Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Reinstatement

Using the below example, you can do the following:

- Reinstate a fully-insured group policy

The following table provides sample data through which you can reinstate a fully-insured group policy:

Person Name	Person Type	Policy Number	Plan Number	Reinstatement Date	Policy End Date
GREG_INDUS	Group Customer	POL_DT_HLT_50	PL_DT_101	2024-05-15	2024-12-31

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Group Policy Termination

Using the below example, you can do the following:

- Terminate a fully-insured group policy

The following table provides sample data through which you can terminate a fully-insured group policy:

Person Name	Person Type	Policy Number	Plan Number	Termination Date	Policy End Date
HOP_TECH	Group Customer	PL_DENT_700	PN_DENT_505	2024-02-01	2024-12-31

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Individual Membership Renewal

Using the below example, you can do the following:

- Renew a fully-insured individual membership

The following table provides sample data through which you can renew a fully-insured individual membership:

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Individual Membership Renewal of a Dependent Person

Using the below example, you can do the following:

- Renew a fully-insured individual membership

The following table provides sample data through which you can renew a fully-insured individual membership:

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Membership Renewal Date
BRADLEY NICHOLSON	SELF	Yes	HP_SNR_GOLD	2024-01-05
RAMONA NICHOLSON	SPOUSE	No	HP_SNR_GOLD	2024-01-05

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Fully-Insured Individual Membership Termination

Using the below example, you can do the following:

- Terminate a fully-insured individual membership

The following table provides sample data through which you can renew a fully-insured individual membership:

