicate the status of the person in the membership. The valid values are: • Active • Canceled • Inactive • Pending Effectuation **Note:** This list includes only those statuses which are defined in the **MEMBER_PER_STATUS_FLG** lookup field.	Yes (Conditional) **Note:** This field is required while editing a mapping in the membership status reason preference.
Member Person Status Reason	Used to indicate the reason why the status of the member person is changed. The valid values are: • Awaiting Binder Payment	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Binder Payment Not Received • Binder Payment Received • Binder payment notification send to upstream • Member is added by mistake • Employee Left organization • New Enrollment • Membership is re-instated • Spouse legally separated • Membership is Terminated	**Note:** This field is required while editing a mapping in the membership status reason preference.
	Note: This list includes only those status reasons which are defined in the **MEMB_PERS_STAT_RSN_FLG** lookup field.	
Membership Status Reason	Used to indicate the reason why the status of the membership is changed.	Yes (Conditional)
	Note: You must specify a membership status reason which is already defined in the system.	**Note:** This field is required while editing a mapping in the membership status reason preference.

Tip: Alternatively, you can edit the details of a membership status reason preference by clicking the **Edit** button in the **Field Mapping** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the status reason mapping from the membership status reason preference, if required.

Note: You must create at least one status reason mapping in a membership status reason preference.

5. Click **Save**.
   The changes made to the membership status reason preference are saved.

To Do Creation for Manual Refund/Write Off on Individual Membership Cancellation

Oracle Revenue Management and Billing facilitates you with the following on cancelling an individual membership:

- Automatically cancel any refund and/or write off requests which are systematically created through refund/write off instruction via the **Automatic Refund/Write Off** feature.
- Create a To Do for refund and/or write off requests which are manually created for the account via the **Refund/Write Off Request** feature.

Copyright © 2025, Oracle and/or its affiliates.

To implement this feature, the following changes are made to the system:

- A new algorithm type named **C1-WOCANMCN** is introduced in this release. An algorithm created using the **C1-WOCANMCN** algorithm type is attached to the **Canceled** status in the lifecycle of the **C1-IndMembership** business object.
- The **C1-RFRQC** and **C1-WORQC** To Do types are newly introduced in this release.

On canceling an individual membership, the system determines the account to which the individual membership is billed using the **Account Identifier Type** and **Account Identifier Value** characteristics. While fetching the characteristics, the system considers the characteristic types which are specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration.

Once the account is derived for an individual membership, the system checks whether there is any refund/write off request created for the account. If so, the system checks whether the refund/write off request is systematically created through refund/write off instruction via the **Automatic Refund/Write Off** feature. If so, the system automatically cancels the refund/write off request of the account. However, if the refund/write off request is not systematically created through refund/write off instruction, the system creates a To Do using the respective To Do type specified in the **C1-WOCANMCN** algorithm. You can then refer this To Do and manually cancel such refund/write off request of the account.

Chapter 8

Customer Registration

Topics:

- Customer Registration (Without Approval) Status Transition
- Customer Registration (With Approval) Status Transition
- Customer Registration Template
- Customer Registration Type
- Customer Registration (Used for Searching)
- Customer Registration (Used for Viewing)

Until now, you were able to create person, account, policy, and policy plan from the different screens. Now, ORMB provides the ability to create a person, multiple accounts for the person, multiple policies for the person, and multiple policy plans for the policy from the same user interface. A new object named **Customer Registration** is introduced in this release. Through a customer registration object, you can create person, accounts, policies, and policy plans at the same time from the same interface. Before creating a customer registration object, you need to create the following:

- Customer Registration Template
- Customer Registration Type

While creating a customer registration object, you need to specify the following:

- A customer registration type using which the customer registration object should be created
- A source system from the customer information is received
- A type of person that you want to create through the customer registration object

Once you specify the above details, the **Customer Registration** screen appears with a set of pages and sections which are added in the respective person template. The default values for the fields, characteristic types, identifier types, and phone types are shown as specified in the person template. In addition, the field values, characteristic types, characteristic values, identifier types, identifier values, phone types, and phone numbers are disabled as specified in the person template. On the Accounts page, you can view one row for each account template which is added in the customer registration type. You can then edit the row and thereby create an account for the person. You can create multiple accounts for the person using the same or different template.

Note:

You cannot create sort records and derivation and pricing parameters for the bill group from the **Customer Registration** screen. You can only create these from the **Customer 360° Information** screen or using the health care inbound message.

The system creates effective dated address using the address business object which is specified in the customer registration type. By default, the account override address is effective from the date when the customer registration object is created in the system.

On the **Policies** page, you can view one row for each policy template which is added in the customer registration type. You can then edit the row and thereby create a policy for the person. You can create multiple policies for the person using the same or different template. On clicking the **Add** icon corresponding

to the policy row, you can view one row for each policy plan template which is added in the customer registration type. You can then edit the row and thereby create a policy plan for the policy.

On clicking the **View/Edit** icon or the **Add New Account** button in the **Accounts** page, the **Customer Registration - Add Account** screen appears with a set of pages and sections which are added in the respective account template. The default values for the fields, characteristic types, and identifier types are shown as specified in the account template. In addition, the field values, characteristic types, characteristic values, identifier types, and identifier values are disabled as specified in the account template.

On clicking the **View/Edit** icon or the **Add New Policy** button in the **Policies** page, you need to specify a policy type. The policy type indicates the category to which the policy belongs (i.e. whether it is Self Funded, Fully-Insured Group, or Fully-Insured Individual) and the policy business object using which the policy should be created. Once you specify a policy type, the **Policy** screen appears with a set of sections which are added in the respective policy template. The default values for the fields and characteristic types are shown as specified in the policy template. In addition, the field values, characteristic types, and characteristic values are disabled as specified in the policy template. You can create one or more policies for the person using the same or different policy type.

On clicking the **View/Edit** icon or the **Add New Plan** button corresponding to a policy plan row in the **Policies** page, the **Plan** screen appears with a set of sections which are added in the respective policy plan template. The default values for the fields and characteristic types are shown as specified in the policy plan template. In addition, the field values, characteristic types, and characteristic values are disabled as specified in the policy plan template.

You can save the person, account, policy, and policy plan details as and when you are entering the data by clicking the **Save as Draft** button. On clicking the **Save as Draft** button, the system creates a customer registration object in the Draft status. The status of the policies which are created through the customer registration object is set to Pending. Once the person, account, policy, and policy plan details are specified, you can click the **Validate and Save** button. The system then validates the information. You can edit, delete, or submit a customer registration object when it is in the **Draft** status. On submitting a customer registration object, the person, accounts, policies, and policy plans are created in the system. Finally, the status of the customer registration object is changed to the following depending on the type of person:

Person Type	**Status**
Parent Customer	Parent Customer Approved
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

You can optionally configure the approval process for the customer registration. If the **Approval Required** option is selected in the customer registration type, the status of the customer registration object is changed to **Approval In Progress** on submitting it. A To Do using the approval To Do type is created and assigned to the users with the approval To Do role. The approver can then review the customer registration object and accordingly approve, reject, or request the submitter to resubmit the customer registration object for approval.

Copyright © 2025, Oracle and/or its affiliates.

On approving a customer registration object, the person, accounts, policies, and policy plans are created in the system. Finally, the status of the customer registration object is changed to the following depending on the type of person:

Person Type	**Status**
Parent Customer	Parent Customer Approved
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

If the approver rejects a customer registration object due to some reason, the status of the customer registration object is changed to **Rejected**. However, if the approver requests the submitter to resubmit a customer registration object for approval after making the required changes, the status of the customer registration object is changed to **Draft**. The submitter can then make the required changes and resubmit the customer registration object for approval.

The system provides the following two options while defining a customer registration type:

- **Manual Billing Hierarchy and Pricing**- Used when you want to inform the user to create the billing hierarchy and pricing for the parent customer manually. In other words, you want the user to create the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters. If this option is selected, a To Do is created using the **Billing Hierarchy and Pricing** To Do type and assigned to the users with the **Billing Hierarchy and Pricing** To Do role. This feature can be used only for customer registration objects where the person type is set to **Parent Customer**. Once the billing hierarchy and pricing is created for the parent customer, the user must complete the corresponding To Do which is created using the **Billing Hierarchy and Pricing** To Do type. On executing the **Customer Registration Monitor (C1-CUSRG)**batch, the system considers all customer registration objects which are in the **Parent Customer Approved**or **Pending Pricing Correction** status. It checks whether the corresponding To Do (if any) created using the **Billing Hierarchy and Pricing** To Do type is completed. If so, it changes the status of the customer registration object to the following depending on whether the **Final Approval Required** option is selected:

Final Approval Required (Yes or No)	**Status**
Yes	Pending Final Approval
No	Complete

- **Final Approval Required**- Used to indicate whether the final approval is required once the approver at the first level approves the customer registration object. Ideally, the final approval is required when the **Manual Billing Hierarchy and Pricing** option is selected. This ensures that the information related to the following entities is created and verified before the customer registration object moves to the **Complete** status:
  - Bill Group
  - Bill Group's Accounts
  - Bill Group's Sorting Records

Copyright © 2025, Oracle and/or its affiliates.

- Bill Group's Derivation and Pricing Parameters
- Pricing Rules for the Policy Plans

If this option is selected, a To Do is created using the **Final Approval** To Do type and assigned to the users with the **Final Approval** To Do role. This feature can be used only for customer registration objects where the person type is set to **Parent Customer**. Once the user with the **Final Approval** To Do role approves the customer registration object, the status of the customer registration object is changed to **Complete**.

If the approver requests the submitter to resubmit a customer registration object for approval, the status of the customer registration object is changed to **Pending Pricing Correction**.

Note: The system enables you to create maximum 10 accounts and 5 policies for a person and maximum 10 policy plans for a policy through a customer registration object from the user interface.

Once the status of a customer registration object is changed to **Complete** or **Bill Group Approved**, the system changes the status of the policies created through the customer registration object to **In Force/Active**. In addition, the status of the pricing rules which are created for such policies' policy plans is set to **Active**.

You can also create a customer registration object using the **File Upload Interface** utility through an inbound message. On creating an inbound message using the **File Upload Interface** utility, the status of the inbound message is set to **Pending**. Once the inbound message is processed, a customer registration object is created in the following status depending on the person type:

Person Type	**Status**
Parent Customer	Complete
Bill Group	Bill Group Approved
Any Other Person Type Other Than Parent Customer and Bill Group	Complete

Note: The above status transition is mentioned based on the assumption that the data uploaded through the **File Upload Interface** utility will be pre-approved and does not require any approval in the system.

At present, only the XML format is supported for creating a customer registration object using the File Upload Interface utility through an inbound message. To implement the Customer Registration feature, the following new screens are introduced in this release:

- Customer Registration Template
- Customer Registration Type
- Customer Registration

Customer Registration Template

A customer registration template encapsulates the following information:

- List of pages that should appear when you create a person, account, policy, or policy plan using the respective customer registration template
- List of sections that should appear in each page
- Field or characteristic attributes, such as:
  - Default value for a field or characteristic type
  - Default value for a person or account identifier type or phone type
  - Primary identifier type for a person or account
  - Mandatory field in each section
  - Enable or disable the field value, identifier type, identifier value, characteristic type, characteristic value, phone type, or phone number

You can create multiple customer registration templates for person, account, policy and policy plan. Depending on whether you are creating a customer registration template for person, account, policy or policy plan, you can include the following pages and define field or characteristic attributes for the following sections:

The following table lists the pages and sections that are available in the respective template category:

Template Category	Template Page	Template Section
Person	Main	Person Main
		Person Names
		Person Identifiers
		Person Phones
	Contact Information	Person Address
		Person Email
	Accounts	-
	Person Hierarchy	Person Hierarchy - Main
		Person Hierarchy - Characteristics
	Person Characteristics	Person Characteristics
	Policies	Policies
		Parent Policies
	Registration Characteristics	Customer Registration Characteristics
Account	Main	Account Information
		Account Identifiers
	Auto Pay	Account Autopay
	Persons	Main
		Account Address Override Information
		Bill Routing

Copyright © 2025, Oracle and/or its affiliates.

Template Category	Template Page	Template Section
	Account Characteristics	Account Characteristics
Policy	Policy - Main	Policy Main
		Policy Persons
		Policy Characteristics
Policy Plan	Plan	Plan - Main
		Plan - Characteristics

Search Customer Registration Template

The **Search Customer Registration Template** zone allows you to search for a customer registration template using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for customer registration templates using the banking template or the healthcare template details. The valid values are: • **Banking Template** - Used to indicate whether you want to search for customer registration templates created using the **C1-CustomerRegistrationTmplBK** business object. • **Healthcare Template** - Used to indicate whether you want to search for customer registration templates created using the **C1-CustomerRegistrationTmplHC** business object. **Note:** By default, the **Banking Template** option is selected.	Yes
Template	Used to search for a particular template.	No
Description	Used to search for customer registration templates having a particular description.	No
Template Category	Used to search for customer registration templates which belong to a particular category. The valid values are: • Account • Person • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** options appear when you select the **Healthcare Template** option from the **Search By** list.	No

Copyright © 2025, Oracle and/or its affiliates.

Note: You must specify at least one search criterion while searching for a customer registration template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Template	Displays the customer registration template.
Description	Displays the description of the customer registration template.
Template Category	Displays the category to which the customer registration template belongs. The valid values are: • Account • Person • Policy • Policy Plan
Edit	On clicking the **Edit**() icon, the **Customer Registration Template** screen appears where you can edit the details of the customer registration template.
Duplicate	On clicking the **Duplicate**() icon, the **Customer Registration Template** screen appears where you can define a new customer registration template using an existing customer registration template.
Delete	On clicking the **Delete** () icon, you can delete the customer registration template. **Note:** You can delete a customer registration template when a customer registration is not yet defined using the customer registration template.

On clicking the **Broadcast** () icon corresponding to a customer registration template, the **Customer Registration Template** zone appears with the details of the respective customer registration template.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Customer Registration Template

The **Customer Registration Template** zone displays the details of the customer registration template. It also allows you to edit, copy, and delete the customer registration template. It contains the following sections

- **Main** - Displays the basic information about the customer registration template. It contains the following fields:

Field Name	Field Description
Template	Displays the customer registration template.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Template Category	Indicates the category for which the customer registration template is created in the system. The valid values are: • Account • Person • Policy • Policy Plan
	Note: The **Policy** and **Policy Plan** template categories appear when the customer registration template is created using the **C1-CustomerRegistrationTmplHC** business object.
Description	Displays the description of the customer registration template.
Detailed Description	Displays additional information about the customer registration template.

- **Template Pages** - The **Template Pages** section lists the template pages, template sections added for a particular template category in a customer registration template. It contains the following columns:

Column Name	Column Description
Template Page	Indicates the template page which is added for the template category.
Template Section	Indicates the template section which is defined for the template page.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration template.
Delete	Used to delete the customer registration template.
	Note: You can delete a customer registration template when a customer registration is not yet created using the customer registration template.
Duplicate	Used to create a new customer registration template using an existing customer registration template.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration template is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Customer Registration Template** zone does not appear in the **Customer Registration Template** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the customer registration template in the **Search Customer Registration Template** zone.

Searching for a Customer Registration Template

Prerequisites

To search for a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Customer registration templates defined in the application
- Customer registration templates associated with the template categories

Procedure

To search for a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.
   A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Template** sub-menu.
   The **Customer Registration Template** screen appears.
4. Enter the search criteria in the **Search Customer Registration Template** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of customer registration templates that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration Template

Prerequisites

To define a customer registration template, you should have:

- Customer registration template business objects defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Template**.
   A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Template** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Template Business Object	Used to indicate the business object using which you want to define the customer registration template. The valid values are: • **Customer Registration Template - Banking** - Used to indicate that you want to define a customer registration template using the **C1-CustomerRegistrationTmplBK** business object. • **Customer Registration Template - Health Care** - Used to indicate that you want to define a customer registration template using the **C1-CustomerRegistrationTmplHC** business object.	Yes

Copyright © 2025, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Template** screen.

4. Select the required customer registration template business object from the respective field.
5. Click **OK**.

   The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the selected business object. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration template.
   - **Template Pages** - Used to add template pages and its related sections for the customer registration template.
   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: • Account • Person • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** options appear when you are defining a customer registration template using the **C1-CustomerRegistrationTmplHC** business object.	Yes
Business Object	Indicates the business object using which you want to define the customer registration template.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

6. Enter the required details in the **Main** section.
7. Add the template pages and template sections for the customer registration template in the **Template Pages** section.
8. Set the field attributes for the template sections in the **Template Pages** section.
9. Click **Save**.
   The customer registration template is defined.

Adding the Pages and Sections in a Customer Registration Template

Prerequisites

To add a page and its related sections in a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To define a customer registration template:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer *r*egistration template.

   The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) **Note:** This field is required while adding pages and sections in a customer registration template.
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. **Note:** On clicking the **Add** (+) icon, the following columns appear: **Column Name** / **Column Description** Template Section: Used to indicate the section for a particular page. Field Attributes: Used to define the field attributes of a section. **Note:** On clicking the **Add** (+) icon, you can define the field attributes for the section.	Yes (Conditional) **Note:** This field is required while adding pages and sections in a customer registration template.

   The following table lists the various pages and sections that you can include in a customer registration template:

Copyright © 2025, Oracle and/or its affiliates.

Template Category	Template Pages		Template Sections	
	Template Page	**Mandatory (Yes or No)**	**Template Section**	**Mandatory (Yes or No)**
Account	Auto Pay	No	Account Autopay	No
	Account Characteristics	No	Account Characteristics	No
	Credit Ratings **Note:** This template page appears when you are defining, editing, or copying a customer registration template which is created using the **C1-Customer Registration TmplBK** business object.	No	Credit Rating	No
	Main	Yes	Account Identifiers	Yes
			Account Information	Yes
	Persons	Yes	Account Address Override Information	No
			Bill Routing	Yes
			Main	Yes
Person	Accounts	No	-	-
	Contact Information	No	Person Address	No
			Person Email	No
	Deal Information **Note:** This template page appears when you are defining, editing, or copying a customer registration template which is created using the **C1-Customer Registration TmplBK** business object.	No	Deal-Main	No

Copyright © 2025, Oracle and/or its affiliates.

Template Category	Template Pages		Template Sections	
	Template Page	**Mandatory (Yes or No)**	**Template Section**	**Mandatory (Yes or No)**
	Main	Yes	Person Identifiers	Yes
			Person Main	Yes
			Person Names	Yes
			Person Phones	No
	Person Characteristics	No	Person Characteristics	No
	Person Hierarchy	No	Person Hierarchy-Characteristics	No
			Person Hierarchy-Main	No
	Policies **Note:** This template page appears only when you are defining, editing, or copying a customer registration template which is created using the **C1-Customer Registration TmplHC** business object.	No	Parent Policy	No
			Policies	No
	Registration Characteristics	No	Customer Registration Characteristics	No
Policy **Note:** This template category appears only when you are defining, editing, or copying a customer registration template which is created using the **C1-CustomerRegistration TmplHC** business object.	Policy-Main	Yes	Policy Characteristics	No
			Policy-Main	Yes
			Policy Persons	No
Policy Plan	Plan	Yes	Plan-Characteristics	No

Copyright © 2025, Oracle and/or its affiliates.

Template Category	Template Pages		Template Sections	
	Template Page	**Mandatory (Yes or No)**	**Template Section**	**Mandatory (Yes or No)**
Note: This template category appears when you are defining, editing, or copying a customer registration template which is created using the **C1-CustomerRegistration TmplHC** business object.			Plan-Main	Yes

2. Enter the required details in the **Template Pages** section.
3. Set the field attributes for the template section, if required.
4. If you want to add more than one page or section for the customer registration template, click the **Add** (+) icon and *t*hen repeat step *2*.

Note: However, if you want to remove a page or section from the customer registration template, click the **Delete** (🗑) icon corresponding to the page or section.

5. Click **Save**.
The pages and sections are added in the customer registration template.

Note:

You can add all the template pages available for a particular template category by clicking the **Select All** check box in the upper left corner of the **Template Pages** section.

You cannot edit or delete a template page or section if a customer registration is already defined using the customer registration template.

Setting the Field Attributes for a Template Section

Prerequisites

To set the field attributes for a template section, you should have:

- Template pages and sections associated with the template category
- Fields for the sections defined in the application

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To set the field attributes for a template section:

1. Ensure that the **Template Pages** section is expanded when you are defining, editing, or copying a customer *r*egistration template.

   The **Template Pages** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template Page	Used to indicate the page which you want to add in a customer registration template for a particular template category.	Yes (Conditional) **Note:** This field is required while adding pages and sections in a customer registration template.
Template Section	Used to indicate the section and its field attributes which you want to define for a particular page in a customer registration template. **Note:** On clicking the **Add** (+) icon, the following columns appear: **Column Name** / **Column Description** Template Section – Used to indicate the section for a particular page. Field Attributes – Used to define the field attributes of a section. **Note:** On clicking the **Add** (+) icon, you can define the field attributes for the section.	Yes (Conditional) **Note:** This field is required while adding pages and sections in a customer registration template.

2. Select the template page and template section from the respective columns.
3. Click the **Add** (+) icon in the **Field Attributes** column corresponding to the template section whose field *a*ttributes you want to set.

   It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence of the field attribute.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Field	Used to indicate the field for which you want to set attributes.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the field.	**Note:** This field is required while setting the field attributes for a template section.
Default Field Value	Used to indicate the default value for the field in the template section.	Yes (Conditional)
	Note: On specifying a field, the **Search** (🔍) icon appears corresponding to the **Default Field Value** field. On clicking the **Search** icon, a window appears depending on the field that you have selected. On specifying the default field value, the description of the default field value appears corresponding to the default field value.	**Note:** This field is required while setting the field attributes for a template section.
Required	Used to indicate whether the field is mandatory in the template section.	Yes (Conditional)
	Note: By default, the check box in the **Required** column is disabled. It is enabled when you specify the field in the **Field** column.	**Note:** This field is required while setting the field attributes for a template section.
Disable Field Value	Used to indicate whether the field is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the **Disable Field Value** column is disabled. It is enabled when you specify the field in the **Field** column.	**Note:** This field is required while setting the field attributes for a template section.
Identifier Type	Used to indicate the type of identifier for which you want to set attributes.	Yes (Conditional)
	Note: On specifying a field, the **Search** (🔍) icon appears corresponding to the **Identifier Type** field. On clicking the **Search** icon, the **Search Zone for Person Identifier** window appears. On specifying the identifier type, the description of the identifier type appears corresponding to the **Identifier Type** field.	**Note:** This field is required while setting the field attributes for a template section.
Identifier Value	Used to specify the value for the identifier type for which you want to set attributes.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, this field is disabled. It is enabled when you specify the identifier type in the **Identifier Type** column.	**Note:** This field is required while setting the field attributes for a template section.
Primary ID	Used to indicate whether the identifier type and identifier value are primary or not.	Yes (Conditional)
	Note: By default, the check box in the **Primary ID** field is disabled. It is enabled when you specify the identifier type in the **Identifier Type** column.	**Note:** This field is required while setting the field attributes for a template section.
Disable Identifier Type	Used to indicate whether the identifier type is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the **Disable Identifier Type** column is disabled. It is enabled when you specify the identifier type in the **Identifier Type** column.	**Note:** This field is required while setting the field attributes for a template section.
Disable Identifier Value	Used to indicate whether the identifier value is disabled in the template section.	Yes (Conditional)
	Note: By default, the check box in the **Disable Identifier Value** column is disabled. It is enabled when you specify the identifier value in the **Identifier Value** column.	**Note:** This field is required while setting the field attributes for a template section.
Name Type	Used to indicate the type of name for which you want to set attributes.	Yes (Conditional)
	Note: On specifying a field, the **Search** (🔍) icon appears corresponding to the **Name Type** field. On clicking the **Search** icon, the **Search Zone for Person Name Type** window appears. On specifying the name type, the description of the name type appears corresponding to the **Name Type** field.	**Note:** This field is required while setting the field attributes for a template section.
Name	Used to specify the name of the person.	Yes (Conditional)
	Note: By default, this field is disabled. It is enabled when you specify the name type in the **Name Type** column.	**Note:** This field is required while setting the field attributes for a template section.
Disable Name Type	Used to indicate whether the name type is disabled in the template section.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the check box in the **Disable Name Type** column is disabled. It is enabled only when you specify the name type in the **Name Type** column.	**Note:** This field is required while setting the field attributes for a template section.
Disable Name	Used to indicate whether the specified name of the person is disabled in the template section. **Note:** By default, the check box in the **Disable Name** column is disabled. It is enabled when you specify the name in the **Name** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Phone Type	Used to specify the type of phone for which you want to set attributes. **Note:** On specifying a field, the**Search** (🔍) icon appears corresponding to the **Phone Type** field. On clicking the **Search** icon, the **Search Zone for Phone Type** window appears. On specifying the phone type, the description of the phone type appears corresponding to the **Phone Type** field.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Phone Number	Used to specify the phone number. **Note:** By default, this field is disabled. It is enabled when you specify the phone type in the **Phone Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Phone Type	Used to indicate whether the phone type is disabled in the template section. **Note:** By default, the check box in the **Disable Phone Type** column is disabled. It is enabled when you specify the phone type in the **Phone Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Phone Number	Used to indicate whether the specified phone number is disabled in the template section. **Note:** By default, the check box in the **Disable Phone Number** column is disabled. It is enabled when you specify the phone number in the **Phone Number** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Characteristic Information	Used to indicate the characteristic type and characteristic value for which you want to set attributes.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On specifying the characteristic type, the characteristic value field appears in the **Characteristic Information** column. On specifying a predefined characteristic type, the**Search** (🔍) icon appears corresponding to the characteristic value field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the characteristic value field..	**Note:** This field is required while setting the field attributes for a template section.
Disable Characteristic Type	Used to indicate whether the characteristic type is disabled in the template section. **Note:** By default, the check box in the **Disable Characteristic Type** column is disabled. It is enabled when you specify the characteristic type in the **Characteristic Type** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.
Disable Characteristic Value	Used to indicate whether the characteristic is disabled in the template section. **Note:** By default, the check box in the **Disable Characteristic Value** column is disabled. It is enabled when you specify the characteristic value in the **Characteristic Value** column.	Yes (Conditional) **Note:** This field is required while setting the field attributes for a template section.

4. Enter the required details in the **Template Pages** section.
5. If you want to set more than one field attribute for the template section, click the **Add** (+) icon and then *r*epeat step *2*.

> **Note:** However, if you want to remove a field attribute from the template section, click the **Delete** (🗑) icon corresponding to the field.

6. Click **Save**.
   The field attributes are set for the template section.

Editing a Customer Registration Template

Prerequisites

To edit a customer registration template, you should have:

- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To edit a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the customer *r*egistration template whose details you want to edit.

   The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template is defined. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration template.
   - **Template Pages** - Used to add template pages and its related sections for the customer registration template.
   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Displays the customer registration template.	Not applicable
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: • Account • Person • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** options appear when you are defining a customer registration template using the **C1-CustomerRegistrationTmplHC** business object.	Yes
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can edit the details of a customer registration template by clicking the **Edit** button in the **Customer Registration Template** zone.

3. Modify the details in the **Main** section, if required.

Copyright © 2025, Oracle and/or its affiliates.

4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.
   The changes made to the customer registration template are saved.

> **Note:** You can edit a customer registration template only when a customer registration it is not yet defined using the customer registration template.

Copying a Customer Registration Template

Instead of creating a customer registration template from scratch, you can create a new customer registration template using an existing customer registration template. This is possible through copying a customer registration template. On copying a customer registration template, the details including the template pages, template sections, and field attributes for the template sections are copied to the new customer registration template. You can then edit the details, if required.

Prerequisites

To copy a customer registration template, you should have:

- Customer registration template (whose copy you want to create) defined in the application
- Template categories defined in the application
- Template pages and sections defined in the application

Procedure

To copy a customer registration template:

1. Search for the customer registration template in the **Customer Registration Template** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the *c*ustomer registration template whose copy you want to create.

   The **Customer Registration Template for Banking** or the **Customer Registration Template for Healthcare** screen appears depending upon the business object using which the customer registration template whose copy you want to create is defined. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration template.
   - **Template Pages** - Used to add template pages and its related sections for the customer registration template.
   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the customer registration template.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Template Category	Used to indicate the category for which you want to define the customer registration template. The valid values are: • Account • Person • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** options appear when you are defining a customer registration template using the **C1-CustomerRegistrationTmplHC** business object.	Yes
Business Object	Indicates the business object using which the customer registration template is defined in the system.	Not applicable
Description	Used to specify the description for the customer registration template.	Yes
Detailed Description	Used to specify additional information about the customer registration template.	No

Tip: Alternatively, you can copy a customer registration template by clicking the **Duplicate** button in the **Customer Registration Template** zone.

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the template pages and template sections from the customer registration template, if required.
5. Add, edit, or remove the field attributes from the template section, if required.
6. Click **Save**.
   The new customer registration template is defined.

Deleting a Customer Registration Template

Procedure

To delete a Customer Registration Template:

1. Search for the customer registration template in the **Customer Registration Template** screen.

Copyright © 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the customer *r*egistration template that you want to delete.

   A message appears confirming whether you want to delete the customer registration template.
3. Click **OK**.
   The customer registration template is deleted.

> **Note:** You can delete a customer registration template when a customer registration is not yet created using the customer registration template.

> **Tip:** Alternatively, you can delete a customer registration template by clicking the **Delete** button in the **Customer Registration Template** zone.

Customer Registration Type

A customer registration type encapsulates the following information:

- Users with a particular access group can only create a customer registration object using the customer registration type
- Whether the customer registration type can be used to create a customer registration object from the user interface, through the inbound message, or through the **File Upload Interface** utility
- Whether the approval is required when you create, edit, or delete a customer registration object
- Whether the final level approval is required once the approver at the first level approves the customer registration object
- Whether a To Do should be created indicating that the users have to manually create the billing hierarchy and pricing for the parent customer.
- The business objects using which the person, account, policy plan, membership, and address should be created when a customer registration object is created using the customer registration type
- A customer registration template which indicates the pages and sections that should appear when you are creating a customer registration object using the customer registration type. You can specify one customer registration template for person and one or more customer registration templates for account, policy, and policy plan.
- Information, such as person names, person identifiers, person phones, person characteristics, person addresses, person hierarchy, accounts, account identifiers, account characteristics, account auto pay information, account persons, account bill routing information, policies, policy plans, policy characteristics, or policy plan characteristics, which should be copied when you create a copy of a customer registration object which is created using the customer registration type.

Customer Registration Type List

The **Customer Registration Type List** zone lists the customer registration types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Customer Registration Type	Displays the customer registration type.
Description	Displays the description of the customer registration type.
Edit	On clicking the **Edit** (✎) icon, the **Customer Registration Type** screen appears where you can edit the details of the customer registration type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Customer Registration Type** screen appears where you can define a new customer registration type using an existing customer registration type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the customer registration type.
	Note: You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.

You can filter the list using various search criteria (such as, **Customer Registration Type** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

On clicking the **Broadcast** (📡) icon corresponding to a customer registration type, the **Customer Registration Type** zone appears with the details of the respective customer registration type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Customer Registration Type

The **Customer Registration Type** zone displays the details of the customer registration type. It contains the following sections:

- **Main** - Displays the basic information about the customer registration type. It contains the following fields:

Field Name	Field Description
Customer Registration Type	Displays the customer registration type.
Description	Displays the description of the customer registration type.
Customer Registration Business Object	Indicates the business object using which the customer registration is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are: • **Customer Registration - Banking** - Indicates customer registration is created using the **C1-CustomerRegistrationBanking** business object. • **Customer Registration - Health Care** - Indicates customer registration is created using the **C1-CustomerRegistrationHC** business object. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the customer registration type.
Status	Indicates the status of the customer registration type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a customer registration type to **Inactive** when the corresponding customer registration is in a status other than **Processed** or **Rejected**.
Access Group	Displays the user group that can access the customer registration created using the customer registration type. **Note:** It has a link. On clicking the link, the **Access Group** screen appears where you can view the details of the respective access group.
Registration Source	Indicates the source through which the customer registration is created using the customer registration type. The valid values are: • File Upload • Inbound Message • Manual

- **Additional Data** - Displays additional information about the customer registration type. It contains the following fields:

Field Name	Field Description
Approval Required	Indicates whether approval is required while creating the customer registration using the customer registration type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type is created when you submit the customer registration for approval.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve, reject, or resubmit the customer registration for approval.
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Role** screen appears with the details of the respective To Do role.
Submitter To Do Type	Indicates the To Do entry of the specified To Do type is created when the customer registration is resubmitted by the approver.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the users with the specified To Do role for whom the To Do task is created when the customer registration is resubmitted by the approver.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Final Approval Required	Indicates whether the final approval is required once the approver at the first level approves the customer registration.
	Note: This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object. The final approval is required when the **Manual Billing Hierarchy and Pricing** option check box is selected.
Final Approval To Do Type	Indicates that the To Do entry of the specified To Do type is created when you submit the customer registration for final approval.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type. This field appears when the **Final Approval Required** check box is selected.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Final Approval To Do Role	Indicates that users with the specified To Do role can only approve or resubmit the customer registration for final approval.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role. This field appears when the **Final Approval Required** check box is selected.
Manual Billing Hierarchy and Pricing	Indicates whether the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters are created manually by the user while defining the customer registration.
	Note: This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object. This feature is used only for customer registration objects where the person type is set to **Parent Customer**.
Billing Hierarchy and Pricing To Do Type	Indicates the To Do entry of the specified To Do type is created for the user to define or edit the billing hierarchy and pricing for the parent customer manually.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type. This field appears when the **Manual Billing Hierarchy and Pricing** check box is selected.
Billing Hierarchy and Pricing To Do Role	Indicates users with the specified To Do role can only define or edit the billing hierarchy and pricing for the parent customer manually.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role. This field appears when the **Manual Billing Hierarchy and Pricing** check box is selected.
Person Business Object	Indicates the business object using which the person is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Account Business Object	Indicates the business object using which the account is created while defining the customer registration.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Policy Plan Business Object	Indicates the business object using which the policy plan is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Benefits Business Object	Indicates the business object using which the benefit is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Membership Business Object	Indicates the business object using which the membership is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Address Business Object	Indicates the business object using which the address is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Statement Construct Business Object	Indicates the business object using which the statement construct is created while defining the customer registration.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics defined for the customer registration type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Customer Registration Templates** - Lists the templates that are associated with the customer registration type for creating a customer registration. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Sequence	Displays the sequence of the customer registration template.
Template Category	Indicates the category to which the customer registration template belongs. The valid values are: • Person • Account • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** template categories appear when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Template	Displays the customer registration template associated with the customer registration type. **Note:** It has a link. On clicking the link, the **Customer Registration Template** screen appears where you can view the details of the respective customer registration template.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the customer registration type.
Delete	Used to delete the customer registration type. **Note:** You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.
Duplicate	Used to create a new customer registration type using an existing customer registration type.