Person Name	Member Relationship Type	Main Subscriber	Health Plan Code	Membership Termination Date
GLENN, MARSH	SELF	Yes	HPMINAG01	2024-03-31

```

Health Product and Plan Inbound Message

On calling the **C1-HCProdHlthPlnInboundMessage** or **C1-HCProdHlthPlnInboundMes** web service, you can define a health product and plan inbound message using a health product and plan inbound message type. The **C1-HCProdHlthPlnInboundMessage** is a **SOAP** service which helps to create a health product, health plan, and pricing

Copyright © 2025, Oracle and/or its affiliates.

rule for a health plan through an inbound message, whereas the **C1-HCProdHlthPlnInboundMes** is a **RESTful** service which helps to create and edit a health product, health plan, and pricing rule for a health plan through an inbound message.

You can define a health product and plan inbound message type using the **Health Product and Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)** business object through the **Inbound Message Type** screen. The health product and plan inbound message type business object encapsulates the following information:

- A business object using which you want to create the health product when the health product and plan inbound message is processed.
- A business object using which you want to create the health plan when the health product and plan inbound message is processed.

The health product and plan inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health product and plan inbound message should be created in the system. You must specify the **Health Product and Plan Inbound Message (C1-HCProdHlthPlnInbound)** business object in the health product and plan inbound message type. The health product and plan inbound message business object enables you to create and edit the following entities for a fully-insured individual customer through an inbound web service:
  - Health Product
  - Health Plan
  - Health Plan Pricing Rules

  Note: You can create or update the above entities either through a single or separate health product and plan inbound messages.
- **Health Care Product Business Object** - The business object using which health product should be created in the system. You must specify the **Health Care Product (C1-HealthcareProduct)** business object in the health product and plan inbound message type.
- **Health Plan Business Object** - The business object using which health plan should be created in the system. You must specify the **Health Plan (C1-HealthPlan)** business object in the health product and plan inbound message type.

On calling the **C1-HCProdHlthPlnInboundMessage** or **C1-HCProdHlthPlnInboundMes** web service, a batch named **C1-HCPHP** checks whether there are any health product and plan inbound messages in the **Pending** status. If there is a health product and plan inbound message in the **Pending** status, the batch changes the status of the health product and plan inbound message to the default next status (i.e. **Validation**). Then, the algorithm attached to the **Validation** status is triggered. If the validation is successful, the system changes the status of the health product and plan inbound message to **Processing**. Then, the algorithm attached to the **Processing** status is triggered. If the processing is successful, the system creates or updates the entities, such as health product, health plan, pricing rules for the health plan, and then changes the status of the health product and plan inbound message to **Processed**.

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4313

Prerequisites

To use the health product and plan inbound message feature, you need to do the following:

- Define the required health product and plan inbound message types in the system.
- Assign the **Product (C1_PRODUCT)** maintenance object to the **Health Product (C1-HealthcareProduct)** business object, while defining the health product and plan inbound message type.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the required characteristic types where the characteristic entity is set to **Health Plan**.

Copyright © 2025, Oracle and/or its affiliates.

- Define the required characteristic types where the characteristic entity is set to **Product**.
- Define the **Health Product and Plan Inbound Message (C1-HCProdHlthPlnInbound)** business object in the system.
- Define the **Health Product and Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)** business object in the system.
- Define the **Healthcare Product (C1-HealthcareProduct)** business object in the system.
- Define the **Health Plan (C1-HealthPlan)** business object in the system.
- Define the required pricing rule type business object in the system.
- Define the required values for the health plan in the **PRC_RULE_ENTITY_TYPE** lookup field.

Health Product and Plan Inbound Message Status Transition through User Interface

The following figure graphically indicates how a health care inbound message moves from one status to another when it is validated and processed through the user interface:

Algorithms Used in C1-HCProdHlthPlnInbound

The following table lists the algorithms which are used in the lifecycle of the **C1-HCProdHlthPlnInbound** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to C1-AT-RQJ on page 2202.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 226.
	Enter	C1-HLTPRDVAL	C1-HLTPRDVAL	Refer to C1-HLTPRDVAL on page 2551.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 226.
	Enter	C1-HCPRPROC	C1-HCPRPROC	Refer to C1-HCPRPROC on page 2552.

Copyright © 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to C1-TODORETRY on page 2203.
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to C1-TDCRINMSG on page 2203.
Processed	-	-	-	-
Voided	-	-	-	-

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HLTPRDVAL

This algorithm is invoked when you execute the **Health Product Health Plan (C1-HCPHP)** periodic monitor batch or click the **Submit for Processing** button in the **Inbound Message** screen. This algorithm validates the Health Product and Plan Inbound Message, which is in the Pending status, to check the following conditions:

- Whether the specified **Inbound Message Type** and **Inbound Message Business Object** are valid.
- Whether the specified source system is valid and does exists in the **Source System Extendable Lookup (C1-SourceSystemLookup)**.
- Whether the mandatory data (such as health product code, description, product type, bundled product, start date, status) is specified in the health product.
- Whether the mandatory data (such as health plan code, description, health product, start date, status) is specified in the health plan.
- Whether the mandatory data (such as health plan code, charge, start date, pricing rule) is specified in the health plan pricing rules.
- Whether the specified data for the lookup columns matches with those mentioned in the system.
- Whether all of the switch columns either contain **Y** or **N** as values.
- Whether the specified end date for health product, health plan, and health pricing rule is greater than the start date.

Copyright © 2025, Oracle and/or its affiliates.

- Whether the product is mapped to the division which exists in the system, and the product - division mapping is a one time process.
- Whether the product code is mapped with the health plan exists in the system.
- Whether the characteristic type mapped with the respective entity exists in the system.
- Whether the specified pricing rule type for creating the pricing rule exists in the system in the **Active** status, and the pricing rule type - health plan mapping is a one time process.
- Whether the specified price item and price item parameters for pricing rule eligibility are valid, and the price item parameters exist in the **CI_PRICE_PARM** table.
- Whether the price item parameters that have parameter usage specified as **Pricing Rule Eligibility Criteria** are available while defining the pricing rule eligibility for the pricing rule.
- Whether the entity type is specified as **Health Plan** and entity value as **Health Plan Code** while creating a pricing rule for a health plan.

Note:

This algorithm does not consider the following validations or checks:

- No validation is performed between the date range of the product and health plan.
- No check is performed whether the product is in the **Active** status while creating a health plan.
- No check is performed whether the health plan is in the **Active** status while creating the health plan pricing rules.
- No check is performed on the set of the pricing rule eligibility, which is defined on multiple pricing rules, for a price item.
- No validation is performed if duplicate parameters are defined for a pricing rule.

C1-HCPRPROC

This algorithm is invoked when the health product and plan inbound message is successfully validated. This algorithm creates or updates the health product, health plan, and health plan pricing rule information for individual memberships.

This algorithm fetches the business object from the health product and plan inbound message type to create or update the records for health product, health plan, and health plan pricing rule. The algorithm performs the following operations:

- Creates or updates the health product based on the health product code.
- Creates or updates the health plan based on the health plan code.
- Creates or updates the health plan pricing rules based on the price item, health plan, start date, and eligibility criteria.

Note:

The pricing rule eligibility is optional while creating or updating the pricing rules for the health plan.

The health product and plan inbound message log maintains complete trail of actions performed on health product, health plan, and health plan pricing rules.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** - Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** - This parameter is not used at the moment.

Copyright © 2025, Oracle and/or its affiliates.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Health Product and Plan Inbound Message XML Format

Note: We recommend you to refer the Health Product and Plan Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCProdHlthPlnInboundMessage** inbound web service, you need to ensure that the health product and plan inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health product and plan inbound message.	Yes
messageType	Used to indicate the health product and plan inbound message type using which the health product and plan inbound message should be created in the system. **Note:** You must specify a valid health product and plan inbound message type which is created using the **C1-HCProdHlthPlnInboundTyp** business object and which is in the **Active** status. The system then derives the business objects using which the health product and plan inbound message, health products, and health plans should be created from the health product and plan inbound message type.	Yes
sourceSystem	Used to indicate the external system from where the health product and plan inbound message is received. **Note:** You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup. It must be in the **Active** status.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
externalTransactionId	Used to indicate the transaction in the external source system which resulted in the health product and plan inbound message.	No
externalBatchId	Used to indicate the external batch job or batch run number through which the health product and plan inbound message is created.	Yes
externalSourceId	Used to specify the external source system ID.	Yes
characteristics	You can use this tag within the following tags: • **schema** - Here, the **characteristics** tag is used to specify a list of characteristics for the health product and plan inbound message. • **healthPlanPricingRuleData** - Here, the **characteristics** tag is used to specify a list of characteristics for the pricing rule of a health plan.	No
inboundMessageCharacteristic	Used to specify a characteristic for the health product and plan inbound message.	No
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing an adhoc characteristic of the health product and plan inbound message.
characteristicType	You can use this tag within the following tags: • **inboundMessageCharacteristic** - Here, the **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Inbound Message**. • **productCharacteristics** - Here, the **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Product**. • **healthPlanCharacteristics** - Here, the **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Health Plan**. • **characteristicsList** - Here, the **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.
effectiveDate	You can use this tag within the following tags: • **inboundMessageCharacteristic** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the health product and plan inbound message.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **productCharacteristics** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the health product. • **healthPlanCharacteristics** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the health plan. • **characteristicsList** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the pricing rule of a health plan. **Note:** You must specify the date in the `YYYY-MM-DD` format.	
characteristicValue	You can use this tag within the following tags: • **inboundMessageCharacteristic** - Here, the **characteristicValue** tag is used to specify the value for the predefined characteristic type. • **productCharacteristics** - Here, the **characteristicValue** tag is used to specify the value for the characteristic type. • **healthPlanCharacteristics** - Here, the **characteristicValue** tag is used to specify the value for the characteristic type. • **characteristicsList** - Here, the **characteristicValue** tag is used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.
characteristicValueForeignKey1	Used to specify the first value for the foreign key characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing a foreign key characteristic of the health product and plan inbound message.
characteristicValueFK2	Used to specify the second value for the foreign key characteristic type.	No
characteristicValueFK3	Used to specify the third value for the foreign key characteristic type.	No
characteristicValueFK4	Used to specify the fourth value for the foreign key characteristic type.	No
characteristicValueFK5	Used to specify the fifth value for the foreign key characteristic type.	No
productHealthPlanMessage	Used to specify the details of a health product, health plan, or pricing rule for a health plan.	Yes
HealthProductData	Used to specify the details of a health product.	Yes (Conditional) **Note:** This data is required while defining or editing a health product.
healthProductCode	Used to indicate the type of product. The valid values are:	Yes

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **EPO** - Indicates that the product type is exclusive provider organization. • **HMO** - Indicates that the product type is health maintenance organization. • **POS** - Indicates that the product type is point of service plan. • **PPO** - Indicates that the product type is preferred provider organization. **Note:** You must specify a value which is already defined in the **PRODUCT_TYPE_FLG** lookup field. It must be in the **Active** status. You can use this tag within the following tags: • **HealthProductData** - Here, the **healthProductCode** tag is used to specify the unique identifier for the health product. • **healthPlanData** - Here, the **healthProductCode** tag is used to indicate the health product for which you want to define the health plan.	
description	You can use this tag within the following tags: • **HealthProductData** - Here, the **description** tag is used to specify the description for the health product. • **healthPlanData** - Here, the **description** tag is used to specify the description for the health plan.	Yes
productType	Used to indicate how the health product can be classified based on the provider network. **Note:** You must specify a value which is already defined in the **PRODUCT_TYPE_FLG** lookup field. It must be in the **Active** status.	Yes
productSubType	Used to indicate the type of medical accounts that are linked to the health product. The valid values are: • **FSA** - Indicates that the product sub type is flexible spending account. • **HRA** - Indicates that the product sub type is health reimbursement account. • **HSA** - Indicates that the product sub type is point of service plan. • **MC** - Indicates that the product sub type is medicare cost. • **MR** - Indicates that the product sub type is medicare risk. **Note:** You must specify a value which is already defined in the **PRODUCT_SUB_TYPE_FLG** lookup field. It must be in the **Active** status.	No
productHCCategory	Used to indicate the health care category to which the health product belongs. The valid value is: • **MED** - Indicates the health care category of product is medical.	No

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **PRODUCT_HC_CAT_FLG** lookup field. It must be in the **Active** status.	
productAdministration	Used to specify the name of the agency which administers the health product.	No
productLOB	Used to indicate the line of business to which the health product belongs. The valid value is: • **SHOP** - Indicates the line of business to which the health product belongs is shopping mall. **Note:** You must specify a value which is already defined in the **PRODUCT_LOB_FLG** lookup field. It must be in the **Active** status.	No
productLOBCategory	Used to indicate the line of business category to which the health product belongs.The valid value is: • **COMM** - Indicates the line of business category to which the health product belongs is commercial. • **GOVT** - ndicates the line of business category to which the health product belongs is government. • **STPG** - ndicates the line of business category to which the health product belongs is state programs. **Note:** You must specify a value which is already defined in the **PRODUCT_LOB_CAT_FLG** lookup field. It must be in the **Active** status.	No
bundledProduct	Used to indicate whether the health product is a bundled product. The valid values are: • Y • N	Yes
bundledProducts	Used to specify the health products which are included in the bundled product.	Yes (Conditional) **Note:** This data is required when the health product is a bundled product (i.e. when the **bundledProduct** tag contains **Y**).
startDate	You can use this tag within the following tags: • **HealthProductData** - Here, the **startDate** tag is used to specify the date from when the health product is effective. **Note:** The health product start date cannot be later than the health product end date. • **healthPlanData** - Here, the **startDate** tag is used to specify the date from when the health plan is effective.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: The health plan start date cannot be later than the health plan end date. The health plan start date cannot be earlier than the health product start date and later than the health product end date. • **healthPlanPricingRuleData** - Here, the **startDate** tag is used to specify the date from when the pricing rule of a health plan is effective. **Note:** The pricing rule start date cannot be later than the pricing rule end date. The pricing rule start date cannot be earlier than the health plan start date and later than the health plan end date. **Note:** You must specify the date in the `YYYY-MM-DD` format.	
endDate	You can use this tag within the following tags: • **HealthProductData** - Here, the **endDate** tag is used to specify the date till when the health product is effective. **Note:** The health product end date cannot be earlier than the health product start date. • **healthPlanData** - Here, the **endDate** tag is used to specify the date till when the health plan is effective. **Note:** The health plan end date cannot be earlier than the health plan start date. The health plan end date cannot be earlier than the health product start date and later than the health product end date. • **healthPlanPricingRuleData** - Here, the **endDate** tag is used to specify the date till when the pricing rule of a health plan is effective. **Note:** The pricing rule end date cannot be earlier than the pricing rule start date. The pricing rule end date cannot be earlier than the health plan start date and later than the health plan end date. **Note:** You must specify the date in the `YYYY-MM-DD` format.	No
status	You can use this tag within the following tags:	Yes

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)

	• **HealthProductData** - Here, the **status** tag is used to indicate the status of the health product. The valid values are:
	  • ACTIVE
	  • INACTIVE
	• **healthPlanData** - Here, the **status** tag is used to indicate the status of the health plan. The valid values are:
	  • ACTIVE
	  • INACTIVE
	• **healthPlanPricingRuleData** - Here, the **status** tag is used to indicate the status of the pricing rule. The valid values are:
	  • PENDING
	  • ACTIVE
	  • INACTIVE	

productCharacteristics	Used to specify a list of characteristics for the health product.	No
healthProductDivision	Used to specify a list of divisions where the health product is available.	Yes (Conditional) **Note:** This data is required while associating a health product with a division.
division	Used to indicate the division where the health product is available. **Note:** If you associate the health product with a division, the system only allows the persons belonging to the division to enroll for different health plans of the health product. However, if you do not associate the health product to any division, the system allows the persons belonging to different divisions to enroll for different health plans of the health product.	Yes
healthPlanData	Used to specify the details of the health plan.	Yes (Conditional) **Note:** This data is required while defining or editing a health plan.
healthPlanCode	Used to specify the unique identifier for the health plan.	Yes
charitablePlan	Used to indicate whether the health plan provides subsidized health insurance coverage. The valid values are: • Y • N **Note:** If you do not specify the value, by default, it is set to **N**.	No
standardPlan	Used to indicate whether the health plan provides standard health insurance coverage. The valid values are: • Y • N	No

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to **N**.	
acaQhp	Used to indicate whether the health plan provides Affordable Care Act (ACA) qualified health insurance coverage. The valid values are: • Y • N **Note:** If you do not specify the value, by default, it is set to **N**.	No
grandFatherPlan	Used to indicate whether the health plan is a grandfathered health plan. The valid values are: • Y • N **Note:** If you do not specify the value, by default, it is set to **N**.	No
ancillaryBenefits	Used to indicate whether the health plan provides ancillary benefits. The valid values are: • Y • N **Note:** Ancillary benefits are a secondary type of health insurance coverage that covers miscellaneous medical expenses that are incurred during a stay at the hospital. For example, it can cover expenses such as ambulance transportation, blood, drugs, and medical supplies like bandages. If you do not specify the value, by default, it is set to **N**.	No
riderBenefits	Used to indicate whether the health plan provides rider benefits. The valid values are: • Y • N **Note:** A rider is an additional benefit that can be included to the basic health insurance plan. By adding riders, the insurance coverage can be expanded as per the requirement and at a lower cost. If you do not specify the value, by default, it is set to **N**.	No
addOnPlan	Used to indicate whether the health plan is an add-on health plan. The valid values are: • Y • N	No

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to **N**. An add-on health plan may provide ancillary or rider benefits. It is also known as a supplemental health plan. As these add-on plans provide additional benefits over the base plan, they are not considered as the standalone plan.	
hiosId	Used to specify the Health Insurance Oversight System ID.	Yes (Conditional) **Note:** This data is required while associating the hiosId for a health plan.
healthPlanCharacteristics	Used to specify a list of characteristics for the health plan.	Yes (Conditional) **Note:** This data is required while defining or editing the characteristics of a health plan.
healthPlanPricingRuleTypes	Used to associate the pricing rule types with the health plan.	Yes (Conditional) **Note:** This data is required while associating a pricing rule type with the health plan.
pricingRuleType	You can use this tag within the following tags: • **healthPlanPricingRuleTypes** - Here, the **pricingRuleType** tag is used to specify the pricing rule type. • **healthPlanPricingRuleData** - Here, the **pricingRuleType** tag is used to indicate the pricing rule type using which you want to define the pricing rule. **Note:** At present, you can only specify those pricing rule types where the category is set to **Age Based**, **Tier Based**, **Discount Charge**, **Additional Fee**, and **Benefit**.	Yes (Conditional) **Note:** This data is required while associating a pricing rule type with the health plan and while defining or editing a pricing rule for a health plan.
healthPlanPricingRuleData	Used to specify the details of the pricing rule.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule defined for the health plan.
sequence	You can use this tag within the following tags:	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **healthPlanPricingRuleData** - Here, the **sequence** tag is used to indicate the order in which the pricing rules should be created in the system. • **baseRate** - Here, the **sequence** tag is used to indicate the order in which the price component should be created using the given base rate information. • **pricingParameter** - Here, the **sequence** tag is used to indicate the order in which the pricing eligibility criteria should be created using the parameter information. • **modifierInformation** - Here, the **sequence** tag is used to indicate the order in which the pricing eligibility criteria should be created using the modifier information. • **pricingRuleEligibility** - Here, the **sequence** tag is used to indicate the order in which the pricing rule eligibility should be created for the health plan.	**Note:** This data is required while defining or editing the respective information.
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes
entityIdentifiersList	Used to specify the details of the entity.	Yes
entityIdentifierType	Used to specify the entity type. The valid values are: • **HLPN** - Used when you want to specify the health plan. • **PER** - Used when you want to specify the person. • **PIDT** - Used when you want to specify the person identifier type. • **PIDV** - Used when you want to specify the person identifier value. • **PLAN** - Used when you want to specify the plan. • **PLCY** - Used when you want to specify the policy. • **SSYS** - Used when you want to specify the source system. • **STAT** - Used when you want to specify the state. **Note:** You must specify a value which is already defined in the **PRC_RULE_ENTITY_TYPE** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule defined for the health plan.
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule defined for the health plan.
priceItemCd	Used to indicate the price item for which you want to define the pricing rule. **Note:** You must specify a price item which is already associated with the respective pricing rule type.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule defined for the health plan.

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
rateOption	Used to indicate the rate option using which you want to create price assignment for the pricing rule of a health plan. **Note:** You must specify a rate option which is already defined in the **C1-ExtLookRetTypeRateOpt** extendable lookup. It must be in the **Active** status. If the rate option is not given for an age-based pricing rule, by default, it is set to: • The value specified in the **Default Rate Option - Flat** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **FLAT** • The value specified in the **Default Rate Option - Percentage** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **EXPT** or **INPT** However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the **Default Rate Option - Flat** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **FLAT** or **NULL**.	No
pricingType	Used to indicate the type of pricing defined for the pricing rule. The valid values are: • **FLAT** • **PCNT** **Note:** You must specify a value which is already defined in the **PRC_TYPE_FLG** lookup field. It must be in the **Active** status.	Yes
modifierApplicability	Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are: • **Y** • **N** **Note:** You must specify a value which is already defined in the **HC_MODIFIER_APPLICABILITY** lookup field. It must be in the **Active** status. If you do not specify the value, by default, it is set to **N**.	No
modifierMethod	Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are: • **EXPT** - Indicates that the system should consider the modifier rate as exclusive percentage. • **FLAT** - Indicates that the system should consider the modifier rate as a flat amount.	Yes (Conditional) **Note:** This data is required when the **modifierApplicability** tag contains **Y**.

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **INPT** - Indicates that the system should consider the modifier rate as inclusive percentage. **Note:** You must specify a value which is already defined in the **HC_MODIFIER_METHOD** lookup field. It must be in the **Active** status.	
baseRate	Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes. **Note:** While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.	Yes (Conditional) **Note:** This data is required while defining a pricing rule for the health plan.
baseFee	Used to specify the base fees for the health plan.	Yes (Conditional) **Note:** This data is required while defining a pricing rule for the health plan.
lowerAgeLimit	Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component. **Note:** The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) **Note:** This data is required while defining or editing an age-based pricing rule for the health plan.
upperAgeLimit	Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component. **Note:** The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) **Note:** This data is required while defining an age-based pricing rule for the health plan.
pricingParameter	Used to specify a set of employee attributes based on which the base fees may vary.	Yes (Conditional) **Note:** This data is required while defining a tier-based pricing rule for the health plan.

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
parameterCode	You can use this tag within the following tags: • **pricingParameter** - Here, the **parameterCode** tag is used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria. • **modifierInformation** - Here, the **parameterCode** tag is used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria. **Note:** You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to **Pricing Eligibility Criteria**. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information. You cannot specify any special character except underscore (_) in the parameter name.	Yes (Conditional) **Note:** This data is required while specifying the respective information.
parameterValue	You can use this tag within the following tags: • **pricingParameter** - Here, the **parameterCode** tag is used to specify the value for the parameter (i.e. employee attribute). • **modifierInformation** - Here, the **parameterCode** tag is used to specify the value for the parameter (i.e. modifier). **Note:** You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes (Conditional) **Note:** This data is required while specifying the respective information.
modifierInformation	Used to specify the modifier based on which you want to increase or decrease the base fees. **Note:** While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.	Yes (Conditional) **Note:** This data is required while specifying the modifier information.
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional) **Note:** This data is required while specifying the modifier information.
characteristicsList	Used to specify a characteristic for the health plan.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
pricingRuleEligibility	Used to specify a set of attributes based on which the pricing rule eligibility is decided.	Yes (Conditional) **Note:** This data is required while defining or editing an age or tier-based pricing rule for the health plan.
priceParmCode	Used to specify the pricing attribute using which you want to define the pricing eligibility criteria.	Yes (Conditional) **Note:** This data is required while specifying the respective information.
priceParmVal	Used to specify the value for the parameter (i.e. pricing attribute).	Yes (Conditional) **Note:** This data is required while specifying the respective information.

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
bo	Indicates the business object using which the health product and plan inbound message is created in the system.
boStatus	Displays the status of the health product and plan inbound message.
statusReason	Indicates the reason why the status of the health product and plan inbound message is changed.
statusDateTime	Displays the date and time when the status of the health product and plan inbound message is changed in the system.
creationDateTime	Displays the date and time when the health product and plan inbound message is created in the system.
version	This tag appears within the following parent tags: • **schema** - Here, the **version** tag displays the version of the health product and plan inbound message. • **inboundMessageCharacteristic** - Here, the **version** tag displays the version of the characteristic defined for the health product and plan inbound message.
searchCharacteristicValue	At present, this tag is not supported in a health product and plan inbound message.
toDoRetry	Displays the information about the retry option used for the health product and plan inbound message.

Copyright © 2025, Oracle and/or its affiliates.

Tag Name	Tag Description
	Note: This information appears at the bottom of the inbound message in the **Inbound Message Content** zone once the health product and plan inbound message is validated and processed either through the user interface or batch process.
retryDateTime	Displays the date and time when the retry option is used to change the status of the health product and plan inbound message from **Rejected** to **Pending**.
numberOfRetries	Indicates the number of times the retry option is used for the health product and plan inbound message.
currentErrorState	Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is: • REJECTED
isRetried	Indicates whether the retry option is used to change the status of the health product and plan inbound message. The valid values are: • true • false

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Product and Plan Inbound Message for Health Plan Setup

Using the below example, you can do the following:

- Create the health plan for the product in the ORMB system through the health product and health plan inbound message.

The following table provides sample data for a health product and health plan that you can process through the health product and plan inbound message:

Health Product Code	Health Plan Code	HiOS ID	Description	Start Date	Status
HPMP444	HMCSP01	HIOSHLPNMS001	Health Plan Medicare Surplus	2021-02-01	ACTIVE
HPMP444	HMCDP01	HIOSHLPNMD005	Health Plan Medicare Dental	2021-03-01	ACTIVE

Sample Health Product and Plan Inbound Message for Health Plan Pricing Rules Setup

Using the below example, you can do the following:

- Create the age-based pricing rule for the **RET_DENT** health plan -
  The following table provides sample data for an age-based pricing rule of the health plan:

		Base Rate			Pricing Parameter		Modifier Information		
Health Plan	**Pricing Rule Type**	**Base Fee**	**Lower Age Limit**	**Upper Age Limit**	**Parameter**	**Parameter Value**	**Modifier**	**Modifier Value**	**Modifier Rate**
RET_DENT	AGE_BASED	100	1	20	TOBAC	Y	SMOKER	N	10
		300	1	40	TOBAC	Y	SMOKER	N	20
		500	1	60	TOBAC	Y	SMOKER	N	30

- Create the discount charge pricing rule for the **RET_DENT** health plan -
  The following table provides sample data for a discount charge pricing rule of the health plan:

Health Plan	**Pricing Rule Type**	**Base Fee**	**Modifier**	**Modifier Value**	**Modifier Rate**
RET_DENT	DISCOUNT_CHARGE	50	VP_BAND	VP1	10
		70	M_BAND	M1	20
		90	IC_BAND	IC1	30

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Inbound Message Type

Oracle Revenue Management and Billing allows you to define an inbound message type using which you can create an inbound message through an inbound web service. The following table describes the significance of the respective inbound message type:

Inbound Message Type	Helps the system to determine...
Health Care Inbound Message Type (C1-HCInboundMsgType)	• **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. • **Customer Registration Type** - The customer registration type using which the customer registration object should be created through a health care inbound message.
Health Product Health Plan Inbound Message Type (C1-HCProdHlthPlnInboundTyp)	• **Inbound Message Business Object** - The business object using which the health product and plan inbound message should be created in the system. • **Health Product Business Object** - The business object using which the health product should be created in the system. • **Health Plan Business Object** - The business object using which the health plan should be created in the system.
Individual Inbound Message Type (C1-IndHCInboundMsgType)	• **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. • **Person Business Object** - The business object using which the individual customer should be created in the system. • **Account Business Object** - The business object using which the individual customer's account should be created in the system. • **Individual Membership Business Object** - The business object using which the individual membership should be created in the system. • **Benefits Business Object** - The business object using which the individual membership benefits should be created in the system. • **Address Business Object** - The business object using which the address should be created in the system. • **Statement Construct Business Object** - The business object using which the statement construct should be created in the system.

The **Inbound Message Type** screen allows you to define, edit, copy, and delete an inbound message type. It contains the following zones:

- Inbound Message Type List on page 2577
- Inbound Message Type on page 2578

Inbound Message Type List

The **Inbound Message Type List** zone lists the inbound message types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Inbound Message Type	Displays the inbound message type.
Description	Displays the description of the inbound message type.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Edit	On clicking the **Edit** (✎) icon, the **Inbound Message Type** screen appears where you can edit the details of the inbound message type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Inbound Message Type** screen appears where you can define a new inbound message type using an existing inbound message type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the inbound message type.
	Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.

On clicking the **Broadcast** (📡) icon corresponding to an inbound message type, the **Inbound Message Type** zone appears with the details of the respective inbound message type.

Inbound Message Type

The **Inbound Message Type** zone displays the details of the inbound message type. It contains the following sections:

- **Main** - This section displays basic information about the inbound message type. It contains the following fields:

Field Name	Field Description
Inbound Message Type	Displays the inbound message type.
Customer Registration Type	Indicates the customer registration type using which the customer registration object is created through a health care inbound message.
	Note: It has a link. On clicking the link, the **Customer Registration Type** screen appears where you can view the details of the respective customer registration type. This field appears when you are viewing the details of an inbound message type which is created using the **C1-HCInboundMsgType** business object.
Inbound Message Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Healthcare Product Business Object	Indicates the business object using which the health product is created through a health product and plan inbound message. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when you are viewing the details of an inbound message type which is created using the **C1-HCProdHlthPlnInboundTyp** business object.
Health Plan Business Object	Indicates the business object using which the health plan is created through a health product and plan inbound message. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when you are viewing the details of an inbound message type which is created using the **C1-HCProdHlthPlnInboundTyp** business object.
Description	Displays the description of the inbound message type.
Status	Indicates the status of the inbound message type. The valid values are: • Active • Inactive
Detailed Description	Displays additional information about the inbound message type.

- **Additional Data** - This section lists the additional information about the inbound message type. This section appears when you are viewing the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. It contains the following fields:

Field Name	Field Description
Person Business Object	Indicates the business object using which the individual customer is created through a health care inbound message. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Account Business Object	Indicates the business object using which the individual customer's account is created through a health care inbound message. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Individual Membership Business Object	Indicates the business object using which the individual membership is created through a health care inbound message.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Benefits Business Object	Indicates the business object using which the individual membership benefit is created through a health care inbound message.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Address Business Object	Indicates the business object using which the address is created through a health care inbound message.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Statement Construct Business Object	Indicates the business object using which the statement construct is created through a health care inbound message.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - This section lists the characteristics defined for the inbound message type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the inbound message type.
Delete	Used to delete the inbound message type.
	Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.
Duplicate	Used to create a new inbound message type using an existing inbound message type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Inbound Message Type** zone does not appear in the **Inbound Message Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an inbound message type in the **Inbound Message Type List** zone.

Viewing the Inbound Message Type Details

Procedure

To view the details of an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
   The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Broadcast** (⦾) icon corresponding to the inbound *m*essage type whose details you want to view.
   The **Inbound Message Type** zone appears.
5. View the details of the inbound message type in the **Inbound Message Type** zone.

Defining an Inbound Message Type

Prerequisites

The following table lists the prerequisites for defining various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Customer registration types defined in the application

Copyright © 2025, Oracle and/or its affiliates.

If you want to define a..	Then, you should have...
Health Product and Plan Inbound Message Type	• Health product and plan inbound message type business object defined in the application • Health product and plan inbound message business object defined in the application • Health product business object defined in the application • Health plan business object defined in the application
Individual Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To define an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Inbound Message Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type Business Object	Used to indicate the business object using which you want to create the inbound message type. The following table lists the business objects using which you can create the respective inbound message type: **Inbound Message Type** / **Business Object** Health Care Inbound Message Type / C1-HCInboundMsgType Health Product and Plan Inbound Message Type / C1-HCProdHlthPlnInbound Individual Inbound Message Type / C1-IndHCInboundMsgType	Yes

4. Select the required business object to create the respective inbound message type.
5. Click **OK**.

   The **Inbound Message Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object using which you are defining the inbound message type.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message. **Note:** This field appears when you are defining an inbound message type using the **C1-HCInboundMsgType** business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product through a health product and plan inbound message. **Note:** This field appears when you are defining a health product and plan inbound message type using the **C1-HCProdHlthPlnInbound** business object.	Yes
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan through a health product and plan inbound message. **Note:** This field appears when you are defining a health product and plan inbound message type using the **C1-HCProdHlthPlnInbound** business object.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: • Active • Inactive	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

- **Additional Data** - Used to specify additional details about the inbound message type. This section appears when you are specifying the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. This section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Business Object	Used to indicate the business object using which you want to create an individual customer through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Account Business Object	Used to indicate the business object using which you want to create an individual customer's account through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Individual Membership Business Object	Used to indicate the business object using which you want to create an individual membership through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Benefits Business Object	Used to indicate the business object using which you want to create an individual membership benefit through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Address Business Object	Used to indicate the business object using which you want to create an address through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Statement Construct Business Object	Used to indicate the business object using which you want to create an statement construct through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Inbound Message Type** screen.

- **Characteristics** - Used to define the characteristics for the inbound message type.

6. Enter the required details in the **Main** section.

Copyright © 2025, Oracle and/or its affiliates.

7. Enter the required details in the **Additional Data** section.
8. Define characteristics for the inbound message type, if required.
9. Click **Save**.
   The inbound message type is defined.

Inbound Message Type screen	Inbound Message Type on page 2577
How to define a characteristic for an inbound message type	Defining a Characteristic for an Inbound Message Type on page 2585

Defining a Characteristic for an Inbound Message Type

Prerequisites

To define a characteristic for an inbound message type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message Type**)

Procedure

To define a characteristic for an inbound message type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an inbound *m*essage type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Inbound Message Type**.	**Note:** This field is required while defining a characteristic for the inbound message type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required while defining a characteristic for the inbound message type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message type, click the **Add** (+) icon and *t*hen repeat step 2.

Copyright © 2025, Oracle and/or its affiliates.

Note: However, if you want to remove a characteristic from the inbound message type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing an Inbound Message Type

Prerequisites

The following table lists the prerequisites for editing various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Customer registration types defined in the application
Health Product and Plan Inbound Message Type	• Health product and plan inbound message type business object defined in the application • Health product and plan inbound message business object defined in the application • Health product business object defined in the application • Health plan business object defined in the application
Individual Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To edit an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
   The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *I*nbound message type whose details you want to edit.

   The **Inbound Message Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Displays the inbound message type.	Not applicable
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message. **Note:** This field appears when you are defining an inbound message type using the **C1-HCInboundMsgType** business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product through a health product and plan inbound message. **Note:** This field appears when you are defining a health product and plan inbound message type using the **C1-HCProdHlthPlnInbound** business object.	Yes
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan through a health product and plan inbound message. **Note:** This field appears when you are defining a health product and plan inbound message type using the **C1-HCProdHlthPlnInbound** business object.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: • Active • Inactive	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the inbound message type.	No

- **Additional Data** - Used to specify additional details about the inbound message type. This section appears when you are specifying the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Business Object	Used to indicate the business object using which you want to create an individual customer through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Account Business Object	Used to indicate the business object using which you want to create an individual customer's account through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Individual Membership Business Object	Used to indicate the business object using which you want to create an individual membership through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Benefits Business Object	Used to indicate the business object using which you want to create an individual membership benefit through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Address Business Object	Used to indicate the business object using which you want to create an address through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Statement Construct Business Object	Used to indicate the business object using which you want to create an statement construct through a health care inbound message.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	

- **Characteristics** - Used to define the characteristics for the inbound message type.

Tip: Alternatively, you can edit the details of an inbound message type by clicking the **Edit** button in the **Inbound Message Type** zone.

5. Modify the required details in the **Main** and **Additional Data** section, if required.
6. Define, edit, or remove characteristics of the inbound message type, if required.
7. Click **Save**.
   The changes made to the inbound message type are saved.

Copying an Inbound Message Type

Instead of creating an inbound message type from scratch, you can create a new inbound message type using an existing inbound message type. This is possible through copying an inbound message type. On copying an inbound message type, the details including the characteristics are copied to the new inbound message type. You can then edit the details, if required.

Prerequisites

The following table lists the prerequisites for copying various inbound message types:

If you want to define a..	Then, you should have...
Health Care Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application • Customer registration types defined in the application
Health Product and Plan Inbound Message Type	• Health product and plan inbound message type business object defined in the application • Health product and plan inbound message business object defined in the application • Health product business object defined in the application • Health plan business object defined in the application
Individual Inbound Message Type	• Health care inbound message type business object defined in the application • Health care inbound message business object defined in the application

Copyright © 2025, Oracle and/or its affiliates.

If you want to define a..	Then, you should have...
	• Required person, account, individual membership, membership benefit, address, and statement construct business objects defined in the application

Procedure

To copy an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
   The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the inbound message type whose copy you want to create.

   The **Inbound Message Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the inbound message type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Customer Registration Type	Used to indicate the customer registration type using which you want to create the customer registration object through a health care inbound message. **Note:** This field appears when you are defining an inbound message type using the **C1-HCInboundMsgType** business object. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Health Product Business Object	Used to indicate the business object using which you want to create a health product through a health product and plan inbound message.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining a health product and plan inbound message type using the **C1-HCProdHlthPlnInbound** business object.	
Health Plan Business Object	Used to indicate the business object using which you want to create a health plan through a health product and plan inbound message. **Note:** This field appears when you are defining a health product and plan inbound message type using the **C1-HCProdHlthPlnInbound** business object.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	Used to indicate the status of the inbound message type. The valid values are: • Active • Inactive	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

- **Additional Data** - Used to specify additional details about the inbound message type. This section appears when you are specifying the details of an inbound message type which is created using the **C1-IndHCInboundMsgType** business object. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Business Object	Used to indicate the business object using which you want to create an individual customer through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Account Business Object	Used to indicate the business object using which you want to create an individual customer's account through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Individual Membership Business Object	Used to indicate the business object using which you want to create an individual membership through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Benefits Business Object	Used to indicate the business object using which you want to create an individual membership benefit through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Address Business Object	Used to indicate the business object using which you want to create an address through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes
Statement Construct Business Object	Used to indicate the business object using which you want to create an statement construct through a health care inbound message. **Note:** This field appears when you are defining a health care inbound message type using the **C1-IndHCInboundMsgType** business object.	Yes

- **Characteristics** - Used to define the characteristics for the inbound message type.

Tip: Alternatively, you can copy an inbound message type by clicking the **Duplicate** button in the **Inbound Message Type** zone.

5. Enter the required details in the **Main** and **Additional Data** section.
6. Define, edit, or remove characteristics of the inbound message type, if required.
7. Click **Save**.
   The new inbound message type is defined.

Deleting an Inbound Message Type

Procedure

To delete an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2025, Oracle and/or its affiliates.

2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.
   The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *I*nbound message type that you want to delete.
   A message appears confirming whether you want to delete the inbound message type.

   Note: You can delete an inbound message type when an inbound message is not created using the inbound message type.

   Tip: Alternatively, you can delete an inbound message type by clicking the **Delete** button in the **Inbound Message Type** zone.
5. Click **OK**.
   The inbound message type is deleted.

Inbound Message (Used for Searching)

The **Inbound Message** screen allows you to search for an inbound message using various search criteria. It contains the following zone:

- Search Inbound Message on page 2593

Through this screen, you can navigate to the following screen:

- Inbound Message (Used for Viewing) on page 2599

Search Inbound Message

The **Search Inbound Message** zone allows you to search for an inbound message using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an inbound message using the inbound message or person details. The valid values are: • Message Details • Person Details **Note:** By default, the **Message Details** option is selected.	Yes
Inbound Message ID	Used to search a particular inbound message.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Message Details** option is selected from the **Search By** list.	
Person ID	Used to search inbound messages through which a particular parent customer or bill group and their related entities are created in the system. **Note:** The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears. This field appears when the **Person Details** option is selected from the **Search By** list. This field is only applicable for the fully-insured group and self-funded businesses. This field can only be used to search inbound messages through which a person of the following person types is created in the system: • Parent Customer • Bill Group	Yes
Status	Used to search inbound messages with a particular status. The valid values are: • Pending • Processed • Rejected • Voided **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
Source System	Used to search inbound messages which are received from a particular external system. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
Created From	Used to search inbound messages which are created from a particular date onwards. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
External Source ID	Used to search inbound messages which are received from a particular external source system. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Created To	Used to search inbound messages which are created till a particular date. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
External Transaction ID	Used to search the inbound message which was a result of a particular transaction in the external source system. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
User ID	Used to search inbound messages which are created by a particular user. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
External Batch ID	Used to search inbound messages which are created through a particular batch job. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No
Inbound Message Type	Used to search inbound messages which are created using a particular inbound message type. **Note:** This field appears when the **Message Details** option is selected from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for an inbound message.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date	Displays the date when the inbound message is created in the system.
Inbound Message Information	Displays information about the inbound message. **Note:** It has a link. On clicking the link, the **Inbound Message** screen appears where you can view the details of the respective inbound message.
Status	Indicates the status of the inbound message. The valid values are: • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Source ID	Displays the external source system ID.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
Person Information	Indicates the person whose record is created or updated in the system through the inbound message. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This column appears when the **Person Details** option is selected from the **Search By** list.
Created By	Indicates the user who has created the inbound message.
	Note: This column appears when the **Message Details** option is selected from the **Search By** list.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Inbound Message

Prerequisites

To search for an inbound message, you should have:

- Inbound message types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Person identifier types defined in the application

Procedure

To search for an inbound message:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Integration** and then click **Inbound Message**.
   The **Inbound Message** screen appears.
3. Enter the search criteria in the **Search Inbound Message** zone.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of inbound messages that meet the search criteria appears in the **Search Results** section.

Creating an Inbound Message

The following table lists the different types of inbound messages that you can create through the respective inbound web service:

Inbound Message	Inbound Web Service
Health Care Inbound Message on page 2188	C1-HCInboundMessage on page 2597
Health Product and Plan Inbound Message on page 2546	C1-HCProdHlthPlnInboundMessage on page 2598
	C1-HCProdHlthPlnInboundMes on page 2598

You cannot create the above inbound messages from the user interface. However, you can define, edit, and remove a characteristic from the above inbound messages from the user interface. You can delete and submit the above inbound messages for validation and processing from the user interface and through a batch process.

C1-HCInboundMessage

The **C1-HCInboundMessage** inbound web service is a SOAP based Web service which can be used for the self-funded, fully-insured group, and fully-insured individual businesses. It enables you to create or update a parent customer, bill group, individual customer and their account, self-funded or fully-insured group policy, policy plan, group or individual membership, group or individual membership benefits, and statement constructs. It allows you to define and edit pricing rules for the fully-insured group business. It allows you to create or update a pass-through billable charge for a fully-insured group policy. It allows you to terminate, reinstate, or renew a fully-insured group policy. It also allows you to terminate an individual membership.

On calling the **C1-HCInboundMessage** inbound web service, a health care inbound message is created in the **Pending** status. A health care inbound message goes through various statuses in its lifecycle. You can search for a health care inbound message through the **Inbound Message** screen.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in Prerequisites on page 2196.

Viewing the Inbound Message Details

Procedure

To view the details of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to *t*he inbound message whose details you want to view.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the inbound message in the **Inbound Message** zone.

Related Topics

Inbound Message (Used for Viewing)

Once an inbound message is created, the **Inbound Message** screen allows you to:

- View the details of the inbound message
- Edit the details of the inbound message
- Delete the inbound message
- Submit the inbound message for validation and processing
- Resubmit the inbound message for validation and processing on failure
- Void the inbound message
- View the content of the inbound message
- View the log of the inbound message
- Add a log entry for the inbound message

The **Inbound Message** screen contains the following tabs:

- Inbound Message - Main on page 2599
- Inbound Message - Message on page 2601
- Inbound Message - Log on page 2602

Inbound Message - Main

The **Main** tab displays information about the inbound message. It contains the following zone:

- Inbound Message on page 2600

Copyright © 2025, Oracle and/or its affiliates.

Inbound Message

The **Inbound Message** zone displays the details of the inbound message. It contains the following sections:

- **Main** - Displays basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Status	Indicates the status of the inbound message. The valid values are: • Pending • Processed • Rejected • Voided
Inbound Message Type	Indicates the inbound message type using which the inbound message is created. **Note:** It has a link. On clicking the link, the **Inbound Message Type** screen appears where you can view the details of the respective inbound message type.
Source System	Indicates the external source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the external batch job through which the inbound message is created.
External Source ID	Displays the external source system ID.
Person	Indicates the person specified in the inbound message. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This field appears when the **Person Details** option is selected from the **Search By** list in the **Search Inbound Message** zone.

- **Characteristics** - Lists the characteristics defined for the inbound message. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the inbound message.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, or remove characteristics of the inbound message. **Note:** The **Edit** button appears when the inbound message is in the **Pending** or **Rejected** status.
Delete	Used to delete the inbound message.

Copyright © 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Delete** button appears when the inbound message is in the **Pending** status.
Submit for Processing	Used to submit the inbound message for validation and processing.
	Note: The **Submit for Processing** button appears only when the inbound message is in the **Pending** status.
Retry	Used when you want to change the status of the inbound message from **Rejected** to **Pending** so that the inbound message can be considered once again for validation and processing.
	Note: The **Retry** button appears when the inbound message is in the **Rejected** status.
Void	Used to cancel the inbound message.
	Note: The **Void** button appears when the inbound message is in the **Rejected** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the status of the inbound message is updated.
Create Date/Time	Displays the date and time when the inbound message is created.

Editing an Inbound Message

Procedure

To edit an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message whose details you want to edit.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Inbound Message** zone.

   The **Inbound Message** screen appears. It contains the following sections:

   - **Main** - Displays the basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
External Source ID	Displays the external source system ID.

   - **Characteristics** - Used to define, edit, or remove characteristics of the inbound message.

   Note: The **Edit** button appears when the inbound message is in the **Pending** or **Rejected** status.

5. Define, edit, or remove characteristics of the inbound message, if required.
6. Click **Save**.
   The changes made to the inbound message are saved.

How to define a characteristic for an inbound message	Defining a Characteristic for an Inbound Message on page 2604

Defining a Characteristic for an Inbound Message

Prerequisites

To define a characteristic for an inbound message, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message**)

Procedure

To define a characteristic for an inbound message:

1. Ensure that the **Characteristics** section is expanded when you are editing an inbound message.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the inbound message.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the inbound message.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Inbound Message**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the inbound message.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the inbound message.

2. Enter the required details in the **Characteristics** section.

Copyright © 2025, Oracle and/or its affiliates.

3. If you want to define more than one characteristic for the inbound message, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a characteristic from the inbound message, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the inbound message.

Deleting an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to delete the inbound message when it is not yet validated or processed. Note that you can delete an inbound message when the inbound message is in the **Pending** status.

Procedure

To delete an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message that you want to delete.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Inbound Message** zone.
   A message appears confirming whether you want to delete the inbound message.

> **Note:** The **Delete** button appears when the inbound message is in the **Pending** status.

5. Click **OK**.
   The inbound message is deleted.

Processing an Inbound Message

Prerequisites

The following table lists the prerequisites which you should setup before processing the respective inbound message:

Inbound Message	Refer to...
Health Care Inbound Message	Prerequisites on page 2196

Copyright © 2025, Oracle and/or its affiliates.

Inbound Message	Refer to...
Health Product and Plan Inbound Message	Prerequisites on page 2547

Procedure

To process an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message that you want to submit for validation and processing.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Processing** button in the **Inbound Message** zone.

   The status of the inbound message is changed to **Validation** and the algorithms attached to the **Validation** status are invoked in the specified sequence. If the validation is successful, the status of the inbound message is changed to **Processing** and the algorithms attached to the **Processing** status are invoked in the specified sequence. The following table lists how the system behaves when the respective inbound message is processed:

If the inbound message is a...	Then...
Health Care Inbound Message	Creates or updates a person, account and fully-insured group or self-funded policy. It creates or updates a policy plan, membership, and pass-through billable charge for a fully-insured group policy. In addition, if requested, it terminates, reinstates, or renews a fully-insured group policy. Finally, the status of the inbound message is changed to **Processed**. The system uses the **C1-PERSTYPE** feature configuration to decide whether the person type specified in the health care inbound message represents **Parent Customer** or **Bill Group**. If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system. If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination.
Health Product and Plan Inbound Message	Creates or updates a health product, health plan, and pricing rules for individual memberships. In addition, it also maintains a log of the entities that are either added or updated through the health product and plan inbound message. Note that the system allows to upload the health product, health plan, and pricing rules together in a single inbound message or by creating

Copyright © 2025, Oracle and/or its affiliates.

If the inbound message is a...	Then...
	three separate inbound messages. Finally, the status of the inbound message is changed to **Processed**. The system uses the **C1-HLTPRDVAL** algorithm to validate the uploaded data through the health product and plan inbound message. Once the data is successfully validated, entities like health product, health plan, and pricing rules are created in the system.

However, if the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected** and the algorithms attached to the **Rejected** status are invoked in the specified sequence. A To Do is created using the To Do type specified in the **C1-TDCRINMSG** algorithm and assigned to the users with the To Do role specified in the **C1-TDCRINMSG** algorithm.

Note: The **Submit for Processing** button appears when the inbound message is in the **Pending** status.

Using the Retry Option for an Inbound Message

If the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected**. The system enables you to resubmit the inbound messages for validation and processing on failure. However, to resubmit the inbound message for validation and processing, you need to change the status of the inbound message from **Rejected** to **Pending**. This is possible through using the **Retry** option.

Procedure

To use the retry option for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message for which you want to use the retry option.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Ensure that the To Dos created for the inbound message are in the **Complete** status.
5. Click the **Retry** button in the **Inbound Message** zone.
   The status of the inbound message is changed to **Pending**.

Note: The **Retry** button appears when the inbound message is in the **Rejected** status.

Voiding an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to void or cancel the inbound message after the validation or processing fails. Note that you can void or cancel an inbound message when the inbound message is in the **Rejected** status.

Procedure

To void an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message that you want to void.
   The **Inbound Message** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Void** button in the **Inbound Message** zone.
   The status of the inbound message is changed to **Voided**.

Note: The **Void** button appears when the inbound message is in the **Rejected** status.

Adding a Log Entry for an Inbound Message

Procedure

To add a log entry for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding *t*o the inbound message for which you want to add a log entry.
   The **Inbound Message** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

   The **Add Inbound Message Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Information	Displays information about the inbound message.	Not applicable
Log Details	Used to specify additional comments for the inbound message.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

Copyright © 2025, Oracle and/or its affiliates.

The log entry is added in the **Inbound Message Log** zone.

Statement Construct Preference

Oracle Revenue Management and Billing enables you to create and edit the statement construct of a person through a health care inbound message. However, note that you can create and edit the statement construct of only those persons through a health care inbound message whose record is created via a customer registration object. While creating or editing a statement construct, the system uses the statement construct business object of the customer registration type which is specified in the respective inbound message type.

If the data is not available in the following tags of a health care inbound message while creating a statement construct for a person, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
statementAddressSource	Default Statement Address Source
effectiveStatus	Default Statement Status
statementCycle	Default Statement Cycle
statementFormat	Default Statement Format
statementRouteType	Default Statement Route Type
numberOfCopies	Default Statement Number of Copies

In addition, if the data is not available in the following tag of a health care inbound message while adding an account or contract in a statement construct, the system uses the default value from the respective attribute of the statement construct preference:

Tag Name	Considers Default Value from the Following Attribute...
printOrder	Default Statement Print Order

The system considers the statement construct preference which is specified in the **Field Mapping** parameter of the **C1-HCINPROC** algorithm. You can define, edit, delete, and copy a statement construct preference through the **Field Mapping** screen.

Searching for a Statement Construct Preference

Prerequisites

To search for a statement construct preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a statement construct preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Statement Construct** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of statement construct preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Statement Construct Preference Details

Procedure

To view the details of a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the statement construct preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the statement construct preference in the **Field Mapping** zone.

Related Topics

How to search for a statement construct preference	Searching for a Statement Construct Preference on page 2611

Defining a Statement Construct Preference

Prerequisites

To define a statement construct preference, you should have:

- Values defined in the **STM_ADDR_SRC_FLG**, **STM_FORMAT_FLG**, and **MAP_ENTITY_FLG** lookup fields

Copyright © 2025, Oracle and/or its affiliates.

- Statement cycles and statement route types defined in the application

Procedure

To define a statement construct preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the statement construct preference. The valid values are: • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: • Active • Inactive	Yes

   - **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct	

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the statement construct preference. The valid values are: • **Default Statement Address Source** - Used when the address source is not specified while creating a statement construct through a health care inbound message. • **Default Statement Status** - Used when the status is not specified while creating a statement construct through a health care inbound message. • **Default Statement Cycle** - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message. • **Default Statement Format** - Used when the statement format is not specified while creating a statement construct through a health care inbound message. • **Default Statement Route Type** - Used when the statement route type is not specified while creating a statement construct through a health care inbound message. • **Default Statement Number of Copies** - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message. • **Default Statement Print Order** - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message.	Yes (Conditional) **Note:** This field is required while setting an attribute in the statement construct preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference: **If the attribute is set to...** / **Then, this field is...** Default Statement Address Source / Used to indicate the source whose address should be used for sending the statements to the person. The valid value is:	Yes (Conditional) **Note:** This field is required while setting an attribute in the statement construct preference.

Field Name	Field Description		Mandatory (Yes or No)
		Note: You must specify a positive integer for this attribute.	
	Default Statement Print Order	Used to indicate the order in which the financial transactions associated with the account or contract should appear on the printed statement.	
		Note: You must specify a positive integer for this attribute.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Billable Charge		No
	Note: At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.		

Note: While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

6. Select the **Statement Construct** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the statement construct preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the statement construct preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The statement construct preference is defined.

Editing a Statement Construct Preference

Prerequisites

To edit a statement construct preference, you should have:

- Values defined in the **STM_ADDR_SRC_FLG**, **STM_FORMAT_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Statement cycles and statement route types defined in the application

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To edit a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the statement construct preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the statement construct preference.	Not applicable
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Statement Construct	Not applicable

   - **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the statement construct preference. The valid values are: • **Default Statement Address Source** - Used when the address source is not specified while creating a statement construct through a health care inbound message. • **Default Statement Status** - Used when the status is not specified while creating a statement construct through a health care inbound message. • **Default Statement Cycle** - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message. • **Default Statement Format** - Used when the statement format is not specified while creating a statement construct through a health care inbound message. • **Default Statement Route Type** - Used when the statement route type is not specified while creating a statement construct through a health care inbound message. • **Default Statement Number of Copies** - Used when the number of statement copies is not	Yes (Conditional) **Note:** This field is required while setting an attribute in the statement construct preference.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>specified while creating a statement construct through a health care inbound message.

How to search for a statement construct preference	Searching for a Statement Construct Preference on page 2611

Copying a Statement Construct Preference

Instead of creating a statement construct preference from scratch, you can create a new statement construct preference using an existing statement construct preference. This is possible through copying a statement construct preference. On copying a statement construct preference, the details including the attributes are copied to the new statement construct preference. You can then edit the details, if required.

Prerequisites

To copy a statement construct preference, you should have:

- Statement construct preference (whose copy you want to create) defined in the application
- Values defined in the **STM_ADDR_SRC_FLG**, **STM_FORMAT_FLG**, and **MAP_ENTITY_FLG** lookup fields
- Statement cycles and statement route types defined in the application

Procedure

To copy a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the statement construct preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the statement construct preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the statement construct preference.	Yes
Description	Used to specify the description for the statement construct preference.	Yes
Detailed Description	Used to specify additional information about the statement construct preference.	No
Status	Used to indicate the status of the statement construct preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Statement Construct	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

- **Preference Settings** - Used to set the attributes in the statement construct preference. It contains the following fields in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Attribute</td><td>Used to indicate the attribute which you want to set in the statement construct preference. The valid values are:
Default Statement Address Source - Used when the address source is not specified while creating a statement construct through a health care inbound message.
Default Statement Status - Used when the status is not specified while creating a statement construct through a health care inbound message.
Default Statement Cycle - Used when the statement cycle is not specified while creating a statement construct through a health care inbound message.
Default Statement Format - Used when the statement format is not specified while creating a statement construct through a health care inbound message.
Default Statement Route Type - Used when the statement route type is not specified while creating a statement construct through a health care inbound message.
Default Statement Number of Copies - Used when the number of statement copies is not specified while creating a statement construct through a health care inbound message.
Default Statement Print Order - Used when the print order is not specified for an account or contract while creating or updating a statement construct through a health care inbound message.</td><td>Yes (Conditional)
Note: This field is required while setting an attribute in the statement construct preference.</td></tr>
<tr><td>Value</td><td>Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the statement construct preference:<table><tr><th>If the attribute is set to...</th><th>Then, this field is...</th></tr><tr><td>Default Statement Address Source</td><td>Used to indicate the source whose address should be used for sending the statements to the person. The valid value is:
Person
Note: The list includes only those values which are defined in the STM_ADDR_SRC_FLG lookup field.</td></tr></table></td><td>Yes (Conditional)
Note: This field is required while setting an attribute in the statement construct preference.</td></tr>
</table>

Field Name	Field Description	Mandatory (Yes or No)
	should appear on the printed statement. **Note:** You must specify a positive integer for this attribute.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Billable Charge **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a statement construct preference, you must set at least one attribute in the statement construct preference.

Tip: Alternatively, you can copy a statement construct preference by clicking the **Duplicate** button in the **Field Mapping** zone.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the statement construct preference, if required.
5. Click **Save**.
   The new statement construct preference is defined.

Deleting a Statement Construct Preference

Procedure

To delete a statement construct preference:

1. Search for the statement construct preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the statement construct preference that you want to delete.
   A message appears confirming whether you want to delete the statement construct preference.

Tip: Alternatively, you can delete a statement construct preference by clicking the **Delete** button in the **Field Mapping** zone.

3. Click **OK**.
   The statement construct preference is deleted.

Hold Request Preference

The Hold Request Preference enables you to set the attributes that are used during:

- **Manual Hold Request Creation Via Inbound Message** - While manually creating or releasing a hold request via an inbound message, the system uses the following attributes from the hold request preference:
  - Default Manual Hold Reason
  - Default Manual End Date
  - Default Manual Hold Request Type Code
  - Default Manual Release Reason
  - Default Manual Discard Reason
- **Automatic Hold Request Creation Via Inbound Message** - While automatically creating a hold request when the status of an inbound message is changed to **Rejected**, the system uses the following attributes from the hold request preference:
  - Create Automatic Hold Request
  - Default Automatic Hold Reason
  - Default Automatic End Date
  - Default Automatic Hold Request Type Code
  - Characteristic Type for Bill Level 1
  - Characteristic Type for Bill Level 2
  - Characteristic Type for Bill Level 3
  - Characteristic Type for Bill Level 4
- **Automatic Hold Request Creation Via File Upload Interface** – While automatically creating a hold request when a billable charge creation or cancelation fails for an account through the **File Upload Interface** feature, the system uses the following attributes from the hold request preference:
  - Create Premium Hold Request
  - Default Automatic Hold Reason
  - Default Automatic End Date
  - Default Automatic Hold Request Type Code

For more information about these attributes, see Defining a Hold Request Preference.

The system considers the hold request preference which is specified in the **Hold Request Field Mapping** option type of the **C1-HOLDSRCH** feature configuration. You can define, edit, delete, and copy a hold request preference using the **C1-FieldMapping** business object through the **Field Mapping** screen. While creating a hold request preference, you must set the preference category to **Hold Request**.

Searching for a Hold Request Preference

Procedure

To search for a hold request preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.

Copyright © 2025, Oracle and/or its affiliates.

A sub-menu appears.

3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Hold Request** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of hold request preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Hold Request Preference Details

Procedure

To view the details of a hold request preference:

1. Search for the hold request preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the hold request preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the hold request preference in the **Field Mapping** zone.

Defining a Hold Request Preference

Prerequisites

To define a hold request preference, you should have:

- Field mapping business objects defined in the application.
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Values defined in the **HOLD_REASON_FLG** lookup field.
- Required hold request types defined in the application.
- Required reasons defined for the **Discarded** and **Released** statuses of the **C1-HoldRequest** business object in the **Status Reason** screen.

Procedure

To define a hold request preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.

Copyright © 2025, Oracle and/or its affiliates.

3. Click the **Add** option from the **Field Mapping** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)

Field Mapping Business Object	Used to indicate the business object using which you want to create a hold request preference. The valid values are:
	• **Bill Route Method - Contact Method Mapping (i.e., C1_BillRouteCntMethMap)** - Enables you to maintain a routing method - contact method mapping preference.
	• **Field Mapping (i.e., C1-FieldMapping)** - Enables you to maintain the following:
	  • Automatic Refund/Write-Off Preference
	  • Billing Preference
	  • Binder Payment Preference
	  • Configuration for Match Type - Handling Overpayment Preference
	  • Delinquency Process Preference
	  • Delinquency Process Type Preference
	  • Geographic Rating Area Preference
	  • Individual Membership Preference
	  • Medicare Preference
	  • Member Reconciliation Preference
	  • Member Relationship and Subscription Tier Preference
	  • Membership Repricing Reasons Preference
	  • Statement Construct Preference
	  • Transaction Paid Status Count Preference
	  • Hold Request Preference
	• **Group Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapGroup)** - Enables you to maintain a group membership status reason preference.
	• **Medicare Plan Benefit Package (i.e., C1-BenefitPackage)** - Enables you to maintain a Medicare plan benefit package.
	• **Membership Status Reason Mapping (i.e., C1-MemStatusReasonMapping)** - Enables you to maintain an individual membership status reason preference.
	Note: The above business objects are shipped with the product. The list includes those business objects which are created using the **Field Mapping** (i.e., **C1-FIELDMAP**) maintenance object.
		Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

   The **Field Mapping** screen appears. It contains the following sections:

Copyright © 2025, Oracle and/or its affiliates.

- **Main** - Used to specify basic details for the hold request preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the hold request preference.	Yes
Description	Used to specify the description for the hold request preference.	Yes
Detailed Description	Used to specify additional information about the hold request preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⁄) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the hold request preference. The valid values are: • Active • Inactive	Yes

- **Preference Category** - Used to specify the preference category. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Automatic Refund/Write-Off • Billing • Binder Payment • Configuration for Match Type - Handling Overpayment • Delinquency Process • Delinquency Process Type • Geographic Rating Area • Hold Request • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Repricing Reasons • Membership Status Reason • Routing Method - Contact Method Mapping • Statement Construct • Transaction Paid Status Count	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the **FIELD_CAT_FLG** lookup field. You must select the **Hold Request** option from the list while creating a hold request preference.	

- **Preference Settings** - Used to set the attributes in the hold request preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the hold request preference. **Note:** The attribute list appears only when the preference category is selected from the respective list.	Yes
Value	Used to specify the attribute value. **Note:** The attribute value list appears only when the attribute is selected from the respective list. The attribute value list varies depending on the attribute that you want to set in the hold request preference.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types in the **MAP_ENTITY_FLG** lookup field.	No

The following table lists and describes the attributes available while defining, editing, or copying the hold request preference:

Attribute	Description	Mandatory (Yes or No)
Characteristic Type for Bill Level 1	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 1 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system	Yes

Copyright © 2025, Oracle and/or its affiliates.

Attribute	Description	Mandatory (Yes or No)
	then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	
Characteristic Type for Bill Level 2	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 2 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Characteristic Type for Bill Level 3	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 3 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Characteristic Type for Bill Level 4	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 4 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Create Automatic Hold Request	Used to indicate whether the system should automatically create a hold request whenever the status of an inbound message (with person or account data) is changed to **Rejected**. The valid values are: • Yes • No	Yes
Create Premium Hold Request	Used to indicate whether the system should automatically create a hold request when a billable charge creation or cancelation fails for an account through the **File Upload Interface** feature. The valid values are: • Yes • No	Yes
Default Automatic End Date	Used to specify the date till when you want an automatic hold request to be effective.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Attribute	Description	Mandatory (Yes or No)
	Note: The specified date should be later than the date when the automatic hold request is created via an inbound message or file upload interface. You must specify the date in the **YYYY-MM-DD** format.	
Default Automatic Hold Reason	Used to indicate the reason why you want to hold the entity via an automatic hold request. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	Yes
Default Automatic Hold Request Type Code	Used to indicate the hold request type using which you want to create an automatic hold request via an inbound message or file upload interface. **Note:** The list includes only those hold request types which are already defined in the system.	Yes
Default Manual Discard Reason	Used to indicate the reason why you want to discard the hold request via an inbound message. The system considers the default manual discard reason when the **action** tag is set to **R** within the **billHold** tag in an inbound message and the derived hold request's start data is a future date. **Note:** You must specify a reason which is already defined for the **Discarded** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes
Default Manual End Date	Used to specify the date till when you want a manual hold request to be effective. The system considers the default manual end date when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The specified date should be later than the date when the manual hold request is created via an inbound message. You must specify the date in the **YYYY-MM-DD** format.	Yes
Default Manual Hold Reason	Used to indicate the reason why you want to hold the entity via a manual hold request. The system considers the default manual hold reason when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Attribute	Description	Mandatory (Yes or No)
Default Manual Hold Request Type Code	Used to indicate the hold request type using which you want to create a manual hold request via an inbound message. The system considers the default manual hold request type when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The list includes only those hold request types which are already defined in the system.	Yes
Default Manual Release Reason	Used to indicate the reason why you want to release the hold request via an inbound message. The system considers the default manual release reason when the **action** tag is set to **R** within the **billHold** tag in an inbound message. **Note:** You must specify a reason which is already defined for the **Released** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes

Note: While defining a hold request preference, you must set at least one attribute in the hold request preference.

6. Select the **Hold Request** option from the **Preference Category** list.
   The **Preference Category** section disappears and the **Preference Category** field appears in the **Main** section.
7. Enter the required details in the **Main** section.
8. Set the required attributes in the hold request preference.
9. If you want to set more than one attribute in the hold request preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the hold request preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The hold request preference is defined.

Editing a Hold Request Preference

Prerequisites

To edit a hold request preference, you should have:

- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Values defined in the **HOLD_REASON_FLG** lookup field.
- Required hold request types defined in the application.

Copyright © 2025, Oracle and/or its affiliates.

- Required reasons defined for the **Discarded** and **Released** statuses of the **C1-HoldRequest** business object in the **Status Reason** screen.

Procedure

To edit a hold request preference:

1. Search for the hold request preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the hold request preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the hold request preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the hold request preference.	Not applicable
Description	Used to specify the description for the hold request preference.	Yes
Detailed Description	Used to specify additional information about the hold request preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the hold request preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Hold Request	Not applicable

   - **Preference Settings** - Used to set the attributes in the hold request preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the hold request preference.	Yes
Value	Used to specify the attribute value. **Note:** The attribute value list appears only when the attribute is selected from the respective list. The attribute value list varies depending on the attribute that you want to set in the hold request preference.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types in the **MAP_ENTITY_FLG** lookup field.	

The following table lists and describes the attributes available while defining, editing, or copying the hold request preference:

Attribute	Description	Mandatory (Yes or No)
Characteristic Type for Bill Level 1	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 1 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Characteristic Type for Bill Level 2	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 2 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Characteristic Type for Bill Level 3	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 3 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Characteristic Type for Bill Level 4	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 4 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Attribute	Description	Mandatory (Yes or No)
	Note: You must specify a characteristic type where the characteristic entity is set to **Membership**.	
Create Automatic Hold Request	Used to indicate whether the system should automatically create a hold request whenever the status of an inbound message (with person or account data) is changed to **Rejected**. The valid values are: • Yes • No	Yes
Create Premium Hold Request	Used to indicate whether the system should automatically create a hold request when a billable charge creation or cancelation fails for an account through the **File Upload Interface** feature. The valid values are: • Yes • No	Yes
Default Automatic End Date	Used to specify the date till when you want an automatic hold request to be effective. **Note:** The specified date should be later than the date when the automatic hold request is created via an inbound message or file upload interface. You must specify the date in the **YYYY-MM-DD** format.	Yes
Default Automatic Hold Reason	Used to indicate the reason why you want to hold the entity via an automatic hold request. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	Yes
Default Automatic Hold Request Type Code	Used to indicate the hold request type using which you want to create an automatic hold request via an inbound message or file upload interface. **Note:** The list includes only those hold request types which are already defined in the system.	Yes
Default Manual Discard Reason	Used to indicate the reason why you want to discard the hold request via an inbound message. The system considers the default manual discard reason when the **action** tag is set to **R** within the **billHold** tag in an inbound message and the derived hold request's start data is a future date. **Note:** You must specify a reason which is already defined for the **Discarded** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Attribute	Description	Mandatory (Yes or No)
Default Manual End Date	Used to specify the date till when you want a manual hold request to be effective. The system considers the default manual end date when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The specified date should be later than the date when the manual hold request is created via an inbound message. You must specify the date in the **YYYY-MM-DD** format.	Yes
Default Manual Hold Reason	Used to indicate the reason why you want to hold the entity via a manual hold request. The system considers the default manual hold reason when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	Yes
Default Manual Hold Request Type Code	Used to indicate the hold request type using which you want to create a manual hold request via an inbound message. The system considers the default manual hold request type when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The list includes only those hold request types which are already defined in the system.	Yes
Default Manual Release Reason	Used to indicate the reason why you want to release the hold request via an inbound message. The system considers the default manual release reason when the **action** tag is set to **R** within the **billHold** tag in an inbound message. **Note:** You must specify a reason which is already defined for the **Released** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes

Tip: Alternatively, you can click the **Edit** button in the **Field Mapping** zone to edit the details of the hold request preference.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove the attribute from the hold request preference, if required.

Note: You must set at least one attribute in the hold request preference.

5. Click **Save**.
   The changes made to the hold request preference are saved.

Copying a Hold Request Preference

Instead of creating a hold request preference from scratch, you can create a new hold request preference using an existing hold request preference. This is possible through copying a hold request preference. On copying a hold request preference, the details including the attributes are copied to the new hold request preference. You can then edit the details, if required.

Prerequisites

To copy a hold request preference, you should have:

- Hold request preference (whose copy you want to create) defined in the application
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Values defined in the **HOLD_REASON_FLG** lookup field.
- Required hold request types defined in the application.
- Required reasons defined for the **Discarded** and **Released** statuses of the **C1-HoldRequest** business object in the **Status Reason** screen.

Procedure

To copy a hold request preference:

1. Search for the hold request preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the hold request preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the hold request preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the hold request preference.	Yes
Description	Used to specify the description for the hold request preference.	Yes
Detailed Description	Used to specify additional information about the hold request preference. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⤡) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the hold request preference. The valid values are:	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Active • Inactive	
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Hold Request	Not applicable

- **Preference Settings** - Used to set the attributes in the hold request preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute that you want to set in the hold request preference.	Yes
Value	Used to specify the attribute value. **Note:** The attribute value list appears only when the attribute is selected from the respective list. The attribute value list varies depending on the attribute that you want to set in the hold request preference.	Yes
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Adjustment • Billable Charge • Membership • Payment • Policy **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types in the **MAP_ENTITY_FLG** lookup field.	No

The following table lists and describes the attributes available while defining, editing, or copying the hold request preference:

Attribute	Description	Mandatory (Yes or No)
Characteristic Type for Bill Level 1	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 1 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Attribute	Description	Mandatory (Yes or No)
	Note: You must specify a characteristic type where the characteristic entity is set to **Membership**.	
Characteristic Type for Bill Level 2	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 2 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Characteristic Type for Bill Level 3	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 3 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Characteristic Type for Bill Level 4	Used to specify the characteristic type which stores the bill group derivation and pricing parameter 4 for the membership. The system considers this characteristic type to determine the account to which the group membership is billed. The system then creates an automatic hold request for the respective billing account via the inbound message. **Note:** You must specify a characteristic type where the characteristic entity is set to **Membership**.	Yes
Create Automatic Hold Request	Used to indicate whether the system should automatically create a hold request whenever the status of an inbound message (with person or account data) is changed to **Rejected**. The valid values are: • Yes • No	Yes
Create Premium Hold Request	Used to indicate whether the system should automatically create a hold request when a billable charge creation or cancelation fails for an account through the **File Upload Interface** feature. The valid values are: • Yes • No	Yes
Default Automatic End Date	Used to specify the date till when you want an automatic hold request to be effective.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Attribute	Description	Mandatory (Yes or No)
	Note: The specified date should be later than the date when the automatic hold request is created via an inbound message or file upload interface. You must specify the date in the **YYYY-MM-DD** format.	
Default Automatic Hold Reason	Used to indicate the reason why you want to hold the entity via an automatic hold request. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	Yes
Default Automatic Hold Request Type Code	Used to indicate the hold request type using which you want to create an automatic hold request via an inbound message or file upload interface. **Note:** The list includes only those hold request types which are already defined in the system.	Yes
Default Manual Discard Reason	Used to indicate the reason why you want to discard the hold request via an inbound message. The system considers the default manual discard reason when the **action** tag is set to **R** within the **billHold** tag in an inbound message and the derived hold request's start data is a future date. **Note:** You must specify a reason which is already defined for the **Discarded** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes
Default Manual End Date	Used to specify the date till when you want a manual hold request to be effective. The system considers the default manual end date when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The specified date should be later than the date when the manual hold request is created via an inbound message. You must specify the date in the **YYYY-MM-DD** format.	Yes
Default Manual Hold Reason	Used to indicate the reason why you want to hold the entity via a manual hold request. The system considers the default manual hold reason when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Attribute	Description	Mandatory (Yes or No)
Default Manual Hold Request Type Code	Used to indicate the hold request type using which you want to create a manual hold request via an inbound message. The system considers the default manual hold request type when the **action** tag is set to **H** or **R** and other hold details are not received within the **billHold** tag in an inbound message. **Note:** The list includes only those hold request types which are already defined in the system.	Yes
Default Manual Release Reason	Used to indicate the reason why you want to release the hold request via an inbound message. The system considers the default manual release reason when the **action** tag is set to **R** within the **billHold** tag in an inbound message. **Note:** You must specify a reason which is already defined for the **Released** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes

Note: While defining a hold request preference, you must set at least one attribute in the hold request preference.

Tip: Alternatively, you can click the **Duplicate** button in the **Field Mapping** zone to create a copy of the hold request preference.

3. Enter the required details in the **Main** section.
4. Define, edit, or remove the attribute from the hold request preference, if required.
5. Click **Save**.
   The new hold request preference is defined.

Deleting a Hold Request Preference

Procedure

To delete a hold request preference:

1. Search for the hold request preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the hold request preference that you want to delete.
   A message appears confirming whether you want to delete the hold request preference.

Copyright © 2025, Oracle and/or its affiliates.

Tip: Alternatively, you can click the **Delete** button in the **Field Mapping** zone to delete the hold request preference.

3. Click **OK**.
   The hold request preference is deleted.

Upload Lockbox Payment and Remittance Advices

Topics:

- Prerequisites
- EDI 820 Flat File Description
- Sample EDI 820 Flat File
- Upload EDI 820 Files in ORMB

Oracle Revenue Management and Billing enables you to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. Under this feature, the payments made by customers are directed to a special post office box instead of going to the company directly. The bank goes to this post office box, retrieves the payments, processes them and deposits the funds directly into the company's bank account.

An EDI 820 payment order or remittance advice is an electronic document that can be used to initiate payments and send remittance information. EDI 820 sends information to vendor furnishing details of payment for his supplies. A remittance advice is a note sent from a customer to their supplier, informing the supplier that they have paid their invoice. The advice may contain elements such as a text note, the invoice number and the invoice amount, among others. Remittance advice is not required, but they are seen as a courtesy since they make it easier for the supplier to match invoices with payments.

To enable this feature, lockbox payment files are required to be uploaded on ORMB and these files have to be allocated to the appropriate accounts. To support multiple lines of business, the lockbox upload needs to:

- Consider the primary identifier when looking for a source customer number match. For customers having multiple source system identifiers, the lockbox process only matches against the one identified as primary customer.
- Incorporate the payment allocation logic in the system on the basis of which the lockbox uploads the payments for the identified customer.

To support remittances which can split a tender across multiple customers:

- Allow source customer number or tax id to be provided as remittance (RMR) values. In case of multiple source customer number or tax id, remittance values are provided for a single tender, the account associated with the first remittance value is set as the payor account. If there is at least one remittance value where a single customer account cannot be determined, the entire tender is placed into general suspense.
- A new payment upload batch **C1-PUPSG** is developed to read lockbox payment files from the bank and load the payment details into the ORMB payment upload staging tables for processing.
- Once the text file is uploaded, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

Note: For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the upload lockbox payment process, you need to do the following:

- Define the values in the parameters of the **C1-CCPYTSADS** and **C1-MATSATYP** algorithms.
- Lockbox tender types defined in the **C1_LBX_TENDER_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1_LBX_820_RECORD_TYPE** , **C1_LBX_REF_IDQ_LKP**, and **C1_LBX_RMR_ID_TYPE** lookup fields respectively.