- **Record Information** - The **Record Information** section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the customer registration type is created in the system. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Copy Customer Registration Details** - Enables you to specify the type of information you want to copy while defining a customer registration using an existing customer registration. It contains the following fields:

Column Name	Column Description
Person Names	Indicates whether you want to copy the person details while copying a customer registration.
Accounts	Indicates whether you want to copy the account details while copying a customer registration.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Person Identifiers	Indicates whether you want to copy the person identifier details while copying a customer registration.
Account Identifiers	Indicates whether you want to copy the account identifier details while copying a customer registration.
Person Phones	Indicates whether you want to copy the phone details of the person while copying a customer registration.
Account Characteristics	Indicates whether you want to copy the characteristic details of the account while copying a customer registration.
Person Characteristics	Indicates whether you want to copy the characteristic details of the person while copying a customer registration.
Account Auto Pay Information	Indicates whether you want to copy the automatic payment details of the account while copying a customer registration.
Person Addresses	Indicates whether you want to copy the address details of the person while copying a customer registration.
Account Persons	Indicates whether you want to copy the details of the persons related to the account while copying a customer registration.
Person Hierarchy	Indicates whether you want to copy the person hierarchy details while copying a customer registration.
Account Override Address	Indicates whether you want to copy the account override address details while copying a customer registration.
Bill Routing Information	Indicates whether you want to copy the bill routing details of the account while copying a customer registration.
Credit Rating History	Indicates whether you want to copy the credit rating history details while copying a customer registration.
Policies	Indicates whether you want to copy the policy details while copying a customer registration. **Note:** This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Policy Plans	Indicates whether you want to copy the policy plan details while copying a customer registration. **Note:** This field appears only when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Policy Characteristics	Indicates whether you want to copy the policy characteristic details while copying a customer registration. **Note:** This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.
Policy Plan Characteristics	Indicates whether you want to copy the policy plan characteristic details while copying a customer registration.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears when the **Customer Registration Type** is created using the **C1-CustRegTypeHealthCare** business object.

By default, the **Customer Registration Type** zone does not appear in the **Customer Registration Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a customer registration type in the **Customer Registration Type List** zone.

Searching for a Customer Registration Type

Prerequisites

To search for a customer registration type, you should have:

- Customer registration types defined in the application

Procedure

To search for a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Customer Registration Type** sub-menu.
   The **Customer Registration Type** screen appears with a list of customer registration types in the **Customer Registration Type List** zone.
4. Click the **Filters** (▽) icon in the title bar of the **Customer Registration Type List** zone.
   It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to search for a particular customer registration type.	No
Description	Used to search for customer registration types having a particular description.	No

5. Enter the search criteria in the **Customer Registration Type List** zone.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of customer registration types that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration Type

Prerequisites

To define a customer registration type, you should have:

- Customer registration type business objects defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

> **Note:** The policy plan and membership business objects are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

> **Note:** The billing hierarchy and pricing To Do types and To Do roles are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To define a customer registration type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **C** and then click **Customer Registration Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Customer Registration Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type Business Object	Used to indicate the business object using which you want to create the customer registration type. The valid values are: • Customer Registration Type - Banking • Customer Registration Type - Healthcare	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration Type** screen.

Note: The **Select Business Object** screen appears when there are multiple customer registration type business objects defined in the application. If there is only one customer registration type business object defined in the application, the **Customer Registration Type** screen appears.

4. Select the required customer registration business object from the respective field.
5. Click **OK**.

The **Customer Registration Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the customer registration type.
- **Additional Data** - Used to define additional information about the customer registration type.
- **Characteristics** - Used to define a list characteristics for the customer registration type.
- **Customer Registration Templates** - Used to associate templates with the customer registration type.
- **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.

- **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. • Active • Inactive	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: • File Upload • Inbound Message • Manual	Yes

6. Enter the required details in the **Main** section.
7. Define additional information about the customer registration type in the **Additional Data** section.
8. Define a list of characteristics for the customer registration type in the **Characteristics** section.
9. Associate customer registration templates with the customer registration type in the **Customer Registration Templates** section
10. Specify the type of information you want to copy while defining a customer registration using an existing *c*ustomer registration in the **Copy Customer Registration Details** section.
11. Click **Save**.
    The customer registration type is defined.

Defining Additional Data for a Customer Registration Type

Prerequisites

To define additional data for a customer registration type, you should have:

- Person, account, policy plan, membership, and address business objects defined in the application

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** The policy plan and membership business objects are required when you are defining, editing, or copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

> **Note:** The billing hierarchy and pricing To Do types and To Do roles are required when you are defining, editing, or copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

Procedure

To define additional data for a customer registration type:

1. Ensure that the **Additional Data** section is expanded when you are defining, editing, or copying a customer *r*egistration type.

   The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required while creating the customer registration using the customer registration type.	Yes (Conditional) **Note:** This field is required for approving the customer registration which is created using the customer registration type.
Approval To Do Type	Used to indicate the To Do entry of the specified To Do type is created when you submit the customer registration for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the customer registration which is created using the customer registration type.
Approval To Do Role	Used to indicate the users with the specified To Do role can approve, reject, or resubmit the customer registration for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for approving the customer registration which is created using the customer registration type.
Submitter To Do Type	Used to indicate the To Do entry of the specified To Do type is created when the customer registration is resubmitted by the approver.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field.	**Note:** This field is required for resubmitting the customer registration for approval.
Submitter To Do Role	Used to indicate the users with the specified To Do role for whom the To Do task is created when the customer registration is resubmitted by the approver.	Yes (Conditional) **Note:** This field is required for resubmitting the customer registration for approval.
Final Approval Required	Used to indicate whether final approval is required once the approver at the first level approves the customer registration. **Note:** This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object. The final approval is required when the **Manual Billing Hierarchy and Pricing** option check box is selected.	Yes (Conditional) **Note:** This field is required for approving the customer registration which is created using the customer registration type.
Final Approval To Do Type	Used to indicate the To Do entry of the specified To Do type is created when you submit the customer registration for final approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Final Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Final Approval To Do Type** field. This field appears when the **Final Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for final approval of the customer registration.
Final Approval To Do Role	Used to indicate the users with the specified To Do role can only approve or resubmit the customer registration for final approval. **Note:** This field appears when the **Final Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required for final approval of the customer registration.

Field Name	Field Description	Mandatory (Yes or No)
Manual Billing Hierarchy and Pricing	Used to indicate whether the required bill groups for the parent customer, the bill group's accounts, pricing rules, bill group sorting information, and bill group derivation and pricing parameters are created manually by the user while defining the customer registration. **Note:** The **Manual Billing Hierarchy and Pricing** option can be used only for customer registrations where the person type is set to **Parent Customer**. This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object.	Yes (Conditional) **Note:** This field is required for creating the billing hierarchy and pricing for the parent customer manually.
Billing Hierarchy and Pricing To Do Type	Used to indicate the To Do entry of the specified To Do type is created for the user to define or edit the billing hierarchy and pricing for the parent customer manually. **Note:** The **Search** (🔍) icon appears corresponding to the **Billing Hierarchy and Pricing To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Billing Hierarchy and Pricing To Do Type** field. This field appears when the **Manual Billing Hierarchy and Pricing** check box is selected.	Yes (Conditional) **Note:** This field is required for creating the billing hierarchy and pricing for the parent customer manually.
Billing Hierarchy and Pricing To Do Role	Used to indicate the users with the specified To Do role can only define or edit the billing hierarchy and pricing for the parent customer manually. **Note:** This field appears when the **Manual Billing Hierarchy and Pricing** check box is selected.	Yes (Conditional) **Note:** This field is required for creating the billing hierarchy and pricing for the parent customer manually.
Person Business Object	Used to indicate the business object using which the customer registration for a person is created using the customer registration type.	Yes
Account Business Object	Used to indicate the business object using which the customer registration for an account is created using the customer registration type.	Yes
Policy Plan Business Object	Used to indicate the business object using which the customer registration for a policy plan is created using the customer registration type.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object.	
Membership Business Object	Used to indicate the business object using which the customer registration for a membership is created using the customer registration type. **Note:** The **Membership Business Object** is required for creating customer registrations through an **Inbound Message**. This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object.	Yes
Benefits Business Object	Used to indicate the business object using which the customer registration for a benefit is created using the customer registration type.	No
Address Business Object	Used to indicate the business object using which the customer registration for an address is created using the customer registration type.	Yes
Statement Construct Business Object	Used to indicate the business object using which the customer registration for a statement construct is created using the customer registration type.	Yes

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.
   The additional data for the customer registration type is defined.

Defining a Characteristic for a Customer Registration Type

Prerequisites

To define a characteristic for a customer registration type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration Type**)

Procedure

To define a characteristic for a customer registration type:

Copyright © 2025, Oracle and/or its affiliates.

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a customer *r*egistration type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Customer Registration Type**.	**Note:** This field is required when you are defining a characteristic for the customer registration type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the customer registration type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the customer registration type, click the **Add** (+) icon *a*nd then repeat step *2*.

   Note: However, if you want to remove a characteristic from the customer registration type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristic is defined for the customer registration type.

Associating a Customer Registration Template with a Customer Registration Type

Prerequisites

To associate a customer registration template with a customer registration type, you should have:

- Template categories defined in the application

Copyright © 2025, Oracle and/or its affiliates.

- Customer registration templates associated to the template categories

Procedure

To associate a customer registration template with a customer registration type:

1. Ensure that the **Customer Registration Templates** section is expanded when you are defining, editing, or *c*opying a customer registration type.

   The **Customer Registration Templates** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence for the customer registration template.	Yes (Conditional) **Note:** This field is required when you are associating a customer registration template with a customer registration type.
Template Category	Used to indicate the category to which the customer registration template belongs. The valid values are: • Person • Account • Policy • Policy Plan **Note:** The **Policy** and **Policy Plan** template categories appear when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object. You can associate only one person template category and multiple account, policy, and policy plan template categories with the customer registration type.	Yes (Conditional) **Note:** This field is required when you are associating a customer registration template with a customer registration type.
Template	Used to specify the customer registration template which you want to associate with the customer registration type. **Note:** The **Search** (🔍) icon appears corresponding to the **Template** field. On clicking the **Search** icon, the **Customer Registration Template Search** window appears. On specifying the template, the description of the template appears corresponding to the **Template** field.	Yes (Conditional) **Note:** This field is required when you are associating a customer registration template with a customer registration type.

2. Enter the required details in the **Customer Registration Templates** section.

Copyright © 2025, Oracle and/or its affiliates.

3. If you want to define more than one template for the customer registration type, click the **Add** (+) icon and *t*hen repeat step *2*.

> **Note:** However, if you want to remove a template from the customer registration type, click the **Delete** (🗑) icon corresponding to the customer registration template.

4. Click **Save**.
   The customer registration template is associated with the customer registration type.

Setting Attributes to Define a Customer Registration Using the Existing Customer Registration

Prerequisites

To set an attribute for defining a customer registration using the existing customer registration, you should have:

- **Person** attributes defined in the application
- **Account** attributes defined in the application
- **Policy** attributes defined in the application

> **Note:** The **Policy** attributes are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

- **Policy Plan** attributes defined in the application

> **Note:** The **Policy Plan** attributes are required when you are defining a customer registration type using the **C1-CustRegTypeHealthCare** business object.

Procedure

To set an attribute for defining a customer registration using the existing customer registration:

1. Ensure that the **Copy Customer Registration Details** section is expanded when you are defining, editing, or *c*opying a customer registration type.

   The **Copy Customer Registration Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Names	Used to indicate whether you want to copy the person details while copying a customer registration.	No
Accounts	Used to indicate whether you want to copy the account details while copying a customer registration.	No
Person Identifiers	Used to indicate whether you want to copy the person identifier details while copying a customer registration.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifiers	Used to indicate whether you want to copy the account identifier details while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Person Phones	Used to indicate whether you want to copy the phone details of the person while copying a customer registration.	No
Account Characteristics	Used to indicate whether you want to copy the characteristic details of the account while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Person Characteristics	Used to indicate whether you want to copy the characteristic details of the person while copying a customer registration.	No
Account Auto pay Information	Used to indicate whether you want to copy the automatic payment details of the account while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Person Addresses	Used to indicate whether you want to copy the address details of the person while copying a customer registration.	No
Account Persons	Used to indicate whether you want to copy the details of the persons related to the account while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Person Hierarchy	Used to indicate whether you want to copy the person hierarchy details while copying a customer registration.	No
Account Override Address	Used to indicate whether you want to copy the account override address details while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill Routing Information	Used to indicate whether you want to copy the bill routing details of the account while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Credit Rating History	Used to indicate whether you want to copy the credit rating history details while copying a customer registration. **Note:** The check box of this field is enabled when the **Accounts** check box is selected in the **Copy Customer Registration Details** section.	No
Policies	Used to indicate whether you want to copy the policy details while copying a customer registration. **Note:** This field appears only when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object.	No
Policy Plans	Used to indicate whether you want to copy the policy plan details while copying a customer registration. **Note:** This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object. The check box of this field is enabled only when the **Policies** check box is selected in the **Copy Customer Registration Details** section.	No
Policy Characteristics	Used to indicate whether you want to copy the policy characteristic details while copying a customer registration. **Note:** This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object. The check box of this field is enabled only when the **Policies** check box is selected in the **Copy Customer Registration Details** section.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Plan Characteristics	Used to indicate whether you want to copy the policy plan characteristic details while copying a customer registration. **Note:** This field appears when you are defining, editing, or copying a **Customer Registration Type** using the **C1-CustRegTypeHealthCare** business object. The check box of this field is enabled when the **Policy Plans** check box is selected in the **Copy Customer Registration Details** section.	No

2. Select the required attributes in the **Copy Customer Registration Details** section.
3. Click **Save**.
   The attributes are set for defining a customer registration using the existing customer registration.

Editing a Customer Registration Type

Prerequisites

To edit a customer registration type, you should have:

- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application
- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

> **Note:** The policy plan and membership business objects are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

> **Note:** The billing hierarchy and pricing To Do types and To Do roles are required when you are editing a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To edit a customer registration type:

Copyright © 2025, Oracle and/or its affiliates.

1. Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the customer *r*egistration type whose details you want to edit.

   The **Customer Registration Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration type.
   - **Additional Data** - Used to define additional information about the customer registration type.
   - **Characteristics** - Used to define a list characteristics for the customer registration type.
   - **Customer Registration Templates** - Used to associate templates with the customer registration type.
   - **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.

   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Displays the customer registration type.	Not applicable
Business Object	Indicates the business object using which the customer registration type is created in the system.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. • Active • Inactive	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	Yes
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: • File Upload • Inbound Message	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Manual	

Tip: Alternatively, you can edit the details of a customer registration type by clicking the **Edit** button in the **Customer Registration Type** zone.

3. Modify the required details in the **Main** section, if required.
4. Modify additional information about the customer registration type in the **Additional Data** section, if required.
5. Define, edit, or remove characteristics of the customer registration type in the **Characteristics** section, if required.
6. Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section, if required.
7. Specify the type of information you want to copy while defining a customer registration using an existing *c*ustomer registration in the **Copy Customer Registration Details** section, if required.
8. Click **Save**.
   The changes made to the customer registration type are saved.

Copying a Customer Registration Type

Instead of creating a customer registration type from scratch, you can create a new customer registration type using an existing customer registration type. This is possible through copying a customer registration type. On copying a customer registration type, the details including the additional data, characteristics, customer registration templates, and attributes set to define a customer registration from the existing customer registration are copied to the new customer registration type. You can then edit the details, if required.

Prerequisites

To copy a customer registration type, you should have:

- Customer registration type (whose copy you want to create) defined in the application
- Customer registration business objects defined in the application
- Access groups defined in the application
- Registration sources defined in the application
- Statement construct business object defined in the application

Copyright © 2025, Oracle and/or its affiliates.

- Benefit business object defined in the application
- Person, account, policy plan, membership, and address business objects defined in the application

> **Note:** The policy plan and membership business objects are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Approval To Do types and To Do roles defined in the application
- Billing hierarchy and pricing To Do types and To Do roles defined in the application

> **Note:** The billing hierarchy and pricing To Do types and To Do roles are required when you are copying a customer registration type which is created using the **C1-CustRegTypeHealthCare** business object.

- Characteristic types defined in the application
- Template categories defined in the application

Procedure

To copy a customer registration type:

1. Search for a customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the *c*ustomer registration type whose copy you want to create.

   The **Customer Registration Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the customer registration type.
   - **Additional Data** - Used to define additional information about the customer registration type.
   - **Characteristics** - Used to define a list characteristics for the customer registration type.
   - **Customer Registration Templates** - Used to associate templates with the customer registration type.
   - **Copy Customer Registration Details** - Used to specify the type of information you want to copy while defining a customer registration using an existing customer registration.

   - **Main** - The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to specify the customer registration type.	Yes
Business Object	Indicates the business object using which you want to create the customer registration type.	Not applicable
Description	Used to specify the description for the customer registration type.	Yes
Customer Registration Business Object	Used to indicate the business object using which you want to create the customer registration in the system.	Yes
Detailed Description	Used to specify additional information about the customer registration type.	No
Status	Used to indicate the status of the customer registration type. • Active • Inactive	Yes
Access Group	Used to specify the user group that can access the customer registration created using the customer registration type.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	
Registration Source	Used to indicate the source through which you want to create the customer registration in the system. The valid values are: • File Upload • Inbound Message • Manual	Yes

Tip: Alternatively, you can copy a customer registration type by clicking the **Duplicate** button in the **Customer Registration Type** zone.

3. Enter the required details in the **Main** section.
4. Enter additional information about the customer registration type in the **Additional Data** section.
5. Define, edit, or remove characteristics of the customer registration type in the **Characteristics** section.
6. Associate or disassociate customer registration templates from the customer registration type in the **Customer Registration Templates** section.
7. Specify the type of information you want to copy while defining a customer registration using an existing *c*ustomer registration in the **Copy Customer Registration Details** section.
8. Click **Save**.
   The new customer registration type is defined.

Deleting a Customer Registration Type

Procedure

To delete a Customer Registration Type:

1. Search for the customer registration type in the **Customer Registration Type List** zone of the **Customer Registration Type** screen.
2. In the **Customer Registration Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the customer registration type that you want to delete.

   A message appears confirming whether you want to delete the customer registration type.
3. Click **OK**.
   The customer registration type is deleted.

> **Note:** You can delete a customer registration type when a customer registration is not yet defined using the customer registration type.

> **Tip:** Alternatively, you can delete a customer registration type by clicking the **Delete** button in the **Customer Registration Type** zone.

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier	Used to specify the value of the person identifier type using which you want to search for customer registrations. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to enter the person identifier. This field is required for searching customer registrations using the person details.
Characteristic Type	Used to search customer registrations of persons with a particular characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Customer Registration**. This field appears when the **Person Details** option is selected from the **Search By** list and the **Advanced Search** link available in the upper right corner of the **Search Customer Registration** zone is clicked.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the person details.
Characteristic Value	Used to specify the value of the characteristic type using which you want to search customer registrations of persons. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field. This field appears when the **Person Details** option is selected from the **Search By** list and the **Advanced Search** link available in the upper right corner of the **Search Customer Registration** zone is clicked.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the person details.
Inbound Message ID	Used to search for a customer registration which was created through a particular inbound message.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when the **Inbound Message Details** option is selected from the **Search By** list.	**Note:** This field is required for searching customer registrations using the inbound message details.
Source System	Used to search customer registrations whose information is received from a particular external system. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
External Source ID	Used to search for a customer registrations whose information is received from a particular external source system. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
External Transaction ID	Used to search for a customer registration which is created as a result of a particular transaction in the external source system. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
External Batch ID	Used to search customer registrations which are created through an external batch job. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
Inbound Message Type	Used to search customer registrations which are created using a particular inbound message type. **Note:** This field appears when the **Inbound Message Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the inbound message details.
Request Id	Used to search customer registrations which are created from a particular file uploaded through the **File Upload Interface** utility. **Note:** This field appears when the **File Upload Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the file upload details.
File Name	Used to search customer registrations created from uploading a file with a particular name.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **File Upload Details** option is selected from the **Search By** list.	**Note:** This field is required for searching customer registrations using the file upload details.
File Status	Used to search customer registrations created from the uploaded files having a particular status. The valid values are: • Approval Pending • Completed • Error • Pending • Rejected **Note:** This field appears when the **File Upload Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the file upload details.
File Request Type	Used to search customer registrations which are created from the uploaded files with a particular file request type. **Note:** This field appears when the **File Upload Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required for searching customer registrations using the file upload details.

Note: You must specify at least one search criterion while searching for a customer registration. One more search criterion is required when you are searching for a customer registration using the division and/or person type.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the customer registration is created in the system.
Customer Registration Information	Displays the concatenated string of information about the customer registration. **Note:** It has a link. On clicking the link, the **Customer Registration** screen appears where you can view the details of the respective customer registration.
Status	Indicates the status of the customer registration. The valid values are: • Approval In Progress • Bill Group Approved • Complete • Draft • Draft for Update • Parent Customer Approved • Pending Final Approval • Pending Pricing Correction • Rejected

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The values listed above appear when the **Registration Details** option is selected from the **Search By** list.
	• Pending • Processed • Rejected • Voided
	Note: These values listed above appear when the **Inbound Message Details** option is selected from the **Search By** list.
	Note: This column appears only when the **Registration Details**, **Person Details**, or **Inbound Message Details** options are selected from the **Search By** list.
Request Id	Displays the request Id generated while uploading a file through the **File Upload Interface** utility for creating the customer registration object.
	Note: This column appears when the **File Upload Details** option is selected from the **Search By** list.
Created By	Displays the user who has created the customer registration.
	Note: This column appears when the **Registration Details**, **Person Details**, or **Inbound Message Details** options are selected from the **Search By** list.
Inbound Message Information	Displays the concatenated string of information about the inbound message.
	Note: It has a link. On clicking the link, the **Inbound Message** screen appears where you can view the details of the respective inbound message. This column appears when the **Inbound Message Details** option is selected from the **Search By** list.
File ID	Displays the file which is uploaded for creating the customer registration through the **File Upload Interface** utility.
	Note: This column appears when the **File Upload Details** option is selected from the **Search By** list.
Copy	On clicking the **Copy** (⧉) icon, the **Customer Registration** screen appears where you can define a new customer registration using an existing customer registration.
	Note: This column appears when the **Registration Details** option is selected from the **Search By** list.
Person Name	Displays the name of the person for whom the customer registration is defined in the system.
	Note: This column appears when the **Person Details** option is selected from the **Search By** list.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Inbound Message Type	Indicates the inbound message type using which the inbound message is created in the system. **Note:** This column appears when the **Inbound Message Details** option is selected from the **Search By** list.
File Name	Displays the name of the file which is uploaded for creating the customer registration through the **File Upload Interface** utility. **Note:** This column appears when the **File Upload Details** option is selected from the **Search By** list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person. **Note:** This column appears when the **Person Details** option is selected from the **Search By** list.
Source System	Indicates the source system from where the inbound message is received for creating the customer registration. **Note:** This column appears when the **Inbound Message Details** option is selected from the **Search By** list.
Request Type	Indicates the request type using which the file is uploaded through the **File Upload Interface** utility for creating the customer registration. **Note:** This column appears only when the **File Upload Details** option is selected from the **Search By** list.
Primary Person Identifier	Displays the primary person identifier. **Note:** This column appears when the **Person Details** option is selected from the **Search By** list.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Customer Registration

Prerequisites

To search for a customer registration, you should have:

- Customer registration business objects defined in the application
- Customer registration statuses and customer registration types defined in the application

Copyright © 2025, Oracle and/or its affiliates.

- Divisions associated with the access group to which the user belongs
- Person types and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Inbound message statuses, inbound message types, and source systems defined in the application.
- File statuses and file request types defined in the application.

Procedure

To search for a customer registration:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Customer Registration**.
   A sub-menu appears.
3. Click the **Search** option from the **Customer Registration** sub-menu.
   The **Customer Registration** screen appears.
4. Enter the search criteria in the **Search Customer Registration** zone.

   Note:

   You must specify at least one search criterion while searching for a customer registration object. One more search criterion is required when you are searching for a customer registration using the division and/or person type.

   The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

   You must specify the division when you are searching for a customer registration of a person using the city.

   You must specify division and/or any other criteria in the second group when you are searching for a customer registration using the person type.

   If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the customer registration using the person ID.

   ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

   The **Advanced Search** link appears in the right side of the **Search Customer Registration** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

   If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.
   A list of customer registrations that meet the search criteria appears in the **Search Results** section.

Defining a Customer Registration

Prerequisites

To define a customer registration, you should have:

- Customer registration types, source systems, and person types defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

> **Note:** These prerequisites are required when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

Procedure

To define a customer registration:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Customer Management** and then click **Customer Registration**.
   A sub-menu appears.
3. Click the **Add** option from the **Customer Registration** sub-menu.

   The **Add Customer Registration** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to define the customer registration.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the customer registration information is received.	No
Person Type	Used to indicate the type of person for whom you want to define the customer registration.	Yes

Tip: Alternatively, you can access the **Add Customer Registration** screen by clicking the **Add** button in the **Page Title** area of the **Customer Registration** screen.

4. Select the required **Customer Registration Type** from the respective field.
5. Select the required **Source System** from the respective field, if required.
6. Select the required **Person Type** from the respective field.
7. Click **OK**.

The **Customer Registration** screen appears. It contains the following pages:

- **Main** - Used to specify basic information about the person.
- **Contact** - Used to specify the contact information about the person.
- **Person Characteristics** - Used to define a list of characteristics for the person.
- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Policies** - Used to specify the policy details of the person.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.
- **Person Name** - Used to add the person names for customer registration.
- **Person Phones** - Used to add the person phone details for customer registration.
- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs. **Note:** You can view only those divisions to which you have access in the **Division** list.	Yes
Person Since Date	Used to specify the date from when the person is the main customer.	Yes
Customer Segment	Used to indicate the customer segment to which the person belongs.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.	
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs. **Note:** This field appears when you are defining a customer registration using the **C1-CustomerRegistrationBanking** business object.	Yes
Access Group	Used to indicate the user group that can access the customer registration. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	Yes

8. Enter the required details in the **Main** section.
9. Add the names of the person in the **Person Names** section.
10. Add the phone details for the person in the **Person Phones** section.
11. Add the identifier details for the person in the **Person IDs** section.
12. Define the addresses of the person in the **Contact** page, if required.
13. Define a list of characteristics for the person in the **Person Characteristics** page, if required.
14. Define the person to person relationship for the person in the **Hierarchy** page, if required.
15. Add the account details of the person in the **Accounts** page, if required.
16. Add the policy details of the person in the **Policies** page, if required.

Note: This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

17. Define a list of characteristics for the customer registration in the **Registration Characteristics** page, if *r*equired.
18. Click **Validate and Save**.
    The customer registration is defined.

Adding the Names of a Person

Prerequisites

To add the names of a person, you should have:

- Name types defined in the application.

Procedure

To add the names of a person:

1. Ensure that the **Person Names** section is expanded in the **Main** page when you are defining, editing, or copying *a* customer registration.

   The **Person Names** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Name Type	Used to indicate the type of name which you want to add for the customer registration. **Note:** The list includes only those name types where the name type entity is set to **Customer Registration**.	Yes (Conditional) **Note:** This field is required when you are adding a name for customer registration.
Name	Used to specify the name of the person.	Yes (Conditional) **Note:** This field is required when you are adding a name for customer registration.

2. Enter the required details in the **Person Names** section.
3. If you want to add more than one person name for the customer registration, click the **Add** (+) icon and then *r*epeat step *2*.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a person name from the customer registration, click the **Delete** (🗑) icon corresponding to the person name.

4. Click **Validate and Save**.
   The names are added for the person.

Adding the Phone Details of a Person

Prerequisites

To add the phone details of a person, you should have:

- Phone types defined in the application.

Procedure

To add the phone details of a person:

1. Ensure that the **Person Phones** section is expanded in the **Main** page when you are defining, editing, or *c*opying a customer registration.

   The **Person Phones** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Phone Type	Used to indicate the type of the phone which you want to add for the person. The valid values are: • Business • Business Phone • Fax • Home • Mobile **Note:** The list includes only those phone types where the phone type entity is set to **Customer Registration**.	Yes (Conditional) **Note:** This field is required when you are adding the phone details of a person.
Phone Number	Used to specify the phone number.	Yes (Conditional) **Note:** This field is required when you are adding the phone details of a person.
Extension	Used to specify the extension value of the phone number.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
		Note: This field is required when you are adding the phone details of a person.
Phone Format	Displays the format in which the phone number is specified for the person.	Not applicable

2. Enter the required details in the **Person Phones** section.
3. If you want to add more than one person phone for the customer registration, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a person phone from the customer registration, click the **Delete** (🗑) icon corresponding to the person phone.

4. Click **Validate and Save**.
   The phone details are added for the person.

Adding the Contact Details of a Person

Prerequisites

To add the contact details of a person, you should have:

- Address type codes and countries defined in the application.

Procedure

To add the contact details of a person:

1. Ensure that the **Person Addresses** section in the **Contact** page is expanded when you are defining, editing, or *c*opying a customer registration.

   The **Person Addresses** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Address Type Code	Used to indicate the type of address that you want to add for the person. **Note:** The list includes only those address type codes where the address type code entity is set to **Customer Registration**.	Yes
Effective Date	Used to specify the date from when the address is effective for the person.	Yes
Season	Used to specify the season for which the address is effective for the person.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Person Seasonal** option from the Address Type Code field.	**Note:** This field is required while adding the seasonal contact details of a person.
Country	Used to indicate the country where the person is located. **Note:** The list includes only those countries which are already defined in the system. On selecting a country, only those address fields which are set as **Optional** while defining the country appear in the **Person Addresses** section. Also, the labels of the address fields will change depending on the business label which is defined for the respective address field in the **Country** screen.	Yes
Address 1	Used to specify the first line of the address. It may contain details, such as house number and apartment name.	No
Address 2	Used to specify the second line of the address. It may contain details, such as street name.	No
City	Used to specify the city name.	No
Address 3	Used to specify the third line of the address. It may contain the landmark details.	No
County	Used to specify the county name.	No
State	Used to indicate the state where the city or county is located. **Note:** The states listed in this field change depending on the country that you have selected.	No
Province	Used to specify the location within the country where the person is located.	No
Address 4	Used to specify the fourth line of the address.	No
Postal	Used to specify the postal or zip code of the address.	No
House Type	Used to indicate the type of the house. **Note:** The list includes only those values which are defined in the **HOUSE_TYPE** lookup field.	No
In City Limit	Used to indicate whether the address is within the city limit. The valid values are:	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Yes • No	
Geographic Code	Used to specify the geographic code of the address.	No

Note: The above mentioned fields appear in the **Person Addresses** section when the respective data is available for the person.

In addition, the **Person Addresses** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Override Mailing Name - Name1	Used to specify the name using which you want to override the person's mailing name.	Yes (Conditional) **Note:** This field is required while overriding the persons contact name.
Override Mailing Name - Name2	Used to specify the name using which you want to override the person's override mailing name 1.	Yes (Conditional) **Note:** This field is required while overriding the persons **Override Mailing Name - Name1**.
Override Mailing Name - Name3	Used to specify the name using which you want to override the person's override mailing name 2.	Yes (Conditional) **Note:** This field is required while overriding the persons **Override Mailing Name - Name2**.
Email Address	Used to specify the email address of the person.	No

2. Enter the required details in the **Person Addresses** section.
3. If you want to add more than one contact details of the person, click the **Add** (+) icon in the upper right corner *of* this section and then repeat step *2*.

Note: However, if you want to remove the contact details of the person, click the **Delete** (🗑) icon in the upper right corner of this section.

4. Click **Validate and Save**.
   The contact details are added for the person.

Defining a Characteristic for a Person

Prerequisites

To define a characteristic for a person, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)

Procedure

To define a characteristic for a person:

1. Ensure that the **Characteristics** section is expanded in the **Person Characteristics** page when you are defining, *e*diting, or copying a customer registration.

   The **Characteristics** section contains the following columns:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the person.	Yes (Conditional) **Note:** This field is required while defining a characteristic for the person.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Customer Registration**.	Yes (Conditional) **Note:** This field is required while defining a characteristic for the person.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required while defining a characteristic for the person.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the person, click the **Add** (+) icon and then *r*epeat step *2*.

   Note: However, if you want to remove a characteristic from the person, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Validate and Save**.
   The characteristic is defined for the person.

Defining a Person to Person Relationship for a Person

Prerequisites

To define a person to person relationship for a person, you should have:

- Relationship types defined in the application (where the relationship entity is set to **Customer Registration**)

Procedure

To define a person to person relationship for a person:

1. Ensure that the **Related Person Information** section is expanded in the **Hierarchy** page when you are *d*efining, editing, or copying a customer registration.

   The **Related Person Information** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Related Person ID	Used to indicate the person with whom you want to define the person to person relationship of the main customer.	Yes (Conditional) **Note:** This field is required while defining a person to person relationship for a person.
	Note: The **Search** (🔍) icon appears corresponding to the **Related Person ID** field. On clicking the **Search** icon, the **Person Search** window appears. On specifying the person, the description of the person appears corresponding to the **Related Person ID** field.	
Parent/Child	Used to indicate whether the related person is a parent or a child. The valid values are: • Parent • Child	Yes (Conditional) **Note:** This field is required while defining a person to person relationship for a person.
Relationship Type	Used to indicate the person to person relationship type.	Yes (Conditional) **Note:** This field is required while defining a person to person relationship for a person.
	Note: The list includes only those relationship types where the relationship entity is set to **Customer Registration**.	
Start Date	Used to indicate the date from when the person to person relationship is effective.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: The start date cannot be later than the end date.	**Note:** This field is required while defining a person to person relationship for a person.
End Date	Used to indicate the date till when the person to person relationship is effective. **Note:** The end date cannot be earlier than the start date.	No
Financial Relationship	Used to indicate whether the related person is financially responsible or not.	Yes (Conditional) **Note:** This field is required while defining a person to person relationship for a person.
Characteristics	On clicking the **Add** (+) icon, you can define a list of characteristics for the person to person relationship.	No

2. Enter the required details in the **Related Person Information** section.
3. If you want to define more than one person to person relationship for the person, click the **Add** (+) icon and *t*hen repeat step *2*.

Note: However, if you want to remove a person to person relationship from the person, click the **Delete** (🗑) icon corresponding to the related person.

4. Click **Validate and Save**.
   The person to person relationship is defined for the person.

Adding an Account for a Person

Prerequisites

To add the account for a person, you should have:

- Customer class, divisions, currencies, account categories, access groups, accrual cycles, and bill cycles defined in the application
- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To add an account for a person:

1. Ensure that the **Accounts** section is expanded in the **Accounts** page when you are adding, editing, or removing *a*n account of a person.

   The **Accounts** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the account.	Not applicable
Template	Displays the account template using which the account is added for the person.	Not applicable
Customer Class	Indicates the customer class to which the account belongs.	Not applicable
Division	Indicates the division to which the account belongs.	Not applicable
Primary Identifier Type	Indicates the primary identifier type using which the account is added for the person.	Not applicable
Identifier Value	Displays the value of the primary identifier type.	Not applicable
Account Information	Displays the concatenated string of information about the account that is added for the person.	Not applicable
View / Edit	On clicking the **View / Edit** (✎) icon, you can view or edit the details of the account.	Not applicable

   Note: No information appears in the above columns if an account is not yet added for the person.

2. Click the **Add New Account** button in the **Accounts** section.

   The **Customer Registration - Add Account** screen appears. It contains the following pages:

   - **Main** - Used to specify basic information about the account.
   - **Auto Pay** - Used to add the automatic payment details of the account.
   - **Persons** - Used to associate a person to the account.
   - **Account Characteristics** - Used to define a list of characteristics for the account.

   The **Main** page contains the following sections:

   - **Main** - Used to specify basic details about the account.

Copyright © 2025, Oracle and/or its affiliates.

- **Account Identifiers** - Used to add the identifier details for the account.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs. **Note:** You can only view those divisions to which you have access in the **Division** list.	Yes
Set Up Date	Used to specify the date from when the account is configured for the person. **Note:** By default, the current date appears in this field.	Yes
Invoice Currency	Used to indicate the currency which you want to use for generating the invoice of the account. **Note:** The list includes only those currencies which are defined in the system.	Yes
Account Category	Used to indicate the category to which the account belongs. The valid values are: • Invoice Account • Settlement Account • Usage Account **Note:** The list includes only those values which are present in the **ACCT_USAGE_FLG** lookup field.	Yes
Access Group	Used to indicate the user group that can access the account for the person. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	Yes
Exclude Accrual	Used to indicate whether the account is eligible for accrual.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the account is eligible for accrual if the division to which the account belongs is eligible for accrual. If you do not want the account to be eligible for accrual, you must select the **Exclude Accrual** check box. On selecting the **Exclude Accrual** check box, the **Accrual Cycle** field is disabled.	
Accrual Cycle	Used to indicate the accrual cycle of the account in the division. **Note:** The **Search** (🔍) icon appears corresponding to the **Accrual Cycle** field. On clicking the **Search** icon, the **Accrual Cycle Search for Cust Reg** window appears. On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the **Accrual Cycle** field. This field is disabled when you click the **Exclude Accrual** check box.	No
Product	Used to indicate the product for which the account is enrolled. **Note:** The **Search** (🔍) icon appears corresponding to the **Product** field. On clicking the **Search** icon, the **Search Product** window appears.	Yes (Conditional) **Note:** This field is required while enrolling an account for a product.
Eligible for Repricing	Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed. **Note:** Only accounts where the person and child person are the main customers are considered for repricing. The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.	No
Bill Cycle	Used to indicate the bill cycle for the account.	No
Bill Lead Days	Used to specify the number of days which is used to derive the cut-off date for advance billing.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: In case you don't want to bill the account in advance, you must specify **0** in this field.	
Comments	Used to specify additional information about the account.	No

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
5. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
6. Associate or disassociate persons from the account in the **Persons** page, if required.
7. Define, edit, or remove characteristics of the account in the **Account Characteristics** page, if required.
8. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
9. Click **Validate and Save**.
   The account is added for the person.

Adding the Credit Rating Details for an Account

Prerequisites

To add the credit rating details for an account, you should have:

- Collection classes defined in the application

Procedure

To add the credit rating details for an account:

1. Ensure that the **Credit Ratings** page is expanded in the **Customer Registration - Add Account** screen when you are adding or editing the account of a person.

   The **Credit Ratings** page contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Collection Class	Used to indicate how the account's debt is reviewed by the credit and collections processes (i.e., the account debt monitor and the write-off monitor).	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Postpone Credit Review Until	Used to specify the date till when you want to postpone the account's debt review by the credit and collections processes (i.e., the account debt monitor and the write-off monitor).	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Last Credit Review Date	Used to indicate the last review date of the account's debt by the account debt monitor.	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Current Credit Rating	Displays the current credit rating.	Not applicable
Current Cash Only Score	Displays the current cash only score.	Not applicable
Start Date	Used to specify the date from when the credit rating transaction affects the account's credit rating and cash-only score. **Note:** The start date cannot be later than the end date	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
End Date	Used to specify the date till when the credit rating transaction affects the account's credit rating and cash-only score. **Note:** The end date cannot be earlier than the start date.	No
Affect Credit Rating By	Used to specify the effect of the credit rating transaction on the account's credit score. **Note:** This should be a negative number because the lower the score, the worse the credit rating.	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Affect Cash Only Score By	Used to specify the effect of the credit rating transaction on the account's cash-only score. **Note:** This should be a positive number because the higher the score, the greater the chance for the account to be marked as cash-only.	Yes (Conditional) **Note:** This field is required while adding the credit rating details for an account.
Comments	Used to specify additional information about the credit rating for the account.	No

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** The **Credit Ratings** page appears in the **Customer Registration - Add Account** screen when you are defining, editing, or copying a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.

2. Enter the required details in the **Credit Ratings** page.
3. If you want to add more than one credit rating details for the account, click the **Add** (+) icon and then repeat *s*tep 2.

> **Note:** However, if you want to remove a credit rating detail from the account, click the **Delete** (🗑) icon.

4. Click **Validate and Save**.
   The credit rating details are added for the account.

Adding the Automatic Payment Details of an Account

Prerequisites

To add the automatic payment details of an account, you should have:

- Auto pay source codes, auto pay methods, and auto pay route types defined in the application

Procedure

To add the automatic payment details of an account:

1. Ensure that the **Auto Pay** page is expanded in the **Customer Registration - Add Account** screen when you *a*re adding or editing the account of a person.

   The **Auto Pay** page contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Defer Auto Pay Date	Used to indicate the date till when you want to hold the automatic payment process of the account.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Rule Based Auto Pay	Used to indicate whether the automatic payment is rule based.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required while adding the automatic payment details of the account
Start Date	Used to indicate the date from when the automatic payment is effective for the account. **Note:** The start date cannot be later than the end date.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
End Date	Used to indicate the date till when the automatic payment is effective for the account. **Note:** The end date cannot be earlier than the start date.	No
Percentage	Used to specify the contribution of payment amount in percentage within multiple **Auto Pay IDs** (i.e for **Auto Pay Source Codes**) having the same priority.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Priority	Used to specify the order in which the automatic payment option is considered for the effective date range.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request. **Note:** The **Search** (🔍) icon appears corresponding to the **Auto Pay Source Code** field. On clicking the **Search** icon, the **Auto Pay Source Search** window appears. On specifying the auto pay source code, the description of the auto pay source code appears corresponding to the **Auto Pay Source Code** field.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Auto Pay Method	Used to indicate the method using which you want the system to process the automatic payment for the account. The valid values are: • Direct Debit • Payment Advice	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Auto Pay Route Type	Used to indicate when and how the automatic payment request of the account is routed to the financial institution.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Auto Pay Route Type** field. On clicking the **Search** icon, the **Auto Pay Route Type Search** window appears. On specifying the auto pay route type, the description of the auto pay route type appears corresponding to the **Auto Pay Route Type** field.	**Note:** This field is required while adding the automatic payment details of the account
Account Number	Used to specify the account number for which you want to add the automatic payment details.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Expires On	Used to specify the month and year of expiry for the automatic payment of the account.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Name	Used to specify the account name for which you want to add the automatic payment details.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Maximum Withdrawal Amount	Used to specify the maximum amount which can be withdrawn from the account through the automatic payment method.	Yes (Conditional) **Note:** This field is required while adding the automatic payment details of the account
Comments	Used to specify additional information about the automatic payment for the account.	No

2. Enter the required details in the **Auto Pay** page.
3. If you want to add more than one automatic payment details of the account, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove an automatic payment detail from the account, click the **Delete** (🗑) icon.

4. Click **Validate and Save**.
   The automatic payment details are added for the account.

Defining a Policy

Prerequisites

To define a policy, you should have:

- Policy types defined in the application.
- Source systems defined in the application.
- Policy person roles defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a policy:

1. Ensure that the **Policies & Plans** section is expanded in the **Policies** page when you are defining, editing, or *r*emoving a policy from the person.

   The **Policies & Plans** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy.	Not applicable
Template	Indicates the policy template using which the policy is defined for the person.	Not applicable
Policy Type	Indicates the policy type using which the policy is defined for the person.	Not applicable
Policy Number	Displays the policy number.	Not applicable
View / Edit	On clicking the **View / Edit** (✎) icon, you can view or edit the details of the policy.	Not applicable
Policy Plans	On clicking the **Add** (🗎) icon, you can add policy plans for the policy.	Not applicable

   Note: No information appears in the above columns if a policy is not yet defined for the person.

2. Click the **Add New Policy** button in the **Policies & Plans** section.
   The **Select Policy Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to indicate the policy type using which you want to define a policy.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you want to create a fully-insured group policy, you must select a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**. However, if you want to create a self-funded policy, you must select a policy type where the policy category is set to **Self-Funded**.	

3. Select the required policy type from the **Policy Type** field.
4. Click **OK**.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the policy.
   - **Persons** - Used to associate persons with the policy.
   - **Characteristics** - Used to define the characteristics for the policy.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Indicates the policy type using which you are defining the policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description for the policy.	Yes
Source System	Used to indicate the external system from where the policy is originated. **Note:** This field is enabled when you are defining a policy using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.	Yes
Start Date	Used to specify the date from when the policy is effective. **Note:** The policy start date cannot be later than the policy end date.	Yes
End Date	Used to specify the date till when the policy is effective. **Note:** The policy end date cannot be earlier than the policy start date.	Yes
Policy Person Role	Used to indicate the role of the person for whom you are defining the policy.	Yes

Note: The **Policies** page appears when you are defining, editing, or copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

5. Enter the required details in the **Main** section.
6. Define characteristics for the policy in the **Characteristics** section, if required.

Copyright © 2025, Oracle and/or its affiliates.

7. Associate persons to the policy in the **Persons** section, if required.
8. Click **Validate and Save**.
   The policy is defined for the person.

Associating a Person to a Policy

Prerequisites

To associate a person to a policy, you should have:

- Policy person roles defined in the application

Procedure

To associate a person to a policy:

1. Ensure that the **Persons** section is expanded in the **Policy** screen when you are defining or editing a policy.

   The **Persons** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Person	Used to indicate the person that you want to associate to the policy. **Note:** The **Search** (🔍) icon appears corresponding to the **Person** field. On clicking the **Search** icon, the **Person Search** window appears. On specifying the person, the concatenated string of information about the person appears corresponding to the **Person** field separated by a comma (,).	Yes (Conditional) **Note:** This field is required when you are associating a person to the policy.
Sequence	Used to specify the sequence number for the associated person.	Yes (Conditional) **Note:** This field is required when you are associating a person to the policy.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Policy Person Role	Used to indicate the role of the associated person in the policy.	Yes (Conditional) **Note:** This field is required when you are associating a person to the policy.
Main Customer	Used to indicate whether the associated person is the main customer of the policy. **Note:** At a time, only one person can be the main customer of the policy. You must select this option while associating a person who is the main customer of the policy.	Yes (Conditional) **Note:** This field is required when you are associating a person to the policy.
Start Date	Used to specify the date from when the person is associated to the policy. **Note:** The start date cannot be later than the end date. The start date cannot be earlier than the policy start date and later than the policy end date.	Yes (Conditional) **Note:** This field is required when you are associating a person to the policy.
End Date	Used to specify the date till when the person is associated to the policy. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the policy start date and later than the policy end date.	No

2. Enter the required details in the **Persons** section.
3. If you want to associate more than one person to the policy, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a person from the person, click the **Delete** (🗑) icon corresponding to the person.

4. Click **Validate and Save**.
   The person is associated to the policy.

Defining a Characteristic for a Policy

Prerequisites

To define a characteristic for a policy, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define a characteristic for a policy:

1. Ensure that the **Characteristics** section is expanded in the **Policy** screen when you are defining or editing a *p*olicy.

   The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy.	Yes (Conditional) **Note:** This field is required when defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Policy**	Yes (Conditional) **Note:** This field is required when defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when defining a characteristic for the policy.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the policy, click the **Add** (+) icon and then *r*epeat step *2*.

   Note: However, if you want to remove a characteristic from the policy, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Validate and Save**.
   The characteristic is defined for the policy.

Adding a Plan in a Policy

Prerequisites

To add a plan in a policy, you should have:

- Policy plan templates defined in the application.
- Policy plan business objects defined in the application.
- Pricing rule types defined in the application.
- Characteristic types defined in the application (where the characteristic entity is set to **Policy Plan**)

Procedure

To add a plan in a policy:

1. Ensure that the **Policies & Plans** section is expanded in the **Policies** page when you are adding, editing, or *r*emoving a policy plan from a policy.
2. Click the **Add** (+) icon in the **Policy Plans** column corresponding to the policy in which you want to add a *p*olicy plan.

   The following columns appear in the **Policies & Plans** section:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No.	Displays the sequence number of the policy plan.	Not applicable
Template	Indicates the policy plan template using which the policy plan is added in the policy.	Not applicable
Plan Number	Displays the policy plan number.	Not applicable
Price Item	Displays the price item that is associated with the policy plan.	Not applicable
View / Edit	On clicking the **View / Edit** (✎) icon, you can view or edit the details of the policy plan.	Not applicable

Note: No information appears in the above columns if a plan is not yet added in the policy.

3. Click the **Add New Plan** button in the **Policies & Plans** section.
   The **Select Policy Plan Template** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template using which you want to define the policy plan for the policy.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the **Policy Plan - Healthcare** option is selected.	
Business Object	Used to indicate the business object using which you want to define the policy plan for the policy. **Note:** By default, the **Policy Plan** option is selected.	Yes

4. Select the required template and business object from the respective fields.
5. Click **OK**.

The **Plan** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the policy plan.
- **Pricing Rule Types** - Used to associate the pricing rule types with the policy plan.
- **Characteristics** - Used to define the characteristics for the policy plan.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to directly associate with the policy plan. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears. On the specifying the price item, the concatenated string of information about the price item appears corresponding to the **Price Item** field separated by a comma (,).	Yes
Plan Number	Used to specify the policy plan number.	Yes
Plan Name	Used to specify the description for the policy plan.	No
Start Date	Used to specify the date from when the policy plan is effective for the policy. **Note:** The policy plan start date cannot be earlier than the policy start date and later than the policy end date. The policy plan start date cannot be later than the policy plan end date.	Yes
End Date	Used to specify the date till when the policy plan is effective for the policy.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The policy plan end date cannot be earlier than the policy start date and later than the policy end date. The policy plan end date cannot be earlier than the policy plan start date.	

6. Enter the required details in the **Main** section.
7. Associate the pricing rule types with the policy plan in the **Pricing Rule Types** section, if required.
8. Define the characteristics for the policy plan in the **Characteristics** section, if required.
9. Click **Validate and Save**.
   The policy plan is added in the policy.

Editing the Account Details of a Person

Prerequisites

To edit the account details of a person, you should have:

- Customer class, divisions, currencies, access groups, accrual cycles, and bill cycles defined in the application
- Account identifier types defined in the application
- Auto pay source codes, auto pay methods, and auto pay route types defined in the application
- Account relationship types defined in the application
- Address sources, bill formats, and bill route types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To edit the account details of a person:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration whose account details you want to edit.
   The **Main** tab appears in the **Customer Registration** screen.
3. Click the **Edit** button in the **Customer Registration** zone.
   The **Main** page appears in the **Customer Registration** screen.
4. Ensure that the **Accounts** section is expanded in the **Accounts** page.
5. Click the **Edit**(✎) icon in the **View / Edit** column corresponding to the account whose details you want to edit.

   The **Customer Registration - Add Account** screen appears. It contains the following pages:

   - **Main** - Used to specify basic information about the account.
   - **Auto Pay** - Used to add the automatic payment details of the account.
   - **Persons** - Used to associate a person to the account.
   - **Account Characteristics** - Used to define a list of characteristics for the account.

   The **Main** page contains the following sections:

   - **Main** - Used to specify basic details about the account.
   - **Account Identifiers** - Used to add the identifier details for the account.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Customer Class	Used to indicate the customer class to which the account belongs.	Yes
Division	Used to indicate the division to which the account belongs. **Note:** You can only view those divisions to which you have access in the **Division** list.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Set Up Date	Displays the date from when the account is configured for the person.	Not applicable
Invoice Currency	Used to indicate the currency which you want to use for generating the invoice of the account. **Note:** The list includes only those currencies which are defined in the system.	Yes
Account Category	Displays the category to which the account belongs. The valid values are: • Invoice Account • Settlement Account • Usage Account **Note:** The list includes only those values which are present in the **ACCT_USAGE_FLG** lookup field.	Not applicable
Access Group	Used to indicate the user group that can access the account for the person. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	Yes
Exclude Accrual	Used to indicate whether the account is eligible for accrual. **Note:** By default, the account is eligible for accrual if the division to which the account belongs is eligible for accrual. If you do not want the account to be eligible for accrual, you must select the **Exclude Accrual** check box. On selecting the **Exclude Accrual** check box, the **Accrual Cycle** field is disabled.	No
Accrual Cycle	Used to indicate the accrual cycle of the account in the division.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Accrual Cycle** field. On clicking the **Search** icon, the **Accrual Cycle Search for Cust Reg** window appears. On specifying the accrual cycle, the description of the accrual cycle appears corresponding to the **Accrual Cycle** field. This field is disabled when you click the **Exclude Accrual** check box.	
Product	Used to indicate the product for which the account is enrolled. **Note:** The **Search** (🔍) icon appears corresponding to the **Product** field. On clicking the **Search** icon, the **Search Product** window appears.	Yes (Conditional) **Note:** This field is required while enrolling an account for a product.
Eligible for Repricing	Used to indicate whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed. **Note:** Only accounts where the person and child person are the main customers are considered for repricing. The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.	No
Bill Cycle	Used to indicate the bill cycle for the account.	No
Bill Lead Days	Used to specify the number of days which is used to derive the cut-off date for advance billing. **Note:** In case you don't want to bill the account in advance, you must specify **0** in this field.	Yes
Comments	Used to specify additional information about the account.	No

6. Modify the required details of the account in the **Main** page.
7. Add, edit, or remove the identifier details of the account in the **Account Identifiers** section.
8. Add, edit, or remove the automatic payment details of the account in the **Auto Pay** page, if required.
9. Associate or disassociate persons from the account in the **Persons** page, if required.
10. Define, edit, or remove characteristics of the account in the **Account Characteristics** page, if required.

Copyright © 2025, Oracle and/or its affiliates.

11. Add, edit, or remove the credit rating details of the account in the **Credit Ratings** page, if required.
12. Click **Validate and Save**.
    The changes made to the account are saved.

Copying a Customer Registration

Instead of creating a customer registration from scratch, you can create a new customer registration using an existing customer registration. This is possible through copying a customer registration. On copying a customer registration, the details including the characteristics are copied to the new customer registration. You can then edit the details, if required.

Prerequisites

To copy a customer registration, you should have:

- Customer registration (whose copy you want to create) defined in the application
- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic Types defined in the application
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

> **Note:** These prerequisites are required when you are copying a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

Procedure

To copy a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. Click the **Copy** (⎘) icon in the **Copy** column corresponding to the customer registration whose copy you want *t*o create.

   The **Customer Registration** screen appears. It contains the following pages:

   - **Main** - Used to specify basic information about the person.
   - **Contact** - Used to specify the contact information about the person.
   - **Person Characteristics** - Used to define a list of characteristics for the person.

Copyright © 2025, Oracle and/or its affiliates.

- **Hierarchy** - Used to define the person to person relationship for the person
- **Accounts** - Used to add the account details of the person.
- **Policies** - Used to specify the policy details of the person.

> **Note:** This page appears when you are defining a customer registration using the **C1-CustomerRegistrationHC** business object.

- **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

The **Main** page contains the following sections:

- **Main** - Used to specify basic details about the person.

Division	Indicates the division to which the account belongs.
Set Up Date	Displays the date from when the account is configured for the person.
Invoice Currency	Indicates the currency which is used for generating the invoice of the account.
Account Category	Indicates the category to which the account belongs. The valid values are:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Invoice Account • Settlement Account • Usage Account
Access Group	Indicates the user group that can access the account for the person.
Exclude Accrual	Indicates whether the account is eligible for accrual.
Eligible for Repricing	Indicates whether the account is eligible for repricing when the account attributes (defined as parameters in the system) are changed.
Product	Indicates the product for which the account is enrolled.
Bill Cycle	Indicates the billing cycle for the account.
Bill Lead Days	Displays the number of days which is used to derive the cut-off date for advance billing.
Comments	Displays additional information about the account.

- **Account Identifiers** - Lists the identifiers details of the account. It contains the following columns:

Column Name	Column Description
Primary ID	Indicates whether the account identifier is primary or not.
Account Identifier Type	Indicates the identifier type for the account.
Primary Account Identifier	Displays the primary account identifier for the account identifier type.

- **Account Characteristics** - Lists the characteristics of the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

Auto Pay Details - Displays the automatic payment details of the account. It contains the following fields:

Field Name	Field Description
Defer Auto Pay Date	Displays the date till when you want to hold the automatic payment process of the account.
Rule Based Auto Pay	Indicates whether the automatic payment is rule based.
Start Date	Displays the date from when the automatic payment is effective for the account.
End Date	Displays the date till when the automatic payment is effective for the account.
Percentage	Displays the contribution of payment amount in percentage within multiple **Auto Pay IDs** (i.e for **Auto Pay Source Codes**) having the same priority.
Priority	Displays the order in which the automatic payment option is considered for the effective date range.
Auto Pay Source Code	Indicates the financial institution that receives the automatic payment request.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Auto Pay Route Type	Indicates when and how the automatic payment request of the account is routed to the financial institution.
Account Number	Displays the account number for which the automatic payment is defined.
Expires On	Displays the month and year of expiry for the automatic payment of the account.
Name	Displays the account name for which the automatic payment is defined.
Maximum Withdrawal Amount	Displays the maximum amount which can be withdrawn from the account through the automatic payment method.
Comments	Displays additional information about the automatic payment for the account.

- **Account Credit Rating** - Displays the credit rating details of the account. It contains the following fields:

Field Name	Field Description
Collection Class	Indicates how the account's debt is reviewed by the credit and collections processes (i.e., the account debt monitor and the write-off monitor).

Editing the Customer Registration Details

Prerequisites

To define a customer registration, you should have:

- Divisions, customer segments, customer tiers, and access groups defined in the application
- Name types, phone types, and person identifier types defined in the application
- Address type codes and countries defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Customer Registration**)
- Relationship types defined in the application
- Policy types and policy person roles defined in the application.

Note: These prerequisites are required when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

Procedure

To edit a customer registration:

1. Search for the customer registration in the **Customer Registration** screen.
2. In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding *t*o the customer registration whose details you want to edit.
   The **Main** tab appears in the **Customer Registration** screen.
3. Click the **Edit** button in the **Customer Registration** zone.

   The **Customer Registration** screen appears. It contains the following pages:

   - **Main** - Used to specify basic information about the person.
   - **Contact** - Used to specify the contact information about the person.
   - **Person Characteristics** - Used to define a list of characteristics for the person.
   - **Hierarchy** - Used to define the person to person relationship for the person
   - **Accounts** - Used to add the account details of the person.
   - **Policies** - Used to specify the policy details of the person.

     Note: This page appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.
   - **Registration Characteristics** - Used to define a list of characteristics for the customer registration.

   The **Main** page contains the following sections:

   - **Main** - Used to specify basic details about the person.
   - **Person Name** - Used to add the person names for customer registration.
   - **Person Phones** - Used to add the person phone details for customer registration.

Copyright © 2025, Oracle and/or its affiliates.

- **Person IDs** - Used to add the person identifiers for customer registration.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Type	Indicates the person type using which you want to define the customer registration for the person.	Not applicable
Date of Birth	Used to specify the date when the person was born.	Yes
Division	Used to indicate the division to which the person belongs. **Note:** You can view only those divisions to which you have access in the **Division** list.	Yes
Person Since Date	Used to specify the date from when the person is the main customer.	Yes
Customer Segment	Used to indicate the customer segment to which the person belongs. **Note:** This field appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.	Yes
Customer Tier	Used to indicate the customer tier of the customer segment to which the person belongs. **Note:** This field appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationBanking** business object.	Yes
Access Group	Used to indicate the user group that can access the customer registration. **Note:** The **Search** (🔍) icon appears corresponding to the **Access Group** field. On clicking the **Search** icon, the **Access Group Search** window appears. On specifying the access group, the description of the access group appears corresponding to the **Access Group** field.	Yes

4. Modify the required details in the **Main** section.
5. Add, edit, or remove the names of the person in the **Person Names** section.
6. Add, edit, or remove the phone details of the person in the **Person Phones** section.
7. Add or remove the identifier details of the person in the **Person IDs** section.
8. Define, edit, or remove the address of the person in the **Contact** page, if required.

Copyright © 2025, Oracle and/or its affiliates.

9. Define, edit, or remove characteristics of the person in the **Person Characteristics** page, if required.
10. Define, edit, or remove the person to person relationship for the person in the **Hierarchy** page, if required.
11. Add, edit, or remove the account details of the person in the **Accounts** page, if required.
12. Add, edit, or remove the policy details of the person in the **Policies** page, if required.

> **Note:** This page appears when you are editing a customer registration which is created using the **C1-CustomerRegistrationHC** business object.

13. Define, edit, or remove characteristics of the customer registration in the **Registration Characteristics** page, *if* required.
14. Click **Validate and Save**.
    The changes made to the customer registration are saved.

Approving a Customer Registration

You can view the number of customer registrations which are pending for an approval in the **Customer Registration** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the customer registration based on the observations.

Note: The system will not allow you to approve, reject or resubmit a customer registration submitted by you.

Procedure

To approve a customer registration:

1. Do either of the following:

If you want to...	Then...
Approve a customer registration through the Customer Registration screen	**a.** Search for the customer registration in the **Customer Registration** screen. **b.** In the **Search Results** section, click the link in the **Customer Registration ID** column corresponding to the customer registration which you want to review.
Approve a customer registration from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-CustomerRegistration** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. **e.** Click **Search**. The **To Do Type Search** screen appears.

   The **Customer Registration** screen appears.
2. Review the details in the **Customer Registration** screen.
3. If the information in the customer registration is accurate, then click the **Approve** button in the **Customer Registration** zone.

Copyright © 2025, Oracle and/or its affiliates.

Note: The **Approve** button appears when:

- The status of customer registration is in the **Approval In Progress**.
- A user with the approval To Do role is reviewing the customer registration.

Rejecting a Customer Registration

Prerequisites

To reject a customer registration, you should have:

- Reasons defined for the **Rejected** status of the **C1-CustomerRegistration** business object in the **Status Reason** screen

Note: The system will not allow you to approve, reject or resubmit a customer registration submitted by you.

Procedure

To reject a customer registration:

1. Do either of the following:

If you want to...	Then...
Reject a customer registration through the Customer Registration screen	**a.** Search for the customer registration in the **Customer Registration** screen. **b.** In the **Search Results** section, click the link in the **Customer Registration Information** column corresponding to the customer registration which you want to review.
Reject a customer registration from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-CustomerRegistration** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos.

Copyright © 2025, Oracle and/or its affiliates.

If you want to...	Then...
	f. Click the link in the **Message** column corresponding to the To Do of the customer registration that you want to review.

The **Customer Registration** screen appears.

2. Review the details in the **Customer Registration** screen.
3. If the information in the customer registration is incorrect, then click the **Reject** button in the **Customer Registration** zone.

   The **Reject Customer Registration** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the customer registration. **Note:** The list includes only those reasons which are defined for the **Rejected** status of the **C1-CustomerRegistration** business object in the **Status Reason** screen.	Yes
Comments	Used to specify additional information while rejecting the customer registration.	No

Note: The **Reject** button appears when:

- The customer registration is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the customer registration.

4. Select the reason for rejection of the customer registration from the **Status Reason** field.
5. Click **Save**.
   The status of the customer registration is changed to **Rejected**.

4. Click the **Add Log Entry** link in the upper right corner of the **Customer Registration Log** zone.

   The **Add Request Log** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays the concatenated string of information about the customer registration separated by a comma (,).	Not applicable
Log Details	Used to specify the reason for adding a log entry for the customer registration.	Yes

Copyright © 2025, Oracle and/or its affiliates.

5. Enter the required details in the **Log Details** field.
6. Click **Save**.
   The log entry is added for the **Customer Registration Log** zone.