EDI 820 Flat File Description

Following is the description of the key field segments in the EDI 820 flat file format:

<table>
<tr><th>Field Name</th><th>Description</th></tr>
<tr><td>External Source ID</td><td>Uniquely identifies the lockbox.</td></tr>
<tr><td>External Transmission ID</td><td>Uniquely identifies the transmission. To ensure this transmission, the date component (such as, 20150813) should match the deposit date and there should only be one file per deposit date.</td></tr>
<tr><td>External Batch ID</td><td>Uniquely identifies the batch of payments in a transmission. To ensure these payments, if there are multiple ST records in a file, the transaction set control number (such as, 0101, 0202, ..) should be unique.</td></tr>
<tr><td>Payment Transaction</td><td>The following table describes the fields that are included in the payment transaction:
<table>
<tr><th>Field</th><th>Description</th></tr>
<tr><td>Attributes</td><td>Following are the attributes of payment transaction:
Payment Amount
Payment Method
Payment Date
Payor Name</td></tr>
<tr><td>Reference Records</td><td>Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction:
<table>
<tr><th>External Reference ID Value</th><th>Description</th></tr>
<tr><td>ACH</td><td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td></tr>
<tr><td>CHK</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr>
</table></td></tr>
</table></td></tr>
</table>

Upload EDI 820 Files in ORMB

A new batch named **Lockbox Payment Upload - Small Group (C1-PUPSG)** is introduced in this release. This batch is used to read the EDI 820 lockbox file received from the bank containing payment details for accounts and uploads the payment details into the ORMB payment upload staging tables. The batch uses the reference ID available in the payment and remittance record (in the specified order) to identify the account in the system:

- Source System Customer Number
- Invoice ID (if the source system customer number is not available)
- MICR (if the source system customer number and invoice ID are not available)

If all three reference IDs are available in the payment and remittance record, the system uses the source system customer number to identify the customer in ORMB. If the customer is found in ORMB, the system then checks whether the identified customer has an account. If the identified customer has one account, the system checks the following:

- If the **Check Binder Payment** parameter in the **Pay Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether the payment is the first payment for the account and the tender used for the payment is not automatic payment. If so, the payment is applied to the **Binder Payment** contract.

Copyright © 2025, Oracle and/or its affiliates.

- If the **Check Promise To Pay** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active promise to pay for the account. If so, the payment is applied to the **On Account** contract.
- If the **Check Payment Agreement** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether there is an active payment agreement request for the account. If so, the payment is applied to the **On Account** contract.

However, if the **Check Binder Payment**, **Check Promise To Pay**, and **Check Payment Agreement** parameters are set to **N**, the payment is applied to the account's open bills in the order of the due date (i.e. oldest bill first). If the payment amount is greater than the account's billed balance plus overpayment threshold amount (defined in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm), the entire amount is applied on the On Account contract. However, if the payment amount is greater than the account's billed balance, but less than account's billed balance plus overpayment threshold amount, the overpayment amount is applied on the On Account contract.

Let us understand this with the help of an example:

Payment Amount	**Bill 1 (Due Date 01-Feb-2017)**	**Bill 2 (Due Date 01-April-2016)**	**Overpayment Threshold Amount**	**System Behavior**
100	50	50	50	One payment (50$) is created for Bill 2 (oldest due date); One payment (50$) is created for Bill 1.
150	50	100	120	One payment (100$) is created for Bill 2 (oldest due date); One payment (50$) is created for Bill 1.
175	60	75	50	One payment (75$) is created for Bill 2 (oldest due date); One payment (60$) is created for Bill 1; The remaining amount (40$) is applied on the On Account contract.
200	50	50	50	The entire amount (200$) is applied on the On Account contract. This is because the payment amount is greater than the account's billed balance plus overpayment threshold amount.

If the identified customer has multiple accounts, then the payment is applied to the On Account contract. If there are no accounts for the identified customer, or account could not be found in ORMB, or the customer could not be found in ORMB, the payment is applied to the suspense contract defined on the tender source associated with the external source (lockbox) ID.

If the source system customer number is not available, but the invoice ID and MICR are available in the payment and remittance record, then batch uses the invoice ID to find the account for which the invoice is created. Once the account is identified, the system behaves in the similar manner (listed above) when the identified customer has one account.

If the source system customer number and invoice ID are not available, but the MICR is available in the payment and remittance record, then system finds the payment where the same MICR is stamped as a characteristic and then finds the account for which the respective payment is created. In this way, the system derives the account for which the payment must be applied. However, the MICR is used to derive the account only when the **Search Customer Using MICR (Y/N)** parameter in the batch is set to **Y**. Once the account is derived, the system behaves in the similar manner (listed above) when the identified customer has one account.

Copyright © 2025, Oracle and/or its affiliates.

Following scenarios must be considered before uploading the **EDI 820** file in the system.

Scenario	System Behavior
If the **RMR** tag contains the bill Id and the **NM1** tag contains the binder payment identification value	The system initiates the payment for the bill Id and defines the binder payment identifier value in the **Characteristics** tab of the **Payment** screen.
If the **RMR** tag contains the bill Id but the **NM1** tag does not contains the binder payment identification value	The system initiates the payment for the bill Id and does not process further.
If the **RMR** tag contains some other information besides the bill Id and the **NM1** tag contains the binder payment identification value	The system performs the following actions: **1.** Identifies the appropriate membership using the binder payment identification value provided in the **NM1** tag. The binder payment identification value must contain the binder payment applicability flag set to **Y**. **2.** Once the membership is identified and is in the **Pending Effectuation** status, the system identifies the account of the membership, using the information provided in the **RMR** tag, and applies the payment against the binder contract. **3.** If the membership is in the **Active** status, the system applies the payment against the account's contract.
If the **RMR** tag contains some other information besides the bill Id and the **NM1** tag does not contains the binder payment identification value	The system identifies the account of the membership using the information provided in the **RMR** tag and applies the payment against the account's contract.

You can upload payment and remittance advice in the TXT format. You need to ensure that the text file is in the required format; otherwise the file will not be uploaded.

Once the text file is uploaded through the **Lockbox Payment Upload - Small Group (C1-PUPSG)** batch, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

Note: For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

Chapter 34

Deferred Revenue Recognition

Topics:

- Prerequisites
- Deferred Revenue Recognition Status Transition
- Algorithms Used in Deferred Revenue Recognition
- Deferred Revenue Recognition Template (Used for Searching)
- Deferred Revenue Recognition Template (Used for Viewing)
- Deferred Revenue Recognition (Used for Searching)
- Deferred Revenue Recognition (Used for Viewing)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is $1200. When this new business is booked, the revenue of $1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, $200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information about the deferred revenue recognition statuses, see Deferred Revenue Recognition Status Transition on page 2651.

Note: The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see Prerequisites on page 2651.

Copyright © 2025, Oracle and/or its affiliates.

Prerequisites

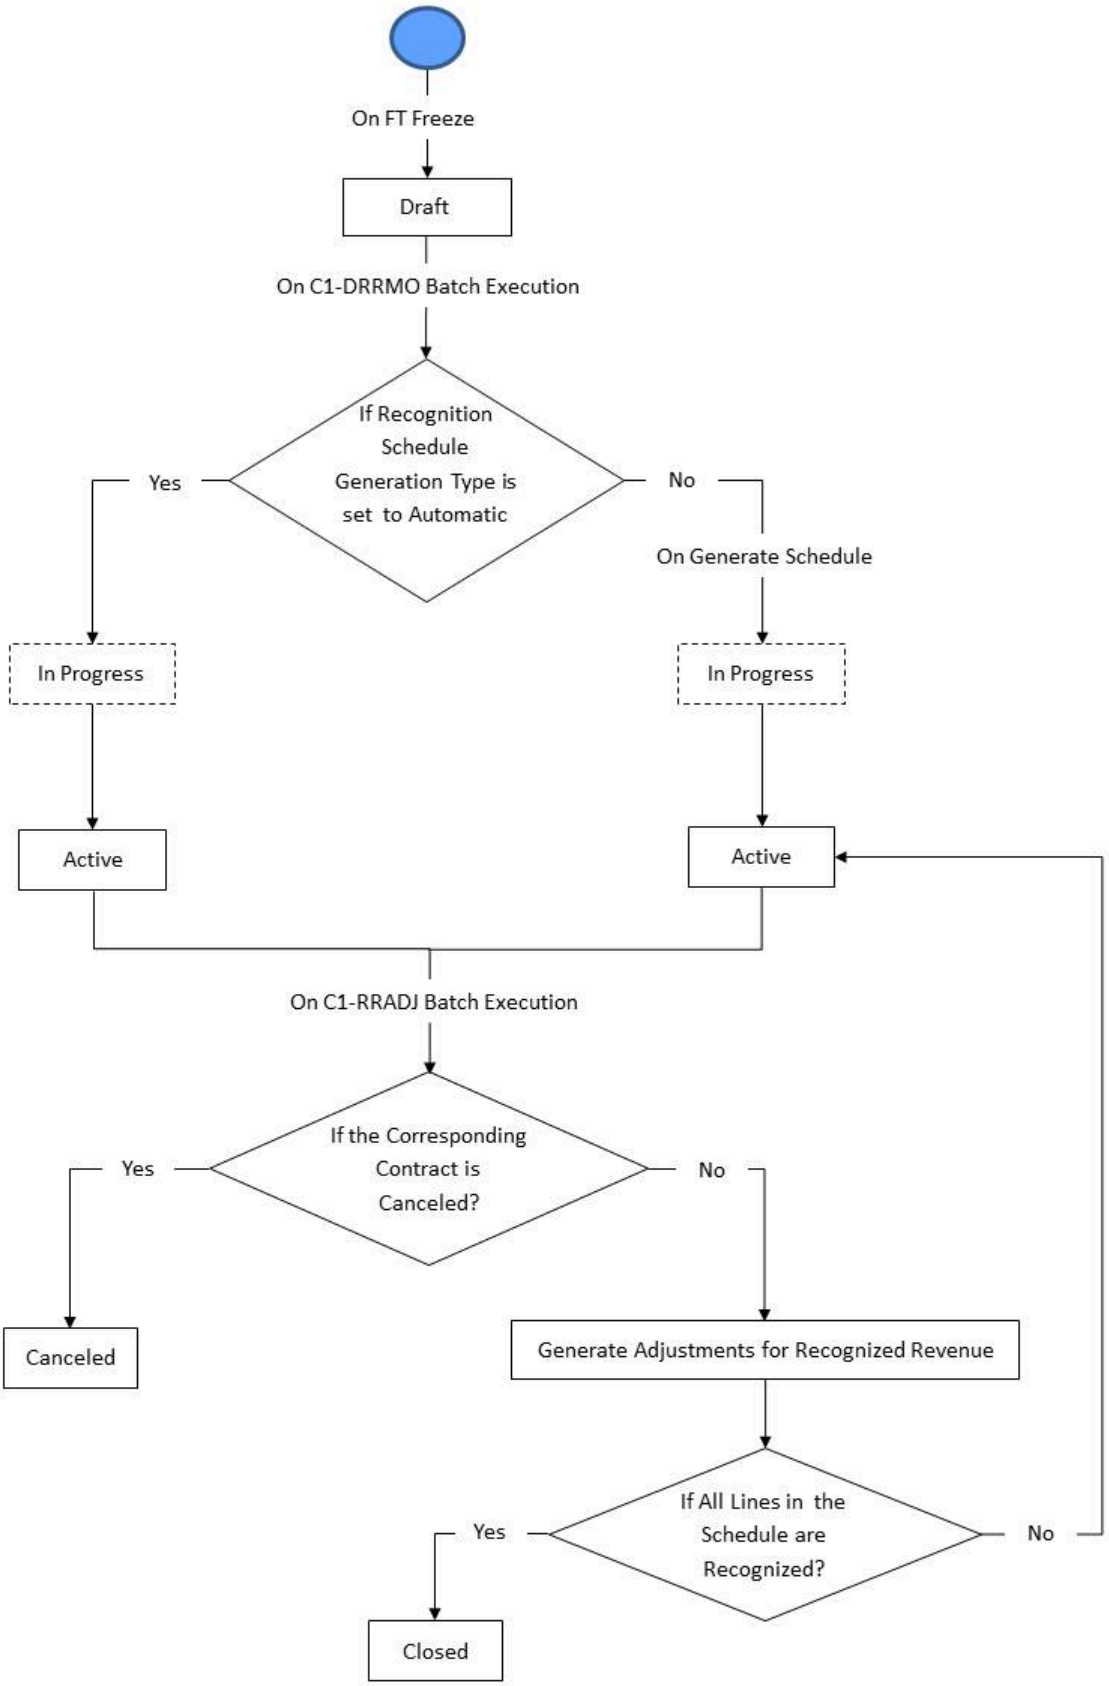
To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
  - Use Calendar or Business Days (C or B)
  - Override Default Recognition Date (Y or N)
  - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
  - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Deferred Revenue Recognition Status Transition

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

Copyright © 2025, Oracle and/or its affiliates.



Copyright © 2025, Oracle and/or its affiliates.

Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter: • Use Contract Expiration Date (Y or N) - Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.
		C1-REVRECITM	C1-REVRECITM	This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon

Copyright © 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				(which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters: • **Use Calendar or Business Days (C or B)** - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory. • **Override Default Recognition Date (Y or N)** - Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory. • **Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)** - Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day. • **Override Default Monthly Recognition Date (1-31)** - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, …, 31. This parameter is required when you want to override the default monthly recognition date.
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.

Copyright © 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVITMREC	C1-REVITMREC	If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter: • **Create Adjustments (Y or N)** - Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.
		C1-DRRTM-INF	C1-DRRTM-INF	This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order: **1.** Deferred Revenue Recognition Template **2.** Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	This algorithm validates the deferred revenue recognition template. It checks the following: • Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule. • Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events. • Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination. • Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field. • Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.>> Whether the low proration limit is between 0 to 31 and is less than the high proration limit. In addition, it does not allow you to:

Status	System Event	Algorithm	Algorithm Type	Description
				• Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition. • Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status. • Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status. You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.
		C1-DRRSC-INF	C1-DRRSC-INF	This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order: **1.** Deferred Revenue Recognition Template **2.** Deferred Revenue Recognition Status **3.** Distribution Code **4.** Deferred Revenue Recognition ID
		C1-REVMON	C1-REVMON	This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.
		C1-REVRECINP	C1-REVRECINP	This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.

Copyright © 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: • Next Status • Next Transition Condition At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.

Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- Deferred Revenue Recognition Template (Used for Viewing) on page 2664

This screen consists of the following zone:

- Search Deferred Revenue Recognition Template on page 2657

Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: • Daily • Monthly • Weekly	No
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are:	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Active • Inactive	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the respective deferred revenue recognition template.
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

Searching for a Deferred Revenue Recognition Template

Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
   The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Copyright © 2025, Oracle and/or its affiliates.

4. Click **Search**.
   A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

Defining a Deferred Revenue Recognition Template

Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

   The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the deferred revenue recognition template.
   - **Parameters** - Used to specify the various parameters for the deferred revenue recognition template.
   - **Algorithms** - Used to associate algorithms with the deferred revenue recognition template.
   - **Divisions** - Used to associate a deferred revenue recognition template with a division.
   - **Characteristics** - Used to define the characteristics for the deferred revenue recognition template.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: • Active • Inactive	Yes

   The **Parameters** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition. **Note:** The **Search** (icon appears corresponding to this field. On clicking the **Search** icon, the **Distribution Code Search** window appears.	Yes
Contract Type	Used to indicate a particular type of contract. **Note:** The **Search** (icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created. **Note:** The **Search** ( ) icon appears corresponding to this field. On clicking the **Search** icon, the **Adjustment Type Search** window appears.	No
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: • Automatic • Manual	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: • Daily • Monthly • Weekly	Yes
Allow Proration	Used to allow proration. **Note:** The **Allow Proration** field appears when you select **Recognition Schedule** as **Monthly**.	Yes
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.	Yes (Conditional) **Note:** This field is required when the recognition schedule is selected as monthly and when the **Allow Proration** check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	(in which it is enrolled) is less than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.	**Note:** This field is required when the recognition schedule is selected as monthly and when the **Allow Proration** check box is selected.

4. Enter the required details.
5. Associate algorithms with the deferred revenue recognition template, if required.
6. View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
7. Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
8. Click **Save**.
   The deferred revenue recognition template is created.

Associating Algorithms with a Deferred Revenue Recognition Template

Procedure

To associate algorithms with a deferred revenue recognition template:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue *r*ecognition template.

   The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes
Sequence	Used to specify the sequence number. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the **Algorithm** field.	

2. Enter the required details in the **Algorithms** section.
3. If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add** (+) icon, and then repeat 2.

Note: However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete** (🗑) icon corresponding to the algorithm.

Associating Deferred Revenue Recognition Template With A Division

Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

Procedure

To associate deferred revenue recognition template with a division:

1. Ensure that the **Divisions** section is expanded when you are creating or *e*diting a deferred revenue recognition template.

   The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template. **Note:** You can only view those divisions to which you have access in the **Division** list.	No

2. Select the required division from the list.
3. If you want to associate the deferred revenue recognition template with more than one division, click the **Add** (+) icon and then repeat step *2*.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑) icon corresponding to the division.

4. Click **Save**.
   The deferred revenue recognition template is associated with the divisions.

Defining a Characteristic for a Deferred Revenue Recognition Template

Prerequisites

To define a characteristic for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

Procedure

To define a characteristic for a deferred revenue recognition template:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value**d field.	**Note:** This field is required when you are defining a characteristic for the deferred revenue recognition template.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add** (+) icon *a*nd then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete** (🗑) icon corresponding to the characteristic.

Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- Deferred Revenue Recognition Template on page 2665

Copyright © 2025, Oracle and/or its affiliates.

Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** - Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: • Active • Inactive

- **Parameters** - Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code. **Note:** It has a link. On clicking the link, the **Distribution Code** screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the **Deferred Revenue Recognition Template** which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: • Manual • Automatic
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: • Daily • Monthly • Weekly
Allow Proration	Used to allow proration. **Note:** The **Allow Proration** field appears when you select **Recognition Schedule** as **Monthly**.
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated. **Note:** This field appears when you check the tick-box for **Allow Proration**.

- **Divisions** - Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** - Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No
Algorithm	Displays an algorithm that needs to be attached to the selected system event. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.	No

- **Characteristics** - Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** -This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template. **Note:** The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.
Delete	Used to delete the deferred revenue recognition template.

Copyright © 2025, Oracle and/or its affiliates.

-
- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

Editing a Deferred Revenue Recognition Template

Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column *c*orresponding to the deferred revenue recognition template whose details you want to edit.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.
   The **Deferred Revenue Recognition Template** screen appears.

   Note: The **Edit** button appears when the deferred revenue recognition template is in the **Active** status.
4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics of the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.
   The changes made to the deferred revenue recognition template are saved.

Deleting a Deferred Revenue Recognition Template

Procedure

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.

Copyright © 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column *c*orresponding to the deferred revenue recognition template that you want to delete.
   The **Deferred Revenue Recognition Template** screen appears.
3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.
   A message appears confirming whether you want to delete the deferred revenue recognition template.
4. Click **OK**.
   The deferred revenue recognition template is deleted.

Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: • Account Details • Person Details • Deferred Revenue Recognition Details • Financial Transaction Details • Policy Details **Note:** By default, the **Account Details** option is selected.	Yes
Person ID	Used to search deferred revenue recognition which are assigned to a particular person. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	No
Account ID	Used to search the account ID. **Note:** This field appears only when you select the **Account Details** option from the **Search By** list.	No
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Account Details** option from the **Search By** list.	**Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	No
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	No
Status	Used to search deferred revenue recognition with a particular status. The valid values are: • Active • Closed • Canceled • Draft **Note:** This field appears when you select the **Person Details**, **Account Details**, or **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition. **Note:** This field appears when you select the **Person Details**, **Account Details**, or **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid. **Note:** This field appears when you select the **Person Details** or **Account Details** option from the **Search By** list.	No
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	
Description	Used to specify the description of the deferred revenue recognition. **Note:** This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: • Daily • Monthly • Weekly **Note:** This field appears when you select the **Deferred Revenue Recognition Details** option from the **Search By** list.	No
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction. **Note:** This field appears only when you select the **Financial Transaction Details** option from the **Search By** list.	
Policy Type	Used to indicate the type of policy. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	Yes
Policy Number	Used to indicate the policy number. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Plan Number	Used to indicate the plan number of the policy. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Source System	Used to indicate the name of the external system from where the policy originated. **Note:** This field appears when you select the **Policy Details** option from the **Search By** list.	No
Start Date	Used to indicate the date from when the policy is effective.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Policy Details** option from the **Search By** list.	
End Date	Used to indicate the date till when the policy is effective.	No
	Note: This field appears when you select the **Policy Details** option from the **Search By** list.	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition** screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the respective financial transaction.

Searching for a Deferred Revenue Recognition

Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application

Copyright © 2025, Oracle and/or its affiliates.

- Recognition Schedules defined in the application
- Source Systems defined in the application

Procedure

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable**.
   A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.
   The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

Viewing the Deferred Revenue Recognition Details

Procedure

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

   The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

   - Deferred Revenue Recognition - Main on page 2674
   - Deferred Revenue Recognition - Log on page 2677
3. Ensure that the **Main** tab is selected.
4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- Deferred Revenue Recognition - Main on page 2674
- Deferred Revenue Recognition - Log on page 2677

Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- Deferred Revenue Recognition on page 2674
- Associated Deferred Revenue Recognitions on page 2676
- Recognition Schedule on page 2676
- Revenue Recognition Items on page 2677

Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** - Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction Information** screen appears where you can view the details of the financial transaction.
Total Revenue Deferred	Displays the total revenue deferred.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: • Active • Closed • Canceled • Draft

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	Note: The **Edit** button appears when the deferred revenue recognition is in the **Active** status.
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	Note: The **Generate Schedule** button appears only when the deferred revenue recognition is in the **Draft** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** - Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition** screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the **Deferred Revenue Recognition Template** screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: • Active • Closed • Canceled

Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

Copyright © 2025, Oracle and/or its affiliates.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

Note: This zone appears when the deferred revenue recognition is in the **Active** status.

Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. "
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the deferred revenue recognition.

Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- Deferred Revenue Recognition Log on page 2677

Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

Editing a Deferred Revenue Recognition

Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you want to edit.
   The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.
   The **Deferred Revenue Recognition** screen appears.

> **Note:** The **Edit** button appears when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics of the deferred revenue recognition, if required.
7. Click **Save**.
   The changes made to the deferred revenue recognition are saved.

Creating the Deferred Revenue Recognition Schedule

Prerequisites

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.

Copyright © 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.
   The **Deferred Revenue Recognition** screen appears.
3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

Note: The **Generate Schedule** button appears when the deferred revenue recognition is in the **Draft** status.

The status of the deferred revenue recognition is changed to **Active**.

Defining a Characteristic for a Deferred Revenue Recognition

Prerequisites

To define a characteristic for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

Procedure

To define a characteristic for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

   The **Characteristics** section contains the following fields in a grid:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the deferred revenue recognition.

Copyright © 2025, Oracle and/or its affiliates.

2. Enter the required details in the **Characteristics** section.

> **Note:** If you select a characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

3. If you want to define more than one characteristic for the deferred revenue recognition, click the **Add** (+) icon *a*nd then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the characteristic.

Adding Related Deferred Revenue Recognitions

Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

Procedure

To add related deferred revenue recognitions:

1. Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred *r*evenue recognition.

   The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Deferred Revenue Recognition Search** window appears.	Yes
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Financial Transactions Search** window appears.	Yes

2. Enter the required details in the **Related Deferred Revenue Recognitions** section.
3. If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click *t*he **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the related deferred revenue recognition.

Editing the Deferred Revenue Recognition Schedule Details

Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

Procedure

To edit the details of the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

   The **Deferred Revenue Recognition** screen appears.
3. Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.
   The **Edit Recognition Schedule** screen appears.

   Note: A recognition schedule from the deferred revenue recognition can be edited when the deferred revenue recognition is in the **Active** status.

   The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

   In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

4. Modify the details of the recognition schedule.
5. If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 4.

   Note: However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete** () icon corresponding to the recognition schedule.
6. Click **Save**.

Reconciliation

Topics:

- Pre-requisites
- Reconciliation of Individual Health Insurance Subsidy Payments
- Reconciliation of Individual Medicare Benefits on Sponsor Account
- Reconciliation Discrepancy Report of Individual Health Insurance Subsidy Payments
- Deferred Processing Mode for Discrepancy Report Creation
- Reconciliation Status Transition
- Pay Instruction Status Transition
- Discrepancy Report Status Transition
- EDI 820 File Format For Reconciliation
- Sample EDI 820 File Format
- Algorithms Used in C1-MemberReconType
- Algorithms Used in C1-MemberReconciliation
- Algorithms Used in C1-PayInstruction
- Algorithms Used in C1-MemberDiscReportType
- Algorithms Used in C1-DiscrepancyReport
- Reconciliation Type
- Reconciliation (Used for Searching)
- Reconciliation (Used for Viewing)
- Pay Instruction
- Discrepancy Report Type

Oracle Revenue Management and Billing enables you to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. The system enables you to upload a pay instruction file in the following formats:

- CSV File Format - You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch.
- EDI 820 File Format - You can upload pay instruction files in the EDI 820 file format from the specified location on the server using the **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.

> **Note:** The **BPR** tag in the EDI 820 file must be set to **I** to indicate that the file contains pay instructions for reconciliation.

While uploading pay instruction files, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Once a file is successfully validated, the reconciliation is created for the file in the **Draft** status. The reconciliation is immediately transitioned to the **Send Notification** status and the algorithms attached to the Send Notification status are executed. Once the To Do is created, the status of the reconciliation is changed to **Pending**. A pay instruction is created for each record in the file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

You need to then specify the payment ID against which you want to reconcile the billed items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the accounts for which you have received the pay instruction. The status of the reconciliation is changed to **Pending Reconciliation**.

On reconciling the pay instructions, the system finds the bill segment against which the pay instruction must be reconciled using the account identifier, policy number, plan number, member identifier, and coverage period combination.

- Discrepancy Report (Used for Searching)
- Discrepancy Report (Used for Viewing)
- Member Reconciliation Preference

Once the bill segment is identified, the transfer adjustment is created against the bill segment and offset adjustment is created against the respective reconciliation contract. If all pay instructions in the file are successfully reconciled, the status of the reconciliation is changed to **Completed**. However, if one or more pay instruction in the file could not be successfully reconciled, the status of the reconciliation is changed to **Open**. If a file contains a pay instruction for previous coverage period, then system checks whether there is any open pay instruction for that coverage period in the system and accordingly tries to reconcile the pay instruction. However, if an open pay instruction for that coverage period does not exist in the system, the system tries to reconcile the pay instruction against the billed item.

You may manually reconcile the pay instructions which are in the **Pending Reconciliation** status. Alternatively, you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** batch at regular interval to reconcile the pay instructions.

During reconciliation, a pay instruction also goes through various statues in its lifecycle. You may configure the following two batches to execute at the regular intervals:

- **Pay Instruction Periodic Monitor (for Pending Status) (C1-PIPMO)** - It monitors whether there are any pay instructions in the **Pending** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.
- **Pay Instruction Periodic Monitor (for Open Status) (C1-PIMDF)** - It monitors whether there are any pay instructions in the **Open** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.

If you cancel the payment tender, the payment and reconciliation associated with the payment are automatically canceled. The status of the reconciliation is changed to **Pending Cancelation**. And, the status of all pay instructions in the reconciliation is changed to **Canceled**. If required, you can manually cancel a reconciliation. However, you can cancel a reconciliation when it is in the **Open** or **Completed** status. On canceling a reconciliation, the status of the reconciliation is changed to **Pending Cancelation** and the status of all pay instructions in the reconciliation is changed to **Canceled**.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. It monitors whether there are reconciliations in the **Pending Cancelation** status. If there is a reconciliation in the **Pending Cancelation** status, the status of the reconciliation is changed to **Canceled**.

The system enables you to create a copy of reconciliation when it is in the **Canceled** status. If the number of pay instructions in the reconciliation does not exceed the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a copy of the reconciliation and pay instructions is created in the real time (i.e. immediately). The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

Copyright © 2025, Oracle and/or its affiliates.

However, if the number of pay instructions in the reconciliation exceeds the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a batch job is automatically created using the **Duplicate Reconciliation (C1-RECDU)** batch. A message appears indicating the batch job ID. This batch job creates a copy of the reconciliation and pay instructions. The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

If the policy number, plan number, and member identifier are specified in a pay instruction, then the pay instruction is reconciled at the main subscriber level. If the policy number and plan number are specified in a pay instruction, then the pay instruction is reconciled at the plan level. However, if the policy number is only specified in a pay instruction, then the pay instruction is reconciled at the policy level.

On reconciling, some pay instructions are fully reconciled against the bill segments, some pay instructions are partially reconciled against the bill segments, and some pay instructions are not reconciled against any bill segments. The system enables you to capture such discrepancies for the reporting purposes. If required, you can generate the discrepancy report at the file or account level. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All billed items which were partially reconciled against pay instructions due to rate variance
- All billed items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. Once you review and finalize the discrepancy report, its status is changed to **Completed**. At a time, you can only have one discrepancy report for the file or account in the **Pending** status. Until, you finalize a discrepancy report, you cannot create another discrepancy report for the file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation is in the **Open** status.

The reconciliation process goes through various statuses in its entire lifecycle. For more information about the reconciliation statuses, see...

- Reconciliation Status Transition on page 2693
- Pay Instruction Status Transition on page 2694
- Discrepancy Report Status Transition on page 2696

Copyright © 2025, Oracle and/or its affiliates.

Pre-requisites

To setup the Member to Member Reconciliation feature, you need to do the following:

- **Configure the following Characteristics:**
  - Define an account eligible for reconciliation process from an **On-Account Contract** of a Universal Generic account.
  - Populate the Policy ID, or Plan ID, or Membership ID linked with the billable charges.
- Define the bills having the status as **Completed** for reconciliation.
- Define the **Contract Types** for reconciliation.
- Ensure that payment on **Suspense Contract** is available to match against the bills.
- Configure the **Customer Class** algorithm for a payer account.

Reconciliation of Individual Health Insurance Subsidy Payments

Several states have established health insurance exchanges to offer health and dental insurance coverage options to their respective residents. Individuals within these states can compare and purchase coverage from a selection of health and dental plans, which are referred to as Qualified Health Plan (QHP).

Individuals who enroll for these QHPs may be eligible for Federal Tax Credits and Cost-Sharing Reductions (CSRs), which are subsidies based on the subscriber's income, to help pay for their health insurance and lower their out-of-pocket costs. The Centers for Medicare & Medicaid Services (CMS) makes monthly payments to insurers for the individuals who receive these credits.

CMS has established and instituted the State-Based Exchange (SBE) or Federally Facilitated Marketplace (FFM) reconciliation process to ensure that insurers enrollment information aligns with Marketplace enrollment information. The dispute process provides a mechanism for insurers to correct an FFM enrollment record or related payment information that the monthly reconciliation process cannot resolve.

Oracle Revenue Management and Billing (ORMB) may receive either the exact or different payment amount from the exchange for the sponsored charges due to various reasons. ORMB now enables you to reconcile the payments from the exchange against the bill line items for the fully insured individual business, thereby ensuring that the discrepancy is identified and resolved on time to quickly recover the money from CMS via the dispute process.

The reconciliation process in ORMB is enhanced to support both the fully insured group business and fully insured individual business. For the fully insured group business, the system stamped the policy ID and plan ID in the **C1_FT_EXT** table while freezing a financial transaction on the bill completion. These details were later used to reconcile the pay instructions against the bill line items. In this release, the **C1-STMPFTINF** algorithm type (which is attached on the **FT Freeze** system event of a customer class) is enhanced to support the fully insured individual business. It stamps the health plan code and price item in the **C1_FT_EXT** table while freezing a financial transaction on the bill completion for the fully insured individual business. These details are later used to reconcile the pay instructions received from the exchange against the bill line items of the exchange account.

A new field named **Reconciliation Category** is available while defining a reconciliation type. It helps to differentiate between the fully insured group and fully insured individual reconciliation objects. If you want to upload and process a pay instruction file for a fully insured group business using a reconciliation type, you must set the reconciliation category of the reconciliation type to **Group**. However, if you want to upload and process a pay instruction file for a fully insured individual business using a reconciliation type, you must set the reconciliation category of the reconciliation type to **Individual**.

A new algorithm type named **C1-PAYINSEXC** is introduced in this release. You need to attach an algorithm created using the **C1-PAYINSEXC** algorithm type to the **Upload Pay Instructions** system event of a reconciliation type where the reconciliation category is set to **Individual**. This algorithm parses a pay instruction file which is received from the

Copyright © 2025, Oracle and/or its affiliates.

exchange. It reads each record in the pay instruction file and creates one or more pay instructions in a reconciliation object depending on the number of exchange payment types received in the record. For example, if a record contains information about two exchange payment types (i.e. EP1 and EP2), the system will create two pay instructions for the record - one for EP1 and another for EP2. The exchange payment types (i.e. health insurance coverage) maintained in the CMS system might be different from the price items maintained in ORMB. Therefore, ORMB enables you to map an exchange payment type with a price item using the **C1-PayTypePrcItemMap** extendable lookup. Note that no values are shipped for this extendable lookup from the product. You need to create a value for the **C1-PayTypePrcItemMap** extendable lookup wherein each payment type received from the exchange is mapped to a price item. You can map a price item to one or more payment types based on the requirements.

While creating an algorithm using the **C1-PAYINSEXC** algorithm type, you need to specify the following parameters:

- **Pay Instruction Business Object** - Used to indicate the business object using which you want to create a pay instruction.
- **Date Format** - Used to indicate the format in which you want to store the coverage period start and end dates.
- **Payment Type - Price Item mapping** - Used to indicate the **C1-PayTypePrcItemMap** extendable lookup value using which you want the system to derive the price item for each payment type received from the exchange.

The system enables you to upload a pay instruction file received from the exchange in the CSV file format. You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch. While receiving a pay instruction file from the exchange, you need to ensure that each record in the pay instruction file contains the following information:

- Payor (i.e. exchange person) or its account from where the payment is received
- Subscriber (i.e. individual membership) for whom the payment is received
- Health plan and its coverage period for which the payment is received
- At least one exchange payment type (i.e. health insurance coverage) and its subsidy amount which is sponsored by the exchange

Note:

The system assumes that the exchange person will have only one account. Therefore, if an exchange person has multiple accounts, the system will not allow you to upload and process a pay instruction file received from the respective exchange. Hence, if the exchange person has a single account in the system, you can either provide the payor or its account details in the record. However, if the exchange person has multiple accounts in the system, you must provide the payor's account details in the record.

You can create an exchange person and its account in the system through the health care inbound message. While creating an account for an exchange person, ensure that you set the **Eligible for Member Reconciliation (C1-RCELG)** characteristic of the account to **Y**.

You can specify either the health plan code or Health Insurance Oversight System (HIOS) ID in the record. If you are planning to use the Health Insurance Oversight System (HIOS) ID for a health plan, you need to attach an algorithm created using the **C1-STMPHLPN** algorithm type to the **Enter** system event (with the lowest sequence number) of the **Pending** status in the **C1-MemberReconciliation** business object. This algorithm will then derive the code of the health plan, to which the individual is enrolled for the coverage period, using the HIOS ID. Note that, while creating a pay instruction, the system will derive the health plan code when the HIOS ID is present in the record irrespective of whether the health plan code is present in the record or not. However, if the HIOS ID is not present in the record, the system will use the health plan code that is present in the record.

If a subscriber has enrolled for multiple insurance coverages of a health plan for the same coverage period and if the subscriber is eligible for subsidy for one or more insurance coverages, you will receive the subsidy amount for the respective insurance coverages from the CMS system. The subsidy information is received in the form of exchange payment type and amount. At a time, you can specify maximum 10 exchange payment types and their amounts in each record of a pay instruction file.

The **C1-RECUP** batch is enhanced to support the fully insured individual business. On executing the **C1-RECUP** batch, the system reads the pay instruction file from the specified location and validates it. Once a file is successfully validated, the reconciliation object is created for the file in the **Draft** status. The reconciliation object is immediately transitioned

Copyright © 2025, Oracle and/or its affiliates.

to the **Send Notification** status and the algorithms attached to the **Send Notification** status are executed. Once the To Do is created, the status of the reconciliation object is changed to **Pending**. One or more pay instructions are created for a record of a pay instruction file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not. While creating a pay instruction, the system derives the health plan code (if not available), individual membership and the exchange account. For more information about the **C1-RECUP** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

You need to then specify the payment ID against which you want to reconcile the bill line items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the exchange accounts for which you have received the pay instruction. The status of the reconciliation object is changed to **Pending Reconciliation**. On reconciling the pay instructions, the system finds the open and unmatched bill line item of the exchange account against which the pay instruction must be reconciled using the health plan, subscriber, price item, and coverage period combination. The system creates a reconciliation adjustment for a pay instruction which is successfully reconciled. While reconciling the pay instructions, the system sets the pay instruction matching level characteristic type of the reconciliation object to **MEMBER**.

You can manually reconcile the pay instructions of a reconciliation object, or you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** or **Pay Instruction Processing Batch (C1-RCPM)** batch at regular intervals to reconcile the pay instructions.

Note: While executing the **C1-RCPM** batch, you need to specify a member reconciliation preference whose attributes you want to use while reconciling all pay instructions of a file at the member level.

For more information about the above batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

If you attach an algorithm created using the **C1-VALMRPYCN** algorithm type to the **Payment Cancellation** system event of the required customer class, the system automatically cancels the payment and reconciliation object associated with the payment when you cancel its corresponding payment tender. The status of the reconciliation object is changed to **Pending Cancelation** and the status of all pay instructions in the reconciliation object is changed to **Canceled**.

If required, you can also manually cancel a reconciliation object. However, you can cancel a reconciliation object only when it is in the **Open** or **Completed** status. On canceling a reconciliation object, the status of the reconciliation object is changed to **Pending Cancelation**. Before canceling a pay instruction, the reconciliation adjustment (if any) corresponding to the pay instruction is also canceled.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. This batch monitors whether there are any reconciliation objects in the **Pending Cancelation** status. If there is a reconciliation object in the **Pending Cancelation** status, the status of the reconciliation object and the status of all pay instructions in the reconciliation object is changed to **Canceled**. For more information about the **C1-RCNMD** batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

If all pay instructions in a reconciliation object are successfully reconciled, the system changes the status of the reconciliation object to **Completed**. However, if one or more pay instruction in a reconciliation object is not successfully reconciled, the system changes the status of the reconciliation object to **Open**. If you want the system to automatically reconcile the open pay instructions of the account when you bill the account each time, you need to attach an algorithm created using the **C1-RCLOPNRCN** algorithm type to the **Post Bill Completion** system event of the required customer class. The system will then trigger the reconciliation process to reconcile the open pay instruction against the open and unmatched bill line item of the exchange account and will accordingly update the status of the pay instruction and reconciliation object.

If you attach an algorithm created using the **C1-VLPYINACN** algorithm type to the **Adjustment Cancellation** system event of the adjustment type (using which the reconciliation adjustments are created), the system ensures that no one can cancel a reconciliation adjustment until it is linked to a non-canceled pay instruction.

Reconciliation of Individual Medicare Benefits on Sponsor Account

Until now, the system enabled you to reconcile payable pay instructions of the sponsor account against the bill line items and thereby ensure that the discrepancy is identified and resolved on time. Now, the system enables you to reconcile Medicare benefits which may be payable or non-payable by the sponsor. In other words, you can reconcile payable and non-payable pay instructions of the sponsor account against the bill line items and thereby ensure that the discrepancy is identified and resolved on time. The non-payable pay instructions can be reconciled against memo only or non-memo charges depending on whether the membership benefit is memo only or not.

To implement this feature, the following changes are made to the system:

- The **Payable** column is available while mapping a payment type to a price item in the **C1-PayTypePrcItemMap** extendable lookup value.
- The **Payable** field is added in the **Pay Instructions** zone of the **Pay Instruction** tab in the **Reconciliation** screen.
- The **C1-RCPM** and **C1-RCNMD** batches are enhanced to support non-payable pay instructions in the reconciliation object.
- A new parameter named **Payment Type – Price Item** mapping is added in the **C1-CRDSLNITM** algorithm type.
- Two new discrepancy categories - **Record Not Found in the File** and **Record Not Found in the System** are introduced to accurately classify the non-payable pay instruction discrepancies.

Once you upload a pay instruction file which contains payable and/or non-payable instructions, the system determines whether a pay instruction is payable or non-payable using the **C1-PayTypePrcItemMap** extendable lookup value while creating a pay instruction. Once the pay instructions are created, you can filter and view the payable and non-payable pay instructions of a reconciliation object in the **Pay Instructions** zone.

While specifying the payment against which you want to reconcile the bill line items for which you have received the pay instructions, you must ensure that the payment amount is equal to only the amount of payable pay instructions. On reconciling a non-payable pay instruction, the system will check whether the membership benefit is memo only. If the non-payable membership benefit is not memo only, the system reconciles the pay instruction against the financial transaction. And, if the non-payable membership benefit is memo only, the system reconciles the pay instruction against the bill line item. However, note the system does not create a reconciliation adjustment for a non-payable pay instruction when it is successfully reconciled.

The system enables you to view the reconciliation discrepancy report at the file or account level for the payable as well as non-payable pay instructions.

Reconciliation Discrepancy Report of Individual Health Insurance Subsidy Payments

Until now, you were able to generate the reconciliation discrepancy report at the file or account level for the fully insured group business. Now, in addition, you can generate the reconciliation discrepancy report at the file or account level for the individual health insurance subsidy payments. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All bill line items which were partially reconciled against pay instructions due to rate variance
- All bill line items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

Copyright © 2025, Oracle and/or its affiliates.

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. The system will create the discrepancy report in either **Pending** or **Deferred Processing** status. Once you review the discrepancy line items and finalize the discrepancy report, its status is changed to **Completed**.

At a time, you can only have one discrepancy report for a file or an account in the **Pending** or **Deferred Processing** status. Until you finalize a discrepancy report, you cannot create another discrepancy report for the respective file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation object is in the **Open** status.

When you generate a discrepancy report for a pay instruction file which is received from the exchange or when you generate a discrepancy report for an exchange account, the system displays the following additional information for each discrepancy line item along with other details:

- Payor Identifier Type
- Payor Identifier
- Health Plan
- HIOS ID
- Payment Type

Note: Policy number and plan number are displayed instead of the above information when you generate discrepancy report for the fully insured group business.

Deferred Processing Mode for Discrepancy Report Creation

Until now, the reconciliation discrepancy report at the file or account level was only created in the online mode (i.e. immediately). Now, the system provides you with the ability to configure deferred processing mechanism for the reconciliation discrepancy report creation. A new status named **Deferred Processing** is introduced in the lifecycle of the **C1-DiscrepancyReport** business object. On generating a discrepancy report at the file or account level, the discrepancy report is created in the **Draft** status. A new algorithm named **C1-DISCDEF** is attached to the **Enter** system event of the **Draft** status. This algorithm checks whether the number of pay instructions in the non-final status exceeds the deferred count specified in the algorithm. If the number of pay instructions in the non-final status does not exceed the deferred count, the status of the discrepancy report is changed to **Pending**. The system then adds the discrepancy line items in the discrepancy report by comparing each non-final pay instruction against the open and unmatched bill line item of the exchange account.

However, if the number of pay instructions in the non-final status exceeds the deferred count, the status of the discrepancy report is changed to **Deferred Processing**. A new batch named **C1-DRMT** is introduced in this release. This batch is used to monitor or check whether there are any discrepancy reports in the **Deferred Processing** status. If there is a discrepancy report in the **Deferred Processing** status, the batch changes the status of the discrepancy report to **Pending**. Then, the system adds the discrepancy line items in the discrepancy report by comparing each non-final pay instruction against the open and unmatched bill line item of the exchange account.

This batch is a multi-threaded batch. The multi-threading is based on discrepancy request ID and chunks for multi-threading are created based on numerical distribution of discrepancy request ID. This batch contains the following parameters:

Parameter Name	Mandatory (Yes or No)	Description
Maintenance Object	Yes	Used to indicate that you want to monitor discrepancy reports which are created using the business objects of a particular maintenance object. **Note:** By default, the parameter value is set to **C1-DISCR-RPT**.

Copyright © 2025, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
Restrict by Batch Code	No	Used when you want to monitor discrepancy reports whose current status is linked to the **Discrepancy Report Monitor (C1-DRMT)** batch. The valid value is **true**.
Restrict by Discrepancy Report Type	No	Used when you want to monitor the discrepancy reports which are created using a particular discrepancy report type.
Restrict by Business Object	No	Used when you want to monitor discrepancy reports which are created using a particular business object.
Restrict by Status Code	No	Used when you want to monitor discrepancy reports which are in a particular status. **Note:** This parameter is useful when this batch is invoked from more than one status in the lifecycle of the business object.
Override maximum errors	No	Used to override the maximum number of errors after which the batch must be terminated.
Threadpool	No	Used to specify the thread pool on which you want to execute the batch.

Reconciliation Status Transition

EDI 820 File Format For Reconciliation

Before uploading an EDI 820 file, you need to ensure that the EDI 820 file contains the following columns:

Tag	Attribute	Description	Mandatory (Yes or No)
Algo Param	Account Identifier Type	Used to specify the account identifier type. The valid values are: • Account Name • Base Global Account ID • Bill Group Identifier • Demo Bank Account Number • External Account Identifier • Flexcube Account ID • International Bank Account Number	Yes (Conditional) **Note:** This data is required when Account Identifier is provided.
N1[3]	Account Identifier value	Used to specify the value of the account identifier type.	Yes (Conditional) **Note:** This data is required when Account Identifier Type is provided.

Copyright © 2025, Oracle and/or its affiliates.

Tag	Attribute	Description	Mandatory (Yes or No)
Batch Param	Member Identifier type	Used to specify the member identifier type.	Yes
RMR[2]	Policy Number	Used to specify the policy number of the member.	Yes
Algo Param	Plan Number	Used to specify the plan number of the member.	No
ENT[4]	Member Identifier Value	Used to specify the value of the member identifier type.	Yes
RMR[4]	Amount	Used to specify the amount that has to be paid to the member.	Yes **Note:** The data value of this column must be 0, if no amount is provided.
DTM[6]	Coverage Start Date	Used to specify the date of the policy from where the coverage starts. **Note:** The Coverage Start Date cannot be later than the coverage end date.	Yes
DTM[6]	Coverage End Date	Used to specify the date of the policy till when the coverage ends. **Note:** The coverage end date cannot be earlier than the coverage start date.	Yes
NM1[4][5]	Member Name	Used to specify the name of the member.	Yes
REF[2]	Plan Number	Used to specify the plan number of the member.	Yes (Conditional) **Note:** This data is required when Algo Param tag does not have a value.
Batch Param	Reconciliation Type	Used to specify the type of reconciliation.	Yes
Batch Param	Reconciliation Cancel Status	Used to specify the Reconciliation Cancelation status.	Yes

Algorithms Used in C1-MemberReconType

The following table lists the algorithms which are attached to the **C1-MemberReconType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-REOCNPEP	C1-REOCNPEP	Refer to C1-REOCNPEP on page 2698

C1-REOCNPEP

This algorithm validates a reconciliation type.

It checks the following:

- A duplicate algorithm is not added.
- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a reconciliation type when the corresponding reconciliation is in a status other than **Completed** or **Canceled**.

Algorithms Used in C1-MemberReconciliation

The following table lists the algorithms which are attached to the **C1-MemberReconciliation** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Void	-	-	-	-

C1-RECONINFO

This algorithm generates the reconciliation information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Reconciliation Type Description
- Reconciliation Status
- Reconciliation ID

C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancelation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** - Used to specify the status code to which the reconciliation in the **Pending Cancelation** status is transitioned when the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancelation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-TDCREATE

This algorithm is invoked when the status of the reconciliation is changed to **Send Notification**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the reconciliation is created for a pay instruction file.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is created for a pay instruction file.

Copyright © 2025, Oracle and/or its affiliates.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

C1-VALPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Pending**. Once a pay instruction is created, this algorithm validates the following:

- The coverage end date is not earlier than the coverage start date.
- Either the account identifier type and account identifier or the account ID is available in the pay instruction record.
- The member identifier type is available when the member identifier is specified and vice versa.
- A person with the given member identifier type and member identifier combination exists in the system.
- An account with the specified account ID exists in the system.
- The account ID is derived using the account identifier type and account identifier combination when the account ID is not available in the pay instruction record.
- The account is eligible for reconciliation.

If the above mentioned validations are successful, the status of the pay instruction is set to **Pending**. However, if any of the above validation fails, the status of the pay instruction is set to **Error**.

This algorithm contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** - Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. This type of characteristic is defined on the account. You must specify a characteristic type where the characteristic entity is set to Account.
- **Maintenance Object for Generating Pay Instruction Logs** - Used to specify the maintenance object using which you want to generate logs for the pay instruction.
- **Pay Instruction Error Status** - Used to specify the status code to which you want to transition the pay instruction when the validation fails.
- **Pay Instruction Pending Status** - Used to specify the status code to which you want to transition the pay instruction when the validation is successful.

All these parameters are mandatory.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

Copyright © 2025, Oracle and/or its affiliates.

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancelation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** - Used to specify the status code to which the reconciliation in the **Pending Cancelation** status is transitioned when the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancelation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

C1-MONPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Initial Reconciliation in Progress** or **Reconciliation in Progress**. It monitors or checks whether there are any pay instructions in the following statuses:

- Reconciliation Pending Processing
- Derivation Pending Processing
- Completed

If all pay instructions in the reconciliation are in the **Completed** status, then the status of the reconciliation is changed to Completed. However, if there are any pay instructions in the **Reconciliation Pending Processing** or **Derivation Pending Processing** status, then the status of reconciliation is changed to **Open**.

This algorithm contains the following parameters:

- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which the pending pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Reconciliation Pending Processing Status** - Used to specify the status code to which the open pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Completed Status** - Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Reconciliation Open Status** - Used to specify the status code to which you want to transition the reconciliation when there is a pay instruction in the status which is specified in the **Pay Instruction Derivation Pending Processing Status** or **Pay Instruction Reconciliation Pending Processing Status** parameter.
- **Reconciliation Completed Status** - Used to specify the status code to which you want to transition the reconciliation when all its pay instructions are in the status which is specified in the **Pay Instruction Completed Status** parameter.

All these parameters are mandatory.

C1-TRNPAYRCN

This algorithm transfers the payment amount from the payor account's contract to the reconciliation contract of the accounts for which you have received the pay instruction. In this process, the payment against the payor account's contract is canceled and the payment against the payee account's reconciliation contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** - Used to indicate the reason that you want to use when the payment on the payor account's contract is canceled.
- **Reconciliation Contract Match Type** - Used to specify the match type using which you want to apply payment against the reconciliation contract.

Copyright © 2025, Oracle and/or its affiliates.

Both these parameters are mandatory.

C1-RCOPNPYIN

This algorithm checks whether the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter. If the status of the pay instruction is **Pending** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Derivation Pending Processing Status** parameter.

However, if the status of the pay instruction is **Open** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Reconciliation Pending Processing Status** parameter.

It contains the following parameters:

- **Pay Instruction Pending Status** - Used to specify the status code to which a pay instruction is transitioned when its validation is successful.
- **Pay Instruction Open Status** - Used to specify the status code to which a pay instruction is transitioned when it is not fully reconciled.
- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which you want to transition the pending pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Pay Instruction Reconciliation Pending Processing Status** - Used to specify the status code to which you want to transition the open pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Deferred Processing Threshold** - Used to specify the maximum number of pay instructions that can be reconciled in the real time (i.e. immediately). If the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit, the pay instruction is reconciled in the deferred mode.

All these parameters are mandatory.

C1-RCNOPNMR

This algorithm initiates the reconciliation process for the past open reconciliation records of the account. It contains the following parameters:

- **Reconciliation Open Status** - Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.
- **Reconciliation In Progress Status** - Used to specify the status code to which you want to transition the past open reconciliation record when the current reconciliation record of the account is reconciled.

Both these parameters are mandatory.

C1-RCMONPNCN

This algorithm is invoked when the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch is executed. It checks whether the reason is specified while canceling the reconciliation. If the cancel reason is specified, the status of the reconciliation is changed to **Canceled**. However, if the cancel reason is not specified, an error occurs while executing the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch.

It contains the following parameters:

- **Reconciliation Cancel Status Reason** -

  Used to specify the cancel reason. If you specify the value for this parameter, the system will validate whether the cancel reason specified while canceling the reconciliation matches the cancel reason specified in this parameter. If the

Copyright © 2025, Oracle and/or its affiliates.

cancel reason does not match, an error occurs while executing the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch. You must specify a reason which is defined for the **Pending Cancelation** status of the **C1-MemberReconciliation** business object.

C1-CANPAYINS

This algorithm is invoked when the **Reconciliation Cancelation Periodic Monitor (C1-RCNMD)** batch is executed. It changes the status of all pay instructions in the reconciliation.

It contains the following parameter:

- **Pay Instruction Canceled Status** - Used to specify the status code to which you want to transition a pay instruction when the reconciliation is canceled. This parameter is mandatory.

C1-CANRCNPAY

This algorithm transfers the payment amount from the payee account's reconciliation contract to the payor account's contract. In this process, the payment against the reconciliation contract is canceled and the payment against the payor account's contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** - Used to indicate the reason that you want to use when the payment against the payee account's reconciliation contract is canceled.
- **On Account Match Type** - Used to specify the match type using which you want to apply the payment against the contract of the payor account.

Both these parameters are mandatory.

C1-RCNCANLTD

This algorithm is invoked when the status of the reconciliation is changed to **Canceled**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the reconciliation is canceled.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is canceled.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Algorithms Used in C1-PayInstruction

The following table lists the algorithms which are attached to the **C1-PayInstruction** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-MPAYININF	C1-MPAYININF	Refer to C1-MPAYININF on page 2705

The following table lists the algorithms which are used in the lifecycle of the **C1-PayInstruction** business object:

Copyright © 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 226

Reconciliation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 226
Error	-	-	-	-

C1-MPAYININF

This algorithm generates the pay instruction information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- "Period:" Start Date - End Date
- Pay Instruction Amount
- Pay Instruction Status
- Payor Name
- Pay Instruction ID

C1-PYINDRVAN

This algorithm is invoked when the status of the pay instruction is changed to **Derivation in Progress**. It derives the following:

- Policy using the policy number
- Plan using the plan number
- Member using the member identifier type and member identifier
- Payee account using the account identifier type and account identifier

If the policy, plan, and member information is available, it validates whether the member is covered under the specified plan of the policy. However, if the policy and plan information is available, it validates whether the plan is included in the specified policy. If the derivation and validation process is successful, the related object information is derived for policy, plan, and/or member from the system.

However, if the derivation and validation process fails, the related object information is not derived for policy, plan, and/or member and the status of the pay instruction remains as **Pending**.

In addition, the system determines whether the pay instruction must be reconciled at the member, plan, or policy level depending on the information available in the pay instruction. If the policy, plan, and member information is available, the pay instruction is reconciled at the member level. If the policy and plan information is available, the pay instruction

Copyright © 2025, Oracle and/or its affiliates.

is reconciled at the policy plan level. However, if the policy information is available, the pay instruction is reconciled at the policy level.

It contains the following parameters:

- **Unsuccessful Processing Status** - Used to specify the status code to which you want to transition the pay instruction when the derivation and validation process fails.
- **Pay Instruction Matching Level Characteristic Type** - Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy level.

All these parameters are mandatory.

C1-PIRECOCIL

This algorithm is invoked when the status of the pay instruction is changed to **Reconciliation in Progress**. It searches whether there is an open bill segment with the policy, plan, member, and coverage period combination for the payee account. If such bill segment exists in the system, this algorithm reconciles the pay instruction against the open bill segment. It creates two reconciliation adjustments - one against the payee account's reconciliation contract and another against the bill segment's contract.

If the amount on the pay instruction is fully reconciled, then the status of the pay instruction is changed to **Completed**. However, if the amount on the pay instruction is not fully reconciled, then the status of the pay instruction is changed to **Open**.

It contains the following parameters:

- **Payment Instruction Match Level Char Type** - Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Subscriber Match Level Char Value** - Used to specify the value of the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the pay instruction must be reconciled at the member level.
- **Policy Plan Match Level Char Value** - Used to specify the value of the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the pay instruction must be reconciled at the policy plan level.
- **Policy Match Level Char Value** - Used to specify the value of the characteristic type specified in the **Payment Instruction Match Level Char Type** parameter which indicates that the pay instruction must be reconciled at the policy level.
- **Billed Transfer Recon Adjustment Type** - Used to specify the adjustment type using which you want to create the adjustment on the bill segment's contract when the pay instruction is reconciled.
- **Payment Instruction Recon Adjustment Type** - Used to specify the adjustment type using which you want to create the adjustment on the reconciliation contract when the pay instruction is reconciled.
- **Recon Open Status** - Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**.

Copyright © 2025, Oracle and/or its affiliates.

- **Payment Instruction Open Status** - Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled.
- **Payment Instruction Complete Status** - Used to specify the status code to which you want to transition the pay instruction when it is fully reconciled.
- **Reconciliation Char Type** - Used to specify the characteristic type which you want to use to store the reconciliation ID. This type of characteristic is defined on the adjustments which are created on reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment Type**.
- **Payment Event Characteristic Type** - Used to specify the characteristic type which you want to use to store the payment event ID. This type of characteristic is defined on the reconciliation adjustments to indicate the payment event whose payment is distributed against the bill segment.
- **Reconciliation Adjustment Type for Offsetting Debits using Billed Credits** - Used to specify the adjustment type using which you want to create the adjustments when offsetting billed debit verses billed credits.

All these parameters are mandatory.

C1-PYICNADJ

This algorithm is invoked when the status of the pay instruction is changed to **Canceled**. It cancels the reconciliation adjustments which are created while reconciling the pay instruction. It cancels the reconciliation adjustment irrespective of whether the status of the pay instruction is **Open** or **Completed**.

It contains the following parameters:

- **Adjustment Cancel Reason** - Used to indicate the reason that you want to use when the reconciliation adjustments are canceled.
- **Pay Instruction Completed Status** - Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Pay Instruction Open Status** - Used to specify the status code to which the pay instruction is transitioned when it is not fully reconciled.
- **Reconciliation Completed Status** - Used to specify the status code to which the reconciliation is transitioned when all its pay instructions are fully reconciled.
- **Reconciliation Open Status** - Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.

All these parameters are mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Algorithms Used in C1-MemberDiscReportType

The following table lists the algorithms which are attached to the **C1-MemberDiscReportType** business object:

Copyright © 2025, Oracle and/or its affiliates.

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-DISCPEP	C1-DISCPEP	Refer to C1-DISCPEP on page 2708

C1-DISCPEP

This algorithm validates a discrepancy report type. It checks the following:

- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a discrepancy report type when the corresponding discrepancy report is in a status other than **Completed**.

Algorithms Used in C1-DiscrepancyReport

The following table lists the algorithms which are attached to the **C1-DiscrepancyReport** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-DISRINFO	C1-DISRINFO	Refer to C1-DISRINFO on page 2709

The following table lists the algorithms which are used in the lifecycle of the **C1-DiscrepancyReport** business object:

The following table lists the algorithms which are used in the lifecycle of the **C1-DiscrepancyReport** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-VALNEWDIS	C1-VALNEWDIS	Refer to C1-VALNEWDIS on page 2709

Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 226
Pending	Enter	C1-CRDSLNITM	C1-CRDSLNITM	Refer to C1-CRDSLNITM on page 2709
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to F1-TODOCOMPL on page 1462
Completed	Enter	C1-VALCMPDIS	C1-VALCMPDIS	Refer to C1-VALCMPDIS on page 2710

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Copyright © 2025, Oracle and/or its affiliates.

C1-DISRINFO

This algorithm generates the discrepancy report information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Discrepancy Report Type Description
- Discrepancy Report Status
- Discrepancy Report ID

C1-DISCDEF

This algorithm checks whether the number of pay instructions in the non-final status exceeds the deferred count specified in the algorithm. If the total number of pay instructions exceed the defer processing count, the status of the discrepancy report is set to **Deferred Processing** else the status of the discrepancy report is set to **Pending**.

It contains the following parameters:

- **Deferred Count** - Used to specify the count which helps to determine whether the pay instructions must be processed in the deferred mode (i.e. in the background) or in real time (i.e. immediately).

  Note: If the defer processing count is not provided, the system sets the default value to 1000.

- **Reconciliation Open Status** - Used to specify the status code to which you want to transition the reconciliation when its corresponding pay instruction is either in the **Deferred Processing** or **Pending** status.

C1-VALNEWDIS

This algorithm allows you to create a discrepancy report when the following conditions are met:

- The account for which discrepancy report is created is eligible for reconciliation.
- A discrepancy report in the **Pending** status does not exist for the account or file.
- A reconciliation record in the **Open** status exists for the account or file.

It contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** - Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Account**.
- **Eligible for Reconciliation Characteristic Value** - Used to specify the value of the characteristic type specified in the **Eligible for Reconciliation Characteristic Type** parameter which indicates that the account is eligible for reconciliation.

Both these parameters are mandatory.

C1-CRDSLNITM

This algorithm is invoked when the status of the discrepancy report is changed to **Pending**. If the discrepancy report is created at the account level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there is an open bill segment for the account and for which there are open and pending pay instructions in the open reconciliation.

However, if the discrepancy report is created at the file level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there are open and pending pay instructions in the open reconciliation. Note that the discrepancy line items are created for each account whose pay instructions are received in the pay instruction file.

It contains the following parameters:

Copyright © 2025, Oracle and/or its affiliates.

- **Consumer Status Characteristic Type** - Used to specify the characteristic type which stores the consumer status of the member. The system retrieves the consumer status of the member and stores it against the respective discrepancy line item. Here, you must specify a characteristic type where the characteristic entity is set to **Person**. This parameter is mandatory.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-VALCMPDIS

This algorithm is invoked when you click the **Finalize** button. It changes the status of the discrepancy report to **Completed** when the discrepancy category is specified for each discrepancy line item in the report.

Reconciliation Type

Oracle Revenue Management and Billing allows you to define a reconciliation type using which you can create the reconciliation. It is the reconciliation type which helps the system to determine the following:

- The business object using which the reconciliation should be created.
- The file format through which the pay instruction records can be uploaded in the system.

In addition, a reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

The **Reconciliation Type** screen allows you to define, edit, copy, and delete a reconciliation type. It contains the following zones:

- Reconciliation Type List on page 2710
- Reconciliation Type on page 2711

Reconciliation Type List

The **Reconciliation Type List** zone lists the reconciliation types that are already defined in the system. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Reconciliation Type	Displays the reconciliation type.
Description	Displays the description of the reconciliation type.
Edit	On clicking the **Edit** (✎) icon, the **Reconciliation Type** screen appears where you can edit the details of the reconciliation type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Reconciliation Type** screen appears where you can define a new reconciliation type using an existing reconciliation type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the reconciliation type.
	Note: You can delete a reconciliation type only when a reconciliation is not yet created using the reconciliation type.

On clicking the **Broadcast** (📡) icon corresponding to a reconciliation type, the **Reconciliation Type** zone appears with the details of the respective reconciliation type.

Reconciliation Type

The **Reconciliation Type** zone displays the details of the reconciliation type. It contains the following sections:

- **Main** - Displays basic information about the reconciliation type. It contains the following fields:

Field Name	Field Description
Reconciliation Type	Displays the reconciliation type.
Reconciliation Business Object	Indicates the business object using which the reconciliation will be created. In addition, a context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the reconciliation type.
Status	Indicates the status of the reconciliation type. The valid values are: • Active • Inactive
Reconciliation Category	Used to indicate the category to which the reconciliation belongs. The valid values are: • Group

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Individual **Note:** The list includes only those values which are defined in the **RECON_CAT_FLG** lookup field.
Detailed Description	Displays additional information about the reconciliation type.

- **Algorithms** - Lists the algorithms which are associated with the reconciliation type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithms with the same system event should be executed.
System Event	Indicates the system event when the algorithm should be executed. The valid value is: • Upload Pay Instructions
Algorithm	Indicates the algorithm attached to the system event. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics defined for the reconciliation type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type. **Note:** It has a link. On clicking the link, the **Characteristic Type** screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value** or **Foreign Key Value**.

- **Record Actions** - Enables you to perform various actions on the reconciliation type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the reconciliation type.
Delete	Used to delete the reconciliation type. **Note:** You can delete a reconciliation type only when a reconciliation is not yet created using the reconciliation type.
Duplicate	Used to create a new reconciliation type using an existing reconciliation type.

- **Record Information** - This section contains the following field:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation type is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Reconciliation Type** zone does not appear in the **Reconciliation Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a reconciliation type in the **Reconciliation Type List** zone.

Defining a Reconciliation Type

Prerequisites

To define a reconciliation type, you should have:

- Reconciliation type and reconciliation business objects defined in the application
- Field mapping and reconciliation category defined in the application.

Procedure

To define a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Reconciliation Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type Business Object	Used to indicate the business object using which you want to create the reconciliation type. The valid value is: • Claims Reconciliation Type • Member Reconciliation Type	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The above business object is shipped with the product. The list includes those business objects which are created using the **Reconciliation Type** (i.e., **F1-EXT LKUP**) maintenance object.	

Tip: Alternatively, you can access **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Reconciliation Type** screen.

Note: The **Select Business Object** screen appears when there are multiple reconciliation type business objects defined in the application. If there is only one reconciliation type business object defined in the application, the **Reconciliation Type** screen appears.

4. Select the required reconciliation type business object from the respective field.
5. Click **OK**.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define the characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation. The valid value is: • Member Reconciliation **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Reconciliation** (i.e., **C1-RECON**) maintenance object.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇗) icon at the bottom right corner of the text box.	No
Reconciliation Category	Used to indicate the category to which the reconciliation belongs. The valid values are: • Group • Individual	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the **RECON_CAT_FLG** lookup field.	
Status	Used to indicate the status of the reconciliation type. The valid values are: • Active • Inactive	Yes

6. Enter the required details in the **Main** section.
7. Associate algorithms with the reconciliation type, if required.
8. Define characteristics for the reconciliation type, if required.
9. Click **Save**.
   The reconciliation type is defined.

Related Topics

For more information on...	See...
Reconciliation Type screen	Reconciliation Type on page 2710
How to associate an algorithm with a reconciliation type	Associating an Algorithm with a Reconciliation Type on page 2716
How to define a characteristic for a reconciliation type	Defining a Characteristic for a Reconciliation Type on page 2715

Defining a Characteristic for a Reconciliation Type

Prerequisites

To define a characteristic for a reconciliation type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Reconciliation Type**).

Procedure

To define a characteristic for a reconciliation type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a reconciliation type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Reconciliation Type**.	**Note:** This field is required when you are defining a characteristic for the reconciliation type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the reconciliation type.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the reconciliation type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the reconciliation type, click the **Delete** (🗑) icon corresponding to the characteristic.

Associating an Algorithm with a Reconciliation Type

You can upload a pay instruction file in the CSV and EDI 820 file formats. While uploading a pay instruction file, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Prerequisites

To associate an algorithm with a reconciliation type, you should have:

- Algorithm defined using the **C1-PAYINSUPL** or **C1-RECONPROC** algorithm type depending on whether you want to use the reconciliation type while uploading a pay instruction file in the CSV or EDI 820 file format
- System event defined in the application.

Procedure

To associate an algorithm with a reconciliation type:

1. Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying a *r*econciliation type.

Copyright © 2025, Oracle and/or its affiliates.

The **Algorithms** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithms for each system event should be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the reconciliation type.
System Event	Used to indicate the system event on which the algorithm should be executed. The valid value is: • **Upload Pay Instructions** - Used when you want to execute the attached algorithm while uploading a pay instruction file using the **Pay Instruction CSV File Upload (C1-RECUP)** or **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the reconciliation type.
Algorithm	Used to indicate the algorithm that you want to attach to the system event. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the value for a algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the reconciliation type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm with the reconciliation type, click the **Add** (+) icon and *t*hen repeat step *2*.

Note: However, if you want to remove an algorithm from the reconciliation type, click the **Delete** (🗑) icon corresponding to the algorithm.

4. Click **Save**.
   The algorithms are associated with the reconciliation type.

Editing a Reconciliation Type

Prerequisites

To edit a reconciliation type, you should have:

- Reconciliation type and reconciliation business objects defined in the application

Copyright © 2025, Oracle and/or its affiliates.

- Field mapping and reconciliation category defined in the application

Procedure

To edit a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
   The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *r*econciliation type whose details you want to edit.

   The **Reconciliation Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the reconciliation type.
   - **Algorithms** - Used to associate algorithms with the reconciliation type.
   - **Characteristics** - Used to define the characteristics for the reconciliation type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Displays the reconciliation type.	Not applicable
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation. The valid value is: • Member Reconciliation **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Reconciliation** (i.e., **C1-RECON**) maintenance object.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Reconciliation Category	Used to indicate the category to which the reconciliation belongs. The valid values are: • Group • Individual **Note:** The list includes only those values which are defined in the **RECON_CAT_FLG** lookup field.	Yes
Status	Used to indicate the status of the reconciliation type. The valid values are: • Active • Inactive	Yes

Copyright © 2025, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can click the **Edit** button in the **Reconciliation Type** zone to edit the details of the reconciliation type.

5. Modify the required details in the **Main** section.
6. Associate or remove an algorithm from the reconciliation type, if required.
7. Define, edit, or remove characteristics of the reconciliation type, if required.
8. Click **Save**.
   The changes made to the reconciliation type are saved.

Deleting a Reconciliation Type

Procedure

To delete a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
   The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *r*econciliation type that you want to delete.
   A message appears confirming whether you want to delete the reconciliation type.

> **Note:** You can delete a reconciliation type only when a reconciliation is not yet created using the reconciliation type.

> **Tip:** Alternatively, you can click the **Delete** button in the **Reconciliation Type** zone to delete the reconciliation type.

5. Click **OK**.
   The reconciliation type is deleted.

Copying a Reconciliation Type

Instead of creating a reconciliation type from scratch, you can create a new reconciliation type using an existing reconciliation type. This is possible through copying a reconciliation type. On copying a reconciliation type, the details including the algorithms and characteristics are copied to the new reconciliation type. You can then edit the details, if required.

Prerequisites

To copy a reconciliation type, you should have:

- Reconciliation type (whose copy you want to create) defined in the application
- Reconciliation business objects defined in the application

Procedure

To copy a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.
   The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Duplicate** (⎘) icon in the **Duplicate** column *c*orresponding to the reconciliation type whose copy you want to create.

   The **Reconciliation Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the reconciliation type.
   - **Algorithms** - Used to associate algorithms with the reconciliation type.
   - **Characteristics** - Used to define the characteristics for the reconciliation type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation. The valid value is: • Member Reconciliation **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Reconciliation** (i.e., **C1-RECON**) maintenance object.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can resize the text box depending on your requirement by clicking the **Resize Handle** ( ) icon at the bottom right corner of the text box.	
Reconciliation Category	Used to indicate the category to which the reconciliation belongs. The valid values are: • Group • Individual **Note:** The list includes only those values which are defined in the **RECON_CAT_FLG** lookup field.	Yes
Status	Used to indicate the status of the reconciliation type. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can click the **Duplicate** button in the **Reconciliation Type** zone to create a copy of the reconciliation type.

5. Enter the required details in the **Main** section.
6. Associate or remove an algorithm from the reconciliation type, if required.
7. Define, edit, or remove characteristics of the reconciliation type, if required.
8. Click **Save**.
   The new reconciliation type is defined.

Viewing the Reconciliation Type Details

Procedure

To view the details of a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.

Copyright © 2025, Oracle and/or its affiliates.

The **Reconciliation Type** screen appears.

4. In the **Reconciliation Type List** zone, click the **Broadcast** (📡) icon corresponding to the reconciliation type whose details you want to view.
   The **Reconciliation Type** zone appears.
5. View the details of the reconciliation type in the **Reconciliation Type** zone.

Reconciliation (Used for Searching)

The **Reconciliation** screen allows you to search for a reconciliation using various search criteria. It contains the following zone:

- Search Reconciliation on page 2722

Through this screen, you can navigate to the following screen:

- Reconciliation (Used for Viewing) on page 2727

Search Reconciliation

The **Search Reconciliation** zone allows you to search for a reconciliation using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a reconciliation using the reconciliation, payee account, or payment tender details. The valid values are: • Reconciliation Details • Account Details • Payment Tender Details **Note:** By default, the **Reconciliation Details** option is selected.	Yes
Reconciliation ID	Used to search for a particular reconciliation. **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list.	No
Reconciliation Type	Used to search for reconciliations which are created using a particular reconciliation type.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Reconciliation Details** option is selected from the **Search By** list. The list includes only those reconciliation types which are already defined in the system.	
Created From	Used to search reconciliations which are created from a particular date onwards. **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Status	Used to search for reconciliations with a particular status. The valid values are: • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancelation • Pending • Pending Reconciliation • Reconciliation in Progress • Void **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list.	No
Created Until	Used to search for reconciliations which are created till a particular date. **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
File Name	Used to search for a reconciliation which is created for a particular pay instruction file. **Note:** This field appears when the **Reconciliation Details** option is selected from the **Search By** list.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search for reconciliations which contain a particular member's pay instructions. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	No
Account Identifier Type	Used to select the identifier type based on which you want to search reconciliations which contain pay instructions for a particular payee account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those account identifier types which are already defined in the system.	Yes (Conditional) **Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account ID	Used to search for reconciliations which contain pay instructions for a particular payee account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears.	No
Account Identifier	Used to specify the value for the account identifier type. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Check Number	Used to search a reconciliation associated with a payment tender which is received through a particular check. **Note:** This field appears when the **Payment Tender Details** option is selected from the **Search By** list.	No
Payor Account ID	Used to search reconciliations which are associated with a particular payor account. **Note:** This field appears when the **Payment Tender Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Payor Account ID** field. On clicking the **Search** icon, the **Account Search** window appears.	No
MICR ID	Used to search a reconciliation associated with a payment tender which contains a particular MICR code.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Payment Tender Details** option is selected from the **Search By** list.	
Tender Amount	Used to search reconciliations associated with payment tenders with a particular amount. **Note:** This field appears when the **Payment Tender Details** option is selected from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for a reconciliation.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date/ Time	Displays the date and time when the reconciliation is created.
Reconciliation Information	Displays information about the reconciliation. **Note:** It has a link. On clicking the link, the **Reconciliation** screen appears where you can view the details of the respective reconciliation.
Status	Indicates the status of the reconciliation. The valid values are: • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancelation • Pending • Pending Reconciliation • Reconciliation in Progress • Void
Payor Account ID	Indicates the payor account to which the reconciliation is associated. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective payor account.
Payment ID	Indicates the payment to which the reconciliation is associated. **Note:** It has a link. On clicking the link, the **Payment** screen appears where you can view the details of the respective payment.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Duplicate	Used to create a new reconciliation using an existing reconciliation. **Note:** The **Duplicate** button appears when the reconciliation is in the **Canceled** status.

Copyright © 2025, Oracle and/or its affiliates.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Reconciliation

Prerequisite

To search for a reconciliation, you should have:

- Reconciliation types and account identifier types defined in the application.

Procedure

To search for a reconciliation:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Reconciliation**.
   The **Reconciliation** screen appears.
3. Enter the search criteria in the **Search Reconciliation** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of reconciliations that meet the search criteria appears in the **Search Results** section.

Viewing the Reconciliation Details

Procedure

To view the details of a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.
   The **Reconciliation** screen appears. It contains following tabs:
   - Reconciliation - Main on page 2727

Copyright © 2025, Oracle and/or its affiliates.

- Reconciliation - Pay Instruction on page 2730
- Reconciliation - Log on page 2733

3. Ensure that the **Main** tab is selected.
4. View the details of the reconciliation in the **Reconciliation** zone.
5. View the list of pay instructions uploaded through the file in the **Pay Instructions** zone.

The **Main** tab displays information about the reconciliation. It contains the following zones:

- Reconciliation on page 2727

Reconciliation

The **Reconciliation** zone displays the details of the reconciliation. It contains the following sections:

- **Main** - Displays basic information about the reconciliation. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Reconciliation Information	Displays information about the reconciliation.
Reconciliation Type	Indicates the reconciliation type using which the reconciliation is created. **Note:** It has a link. On clicking the link, the **Reconciliation Type** screen appears where you can view the details of the reconciliation type.
Status	Indicates the status of the reconciliation. The valid values are: • Canceled • Completed • Draft • Initial Reconciliation in Progress • Open • Pending Cancelation • Pending • Pending Reconciliation • Reconciliation in Progress • Void
Status Reason	Indicates the reason why the status of the reconciliation is changed. **Note:** This field appears when the reconciliation is in the **Pending Cancelation** or **Canceled** status. It has a link. On clicking the link, the **Status Reason Display** screen appears where you can view the details of the respective status reason.
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Payment Information	Indicates the payment to which the reconciliation is associated. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Payment** screen appears where you can view the details of the respective payment. This field does not appear when the reconciliation is in the **Draft** or **Pending** status.
Account Information	Indicates the payor account to which the reconciliation is associated. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This field does not appear when the reconciliation is in the **Draft** or **Pending** status.

- **Characteristics** - Lists the characteristics defined for the reconciliation. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. **Note:** The data appears in this column when the type of characteristic value is set to **Predefined Value** or **Foreign Key Value**.

- **Pay Instruction Statistics** - Lists the statistics of records in the reconciliation. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in the reconciliation file.
Total Records in Error	Displays the count of data records in error status.
Total Records Processed	Displays the count of data records derived after processing.
Total Records Pending	Displays the count of data records pending after successful derivation.
Total Records Cancelled	Displays the count of data records derived after unsuccessful processing.
Total Records in Open	Displays the count of data records in open status.
Total Amount	Indicated the sum of money involved in the payment instructions.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the reconciliation. **Note:** The **Edit** button appears when the reconciliation is in the **Pending** or **Draft** status.
Delete	Used to delete the reconciliation. **Note:** The **Delete** button appears when the reconciliation is in the **Pending** or **Draft** status.
Submit for Reconciliation	Used to submit the pay instructions for reconciliation. **Note:** The **Submit for Reconciliation** button appears when the reconciliation is in the **Pending** status.
Cancel	Used to cancel the reconciliation. **Note:** The **Cancel** button appears when the reconciliation is in the **Completed** or **Open** status.
Reconcile	Used to reconcile the pay instructions in the reconciliation.

Copyright © 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Reconcile** button appears when the reconciliation is in the **Pending Reconciliation** status.
Revert to Pending	Used to revert the status of the reconciliation to **Pending**.
	Note: The **Revert to Pending** button appears when the reconciliation is in the **Pending Reconciliation** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the reconciliation status is updated.
Creation/Date Time	Displays the date and time when the reconciliation is created.

Reconciliation - Pay Instruction

The **Pay Instruction** tab allows you to search for a pay instruction using various search criteria. It contains the following zone:

- Pay Instructions on page 2730

Pay Instructions

The **Pay Instructions** zone allows you to search for a pay instruction using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search pay instructions for a particular payee account.	No
	Note: The Search (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** screen appears.	
Policy Number	Used to search pay instructions with a particular policy number.	No
	Note: This field appears only when the fully insured group business record is selected from the **Reconciliation Type** list.	
Health Plan	Used to search pay instructions with a particular health plan.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Health Plan** field. On clicking the **Search** icon, the **Health Plan Search** window appears. This field appears only when the fully insured individual business record is selected from the **Reconciliation Type** list.	
Subscriber Identifier Type	Used to search pay instructions with a particular member identifier type. **Note:** The list includes only those **Member Identifier Type** which are already defined in the system.	No
Subscriber Identifier	Used to search pay instructions with a particular member identifier.	No
Coverage Start Date	Used to search pay instructions which are created from a particular date. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Coverage End Date	Used to search pay instructions which are created till a particular date. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Amount From	Used to search pay instructions with a particular minimum amount.	No
Amount To	Used to search pay instructions with a particular maximum amount.	No
Status	Used to search pay instructions with a particular status. The valid values are: • Canceled • Complete • Derivation Pending Processing • Error • Open • Pending • Reconciliation Pending Processing	No
Payment Type	Used to specify the type of tender through which the payment is made. **Note:** This field appears only when the fully insured individual business record is selected from the **Reconciliation Type** list.	No

Copyright © 2025, Oracle and/or its affiliates.

Note: You must specify at least one search criterion while searching for a hold request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the account identifier type of the member.
Account Identifier	Displays the value for the account identifier type.
Account ID	Displays the account ID of the member. **Note:** It has a link. On clicking the link, the **Account** screen appears with the details of the respective account.
Policy Number	Displays the policy number of the member.
Plan Number	Displays the plan number of the member.
Payor Identifier Type	
Payor Identifier	
Member Identifier Type	Displays the member identifier type of the member.
Member Identifier	Displays the member identifier of the member.
Member Name	Displays the member name of the member.
Health Plan	
HIOS ID	
Coverage Start Date	Displays the date of the policy from where the coverage starts.
Coverage End Date	Displays the coverage end date of the policy till where the coverage ends.
Payment Type	
Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.
Status	Displays the status of the pay instruction. The valid values are: • Canceled • Complete • Derivation Pending Processing • Error • Open • Pending • Reconciliation Pending Processing
Pay Instruction ID	Displays the pay instruction ID.

On clicking the **View** (🔗) icon corresponding to an **Account Identifier Type** column, the **Pay Instruction** screen appears with the details of the respective pay instruction record.

You can filter the list using various search criteria (such as, **Account ID**, **Policy Number**, **Member Identifier Type**, **Member Identifier**, **Coverage Start Date**, **Coverage End Date**, **Amount From**, **Amount To**, and **Status**) available

Copyright © 2025, Oracle and/or its affiliates.

in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Reconciliation - Log

The **Log** tab contains the following zone:

- Reconciliation Log on page 2733

Reconciliation Log

The **Reconciliation Log** zone lists the complete trail of actions performed on the reconciliation. It contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the reconciliation.
Details	Displays the details about the action performed on the reconciliation.
User	Indicates the user who has performed the action on the reconciliation.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity that is created when the action is performed on the reconciliation. **Note:** It has a link. On clicking the link, the **To Do Entry** screen appears where you can view the details of the respective reconciliation.
Status Reason	Indicates the reason why the status of the reconciliation is changed. **Note:** The data appears in this column when the status of the reconciliation is changed to **Pending Cancelation** or **Canceled**.

Note: You can manually add a log entry for the reconciliation by clicking the **Add Log Entry** link in the upper right corner of the **Reconciliation Log** zone.

Editing a Reconciliation

Procedure

To edit a reconciliation:

1. Search for the reconciliation in **Reconciliation** screen.
   A list appears.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to edit.
   The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Reconciliation** zone.
   The **Member Reconciliation** screen appears.

   It contains the following sections:

   - **Main** - Used to specify the basic details for the reconciliation.
   - **Characteristics** - Used to define the characteristics for the reconciliation.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Information	Displays information about the reconciliation.	Not applicable
Reconciliation Type	Indicates the reconciliation type using which the reconciliation is created.	Not applicable
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.	Not applicable
Payment Information	Indicates the payment to which the reconciliation is associated. **Note:** The **Search** (🔍) icon appears corresponding to the **Payment Information** field. On clicking the **Search** icon, the **Payment Search** window appears.	No

   Note: The **Edit** button appears only when the reconciliation is in the **Pending** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the reconciliation, if required.
7. Click **Save**.
   The changes made to the reconciliation are saved.

Defining a Characteristic for a Reconciliation

Prerequisites

To define a characteristic for a reconciliation, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Reconciliation**)

Procedure

To define a characteristic for a reconciliation:

1. Ensure that the **Characteristics** section is expanded when you are editing a reconciliation.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the reconciliation. **Note:** You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the reconciliation.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Reconciliation**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the reconciliation.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** ( ) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the reconciliation.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the reconciliation, click the **Add** (+) icon and then repeat *s*tep 2.

Note: However, if you want to remove a characteristic from the reconciliation, click the **Delete** ( ) icon corresponding to the characteristic.

Deleting a Reconciliation

Procedure

To delete a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the *r*econciliation that you want to delete.
   The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Reconciliation** zone.
   A message appears confirming whether you want to delete the reconciliation.

> **Note:** The **Delete** button appears when the reconciliation is in the **Pending** or **Draft** status.

5. Click **OK**.
   The reconciliation object is deleted.

Submitting Pay Instructions for a Reconciliation

Prerequisites

To submit pay instructions for reconciliation, you should have:

- Account ID defined in the application.
- Reconciliation BO status as Pending.

Procedure

To submit pay instructions for a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the *r*econciliation that you want to submit.
   The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit for Reconciliation** button in the **Reconciliation** zone.
   The pay instruction is submitted for reconciliation and the reconciliation status gets changed to **Pending Reconciliation**.

> **Note:**
>
> The **Submit for Reconciliation** button appears when the reconciliation is in the **Pending** status.

Reconciling Pay Instructions

Prerequisites

To reconcile pay instructions, you should have:

- Account ID defined in the application.
- Reconciliation status must be in **Pending Reconciliation**.

Procedure

To reconcile pay instructions:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the *r*econciliation that you want to reconcile.
   The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Reconcile** button in the **Reconciliation** zone.
   The pay instructions gets reconciled and the reconciliation status gets changed to **Open**.

> **Note:**
>
> The **Reconcile** button appears when the reconciliation is in the **Pending Reconciliation** status.

Adding a Log Entry for a Reconciliation

Procedure

To add a log entry for a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the *r*econciliation for which you want to add a log entry.
   The **Reconciliation** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Reconciliation Log** zone.

   The **Add Reconciliation Log** window appears. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Information	Displays information about the reconciliation.	Not applicable