Chapter 9

Customer 360° View

Topics:

- Prerequisites
- Customer 360° View
- Customer 360° Information
- Bill Information
- Pricing Rule (Used for Viewing)

Oracle Revenue Management and Billing provides a new screen named **Customer 360° View** which enables you to quickly view in-depth information about the person. This screen can be used to view the 360° information of a person who is associated with the fully-insured group or self-funded policy. It provides the following information:

- Basic details, characteristics, child persons, person hierarchy, person billing hierarchy, and the customer contacts of the person.
- Customer registration objects through which the bill groups are created for a parent customer.
- List of accounts to which the parent customer and its bill groups are associated.
- Basic details, characteristics, administrative contracts, automatic payment options, billing and adjustment summary, financial and collections summary, and unpaid bills of the person's account.
- Consolidated view of the transactions (such as, billing, payment, payment cancellation, adjustment, adjustment cancellation, automatic payments sent to the auto clearing house for review, refund, write off, excess credit, and reconciliation) which are carried out for the person's account.
- List of policies to which the parent customer or bill group is associated. The system lists those policies where the policy category is set to **Self-Funded** and **Fully Insured Group**.
- Basic details, related persons, and policy plans in the person's policy.
- Basic and in-depth details of the pricing rules which are defined for a parent customer who is associated with the fully-insured group or self-funded policy.
- Basic and in-depth details of the pricing rules which are defined for a self-funded policy of a bill group.
- Basic details of the pricing groups which are defined for a bill group who is associated with the self-funded policy.
- Basic and in-depth details of the pricing rules which are defined for a fully-insured group policy.
- Basic and in-depth details of the pricing rules which are defined for a fully-insured group policy plan.
- Basic and in-depth details of the pricing rules which are defined for the states where the fully-insured group policy and its plans and memberships are issued.
- Basic details of the approval transactions which are created while defining, editing, and deleting the pricing rules for the self-funded or fully-insured group business.
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, write off, or transfer) through which the bill is settled, high-level summary and details of the bill segments which

are included in the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill-down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

Prerequisites

To setup the **Customer 360° View** feature, you need to do the following:

- Define the required divisions, customer classes, person types, person identifier types, account identifier types, policy types, and policy person roles in the system
- Define values for the **C1-SourceSystemLookup** extendable lookup
- Define the required characteristic types where the characteristic entity is set to **Person**
- Define the required characteristic types where the characteristic entity is set to **Account**
- Define the required characteristic types where the characteristic entity is set to **Policy**
- Define values for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1_CMO** feature configuration

  Note: This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.
- Define values for **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

  Note: This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.
- Define value for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

Customer 360° View

The **Customer 360° View** screen allows you to search for a person, its accounts, and policies using various search criteria. It contains the following zone:

- 360° Search on page 589

360° Search

The **360° Search** zone allows you to search for a person, account, and policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person, account, or policy. The valid values are:	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Policy • Person • Account **Note:** By default, the **Policy** option is selected.	
Policy Type	Used to search policies which are created using a particular policy type. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Source System	Used to search policies which were created in a particular external system. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Policy Number	Used to search a policy with a particular policy number. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Policy ID	Used to search a particular policy. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Policy Person Role	Used to search policies where a person is assigned a particular person role. **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	No
Person Name	Used to search a particular person using its primary or secondary name. If you specify the person name while searching for an account, the system searches all accounts where the person is the main customer. However, if you specify the person name while searching for a policy, the system searches all policies where the person is the main customer. **Note:** This field appears when: • The **Policy** or **Person** option is selected from the **Search By** list. • The **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	Yes (Conditional) **Note:** This field is required when you are searching for a policy using the policy person role.
Status	Used to search policies with a particular status. The valid values are:	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated **Note:** This field appears when the **Policy** option is selected from the **Search By** list.	
Start Date	Used to search policies which are effective from a particular date. **Note:** This field appears when the **Policy** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
End Date	Used to search policies which are effective till a particular date. **Note:** This field appears when the **Policy** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Characteristic Type	Used to search persons, accounts, or policies with a particular type of characteristic. **Note:** This field appears when the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Characteristic Value	Used to search persons, accounts, or policies with a particular characteristic. **Note:** This field appears when you are searching for a person, account, or policy using the characteristic type. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristics value.
Division	Used to search persons or accounts which belong to a particular division.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Person** or **Account** option is selected from the **Search By** list.	
Customer Class	Used to search accounts or persons' whose accounts belong to a particular customer class. **Note:** This field appears when the **Person** or **Account** option is selected from the **Search By** list.	No
Person ID	Used to search a particular person. **Note:** This field appears when the **Person** option is selected from the **Search By** list.	No
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person. **Note:** This field appears when the **Person** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search a person with a particular identifier. **Note:** This field appears when the **Person** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Person Type	Used to search persons of a particular type. The valid values are: • Business • Bill Group • Group • Broker • Person • Parent Customer **Note:** This field appears when the **Person** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Address	Used to search persons with a particular address or accounts' whose main customer has a particular address. **Note:** This field appears when the **Person** or **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
City	Used to search persons who belong to a particular city or accounts' whose main customer belongs to a particular city. **Note:** This field appears when the **Person** or **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Skip Months	Used to search accounts for which the skip months are defined through a billing preference. **Note:** You can set the billing preference for an account through a characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration. The system enables you to define, edit, delete, and copy a billing preference through the **Field Mapping** screen. For more information, see Defining a Billing Preference on page 3546. This field appears when the **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Phone Number	Used to search a person with a particular phone number or accounts' whose main customer has a particular phone number. **Note:** This field appears when the **Person** or **Account** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **360° Search** zone is clicked.	No
Account ID	Used to search a particular account. **Note:** This field appears when the **Account** option is selected from the **Search By** list.	No
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account. **Note:** This field appears when the **Account** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search an account with a particular identifier.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Account** option is selected from the **Search By** list.	**Note:** If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Note:

You must specify at least one search criterion while searching for a person, account, or policy. One more search criterion is required when you are searching for a person or account using the division and/or customer class. Similarly, one more search criterion is required when you are searching for a policy using the policy type and/or source system.

If you have specified any other search criterion along with the person ID, account ID, or policy ID, the system ignores the additional search criterion and searches using the person ID, account ID, or policy ID, respectively.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Information	Displays information about the policy. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy. This column appears when the **Policy** option is selected from the **Search By** list.
Main Customer	Indicates the main customer of the policy or account. **Note:** This column appears when the **Policy** or **Account** option is selected from the **Search By** list.
Source System	Displays the name of the external system in which the policy was created. **Note:** This column appears when the **Policy** option is selected from the **Search By** list.
Policy Number	Displays the policy number. **Note:** This column appears when the **Policy** option is selected from the **Search By** list.
Start Date	Displays the date from when the policy is effective. **Note:** This column appears when the **Policy** option is selected from the **Search By** list.
End Date	Displays the date till when the policy is effective. **Note:** This column appears when the **Policy** option is selected from the **Search By** list.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Status	Indicates the status of the policy. The valid values are: • In Force/Active • Canceled • Pending Cancellation • Pending • Pending Reinstatement • Pending Termination • Post Runout • Reinstated • Runout • Terminated **Note:** This column appears when the **Policy** option is selected from the **Search By** list.
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This column appears when the **Person** option is selected from the **Search By** list.
Person Name	Displays the name of the person. **Note:** This column appears when the **Person** option is selected from the **Search By** list.
Person Type	Indicates the type of the person. The valid values are: • Business • Bill Group • Group • Broker • Person • Parent Customer **Note:** This column appears when the **Person** option is selected from the **Search By** list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person. **Note:** This column appears when the **Person** option is selected from the **Search By** list.
Primary Person Identifier	Displays the primary person identifier. **Note:** This column appears when the **Person** option is selected from the **Search By** list.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This column appears when the **Account** option is selected from the **Search By** list.
Division	Indicates the division to which the account belongs.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Customer Class	Indicates the customer class to which the account belongs.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Primary Account Identifier Type	Indicates the primary identifier type associated with the account.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Primary Account Identifier	Displays the primary account identifier.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Current Balance	Displays the total amount of funds in the account.
	Note: This column appears when the **Account** option is selected from the **Search By** list.
Also Known As	Displays the non-primary names of the person separated by semi-colon (;).
	Note: This column appears when the **Person** option is selected from the **Search By** list.

Note:

You can view the 360° information of the person, account, or policy by clicking the **View** (🔗) icon corresponding to the record in the **Search Results** section.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Person

Prerequisites

To search for a person, you should have:

- Divisions, customer classes, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
   The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify division and/or customer class when you are searching for a person using the city.

You must specify division, customer class, or any other criteria in the second group when you are searching for a person using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

Copyright © 2025, Oracle and/or its affiliates.

5. Click **Search**.
   A list of persons that meet the search criteria appears in the **Search Results** section.

Searching for an Account

Prerequisites

To search for an account, you should have:

- Divisions, customer classes, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
   The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.
4. Enter the required search criteria in the **360° Search** zone.

> **Note:**
>
> You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.
>

Searching for a Policy

Prerequisites

To search for a policy, you should have:

- Policy types and policy person roles defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, click **Customer Management** and then click **Customer 360° View**.
   The **Customer 360° View** screen appears.
3. Select the **Policy** option from the **Search By** list to indicate that you want to search for a policy.
4. Enter the required search criteria in the **360° Search** zone.

   Note:

   You must specify at least one search criterion while searching for a policy. One more search criterion is required when you are searching for a policy using the policy type and/or source system.

   If you have specified any other search criterion along with the policy ID, the system ignores the additional search criterion and searches for the policy using the policy ID.

   You must specify the person name when you are searching for a policy using the policy person role.

   ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

   The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

   If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.
   A list of policies that meet the search criteria appears in the **Search Results** section.

Viewing the 360° Information of a Person

Prerequisites

To view the 360° information of a person, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

Procedure

To view the 360° information of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.

   The **Person** tab appears in the **Customer 360° Information** screen. It contains the following zones:

   - Person Information on page 610
   - Additional Attributes on page 612
   - Child Persons on page 613
   - Person Hierarchy on page 613

     Note: The **Person Hierarchy** zone does not appear when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Person Billing Hierarchy on page 614

     Note: The **Person Billing Hierarchy** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Bill Group Derivation and Pricing Parameters on page 616

     Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Bill Group Sorting on page 618

     Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Customer Contacts on page 619
   - Bill Groups Created Via Customer Registration on page 620

     Note: The **Bill Groups Created Via Customer Registration** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
3. View the basic details of the person in the **Person Information** zone.
4. View the characteristics of the person in the **Person Characteristics** zone.
5. View the child persons included in the person's hierarchy in the **Child Persons** zone.
6. View the accounts and policies where the person is the main customer and memberships where the person is the *m*ain subscriber in the **Person Hierarchy** zone.
7. View the parent customer's accounts and policies and its bill groups' accounts and policies in the **Person Billing Hierarchy** zone.
8. View the derivation and pricing parameters defined for the bill group and sort ID combinations in the **Bill Group Derivation and Pricing Parameters** zone.
9. View the sort IDs defined for the bill groups in the **Bill Group Sorting** zone.
10. View how and when the person was contacted in the **Customer Contacts** zone.
11. View the customer registration objects through which the bill groups are created for the parent customer in the **Bill Groups Created Via Customer Registration** zone.

Copyright © 2025, Oracle and/or its affiliates.

12. If required, you can view the details of the account to which the person is associated in the **Account** tab.

> **Note:**
>
> If you are viewing the 360° information of a parent customer, the following zones appears in the **Account** tab when you click the **Broadcast** (ᯤ) icon corresponding to the account in the Account List on page 622 zone:
>
> - Account Information on page 623
> - Auto Pay Details on page 625
> - Account Characteristics on page 624
> - Account Financial and Collections Summary on page 626
> - Open Bills on page 627
> - Billed Vs Paid on page 629
> - Timeline on page 631
> - Trial Bills on page 634

13. If required, you can view the details of the policy to which the person is associated in the **Policy** tab.
14. If required, you can view the pricing information of the parent customer or its bill groups in the **Pricing Information** tab.

Prerequisites

To view the 360° information of an account, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration
- Values defined for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1_CMO** feature configuration
- Values defined for the **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

Copyright © 2025, Oracle and/or its affiliates.

Note: The latter two prerequisites are not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

Procedure

To view the 360° information of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account whose details you want *t*o view.

   The **Account** tab appears in the **Customer 360° Information** screen. It contains the following zones:

   - Account List on page 622

     Note: The **Account List** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
   - Account Information on page 623
   - Auto Pay Details on page 625
   - Account Characteristics on page 624
   - Administrative Contracts on page 625

     Note: The **Administrative Contracts** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.
   - Account Financial and Collections Summary on page 626
   - Billing and Adjustment Summary on page 627

     Note: The **Billing and Adjustment Summary** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.
   - Open Bills on page 627
   - Billed Vs Paid on page 629
   - Timeline on page 631
   - Trial Bills on page 634
3. View the accounts of the parent customer and its bill groups in the **Account List** zone.
4. View the basic details of the account in the **Account Information** zone.
5. View the automatic payment options defined for the account in the **Auto Pay Details** zone.
6. View the characteristics of the account in the **Account Characteristics** zone.
7. View the account's contracts which should be monitored closely for various administrative reasons in the **Administrative Contracts** zone.
8. View the financial and collection details of the account in the **Account Financial and Collections Summary** zone.
9. View the billing and adjustment summary of the account in the **Billing and Adjustment Summary** zone.
10. View the unpaid bills of the account in the **Open Bills** zone.
11. View various transactions of the account, such as bills, payments, adjustments, reconciliations, and so on, in the **Billed Vs Paid** zone.
12. View the number of customer contacts, bills, and payments created for the account in a particular month in the **Timeline** zone.
13. View the trial bills which are created for the account in the **Trial Bills** zone.

Person Information

The **Person Information** zone displays the details of the person. It contains the following sections:

- **Main** - Displays the basic information about the person. It contains the following fields:

Field Name	Field Description
Person Information	Displays information about the person. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the person.
Person Type	Indicates the type of the person. The valid values are: • Business • Bill Group • Group • Broker

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Person • Parent Customer
Date of Birth	Displays the date when the person was born. **Note:** This field appears when the respective data is available for the person.

- **Person Names** - Lists the primary and non-primary names of the person. It contains the following columns:

Column Name	Column Description
Name Type	Indicates the type of the name.
Person Name	Displays the name of the person.

- **Person Identifiers** - Lists various types of identification associated with the person. It contains the following columns:

Column Name	Column Description
Person Identifier Type	Indicates the person identifier type.
Person Identifier	Displays the value of the person identifier type.

- **Contact Information** - Displays the contact details of the person. It contains the following fields:

Field Name	Field Description
Country	Indicates the country where the person is located.
Address 1	Displays the first line of the person's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the person's address. It may contain details, such as street name.
Address 3	Displays the third line of the person's address. It may contain the landmark details.
Address 4	Displays the fourth line of the person's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the person resides within the city limit or not. The valid values are: • Yes • No
City	Displays the city where the person is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the person is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.
Email ID	Displays the e-mail ID of the person.

Copyright © 2025, Oracle and/or its affiliates.

Note: The above mentioned fields appear in the **Contact Information** section when the respective data is available for the person.

- **Phone Details** - Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone number.
Phone Number	Displays the phone number of the person.
Extension	Displays the telephone extension number (if any).

- **Person Collection** - Lists the person's collection and advance deposit details. It contains the following fields:

Field Name	Field Description
Collection Class	Displays the separate delinquency process created for the accounts belonging to the collection class.
Last Credit Review Date	Indicates the date when the account's debt was last reviewed.
Drag Days	Displays the additional grace days offered at the account level.
Advance Deposit Amount	Displays the advance deposit amount. **Note:** This field appears only when the advance deposit level of a person is set to **Parent Customer**.
Advance Deposit Grace Days	Displays the grace days used for calculating the advance deposit grace period. **Note:** This field appears only when the advance deposit level of a person is set to **Parent Customer**.
Advance Deposit Level	Indicates whether the advance deposit received from the group customer is parked at the parent customer or policy level. The valid values are: • Parent Customer • Policy **Note:** This field appears only when you are viewing the details of a person whose person type is set to **Parent Customer**.

Note: The fields appear in the **Person Collection** section only when the respective data is available for the person.

Additional Attributes

The **Additional Attributes** zone lists the characteristics of the person. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value** or **Foreign Key Value**.

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Child Persons

The **Child Persons** zone lists the child persons included in the person's hierarchy. It contains the following columns:

Column Name	Column Description
Child Person Information	Displays information about the child person.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the child person.
Relationship Type	Indicates how the child person is related to the parent person.
Start Date	Displays the date from when the child person is related to the parent person.
End Date	Displays the date till when the child person is related to the parent person.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a child person by clicking the **View** (🔗) icon corresponding to the child person in this zone.

You can create a new child person through the **Customer Registration** feature by clicking the **Add** link in the upper right corner of this zone. While adding a child person to a parent person, the child person is related to the parent person using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.

You can filter the list using the **Person Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Bill Group Derivation and Pricing Parameters

An employer may have different bill groups. Each bill group will handle the claim and enrollment transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group and sort ID combination. These parameters are used to derive the bill group against which the claim and enrollment transactions should be billed in the system. For example, if you want bill group 1 to handle claim and enrollment transactions of employees who reside in the western location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 1 where the source system is set to X, parameter 1 is set to Western, and parameter 2 is set to Grade A. Similarly, if you want bill group 2 to handle claim and enrollment transactions of employees who reside in the eastern location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 2 where the source system is set to X, parameter 1 is set to Eastern, and parameter 2 is set to Grade A.

Note: In the above examples, the bill group is derived based on the specified attributes when the source system, parameter 1, and parameter 2 are mapped to the appropriate transaction fields in the pricing rule type using which the pricing rules are defined for the bill group.

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4. If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group.

The **Bill Group Derivation and Pricing Parameters** zone lists the derivation and pricing parameters defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define and edit the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination through this zone. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for a bill group and sort ID combination either from this zone or from the **Upload Request** screen. While creating an upload request for the derivation and pricing parameters, you need to specify the parent customer whose bill groups' derivation and pricing parameters you want to upload. Once the upload request is processed, the derivation and pricing parameters are defined for the bill group and sort ID combination in the system.

This zone contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the derivation and pricing parameters are defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Source System	Indicates the source system from where the claim and enrollment transactions are received.
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.
Sort ID	Indicates the sort ID of the bill group.
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.
Status	Indicates the status of the derivation and pricing parameters defined for the bill group and sort ID combination. The valid values are: • Active • Inactive

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the derivation and pricing parameters of a bill group and sort ID combination.

If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header in this zone, and then click the **Edit** button. However, if you want to edit the derivation and pricing parameters of one or more bill group and sort ID combination, you need to select the check box corresponding to the bill group and sort ID combination, and then click the **Edit** button.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing.

You can define the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination by clicking the **Add** link in the upper right corner of this zone. You can also upload the derivation and pricing parameters for one or more bill group (who is effective child person of the parent customer) and sort ID combinations by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using various search criteria (such as, **Parameter 1**, **Parameter 2**, **Parameter 3**, **Parameter 4**, **Bill Group ID**, **Sort ID**, **Status**, and **Bill Group Name**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306.

Bill Group Sorting

Oracle Revenue Management and Billing allows you to define unique sort IDs for a bill group in a given date range. In future, the sort ID will be used to club transactions based on certain parameters and present them in the bill in the ascending or descending order. It may also be used to sort data while generating various reports.

The **Bill Group Sorting** zone lists the sort IDs defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define, edit, and delete a sort ID of a bill group (who is effective child person of the parent customer) through this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) at the same time using the **Upload Request** feature. You can upload the sort IDs for bill groups either from this zone or from the **Upload Request** screen. While creating an upload request for bill group sort IDs, you need to specify the parent customer whose bill groups' sort IDs you want to upload. Once the upload request is processed, the sort ID is defined for the respective bill group in the system.

This zone contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the sort ID is defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Sort ID	Displays the sort ID.
Description	Displays the description of the sort ID.
Start Date	Displays the date from when the sort ID is effective for the bill group.
End Date	Displays the date till when the sort ID is effective for the bill group.

In addition, it contains the following buttons:

Copyright © 2025, Oracle and/or its affiliates.

Button Name	Button Description
Edit	Used to edit the details of a bill group's sort ID.
Delete	Used to delete a bill group's sort ID.
	Note: You can delete a bill group's sort ID when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

If you want to edit or delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header in this zone, and then accordingly click the **Edit** or **Delete** button. However, if you want to edit or delete one or more sort IDs of effective bill groups, you need to select the check box corresponding to the bill group and sort ID combination, and then accordingly click the **Edit** or **Delete** button.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing or deleting.

You can define a sort ID for a bill group (who is effective child person of the parent customer) by clicking the **Add** link in the upper right corner of this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using the **Bill Group Name** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306.

Customer Contacts

The **Customer Contacts** zone displays information about how and when the person was contacted. It contains the following columns:

Column Name	Column Description
Contact Date	Displays the date when the person was contacted.
Customer Contact Information	Displays information about the customer contact.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Customer Contact** screen appears where you can view the details of the customer contact.
Contact Type	Indicates how the person was contacted.
Comments	Displays additional information about the customer contact.

You can filter the list using various search criteria (such as, **On or Before Contact Date**, **Contact Class**, **Contact Type**, and **Show Open Contacts Only**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Bill Groups Created Via Customer Registration

The **Bill Groups Created Via Customer Registration** zone lists the customer registration objects through which the parent customer's bill groups are created in the system. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**. It contains the following columns:

Column Name	Column Description
Customer Registration Information	Indicates the customer registration object through which the bill group is created.
	Note: It has a link. On clicking the link, the **Customer Registration** screen appears where you can view the details of the respective customer registration object.
Person Name	Displays the name of the bill group.
Person Relationship Type	Indicates how the bill group is related to the parent customer.
Status	Indicates the status of the customer registration object. The valid value is: • Bill Group Approved

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Person Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Customer 360° Information - Account

The following table provides information about the **Account** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded or fully-insured group policy	The **Account** tab displays the following: • List of the parent customer's and bill groups' accounts. Note that the system lists the accounts of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.

Copyright © 2025, Oracle and/or its affiliates.

If you are viewing the 360° information of...	Then...
	• Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the parent customer's or bill group's account.
A bill group who is associated with the fully-insured group or self-funded policy	The **Account** tab displays the basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account. **Note:** If the bill group has multiple accounts, the system, by default, picks and displays the details of any one of its account.
A person whose person type is neither **Parent Customer** nor **Bill Group**	The **Account** tab displays the basic details, characteristics, automatic payment options, administrative contracts, financial and collections summary, billing and adjustment summary, and unpaid bills of the person's account. **Note:** If the person has multiple accounts, the system, by default, picks and displays the details of any one of its account.

It contains the following zones:

- Account List on page 622

  Note: The **Account List** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- Account Information on page 623
- Auto Pay Details on page 625

Account List

The **Account List** zone lists the accounts of the parent customer and its bill groups. Note that the system lists the accounts of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**. It contains the following columns:

Column Name	Column Description
Person Name	Indicates the person who is linked to the account.
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Person Type	Indicates the type of the person. The valid values are: • Business • Bill Group • Group • Broker • Person • Parent Customer
Person's Mailing Address	Displays the mailing address of the person.
Person ID	Displays the person ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to an account, the following zones appear in the **Account** tab:

- Account Information
- Auto Pay Details
- Account Financial and Collections Summary
- Account Characteristics
- Open Bills
- Billed Vs Paid
- Timeline

You can filter the list using various search criteria (such as, **Person Name**, **Account ID**, **Person Type**, and **Include Ended Child Person's Accounts**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Account Information

The **Account Information** zone displays the details of the account. It contains the following sections:

- **Main** - Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Management Group	Indicates the account management group to which the account belongs.
	Note: It has a link. On clicking the link, the **Account Management Group** screen appears where you can view the details of the respective account management group. This field appears when the respective data is available for the account.

- **Contact Information** - Displays the contact details of the account's main customer. It contains the following fields:

Field Name	Field Description
Address Source	Indicates which address should be used to route the account's bills and/or quotes via the postal service.
Country	Indicates the country where the main customer is located.
Address 1	Displays the first line of the main customer's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the main customer's address. It may contain details, such as street name.
Address 3	Displays the third line of the main customer's address. It may contain the landmark details.
Address 4	Displays the fourth line of the main customer's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the main customer resides within the city limit or not. The valid values are: • Yes • No
City	Displays the city where the main customer is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the main customer is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.

Copyright © 2025, Oracle and/or its affiliates.

Note: The above mentioned fields except **Address Source** appear in the **Contact Information** section when the address source of the main customer is set to **Account Override** and the respective data is available for the account.

- **Account Identifiers** - Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

- **Billing** - Displays the billing information of the account. It contains the following fields:

Field Name	Field Description
Bill Cycle	Indicates the bill cycle of the account.
	Note: It has a link. On clicking the link, the **Bill Cycle** screen appears where you can view the details of the respective bill cycle. This field appears when the respective data is available for the account.
Bill After Date	Displays the date when the billing should be resumed for the account.
	Note: This field appears when the respective data is available for the account.
Skip Months	Indicates the months separated by comma for which billing should be skipped for the account.
	Note: The system derives the skip months for an account using the billing preference. You can set the billing preference for an account through a characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration. The system enables you to define, edit, delete, and copy a billing preference through the **Field Mapping** screen. For more information, see Defining a Billing Preference on page 3546.

Account Characteristics

The **Account Characteristics** zone lists the characteristics of the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value** or **Foreign Key Value**.

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Copyright © 2025, Oracle and/or its affiliates.

Administrative Contracts

The **Administrative Contracts** zone lists the account's contracts which should be monitored closely for various administrative reasons. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following columns:

Column Name	Column Description
Contract ID	Displays the contract ID. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Contract Type	Indicates the type of the contract.
Currency	Indicates the currency in which the contract balance is maintained.
Current Balance	Displays the current balance on the contract.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The data appears in this zone when you have defined the value for the **Administrative Contract Type** option type in the **C1_CMO** feature configuration.

Auto Pay Details

The **Auto Pay Details** zone lists the automatic payment options defined for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card. **Note:** The data appears in this column when the external type of the auto pay source code's tender type is set to **Credit Card Withdrawal**.
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

Copyright © 2025, Oracle and/or its affiliates.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Account Financial and Collections Summary

The **Account Financial and Collections Summary** zone displays the financial and collection details of the account. It contains the following fields:

Field Name	Field Description
Collection Class	Indicates the collection class to which the account belongs.
Current Credit Rating	Indicates the account's credit rating which is effective on the current date.
Last Credit Review Date	Displays the date when the account's debt was last reviewed.
Last Payment Date	Displays the date when the last payment was made for the account. **Note:** The system considers the last payment which is in the **Frozen** status.
Last Payment Amount	Displays the amount of the last payment. **Note:** The system considers the last payment which is in the **Frozen** status.
Current Balance	Displays the current balance of the account. **Note:** Current Balance = Account Level billed + Payments + Excess Credits + Unbilled Adjustments + Unbilled Corrections
Payoff Balance	Displays the payoff balance of the account. **Note:** Payoff balance = Account Level billed + Payments + Excess Credits + Unbilled Corrections
Actual Account Balance	Displays the actual balance of the account. **Note:** Actual Account Balance = Account Level billed + Payments + Excess Credits
Account on Hold	Indicates whether the account is on hold or not. The valid values are: • Yes • No
Account on Promise to Pay	Indicates whether any promise to pay is scheduled for the account on the current or future date. The valid values are: • Yes • No
Account on Payment Arrangement	Indicates whether any payment arrangement exists for the account. The valid values are: • Yes • No
Account on Payment Agreement	Indicates whether any active payment agreement request exists for the account. The valid values are:

Field Name	Field Description
	• Yes • No

Billing and Adjustment Summary

The **Billing and Adjustment Summary** zone displays the billing and adjustment summary of the account. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following sections:

- **Quote Billed Balance** - Displays information about the account's billed balance. It contains the following fields:

Field Name	Field Description
Past Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a past due date.
Future Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a future due date.
Quote Billed Balance	Displays the sum of past due billed balance and future due billed balance.

- **Future Adjustments and Retroactivity** - Displays information about the account's future adjustments and retro activities. It contains the following fields:

Field Name	Field Description
Future Adjustments	Displays the sum of adjustment financial transactions of the account which are swept onto the next bill.
Future Retro Terms (Credits)	Displays the sum of canceled bill segment financial transactions of the account which are presented on the next bill.
Future Retro Adds (Debits)	Displays the sum of membership premium billable charges which are not yet billed to the account. **Note:** The data appears in this field when the values are defined for the **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration.
Future Balance with Adjustments & Debits/Credits	Displays the sum of quote billed balance, future adjustments, future retro terms (credits), and future retro adds (debits).

• Pending
• Complete</td></tr>
<tr><td>Unpaid Amount</td><td>Displays the unpaid amount of the bill.</td></tr>
<tr><td>Age Bucket</td><td>Indicates the age bucket in which the bill's days past due falls. The valid values are:
• Age 0 to 30 DPD
• Age 31 to 60 DPD
• Age 61 to 90 DPD
• Age > 90 DPD</td></tr>
<tr><td>Days Past Due</td><td>Displays the number of days past after the due date.</td></tr>
<tr><td>Overdue Process Information</td><td>Indicates the overdue process which is initiated for the bill and is currently in the Active status. In addition, this column has a context menu which helps in navigating to other screens in the application.
Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the respective overdue process.</td></tr>
<tr><td>Delinquency Process Information</td><td>Indicates the information of a delinquency process created for an overdue bill of the account.
Note: It has a link. On clicking the link, the Delinquency Process screen appears where you can view the details of the respective delinquency process.</td></tr>
<tr><td>Payment Agreement Request Information</td><td>Indicates the active payment agreement request in which the bill is included.</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Payment Agreement Request** screen appears where you can view the details of the respective payment agreement request.

You can view additional information about the bill by clicking the **View** (🔗) icon corresponding to the bill in the **Open Bills** zone.

You can filter the list using various search criteria (such as, **On or Before Bill Date** and **Show All Bills**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Note: If you select the **Show All Bills** option, the system lists all bills where the unpaid amount is greater than or equal to zero.

Billed Vs Paid

The **Billed Vs Paid** zone lists the following transactions of the account:

- Bills which are created for the account

  Note: The system lists the bills which are created for the account either manually from the user interface or automatically through the batches. It also lists the bills which are created for the account through a manual or automatic invoice request.
- Any excess credit which is made for the account
- Payments which are created or canceled for the account
- Adjustments which are created or canceled for the account
- Refund or Write Off adjustments which are created or canceled for the account
- Payment transfer to the reconciliation contract of the account
- Payment transfer from the reconciliation contract to the payor account's contract
- Reconciliations through which the account's bill segments are reconciled
- Automatic payments sent to the auto clearing house for review before freezing them

Note: The excess credit information for the account appears when you have defined the value for the **On Account Contract Type** option type in the **C1_CMO** feature configuration. Accordingly, the excess credit information (if any) on the respective contracts is listed in this zone.

It contains the following columns:

Column Name	Column Description
Due Date	Displays the date when the bill is due for payment. **Note:** The data appears in this column when the transaction type is set to **Bill**.
Bill ID	Displays the bill ID.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when the transaction type is set to **Adjustment**, **Adjustment Cancellation**, **Reconciliation Contract - Returned**, **Payment Transfer**, and **Payment Transfer Cancellation**. In addition, the data appears in this column when the automatic payments are sent to the auto clearing house for review before freezing them. The transaction description for such payments is set to **Pending Payment**.
Transaction Amount	Displays the transaction amount.
Unpaid Amount	Displays the unpaid amount of the bill.
	Note: The data appears in this column when the transaction type is set to **Bill**.
Payment Date	Displays the date when the payment is created or canceled for the account.
	Note: The data appears in this column when the transaction type is set to **Payment**, **Payment Cancellation**, or **Excess Credit (overpayment)**.
Tender Type	Indicates the type of tender through which the payment was made.
Check Number/External Reference ID	Displays the check number or external reference ID.
Transaction ID	Displays the payment, adjustment, or reconciliation ID.
	Note: It has a link. On clicking the link, the **Payment**, **Adjustment**, or **Reconciliation** screen appears where you can view the details of the respective transaction.

The **View** (🔗) icon appears corresponding to a bill in this zone. On clicking the **View** (🔗) icon corresponding to a bill, the **Bill Information** screen appears where you can view the details of the respective bill.

You can filter the list using the **On or Before Due Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306.

Timeline

The **Timeline** zone displays the following information in a graphical form:

- Number of customer contacts which are created for the account's main customer in a particular month
- Number of bills which are created for the account in a particular month
- Number of payments which are created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the current month appears in this field.	
Year	Used to indicate the year till when you want to display the above stated information. **Note:** By default, the current year appears in this field.	Yes

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** (⊙) icon.

You can use the **Previous 12 Months** (⏮), **Previous Month** (⏪), **Go To Today** (○), **Next Month** (⏩), and **Next 12 Months** (⏭) icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description
Customer Contacts	A small icon appears for each customer contact which is created for the account's main customer in the respective month. For example, if two customer contacts are created for the main customer in the month of Jan 2017 and one customer contact is created in the month of Feb 2017, then two icons appear in the Jan 2017 column and one icon appear in the Feb 2017 column. A text indicating the day of the month when the customer contact was created appears on the icon. The following table indicates the color in which the icon appears depending on the condition which is satisfied: **If the contact action on the customer contact type is...** / **Then the icon appears in...** Set to **Send Letter** / Red Set to **Action Algorithm** / Yellow On clicking the icon, the corresponding customer contact information appears at the bottom of this zone. It has a link. On clicking the link, the **Customer Contact** screen appears where you can view the details of the respective customer contact. **Note:** You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the **C1-TL-CC-EVT** algorithm.
Bills	A small icon appears for each bill which is created for the account in the respective month. For example, if three bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month when the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied: **If the bill is...** / **Then the icon appears in...** Fully Matched / Green Unmatched / Red

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Row Name</th><th>Row Description</th></tr>
<tr><td></td><td>
<table>
<tr><th>If the bill is...</th><th>Then the icon appears in...</th></tr>
<tr><td>Credit Note</td><td>Blue</td></tr>
<tr><td>Scheduled for billing in the next bill cycle</td><td>Black</td></tr>
</table>
On clicking the icon, the corresponding bill information appears at the bottom of this zone. It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Note:
If you want to display the day of the due date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to D. However, if you want to display the day of the bill date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to B.
You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-OI-EVT algorithm.
</td></tr>
<tr><td>Payments</td><td>
A small icon appears for each payment which is created for the account in the respective month. For example, if one payment is created for the account in the month of Aug 2016, three payments are created in the month of Dec 2016, and four payments are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month when the payment was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the payment:
<table>
<tr><th>Status</th><th>Color</th></tr>
<tr><td>Frozen</td><td>Green</td></tr>
<tr><td>Canceled</td><td>Red</td></tr>
<tr><td>Freezable</td><td>Blue</td></tr>
<tr><td>Error</td><td>Red</td></tr>
<tr><td>Incomplete</td><td>Yellow</td></tr>
</table>
On clicking the icon, the corresponding payment information appears at the bottom of this zone. It has a link. On clicking the link, the Payment screen appears where you can view the details of the respective payment.
Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the C1-TL-PY-EVT algorithm.
</td></tr>
</table>

Hold Details

The **Hold Details** zone lists the hold requests which are created for the account. Note that only those hold requests are listed in this zone where the respective entity's start date is earlier than or equal to the system date and the entity's end date is later than or equal to the system date. However, note that the system does not list the hold requests which are either in the **Rejected** or **Released** status.