Log Details	Used to specify additional comments for the reconciliation.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Reconciliation Log** zone.

Canceling a Reconciliation

Prerequisites

To cancel a reconciliation, you should have:

- Reasons defined for the **Canceled** status of the **C1-MemberReconciliation** business object in the **Status Reason** screen.

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To cancel a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to cancel.
   The **Reconciliation** screen appears.
3. Click the **Cancel** button in the **Reconciliation** zone.

   The **Status Reason** window appears. It contains following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the reconciliation. **Note:** The list includes only those reasons which are defined for the **Canceled** status of the **C1-MemberReconciliation** business object through the **Status Reason** screen.	Yes

Note: The **Cancel** button appears when the reconciliation is in the **Open** or **Completed** status.

4. Select the reason for canceling the reconciliation from the **Status Reason** list.
5. Click **Save**.
   The status of the reconciliation is changed to **Canceled**.

Searching for a Pay Instruction

Prerequisite

To search for a pay instruction, you should have:

- Pay instruction statuses and subscriber identifier types defined in the application.

Procedure

To search for a pay instruction:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.
   The **Reconciliation** screen appears.
3. Click the **Pay Instruction** tab.
   The **Pay Instruction** tab appears.
4. Enter the search criteria in the **Pay Instruction** zone.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of pay instructions that meet the search criteria appears in the **Search Results** section.

Viewing the Pay Instruction Details

Procedure

To view the details of a pay instruction:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose pay instruction details you want to view.
   The **Reconciliation** screen appears. It contains following tabs:
   - Reconciliation - Main on page 2727
   - Reconciliation - Pay Instruction on page 2730
   - Reconciliation - Log on page 2733
3. Click the **Pay Instruction** tab.
   The **Pay Instruction** tab appears.
4. Enter the search criteria in the **Pay Instructions** zone.
5. Click **Search**.
   A list of pay instruction that meet the search criteria appears in the **Search Results** section.
6. In the **Search Results** section, click the **View** (🔗) icon corresponding to the **Account Identifier Type** column.
   The **Pay Instruction** screen appears.
7. Ensure that the **Main** tab is selected.
8. View the details of the pay instruction in the **Pay Instruction** zone.

Pay Instruction

The **Pay Instruction** screen allows you to search for a pay instruction which is the part of reconciliation using various search criteria. It also allows you to:

- View the details and characteristics of the pay instruction
- View the details of the reconciliation adjustments
- View the related objects

This screen contains of the following tabs:

- Pay Instruction - Main on page 2741
- Pay Instruction - Log on page 2744

Pay Instruction - Main

The **Pay Instruction - Main** tab displays information about the pay instruction. It contains the following zones:

- Pay Instruction on page 2741
- Reconciliation Adjustments on page 2743
- Related Objects on page 2744

Pay Instruction

The **Pay Instruction** zone displays the payment related information that is specific to each member. It contains the following sections:

- **Main** - Displays the basic information about the pay instruction. It contains the following fields:

Field Name	Field Description
Pay Instruction Information	Displays information about the pay instruction in brief.
Reconciliation Information	Displays information about the reconciliation. **Note:** It has a link. On clicking the link, the **Reconciliation** screen appears where you can view the details of the respective reconciliation.
Status	Indicates the status of the pay instruction. The valid values are: • Canceled • Completed • Derivation Pending Processing • Error • Open • Pending • Reconciliation Pending Processing
Coverage Start Date	Displays the date of the policy from when the coverage starts.
Coverage End Date	Displays the date of the policy till when the coverage ends.
Account Identifier Type	Displays the account identifier type of the member.
Account Identifier	Displays the value for the account identifier type.
Account Information	Displays information about the account of the member.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Policy Number	Displays the policy number of the member. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured group business.
Plan Number	Displays the plan number of the member. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured group business.
Health Plan	Displays information about the health plan. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
HIOS ID	**Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
Payment Type	Displays the type of tender through which the payment is made. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
Payor Identifier Type	Displays the payor identifier type. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
Payor Identifier	Displays the payor identifier. **Note:** This field appears only when you are viewing the details of a pay instruction which is created for the fully insured individual business.
Subscriber Identifier Type	Displays the subscriber identifier type of the member.
Subscriber Identifier	Displays the subscriber identifier of the member.
Subscriber Name	Displays the subscriber name of the member.
Payment Instruction Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.

- **Pay Instruction Amount** -This section provides information on the pay instruction amount. It contains the following fields:

Field Name	Field Description
Payment Instruction Amount	Displays the amount that has to be paid to the member.
Open Amount	Displays the amount which has not been paid to the member and is still in the open state.

Copyright © 2025, Oracle and/or its affiliates.

- **Record Information** - This section provides information on the pay instruction business object. It contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the pay instructions are executed. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the pay instruction object status is updated.
Creation Date/Time	Displays the date and time when the pay instruction object is created.

- **Characteristics** - This section provides characteristic information for the pay instruction.

Field Name	Field Description
Characteristic Type	Displays the characteristic type. **Note:** It has a link. On clicking the link, the **Characteristic Type** screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of characteristic type.
Description	Displays the description of the characteristic type.

Reconciliation Adjustments

The **Reconciliation Adjustments** zone displays the adjustment information for each pay instruction. It contains the following columns:

Column Name	Column Description
Transfer Adjustment	Indicates the amount to be transferred from a reconciliation contract against a pay instruction. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the transferred adjustment.
Transfer Type	Displays the type of transfer transaction made against a pay instruction or an internal offsetting.
Transfer Financial Transaction ID	Displays the transfer financial transaction ID.
Offset Adjustment	Indicates a reciprocal adjustment that is associated with a transfer adjustment.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the offset adjustment details.
Related Object Type	Displays the related object type whether it is pay instruction / financial transaction.
Related Object ID	Indicates the ID of the related pay instruction / financial transaction created in reconciliation process..
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the financial transaction of reconciliation adjustments.

Note: Pagination is used to display limited number of records in the **Reconciliation Adjustments** zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the adjustments using **Show All Adjustments** available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of the **Reconciliation Adjustments** zone.

Related Objects

The **Related Objects** zone displays all those business objects based on which reconciliation process takes place. It contains the following columns:

Column Name	Column Description
Related Object Type	Displays the related object type that was used in pay instruction process.
Related Object Information	Displays the details of related object in brief.
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the transferred adjustment.

Note: Pagination is used to display limited number of records in the **Related Topics** zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Pay Instruction - Log

The **Pay Instruction - Log** tab contains the following zone:

- Pay Instruction Log on page 2744

Pay Instruction Log

The **Pay Instruction Log** zone lists the complete trail of actions performed on the pay instructions. It contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the pay instruction.
Details	Displays the details about the action performed on the pay instruction.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
User	Indicates the user who has performed the action on the pay instruction.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the pay instruction.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the status reason of action performed on the pay instruction.

Note: You can manually add a log entry for the pay instruction by clicking the **Add Log Entry** link in the upper right corner of the **Pay Instruction Log** zone.

Discrepancy Report Type

Oracle Revenue Management and Billing allows you to define a discrepancy report type using which you can create a discrepancy report. The Discrepancy Report Type uses the following business object.

- **C1-DiscrepancyReport**

The **Discrepancy Report Type** screen allows you to define, edit, copy, and delete a discrepancy report type. It consists of the following zones:

- Discrepancy Report Type List on page 2747
- Discrepancy Report Type on page 2748

For more information on...	See...
How to define a discrepancy report type	Defining a Discrepancy Report Type on page 2749

Discrepancy Report Type List

The **Discrepancy Report Type List** zone lists the various types of discrepancy report types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Discrepancy Report Type	Displays the discrepancy report type.
Description	Displays the description of the discrepancy report type.
Edit	On clicking the **Edit** (✎) icon, the **Discrepancy Report Type** screen appears where you can edit the details of the discrepancy report type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Discrepancy Report Type** screen appears where you can define a new discrepancy report type using an existing discrepancy report type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the discrepancy report type.
	Note: You can delete a discrepancy report type only when a discrepancy report is not yet created using the discrepancy report type.

On clicking the **Broadcast** (📡) icon corresponding to a discrepancy report type, the **Discrepancy Report Type** zone appears with the details of the respective discrepancy report type.

Discrepancy Report Type

The **Discrepancy Report Type** zone displays the details of the discrepancy report type. It consists of the following sections:

- **Main** - Displays the basic information about the discrepancy report type. It contains the following fields:

Field Name	Field Description
Discrepancy Report Type	Displays the discrepancy report type.
Discrepancy Report Business Object	Indicates the business object using which a discrepancy report should be created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the discrepancy report type.
Detailed Description	Displays additional information about the discrepancy report type.
Status	Indicates the status of the discrepancy report type. The valid values are: • Active • Inactive

- **Record Actions** - Enables you to perform various actions on the discrepancy report type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the discrepancy report type.
Delete	Used to delete the discrepancy report type. **Note:** You can delete a discrepancy report type when a discrepancy report is not yet created using the discrepancy report type.
Duplicate	Used to create a new discrepancy report type using an existing discrepancy report type.

- **Record Information** - This section contains the following field:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report type is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics of the discrepancy report type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type. **Note:** It has a link. On clicking the link, the **Characteristic Type** screen appears where you can view the details of the respective account.
Characteristic Value	Displays the value of the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.
Description	Displays description of the characteristic value.

By default, the **Discrepancy Report Type** zone does not appear in the **Discrepancy Report Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a discrepancy report type in the **Discrepancy Report Type List** zone.

Defining a Discrepancy Report Type

Prerequisites

To define a discrepancy report type, you should have:

Copyright © 2025, Oracle and/or its affiliates.

- Discrepancy report business objects defined in the application.
- Characteristic type defined for the discrepancy report.

Procedure

To define a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D**, and then click **Discrepancy Report Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report Type** sub-menu.
   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type Business Object	Used to indicate the business object using which you want to create the discrepancy report type. The valid value is: • **Discrepancy Report Type (i.e., C1-MemberDiscReportType)** - Enables you to maintain a discrepancy report type. **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Hold Request Type** (i.e., **C1-DSC-RP-TY**) maintenance object.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report Type** screen.

Note: The **Select Business Object** screen appears when there are multiple discrepancy report type business objects defined in the application. If there is only one discrepancy report type business object defined in the application, the **Discrepancy Report Type** screen appears.

4. Select the required discrepancy report type business object from the respective field.
5. Click **OK**.
   The **Discrepancy Report Type** screen appears. It contains the following sections:
   - **Main** - Used to specify the basic details for the discrepancy report type.
   - **Characteristics** - Used to define the characteristics for the discrepancy report type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Yes
Business Object	Indicates the business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report. The valid value is: • **Discrepancy Report (i.e., C1-DiscrepancyReport)**- Enables you to create a discrepancy report.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The above mentioned business object is shipped with the product. The list includes those business objects which are created using the **Hold Request Type** (i.e., **C1-DSC-RP-TY**) maintenance object.	
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: • Active • Inactive	Yes

6. Enter the required details in the **Main** section.
7. Define characteristics for the discrepancy report type, if required.
8. Click **Save**.
   The discrepancy report type is defined.

Defining a Characteristic for a Discrepancy Report Type

Prerequisites

To define a characteristic for a discrepancy report type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Discrepancy Report Type**).

Procedure

To define a characteristic for a discrepancy report type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a discrepancy *r*eport type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Discrepancy Report Type**.	**Note:** This field is required when you are defining a characteristic for the discrepancy report type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the discrepancy report type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the discrepancy report type, click the **Add** (+) icon and then *r*epeat step 2.

Note: However, if you want to remove a characteristic from the discrepancy report type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Discrepancy Report Type

Prerequisites

To edit a discrepancy report type, you should have:

- Discrepancy report business objects defined in the application.
- Characteristic type defined for the discrepancy report.

Procedure

To edit a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.
   The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discrepancy *r*eport type whose details you want to edit.

   The **Discrepancy Report Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the discrepancy report type.

Copyright © 2025, Oracle and/or its affiliates.

- **Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Displays the discrepancy report type.	Not applicable
Business Object	Indicates the business object which is used while defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report. The valid value is: • **Discrepancy Report (i.e., C1-DiscrepancyReport)**- Enables you to create a discrepancy report. **Note:** The above mentioned business object is shipped with the product. The list includes those business objects which are created using the **Hold Request Type** (i.e., **C1-DSC-RP-TY**) maintenance object.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: • Active • Inactive	No

Tip: Alternatively, you can click the **Edit** button in the **Discrepancy Report Type** zone to edit the details of the discrepancy report type.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the discrepancy report type, if required.
7. Click **Save**.
   The changes made to the discrepancy report type are saved.

Deleting a Discrepancy Report Type

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To delete a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.
   The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *d*iscrepancy report type that you want to delete.
   A message appears confirming whether you want to delete the discrepancy report type.

   Note: You can delete a discrepancy report type only when a discrepancy report is not yet created using the discrepancy report type.

   Tip: Alternatively, you can click the **Delete** button in the **Discrepancy Report Type** zone to delete the discrepancy report type.
5. Click **OK**.
   The discrepancy report type is deleted.

Copying a Discrepancy Report Type

Instead of creating a discrepancy report type from scratch, you can create a new discrepancy report type using an existing discrepancy report type. This is possible through copying a discrepancy report type. On copying a discrepancy report type, the details including the characteristics are copied to the new discrepancy report type. You can then edit the details, if required.

Prerequisites

To copy a discrepancy report type, you should have:

- Discrepancy report business objects defined in the application.
- Characteristic type defined for the discrepancy report.

Procedure

To copy a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.
   The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the discrepancy report type whose copy you want to create.

   The **Discrepancy Report Type** screen appears. It contains the following sections:

Copyright © 2025, Oracle and/or its affiliates.

- **Main** - Used to specify the basic details for the discrepancy report type.
- **Characteristics** - Used to define the characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Yes
Business Object	Indicates the business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report. The valid value is: • **Discrepancy Report (i.e., C1-DiscrepancyReport)**- Enables you to create a discrepancy report. **Note:** The above mentioned business object is shipped with the product. The list includes those business objects which are created using the **Hold Request Type** (i.e., **C1-DSC-RP-TY**) maintenance object.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Indicates the status of the discrepancy report type. The valid values are: • Active • Inactive	Yes

Tip: Alternatively, you can click the **Duplicate** button in the**Discrepancy Report Type** zone to create a copy of the discrepancy report type.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the discrepancy report type, if required.
7. Click **Save**.
   The new discrepancy report type is defined.

Discrepancy Report (Used for Searching)

The **Discrepancy Report** screen allows you to search for a discrepancy report using various search criteria. It also allows you to create a discrepancy report. It contains the following zone:

- Search Discrepancy Report on page 2756

Through this screen, you can navigate to the following screen:

- Discrepancy Report (Used for Viewing) on page 2762

Search Discrepancy Report

The **Search Discrepancy Report** zone allows you to search for a discrepancy report using various search criteria. It contains the following two sections:

Search Criteria - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a discrepancy report using the discrepancy or account details. The valid values are: • Discrepancy Details • Account Details **Note:** By default, the **Discrepancy Details** option is selected.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report ID	Used to search a particular discrepancy report. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list.	No
Discrepancy Report Type	Used to indicate the levels at which the discrepancy report is generated. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list. The list includes only those discrepancy report types which are already defined in the system.	No
Created From	Used to search discrepancy reports which are created from a particular date onwards. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Status	Used to search for discrepancy reports with a particular status. The valid values are: • Completed • Deferred Processing • Draft • Pending **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list.	No
Created To	Used to search for discrepancy report which are created till a particular date. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
File Name	Used to specify the file name that is provided when a discrepancy report is created at file level. **Note:** This field appears when the **Discrepancy Details** option is selected from the **Search By** list.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search discrepancy reports through which a particular person's record is created or updated in the system. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	No
Account Identifier Type	Used to search for the identifier type based on which you want to search discrepancy reports of a particular account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search discrepancy report for a particular account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Account ID	Used to search discrepancy reports which are created for a particular account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search icon**, the **Account Search** window appears. On selecting the account, the respective information string appears corresponding to the **Account ID** field. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.	No

Note: You must specify at least one search criterion while searching for a discrepancy report.

Search Results - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays date and time when the discrepancy report is created.
Discrepancy Report Information	Displays information about the discrepancy report. **Note:** It has a link. On clicking the link, the **Discrepancy Report** screen appears where you can view the details of the respective discrepancy report.
Status	Indicates the status of the discrepancy report. The valid values are: • Completed

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Deferred Processing • Draft • Pending
Account ID	Displays the account ID of the person who created the discrepancy report.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
File Name	Displays the file name given when discrepancy report is created at file level.

Searching for a Discrepancy Report

Prerequisites

To search for a discrepancy report, you should have:

- Discrepancy report types and account identifier types defined in the application.
- Status defined in the application.

Procedure

To search for a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Menu** menu, select **Accounting and Receivable** and then click **Discrepancy Report**.
   A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report** sub-menu.
   The **Discrepancy Report** screen appears.
4. Enter the search criteria in the **Search Discrepancy Report** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of discrepancy reports that meet the search criteria appear in the **Search Results** section.

Creating a Discrepancy Report

Prerequisites

To create a discrepancy report, you should have:

- Discrepancy report types defined in the application.
- Report level defined in the application.

Procedure

To create a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable**and then click **Discrepancy Report**.
   A sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report** sub-menu.
   The **Discrepancy Report** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to indicate the discrepancy report type using which you want to create the discrepancy report. **Note:** The list includes only those discrepancy report types which are already defined in the system.	Yes
Report Level	Used to specify the level at which the discrepancy report is created. The valid values are: • At Account Level • At File Level **Note:** The list includes only those values which are defined in the **C1_DISCRE_REPORT_LEVEL** lookup field.	Yes
Account ID	Used to specify an account ID when report level is selected as **At Account Level**.	Yes (Conditional) **Note:** This field is required when the report level is selected as **At Account Level** while creating a discrepancy report.
File Name	Used to specify a name for the file when report level is selected as **At File Level**.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when the report level is selected as **At File Level** while creating a discrepancy report.

Tip: Alternatively, you can access the **Select Discrepancy Report Type** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report** screen.

4. Enter the required details.
5. Click **Save**.
   The **Discrepancy Report** is created.

Discrepancy Report - Log

The **Discrepancy Report - Log** tab contains the following zone:

- Discrepancy Report Log on page 2766

Discrepancy Report Log

The **Discrepancy Report Log** zone lists the complete trail of actions performed on the discrepancy report. It contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the discrepancy report.
Details	Displays the details about the action performed on the discrepancy report.
User	Indicates the user who has performed the action on the discrepancy report.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the discrepancy report. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason of the action performed on the discrepancy report object.

Copyright © 2025, Oracle and/or its affiliates.

Note: You can manually add a log entry for the discrepancy report by clicking the **Add Log Entry** link in the upper right corner of the **Discrepancy Report Log** zone.

Editing a Discrepancy Line Item

Prerequisites

To edit a discrepancy line item, you should have:

- Discrepancy category defined in the application.
- **Discrepancy Line Item** status as **Pending** or **Draft**.

Procedure

To edit a discrepancy line item:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding *t*o the discrepancy report, whose details you want to edit.

   The **Discrepancy Report Information** screen appears.
3. Ensure that the **Main** tab is selected.
4. In the **Discrepancy Line Items** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the discrepancy line item whose details you want to edit.
   The **Discrepancy Line Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report ID	Displays the discrepancy report ID.	Not applicable
Account ID	Indicates the account for which the discrepancy line item is created.	Not applicable
Policy Number	Indicates the policy number.	Not applicable
Plan Number	Indicates the plan number of the policy.	Not applicable
Payor Identifier Type	Displays the payor identifier type. **Note:** This field appears when you generate discrepancy report for fully insured individual business.	Not applicable
Payor Identifier	Displays the payor identifier. **Note:** This field appears when you generate discrepancy report for fully insured individual business.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Health Plan	Displays information about the health plan. **Note:** This field appears when you generate discrepancy report for fully insured individual business.	Not applicable
HIOS ID	**Note:** This field appears when you generate discrepancy report for fully insured individual business.	Not applicable
Payment Type	Displays the type of tender through which the payment is made. **Note:** This field appears when you generate discrepancy report for fully insured individual business.	Not applicable
Subscriber Identifier Type	Displays the member identifier type.	Not applicable
Subscriber Identifier	Displays the value of the member identifier.	Not applicable
Subscriber Name	Displays the name of the member to whom the discrepancy report belongs.	Not applicable
Coverage Start Date	Displays the start date of the coverage cycle.	Not applicable
Coverage End Date	Displays the end date of the coverage cycle.	Not applicable
Billed Amount	Displays the bill segment amount.	Not applicable
Paid Amount	Displays the paid amount of the bill amount.	Not applicable
Discrepancy Amount	Displays the amount that highlights the discrepancy value.	Not applicable
Discrepancy Category	Used to specify the discrepancy category. The valid values are: • Billed But Not Paid • Paid But Not Billed • Rate Variance **Note:** The list includes only those values which are defined in the **DSC_CAT_FLG** lookup field.	No
Comments	Used to specify additional details about the discrepancy line item.	No

Note: The **Edit** icon appears when the discrepancy line item is in the **Pending** or **Draft** status.

5. Modify the required details for the discrepancy line item.
6. Click **Save**.
   The changes made to the discrepancy line item are saved.

Deleting a Discrepancy Report

Procedure

To delete a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding *t*o the discrepancy report that you want to delete.

   The **Discrepancy Report** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Discrepancy Report** zone.
   A message appears confirming whether you want to delete the discrepancy report.

   Note: The **Delete** button appears when the discrepancy report is in the **Pending** or **Draft** status.
5. Click **OK**.
   The discrepancy report is deleted.

Finalizing a Discrepancy Report

Prerequisites

To finalize a discrepancy report, you should have:

- **Discrepancy Report** status as **Pending** or **Draft**.

Procedure

To finalize a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding *t*o the discrepancy report that you want to finalize.
   The **Discrepancy Report** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Finalize** button in the **Discrepancy Report** zone.
   The status of the discrepancy report is changed to **Completed**.

Copyright © 2025, Oracle and/or its affiliates.

Note: The **Finalize** button appears when the discrepancy report is in the **Pending** status.

Adding a Log Entry for a Discrepancy Report

Procedure

To add a log entry for a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding *t*o the discrepancy report for which you want to add a log entry.
   The **Discrepancy Report** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Discrepancy Report Log** zone.

   The **Add Discrepancy Report Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Information	Displays information about the discrepancy report.	Not applicable
Log Details	Used to specify additional comments for the discrepancy report.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Discrepancy Report Log** zone.

Member Reconciliation Preference

Oracle Revenue Management and Billing enables you to reconcile all pay instructions of a file at the member level through a batch named **C1-RCPM**. While executing the **C1-RCPM** batch, you need to specify a member reconciliation preference whose attributes you want to use while reconciling all pay instructions of a file at the member level. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

A member reconciliation preference consists of the following attributes:

- Payment Event Characteristic Type
- Pay Instruction Completed Status
- Reconciliation Matching Level Characteristic Type
- Pay Instruction Open Status
- Reconciliation Open Status

For more information about these attributes, see Defining a Member Reconciliation Preference on page 2772. You can define, edit, delete, and copy a member reconciliation preference through the **Field Mapping** screen.

Searching for a Member Reconciliation Preference

Prerequisites

To search for a member reconciliation preference, you should have:

- Values defined in the **FIELD_CAT_FLG** lookup field

Procedure

To search for a member reconciliation preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.

Copyright © 2025, Oracle and/or its affiliates.

3. Click the **Search** option from the **Field Mapping** sub-menu.
   The **Field Mapping** screen appears.
4. Select the **Member Reconciliation** option from the **Preference Category** list.
5. Enter the additional search criteria in the **Search Field Mapping** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A list of member reconciliation preferences that meet the search criteria appears in the **Search Results** section.

Viewing the Member Reconciliation Preference Details

Procedure

To view the details of a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the member reconciliation preference whose details you want to view.
   The **Field Mapping** zone appears.
3. View the details of the member reconciliation preference in the **Field Mapping** zone.

Related Topics

Defining a Member Reconciliation Preference

Prerequisites

To define a member reconciliation preference, you should have:

- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To define a member reconciliation preference:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Field Mapping**.
   A sub-menu appears.
3. Click the **Add** option from the **Field Mapping** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Field Mapping Business Object	Used to indicate the business object using which you want to create the member reconciliation preference. The valid values are: • Field Mapping • Medicare Plan Benefit Package • Membership Status Reason Mapping	Yes

Note: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Field Mapping** screen.

4. Select the **Field Mapping** option from the **Field Mapping Business Object** list.
5. Click **OK**.

The **Field Mapping** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member reconciliation preference.	Yes
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: • Active • Inactive	Yes

- **Preference Category** - This section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Preference Category	Used to indicate the category to which the preference belongs. The valid values are: • Billing • Binder Payment • Geographic Rating Area • Individual Membership • Medicare • Medicare Plan Benefit • Member Reconciliation • Member Relationship and Subscription Tier • Membership Status Reason • Statement Construct	Yes

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: • **Payment Event Characteristic Type** - Used when a pay instruction is reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Completed Status** - Used when a pay instruction is fully reconciled at the member level through the **C1-RCPM** batch. • **Reconciliation Matching Level Characteristic Type** - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • **Pay Instruction Open Status** - Used when a pay instruction is not fully reconciled at the member level through the **C1-RCPM** batch. • **Reconciliation Open Status** - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the **C1-RCPM** batch.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the member reconciliation preference. The valid values are: • **Payment Event Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the payment event ID. This type of characteristic is defined for the reconciliation adjustments. It indicates the payment event whose payment is distributed against the bill segment. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment**. **Note:** The **C1PAYEVT** characteristic type is shipped with the product. • **Pay Instruction Completed Status** - The **Value** field is used to specify the status code to which you want to transition the pay instruction when it is fully reconciled. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-PayInstruction** business object. • **Reconciliation Matching Level Characteristic Type** - The **Value** field is used to specify the characteristic type which indicates all pay instructions in the file must be reconciled at the member level. This type of characteristic is defined for the reconciliation when all pay instructions in a file have member data. Here, you must specify a characteristic type where the characteristic entity is set to **Member Reconciliation**. **Note:** The **C1-MTLVL** characteristic type is shipped with the product.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Pay Instruction Open Status** - The **Value** field is used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-PayInstruction** business object. • **Reconciliation Open Status** - The **Value** field is used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**. **Note:** Here, you must specify the status code which is already defined in the lifecycle of the **C1-MemberReconciliation** business object.	
Entity Type	Used to indicate the type of entity for which the attribute is applicable. The valid values are: • Account • Billable Charge **Note:** At present, this data is stored for informational purposes only and is not considered in the business logic. If required, you can add more entity types to the **MAP_ENTITY_FLG** lookup field.	No

Note: While defining a member reconciliation preference, you must set at least one attribute in the member reconciliation preference.

6. Select the **Member Reconciliation** option from the **Preference Category** list.
7. Enter the required details in the **Main** section.
8. Select the required attribute and value from the respective fields.
9. If you want to set more than one attribute in the member reconciliation preference, click the **Add** (+) icon and then repeat step 8.

Note: However, if you want to remove an attribute from the member reconciliation preference, click the **Delete** (🗑) icon corresponding to the attribute.

10. Click **Save**.
    The member reconciliation preference is defined.

Editing a Member Reconciliation Preference

Prerequisites

To edit a member reconciliation preference, you should have:

- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Copyright © 2025, Oracle and/or its affiliates.

Procedure

To edit a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the member reconciliation preference whose details you want to edit.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Displays the member reconciliation preference.	Not applicable
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Member Reconciliation	Not applicable

   - **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: • **Payment Event Characteristic Type** - Used when a pay instruction is reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Completed Status** - Used when a pay instruction is fully reconciled at the member level through the **C1-RCPM** batch. • **Reconciliation Matching Level Characteristic Type** - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • **Pay Instruction Open Status** - Used when a pay instruction is not fully reconciled at the member level through the **C1-RCPM** batch. • **Reconciliation Open Status** - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the **C1-RCPM** batch.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the member reconciliation preference. The valid values are:	Yes (Conditional)

Copying a Member Reconciliation Preference

Instead of creating a member reconciliation preference from scratch, you can create a new member reconciliation preference using an existing member reconciliation preference. This is possible through copying a member reconciliation preference. On copying a member reconciliation preference, the details including the attributes are copied to the new member reconciliation preference. You can then edit the details, if required.

Prerequisites

To copy a member reconciliation preference, you should have:

- Member reconciliation preference (whose copy you want to create) defined in the application
- Required characteristic types defined in the application
- Required statuses defined in the lifecycle of the **C1-MemberReconciliation** and **C1-PayInstruction** business objects
- Values defined in the **MAP_ENTITY_FLG** lookup field

Procedure

To copy a member reconciliation preference:

1. Search for the member reconciliation preference in the **Field Mapping** screen.
2. In the **Search Results** section, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the member reconciliation preference whose copy you want to create.

   The **Field Mapping** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details of the member reconciliation preference. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Preference	Used to specify the member reconciliation preference.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the member reconciliation preference.	Yes
Detailed Description	Used to specify additional information about the member reconciliation preference.	No
Status	Used to indicate the status of the member reconciliation preference. The valid values are: • Active • Inactive	Yes
Preference Category	Indicates the category to which the preference belongs. The valid value is: • Member Reconciliation	Not applicable

- **Preference Settings** - Used to set the attributes in the member reconciliation preference. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Attribute	Used to indicate the attribute which you want to set in the member reconciliation preference. The valid values are: • **Payment Event Characteristic Type** - Used when a pay instruction is reconciled at the member level through the **C1-RCPM** batch. • **Pay Instruction Completed Status** - Used when a pay instruction is fully reconciled at the member level through the **C1-RCPM** batch. • **Reconciliation Matching Level Characteristic Type** - Used when reconciliation is created for a pay instruction file where all pay instructions have member data. • **Pay Instruction Open Status** - Used when a pay instruction is not fully reconciled at the member level through the **C1-RCPM** batch. • **Reconciliation Open Status** - Used when one or more pay instructions of a file are not yet fully reconciled at the member level through the **C1-RCPM** batch.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.
Value	Used to specify the attribute value. The attribute value that you can specify varies depending on the attribute you want to set in the member reconciliation preference. The valid values are: • **Payment Event Characteristic Type** - The **Value** field is used to specify the characteristic type where you can store the payment event ID. This type of characteristic is defined for the reconciliation adjustments. It indicates the payment event whose payment is distributed against the bill segment. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment**.	Yes (Conditional) **Note:** This field is required while setting an attribute in the member reconciliation preference.

Chapter 36

Self-Funded Pricing

Topics:

- Prerequisites
- Approval Workflow for the Self-Funded Pricing Rules
- Write-Off Charges during Post Runout
- Line Item Extendable Lookup
- Extendable Lookup (Line Item)
- Claim Template Extendable Lookup
- Extendable Lookup (Claim Template)
- Rate Option Extendable Lookup
- Extendable Lookup (Rate Option)
- Rate Type Extendable Lookup
- Extendable Lookup (Rate Type)
- Pricing Group
- Pricing Rule Type
- Claim Pricing
- Specific Stop-Loss (SSL) Pricing
- Aggregate Stop-Loss (ASL) Pricing
- Retention Type Claim Based Pricing
- Retention Type Enrollment Based Pricing
- Flat Fee Pricing
- Ancillary Pricing
- Discount Pricing
- Level Funding Pricing
- Minimum Premium Program
- Self-Funded Pricing Rule Versioning
- Retention Type Enrollment Tier Based Pricing

Oracle Revenue Management and Billing introduces a new pricing model for the self-funded health insurance business. In this pricing model, you can define pricing rules using a pricing rule type. You can define the following pricing rule types in ORMB:

- Claim
- Aggregate Stop-Loss
- Specific Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment

Prerequisites

To setup the self-funded pricing feature, you need to do the following:

- Define values for claim template extendable lookup
- Define values for rate option extendable lookup
- Define values for line item extendable lookup
- Setup the **C1-ASOBLLNG** feature configuration
- Define price items for the pricing rules

Approval Workflow for the Self-Funded Pricing Rules

Oracle Revenue Management and Billing enables you to configure the approval workflow process for the claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, flat fees, ancillary, discount, or level funded pricing rules. The following approval workflow groups are shipped with the product:

Approval Workflow Group	Description
C1PRCRLCLM	Claim Pricing Rule
C1PRCSSL	Specific Stop-Loss Pricing Rule
C1PRCASL	Aggregate Stop-Loss Pricing Rule
C1PRETCLM	Retention Type Claim Based Pricing Rule
C1PRRETENR	Retention Type Enrollment Based Pricing Rule
C1PRFLTFEE	Flat Fees Pricing Rule
C1PRCANC	Ancillary Pricing Rule
C1PRCDA	Discount Arrangement Pricing Rule
C1PRCLVLFN	Level Funded Pricing Rule

To enable the approval workflow process for the pricing rules, you need to do the following:

1. Create the required approval workflow chains, approval workflow criterion types, approval workflow group chain linkages, and approval workflow reasons.

   Note: The **Field Level Approval** feature is not supported for the self-funded pricing rules. Therefore, you should not define field approval rule criteria while creating the approval workflow group chain linkage for the above listed approval workflow groups.
2. Define the approval workflow settings for the respective approval workflow group and set the **Active** field to **Yes**.
3. Ensure that the following value is set in the respective option type of the **C1-ASOBLLNG** feature configuration:

Copyright © 2025, Oracle and/or its affiliates.

Option Type	Value
Approval Workflow Group for Claim	C1PRCRLCLM
Approval Workflow Group for SSL	C1PRCSSL
Approval Workflow Group for ASL	C1PRCASL
Approval Workflow Group for Retention Type Claim Based	C1PRETCLM
Approval Workflow Group for Retention Type Enrollment Based	C1PRRETENR
Approval Workflow Group for Flat Fees	C1PRFLTFEE
Approval Workflow Group for Ancillary	C1PRCANC
Approval Workflow Group for Discount Arrangement	C1PRCDA
Approval Workflow Group for Level Funded	C1PRCLVLFN

Once the approval workflow process is enabled for the pricing rules of a particular category (for example, Claim), the system creates an approval transaction whenever you define, edit, or delete a pricing rule of the respective category (i.e. whenever you define, edit, or delete a claim pricing rule). You can view the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules in the **Pricing Rule Approval Transactions** zone of the **Customer 360° Information** screen. On clicking the link in the **Approval Transaction ID** column corresponding to an approval transaction, the **Comparison: New versus Existing** screen appears. It allows the approver to review the pricing rule and accordingly approve, reject, or cancel the approval transaction.

Tip: Alternatively, you can review the approval transaction and take appropriate action from the **Approval Transaction** screen.

Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

1. Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
2. Specify the post runout write-off adjustment type in the respective pricing rule type.
3. Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

Line Item Extendable Lookup

Different charges, such as consumer-driven amount, traditional health insurance amount, network access fees, and so on are received as part of the claim transaction. These charges which contribute to the total claim amount are defined as the line items in the system. Each line item must be defined in the system using the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. A line item encapsulates the following information:

- Service Quantity Identifier (SQI) which indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the charge.
- Billable charge line type using which you want to create the calculation line for the charge.
- Whether the system should write off the charge when it is not eligible for billing.
- Billable charge line type using which you want to create the write off calculation line for the charge.
- Whether the charge should be considered while calculating the percentage based retention type claim based fee.
- The pricing rule type categories to which the charge is associated.

For example, the following table illustrates few line items which are applicable to different pricing rule type categories:

Charge	**Line Item**	**Write Off, If Not Eligible for Billing**	**Pricing Rule Type Category**
Consumer-Driven Amount	CDH	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
			Ancillary
Traditional Health Insurance Amount	THC	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
Preventive Care Charges	PCC	No	Ancillary

The CDH and THC line items can be included in a claim template. They can also be considered while calculating specific and aggregate stop-loss. The CDH and PCC line items can be considered while defining pricing arrangements in an ancillary pricing rule type. In addition, any charge received for the CDH and THC line items in a claim transaction will be written off when these line items are not eligible for billing.

The **C1-ExtLookPricingRuleLineItem** extendable lookup is redesigned to:

- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the fees separately for each applicable claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge
- Specify a billable charge line type using which the calculation line should be created for a rate type when the system calculates the minimum and maximum amount for a line item

Once you derive the pricing information from a claim pricing rule in a specific stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for specific stop-loss. If so, it is considered for calculating specific stop-loss.

Once you derive the pricing information from a claim pricing rule in an aggregate stop-loss pricing rule, you need to specify whether the additional fee (if any) is eligible for aggregate stop-loss. If so, it is considered for calculating aggregate stop-loss.

Once you derive the pricing information from a claim pricing rule in a level-funded pricing rule, you need to specify whether the additional fee (if any) should be settled through level funding. If so, it is considered while accumulating level funded charges.

Copyright © 2025, Oracle and/or its affiliates.

Until now, when the **Include In Settlement** column was selected corresponding to a line item in a level funded pricing rule, the system settled the charge as well as its markup or markdown through level funding. However, now, the system provides two different options - one which helps to determine whether the charge should be settled through level funding and another which helps to determine whether the corresponding markup or markdown should be settled through level funding.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 2787

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Searching for the Line Item Extendable Lookup

Procedure

To search for the **Line Item** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.

Copyright © 2025, Oracle and/or its affiliates.

The **Extendable Lookup Query** screen appears.

3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookPricingRuleLineItem** in the **Business Object** field.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   The **Line Item** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Line Item Extendable Lookup

Procedure

To view the values of the **Line Item** extendable lookup:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. View the values of the **Line Item** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Line Item)

The **Extendable Lookup** screen allows you to view the values of the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. It also allows you to define, edit, copy, and delete a line item. It contains the following zones:

- Extendable Lookup Value List on page 2789
- Extendable Lookup Value on page 2789

Copyright © 2025, Oracle and/or its affiliates.

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Line Item** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the line item.
Description	Displays the description of the line item.
Owner	Indicates who has created the line item. The valid values are: • Base • Customer Modification • Framework
Edit	On clicking the **Edit** (✎) icon, the **Line Item** screen appears where you can edit the details of the line item.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Line Item** screen appears where you can define a new line item using an existing line item.
Delete	On clicking the **Delete** (🗑) icon, you can delete the line item.
	Note: You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.
Detailed Description	Displays additional information about the line item.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a line item, the **Extendable Lookup Value** zone appears with the details of the respective line item.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the line item. It contains the following sections:

- **Main** - Displays basic information about the line item. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Line Item	Indicates the charge for which the line item is created.
Description	Displays the description of the line item.
Override Description	Displays the overridden description of the line item.
Detailed Description	Displays additional information about the line item.
Status	Indicates the status of the line item. The valid values are: • Active • Inactive
Service Quantity Identifier	Indicates the service quantity identifier associated with the line item.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge (i.e. line item).
Write Off Billable Charge Line Type	Indicates the billable charge line type using which the write off calculation line is created for the charge (i.e. line item).
Write Off, if Not Eligible for Billing	Indicates whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: • Yes • No
Retention Claim Based Percentage Calculation	Indicates whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: • Yes • No

- **Line Item Usage** - Indicates the pricing rule type categories to which the line item is associated. It contains the following column in a grid:

Column Name	Column Description
Pricing Rule Type Category	Indicates the pricing rule type category which is associated with the charge (i.e. line item). The valid values are: • Aggregate Stop-Loss • Ancillary • Claim • Retention Type Claim Based • Specific Stop-Loss

- **Markup or Markdown Billing Information** - Indicates the markup or markdown billing information defined for the line items. It contains the following columns in a grid:

Column Name	Column Description
Rate Type	Indicates the minimum and maximum markup or markdown billing information defined using the rate type.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum markup or markdown separately for each eligible claim charge.

Copyright © 2025, Oracle and/or its affiliates.

- **Line Item Billing Information** - Indicates the rate type and billable charge line type to which the line item is associated. It contains the following columns in a grid:

Column Name	Column Description
Rate Type	Indicates the rate type defined for the line item.
Billable Charge Line Type	Indicates the billable charge line type billable charge line type using which the calculation line is created for a rate type when the system calculates the minimum and maximum amount for a line item.

- **Claim Handling Fees Billing Information** - Indicates the claim handling fees billing information. It contains the following columns in a grid:

Column Name	Column Description
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee defined for the line items.
Rate	Indicates the rate and billable charge line type defined for the line items. **Column Name** / **Column Description** Rate Type – Indicates the rate type defined for a line item. Billable Charge Line Type – Indicates the billable charge line type using which the calculation line is created for a rate type when the system calculates the fees separately for each applicable claim charge.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the line item.
Delete	Used to delete the line item. **Note:** You can delete a line item when it is not yet used in the claim template or while defining the self-funded pricing.
Duplicate	Used to create a new line item using an existing line item.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the line item is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the line item. The valid values are: • Framework • Base • Customer Modification

Copyright © 2025, Oracle and/or its affiliates.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the line item in the **Extendable Lookup Value List** zone.

Defining a Line Item

Prerequisites

To define a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

Procedure

To define a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Line Item** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the line item.
   - **Line Item Usage** - Used to associate the line item with one or more pricing rule type categories.
   - **Markup or Markdown Billing Information** - Used to define the markup or markdown billing information for the line items.
   - **Line Item Billing Information** - Used to define line item billing information for the line items.
   - **Claim Handling Fees Billing Information** - Used to define the claim handling fees billing information for the line items.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are:	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Active • Inactive **Note:** By default, the value is set to **Active**.	
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type Search** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Write Off Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Write Off Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required when the **Write Off, if Not Eligible for Billing** field is set to **Yes**.
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: • Yes • No **Note:** By default, the value is set to **No**.	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: • Yes • No	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the value is set to **No**.	

4. Enter the required details in the **Main** section.
5. Associate the line item with one or more pricing rule type categories.
6. Define the markup or markdown billing information for the line items.
7. Define line item billing information for the line items.
8. Define the claim handling fees billing information for the line items.
9. Click **Save**.
   The line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Associating a Line Item with a Pricing Rule Type Category

Procedure

To associate a line item with a pricing rule type category:

1. Ensure that the **Line Item Usage** section is expanded when you are defining, editing, or copying a line item.

   The **Line Item Usage** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category which you want to associate with the charge (i.e. line item). The valid values are: • Aggregate Stop-Loss • Ancillary • Claim • Retention Type Claim Based • Specific Stop-Loss The following table describes the significance of each category that can be associated with the line item:	Yes (Conditional) **Note:** This field is required when you are associating the line item with a pricing rule type category.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Pricing Rule Type Category / **Significance** Claim: Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group. Specific Stop-Loss: Whether the line item can be considered while calculating specific stop-loss. Aggregate Stop-Loss: Whether the line item can be considered while calculating aggregate stop-loss. Retention Type Claim Based: Whether the line item can be used while calculating the percentage based retention type claim based fee. Ancillary: Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type. **Note:** At present, the line items are not used in the pricing rule types where the pricing rule type category is set to **Retention Type Enrollment Based** and **Flat Fees**.	

2. Enter the required details in the **Line Item Usage** section.
3. If you want to associate the line item with more than one pricing rule type category, click the **Add** (+) icon and *t*hen repeat step 3.

Note: However, if you want to remove a pricing rule type category from the line item, click the **Delete** (🗑) icon corresponding to the pricing rule type category.

4. Click **Save**.
   The line item is associated with the pricing rule type category.

Defining the Markup or Markdown Billing Information for the Line Items

Procedure

To define the markup or markdown billing information for the line items:

Copyright © 2025, Oracle and/or its affiliates.

1. Ensure that the **Markup or Markdown Billing Information** section is expanded when you are defining, editing, or copying a line item.

   The **Markup or Markdown Billing Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to indicate the rate type.	Yes (Conditional) **Note:** This field is required when you select a billable charge line type from the **Billable Charge Line Type** field.
Billable Charge Line Type	Used to specify the billable charge line type. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required when you select an option from the **Rate Type** field.

2. Enter the required details in the **Markup or Markdown Billing Information** section.
3. If you want to add more than one markup or markdown billing information for the line item, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a markup or markdown billing information from the line item, click the **Delete** (🗑) icon corresponding to the line item.

4. Click **Save**.
   The markup or markdown billing information is defined for the line items.

Editing a Line Item

Prerequisites

To edit a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

Procedure

To edit a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the line item whose details you want to edit.

   The **Line Item** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the line item.
   - **Line Item Usage** - Used to associate the line item with one or more pricing rule type categories.
   - **Markup or Markdown Billing Information** - Used to define the markup and markdown billing information for the line item.
   - **Line Item Billing Information** - Used to define the line item billing information for the line item.
   - **Claim Handling Fees Billing Information** - Used to define the claim handling fees billing information for the line item.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Indicates the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Not applicable
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: • Active • Inactive	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type Search** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Write Off Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Write Off Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required when the **Write Off, if Not Eligible for Billing** field is set to **Yes**.
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: • Yes • No	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: • Yes • No	No

Tip: Alternatively, you can edit the details of a line item by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.
   The changes made to the line item are saved.

Copying a Line Item

Instead of creating a line item from scratch, you can create a new line item using an existing line item. This is possible through copying a line item. On copying a line item, the details including the pricing rule type categories to which the line item is associated are copied to the new line item. You can then edit the details, if required.

Prerequisites

To copy a line item, you should have:

- Line item (whose copy you want to create) defined in the application
- Service quantity identifiers and billable charge line types defined in the application

Procedure

To copy a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the line item whose copy you want to create.

   The **Line Item** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the line item.
   - **Line Item Usage** - Used to associate the line item with one or more pricing rule type categories.
   - **Markup or Markdown Billing Information** - Used to define the markup or markdown billing information for the line item.
   - **Line Item Billing Information** - Used to define the line item billing information for the line item.
   - **Claim Handling Fees Billing Information** - Used to define the claim handling fees billing information for the line item.

   The **Main** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional health insurance amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: • Active • Inactive	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type Search** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Write Off Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Write Off Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required when the **Write Off, if Not Eligible for Billing** field is set to **Yes**.
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: • Yes • No	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: • Yes • No	No

Tip: Alternatively, you can copy a line item by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Associate or remove a pricing rule type category from the line item, if required.
6. Modify the markup or markdown billing information for the line items, if required.
7. Add, edit, or remove the line item billing information for the line items, if required.
8. Add, edit, or remove the claim handling fees billing information for the line items, if required.
9. Click **Save**.
   The new line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Deleting a Line Item

Procedure

To delete a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the line item that you want to delete.
   A message appears confirming whether you want to delete the line item.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** You can delete a line item when it is not yet used in the claim template or while defining the Administrative Services Only (ASO) pricing.

> **Tip:** Alternatively, you can delete a line item by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The line item is deleted from the **C1-ExtLookPricingRuleLineItem** extendable lookup.

Viewing the Line Item Details

Procedure

To view the details of a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (ᯤ) icon corresponding to the line item whose details you want to view.
   The **Extendable Lookup Value** zone appears.
4. View the details of the line item in the **Extendable Lookup Value** zone.

Claim Template Extendable Lookup

The ASO service provider may bill different charges for a claim transaction to different employers. The system enables you to create different claim templates for different employers. A claim template contains a set of charges (i.e. line items) which can be billed to a parent customer or bill group. You can define multiple claim templates in the system. Each

Copyright © 2025, Oracle and/or its affiliates.

claim template must be defined in the system using the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. A claim template encapsulates the following information:

- Whether the claim template can be used while defining a claim pricing rule for a policy which is in the **In Force/ Active**, **Post Runout**, or **Runout** status.
- Line items which can be billed to a parent customer or bill group.
- Whether you want to calculate the markup or markdown on the line items which are included in the claim template.
- Whether you want to specify a flat markup or markdown amount for the line items or the markup or markdown percentage for the line items which are eligible for percentage based markup or markdown
- Whether a line item is eligible for billing or not.
- Whether you want to define rule based billing eligibility for a line item.
- Whether you want to define billing eligibility for a line item while defining a claim pricing rule.
- Rule type which indicates the rules that should be executed to determine whether the line item is eligible for billing.
- Whether the line item is eligible for percentage based markup or markdown when the markup or markdown type is set to **Percentage**.

Once a claim template is defined in the extendable lookup, you can associate the claim template with a claim pricing rule type. You can associate multiple claim templates with a claim pricing rule type. Then, while defining a claim pricing rule for a parent customer, you can use any one of the claim template associated with the respective claim pricing rule type. The system then inherits the line items and the default markup and markdown values in the claim pricing rule from the claim template.

However, while defining a claim pricing rule for a policy of a bill group, you can only use the claim templates which are defined for the respective policy status and associated with the respective claim pricing rule type.

For example, the following table illustrates few claim templates with different line items:

Claim Template	Policy Status	Line Item	Billing Eligibility	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount	Markdown or Markdown Percentage
CT1	In Force/ Active	CDH	Yes	Markup	Flat Amount	$2	-
		THC	Yes				
		PCC	No				
CT2	Runout	CDH	Yes	Markdown	Percentage	-	2.00
		THC	Yes				
CT3	Post Runout	PCC	Yes	None	-	-	-
		NAF	No				

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 2805

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object. **Note:** It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Searching for the Claim Template Extendable Lookup

Procedure

To search for the **Claim Template** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookClaimTemplate** in the **Business Object** field.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   The **Claim Template** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Claim Template Extendable Lookup

Procedure

To view the values of the **Claim Template** extendable lookup:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. View the values of the **Claim Template** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Claim Template)

The **Extendable Lookup** screen allows you to view the values of the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. It also allows you to define, edit, copy, and delete a claim template. It contains the following zones:

- Extendable Lookup Value List on page 2807
- Extendable Lookup Value on page 2808

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Claim Template** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the claim template.
Description	Displays the description of the claim template.
Owner	Indicates who has created the claim template. The valid values are: • Framework • Base • Customer Modification
Edit	On clicking the **Edit** (✎) icon, the **Claim Template** screen appears where you can edit the details of the claim template.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Claim Template** screen appears where you can define a new claim template using an existing claim template.
Delete	On clicking the **Delete** (🗑) icon, you can delete the claim template.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: You can delete a claim template when it is not yet used in a claim pricing rule type.
Detailed Description	Displays additional information about the claim template.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a claim template, the **Extendable Lookup Value** zone appears with the details of the respective claim template.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the claim template. It contains the following sections:

- **Main** - Displays basic information about the claim template. It contains the following fields:

Field Name	Field Description
Claim Template	Displays the claim template.
Description	Displays the description of the claim template.
Override Description	Displays the overridden description of the claim template.
Detailed Description	Displays additional information about the claim template.
Status	Indicates the status of the claim template. The valid values are: • Active • Inactive

- **Claim Template Usage** - Indicates when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description
Policy Status	Indicates whether the claim template should be used while defining a claim pricing rule for a policy which is in the **In Force/Active**, **Post Runout**, or **Runout** status. The valid values are: • In Force/Active • Post Runout

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Runout

- **Claim Handling Fees** - Indicates the claim handling fees which are applicable to one ore more line items in the claim template. It contains the following columns:

Column Name	Column Description
Show Line Items in Pricing Rule	Indicates that claim line item appears when you are defining or editing a claim pricing rule.
Fee Type	Indicates the type of charge applicable on the line items.
Fee	Indicates the fee defined for the line items.
Fee Significance	Indicates the purpose of the imposing the claim handling fees on the line items.
Fee Applicability	Indicates the fee applicability on which the claim handling fees are defined.
Rating Information	Indicates the rate type and value that you want to use while defining the rating information for the line items. **Column Name** / **Column Description** Editable – Indicates that rate type and rate value fields are editable while defining or editing the claim handling fees for the line items. Rate Type – Indicates the rate type that you want to use while defining or editing the claim handling fees for the line items. Rate – Displays the rate that you want to use while defining or editing the claim handling fees for the line items.

- **Default Markup or Markdown Values** - Indicates the default markup or markdown values defined for the line items in the claim template. It contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates whether you want to markup or markdown the line items. The valid values are: • Markup • Markdown • None
Markup or Markdown Type	Indicates whether you want a flat or percentage based markup or markdown on the line items. The valid values are: • Flat Amount • Percentage **Note:** This field appears when the **Markup** or **Markdown** option is selected from the **Pricing Strategy** list.
Markup or Markdown Amount	Displays the default flat markup or markdown amount for the line items. **Note:** This field appears when the **Flat Amount** option is selected from the **Markup or Markdown Type** list.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Markup or Markdown Percentage	Displays the default percentage of markup or markdown for all line items. **Note:** This field appears when the **Percentage** option is selected from the **Markup or Markdown Type** list.
Editable	Indicates that rate type and rate value fields are editable while defining or editing the markup or markdown values for the line items.
Rate Type	Displays minimum and maximum markup or markdown defined using the rate type.
Rate	Displays the rate for minimum and maximum markup or markdown defined using the rate type.

- **Line Items** - Lists the line items which are added in the claim template. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the calculation line should be generated for the line item.
Line Item	Indicate the line item which is added in the claim template.
Billing Eligibility	Indicates whether the line item is eligible for billing. The valid values are: • Eligible • Not Eligible • Rule Based • Used Defined (Default No) • User Defined (Default Yes)
Rule Type	Indicates that rules of the specified rule type should be executed to determine whether the line item is eligible for billing. **Note:** The data appears in this column when the **Rule Based** option is selected from the **Billing Eligibility** list.
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible for percentage based markup or markdown when the **Markup or Markdown Type** field is set to **Percentage**. The valid values are: • Eligible • Not Eligible
Post-Processing Required	Indicates that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.
Rating Information	Displays the rate type and rate value that you want to use while defining the rate for the line items.

Column Name	Column Description
Editable	Indicates that the rate type and rate value fields are editable while defining a claim pricing rule.
Rate Type	Indicates the rate type that you want to use while defining the rate for the line items.
Rate	Used to specify the rate that you want to use while defining the rate for the line items.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Column Name / **Column Description** **Note:** This field is editable when the **Editable** checkbox is selected in the **Rate** column of the **Additional Fees** section while defining or editing the **C1-ExtLookClaimTemplate** extendable lookup.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the claim template.
Delete	Used to delete the claim template. **Note:** You can delete a claim template when it is not yet used in a claim pricing rule type.
Duplicate	Used to create a new claim template using an existing claim template.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the claim template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the claim template. The valid values are: • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the claim template in the **Extendable Lookup Value List** zone.

Defining a Claim Template

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To define a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Claim Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: • Active • Inactive **Note:** By default, the value is set to **Active**.	Yes

   - **Claim Template Usage** - Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the **In Force/Active**, **Post Runout**, or **Runout** status. The valid values are: • In Force/Active • Post Runout • Runout	Yes

   - **Claim Handling Fees** - Used to define the claim handling fees for the claim lines items which are added in the claim template.
   - **Default Markup or Markdown Values** - Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
   - **Line Items** - Used to add the claim line items in the claim template.
4. Enter the required details in the **Main** section.
5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** dropdown list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in a particular status.
6. Define the claim handling fees for the line items in the claim template, if required.
7. Define the default markup or markdown values for the line items in the claim template, if required.
8. Add the required the line items in the claim template.
9. Click **Save**.

Copyright © 2025, Oracle and/or its affiliates.

The claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

Defining the Claim Handling Fees for Line Items in the Claim Template

Procedure

To define the claim handling fees for the line items in the claim template:

1. Ensure that the **Claim Handling Fees** section is expanded *w*hen you are defining, editing, or copying a claim template.

   The **Claim Handling Fees** section contains the following fields:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Show Line Items in Pricing Rule</td><td>Used to indicate whether the claim line item is visible while defining or editing the pricing rules.</td><td>Not applicable</td></tr>
<tr><td>Fee Type</td><td>Used to indicate the charge type defined on the line items.</td><td>Yes</td></tr>

</table>
</td><td></td></tr>
</table>

2. Enter the required details in the **Claim Handling Fees** section.
3. If you want to add more than one claim handling fee in the claim template, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a claim handling fee from the claim template, click the **Delete** (🗑) icon corresponding to the line item.

4. If you want to add more than one fee applicability in the claim template, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a fee applicability from the claim template, click the **Delete** (🗑) icon corresponding to the line item.

5. If you want to add more than one rating information in the claim template, click the **Add** (+) icon and *t*hen repeat step 2.

> **Note:** However, if you want to remove a rating information from the claim template, click the **Delete** (🗑) icon corresponding to the line item.

6. Click **Save**.
   The claim handling fees are defined for the line items in the claim template.

Defining the Default Markup or Markdown Values for Line Items in a Claim Template

Procedure

To define the markup or markdown values for line items in a claim pricing rule:

1. Ensure that the **Default Markup or Markdown Values** section is expanded *w*hen you are defining, editing, or copying a claim template.

   The **Default Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: • Markdown • Markup • None	No
Markup or Markdown Type	Used to indicate the markup or markdown type for the claim line items. The valid values are: • Flat Amount • Percentage	No
Markup or Markdown Amount	Used to specify the markup or markdown amount.	No
Markup or Markdown Percentage	Used to specify the markup or markdown percentage.	No
Editable	Used to indicate whether the rate specified for a rate type is editable when you use the claim template in a claim pricing rule.	Not applicable
Rate Type	Indicates the minimum and maximum markup or markdown defined using the rate type.	Yes (Conditional) **Note:** This field is required when you define the rate from the respective field.
Rate	Used to specify the value for minimum and maximum markup or markdown using the rate type.	Yes (Conditional) **Note:** This field is required when you select the rate type from the respective field.

2. Enter the required details in the **Markup or Markdown Values** section.
3. If you want to add more than one default markup or markdown value in the claim template, click the **Add** (+) icon and *t*hen repeat step 2.

   Note: However, if you want to remove a default markup or markdown value from the claim template, click the **Delete** (🗑) icon corresponding to the line item.

4. Click **Save**.
   The markup or markdown values for line items are defined for the claim template.

Adding a Line Item in a Claim Template

Prerequisites

To add a line item in a claim template, you should have:

- The line item defined in the **C1-ExtLookPricingRuleLineItem** extendable lookup.
- Rule types defined in the application (where the rule type usage is set to **ASO Billing Line Item Eligibility**) when you want to define rule based billing eligibility for a line item.

Procedure

To add a line item in a claim template:

1. Ensure that the **Line Items** section is expanded when you are defining, editing, or copying a claim template.

   The **Line Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the calculation line should be generated for the line item.	Yes (Conditional) **Note:** This field is required while adding a line item in the claim template.
Line Item	Used to indicate the line item that you want to include in the claim template. **Note:** The list includes only those line items which are associated to the **Claim** pricing rule type category.	Yes (Conditional) **Note:** This field is required while adding a line item in the claim template.
Billing Eligibility	Used to indicate whether the line item is eligible for billing. If line item is not eligible for billing, the system does not create the calculation line for the line item. The valid values are: • **Eligible** - Used when the line item is eligible for billing. • **Not Eligible** - Used when the line item is not eligible for billing. • **Rule Based** - Used when you want to determine whether the line item is eligible for billing using certain business rules while executing the **Update Status (C1-TXNEX)** batch. • **Used Defined (Default No)** - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the **User Defined Billing Option** option is not selected for the line item in the claim pricing rule.	Yes (Conditional) **Note:** This field is required while adding a line item in the claim template.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• User Defined (Default Yes) - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the User Defined Billing Option option is selected for the line item in the claim pricing rule.</td><td></td></tr>
<tr><td>Rule Type</td><td>Used to indicate that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.
Note:
The list includes only those rule types where the rule type usage is set to ASO Billing Line Item Eligibility.
The values appear in this list when you select the Rule Based option from the Billing Eligibility list.</td><td>Yes (Conditional)
Note: This field is required when you select the Rule Based option from the Billing Eligibility list.</td></tr>
<tr><td>Markup or Markdown Percentage Eligibility</td><td>Used to indicate whether the line item is eligible for percentage based markup or markdown when the Markup or Markdown Type field is set to Percentage. The valid values are:
• Eligible
• Not Eligible</td><td>Yes (Conditional)
Note: This field is required while adding a line item in the claim template.</td></tr>
<tr><td>Post-Processing Required</td><td>Used to indicate that the line item is applicable for post-processing once the claim pricing rule is derived for a claim transaction.</td><td>Yes (Conditional)
Note: This field is required while adding a line item in the claim template.</td></tr>
<tr><td>Rating Information</td><td>Displays the rate type and rate value that you want to use while defining the rate for the line items.
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Editable</td><td>Used to indicate that the rate type and rate value fields are editable while defining a claim pricing rule.</td><td>Not applicable</td></tr>
<tr><td>Rate Type</td><td>Used to indicate the rate type that you want to use while defining the rate for the line items.</td><td>Yes (Conditional)
Note: This field is required when you define the rate from the respective field.</td></tr>
<tr><td>Rate</td><td>Used to specify the rate that you want to use while defining the rate for the line items.</td><td>Yes (Conditional)</td></tr>
</table></td><td>Yes (Conditional)
Note: This field is required while adding a line item in the claim template.</td></tr>
</table>

How to define a claim template	Defining a Claim Template on page 2811
How to edit a claim template	Editing a Claim Template on page 2818
How to copy a claim template	Copying a Claim Template on page 2820

Editing a Claim Template

Procedure

To edit a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the claim template whose details you want to edit.

   The **Claim Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Displays the claim template.	Not applicable
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: • Active • Inactive	Yes

- **Claim Template Usage** - Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the **In Force/Active**, **Post Runout**, or **Runout** status. The valid values are: • In Force/Active • Post Runout • Runout	Yes

- **Claim Handling Fees** - Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** - Used to indicate the default markup or markdown values for the claim line items which are added in the claim template.
- **Line Items** - Used to indicate the line items in the claim template.

Tip: Alternatively, you can edit the details of a claim template by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Modify the policy status in the **Claim Template Usage** section, if required.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove line items from the claim template, if required.
9. Click **Save**.
   The changes made to the claim template are saved.

Copying a Claim Template

Instead of creating a claim template from scratch, you can create a new claim template using an existing claim template. This is possible through copying a claim template. On copying a claim template, the details including the line items and default markup or markdown values are copied to the new claim template. You can then edit the details, if required.

Prerequisites

To copy a claim template, you should have:

- Claim template (whose copy you want to create) defined in the application

Procedure

To copy a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the claim template whose copy you want to create.

   The **Claim Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: • Active • Inactive	Yes

   - **Claim Template Usage** - Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the **In Force/Active**, **Post Runout**, or **Runout** status. The valid values are: • In Force/Active	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Post Runout • Runout	

- **Claim Handling Fees** - Used to indicate the claim handling fees for the lines items which are added in the claim template.
- **Default Markup or Markdown Values** - Used to indicate the default markup or markdown values for the line items which are added in the claim template.
- **Line Items** - Used to add the claim line items in the claim template.

Tip: Alternatively, you can copy a claim template by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** list depending on *w*hether you want to use the claim template while defining a claim pricing rule for a policy in a particular status.
6. Add, edit, or remove the claim handling fees for the line items in the claim template, if required.
7. Modify the default markup or markdown values for the line items in the claim template, if required.
8. Add, edit, or remove the line items from the claim template, if required.
9. Click **Save**.
   The new claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

Deleting a Claim Template

Procedure

To delete a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the claim template that you want to delete.
   A message appears confirming whether you want to delete the claim template.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** You can delete a claim template when it is not yet used in a claim pricing rule type.

> **Tip:** Alternatively, you can delete a claim template by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The claim template is deleted from the **C1-ExtLookClaimTemplate** extendable lookup.

Viewing the Claim Template Details

Procedure

To view the details of a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (ᯤ) icon corresponding to the claim template whose details you want to view.
   The **Extendable Lookup Value** zone appears.
4. View the details of the claim template in the **Extendable Lookup Value** zone.

Rate Option Extendable Lookup

The basic pricing details (such as rate schedule, pricing currency) and the transaction aggregation details may vary from one bill group or parent customer to another and from one price item to another. The basic pricing and transaction aggregation details are defined in the rate option. Each rate option must be defined in the system using the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. A rate option encapsulates the following information:

Copyright © 2025, Oracle and/or its affiliates.

- The rate schedule that you want to use while defining the price item pricing.
- Currency in which you want to define the price item pricing.
- Whether zero pricing should be displayed in the bill.
- Whether the transactions mapped to the price item should be ignored for billing.
- Whether the transactions mapped to the price item should be aggregated for billing.
- The aggregation schedule using which the transactions should be aggregated for billing.
- How and when you want to rate the transaction legs which are mapped to the price item.
- Whether you want the price item pricing to be applied to all customers or only to the new customers.

Once the rate options are defined in the extendable lookup, you can associate one or more rate options with a price item while adding the price item in a claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, or ancillary pricing rule type. You can then use the rate option while defining pricing rule for the respective price item using the respective pricing rule type. The rate option specified in a pricing rule is used while creating the price item pricing or price assignment for the pricing rule.

For example, the following table illustrates how the rate options can be used for different price items in a pricing rule type:

Claim Pricing Rule Type	**Price Item**	**Rate Option**	**Claim Pricing Rule**	**Price Item Pricing**
CPRT1	P1	R1	CPR1 (Price Item: P1, Rate Option: R1)	PA1 is created for P1 using the details specified in R1.
		R2	-	-
		R3	CPR2 (Price Item: P1, Rate Option: R3)	PA2 is created for P1 using the details specified in R3.
	P2	R1	-	-
		R4	CPR3 (Price Item: P2, Rate Option: R4)	PA3 is created for P2 using the details specified in R4.
CPRT2	P1	R1	CPR4 (Price Item: P1, Rate Option: R1)	PA4 is created for P1 using the details specified in R1.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 2823

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

Copyright © 2025, Oracle and/or its affiliates.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Searching for the Rate Option Extendable Lookup

Procedure

To search for the **Rate Option** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRetTypeRateOpt** in the **Business Object** field.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   The **Rate Option** extendable lookup business object appears in the **Search Results** section.

Extendable Lookup (Rate Option)

The **Extendable Lookup** screen allows you to view the values of the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. It also allows you to define, edit, copy, and delete a rate option. It contains the following zones:

- Extendable Lookup Value List on page 2825
- Extendable Lookup Value on page 2826

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Option** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate option.
Description	Displays the description of the rate option.
Owner	Indicates who has created the rate option. The valid values are: • Framework • Base • Customer Modification
Edit	On clicking the **Edit** (✎) icon, the **Rate Option** screen appears where you can edit the details of the rate option.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Rate Option** screen appears where you can define a new rate option using an existing rate option.
Delete	On clicking the **Delete** (🗑) icon, you can delete the rate option. **Note:** You can delete a rate option when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate option.

Copyright © 2025, Oracle and/or its affiliates.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a rate option, the **Extendable Lookup Value** zone appears with the details of the respective rate option.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate option. It contains the following sections:

- **Main** - Displays basic information about the rate option. It contains the following fields:

Field Name	Field Description
Rate Option	Displays the rate option.
Description	Displays the description of the rate option.
Override Description	Displays the overridden description of the rate option.
Detailed Description	Displays additional information about the rate option.
Status	Indicates the status of the rate option. The valid values are: • Active • Inactive
Rate Schedule	Indicates the rate schedule that will be used while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. **Note:** It has a link. On clicking the link, the **Rate Schedule** screen appears where you can view the details of the respective rate schedule.
Pricing Currency	Indicates the currency in which the price item pricing will be defined.
Print Zero	Indicates whether zero pricing will be displayed in the bill. The valid values are: • Yes • No
Ignore Transaction	Indicates whether the transactions mapped to the price item will be ignored for billing. The valid values are: • Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• No
Aggregate Transaction	Indicates whether the transactions mapped to the price item will be aggregated for billing. The valid values are: • Yes • No
Aggregation Schedule	Indicates the aggregation schedule using which the transactions will be aggregated for billing.
Transaction Rating Criteria	Indicates how and when the transaction legs which are mapped to the price item are rated. The valid values are: • Aggregate Transactions and Then Rate SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines • Rate Transactions
Apply To	Indicates whether the price item pricing will be applied to all customers or only to the new customers. The valid values are: • All Customers • New Customers

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate option.
Delete	Used to delete the rate option. **Note:** You can delete a rate option when it is not yet used in a pricing rule type.
Duplicate	Used to create a new rate option using an existing rate option.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate option is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the rate option. The valid values are: • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the rate option in the **Extendable Lookup Value List** zone.

How to view the details of a rate option	Viewing the Rate Option Details on page 2835

Defining a Rate Option

Prerequisites

To define a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To define a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Rate Option** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: • Active • Inactive **Note:** By default, the value is set to **Active**.	Yes
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Rate Schedule Search** window appears.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: • Yes • No **Note:** By default, the value is set to **Yes**.	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: • Yes • No **Note:** By default, the value is set to **No**.	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: • Yes • No **Note:** By default, the value is set to **No**. This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing. **Note:** This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes (Conditional) **Note:** This field is required when the **Aggregate Transaction** field is set to **Yes**.
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: • Aggregate Transactions and Then Rate SQs **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Rate Transactions **Note:** This value appears in the list only when the **Ignore Transaction** field is set to either **Yes** or **No** and the **Aggregate Transaction** field is set to **No**. **Note:** By default, the value is set to **Do Not Rate Transactions**.	
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: • All Customers • New Customers **Note:** By default, the value is set to **All Customers**.	Yes

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Editing a Rate Option

Prerequisites

To edit a rate option, you should have:

- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To edit a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the rate option whose details you want to edit.

   The **Rate Option** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate option. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Displays the rate option.	Not applicable
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: • Active • Inactive	Yes
Owner	Indicates who has created the rate option. The valid values are: • Framework • Base • Customer Modification	Not applicable
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Rate Schedule Search** window appears.	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: • Yes • No	Yes
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: • Yes • No	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: • Yes • No **Note:** This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is disabled when the **Ignore Transaction** field is set to **Yes**.	**Note:** This field is required when the **Aggregate Transaction** field is set to **Yes**.
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: • Aggregate Transactions and Then Rate SQs **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Rate Transactions **Note:** This value appears in the list only when the **Ignore Transaction** field is set to either **Yes** or **No** and the **Aggregate Transaction** field is set to **No**.	Yes
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: • All Customers • New Customers	Yes

Tip: Alternatively, you can edit the details of a rate option by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Click **Save**.
   The changes made to the rate option are saved.

Copying a Rate Option

Instead of creating a rate option from scratch, you can create a new rate option using an existing rate option. This is possible through copying a rate option. On copying a rate option, the pricing and transaction aggregation details are copied to the new rate option. You can then edit the details, if required.

Prerequisites

To copy a rate option, you should have:

- Rate option (whose copy you want to create) defined in the application
- Rate schedules, currencies, and aggregation schedules defined in the application

Procedure

To copy a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the rate option whose copy you want to create.

   The **Rate Option** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate option. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option.	Yes
Description	Used to specify the description for the rate option.	Yes
Override Description	Used when you want to override the description of the rate option.	No
Detailed Description	Used to specify additional information about the rate option.	No
Status	Used to indicate the status of the rate option. The valid values are: • Active • Inactive	Yes
Rate Schedule	Used to indicate the rate schedule that you want to use while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Rate Schedule Search** window appears.	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: • Yes	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• No	
Ignore Transaction	Used to indicate whether the transactions mapped to the price item should be ignored for billing. The valid values are: • Yes • No	Yes
Aggregate Transaction	Used to indicate whether the transactions mapped to the price item should be aggregated for billing. The valid values are: • Yes • No **Note:** This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes
Aggregation Schedule	Used to indicate the aggregation schedule using which the transactions should be aggregated for billing. **Note:** This field is disabled when the **Ignore Transaction** field is set to **Yes**.	Yes (Conditional) **Note:** This field is required when the **Aggregate Transaction** field is set to **Yes**.
Transaction Rating Criteria	Used to indicate how and when you want to rate the transaction legs which are mapped to the price item. The valid values are: • Aggregate Transactions and Then Rate SQs **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines **Note:** This value appears in the list when the **Ignore Transaction** field is set to **No** and the **Aggregate Transaction** field is set to **Yes**. • Rate Transactions **Note:** This value appears in the list only when the **Ignore Transaction** field is set to either **Yes** or **No** and the **Aggregate Transaction** field is set to **No**.	Yes
Apply To	Used to indicate whether you want the price item pricing to be applied to all customers or only to the new customers. The valid values are: • All Customers • New Customers	Yes

Tip: Alternatively, you can copy a rate option by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

Copyright © 2025, Oracle and/or its affiliates.

4. Enter the required details in the **Main** section.
5. Click **Save**.
   The new rate option is added in the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Deleting a Rate Option

Procedure

To delete a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the rate option that you want to delete.
   A message appears confirming whether you want to delete the rate option.

> **Note:** You can delete a rate option when it is not yet used in a pricing rule type.

> **Tip:** Alternatively, you can delete a rate option by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.
   The rate option is deleted from the **C1-ExtLookRetTypeRateOpt** extendable lookup.

Viewing the Rate Option Details

Procedure

To view the details of a rate option:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.

Copyright © 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (ᯤ) icon corresponding to the rate option whose details you want to view.
   The **Extendable Lookup Value** zone appears.
4. View the details of the rate option in the **Extendable Lookup Value** zone.

Rate Type Extendable Lookup

A new extendable lookup for rate type named **C1-ExtLookRateType** is introduced in the system. A rate type extendable lookup enables you to specify the following:

- Whether the system should calculate fees on sum of all applicable claim charges or separately for each applicable claim charge.
- The billable charge line type using which the calculation line should be created when the fee is calculated on sum of all applicable claim charges
- Whether the system should calculate percentage based markup or markdown on sum of all eligible claim charges or separately for each eligible claim charge
- The billable charge line type using which the calculation line should be created when the minimum and maximum markup or markdown is calculated on sum of all eligible claim charges
- Whether the rate type can be used while adding fees, default markup or markdown, or claim line items

Following rate types are used in the system:

- Maximum Fee
- Minimum Fee
- Retained Percentage
- Minimum Markup or Markdown
- Maximum Markup or Markdown
- Minimum Amount
- Maximum Amount

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- Extendable Lookup Search on page 2836

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

Note: You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	Note: It has a link. On clicking the link, the **Extendable Lookup** screen appears where you can view the details of the respective extendable lookup.

Searching for the Rate Type Extendable Lookup

Procedure

To search for the **Rate Type** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
   The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRateType** in the **Business Object** field.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   The **Rate Type** extendable lookup business object appears in the **Search Results** section.

Viewing the Values of the Rate Type Extendable Lookup

Procedure

To view the values of the **Rate Type** extendable lookup:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. View the values of the **Rate Type** extendable lookup in the **Extendable Lookup Value List** zone.

Extendable Lookup (Rate Type)

The **Extendable Lookup** screen allows you to view the values of the **Rate Type (C1-ExtLookRateType)** extendable lookup. It also allows you to define, edit, copy, and delete a rate type. It contains the following zones:

- Extendable Lookup Value List on page 2825
- Extendable Lookup Value on page 2826

Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Type** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate type.
Description	Displays the description of the rate type.
Owner	Indicates the user who has created the rate type. The valid values are: • Framework • Base • Customer Modification
Edit	On clicking the **Edit** (✎) icon, the **Rate Type** screen appears where you can edit the details of the rate type.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Rate Type** screen appears where you can define a rate type item using an existing rate type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the rate type.
	Note: You can delete a rate type when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a rate type, the **Extendable Lookup Value** zone appears with the details of the respective rate type.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate type. It contains the following sections:

- **Main** - Displays basic information about the rate type. It contains the following fields:

Field Name	Field Description
Rate Type	Displays the rate type.
Description	Displays the description for the rate type.
Override Description	Displays the overridden description of the rate type.
Detailed Description	Displays the additional information about the rate type.
Status	Indicates the status of the rate type. The valid values are: • Active • Inactive
Line-Specific Calculation	Indicates whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: • Yes • No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge.

Rate Type Usage - Lists the various charges to which the rate type is associated. It contains the following column in a grid:

Column Name	Column Description
Applicable To	Indicates the claim handling fees that are associated with the rate type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate type.
Delete	Used to delete the rate type. **Note:** You can delete a rate type when it is not yet used in a pricing rule type.
Duplicate	Used to create a new rate type using an existing line item.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the line item. The valid values are: • Framework • Base • Customer Modification

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the line item in the **Extendable Lookup Value List** zone.

Defining a Rate Type

Prerequisites

Copyright © 2025, Oracle and/or its affiliates.

To define a rate type, you should have:

- Billable charge line type and rate types defined in the application.

Procedure

To define a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

   The **Rate Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate type. It contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Rate Type	Used to specify the rate type.	Yes
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: • Active • Inactive **Note:** By default, the value is set to **Active**.	No
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: • Yes • No	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No

Copyright © 2025, Oracle and/or its affiliates.

- **Rate Type Usage** - Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: • Claim Handling Fees • Claim Line Items • Markup or Markdown	Yes

4. Enter the required details in the **Main** section.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

> **Note:** However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑) icon corresponding to the **Applicable To** field.

7. Click **Save**.
   The rate type is added in the **C1-ExtLookRateType** extendable lookup.

Editing a Rate Type

Prerequisites

To edit a rate type, you should have:

- Billable charge line type and rate type usage defined in the application.

Procedure

To edit a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the rate type whose details you want to edit.

   The **Rate Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Displays the rate type.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: • Active • Inactive	No
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: • Yes • No	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No

- **Rate Type Usage** - Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items. The valid values are: • Claim Handling Fees • Claim Line Items • Markup or Markdown	Yes

Tip: Alternatively, you can edit the details of a rate type by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section, if required.
5. Add, edit, or remove usage (for the rate type) from the **Usage** section, if required.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑) icon corresponding to the **Applicable To** field.

Copyright © 2025, Oracle and/or its affiliates.

7. Click **Save**.
   The changes made to the rate type are saved.

Copying a Rate Type

Instead of creating a rate type from scratch, you can create a new rate type using an existing rate type. This is possible through copying a rate type. On copying a rate type, the line specific calculation, billable charge type, and usage detailed are copied to the new rate type. You can then edit the details, if required.

Prerequisites

To copy a rate type, you should have:

- Rate type (whose copy you want to create) defined in the application.
- Billable charge line type and rate type usage defined in the application.

Procedure

To copy a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding *t*o the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the rate type whose copy you want to create.

   The **Rate Type** screen appears. It contains the following section:

   - **Main** - Used to specify basic details about the rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Type	Used to specify the rate type.	Yes
Description	Used to specify the description for the rate type.	Yes
Override Description	Used when you want to override the description of the rate type.	No
Detailed Description	Used to specify additional information about the rate type.	No
Status	Used to indicate the status of the rate type. The valid values are: • Active • Inactive	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Line-Specific Calculation	Used to indicate whether the calculation of fees, percentage, or markup and markdown should take place for each and every claim charge or not. The valid values are: • Yes • No	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the value for a billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No

- **Rate Type Usage** - Used to specify the usage of a rate type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Applicable To	Used to indicate whether the rate type can be used while adding fees, default markup or markdown, or claim line items.	Yes

Tip: Alternatively, you can copy a rate type by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section, if required.
5. Select the required rate type usage (for the rate type) from the **Rate Type Usage** section.
6. If you want to define more than one rate type usage for the rate type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a rate type usage from the rate type, click the **Delete** (🗑) icon corresponding to the **Applicable To** field.

7. Click **Save**.
   The new rate type is added in the **C1-ExtLookRateType** extendable lookup.

Deleting a Rate Type

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To delete a rate type:

1. Search for the **Rate Type** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the rate type that you want to delete.
   A message appears confirming whether you want to delete the rate type.

   Note: You can delete a rate type when it is not yet used in a pricing rule type.

   Tip: Alternatively, you can delete a rate type by clicking the **Delete** button in the **Extendable Lookup Value** zone.
4. Click **OK**.
   The rate type is deleted from the **C1-ExtLookRateType** extendable lookup.

Viewing the Rate Type Details

Procedure

To view the details of a rate type:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the *e*xtendable lookup business object whose details you want to view.
   The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Broadcast** (📡) icon corresponding to the rate option whose details you want to view.
   The **Extendable Lookup Value** zone appears.
4. View the details of the rate type in the **Extendable Lookup Value** zone.

Pricing Group

Oracle Revenue Management and Billing enables you to create pricing groups for a bill group. It consists of one or more rules. Each rule has a unique priority. A rule contains one or more criteria. Each criterion can contain the following:

- **Source System** - Indicates the external system from where the claim or enrollment transaction is received.
- **Parameter 1**, **Parameter 2**, **Parameter 3**, and **Parameter 4** - Indicates employee attributes based on which you want to define the pricing.

Note that the source system and parameter 1 are mandatory when you are defining a criterion in a rule. In the **Parameter 1** field, you can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone.

You can specify multiple parameter 2, parameter 3, and parameter 4 combinations in the criterion. You can also specify multiple source system, parameter 1, parameter 2, parameter 3, and parameter 4 combinations (i.e. multiple criteria) in a rule. Once a pricing group is defined for a bill group, you can then use the pricing group while defining a pricing rule for the bill group. This enables you to define various rates for employees with different set of attributes. For example, in a claim pricing rule, you can maintain different markup and markdown values for employees who belong to the Western, Eastern, and Central location of United States.

You can define, edit, copy, and delete a pricing group through the **Bill Group Pricing Groups** zone in the **Pricing** tab of the **Customer 360° Information** screen.

Viewing the Pricing Groups of a Bill Group

Procedure

To view the pricing groups of a bill group:

1. Search for the bill group whose is associated with the self-funded policy in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose *d*etails you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. In the **Bill Group Self-Funded Policy Information** zone, click the **Broadcast** (📡) icon corresponding *t*o a bill group whose pricing groups you want to view.
   The **Bill Group Self-Funded Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. View the pricing groups which are defined for the bill group and are currently active in the **Bill Group Pricing Groups** zone.

Defining a Pricing Group for a Bill Group

Prerequisites

To define a pricing group for a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To define a pricing group for a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group for *w*hom you want to define a pricing group.
   The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. Click the **Add** link in the upper right corner of the **Bill Group Pricing Groups** zone.

   The **Pricing Group** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: • Active • Inactive	Yes
Description	Used to specify the description for the pricing group.	Yes

   - **Pricing Group Rules** - Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. **Note:** You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the **Add** (➕) icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define the required rules in the **Pricing Group Rules** section.
8. Click the **Add** (➕) icon in the **Criteria** field corresponding to the pricing group rule for which you want to *d*efine the criteria.

Copyright © 2025, Oracle and/or its affiliates.

The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone. You must not specify the ampersand (&) character in this field. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Parameter 1 List for Bill Group** window appears.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No

9. Enter the source system and parameter 1 in the pricing group rule criteria.

> **Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination *i*n the pricing group rule criteria.
11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 *c*ombination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

> **Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑) icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

> **Note:** However, if you want to remove a rule from the pricing group, click the **Delete** (🗑) icon corresponding to the pricing group rule.

14. Click **Save**.
    The pricing group is defined for the bill group.

Editing a Pricing Group of a Bill Group

Prerequisites

To edit a pricing group of a bill group, you should have:

- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To edit a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose *p*ricing group you want to edit.
   The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. In the **Bill Group Pricing Groups** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *p*ricing group whose details you want to edit.

   The **Pricing Group** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the pricing group. The valid values are: • Active • Inactive	Yes
Description	Used to specify the description for the pricing group.	Yes

- **Pricing Group Rules** - Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. **Note:** You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the **Add** (+) icon, you can define criteria for the pricing group rule.	Not applicable

Note: You cannot define, edit, or remove a rule when the pricing group is already used while defining a pricing rule for the bill group.

6. Modify the required details in the **Main** section.
7. Edit the required rules in the **Pricing Group Rules** section.
8. Click the **Add** (+) icon in the **Criteria** field corresponding to the pricing group rule for which you want to *e*dit the criteria.

   The following fields appear in another grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone. You must not specify the ampersand (&) character in this field. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Parameter 1 List for Bill Group** window appears.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No

Note: You cannot define, edit, or remove the source system, parameter 1, parameter 2, parameter 3, and parameter 4 from a rule when the pricing group is already used while defining a pricing rule for the bill group.

9. If required, enter the source system and parameter 1 in the pricing group rule criteria.

Note: You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.
11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

Note: However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

Note: However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑) icon corresponding to the combination.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

Note: However, if you want to remove a rule from the pricing group, click the **Delete** (🗑) icon corresponding to the pricing group rule.

14. Click **Save**.
    The changes made to the pricing group are saved.

Deleting a Pricing Group of a Bill Group

Procedure

To delete a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose *p*ricing group you want to delete.
   The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. In the **Bill Group Pricing Groups** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *p*ricing group that you want to delete.

   A message appears confirming whether you want to delete the pricing group.

   Note: You can delete a pricing group when it is not yet used while defining a pricing rule for the bill group.
6. Click **OK**.
   The pricing group is deleted.

Copying a Pricing Group of a Bill Group

Instead of creating a pricing group from scratch, you can create a new pricing group using an existing pricing group. This is possible through copying a pricing group. On copying a pricing group, the details including the rules are copied to the new pricing group. You can then edit the details, if required.

Prerequisites

To copy a pricing group of a bill group, you should have:

Copyright © 2025, Oracle and/or its affiliates.

- Pricing group (whose copy you want to create) defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup

Procedure

To copy a pricing group of a bill group:

1. Search for the Administrative Services Only (ASO) person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person whose details you want *t*o view.
   The **Person** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to a bill group whose *p*ricing group you want to copy.
   The **Bill Group ASO Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.
5. In the **Bill Group Pricing Groups** zone, click the **Duplicate** (📋) icon in the **Duplicate** column *c*orresponding to the pricing group whose copy you want to create.

   The **Pricing Group** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the pricing group. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group for whom you want to define the pricing group.	Not applicable
Status	Used to indicate the status of the pricing group. The valid values are: • Active • Inactive	Yes
Description	Used to specify the description for the pricing group.	Yes

   - **Pricing Group Rules** - Used to define rules in the pricing group. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to indicate the order in which the rule should be executed while determining the pricing for the price item. **Note:** You cannot define multiple rules in the pricing group with the same priority.	Yes
Rule	Used to specify the rule in the pricing group.	Yes
Description	Used to specify the description for the pricing group rule.	Yes
Criteria	On clicking the **Add** (📄) icon, you can define criteria for the pricing group rule.	Not applicable

6. Enter the required details in the **Main** section.
7. Define, edit, or remove the required rules from the **Pricing Group Rules** section.
8. Click the **Add** (📄) icon in the **Criteria** field corresponding to the pricing group rule for which you want to *d*efine or edit the criteria.

   The following fields appear in another grid:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the external system from where the claim or enrollment transaction is received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You can only specify the employee attribute which is defined for the bill group and source system combination in the **Bill Group Derivation and Pricing Parameters** zone. You must not specify the ampersand (&) character in this field. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Parameter 1 List for Bill Group** window appears.	Yes
Parameter 2	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 3	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No
Parameter 4	Used to specify the employee attribute based on which you want to define the pricing. **Note:** You must not specify the ampersand (&) character in this field.	No

9. Enter the source system and parameter 1 in the pricing group rule criteria.

> **Note:** You must define at least one rule in the pricing group and at least one source system and parameter 1 combination in the pricing group rule.

10. If required, enter the parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination in the pricing group rule criteria.
11. If you want to define more than one parameter 2, parameter 3, and parameter 4 for the source system and parameter 1 combination, click the **Add** (+) icon corresponding to the **Parameter 2** field and then repeat step 10.

> **Note:** However, if you want to remove a parameter 2, parameter 3, and parameter 4 from the source system and parameter 1 combination, click the **Delete** (🗑) icon corresponding to the parameter 2, parameter 3, and parameter 4.

12. If you want to define more than one source system and parameter 1 combination in the pricing group rule, click the **Add** (+) icon corresponding to the **Source System** field and then repeat step 9 and 10.

> **Note:** However, if you want to remove a source system and parameter 1 combination from the pricing group rule, click the **Delete** (🗑) icon corresponding to the combination.

Copyright © 2025, Oracle and/or its affiliates.

13. If you want to define more than one rule in the pricing group, click the **Add** (+) icon corresponding to the **Priority** field and then repeat the steps from 7 to 10.

> **Note:** However, if you want to remove a rule from the pricing group, click the **Delete** (🗑) icon corresponding to the pricing group rule.

14. Click **Save**.
    The new pricing group is defined for the bill group.

Pricing Rule Type

Oracle Revenue Management and Billing enables you to define a pricing rule type using which you can create a pricing rule. Through this screen you can define the following pricing rule types:

- **Claim**
- **Specific Stop-Loss (SSL)**
- **Aggregate Stop-Loss (ASL)**
- **Retention Type Claim Based**
- **Retention Type Enrollment Based**
- **Flat Fee**
- **Ancillary**
- **Discount Arrangement**
- **Level Funded**
- **Minimum Premium Pricing**
- **Age Based**
- **Tier Based**
- **Pass-Through Billable Charge**
- **Additional Fee**
- **Benefit**
- **Discount Charge**

This screen consists of the following zones:

- Pricing Rule Type List on page 2857
- Pricing Rule Type on page 2860

Copyright © 2025, Oracle and/or its affiliates.

Pricing Rule Type List

The **Pricing Rule Type List** zone lists the pricing rule types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description of the pricing rule type.
Pricing Rule Type Category	Indicates the category to which the pricing rule type belongs. The valid values are: • Claim • Specific Stop-Loss • Aggregate Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees • Ancillary • Discount Arrangement • Discount Charge • Level Funded • Age Based • Tier Based • Pass-Through Billable Charge • Benefit • Additional Fee • Minimum Pricing Rule Type
Edit	On clicking the **Edit** (✎) icon, the **Claim Pricing Rule Type**, **Specific Stop-Loss (SSL) Pricing Rule Type**, **Aggregate Stop-Loss (ASL) Pricing Rule Type**, **Retention Type Claim Based Pricing Rule Type**, **Retention Type Enrollment Based Pricing Rule Type**, **Flat Fees Pricing Rule Type**, **Ancillary Pricing Rule Type**, **Discount Arrangement Pricing Rule Type**, **Discount Charge Pricing Rule Type**, **Level Funded Pricing Rule Type**, **Age Based Pricing Rule Type**, **Tier Based Pricing Rule Type**, **Pass-Through Billable Charge Pricing Rule Type**, **Benefit Pricing Rule Type**, **Additional Fee Pricing Rule Type**, or **Minimum Pricing Rule Type** screen appears, based on the pricing rule type category, where you can edit the details of the respective pricing rule type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the pricing rule type. **Note:** You can delete a pricing rule type when it is not yet used in the system.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a pricing rule type, the **Pricing Rule Type** zone appears with the details of the respective pricing rule type.

You can filter the list using the **Pricing Rule Type Category** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Pricing Rule Type

The **Pricing Rule Type** zone displays the details of the pricing rule type for claim, aggregate stop-loss, specific stop-loss, retention type enrollment based, retention type claim based, one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee. This zone contains the following sections:

- **Main** - This section provides basic information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Pricing Rule Type	Displays the pricing rule type.
Description	Displays the description for the pricing rule type.
Detailed Description	Displays additional information about the pricing rule type category.
Pricing Rule Business Object	Indicates the pricing rule business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule • Ancillary Pricing Rule • Discount Arrangement Pricing Rule • Level Funded (LF) Pricing Rule • Minimum Premium Program Pricing Rule

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Business Object	Indicates the pricing rule type business object. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. The valid values are: • Claim Pricing Rule Type • Aggregate Stop-Loss (ASL) Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Flat Fee Pricing Rule Type • Ancillary Pricing Rule Type • Discount Arrangement Pricing Rule Type • Level Funded (LF) Pricing Rule Type • Minimum Premium Program Pricing Rule Type
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status	Indicates the status of the pricing rule type. The valid values are: • Active • Inactive
Primary	Displays whether the pricing rule type is primary or not.
Pricing Rule Type Category	Indicates the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees • Ancillary • Discount Arrangement • Level Funded • Minimum Premium Program

- **Related Pricing Rule Types** - This section lists the pricing rule types which are related to the parent pricing rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the order in which pricing rule type is executed.
Pricing Rule Type	Displays the related pricing rule type for the parent rule type.
	Note: It has a link. On clicking the link, the **Pricing Rule Type** screen appears where you can view the details of the respective pricing rule type.
Eligibility Rule Type	Indicates the rule type eligibility for the related pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Rule Type** screen appears where you can view the eligibility details of the respective pricing rule type.

Note: This section appears when the pricing rule type is a primary pricing rule type.

- **Transaction Field Mapping** - This section displays the transaction related data mapped to the pricing rule type. It contains the following fields:

Field Name	Field Description
Source System	Displays the external system from where the transaction data is mapped.
Parameter 1 ... Parameter 4	Displays the parameters mapped for the transactions.
Incurred Date	Displays the date incurred for transaction.
Paid Date	Displays the transaction paid date.
Source of Funds	Displays the source of funds used to make the payment.
Composite	Displays the composite transaction data.
Claim Disposition	Displays the disposition of the claims transaction.
Provider's Tax Identification Number	Displays the tax identification number of the provider.
Member ID	Displays the member ID.
Main Subscriber ID	Displays the customer ID.
Run-in Identifier	Displays the run-in identifier.
Runout Identifier	Displays the runout identifier.
Coverage Start Date	Displays the transaction coverage start date.
Coverage End Date	Displays the transaction coverage end date.
Retroactivity Indicator	Displays information of the retroactivity indicator.

Note: This section appears when the pricing rule type is a primary pricing rule type.

- **Algorithms** - This section displays the algorithms used for the pricing rule type. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event on which the algorithm must be executed. The valid values are: • Account and Price Item Derivation • Account and Price Item Derivation Post-Processing • Accumulation Billable Charge Post-Processing • Accumulation Billable Charge Pre-Processing • Accumulation Post-Processing • Accumulation Pre-Processing • Bill After Date Determination • Bill Group Derivation • Billable Charge Creation Post-Processing • Billable Charge Creation Pre-Processing

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Final Settlement Derivation • New Born Waiver Calculation • Premium Calculation • Pricing Rule Derivation • Pricing Rule Post-Processing • Pricing Rule Pre-Processing • Pricing Rule Proration Amount Calculation • Skip Month Premium Calculation • Transaction Validation
Sequence	Displays the order in which the algorithms for each system event must be executed.
Algorithm	Displays the algorithm. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears with the details of the respective algorithm.

- **Additional Data** - This section displays the additional information about the pricing rule type. It contains the following fields:

Field Name	Field Description
Eligible for Level Funding	Indicates whether the pricing rule type is eligible for level funding or not. The valid values are: • Yes • No
Eligible for Specific Stop-Loss	Indicates whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: • Yes • No **Note:** This field appears when the option selected for the **Pricing Rule Type Category** is **Claim**, **Retention Type Claim Based**, or **Retention Type Enrollment Based**.
Eligible for Minimum Premium Program	Indicates whether the pricing rule type is eligible for minimum premium program or not. The valid values are: • Yes • No **Note:** This field appears when the option selected for the **Pricing Rule Type Category** is
Run-in Identifier Value	Displays the value for run-in identifier.
Runout Identifier Value	Displays the value for runout identifier.

Note: This section does not appear when the pricing rule type category is flat fees.

- **Price Items** - This section displays the price items assigned to the pricing rule type. It contains the following columns:

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>Price Item</td><td>Displays the price item information.

Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.</td></tr>
<tr><td>Rate Option</td><td>On clicking the Add () icon, the following column appears:

<table><tr><th>Column Name</th><th>Column Description</th></tr><tr><td>Rate Option</td><td>Indicates the rate option for the price item.</td></tr></table>
Note: This column does not appear when the pricing rule type category is flat fees.</td></tr>
<tr><td>Bill To Account</td><td>On clicking the Add () icon, the following columns appear:

<table><tr><th>Column Name</th><th>Column Description</th></tr><tr><td>Priority</td><td>Displays the order in which the invoice type was considered while defining a price item.</td></tr><tr><td>Invoice Type</td><td>Displays the invoice type for the price item.</td></tr></table></td></tr>
<tr><td>Eligibility Rule Type</td><td>Indicates the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.

Note: It has a link. On clicking the link, the Rule Type screen appears where you can view the eligibility details of the respective pricing rule type.</td></tr>
</table>

- **Price Item Parameters** - This section displays the price item parameters in the pricing rule type. It contains the following columns:

Column Name	Column Description
Price Item Parameter	Displays the parameter associated with the price item. **Note:** It has a link. On clicking the link, the **Parameter** screen appears where you can view the details of the respective parameter.
Transaction Field	Displays the additional transaction data. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective transaction field. This column does not appear when the pricing rule type category is flat fees.
Eligible for Specific Stop-Loss	Displays the parameter eligible for Specific Stop-Loss when the eligibility checkbox was checked. **Note:** This field appears only when the option selected for the **Pricing Rule Type Category** is **Claim**, **Retention Type Claim Based**, or **Retention Type Enrollment Based**.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Eligible for Level Funding	Displays the parameter eligible for level funding when the eligibility checkbox was checked.

- **Characteristics** - This section displays the pricing rule type characteristics. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Event Management** - This section displays the audit event details. It contains the following columns:

Column Name	Column Description
Audit Event Type	Displays the audit event type which you can use while adding elements for audit in a fully-insured benefit pricing rule type.
Element Type	Indicates the type of audit element for a fully-insured benefit pricing rule type. The valid values are: • Business Object Status • Characteristic • Field
Element Name	Displays the element name for a fully-insured benefit pricing rule type.
Element Value	Displays the value for an element name.

- **Claim Templates** - This section list the pricing rule type for claim template. It contains the following field:

Field Name	Field Description
Claim Template	Indicates the claim template.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Claim-Specific Additional Data** - This section displays the claim specific additional data. It contains the following fields:

Field Name	Field Description
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not.
	Note: It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not.
	Note: It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **ASL-Specific Additional Data** - This section displays the Aggregated Stop-Loss specific additional data. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
ASL Billable Charge Line Type	Displays the Aggregated Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.
ASL Limit Price Item	Displays the Aggregated Stop-Loss limit price item.
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Note: This section appears when the **Business Object** is **Aggregate Stop-Loss (ASL) Pricing Rule Type**.

- **Enrollment-Specific Additional Data** - This section displays the enrollment specific additional data. It contains the following fields:

Field Name	Field Description
Retroactivity Indicator Value	Displays the value for the retroactivity indicator.

Note: This section appears when the **Business Object** is **Retention Type Enrollment Based Pricing Rule Type**.

- **Claim Disposition Details** - This section displays the details of claim disposition. It contains the following columns:

Column Name	Column Description
Claim Disposition	Indicates the claim disposition.
Disposition Mode	Indicates the claim disposition mode. The valid values are: • Align Signage • Zero Out

Note: This section appears when the **Business Object** is **Retention Type Claim Based Pricing Rule Type**.

- **SSL-Specific Additional Data** - This section displays the Specific Stop-Loss additional data. It contains the following fields:

Field Name	Field Description
SSL Billable Charge Line Type	Displays the Specific Stop-Loss billable charge line type.
Domestic Provider Claim Billable Charge Line Type	Displays the claim billable charge line type for domestic provider.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Rule Based Domestic Provider Claim Eligibility Field	Displays the rule based domestic provider for claim eligibility field.
Rule Based Billing Eligibility Field	Displays whether the rule based field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Rule Based Markup or Markdown Eligibility Field	Displays whether the rule based markup or markdown field is eligible for billing or not. **Note:** It has a link. On clicking the link, the **Field** screen appears where you can view the details of the respective field.
Markup or Markdown Billable Charge Line Type	Displays the markup or markdown billable charge line type.

Note: This section appears when the **Business Object** is **Specific Stop-Loss (SSL) Pricing Rule Type**.

- **Billable Charge Line Types** - This section list the billable charge line type. It contains the following column:

Column Name	Column Description
Billable Charge Line Type	Indicates the billable charge line type.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

- **Flat Fees - Specific Additional Data** - This section displays the recurring flat fee that is specific and considered as additional data. It contains the following fields:

Field Name	Field Description
Bill Segment Cancel Reason	Indicates the reason for cancelling the bill segment.
Recurring Fee	Displays whether the recurring flat fee is required or not.
Recurring Method	Indicates the recurring method if recurring fee is required. The valid values are: • Bill Period • Frequency **Note:** This field appears when the checkbox for **Recurring Fee** field is selected.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

This section contains the following sub-section:

- **Bill Periods** - This section displays the bill period for the recurring flat fee. It contains the following column:

Column Name	Column Description
Bill Period	Indicates the bill period.

Note: This section appears when the **Recurring Method** is **Bill Period**.

Copyright © 2025, Oracle and/or its affiliates.

- **Additional Fee Indicator** - This section displays the additional fees which are applicable to one or more line items in the claim pricing rule. It contains the following fields:

Column Name	Column Description
Fee	Indicates the charge type category for the claim pricing rule.
Claim Additional Fee Indicator	Indicates the charge type sub category for the claim pricing rule.

Note: This section appears when the **Business Object** is **Claim Pricing Rule Type**.

- **Minimum Premium Program - Specific Additional Data** -

Column Name	Column Description

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the pricing rule type.
Delete	Used to delete the pricing rule type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the extendable lookup value for pricing rule type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears with the details of the respective business object.

By default, the **Pricing Rule Type** zone does not appear in the **Pricing Rule Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the pricing rule type in the **Pricing Rule Type List** zone.

Claim Pricing

The ASO service provider processes the claims as part of the ASO agreement and pays the claim amount to either hospital or main subscriber. The employer, in turn, reimburses the claim amount to the ASO service provider at the end of the bill period (i.e. typically, every month). Apart from charging the claim amount to the employer, the ASO service provider charges various additional fees, such as fee for network access, fee for non-network access, fee for collection services provided by external vendor, fee for hospital audit performed by external vendor, and so on.

Oracle Revenue Management and Billing allows the ASO service provider to bill the employers for the claim amount and various additional fees. You can use any custom mechanism or the file upload utility in ORMB to upload the claim transactions. The pricing for the claim transactions can be defined using the claim pricing rules. You can define a claim pricing rule at the parent customer and bill group levels. The claim pricing rule at the bill group level takes precedence over the claim pricing rule at the parent customer level. You can define claim pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a claim pricing rule using a claim pricing rule type.

It is the claim pricing rule type which helps the system to determine:

- Business object using which the claim pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types, such as specific stop-loss, aggregate stop-loss, and retention type claim based pricing rule types, will inherit the attributes.

Note: You must select the **Primary** option while defining a claim pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Claim Pricing Rule Type** screen.

- Pricing rule types which are related to claim pricing rule type.
- Transaction fields from where the data for claim, specific stop-loss, aggregate stop-loss, retention type claim based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

Copyright © 2025, Oracle and/or its affiliates.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define claim pricing rules using the claim pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while accumulating specific stop-loss and aggregate stop-loss and while aggregating transactions.
- Claim templates which can be used while defining claim pricing rules using the claim pricing rule type.
- Additional information, such as:
    - Whether the price items included in the claim pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
    - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.
    - Billable charge line type using which you want to create markup or markdown calculation lines.
    - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
    - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.

Once a claim pricing rule type is defined, you can create claim pricing rules using the claim pricing rule type. While defining a claim pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option and claim template which you want to use while defining the claim pricing.
- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Note: You can override the default markup and markdown values which are retrieved from the claim template.

In addition, while defining a claim pricing rule for a bill group, you need to specify the status of the policy for which you want to define the claim pricing rule. You can also specify a pricing group while defining a claim pricing rule for a bill group. If you specify a pricing group while defining a claim pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether you want to markup or markdown the various charges.
- Whether you want to use a flat amount for markup or markdown on overall charges.
- Whether you want to calculate markup or markdown amount based on percentage for each eligible charge.
- Whether a line item is eligible for billing when the billing eligibility for the line item in the claim template is set to **User Defined**.

Once a claim pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Copyright © 2025, Oracle and/or its affiliates.

Defining a Claim Pricing Rule Type

Prerequisites

To define a claim pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeClaim** defined for pricing rule type.
- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

Procedure

To define a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. **Note:** You can create a claim pricing rule type using the **Claim Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Claim Pricing Rule Type** business object.
5. Click **OK**.

   The **Claim Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **Claim Templates** - Used to define the pricing rule type for claim template.
   - **Claim-Specific Additional Data** - Used to specify the claim specific additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Indicate the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.
11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Add claim templates in the claim pricing rule type, if required.
15. Add the claim-specific data in the pricing rule type, if required.
16. Define claim handling fees indicator in the claim pricing rule type, if required.
17. Click **Save**.
    The claim pricing rule type is defined.

Adding Related Pricing Rule Types in a Primary Pricing Rule Type

Prerequisites

To add related pricing rule types in a primary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.

Procedure

To add related pricing rule types in a primary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing a primary pricing rule type.

   Note:

   This section appears when you have chosen the **Primary** from the **Main** section.

   The **Related Pricing Rule Types** section contains the following columns in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) **Note:** This field is required when you are defining a pricing rule type for the related pricing rule type.
Pricing Rule Type	Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Pricing Rule Type** field, the **Pricing Rule Type Search** window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field.	Yes (Conditional) **Note:** This field is required when the corresponding **Sequence** and **Eligibility Rule Type** field is specified for the related pricing rule type.
Eligibility Rule Type	Used to indicate the rule type eligibility for the related pricing rule type. **Note:** The **Eligibility Rule Type** list includes only those rule-types where the rule type eligibility is **Related Pricing Rule Type Eligibility**.	No

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the primary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the primary pricing rule type, click the **Delete** (🗑) icon corresponding to the related pricing rule type.

4. Click **Save**.
   The related pricing rule types are added for the primary pricing rule type.

Defining Transaction Field Mapping in a Primary Pricing Rule Type

Prerequisites

To define the transaction field mapping for a primary pricing rule type, you should have:

- Transaction fields defined in the application

Procedure

To define the transaction field mapping for a primary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are defining a primary pricing rule type.

> **Note:**
> This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

Field Name	Field Description
Source System	Used to specify the external system from where the transaction data is mapped.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Source System** field, the **Transaction Field Search** window appears. On specifying the source system, the description of the source system appears corresponding to the **Source System** field.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Parameter 1.....Parameter 4	Used to specify the parameters mapped for the transaction.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Parameter 1**, **Parameter 2**, **Parameter 3**, **Parameter 4** field, the **Transaction Field Search** window appears. On specifying the parameter, the description of the parameter appears corresponding to the **Parameter 1**, **Parameter 2**, **Parameter 3**, **Parameter 4** field respectively.
Incurred Date	Used to specify the date incurred for transaction.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Incurred Date** field, the **Transaction Field Search** window appears. On specifying the incurred date, the description of the incurred date appears corresponding to the **Incurred Date** field.
Paid Date	Used to specify the transaction paid date.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Paid Date** field, the **Transaction Field Search** window appears. On specifying the paid date, the description of the paid date appears corresponding to the **Paid Date** field.
Source of Funds	Used to specify the source of funds used to make the payment.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Source of Funds** field, the **Transaction Field Search** window appears. On specifying the source of funds, the description of the source of funds appears corresponding to the **Source of Funds** field.
Composite	Used to specify the composite transaction data.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Composite** field, the **Transaction Field Search** window appears. On specifying the composite, the description of the composite appears corresponding to the **Composite** field.
Claim Disposition	Used to specify the disposition of the claims transaction.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Claim Disposition** field, the **Transaction Field Search** window appears. On specifying the claim disposition, the description of the claim disposition appears corresponding to the **Claim Disposition** field.
Provider's Tax Identification Number	Used to specify the tax identification number of the provider.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Provider's Tax Identification Number** field, the **Transaction Field Search** window appears. On specifying the provider's tax identification number, the description of the provider's tax identification number appears corresponding to the **Provider's Tax Identification Number** field.
Member ID	Used to specify the member ID.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Member ID** field, the **Transaction Field Search** window appears. On specifying the member ID, the description of the member ID appears corresponding to the **Member ID** field.
Main Subscriber ID	Used to specify the customer ID.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Main Subscriber ID** field, the **Transaction Field Search** window appears. On specifying the main subscriber ID, the description of the main subscriber ID appears corresponding to the **Main Subscriber ID** field.
Run-in Identifier	Used to specify the run-in identifier.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Run-in Identifier** field, the **Transaction Field Search** window appears. On specifying the run-in identifier, the description of the run-in identifier appears corresponding to the **Run-in Identifier** field.
Runout Identifier	Used to specify the runout identifier.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Runout Identifier** field, the **Transaction Field Search** window appears. On specifying the runout identifier, the description of the runout identifier appears corresponding to the **Runout Identifier** field.
Third Party Identifier	Used to specify the third party identifier to determine that the claim transaction is received from an external source system while defining a claim pricing rule type.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Third Party Identifier** field, the **Transaction Field Search** window appears. On specifying the third party identifier, the description of the third party identifier appears corresponding to the **Third Party Identifier** field.
Coverage Start Date	Used to specify the transaction coverage start date.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Coverage Start Date** field, the **Transaction Field Search** window appears. On specifying the coverage start date, the description of the coverage start date appears corresponding to the **Coverage Start Date** field.
Coverage End Date	Used to specify the transaction coverage end date.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Coverage End Date** field, the **Transaction Field Search** window appears. On specifying the coverage end date, the description of the coverage end date appears corresponding to the **Coverage End Date** field.
Retroactivity Indicator	Used to specify information of the retroactivity indicator.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Retroactivity Indicator** field, the **Transaction Field Search** window appears. On specifying the retroactivity indicator, the description of the retroactivity indicator appears corresponding to the **Retroactivity Indicator** field.
Network Indicator	Used to map to a transaction field which indicates whether the service provider is in network or out of network.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Network Indicator** field, the **Transaction Field Search** window appears. On specifying the network indicator, the description of the network indicator appears corresponding to the **Network Indicator** field.
Covered Charged Amount	Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Covered Charged Amount** field, the **Transaction Field Search** window appears. On specifying the covered charged amount, the description of the covered charged amount appears corresponding to the **Covered Charged Amount** field.
Discount Savings Amount	Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Discount Savings Amount** field, the **Transaction Field Search** window appears. On specifying the discount savings amount, the description of the discount savings amount appears corresponding to the **Discount Savings Amount** field.
Accumulation Only Identifier	Used to map to a transaction field which indicates that the claim transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the claim transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the claim transaction.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Accumulation Only Identifier** field, the **Transaction Field Search** window appears. On specifying the accumulation only identifier, the description of the accumulation only identifier appears corresponding to the **Accumulation Only Identifier** field.
Billing Eligibility Identifier	Used to specify whether the transaction is eligible for billing or not.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Billing Eligibility Identifier** field, the **Transaction Field Search** window appears. On specifying the billing eligibility identifier, the description of the billing eligibility identifier appears corresponding to the **Billing Eligibility Identifier** field.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Transaction Upload Date	Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Transaction Upload Date** field, the **Transaction Field Search** window appears. On specifying the transaction upload date, the description of the transaction upload date appears corresponding to the **Transaction Upload Date** field.
Claim Handling Fees Indicator	Used to specify the claim handling fees which are applicable to one or more line items in the claim pricing rule.
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Claim Handling Fees Indicator** field, the **Transaction Field Search** window appears. On specifying the claim handling fees indicator, the description of the claim handling fees indicator appears corresponding to the **Claim Handling Fees Indicator** field.

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.
   The transaction field mapping is defined for the primary pricing rule type.

Associating Algorithms with a Pricing Rule Type

Prerequisites

To associate algorithms with a pricing rule type, you should have:

- Algorithm and Algorithm Type defined in the application.
- System event defined in the application.

Procedure

To associate algorithms with a pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining a pricing rule type.

   The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event on which the algorithm is executed. The valid values are: • Account and Price Item Derivation • Accumulation Billable Charge Post-Processing • Accumulation Billable Charge Pre-Processing • Accumulation Post-Processing • Accumulation Pre-Processing • Bill After Date Determination • Bill Group Derivation • Final Settlement Derivation • Billable Charge Creation Pre-Processing • Billable Charge Creation Post-Processing • Pricing Rule Post-Processing • Pricing Rule Pre-Processing • Premium Calculation • Transaction Validation	Yes **Note:** This field is required when you are defining an algorithm for the pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
		Note: This field is required when you are defining an algorithm for the pricing rule type.
Algorithm	Used to specify the algorithm.	Yes (Conditional)
	Note: If you select the system event option, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	**Note:** This field is required when you are defining an algorithm for the pricing rule type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to disassociate an algorithm from the pricing rule type, click the **Delete** (🗑) icon corresponding to the algorithm.

4. Click **Save**.
   The algorithms are associated with the pricing rule type.

Defining Additional Data for a Pricing Rule Type

Procedure

To define additional data for a pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining a pricing rule type.

   Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

   The **Additional Data** section contains the following fields:

Field Name	Field Description
Eligible for Level Funding	Used to indicate whether the pricing rule type is eligible for level funding or not. The valid values are: • Yes • No
Eligible for Specific Stop-Loss	Used to whether the pricing rule type is eligible for specific stop-loss or not. The valid values are: • Yes • No **Note:** This field appears when the option selected for the **Pricing Rule Type Category** is **Claim**, **Retention Type Claim Based**, or **Retention Type Enrollment Based**.
Run-in Identifier Value	Used to specify the identifier value to determine that the ancillary transaction is received during the run-in period of the policy.
Third Party Identifier Value	Used to specify the identifier value to determine that the ancillary transaction is received from an external source system.
Accumulation Only Identifier Value	Used to specify the identifier value to determine that the ancillary transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.
Eligible for Write-Off in Post Runout	Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are: • Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which the post runout write-off adjustments must be created.
Rule Based Price Item Eligibility Field	Used to specify the price item eligibility field that satisfies the pricing rule.
Rule Based Related Pricing Rule Type Eligibility Field	Used to specify the pricing rule type eligibility field that satisfies the pricing rule.
Rule Based Eligibility Value	Used to specify the eligibility value that satisfies the pricing rule.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.
   The additional data is defined for the ppricing rule type.

Adding Price Items in a Pricing Rule Type

Prerequisites

To add price items in a pricing rule type, you should have:

- Price items defined in the application
- Rate Options defined in the application
- Invoice Type defined in the application

Procedure

To add price items in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or *e*diting a pricing rule type.

   The **Price Items** section contains the following columns in a grid:

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>Price Item</td><td>Used to specify the price item information.

Note:
On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears.
On specifying the price item, the description of the price item appears corresponding to the Price Items field.</td></tr>
<tr><td>Rate Option</td><td>On clicking the Add (➕) icon, the following column appears in a grid:

<table>
<tr><th>Column Name</th><th>Column Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Rate Option</td><td>Used to indicate the rate option for the price item. The valid values are:
• Aggregate Stop Loss
• Ancillary
• Claims
• Discount Share
• Enrollment Based Retention Per Member Per Month
• Enrollment Based Retention Per Subscriber Per Month
• Flat Dollar Per Claim - Aggregate Daily
• Percentage of Claim - Aggregate Daily
• Retention Claim Percentage Based Service Agreement
• Retention - Aggregate Monthly
• Specific Stop Loss</td><td>Yes (Conditional)

Note: This field is required when the Price Item field is present.</td></tr>
</table>
</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td></td><td>
<table>
<tr><th>Column Name</th><th>Column Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• TFM Claim Weekly</td><td></td></tr>
</table>
Note: The Rate Option column does not appear when the Pricing Rule Type Category is Flat Fees.
</td></tr>
<tr><td>Bill To Account</td><td>On clicking the Add (+) icon, the following columns appear in a grid:
<table>
<tr><th>Column Name</th><th>Column Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes (Conditional)
Note: This field is required when you are defining the invoice type.</td></tr>
<tr><td>Invoice Type</td><td>Used to specify the invoice type for the price item.
Note: On clicking the Search (Q) icon that appears corresponding to the Invoice Type field, the Invoice Type Search window appears.</td><td>No</td></tr>
</table>
</td></tr>
</table>

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from the pricing rule type, click the **Delete** (🗑) icon corresponding to the price item.

4. If you want to define more than one rate option to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a rate option from the price item for the pricing rule type, click the **Delete** (🗑) icon corresponding to the rate option.

5. If you want to define more than one invoice types to the price item for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a invoice type from the price item for the pricing rule type, click the **Delete** (🗑) icon corresponding to the invoice type.

6. Click **Save**.
   The price items are added for the pricing rule type.

Adding a Price Item Parameter in a Pricing Rule Type

Prerequisites

To add a price item parameter in a pricing rule type, you should have:

- Parameters defined in the application
- Transaction field defined in the application
- Price item parameter associated with the price item

Procedure

To add a price item parameter in a pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or *e*diting a pricing rule type.

   The **Price Item Parameters** section contains the following columns in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining the pricing for the price item. **Note:** On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	Yes (Conditional) **Note:** This field is required when you are defining the pricing rule type.
Transaction Field	Used to specify the transaction field from where the data should be retrieved. **Note:** On clicking the **Search** (🔍) icon corresponding to the **Transaction Field** field, the **Transaction Field Search** window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the **Transaction Field**.	Yes (Conditional) **Note:** This field is required once the price item parameter is specified.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used in the accumulation criteria.	No
Eligible for Level Funding	Used to specify whether the price item parameter can be used in level funding or not.	No

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item parameter from the pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.
   A price item parameter is added for the pricing rule type.

Defining a Characteristic for a Pricing Rule Type

Prerequisites

To define the characteristics for a pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining a pricing rule type.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for the pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the pricing rule type.

Adding Claim Templates in a Claim Pricing Rule Type

Prerequisites

To add claim templates in a claim pricing rule type, you should have:

- Claim templates defined in the application

Procedure

To add claim templates in a claim pricing rule type:

1. Ensure that the **Claim Templates** section is expanded when you are defining or editing a pricing rule type.

   The **Claim Templates** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Claim Template	Used to indicate the claim template.	Yes (Conditional) **Note:** This field is required when you are defining a claim template for the pricing rule type.

2. Enter the required details in the **Claim Templates** section.
3. If you want to define more than one claim template for the pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a claim template from the pricing rule type, click the **Delete** (🗑) icon corresponding to the claim template.

4. Click **Save**.
   The claim templates are defined for the pricing rule type.

Adding the Claim-Specific Data in a Pricing Rule Type

Procedure

To add the Claim-Specific additional data in a pricing rule type:

1. Ensure that the **Claim-Specific Additional Data** section is *e*xpanded when you are defining or editing a pricing rule type.

   The **Claim-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Billing Eligibility Field	Used to specify whether the rule based field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Billing Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Billing Eligibility Field** field.	No
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	
Markup or Markdown Billable Charge Line Type	Used to specify the markup or markdown billable charge line type.	No
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge lien type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	

2. Enter the required details in the **Claim-Specific Additional Data** section.
3. Click **Save**.
   The Claim-Specific Additional data is added in the pricing rule type.

Adding Claim Handling Fees Indicator in a Claim Pricing Rule Type

Procedure

To add claim handling fees indicator in a claim pricing rule type:

1. Ensure that the **Claim Handling Fees Indicator** section is expanded when you are defining or editing a claim pricing rule type.

   The **Claim Handling Fees Indicator** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Fee	Used to indicate the charge type category for the claim pricing rule type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required while adding claim handling fees indicator in a claim pricing rule.
Fee Indicator	Used to specify the charge type sub category for the claim pricing rule type.	No

2. Enter the required details in the **Claim Handling Fees Indicator** section.
3. If you want to define more than one claim handling fees indicator for the claim pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a claim handling fees indicator from the claim pricing rule type, click the **Delete** (🗑) icon corresponding to the fee.

4. Click **Save**.
   The claim handling fees indicator is defined for the claim pricing rule type.

Editing a Claim Pricing Rule Type

Prerequisites

Copyright © 2025, Oracle and/or its affiliates.

To edit the claim pricing rule type, you should have:

- Business Object **C1-PricingRuleClaim** defined for pricing rule.
- Pricing rule type category for claim defined in the application

Procedure

To edit a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for claim whose details you want to edit.

   The **Claim Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the claim pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **Claim Templates** - Used to define the pricing rule type for claim template.
   - **Claim-Specific Additional Data** - Used to specify the claim specific additional data.

   The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the pricing rule type business object for claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for claim.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Add, edit, or remove claim templates in the claim pricing rule type, if required.
14. Modify the claim-specific data in the pricing rule type, if required.
15. Click **Save**.
    The changes made to the claim pricing rule type are saved.

Deleting a Claim Pricing Rule Type

Procedure

To delete a claim pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the claim pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the claim pricing rule type.

   Note: You can delete a claim pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete a claim pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The claim pricing rule type is deleted.

Defining a Claim Pricing Rule for a Parent Customer

Prerequisites

To define a claim pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To define a claim pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, *or* **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can create a claim pricing rule using the **Pricing Rule Type** for claim.	

4. Click **OK**.

The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information.
- **Main** - Used to specify basic details about the claim pricing rule.
- **Claim Handling Fees** - Used to define the claim handling fees for the line items in the claim pricing rule.
- **Markup or Markdown Values** - Used to define the markup or markdown values for the line items in the claim pricing rule.
- **Line Items** - Used to associate line items eligible for billing in the claim pricing rule.
- **Characteristics** - Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description
Parent Customer Information	Displays the parent customer information.
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the status of the parent customer for the claim pricing rule. The valid values are: • Active • Inactive • Pending

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Pricing Start Date	Used to specify the pricing rule start date.	Yes
	Note: This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy Start Date**.	
Pricing End Date	Used to specify the pricing rule end date.	Yes
	Note: This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy End Date**.	

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option to define the claim pricing rule for the price item.	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes

5. Enter the required details in the **Main** section.
6. Define the claim handling fees for the line items in a claim pricing rule, if required.

   Note: The **Claim Handling Fees** section appears when an option from **Claim Template** field is selected.
7. Define the markup or markdown values for the line items in a claim pricing rule, if required.

   Note: The **Markup or Markdown Values** section appears when an option from **Claim Template** field is selected.
8. Define line items in a claim pricing rule, if required.

   Note: The **Line Items** section appears when an option from **Claim Template** field is selected.
9. Define characteristics for a claim pricing rule, if required.
10. Click **Save**.
    The claim pricing rule for a parent customer is defined.

Defining the Claim Handling Fees For Line Items in a Claim Pricing Rule

Procedure

To define claim handling fees for the line items in a claim pricing rule:

1. Ensure that the **Claim Handling Fees** section is expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.

   The **Claim Handling Fees** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Fee Type</td><td>Indicates the charge type defined on the line items.</td><td>Not applicable</td></tr>
<tr><td>Fee</td><td>Indicates the type of rate defined on the line items.</td><td>Not applicable</td></tr>
<tr><td>Fee Significance</td><td>Indicates the purpose of the imposing the fees on the line items.</td><td>Not applicable</td></tr>
<tr><td>Fee Applicability</td><td>Displays one or more applicable claim line item on which additional fees are imposed.<table><tr><th>Field Name</th><th>Field Description</th></tr><tr><td>Line Item</td><td>Indicates the line item that you want to use while defining additional fees for the claim pricing rule.</td></tr></table></td><td>Not applicable</td></tr>
<tr><td>Rating Information</td><td>Displays the rating information that you want to use while defining the rate for the line items.<table><tr><th>Field Name</th><th>Field Description</th></tr><tr><td>Rate Type</td><td>Indicates the rate type that you want to use while defining the rate for the line items.</td></tr><tr><td>Rate</td><td>Used to specify the rate that you want to use while defining the rate for the line items.

Note: This field is editable when the Editable checkbox is selected in the Rate column of the Claim Handling Fees section while defining or editing the C1-ExtLookClaimTemplate extendable lookup.</td></tr></table></td><td>No</td></tr>
</table>

2. Enter the required details in the **Claim Handling Fees** section.
3. Click **Save**.
   The claim handling fees for the line items are defined in a claim pricing rule.

Defining the Markup or Markdown Values For Line Items in a Claim Pricing Rule

Procedure

To define the markup or markdown values for the line items in a claim pricing rule:

1. Ensure that the **Markup or Markdown Values** section is expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: • Markdown • Markup • None	No
	Note: This field is disabled when the **Post Run Out Claims** option is selected from the **Claim Template** field of the **Main** section.	
Markup or Markdown Type	Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: • Flat Amount • Percentage	No
	Note: This field is disabled when the **Post Run Out Claims** option is selected from the **Claim Template** field of **Main** section.	
Markup or Markdown Amount	Used to specify the markup or markdown amount.	Yes (Conditional)
	Note: This field is disabled when you select, • the **Post Run Out Claims** option from the **Claim Template** field of the **Main** section. • or the **Percentage** option from the **Markup or Markdown Type** field.	**Note:** This field is required when you select **Flat Amount** option from the **Markup or Markdown Type** field.
Rate Type	Indicates the minimum and maximum markup or markdown defined using the rate type.	Not applicable
Rate Value	Used to specify the value for minimum and maximum markup or markdown using the rate type.	Yes (Conditional)
	Note: This field is editable only when the **Editable** checkbox is selected in the **Rate** column of the **Additional Fees** section while defining or editing the **C1-ExtLookClaimTemplate** extendable lookup.	**Note:** This field is required when you select **Percentage** option from the **Markup or Markdown Type** field.

2. Enter the required details in the **Markup or Markdown Values** section.
3. Click **Save**.
   The markup or markdown values for the line items are defined for the claim pricing rule.

Defining the Markup or Markdown Values for Line Items for Each Rule in a Claim Pricing Rule

Procedure

To define the markup or markdown values for line items for each rule in a claim pricing rule:

1. Ensure that sections for each rule are expanded when you have selected an option from the **Claim Template** field of **Main** section while defining a claim pricing rule.
2. Expand the **Markup or Markdown Values** and **Line Items** sections relevant to each rule.

   The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy. The valid values are: • Markdown • Markup • None	No
Markup or Markdown Type	Used to indicate the markup or markdown value type for claim pricing rule. The valid values are: • Flat Amount • Percentage	No
Markup or Markdown Amount	Used to specify the markup or markdown amount.	Yes (Conditional)
	Note: This field is disabled when you select the **Flat Amount** option from the **Markup or Markdown Type** field.	**Note:** This field is required when you selecting **Percentage** option from the **Markup or Markdown Type** field.

   The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Billing Eligibility	Displays whether the line item is user defined, eligible or not eligible for billing. The valid values are: • Eligible • Not Eligible • User Defined (Default Yes) • User Defined (Default No)	Not applicable
User Defined Billing Option	Used to specify whether the billing option is user defined, eligible or not eligible.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The checkbox for this field is by default checked and disabled for values **Eligible**, **Rule Based**, or **Not Eligible** in the **Billing Eligibility** field. The checkbox for this field is enabled for values **User Defined (Default Yes)** or **User Defined (Default No)** in the **Billing Eligibility**.	
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible	Not applicable
Markup or Markdown Percentage	Used to specify the percentage for markup or markdown value. **Note:** This field is enabled when the **Markup or Markdown Percentage Eligibility** is **Eligible** and when the **Markup or Markdown Type** is **Percentage**.	Yes

3. Enter the required details in the **Markup or Markdown Values** section.
4. Enter the required details in the **Line Items** section.
5. Click **Save**.
   The markup or markdown values for line items for each rule are defined in the claim pricing rule.

Defining a Characteristic for a Claim Pricing Rule

Prerequisites

To define a characteristic for a claim pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a claim pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the claim pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the claim pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	**Note:** This field is required when you are defining a characteristic for the claim pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the claim pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the claim pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the claim pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the claim pricing rule.

How to edit the claim pricing rule for a parent customer	Editing a Claim Pricing Rule of a Parent Customer on page 2907

Editing a Claim Pricing Rule of a Parent Customer

Prerequisites

To edit a claim pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To edit a claim pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.

Copyright © 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *or* policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for claim whose claim pricing rule details you want to edit.

   The **Claim Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Claim Handling Fees** - Used to define the claim handling fees for the lines items in the claim pricing rule.
   - **Markup or Markdown Values** - Used to define the markup or markdown values for the lines items in the claim pricing rule.
   - **Line Items** - Used to associate line items eligible for billing in the claim pricing rule.
   - **Characteristics** - Used to define the characteristics for the claim pricing rule.

   The **Customer Information** section contains the following fields:

Column Name	Column Description
Parent Customer Information	Displays the parent customer information
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the status of the parent customer for the claim pricing rule. The valid values are: • Active • Inactive • Pending

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** The pricing start date cannot be later than the pricing end date.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a parent customer.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are reapplying for a claim template.

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Modify the details in the **Main** section, if required.
6. Modify the claim handling fees specified for the line items in a claim pricing rule, if required.
7. Modify the markup or markdown values for the line items in a claim pricing rule, if required.
8. Modify the line items in a claim pricing rule, if required.
9. Add, edit, or remove characteristics for a claim pricing rule, if required.
10. Click **Save**.
    The changes made to a claim pricing rule for a parent customer are saved.

Viewing a Claim Pricing Rule of a Parent Customer

Procedure

To view a claim pricing rule of a parent customer:

1. Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *or* policy whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the claim pricing rule type whose claim pricing rule parent customer details you want to view.
   The **Claim** screen appears. It contains the following zone:
   - **Claim** - Displays the pricing rule claim details for a parent customer. It contains the following sections:
     - **Main** - Displays the basic details of the claim pricing rule.
     - **Claim Handling Fees** - Displays the claim handling fees defined for the lines items in the claim pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

- **Markup or Markdown Values** - Displays the markup or markdown values for the lines items in the claim pricing rule.
- **Line Items** - Displays the associated line items eligible for billing in the claim pricing rule.
- **Characteristics** - Displays the characteristics defined for the claim pricing rule.

5. View the basic details of claim pricing rule in the **Main** section.
6. View the claim handling fees defined for the line items in the **Claim Handling Fees** section.
7. View the markup or markdown values for the lines items in the **Markup or Markdown Values** section.
8. View the associated line items eligible for billing in the **Line Items** section.
9. View the characteristics of the claim pricing rule in the **Characteristics** section.

Defining a Claim Pricing Rule for a Bill Group

Prerequisites

To define a claim pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.

Copyright © 2025, Oracle and/or its affiliates.

- Policy status defined in the application.
- Price item defined in the application.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To define a claim pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a claim pricing rule for the bill group. **Note:** You can create a claim pricing rule using the **Pricing Rule Type** for claim.	Yes
Pricing Group	Used to indicate the pricing group for the bill group. **Note:** Select the pricing group option when the claim pricing rule has to be defined for a bill group using the pricing group.	No
Policy Status	Used to indicate the policy status for the bill group. The valid values are: • In Force/Active • Post Runout • Runout **Note:** Claim pricing rule cannot be created for **Runout** or **Post Runout** policy statuses, where the policy run out end date is missing.	Yes

4. Click **OK**.

   The **Claim Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Claim Handling Fees** - Used to define the claim handling fees on the lines items for the claim pricing rule.
   - **Markup or Markdown Values** - Used to define the markup or markdown values for the line items in the claim pricing rule.
   - **Line Items** - Used to associate line items eligible for billing in the claim pricing rule.
   - **Characteristics** - Used to define the characteristics for the claim pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

The **Customer Information** section contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the claim pricing rule. The valid values are: • In Force/Active • Post Runout • Runout
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the bill group status for the claim pricing rule. The valid values are: • Active • Inactive • Pending

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** The pricing start date cannot be later than the pricing end date.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a bill group.	Yes (Conditional) **Note:** This field is required when you are reapplying for a claim template.

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

5. Enter the required details in the **Main** section.
6. Define the claim handling fees for the line items in a claim pricing rule, if required.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** The **Claim Handling Fees** section appears when an option from **Claim Template** field is selected.

7. Define the markup or markdown values for the line items in a claim pricing rule, if required.

> **Note:** The **Markup or Markdown Values** section appears when an option from **Claim Template** field is selected.

8. Define line items in a claim pricing rule, if required.

> **Note:** The **Line Items** section appears when an option from **Claim Template** field is selected.

9. Define characteristics for a claim pricing rule, if required.
10. Click **Save**.
    The claim pricing rule for a bill group is defined.

> **Note:** A price list and price assignment is created, the created price list is assigned to the claim pricing rule.

Defining a Claim Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a claim pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Claim template defined in the application.

Procedure

To define a claim pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.

Copyright © 2025, Oracle and/or its affiliates.

The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a claim pricing rule using the **Pricing Rule Type** for claim.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout **Note:** Claim pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out End Date is missing.	Yes

4. Click **OK**.

   The **Claim Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group using pricing group.
- **Main** - Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** - Used to define the markup or markdown values for line items for each rule.
- **Line Items** - Used to associate line items eligible for billing for each rule.
- **Characteristics** - Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Pricing Start Date	Used to specify the pricing rule start date. **Note:** This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy Start Date**.	Yes
Pricing End Date	Used to specify the pricing rule end date. **Note:** This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy End Date**.	Yes
Rate Option	Used to indicate the rate option to define the claim pricing rule for the price item.	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a bill group. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes

5. Enter the required details in the **Main** section.
6. Define markup or markdown values for line items for each rule in a claim pricing rule, if required.

Note: The **Markup or Markdown Values** section appears in the rule section and the rule section appears when an option from **Claim Template** field is selected.

7. Define line items for each rule in a claim pricing rule, if required.

Note: The **Line Items** section appears in the rule section and the rule section appears when an option from **Claim Template** field is selected.

8. Define characteristics for a claim pricing rule, if required.
9. Click **Save**.
   The claim pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the claim pricing rule.

Editing a Claim Pricing Rule of a Bill Group

Prerequisites

To edit a claim pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleClaim** defined for claim pricing rule.
- Rate options defined in the Rate Option (**C1-ExtLookRateType**) extendable lookup.
- Claim template defined in the Claim Template (**C1-ExtLookClaimTemplate**) extendable lookup.
- Line items defined in the Line Item (**C1-ExtLookPricingRuleLineItem**) extendable lookup.

Procedure

To edit a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing Information** tab.
   The **Pricing Information** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Group Information** column, whose pricing details you want to edit.

   The **Claim Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for the bill group.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Claim Handling Fees** - Used to define the claim handling fees on the lines items in the claim pricing rule.
   - **Markup or Markdown Values** - Used to define the markup or markdown values on the lines items in the claim pricing rule.
   - **Line Items** - Used to associate line items eligible for billing.
   - **Characteristics** - Used to define the characteristics for the claim pricing rule.

   The **Customer Information** section contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the claim pricing rule. The valid values are:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• In Force/Active • Post Runout • Runout
Pricing Rule Type	Indicates the pricing rule type.
Status	Indicates the bill group status for the claim pricing rule. The valid values are: • Active • Inactive • Pending

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to edit the pricing.	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** The pricing start date cannot be later than the pricing end date.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while editing the pricing for the price item.	Yes
Claim Template	Used to indicate the claim template of the claim pricing rule for a bill group.	Yes

Note: This section also consists of a button, **Reapply**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the pricing rule.

6. Modify the details in the **Main** section, if required.
7. Modify the claim handling fees specified on the line items in a claim pricing rule, if required.
8. Modify the markup or markdown values on the line items in a claim pricing rule, if required.
9. Modify the line items in a claim pricing rule, if required.
10. Add, edit, or remove the characteristics for a claim pricing rule, if required.
11. Click **Save**.
    The changes made to a claim pricing rule for a bill group are saved.

Viewing a Claim Pricing Rule of a Bill Group

Procedure

To view a claim pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the account, person, or policy whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding *t*o the bill group whose claim pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the claim pricing rule type whose claim pricing rule bill group you want to view.

   The **Pricing Rule** screen appears. It contains the following zone:

   - **Claim** - Displays the pricing rule claim details for a bill group. It contains the following sections:
     - **Main** - Displays the basic details of the claim pricing rule.
     - **Claim Handling Fees** - Displays the claim handling fees specified for the lines items in the claim pricing rule.
     - **Markup or Markdown Values** - Displays the markup or markdown values for the lines items in the claim pricing rule.
     - **Line Items** - Displays the associated line items eligible for billing.
     - **Characteristics** - Displays the characteristics defined for the claim pricing rule.
6. View the basic details of claim pricing rule in the **Main** section.
7. View the claim handling fees specified for the line items in the **Claim Handling Fees** section.
8. View the markup or markdown values for the line items in the **Markup or Markdown Values** section.
9. View the associated line items eligible for billing in the **Line Items** section.
10. View the characteristics of the claim pricing rule in the **Characteristics** section.

Deleting a Claim Pricing Rule of a Bill Group

Procedure

To delete a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the claim pricing rule.
4. Click **OK**.
   The claim pricing rule of a bill group is deleted.

Specific Stop-Loss (SSL) Pricing

Stop-Loss coverage provides liability limits on claims for individuals and for the employer group as a whole. Specific Stop-Loss (SSL) is the form of excess risk coverage that provides protection for the employer against a high claim on any one individual. This is protection against abnormal severity of a single member claim rather than abnormal frequency of claims in total. Specific stop-loss is also known as individual stop-loss. The specific stop-loss is calculated on the claim transactions received for an individual.

You can define a specific stop-loss pricing rule at the parent customer and bill group levels. The specific stop-loss pricing rule at the bill group level takes precedence over the specific stop-loss pricing rule at the parent customer level. You can define specific stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a specific stop-loss pricing rule using a specific stop-loss pricing rule type.

It is the specific stop-loss pricing rule type which helps the system to determine:

- Business object using which the specific stop-loss pricing rule should be created in the system.

Note: The specific stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

Copyright © 2025, Oracle and/or its affiliates.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the specific stop-loss pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define specific stop-loss pricing rules using the specific stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

Note: Ideally, the price item parameters should not be specified in a specific stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating specific stop-loss.

- Additional information, such as:
  - Identifier which helps to determine whether the specific stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
  - SSL billable charge line type using which you want to create specific stop-loss billable charges.
  - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
  - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.

Once a specific stop-loss pricing rule type is defined, you can create specific stop-loss pricing rules using the specific stop-loss pricing rule type. While defining a specific stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss pricing rule must be used for only pricing or for pricing and billing.
- Whether the specific stop-loss must be accumulated at the member or main subscriber level.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - Immediately - If you select this option from the list, the bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next bill cycle.
  - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
  - Never - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.
  - Yearly - If you select this option from the list, the bill after date in the specific stop-loss billable charge is set to the pricing end date.

Copyright © 2025, Oracle and/or its affiliates.

- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the specific stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for specific stop-loss at the member or main subscriber level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the Aggregate Specific Stop-Loss (ASSL) should be calculated during the C1-BCSSL batch run for each bill group
- The ASSL limit indicating that the aggregate specific stop-loss amount beyond this limit will be paid by the insurance company to the ASSL credit account.
- Whether any member, main subscriber, or provider is excluded during the specific stop-loss calculation Different SSL limit (i.e. lasered amount) for a member, main subscriber, or provider who are expected to have higher claim amount.

However, while defining a specific stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the specific stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the accumulation parameters and exclusion and lasering information.

Note: The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the specific stop-loss pricing.
- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss

Note: By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

You can also specify a pricing group while defining a specific stop-loss pricing rule for a bill group. If you specify a pricing group while defining a stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the specific stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- The SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.
- The maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
- Whether line items in a claim pricing rule are eligible for specific stop-loss.

Note: By default, the line items where the pricing rule type category is set to Specific Stop-Loss appear in the Line Items section. If you want to set specific stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of SSL should be excluded while calculating specific stop-loss for domestic provider claim.

Copyright © 2025, Oracle and/or its affiliates.

Once a specific stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Specific Stop-Loss (SSL) Pricing Rule Type

Prerequisites

To define a specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeSSL** defined for pricing rule type.
- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss defined in the application

Procedure

To define a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. **Note:** You can create a specific stop-loss pricing rule type using the **Specific Stop-Loss (SSL) Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Specific Stop-Loss (SSL) Pricing Rule Type** business object.
5. Click **OK**.

   The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the specific stop-loss pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **SSL-Specific Additional Data** - Used to specify the specific stop-loss related additional data.

   The **Main** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Indicate the pricing rule type business object for specific stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.
11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Add the SSL-Specific data in the pricing rule type, if required.
15. Click **Save**.
    The specific stop-loss pricing rule type is defined.

Adding the SSL-Specific Data in a Pricing Rule Type

Procedure

To add the SSL-Specific additional data in a pricing rule type:

1. Ensure that the **SSL-Specific Additional Data** section is expanded when you are *d*efining or editing a pricing rule type.

   The **SSL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SSL Billable Charge Line Type	Used to specify the Specific Stop-Loss billable charge line type. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **SSL Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **SSL Billable Charge Line Type** field.	No
Domestic Provider Claim Billable Charge Line Type	Used to specify the claim billable charge line type for domestic provider.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Domestic Provider Claim Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Domestic Provider Claim Billable Charge Line Type** field.	
Markup or Markdown Billable Charge Line Type	Used to specify the markup or markdown billable charge line type. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	No
Rule Based Billing Eligibility Field	Used to specify whether the rule based field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Billing Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Billing Eligibility Field** field.	No
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Domestic Provider Claim Eligibility Field	Used to specify the rule based domestic provider for claim eligibility field. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field.	No

2. Enter the required details in the **SSL-Specific Additional Data** section.
3. Click **Save**.
   The SSL-Specific Additional data is added in the pricing rule type.

Editing a Specific Stop-Loss (SSL) Pricing Rule Type

Prerequisites

To edit the specific stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleSSL** defined for pricing rule.
- Pricing rule type category for specific stop-loss (SSL) defined in the application

Procedure

To edit the specific stop-loss (SSL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for specific stop-loss (SSL) whose details you want to edit.

   The **Specific Stop-Loss (SSL) Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the specific stop-loss pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type

Copyright © 2025, Oracle and/or its affiliates.

- **Algorithms** - Used to define the algorithms used for the pricing rule type.
- **Additional Data** - Used to specify the additional information about the pricing rule type.
- **Price Items** - Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
- **Characteristics** - Used to define the characteristics for the pricing rule type.
- **SSL-Specific Additional Data** - Used to specify the specific stop-loss additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the pricing rule type business object for specific stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.

Copyright © 2025, Oracle and/or its affiliates.

11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the SSL-Specific data in the pricing rule type, if required.
14. Click **Save**.
    The changes made to the specific stop-loss pricing rule type are saved.

Deleting a Specific Stop-Loss (SSL) Pricing Rule Type

Procedure

To delete a specific stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the specific stop-loss pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the specific stop-loss pricing rule type.

Note: You can delete a specific stop-loss pricing rule type when it is not yet used in the system.

Copyright © 2025, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can delete a specific stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
   The specific stop-loss pricing rule type is deleted.

Defining a Specific Stop-Loss Pricing Rule for a Parent Customer

Prerequisites

To define a specific stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.

Copyright © 2025, Oracle and/or its affiliates.

- Settlement frequency defined in the application.
- Underwriter review defined in the application.

Procedure

To define a specific stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a specific stop-loss pricing rule using the **Pricing Rule Type** for specific stop-loss.	Yes

4. Click **OK**.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the specific stop-loss pricing rule.
   - **Accumulation Parameters** - Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
   - **Run-In Parameters** - Used to define run-in parameters in the run-in period of the policy.
   - **Lasering and Exclusion** - Used to define the lasering and exclusion information to inherit the accumulation parameters.
   - **Characteristics** - Used to define the characteristics for a specific stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Pricing Start Date	Used to specify the pricing rule start date.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy Start Date**.	
Pricing End Date	Used to specify the pricing rule end date. **Note:** This field is enabled when an option from **Price Item** field is selected. By default it displays the **Policy End Date**.	Yes
Rate Option	Used to indicate the rate option which you want to use for defining the specific stop-loss pricing rule for the price item.	Yes
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: • Pricing • Pricing and Billing **Note:** This field is enabled when an option from **Price Item** field is selected.	Yes
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are: • Member • Main Subscriber	
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: • **Immediately** - The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle. • **Manually (At Required Intervals)** - The bill after date specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge. • **Never** - The bill after date specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Yearly** - The bill after date in the specific stop-loss billable charge is set to the pricing end date. **Note:** This field is disabled when you select **Pricing and Billing** option from the **Pricing Rule Usage** field.	
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No	Yes
Claim Template	Used to indicate the claim template to define the claim pricing rule for a parent customer. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in a specific stop-loss pricing rule, if required.

Note: The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

7. Define run-in parameters in a specific stop-loss pricing rule, if required.

Note: The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

8. Define lasering and exclusion information in a specific stop-loss pricing rule, if required.

Note: The **Lasering and Exclusion** section appears when an option from the **Price Item** field is selected.

9. Define characteristics for a specific stop-loss pricing rule, if required.
10. Click **Save**.
    The specific stop-loss pricing rule for a parent customer is defined.

Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule

Procedure

To define accumulation parameters in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have *s*elected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

   The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on which you want to accumulate the specific stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Incurred End Date	Used to specify the incurred end date based on which you want to accumulate the specific stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
SSL Payout Limit	Used to specify the maximum limit defined for specific stop-loss at the member or main subscriber level.	Yes
Paid Start Date	Used to specify the paid start date based on which you want to accumulate the specific stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Paid End Date	Used to specify the paid end date based on which you want to accumulate the specific stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy.	Yes
Settlement Days	Used to indicate the settlement days which helps to calculate the settlement date. **Note:** Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.	Yes
Compute Aggregate SSL (ASSL)	Used to indicate whether the aggregate specific stop-loss (ASSL) should be calculated or not during the **C1-BCSSL** batch run for each bill group. The valid values are: • Yes • No	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
ASSL Credit Count	Used to indicate that the aggregate specific stop-loss amount beyond the ASSL limit will be paid by the insurance company to the ASSL credit account. **Note:** This field is enabled when you select **Yes** option from the **Compute Aggregate SSL (ASSL)** field.	Yes
ASSL Limit	**Note:** This field is enabled when you select **Yes** option from the **Compute Aggregate SSL (ASSL)** field.	Yes

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.
   The accumulation parameters are defined in the specific stop-loss pricing rule.

Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule

Procedure

To define run-in parameters in a specific stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

   The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in a specific stop-loss pricing	No
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the specific stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the specific stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the specific stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the specific stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes

2. Enter the required details in the **Run-In Parameters** section.
3. Click **Save**.
   The run-in parameters are defined in the specific stop-loss pricing rule.

Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule

Prerequisites

To define lasering and exclusion information in a specific stop-loss pricing rule, you should have:

- Lasering or exclusion level defined in the application.
- Exception type defined in the application.

Procedure

To define lasering and exclusion information in a specific stop-loss pricing rule:

1. Ensure that the **Lasering and Exclusion** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining a specific stop-loss pricing rule.

   The **Lasering and Exclusion** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for a specific stop-loss.	Not applicable
Level Identifier	Used to specify the lasering or exclusion level identifier.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Lasering or Exclusion Level	Used to indicate the lasering or exclusion in a specific stop-loss. The valid values are: • Main Subscriber • Member • Provider	Yes
Exception Type	Used to indicate the exception type. The valid values are: • Lasering • Exclusion **Note:** This field displays **Exclusion** option and is disabled on selection of **Provider** option from the **Lasering or Exclusion Level** column.	Yes
Comments	Used to specify the comments.	No
Lasered Amount	Used to specify the lasered amount.	Yes (Conditional)
	Note: This field is disabled when **Exclusion** option is selected from the **Exception Type** column.	**Note:** This column is mandatory when **Lasering** option is selected from the **Exception Type** column.

2. Enter the required details in the **Lasering and Exclusion** section.
3. If you want to define more than one lasering and exclusion information in a specific stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a lasering and exclusion information from the specific stop-loss pricing rule, click the **Delete** (🗑) icon corresponding to the level identifier.

4. Click **Save**.
   The lasering and exclusion information is defined in a specific stop-loss pricing rule.

Defining a Characteristic for a Specific Stop-Loss Pricing Rule

Prerequisites

To define a characteristic for a specific stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a specific stop-loss pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the specific stop-loss pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the specific stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the specific stop-loss pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the specific stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the specific stop-loss pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the specific stop-loss pricing rule.

Editing a Specific Stop-Loss Pricing Rule of a Parent Customer

Prerequisites

To edit a specific stop-loss pricing rule of a parent customer, you should have:

Copyright © 2025, Oracle and/or its affiliates.

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule usage defined in the application.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.

Procedure

To edit a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** (🔗) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to edit.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the specific stop-loss pricing rule.
   - **Accumulation Parameters** - Used to define the accumulation parameters based on which you want to accumulate the specific stop-loss for the transactions which are processed in the run-in or active period of the policy.
   - **Run-In Parameters** - Used to define run-in parameters in the run-in period of the policy.
   - **Lasering and Exclusion** - Used to define the lasering and exclusion information to inherit the accumulation parameters.
   - **Characteristics** - Used to define the characteristics for a specific stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Pricing Start Date	Used to specify the pricing rule start date.	Yes
Pricing End Date	Used to specify the pricing rule end date.	Yes
Rate Option	Indicates the rate option used for defining the specific stop-loss pricing rule for the price item.	Not applicable
Pricing Rule Usage	Used to indicate whether the pricing rule is used only for pricing or for pricing and billing. The valid values are: • Pricing • Pricing and Billing	Yes
SSL Accumulation Level	Used to indicate whether the specific stop-loss must be accumulated at the member or main subscriber level. The valid values are:	

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Member • Main Subscriber	
Settlement Frequency	Indicates the settlement frequency to determine the bill after date. The valid values are: • **Immediately** - The bill after date is not calculated. The specific stop-loss billable charge is billed immediately in the next cycle. • **Manually (At Required Intervals)** - The bill after date specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCSSL** batch is stamped on the specific stop-loss billable charge. • **Never** - • **Yearly** - The bill after date in the specific stop-loss billable charge is set to the pricing end date. **Note:** This field is disabled when you select **Pricing and Billing** option from the **Pricing Rule Usage** field.	Not applicable
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No	Yes

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in a specific stop-loss pricing rule, if required.
6. Modify the run-in parameters in a specific stop-loss pricing rule, if required.
7. Add, edit, or remove the lasering and exclusion information for the specific stop-loss pricing rule, if required.
8. Add, edit, or remove characteristics for the specific stop-loss pricing rule, if required.
9. Click **Save**.
   The changes made to a specific stop-loss pricing rule for a parent customer are saved.

Viewing a Specific Stop-Loss Pricing Rule of a Parent Customer

Procedure

To view a specific stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule parent customer details you want to view.
   The **Pricing Rule** screen appears. It contains the following zone:
   - **Specific Stop-Loss** - Displays the pricing rule specific stop-loss details for a parent customer. It contains the following sections:
     - **Main** - Displays the basic details of the specific stop-loss pricing rule.
     - **Accumulation Parameters** - Displays the accumulation parameters based on which accumulated specific stop-loss for the transactions are processed in the run-in or active period of the policy.
     - **Run-In Parameters** - Displays the run-in parameters in the run-in period of the policy.
     - **Lasering and Exclusion** - Displays the lasering and exclusion information that inherits the accumulation parameters
     - **Characteristics** - Displays the characteristics defined for the specific stop-loss pricing rule.
5. View the basic details of specific stop-loss pricing rule in the **Main** zone.
6. View the accumulated parameters in the **Accumulation Parameters** zone.
7. View the run-in parameters in the **Run-In Parameters** zone.
8. View the lasering and exclusion information in the **Lasering and Exclusion** zone.
9. View the characteristics of the specific stop-loss pricing rule in the **Characteristics** zone.

Defining a Specific Stop-Loss Pricing Rule for a Bill Group

Prerequisites

To define a specific stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To define a specific stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a specific stop-loss pricing rule using the **Pricing Rule Type** for specific stop-loss.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout **Note:** Specific stop-loss pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out end date is missing.	Yes

4. Click **OK**.

The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group.
- **Main** - Used to specify basic details about the specific stop-loss pricing rule.
- **Accumulation Criteria** - Used to define the accumulation criteria in a specific stop-loss pricing rule.
- **Pricing Information** - Used to define stop-loss eligibility for claim line items.
- **Characteristics** - Used to define the characteristics for the specific stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. **Note:** Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field displays the **Policy Start Date**.	
Pricing End Date	Displays the pricing rule end date. **Note:** This field displays the **Policy End Date**.	Not applicable
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item. **Note:** Rate options in this field appears for selection, when you select an option from the **Price Item** field.	Yes
Reinsurer Account	Used to indicate the account of the reinsurer person (associated with the parent customer of the bill group) which you want to use for defining the specific stop-loss pricing rule for the price item.	No

5. Enter the required details in the **Main** section.
6. Define accumulation criteria in a specific stop-loss pricing rule, if required.

Note:

The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Accumulation Criteria** for each rule in a specific stop-loss pricing rule.

7. Define stop-loss eligibility for claim line items, if required.

Note:

The **Pricing Information** section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

You can also define the **Pricing Information** for each rule in a specific stop-loss pricing rule.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.
   The specific stop-loss pricing rule for a bill group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule

Procedure

To define accumulation criteria in a specific stop-loss pricing rule:

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

   The **Accumulation Criteria** section contains the following fields:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Accumulation Group ID</td><td>Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for a specific stop-loss.</td><td>Not applicable</td></tr>
<tr><td>Run-In Maximum Limit</td><td>Used to specify the maximum specific stop-loss limit defined for the member when the claim transactions are received in the run-in period of the policy.
Note: This field is enabled when the start date and end date selected from the Parent Customer's SSL Pricing Rules field of Main section is greater than today's date.</td><td>Yes</td></tr>
<tr><td>SSL Limit</td><td>Used to specify whether the SSL limit indicating that the specific stop-loss amount beyond this limit will be paid by the insurance company.</td><td>Yes</td></tr>
<tr><td>Price Item</td><td>Used to specify the price item information.
Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears.</td><td>No</td></tr>
<tr><td>Price Item Parameters</td><td>This field contains the following columns:
<table>
<tr><th>Column Name</th><th>Column Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Price Item Parameter</td><td>Used to specify multiple parameters based on which you want to determine the price item utilization.</td><td>No</td></tr>
</table></td><td>No</td></tr>
</table>

Field Name	Field Description			Mandatory (Yes or No)
	Column Name	**Column Description**	**Mandatory (Yes or No)**	
		Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Price Item Parameter** field, the **Price Item Parameter Search** window appears.		
	Parameter Value	Used to specify the value of the parameter. **Note:** On selecting the **Price Item Parameter**, the **Search** (🔍) icon appears corresponding to this field, and on clicking the icon, the **Parameter Value Search** window appears.	No	

2. Enter the required details in the **Accumulation Criteria** section.
3. If you want to define more than one price item in the accumulation group, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑) icon corresponding to the price item.

4. If you want to define more than one price item parameters for the price item, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑) icon corresponding to the price item parameter.

5. Click **Save**.
   The accumulation criteria is defined in the specific stop-loss pricing rule.
6. You can define accumulation rules for each rule in a specific stop-loss pricing rule.

> **Note:** You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule

Procedure

To define the stop-loss eligibility for claim line items:

1. Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL Pricing Rules** field of **Main** section while defining or editing a specific stop-loss pricing rule.

   The **Pricing Information** section contains the following section:

   - **Claim Pricing Rule** - Used to indicate the claim pricing rule. It contains the following sub-sections:
     - **Domestic Provider Claims** - Used to specify the domestic provider claim while calculating specific stop-loss.
     - **Markup or Markdown Values** - Used to define the markup or markdown values for billable charge line.
     - **Line Items** - Used to associate line items eligible for billing.

   The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

   On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

   Note: The **Reapply Claim Template** button appears when you are editing a specific stop-loss.

   The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude SSL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the specific stop-loss in percentage to create domestic provider claim calculation lines.	No

   The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup • None	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: • Flat Amount • Percentage	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount. **Note:** This field displays amount when **Markup or Markdown Type** field is **Flat Amount**.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for specific stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.
3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.
5. Click **Save**.
   The claim line items are defined in the specific stop-loss pricing rule.
6. You can define eligibility claim line items for each rule in a specific stop-loss pricing rule.

Note: You can exclude a rule from the specific stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a specific stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To define a specific stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a specific stop-loss pricing rule using the **Pricing Rule Type** for specific stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout **Note:** Specific stop-loss pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out End Date is missing.	Yes

4. Click **OK**.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group using pricing group.
   - **Main** - Used to specify basic details about the claim pricing rule.
   - **Markup or Markdown Values** - Used to define the markup or markdown values for billable charge line for each rule.
   - **Line Items** - Used to associate line items eligible for billing for each rule.
   - **Characteristics** - Used to define the characteristics for the claim pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Runout	
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. **Note:** Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss pricing rule. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the specific stop-loss pricing rule for the price item. **Note:** Rate options in this field appears for selection, when you select an option from the **Price Item** field.	Yes

5. Enter the required details in the **Main** section.
6. Define accumulation criteria for each rule in a specific stop-loss pricing rule pricing rule, if required.

Note: The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

7. Define stop-loss eligibility for claim line items, if required.

Note: The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL Pricing Rules** field is selected.

8. Define characteristics for a specific stop-loss pricing rule, if required.
9. Click **Save**.
   The specific stop-loss pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the specific stop-loss pricing rule.

Editing a Specific Stop-Loss Pricing Rule of a Bill Group

Prerequisites

To edit a specific stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleSSL** defined for specific stop-loss pricing rule.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To edit a specific stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *or* policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for specific stop-loss whose specific stop-loss pricing rule details you want to edit.

   The **Specific Stop-Loss (SSL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Displays the basic details of the specific stop-loss pricing rule.
   - **Accumulation Criteria** - Used to define the accumulation criteria in a specific stop-loss pricing rule.
   - **Pricing Information** - Used to define stop-loss eligibility for claim line items.
   - **Characteristics** - Used to define the characteristics for the specific stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Parent Customer's SSL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the specific stop-loss pricing rule for the price item.	Not applicable
Reinsurer Account	Used to indicate the account of the reinsurer person (associated with the parent customer of the bill group) which you want to use for defining the specific stop-loss pricing rule for the price item. **Note:** You cannot update the reinsurer account when the reinsurer billable charges are already created for the accumulation group. Ideally, you should first cancel the reinsurer charges and then update the reinsurer account in the specific stop-loss pricing rule.	No

4. Modify the accumulation criteria in a specific stop-loss pricing rule, if required.

Note: You can add, edit, or remove price item and its price item parameters in the accumulation criteria for a specific stop-loss, if required.

5. Modify the stop-loss eligibility for claim line items, if required.

Note: This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

6. Add, edit, or remove characteristics for a specific stop-loss pricing rule, if required.
7. Click **Save**.
   The changes made to a specific stop-loss pricing rule for a bill group are saved.

Viewing a Specific Stop-Loss Pricing Rule of a Bill Group

Procedure

To view a claim pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Bill Group ASO Policy Information** zone, click the **Broadcast** (📡) icon corresponding to the bill group whose specific stop-loss pricing rule bill group details you want to view.
5. In the **Bill Group ASO Policy Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the specific stop-loss pricing rule type whose specific stop-loss pricing rule bill group you want to view.
   The **Pricing Rule** screen appears. It contains the following zone:
   - **Specific Stop-Loss** - Displays the pricing rule specific stop-loss details for a bill group. It contains the following sections:
     - **Main** - Displays the basic details of the specific stop-loss pricing rule.
     - **Accumulation Criteria** - Displays the accumulation criteria in a specific stop-loss pricing rule.
     - **Pricing Information** - Displays the stop-loss eligibility for claim line items.
     - **Characteristics** - Displays the characteristics defined for the specific stop-loss pricing rule.
6. View the basic details of specific stop-loss pricing rule in the **Main** section.
7. View the accumulation criteria in the **Markup or Markdown Values** section.
8. View the stop-loss eligibility for claim line items in the **Line Items** section.
9. View the characteristics of the specific stop-loss pricing rule in the **Characteristics** section.

Aggregate Stop-Loss (ASL) Pricing

ASL provides a ceiling on the eligible expenses that an employer would pay, in total for all members or subscribers, during a contract period. The amount that exceeds this limit will be paid by the insurance company.

You can define an aggregate stop-loss pricing rule at the parent customer and bill group levels. The aggregate stop-loss pricing rule at the bill group level takes precedence over the aggregate stop-loss pricing rule at the parent customer level. You can define aggregate stop-loss pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an aggregate stop-loss pricing rule using an aggregate stop-loss pricing rule type. It is the aggregate stop-loss pricing rule type which helps the system to determine:

- Business object using which the aggregate stop-loss pricing rule should be created in the system.

Note: The aggregate stop-loss pricing rule type is not a primary pricing rule type. It inherits the attributes from a claim pricing rule type where it is included as a related pricing rule type.

- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Post-processing algorithm which should be triggered once the aggregate stop-loss pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.

Note: Ideally, the price item parameters should not be specified in an aggregate stop-loss pricing rule type. The price item parameters which are specified in the claim pricing rule type are used for accumulating aggregate stop-loss.

Copyright © 2025, Oracle and/or its affiliates.

- Additional information, such as:
  - Identifier which helps to determine whether the aggregate stop-loss should be calculated for claim transactions which are received during the run-in period of the policy.
  - ASL billable charge line type using which you want to create aggregate stop-loss billable charges.