If two or more processes are kept on hold for the account through a hold request, the system will list multiple records for the hold request — one each for the process kept on hold through the hold request. This zone contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Hold Request Information	Displays information about the hold request. **Note:** It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request. The valid value is: • Draft
Entity	Indicates the type of entity for which the hold request is created. The valid value is: • Account
Hold Reason	Indicates the reason why the hold request is created for the entity.
Hold Process	Indicates the process that is kept on hold for the account.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.

Trial Bills

The **Trial Bills** zone lists the trial bills which are created for the account. It contains the following columns:

Column Name	Column Description
Creation Date	Displays the date when the trial bill is created.
Trial Bill Information	Displays information about the trial bill. **Note:** It has a link. On clicking the link, the **Trial Bill** screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.

Customer 360° Information - Policy

The following table provides information about the **Policy** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	The **Policy** tab displays the following: • List of self-funded policies to which the parent customer's bill groups are associated. **Note:** The system lists only those policies of the bill groups where the parent customer is associated as a policy holder. • Basic details and policy persons of a self-funded policy where the parent customer is the policy holder.
A parent customer who is associated with the fully-insured group policy	The **Policy** tab displays the following: • List of fully-insured group policies to which the parent customer or its bill groups are associated.

Copyright © 2025, Oracle and/or its affiliates.

If you are viewing the 360° information of...	Then...
	Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder. • Basic details, policy persons, and policy plans of a fully-insured group policy to which the parent customer or its bill group is associated.
A bill group who is associated with the self-funded policy	The **Policy** tab displays the following: • List of self-funded policies to which the bill group is associated. • Basic details and policy persons of a self-funded policy.
A bill group who is associated with the fully-insured group policy	The **Policy** tab displays the following: • List of fully-insured group policies to which the bill group is associated. • Basic details, policy persons, and policy plans of a fully-insured group policy.
A person whose person type is neither **Parent Customer** nor **Bill Group**	The **Policy** tab displays the following: • List of fully-insured group or self-funded policies to which the person is associated. • Basic details, policy persons, and policy plans of a self-funded or fully-insured group policy.

It contains the following zones:

- Policy List on page 635

Note: The **Policy List** zone appears when there is more than one policy associated with the person.

- Policy Information on page 636
- Policy Persons on page 640
- Policy Plans on page 640

Note: The **Policy Plans** zone appears when you are viewing the 360° information of a person who is associated with the fully-insured group policy.

Policy List

If you are viewing 360° information of a parent customer, the **Policy List** zone lists the policies to which the parent customer and its bill groups are associated. Note that the system lists the policies of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.

Note: The system lists only those policies of the bill groups where the parent customer is associated as a policy holder.

If you are viewing 360° information of a bill group, the **Policy List** zone lists the policies to which the bill group is associated. If you are viewing 360° information of a person who is neither a parent customer nor a bill group, the **Policy**

Copyright © 2025, Oracle and/or its affiliates.

List zone lists the policies to which the person is associated. This zone appears when there is more than one policy associated with the person. It contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Policy Type	Indicates the type of the policy.
Status	Indicates the status of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a policy, the following zones appear in the **Policy** tab:

- Policy Information
- Policy Persons
- Policy Plans

You can filter the list using various search criteria (such as, **Policy Number**, **Start Date**, **Policy Type**, **End Date**, and **Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Policy Information

The **Policy Information** zone displays the details of the policy. It contains the following sections:

- **Main** - Displays the basic information about the policy. It contains the following fields:

Field Name	Field Description
Base Policy Information	Displays information about the base policy.
	Note: This field appears when you are viewing the details of a renewed policy which is created using a policy type where the policy category is set to **Self-Funded**.
Policy Information	Displays information about the policy.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Policy Type	Indicates the policy type using which the policy is created.
	Note: It has a link. On clicking the link, the **Policy Type** screen appears where you can view the details of the respective policy type.
Source System	Indicates the external system from where the policy is originated.
Policy Number	Displays the policy number.
Status	Indicates the status of the policy. If the policy is created using the **C1-POLICY** business object, the valid values are: • Pending • In Force/Active • Pending Cancellation • Canceled • Pending Reinstatement • Reinstated • Pending Termination • Terminated However, if the policy is created using the **C1-ASOPolicy** business object, the valid values are: • Pending • In Force/Active • Runout • Post Runout
Status Reason	Indicates the reason why the policy is terminated.
	Note: It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective termination reason. This field appears when you are viewing the details of a terminated or reinstated policy which is created using a policy type where the policy category is set to **Fully-Insured Group** or **Fully-Insured Individual**.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Renewal Date	Displays the date when the policy is renewed.
	Note: This field appears when you are viewing the details of a policy which is renewed.
Paid Through Date	Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.

Field Name	Field Description
	Note: This field appears only when the **Advance Deposit Applicability** option is selected. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

- **Characteristics** - Lists the characteristics defined for the policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Policy Persons

The **Policy Persons** zone lists the persons associated with the policy. It contains the following columns:

Column Name	Column Description
Person Name	Indicates the person who is associated with the policy.
Policy Person Role	Indicates the role of the person with respect to the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a policy person by clicking the **View** (🔗) icon corresponding to the person in the **Policy Persons** zone.

Policy Plans

The **Policy Plans** zone lists the plans defined in the policy. It appears when you are viewing the 360° information of a person who is associated with the fully-insured group policy. It contains the following columns:

Column Name	Column Description
Policy Plan Information	Displays information about the policy plan. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Plan Name	Indicates the plan to which the policy belongs.
Benefit Type	Indicates the benefit type of the policy plan. The valid values are:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Commercial • Medicare Affiliated
No. of Subscribers	Indicates the number of main subscribers in the policy plan.
No. of Members	Indicates the number of members in the policy plan.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Plan Start Date** and **Plan End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Customer 360° Information - Pricing Information

The following table provides information about the **Pricing Information** tab:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	The **Pricing Information** tab displays the following: • Basic details of the pricing rules which are defined for the parent customer. • Summarized tree view listing each bill group of the parent customer and the bill groups' self-funded policies and pricing rules. • Basic details of the self-funded policies which are associated with each bill group of the parent customer. • Basic details of the pricing rules which are defined for the self-funded policies of each bill group. • Basic details of the active pricing groups which are defined for each bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.
A bill group who is associated with the self-funded policy	The **Pricing Information** tab displays the following: • Summarized tree view listing the parent customer and pricing rules which are defined for the parent customer. • Basic details of the self-funded policies which are associated with the bill group. • Basic details of the pricing rules which are defined for the self-funded policies of the bill group. • Basic details of the active pricing groups which are defined for the bill group. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.
A parent customer who is associated with the fully-insured group policy	The **Pricing Information** tab displays the following:

Copyright © 2025, Oracle and/or its affiliates.

If you are viewing the 360° information of...	Then...
	• Basic details of the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue). • Summarized tree view listing the pricing rules which are defined for the parent customer, fully-insured group policies, and policy plans. • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules for different entities.
A bill group who is associated with the fully-insured group policy	The **Pricing Information** tab displays the following: • Basic details of the pricing rules which are defined for different entities (such as parent customer, fully-insured group policy, policy plan, and state of issue). • Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules for different entities.
A person whose person type is neither **Parent Customer** nor **Bill Group**	No data appears in the **Pricing Information** tab.

It contains the following zones:

- Parent Customer Pricing Rules on page 643

  Note: The **Parent Customer Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.
- Bill Group Self-Funded Policy Pricing Rule Summary on page 646

  Note: The **Bill Group Self-Funded Policy Pricing Rule Summary** zone appears when you are viewing 360° information of a parent customer who is associated with the self-funded policy.
- Parent Customer Pricing Rule Summary on page 647

  Note: The **Parent Customer Pricing Rule Summary** zone appears when you are viewing 360° information of a bill group who is associated with the self-funded policy.
- Bill Group Self-Funded Policy Information on page 648

  Note: The **Bill Group Self-Funded Policy Information** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy.
- Bill Group Self-Funded Policy Pricing Rules on page 649

Bill Group Self-Funded Policy Information

The **Bill Group Self-Funded Policy Information** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy. If you are viewing the 360° information of a parent customer, the **Bill Group Self-Funded Policy Information** zone lists the policies to which each bill group of the parent customer is associated. However, if you are viewing the 360° information of a bill group, the **Bill Group Self-Funded Policy Information** zone lists the policies to which the bill group is associated. It contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the bill group to which the policy is associated. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective bill group (i.e. person).
Policy Information	Displays information about the policy. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
Renew	On clicking the **Renew** (⎘) icon, the **Policy** screen appears where you can renew the policy. **Note:** The **Renew** icon appears when the policy is in the **In Force/Active** status and it is not yet renewed.
Policy Number	Displays the policy number.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Status	Indicates the status of the policy. The valid values are: • Pending • In Force/Active • Runout • Post Runout
Runout End Date	Displays the date when the runout period of the policy ends.
Renewal Date	Displays the date when the policy is renewed.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when the policy is renewed.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (ᯤ) icon corresponding to a bill group and policy combination, the **Bill Group Self-Funded Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

You can filter the list using various search criteria (such as, **Bill Group Name**, **Policy Start Date**, and **Policy End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (⧩) icon in the upper right corner of this zone.

Bill Group Pricing Groups

The **Bill Group Pricing Groups** zone lists the pricing groups which are defined for the bill group. By default, the active pricing groups are listed in this zone. It appears when you are viewing 360° information of a bill group who is associated with the self-funded policy. It contains the following columns:

Column Name	Column Description
Pricing Group	Indicates the pricing group which is created for the bill group.
Status	Indicates the status of the pricing group. The valid values are: • Active • Inactive

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Edit	On clicking the **Edit** (✎) icon, the **Pricing Group** screen appears where you can edit the details of the pricing group.
Delete	On clicking the **Delete** (🗑) icon, you can delete the pricing group.
	Note: You can delete a pricing group when it is not yet used while defining a pricing rule for the bill group.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Pricing Group** screen appears where you can define a new pricing group using an existing pricing group.
Associated Price Items	Indicates the price items whose pricing is defined using the pricing group.
Rules	Indicates the number of rules defined in the respective pricing group.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Group Pricing Groups** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill group in the **Bill Group Self-Funded Policy Information** zone.

You can define a new pricing group for the bill group by clicking the **Add** link in the upper right corner of this zone.

You can filter the list using the **Show All** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Note: If you select the **Yes** option from the **Show All** list, the system lists both the active and inactive pricing groups in the **Bill Group Pricing Groups** zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306.

Fully-Insured Pricing Rules

The **Fully-Insured Pricing Rules** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the fully-insured group policy. If you are viewing the 360° information of a parent customer, the **Fully-Insured Pricing Rules** zone lists:

- Age based or tier based pricing rules defined for the parent customer's or its bill groups' fully-insured group policy plans
- Additional fee pricing rules defined for the parent customer

Copyright © 2025, Oracle and/or its affiliates.

- Additional fee pricing rules defined for the fully-insured group policies and policy plans of the parent customer and its bill groups
- Additional fee pricing rules defined for the states where the fully-insured group policy, its policy plans, and memberships are issued

However, if you are viewing the 360° information of a bill group, the **Fully-Insured Pricing Rules** zone lists:

- Age based or tier based pricing rules defined for the bill group's fully-insured group policy plans
- Additional fee pricing rules defined for the parent customer
- Additional fee pricing rules defined for the fully-insured group policies and policy plans of the parent customer and the bill group
- Additional fee pricing rules defined for the states where the fully-insured group policy, its policy plans, and memberships are issued

It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Pricing Rule Type** screen appears where you can view the details of the respective pricing rule type.
Pricing Rule Information	Displays information about the pricing rule. **Note:** It has a link. On clicking the link, the **Pricing Rule** screen appears where you can view the details of the respective pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item.
Pricing Level	Indicates the level at which the pricing rule is defined. The valid values are: • Parent Customer • Plan • Policy • State
Entity Information	Indicates the fully-insured group policy, policy plan, parent customer, or state for which the pricing rule is defined.
Start Date	Displays the date from when the pricing rule is effective.
End Date	Displays the date till when the pricing rule is effective.
Price List Information	Indicates the price list that contains the price item pricing which is created through the pricing rule. **Note:** It has a link. On clicking the link, the **Price List** screen appears where you can view the details of the respective price list.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Pricing Rule Summary

The **Pricing Rule Summary** zone lists the following in a tree structure:

- Information string of the parent customer
- Information string of the pricing rule defined for the parent customer
- Information string of each fully-insured group policy where the parent customer is associated
- Information string of the pricing rule defined for the fully-insured group policy of the parent customer
- Information string of each plan defined for the fully-insured group policy of the parent customer
- Information string of the pricing rule defined for the fully-insured group policy plans

It appears when you are viewing 360° information of a parent customer who is associated with the fully-insured group policy. It contains the following column:

Column Name	Column Description
Hierarchy	Displays information about the parent customer, fully-insured group policies, policy plans, and pricing rules in a tree structure.

Pricing Rule Approval Transactions

The **Pricing Rule Approval Transactions** zone lists the following information:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	The **Pricing Rule Approval Transactions** zone lists the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.
A bill group who is associated with the self-funded policy	The **Pricing Rule Approval Transactions** zone lists the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.
A parent customer who is associated with the fully-insured group policy	The **Pricing Rule Approval Transactions** zone lists the approval transactions which are created while defining, editing, and deleting the pricing rules of different entities (such as parent customer, fully-insured group policy, policy plans, and state of issue).

Defining a Sort ID for a Bill Group

Prerequisites

To define a sort ID for a bill group, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration

Procedure

To define a sort ID for a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

   Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.
4. Click the **Add** link in the upper right corner of the **Bill Group Sorting** zone.

   The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Used to indicate the bill group for whom you want to define the sort ID. **Note:** The values appear in this list when there are effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** parameter of the **C1-ASOBLLNG** feature configuration.	Yes
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Used to specify the sort ID.	Yes
Start Date	Used to specify the date from when the sort ID is effective for the bill group.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the sort ID is effective for the bill group.	No
	Note: The end date cannot be earlier than the start date.	

5. Enter the required details in the grid.
6. If you want to define more than one sort ID for a bill group, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a sort ID of a bill group, click the **Delete** (🗑) icon corresponding to the bill group and sort ID combination.

7. Click **Save**.
   A sort ID is defined for the bill group.

Editing a Sort ID of a Bill Group

Procedure

To edit a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

Note: The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination whose details you want to edit.

Note: If you want to edit all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

   The **Bill Group Sorting** screen appears. It contains the following field:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to edit.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group whose sort ID you want to edit.	Not applicable
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Displays the sort ID.	Not applicable
Start Date	Used to specify the date from when the sort ID is effective for the bill group. **Note:** The start date cannot be later than the end date. The start date cannot be later than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	Yes
End Date	Used to specify the date till when the sort ID is effective for the bill group. **Note:** The end date cannot be earlier than the start date. The end date cannot be earlier than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	No

6. Modify the details of a bill group's sort ID, if required.
7. Click **Save**.
   The changes made to the bill group's sort ID are saved.

Deleting a Sort ID of a Bill Group

Procedure

To delete a sort ID of a bill group:

Copyright © 2025, Oracle and/or its affiliates.

1. Search for a person whose person type is set to **Parent Customer** in *t*he **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

> **Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination *t*hat you want to delete.

> **Note:** If you want to delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for deleting.

5. Click **Delete**.

   A message appears confirming whether you want to delete the bill group's sort ID.

> **Note:** You can delete a bill group's sort ID when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

6. Click **OK**.
   The bill group's sort ID is deleted.

Creating a Bill Group Sorting Upload Request

Procedure

To create a bill group sorting upload request:

1. Search for a person whose person type is set to **Parent Customer** in *t*he **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view. The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

> **Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Upload** link in the upper right corner of the **Bill Group Sorting** zone.

   The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those upload request types where the upload request business object with the **Upload Type** option type set to **BG** is selected.	

Note: The **Select Upload Request Type** screen appears when there are multiple upload request types where the upload request business object with the **Upload Type** option type set to **BG** is selected. If there is only one such upload request type defined in the application, the **Bill Group Sorting Upload Request** screen appears.

5. Select the required upload request type from the respective field.
6. Click **OK**.

The **Bill Group Sorting Upload Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the upload request.
- **Characteristics** - Used to define the characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the bill group sorting upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting upload request. **Note:** By default, the parent customer's ID appears in this field. You can change the person, if required. The system allows you to create a bill group sorting upload request for a person whose person type is set to **Parent Customer**. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes
File Name	Used to specify the name and path of the file that you want to upload. **Note:** You can also click the **Browse** button corresponding to this field to browse to the location where the file is available in the system.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify additional information about the upload request.	No

7. Click the **Browse** button corresponding to the **File Name** field.
   The **Choose File to Upload** dialog box appears.
8. Browse to the location where the file that you want to upload is available in the system.
9. Click **Open**.
   The file name along with the path appears in the **File Name** field.
10. Select the **Replace Existing File** check box depending on whether you want to upload the same file once *a*gain in the system.
11. Define characteristics for the upload request, if required.
12. Click **Save**.
    A message appears indicating the number of records which are successfully uploaded. Then, a bill group sorting upload request is created in the **Draft** status. If the bill group ID is available in the record, the status of the record is set to **Pending**. However, if the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination when the bill group ID is not specified in the record, the status of the record is set to **Invalid**.

Defining the Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

Prerequisites

To define the derivation and pricing parameters for a bill group and sort ID combination, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration
- Sort ID defined for the bill group
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To define the derivation and pricing parameters for a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in *t*he **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

Copyright © 2025, Oracle and/or its affiliates.

Note: The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Add** link in the upper right corner of the **Bill Group Derivation and Pricing Parameters** zone.

   The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' derivation and pricing parameters you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the source system from where the claim and enrollment transactions are received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in this field.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in this field.	No
Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination. **Note:** The effective date must be within the date range of the sort ID defined for the bill group.	Yes
Status	Indicates the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: • Active • Inactive	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the value is set to **Active**.	
Bill Group Information	Used to indicate the bill group for whom you want to define the derivation and pricing parameters.	Yes
	Note: The values appear in this list when there are effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** parameter of the **C1-ASOBLLNG** feature configuration.	
Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Sort ID Search** window appears.	

5. Enter the required details in the grid.
6. If you want to define the derivation and pricing parameters for more than one bill group and sort ID combination, *c*lick the **Add** (➕) icon and then repeat step 5.

Note: However, if you want to remove the derivation and pricing parameters of a bill group and sort ID combination, click the **Delete** (🗑) icon corresponding to the bill group and sort ID combination.

7. Click **Save**.
   The derivation and pricing parameters are defined for the bill group and sort ID combination.

Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. However, note that you can renew a self-funded policy when it is in the **In Force/Active** status and is not yet renewed. For more information, see Self-Funded Policy Renewal on page 341.

Procedure

To renew a self-funded policy of a bill group:

Copyright © 2025, Oracle and/or its affiliates.

1. Search for the bill group who is associated with the self-funded policy (which you want to renew) in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose details you want *t*o view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. In the **Bill Group Self-Funded Policy Information** zone, click the **Renew** (📋) icon in the **Renew** column *c*orresponding to the self-funded policy which you want to renew.

   The **Policy** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the renewed policy.
   - **Persons** - Used to associate or disassociate persons from the renewed policy.

     Note: You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.
   - **Characteristics** - Used to define the characteristics for the renewed policy.

   The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	Yes
Start Date	Used to specify the date from when the renewed policy is effective. **Note:** By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019. The start date cannot be later than the end date. The start date cannot be earlier than or equal to the base policy's end date.	Yes
End Date	Used to specify the date till when the renewed policy is effective. **Note:** The end date cannot be earlier than the start date.	Yes
Runout End Date	Used to specify the date when the runout period of the renewed policy ends. **Note:** The runout end date cannot be earlier than or equal to the renewed policy's end date.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: • None • Percentage of Claim **Note:** At present, this field is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.	No
Copy Pricing Rules	Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the **Copy Pricing Rules** option, the system copies the following pricing rules of the base policy: • Claim • Retention Type Claim Based • Retention Type Enrollment Based • Recurring Flat Fees • Ancillary **Note:** While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively. If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.	No
Copy Advance Level Funding Eligibility	Used to indicate whether you want to copy the advance level funding eligibility value of the base policy to the renewed policy. **Note:** If the **Copy Advance Level Funding Eligibility** option is set to **Y** in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date. This field appears only when you want to renew a self-funded policy.	No

Note: The **Renew** icon appears when the policy is in the **In Force/Active** status and it is not yet renewed.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.
7. Define, edit, or remove characteristics of the renewed policy, if required.

Copyright © 2025, Oracle and/or its affiliates.

8. Click **Save**.
   The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group Self-Funded Policy Information** zone.

Viewing the Bill Details

Procedure

To view the details of a bill:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account whose details you want *t*o view.
   The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Open Bills** zone, click the **View** (🔗) icon corresponding to the bill whose details you want to view.
   The **Bill Information** screen appears.
4. View the basic details of the bill in the **Bill Information** zone.
5. View the adjustments which are swept onto the bill in the **Adjustments** zone.
6. View the activities, such as payment, transfer, offset, refund, or write off through which the bill is settled, in the **Settlement Activities** zone.
7. View the bill segment information, which is summarized based on the date range and price item combination, in the **Bill Segment Summary** zone.
8. View the details of the bill segments in the **Bill Segment Details** zone.
9. View the SQ details of the bill segment in the **SQ Details** zone.
10. View the calculation lines of the bill segment in the **Bill Segment Calculation Lines** zone.
11. View the transactions whose charges are billed through the bill segment in the **Transaction Details** zone.
12. View the calculation lines of all transaction legs (which are rated before billing) in the **Transaction Leg Calculation Lines** zone.
13. View the active hold requests due to which the bill is kept on hold in the **Hold Details** zone.
14. View the offset requests through which the bill is offset against another bill in the **Offset Details** zone.
15. View the refund and write off requests through which the bill or its bill segment is either refunded or written *o*ff in the **Refund and Write Off Details** zone.

Bill Information

The **Bill Information** screen allows you to view:

- Basic details of the bill
- Adjustments which are swept onto the bill
- Activities, such as payment, offset, refund, write off, or transfer through which the bill is settled
- High-level summary and details of the bill segments which are included in the bill
- Active hold requests due to which the bill is kept on hold
- Offset requests through which the bill is offset against another bill
- Refund and write off requests through which the bill or its bill segment is either refunded or written off

It contains the following zones:

- Bill Information on page 678
- Adjustments on page 678
- Settlement Activities on page 678
- Bill Segment Summary on page 679
- Bill Segment Details on page 679
- SQ Details on page 681

Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** - Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	Displays information about the bill. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Alternate Bill ID	Displays the alternate bill ID.
	Note: This field appears only when the respective data is available for the bill.
Account Information	Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

Adjustments

The **Adjustments** zone lists the adjustments which are swept onto the bill. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustment.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Contract Information	Indicates the contract against which the adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.

Settlement Activities

You may settle a bill or its bill segment by making a payment, offsetting, refunding, writing off, or by reconciling against pay instructions. The **Settlement Activities** zone lists the activities related to the bill or its bill segment settlement. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Activity Date	Displays the date when the settlement activity was performed in the system.
Activity Type	Indicates the type of the settlement activity. The valid values are: • Payment • Offset • Refund • Write Off • Transfer
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the settlement activity.
Related Object ID	Indicates the payment, offset request, refund request, write off request, or reconciliation adjustment which is created during settlement. **Note:** It has a link. On clicking the link, the **Payment**, **Offset Request**, **Refund Request**, **Write Off Request**, or **Adjustment** screen appears where you can view the details of the respective activity.

Bill Segment Summary

The system groups the bill segments with the same date range and price item combination and then provides the summarized information for each combination in the **Bill Segment Summary** zone. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segments.
End Date	Displays the end date of the bill segments.
Policy Number	Indicates the policy for which the bill segments are generated.
Price Item Description	Indicates the price item for which the bill segments are generated.
Amount	Displays the sum of the bill segment amount.
Unpaid Amount	Displays the sum of the unpaid amount of the bill segments.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Bill Segment Details

The **Bill Segment Details** zone displays the details of the bill segments which are included in the bill. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Policy Number	Indicates the policy for which the bill segment is generated.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Price Item Description	Displays the description of the price item.
Price Item	Indicates the price item for which the bill segment is generated.
Status	Indicates the status of the bill segment. The valid values are: • Incomplete • Error • Freezable • Pending Cancel • Frozen • Canceled
Amount	Displays the bill segment amount.
Billable Charge ID	Indicates the billable charge for which the bill segment is generated. **Note:** It has a link. On clicking the link, the **Billable Charge** screen appears where you can view the details of the respective billable charge.
Unpaid Amount	Displays the unpaid amount of the bill segment.
Price Item Parameters	Displays the concatenated string consisting of a list of parameters and their values based on which the price item pricing is defined.
External Membership ID	Indicates the membership for which the bill segment is generated.
Member's Primary Identifier	Displays the concatenated string consisting of member's primary identifier type and its value which are separated by a colon (:).
Member Name	Indicates the member for whom the bill segment is generated.
Plan Information	Indicates the plan to which the membership belongs. **Note:** It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.
Auto Pay ID	Indicates the auto pay instruction through the automatic payment is created for the bill segment. **Note:** It has a link. On clicking the link, the **Auto Pay Instruction** screen appears where you can view the details of the respective auto pay instruction.
Bill Segment ID	Displays the bill segment ID. **Note:** It has a link. On clicking the link, the **Bill Segment** screen appears where you can view the details of the respective bill segment.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **View** (🔗) icon corresponding to a bill segment, the **Bill Segment** screen appears where you can view the additional details of the respective bill segment.

On clicking the **Broadcast** (📡) icon corresponding to a bill segment, the **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

Copyright © 2025, Oracle and/or its affiliates.

Note:

The **SQ Details** zone appears when the bill segment is generated for an SQI based billable charge.

The **Transaction Details** zone appears only when the bill segment is generated for a billable charge which is created through the transaction aggregation process.

You can filter the list using various search criteria (such as, **Start Date** and **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

SQ Details

The **SQ Details** zone lists the service quantity identifiers (SQIs) used in the bill segment calculation. It appears when the bill segment is generated for an SQI based billable charge. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Billed Service Quantity	Displays the service quantity used by the rates engine for calculation. This amount differs from the initial service quantity when the rate's SQ rules manipulate the service quantity.

By default, the **SQ Details** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

Bill Segment Calculation Lines

The **Bill Segment Calculation Lines** zone lists the calculation lines of the bill segment. It contains the following columns:

Column Name	Column Description
Header Sequence	Indicates the sequence in which the calculation line is generated.
Sequence	Ideally, the sequence would be 1 unless multiple versions of the rate were effective during the bill period. If there is more than one effective rate version, there will be a separate set of calculation lines for each version applied. The lines that apply to the first part of the bill period would have a Sequence of 1, the lines for the next part of the bill period would have a Sequence of 2 and so on.
Description on Bill	Displays the summarized information about the charge that will be printed on the bill.
Amount	Displays the charge amount.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Distribution Code	Displays the distribution code which indicates the GL account to which the charge must be posted.
Service Quantity	Indicates the service quantity which is used for calculation.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Segment Calculation Lines** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

Transaction Details

The **Transaction Details** zone lists the transactions whose charges are billed through the bill segment. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. **Note:** It has a link. On clicking the link, the **Transaction Details** screen appears where you can view the details of the respective transaction.
Transaction Date	Displays the date and time when the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Transaction Currency	Displays the currency in which the transaction was performed.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Initial Price Item	Indicates the price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction. **Note:** It has a link. On clicking the link, the **Rule** screen appears where you can view the details of the respective rule.
Transaction Information	Displays information about the transaction. **Note:** It has a link. On clicking the link, the **Transaction Details** screen appears where you can view the details of the respective transaction.

By default, the **Transaction Details** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a bill segment in the **Bill Segment Details** zone.

On clicking the **Broadcast** (📡) icon corresponding to a transaction, the **Transaction Leg Calculation Lines** zone appears with the details of the respective transaction.

How to view the calculation lines of all legs of a transaction	Viewing the Calculation Lines of All Legs of a Transaction on page 688

Transaction Leg Calculation Lines

The **Transaction Leg Calculation Lines** zone lists the calculation lines of all legs of the transaction which are rated before billing. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate	Indicates the rate which is used for the calculation.
SQI	Indicates the service quantity identifier (SQI) which is used in the calculation.
Billable Service Quantity	Indicates the service quantities used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off (i.e. amount in precision). For example, 100. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount which is not rounded off (i.e. amount with precision and scale). For example, 98.67. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount which is not rounded off (i.e. amount with precision and scale). For example, 98.67. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: • Y • N
Description on Bill	Displays the summarized information about the charge that will be printed on the bill.
Distribution Code	Displays the distribution code which indicates the GL account to which the charge must be posted.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction legs are aggregated during calculation.

Copyright © 2025, Oracle and/or its affiliates.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Bill Information** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a transaction in the **Transaction Details** zone.

Hold Details

The **Hold Details** zone lists the hold requests through which the bill is kept on hold or through which the bill generation process of the respective person or account is kept on hold. Note that only those hold requests are listed in this zone where the respective entities' start date is earlier than or equal to the system date and the entities' end date is later than or equal to the system date. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request. **Note:** It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request. The valid values are: • Draft • Active
Entity	Indicates the type of entity for which the hold request is created. The valid value is: • Account • Bill • Person
Entity Information	Indicates the entity for which the hold request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account**, **Bill**, or **Person** screen appears, respectively, where you can view the details of the respective entity.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.

Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays information about the offset request. **Note:** It has a link. On clicking the link, the **Offset Request** screen appears where you can view the details of the respective offset request.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Offset Amount	Indicates the bill amount which is offset against another bill.
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: • Automatic • Manual

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request. **Note:** It has a link. On clicking the link, the **Refund Request** or **Write Off Request** screen appears depending on whether the request is created for refund or write off.
Refund/Write Off Amount	Displays the total refund or write off amount.
Status	Indicates the status of the refund or write off request. The valid values are: • Approval In Progress • Cancelled • Deferred Processing • Draft • Processed • Rejected • Voided
Action	Indicates whether the request is created for refund or write off. The valid values are: • Refund • Write Off
Account Information	Indicates the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Created By	Indicates the user who has created the refund or write off request.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Copyright © 2025, Oracle and/or its affiliates.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Viewing the SQ Details of a Bill Segment

Procedure

To view the SQ details of a bill segment:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account whose details you want *t*o view.
   The **Account** tab appears in the **Customer 360° Information** screen.
3. In the **Open Bills** zone, click the **View** (🔗) icon corresponding to the bill whose details you want to view.
   The **Bill Information** screen appears.
4. In the **Bill Segment Details** zone, click the **Broadcast** (📡) icon corresponding *t*o the bill segment whose details you want to view.
   The **SQ Details**, **Bill Segment Calculation Lines**, and **Transaction Details** zones appear.

   Note:

   The **SQ Details** zone appears when the bill segment is generated for an SQI based billable charge.

   The **Transaction Details** zone appears when the bill segment is generated for a billable charge which is created through the transaction aggregation process.
5. View the SQ details of the bill segment in the **SQ Details** zone.

Claim

The **Claim** zone displays the details of the claim pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** - Displays basic details of the claim pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer. This field appears only when the claim pricing rule is viewed for parent customer.
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group. This field appears when the claim pricing rule is viewed for bill group.
Policy Information	Displays the policy information.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Pricing Start Date	Displays the claim pricing rule start date.
Pricing End Date	Displays the claim pricing rule end date.
Rate Option	Indicates the rate option of the claim pricing rule for the price item.
Claim Template	Indicates the claim template of the claim pricing rule.
Pricing Group	Displays the pricing group of the claim pricing rule.
	Note: This field appears when the claim pricing rule is viewed for pricing group.

- **Claim Handling Fees** - Lists the claim handling fees for line items in a claim pricing rule. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>Fee Type</td><td>Indicates the type of charge applicable on the line items.</td></tr>
<tr><td>Fee</td><td>Indicates the fee for the line items.</td></tr>
<tr><td>Fee Significance</td><td>Indicates the purpose of the imposing the additional fees on the line items.</td></tr>
<tr><td>Fee Applicability</td><td>Displays the fee applicability on which the claim handling fees are defined.<table><tr><th>Column Name</th><th>Column Description</th></tr><tr><td>Line Item</td><td>Indicates the line item that you want to use while defining additional fees for the claim pricing rule.</td></tr></table></td></tr>
<tr><td>Rating Information</td><td>Displays the rating information that you want to use while defining the rate for the line items.<table><tr><th>Column Name</th><th>Column Description</th></tr><tr><td>Rate Type</td><td>Indicates the rate type that you want to use while defining the additional fees for the line items.</td></tr><tr><td>Rate</td><td>Used to specify the rate that you want to use while defining the additional fees for the line items.

Note: This field is editable when the Editable checkbox is selected in the Rate column of the Additional Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</td></tr></table></td></tr>
</table>

- **Markup or Markdown Values** - Lists the markup or markdown values for line items in a claim pricing rule. It contains the following columns:

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup • None
Markup or Markdown Type	Indicates the markup or markdown value type for claim pricing rule. The valid values are: • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount.
Rate Type	Displays minimum and maximum markup or markdown defined using the rate type.
Rate	Displays the value for minimum and maximum markup or markdown defined using the rate type.