  - Domestic provider claim billable charge line type using which you want to create domestic provider claim calculation lines.
  - Markup or markdown billable charge line type using which you want to create markup or markdown calculation lines.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the line item is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the domestic provider claim calculation line is eligible for billing.
  - ASL limit price item whose effective retention type enrollment based pricing should be used to calculate the enrollment based limit when the ASL Limit (During Policy Period) or ASL Limit (During Settlement Period) field is set to Enrollment Based Limit, Enrollment Based or Minimum ASL Limit (Whichever is Greater), or Percentage of Enrollment Based Limit in the aggregate stop-loss pricing rule which is defined for a parent customer.

Once an aggregate stop-loss pricing rule type is defined, you can create aggregate stop-loss pricing rules using the aggregate stop-loss pricing rule type. While defining an aggregate stop-loss pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Parent customer's SSL pricing rule from which you want to inherit the settlement frequency, settlement days, accumulation parameters (such as incurred start date, incurred end date, paid start date, and paid end date).

Note: The pricing date range is derived from the parent customer's specific stop-loss pricing rule because the specific stop-loss and aggregate stop-loss pricing rules for a parent customer should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - Immediately - If you select this option from the list, the bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next bill cycle.
  - Manually (At Required Intervals) - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
  - Monthly - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge.
  - Yearly - If you select this option from the list, the bill after date in the aggregate stop-loss billable charge is set to the pricing end date.
- Account in which the aggregate stop-loss amount should be credited.
- Accumulation parameters (such as incurred start date, incurred end date, paid start date, paid end date, etc.) based on which you want to accumulate the aggregate stop-loss for the claim transactions which are processed in the run-in or active period of the policy.
- The maximum limit defined for aggregate stop-loss at the parent customer level.
- Settlement days which helps to calculate the settlement date (i.e. pricing end date, incurred end date, or paid end date whichever is later + settlement days)
- Whether the ASL limit should be set to either of the following during the policy period:
  - Policy Based Limit
  - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
  - Enrollment Based Limit

Copyright © 2025, Oracle and/or its affiliates.

    - Percentage of Enrollment Based Limit
- Whether the ASL limit should be set to either of the following during the settlement period:
    - Policy Based Limit
    - Enrollment Based or Minimum ASL Limit (Whichever is Greater)
    - Enrollment Based Limit

However, while defining an aggregate stop-loss pricing rule for a bill group, you need to specify the following:

- The status of the policy for which you want to define the aggregate stop-loss pricing rule.
- Price item for which you want to define the pricing.
- Parent customer's ASL pricing rule from which you want to inherit the pricing date range.

Note: The pricing date range is derived from the parent customer's aggregate stop-loss pricing rule because the aggregate stop-loss pricing rules for parent customer and bill group should have the same date range.

- Rate option which you want to use while defining the aggregate stop-loss pricing.
- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

Note: By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

You can also specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group. If you specify a pricing group while defining an aggregate stop-loss pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Whether the aggregate stop-loss calculated for the claim transactions which are mapped to the specified price items and price item parameters should be accumulated.
- Whether line items in a claim pricing rule are eligible for aggregate stop-loss.

Note: By default, the line items where the pricing rule type category is set to Aggregate Stop-Loss appear in the Line Items section. If you want to set aggregate stop-loss eligibility for the line items which belong to a particular claim pricing rule, you must select the respective claim pricing rule.

- Whether certain percentage of ASL should be excluded while calculating aggregate stop-loss for domestic provider claim.

Once an aggregate stop-loss pricing rule is defined for a parent customer and bill group, the system creates one price assignment, one price list, and one price list assignment.

Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type

Prerequisites

To define an aggregate stop-loss (SSL) pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeASL** defined for pricing rule type.
- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss defined in the application

Procedure

To define an aggregate stop-loss pricing rule type:

Copyright © 2025, Oracle and/or its affiliates.

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. **Note:** You can create an aggregate stop-loss pricing rule type using the **Aggregate Stop-Loss (ASL) Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Aggregate Stop-Loss (ASL) Pricing Rule Type** business object.
5. Click **OK**.

   The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the aggregate stop-loss pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **ASL-Specific Additional Data** - Used to specify the aggregate stop-loss related additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicate the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Note: Related Pricing Rule Types section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

Note: Transaction Field Mapping section appears when the pricing rule type is primary.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.
11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Add the ASL-Specific additional data in the pricing rule type, if required.
15. Click **Save**.
    The aggregate stop-loss pricing rule type is defined.

Adding the ASL-Specific Data in a Pricing Rule Type

Procedure

To add the ASL-Specific additional data in a pricing rule type:

1. Ensure that the **ASL-Specific Additional Data** section is expanded when you are defining *or* editing a pricing rule type.

   The **ASL-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
ASL Billable Charge Line Type	Used to specify the Aggregate Stop-Loss billable charge line type. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **ASL Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **ASL Billable Charge Line Type** field.	No
Domestic Provider Claim Billable Charge Line Type	Used to specify the claim billable charge line type for domestic provider. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Domestic Provider Claim Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Domestic Provider Claim Billable Charge Line Type** field.	No
Markup or Markdown Billable Charge Line Type	Used to specify the markup or markdown billable charge line type.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	
Rule Based Billing Eligibility Field	Used to specify whether the rule based field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Billing Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Billing Eligibility Field** field.	No
Rule Based Markup or Markdown Eligibility Field	Used to specify whether the rule based markup or markdown field is eligible for billing or not. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	No
Rule Based Domestic Provider Claim Eligibility Field	Used to specify the rule based domestic provider for claim eligibility field. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field.	No
ASL Limit Price Item	Used to specify the Aggregated Stop-Loss limit price item.	No

2. Enter the required details in the **ASL-Specific Additional Data** section.
3. Click **Save**.

Copyright © 2025, Oracle and/or its affiliates.

The ASL-Specific Additional data is added in the pricing rule type.

How to define an aggregate stop-loss (ASL) pricing rule type	Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type on page 2955
How to edit the aggregate stop-loss (ASL) pricing rule type	Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type on page 2960

Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type

Prerequisites

To edit the aggregate stop-loss (ASL) pricing rule type, you should have:

- Business Object **C1-PricingRuleASL** defined for pricing rule.
- Pricing rule type category for aggregate stop-loss (ASL) defined in the application

Procedure

To edit the aggregate stop-loss (ASL) pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for aggregate stop-loss (ASL) whose details you want to edit.

   The **Aggregate Stop-Loss (ASL) Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the aggregate stop-loss pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **ASL-Specific Additional Data** - Used to specify the aggregate stop-loss additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the pricing rule type business object for aggregate stop-loss.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for specific stop-loss.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the primary pricing rule type, if required.
7. Modify the transaction field mapping in the primary pricing rule type, if required.
8. Add, edit, or remove algorithms with the pricing rule type, if required.
9. Modify the additional data for the pricing rule type, if required.
10. Add, edit, or remove pricing items in the pricing rule type, if required.
11. Add, edit, or remove price item parameters in the pricing rule type, if required.
12. Add, edit, or remove characteristics for the pricing rule type, if required.
13. Modify the ASL-Specific data in the pricing rule type, if required.
14. Click **Save**.
    The changes made to the aggregate stop-loss pricing rule type are saved.

Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type

Procedure

To delete an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the aggregate stop-loss pricing rule type.

   Note: You can delete an aggregate stop-loss pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete an aggregate stop-loss pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The aggregate stop-loss pricing rule type is deleted.

Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details

Procedure

To view the details of an aggregate stop-loss pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Broadcast** (ᯤ) icon corresponding to *t*he aggregate stop-loss pricing rule type whose details you want to view.
   The **Pricing Rule Type** zone appears.
5. View the details of the aggregate stop-loss pricing rule type in the **Pricing Rule Type** zone.

Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer

Prerequisites

To define an aggregate stop-loss pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Price item defined in the application.
- Rate option defined in the application.
- Settlement frequency defined in the application.
- Underwriter review defined in the application.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To define an aggregate stop-loss pricing rule for a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *o*r policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing Information** tab and then click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create an aggregate stop-loss pricing rule using the **Pricing Rule Type** for aggregate stop-loss.	Yes

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information.
- **Main** - Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Parameters** - Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
- **Run-In Parameters** - Used to define run-in parameters in the run-in period of the policy.
- **Characteristics** - Used to define the characteristics for an aggregation stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item which you want to define for pricing.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules. **Note:** This field is enabled when you select an option from the **Price Item** field.	Yes
Pricing Start Date	Displays the pricing rule start date. **Note:** By default it displays the **Policy Start Date**.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field displays date when you select the date range from **Parent Customer's SSL or ASL Pricing Rules**.	
Rate Option	Used to indicate the rate option which you want to use for defining the aggregate stop-loss pricing rule for the price item. **Note:** Options appears in this field when you select an option from the **Price Item** field.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: • **Immediately** - The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle. • **Manually (At Required Intervals)** - The bill after date specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge. • **Monthly** - The bill after date specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge. • **Yearly** - The bill after date in the aggregate stop-loss billable charge is set to the pricing end date. **Note:** This field is enabled when you select an option from the **Price Item** field.	Yes
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No **Note:** This field is enabled when you select an option from the **Price Item** field.	Yes
Reinsurer Account	Used to indicate the account of the reinsurer person (associated with the parent customer) which you want to use for defining the aggregate stop-loss pricing rule for the price item.	No

5. Enter the required details in the **Main** section.
6. Define accumulation parameters in an aggregate stop-loss pricing rule, if required.

Note: The **Accumulation Parameters** section appears when an option from the **Price Item** field is selected.

7. Define run-in parameters in an aggregate stop-loss pricing rule, if required.

Note: The **Run-In Parameters** section appears when an option from the **Price Item** field is selected.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.

Copyright © 2025, Oracle and/or its affiliates.

9. Click **Save**.
   The aggregate stop-loss pricing rule for a parent customer is defined.

Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule

Procedure

To define accumulation parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregation stop-loss pricing rule.

   The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays blank field, accumulation group ID is generated when accumulation parameter values are defined for an aggregation stop-loss.	Not applicable
ASL Credit Account	Used to indicate the account in which the aggregate stop-loss amount should be credited. **Note:** This field becomes read when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**.	Not applicable
Incurred Start Date	Displays the incurred start date based on which you want to accumulate the aggregate stop-loss.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**. **Incurred Start Date** is equal to the pricing rule start date.	
Incurred End Date	Displays the incurred end date based on which you want to accumulate the aggregate stop-loss. **Note:** The accumulated aggregated stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**. **Incurred End Date** is equal to the pricing rule end date.	Not applicable
ASL Payout Limit	Used to specify the maximum limit defined for aggregated stop-loss at the member or main subscriber level.	Yes
Paid Start Date	Used to specify the paid start date based on which you want to accumulate the aggregate stop-loss. **Note:** The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**. **Paid Start Date** is equal to the pricing rule start date.	Yes
Paid End Date	Used to specify the paid end date based on which you want to accumulate the aggregate stop-loss.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The accumulated specific stop-loss for claim transactions are processed in the run-in or active period of the policy. This field displays date when you select a date range from the **Parent Customer's SSL or ASL Pricing Rules**. **Paid End Date** is equal to the pricing rule end date.	
Settlement Days	Used to indicate the settlement days which helps to calculate the settlement date. **Note:** Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later added with the settlement days.	Yes
ASL Limit (During Policy Period)	Used to indicate the aggregate stop-loss limit set during the policy period. The valid values are: • Policy Based Limit • Enrollment Based Limit • Percentage of Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)	Yes
ASL Limit (During Settlement Period)	Used to indicate the aggregate stop-loss limit set during the settlement period. The valid values are: • Policy Based Limit • Enrollment Based Limit • Enrollment Based or Minimum ASL Limit (Whichever is Greater)	Yes
Minimum ASL Limit	Used to specify the minimum ASL limit. **Note:** This field is enabled when you select the **Enrollment Based or Minimum ASL Limit (Whichever is Greater)** option from the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** field.	Yes (Conditional) **Note:** This field is required when the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** is **Enrollment Based or Minimum ASL Limit (Whichever is Greater)**.
Percentage of Enrollment Based Limit	Used to specify the percentage of enrollment based limit. **Note:** This field is enabled when you select the **Percentage of Enrollment Based Limit** option from **ASL Limit (During Policy Period)** field.	Yes (Conditional) **Note:** This field is required when the **ASL Limit (During Policy Period)** is **Percentage of Enrollment Based Limit**.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Based Limit	Used to specify the policy based limit.	Yes (Conditional)
	Note: This field is enabled when you select the **Policy Based Limit** option from the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** field.	**Note:** This field is required when the **ASL Limit (During Policy Period)** or **ASL Limit (During Settlement Period)** is **Policy Based Limit**.

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.
   The accumulation parameters are defined in the aggregated stop-loss pricing rule.

Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule

Prerequisites

To define run-in parameters in an aggregate stop-loss pricing rule, you should have:

- Settlement days defined in the application.
- ASL limit during the policy period defined in the application.
- ASL limit during the settlement period defined in the application.

Procedure

To define run-in parameters in an aggregate stop-loss pricing rule:

1. Ensure that the **Run-In Parameters** section is expanded when you have selected an option from the **Price Item** field of **Main** section while defining an aggregate stop-loss pricing rule.

   The **Run-In Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Run-In	Used to specify whether the run-in parameters of the run-in period of policy are to be considered or not in an aggregate stop-loss pricing	No
Accumulation Group ID	Displays blank column, accumulation group ID is generated when accumulation parameter values are defined for an aggregate stop-loss.	Not applicable
Incurred Start Date	Used to specify the incurred start date based on the run-in period of the policy in the aggregate stop-loss.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is enabled when you select the checkbox for the **Run-In** field.	
Incurred End Date	Used to specify the incurred end date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Paid Start Date	Used to specify the paid start date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Paid End Date	Used to specify the paid end date based on the run-in period of the policy in the aggregate stop-loss. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes
Run-In Maximum Limit	Used to specify the maximum limit of the run-in parameters. **Note:** This field is enabled when you select the checkbox for the **Run-In** field.	Yes

2. Enter the required details in the **Run-In Parameters** section.
3. Click **Save**.
   The run-in parameters are defined in the aggregate stop-loss pricing rule.

Defining a Characteristic for an Aggregate Stop-Loss Pricing Rule

Prerequisites

To define a characteristic for an aggregate stop-loss pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for an aggregate stop-loss pricing rule:

Copyright © 2025, Oracle and/or its affiliates.

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the aggregate stop-loss pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the aggregate stop-loss pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the aggregate stop-loss pricing rule, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the aggregate stop-loss pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the aggregate stop-loss pricing rule.

Related Topics

How to define an aggregate stop-loss pricing rule for a parent customer	Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer on page 2963
How to edit the aggregate stop-loss pricing rule for a parent customer	Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer on page 2971

Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

Prerequisites

Copyright © 2025, Oracle and/or its affiliates.

To edit an aggregate stop-loss pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- SSL accumulation level defined in the application.
- Underwriter review defined in the application.
- Values defined for the **Reinsurer Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration.

Procedure

To edit an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to edit.

   The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information.
   - **Main** - Used to specify basic details about the aggregate stop-loss pricing rule.
   - **Accumulation Parameters** - Used to define the accumulation parameters based on which you want to accumulate the aggregate stop-loss for the transactions which are processed in the run-in or active period of the policy.
   - **Run-In Parameters** - Used to define run-in parameters in the run-in period of the policy.
   - **Characteristics** - Used to define the characteristics for an aggregate stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer Information	Displays the parent customer information	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item defined for pricing.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rules.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option used for defining the aggregate stop-loss pricing rule for the price item.	Not applicable
Settlement Frequency	Indicates the settlement frequency to determine the bill after date. The valid values are: • **Immediately** - The bill after date is not calculated. The aggregate stop-loss billable charge is billed immediately in the next cycle.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Manually (At Required Intervals)** - The bill after date specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge. • **Monthly** - The bill after date specified in the **Manual Settlement Date** parameter while executing the **C1-BCASL** batch is stamped on the aggregate stop-loss billable charge. • **Yearly** - The bill after date in the aggregate stop-loss billable charge is set to the pricing end date.	
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No	Yes
Reinsurer Account	Used to indicate the account of the reinsurer person (associated with the parent customer) which you want to use for defining the aggregate stop-loss pricing rule for the price item. **Note:** You cannot update the reinsurer account when the reinsurer billable charges are already created for the accumulation group. Ideally, you should first cancel the reinsurer charges and then update the reinsurer account in the aggregate stop-loss pricing rule.	No

4. Modify the details in the **Main** section, if required.
5. Modify the accumulation parameters in an aggregate stop-loss pricing rule, if required.
6. Modify the run-in parameters in an aggregate stop-loss pricing rule, if required.
7. Add, edit, or remove characteristics for the aggregate stop-loss pricing rule, if required.
8. Click **Save**.
   The changes made to an aggregate stop-loss pricing rule for a parent customer are saved.

Viewing an Aggregate Stop-Loss Pricing Rule of a Parent Customer

Procedure

To view an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding *t*o the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule parent customer details you want to view.
   The **Pricing Rule** screen appears. It contains the following zone:
   - **Aggregate Stop-Loss** - Displays the pricing rule aggregate stop-loss details for a parent customer. It contains the following sections:
     - **Main** - Displays the basic details of the aggregate stop-loss pricing rule.
     - **Accumulation Parameters** - Displays the accumulation parameters based on which accumulated aggregate stop-loss for the transactions are processed in the run-in or active period of the policy.
     - **Run-In Parameters** - Displays the run-in parameters in the run-in period of the policy.
     - **Characteristics** - Displays the characteristics defined for the aggregate stop-loss pricing rule.
5. View the basic details of aggregate stop-loss pricing rule in the **Main** zone.
6. View the accumulated parameters in the **Accumulation Parameters** zone.
7. View the run-in parameters in the **Run-In Parameters** zone.
8. View the characteristics of the aggregate stop-loss pricing rule in the **Characteristics** zone.

Deleting an Aggregate Stop-Loss Pricing Rule of a Parent Customer

Procedure

To delete an aggregate stop-loss pricing rule of a parent customer:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *o*r policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Parent Customer Pricing Rules** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the aggregate stop-loss pricing rule type whose aggregate stop-loss pricing rule you want to delete.
   A message appears confirming whether you want to delete the aggregate stop-loss pricing rule.
4. Click **OK**.

Copyright © 2025, Oracle and/or its affiliates.

The aggregate stop-loss pricing rule is deleted.

Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group

Prerequisites

To define an aggregate stop-loss pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create an aggregate stop-loss pricing rule using the **Pricing Rule Type** for aggregate stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	No
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Aggregate stop-loss pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out end date is missing.	

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group.
- **Main** - Used to specify basic details about the aggregate stop-loss pricing rule.
- **Accumulation Criteria** - Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
- **Pricing Information** - Used to define stop-loss eligibility for claim line items.
- **Characteristics** - Used to define the characteristics for the aggregate stop-loss pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. **Note:** Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date. **Note:** This field displays the **Policy Start Date**.	Not applicable
Pricing End Date	Displays the pricing rule end date. **Note:** This field displays the **Policy End Date**.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item. **Note:** Rate options in this field appears for selection, when you select an option from the **Price Item** field.	Yes

5. Enter the required details in the **Main** section.
6. Define accumulation criteria in an aggregate stop-loss pricing rule, if required.

> **Note:**
>
> The **Accumulation Criteria** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.
>
> You can also define the **Accumulation Criteria** for each rule in an aggregate stop-loss pricing rule.

7. Define stop-loss eligibility for claim line items, if required.

> **Note:**
>
> The **Pricing Information** section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.
>
> You can also define the **Pricing Information** for each rule in an aggregate stop-loss pricing rule.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.
   The aggregate stop-loss pricing rule for a bill group is defined.

> **Note:** A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule

Procedure

To define accumulation criteria in an aggregate stop-loss pricing rule:

Copyright © 2025, Oracle and/or its affiliates.

1. Ensure that the **Accumulation Criteria** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

   The **Accumulation Criteria** section contains the following fields:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Accumulation Group ID</td><td>Displays blank field, accumulation group ID is generated when accumulation criteria values are defined for an aggregate stop-loss.</td><td>Not applicable</td></tr>
<tr><td>Price Item</td><td>Used to specify the price item information.

Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item field, the Price Item Search window appears.</td><td>No</td></tr>
<tr><td>Price Item Parameters</td><td>This field contains the following columns:
<table>
<tr><th>Column Name</th><th>Column Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Price Item Parameter</td><td>Used to specify multiple parameters based on which you want to determine the price item utilization.

Note: On clicking the Search (🔍) icon that appears corresponding to the Price Item Parameter field, the Price Item Parameter Search window appears.</td><td>No</td></tr>
<tr><td>Parameter Value</td><td>Used to specify the value of the parameter.

Note:
On selecting the Price Item Parameter, the Search (🔍) icon appears corresponding to this field, and on clicking the icon, the Parameter Value Search window appears.</td><td>No</td></tr>
</table></td><td>No</td></tr>
</table>

2. Enter the required details in the **Accumulation Criteria** section.
3. If you want to define more than one price item in the accumulation group, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item from the accumulation group, click the **Delete** (🗑) icon corresponding to the price item.

4. If you want to define more than one price item parameters for the price item, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item parameter from the price item, click the **Delete** (🗑) icon corresponding to the price item parameter.

Copyright © 2025, Oracle and/or its affiliates.

5. Click **Save**.
   The accumulation criteria is defined in the aggregate stop-loss pricing rule.
6. You can define accumulation rules for each rule in an aggregate stop-loss pricing rule.

> **Note:** You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule

Procedure

To define claim pricing rules in an aggregate stop-loss pricing rule:

1. Ensure that the **Pricing Information** section is expanded when you have selected an option from the **Parent Customer's SSL or ASL Pricing Rules** field of **Main** section while defining or editing an aggregate stop-loss pricing rule.

   The **Pricing Information** section contains the following section:

   - **Claim Pricing Rule** - Used to indicate the claim pricing rule. It contains the following sub-sections:
     - **Domestic Provider Claims** - Used to specify the domestic provider claim while calculating aggregate stop-loss.
     - **Markup or Markdown Values** - Used to define the markup or markdown values for billable charge line.
     - **Line Items** - Used to associate line items eligible for billing.

   The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for pricing.	No

   On clicking the **Reapply Claim Template** button to the right side of the **Effective Claim Pricing Rule** field you can reapply for claim pricing rule.

> **Note:** The **Reapply Claim Template** button appears when you are editing an aggregate stop-loss.

   The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude ASL (Percentage)	Used to specify the domestic provider claim billable charge line excluding the aggregate stop-loss in percentage to create domestic provider claim calculation lines.	No

   The **Markup or Markdown Values** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Indicates the pricing strategy. The valid values are: • Markdown • Markup • None	Not applicable
Markup or Markdown Type	Indicates the markup or markdown value type for claim line items. The valid values are: • Flat Amount • Percentage	Not applicable
Markup or Markdown Amount	Displays the markup or markdown amount. **Note:** This field displays amount when **Markup or Markdown Type** field is **Flat Amount**.	Not applicable

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Eligible for Specific Stop-Loss	Used to specify whether the line item is eligible or not eligible for aggregate stop-loss.	No
Markup or Markdown Percentage Eligibility	Displays whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible	Not applicable
Markup or Markdown Percentage	Displays the percentage for markup or markdown value.	Not applicable

2. Select the required details in the **Claim Pricing Rule** section, if required.
3. Enter the required details in the **Domestic Provider Claims** section, if required.
4. Select the required details in the **Line Items** section, if required.
5. Click **Save**.
   The claim line items are defined in the aggregate stop-loss pricing rule.
6. You can define eligibility claim line items for each rule in an aggregate stop-loss pricing rule.

Note: You can exclude a rule from the aggregate stop-loss pricing by selecting the **Exclude Rule** checkbox.

Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define an aggregate stop-loss pricing rule for a bill group using a pricing group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.
- Pricing rule type defined in the application.
- Pricing group defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Rate option defined in the application.

Procedure

To define an aggregate stop-loss pricing rule for a bill group using a pricing group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *or* policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create an aggregate stop-loss pricing rule using the **Pricing Rule Type** for aggregate stop-loss.	Yes
Pricing Group	Used to indicate the pricing group.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Aggregate stop-loss pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out End Date is missing.	

4. Click **OK**.

The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group using pricing group.
- **Main** - Used to specify basic details about the claim pricing rule.
- **Markup or Markdown Values** - Used to define the markup or markdown values for billable charge line for each rule.
- **Line Items** - Used to associate line items eligible for billing for each rule.
- **Characteristics** - Used to define the characteristics for the claim pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Group	Displays the pricing group.	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item. **Note:** Once an option is selected for this field, the field appears disabled.	Yes
Parent Customer's SSL or ASL Pricing Rules	Used to indicate the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule. **Note:** This field is enabled for selection when an option from **Price Item** field is selected.	Yes
Pricing Start Date	Displays the pricing rule start date.	Yes
Pricing End Date	Displays the pricing rule end date.	Yes
Rate Option	Used to indicate the rate option to define the aggregate stop-loss pricing rule for the price item.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Rate options in this field appears for selection, when you select an option from the **Price Item** field.	

5. Enter the required details in the **Main** section.
6. Define accumulation criteria for each rule in an aggregate stop-loss pricing rule pricing rule, if required.

Note: The **Accumulation Criteria** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

7. Define stop-loss eligibility for claim line items, if required.

Note: The **Pricing Information** section appears in the rule section and the rule section appears when an option from **Parent Customer's SSL or ASL Pricing Rules** field is selected.

8. Define characteristics for an aggregate stop-loss pricing rule, if required.
9. Click **Save**.
   The aggregate stop-loss pricing rule for a bill group using a pricing group is defined.

Note: A price list and price assignment is created, the price list created is assigned to the aggregate stop-loss pricing rule.

Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group

Prerequisites

To edit an aggregate stop-loss pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleASL** defined for aggregate stop-loss pricing rule.

Procedure

To edit an aggregate stop-loss pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.

Copyright © 2025, Oracle and/or its affiliates.

3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for aggregate stop-loss whose aggregate stop-loss pricing rule details you want to edit.

   The **Aggregate Stop-Loss (ASL) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Displays the basic details of the aggregate stop-loss pricing rule.
   - **Accumulation Criteria** - Used to define the accumulation criteria in an aggregate stop-loss pricing rule.
   - **Pricing Information** - Used to define stop-loss eligibility for claim line items.
   - **Characteristics** - Used to define the characteristics for the aggregate stop-loss pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Parent Customer's SSL or ASL Pricing Rules	Indicates the pricing date range derived from the parent customer's specific stop-loss or aggregate stop-loss pricing rule.	Not applicable
Pricing Start Date	Displays the pricing rule start date.	Not applicable
Pricing End Date	Displays the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option of the aggregate stop-loss pricing rule for the price item.	Not applicable

4. Modify the accumulation criteria in an aggregate stop-loss pricing rule, if required.

   Note: You can add, edit, or remove price item and its price item parameters in the accumulation criteria for an aggregate stop-loss, if required.

5. Modify the stop-loss eligibility for claim line items, if required.

   Note: This section also consists of a button, **Reapply Claim Template**, on clicking the button a message occurs indicating that updating the claim template will reset all the default fields on the claim pricing rule.

6. Add, edit, or remove characteristics for an aggregate stop-loss pricing rule, if required.
7. Click **Save**.
   The changes made to an aggregate stop-loss pricing rule for a bill group are saved.

Retention Type Claim Based Pricing

The ASO service provider provides claim administrative services and pays the claim amount on behalf of the employer. Different charges, such as administration fees, network fees, managed care fees, are typically charged as retention type claim based fees. The system enables you to charge a flat or percentage based retention type claim based fee. The rate schedule defined in the respective rate option indicates whether the retention type claim based fee is a flat fee or percentage based fee. The system considers the claim line items for calculating the percentage based retention type claim based fee when the **Retention Claim Based Percentage Calculation** field is set to **Yes**.

You can define a retention type claim based pricing rule at the parent customer and bill group levels. The retention type claim based pricing rule at the bill group level takes precedence over the retention type claim based pricing rule at the parent customer level. You can define retention type claim based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type claim based pricing rule using a retention type claim based pricing rule type. It is the retention type claim based pricing rule type which helps the system to determine:

- Business object using which the retention type claim based pricing rule should be created in the system.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving account and price item for a transaction.

Note: You must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Algorithm which should be triggered while determining the bill after date.

Copyright © 2025, Oracle and/or its affiliates.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.

- Post-processing algorithm which should be triggered once the claim pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type claim based pricing rules using the retention type claim based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type claim based pricing rules.
- Additional information, such as:
  - Whether the price items included in the retention type claim based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
  - Identifiers which help to determine whether the claim transaction is received during the run-in period of the policy.
  - Indicates how the claim must be disposed. If the **Claim Disposition** field in the transaction is set to Yes, you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

Note: If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

Once a retention type claim based pricing rule type is defined, you can create retention type claim based pricing rules using the retention type claim based pricing rule type. While defining a retention type claim based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type claim based pricing.
- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

In addition, while defining a retention type claim based pricing rule for a bill group, you need to specify the status of the policy for which you want to define the retention type claim based pricing rule. You can also specify a pricing group while defining a retention type claim based pricing rule for a bill group. If you specify a pricing group while defining a retention type claim based pricing rule for a bill group, you will have to define the following details for each rule defined in the pricing group:

- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type claim based pricing rule type.

- Flat or percentage based fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat or percentage based fee for different set of price item parameters combination. For example, you can define one flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper and another flat fee for the claim transactions where health coverage is set to Dental and submission type is set to Paper.

Copyright © 2025, Oracle and/or its affiliates.

Once a retention type claim based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

Defining a Retention Type Claim Based Pricing Rule Type

Prerequisites

To define a retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Business Object **C1-PricingRule** defined for pricing rule.
- Pricing rule type category for the retention type claim defined in the application.

Procedure

To define a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type claim based pricing rule type	Yes
	Note: You can create a retention type claim based pricing rule type using the **Claim Pricing Rule Type** business object.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Retention Type Claim Based Pricing Rule Type** business object.
5. Click **OK**.

   The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the retention type claim based pricing rule type.
   - **Algorithms** - Used to associate the algorithms with the retention type claim based pricing rule type.
   - **Additional Data** - Used to specify the additional information about the retention type claim based pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the retention type claim based pricing rules using the retention type claim based pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
   - **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule type.
   - **Claim Disposition Details** - Used to define the disposition details of the claims transaction.

   The **Main** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the retention type claim based pricing rule type.	Yes
Description	Used to specify the description for the retention type claim based pricing rule type.	Yes
Detailed Description	Used to specify the additional information about the retention type claim based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the retention type claim based pricing rule business object. The valid value is: • Retention Type Claim Based Pricing Rule	Yes
Business Object	Indicate the retention type claim based pricing rule type business object using which you are defining the retention type claim based pricing rule type.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type. **Note:** You must not select the **Primary** option while defining the retention type claim based pricing rule type.	Not applicable
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: • Retention Type Claim Based	Yes

6. Enter the required details in the **Main** section.
7. Ensure that **Primary** option is not selected when you are defining a retention type claim based pricing rule type.
8. Associate the following algorithms with the retention type claim based pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Pricing Rule Post Processing	C1-PRCRETPOS	C1-PRCRETPOS	Retention Claim Based - Post Processing
Transaction Validation	C1-RETCLMVAL	C1-RETCLMVAL	Retention Claim Based - Validation

9. Define additional data for the retention type claim based pricing rule type.
10. Add the required price items for retention type claim based pricing rule type.
11. Add price item parameters for the retention type claim based pricing rule type.
12. Define characteristics for the retention type claim based pricing rule type.
13. Add the claim disposition details for retention type claim based pricing rule type.
14. Click **Save**.
    The retention type claim based pricing rule type is defined.

Adding Claim Based Disposition Details in a Pricing Rule Type

Prerequisites

To add claim based disposition details in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Claim Disposition and Disposition Mode defined in the application.

Procedure

To add claim based disposition details in a pricing rule type:

1. Ensure that the **Claim Disposition Details** section is expanded when you are defining *or* editing for a primary pricing rule type.

   The **Claim Disposition Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Disposition	Used to specify the type of claim disposition.	No
Disposition Mode	Used to specify the mode of claim disposition.	No

2. Enter the required details in the **Claim Disposition Details** section.

Copyright © 2025, Oracle and/or its affiliates.

Note:

If the **Claim Disposition** field in the transaction is set to **Yes,** you must set the disposition mode to **Align Signage**. However, if the **Claim Disposition** field in the transaction is set to **No**, you must set the disposition mode to **Zero Out**.

If the **Disposition Mode** field is set to **Align Signage**, the claim based fees is positive for positive claims and the claim based fees is negative for negative claims. However, if the **Disposition Mode** field is set to **Zero Out**, the claim based fees for the negative claims is set to zero (0).

3. If you want to define more than one claim disposition entry for the primary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a claim disposition entry for the primary pricing rule type, click the **Delete** (🗑) icon corresponding to the related pricing rule type.

Editing a Retention Type Claim Based Pricing Rule Type

Prerequisites

To edit the retention type claim based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeClaim** defined for the retention type claim based pricing rule type.
- Business Object **C1-PrcRuleTypRetClaimBase** defined for the retention type claim based pricing rule type.
- Pricing rule type category for the retention type claim based pricing rule type defined in the application

Procedure

To edit a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2025, Oracle and/or its affiliates.

2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for claim whose details you want to edit.

   The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the retention type claim based pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the retention type claim based pricing rule type.
   - **Additional Data** - Used to specify the additional information about the retention type claim based pricing rule type.
   - **Price Items** - Used to define the price items assigned to the retention type claim based pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the retention type claim based pricing rule type.
   - **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule type.
   - **Claim Templates** - Used to define the pricing rule type for retention type claim based template.
   - **Claim-Specific Additional Data** - Used to specify the retention type claim based specific additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the retention type claim based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type claim based pricing rule type. The valid values are: • Active • Inactive	
Primary	Used to select the checkbox if the retention type claim based pricing rule type is primary.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type claim based pricing rule type. The valid values are: • Aggregate Stop-Loss • Claim • Discounted Agreement • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type claim.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the retention type claim based pricing rule type, if required.
7. Modify the transaction field mapping in the retention type claim based pricing rule type, if required.
8. Add, edit, or remove algorithms with the retention type claim based pricing rule type, if required.
9. Modify the additional data for the retention type claim based pricing rule type, if required.
10. Add, edit, or remove pricing items in the retention type claim based pricing rule type, if required.
11. Add, edit, or remove price item parameters in the retention type claim based pricing rule type, if required.
12. Add, edit, or remove characteristics for the retention type claim based pricing rule type, if required.
13. Add, edit, or remove claim templates in the retention type claim based pricing rule type, if required.
14. Modify the claim-specific data in the retention type claim based pricing rule type, if required.
15. Click **Save**.
    The changes made to the Retention Type Claim Based Pricing Rule Type are saved.

Deleting a Retention Type Claim Based Pricing Rule Type

Procedure

To delete a retention type claim based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the retention type claim based pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the retention type claim based pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** You can delete a retention type claim based pricing rule type when it is not yet used in the system.

> **Tip:** Alternatively, you can delete a retention type claim based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
   The retention type claim based pricing rule type is deleted.

Defining a Retention Type Claim Based Pricing Rule for a Parent Customer

Prerequisites

To define a retention type claim based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type claim based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
   The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the parent customer whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values is: • Retention Type Claim Based Pricing Rule	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.

5. Select the required pricing rule type in the respective field.
6. Click **OK**.
   The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays information about the parent customer for whom you are defining the retention type claim based pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type claim based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type claim based pricing rule.

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the retention type claim based pricing. The valid value is: • Admin Fee	Yes
Pricing Start Date	Used to specify the start date from when the retention type claim based pricing will be effective for the price item.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The pricing start date cannot be later than the pricing end date.	**Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the retention type claim based pricing will be effective for the price item. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item. The valid value is: • Flat Dollar Per Claim - Agg Daily On selecting an option from the **Rate Option** field, following fields appear in a grid:	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** icon, the **Price Item Parameter Search** screen appears. On specifying the price item, the description of the price item appears corresponding to the **Price Item Parameter** field.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon appears corresponding to the **Parameter Value** field. On clicking the **Search** icon, the **Predefined Parameter Value Search** screen appears. On specifying the price item, the description of the price item appears corresponding to the **Parameter Value Search** field.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you want to define more than one price item parameter to the price item in a retention type claim based pricing rule type, click the **Add** (+) icon. However, if you want to remove a price item parameter from the price item in a retention type claim based pricing rule type, click the **Delete** (🗑) icon corresponding to the **Price Item Parameter** field.	
Fee	Used to specify the fee for the price item parameter.	

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer.

7. Add the required details in the main and characteristics section.
8. Click **Save**.
   The retention type claim based pricing rule for a parent customer is defined.

Note:

If the approval workflow group setting is set as **Active** for the parent customer, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular parent customer. The retention type claim based pricing rule for a parent customer is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Claim Based Pricing Rule

Prerequisites

To define a characteristic for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining *o*r editing a retention type claim based pricing rule.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a parent customer.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a characteristic for retention type claim based pricing rule.
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a parent customer. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type claim based pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type claim based pricing rule.

Deleting a Retention Type Claim Based Pricing Rule of a Parent Customer

Procedure

To delete a retention type claim based pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° Information** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the parent customer whose pricing details you want to view.
   The **Person** tab in the **Customer 360° Information** screen.
3. Click the **Pricing** tab. It consists of the following zones:
   The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the retention type claim based pricing rule that you want to delete.
   A message appears confirming whether you want to delete the retention type claim based pricing rule type of a parent customer.
5. Click **OK**.
   The retention type claim based pricing rule of a parent customer is deleted.

Defining a Retention Type Claim Based Pricing Rule for a Bill Group

Prerequisites

To define a retention type claim based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, **C1-RETCLMVAL**, **C1-PRRTPREP**, **C1-PRCRLTY** defined for retention type claim based pricing rule type.

Note: A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type claim based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer. **Note:** If you are defining the pricing rule type for the parent customer, then the person type will be **Parent Customer**.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type claim based pricing rule. **Note:** Select the **Retention Type Claim Based Pricing Rule Type** option, as the pricing rule type.	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Select the pricing group option when the retention type claim based pricing rule has to be defined for a bill group using the pricing group.	
Policy Status	Used to indicate the policy status for the bill group. The valid values are: • In Force/Active • Post Runout • Runout	Yes (Conditional) **Note:** Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.
7. Click **OK**.
   The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following sections:

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: • Admin Fee	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Used to specify the rate option for the price item. The valid value are: • Flat Dollar Per Claim - Agg Daily	Yes
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

   - **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for a bill group.

Copyright © 2025, Oracle and/or its affiliates.

8. Add the required details in the main and characteristics section.
9. Click **Save**.
   The retention type claim based pricing rule for a bill group is defined.

> **Note:**
>
> If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Claim Based Pricing Rule

Prerequisites

To define a characteristic for a retention type claim based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a *r*etention type claim based pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: • Eligible for Billing **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type claim based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type claim based pricing rule.

2. Enter the required details in the **Characteristics** section.

Copyright © 2025, Oracle and/or its affiliates.

3. If you want to define more than one characteristic for retention type claim based pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from retention type claim based pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type claim based pricing rule.

Editing a Retention Type Claim Based Pricing Rule of a Bill Group

Prerequisites

To edit a retention type claim based pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PricingRuleRetTypeClaim** defined for retention type claim based pricing rule type.
- Algorithms **C1-APPTXNBAS**, **C1-PRCRETPOS**, and **C1-RETCLMVAL** defined for retention type claim based pricing rule type.

> **Note:** A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type claim based pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

   The **Retention Type Claim Based Pricing Rule** screen appears. It contains the following zones:

   - **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Displays the status of the policy.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a bill group.

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.	Yes (Conditional)
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	No
Fee	Indicates the fee for the price item parameter.	Not applicable

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. *I*t contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a bill group.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a bill group. The valid values are: • Eligible for Billing	No
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a bill group.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the Characteristic Value field. On clicking the **Search** icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	

6. Click **Save**.

   The **Approval Transaction Information** pop-up window appears with the Approval Transaction ID that is generated by the application.
7. Click **OK**
   The retention type claim based pricing rule of a bill group is edited.

> **Note:**
>
> If the approval workflow group setting is set as **Active** for the bill group, for which the retention type claim based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type claim based pricing rule for a bill group is defined, once the approval transaction is approved.

Retention Type Enrollment Based Pricing

Some of the charges, such as stop-loss premium, administrative fees, etc. are typically calculated based on the number of enrollments. In addition, the ASL limit can also be based on the number of enrollments for the month. These charges can be calculated using the retention type enrollment based pricing rules.

Copyright © 2025, Oracle and/or its affiliates.

You can define a retention type enrollment based pricing rule at the parent customer and bill group levels. The retention type enrollment based pricing rule at the bill group level takes precedence over the retention type enrollment based pricing rule at the parent customer level. You can define retention type enrollment based pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a retention type enrollment based pricing rule using a retention type enrollment based pricing rule type. It is the retention type enrollment based pricing rule type which helps the system to determine:

- Business object using which the retention type enrollment based pricing rule should be created in the system.
- Whether it is the primary pricing rule type.

Note: You must select the **Primary** option while defining a retention type enrollment based pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Retention Type Enrollment Based Pricing Rule Type** screen. At present, the system does not allow you to define any pricing rule type which inherits the attributes from the retention type enrollment based pricing rule type.

- Transaction fields from where the data for retention type enrollment based processing should be retrieved.
- Algorithm which should be triggered while validating a transaction.

Note: An algorithm type for validating a transaction is not shipped from the product. You need to create a custom algorithm type, if required.

- Algorithms which should be triggered while deriving bill group, account, and price item for a transaction.

Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event. Similarly, you must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered while determining the bill after date.

Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event. The **C1_BAFTDRV** algorithm sets the bill after date to the end date of the aggregation schedule which is specified in the respective rate option. For example, if the aggregation schedule is monthly, the bill after date is set to the last day of the month.

- Post-processing algorithm which should be triggered once the retention type enrollment based pricing rule is derived.

Note: A post-processing algorithm type is not shipped from the product. You need to create a custom algorithm type, if required.

- Price items for which you can define retention type enrollment based pricing rules using the retention type enrollment based pricing rule type.
- Rate options that you can use while defining the pricing for a price item.
- Different type of account to which the price item should be billed based on the specified priority.
- Price item parameters which you can use while defining retention type enrollment based pricing rules.
- Additional information, such as:
    - Whether the price items included in the retention type enrollment based pricing rule type are used while accumulating specific stop-loss and aggregate stop-loss.
    - Retroactivity indicator which helps to determine whether the enrollment transaction is retro or non-retro transaction.

Once a retention type enrollment based pricing rule type is defined, you can create retention type enrollment based pricing rules using the retention type enrollment based pricing rule type. While defining a retention type enrollment based pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the retention type enrollment based pricing.

Copyright © 2025, Oracle and/or its affiliates.

- Whether you want to exempt the retrospective transactions while calculating retention type enrollment based fees.
- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Price item parameters based on which you want to define the pricing.

Note: You can only use those price item parameters which are included in the respective retention type enrollment based pricing rule type.

- Flat fee which you want to charge for a price item and price item parameters combination.

The system enables you to define different flat fee for different set of price item parameters combination. For example, you can define one flat fee for the enrollment transactions where health coverage class is set to Medical and health coverage tier is set to Family and another flat fee for the enrollment transactions where health coverage class is set to Dental and health coverage tier is set to Employee.

Once a retention type enrollment based pricing rule is defined for a parent customer and bill group, the system creates one price assignment for each set of price item parameters combination, one price list, and one price list assignment.

Defining a Retention Type Enrollment Based Pricing Rule Type

Prerequisites

To define a retention type retention based pricing rule type, you should have:

- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Business Object **C1-PricingRuleRetTypeEnroll** defined for pricing rule.
- Pricing rule type category for the retention type enrollment defined in the application.

Procedure

To define a retention type retention based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the retention type enrollment based pricing rule type. **Note:** You can create a retention type enrollment based pricing rule type using the **Claim Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Retention Type Claim Based Pricing Rule Type** business object.
5. Click **OK**.

Copyright © 2025, Oracle and/or its affiliates.

The **Retention Type Claim Based Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the retention type enrollment based pricing rule type.
- **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the enrollment based parent pricing rule type.
- **Transaction Field Mapping** - Used to specify the transaction related data mapped to the enrollment based pricing rule type.
- **Algorithms** - Used to define the algorithms used for the enrollment based pricing rule type.
- **Additional Data** - Used to specify the additional information about the enrollment based pricing rule type.
- **Price Items** - Used to define the price items assigned to the enrollment based pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the enrollment based pricing rule type.
- **Characteristics** - Used to define the characteristics for the enrollment based pricing rule type.
- **Enrollment-Specific Additional Data** - Used to specify the enrollment specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the pricing rule business object. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule	Yes
Business Object	Indicate the retention type enrollment based pricing rule type business object for the claim.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Aggregate Stop-Loss • Claim • Discount Arrangement • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

Copyright © 2025, Oracle and/or its affiliates.

> **Note: Related Pricing Rule Types** section appears when the pricing rule type is primary.

8. Define the transaction field mapping in the primary pricing rule type, if required.

> **Note: Transaction Field Mapping** section appears when the pricing rule type is primary.

9. Associate algorithms with the enrollment based pricing rule type, if required.
10. Define additional data for the enrollment based pricing rule type, if required.
11. Add pricing items in the enrollment based pricing rule type, if required.
12. Add price item parameters in the enrollment based pricing rule type, if required.
13. Define characteristics for the enrollment based pricing rule type, if required.
14. Add the enrollment-specific data, if required.
15. Click **Save**.
    The retention type enrollment based pricing rule type is defined.

Adding the Enrollment Specific Data in a Pricing Rule Type

Prerequisites

To add enrollment specific data in a pricing rule type, you should have:

- Pricing rule types defined in the application.
- Account and Price Item Derivation Algorithm defined in the application.
- Bill Group Derivation Algorithm defined in the application.

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To add enrollment specific data in a pricing rule type in a pricing rule type:

1. Ensure that the **Enrollment-Specific Additional Data** section is expanded when you are *a*dding enrollment specific data for a primary pricing rule type.

   The **Enrollment-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Retroactivity Indicator Value	Used to specify that retroactivity indicator value should not be a part of enrollment based pricing rule type. **Note:** Set the retroactivity indicator value to **R** if the field should be excluded from enrollment based pricing rule types.	No

2. Enter the required details in the **Enrollment-Specific Additional Data** section.
3. Click **Save**.
   The enrollment-specific data has been added in the pricing rule type.

Editing a Retention Type Enrollment Based Pricing Rule Type

Prerequisites

To edit the retention type enrollment based pricing rule type, you should have:

- Business Object **C1-PricingRuleRetTypeEnroll** defined for the retention type enrollment based pricing rule type.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for the retention type enrollment based pricing rule type.
- Pricing rule type category for retention type enrollment based pricing rule type defined in the application

Procedure

To edit a retention type enrollment based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type for claim whose details you want to edit.

   The **Retention Type Enrollment Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the retention type enrollment based pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the retention type enrollment based pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type.
   - **Algorithms** - Used to define the algorithms used for the retention type enrollment based pricing rule type.
   - **Additional Data** - Used to specify the additional information about the retention type enrollment based pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

- **Price Items** - Used to define the price items assigned to the retention type enrollment based pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the retention type enrollment based pricing rule type.
- **Characteristics** - Used to define the characteristics for the retention type enrollment based pricing rule type.
- **Claim Templates** - Used to define the pricing rule type for the retention type enrollment based pricing rule type.
- **Claim-Specific Additional Data** - Used to specify the retention type enrollment based specific additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Related Transaction Business Object	Used to indicate the retention type claim based pricing rule type business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule	Yes
Business Object	Displays the retention type enrollment based pricing rule type business object for retention type claim.	Not applicable
Status	Used to indicate the status of the retention type enrollment based pricing rule type. The valid values are: • Active • Inactive	
Primary	Used to select the checkbox if the retention type enrollment based pricing rule type is primary.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the retention type enrollment based pricing rule type. The valid values are: • Aggregate Stop-Loss • Claim • Discounted Agreement • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss	Yes

Tip: Alternatively, you can click the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for retention type enrollment.

5. Modify the details in the **Main** section, if required.
6. Add, edit, or remove the related pricing rule types in the retention type enrollment based pricing rule type, if required.

Copyright © 2025, Oracle and/or its affiliates.

7. Modify the transaction field mapping in the retention type enrollment based pricing rule type, if required.
8. Add, edit, or remove algorithms with the retention type enrollment based pricing rule type, if required.
9. Modify the additional data for the retention type enrollment based pricing rule type, if required.
10. Add, edit, or remove pricing items in the retention type enrollment based pricing rule type, if required.
11. Add, edit, or remove price item parameters in the retention type enrollment based pricing rule type, if required.
12. Add, edit, or remove characteristics for the retention type enrollment based pricing rule type, if required.
13. Modify the enrollment-specific data in the retention type enrollment based pricing rule type, if required.
14. Click **Save**.
    The changes made to the Retention Type Enrollment Based Pricing Rule Type are saved.

Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer

Prerequisites

To define a retention type enrollment based pricing rule for a parent customer, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

> **Note:** A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type enrollment based pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
   The **Search Result** screen appears.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: • Retention Type Enrollment Based Pricing Rule	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.

5. Select the required pricing rule type in the respective field.
6. Click **OK**.
   The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays information about the parent customer for whom you are defining the retention type enrollment based pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the retention type enrollment based pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the retention type enrollment based pricing rule.

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: • Administrative Services Fees • Administrative Services Fees (No Mandatory Parameters) • AS_RET_ENRB • Consultant Oversight Fees	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item. **Note:** The pricing start date cannot be later than the pricing end date.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the retention type enrollment based pricing will be effective for the price item. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to specify the rate option for the price item. The valid values are: • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims	Yes

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>
• Percentage of Claim - Agg Daily
• Flat Dollar Per Claim - Agg Daily
On selecting an option from the Rate Option field, following fields appear in a grid:
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Price Item Parameter</td><td>Used to specify multiple price item parameters based on which you want to determine the price item utilization.</td><td>No</td></tr>
<tr><td></td><td>Note:
The Search (🔍) icon appears corresponding to the Price Item Parameter field. On clicking the Search icon, the Price Item Parameter Search screen appears.
On specifying the price item, the description of the price item appears corresponding to the Price Item Parameter field.</td><td></td></tr>
<tr><td>Parameter Value</td><td>Used to specify multiple price item parameter values based on which you want to determine the price item utilization.</td><td>No</td></tr>
<tr><td></td><td>Note:
The Search (🔍) icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search screen appears.
On specifying the price item, the description of the price item appears corresponding to the Parameter Value Search field.</td><td></td></tr>

Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type claim based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining *or* editing a retention type enrollment based pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: • Eligible for Billing **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type enrollment based pricing rule.

Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group

Prerequisites

To define a retention type enrollment based pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** and **C1-PricingRuleType**, and **C1-PricingGroup** defined for the pricing rule.
- Business Object **C1-PolicyBOStatusReason** defined for the policy status.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

> **Note:** A custom algorithm type must be created to validate a transaction.

Procedure

To define a retention type enrollment based pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) *i*con corresponding to the person *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you are defining the pricing rule type for the parent customer, then the person type will be **Parent Customer**.	
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a retention type enrollment based pricing rule. **Note:** Select the **Retention Type Enrollment Based Pricing Rule** option, as the pricing rule type.	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group. **Note:** Select the pricing group option when the retention type enrollment based pricing rule has to be defined for a bill group using the pricing group.	No
Policy Status	Used to indicate the policy status for the bill group. The valid values are: • In Force/Active • Post Runout • Runout	Yes (Conditional) **Note:** Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.
7. Click **OK**.

The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: • Administrative Services Fees • Administrative Services Fees (No Mandatory Parameters) • AS_RET_ENRB • Consultant Oversight Fees	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rate Option	Used to specify the rate option for the price item. The valid values are: • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims • Percentage of Claim - Agg Daily • Flat Dollar Per Claim - Agg Daily	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the name of the pricing group rule code. **Note:** If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description.	No
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	No
Fee	Used to specify the fee for the price item parameter.	No

- **Characteristics** - Used to define the characteristics for the retention type enrollment based pricing rule for a bill group.

8. Add the required details in the main and characteristics section.
9. Click **Save**.
   The retention type enrollment based pricing rule for a bill group is defined.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type enrollment based pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a *r*etention type claim based pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: • Eligible for Billing **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for retention type enrollment based pricing rule, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from retention type enrollment based pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type enrollment based pricing rule.

Editing a Retention Type Enrollment Based Pricing Rule of a Bill Group

Prerequisites

To edit a retention type enrollment based pricing rule of a bill group, you should have:

- Business Object **C1-PricingRule** defined for the pricing rule.
- Business Object **C1-PrcRuleTypRetEnrollBased** defined for retention type enrollment based pricing rule type.
- Algorithms **C1-APPTXNBAS** defined for retention type enrollment based pricing rule type.

> **Note:** A custom algorithm type must be created to validate a transaction.

Procedure

To edit a retention type enrollment based pricing rule of a bill group:

1. Search for a bill group in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.

   The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following zones:

   - **Customer Information** - Displays the basic information about the customer. It contains the following fields:

Column Name	Column Description
Bill Group Information	Displays the bill group name.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Displays the status of the policy.
Pricing Group	Displays the pricing group information.
Pricing Rule Type	Displays the pricing rule type that is chosen to define the retention type claim based pricing rule of a bill group.

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item for which you want to define the pricing.	Not applicable
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item.	No
Rate Option	Indicates the rate option for the price item.	Not applicable
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the name of the pricing group rule code. **Note:** If a particular bill group has a single or multiple pricing group rule codes then all of those pricing group rule codes are shown along with their respective description.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	No
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization. **Note:** The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	No
Fee	Indicates the fee for the price item parameter.	Not applicable

Note: If you want to define more than one price item parameter information, click the **Add** (+) icon. However, if you want to remove more than one price item or price item bundle, click the Delete (🗑) icon corresponding to the price item parameter.

- **Characteristics** - Used to define the characteristics for the retention type claim based pricing rule for parent customer. *I*t contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the effective date from when the characteristic is effective for the retention type claim based pricing rule of a bill group.	No
Characteristic Type	Used to indicate the characteristic type for the retention type claim based pricing rule of a bill group. The valid values are: • Eligible for Billing	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the characteristic value for the retention type claim based pricing rule of a bill group. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the Characteristic Value field. On clicking the **Search** icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	No

Note: If you want to define more than one characteristic, click the **Add** (+) icon. However, if you want to remove more than one characteristic, click the Delete (🗑) icon corresponding to the characteristic.

6. Click **Save**.

Note:

If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group is defined, once the approval transaction is approved.

7. Click **OK**
   The retention type enrollment based pricing rule of a bill group is edited.

Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group

Procedure

To define a retention type enrollment based pricing rule for a bill group using pricing group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following sections:

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule **Note:** Select the **Retention Type Enrollment Based Pricing Rule** option, as the pricing rule type.	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group for the bill group. **Note:** You must select a pricing group for the bill group on which a retention type enrollment based pricing rule is to be defined.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate the policy status for the bill group. The valid values are: • In Force/Active • Post Runout • Runout	Yes (Conditional) **Note:** Policy Status is required once the Pricing Rule Type is selected.

6. Select the appropriate fields in the **Main** section.
7. Click **OK**.
   The **Retention Type Enrollment Based Pricing Rule** screen appears. It contains the following sections:

   - **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the pricing. The valid value are: • Administrative Services Fees • Administrative Services Fees (No Mandatory Parameters) • AS_RET_ENRB • Consultant Oversight Fees	Yes
Pricing Start Date	Used to specify the start date from when the pricing will be effective for the price item.	Yes (Conditional) **Note:** Pricing Start Date should be entered if Pricing End Date has been mentioned.
Pricing End Date	Used to specify the end date till when the pricing will be effective for the price item. **Note:** If the pricing end date is mentioned, once the price parameters and fees have been already entered, then the price parameter value and fee field values are reset.	No
Rate Option	Used to specify the rate option for the price item. The valid values are: • Flat Dollar Per Claim - Agg Daily • Retention - Aggregate Monthly • Claims • Percentage of Claim - Agg Daily • Flat Dollar Per Claim - Agg Daily	Yes
Exempt Retro Transactions	Used to indicate that retro transactions should not be considered for calculation purposes.	No
Pricing Group Rule Code	Displays the code of the pricing group rule.	Not applicable
Description	Displays the description of the pricing group rule.	Not applicable
Price Item Parameter	Used to specify multiple price item parameters based on which you want to determine the price item utilization.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Price Item Parameters** screen appears.	
Parameter Value	Used to specify multiple price item parameter values based on which you want to determine the price item utilization.	No
	Note: The Search (🔍) icon does appear corresponding to this field. On clicking the **Search** icon, the **Parameter Value Search** screen appears.	
Fee	Used to specify the fee for the price item parameter.	No

Note: If you want to define more than one price item parameter information, click the **Add** (+) icon. However, if you want to remove more than one price item or price item bundle, click the Delete (🗑) icon corresponding to the price item parameter.

- **Characteristics** - Used to define the characteristics for the Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.

8. Add the required details in the main and characteristics section.
9. Click **Save**.
   The retention type claim based pricing rule for a bill group using a pricing group is defined.

   If the approval workflow group setting is set as **Active** for the bill group, for which the retention type enrollment based pricing rule is defined then an approval transaction is created for that particular bill group. The retention type enrollment based pricing rule for a bill group using a pricing group is defined, once the approval transaction is approved.

Defining a Characteristic for a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group

Prerequisites

To define a characteristic for a retention type enrollment based pricing rule for a bill group using a pricing group, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a retention type enrollment based pricing rule for a bill group using a pricing group:

1. Ensure that the **Characteristics** section is expanded when you are defining *or* editing a retention type claim based pricing rule for a bill group using a pricing group.

   The **Characteristics** section contains the following columns in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify from when the pricing rule will be effective.	Yes
Characteristic Type	Used to indicate the characteristic type. The valid values are: • Eligible for Billing **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule for a bill group using a pricing group.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for retention type enrollment based pricing rule for a bill group using a pricing group.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the retention type enrollment based pricing rule for a bill group using a pricing group.

Flat Fee Pricing

The Administrative Services Only (ASO) provider would like to charge one-time or recurring flat fee to the self-funded employer. Oracle Revenue Management and Billing enables you to process and bill such one-time and recurring charges to the bill group. The system enables you to define one-time or recurring flat fee for a price item. You can define recurring flat fee based on bill period or frequency. The one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee can be defined using the respective flat fee pricing rules. You can only define one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rules for a bill group.

You can define the flat fee pricing rules for bill groups from the **Customer 360° Information** screen. You can define a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule using the respective flat fee pricing rule type. It is the flat fee pricing rule type which helps the system to determine:

- Business object using which the flat fee pricing rule should be created in the system.

  Note: You must not select the **Primary** option while defining a one-time flat fee, bill period based recurring flat fee, and frequency based recurring flat fee pricing rule type.

- Price items for which you can define the flat fee pricing rules.
- Rate options that you can use while defining the pricing for the price item.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional flat fee specific data, such as:
  - Bill segment cancel reason which you want to use when the one-time or recurring flat fee bill segment is canceled due to change in the flat fee amount.
  - Whether the pricing rule type is defined for one-time flat fee or recurring flat fee.
  - Recurring method which indicates that the system should create recurring flat fee charge based on bill period or frequency. This information is required when you are defining a recurring flat fee pricing rule type.
  - Bill period that you can use while defining a bill period based recurring flat fee pricing rule. This information is required when you are defining a bill period based recurring flat fee pricing rule type.

Once a one-time flat fee pricing rule type is defined, you can define one-time flat fee pricing rules using the one-time flat fee pricing rule type. While defining a one-time flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the one-time flat fee pricing rule is applicable. Note that you cannot define a one-time flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the one-time flat fee billable charge.
- Date which you want to specify as the start and end dates in the one-time flat fee billable charge.
- Billable charge line type using which you want to create the one-time flat fee billable charge.
- Bill after date which you want to stamp on the one-time flat fee billable charge.
- Flat fee amount for which you want to create the one-time flat fee billable charge.
- Override account when you want to create the one-time flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the one-time flat fee pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

Once a bill period based recurring flat fee pricing rule type is defined, you can define bill period based recurring flat fee pricing rules using the bill period based recurring flat fee pricing rule type. While defining a bill period based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the bill period based recurring flat fee pricing rule is applicable. Note that you cannot define a bill period based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the bill period based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the bill period based recurring flat fee billable charge.
- Billable charge line type using which you want to create the bill period based recurring flat fee billable charge.
- Bill period using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the bill period based recurring flat fee billable charge.
- Override account when you want to create the bill period based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the bill period based recurring flat fee pricing rule type.

Once a frequency based recurring flat fee pricing rule type is defined, you can define frequency based recurring flat fee pricing rules using the frequency based recurring flat fee pricing rule type. While defining a frequency based recurring flat fee pricing rule for a bill group, you need to specify the following:

- The policy status in which the frequency based recurring flat fee pricing rule is applicable. Note that you cannot define a frequency based recurring flat fee pricing rule for the post runout period of the policy.
- Price item for which you want to create the frequency based recurring flat fee billable charge.
- Dates which you want to specify as the start and end dates in the frequency based recurring flat fee billable charge.
- Billable charge line type using which you want to create the frequency based recurring flat fee billable charge.
- Frequency using which the recurring bill segments should be created in the system.
- Flat fee amount for which you want to create the frequency based recurring flat fee billable charge.
- Override account when you want to create the frequency based recurring flat fee billable charge on a particular account. If you do not specify the bill to override account, the system will derive the account using the priority defined for the price item in the frequency based recurring flat fee pricing rule type.

Once a one-time flat fee, bill period based recurring flat fee, or frequency based recurring flat fee pricing rule is defined for a bill group, the system creates the one-time or recurring flat fee billable charge, respectively. The system does not create any price assignment, price list, or price list assignment in case of flat fee pricing.

Defining a One-Time Flat Fee Pricing Rule Type

Prerequisites

To define a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleTypeFlatFees** defined for pricing rule type.
- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To define a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create the pricing rule type. **Note:** You can create a one-time flat fee pricing rule type using the **Flat Fee Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Flat Fee Pricing Rule Type** business object.
5. Click **OK**.

The **Flat Fee Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the flat fee pricing rule type.
- **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
- **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
- **Algorithms** - Used to define the algorithms used for the pricing rule type.
- **Additional Data** - Used to specify the additional information about the pricing rule type.
- **Price Items** - Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
- **Characteristics** - Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** - Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** - Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Inactive	
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** This field is not enabled for selection if the **Pricing Rule Type Category** is **Flat Fees**.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the primary pricing rule type, if required.

> **Note:**
>
> **Related Pricing Rule Types** section appears when the pricing rule type is primary.
>
> This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define the transaction field mapping in the primary pricing rule type, if required.

> **Note:**
>
> **Transaction Field Mapping** section appears when the pricing rule type is primary.
>
> This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

9. Associate algorithms with the pricing rule type, if required.
10. Define additional data for the pricing rule type, if required.

> **Note:** This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

11. Add pricing items in the pricing rule type, if required.
12. Add price item parameters in the pricing rule type, if required.
13. Define characteristics for the pricing rule type, if required.
14. Define billable charge line types in the flat fees pricing rule type, if required.
15. Add the flat fees - specific additional data in the pricing rule type, if required.

> **Note:** This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

16. Click **Save**.
    The one-time flat fee pricing rule type is defined.

Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type

Procedure

To add the one-time flat fee specific data in a pricing rule type:

1. Ensure that the **Flat Fees - Specific Additional Data** section is expanded when you are defining or editing a pricing rule type.

   The **Flat Fees - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the bill segment cancel reason.	No
Recurring Fee	Used to specify whether the recurring flat fee or one-time flat fee is required. **Note:** This field cannot be edited.	No
Recurring Method	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency. The valid values are: • Bill Period • Frequency	Yes (Conditional) **Note:** This field is required when you are specifying whether the recurring flat fee is based on bill period or frequency.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the checkbox for **Recurring Fee** field. This field cannot be edited.	

2. Enter the required details in the **Flat Fees - Specific Additional Data** section.
3. Click **Save**.
   The Flat Fees - Specific Additional data is added in the pricing rule type.

Editing a One-Time Flat Fee Pricing Rule Type

Prerequisites

To edit a one-time flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To edit a one-time flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *P*ricing rule type whose details you want to edit.

   The **Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the flat fee pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **Billable Charge Line Types** - Used to define the pricing rule type for billable charge line type.

Copyright © 2025, Oracle and/or its affiliates.

- **Flat Fees - Specific Additional Data** - Used to specify the flat fees specific for additional data.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** This field is not enabled for selection if the **Pricing Rule Type Category** is **Flat Fees**.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees	Yes

Tip: Alternatively, you can edit the details of a one-time flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

Defining a One-Time Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a one-time flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a one-time flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a one-time flat fee pricing rule using the **Pricing Rule Type** for flat fees.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Yes

4. Click **OK**.

   The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Used to specify basic details about the one-time flat fee pricing rule.
   - **Characteristics** - Used to define the characteristics for the one-time flat fee pricing rule.

   The **Customer Information** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Date	Used to specify the flat fee charge date. **Note:** By default this field displays the policy start date or policy runout start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No
Bill After Date	Used to specify the bills after the specific date.	No
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you select the billable charge line type in the **Billable Charge Line Type** field.	Yes
Bill To Account Override	Used to specify the account to which the bill is override. **Note:** On clicking the **Search** (🔍) icon, the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Bill To Account Override** field.	Yes

5. Enter the required details in the **Main** section.

Copyright © 2025, Oracle and/or its affiliates.

6. Define characteristics for a one-time flat fee pricing rule, if required.
7. Click **Save**.
   The one-time flat fee pricing rule for a bill group is defined.

Note: A billable charge is created and assigned to the one-time flat fee pricing rule.

Defining a Characteristic for a One-Time Flat Fee Pricing Rule

Prerequisites

To define a characteristic for a one-time flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a one-time flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the one-time flat fee pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the one-time flat fee pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the one-time flat fee pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the one-time flat fee pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the one-time flat fee pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the one-time flat fee pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the one-time flat fee pricing rule.

Editing a One-Time Flat Fee Pricing Rule of a Bill Group

Prerequisites

To edit a one-time flat fee pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for one-time flat fee pricing rule.

Procedure

To edit a one-time flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for one-time flat fee whose one-time flat fee pricing rule details you want to edit.

   The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Displays the basic details of the one-time flat fee pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

- **Characteristics** - Used to define the characteristics for the one-time flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Charge Date	Used to specify the flat fee charge date.	Yes
Billable Charge Line Type	Displays the billable charge line type.	Not applicable
Bill After Date	Displays the bills after the specific date.	Not applicable
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you have added the billable charge line type in the **Billable Charge Line Type** field.	Yes
Bill To Account Override	Displays the account to which the bill is override.	Not applicable
Billable Charge Information	Displays the billable charge information.	Not applicable

4. Modify the basic details of the one-time flat fee pricing rule, if required.
5. Add, edit, or remove characteristics for a one-time flat fee pricing rule, if required.
6. Click **Save**.

Note: If **Fee** or **Charge Date** is modified then it checks whether bill segment is created, and if it is created then,

- If it is in frozen or pending cancelled status then,
  - Bill segment and billable charge is cancelled and new billable charge is created.
- If it is in any other status other than cancelled then,
  - Bill segment is deleted and existing billable charge billable charge is updated.

Charge Date is set to billable charge start date and end date.

When characteristics are updated, billable charge is updated with those characteristics.

The changes made to a one-time flat fee pricing rule for a bill group are saved.

Editing a Bill Period Based Recurring Flat Fee Pricing Rule Type

Prerequisites

To edit a bill period based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To edit a bill period based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *P*ricing rule type whose details you want to edit.

   The **Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the flat fee pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

- **Additional Data** - Used to specify the additional information about the pricing rule type.
- **Price Items** - Used to define the price items assigned to the pricing rule type.
- **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
- **Characteristics** - Used to define the characteristics for the pricing rule type.
- **Billable Charge Line Types** - Used to define the pricing rule type for billable charge line type.
- **Flat Fees - Specific Additional Data** - Used to specify the flat fees specific for additional data.
    - **Bill Periods** - Used to specify the bill periods for specifying intervals for creating recurring bill segments.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** This field is not enabled for selection if the **Pricing Rule Type Category** is **Flat Fees**.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are: • Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees	Yes

Tip: Alternatively, you can edit the details of a bill period based recurring flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

Defining a Bill Period Based Recurring Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a bill period based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for bill period based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a bill period based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a bill period based recurring flat fee pricing rule using the **Pricing Rule Type** for flat fees.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are:	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• In Force/Active • Runout	

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group.
- **Main** - Used to specify basic details about the bill period based recurring flat fee pricing rule.
- **Characteristics** - Used to define the characteristics for the bill period based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No
Charge End Date	Used to specify the flat fee charge end date.	No
Bill Period	Used to indicate the bill period for flat fee.	Yes
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you select the billable charge line type in the **Billable Charge Line Type** field.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill To Account Override	Used to specify the account to which the bill is override. **Note:** On clicking the **Search** (🔍) icon, the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Bill To Account Override** field.	Yes

5. Enter the required details in the **Main** section.
6. Define characteristics for a bill period based recurring flat fee pricing rule, if required.
7. Click **Save**.
   The bill period based recurring flat fee pricing rule for a bill group is defined.

Note: A billable charge is created and assigned to the bill period based recurring flat fee pricing rule.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the checkbox for **Recurring Fee** field. This field cannot be edited.	

The **Flat Fees - Specific Additional Data** section contains the following sub-section:

The **Bill Periods** sub-section contains the following column in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Bill Period	Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes

2. Enter the required details in the **Flat Fees - Specific Additional Data** section.
3. Enter the details in the **Bill Periods** sub-section, if required.

Note: This sub-section appears when you have selected **Bill Period** as**Recurring Method**.

4. Click **Save**.
   The Flat Fees - Specific Additional data is added in the pricing rule type.

Editing a Frequency Based Recurring Flat Fee Pricing Rule Type

Prerequisites

To edit a frequency based recurring flat fee pricing rule type, you should have:

- Business Object **C1-PricingRuleFlatFees** defined for pricing rule.
- Pricing rule type category for flat fees defined in the application.

Procedure

To edit a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.

Copyright © 2025, Oracle and/or its affiliates.

3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *P*ricing rule type whose details you want to edit.

   The **Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the flat fee pricing rule type.
   - **Related Pricing Rule Types** - Used to define the pricing rule types which are related to the parent pricing rule type.
   - **Transaction Field Mapping** - Used to specify the transaction related data mapped to the pricing rule type
   - **Algorithms** - Used to define the algorithms used for the pricing rule type.
   - **Additional Data** - Used to specify the additional information about the pricing rule type.
   - **Price Items** - Used to define the price items assigned to the pricing rule type.
   - **Price Item Parameters** - Used to define the price item parameters in the pricing rule type.
   - **Characteristics** - Used to define the characteristics for the pricing rule type.
   - **Billable Charge Line Types** - Used to define the pricing rule type for billable charge line type.
   - **Flat Fees - Specific Additional Data** - Used to specify the flat fees specific for additional data.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the pricing rule type.	Not applicable
Description	Used to specify the description for the pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pricing rule type.	No
Pricing Rule Business Object	Used to indicate the pricing rule business object. The valid values are: • Claim Pricing Rule • Aggregate Stop-Loss (ASL) Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Flat Fee Pricing Rule	Yes
Business Object	Indicates the pricing rule type business object for flat fees.	Not applicable
Status	Used to indicate the status of the pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** This field is not enabled for selection if the **Pricing Rule Type Category** is **Flat Fees**.	No
Pricing Rule Type Category	Used to indicate the pricing rule type category for the pricing rule type. The valid values are:	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Claim • Aggregate Stop-Loss • Specific Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • Flat Fees	

Tip: Alternatively, you can edit the details of a frequency based recurring flat fees pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit or remove related pricing rule types from the primary pricing rule type, if required.

Note:

Related Pricing Rule Types section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

7. Modify the details of transaction field mapping, if required.

Note:

Transaction Field Mapping section appears when the pricing rule type is primary.

This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

8. Define, edit or remove algorithms from the pricing rule type, if required.
9. Modify additional data for the pricing rule type, if required.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

10. Define, edit or remove price items from the pricing rule type, if required.
11. Define, edit or remove price items from the pricing rule type, if required.
12. Define, edit, or remove characteristics of the pricing rule type, if required.
13. Define, edit or remove billable charge line types for the flat fees pricing rule type, if required.
14. Modify flat fees - specific additional data in the pricing rule type, if required.

Note: This section appears when the **Business Object** is **Flat Fees Pricing Rule Type**.

15. Click **Save**.
    The changes made to the frequency based recurring flat fee pricing rule type are saved.

Deleting a Frequency Based Recurring Flat Fee Pricing Rule Type

Procedure

To delete a frequency based recurring flat fee pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the frequency based recurring flat fee pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the frequency based recurring flat fee pricing rule type.

   Note: You can delete a frequency based recurring flat fee pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete a frequency based recurring flat fee pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The frequency based recurring flat fee pricing rule type is deleted.

Defining a Frequency Based Recurring Flat Fee Pricing Rule for a Bill Group

Prerequisites

To define a frequency based recurring flat fee pricing rule for a bill group, you should have:

- Business Object **C1-PricingRule** defined for pricing rule.
- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.
- Pricing rule type defined in the application.
- Policy status defined in the application.
- Price item defined in the application.
- Billable Charge Line Type defined in the application.

Procedure

To define a frequency based recurring flat fee pricing rule for a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, *o*r policy whose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab and then click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the person name.	Not applicable
Person Type	Displays the person type.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the pricing rule type to create the pricing rule. **Note:** You can create a frequency based recurring flat fee pricing rule using the **Pricing Rule Type** for flat fees.	Yes
Policy Status	Used to indicate the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Yes

4. Click **OK**.

The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information for bill group.
- **Main** - Used to specify basic details about the frequency based recurring flat fee pricing rule.
- **Characteristics** - Used to define the characteristics for the frequency based recurring flat fee pricing rule.

The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item.	Yes
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Billable Charge Line Type	Used to specify the billable charge line type. **Note:** On clicking the **Search** (🔍) icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	No
Charge End Date	Used to specify the flat fee charge end date.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Frequency	Used to indicate the frequency for flat fee.	Yes
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you select the billable charge line type in the **Billable Charge Line Type** field.	Yes
Bill To Account Override	Used to specify the account to which the bill is override. **Note:** On clicking the **Search** (🔍) icon, the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Bill To Account Override** field.	Yes

5. Enter the required details in the **Main** section.
6. Define characteristics for a frequency based recurring flat fee pricing rule, if required.
7. Click **Save**.
   The frequency based recurring flat fee pricing rule for a bill group is defined.

Note: A billable charge is created and assigned to the frequency based recurring flat fee pricing rule.

How to define a characteristic for a frequency based recurring flat fee pricing rule	Defining a Characteristic for a Frequency Based Recurring Flat Fee Pricing Rule on page 3078

Defining a Characteristic for a Frequency Based Recurring Flat Fee Pricing Rule

Prerequisites

To define a characteristic for a frequency based recurring flat fee pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**)

Procedure

To define a characteristic for a frequency based recurring flat fee pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pricing rule.

   The **Characteristics** section contains the following columns in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the frequency based recurring flat fee pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the frequency based recurring flat fee pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the frequency based recurring flat fee pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the frequency based recurring flat fee pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the frequency based recurring flat fee pricing rule.

Editing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group

Prerequisites

To edit a frequency based recurring flat fee pricing rule of a bill group, you should have:

Copyright © 2025, Oracle and/or its affiliates.

- Business Object **C1-PricingRuleFlatFees** defined for frequency based recurring flat fee pricing rule.

Procedure

To edit a frequency based recurring flat fee pricing rule of a bill group:

1. Search for the account, person, or policy whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the account, person, or policy *w*hose pricing details you want to view.
   The **Account**, **Person**, or **Policy** tab in the **Customer 360° Information** screen appears.
3. Click the **Pricing** tab, in the **Bill Group ASO Policy Pricing Rules** zone click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type for frequency based recurring flat fee whose frequency based recurring flat fee pricing rule details you want to edit.

   The **Flat Fee Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the customer information for bill group.
   - **Main** - Displays the basic details of the frequency based recurring flat fee pricing rule.
   - **Characteristics** - Used to define the characteristics for the frequency based recurring flat fee pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for pricing rule. The valid values are: • In Force/Active • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type.	Not applicable

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Charge Start Date	Used to specify the flat fee charge start date.	Yes
Charge End Date	Used to specify the flat fee charge end date.	Yes
Billable Charge Line Type	Displays the billable charge line type.	Not applicable
Frequency	Indicates the frequency for flat fee.	Not applicable
Fee	Used to specify the amount of flat fee. **Note:** This field appears when you have added the billable charge line type in the **Billable Charge Line Type** field.	Yes
Bill To Account Override	Displays the account to which the bill is override.	Not applicable
Billable Charge Information	Displays the billable charge information.	Not applicable

4. Modify the basic details of the frequency based recurring flat fee pricing rule, if required.

Copyright © 2025, Oracle and/or its affiliates.

5. Add, edit, or remove characteristics for a frequency based recurring flat fee pricing rule, if required.
6. Click **Save**.

Note:

If **Fee** is modified then,

- The frequency based recurring flat fee is saved as a one time charge process.

If **Charge Start Date** is modified then it checks whether bill segment is already created for a period which is not available for the updated duration then,

- Bill segment is deleted and existing billable charge is updated.
- For recurring flat fee bill segments are not created or is in cancelled status.

Note: The modified charge start date should be a future date and not past date.

The changes made to a frequency based recurring flat fee pricing rule for a bill group are saved.

Ancillary Pricing

The Administrative Services Only (ASO) provider may process some adhoc charges with respect to preventive care, vaccination, diagnostic, and so on. These adhoc charges may also occur due to some corrections in the claim transactions which are already billed to the customer. Oracle Revenue Management and Billing enables you to process and bill these ancillary transactions to the self-funded employer.

The system enables you to create an ancillary charge in either of the following ways:

- Create a pass through charge without markup or markdown (i.e. flat charge).
- Create a pass through charge with a flat or percentage based markup or markdown.
- Create a rate based charge using the rate defined in the ancillary pricing and the service quantity specified in the ancillary transaction. You can also apply markup or markdown to a rate based charge.

You can use any custom mechanism or the file upload utility in ORMB to upload the ancillary transactions. The pricing for the ancillary transactions can be defined using the ancillary pricing rules. You can define an ancillary pricing rule at the parent customer and bill group levels. The ancillary pricing rule at the bill group level takes precedence over the ancillary pricing rule at the parent customer level. You can define the ancillary pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define an ancillary pricing rule using an ancillary pricing rule type. It is the ancillary pricing rule type which helps the system to determine:

Copyright © 2025, Oracle and/or its affiliates.

- Business object using which the ancillary pricing rule should be created in the system.
- Whether it is the primary pricing rule type from where the related pricing rule types will inherit the transaction field mapping details.

  Note: You must select the **Primary** option while defining an ancillary pricing rule type. On selecting the **Primary** option, the **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear in the **Ancillary Pricing Rule Type** screen.
- Rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.
- Transaction fields from where the data from the ancillary transaction should be stored in the respective fields (for example, the data from the **UDF_CHAR_1** transaction field must be stored in the **Parameter 1** field which will be used for deriving the bill group and pricing).
- Algorithm which should be triggered for validating an ancillary transaction.

  Note: An algorithm type for validating an ancillary transaction is not shipped with the product. You can create a custom algorithm type, if required.
- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for an ancillary transaction.

  Note: You must create an algorithm using the **C1_TXNBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.
- Algorithm which should be triggered for deriving the account and price item for an ancillary transaction.

  Note: You must create an algorithm using the **C1_ACCPRIDRV** algorithm type and attach it to the **Account and Price Item Derivation** system event.
- Algorithm which should be triggered for determining the bill after date.

  Note: You must create an algorithm using the **C1_BAFTDRV** algorithm type and attach it to the **Bill After Date Determination** system event.
- Pricing rule post-processing algorithm which should be triggered once the effective ancillary pricing rule is derived.

  Note: A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.
- Additional generic information, such as:
  - Whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss and aggregate stop-loss.
  - Whether the price items included in the ancillary pricing rule type are eligible for level funding.
  - Whether the ancillary charges should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the ancillary pricing rule type.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs.
  - Value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.
- Price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
- Rate options that you can use while defining the pricing for the ancillary price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.

Copyright © 2025, Oracle and/or its affiliates.

- Price item parameters based on which you want to define the price item pricing. Two price item parameters are mandatory in the ancillary pricing rule type - one which stores the billable charge line type from the ancillary transaction and another which stores the pricing arrangement from the ancillary transaction. The following pricing arrangements are supported in the ancillary pricing rule:
  - Pass Through Charge Without Markup and Markdown
  - Pass Through Charge With Markup and Markdown
  - Rate Based Charge Without Markup and Markdown
  - Rate Based Charge With Markup and Markdown

  Note: The price item parameters (for example, BCHGLINETYPE and PRICINGARRANGEMENT) which you include in the ancillary pricing rule type must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLLNG** feature configuration, respectively.
- Additional ancillary-specific information, such as:
  - Identifiers which help to determine whether the ancillary transaction is eligible for billing for not.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Billable charge line type using which you want to create billable charges for markup and markdown.
  - Rule type which indicates the rules which should be executed to determine whether the markup or markdown calculation line is eligible for billing.
  - How the system should interpret the value stored in the pricing arrangement price item parameter (i.e. whether the value means the ancillary charge should be a pass through charge without markup or markdown, pass through charge with markup or markdown, or rate based charge with or without markup or markdown). Accordingly, the system will search for the pricing in the effective ancillary pricing rule where:
    - Billable charge line type matches the one specified in the ancillary transaction
    - Line defined for the billable charge line type has the pricing arrangement as mentioned in the ancillary transaction
  - Line item which indicates the SQI using which the ancillary charge should be created. You need to specify the line item for each pricing arrangement which is defined in the ancillary pricing rule type.

Once an ancillary pricing rule type is defined, you can create ancillary pricing rules using the ancillary pricing rule type. While defining an ancillary pricing rule for a parent customer and bill group, you need to specify the following:

- Price item for which you want to define the pricing.
- Pricing date range during which the pricing is effective.
- Rate option which you want to use while defining the ancillary pricing.
- Whether you want to define the pricing for a pass through charge without markup or markdown. If you select the **Pass Through without Markup or Markdown** option, you cannot define the pricing for a pass through charge with markup or markdown and the pricing for rate based charge with or without markup or markdown in the ancillary pricing rule. However, if the **Pass Through without Markup or Markdown** option is not selected, you can define pricing for different billable charge line types which can be with markup or markdown or which can be rate based with or without markup or markdown. In addition, if the **Pass Through without Markup or Markdown** option is not selected, by default, the system will define the pricing for a pass through charge without markup or markdown. Depending on the billable charge line type and pricing arrangement information in the ancillary transaction, the system will accordingly fetch the appropriate pricing for billing the ancillary charge. For example, if the ancillary transaction contains BCLT1 as the billable charge line type and PASSMK as the pricing arrangement and the effective ancillary pricing rule contains the following pricing:

Ancillary Pricing	Billable Charge Line Type	Pricing Arrangement	Rate	Pricing Strategy	Markup Amount	Markdown Amount
AP1	BCLT0	Pass Through with Markup or Markdown	-	Markup	$10	-

Copyright © 2025, Oracle and/or its affiliates.

Ancillary Pricing	Billable Charge Line Type	Pricing Arrangement	Rate	Pricing Strategy	Markup Amount	Markdown Amount
AP2	BCLT1	Pass Through with Markup or Markdown	-	Markdown	-	$5
AP3	BCLT2	Rate Based without Markup or Markdown	$5	-	-	-
AP4	BCLT3	Rate Based with Markup or Markdown	$5	Markup	$10	-
AP5	BCLT4	Rate Based with Markup or Markdown	$5	Markdown	-	$5
AP6	-	Pass Through without Markup or Markdown	-	-	-	-

In this case, the system will use the AP2 pricing defined in the ancillary pricing rule. The system will markdown the SQI with the specified amount (i.e. $5).

- Whether the billable charge line type is eligible for billing or not. Accordingly, the system will create billable charge for the ancillary transaction.

In addition, while defining an ancillary pricing rule for a bill group, you need to indicate the policy status for which the ancillary pricing rule is applicable. You can also specify a pricing group while defining an ancillary pricing rule for a bill group. Once an ancillary pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the bill group.

Defining an Ancillary Pricing Rule Type

Prerequisites

To define an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To define an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create an ancillary pricing rule type. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule Type • Ancillary Pricing Rule Type • Claim Pricing Rule Type • Discount Arrangement Pricing Rule Type • Flat Fee Pricing Rule Type	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Level Funded (LF) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type **Note:** You must select the **Ancillary Pricing Rule Type** option from the **Pricing Rule Type Business Object** list while defining an ancillary pricing rule type.	

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Ancillary Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details about the ancillary pricing rule type.
- **Related Pricing Rule Types** - Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:

  a. Specific Stop Loss
  b. Aggregate Stop Loss
  c. Level Funding

  Note: You can use any of the above specified pricing rule types as the related pricing rule type in an ancillary pricing rule type.
- **Transaction Field Mapping** - Used to map the transaction fields in a ancillary transaction to the appropriate fields in the ancillary pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

  Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for an ancillary pricing rule type.
- **Algorithms** - Used to associate the algorithms with an ancillary pricing rule type.
- **Additional Data** - Used to specify additional information about the ancillary pricing rule type.
- **Price Items** - Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
- **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.

  Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:
  - A price item which stores the billable charge line type from the ancillary transaction.
  - A price item which stores the pricing arrangement from the ancillary transaction.
- **Characteristics** - Used to define the characteristics for an ancillary pricing rule type.
- **Ancillary-Specific Additional Data** - Used to define the ancillary-specific additional data in an ancillary pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.
>
> - **Billing Eligibility Identifier Value**
> - **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** - Used to define the following pricing arrangements that are used while defining an ancillary pricing rule type.
  - **Pass Through (Markup or Markdown Optional)**
  - **Pass Through Without Markup or Markdown**
  - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the ancillary pricing rule type.	Yes
Description	Used to specify the description for the ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the ancillary pricing rule. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule **Note:** You must select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list while defining an ancillary pricing rule type.	Yes
Business Object	Indicates the business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	Used to indicate the status of the ancillary pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the ancillary pricing rule type is a primary pricing rule type.	No
Pricing Rule Type Category	Used to indicate the category to which the ancillary pricing rule type belongs. The valid value are: • Aggregate Stop-Loss • Ancillary	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss **Note:** You must select the **Ancillary** option from the **Pricing Rule Type Category** list while defining an ancillary pricing rule type.	

6. Enter the required details in the **Main** section.
7. Select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list.
8. Select the **Primary** option in the **Main** section.
   The **Related Pricing Rule Types** and **Transaction Field Mapping** sections appear.
9. Select the **Ancillary** option from the **Pricing Rule Type Category** list.
10. Add the related pricing rule types in the ancillary pricing rule type, if required.
11. Map the transaction fields of an ancillary transaction to the appropriate fields in the ancillary pricing rule type.
12. Associate the following algorithms with the ancillary pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_TXNBGDRV	C1_TXNBGDRV	Derive Bill Group
Account and Price Item Derivation	C1_ACCPRIDRV	C1_ACCPRIDRV	Account and Price Item Derivation
Bill After Date Determination	C1_BAFTDRV	C1_BAFTDRV	Bill After Date Determination

13. Define additional data for an ancillary pricing rule type, if required.
14. Add the required price items for which you can define ancillary pricing rules using the ancillary pricing rule type.
15. Add the price item parameters based on which you want to define the ancillary pricing, if required.
16. Define the characteristics for an ancillary pricing rule type, if required.
17. Define the required ancillary-specific additional data in the ancillary pricing rule type.
18. Define the pricing arrangements for an ancillary pricing rule type, if required.
19. Click **Save**.
    The ancillary pricing rule type is defined.

Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type

The **Administrative Services Only (ASO)** feature is designed in such a way that all non-primary pricing rule types should inherit the transaction field mapping details from a primary pricing rule type. These non-primary pricing rule types are added in a primary pricing rule type as the related pricing rule types.

Prerequisites

To add related pricing rule types in an ancillary pricing rule type, you should have:

- Aggregate Stop Loss pricing rule type defined in the application.
- Specific Stop Loss pricing rule type defined in the application.
- Level Funding pricing rule type defined in the application.
- Rule types defined in the application (where the rule type usage is set to **Related Pricing Rule Type Eligibility**)

Procedure

To add related pricing rule type in an ancillary pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an ancillary pricing rule type.

   Note: The **Related Pricing Rule Types** section appears when the **Primary** option is selected in the **Main** section.

   The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) **Note:** This field is required when you are adding a related pricing rule type in the ancillary pricing rule type.
Pricing Rule Type	Used to indicate the non-primary pricing rule type which should inherit the transaction field mapping details from the claim pricing	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	rule type. You can add a non-primary pricing rule type of the following categories in the claim pricing rule type: **a.** Retention Type Claim Based **b.** Discount Arrangement **c.** Specific Stop-Loss **d.** Aggregate Stop-Loss **e.** Level Funding	**Note:** This field is required when the corresponding **Sequence** field is specified for the related pricing rule type.
	Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur. The **Search** (🔍) icon appears corresponding to the **Pricing Rule Type** field.. On clicking the **Search** (🔍) icon corresponding to the **Pricing Rule Type** field, the **Pricing Rule Type Search** window appears. On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field.	
Eligibility Rule Type	Used to specify the rule type which indicates the rules that should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.	No
	Note: The list includes only those rule types where the rule type usage is set to **Related Pricing Rule Type Eligibility**.	

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a related pricing rule type from the ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the related pricing rule type.

4. Click **Save**.
   The related pricing rule type is added in the ancillary pricing rule type.

Mapping the Transaction Field in an Ancillary Pricing Rule Type

Prerequisites

To map the transaction field mapping for an ancillary pricing rule type, you should have:

Copyright © 2025, Oracle and/or its affiliates.

- Transaction fields defined in the application

Procedure

To map the transaction field mapping for an ancillary pricing rule type:

1. Ensure that the **Transaction Field Mapping** section is expanded when you are *d*efining an ancillary pricing rule type.

> **Note:**
> This section appears when you have chosen the **Primary** option from the **Main** section.

The **Transaction Field Mapping** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to map to a transaction field which indicates the external system from where the ancillary transaction is received. The information stored in this field is then used for deriving the bill group, parent customer, and policy for the ancillary transaction.	Yes
Parameter 1	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes
Parameter 2	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) **Note:** This field is required when you want to derive the bill group using multiple employee attributes.
Parameter 3	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) **Note:** This field is required when you want to derive the bill group using multiple employee attributes.
Parameter 4	Used to map to a transaction field which indicates the employee attribute based on which you want to derive the bill group.	Yes (Conditional) **Note:** This field is required when you want to derive the bill group using multiple employee attributes.
Incurred Date	Used to map to a transaction field which contains the date when the health insurance service was availed by the employee.	Yes (Conditional) **Note:** This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the claim transaction.
Paid Date	Used to map to a transaction field which contains the date when the claim amount was paid to the employee.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you want to fetch an effective specific stop-loss or aggregate stop-loss pricing rule for the ancillary transaction.
Source of Funds	Used to map to a transaction field which indicates the source of funding. At present, this field is not used in the system.	No
Composite	Used to map to a transaction field which indicates whether the employee is covered under the composite insurance.	No
Claim Disposition	Used to map to a transaction field which helps to determine how the claim based fees should be charged for the positive and negative claim transactions.	Yes (Conditional) **Note:** This field is required while calculating the retention type claim based fees for the claim transaction.
Provider's Tax Identification Number	Used to map to a transaction field which states the health insurance provider's identification number. The information stored in this field is then used to determine whether the health insurance provider is excluded from the specific stop-loss coverage.	Yes (Conditional) **Note:** This field is required while calculating specific stop-loss for the ancillary transaction.
Member ID	Used to map to a transaction field which states the member's identification number. The information stored in this field is then used to determine whether the member is excluded from the specific stop-loss coverage.	Yes (Conditional) **Note:** This field is required while calculating specific stop-loss for the ancillary transaction.
Main Subscriber ID	Used to map to a transaction field which states the main subscriber's identification number. The information stored in this field is then used to determine whether the main subscriber is excluded from the specific stop-loss coverage.	Yes (Conditional) **Note:** This field is required while calculating specific stop-loss for the ancillary transaction.
Run-in Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is a run-in ancillary transaction.	Yes (Conditional) **Note:** This field is required while defining a ancillary pricing rule type.
Runout Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is a runout ancillary transaction. At present, this field is not used in the system.	No
Third Party Identifier	Used to specify the third party identifier to determine that the ancillary transaction is received from an external	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	source system while defining an ancillary pricing rule type.	
Coverage Start Date	Used to map to a transaction field which indicates the coverage start date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a non-retroactive enrollment transaction.	Yes (Conditional) **Note:** This field is required while defining a retention type enrollment based pricing rule type.
Coverage End Date	Used to map to a transaction field which indicates the coverage end date. The information stored in this field is then used to fetch an effective retention type enrollment based pricing rule for a retroactive enrollment transaction.	Yes (Conditional) **Note:** This field is required while defining a retention type enrollment based pricing rule type.
Retroactivity Indicator	Used to map to a transaction field which indicates whether the enrollment transaction is a retroactive enrollment transaction.	Yes (Conditional) **Note:** This field is required while defining a retention type enrollment based pricing rule type.
Network Indicator	Used to map to a transaction field which indicates whether the service provider is in network or out of network.	Yes (Conditional) **Note:** This field is required while defining a discount arrangement pricing rule.
Covered Charge Amount	Used to map to a transaction field which indicates the amount which is covered for the employee in the policy.	Yes (Conditional) **Note:** This field is required while calculating the discount using a discount guarantee pricing rule.
Discount Savings Amount	Used to map to a transaction field which indicates the amount which is offered as the discount to the service provider.	Yes (Conditional) **Note:** This field is required while calculating the discount using a discount guarantee or discount share pricing rule.
Accumulation Only Identifier	Used to map to a transaction field which indicates that the ancillary transaction should only be used for calculating charges for the accumulated products, such as Specific Stop-Loss, Aggregate Stop-Loss, and so on. This means that the system should not derive the ancillary transaction leg. Instead, it should only derive the specific stop-loss or aggregate stop loss transaction legs for the ancillary transaction.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility Identifier	Used to map to a transaction field which indicates whether the ancillary transaction is eligible for billing.	Yes (Conditional) **Note:** This field is required while defining an ancillary pricing rule type.
Transaction Upload Date	Used to map to a transaction field which indicates the date when the transaction was uploaded in the external system. The system does not derive the discount transaction leg when the transaction upload date is later than the settlement date.	Yes (Conditional) **Note:** This field is required while calculating the discount using a discount guarantee or discount share pricing rule.

Note:

The **Search** (🔍) icon appears corresponding to each field. On clicking the **Search** icon, the **Transaction Field Search** window appears.

On specifying the transaction field, the description of the transaction field appears corresponding to the respective field.

2. Enter the required details in the **Transaction Field Mapping** section.
3. Click **Save**.
   The transaction fields are mapped to the appropriate fields in the claim pricing rule type.

Associating an Algorithm with an Ancillary Pricing Rule Type

Prerequisites

To associate algorithms with an ancillary pricing rule type, you should have:

- Algorithms defined using the **C1_TXNBGDRV**, **C1_ACCPRIDRV**, and **C1_BAFTDRV** algorithm types.

Procedure

To associate an algorithm with an ancillary pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing an ancillary pricing rule type.

   The **Algorithms** section contains the following columns in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: • **Account and Price Item Derivation** - Used to derive the account and price item for the ancillary transaction. • **Accumulation Billable Charge Post Proc** - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the **C1-BCDA (Create Billable Charge for Discount)** batch. • **Accumulation Billable Charge Pre Proc** - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the **C1-BCDA (Create Billable Charge for Discount)** batch. • **Accumulation Post Processing** - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the **C1-ACDA (Accumulate Discount Arrangement)** batch. • **Accumulation Pre Processing** - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the **C1-ACDA (Accumulate Discount Arrangement)** batch. • **Bill After Date Determination** - Used to determine the bill after date for the ancillary transaction. • **Bill Group Derivation** - Used to derive the bill group, parent customer, and policy for the ancillary transaction. • **Pricing Rule Post Processing** - Used to introduce a custom logic once the effective ancillary pricing rule is derived for the ancillary transaction. • **Transaction Validation** - Used to introduce a custom validation for the ancillary transaction. **Note:** You must specify **Account and Price Item Derivation** and **Bill Group Derivation** algorithms when you are associating the algorithms with an ancillary pricing rule type.	Yes **Note:** This field is required when you are associating an algorithm with the ancillary pricing rule type.
Sequence	Used to specify the order in which the algorithms with the same system event should be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the ancillary pricing rule type.
Algorithm	Used to indicate the algorithm that you want to execute on the system event.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: Once you select the system event, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	**Note:** This field is required when you are associating an algorithm with the ancillary pricing rule type.

2. Enter the required details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Account and Price Item Derivation	C1_ACCPRIDRV	Yes	Account and Price Item Derivation (for the Claim Pricing Rule Type Category) on page 3239
Accumulation Billable Charge Post Proc	- **Note:** An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Billable Charge Pre Proc	- **Note:** An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Post Processing	- **Note:** An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Pre Processing	- **Note:** A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Bill After Date Determination	C1_BAFTDRV	Yes	Bill After Date Determination on page 3276
Bill Group Derivation	C1_TXNBGDRV	Yes	Bill Group Derivation on page 3237

Defining Additional Data in an Ancillary Pricing Rule Type

Procedure

To define additional data in an ancillary pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining *or* editing an ancillary pricing rule type.

Note: This section does not appear when the **Pricing Rule Type Category** is **Flat Fees**.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether the price items included in the ancillary pricing rule type are eligible for specific stop-loss. The valid values are: • Yes • No	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Pricing Rule Type Category** is either **Ancillary**, **Claim**, **Retention Type Claim Based**, or **Retention Type Enrollment Based**. If you do not specify the value for this field, by default, it is set to **No**	
Eligible for Level Funding	Used to indicate whether the price items included in the ancillary pricing rule type are eligible for level funding. The valid values are: • Yes • No	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the ancillary transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the ancillary transaction is received from an external source system.	No
Accumulation Only Identifier Value	Used to specify the value when received in an ancillary transaction indicates that the ancillary transaction should only be considered for calculating specific stop-loss and aggregate stop-loss. In such case, a transaction leg is not derived for the ancillary transaction.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the pricing rule is eligible for Write-Off in Post Runout or not. The valid values are: • Yes • No For more information, refer to the Write-Off Charges during Post Runout section. **Note:** By default, the value is set to **No**.	No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which the post runout write-off adjustments must be created. **Note:** This field appears when the **Eligible for Write-Off in Post Runout** field is set to **Yes**. The **Search** (🔍) icon appears corresponding to the **Post Runout Write-Off Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Eligible for Write-Off in Post Runout** field.	Yes (Conditional) **Note:** This field is required when the **Eligible for Write-Off in Post Runout** field is set to **Yes**.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rule Based Price Item Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing. For more information, refer to the Price Item Eligibility on page 3229. **Note:** This field appears when the **Eligible for Write-Off in Post Runout** field is set to **Yes**. The **Search** (🔍) icon appears corresponding to the **Rule Based Price Item Eligibility Field** field. On clicking the **Search** icon, the **Field Search** window appears. On specifying the field name, the description of the field name appears corresponding to the **Rule Based Price Item Eligibility Field**.	No
Rule Based Related Pricing Rule Type Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the related pricing rule type should be considered for deriving the transaction legs. For more information, refer to Related Pricing Rule Type Eligibility on page 3228. **Note:** The **Search** (🔍) icon appears corresponding to the **Rule Based Related Pricing Rule Type Eligibility Field** field. On clicking the **Search** icon, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Related Pricing Rule Type Eligibility Field** field.	No
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item and related pricing rule type in the ancillary pricing rule type should be considered for processing.	Yes (Conditional) **Note:** This field is required when a value is specified in the **Rule Based Price Item Eligibility Field** or **Rule Based Related Pricing Rule Type Eligibility Field** field.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.
   The additional data is defined in the ancillary pricing rule type.

Adding a Price Item in an Ancillary Pricing Rule Type

Prerequisites

To add a price item in an ancillary pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an ancillary pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining *or* editing an ancillary pricing rule type.

   The **Price Items** section contains the following fields in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td rowspan="3">Price Item</td><td>Used to indicate the price item that you want to include in an ancillary pricing rule type.</td><td>Yes (Conditional)</td></tr>
<tr><td>Note:
The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search (🔍) icon, the Price Item Search window appears.
On specifying the price item, the description of the price item appears corresponding to the Price Items field.</td><td>Note: This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type.</td></tr>
<tr><td></td><td></td></tr>
<tr><td>Rate Option</td><td>Used to indicate one or more rate options which are valid for a price item.
On clicking the Add (📄) icon, the following field appears in a grid:
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Rate Option</td><td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td><td>Yes</td></tr>
</table>
Note:
If you want to define more than one rate option to the price item in an ancillary pricing rule type, click the Add (+) icon.
However, if you want to remove a price item from an ancillary pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</td><td>Not applicable</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Bill To Account</td><td>Used to indicate a order in which the account should be considered while deriving a transaction leg.

On clicking the Add (+) icon, the following fields appear in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes</td></tr>
<tr><td>Invoice Type</td><td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 13 section.

Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</td><td>Yes</td></tr>
</table>

Note:

If you want to define more than one invoice type to the price item in an ancillary pricing rule type, click the Add (+) icon.

However, if you want to remove a invoice type from the price item in an ancillary pricing rule type, click the Delete (🗑) icon corresponding to the Priority field.</td><td>Not applicable</td></tr>
<tr><td>Eligibility Rule Type</td><td>Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.</td><td>No</td></tr>
</table>

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the price item.

4. Click **Save**.
   The price items are added for an ancillary pricing rule type.

Adding a Price Item Parameter in an Ancillary Pricing Rule Type

Prerequisites

To add a price item parameter in an ancillary pricing rule type, you should have:

- Parameters defined in the application where parameter usage is set to **Price Item**.
- Parameters associated with the price item.
- **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** defined in the application.
- **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** set as option types in the **C1-ASOBLLNG** feature configuration.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in an ancillary pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing an ancillary pricing rule type.

   The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining an ancillary pricing for the price item. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	Yes (Conditional) **Note:** This field is required while adding a price item parameter in an ancillary pricing rule type.
Transaction Field	Used to map to a transaction field which contains the parameter value. **Note:** The **Search** (🔍) icon appears corresponding to the **Transaction Field** field. On clicking the **Search** (🔍) icon corresponding to the **Transaction Field** field, the **Transaction Field Search** window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the **Transaction Field**.	Yes (Conditional) **Note:** This field is required while adding a price item parameter in an ancillary pricing rule type.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level.	No
Eligible for Level Funding	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level funding pricing rules at the bill group level.	No

2. Enter the required details in the **Price Item Parameters** section.

Copyright © 2025, Oracle and/or its affiliates.

3. If you want to add more than one price item parameter for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item parameter from an ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.
   The price item parameter is added in the ancillary pricing rule type.

Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type

Procedure

To add the ancillary-specific additional data in an ancillary pricing rule type:

1. Ensure that the **Ancillary-Specific Additional Data** section is expanded when you are defining *or* editing an ancillary pricing rule type.

   The **Ancillary-Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility Identifier Value	Used to specify the billing eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) **Note:** This field is required when you are adding the ancillary-specific additional data.
Billing Non-Eligibility Identifier Value	Used to specify the billing non-eligibility identifiers which help to determine whether the ancillary transaction is eligible for billing.	Yes (Conditional) **Note:** This field is required when you are adding the ancillary-specific additional data.
Rule Based Markup or Markdown Eligibility Field	Used to specify the transaction field that you want to use in the rules as the output parameter to determine whether	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	the markup or markdown calculation line is eligible for billing. **Note:** On clicking the **Search** (🔍) icon corresponding to the **Rule Based Markup or Markdown Eligibility Field** field, the **Field Search** window appears. On specifying the field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	**Note:** This field is required when the Markup or Markdown Eligibility Rule Type field is specified.
Markup or Markdown Billable Charge Line Type	Used to specify the billable charge line type using which you want to create the billable charges for markup and markdown. **Note:** On clicking the **Search** (🔍) icon corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	No
Markup or Markdown Eligibility Rule Type	Used to specify the markup or markdown eligibility rule type for the ancillary pricing rule type. The valid values are: • Rule 1 **Note:** The **Markup or Markdown Eligibility Rule Type** list includes only those rule-types where the rule type eligibility is **ASO Billing Mark Up / Down Eligibility**.	No

2. Enter the required details in the **Ancillary-Specific Additional Data** section.
3. Define pricing arrangements for ancillary-specific data in the **Ancillary-Specific Additional Data** section.
4. Click **Save**.
   The ancillary-specific additional data is added in the ancillary pricing rule type.

Defining Pricing Arrangements in an Ancillary Pricing Rule Type

Prerequisites

To define pricing arrangements in an ancillary pricing rule type, you should have:

- Line Items where category is set to **Ancillary**, as defined in the application.

Procedure

To add pricing arrangements in an ancillary pricing rule type:

1. Ensure that the **Ancillary-Specific Data** and **Pricing Arrangements** section is expanded when you are *d*efining or editing a pricing rule type.

   The **Pricing Arrangements** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Pricing Arrangement Identifier	Used to indicate the pricing arrangement identifier that you can define through an ancillary pricing rule type. The valid values are: • Pass Through (Markup or Markdown Optional) • Pass Through without Markup or Markdown • Rate Based (Markup or Markdown Optional)	Yes (Conditional) **Note:** This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Pricing Arrangement Identifier Value	Used to specify the value for the pricing arrangement identifier. The valid values are: • Pass Through (Markup or Markdown Optional) • Pass Through without Markup or Markdown • Rate Based (Markup or Markdown Optional)	Yes (Conditional) **Note:** This field is required when you are defining pricing arrangements for an ancillary pricing rule type.
Line Item	Used to indicate the line item which using the billable charge is created for a pricing arrangement.	Yes (Conditional) **Note:** This field is required when you are defining pricing arrangements for an ancillary pricing rule type.

2. Enter the required details in the **Pricing Arrangements** section.
3. If you want to define more than one pricing arrangement in an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a pricing arrangement from the ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the pricing arrangement identifier.

4. Click **Save**.
   The pricing arrangements are defined for the ancillary pricing rule type.

Defining a Characteristic for a Ancillary Pricing Rule Type

Prerequisites

To define a characteristic for an ancillary pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an ancillary pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining an ancillary pricing rule type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for an ancillary pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for an ancillary pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an ancillary pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from an ancillary pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristic is defined for an ancillary pricing rule type.

Editing an Ancillary Pricing Rule Type

Prerequisites

To edit an ancillary pricing rule type, you should have:

- Ancillary pricing rule type business object defined in the application.
- Ancillary pricing rule business object defined in the application.

Procedure

To edit an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to an ancillary pricing rule type whose details you want to edit.

   The **Ancillary Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the ancillary pricing rule type.
   - **Related Pricing Rule Types** - Used to indicate the non-primary pricing rule types which should inherit the transaction field mapping details from the ancillary pricing rule type. You can add a pricing rule type which belongs to the following category:

     a. Retention Type Claim Based
     b. Discount Arrangement
     c. Specific Stop-Loss
     d. Aggregate Stop-Loss
     e. Level Funding

     Note: We recommend you to add the required related pricing rule types in the above specified sequence. Otherwise, erroneous results might occur.
   - **Transaction Field Mapping** - Used to map the transaction fields in a claim transaction to the appropriate fields in the claim pricing rule type. This helps the system to determine the field where the data from the transaction field must be stored. This data is then used in the system for various reasons, such as for deriving a bill group and pricing, deriving an effective related pricing rule, and so on.

     Note: The **Billing Eligibility Identifier** field is required when you are defining the **Transaction Field Mapping** for the ancillary pricing rule type.
   - **Algorithms** - Used to associate the algorithms with the ancillary pricing rule type.
   - **Additional Data** - Used to specify the additional information about the ancillary pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the ancillary pricing rules using the ancillary pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.

     Note: There are two price item parameters that are mandatory in the ancillary pricing rule type:
     - A price item which stores the billable charge line type from the ancillary transaction.
     - A price item which stores the pricing arrangement from the ancillary transaction.
   - **Characteristics** - Used to define the characteristics for the ancillary pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

- **Ancillary-Specific Additional Data** - Used to define ancillary-specific additional data.

  Note: Following fields are required when you are defining the **Ancillary-Specific Additional Data** for the ancillary pricing rule type.

  - **Billing Eligibility Identifier Value**
  - **Billing Non-Eligibility Identifier Value**

- **Pricing Arrangements** - Used to define the pricing arrangements for the ancillary pricing rule type.
  - **Pass Through (Markup or Markdown Optional)**
  - **Pass Through Without Markup or Markdown**
  - **Rate Based (Markup or Markdown Optional)**

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the ancillary pricing rule type.	Not applicable
Description	Used to specify the description for an ancillary pricing rule type.	Yes
Detailed Description	Used to specify additional information about the ancillary pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create an ancillary pricing rule. The valid value is: • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule **Note:** You must select the **Ancillary Pricing Rule** option from the **Pricing Rule Business Object** list while defining an ancillary pricing rule type.	Yes
Business Object	Indicates the ancillary pricing rule type business object using which you are defining the ancillary pricing rule type.	Not applicable
Status	Used to indicate the status of the ancillary pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the ancillary pricing rule type is a primary pricing rule type. **Note:** This field is disabled when you select the **Flat Fees** option from the **Pricing Rule Type Category** list.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Category	Indicates the category to which the ancillary pricing rule type belongs. The valid values are: • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement • Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss **Note:** You must select the **Ancillary** option from the **Pricing Rule Type Category** list while defining an ancillary pricing rule type.	No

Tip: Alternatively, you can edit the details of an ancillary pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone to edit the pricing rule type for ancillary.

5. Modify the required details in the **Main** section, if required.
6. Ensure that the **Ancillary Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
7. Ensure that the **Primary** option is selected in the **Main** section.
8. Add, edit, or remove the related pricing rule types in the ancillary pricing rule type, if required.

Note: The **Related Pricing Rule Types** section appears when the **Primary** option is selected from the **Main** section.

9. Modify the transaction field mapping in the ancillary pricing rule type, if required.

Note: The **Transaction Field Mapping** section appears when the **Primary** option is selected from the **Main** section.

10. Add, edit, or remove algorithms from the ancillary pricing rule type, if required.

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

11. Edit generic additional data for the ancillary pricing rule type, if required.
12. Add, edit, or remove price items in an ancillary pricing rule type, if required.
13. Add, edit, or remove price item parameters in an ancillary pricing rule type, if required.
14. Add, edit, or remove characteristics in an ancillary pricing rule type, if required.
15. Modify the ancillary-specific data in an ancillary pricing rule type, if required.
16. Modify the pricing arrangements in an ancillary pricing rule type, if required.
17. Click **Save**.
    The changes made to the ancillary pricing rule type are saved.

Deleting an Ancillary Pricing Rule Type

Procedure

To delete an ancillary pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding *t*o the ancillary pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the ancillary pricing rule type.

   Note: You can delete an ancillary pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete an ancillary pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The ancillary pricing rule type is deleted.

Defining an Ancillary Pricing Rule for a Parent Customer

Prerequisites

To define an ancillary pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

Procedure

To define an ancillary pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Add** link in the upper right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create an ancillary pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: • Parent Customer **Note:** If you are defining the pricing rule type for the parent customer, then the person type will be **Parent Customer**.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule.	Yes

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the information about the parent customer. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining an ancillary pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining an ancillary pricing rule.

- **Main** - Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define an ancillary pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective. **Note:** The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining pricing for the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is enabled when the **Rate Option** field is selected.	**Note:** This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule. **Note:** The Search (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Billable Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with or without rate based billable charge line type.
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with or without the **Markup or Markdown Type** field and the **Rate Based** option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with the **Rate Based** option.
Rate	Used to indicate the rate for calculating the ancillary charge. **Note:** This field is enabled when the **Rate Based** option is selected.	Yes (Conditional) **Note:** This field is required when **Rate Based** option is selected.
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: • Markup • Markdown	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• None	
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: • Flat Amount • Percentage **Note:** This field is enabled when the **Pricing Strategy** field is selected.	Yes (Conditional) **Note:** This field is required when the **Pricing Strategy** field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional) **Note:** This field is required when the **Markup or Markdown Type** field is selected.

- **Characteristics** - Used to define the characteristics for an ancillary pricing rule.

7. Enter the required details in the **Main** section.
8. Define the characteristics for an ancillary pricing rule, if required.
9. Click **Save**.
   The ancillary pricing rule is defined for a parent customer.

Defining a Characteristic for an Ancillary Pricing Rule

Prerequisites

To define a characteristic for an ancillary pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for an ancillary pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an ancillary pricing rule.

   The **Characteristics** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the ancillary pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the ancillary pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the ancillary pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for an ancillary pricing rule.

Editing an Ancillary Pricing Rule of a Parent Customer

Prerequisites

To edit an ancillary pricing rule of a parent customer, you should have:

- Business Object **C1-PricingRuleAncillary** defined for ancillary pricing rule.

Procedure

To edit a ancillary pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** screen appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Parent Customer Pricing Rules** zone, corresponding to the ancillary pricing rule whose details you want to edit.

Copyright © 2025, Oracle and/or its affiliates.

The **Ancillary Pricing Rule** screen appears. It contains the following sections:

- **Customer Information** - Displays the customer information.

Field Name	Field Description
Parent Customer Information	Displays the parent customer for whom the ancillary pricing rule is created.
Pricing Rule Type	Indicates the pricing rule type for whom the ancillary pricing rule is created.

- **Main** - Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item that is used to create ancillary pricing rule.	Not applicable
Pricing Start Date	Displays the date from when the ancillary pricing rule is effective.	Not applicable
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	Not applicable
Rate Option	Displays the rate option that you want to use while defining the price item.	Not applicable
Pass Through without Markup or Markdown	Indicates that markup or markdown should not be calculated for the ancillary charge. **Note:** This field is enabled when the **Rate Option** field is selected.	Yes (Conditional) **Note:** This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule. **Note:** The Search (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Billable Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with or without rate based billable charge line type.
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required while creating a pricing arrangement with or without the **Rate Based** option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with the **Rate Based** option.
Rate	Used to indicate the rate for calculating the ancillary charge. **Note:** This field is enabled when the **Rate Based** option is selected.	Yes (Conditional) **Note:** This field is required when **Rate Based** option is selected.
Pricing Strategy	Used to indicate the price calculation strategy which should be applied while defining the ancillary pricing rule. The valid values are: • Markup • Markdown • None	No
Markup or Markdown Type	Used to indicate the type of charge which should be applied while defining the ancillary pricing rule. The valid values are: • Flat Amount • Percentage **Note:** This field is enabled when the **Pricing Strategy** field is selected.	Yes (Conditional) **Note:** This field is required when the **Pricing Strategy** field is selected.
Amount / Percentage	Used to specify the actual proportion of the charge that should be applied while defining the ancillary pricing rule.	Yes (Conditional) **Note:** This field is required when the **Markup or Markdown Type** field is selected.

- **Characteristics** - Used to define the characteristics for the ancillary pricing rule.

5. Modify the details in the **Main** section.
6. Define, edit, or remove characteristics for an ancillary pricing rule, if required.
7. Click **Save**.
   The changes made to an ancillary pricing rule for a parent customer are saved.

Defining an Ancillary Pricing Rule for a Bill Group

Prerequisites

To define an ancillary pricing rule for a bill group, you should have:

- Pricing rule type where the category is set to **Ancillary**.
- Price items associated with the ancillary pricing rule type.
- Pricing arrangements defined in the ancillary pricing rule type.

Procedure

To define an ancillary pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the bill group whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.

Copyright © 2025, Oracle and/or its affiliates.

4. Click the **Broadcast** (ᯤ) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Add** link in the upper-right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer. **Note:** If you are defining the pricing rule type for the parent customer, then the person type will be **Parent Customer**.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create an ancillary pricing rule. **Note:** Select the **Ancillary Pricing Rule Type** option, as the pricing rule.	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group which is used while defining the pricing.	No
Policy Status	Used to indicate the policy status for the pricing rule. The valid values are: • In Force/Active • Post Runout • Runout **Note:** An ancillary pricing rule cannot be created for **Runout** or **Post Runout** policy status where the policy run out end date is missing.	Yes

6. Click **OK**.

   The **Ancillary Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the information about the bill group. It contains the following fields:

Field Name	Field Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type for whom the ancillary pricing rule is created.

   - **Main** - Used to specify basic details about the ancillary pricing rule. In addition it allows you to define pricing for different types of ancillary charges.

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item that is used to create ancillary pricing rule.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Start Date	Used to specify the date from when the ancillary pricing rule is effective.	Yes
Pricing End Date	Used to specify the date till when the ancillary pricing rule is effective.	No
Rate Option	Used to indicate the rate option that you want to use while defining the price item.	Yes
Pass Through without Markup or Markdown	Used when markup or markdown should not be calculated for the ancillary charge. **Note:** This field is enabled when the **Rate Option** field is selected.	Yes (Conditional) **Note:** This field is required when you want to calculate the ancillary pricing without the pass through charge while defining the ancillary pricing rule.

The following fields appear when the **Pass Through without Markup or Markdown** option is not selected. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the ancillary pricing rule. **Note:** The Search (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Billable Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with or without rate based billable charge line type.
Billable	Used to indicate whether the ancillary charge is eligible for billing or not.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with or without the **Markup or Markdown Type** field and the **Rate Based** option.
Rate Based	Used to indicate whether the ancillary charge is calculated using a particular rate.	Yes (Conditional) **Note:** This field is required while creating a pricing arrangement with the **Rate Based** option.
Rate	Used to indicate the rate for calculating the ancillary charge.	Yes (Conditional)

Defining a Characteristic for an Ancillary Pricing Rule

Prerequisites

To define a characteristic for an ancillary pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for an ancillary pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an ancillary pricing rule.

   The **Characteristics** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the ancillary pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	**Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the ancillary pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the ancillary pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the ancillary pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for an ancillary pricing rule.

Discount Pricing

The Administrative Services Only (ASO) provider may offer some discounts to its network hospitals and providers. A portion of these discounts is then charged to the self-funded employer. Oracle Revenue Management and Billing enables you to calculate and bill the discount share or discount guarantee amount to the self-funded employer. The system enables you to calculate the discount using the following methods:

- Discount Share on page 3128
- Discount Guarantee on page 3128

The pricing for the share or guarantee discount can be defined using the respective discount pricing rules. You can define a share or guarantee discount pricing rule only at the parent customer level. You can define the share or guarantee discount pricing rules for parent customers from the **Customer 360° Information** screen. You can define a share or guarantee discount pricing rule using a discount arrangement pricing rule type.

Once a discount arrangement pricing rule type is defined, you can create discount pricing rules using the discount arrangement pricing rule type. Once a discount pricing rule is created, the system creates multiple price assignments in a price list and assigns the price list to the parent customer.

The following new batches are introduced in this release:

- **C1-ACDA** - Once the transaction legs and calculation lines are created for discount, this batch is used to accumulate the discount. It also calculates the required minimum or maximum limit on the contract. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.
- **C1-BCDA** - Once the discount is accumulated, this batch is used to create the credit (if any) and discount billable charges. It is also used to calculate the bill after date. For more information about the batch refer to *Oracle Revenue Management and Billing Batch Guide*.

Types of Discount Arrangement

The Oracle Revenue Management and Billing enables you to calculate the discount using the following methods:

- Discount Share on page 3128
- Discount Guarantee on page 3128

Discount Share

In the discount share method, the discount is calculated while processing the claim transaction. It is calculated as follows:

Billable Discount Amount = Discount Savings Amount * Discount Percentage

Note that the discount share percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

Discount Guarantee

In the discount guarantee method, the discount is calculated while processing the claim transaction. It is calculated as follows:

Targeted Guaranteed Amount = Covered Charge Amount * Discount Guarantee Percentage

Copyright © 2025, Oracle and/or its affiliates.

Billable Discount Amount = Discount Savings Amount - Targeted Guaranteed Amount

Note that the discount guarantee percentage varies depending on various parameters (such as health coverage class, In or Out Network, etc). Therefore, the system enables you to define different discount percentage for the claim transactions which are received from employees with different set of attributes. The system allows you to define maximum discount amount that can be charged per claim transaction. You can optionally configure the minimum and maximum discount limit on the contract. Note that the minimum limit is applicable during the settlement and maximum limit is applicable when you execute the **C1-ACDA** batch. The minimum and maximum limit can be a flat limit or enrollment based limit. Once the discount is accumulated, you can charge the customer at the pre-defined frequency. If the discount amount exceeds the maximum discount limit per claim or if the discount amount exceeds maximum discount limit defined on the contract, a credit billable charge is created for the customer.

Defining a Discount Arrangement Pricing Rule Type

Prerequisites

To define a discount arrangement pricing rule type, you should have:

- Discount Arrangement pricing rule type business object defined in the application
- Discount Arrangement pricing rule business object defined in the application

Procedure

To define a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a discount arrangement pricing rule type. The valid values are: • Aggregate Stop-Loss (ASL) Pricing Rule Type • Ancillary Pricing Rule Type • Claim Pricing Rule Type • Discount Arrangement Pricing Rule Type • Flat Fee Pricing Rule Type • Level Funded (LF) Pricing Rule Type • Retention Type Claim Based Pricing Rule Type • Retention Type Enrollment Based Pricing Rule Type • Specific Stop-Loss (SSL) Pricing Rule Type **Note:** You must select the **Discount Arrangement Pricing Rule Type** option from the **Pricing Rule Type Business Object** list while defining a discount arrangement pricing rule type.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Discount Arrangement Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.

Copyright © 2025, Oracle and/or its affiliates.

5. Click **OK**.

The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discount arrangement pricing rule type.
- **Algorithms** - Used to associate the algorithms with the discount arrangement pricing rule type.
- **Additional Data** - Used to specify additional information in the discount arrangement pricing rule type.
- **Price Items** - Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
- **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** - Used to define the characteristics for the discount arrangement pricing rule type.
- **DA - Specific Additional Data** - Used to specify discount arrangement-specific additional data in the discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the discount arrangement pricing rule type.	Yes
Description	Used to specify the description for the discount arrangement pricing rule type.	Yes
Detailed Description	Used to specify additional information about the discount arrangement pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value are: • **Aggregate Stop-Loss (ASL) Pricing Rule** • **Ancillary Pricing Rule** • **Claim Pricing Rule** • **Discount Arrangement Pricing Rule** • **Flat Fee Pricing Rule** • **Level Funded (LF) Pricing Rule** • **Retention Type Claim Based Pricing Rule** • **Retention Type Enrollment Based Pricing Rule** • **Specific Stop-Loss (SSL) Pricing Rule** **Note:** You must select the **Discount Arrangement Pricing Rule** option from the **Pricing Rule Business Object** list while defining a discount arrangement pricing rule type.	Yes
Business Object	Indicates the business object using which you are defining the discount arrangement pricing rule type.	Not applicable
Status	Used to indicate the status of the discount arrangement pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must not select the **Primary** option while defining a discount arrangement pricing rule type.	
Pricing Rule Type Category	Used to indicate the category to which the discount arrangement pricing rule type belongs. The valid value is: • **Aggregate Stop-Loss** • **Ancillary** • **Claim** • **Discount Arrangement** • **Flat Fees** • **Level Funded** • **Retention Type Claim Based** • **Retention Type Enrollment Based** • **Specific Stop-Loss**	Yes
	Note: You must select the **Discount Arrangement** option from the **Pricing Rule Type Category** list while defining a discount arrangement pricing rule type.	

6. Enter the required details in the **Main** section.
7. Select the **Discount Arrangement Pricing Rule** option from the **Pricing Rule Business Object** list.
8. Ensure that **Primary** option is not selected when you are defining a discount arrangement pricing rule type.
9. Select the **Discount Arrangement** option from the **Pricing Rule Type Category** list.
10. Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

11. Define additional data for a discount arrangement pricing rule type, if required.
12. Add the required price items in the discount arrangement pricing rule type.
13. Add the price item parameters in the discount arrangement pricing rule type, if required.
14. Define characteristics for a discount arrangement pricing rule type, if required.
15. Add discount arrangement-specific additional data in the discount arrangement pricing rule type.
16. Click **Save**.
    The discount arrangement pricing rule type is defined.

Associating Algorithms with a Discount Arrangement Pricing Rule Type

Prerequisites

To associate algorithms with a discount arrangement pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIDIS** algorithm type.

Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing a *d*iscount arrangement pricing rule type.

   The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to execute the algorithm. The valid values are: • **Account and Price Item Derivation** - Used to derive the account and price item for the discount arrangement transaction. • **Accumulation Billable Charge Post Proc** - Used to introduce a custom logic after creating discount share or discount guarantee billable charges. This algorithm is invoked in the **C1-BCDA (Create Billable Charge for Discount)** batch. • **Accumulation Billable Charge Pre Proc** - Used to introduce a custom logic before creating discount share or discount guarantee billable charges. This algorithm is invoked in the **C1-BCDA (Create Billable Charge for Discount)** batch. • **Accumulation Post Processing** - Used to introduce a custom logic after accumulating the discount share or discount guarantee amount. This algorithm is invoked in the **C1-ACDA (Accumulate Discount Arrangement)** batch. • **Accumulation Pre Processing** - Used to introduce a custom logic before accumulating the discount share or discount guarantee amount. This algorithm is invoked in the **C1-ACDA (Accumulate Discount Arrangement)** batch.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the discount arrangement pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Pricing Rule Post Processing** - Used to introduce a custom logic once the effective discount arrangement pricing rule is derived for the discount arrangement transaction. • **Transaction Validation** - Used to introduce a custom validation for the discount arrangement transaction.	
Sequence	Used to specify the order in which the algorithms with the same system event must be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the discount arrangement pricing rule type.
Algorithm	Used to specify the algorithm that you want to execute on the system event. **Note:** Once you select the system event, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the discount arrangement pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Account and Price Item Derivation	C1_ACCPRIDIS	Yes	Information will be available soon...
Accumulation Billable Charge Post Proc	- **Note:** An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Billable Charge Pre Proc	- **Note:** An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-
Accumulation Post Processing	-	No	-

Copyright © 2025, Oracle and/or its affiliates.

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
	Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accumulation Pre Processing	-	No	-
	Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Pricing Rule Post Processing	-	No	-
	Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Transaction Validation	-	No	-
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

3. If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the discount arrangement pricing rule type, click the **Delete** (🗑) icon corresponding to the algorithm.
4. Click **Save**.
   The algorithms are associated with the discount arrangement pricing rule type.

Defining Additional Data in a Discount Arrangement Pricing Rule Type

Procedure

To define additional data in a discount arrangement pricing rule type:

1. Ensure that the **Additional Data** section is expanded when you are defining or *e*diting a discount arrangement pricing rule type.

   The **Additional Data** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for specific stop-loss. The valid values are: • Yes • No	No
Eligible for Level Funding	Used to indicate whether price items included in the discount arrangement pricing rule type are eligible for level funding. The valid values are: • Yes • No **Note:** If you do not specify the value for this field, by default, it is set to **No**.	No
Run-in Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction is received from an external source system. **Note:** At present, this field is not used in the system.	Not applicable
Accumulation Only Identifier Value	Used to specify the identifier value to determine whether the discount arrangement transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the discount charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: • Yes • No For more information, refer to the Write-Off Charges during Post Runout section. **Note:** By default, the value is set to **No**.	No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which you want to create post runout write-off adjustment.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Eligible for Write-Off in Post Runout** field is set to **Yes**. The **Search** (🔍) icon appears corresponding to the **Post Runout Write-Off Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Post Runout Write-Off Adjustment Type** field.	**Note:** This field is required when the **Eligible for Write-Off in Post Runout** field is set to **Yes**.
Rule Based Price Item Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing. **Note:** For more information, refer to the Price Item Eligibility on page 3229 section. The **Search** (🔍) icon appears corresponding to the **Rule Based Price Item Eligibility Field** field. On clicking the **Search** icon, the **Field Search** window appears. On specifying the field name, the description of the field name appears corresponding to the **Rule Based Price Item Eligibility Field**.	No
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item in the discount arrangement pricing rule type should be considered for processing.	Yes (Conditional) **Note:** This field is required when a value is specified in the **Rule Based Price Item Eligibility Field** field.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.
   The additional data is defined in the discount arrangement pricing rule type.

Adding a Price Item in a Discount Arrangement Pricing Rule Type

Prerequisites

Copyright © 2025, Oracle and/or its affiliates.

To add a price item in a discount arrangement pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or *e*diting a discount arrangement pricing rule type.

   The **Price Items** section contains the following fields in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Price Item</td><td>Used to indicate the price item that you want to include in the discount arrangement pricing rule type.

Note:
The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.
On specifying the price item, the description of the price item appears corresponding to the Price Item field.</td><td>Yes (Conditional)

Note: This field is required when you are adding a rate option and bill to account in the discount arrangement pricing rule type.</td></tr>
<tr><td>Rate Option</td><td>Used to indicate one or more rate options which are valid for a price item.
On clicking the Add (+) icon, the following field appears in a grid:
<table><tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr><tr><td>Rate Option</td><td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td><td>Yes</td></tr></table>Note:
If you want to define more than one rate option to the price item in the discount arrangement pricing rule type, click the Add (+) icon.
However, if you want to remove a price item from a discount arrangement pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</td><td>Not applicable</td></tr>
<tr><td>Bill To Account</td><td>Used to indicate a order in which the account should be considered while deriving a transaction leg.
On clicking the Add (+) icon, the following fields appear in a grid:</td><td>Not applicable</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes</td></tr>
<tr><td>Invoice Type</td><td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 13 section.

Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</td><td>Yes</td></tr>
</table>
Note:
If you want to define more than one invoice type to the price item in a discount arrangement pricing rule type, click the Add (+) icon.
However, if you want to remove a invoice type from the price item in a discount arrangement pricing rule type, click the Delete (🗑) icon corresponding to the Priority field.
</td><td></td></tr>
<tr><td>Eligibility Rule Type</td><td>Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.</td><td>No</td></tr>
</table>

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item in a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a discount arrangement pricing rule type, click the **Delete** (🗑) icon corresponding to the **Price Item** field.

4. Click **Save**.
   The price items are added for a discount arrangement pricing rule type.

Adding a Price Item Parameter in a Discount Arrangement Pricing Rule Type

Prerequisites

Copyright © 2025, Oracle and/or its affiliates.

To add a price item parameter in a discount arrangement pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in a discount arrangement pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or *e*diting a discount arrangement pricing rule type.

   The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a discount arrangement pricing for the price item. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	Yes (Conditional) **Note:** This field is required while adding a price item parameter in a discount arrangement pricing rule type.
Transaction Field	Used to map to a transaction field which contains the parameter value. **Note:** The **Search** (🔍) icon appears corresponding to the **Transaction Field** field. On clicking the **Search** (🔍) icon corresponding to the **Transaction Field** field, the **Transaction Field Search** window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the **Transaction Field**.	Yes (Conditional) **Note:** This field is required while adding a price item parameter in a discount arrangement pricing rule type.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rules at the bill group level.	No
Eligible for Level Funding	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the level funding pricing rules at the bill group level.	No

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item parameter from a discount arrangement pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

Copyright © 2025, Oracle and/or its affiliates.

4. Click **Save**.
   The price item parameter is added in the discount arrangement pricing rule type.

Defining a Characteristic for a Discount Arrangement Pricing Rule Type

Prerequisites

To define a characteristic for a discount arrangement pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a discount arrangement pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or *e*diting a discount arrangement pricing rule type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for a discount arrangement pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for a discount arrangement pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for a discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from a discount arrangement pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.

Copyright © 2025, Oracle and/or its affiliates.

The characteristic is defined for a discount arrangement pricing rule type.

Defining the Discount Specific Data in a Discount Arrangement Pricing Rule Type

Procedure

To add the discount-specific data in a discount arrangement pricing rule type:

1. Ensure that the **DA - Specific Additional Data** section is expanded when you are defining or editing a discount arrangement pricing rule type.

   The **DA - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Guaranteed Discount	Used to indicate whether the discount arrangement pricing rule type is defined for discount guarantee or discount share. The valid values are: • **Yes** - Used when you want to create a discount guarantee pricing rule type. • **No** - Used when you want to create a discount share pricing rule type.	Yes
Discount Billable Charge Line Type	Used to indicate a billable charge line type using which you want to create the charge line for discount. **Note:** The **Search** (🔍) icon appears corresponding to the **Discount Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Discount Billable Charge Line Type** field.	Yes
Credit Billable Charge Line Type	Used to indicate a billable charge line type using which you want to create the charge line for any credit to the customer.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Credit Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Credit Billable Charge Line Type** field.	
Minimum Limit Pricing Rule Type	Used to indicate the retention type enrollment based pricing rule type which you want to use while calculating the minimum limit for the discount. **Note:** The **Search** (🔍) icon appears corresponding to the **Minimum Limit Pricing Rule Type** field. On clicking the **Search** icon, the **Pricing Rule Type Search** window appears. On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the **Minimum Limit Pricing Rule Type** field.	Yes (Conditional) **Note:** This field is required when you are defining enrollment based minimum discount limit on the contract in a discount share pricing rule.
Minimum Limit Price Item	Used to indicate the price item whose pricing you want to use while calculating the minimum limit for the discount. **Note:** The **Search** (🔍) icon appears corresponding to the **Minimum Limit Price Item** field. On clicking the **Search** icon, the **Price Item Details** window appears. On specifying the price item, the description of the price item appears corresponding to the **Minimum Limit Price Item** field.	Yes (Conditional) **Note:** This field is required when you are defining enrollment based minimum discount limit on the contract in a discount share pricing rule.
Maximum Limit Pricing Rule Type	Used to indicate the retention type enrollment based pricing rule type which you want to use while calculating the maximum limit for the discount. **Note:** The **Search** (🔍) icon appears corresponding to the **Maximum Limit Pricing Rule Type** field. On clicking the **Search** icon, the **Pricing Rule Type Search** window appears. On specifying the pricing rule type, the description of the pricing rule type appears corresponding to the **Maximum Limit Pricing Rule Type** field.	Yes (Conditional) **Note:** This field is required when you are defining enrollment based maximum discount limit on the contract in a discount share or discount guarantee pricing rule.
Maximum Limit Price Item	Used to indicate the price item whose pricing you want to use while calculating the maximum limit for the discount. Used	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	to indicate the price item whose pricing you want to use while calculating the minimum limit for the discount. **Note:** The **Search** (🔍) icon appears corresponding to the **Maximum Limit Price Item** field. On clicking the **Search** icon, the **Price Item Details** window appears. On specifying the price item, the description of the price item appears corresponding to the **Maximum Limit Price Item** field.	**Note:** This field is required when you are defining enrollment based maximum discount limit on the contract in a discount share or discount guarantee pricing rule.

2. Enter the required details in the **DA - Specific Additional Data** section.
3. Click **Save**.
   The discount-specific data is added in the discount arrangement pricing rule type.

Editing a Discount Arrangement Pricing Rule Type

Prerequisites

To edit a discount arrangement pricing rule type, you should have:

- Discount arrangement pricing rule type business object defined in the application.
- Discount arrangement pricing rule business object defined in the application.

Procedure

To edit a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the pricing rule type whose details you want to edit.

   The **Discount Arrangement Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the discount arrangement pricing rule type.
   - **Algorithms** - Used to associate the algorithms with the discount arrangement pricing rule type.
   - **Additional Data** - Used to specify additional information in the discount arrangement pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

- **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
- **Characteristics** - Used to define the characteristics for the discount arrangement pricing rule type.
- **DA-Specific Additional Data** - Used to specify discount arrangement-specific additional data in a discount arrangement pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the discount arrangement pricing rule type.	Not applicable
Description	Used to specify the description for the discount arrangement pricing rule type.	Yes
Detailed Description	Used to specify additional information about the discount arrangement pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the discount arrangement pricing rule. The valid value is: • Aggregate Stop-Loss (ASL) Pricing Rule • Ancillary Pricing Rule • Claim Pricing Rule • Discount Arrangement Pricing Rule • Flat Fee Pricing Rule • Level Funded (LF) Pricing Rule • Retention Type Claim Based Pricing Rule • Retention Type Enrollment Based Pricing Rule • Specific Stop-Loss (SSL) Pricing Rule **Note:** You must select the **Discount Arrangement Pricing Rule** option from the **Pricing Rule Business Object** list while defining a discount arrangement pricing rule type.	Yes
Business Object	Indicates the business object used while defining the discount arrangement pricing rule type.	Not applicable
Status	Used to indicate the status of the discount arrangement pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the discount arrangement pricing rule type is a primary pricing rule type. **Note:** You must not select the **Primary** option while defining the discount arrangement pricing rule type.	Not applicable
Pricing Rule Type Category	Indicates the category to which the discount arrangement pricing rule type belongs. The valid values are: • Aggregate Stop-Loss • Ancillary • Claim • Discount Arrangement	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Flat Fees • Level Funded • Retention Type Claim Based • Retention Type Enrollment Based • Specific Stop-Loss **Note:** You must select the **Discount Arrangement** option from the **Pricing Rule Type Category** list while defining a discount arrangement pricing rule type.	

Tip: Alternatively, you can edit the details of a discount arrangement pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the required details in the **Main** section.
6. Ensure that the **Discount Arrangement Pricing Rule** option is selected from the **Pricing Rule Business Object** list.
7. Ensure that **Primary** option is not selected when you are editing a discount arrangement pricing rule type.
8. Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIDIS	C1_ACCPRIDIS	Account and Priceitem Derivation For Discount Arrangement

9. Modify the additional data for a discount arrangement pricing rule type, if required.
10. Add, edit, or remove price items in the discount arrangement pricing rule type, if required.
11. Add, edit, or remove price item parameters in the discount arrangement pricing rule type, if required.
12. Add, edit, or remove characteristics in the discount arrangement pricing rule type, if required.
13. Modify the discount arrangement-specific data in the discount arrangement pricing rule type, if required.
14. Click **Save**.
    The changes made to the discount arrangement pricing rule type are saved.

Deleting a Discount Arrangement Pricing Rule Type

Procedure

To delete a discount arrangement pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the discount arrangement pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the discount arrangement pricing rule type.

   Note: You can delete a discount arrangement pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete a discount arrangement pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The discount arrangement pricing rule type is deleted.

Defining a Discount Arrangement Pricing Rule for a Parent Customer

Prerequisites

To define a discount arrangement pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Discount Arrangement**.
- Price items associated with the discount arrangement pricing rule type.

Procedure

To define a discount arrangement pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a discount arrangement pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: • Parent Customer	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a discount arrangement pricing rule.	Yes

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

   The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays information about the parent customer for whom you are defining the discount arrangement pricing rule. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the discount arrangement pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the discount arrangement pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

- **Main** - Used to specify basic details about the discount arrangement pricing rule.
- **Discount Details** - Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
- **Discount Limits** - Used when you want to define minimum and maximum discount limit on the contract.
- **Exclusion** - Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
- **Characteristics** - Used to define the characteristics for the discount arrangement pricing rule.

Note: The **Discount Details**, **Discount Limits**, and **Exclusion** sections appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the discount arrangement pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the discount arrangement pricing rule is effective. **Note:** The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the discount arrangement pricing rule is effective. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: • **Manually (At Regular Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCDA** batch is stamped on the credit billable charge. • **Yearly** - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date. **Note:** The bill after date is stamped on the credit billable charges and not on the discount billable charges.	Yes

7. Enter the required details in the **Main** section.
8. Add the required discount details in the discount arrangement pricing rule.
9. Define the minimum and maximum discount limits on the contract in the discount arrangement pricing rule, if required.
10. Add the exclusion details of a network or a provider in the discount arrangement pricing rule, if required.
11. Define characteristics for the discount arrangement pricing rule, if required.
12. Click **Save**.
    The discount arrangement pricing rule is defined for the parent customer.

Adding the Discount Details in a Discount Arrangement Pricing Rule

Prerequisites

To add the discount details in a discount arrangement pricing rule, you should have:

- Parameters defined in the application
- Parameters associated with the price item.

Procedure

To add the discount details in a discount arrangement pricing rule:

1. Ensure that the **Discount Details** section appears when you are defining or *e*diting a discount arrangement pricing rule.

   The **Discount Details** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to indicate the parameter using which you want to define an eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** icon, the **Price Item Parameter Search** window appears. On specifying the parameter, the description of the parameter appears corresponding to the **Price Item Parameter** field. You can only select those price item parameters which are effective during the date range specified in the discount arrangement pricing rule. If a parameter associated with the price item is mandatory, then by default, the parameter appears in the **Price Item Parameter** field.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value for the price item parameter.	Yes (Conditional)
	Note: If you select a predefined parameter, the **Search** (🔍) icon appears corresponding to the **Parameter Value** field. On clicking the **Search** icon, the **Predefined Parameter Value Search** window appears. On specifying the parameter value, the description of the parameter value appears corresponding to the **Parameter Value** field.	**Note:** This field is required when the parameter associated with the price item is mandatory.
Discount Percentage	Used to specify the discount share or discount guarantee percentage.	Yes
Maximum Discount Per Claim	Used to specify the maximum discount amount which is allowed per claim. If the discount amount exceeds the maximum limit per claim, the additional amount is credited to the customer.	No

Note: The **Discount Details** section appears when you specify a price item in the **Main** section.

2. Enter the required details in the **Discount Details** section.
3. If you want to define a discount percentage for another price item parameter and parameter value combination, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a discount percentage for a price item parameter and parameter value combination from the discount arrangement pricing rule, click the **Delete** (🗑) icon corresponding to the combination.

4. Click **Save**.
   The discount details are added in the discount arrangement pricing rule.

Defining the Discount Limits in a Discount Arrangement Pricing Rule

Prerequisites

To define the discount limits in a discount arrangement pricing rule, you should have:

- An account, to which you want to credit the discount, defined in the application
- Minimum limit pricing rule type and minimum limit price item defined in the respective discount arrangement pricing rule type when you want to define minimum discount limit on the contract
- Maximum limit pricing rule type and maximum limit price item defined in the respective discount arrangement pricing rule type when you want to define maximum discount limit on the contract

Copyright © 2025, Oracle and/or its affiliates.

Procedure

To define the discount limits in a discount arrangement pricing rule:

1. Ensure that the **Discount Limits** section appears when you are defining or *e*diting a discount arrangement pricing rule.

   The **Discount Limits** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
No Limit	Used to indicate whether you want to define minimum or maximum discount limit on the contract.	No
Discount Credit Account	Used to indicate the account to which you want to credit the discount when the minimum or maximum discount limit is defined on the contract. **Note:** This field is enabled when the **No Limit** option is not selected.	Yes (Conditional) **Note:** This field is required when the **No Limit** option is not selected.
Settlement Days	Used to specify the number of days which helps to calculate the final settlement date (which is pricing end date + the settlement days). The valid values: • 30 Days • 60 Days • 90 Days • 120 Days • 150 Days • 180 Days	Yes

   In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Type of Discount Limit	Displays the type of discount limit. The valid values are: • Minimum • Maximum	Not applicable
Select	On clicking the check box corresponding to the type of discount limit, you can define minimum or maximum discount limit on the contract. **Note:** This field is enabled when the **No Limit** option is not selected.	Yes
Limit Type	Used to indicate whether you want to define a flat limit or an enrollment based limit. The valid values are: • Enrollment Based	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Flat **Note:** This field is enabled when the **No Limit** option is not selected. If you select the check box corresponding to the **Minimum** discount limit, the **Limit Type** field corresponding to the **Minimum** discount limit is enabled.	**Note:** This field is required when you are defining a minimum or maximum discount limit in the discount arrangement pricing rule.
Amount Limit	Used to specify the flat minimum or maximum discount amount. **Note:** This field is enabled when: • The **No Limit** option is not selected. • The minimum or maximum limit type is set to **Flat**.	Yes (Conditional) **Note:** This field is required when the minimum or maximum limit type is set to **Flat**.

Note: The **Discount Limits** section appears when you specify a price item in the **Main** section.

2. Enter the required details in the **Discount Limits** section.
3. Click **Save**.
   The discount limits are defined in the discount arrangement pricing rule.

Excluding a Network or Provider in a Discount Arrangement Pricing Rule

Procedure

To exclude a network or provider in a discount arrangement pricing rule:

1. Ensure that the **Exclusion** section appears when you are defining or editing a discount arrangement pricing rule.

   The **Exclusion** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Exclusion Level	Used to indicate whether you want to exclude the discount offered to certain network hospitals and providers during the discount share or discount guarantee calculation. The valid values are:	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Network • Provider **Note:** The system creates the transaction legs and calculation lines for such excluded network hospitals and providers, but does not accumulate the discount.	**Note:** This field is required while excluding a network or provider in the discount arrangement pricing rule.
Level Identifier	Used to specify the network or provider ID.	Yes (Conditional) **Note:** This field is required while excluding a network or provider in the discount arrangement pricing rule.

2. Enter the required details in the **Exclusion** section.
3. If you want to exclude more than one network or provider in the discount arrangement pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a network or provider from the exclusion list, click the **Delete** (🗑) icon corresponding to the network or provider.

4. Click **Save**.
   The network or provider is excluded in the discount arrangement pricing rule.

Defining a Characteristic for a Discount Arrangement Pricing Rule

Prerequisites

To define a characteristic for a discount arrangement pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a discount arrangement pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a discount *a*rrangement pricing rule.

   The **Characteristics** section contains the following fields in the grid:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the discount arrangement pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the discount arrangement pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the discount arrangement pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the discount arrangement pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the discount arrangement pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the discount arrangement pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the discount arrangement pricing rule.

Editing a Discount Arrangement Pricing Rule of a Parent Customer

Procedure

To edit a discount arrangement pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.

Copyright © 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the parent customer whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discount arrangement pricing rule, whose details you want to edit.

   The **Discount Arrangement Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays information about the parent customer for whom the discount arrangement pricing rule is defined. It contains the following fields:

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom the discount arrangement pricing rule is defined.
Pricing Rule Type	Indicates the discount arrangement pricing rule type using which the discount arrangement pricing rule is defined.

   - **Main** - Used to specify basic details in the discount arrangement pricing rule.
   - **Discount Details** - Used to define eligibility criteria for a discount percentage and maximum discount amount which is allowed per claim.
   - **Discount Limits** - Used when you want to define minimum and maximum discount limit on the contract.
   - **Exclusion** - Used when you want to exclude certain network hospitals and providers during the discount share or discount guarantee calculation.
   - **Characteristics** - Used to define the characteristics for the discount arrangement pricing rule.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the discount arrangement pricing rule.	Yes
Pricing Start Date	Used to specify the date from when the discount arrangement pricing rule is effective. **Note:** The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the discount arrangement pricing rule is effective. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: • **Manually (At Regular Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCDA** batch is stamped on the credit billable charge.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Yearly** - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date. **Note:** The bill after date is stamped on the credit billable charges and not on the discount billable charges.	

5. Modify the required details in the **Main** section.
6. Modify the required discount details in the discount arrangement pricing rule.
7. Modify the minimum or maximum discount limit on the contract in the discount arrangement pricing rule, if required.
8. Modify the exclusion list in the discount arrangement pricing rule, if required.
9. Define, edit, or remove characteristics of the discount arrangement pricing rule, if required.
10. Click **Save**.
    The changes made to the discount arrangement pricing rule are saved.

Deleting a Discount Arrangement Pricing Rule of a Parent Customer

Procedure

To delete a discount arrangement pricing rule of a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the discount arrangement pricing rule that you want to delete.
   A message appears confirming whether you want to delete the discount arrangement pricing rule.

Note: You can delete a discount arrangement pricing rule when it is not yet used in the system.

Copyright © 2025, Oracle and/or its affiliates.

5. Click **OK**.
   The discount arrangement pricing rule of a parent customer is deleted.

Viewing the Discount Arrangement Pricing Rule Details of a Parent Customer

Procedure

To view the discount arrangement pricing rule details of a parent customer:

1. Search for a parent customer whose pricing details you want to view in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. In the **Parent Customer Pricing Rules** zone, click the link in the **Pricing Rule Information** column corresponding to the pricing rule type whose details you want to view.
   The **Pricing Rule** screen appears. It contains the following zone:
   - **Discount Arrangement** - Displays the discount arrangement pricing rule of a parent customer. It contains the following sections:
     - **Main** - Displays basic details of the discount arrangement pricing rule.
     - **Discount Details** - Displays the eligibility criteria for a discount percentage and maximum discount amount that is allowed per claim.
     - **Discount Limits** - Displays the minimum and maximum discount limit defined on the contract.
     - **Exclusions** - Displays the entity (network or provider) which is excluded in the discount arrangement pricing rule.
     - **Characteristics** - Displays the characteristics defined for the discount arrangement pricing rule.
5. View the basic details of the discount arrangement pricing rule in the **Main** section.
6. View the discount details of the discount arrangement pricing rule in the **Discount Details** section.
7. View the discount limits set on the discount arrangement pricing rule in the **Discount Limits** section.
8. View the excluded entity defined for the discount arrangement pricing rule in the **Exclusions** section.
9. View the characteristics of the discount arrangement pricing rule in the **Characteristics** section.

Write-Off Charges during Post Runout

Oracle Revenue Management and Billing enables you to write-off the claim, specific stop-loss, aggregate stop-loss, claim based fees, enrollment based fees, ancillary, discount, and funds charges when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the respective pricing rule type.

To enable this feature, you need to do the following:

1. Set the **Eligible for Write-Off in Post Runout** field in the respective pricing rule type to **Yes**.
2. Specify the post runout write-off adjustment type in the respective pricing rule type.
3. Attach the **C1-PRCRLWOFF** algorithm to the **Post-Bill Completion** system event in the customer class of the accounts for which you want to write-off the charges in the post runout period of the policy.

Level Funding Pricing

Level funding is a type of self-funding. It offers all benefits of traditional self-funding. However, it provides one additional benefit which helps to stabilize monthly costs of the self-funded employer to pay off the claim, ancillary, claim based fee, enrollment based fee, and discount charges.

Oracle Revenue Management and Billing enables you to process and bill the funds charges to the self-funded employer in either of the following ways:

- Pay the fixed flat amount in every bill period
- Pay the amount based on the enrollment based limit in every bill period

The system enables you to define whether the price items included in the claim, retention type claim based, retention type enrollment based, ancillary, and discount pricing rule types are eligible for level funding. If the price items are eligible for level funding, you can then include them in the level funding pricing rule type indicating that the charges for these price items will not be included in the respective billable charge (for example, claim billable charge), but it would be settled against the funds billable charge. While adjusting such charges against the funds billable charge, there might be some surplus or deficit in funds at the time of settlement which is ideally at the end of year. In such case, the system enables you configure whether a flat amount or percentage of surplus should be retained by the ASO provider or whether a flat amount or percentage of deficit is offered as a discount to the self-funded employer.

The pricing for the level funding can be defined using the level funding pricing rules. You can define a level funding pricing rule at the parent customer and bill group levels. The level funding pricing rule at the bill group level takes precedence over the level funding pricing rule at the parent customer level. You can define the level funding pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a level funding pricing rule using a level funding pricing rule type. It is the level funding pricing rule type which helps the system to determine:

- Business object using which the level funding pricing rule should be created in the system.

  Note: You must not select the **Primary** option while defining a level funding pricing rule type.

- Algorithm which should be triggered for deriving the account and price item while creating the funds transaction legs.

  Note: You must create an algorithm using the **C1_ACCPRISL** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Pricing rule post-processing algorithm which should be triggered once the effective level funding pricing rule is derived.

  Note: A pricing rule post-processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.

Copyright © 2025, Oracle and/or its affiliates.

- Additional generic information, such as:
  - Whether the funds charge should be written off when the bill is generated in the post runout period of the policy. In this case, a write-off adjustment is created against the respective bill segment during the post bill completion. The write-off adjustment is created using the post runout write-off adjustment type which is specified in the level funding pricing rule type.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.
  - Value which the output parameter in the rule should return when the price item in the level funding pricing rule type should be considered for processing.
- Price items for which you can define level funding pricing rules using the level funding pricing rule type.
- Rate options that you can use while defining the pricing for the level funded price items.
- Different type of account to which a price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Additional level funding specific information, such as:
  - Whether the level funding premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule.
  - Bill period based recurring flat fee pricing rule type or retention type enrollment based pricing rule type which you want to use for calculating the level funded premium.
  - Price item whose pricing you want to use for calculating the level-funded premium.
  - LF billable charge line type using which you want to create billable charges for level funded premium.
  - GL only contract type which indicates the contract against which the claim, ancillary, claim based fees, enrollment based fees, and discount charges that are settled against the funds must be debited. The distribution code on the GL only contract type will indicate the GL account against which charges settled against the funds must be debited.
  - Liability distribution code will indicate the GL account against which charges settled against the funds must be credited.
  - Number of days before which you want to create a To Do for reminding the self-funded employer to renew the level funded agreement.
  - Surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement.
  - Deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement.
  - Domestic provider billable charge line type using which you want to create billable charges for the claim, claim based fees, enrollment based fees, ancillary, and discount charges which are settled against the funds for a domestic provider.
  - Markup or markdown billable charge line type using which you want to create billable charges for markup or markdown which are settled against the funds.
  - Rule type which indicates the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing.
  - Rule type which indicates the rules that should be executed to determine whether the level funded premium is for a domestic provider.
  - Transaction field which you want to use in the rules as the output parameter to determine whether the level funded premium is for a domestic provider.

Once a level funding pricing rule type is defined, you can create level funding pricing rules using the level funding pricing rule type. While defining a level funding pricing rule for a parent customer, you need to specify the following:

- Price item for which you want to define the pricing.
- Specific stop-loss pricing rule of the parent customer whose accumulation parameters you want to inherit for the level funding. On selecting a specific stop-loss pricing rule, the level funding pricing date range is set automatically. The level funding pricing date range is same as the specific stop-loss pricing rule.
- Rate option which you want to use while defining the level funding pricing.

Copyright © 2025, Oracle and/or its affiliates.

- Settlement frequency which helps to determine the bill after date. The valid values are:
  - **Immediately** - If you select this option from the list, the bill after date is not calculated. The funds billable charge is billed immediately in the next bill cycle.
  - **Manually (At Required Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
  - **Never** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCLF** batch is stamped on the funds billable charge.
  - **Yearly** - If you select this option from the list, the bill after date is set to the pricing end date in the funds billable charge.
  - **On Settlement** - If you select this option from the list, the bill after date is set to the settlement date in the funds billable charge.

Note: The accumulation parameters, such as incurred start date, incurred end date, paid start date, paid end date, and settlement days are automatically inherited from the parent customer's specific stop-loss pricing rule. You cannot change any accumulation parameter except the settlement days.

- Settlement days which helps to calculate the settlement date (which is pricing end date, incurred end date, or paid end date whichever is later + the settlement days)
- Whether the customer would like to renew or cancel the level funded agreement.
- Whether a flat amount or percentage of surplus should be retained by the ASO provider at the time of settlement.
- Whether a flat amount or percentage of deficit should be offered as discount to the self-funded employer at the time of settlement.

However, while defining a level funding pricing rule for a bill group, you need to specify the following:

- The policy status in which the level funding pricing rule is applicable.
- Price item for which you want to define the pricing.
- Parent customer's level funding pricing rule from which you want to inherit the accumulation parameters.

Note:

The pricing date range is derived from the parent customer's level funding pricing rule because the level funding pricing rules for parent customer and bill group should have the same date range.

The settlement fund price item is derived from the level funding pricing rule type using which the level funding pricing rule is created.

- Rate option which you want to use while defining the level funding pricing.
- Price items whose charges should be accumulated against the level funded price items so that it can be settled against the funds.
- Whether the line items and markup or markdown in a particular claim pricing rule should be accumulated.

  OR

  Whether the line items which are associated with the **Level Funded** pricing rule type category should be accumulated.
- Whether the charges created using the billable charge line types in a particular ancillary pricing rule should be accumulated.

  OR

  Whether the charges created using the billable charge line types where the **Pricing Rule Type Category** characteristic is set to **Ancillary** should be accumulated.
- Whether the discount calculated using a particular discount arrangement pricing rule should be accumulated.
- Whether the charges calculated using the retention type claim based or retention type enrollment based pricing for a price item should be accumulated.

Copyright © 2025, Oracle and/or its affiliates.

You can also specify a pricing group while defining a level funding pricing rule for a bill group. Once a level funding pricing rule is defined for a bill group, the system creates a price assignment in a price list and assigns the price list to the bill group.

The following new batches are introduced in this release:

- **C1-ACLF** - This batch is used to accumulate the charges which are to be settled against the funds. During the accumulation post-processing, the level funded billable charges (which are created through the TFM process) are posted against the GL accounts which are derived using the GL only contract type and liability distribution code information in the level funding pricing rule type. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.
- **C1-BCLF** - Once the level funded billable charges are accumulated, this batch is used to create the accumulated level funded billable charges. It is also used to calculate the bill after date. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Terminal Liability Reserve (Run Out) Level Funding Pricing

Oracle Revenue Management and Billing provides a mechanism to maintain terminal liability reserve for a self-funded policy through level funding. Now, the system supports the following types of level funding:

- Regular Enrollment Based Level Funding Without Terminal Liability Reserve (TLR)
- Flat Rate Based Level Funding Without TLR
- Regular Enrollment Based Level Funding With TLR
- Flat Rate Based Level Funding With TLR

The **C1-PricingRuleTypeLF** and **C1-PricingRuleLevelFunded** business objects are extended to support the TLR feature. Therefore, you can now define pricing rule types for the above listed types of level funding. While creating a level funding pricing rule type with TLR feature, you need to specify the following:

- **Terminal Liability Reserve (Run Out) Funding Required** - Used to indicate whether you want to define a level funding pricing rule type with TLR.
- **Claim Fund Off-Process Request Type** - Used to indicate the off-process request type using which the off-process request should be created in the **C1-BCLF** batch. Through this off-process request, the system creates billable charge when the customer decides to roll forward the claim fund.
- **Run Out Fund Off-Process Request Type** - Used to indicate the off-process request type using which the off-process request should be created in the **C1-BCLF** batch. Through this off-process request, the system creates billable charge when the customer decides to roll forward the run out fund.
- **Run Out Fund Pricing Rule Type** - Used to specify a bill period based recurring flat fee pricing rule type or retention type enrollment based pricing rule type which you want to use for calculating the run out fund.
- **Run Out Fund Price Item** - Used to specify the price item which you want to use for calculating the run out fund.
- **Run Out Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create calculation line while settling charges, stop-loss, or discount through run out fund in the runout period.
- **Run Out Surplus Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create the calculation line when the surplus run out funds are left with the ASO provider at the time of settlement.
- **Run Out Deficit Billable Charge Line Type** - Used to specify the billable charge line type using which you want to create the calculation line when the run out funds are in deficit at the time of settlement.

Now, the system enables you to specify the settlement rules while creating a level funding pricing rule type with or without TLR feature. While defining settlement rules, you need to specify the following:

- The policy status for which the settlement rules are applicable
- The fund type (i.e. claim or run out fund) for which you want to define the settlement rules
- The customer action (i.e. cancel or renew the self-funded policy) based on which you want to either close or roll forward the surplus or deficit claim or run out fund

Copyright © 2025, Oracle and/or its affiliates.