- **Line Items** - This section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: • Eligible • Not Eligible • User Defined (Default Yes) • User Defined (Default No)
User Defined Billing Option	Displays whether the billing option is user defined, eligible or not eligible.
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.
Rating Information	Displays the rating information that you want to use while defining the rate for the line items.

Column Name	Column Description
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.
Rate	Used to specify the rate that you want to use while defining the rate for the line items. **Note:** This field is editable when the **Editable** checkbox is selected in the **Rate** column of the **Additional Fees** section while defining or editing the **C1-ExtLookClaimTemplate** extendable lookup.

- **Characteristics** - Lists the characteristics defined for the claim pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the claim pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Aggregate Stop-Loss

The **Aggregate Stop-Loss** zone displays the details of the aggregate stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** - Displays basic details of the aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer. This field appears only when the aggregate stop-loss pricing rule is viewed for parent customer.
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group. This field appears when the aggregate stop-loss pricing rule is viewed for bill group.
Policy Information	Displays the policy information.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy. This field appears when the aggregate stop-loss pricing rule is viewed for bill group.
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Parent Customer's SSL or ASL Pricing Rules	Displays the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Pricing Start Date	Displays the pricing rule start date.
Pricing End Date	Displays the pricing rule end date.
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.
Settlement Frequency	Indicates the settlement frequency that helps to determine the bill after date. The valid values are: • Immediately • Manually (At Required Intervals) • Monthly • Yearly **Note:** This field appears when the aggregate stop-loss pricing rule is viewed for parent customer.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No **Note:** This field appears when the aggregate stop-loss pricing rule is viewed for parent customer.
Pricing Group	Displays the pricing group of the aggregate stop-loss pricing rule. **Note:** This field appears when the aggregate stop-loss pricing rule is viewed for pricing group.

- **Accumulation Parameters** - Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..
ASL Credit Account	Indicates the account in which the aggregate stop-loss amount is credited.

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
ASL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.
ASL Limit (During Policy Period)	Indicates the aggregate stop-loss limit that was set during the policy period. The valid values are:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Policy Based Limit • Enrollment Based Limit • Percentage of Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)
ASL Limit (During Settlement Period)	Indicates the aggregate stop-loss limit that was set during the settlement period. The valid values are: • Policy Based Limit • Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)
Minimum ASL Limit	Displays the minimum ASL limit. **Note:** This field displays value when the **Enrollment Based or Minimum ASL Limit (Whichever is Greater)** option appears for the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** field.
Percentage of Enrollment Based Limit	Displays the percentage of enrollment based limit. **Note:** This field displays value when the **Percentage of Enrollment Based Limit** option appears for the**ASL Limit (During Policy Period)** field.
Policy Based Limit	Displays the policy based limit. **Note:** This field displays value when the **Policy Based Limit** option appears for the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** field.

Note: This section appears when the aggregate stop loss is created for parent customer.

- **Accumulation Criteria** - This section contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a aggregate stop-loss.
Price Item Information	Displays the price item information. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Price Item Parameters	This field contains the following columns: **Column Name** / **Column Description** Price Item Parameter: Displays the multiple parameters based on which you have determined the price item utilization. **Note:** It has a link. On clicking the link, the **Parameter** screen appears where you can view the details of the parameter.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Column Name / **Column Description** Parameter Value / Displays the value of the parameter.

Note:

This section appears when the aggregate stop-loss is created for a bill group.

Accumulation criteria for each rule appears when the aggregate stop-loss is created for a bill group using a pricing group.

- **Pricing Information** - This section contains the following sub-section:
  - **Claim Pricing Rule** - This sub-section contains the following field:

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** - Displays the domestic provider claim while calculating aggregate stop-loss. This section contains the following field:

Field Name	Field Description
Exclude ASL (Percentage)	Displays the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** - Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup • None
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount. **Note:** This field displays amount when **Markup or Markdown Type** field is **Flat Amount**.

- **Line Items** - Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Line Item	Displays the billing line items.
Eligible for Aggregate Stop-Loss	Displays whether the line item is eligible or not eligible for aggregate stop-loss.
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

Note:

This section appears when the aggregate stop-loss is created for a bill group.

Claim line items for each rule appears when the aggregate stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** - This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing
Accumulation Group ID	Displays the accumulation group ID that is generated when the accumulation parameter values were defined for an aggregate stop-loss.
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.
Run-In Maximum Limit	Displays the maximum limit of the run-in parameters. **Note:** This field displays value when the checkbox for the **Run-In** field is selected.

Note: This section appears when the specific stop loss is created for parent customer.

Copyright © 2025, Oracle and/or its affiliates.

- **Characteristics** - Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the aggregate stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Specific Stop-Loss

The **Specific Stop-Loss** zone displays the details of the specific stop-loss pricing rule for respective parent customer, bill group or a bill group using a pricing group. It contains the following sections:

- **Main** - Displays basic details of the specific stop-loss pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer. This field appears only when the specific stop-loss pricing rule is viewed for parent customer.
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group. This field appears when the specific stop-loss pricing rule is viewed for bill group.
Policy Information	Displays the policy information.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy. This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Pricing Rule Type	Indicates the pricing rule type.
Price Item Information	Indicates the price item information. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Parent Customer's SSL Pricing Rule	Displays the pricing date range derived from the parent customer's specific stop-loss pricing rule. **Note:** This field appears when the specific stop-loss pricing rule is viewed for bill group.
Pricing Start Date	Displays the specific stop-loss pricing rule start date.
Pricing End Date	Displays the specific stop-loss pricing rule end date.
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.
Pricing Rule Usage	Indicates whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: • Pricing • Pricing and Billing **Note:** This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Accumulation Level	Indicate whether the specific stop-loss is accumulated at the member or main subscriber level. The valid values are: • Member • Main Subscriber **Note:** This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Settlement Frequency	Indicates the settlement frequency that helps to determine the bill after date. The valid values are: • Immediately • Manually (At Required Intervals) • Never • Yearly **Note:** This field appears when the specific stop-loss pricing rule is viewed for parent customer.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No
	Note: This field appears when the specific stop-loss pricing rule is viewed for parent customer.
Pricing Group	Displays the pricing group of the specific stop-loss pricing rule.
	Note: This field appears when the specific stop-loss pricing rule is viewed for pricing group.

- **Accumulation Parameters** - Lists the accumulation parameters in a specific stop-loss pricing rule. It contains the following field:

Field Name	Field Description
Accumulation Group ID	Displays the accumulation group ID generated when accumulation parameters are defined for a specific stop-loss..

This section also lists the following columns:

Column Name	Column Description
Incurred Start Date	Displays the incurred start date based on the accumulated specific stop-loss.
Incurred End Date	Displays the incurred end date based on the accumulated specific stop-loss.
SSL Payout Limit	Displays the maximum limit for the specific stop-loss at member or main subscriber level.
Paid Start Date	Displays the paid start date based on the accumulated specific stop-loss.
Paid End Date	Displays the paid end date based on the accumulated specific stop-loss.
Settlement Days	Indicates the settlement days used in calculating the settlement date.
Compute Aggregate SSL (ASL)	Indicates whether the aggregate specific stop-loss (ASSL) is calculated or not during the **C1-BCSSL** batch run for each bill group. The valid values are: • Yes • No
ASSL Credit Account	Indicates that the aggregate specific stop-loss amount beyond the ASSL limit paid by the insurance company to the ASSL credit account.
ASSL Limit	

Note: This section appears when the specific stop loss is created for parent customer.

- **Accumulation Criteria** - This section contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a specific stop-loss.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Run-In Maximum Limit	Displays the maximum specific stop-loss limit defined for the member when the claim transactions were received in the run-in period of the policy.
SSL Limit	Displays whether the SSL limit indicating the specific stop-loss amount beyond this limit is paid by the insurance company.
Price Item Information	Displays the price item information. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Price Item Parameters	This field contains the following columns: **Column Name** / **Column Description** Price Item Parameter: Displays the multiple parameters based on which you have determined the price item utilization. **Note:** It has a link. On clicking the link, the **Parameter** screen appears where you can view the details of the parameter. Parameter Value: Displays the value of the parameter.

Note:

This section appears when the specific stop-loss is created for a bill group.

Accumulation criteria for each rule appears when the specific stop-loss is created for a bill group using a pricing group.

- **Pricing Information** - This section contains the following sub-section:
  - **Claim Pricing Rule** - This sub-section contains the following field:

Field Name	Field Description
Effective Claim Pricing Rule	Indicates the claim pricing rule effective for pricing.

This sub-section contains the following sections:

- **Domestic Provider Claims** - Displays the domestic provider claim while calculating specific stop-loss. This section contains the following field:

Field Name	Field Description
Exclude SSL (Percentage)	Displays the domestic provider claim billable charge line excluding the specific stop-loss in percentage created for domestic provider claim calculation lines.

- **Markup or Markdown Values** - Displays the markup or markdown values for billable charge line. This section contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• None
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: • Flat Amount • Percentage
Markup or Markdown Amount	Displays the markup or markdown amount.
	Note: This field displays amount when **Markup or Markdown Type** field is **Flat Amount**.

- **Line Items** - Displays the associated line items eligible for billing. This section contains the following fields:

Field Name	Field Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Eligible for Specific Stop-Loss	Displays whether the line item is eligible or not eligible for specific stop-loss.
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.

Note:

This section appears when the specific stop-loss is created for a bill group.

Claim line items for each rule appears when the specific stop-loss is created for a bill group using a pricing group.

- **Run-In Parameters** - This section contains the following columns:

Column Name	Column Description
Run-In	Displays whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing
Incurred Start Date	Displays the incurred start date based on the run-in period of the policy in the specific stop-loss.
Incurred End Date	Displays the incurred end date based on the run-in period of the policy in the specific stop-loss.
Paid Start Date	Displays the paid start date based on the run-in period of the policy in the specific stop-loss.
Paid End Date	Displays the paid end date based on the run-in period of the policy in the specific stop-loss.

Note: This section appears when the specific stop loss is created for parent customer.

Copyright © 2025, Oracle and/or its affiliates.

- **Lasering and Exclusion** - Lists the lasering and exclusion information in a specific stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation parameter values were defined for the specific stop-loss.
Level Identifier	Displays the lasering or exclusion level identifier.
Lasering or Exclusion Level	Indicates the lasering or exclusion level of the specific stop-loss. The valid values are: • Main Subscriber • Member • Provider
Exception Type	Indicates the exception type. The valid values are: • Lasering • Exclusion
Comments	Displays the comments.
Lasered Amount	Displays the lasered amount.

Note: This section appears when the specific stop loss is created for parent customer.

- **Characteristics** - Lists the characteristics defined for the specific stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the specific stop-loss pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Retention Type Claim Based

The **Retention Type Claim Based** zone displays the details of the Retention Type Claim Based Pricing Rule. This zone contains the following sections:

- **Main** - This section provides basic information about the retention type claim based pricing rule type. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the parent customer. This field appears when the retention type claim based pricing rule is viewed for parent customer.
Pricing Rule Type	Displays the pricing rule type.
Price Item Information	Displays the price item.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Rate Option	Displays the rate option of the retention type claim based pricing rule.
Pricing Start Date	Displays the date from when the pricing is effective for retention type claim based pricing rule.
Pricing End Date	Displays the date till when the pricing is effective for retention type claim based pricing rule.

- **Parameters** - This section lists the parameters which are defined for retention type claim based pricing rule. It contains the following columns:

Column Name	Column Description
Price Item Parameters	Displays the parameter item information for retention type claim based pricing rule.
Fee	Displays the fee that is applicable for which price item parameters are defined.

Column Name	Column Description
Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.
Parameter Description	Displays the description of the parameter.
Parameter Value	Displays the value of the parameter.
Parameter Value Description	Displays the description of the value, defined as a parameter.

- **Characteristics** - This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

Retention Type Enrollment Based

The **Retention Type Enrollment Based** zone displays the details of the Retention Type Enrollment Based Pricing Rule. This zone contains the following sections:

- **Main** - This section provides basic information about the retention type claim based pricing rule type. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the parent customer. This field appears when the retention type enrollment based pricing rule is viewed for parent customer.
Pricing Rule Type	Displays the pricing rule type.
Price Item Information	Displays the price item.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Rate Option	Displays the rate option of the retention type enrollment based pricing rule.
Pricing Start Date	Displays the date from when the pricing is effective for retention type enrollment based pricing rule.
Pricing End Date	Displays the date till when the pricing is effective for retention type enrollment based pricing rule.
Exempt Retro Transactions	Indicates whether retro transactions should be a part of retention type enrollment based pricing rule.

- **Parameters** - This section lists the parameters which are defined for retention type enrollment based pricing rule. It contains the following columns:

Column Name	Column Description
Price Item Parameters	Displays the parameter item information for retention type enrollment based pricing rule.

Column Name	Column Description
Price Item Parameters	Displays multiple parameters based on which you have determined the price item utilization.
Parameter Description	Displays the description of the parameter.
Parameter Value	Displays the value of the parameter.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	
	Column Name	**Column Description**
	Parameter Value Description	Displays the description of the value, defined as a parameter.
Fee	Displays the fee that is applicable for which price item parameters are defined.	

- **Characteristics** - This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

Flat Fee

The **Flat Fee** zone displays the details of the one-time, bill period, and frequency based recurring flat fee pricing rule for bill group. It contains the following sections:

- **Main** - Displays basic details of the one-time, bill period, and frequency based recurring flat fee pricing rule. It contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group.
Policy Information	Displays the policy information. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.
Price Item Information	Indicates the price item information. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Charge Date	Displays the flat fee charge date. **Note:** This field appears only for the one-time flat fee pricing rule for bill group.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Charge Start Date	Displays the flat fee charge start date. **Note:** This field appears only for both bill period and frequency based recurring flat fee pricing rule for bill group.
Charge End Date	Displays the flat fee charge end date. **Note:** This field appears only for both bill period and frequency based recurring flat fee pricing rule for bill group.
Bill To Account Override	Displays the account to which the bill is override. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the account.
Billable Charge Line Type	Displays the billable charge line type.
Fee	Displays the amount of flat fee. **Note:** This field appears when a value is displayed in the **Billable Charge Line Type** field.
Bill Period	Indicates the bill period for flat fee. **Note:** This field appears only for the bill period based recurring flat fee pricing rule for bill group.
Frequency	Indicates the frequency for flat fee. **Note:** This field appears only for the frequency based recurring flat fee pricing rule for bill group.
Billable Charge Information	Displays the billable charge information. **Note:** It has a link. On clicking the link, the **Bill Charge ID** screen appears where you can view the details of the billable charge.

- **Characteristics** - Lists the characteristics defined for the one-time, bill period, and frequency based recurring flat fee pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the one-time, bill period, and frequency based recurring flat fee pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Ancillary

The **Ancillary** zone displays the details of the ancillary pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** - Displays basic details of the ancillary pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer.	Not applicable
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group.	Not applicable
Policy Information	Displays the policy information. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.	Not applicable
Pricing Rule Type	Indicates the type of the pricing rule.	Not applicable
Status	Indicates the status of the pricing rule.	Not applicable
Price Item Information	Indicates the price item information. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Start Date	Displays the date from when the pricing rule is effective.	Not applicable
Pricing End Date	Displays the date till when the pricing rule is effective.	Not applicable
Rate Option	Indicates the rate option of the ancillary pricing rule for the price item.	Not applicable
Pass Through without Markup or Markdown	Indicates that markup or markdown should not be calculated for the ancillary charge.	Not applicable

- **Ancillary Charges** - Lists the accumulation parameters in an aggregate stop-loss pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Indicates the billable charge line type using which the ancillary pricing rule type is created. **Note:** It has a link. On clicking the link, the **Billable Charge Line Type** screen appears where you can view the details of the billable charge line type.	Not applicable
Billable	Indicates whether the ancillary billable charge is eligible for billing or not.	Not applicable
Rate Based	Indicates whether the ancillary charge is calculated using a particular rate or not.	Not applicable
Rate	Indicates the rate for calculating the ancillary charge.	Not applicable
Pricing Strategy	Indicates the price calculation strategy that is applied while defining the ancillary pricing rule.	Not applicable
Markup or Markdown Type	Indicates the type of charge that is applied while defining the ancillary pricing rule.	Not applicable
Amount / Percentage	Displays the actual proportion of the charge that is applied while defining the ancillary pricing rule.	Not applicable

- **Characteristics** - Lists the characteristics defined for the aggregate stop-loss pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the ancillary pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Discount Arrangement

The **Discount Arrangement** zone displays the details of the discount arrangement pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** - Displays basic details of the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer.	Not applicable
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group.	Not applicable
Policy Information	Displays the policy information. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.	Not applicable
Pricing Rule Type	Indicates the type of the pricing rule.	Not applicable
Status	Indicates the status of the pricing rule.	Not applicable
Price Item Information	Indicates the price item for which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.	Not applicable
Rate Option	Indicates the rate option of the discount arrangement pricing rule for the price item.	Not applicable
Pricing Start Date	Displays the date from when the pricing rule is effective.	Not applicable
Pricing End Date	Displays the date till when the pricing rule is effective.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Settlement Frequency	Indicates the settlement frequency which helps to determine the bill after date.	Not applicable

- **Discount Details** - Displays the eligibility criteria for a discount percentage and maximum discount amount that is allowed per claim. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Displays the parameter using which an eligibility criteria is defined for a discount percentage and maximum amount that is allowed per claim.	Not applicable
Parameter Information	Indicates the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Not applicable
Parameter Value	Indicates the value of the parameter.	Not applicable
Parameter Value Description	Displays the description of the value, defined as a parameter.	Not applicable
Discount Percentage	Displays the discount share or discount guarantee percentage.	Not applicable
Maximum Discount Per Claim	Displays maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer.	Not applicable

- **Discount Limits** - Displays the minimum and maximum discount limit defined on the contract. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
No Limit	Indicates the type of discount limit (minimum or maximum) on the contract.	Not applicable
Discount Credit Account	Indicates the account to which the discount is credited, when the minimum or maximum discount limit is defined on the contract.	Not applicable
Settlement Days	Indicates the number of days which help in calculating the final settlement date.	Not applicable

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Type of Discount	Displays the type of discount.	Not applicable
Select	Indicates the type of discount that is applied on the contract.	Not applicable
Limit Type	Indicates the type of limit defined in the discount arrangement pricing rule.	Not applicable
Amount Limit	Indicates the amount limit (flat minimum or maximum discount) on the contract.	Not applicable

- **Exclusion** - Displays the entity (network or provider) which is excluded in the discount arrangement pricing rule. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Exclusion Level	Indicates the entity (network hospitals or providers) that are excluded during the discount share or discount guarantee calculation.	Not applicable
Level Identifier	Displays the network or provider ID.	Not applicable

- **Characteristics** - Displays the characteristics defined for the discount arrangement pricing rule. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Displays the date from when the characteristic is effective for the discount arrangement pricing rule.	Not applicable
Characteristic Type	Indicates the characteristic type.	Not applicable
Characteristic Value	Displays the value of the characteristic type.	Not applicable

Level Funded

The **Level Funded** zone displays the details of the level funded pricing rule for the respective parent customer, bill group, or a bill group using a pricing group. It contains the following sections:

- **Main** - Displays basic details of the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Parent Customer Information	Displays the parent customer information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the parent customer.
Bill Group Information	Displays the bill group information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person**, **Account** or **Policy** screen appears where you can view the details of the bill group.
Policy Information	Displays the policy information.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Status	Indicates the status of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Parent Customer's Pricing Rule	Displays the pricing rule of the parent customer.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option of the level funded pricing rule for the price item.
Settlement Frequency	Indicates the settlement frequency which helps to determine the bill after date.
Settlement Fund Price Item	Indicates the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type. **Note:** The settlement fund price item appears when the level funded pricing rule is created for a bill group.
Underwriter Review	Indicates whether the underwriter settlement review flag is on or off.

- **Accumulation Parameters** - Displays the accumulation parameters for a parent customer in the level funded pricing rule. It contains the following fields:

Column Name	Column Description
Accumulation Group ID	Displays an accumulation group ID which is generated when accumulation parameter values are defined for a level funded pricing rule.
Settlement Account ID	Indicates the account ID to whom the settlement amount is credited.
Incurred Start Date	Displays the incurred start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Incurred End Date	Displays the incurred end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Paid Start Date	Displays the paid start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Paid End Date	Displays the paid end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing.
Settlement Days	Indicates the number of days as the settlement days which help in calculating the settlement date.

Copyright © 2025, Oracle and/or its affiliates.

Note:

The above section appears when the level funded pricing rule is created for a parent customer.

- **Accumulation Criteria** - Displays the accumulation criteria for a bill group in the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Accumulation Group ID	Displays the accumulation group ID generated when the accumulation criteria values were defined for a level funding pricing rule type.
Price Item Information	Displays the price item information. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Price Item Parameters	This field contains the following columns: **Column Name** / **Column Description** Price Item Parameter: Displays the multiple parameters based on which you have determined the price item utilization. **Note:** It has a link. On clicking the link, the **Parameter** screen appears where you can view the details of the parameter. Parameter Value: Displays the value of the parameter.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

The accumulation criteria for each rule appears when the level funded pricing rule is created for a bill group using a pricing group.

- The **Pricing Information for rule type category : Claim** zone contains the following sections:
  - The **Claim Pricing Rule** section contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the claim pricing rule type effective for the level funded pricing.
Derive Using	Indicates the method through which the claim pricing rule information is derived.
Effective Claim Pricing Rule	Displays the claim pricing rule effective for pricing.

  - The **Domestic Provider Claims** section contains the following columns:

Column Name	Column Description
Exclude LF (Percentage)	Displays the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.

  - The **Markup or Markdown Values** section contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Pricing Strategy	Indicates the pricing strategy for the claim line items.
Markup or Markdown Type	Indicates the markup or markdown value type for the claim line items.
Markup or Markdown Amount	Displays the markup or markdown amount for the claim line items. **Note:** This field displays amount when **Markup or Markdown Type** field is set as **Flat Amount**.
Markup / Markdown Included in Settlement?	Displays whether the markup or markdown amount should be included in the level funding settlement. The valid values are:

- The **Line Items** section contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Line Item	Displays the billing line items.
Include in Settlement	Indicates whether the line item should be included in the level funded claim pricing settlement.
Markup or Markdown Included in Settlement	Indicates whether markup or markdown should be included in the level funded claim settlement.
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible or not eligible for markup or markdown percentage.
Markup or Markdown Percentage	Indicates the percentage for markup or markdown value.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Ancillary** zone contains the following sections:
  - The **Ancillary Pricing Rule** section contains the following columns:

Column Name	Column Description
Pricing Rule Type	Indicates the ancillary pricing rule type effective for level funded pricing.
Derive Using	Indicates the method through which the ancillary pricing rule information is derived.
Effective Ancillary Pricing Rule	Displays the ancillary pricing rule effective for pricing.

  - The **Billable Charge Line Types** section contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number for the line items.
Billable Charge Line Type	Indicates the billable charge line type using which you want to create the calculation line for the charge (i.e. line item)
Include in Settlement	Indicates whether the billable charge line item should be included in the level funded ancillary pricing settlement.
Rate Based	Indicates that the billable charge line type is rate based.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Rate	Displays the rate for the billable charge line type.
Markup / Markdown Included in Settlement?	Indicates that markup or markdown amount must be included in the level funding settlement.
Pricing Strategy	Displays the pricing strategy for the billable charge line items.
Markup or Markdown Type	Indicates the markup or markdown type for the billable charge line items.
Amount/Percentage	Displays the amount or percentage which is specified as the markup or markdown value.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Discount** zone contains the following section:

Column Name	Column Description
Pricing Rule Type	Indicates the discount arrangement pricing rule type which is effective for level funding.
Derive Using	Indicates the method through which the discount arrangement pricing rule information is derived.

  - **Discount Pricing Rule** - Indicates the discount arrangement pricing rule. It contains the following columns:

Column Name	Column Description
Discount Pricing Rule	Indicates the discount arrangement pricing rule which is effective for level funding.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- The **Pricing Information for rule type category : Retention** zone contains the following section:

Column Name	Column Description
Retention Rule Type	Indicates the retention type claim based and/or retention type enrollment based pricing rule type for the level funded pricing rule.
	Note: It has a link. On clicking the link, **Pricing Rule Type** screen appears where you can view the details of the rule type.
Price Item	Indicates the price item for the level funded pricing rule.
	Note: It has a link. On clicking the link, **Price Item** screen appears where you can view the details of the price item.

Note:

The above section appears when the level funded pricing rule is created for a bill group.

- **Final Settlement Rules** - Displays the final settlement rules when the customer renews or cancels the contract. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Final Settlement Mode	Displays the final settlement mode when the customer renews the level funded agreement
Final Settlement Option	Indicates the final settlement option when the customer renews the level funded agreement.
Flat/Percentage	Indicates the final settlement payment type when the customer renews the level funded agreement.
Percentage Retained	Displays the percentage retained by the ASO provider when the customer renews the level funded agreement.
Flat Effective Payout	Displays the actual amount which should be retained by the ASO provider or offered as a discount, when the customer renews the level funded agreement.

The **Renewal Decision** sub-section contains the following columns:

Column Name	Column Description
Renewal Decision	Indicates the upcoming status of the level funded contract.

- **Characteristics** - Displays the characteristics defined for the level funded pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the level funded pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Age Based Pricing Rule

The **Age Based Pricing Rule** zone displays the details of the age based pricing rule for the fully-insured group and individual customers (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** - Displays basic details about the fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective.
Plan End Date	Displays the date till when the plan rule is effective.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Policy Information	Displays the policy information. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.
Modifier Applicability	Indicates modifier based on which additional fee or discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.

- **Pricing Parameters** - Displays the pricing parameter information for a fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description
Pricing Parameters	Displays the pricing and parameter details for a fully-insured age based pricing rule. It contains the following columns: **Column Name** / **Column Description** Price Item Parameter — Displays the parameter using which an age based eligibility criteria is defined. Parameter Description — Displays the description of the price item parameter. Parameter Value — Displays the value of the parameter. Parameter Value Description — Displays the description of the value, defined as a parameter.
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.

- **Modifier Information** - Displays the modifiers based on which additional charges or discount is offered to an eligible member in a fully-insured age based pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to charge additional or offer discount to an eligible member.
Modifier Type Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Modifier Value Description	Displays the description of the modifier value.
Modifier Fee	Displays the amount charged or discount offered to an eligible member.

- **Characteristics** - Lists the characteristics defined for the fully-insured age based pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for a fully-insured age based pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Tier Based Pricing Rule

The **Tier Based Pricing Rule** zone displays the details of the tier based pricing rule for the fully-insured group and individual customers (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** - Displays basic details about the fully-insured tier based pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective.
Plan End Date	Displays the date till when the plan rule is effective.
Policy Information	Displays the policy information. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the pricing rule is created. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.

- **Pricing Parameters** - Displays the pricing information defined for the fully-insured tier based pricing rule. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>Pricing Parameters</td><td>Displays the pricing parameter details for the fully-insured tier based pricing rule. It contains the following columns:<table><tr><th>Column Name</th><th>Column Description</th></tr><tr><td>Price Item Parameter</td><td>Displays the parameter using which the membership tier level based criteria is defined.</td></tr><tr><td>Parameter Description</td><td>Displays the description of the price item parameter.</td></tr><tr><td>Parameter Value</td><td>Displays the value of the parameter.</td></tr><tr><td>Parameter Value Description</td><td>Displays the description of the value, defined as a parameter.</td></tr></table></td></tr>
<tr><td>Fee</td><td>Displays the fee applicable on the membership tier level and employee attributes of an eligible member.</td></tr>
</table>

- **Characteristics** - Lists the characteristics defined for the fully-insured tier based pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Additional Fee Pricing Rule

The **Additional Fee Pricing Rule** zone displays the details of the additional fee pricing rule for the fully-insured group customer (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** - Displays basic details about the additional fee pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective for the additional fee pricing rule.
Plan End Date	Displays the date till when the plan rule is effective for the additional fee pricing rule.
Policy Information	Displays information about the policy. **Note:** It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the additional fee pricing rule is created.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.
Modifier Applicability	Indicates modifier based on which additional fee or discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.
Pricing Type	Indicates the type of pricing defined for the additional fee pricing rule. The valid values are: • Flat • Percentage **Note:** This field appears when the **Pricing Type** option is selected.

- **Pricing Parameters** - Displays the pricing parameter information for an additional fee pricing rule. It contains the following fields:

Column Name	Column Description
Pricing Parameters	Displays the pricing and parameter details for an additional fee pricing rule. It contains the following columns: **Column Name** / **Column Description** Price Item Parameter: Displays the parameter using which an age based eligibility criteria is defined. Parameter Description: Displays the description of the price item parameter. Parameter Value: Displays the value of the parameter. Parameter Value Description: Displays the description of the value, defined as a parameter.
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.

- **Modifier Information** - Displays the modifiers based on which additional fee or discount is offered to an eligible member in an additional fee pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to charge additional or offer discount to an eligible member.
Modifier Type Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.
Modifier Value Description	Displays the description of the modifier value.
Modifier Fee	Displays the amount charged or discount offered to an eligible member.

Copyright © 2025, Oracle and/or its affiliates.

- **Characteristics** - Lists the characteristics defined for the an additional fee pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for a fully-insured age based pricing rule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Discount Charge Pricing Rule

The **Discount Charge Pricing Rule** zone displays the details of the discount charge pricing rule for the fully-insured individual or group customer (who is a parent customer, bill group, or a bill group's account) using a pricing group. It contains the following sections:

- **Pricing Information** - Displays basic details about the discount charge pricing rule. It contains the following fields:

Column Name	Column Description
Plan Number	Displays the plan number.
Plan Name	Displays the plan name.
Plan Start Date	Displays the date from when the plan is effective for the additional fee pricing rule.
Plan End Date	Displays the date till when the plan rule is effective for the additional fee pricing rule.
Policy Information	Displays information about the policy.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the policy.
Health Plan	Displays the health plan.
	Note: This field appears only when you are viewing the discount charge pricing rule of a fully-insured individual.
Health Product	Displays the health product.
	Note: This field appears only when you are viewing the discount charge pricing rule of a fully-insured individual.
Pricing Rule Type	Indicates the type of the pricing rule.
Price Item Information	Indicates the price item for which the discount charge pricing rule is created.
	Note: It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the price item.
Pricing Start Date	Displays the date from when the pricing rule is effective.
Pricing End Date	Displays the date till when the pricing rule is effective.
Rate Option	Indicates the rate option which is used while defining the pricing for the price item.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Modifier Applicability	Indicates modifier based on which discount is offered to an eligible member.
Modifier Method	Indicates the method used when modifier applicability option is selected.
Pricing Type	Indicates the type of pricing defined for the discount charge pricing rule. The valid values are: • Flat • Percentage **Note:** This field appears when the **Pricing Type** option is selected.

- **Pricing Parameters** - Displays the pricing parameter information for a discount charge pricing rule. It contains the following fields:

Column Name	Column Description
Pricing Parameters	Displays the pricing and parameter details for an additional charge pricing rule. It contains the following columns: **Column Name** / **Column Description** Price Item Parameter — Displays the parameter using which an age based eligibility criteria is defined. Parameter Description — Displays the description of the price item parameter. Parameter Value — Displays the value of the parameter. Parameter Value Description — Displays the description of the value, defined as a parameter.
Base Fee	Displays the fee applicable on the age limit and attributes of an eligible member.

- **Modifier Information** - Displays the modifiers based on which discount is offered to an eligible member in an discount charge pricing rule. It contains the following fields:

Column Name	Column Description
Modifier Type	Displays the type of modifier based on which you want to offer discount to an eligible member.
Modifier Type Description	Displays the description of the modifier.
Modifier Value	Displays the value of the modifier.
Modifier Value Description	Displays the description of the modifier value.
Modifier Fee	Displays the discount offered to an eligible member.

- **Characteristics** - Lists the characteristics defined for the discount charge pricing rule. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the discount charge pricing rule.
Characteristic Type	Indicates the characteristic type.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

Chapter 10

Health Product 360° View

Topics:

- Prerequisites
- Health Product 360° View (Used for Searching)
- Health Product 360° Information (Used for Viewing)
- Health Plan 360° Information (Used for Viewing)

Until now, you were able to add and edit the health products and health plans through a health product and plan inbound message. But, you were not able to view the details of a health product and health plan from the user interface. Now, Oracle Revenue Management and Billing provides the ability to view the details of a health product and health plan from the user interface. A new screen named **Health Product 360° View** is introduced in this release. It enables you to search for a health product or health plan using the respective details. You can navigate to the **Health Product 360° View** screen from the **Pricing Management** menu. Through the **Health Product 360° View** screen, you can navigate to the following new screens:

- **Health Product 360° Information** - Enables you to view the details of the health product including its characteristics and health plans.
- **Health Plan 360° Information** - Enables you to view the details of the health plan including its characteristics and pricing rules.

Prerequisites

To setup the **Health Product 360° View** feature, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to **Health Product**
- Define the required characteristic types where the characteristic entity is set to **Health Plan**
- Define the values for the **PRODUCT_HC_CAT_FLG** lookup field
- Define the values for the **PRODUCT_LOB_FLG** lookup field
- Define the values for the **PRODUCT_TYPE_FLG** lookup field
- Define the values for the **PRODUCT_LOB_CAT_FLG** lookup field
- Define the values for the **PRODUCT_SUB_TYPE_FLG** lookup field

Health Product 360° View (Used for Searching)

The **Health Product 360° View** screen allows you to search for a health product and health plan using various search criteria. It contains the following zone:

- 360° Search on page 726

Through this screen, you can navigate to the following screen:

- Health Product 360° Information (Used for Viewing) on page 737

Searching for a Health Product

Prerequisites

Copyright © 2025, Oracle and/or its affiliates.

To search for a health product, you should have:

- Values defined for the **PRODUCT_TYPE_FLG** lookup.
- Values defined for the **PRODUCT_HC_CAT_FLG** lookup.
- Values defined for the **PRODUCT_LOB_FLG** lookup.
- Characteristic types defined in the application (where the characteristic entity is set to **Health Product**)

Procedure

To search for a health product:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, click **Pricing Management** and then click **Health Product 360° View**.
   The **Health Product 360° View** screen appears.
3. Select the **Health Product Details** option from the **Search By** list to indicate that you want to search for a health product.
4. Enter the required search criteria in the **360° Search** zone.

> **Note:**
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
>
> You must specify at least one search criterion while searching for a health product.
>
> The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.
>
> If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.
   A list of health products that meet the search criteria appears in the **Search Results** section.

Viewing the Details of a Health Product

Procedure

To view the details of a health product:

1. Search for the health product in the **Health Product 360° View** screen.
2. In the **Search Results** section, click the link in the **Health Product** column whose *d*etails you want to view.

   The **Health Product 360° Information** screen appears.
3. View the details of the health product in the **Product Information** zone.

Health Product 360° Information (Used for Viewing)

The **Health Product 360° Information** screen allows you to:

- View the details of the health product.
- View the characteristics of the health product.
- View the health plans associated with the health product.

It contains the following zones:

- Product Information on page 737
- Product Characteristics on page 738
- Health Plans on page 738

Related Topics

Product Information

The **Product Information** zone displays the details of the health product. It contains the following fields:

Field Name	Field Description
Health Product	Displays information about the health product. In addition, a legend appears corresponding to this field which indicates the status of the health product.
	Note: • - Indicates that the health product is **Active**. • - Indicates that the health product is **Inactive**.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Product Health Category	Indicates the health care category to which the health product belongs.
Product Type	Indicates how the health product can be classified based on the provider network.
Product Sub Type	Indicates the type of medical accounts that are linked to the health product.
Start Date	Displays the date from when the health product is effective.
End Date	Displays the date till when the health product is effective.
Product LOB	Indicates the line of business to which the health product belongs.
Product LOB Category	Indicates the line of business category to which the health product belongs.
Product Administration	Displays the name of the agency which administers the health product.
Bundled Product Flag	Indicates whether the health product is a bundled product.
Bundled Products	Displays the health products which are included in the bundled product.

Product Characteristics

The **Product Characteristics** zone lists the characteristics of the health product. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the health product.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column when the type of characteristic value is set to **Predefined Value**.

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4306.

Health Plans

The **Health Plans** zone displays the details of the health plan. It contains the following columns:

Column Name	Column Description
Health Plan	Displays information about the health plan.
	Note: It has a link. On clicking the link, the **Health Plan 360° Information** screen appears where you can view the details of the health plan.

Chapter 11

Pricing Management

Topics:

- Prerequisites
- Pricing Methodologies and Pricing Variation Based on Parameters (Health Insurance Business)
- Parameter
- Price Item (Health Insurance Business)
- Price List
- Rate Definition
- Tiering Criterion

Oracle Revenue Management and Billing allows you to define prices for premiums, various fees, credits, discounts, and taxes that are defined as price items. Price for the price item may vary based on various attributes, which are defined as parameters in the system. Parameter values are derived either from transaction attributes (for example, for calculating claim based fees for a self-funded customer, pricing may vary based on claim transaction's health coverage class) or based on a field or characteristic of entities (for example, for calculating premium, pricing may vary based on member person's characteristic; whether a smoker or non-smoker). The system also supports deriving the pricing parameter through an algorithm, thereby enabling the custom derivation based on requirements.

Based on the line of business and the type of charge, you can define standard pricing which is common for multiple customers (for example, pricing defined for a health plan is applicable for all the subscribers subscribing to the health plan) or customer-specific pricing (for example, for fully-insured group customer, the pricing is specific to the group and you can define the policy plan level pricing in the system to achieve this. For more information about the fully-insured pricing, see Fully-Insured Pricing on page 3281.

The system enables you to define pricing at various levels in a customer hierarchy (for example, for a self-funded group customer, the pricing can be defined at the bill group level as well as at the parent customer level). If pricing is defined at multiple levels for a customer, the precedence is given to the pricing based on the level while searching for the pricing. For example, if pricing is defined for a price item at the bill group level as well as the parent customer level, the bill group level pricing takes precedence over the parent customer level pricing. Also, the parent customer level pricing is inherited by all the bill groups.

The pricing is triggered based on the transactions to calculate various charges or credit amounts eligible for a transaction. For example, for a self-funded customer, claim amounts with additional fees and markups, claim based fees, stop loss is calculated for claim transactions, enrollment based retention fees are calculated based on enrollment transactions, and ancillary fees are calculated based on ancillary transactions. For more information about the self-funded pricing, see Self-Funded Pricing on page 2783.

Transaction Based Pricing is invoked using the **Transaction Feed Management** module which processes different types of transactions **(for example, claim, capitation, ancillary, enrollment, etc.)** using the configurable validation and mapping rules to invoke the eligible pricing rules. For more information about the transaction feed management, see Transaction Feed Management on page 1137.

Pricing can also be triggered **based on qualifying life events** (for example, premium is calculated when a new membership is added, or a new member

is added to an existing membership, or every time the plan pricing is revised, etc.). The entity audit framework enables you to define various events for which pricing should be revised. For example, **addition of a new membership, addition of a new member, updates to the plan pricing**, **or the membership attributes which you want to monitor for premium change, etc**. The system enables you to define the algorithms to price the eligible events by invoking pricing rules. For more information about the entity audit framework, see Entity Audit on page 3667.

Copyright © 2025, Oracle and/or its affiliates.

Prerequisites

To setup the pricing management feature, you need to do the following:

- Define the required SQIs and divisions in the system.
- Define the required parameters in the system.
- Define the tiering setup for rate components in the system.
- Define the required price items in the system.

Pricing Methodologies and Pricing Variation Based on Parameters (Health Insurance Business)

The specialized pricing methodologies are required for pricing the fully-insured and self-funded customers. Therefore, an out of box pricing solution is provided to the fully-insured and self-funded customers through distinct pricing rule types.

Fully-Insured Pricing

Age Banded Premium Pricing

Age banded premium pricing is one of the methodologies for premium calculation. In this methodology, Premium calculation is done **by determining the premium of each member separately mainly based on the age band in which the member falls, and then aggregating** these to derive the overall premium amount for a membership.

Apart from member's age, premium of age banded plans can vary based upon **different parameters; be it member's attribute or plan level attribute or LOB specific attributes**. For example, pricing can vary by different population segment characteristics such as Employee Type (Retiree, COBRA and Active) and/or by different regions, Employee Status (Permanent/contractual) etc. Age-banded pricing may also vary by different modifiers such as Tobacco usage, Gender etc.

ORMB provides Out of Box Pricing Rule Type ‘Age Banded’. Using the same you can define pricing rule to define age-banded plan pricing. Pricing variation can be defined based on the pricing eligibility parameters where the source can be defined as Membership characteristics or Member characteristics or Plan characteristics. User can set **base fee** for set of parameters and can also set the **percentage or flat amount to be added over the base fee for each modifiers**.

Age-banded premium calculation algorithm which is configured in Age-banded pricing rule type process the premium pricing for each membership, derive the premium amount for each member and then aggregates the amount to derive the overall premium amount for a membership. **Maximum number of eligible dependents and the order of selection of the dependents like oldest first or youngest first is also configurable at Plan or State level**.

Age Banded Example:

Demo Corporation has a fully-insured group policy for the employees and its monthly premium is calculated through an age based pricing rule.

The following table lists the base premium for different age groups and locations or rating areas defined in an age based pricing rule:

Age Band	Location/Rating Area	Base Premium
Up to 15 Years	North California	$200
	South California	$210
16 to 18 Years	North California	$210

Copyright © 2025, Oracle and/or its affiliates.

Age Band	Location/Rating Area	Base Premium
	South California	$220
18 to 40 Years	North California	$220
	South California	$240
40 to 60 Years	North California	$250
	South California	$260
60+ Years	North California	$280
	South California	$290

On Top of the base premium, additional 2% premium will be charged if the member is smoker

State of California is configured with the following pricing rules :

Max. No of Eligible Dependents = 2

Order of Dependent Selection = Oldest first

New Born Gift Days = 30

Proration Rule Defined for the account : Mid Month i.e. Member joining before 15th will be charged the premium for the entire month

Example 1:

North California Based Employee John Doe, a 45 years old smoker who enrolled himself with his spouse Mary Doe (Age 40) and daughter Elsa Doe aged 13, son Bob Doe aged 10 and daughter Laura Doe aged 8.

The following table illustrates how the premium is calculated for different members using an age based pricing rule:

Member	Reason	Premium Contribution
John Doe	Base Premium	$250
	Smoker	$5
Mary Doe	Base Premium	$250
Elsa Doe	Base Premium	$200
Bob Doe	Base Premium	$200
Total Premium		$905

Example 2 :

North California Based Employee John Doe a California based Employee is enrolled in to the plan along with his spouse Mary Doe, John enrolls his new born daughter Laura born on 3rd of July on 20th of July.

The following table illustrates how the premium is calculated for different members prior to new born enrollment using an age based pricing rule:

Copyright © 2025, Oracle and/or its affiliates.

Member	Reason	Premium Contribution
John Doe	Base Premium	$250
Mary Doe	Base Premium	$250
Total Premium		$500

With the new enrollment in the month of July, The premium for July and the following months will be recalculated, As the state of California has New Born Gift days = 30 days, the premium will be calculated as follows:

For the Month of July:

The following table illustrates how the premium is calculated and waived off for the new born using an age based pricing rule:

Member	Reason	Premium Contribution
John Doe	Base Premium	$250
Mary Doe	Base Premium	$250
Laura Doe	Base Premium	$200
	New Born Waiver	-$200
Total Premium		$500

For Month of August:

The following table illustrates how the premium is calculated for different members including the new born using an age based pricing rule:

Member	Reason	Premium Contribution
John Doe	Base Premium	$250
Mary Doe	Base Premium	$250
Laura Doe	Base Premium	$200
Total Premium		$700

Tiered Premium Pricing

Tiered based premium pricing is another methodology for premium calculation. In this methodology, Premium calculation is done by determining the **subscription tier** level for the membership directly to derive the premium amount for that membership.

Standard tier based pricing structure contains different tiers such as Employee only (E), Employee+ Spouse (ES), Family (F), Employee + Children (EC). A member can subscribe his/her dependents to a plan and fall into one of the tier. Tier-based premium varies based upon **membership tier level and different parameters**; parameters can be member's attribute or Plan level attribute or LOB specific attributes. For example, for a particular tier, pricing can vary by different population segment characteristics such as Employee Type (Retiree, COBRA and Active) and/or by different regions, Employee Status (Permanent/contractual) etc.

Like age-based pricing, tier-based pricing can be defined using pricing rule with tier-based pricing rule type You can set premium fee for set of parameters and tier level. Tier-based premium calculation algorithm which is configured in tier-

Copyright © 2025, Oracle and/or its affiliates.

based pricing rule type process the premium pricing for each membership based on the applicable rate for the parameters and tier value for that membership which is defined as membership characteristic.

Tier Based Pricing Example

The following table lists the premium for different customer tiers and locations or rating areas defined in a tier based pricing rule:

Tier	Location/Rating Area	Premium
Employee Only	N. California	$200
	S. California	$210
Employee + Spouse	N. California	$300
	S. California	$310
Family	N. California	$450
	S. California	$500

Example : North California Based Employee John Doe, a 45 years old smoker who enrolled himself with his spouse Mary Doe (Age 40) and daughter Elsa Doe aged 13 the premium charged will be $450 per month.

State Level Configurations

Various state specific rules are defined in ORMB using state specific characteristics e.g. Gift Days to provide no additional premium when New Born is enrolled into the plan or various rules such as maximum dependents to be covered etc. The state and state characteristics can be defined state specific parameters. These parameters which define business rules may have overridden values at Plan or Membership levels.ORMB pricing calculation always checks for the parameters at membership and plan level first, if not found then the state level parameters are considered for the price calculations.

Premium Holiday and Proration

ORMB provides several options for correctly handling of proration; when a rate changes in middle of a billing period or when new Membership is added or terminated during the bill period. Configurable Proration Rule allows to define various options such as; mid-month proration where full premium is applicable if the membership starts before mid-coverage or proration based on covered days etc.

A configuration option can be set to handle special cases where proration is not to be applied even during a long or short bill period (e.g. when a flat charge is to be applied in full; even though the billing period is half of the standard period).

ORMB allows configuring or uploading the period for which premium holiday or waive off of premium needs to be given to the membership, based on which the premium is waived off, the rate configurations allow you to provide these details on the bill lines providing the required transparency to the customer.

Self-funded Pricing

ORMB provides you with a complete solution in terms of pricing, billing and revenue management to support ASO plans and also to provide risk coverage of offering self-funded plans through the stop loss or re-insurance services.

Claim Amount Processing

ORMB provides capability to calculate the final claim amount to be charged to the customer by summing up all the claim line items configured as billable for the customer. It also provides a facility to mark up or markdown these line items amounts as per customer specific pricing.You can also define the capping amounts per claim.

Copyright © 2025, Oracle and/or its affiliates.

In order to support new **'Payments Integrity model'** ORMB enables you to define **the additional fees i.e. recovery fees / savings amounts** to be calculated as **flat or percentage based** on the claim charges and charge the same to the customers along with **Max / Min capping amounts**

ORMB allows you to define pricing rules, having different pricing strategy based on policy status e.g. **during the active policy period various chargeable items** like consumer driven health insurance charges, traditional health insurance charges, **are charged to the customer** whereas during **post runout period** the **entire claim amount will be written off**.

To enable easy configurations ORMB provides you a capability to define **claim templates** and with definition of multiple add-on fees and its usage with default pricing. Using a file upload utility or other custom process the claim transactions can be uploaded to ORMB.

Claim transactions contain information about the membership and details of various claim line items such as ASO **service provider charges, fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor**, and so on.

ORMB allows the ASO service provider to bill employers for claim amount and various additional fees based on the pricing defined. Claim pricing rules can be defined at the parent customer and bill group levels. Claim pricing rule enables you to define whether a particular claim line item should be billable to the customer or should be written off. Eligibility for billing can be defined based on rules using the transaction attributes.

Retention fee - Claim based

Retention fee is based upon claim amount either the percentage of claim or flat amount per claim transaction can also be calculated. ORMB provides you an ability to select the Claim line items eligible for claim based fees calculations. Claim based fees pricing can **vary based on either membership attributes or based on the claim transaction attributes** e.g. different claim based fees can be charged for claim with health coverage class as 'Medical' than that of the 'Dental'

Retention fee - Enrollment based

In order to calculate fees / premium amount / various limits (e.g. ASL Limit based on the enrollments), ORMB provides out of box pricing rule type - retention fee - enrollment based. Enrollment based pricing rules can be defined at both customer or bill group level where, enrollment fees are defined as per member or per subscriber charges where **pricing variation can be provided based on parameters e.g. coverage tier or health coverage class(HCC) etc**. It also calculates the retention fee based upon enrollment count.

Flat and Recurring Fees

Ad-hoc one time fees (e.g. one time admin fees), recurring premium fees / charges e.g. charge the stop loss premium can be defined in ORMB using the flat and recurring fees pricing rule type. These types of charges are independent of no. of enrollments or claims and are charged as a flat fee per month over a period of time. ORMB provides flexibility to set up pricing rules for charging flat / one time fees or flat recurring fees with configurable recurring frequencies e.g. claim funds.

Ancillary fees

Ancillary service charges are basically an adjustments charge which are either pre-calculated charges which need to be included into the bill or to be calculated based on the utilization of the ancillary services Ancillary pricing rule can be defined at the parent customer and bill group levels. The ancillary in ORMB enables you to create an ancillary charge in either of the following ways:

- As **pass through charge without markup or markdown** (i.e. flat charge)
- As **pass through charge** where ORMB adds a **flat or percentage based markup or markdown** to charge the customer
- Or by creating a **rate based charge** using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge

Specific Stop Loss (SSL)

SSL is the form of excess risk coverage that provides protection for the **employer against a high claim on any one individual**. ORMB provides a pricing rule type - specific stop loss to support SSL calculations. SSL pricing rules are defined at two levels - parent level defines all the accumulation specific details which are common for all the bill groups

Copyright © 2025, Oracle and/or its affiliates.

and bill group - policy level pricing to define the limits and also **information about which charges are to be re-insured against SSL**. ORMB provides **complete flexibility** to define the **accumulation criteria** e.g. you can choose to calculate SSL only on the medical claims, out of network claim, etc. based on configurations. Ability to calculate and invoice the specific stop loss based on per subscriber or per member basis with a **facility to laser or excludes** the **subscribers / members**. ORMB's flexible accumulation criteria definitions allow you to define SSL pricing for various types of policies -12/12 or 15/12 or 12/15 with ease. With ORMB you can choose the settlement frequency for the SSL

ORMB enables you to setup **SSL retrospectively** or **allow pricing updates by reprocessing**

Aggregated Stop Loss (ASL)

ORMB enables you to provide a **ceiling on the dollar amount of eligible expenses** that an employer would pay, **in total for all members or subscribers**, during a contract period. **ASL limit** can be configured **as either flat limit** or **based on the PSPM (Per subscriber per month) basis or enrollment based**. Similar to SSL, ASL pricing rules **enables to define eligibility rules for the transactions and claim line items** for the calculations of ASL. With ORMB you can choose the settlement frequency for the ASL. ORMB enables you to setup **ASL retrospectively** or **allow pricing updates by reprocessing**

Discount Arrangements Fees

ORMB discount arrangement pricing rule type enables to calculate and bill the discounts using two different methods - i:e: **discount share Fees** where discount amount to be charged to customer is calculated as percentage of the total discount savings amount per claim and **discount guarantee** Fees where discount amount calculated based **on discount savings amount and guaranteed percentage of the covered amount**.

Pricing Rule type allows you to define maximum discount amount that can be charged per claim transaction and/or allow to configure the **minimum and maximum discount limit on the contract level**. It also allows defining the **rule based eligibility criteria to apply discount** and exclude few transactions based upon the parameters.

Level Funding Arrangements

ORMB level funding pricing rule type allows defining the required setup for monthly contribution mechanism which can be a **fixed monthly amount** or amount based upon enrollment **count**. ORMB enables you to collect the funds during **active policy period** to settle not only the claims and other fees during active period but also to take care of the **terminal liability** or the **claims and other fees during runout period**. ORMB also provides configurable setup to define the charges to be considered for settlement with specific criteria. ORMB enables to setup pricing rules for level funding products where the **claims, ancillary, retention based fees, discounts** can be settled against the level funded amounts.

ORMB has two variations of level funding based on the method to calculate premium fund. The portal enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level funding. If the price items are eligible for level funding, you can then include them in the level funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some **surplus or deficit** in funds at the time of settlement which is ideally at the end of year. In such case, the system enables to configure whether **a flat amount or percentage of surplus should be retained** by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer. It allows you for different settlement options - **Close out - where the final settlement is done**, In case the customer is continuing for the next cycle with the payer you can provide an option to **Roll Forward the surplus funds to the next years funds**.

Level Funding Arrangements

ORMB level funding pricing rule type allows defining the required setup for monthly contribution mechanism which can be a **fixed monthly amount** or amount based upon enrollment **count**. ORMB enables you to collect the funds during **active policy period** to settle not only the claims and other fees during active period but also to take care of the **terminal liability** or the **claims and other fees during runout period**. ORMB also provides configurable setup to define the charges to be considered for settlement with specific criteria. ORMB enables to setup pricing rules for level funding products where the **claims, ancillary, retention based fees, discounts** can be settled against the level funded amounts.

ORMB has two variations of level funding based on the method to calculate premium fund. The portal enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level funding. If the price items are eligible for level funding,

you can then include them in the level funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some **surplus or deficit** in funds at the time of settlement which is ideally at the end of year. In such case, the system enables to configure whether **a flat amount or percentage of surplus should be retained** by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer. It allows you for different settlement options - **Close out - where the final settlement is done**, In case the customer is continuing for the next cycle with the payer you can provide an option to **Roll Forward the surplus funds to the next years funds**.

Parameter

The pricing for a price item may differ depending upon various transaction, person, account, or product attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. In addition, you can define the pricing, price list, and product eligibility criteria using one or more parameters.

Each parameter must be mapped to the following:

- **Source Entity** - Indicates the entity from where the parameter value is derived. A source entity can be account, person, product, transaction, service quantity identifier, or an algorithm.
- **Source Type** - Indicates the type of source from where the parameter value is derived. A source type can be field, characteristic, usage amount, or usage counter.
- **Source Type Code** - Indicates the source (such as, field, characteristic, usage amount, usage counter, SQI, or algorithm) from where the parameter value is derived.

The system allows you to define the following types of parameters:

- **Adhoc** - Used to store an adhoc value.
- **Predefined** - Used to store a predefined value. For example, you can create a parameter named **Country** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
AUT	Austria
AUS	Australia
CAN	Canada
CHN	China

In such case, while defining the pricing for a price item using the **Country** parameter, you can use any one of the above mentioned parameter values.

Another example, you can create a parameter named **Health Coverage Class** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
MEDICAL	Medical
DENTAL	Dental
VISION	Vision

In such case, while defining the pricing for a price item using the **Health Coverage Class** parameter, you can use any one of the above mentioned parameter values.

- **Reference** - Used to store a value which is already present in a table. For example, you can create a parameter named **Country** where the value type is set to **Reference** and the reference entity is set to **CI_COUNTRY_L** (i.e. where

Copyright © 2025, Oracle and/or its affiliates.

the description of all countries is stored). In such case, while defining the pricing for a price item using the **Country** parameter, you can specify a country which is present in the **CI_COUNTRY_L** table in the parameter value.

Parameter (Used for Searching)

The **Parameter** screen allows you to define, view, edit, delete, and copy a parameter. It contains the following zone:

- Search Parameter on page 752

Search Parameter

The **Search Parameter** zone allows you to search for a parameter using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search a particular parameter.	No
Value Type	Used to search parameters in which a particular type of value is stored. The valid values are: • Adhoc • Predefined • Reference	No
Source Entity	Used to search parameters whose value is derived from a particular entity. The valid values are: • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan • Health Product • Membership • Membership Person • Person • Policy • Policy Plan • Product • Service Quantity Identifier • State • Transaction	No
Source Type	Used to search parameters whose value is derived from a particular type of source. The valid values are: • Characteristic • Field • Usage Amount • Usage Counter	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search parameters having a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parameter	Displays the parameter.
Description	Displays the description of the parameter.
Value Type	Indicates the type of value that you want to store in the parameter. The valid values are: • Adhoc • Predefined • Reference
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan • Health Product • Membership • Membership Person • Person • Policy • Policy Plan • Product • Service Quantity Identifier • State • Transaction
Source Type	Indicates the type of source from where the parameter value is derived. The valid values are: • Characteristic • Field • Usage Amount • Usage Counter
View	On clicking the **View** (🔗) icon corresponding to a parameter, the **Parameter** screen appears where you can view the details of the respective parameter.
Edit	On clicking the **Edit** (🔗) icon corresponding to a parameter, the **Parameter** screen appears where you can edit the details of the parameter.
Delete	On clicking the **Delete** (🗑) icon corresponding to a parameter, you can delete the parameter.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: You can delete a parameter when the following conditions are met: • It is not yet associated to any price item or price item bundle. • It is not yet used while defining the pricing, price list, or pricing eligibility criteria.
Copy	On clicking the **Copy** (⧉) icon corresponding to a parameter, the **Parameter** screen appears where you can define a new parameter using an existing parameter.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Parameter**, **Value Type**, **Source Entity**, **Source Type**, and **Description**) available in the **Filter** area. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Searching for a Parameter

Procedure

To search for a parameter:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.
   The **Parameter** screen appears.
3. Enter the search criteria in the **Search Parameter** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of parameters that meet the search criteria appears in the **Search Results** section.

Defining a Parameter

Prerequisites

To define a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To define a parameter:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.
   The **Parameter** screen appears.
3. Click the **Add** button available in the **Page Title** area of the **Parameter** screen.

   The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter. **Note:** You cannot specify any special character except underscore (_) in the parameter name.	Yes
Source Entity	Used to indicate the entity from where the parameter value is derived. The valid values are: • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan **Note:** This option is not applicable for the banking business.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Health Product **Note:** This option is not applicable for the banking business. • Membership **Note:** This option is not applicable for the banking business. • Membership Person **Note:** This option is not applicable for the banking business. • Person • Policy • Policy Plan **Note:** This option is not applicable for the banking business. • Product **Note:** This option is not applicable for the health insurance business. • Service Quantity Identifier • State • Transaction	
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value is derived. The valid values are: • Characteristic • Field • Usage Amount • Usage Counter **Note:** This field appears when the **Account**, **Person**, **Benefit**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Person**, **Policy**, **Policy Plan**, **Product**, or **State** option is selected from the **Source Entity** list. The **Usage Amount** and **Usage Counter** options do not appear in the **Source Type** list when the **Benefit**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Policy**, **Policy Plan**, **Product**, or **State** option is selected from the **Source Entity** list. This is a read-only field. By default, the **Field** option is selected when the **Customer Class**, **Delinquency Event Type**, and **Division** option is selected from the list.	Yes
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: • Adhoc	Yes

You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</td><td>Yes</td></tr>
</table>

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	**Note:** This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** (+) icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete** (🗑) icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the **Algorithm**, **Health Product**, or the **Service Quantity Identifier** option is selected from the **Source Entity** list.	**Note:** This option is required while associating the parameter with a price item.
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the **Transaction** option is selected from the **Source Entity** list.	**Note:** This option is required while defining a pricing eligibility criteria using the parameter.
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the **Membership** or the **Membership Person** option is selected from the **Source Entity** list.	**Note:** This option is required while using the parameter for defining a rule based pricing eligibility criteria.

Copyright © 2025, Oracle and/or its affiliates.

Option Name	Option Description	Mandatory (Yes or No)
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a business rule criteria. **Note:** This option appears only when the **Account**, **Customer Class**, **Delinquency Event Type, Division**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Policy**, **Policy Plan** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria. **Note:** This option does not appear when the **Health Product** or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria. **Note:** This option does not appear when the **Algorithm**, **Health Product**, **Service Quantity Identifier**, or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a product eligibility criteria using the parameter.
Rule Eligibility Criteria	Used to indicate whether the parameter is used while defining the parameter based rule type. **Note:** This option does not appear when the **Health Product**, **Product**, **Service Quantity Identifier**, or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

4. Enter the required details in the **Parameter** screen.
5. Click **Save**.
   The parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Editing a Parameter

Prerequisites

To edit a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To edit a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the parameter *w*hose details you want to edit.

   The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Displays the parameter. **Note:** This is a read-only field.	Not applicable
Source Entity	Used to indicate the entity from where the parameter value is derived. The valid values are: • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan **Note:** This option is not applicable for the banking business. • Health Product **Note:** This option is not applicable for the banking business. • Membership **Note:** This option is not applicable for the banking business. • Membership Person	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This option is not applicable for the banking business. • Person • Policy • Policy Plan **Note:** This option is not applicable for the banking business. • Product **Note:** This option is not applicable for the health insurance business. • Service Quantity Identifier • State • Transaction	
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value is derived. The valid values are: • Characteristic • Field • Usage Amount • Usage Counter **Note:** This field appears when the **Account**, **Person**, **Benefit**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Person**, **Policy**, **Policy Plan**, **Product**, or **State** option is selected from the **Source Entity** list. The **Usage Amount** and **Usage Counter** options do not appear in the **Source Type** list when the **Benefit**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Policy**, **Policy Plan**, **Product**, or **State** option is selected from the **Source Entity** list. This is a read-only field. By default, the **Field** option is selected when the **Customer Class**, **Delinquency Event Type**, and **Division** option is selected from the list.	Yes
Value Type	Displays the type of value that you want to store in the parameter. The valid values are: • Adhoc • Predefined • Reference	Not applicable
Source Type Code	Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	**Note:** This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** (+) icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete** (🗑) icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the **Algorithm**, **Health Product**, or the **Service Quantity Identifier** option is selected from the **Source Entity** list.	**Note:** This option is required while associating the parameter with a price item.
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the **Transaction** option is selected from the **Source Entity** list.	**Note:** This option is required while defining a pricing eligibility criteria using the parameter.
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)
	Note: This option appears only when the **Membership** or the **Membership Person** option is selected from the **Source Entity** list.	**Note:** This option is required while using the parameter for defining a rule based pricing eligibility criteria.

Copyright © 2025, Oracle and/or its affiliates.

Option Name	Option Description	Mandatory (Yes or No)
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a business rule criteria. **Note:** This option appears only when the **Account**, **Customer Class**, **Delinquency Event Type, Division**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Policy**, **Policy Plan** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria. **Note:** This option does not appear when the **Health Product** or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria. **Note:** This option does not appear when the **Algorithm**, **Health Product**, **Service Quantity Identifier**, or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a product eligibility criteria using the parameter.
Rule Eligibility Criteria	Used to indicate whether the parameter can be used while defining the parameter based rule type. **Note:** This option does not appear when the **Health Product**, **Product**, **Service Quantity Identifier**, or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.
   The changes made to the parameter are saved.

How to search for a parameter	Searching for a Parameter on page 754
Parameter screen	Parameter (Used for Searching) on page 752

Deleting a Parameter

Copyright © 2025, Oracle and/or its affiliates.

Procedure

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *p*arameter that you want to delete.
   A message appears confirming whether you want to delete the parameter.
3. Click **OK**.
   The parameter is deleted.

> **Note:**
>
> You can delete a parameter only when:
>
> - It is not yet associated to any price item or price item bundle.
> - It is not yet used while defining the pricing, business rule, price list, product eligibility, or rule eligibility criteria.

How to search for a parameter	Searching for a Parameter on page 754
Parameter screen	Parameter (Used for Searching) on page 752

Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with the parameter usage details. You can then edit the details, if required.

> **Note:** You cannot change the value type that is stored in the new parameter (which is created using an existing parameter).

Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)
- The **Fetch Type Source (C1-FetchSourceTypeVal)** business service defined in the application.

> **Note:**
>
> A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.
>
> A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To copy a parameter:

Copyright © 2025, Oracle and/or its affiliates.

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy** (⧉) icon in the **Copy** column corresponding to the parameter *w*hose copy you want to create.

   The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter. **Note:** You cannot specify any special character except underscore (_) in the parameter name.	Yes
Source Entity	Used to indicate the entity from where the parameter value is derived. The valid values are: • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan **Note:** This option is not applicable for the banking business. • Health Product **Note:** This option is not applicable for the banking business. • Membership **Note:** This option is not applicable for the banking business. • Membership Person **Note:** This option is not applicable for the banking business. • Person • Policy • Policy Plan **Note:** This option is not applicable for the banking business. • Product **Note:** This option is not applicable for the health insurance business. • Service Quantity Identifier • State • Transaction	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value is derived. The valid values are: • Characteristic • Field	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Usage Amount • Usage Counter **Note:** This field appears when the **Account**, **Person**, **Benefit**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Person**, **Policy**, **Policy Plan**, **Product**, or **State** option is selected from the **Source Entity** list. The **Usage Amount** and **Usage Counter** options do not appear in the **Source Type** list when the **Benefit**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Policy**, **Policy Plan**, **Product**, or **State** option is selected from the **Source Entity** list. This is a read-only field. By default, the **Field** option is selected when the **Customer Class**, **Delinquency Event Type**, and **Division** option is selected from the list.	
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: • Adhoc • Predefined • Reference	Not applicable
Source Type Code	Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived. **Note:** This field does not appear when the **Transaction** option is selected from the **Source Entity** list. The following table indicates the values that are listed in the **Source Type Code** field depending on the source entity and source type combination:	Yes

On specifying the entity, the description of the entity appears corresponding to the Reference Entity field.
You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</td><td>Yes</td></tr>
</table>

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define the predefined values for the parameter. It contains the following fields in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Parameter Values	Used to specify the value for the parameter.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	**Note:** This field is required while defining the predefined parameter values.
Description	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This field is required while defining the predefined parameter values.

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list. At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** (+) icon and then specify the details.

However, if you want to remove a predefined value of the parameter, click the **Delete** (🗑) icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where you want to use the parameter in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)
Price Item	Used to indicate whether the parameter is associated with a price item or price item bundle. If the parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)
	Note: This option does not appear when the **Algorithm**, **Health Product**, or the **Service Quantity Identifier** option is selected from the **Source Entity** list.	**Note:** This option is required while associating the parameter with a price item.
Pricing Eligibility Criteria	Used to indicate whether the parameter is used for defining the pricing eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the **Transaction** option is selected from the **Source Entity** list.	**Note:** This option is required while defining a pricing eligibility criteria using the parameter.
Pricing Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based pricing eligibility criteria.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Option Name	Option Description	Mandatory (Yes or No)
	Note: This option appears only when the **Membership** or the **Membership Person** option is selected from the **Source Entity** list.	**Note:** This option is required while using the parameter for defining a rule based pricing eligibility criteria.
Business Rule Eligibility Criteria	Used to indicate whether the parameter is used for defining a rule based business eligibility criteria. **Note:** This option appears only when the **Health Plan**, **Health Product**, **Membership**, or the **Membership Person** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while using the parameter for defining a rule based business eligibility criteria.
Price List Eligibility Criteria	Used to indicate whether the parameter is used for defining the price list eligibility criteria. **Note:** This option does not appear when the **Health Product** or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a price list eligibility criteria using the parameter.
Product Eligibility Criteria	Used to indicate whether the parameter is used for defining the product eligibility criteria. **Note:** This option does not appear when the **Algorithm**, **Health Product**, **Service Quantity Identifier**, or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a product eligibility criteria using the parameter.
Rule Eligibility Criteria	Used to indicate whether the parameter can be used while defining the parameter based rule type. **Note:** This option does not appear when the **Health Product**, **Product**, **Service Quantity Identifier**, or the **Transaction** option is selected from the **Source Entity** list.	Yes (Conditional) **Note:** This option is required while defining a parameter based rule type.

Note: You must select at least one option in the **Parameter Usage** section.

3. Enter the required details in the **Parameter** screen.
4. Click **Save**.
   The new parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Parameter (Used for Viewing)

The **Parameter** screen allows you to view the details of a parameter. It contains the following zone:

- Parameter on page 783

Parameter

The **Parameter** zone displays the details of the parameter. It contains the following sections:

- **Main** - Displays basic information about the parameter. It contains the following fields:

Field Name	Field Description
Parameter	Displays the parameter name.
Description	Displays the description of the parameter.
Value Type	Indicates the type of value that you want to store in the parameter. The valid values are: • Adhoc • Predefined • Reference
Validation Algorithm	Indicates the algorithm using which you want to validate the adhoc parameter value.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Adhoc** option is selected from the **Value Type** list. It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.
Referenced Table	Indicates the table whose primary key (i.e. column) is used to validate the parameter value. **Note:** This field appears when the **Reference** option is selected from the **Value Type** list. It has a link. On clicking the link, the **Table** screen appears where you can view the details of the respective table.
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: • Account • Algorithm • Benefit • Customer Class • Delinquency Event Type • Division • Health Plan **Note:** This option is not applicable for the banking business. • Health Product **Note:** This option is not applicable for the banking business. • Membership **Note:** This option is not applicable for the banking business. • Membership Person **Note:** This option is not applicable for the banking business. • Person • Policy • Policy Plan **Note:** This option is not applicable for the banking business. • Product **Note:** This option is not applicable for the health insurance business. • Service Quantity Identifier • State • Transaction
Source Type	Indicates the type of source from where the parameter value is derived. The valid values are: • Characteristic

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Field • Usage Amount • Usage Counter
	Note: This field appears when the **Account**, **Person**, **Benefit**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Person**, **Policy Plan**, **Product**, or **State** option is selected from the **Source Entity** list. The **Usage Amount** and **Usage Counter** options do not appear in the **Source Type** list when the **Benefit**, **Health Plan**, **Health Product**, **Membership**, **Membership Person**, **Policy**, **Policy Plan**, **Product**, or **State** option is selected from the **Source Entity** list.
Source Type Code	Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.
	Note: This field does not appear when the **Transaction** option is selected from the **Source Entity** list.

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns:

Column Name	Column Description
Parameter Value	Displays the value of the parameter.
Description	Displays the description of the parameter value.

Note: The **Parameter Values** section appears when the **Predefined** option is selected from the **Value Type** list.

- **Parameter Usage** - Indicates where you can use the parameter in the system. It contains the following options:

Option Name	Option Description
Price Item	Indicates whether the parameter is associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing. The following table lists the source entity and source type combinations when the **Price Item** option does not appear in the **Parameter Usage** section:
	Note: This option does not appear when the **Algorithm**, **Health Product**, or the **Service Quantity Identifier** option is selected from the **Source Entity** list.
Pricing Eligibility Criteria	Indicates whether the parameter is used for defining the pricing eligibility criteria.
	Note: This option does not appear when the **Transaction** option is selected from the **Source Entity** list.
Pricing Rule Eligibility Criteria	Indicates whether the parameter is used for defining a rule based pricing eligibility criteria.
	Note: This option appears only when the **Membership** or the **Membership Person** option is selected from the **Source Entity** list.

Price Item (Health Insurance Business)

The various charges that are to be charged to the customer (for example, premium or optional administration fees to a fully-insured group customer and claim based fees or enrollment based fees to a self-funded customer) are defined as price items in the system. Similarly, various charges credited to the customer are also defined as price items. Stop-loss arrangements for a self-funded customer (for example, specific stop-loss that is calculated and credited to customer) is represented using a price item in the system.

Once you define a price item, you can also define the pricing for the price item at various levels using pricing rules based on the requirements. For a fully-insured group customer, the pricing is defined at the policy plan level. Whereas, for a self-funded customer, the pricing can be defined either at the bill group policy level or at the parent customer level. For more information about the fully-insured pricing, see Fully-Insured Pricing on page 3281. And, for more information about the self-funded pricing, see Self-Funded Pricing on page 2783.

The system enables you to create price items which can be used for pricing and billing. It means that pricing can be defined for the price item and charges can be created against it in the system. The system enables you to create the following type of price items:

Copyright © 2025, Oracle and/or its affiliates.

- **Fees Based Price Items** - The fees based services would include services on which fees is charged to the customers either annually or at regular intervals (for example, for the administrative services offered to the self-funded customer, the admin fees will be charged). You can create fees based price items which can be used for pricing and billing in the system.

You need to associate a contract type with a price item. The system allows you to create a charge (i.e. billable charge) for a price item on an account when a contract of the contract type which is associated with the price item is already present on the account.

You can create price items which can be assigned to any price list except global price list or which can assigned to only global price lists. For more information about global price list, see Price List on page 844.

You can associate one or more parameters where the parameter usage is set to **Price Item** with a price item. These parameters can then be used for:

- Aggregating transactions which are mapped to the price item
- Defining multi parameter based pricing for the price item

If the parameter usage is set to **Aggregation** while associating a parameter with a price item, the parameter is only used for aggregating transactions which are mapped to the price item. However, if the parameter usage is set to **Pricing** while associating a parameter with a price item, the parameter is used for aggregating transactions as well as for defining multi parameter based pricing for the price item.

You can associate a price item to one or more divisions. In addition, you can do the following when a price item is associated to a division:

- Associate the Service Quantity Identifiers (SQIs) with the Price Item for the Division
- Define the Division-Specific Characteristics for the Price Item

Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It also allows you to create and copy a price item or price item bundle. It contains the following zone:

- Search Price Item on page 787

Through this screen, you can navigate to the following screens:

- Price Item (Used for Viewing) on page 827
- Price Item Relationship
- Price Item Assignments

Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: • Price Item Details **Note:** By default, the **Price Item Details** option is selected.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
Division	Used to search price items or price item bundles which are associated with a particular division. **Note:** You can only view those divisions to which you have access in the **Division** list.	No
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: • Yes • No	No
Price Item Usage	Used to search price items or price item bundles which is available for pricing or pricing and billing. The valid values are: • Pricing • Pricing and Billing **Note:** By default, the **Pricing and Billing** option is selected.	No
Bundle	Used to indicate whether you want to search a price item bundle. The valid values are: • Yes • No	No
Price Item Type	Used to search a particular type of price items or price item bundles. The valid values are: • Fees • Rate **Note:** This field appears when the **Pricing** option is selected from the **Price Item Usage** list.	No

Note: You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle. **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item or price item bundle.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: • Phantom • Ratio • Regular However, if the price item bundle is available for pricing and its price item type is set to**Fees**, the valid value is: • Regular
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: • Rate • Fees
Price Item Usage	Indicates whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are: • Pricing • Pricing and Billing
Copy	On clicking the **Copy** (⧉) icon, the **Price Item** screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle.
Price Item Assigned To	On clicking the **View** (🔗) icon in the **Price Item Assigned To** column, the **Price Item Assignments** screen appears where you can view the persons, accounts, and active price lists to which the price item or price item bundle is assigned.
Price Item Relationship	On clicking the **View** (🔗) icon in the **Price Item Relationship** column, the **Price Item Relationship** screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Price Item or Price Item Bundle

Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
   A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.
   The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a *p*rice item or price item bundle.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

Defining a Price Item or Price Item Bundle

Prerequisites

To define a price item or price item bundle, you should have:

- Contract types, To Do types, and To Do roles defined in the application
- To Do roles associated with the required To Do type
- Value defined for the **Default Contract Type** option type in the **C1_PRICING** feature configuration

Procedure

To define a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
   A sub-menu appears.
3. Click the **Add** option from the **Price Item** sub-menu.

   The **Price Item** screen appears. It contains the following sections:

Copyright © 2025, Oracle and/or its affiliates.

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

  Note:

  The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

  You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. In addition, it enables you to:
  - Associate the service quantity identifiers (SQIs) with the price item or price item bundle for a division
  - Define the accrual type criteria of the price item or price item bundle for a division

    Note: This step is not applicable for the health insurance business.
  - Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of a division

    Note: This step is not applicable for the health insurance business.
  - Define the cost of the price item or price item bundle for a division

    Note: This step is not applicable for the health insurance business.
  - Define the average price floor and ceil limits of the price item or price item bundle for a division

    Note: This step is not applicable for the health insurance business.
  - Define the negotiability floor and ceil values of the price item or price item bundle for a division

    Note: This step is not applicable for the health insurance business.
  - Define the division-specific characteristics for the price item or price item bundle
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is available for pricing or pricing and billing. The valid values are: • **Pricing** - Used when you want to define pricing for the price item or price item bundle, but no charges should be created against it in the system. **Note:** This option is not applicable for the health insurance business.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Pricing and Billing** - Used when you want to define pricing and create charges for the price item or price item bundle in the system. **Note:** By default, the **Pricing and Billing** option is selected.	
Price Item Type	Used to indicate the type of the price item or price item bundle. The valid values are: • **Rate** - Used when you want to create a rate based price item or price item bundle. For example, savings, current, and loan interest services (i.e. price items) are rate based price items. **Note:** This option is not applicable for the health insurance business. • **Fees** - Used when you want to create a fee based price item or price item bundle. For example, debit credit service (i.e. price item) is a fee based price item. **Note:** This field appears when the **Pricing** option is selected from the **Price Item Usage** list. By default, the **Fees** option is selected. You cannot create a price item bundle when the **Pricing** option is selected from the **Price Item Usage** list and **Rate** option is selected from the **Price Item Type** list. The system automatically sets the price item type of those price items or price item bundles which are available for pricing and billing to **Fees**. Therefore, this field does not appear when the **Pricing and Billing** option is selected from the **Price Item Usage** list.	Yes
Bundle	Used to indicate whether you want to create a price item bundle. The valid values are: • Yes • No **Note:** By default, the **No** option is selected. This field is not applicable for the health insurance business.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	Used to indicate the type of the price item bundle. If the**Pricing and Billing** option is selected from the **Price Item Usage** list, the valid values are: • Regular Bundle • Phantom Bundle • Ratio Bundle However, if the **Pricing** option is selected from the **Price Item Usage** list and the **Fees** option is selected from the **Price Item Type** list, you can only define a regular price item bundle. Therefore, by default, the value is set to **Regular**. **Note:** This field appears when the **Yes** option is selected from the **Bundle** list. This field is enabled when the **Pricing and Billing** option is selected from the **Price Item Usage** list and the **Yes** option is selected from the **Bundle** list. You cannot define a price item bundle when the **Pricing** option is selected from the **Price Item Usage** list and **Rate** option is selected from the **Price Item Type** list. This field is not applicable for the health insurance business.	Yes (Conditional) **Note:** This field is required when you are creating a price item bundle.
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: • Yes • No **Note:** By default, the **No** option is selected.	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle. **Note:** This field appears when the **Pricing and Billing** option is selected from the **Price Item Usage** list. The **Search** (🔍) icon appears corresponding to the **Contract Type** field. On clicking the **Search** icon, the **Contract Type Search** window appears.	Yes
Price Item Manager To Do Type	Used to indicate the To Do type using which a To Do should be created when the deal creator or approver requests the price item manager (i.e. clicks the**Send Price Items for Approval** button)	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	to approve the average price for the price item or price item bundle offered in a deal. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item Manager To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Price Item Manager To Do Type** field. This field is not applicable for the health insurance business.	
Price Item Manager To Do Role	Used to indicate that users with the specified To Do role can approve the average price for the price item or price item bundle offered in a deal. Note that the price item manager can approve the average price when it is within the average price floor and ceil limits defined for the To Do role. **Note:** The list appears when the price item manager To Do type is selected from the respective field. It includes only those To Do roles which are associated with the price item manager To Do type. This field is not applicable for the health insurance business.	Yes (Conditional) **Note:** This field is required when the price item manager To Do type is specified for the price item or price item bundle.
Average Price Floor and Ceil Limits	Used to indicate the manner in which you want to define the average price floor and ceil limits for the price item or price item bundle. The valid value is: • **Absolute Value Range** - Used when you want to define the average price floor and ceil limits in the absolute values. For example, the average price for the price item or price item bundle should be between 10$ to 15$. • **Spread Amount** - Used when you want to define the average floor and ceil limits based on the spread amount. • **Spread Percentage** - Used when you want to define the average floor and ceil limits based on the spread percentage.	Yes (Conditional) **Note:** This field is required when you are defining the average price floor and ceil limits of the price item or price item bundle for a division.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: • Incase of **Spread Amount** and **Spread Percentage** options, the system calculates the average price of a price item and based on the average price and the spread amount or spread percentage, the average floor and ceil limits are derived. • This field is not applicable for the health insurance business.	
Sort Sequence	Used to specify the sequence in which the price item should appear in the price item hierarchy of the deal pricing management module.	No
Variable Price	Used to indicate whether the system inherits the pricing of the price item from the price list while orchestrating a deal in the deal pricing management module. **Note:** If the **Variable Price** option is selected, the pricing offered for a price item to an entity in the deal is overridden when the price list pricing is changed after orchestrating the deal in the system. However, if the **Variable Price** option is not selected, the pricing offered for a price item to an entity in the deal is not overridden when the price list pricing is changed in the system. This enables the relationship manager to create deals for an existing customers, accounts, and prospects where the pricing of the price items are fixed for a particular timeframe.	No

Tip: Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

4. Enter the required details in the **Main** section.
5. Associate the parameters with the price item or price item bundle, if required.

Note: For each predefined parameter which is associated with the price item or price item bundle, you can define a *s*et of valid predefined parameter values for the price item or price item bundle, if required.

6. Associate the price item or price item bundle with the required divisions.
7. Associate the SQIs with the price item or price item bundle for the required divisions.
8. Define the accrual type criteria of the price item or price item bundle for the required divisions.

Note: This step is not applicable for the health insurance business.

9. Associate the price item or price item bundle with a hierarchy entity in an entity hierarchy relationship of the *r*equired divisions.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** This step is not applicable for the health insurance business.

10. Define the cost of the price item or price item bundle for the required divisions.

> **Note:** This step is not applicable for the health insurance business.

11. Define the average price floor and ceil limits of the price item or price item bundle for the required divisions.

> **Note:** This step is not applicable for the health insurance business.

12. Define the negotiability floor and ceil values of the price item or price item bundle for the required divisions.

> **Note:** This step is not applicable for the health insurance business.

13. Define the division-specific characteristics for the price item or price item bundle. if required.
14. Define the characteristics for the price item or price item bundle, if required.
15. Click **Save**.
    The price item is defined.

> **Note:** While creating a price item or price item bundle which is available for pricing, the contract type specified in the **Default Contract Type** option type of the **C1_PRICING** feature configuration is automatically associated to the price item or price item bundle.

Associating a Parameter with a Price Item or Price Item Bundle

You can define multi parameter based pricing for a price item or price item bundle when the parameters using which you want to define the price item pricing are associated with the respective price item or price item bundle during the pricing date range. Let us understand this with the help of an example from the financial institution domain.

The following table illustrates how a financial institution can offer different price for a price item based on the return codes:

Service	Price Item	Parameter	Parameter Value	Price
SEPA Direct Debit Return	SEPADDR	Return Code (RTURNCD)	AC01	0.1$
			AC04	0.2$
			AC06	0.3$
			AG01	0.10$

In such case, you need to first define a predefined parameter named Return Code where the parameter usage is set to **Price Item**). In the Return Code parameter, you must specify the above listed return codes (i.e. AC01, AC04, AC06, and AG01) as the predefined values. Then, in order to define multi parameter based pricing for the SEPADDR price item using the Return Code parameter, you must associate the Return Code parameter with the SEPADDR price item using the following specifications:

Parameter	Display Order	Mandatory (Yes or No)	Optional Priority
Return Code	10	Yes	-

Let us understand this with the help of another example from the health insurance domain.

The following table illustrates how a self-funded customer can be charged different admin fee for the services based on health coverage class and network type:

Service	Price Item	Health Coverage Class	Network Type	Fees
Claim Based Fees	CLBDFS	Medical	In	$100
		Medical	Out	$150
		Dental	In	$50
		Dental	Out	$75

In such case, you need to first define two predefined parameters named Health Coverage Class and Network Type where the parameter usage is set to **Price Item**). In the Health Coverage Class parameter, you must specify the above listed values (i.e. Medical and Dental)) as the predefined values. And, in the Network Type parameter, you must specify the above listed values (i.e. In and Out)) as the predefined values. Then, in order to define parameter based pricing for the CLBDFS price item using the Health Coverage Class and Network Type parameters, you must associate these parameters with the CLBDFS price item using the following specifications:

Parameter	Display Order	Mandatory (Yes or No)	Optional Priority
Health Coverage Class	10	Yes	-
Network Type	20	Yes	-

Prerequisites

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the parameter usage is set to **Price Item**)

Copyright © 2025, Oracle and/or its affiliates.

Procedure

To associate a parameter with a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price *i*tem or price item bundle.

   The **Parameters** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the parameter is associated with the price item or price item bundle. **Note:** You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes
Effective End Date	Used to specify the date till when the parameter is associated with the price item or price item bundle. **Note:** You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Parameter	Used to indicate the parameter that you want to associate with the price item or price item bundle. **Note:** The **Search** ( ) icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, the **Parameter Search** window appears. In the **Parameter Search** window, the system allows you to search only those parameters where the parameter usage is set to **Price Item**. If you select a predefined parameter, the **Add** (icon appears corresponding to the **Parameter** field. On clicking the **Add** icon, a grid appears where you can specify a list of predefined parameter values which are valid for the price item or price item bundle while defining its pricing. If you do not list any predefined parameter value in this grid, the system enables you to specify any predefined value of the parameter while defining the pricing for the price item or price item bundle.	Yes
Business Label	Used to specify a business label for the parameter. If you specify the business label for a parameter, the business label appears throughout the application instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should appear in the	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	pricing parameter information string across the application.	
Parameter Usage	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: • **Aggregation** - Used when you want to use the parameter for aggregating transactions. • **Pricing** - Used when you want to use the parameter for aggregating transactions as well as for defining the price item pricing.	Yes
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing.	No
Priority	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle. **Note:** This field is disabled when the **Mandatory** option is selected.	Yes (Conditional) **Note:** This field is required when the **Mandatory** option is not selected.

Note:

The **Parameters** section appears in the **Price Item** screen when the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **True**.

You cannot associate parameters to the ratio and phantom price item bundles. Therefore, while defining a ratio or phantom price item bundle, the **Parameters** section does not appear in the **Price Item** screen.

2. Enter the required details in the **Parameters** section.
3. If you want to associate more than one parameter with the price item or price item bundle, click the **Add** (+) *i*con and then repeat step 2.

Note:

However, if you want to remove a parameter from the price item or price item bundle, click the **Delete** (🗑) icon corresponding to the parameter. You can edit the parameter details and remove a parameter from the price item or price item bundle when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which is used for aggregation, whenever required. However, you can add a parameter which is used for pricing when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

4. For each predefined parameter which is associated with the price item or price item bundle, you can define a set *o*f valid predefined parameter values for the price item or price item bundle, if required.
5. Click **Save**.
   The parameters are associated with the price item or price item bundle.

Note: By default, the priority of all parameters which are mandatory is set to 0.

For more information on...	See...
How to define a price item or price item bundle	Defining a Price Item or Price Item Bundle on page 790
How to edit a price item or price item bundle	Editing a Price Item or Price Item Bundle on page 837
How to copy a price item or price item bundle	Copying a Price Item or Price Item Bundle on page 819
How to define the valid predefined parameter values for a price item or price item bundle	Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle on page 800

Defining the Valid Predefined Parameter Values for a Price Item or Price Item Bundle

A predefined parameter may have hundreds of values defined in the system. But, there might be situations when only certain predefined parameter values are applicable for a price item or price item bundle while defining its pricing. In such case, you can define a set of valid predefined parameter values for a price item or price item bundle. For example, the Return Code parameter has the following predefined parameter values:

Parameter Value	Description
AC01	Account Identifier Incorrect (i.e. invalid IBAN)
AC04	Account Closed
AC06	Account Blocked
AG01	Direct Debit Forbidden for Regulatory Reasons
AG02	Operation/Transaction Code Incorrect
AM04	Insufficient Funds
AM05	Duplicate Collection
MD01	Unauthorized Transaction
MD06	Disputed Authorized Transaction

If only the MD01 and MD06 predefined parameter values are applicable for the SEPA Debit Refund (SEPADRF) price item, you can define MD01 and MD06 as the valid predefined parameter values for the SEPADRF price item. In such case, the system will allow you to define the pricing for the SEPADRF price item only using the MD01 or MD06 parameter value. However, if all the above listed predefined parameter values are applicable for the SEPA Direct Debit Return (SEPADDR) price item, you must not define the valid predefined parameter values for the SEPADDR price item. In such case, the system will allow you to define the pricing for the SEPADDR price item using any of the above listed parameter value.

Another example, the Health Coverage Class parameter has the following predefined parameter values:

Parameter Value	Description
MEDICAL	Medical
DENTAL	Dental
VISION	Vision

If only the MEDICAL and DENTAL predefined parameter values are applicable for the Claim Based Fees (CLBDFS) price item, you can define MEDICAL and DENTAL as the valid predefined parameter values for the CLBDFS price item. In such case, the system will allow you to define the pricing for the CLBDFS price item only using the MEDICAL or DENTAL parameter value. However, if all the above listed predefined parameter values are applicable for the Claim Based Fees (CLBDFS) price item, you must not define the valid predefined parameter values for the CLBDFS price item. In such case, the system will allow you to define the pricing for the CLBDFS price item using any of the above listed parameter value.

Copyright © 2025, Oracle and/or its affiliates.

Prerequisites

To define the valid predefined parameter values for a price item or price item bundle, you should have:

- Predefined values defined for the parameter which is associated with the price item or price item bundle
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define the valid predefined parameter values for a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price *i*tem or price item bundle.
   The **Parameters** section appears.
2. Click the **Add** (+) icon in the **Parameter** column corresponding to the predefined parameter which is *a*ssociated with the price item or price item bundle.

   The following field appears in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing. **Note:** The **Search** (🔍) icon appears corresponding to the **Parameter Value** field. On clicking the **Search** icon, the **Predefined Parameter Value Search** window appears. On specifying the valid predefined parameter value for a price item or price item bundle, the description of the predefined parameter value appears corresponding to the **Parameter Value** field.	Yes (Conditional) **Note:** This field is required when you are defining the valid predefined parameter values for the price item or price item bundle.

3. Enter a predefined parameter value which is valid for the price item or price item bundle while defining its pricing.
4. If you want to define more than one valid predefined parameter value for the price item or price item bundle, *c*lick the **Add** (+) icon and then repeat step 3.

> **Note:** However, if you want to remove a valid predefined parameter value from the price item or price item bundle, click the **Delete** (🗑) icon corresponding to the parameter value. You can remove a valid predefined parameter value from the price item or price item bundle when the parameter value is not yet used for defining the price item pricing.

5. Click **Save**.
   The valid predefined parameter values are defined for the price item or price item bundle.

Associating a Price Item or Price Item Bundle with a Division

You can assign a price item or price item bundle to a person or account when the price item or price item bundle is associated with the division to which the person or account belongs. Let us understand this with the help of an example from the financial institution domain.

The following table illustrates how a price item can be associated with one or more divisions in the financial institution domain:

Price Item	Division
SEPA Direct Debit Return (SEPADDR)	001-AL
	002-CA
	003-FL
	004-IN
Stop Payment (STPPMT)	002-CA
	003-FL
	004-IN

In such case, you can assign the SEPADDR price item to any person or account which belongs to the 001-AL, 002-CA, 003-FL, or 004-IN division. However, you can assign the STPPMT price item to any person or account which belongs to the 002-CA, 003-FL, or 004-IN division.

Let us understand this with the help of an example from the health insurance domain.

The following table illustrates how a price item can be associated with one or more divisions in the health insurance domain:

Price Item	Division
Claim Based Fees (CLBDFS)	002-CA
	003-FL
	004-IN

In such case, you can charge the CLBDFS price item to any person or account which belongs to the 002-CA, 003-FL, or 004-IN division.

Prerequisites

To associate a price item or price item bundle with a division, you should have:

- Divisions defined in the application
- Divisions associated with the access group to which the user (i.e. who is performing this action) belongs

Procedure

To associate a price item or price item bundle with a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price *i*tem or price item bundle.

   The **Divisions** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQIs	On clicking the **Add** (+) icon, you can associate an SQI with the price item or price item bundle for the division.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Division Characteristics	On clicking the **Add** (+) icon, you can define a division-specific characteristic for the price item or price item bundle.	Not applicable
Accrual Type Criteria	On clicking the **Add** (+) icon, you can define the accrual type criteria of the price item or price item bundle for the division. **Note:** This feature is not applicable for the health insurance business.	Not applicable
Entity Hierarchy	On clicking the **Add** (+) icon, you can associate the price item or price item bundle with a hierarchy entity of an entity hierarchy relationship for the division. **Note:** This feature is not applicable for the health insurance business.	Not applicable
Costs	On clicking the **Add** (+) icon, you can define the cost of the price item or price item bundle for the division. **Note:** This feature is not applicable for the health insurance business.	Not applicable
Floor and Ceiling Type	On clicking the **Add** (+) icon, you can define the average price floor and ceil limits of the price item or price item bundle for the division. **Note:** This feature is not applicable for the health insurance business.	Not applicable
Negotiability	On clicking the **Add** (+) icon, you can define the negotiability floor and ceil limits of the price item or price item bundle for the division. **Note:** This feature is not applicable for the health insurance business.	No
Division	Used to indicate the division to which you want to associate the price item or price item bundle. **Note:** You can only view those divisions to which you have access in the **Division** list.	Yes (Conditional) **Note:** This field is required while associating the price item or price item bundle with a division.

2. Select the division from the respective field.
3. If you want to associate the price item or price item bundle with more than one division, click the **Add** (+) *i*con and then repeat step *2*.

Note: However, if you want to remove the price item or price item bundle from a division, click the **Delete** (🗑) icon corresponding to the division. You cannot remove the price item or price item bundle from a division when it is assigned to a person or account which belongs to the division.

4. Associate the SQIs with the price item or price item bundle for the required divisions.
5. Define the accrual type criteria of the price item or price item bundle for the required divisions.

> **Note:** This step is not applicable for the health insurance business object.

6. Associate the price item or price item bundle with a hierarchy entity of an entity hierarchy relationship for the *r*equired divisions.

> **Note:** This step is not applicable for the health insurance business object.

7. Define the cost of the price item or price item bundle for the required divisions.

> **Note:** This step is not applicable for the health insurance business object.

8. Define the floor and ceiling type of the price item or price item bundle for the required divisions.

> **Note:** This step is not applicable for the health insurance business object.

9. Define the rate negotiability floor and ceil limits of the price item or price item bundle for the required divisions.

> **Note:** This step is not applicable for the health insurance business object.

10. Define the division-specific characteristics for the price item or price item bundle. if required.
11. Click **Save**.
    The price item or price item bundle is associated with the divisions.

> **Tip:** Alternatively, you can associate a price item or price item bundle with a division using the **Division** screen. For more information, see Associating a Price Item or Price Item Bundle with a Division on page 950.

Associating an SQI with a Price Item or Price Item Bundle for a Division

In the transaction aggregation process, an SQI based billable charge is created for a price item or price item bundle (to which a transaction is mapped) when:

Copyright © 2025, Oracle and/or its affiliates.

- The SQIs are associated with the price item or price item bundle for the division to which the account (i.e. for which the billable charge is created) belongs.
- The transaction aggregation rules are defined for such SQIs in the system.

Let us assume that the A1 account belongs to the 201-NJ division and the A2 account belongs to the 209-CA division.

The following table illustrates how you can define division-specific SQIs for a price item in the financial institution domain:

Price Item	Division	Service Quantity Identifiers (SQIs)
Stop Payments (STPY)	201-NJ	Number of Transactions (NBRTXN)
		Transaction Volume (TXNVOL)
		Transaction Amount (TXNAMT)
	209-CA	Number of Transactions (NBRTXN)
		Transaction Amount (TXNAMT)

Now, when an SQI based billable charge is created for the A1 account through the transaction aggregation process, the system calculates the following SQIs using the respective transaction aggregation rule:

- Number of Transactions (NBRTXN)
- Transaction Volume (TXNVOL)
- Transaction Amount (TXNAMT)

And, when an SQI based billable charge is created for the A2 account through the transaction aggregation process, the system calculates the following SQIs using the respective transaction aggregation rule:

- Number of Transactions (NBRTXN)
- Transaction Amount (TXNAMT)

Another example, you can calculate the enrollment based fees for a self-funded customer based on Per Subscriber Per Month or Per Member Per Month for the 201-NJ and 209-CA divisions. Therefore, you need to associate two SQIs – Subscriber Count and Member Count with the Enrollment Based Fees (ERBDFS) price item.

The following table illustrates how you can define division-specific SQIs for a price item in the health insurance domain:

Price Item	Division	Service Quantity Identifiers (SQIs)
Enrollment Based Fees (ERBDFS)	201-NJ	Subscriber Count (SUBCNT)
		Member Count (MEMCNT)
	209-CA	Subscriber Count (SUBCNT)
		Member Count (MEMCNT)

Prerequisites

To associate an SQI with a price item or price item bundle for a division, you should have:

- Service Quantity Identifiers (SQIs) defined in the application
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To associate an SQI with a price item or price item bundle for a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price *i*tem or price item bundle.
   The **Divisions** section appears.

Copyright © 2025, Oracle and/or its affiliates.

2. Click the **Add** (+) icon in the **SQIs** column corresponding to the division for which you want to associate *S*QIs with the price item or price item bundle.

   The following field appears in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI that you want to associate with the price item or price item bundle for the division.	Yes (Conditional)
	Note: The **Search** (🔍) icon appears corresponding to the **SQI** field. On clicking the **Search** icon, the **Service Quantity Identifier Search** window appears. On specifying the SQI, the description of the SQI appears corresponding to the **SQI** field.	**Note:** This field is required while associating an SQI with the price item or price item bundle for the division.

3. Enter the required details in the **SQIs** grid.
4. If you want to associate more than one SQI with the price item or price item bundle for the division, click the **Add** (+) icon *a*nd then repeat step 3.

   Note: However, if you want to remove an SQI from the price item or price item bundle for the division, click the **Delete** (🗑) icon corresponding to the SQI. You cannot remove an SQI from the price item or price item bundle for the division when an SQI based billable charge is created using the SQI.

5. Click **Save**.
   The SQIs are associated with the price item or price item bundle for the division.

Defining a Division-Specific Characteristic for a Price Item or Price Item Bundle

Prerequisites

To define a division-specific characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Division/Price Item Combination**)
- Price items or price item bundles associated with the division to which the user (i.e. who is performing this action) belongs

Procedure

To define a division-specific characteristic for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price *i*tem or price item bundle.

Copyright © 2025, Oracle and/or its affiliates.

The **Divisions** section appears.

2. Click the **Add** (+) icon in the **Division Characteristics** column corresponding to the division for which you want to define division-specific price item or price item bundle characteristics.

   The following fields appear in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division. **Note:** You can either manually specify the date or select it using the **Date Picker** (calendar) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required while defining a division-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Division/Price Item Combination**.	Yes (Conditional) **Note:** This field is required while defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (search) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required while defining a division-specific characteristic for the price item or price item bundle.

3. Enter the required details in the **Divisions** section.
4. If you want to define more than one division-specific characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 3.

   Note: However, if you want to remove a division-specific characteristic from the price item or price item bundle, click the **Delete** (trash) icon corresponding to the characteristic.

5. Click **Save**.
   The division-specific characteristics are defined for the price item or price item bundle.

Defining the Accrual Type Criteria of a Price Item or Price Item Bundle for a Division

Note: This topic is not applicable for the health insurance business.

The accrual type criteria of a price item or price item bundle is referred when the accrual is calculated for an account using an accrual type where the **Price Item Accrual Criteria Required** option is selected. The system behaves in the following manner when the **Price Item Accrual Criteria Required** option is selected in the accrual type:

If the accrual type criteria of a price item or price item bundle is set to...	Then...
Actual	The system considers the billable charges of the price item for accrual when the following conditions are met: • The price item is not excluded in the accrual type. • The accrual is calculated for an account using the accrual type where the accrual criteria is set to **Actual**.