The system provides an option to indicate whether the settlement rules specified for a claim or run out fund are editable. Accordingly, you can change the settlement rules when you create a pricing rule using the pricing rule type for a parent customer.

Now, the system enables you to create a different level funded pricing rule for each policy status at the parent customer level.

Defining a Level Funded Pricing Rule Type

Prerequisites

To define a level funded pricing rule type, you should have:

- Level Funded Pricing Rule Type business object defined in the application.
- Level Funded Pricing Rule business object defined in the application.

Procedure

To define a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a level funded pricing rule type. **Note:** You can create a discount arrangement pricing rule type using the **Level Funded Pricing Rule Type (C1-PricingRuleTypeDA)** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Level Funded (LF) Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

   The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the level funded pricing rule type.
   - **Algorithms** - Used to associate the algorithms with a level funded pricing rule type.
   - **Additional Data** - Used to specify the additional information about the level funded pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the level funded pricing rules using the level funded pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
   - **Characteristics** - Used to define the characteristics for a level funded pricing rule type.
   - **DA - Specific Additional Data** - Used to define the level funded - specific additional data in a discount arrangement pricing rule type.

   The **Main** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the level funded pricing rule type.	Yes
Description	Used to specify the description for the level funded pricing rule type.	Yes
Detailed Description	Used to specify additional information about the level funded pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the level funded pricing rule. The valid value is: • Level Funded (LF) Pricing Rule	Yes
Business Object	Indicates the business object using which you are defining the level funded pricing rule type.	Not applicable
Status	Used to indicate the status of the level funded pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the pricing rule type is a primary pricing rule type. **Note:** You must not select the **Primary** option while defining a level funded pricing rule type.	Not applicable
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: • Level Funded	Yes

6. Enter the required details in the **Main** section.
7. Ensure that **Primary** option is not selected when you are defining a level funded pricing rule type.
8. Associate the following algorithms with the discount arrangement pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRISL	C1_ACCPRIDIS	Account and Priceitem Derivation For Level Funded
Accumulation Post Processing	C1-LFACPOST	C1-LFACPOST	Level Funded Accumulation Post Processing

9. Define additional data for a level funded pricing rule type, if required.
10. Add the required price items in the level funded pricing rule type.
11. Add the price item parameters in the level funded pricing rule type, if required.
12. Define characteristics for a level funded pricing rule type, if required.
13. Add level funded-specific additional data in the level funded pricing rule type.
14. Click **Save**.
    The level funded pricing rule type is defined.

Associating an Algorithm with a Level Funded Pricing Rule Type

Prerequisites

To associate algorithms with a level funding pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIDIS** algorithm type.

Procedure

To associate algorithms with a discount arrangement pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the discount *a*rrangement pricing rule type.

   The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: • Account and Price Item Derivation • Accumulation Billable Charge Post Proc • Accumulation Billable Charge Pre Proc • Accumulation Post Processing • Accumulation Pre Processing • Pricing Rule Post Processing • Transaction Validation	Yes **Note:** This field is required when you are associating an algorithm with the discount arrangement pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the discount arrangement pricing rule type.
Algorithm	Used to specify the algorithm.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: Once you select the system event, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	**Note:** This field is required when you are associating an algorithm with the discount arrangement pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Sequence	Algorithm
Account and Price Item Derivation	10	C1_ACCPRIDIS

3. If you want to associate more than one algorithm with the discount arrangement pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the discount arrangement pricing rule type, click the **Delete** (🗑) icon corresponding to the algorithm.

4. Click **Save**.
The algorithms are associated with the discount arrangement pricing rule type.

Defining Additional Data in a Level Funded Pricing Rule Type

Procedure

To define additional data in a level funded pricing rule type:

1. Ensure that the **Additional Data**section is expanded when you are defining *or* editing a level funded pricing rule type.

The **Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Specific Stop-Loss	Used to indicate whether price items included in the level funded pricing rule type are eligible for specific stop-loss. The valid values are: • Yes • No	No
Eligible for Level Funding	Used to indicate whether price items included in the level funded pricing rule type are eligible for level funding. The valid values are:	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Yes • No	
Run-in Identifier Value	Used to specify the identifier value to determine whether the level funded transaction is received during the run-in period of the policy.	No
Third Party Identifier Value	Used to specify the identifier value to determine whether the level funded transaction is received from an external source system.	No
Accumulation Only Identifier Value	Used to specify the identifier value to determine whether the level funded transaction contains the accumulated information of ASL, SSL, and Level Funding pricing types.	No
Eligible for Write-Off in Post Runout	Used to indicate whether the level funded charges should be written off when the bill is generated in the post runout period of the policy. The valid values are: • Yes • No **Note:** For more information, refer to the Write-Off Charges during Post Runout section.	No
Post Runout Write-Off Adjustment Type	Used to specify the adjustment type using which you want to create post runout write-off adjustment. **Note:** This field appears when the **Eligible for Write-Off in Post Runout** field is set to **Yes**. The **Search** (🔍) icon appears corresponding to the **Post Runout Write-Off Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Eligible for Write-Off in Post Runout** field.	Yes (Conditional) **Note:** This field is required when the **Eligible for Write-Off in Post Runout** field is set to **Yes**.
Rule Based Price Item Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the price item should be considered for billing.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: For more information, refer to the Price Item Eligibility on page 3229 section. This field appears when the **Eligible for Write-Off in Post Runout** field is set to **Yes**. The **Search** (🔍) icon appears corresponding to the **Rule Based Price Item Eligibility Field** field. On clicking the **Search** icon, the **Field Search** window appears. On specifying the field name, the description of the field name appears corresponding to the **Rule Based Price Item Eligibility Field**.	
Rule Based Eligibility Value	Used to specify the value which the output parameter in the rule should return when the price item in the discount arrangement pricing rule type should be considered for processing.	Yes (Conditional) **Note:** This field is required when a value is specified in the **Rule Based Price Item Eligibility Field** field.

2. Enter the required details in the **Additional Data** section.
3. Click **Save**.
   The additional data is defined for the pricing rule type.

Adding a Price Item in a Level Funded Pricing Rule Type

Prerequisites

To add a price item in a level funded pricing rule type, you should have:

- Price item defined in the application
- Rate options defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a level funded pricing rule type:

Copyright © 2025, Oracle and/or its affiliates.

1. Ensure that the **Price Items** section is expanded when you are defining or editing a *l*evel funded pricing rule type.

   The **Price Items** section contains the following fields in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Price Item</td><td>Used to indicate the price item that you want to include in the level funded pricing rule type.

Note:
The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.
On specifying the price item, the description of the price item appears corresponding to the Price Item field.</td><td>Yes (Conditional)

Note: This field is required when you are adding a rate option and bill to account in the level funded pricing rule type.</td></tr>
<tr><td>Rate Option</td><td>Used to indicate one or more rate options which are valid for a price item.
On clicking the Add (➕) icon, the following field appears in a grid:
<table><tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr><tr><td>Rate Option</td><td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td><td>Yes</td></tr></table>
Note:
If you want to define more than one rate option to the price item in the level funded pricing rule type, click the Add (+) icon.
However, if you want to remove a price item from a level funded pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</td><td>Not applicable</td></tr>
<tr><td>Bill To Account</td><td>Used to indicate a order in which the account should be considered while deriving a transaction leg.
On clicking the Add (➕) icon, the following fields appear in a grid:
<table><tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr><tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes</td></tr><tr><td>Invoice Type</td><td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 13 section.</td><td>Yes</td></tr></table></td><td>Not applicable</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</td><td></td></tr>
</table>
Note:
If you want to define more than one invoice type to the price item in a level funded pricing rule type, click the Add (+) icon.
However, if you want to remove a invoice type from the price item in a level funded pricing rule type, click the Delete (🗑) icon corresponding to the Priority field.
</td><td></td></tr>
<tr><td>Eligibility Rule Type</td><td>Used to indicate the rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.</td><td>No</td></tr>
</table>

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item in a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a level funded pricing rule type, click the **Delete** (🗑) icon corresponding to the **Price Item** field.

4. Click **Save**.
   The price items are added for a level funded pricing rule type.

Adding a Price Item Parameter in a Level Funded Pricing Rule Type

Prerequisites

To add a price item parameter in a level funded pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.
- Transaction fields defined in the application.

Procedure

To add a price item parameter in a level funded pricing rule type:

Copyright © 2025, Oracle and/or its affiliates.

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or *e*diting a level funded pricing rule type.

   The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a level funded pricing for the price item. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	Yes (Conditional) **Note:** This field is required when you are adding a price item parameter in a level funded pricing rule type.
Transaction Field	Used to specify the transaction field from where the data should be retrieved. **Note:** The **Search** (🔍) icon appears corresponding to the **Transaction Field** field. On clicking the **Search** (🔍) icon corresponding to the **Transaction Field** field, the **Transaction Field Search** window appears. On specifying the transaction field, the description of the transaction field appears corresponding to the **Transaction Field**.	Yes (Conditional) **Note:** This field is required when you are adding a price item parameter in a level funded pricing rule type.
Eligible for Specific Stop-Loss	Used to indicate whether the price item parameter can be used while defining the accumulation criteria in the specific stop-loss or aggregate stop-loss pricing rule.	No
Eligible for Level Funding	Used to specify whether the price item parameter can be used in level funding.	No

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a price item parameter from a level funded pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.
   The price item parameter is added for a level funded pricing rule type.

Defining a Characteristic for a Level Funded Pricing Rule Type

Prerequisites

To define a characteristic for a level funded pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a level funded pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a discount *a*arrangement pricing rule type.

   The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for a level funded pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for a level funded pricing rule type.

2. Enter the required details in the **Characteristics** section.

   Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for a level funded pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from a level funded pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for a level funded pricing rule type.

Defining the Level Funded Specific Additional Data in a Level Funded Pricing Rule Type

Prerequisites

To define level funded specific additional data in a level funded pricing rule type, you should have:

- A rule type defined for **Markup or Markdown Eligibility Rule Type** and **Domestic Provider Eligibility Rule Type** field.

Procedure

To add the level-funded data in a level funded pricing rule type:

1. Ensure that the **Level Funded - Specific Additional Data** section is expanded when you are defining or *e*diting a level funded pricing rule type.

   The **Level Funded - Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Arrangement	Used to indicate whether the level-funded premium (i.e. funds) should be calculated using the bill period based recurring flat fee pricing rule or using the retention type enrollment based pricing rule. The valid values are: • Enrollment Based Premium • Flat Rate Based Premium	Yes
Settlement Fund Pricing Rule Type	Used to indicate the bill period based recurring flat fee pricing rule type or the retention type enrollment based pricing rule type which you want to use for calculating the level-funded premium. **Note:** The **Search** (🔍) icon appears corresponding to the **Settlement Fund Pricing Rule Type** field. On clicking the **Search** (🔍) icon corresponding to the **Settlement Fund Pricing Rule Type** field, the **Contract Type Search** window appears. On specifying the contract type, the description of the contact type appears corresponding to the **Settlement Fund Pricing Rule Type** field.	Yes
Settlement Fund Price Item	Used to indicate the price item that you want to use for calculating the level-funded premium.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Settlement Fund Price Item** field. On clicking the **Search** (🔍) icon corresponding to the **Settlement Fund Price Item** field, the **Price Item Details** window appears. On specifying the price item details, the description of the price item details appears corresponding to the **Settlement Fund Price Item** field.	
LF Billable Charge Line Type	Used to indicate the level funded billable charge line type using which you want to create the billable charges for level-funded settlement purposes. **Note:** The **Search** (🔍) icon appears corresponding to the **LF Billable Charge Line Type** field. On clicking the **Search** (🔍) icon corresponding to the **LF Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type Search** field.	Yes
GL Only Contract Type	Used to indicate the contract against which the level-funded billable charges for claim, ancillary, claim based fees, enrollment based fees, discount, specific stop-loss, and aggregate stop-loss must be debited. **Note:** The **Search** (🔍) icon appears corresponding to the **GL Only Contract Type** field. On clicking the **Search** (🔍) icon corresponding to the **GL Only Contract Type** field, the **Contract Type Search** window appears.	Yes
Liability Distribution Code	Used to indicate the GL account against which the level-funded billable charges (that are settled against the level-funded premium billable charge) must be credited. **Note:** The **Search** (🔍) icon appears corresponding to the **Liability Distribution Code** field. On clicking the **Search** (🔍) icon corresponding to the **Liability Distribution Code** field, the **Distribution Code Search** window appears. On specifying the distribution code, the description of the distribution code appears corresponding to the **Liability Distribution Code** field.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Renewal Decision Lead Time	Used to specify the number of days before which you want to create a To Do for reminding the self-funded employer to renew the level-funded agreement.	Yes
Surplus Billable Charge Line Type	Used to indicate the surplus billable charge line type using which you want to create the billable charge when the surplus funds are left with the ASO provider at the time of settlement. **Note:** The **Search** (🔍) icon appears corresponding to the **Surplus Billable Charge Line Type** field. On clicking the **Search** (🔍) icon corresponding to the **Surplus Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Surplus Billable Charge Line Type** field.	Yes
Deficit Billable Charge Line Type	Used to indicate the deficit billable charge line type using which you want to create the billable charge when the funds are in deficit at the time of settlement. **Note:** The **Search** (🔍) icon appears corresponding to the **Deficit Billable Charge Line Type** field. On clicking the **Search** (🔍) icon corresponding to the **Deficit Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Deficit Billable Charge Line Type** field.	Yes
Domestic Provider Billable Charge Line Type	Used to indicate the domestic provider billable charge line type using which you want to create level-funded settlement billable charge for a domestic provider. **Note:** The **Search** (🔍) icon appears corresponding to the **Domestic Provider Billable Charge Line Type** field. On clicking the **Search** (🔍) icon corresponding to the **Domestic Provider Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Domestic Provider Billable Charge Line Type** field.	No
Markup or Markdown Billable Charge Line Type	Used to indicate the markup or markdown billable charge line type using which you want to create the billable charges for markup or markdown which are settled against the level-funded premium.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Markup or Markdown Billable Charge Line Type** field. On clicking the **Search** (🔍) icon corresponding to the **Markup or Markdown Billable Charge Line Type** field, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Markup or Markdown Billable Charge Line Type** field.	
Markup or Markdown Eligibility Rule Type	Used to indicate the rules that should be executed to determine whether the markup or markdown calculation line is eligible for billing.	No
Rule Based Markup or Markdown Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the markup or markdown calculation line is eligible for billing. **Note:** The **Search** (🔍) icon appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field. On clicking the **Search** (🔍) icon corresponding to the **Rule Based Markup or Markdown Eligibility Field Type** field, the **Field Search** window appears. On specifying the eligibility field, the description of the field appears corresponding to the **Rule Based Markup or Markdown Eligibility Field** field.	Yes (Conditional) **Note:** This field is required when you are specifying a markup or markdown eligibility rule type in a level funded pricing rule type.
Domestic Provider Eligibility Rule Type	Used to indicate the rules that should be executed to determine whether the level-funded premium is for a domestic provider.	No
Rule Based Domestic Provider Claim Eligibility Field	Used to indicate the transaction field which you want to use in the rules as the output parameter to determine whether the level-funded premium is for a domestic provider. **Note:** The **Search** (🔍) icon appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field. On clicking the **Search** (🔍) icon corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field, the **Field Search** window appears. On specifying the eligibility field, the description of the field appears corresponding to the **Rule Based Domestic Provider Claim Eligibility Field** field.	Yes (Conditional) **Note:** This field is required when you are specifying a domestic provider eligibility rule type in a level funded pricing rule type.

2. Enter the required details in the **Level Funded - Specific Additional Data** section.
3. Click **Save**.
   The level funded-specific data is added in the level funded pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

Editing a Level Funded Pricing Rule Type

Prerequisites

To edit a level funded pricing rule type, you should have:

- Level funded pricing rule type business object defined in the application.
- Level funded pricing rule business object defined in the application.

Procedure

To edit a level funded pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the pricing rule type whose details you want to edit.

   The **Level Funded Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the discount arrangement pricing rule type.
   - **Algorithms** - Used to associate the algorithms with a discount arrangement pricing rule type.
   - **Additional Data** - Used to specify the additional information about the discount arrangement pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the discount arrangement pricing rules using the discount arrangement pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
   - **Characteristics** - Used to define the characteristics for a discount arrangement pricing rule type.
   - **Level Funded - Specific Additional Data** - Used to define the discount arrangement - specific additional data in a discount arrangement pricing rule type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the level funded pricing rule type.	Not applicable
Description	Used to specify the description for the level funded pricing rule type.	Yes
Detailed Description	Used to specify additional information about the level funded pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the level funded pricing rule. The valid value is:	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Level Funded (LF) Pricing Rule	
Business Object	Indicates the business object used while defining the level funded pricing rule type.	Not applicable
Status	Used to indicate the status of the level funded pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to indicate whether the pricing rule type is primary. **Note:** You must not select the **Primary** option while defining the level funded pricing rule type.	Not applicable
Pricing Rule Type Category	Indicates the pricing rule type category for the level funded pricing rule type. The valid values are: • Level Funded	No

Tip: Alternatively, you can edit the details of a level funded pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the details in the **Main** section.
6. Associate the following algorithms with the level funded pricing rule type:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRISL	C1_ACCPRIDIS	Account and Priceitem Derivation For Level Funded
Accumulation Post Processing	C1-LFACPOST	C1-LFACPOST	Level Funded Accumulation Post Processing

7. Modify the additional data for a level funded pricing rule type, if required.
8. Add, edit, or remove the required price items in the level funded pricing rule type.
9. Add, edit, or remove the price item parameters in the level funded pricing rule type, if required.
10. Add, edit, or remove characteristics for a level funded pricing rule type, if required.
11. Modify the level funded-specific additional data in the level funded pricing rule type, if required.
12. Click **Save**.
    The changes made to the level funded pricing rule type are saved.

Defining a Level Funded Pricing Rule for a Parent Customer

Prerequisites

To define a level funded pricing rule for a parent customer, you should have:

- Pricing rule type where the category is set to **Level Funded**.
- Price items associated with the level funded pricing rule type.
- Specific stop-loss pricing rule of the parent customer, whose accumulation parameters you want to inherit for level funding.

Procedure

To define a level funded pricing rule for a parent customer:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding *t*o the parent customer whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Add** link in the upper-right corner of the **Parent Customer Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the parent customer for whom you want to create a level funded pricing rule type.	Not applicable
Person Type	Indicates the type of the parent customer. The valid value is: • **Parent Customer**	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a level funded pricing rule.	Yes

5. Select the required pricing rule type in the respective field.
6. Click **OK**.

   The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

   - **Customer Information** - Displays the information about the parent customer for whom you are defining the level funded pricing rule. It contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description
Parent Customer Information	Indicates the parent customer for whom you are defining the level funded pricing rule.
Pricing Rule Type	Indicates the pricing rule type using which you are defining the level funded pricing rule.

- **Main** - Used to specify basic details in the level funding pricing rule.
- **Accumulation Parameters** - Used to define the accumulation parameters in a level funded pricing rule.
- **Final Settlement Rules** - Used to define the final settlement rules when the customer decides to renew or cancel the level-funded agreement.
- **Characteristics** - Used to define the characteristics for the level funded pricing rule.

Note:

The **Accumulation Parameters** and **Final Settlement Rules** section appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the level funded pricing rule.	Yes
Parent Customer's Pricing Rule	Used to indicate the date range of each specific stop-loss pricing rule, defined for the parent customer. **Note:** On selecting the specific stop-loss pricing rule of the parent customer, the level funded **Pricing Start Date** and **Pricing End Date** field is set automatically.	Yes
Pricing Start Date	Used to specify the date from when the level funded pricing rule is effective. **Note:** The pricing start date cannot be later than the pricing end date.	Yes
Pricing End Date	Used to specify the date till when the level funded pricing rule is effective. **Note:** The pricing end date cannot be earlier than the pricing start date.	No
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Frequency	Used to indicate the settlement frequency which helps to determine the bill after date. The valid values are: • **Immediately** - If you select this option from the list, the bill after date is not calculated. The level-funded settlement billable charge is billed immediately in the next bill cycle. • **Manually (At Regular Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	executing the **C1-BCLF** batch is stamped on the level-funded settlement billable charge. • **Monthly** - If you select this option from the list, the bill after date is set to the last day of the month. • **On Settlement** - If you select this option from the list, the bill after date is set to the settlement date in the level-funded settlement billable charge. • **Yearly** - If you select this option from the list, the bill after date in the credit billable charge is set to the pricing end date in the level-funded settlement billable charge.	
Underwriter Review	Used to indicate whether the underwriter settlement review flag is on or off. The valid values are: • Yes • No **Note:** By default the value of this option type is set to **Yes**.	No

7. Enter the required details in the **Main** section.
8. Define the accumulation parameters in the level funded pricing rule.
9. Define the final settlement rules in the level funded pricing rule.
10. Define characteristics for the level funded pricing rule, if required.
11. Click **Save**.
    The level funded pricing rule is defined for the parent customer.

Defining Accumulation Parameters in a Level Funded Pricing Rule

Procedure

To define accumulation parameters in a level funding pricing rule:

1. Ensure that the **Accumulation Parameters** section is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining a level funded pricing rule.

   The **Accumulation Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accumulation Group ID	Displays a blank field. An accumulation group ID is generated when accumulation parameter values are defined for a level funded pricing rule. **Note:** It is a read-only field.	Not applicable
Settlement Account ID	Used to indicate the account ID to whom the settlement amount is credited.	Yes
Incurred Start Date	Displays the incurred start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing. **Note:** It is a read-only field.	Not applicable
Incurred End Date	Displays the incurred end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing. **Note:** It is a read-only field.	Not applicable
Paid Start Date	Displays the paid start date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing. **Note:** It is a read-only field.	Not applicable
Paid End Date	Displays the paid end date (inherited from parent customer's specific stop-loss pricing rule) based on which you want to accumulate the level funded pricing. **Note:** It is a read-only field.	Not applicable
Settlement Days	Used to indicate the number of days as the settlement days which help in calculating the settlement date. The valid values are:	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• 30 Days • 60 Days • 90 Days • 120 Days • 150 Days • 180 Days	
	Note: Settlement date is calculated as the pricing end date, incurred end date, or paid end date whichever is later plus the settlement days.	

2. Enter the required details in the **Accumulation Parameters** section.
3. Click **Save**.
   The accumulation parameters are defined in the level funded pricing rule.

Defining the Final Settlement Rules in a Level Funded Pricing Rule

Procedure

To define the final settlement rules in a level funded pricing rule:

1. Ensure that the **Final Settlement Rules** section is expanded when you are defining or editing a level funded pricing rule type.

   The **Final Settlement Rules** section contains the following sub-sections:

   - **Customer Renews** - Used to define the final settlement rules when the customer renews the contract.
   - **Customer Cancels** - Used to define the final settlement rules when the customer cancels the contract.
   - **Renewal Decision** - Used to indicate the status for the upcoming level funded contract.

   The **Customer Renews** sub-section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Final Settlement Mode	Displays the final settlement mode when the customer renews the level funded agreement. The valid values are: • Final Settlement Surplus • Final Settlement Deficit	Not applicable
Final Settlement Option	Used to indicate the final settlement option when the customer renews the level funded agreement.	Not applicable

Defining a Characteristic for a Level Funded Pricing Rule

Prerequisites

To define a characteristic for a level funded pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a level funded pricing rule:

Copyright © 2025, Oracle and/or its affiliates.

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a *l*evel funded pricing rule.

   The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for a level funded pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a level funded pricing rule.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from the level funded pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the level funded pricing rule.

Defining a Level Funded Pricing Rule for a Bill Group

Prerequisites

To define a level funded pricing rule for a bill group, you should have:

- Pricing rule type where the category is set to **Level Funded**.
- Price items associated with the level funded pricing rule type.
- Specific stop-loss pricing rule of the parent customer, whose accumulation parameters you want to inherit for level funding.
- Policy status defined in the application.

Procedure

To define a level funded pricing rule for a bill group:

1. Search for the Administrative Services Only (ASO) person, whose person type is set to **Bill Group**, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the person *w*hose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears.
4. Click the **Broadcast** (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose bill group details *y*ou want to view.
   The **Bill Group ASO Policy Pricing Rules** zone is displayed.
5. Click the **Add** link in the upper right corner of the **Bill Group ASO Policy Pricing Rules** zone.

   The **Pricing Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Indicates the name of the parent customer.	Not applicable
Person Type	Indicates the type of the parent customer. **Note:** If you are defining the pricing rule type for the parent customer, then the person type will be **Parent Customer**.	Not applicable
Pricing Rule Type	Used to indicate the pricing rule type using which you want to create a level funded pricing rule. **Note:** Select the **Level Funded Pricing Rule Type** option, as the pricing rule.	Yes **Note:** If the pricing rule type is not selected then the application displays an error message.
Pricing Group	Used to indicate the pricing group which is used while defining the pricing.	No
Policy Status	Used to indicate the policy status for the pricing rule. The valid values are: • In Force/Active • Runout	Yes (Conditional) **Note:** Policy Status is required once the Pricing Rule Type is selected.

6. Click **OK**.

   The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:

Copyright © 2025, Oracle and/or its affiliates.

- **Customer Information** - Displays the information about the bill group. It contains the following columns:

Column Name	Column Description
Bill Group Information	Displays the bill group information.
Policy Start Date	Displays the date from when the policy is effective.
Policy End Date	Displays the date till when the policy is effective.
Policy Status	Indicates the policy status for the pricing rule.
Pricing Rule Type	Indicates the pricing rule type for whom the level funded pricing rule is created.

- **Main** - Used to specify basic details in the level funding pricing rule.
- **Accumulation Criteria** - Used to define the accumulation criteria in a level funded pricing rule.
- **Pricing Information for rule type category : Claim** - Used to define the line items in a particular claim pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Ancillary** - Used to define the line items in a particular ancillary pricing rule or those which are associated with the level funded rule type category.
- **Pricing Information for rule type category : Discount** - Used to define the discount arrangement pricing rule which is effective for level funding calculations.
- **Pricing Information for rule type category : Retention** - Used to define the retention pricing rule which is effective for level funding calculations.
- **Characteristics** - Used to define the characteristics for the level funded pricing rule.

Note:

The **Accumulation Criteria**, **Pricing Information for rule type category: Claim**, **Pricing Information for rule type category: Ancillary**, **Pricing Information for rule type category: Discount**, and **Pricing Information for rule type category: Retention** section appear when you specify a price item in the **Main** section.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item for which you want to define the level funded pricing rule.	Yes
Parent Customer's Pricing Rule	Used to indicate the date range of each specific stop-loss pricing rule, defined for the parent customer. **Note:** On selecting the specific stop-loss pricing rule of the parent customer, the level funded **Pricing Start Date** and **Pricing End Date** field is set automatically.	Yes
Pricing Start Date	Used to specify the date from when the level funded pricing rule is effective. **Note:** The pricing start date cannot be later than the pricing end date.	Not applicable
Pricing End Date	Used to specify the date till when the level funded pricing rule is effective.	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The pricing end date cannot be earlier than the pricing start date.	
Rate Option	Used to indicate the rate option that you want to use while defining the pricing for the price item.	Yes
Settlement Fund Price Item	Used to indicate the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type.	Not applicable

7. Enter the required details in the **Main** section.
8. Define the accumulation criteria in the level funded pricing rule for a bill group.
9. Define the pricing information for the claim rule type category for a bill group.
10. Define the pricing information for the ancillary rule type category for a bill group, if required.
11. Define the pricing information for the discount rule type category for a bill group, if required.
12. Define the pricing information for the retention rule type category for a bill group, if required.
13. Define characteristics for the level funded pricing rule for a bill group, if required, if required.
14. Click **Save**.
    The level funded pricing rule is defined for a bill group.

Editing a Level Funded Pricing Rule of a Bill Group

Prerequisites

To edit a level funded pricing rule of a bill group, you should have:

- Business Object **C1-PricingRuleLevelFunded** defined for the level funded pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

Procedure

To edit a a level funded pricing rule of a bill group:

1. Search for a parent customer in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (🔗) icon corresponding to the parent customer whose pricing details you want to view.
   The **Person** tab appears in the **Customer 360° Information** screen.
3. Click the **Pricing** tab.
   The **Pricing** tab appears. It consists of the following zones:
   - **Parent Customer Pricing Rule Summary**
   - **Bill Group ASO Policy Information**
   - **Bill Group ASO Policy Pricing Rules**
   - **Bill Group Pricing Groups**
   - **Pricing Rule Approval Transactions**
4. Click the Broadcast (📡) icon in the **Bill Group ASO Policy Information** zone, corresponding to the **Bill Group Information** column, whose details you want to view.
   The **Bill Group ASO Policy Pricing Rules** zone appears.
5. Click the **Edit** (✎) icon in the **Bill Group ASO Policy Pricing Rules** zone, corresponding to the **Pricing Rule Type** column, whose details you want to edit.
   The **Level Funded (LF) Pricing Rule** screen appears. It contains the following sections:
   - **Customer Information** - Displays the customer information for the bill group.
   - **Main** - Used to specify basic details about the level funded pricing rule.
   - **Accumulation Criteria** - Used to define the accumulation criteria in a level funded pricing rule.
   - **Pricing Information for rule type category : Claim** - Used to define the line items in a particular claim pricing rule or those which are associated with the level funded rule type category.
   - **Pricing Information for rule type category : Ancillary** - Used to define the line items in a particular ancillary pricing rule or those which are associated with the level funded rule type category.
   - **Pricing Information for rule type category : Discount** - Used to define the discount arrangement pricing rule which is effective for level funding calculations.
   - **Pricing Information for rule type category : Retention** - Used to define the retention pricing rule which is effective for level funding calculations.
   - **Characteristics** - Used to define the characteristics for the level funded pricing rule.

   The **Customer Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Displays the bill group information of the level funded pricing rule.	Not applicable
Policy Start Date	Displays the policy start date.	Not applicable
Policy End Date	Displays the policy end date.	Not applicable
Policy Status	Indicates the policy status for the level funded pricing rule. The valid values are: • In Force/Active • Post Runout • Runout	Not applicable
Pricing Rule Type	Indicates the pricing rule type for the level funded pricing rule.	Not applicable

   The **Main** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Indicates the price item.	Not applicable
Parent Customer's Pricing Rule	Indicates the pricing rule of the parent customer.	Not applicable
Pricing Start Date	Indicates the pricing rule start date.	Not applicable
Pricing End Date	Indicates the pricing rule end date.	Not applicable
Rate Option	Indicates the rate option to edit the level funded pricing rule for the price item.	Not applicable
Settlement Fund Item	Indicates the price item derived from the level funded pricing rule type, used to create the level funded pricing rule type.	Not applicable

6. Modify the details in the **Main** section.
7. Modify the accumulation criteria in a level funded pricing rule for a bill group.
8. Modify the pricing information for the claim rule type category for a bill group.
9. Modify the pricing information for the ancillary rule type category for a bill group, if required.
10. Modify the pricing information for the discount rule type category for a bill group, if required.
11. Modify the pricing information for the retention rule type category for a bill group, if required.
12. Add, edit, or remove characteristics for the characteristics for a level funded pricing rule, if required.
13. Click **Save**.
    The changes made to a level funded pricing rule for a bill group are saved.

Defining Claim Pricing Information in a Level Funded Pricing Rule

Procedure

To define the claim pricing information in the level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Claim** zone is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

   The **Pricing Information for rule type category : Claim** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the claim pricing rule type effective for level funded pricing.	Yes
Derive Using	Used to indicate the method through which the claim pricing rule information is derived. The valid values are: • LF Line Items • Pricing Rules	Yes

   If **LF Line Items** option is selected from the **Derive Using** field, the following sub-sections appear:

   - **Domestic Provider Claims** - Used to specify the domestic provider claims while calculating the level funding line items.

Copyright © 2025, Oracle and/or its affiliates.

- **Markup or Markdown Values** - Used to define the markup or markdown values for level funding line items.
- **Line Items** - Used to associate the line items which are eligible for billing.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude LF (Percentage)	Used to specify the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy for the claim line items. The valid values are: • Markdown • Markup • None	Not applicable
Markup or Markdown Type	Used to indicate the markup or markdown value type for the claim line items. The valid values are: • Flat Amount • Percentage	Not applicable
Markup or Markdown Amount	Used to specify the markup or markdown amount for the claim line items. **Note:** This field displays amount when **Markup or Markdown Type** field is set as **Flat Amount**.	Not applicable
Markup / Markdown Included in Settlement?	Used to specify whether markup or markdown amount should be included in the level funding settlement. The valid values are: • Yes • No **Note:** This field is required when **Flat Amount** option is selected from the **Markup or Markdown Type** field.	Yes (Conditional) **Note:** This field is required when **Flat Amount** option is selected from the **Markup or Markdown Type** field.

The **Line Items** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to indicate the line item which is eligible for level funded pricing.	No

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Line Item** field. On clicking the **Search** (🔍) icon corresponding to the **Line Item** field, the **Pricing Rule Line Item Search** window appears. On specifying the pricing rule line item, the description of the pricing rule line item appears corresponding to the **Line Item** field.	

If **Pricing Rule Type** option is selected from the **Derive Using** field, following sub-sections appear:

- **Claim Pricing Rule** - Used to indicate the claim pricing rule. It contains the following sub-sections:
  - **Domestic Provider Claims** - Used to specify the domestic provider claims while calculating the level funded pricing.
  - **Markup or Markdown Values** - Used to define the markup or markdown values for the billable charge line items.
  - **Line Items** - Used to associate the line items which are eligible for billing.

The **Claim Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Claim Pricing Rule	Used to indicate the claim pricing rule effective for level funded pricing.	No

Note: If you are editing a bill group's level funded pricing rule for the **Claim** rule type category (where the bill group's pricing has ended), a**Reapply** button appears corresponding to the **Effective Claim Pricing Rule** field. You can select an effective claim pricing rule and click the **Reapply** button to set a new pricing for the claim rule type that is eligible for level funding.

The **Domestic Provider Claims** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Exclude LF (Percentage)	Used to specify the billable charge line excluding the level funding charge in the percentage to create the domestic provider claim calculation lines.	No

The **Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate the pricing strategy for the claim line items. The valid values are: • Markdown • Markup • None	Not applicable

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Type	Used to indicate the markup or markdown value type for the claim line items. The valid values are: • Flat Amount • Percentage	Not applicable
Markup or Markdown Amount	Used to specify the markup or markdown amount for the claim line items. **Note:** This field displays amount when **Markup or Markdown Type** field is set as **Flat Amount**.	Not applicable
Markup / Markdown Included in Settlement?	Used to specify whether markup or markdown amount should be included in the level funding settlement. The valid values are: • Yes • No **Note:** This field is required when **Flat Amount** option is selected from the **Markup or Markdown Type** field.	Yes (Conditional) **Note:** This field is required when **Flat Amount** option is selected from the **Markup or Markdown Type** field.

The **Line Items** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Line Item	Displays the billing line items.	Not applicable
Include in Settlement	Used to indicate whether the line item should be included in the level funded claim pricing settlement.	No
Markup or Markdown Included in Settlement	Used to indicate whether markup or markdown should be included in the level funded claim settlement.	No
Markup or Markdown Percentage Eligibility	Used to indicate whether the line item is eligible or not eligible for markup or markdown percentage. The valid values are: • Eligible • Not Eligible	Not applicable
Markup or Markdown Percentage	Used to indicate the percentage for markup or markdown value.	Not applicable

2. Enter the required details in the appropriate sections, based on the option that is selected from the **Derive Using** field.
3. If you want to add information for more than one claim pricing rule type to the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove information of more than one claim pricing rule type from the level funded pricing rule, click the **Delete** (🗑) icon corresponding to the pricing rule type field.

4. Click **Save**.
   The claim line items are defined in the level funded pricing rule.

Defining Ancillary Pricing Information in a Level Funded Pricing Rule

Procedure

To define the ancillary pricing information in the level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Ancillary** zone is expanded only *w*hen you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

   The **Pricing Information for rule type category : Ancillary** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the ancillary pricing rule type effective for level funded pricing.	Yes
Derive Using	Used to indicate the method through which the ancillary pricing rule information is derived. The valid values are: • Ancillary Billable Charge Line Type • Pricing Rules	Yes

   If **Ancillary Billable Charge Line Type** option is selected from the **Derive Using** field, the following sub-sections appear:

   - **Billable Charge Line Types** - Used to associate the billable charge line items which are eligible for billing.

   The **Billable Charge Line Types** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Yes
Rate Based	Used to indicate that the billable charge line type is rate based.	No
Rate	Used to specify the rate for the billable charge line type.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is enabled when the **Rate Based** option is selected.	**Note:** This field is required when the **Rate Based** option is selected.
Markup / Markdown Included in Settlement?	Used to indicate that markup or markdown amount must be included in the level funding settlement.	No
Pricing Strategy	Used to indicate the pricing strategy for the billable charge line items. The valid values are: • Markdown • Markup • None	Yes
Markup or Markdown Type	Used to indicate the markup or markdown type for the billable line items. The valid values are: • Flat Amount • Percentage **Note:** This field is enabled when the **Pricing Strategy** option is selected either as **Markup** or **Markdown**.	Yes (Conditional) **Note:** This field is required when the **Rate Based** option is selected either as **Markup** or **Markdown**.
Amount/Percentage	Used to specify the amount or percentage for markup or markdown value. **Note:** This field appears when the **Markup or Markdown Type** option is selected.	Yes (Conditional) **Note:** This field is required when the **Markup or Markdown Type** option is selected.

If **Pricing Rule Type** option is selected from the **Derive Using** field, the following zone appears:

- **Ancillary Pricing Rule** - Used to indicate the ancillary pricing rule. It contains the following sub-section:
  - The **Billable Charge Line Types** - Used to define the billable charge line types for an ancillary pricing rule, eligible for level funding.

The **Ancillary Pricing Rule** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Effective Ancillary Pricing Rule	Used to indicate the ancillary pricing rule effective for level funded pricing.	No

Note: If you are editing a bill group's level funded pricing rule for the **Ancillary** rule type category (where the bill group's pricing has ended), a**Reapply** button appears corresponding to the **Effective Ancillary Pricing Rule** field. You can select an effective ancillary pricing rule and click the **Reapply** button to set a new pricing for the ancillary rule type that is eligible for level funding.

The **Billable Charge Line Types** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Displays the sequence number for the line items.	Not applicable
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge Line Type** field. On clicking the **Search** icon, the **Billable Charge Line Type Search** window appears. On specifying the billable charge line type, the description of the billable charge line type appears corresponding to the **Billable Charge Line Type** field.	Not applicable
Include in Settlement	Used to indicate whether the billable charge line item should be included in the level funded ancillary pricing settlement.	Not applicable
Rate Based	Indicates that the billable charge line type is rate based.	Not applicable
Rate	Displays the rate for the billable charge line type.	Not applicable
Markup / Markdown Included in Settlement?	Used to indicate that markup or markdown amount must be included in the level funding settlement.	Not applicable
Pricing Strategy	Displays the pricing strategy for the billable charge line items. The valid values are: • Markdown • Markup • None	Not applicable
Markup or Markdown Type	Indicates the markup or markdown type for the billable charge line items. The valid values are: • Flat Amount • Percentage **Note:** This field is enabled when the **Pricing Strategy** option is selected either as **Markup** or **Markdown**.	Not applicable
Amount/ Percentage	Displays the amount or percentage which is specified as the markup or markdown value.	Not applicable

2. Enter the required details in the appropriate sections, based on the option selected from the **Derive Using** field.
3. If you want to add information for more than one ancillary pricing rule type to the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove information of more than one ancillary pricing rule type from the level funded pricing rule, click the **Delete** (🗑) icon corresponding to the pricing rule type field.

4. Click **Save**.
   The ancillary line items are defined in the level funded pricing rule.

Defining Discount Arrangement Pricing Information in a Level Funded Pricing Rule

Procedure

To define the discount arrangement pricing information in the level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Discount** zone is expanded only when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

   The **Pricing Information for rule type category : Discount** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to indicate the discount arrangement pricing rule type which is effective for level funding.	Yes
Derive Using	Used to indicate the method through which the discount arrangement pricing rule information is derived. The valid values are: • Pricing Rules	Yes

   On selecting the **Pricing Rule Type** option from the **Derive Using** field, the following sub-section appears:

   - **Discount Pricing Rule** - Used to indicate the discount arrangement pricing rule. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discount Pricing Rule	Used to indicate the discount arrangement pricing rule which is effective for level funding.	Yes

2. Select the appropriate discount arrangement pricing rule from the **Discount Pricing Rule** section.

> **Note:**
>
> On selecting the discount arrangement pricing rule, the system does not generate any line items for the discount arrangement pricing information. This discount arrangement pricing rule is used at the time of level funding calculations in the TFM module.

3. If you want to add information for more than one discount pricing rule type to the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove information of more than one discount pricing rule type from the level funded pricing rule, click the **Delete** (🗑) icon corresponding to the pricing rule type field.

4. Click **Save**.
   The discount arrangement pricing information is defined in the level funded pricing rule.

Defining Retention Type Claim Based and/or Retention Type Enrollment Based Pricing Rule Information in a Level Funded Pricing Rule

Procedure

To define the retention type claim based and/or retention type enrollment based pricing rule information in a level funded pricing rule:

1. Ensure that the **Pricing Information for rule type category : Retention** zone is expanded when you have selected an option from the **Price Item** field of the **Main** section while defining or editing a level funded pricing rule for a bill group.

   The **Pricing Information for rule type category : Retention** zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Retention Rule Type	Used to indicate the retention type claim based and/or retention type enrollment based pricing rule type for the level funded pricing rule.	Yes
Price Item	Used to indicate the price item for the level funded pricing rule. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** (🔍) icon corresponding to the **Price Item** field, the **Get Retention Type Pricing Rules** window appears. On specifying the retention type pricing rule, the description of the retention type pricing rule appears corresponding to the **Price Item** field.	Yes

2. Select the appropriate **Retention Rule Type** and **Price Item** from the **Pricing Information for rule type category : Retention** zone.

Note:

Once the retention type claim based and/or retention type enrollment based pricing rule type is selected along with the price item, the system does not generate line items for the retention type claim/enrollment based pricing rule. This retention type claim/enrollment based pricing rule is used at the time of level funding calculations in the TFM module.

3. If you want to add more than one retention type claim based and/or retention type enrollment based pricing rule type to the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove more than one retention type claim based and/or retention type enrollment based pricing rule type from the level funded pricing rule, click the **Delete** (🗑) icon corresponding to the pricing rule type field.

Copyright © 2025, Oracle and/or its affiliates.

4. Click **Save**.
   The retention type claim based and/or retention type enrollment based pricing rules eligible for level funding are defined in the level funded pricing rule.

Defining a Characteristic for a Level Funded Pricing Rule

Prerequisites

To define a characteristic for a level funded pricing rule, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule**).

Procedure

To define a characteristic for a level funded pricing rule:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a *l*evel funded pricing rule.

   The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for a level funded pricing rule.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a level funded pricing rule.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for a level funded pricing rule.

2. Enter the required details in the **Characteristics** section.

Copyright © 2025, Oracle and/or its affiliates.

3. If you want to define more than one characteristic for the level funded pricing rule, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from the level funded pricing rule, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the level funded pricing rule.

Minimum Premium Program

To keep up with the changing healthcare dynamics and reduce the rising cost of employer sponsored health plans, the Administrative Services Only (ASO) service providers are constantly thriving to develop innovative pricing models. The ASO service providers are at the forefront designing alternative funding arrangements by amalgamating fully-insured and self-funded plans to trade-off some of the disadvantages of traditional models. The alternative funding arrangements make the self-funded plans more viable to small and medium size employers who traditionally go for the fully-insured plans.

A minimum premium program (MPP) is a self-funded plan that is partly self-insured where an employer is responsible to pay for claims up to a certain level and the remaining is covered by the ASO service provider. A premium is charged to the employer by the ASO service provider for undertaking the risk, processing the claims and for providing all other administrative services.

The following terminologies are used with respect to the minimum premium program:

- **Minimum Premium** - A premium which is paid for the minimum premium program by the employer to the ASO service provider.
- **Capping Limit (i.e. MPP Limit)** - The claim amount within the MPP limit is paid by the employer; whereas the amount exceeding the MPP limit is paid by the ASO service provider.
- **Minimum Attachment Point (MAP)** - This is a guaranteed claim liability by an employer to safeguard the insurer from the financial risk if the enrollment is drastically declines.
- **Effective MPP Limit** - The MPP limit and MAP value whichever is greater is considered as the effective MPP limit.

Oracle Revenue Management and Billing provides the ability to setup the minimum premium program pricing model. You can define a minimum premium program pricing rule at the parent customer and bill group levels. You can define minimum premium program pricing rules for parent customers and bill groups from the **Customer 360° Information** screen. You can define a minimum premium program pricing rule using a minimum premium program pricing rule type.

> **Note:** You cannot create a minimum premium program pricing rule type and a minimum premium program pricing rule through an inbound message.

Copyright © 2025, Oracle and/or its affiliates.

A minimum premium program pricing rule type is not a primary pricing rule type. You must include a minimum premium program pricing rule type as a related pricing rule type in the claim or ancillary pricing rule types which are used for calculating the claim amount or ancillary charges, respectively.

While creating a minimum premium program pricing rule type, you need to do the following:

- Set the pricing rule type business object to **Minimum Premium Program Pricing Rule Type**
- Set the pricing rule type category to **Minimum Premium Program**
- Set the pricing rule business object to **Minimum Premium Program Pricing Rule**
- Specify algorithms for the following system events:

System Event	Algorithm
Accumulation Pre-Processing	C1-MPPACPREP
Account and Price Item Derivation	C1_ACCPRISL
Bill After Date Determination	C1_BAFTDRV
Bill Group Derivation	C1_TXNBGDRV
Final Settlement Derivation	C1-FSBCDV

- Specify the price items (i.e. services related to minimum premium program) for which you want to define pricing using a minimum premium program pricing rule
- Specify the rate options that you can use while defining pricing for a price item
- Specify different types of accounts to which the price item should be billed based on the priority

Note: Ideally, the price item parameters should not be specified in a minimum premium program pricing rule type. The price item parameters which are specified in the claim or ancillary pricing rule type are used for minimum premium program accumulation.

- Specify additional information, such as:
  - Pricing rule type and price item to derive the pricing rule using which the enrollment based MPP limit is calculated

    Note: At present, we are not supporting flat MPP limit for the minimum premium program pricing model.
  - Off process request type using which the deficit should be roll forwarded during the policy renewal
  - MPP, surplus, and deficit billable charge line types using which you want to create the respective charges
  - Number of days before which you want to create a To Do for reminding the self-funded employer to renew the minimum premium program
- Specify the details for the minimum attachment point arrangement:
  - Pricing rule type and price item using which the minimum attachment point pricing rule should be created
  - Specify default values for the following:
    - **Minimum Attachment Point Arrangement Type** - Used to specify the method using which minimum attachment point should be calculated. The system supports the following methods:
      - **Enrollment Percentage of First Month** - Here, the minimum attachment point is calculated using the enrollment based percentage of the first month's MPP limit. For example, If the enrollment based percentage of the first month's MPP limit is set to 75, the system sets the minimum attachment point to (75*First Month's MPP Limit)/100.
      - **Enrollment Percentage of Previous Month** - Here, the minimum attachment point is calculated using the enrollment based percentage of the previous month's MPP limit. For example, If the enrollment based percentage of the previous month's MPP limit is set to 90, the system sets the minimum attachment point to (90*Previous Month's MPP Limit)/100.
      - **Flat Amount** - Here, the minimum attachment point is set to a flat amount.
    - **Default Arrangement Value** - Used to specify default percentage or flat amount for minimum attachment point. You can change the value (if required) while defining a minimum premium program pricing rule using the respective pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

- Specify settlement rules, such:
  - How to settle any deficit or surplus when the customer decides to cancel or renew the policy
  - Whether the system should close out or roll forward the deficit or surplus on policy renewal
  - Whether the system should close out the deficit or surplus on policy cancelation

Once a minimum premium program pricing rule type is defined, you can create minimum premium program pricing rules using the minimum premium program pricing rule type. While defining a minimum premium program pricing rule for a parent customer, you need to specify the following:

- Minimum premium program accumulation price item for which you want to define the pricing
- Specific stop-loss pricing rule of the parent customer whose accumulation parameters you want to inherit for the minimum premium program. On selecting a specific stop-loss pricing rule, the minimum premium program pricing date range is set automatically. The minimum premium program pricing date range is same as the specific stop-loss pricing rule.
- Rate option that you want to use while defining the minimum premium program pricing
- Settlement frequency which helps to determine the bill after date. The valid values are:
  - **Immediately** - If you select this option from the list, the bill after date is not calculated. The minimum premium program settlement billable charge is billed immediately in the next bill cycle.
  - **Manually (At Required Intervals)** - If you select this option from the list, the bill after date which is specified in the **Manual Settlement Bill After Date** parameter while executing the **C1-BCMPP** batch is stamped on the minimum premium program settlement billable charge.
  - **Monthly** - If you select this option from the list, the bill after date is set as per the bill cycle.
  - **Yearly** - If you select this option from the list, the bill after date is set to the pricing end date in the minimum premium program settlement billable charge.
  - **On Settlement** - If you select this option from the list, the bill after date is set to the settlement date in the minimum premium program settlement billable charge.

  Note: The accumulation parameters, such as incurred start date, incurred end date, paid start date, paid end date, and settlement days are automatically inherited from the parent customer's specific stop-loss pricing rule. You cannot change any accumulation parameter except the settlement days.
- Settlement days which helps to calculate the settlement date (which is pricing end date, incurred end date, or paid end date whichever is later + the settlement days)
- Settlement account for which the minimum premium program settlement billable charge should be created
- Minimum premium attachment point and its value using which the effective MPP limit is calculated
- Whether the customer would like to renew or cancel the minimum premium program

However, while defining a minimum premium program pricing rule for a bill group, you need to specify the following:

- The policy status in which the minimum premium program pricing rule is applicable.
- Minimum premium program accumulation price item for which you want to define the pricing
- Parent customer's minimum premium program pricing rule from which you want to inherit the accumulation parameters.

  Note: The pricing date range is derived from the parent customer's minimum premium program pricing rule because the minimum premium program pricing rules of parent customer and bill group should have the same date range.
- Rate option that you want to use while defining the minimum premium program pricing
- Accumulation criteria that indicates the price items whose charges can be accumulated against the minimum premium program accumulation price item so that it can be settled against the minimum premium program premium.
- Whether the line items and markup or markdown in a particular claim pricing rule should be accumulated for minimum premium program.

  OR

  Whether the line items which are associated with the **Minimum Premium Program** pricing rule type category should be accumulated for minimum premium program.

Copyright © 2025, Oracle and/or its affiliates.

- Whether the charges created using the billable charge line types in a particular ancillary pricing rule should be accumulated for minimum premium program.

  OR

  Whether the charges created using the billable charge line types where the **Pricing Rule Type Category** characteristic is set to **Ancillary** should be accumulated for minimum premium program.
- Whether the charges calculated using the retention type claim based or retention type enrollment based pricing for a price item should be accumulated for minimum premium program.

Once a minimum premium program pricing rule is defined for a bill group, the system creates a price assignment in a price list and assigns the price list to the bill group.

You must create an algorithm using the **C1-ASOEXPOS** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the division to which the bill group's account belongs. Otherwise, erroneous results might occur. For more information about the algorithm, refer to the application.

The following new batches are introduced in this release:

- **C1-ACMPP** - This batch is used to accumulate the minimum premium program billable charges which are to be settled against the minimum premium program premium. It creates an accumulation record for an active accumulation group of an account whose bill cycle window is open. It calculates the following:
  - Minimum Attachment Point
  - MPP Limit (Enrollment X MPP Limit Rate)
  - Effective MPP Limit
  - Cumulative MPP Limit
  - Claims
  - Specific Stop Loss (Credit)/Debit Adjustments
  - Net Claims
  - Cumulative Net Claims
  - Max Claim Liability (Monthly Billed Claim)
  - Cumulative Billed Claims
  - Minimum Premium Adjustment Amount
  - Cumulative Surplus/Deficit
  - Roll Forward Charge

  This batch also invokes algorithms which are attached to the **Accumulation Pre-Processing** and **Accumulation Post-Processing** system events in the respective pricing rule type and accordingly updates the accumulation record.
- **C1-BCMPP** - This batch is used to create a billable charge for a minimum premium program accumulation records. The charge contains the minimum premium adjustment amount which is calculated by the **C1-ACMPP** batch. This batch also creates the roll forward billable charge on the successive pricing rule, if applicable, based on the settlement configuration. It calculates and stamps the bill after date on the minimum premium program settlement billable charge.

  This batch also invokes algorithms which are attached to the **Accumulation Billable Charge Pre-Processing** and **Accumulation Billable Charge Post-Processing** system events in the respective pricing rule type and accordingly updates the minimum premium program settlement billable charge.
- **C1-CMMPP** - This batch is used to do the following:
  - Update the MPP billable charge ID on the respective transaction legs in the **CI_TXN_DTL_PRITM** table
  - Mark the transaction as **COMP** if it is in **IGNR** status in the **CI_TXN_DETAIL** table
  - Update the transaction aggregation criteria of the corresponding records in the **CI_TXN_CALC** table to **RITA**

You can opt to configure approval workflow for a minimum premium program pricing rule. The **C1PRRLMPPN** approval workflow group is shipped for the minimum premium program pricing rules. You need to create an appropriate approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, and approval workflow settings for the **C1PRRLMPPN** approval workflow group. Once the approval workflow configuration is

Copyright © 2025, Oracle and/or its affiliates.

done, ensure that **C1PRRLMPPN** is specified in the **Approval Workflow Group for MPP** option type of the **C1-ASOBLLNG** feature configuration.

Self-Funded Pricing Rule Versioning

Until now, the system enabled you to edit a self-funded pricing rule when it is not referred for any transaction in the system. If you wanted to edit a referred pricing rule, you had to manually cancel bill segments of the accounts and create the disaggregation and/or reseeding requests for the accounts. Once the transactions are disaggregated, the system allowed you to edit the self-funded pricing rule.

Now, the system enables you to edit a self-funded pricing rule even when it is referred for a transaction in the system. On editing a referred self-funded pricing rule, the system will do the following:

- Automatically cancel the bill segments of the accounts and create the disaggregation and/or reseeding requests for the accounts
- Increment the version of the referred self-funded pricing rule in the system

Now, the system maintains version numbers for a self-funded pricing rule. On creating a self-funded pricing rule, the version number of the self-funded pricing rule is set to 1. Also, when a self-funded policy is renewed, the version number of each self-funded pricing rule is set to 1.

If a self-funded pricing rule is referred for a transaction, the system creates a new version of the self-funded pricing rule when you edit it. The system does versioning of a self-funded pricing rule when a set of pre-defined fields are edited. For more information about the fields for which versioning is configured, refer to *Oracle Revenue Management and Billing Insurance User Guide*. The system will automatically cancel the bill segments and create the disaggregation and/or reseeding requests for the accounts when you implement the **Entity Audit** feature for the self-funded pricing rules. The entity audit framework is configured for the following business objects in this release:

- C1-PricingRuleAncillary
- C1-PricingRuleClaim
- C1-PricingRuleRetEnroll
- C1-PricingRuleRetTypeClaim
- C1-PricingRuleASL
- C1-PricingRuleSSL
- C1-PricingRuleLevelFunded
- C1-PricingRuleDiscArrangement

The **Eligible for Audit Event** option type in all the above listed business objects is set to **Y** and the **C1-PRVERSION** algorithm is attached to the **Audit** system event of the above listed business objects.

To implement the **Entity Audit** feature, you need to create an active audit event type for the above listed business objects where the audit usage is set to **Disaggregation/Reseeding**. Here, you need to specify a list of fields from the respective business object which you want to audit or monitor. The following audit event types are shipped for the respective pricing rule business object:

Business Object	**Audit Event Type**
C1-PricingRuleAncillary	ANCIL_DISAGG_AUD
C1-PricingRuleClaim	CLAIM_DISAGG_AUD
C1-PricingRuleRetEnroll	ENROL_RETEN_DISAGG_AUD
C1-PricingRuleRetTypeClaim	CLAIM_RETEN_DISAGG_AUD
C1-PricingRuleASL	ASL_DISAGG_AUD
C1-PricingRuleSSL	SSL_DISAGG_AUD

Copyright © 2025, Oracle and/or its affiliates.

Business Object	Audit Event Type
C1-PricingRuleLevelFunded	LF_DISAGG_AUD
C1-PricingRuleDiscArrangement	DISC_DISAGG_AUD

You can use the above audit event types or create a custom audit event type for the required business object. On editing a referred self-funded pricing rule, the system does the following:

If…	Then…
The approval workflow process is configured for the respective pricing rule and you edit a field which is: • Listed in the active audit event type of the respective business object • Configured for versioning	The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to **Disaggregation Initiated**. In addition, the system creates an audit event using the active audit event type for the new version of the self-funded pricing rule. The status of the audit event is set to **Pending**.
The approval workflow process is not configured for the respective pricing rule and you edit a field which is: • Listed in the active audit event type of the respective business object • Configured for versioning	The system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to **Disaggregation Initiated**. In addition, the system creates an audit event using the active audit event type for the new version of the self-funded pricing rule. The status of the audit event is set to **Pending**.
The approval workflow process is configured for the respective pricing rule and you edit a field which is: • Not listed in the active audit event type of the respective business object • Configured for versioning	The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to **Active** and the status of the old version of the self-funded pricing rule is changed to **Inactive**.
The approval workflow process is not configured for the respective pricing rule and you edit a field which is: • Not listed in the active audit event type of the respective business object • Configured for versioning	The system creates a new version of the self-funded pricing rule where the version number is incremented by 1. The status of the new version of the self-funded pricing rule is set to **Active** and the status of the old version of the self-funded pricing rule is changed to **Inactive**.
The approval workflow process is configured for the respective pricing rule and you edit the end date of a self-funded pricing rule which is referred for a transaction after the pricing rule end date	The system creates an approval transaction for the self-funded pricing rule. On approving the approval transaction, the changes are reflected in the existing version of the self-funded pricing rule. Note that the system does not create a new version of the self-funded pricing rule. The system creates an audit event using the active audit event type for the existing version of the self-funded pricing rule. The status of the audit event is set to **Pending**.
The approval workflow process is not configured for the respective pricing rule and you edit the end date of a self-funded pricing rule which is referred for a transaction after the pricing rule end date	The system does not create a new version of the self-funded pricing rule. The changes are reflected in the existing version of the self-funded pricing rule. The system creates an audit event using the active audit event type for the existing version of the

Copyright © 2025, Oracle and/or its affiliates.

If…	Then…
	self-funded pricing rule. The status of the audit event is set to **Pending**.

Note that the new version of the self-funded pricing rule will have the same pricing rule ID. However, on editing a self-funded pricing rule which is not referred for a transaction, the system edits the existing version of the self-funded pricing rule and does not create a new version of the self-funded pricing rule with incremental version number.

A new batch named **C1-DISTA** is introduced in this release. The **C1-DISTA** batch checks whether there are any audit events for the self-funded pricing rules in the **Pending** status. If an audit event for a self-funded pricing rule is in the **Pending** status, the system checks whether the self-funded pricing rule is created using a primary pricing rule type. If so, the system derives the person for whom the self-funded pricing rule is created. If the person type of the derived person is **Parent Customer**, the system fetches all accounts of the parent customer and its bill groups. However, if the person type of the derived person is **Bill Group**, the system fetches all accounts of the bill group. Once the accounts are derived, the system cancels the bill segments of the accounts and creates a disaggregation request for these accounts. The system then confirms whether you want to create reseeding requests for the related pricing rule types (if any). If you click the **OK** button, the system creates the reseeding requests. While creating a reseeding request for a related pricing rule type, the system derives all accounts from the accumulation group and then creates a reseeding request for each such account. Finally, the batch changes the status of the audit event to **Complete**.

Once the disaggregation and reseeding requests are created for the accounts, you need to disaggregate the transactions using the disaggregation batches. On executing the **C1-DRSUA** batch, the system changes the status of the disaggregation or reseeding request to **Complete** and then executes the **C1-UPDAUDEVE** algorithm attached to the **Post-Processing** system event of the batch control. This algorithm changes the status of the new version of the self-funded pricing rule (for which disaggregation is completed) to **Active** and changes the status of the old version of the self-funded pricing rule to **Inactive**.

Note that you cannot edit a self-funded pricing rule in the **Active** status when an audit event for the self-funded pricing rule is in the **Pending** status. You cannot edit or delete a self-funded pricing rule which is in the **Disaggregation Initiated** status. Also, you cannot edit the related self-funded pricing rule in the **Active** status when the new version of the primary self-funded pricing rule is in the **Disaggregation Initiated** status.

Retention Type Enrollment Tier Based Pricing

Until now, you were able to calculate certain charges, such as stop-loss premium, administrative fees, etc. based on number of enrollments using the retention type enrollment based pricing. While defining a retention type enrollment based pricing rule, you were able to define different fees for different set of pricing parameters. There are certain services (i.e., price items) for which business needs to define a complex pricing model wherein several pricing variations are offered based on certain mandatory and non-mandatory pricing parameters. While defining, editing, or copying a retention type enrollment based pricing rule with a complex pricing model, the system performance was deteriorated, thereby affecting the system reliability and usability over time.

To handle the above business scenario, a multi-tiered retention type enrollment based pricing model is offered in this release. The system enables you to define the following two types of retention type enrollment based pricing rules in the system:

- Retention Type Enrollment Based Pricing Rule without Tier (Traditional method)
- Retention Type Enrollment Based Pricing Rule with Tier

To implement this feature, the following changes are made to the system:

- The **tieredSw** tag is newly added in the **C1-PrcRuleTypRetEnrollBased** business object schema.
- A new business object named **C1-PricingRuleRetTypeEnrolTier** is introduced in this release.
- A new option type named **Approval Workflow Group for Retention Type Enrollment Tier** is added in the **C1-ASOBLLNG** feature configuration.

Copyright © 2025, Oracle and/or its affiliates.

A new field named **Tiered Switch** is available in the **Enrollment-Specific Additional Data** section while defining a retention type enrollment based pricing rule type. It enables the system to determine whether the retention type enrollment based pricing rule will be tier or non-tier based. If you select the **Tiered Switch** option, you need to set the pricing rule business object to **C1-PricingRuleRetTypeEnrolTier** in the retention type enrollment based pricing rule type. However, if you do not select the **Tiered Switch** option, you need to set the pricing rule business object to **C1-PricingRuleRetTypeEnroll** in the retention type enrollment based pricing rule type. In this way, you can maintain two separate retention type enrollment based pricing rule types in the system – one without tier and another with tier.

Before you create multi-tiered retention type enrollment based pricing rule, you need to create the following:

- Required parameters including the **Tier** parameter where all the possible business tiers (for example, Spouse + 1 Dependent, Spouse + 2 Dependents, Family, etc.), are set as the predefined values.
- Associate the required parameter (for example, Healthcare Coverage Class) as the mandatory parameter with the price item

  Note: (The system will then, by default, select the mandatory parameter while defining the pricing (i.e., fee) in the pricing rule.)
- Associate the **Tier** parameter as the non-mandatory parameter with the price item.

While defining a pricing rule using the multi-tiered retention type enrollment based pricing rule type, the **Tier** button appears in the **Pricing Parameters** grid. Once you click the **Tier** button, all the business tiers set as the predefined values (for example, Spouse + 1 Dependent, Spouse + 2 Dependents, Family, etc.) are listed in the **Pricing Parameters** grid. You can then specify different fee for each mandatory pricing parameter and tier combination. Until the pricing rule is referred, you can anytime remove the tiers by clicking the **Remove Tier** button and define a non-tier based pricing, if required.

The system creates one price assignment for each mandatory pricing parameter and tier combination. You can define a multi-tiered retention type enrollment based pricing rule at the parent customer and bill group levels. You can also configure the approval workflow process for a multi-tiered retention type enrollment based pricing rule.

Chapter 37

Stop-Loss

Topics:

- Accumulation Data

Oracle Revenue Management and Billing enables you to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the transaction calculation lines for specific stop-loss and aggregate stop-loss are created using the transaction aggregation process, you need to execute the following batches in the specified sequence:

1. Stamp Accumulate After Date (C1-STAAD)
2. Accumulate Specific Stop-Loss (C1-ACSSL)
3. Create Billable Charge for Specific Stop Loss (C1-BCSSL)
4. Accumulate Aggregate Stop-Loss (C1-ACASL)
5. Create Billable Charge for Aggregate Stop Loss (C1-BCASL)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Accumulation Data

The **Accumulation Data** screen enables you to view the aggregate stop-loss, discount, level funded, minimum premium program, and specific stop-loss accumulation details. It contains the following zones:

- **Search Parent Accumulation Group** - Enables you to search for a parent accumulation group whose accumulation details you want to view. You can search a parent accumulation group which is created for either of the following accumulation category:
  - **Aggregate Stop-Loss**
  - **Discount Arrangement**
  - **Level Funded**
  - **Minimum Premium Program**
  - **Specific Stop-Loss**
- **Aggregate Stop-Loss Accumulation Amount** - Enables you to view how the aggregate stop-loss is calculated in each accumulation run. In addition, you can view the aggregate stop-loss billable charge which is created in each accumulation run.
- **Discount Arrangement Accumulation Amount** - Enables you to view how the discount is calculated in each accumulation run. In addition, you can view the discount billable charge which is created in each accumulation run.
- **Level Funded Accumulation Amount** - Enables you to view how the charges eligible for level funding are calculated in each accumulation run. In addition, you can view the level funded billable charge which is created in each accumulation run.
- **Minimum Premium Program Amount** - Enables you to view how the charges eligible for minimum premium program are calculated in each accumulation run. In addition, you can view the minimum premium program billable charge which is created in each accumulation run.
- **Specific Stop-Loss Accumulation Amount** - Enables you to view how the specific stop-loss is calculated in each accumulation run. In addition, you can view the specific stop-loss billable charge which is created in each accumulation run.
- **Off-Process Adjustment/Billable Charges** - Enables you to view the adjustments or billable charges created through an off-process request which are used in the accumulation run.
- **Transaction Information** - Enables you to view the claim transactions for which the specific stop-loss, aggregate stop-loss, discount, or charges eligible for level funding are accumulated.
- **Transaction Leg Calculation Lines** - Enables you to view calculation lines of all legs of the transaction which are rated before billing.
- **Transaction Leg Calculation Line Characteristics** - Enables you to view the characteristics of a calculation line.

You can navigate to the **Accumulation Data** screen from the **Transaction and Audit Event Management** menu.

Search Accumulation Data

The **Search Accumulation Data** zone allows you to search for the accumulation data using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an accumulation data using the accumulation or billable charge details. The valid values are: • **Accumulation Details** - Used when you want to search for an accumulation data using the accumulation details. • **Billable Charge Details** - Used when you want to search for an accumulation data using the billable charge details. **Note:** By default, the **Accumulation Details** option is selected.	Yes
Billable Charge ID	Used to search an accumulation data for a particular billable charge. **Note:** This field appears when you select the **Billable Charge Details** option from the **Search By** field.	Yes
Accumulation Category	Used to search an accumulation data for a particular accumulation category. The valid values are: • **All** • **Aggregate Stop-Loss** • **Discount Arrangement** • **Level Funded** • **Minimum Premium Program** • **Specific Stop-Loss** **Note:** By default, the **All** option is selected.	Yes (Conditional) **Note:** This field is required when the **Accumulation Details** option is selected from the **Search By** list.
Parent Person ID	Used to search an accumulation data for a particular parent person ID. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes (Conditional) **Note:** This field is required when: • The **All** option is selected from the **Accumulation Category** list. • The **Active** or **Completed** option is selected from the **Parent Accumulation Group Status** list.
Parent Person Name	Used to specify the parent person name based on which you want to search an accumulation data.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when: • The **All** option is selected from the **Accumulation Category** list. • The **Active** or **Completed** option is selected from the **Parent Accumulation Group Status** list.
Account ID	Used to search an accumulation data for a particular account. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	Yes (Conditional) **Note:** This field is required when: • The **All** option is selected from the **Accumulation Category** list. • The **Active** or **Completed** option is selected from the **Parent Accumulation Group Status** list.
Parent Accumulation Group ID	Used to search an accumulation data for a particular parent accumulation group. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Accumulation Group Search** window appears.	Yes (Conditional) **Note:** This field is required when: • The **All** option is selected from the **Accumulation Category** list. • The **Active** or **Completed** option is selected from the **Parent Accumulation Group Status** list.
Parent Accumulation Group Status	Used to search an accumulation data for a particular parent accumulation group status. The valid values are: • **Active** • **Completed**	No

Note: You must specify at least one search criterion while searching for the accumulation data.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parent Accumulation Group ID	Indicates the parent accumulation group for which the accumulation data exists.
Status	Indicates the parent accumulation group status. The valid values are:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• **Active** • **Completed**
Parent Person Information	Indicates the information about the parent person. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective parent person.
Accumulation Category	Indicates the category for which the accumulation data exists. The valid values are: • **Aggregate Stop-Loss** • **Discount Arrangement** • **Level Funded** • **Minimum Premium Program** • **Specific Stop-Loss**
Pricing Rule Information	Displays information about the pricing rule used in the accumulation.

On clicking the **Broadcast** (ᯤ) icon corresponding to the parent accumulation group ID column, the **Accumulation Amount** zone appears with the details of the respective accumulation category.

How to search for an accumulation data	Searching for an Accumulation Data on page 3221

Searching for an Accumulation Data

Procedure

To search for an accumulation data:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Accumulation Data**.
   The **Accumulation Data** screen appears.
3. Enter the search criteria in the **Accumulation Data** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of accumulation data that meets the search criteria appears in the **Search Results** section.

- Bill After Date Determination
- Advance Billing for Claim Fund Charge
- SSL Accumulation across Bill Groups
- Trigger Repricing on Deleting Derivation and Pricing Parameters of a Bill Group

Administrative Services Only (ASO) is an arrangement in which an organization funds its own employee benefit plan such as a health plan but hires an outside firm to perform specific administrative services. For example, an organization may hire an insurance company to evaluate and process claims under its employee health plan, while maintaining the responsibility to pay the claims itself.

Self-Funded plan specifics vary depending on the agreement a company establishes with insurance companies and third-party administrators (TPA). In the self-funded plan, the insurance company may provide little to no degree of insurance protection. ASO services are gaining popularity because many employers, particularly larger ones, explore that the self-funded plan provides the potential financial advantages at an acceptable cost.

Oracle Revenue Management and Billing (ORMB) provides a complete solution in terms of pricing, billing, and revenue management to support the self-funded plans. It also provides risk coverage for offering self-funded plans through the stop-loss services, such as specific stop-loss and aggregate stop-loss. The specific stop-loss solution in ORMB helps the employer in mitigating high-cost claims for individual members. And, the aggregate stop-loss helps the employer in mitigating risk against high-volume claims.

The **Transaction Feed Management (TFM)** module is enhanced to support the self-funded billing. You can upload the claim, enrollment, and ancillary transactions in the system using the **File Upload Interface** feature. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Once the claim, enrollment, and ancillary transaction data files are uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Price Item
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the claim, enrollment, and ancillary transactions either prior to billing or during billing. Based on the business

requirements, you can configure the system such that transactions mapped to a price item can be rated at a frequency which is different from the account's billing frequency. For example, daily, weekly, etc.

A new pricing model is introduced for the self-funded health insurance business which enables you to create pricing rules for:

- Claim
- Specific Stop-Loss
- Aggregate Stop-Loss
- Claim Based Fees
- Enrollment Based Fees
- One-time and Recurring Flat Fees
- Ancillary Charges

Once you create the required pricing structure, you can bill for the claim, enrollment, and ancillary transactions. Once the billable charges for claims, claim based fees, enrollment based fees, and ancillary are created through the transaction aggregation process, you can accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the required billable charges are created, you can bill them using the charge-based billing batches.

Copyright © 2025, Oracle and/or its affiliates.

Pre-requisites

To setup the Self-Funded Billing feature, you need to do the following:

- Define the parent customers and bill groups in the system.
- Define the required pricing rule types for different pricing rule type categories, such as **Claim**, **Specific Stop-Loss**, **Aggregate Stop-Loss**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, **Flat Fees**, and **Ancillary**.
- Map the transaction fields appropriately in the primary pricing rule types.
- Attach an algorithm created using the **C1_TXNBGDRV** algorithm type to the **Bill Group Derivation** system event of the pricing rule type where the pricing rule type category is set to **Claim** or **Retention Type Enrollment Based**.
- Attach an algorithm created using the **C1_ACCPRIDRV** algorithm type to the **Account and Price Item Derivation** system event of the pricing rule type where the pricing rule type category is set to **Claim**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, or **Ancillary**.
- Attach an algorithm created using the **C1_ACCPRISL** algorithm type to the **Account and Price Item Derivation** system event of the pricing rule type where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss**.
- Attach an algorithm created using the **C1_BAFTDRV** algorithm type to the **Bill After Date Determination** system event of the pricing rule type where the pricing rule type category is set to **Claim**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, or **Ancillary**.
- Attach an algorithm created using the **SA_DERV_POPC** algorithm type to the **TFM - Contract Derivation** algorithm spot of the required divisions.
- Attach an algorithm created using the **C1-VRPR_POPC** algorithm type to the **TFM - Verify Pricing Post-Processing** algorithm spot of the required divisions.
- Attach an algorithm created using the **C1_BCHG_POPC** algorithm type to the **TFM - Billable Charge Post-Processing** algorithm spot of the required divisions.
- Map each transaction record type to either the required rule type or primary pricing rule type.
- Define the pricing groups for the required bill groups.
- Define the required pricing rules for the parent customer and bill groups.
- Define the rate schedules with the following calculation algorithms for different price items:

Price item related to....	**Calculation Algorithm**
Claim	C1-CLAIMCALC
Specific Stop-Loss	C1-SSLRTCALC
Aggregate Stop-Loss	C1-ASLRTCALC
Retention Type Enrollment Based	None
Flat Fees	None
Ancillary	C1-ANCICALC

- Attach an algorithm created using the **C1-RETFLAT** algorithm type to the **TFM - Rate Pre-Processing** algorithm spot of the required divisions.
- Define the TFM information in the rating option for different price items in the following manner:

  The following table lists the TFM information which must be defined in the rating option for the respective type of price items:

Copyright © 2025, Oracle and/or its affiliates.

Price item related to....	Rate Option			
	Aggregate Transaction	**Aggregation Schedule**	**Ignore Transaction**	**Rating Criteria**
Claim	Yes	As Required	No	RITA
Specific Stop-Loss	No	-	Yes	RITX
Aggregate Stop-Loss	No	-	Yes	RITX
Retention Type Claim Based	Yes	As Required	No	RITA
Retention Type Enrollment Based	Yes	As Required	No	RITA
Ancillary	Yes	As Required	No	RITA

- Define the derivation and pricing parameters for each bill group.
- Set the following option types in the **C1-ASOBLLNG** feature configuration:
  - Person Relationship Type
  - Bill Group Policy Person Role
  - Invoice Type Characteristic Type
  - Pricing Group Rule Parameter
  - Billable Charge Line Type Parameter
  - Pricing Arrangement Parameter

Related Topics

How to set up the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4313

Bill Group Derivation and Pricing Parameters

An employer may have different bill groups. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group. These parameters are used to derive the bill group against which the billable charges created for the claim, enrollment, and ancillary transactions should be billed in the system. The derived bill group is also used for billing the claim based fees, one-time or recurring fees, specific stop-loss credits, and aggregate stop-loss credits. You can define multiple derivation and pricing parameters for a bill group, but the derivation and pricing parameter combination must be unique for a particular duration.

For example, if you want bill group 1 to handle the claim, enrollment, and ancillary transactions of employees:

- Who reside in the Western location of the city
- Who belong to Grade A
- Whose transactions are received from the X system

Then, you need to define the following derivation and pricing parameters for bill group 1:

Bill Group Name	Sort ID	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 1	111	X	Western	Grade A	-	-

Example 1: Derivation and Pricing Parameters for Bill Group 1

Copyright © 2025, Oracle and/or its affiliates.

Similarly, if you want bill group 2 to handle the claim, enrollment, and ancillary transactions of employees:

- Who reside in the Eastern location of Mumbai
- Who are the person of Indian origin
- Who belong to Grade A
- Whose transactions are received from the X system

Then, you need to define the following derivation and pricing parameters for bill group 2:

Bill Group Name	Sort ID	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 2	123	X	Eastern	Grade A	Mumbai	India

Example 2: Derivation and Pricing Parameters for Bill Group 2

In the example 1 and 2, the bill group is derived based on the specified employee attributes when the source system, parameter 1, parameter 2, parameter 3, and parameter 4 are mapped to the appropriate transaction fields in the primary pricing rule type using which the pricing rules are defined for the bill group. For example,

Pricing Rule Type	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
PR1	External System	Location	Designation	City	Country

Example 3: Transaction Field Mapping in Primary Pricing Rule Type

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4.

For example, the following table illustrates how you can define a rule criteria in a pricing group:

Pricing Group	Rule	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
PG1	R1	X	Eastern	Grade A	Mumbai	India
	R2	X	Western	Grade A	-	-

Example 4: Rules Defined in a Pricing Group

If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees.

For example, the following table illustrates how you can use a pricing group to derive a pricing strategy in a pricing rule:

Pricing Rule	Pricing Group	Rule	Rule Criteria	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount
PRRR1	PG1	R1	Source System = X, Parameter 1 = Eastern, Parameter 2 = Grade A, Parameter 3 = Mumbai, Parameter 4 = India	Markup	Flat Amount	$20
		R2	Source System = X, Parameter 1 = Western, Parameter 2 = Grade A	Markdown	Flat Amount	$10

Example 5: Defining a Pricing Rule Using a Pricing Group

In the example 5, the system will use the markup strategy on the claim line items for the employees who satisfy the criteria specified in R1. On the other hand, the system will use the markdown strategy on the claim line items for the employees who satisfy the criteria specified in R2.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group. The source system and parameter 1 are mandatory while defining the derivation and pricing parameters for a bill group.

Copyright © 2025, Oracle and/or its affiliates.

You can define and edit the derivation and pricing parameters for the bill group and sort ID combination from the **Customer 360° Information** screen. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for the bill group and sort ID combinations from the **Customer 360° Information** or **Upload Request** screen. Note that you can upload the derivation and pricing parameters for the bill group and sort ID only using the CSV file format.

Related Pricing Rule Type Eligibility

Oracle Revenue Management and Billing enables you to define eligibility rule type for a related pricing rule type in a primary pricing rule type. If the eligibility rule type is defined of a related pricing rule type, the system checks whether the related pricing rule type is eligible for deriving the transaction legs when it is called during the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch execution. The system searches for all rules which are created using the respective rule type and then executes them one by one in the specified priority until the following conditions are met in a rule:

- The eligibility criteria defined in the rule is satisfied.
- The satisfied rule returns the output parameter and its value as specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively, of the primary pricing rule type.
- The **Rule True Action** field in the satisfied rule returns **Success**.

Note: At present, the system considers all rules created using the respective rule type irrespective of whether it is effective on the transaction date or not.

If all the above conditions are met in a rule, the system calls the respective related pricing rule type for deriving the transaction legs. If none of the rules created using the rule type are satisfied, the system does not call the respective related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example. If the claim transaction is received with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_15 is set Employee
- UDF_DATE_1 is set to 11-05-2018
- Transaction Record Type is set to TR1

The following table illustrates how the eligibility rules can be defined for a related pricing rule type:

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Eligibility Rule Type	Rule	Rule's Effective Start Date	Rule's Effective End Date	Priority	Rule Criteria	Output Parameter	Output Parameter Value
TR1	CLAIM	CLAIM BASED FEES	RT1	R1	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
				R2	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
				R3	01-04-2018	30-06-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
				R4	01-07-2018	31-12-2018	4	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
		SPECIFIC STOP-LOSS	RT2	R5	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_15	Director
				R6	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Eastern	UDF_CHAR_15	Employee
				R7	01-04-2018	31-12-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_15	Employee
		AGGREGATE STOP-LOSS	RT3	R8	01-04-2018	31-12-2018	1	UDF_CHAR_1 = Eastern	UDF_CHAR_15	Employee
				R9	01-04-2018	31-12-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_15	Director

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type. In addition, the **Rule Based Related Pricing Rule Type Eligibility Field** field is set to **UDF_CHAR_15** and the **Rule Based Eligibility Value** field is set to **Employee** in the CLAIM pricing rule type.

Example 1: Related Pricing Rule Type Eligibility Rules

In the example 1, the rules which are created using the RT1 rule type are invoked for the CLAIM BASED FEES pricing rule type in the specified priority. The claim transaction meets the eligibility criteria defined in the R1 rule. But, the output parameter's value specified in the R1 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R2). The claim transaction meets the eligibility criteria defined in the R2 rule. In addition, the output parameter and its value specified in the R2 rule match the values specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers the CLAIM BASED FEES pricing rule type for deriving the transaction legs.

The rules which are created using the RT2 rule type are invoked for the SPECIFIC STOP-LOSS pricing rule type in the specified priority. The claim transaction meets the eligibility criteria defined in the R5 rule. But, the output parameter's value specified in the R5 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R6). Here, the claim transaction does not meet the eligibility criteria defined in the R6 rule. The system then executes the rule with the next priority (i.e. R7). The claim transaction meets the eligibility criteria defined in the R7 rule. In addition, the output parameter and its value specified in the R7 rule match the values specified in the **Rule Based Related Pricing Rule Type Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers the SPECIFIC STOP-LOSS pricing rule type for deriving the transaction legs.

Similarly, the rules which are created using the RT3 rule type are invoked for the AGGREGATE STOP-LOSS pricing rule type in the specified priority. The claim transaction does not meet the eligibility criteria defined in the R8 rule. Therefore, the system executes the rule with the next priority (i.e. R9). The claim transaction meets the eligibility criteria defined in the R9 rule. But, the output parameter's value specified in the R9 rule does not match the value specified in the **Rule Based Eligibility Value** field. As none of the rules created using the rule type met the criteria, the system does not consider the AGGREGATE STOP-LOSS pricing rule type for deriving the transaction legs.

Price Item Eligibility

Oracle Revenue Management and Billing enables you to define eligibility rule type for a price item in a pricing rule type. If the eligibility rule type is defined of a price item, the system checks whether the price item is eligible for billing when the pricing rule type is called during the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch execution.

Copyright © 2025, Oracle and/or its affiliates.

The system searches for all rules which are created using the respective rule type and then executes them one by one in the specified priority until the following conditions are met in a rule:

- The eligibility criteria defined in the rule is satisfied.
- The satisfied rule returns the output parameter and its value as specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively, of the pricing rule type.
- The **Rule True Action** field in the satisfied rule returns **Success**.

Note: At present, the system considers all rules created using the respective rule type irrespective of whether it is effective on the transaction date or not.

If all the above conditions are met, the system searches for an effective pricing rule for the respective price item. If none of the rules created using the rule type are satisfied, the system does not map the transaction to the price item. Let us understand this with the help of an example. If the claim transaction is received with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_20 is set to Employee
- UDF_DATE_1 is set to 05-03-2018
- Transaction Record Type is set to TR1

The following table illustrates how the eligibility rules can be defined for a price item in a pricing rule type:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Eligibility Rule Type	Rule	Rule's Effective Start Date	Rule's Effective End Date	Priority	Rule Criteria	Output Parameter	Output Parameter Value
TR1	CLAIM	P1	RT1	R1	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_20	Director
				R2	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee
				R3	01-04-2018	30-06-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee
				R4	01-07-2018	31-12-2018	4	UDF_CHAR_1 = Western	UDF_CHAR_20	Director
		P2	RT2	R5	01-01-2018	31-03-2018	1	UDF_CHAR_1 = Western	UDF_CHAR_20	Director
				R6	01-01-2018	31-03-2018	2	UDF_CHAR_1 = Eastern	UDF_CHAR_20	Employee
				R7	01-04-2018	31-12-2018	3	UDF_CHAR_1 = Western	UDF_CHAR_20	Employee

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type. In addition, the **Rule Based Related Pricing Rule Type Eligibility Field** field is set to **UDF_CHAR_20** and the **Rule Based Eligibility Value** field is set to **Employee** in the CLAIM pricing rule type.

Example 1: Price Item Eligibility Rules

In the example 1, the rules which are created using the RT1 rule type are invoked for P1 in the specified priority. The claim transaction meets the eligibility criteria defined in the R1 rule. But, the output parameter's value specified in the R1 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R2). The claim transaction meets the eligibility criteria defined in the R2 rule. In addition, the output parameter and its value specified in the R2 rule match the values specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the system considers P1 for billing and maps the claim transaction to P1 if an effective pricing rule, account, and active contract are available for P1.

Similarly, the rules which are created using the RT2 rule type are invoked for P2 in the specified priority. The claim transaction meets the eligibility criteria defined in the R5 rule. But, the output parameter's value specified in the R5 rule does not match the value specified in the **Rule Based Eligibility Value** field. Therefore, the system executes the rule with the next priority (i.e. R6). Here, the claim transaction does not meet the eligibility criteria defined in the R6 rule. The system then executes the rule with the next priority (i.e. R7). The claim transaction meets the eligibility criteria defined in the R7 rule. In addition, the output parameter and its value specified in the R7 rule match the values specified in the **Rule Based Price Item Eligibility Field** and **Rule Based Eligibility Value** fields, respectively. Therefore, the

Copyright © 2025, Oracle and/or its affiliates.

system considers P2 for billing and maps the claim transaction to P2 if an effective pricing rule, account, and active contract are available for P2.

Self-Funded Billing Process

The **Self-Funded Billing** process consists of the following sub-processes:

- Transaction Aggregation on page 3231
- Stop Loss Calculation on page 3236
- Bill Generation on page 3236

Transaction Aggregation

Once the claim, enrollment, and ancillary transactions are uploaded, you can create billable charges for the following using the **Transaction Aggregation** process in the **Transaction Feed Management (TFM)** module:

- Claim
- Claim Based Fees
- Retroactive Enrollment Fees
- Non-retroactive Enrollment Fees
- Ancillary

The transaction calculation lines for specific stop-loss and aggregate stop-loss are created during the **Transaction Aggregation** process. Earlier, the **Transaction Aggregation** process was designed to meet the requirements of the **Payments** and **Financial Services** industries. Now, in addition, it is tuned slightly to meet the requirements of the self-funded health insurance business. The changes are made in the following batches which are executed in the **Transaction Aggregation** process:

- **Validate Transaction and Derive Price Item (C1-TXNIP)** - During this batch execution, the system validates the transaction. If the transaction validation fails due to any reason, the status of the transaction is changed to **Error**. If the transaction validation is successful, the system checks whether a primary pricing rule type is specified in the respective transaction record type. If a primary pricing rule type is not specified in the transaction record type, the system maps the transaction to one or more price item, price item parameters, and account combinations using the rules which are invoked through the rule type. However, if a primary pricing rule type is specified in the transaction record type, the system calls the primary pricing rule type and invokes the algorithms which are attached to the following system events of the primary pricing rule type in the specified sequence:

  1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
  2. **Bill Group Derivation** - For more information, refer to the Bill Group Derivation on page 3237 section.
  3. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a primary pricing rule types with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Claim	C1_ACCPRIDRV	Account and Price Item Derivation (for the Claim Pricing Rule Type Category) on page 3239
Retention Type Enrollment Based	C1_ACCPRIDRV	Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category) on page 3262

Copyright © 2025, Oracle and/or its affiliates.

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Ancillary	C1_ACCPRIDRV	Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category) on page 3270

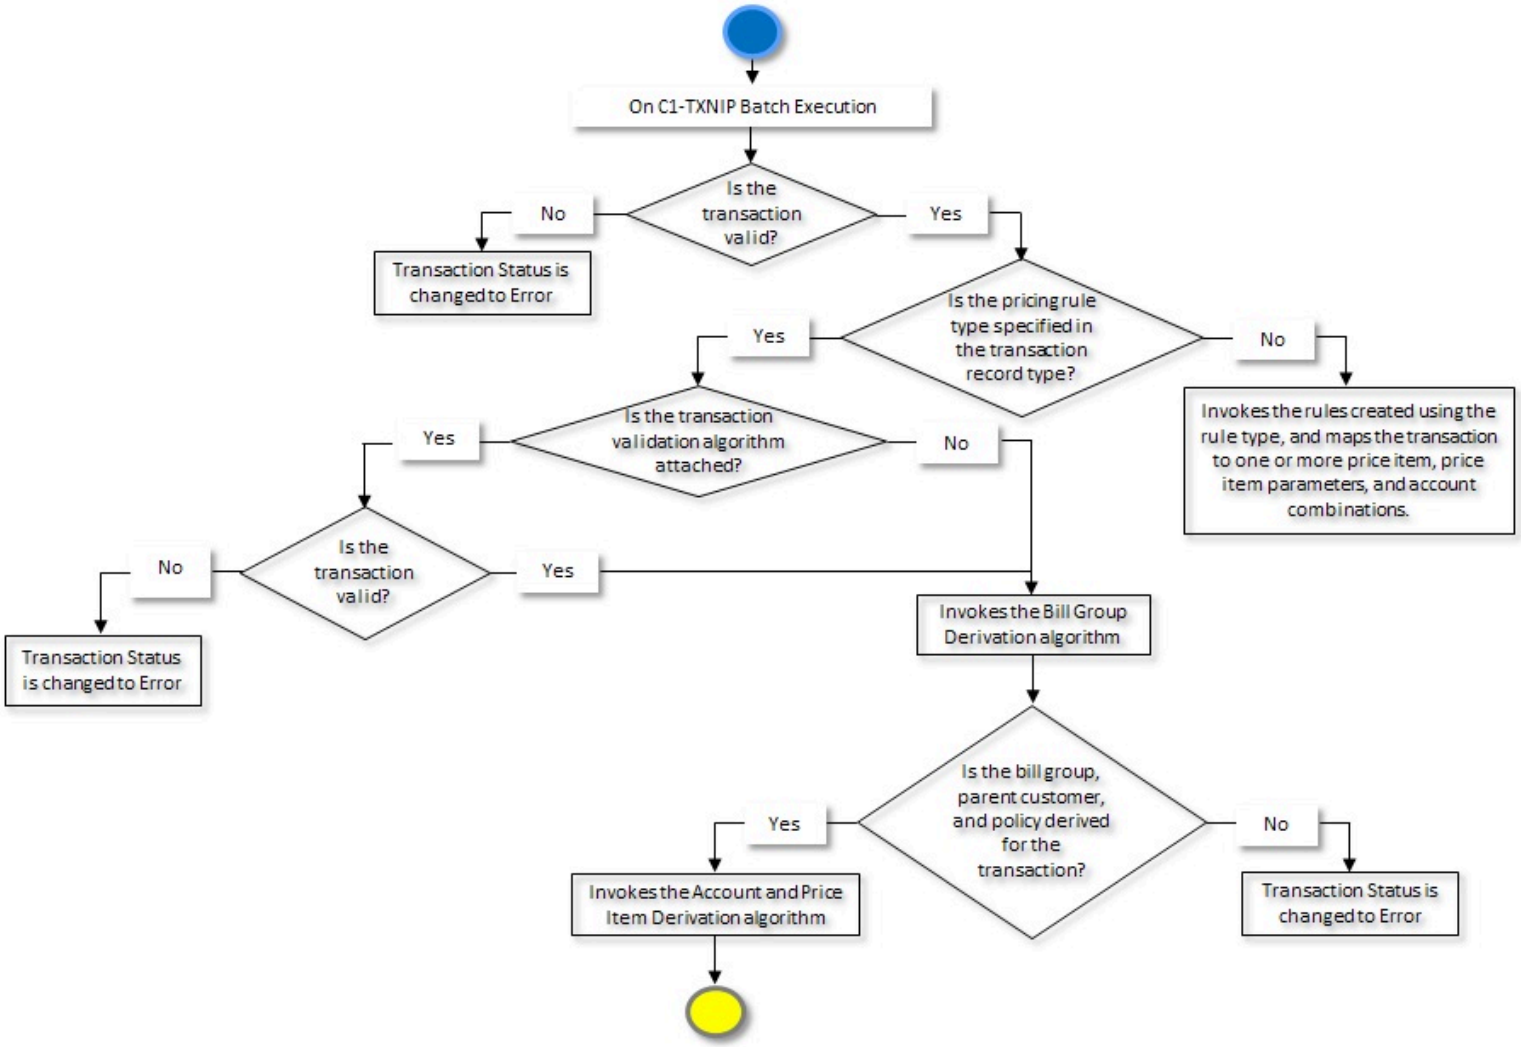
This batch then calls the eligible related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. The system invokes the algorithms which are attached to the following system events of the related pricing rule type in the specified sequence:

1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
2. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a related pricing rule type with different category:

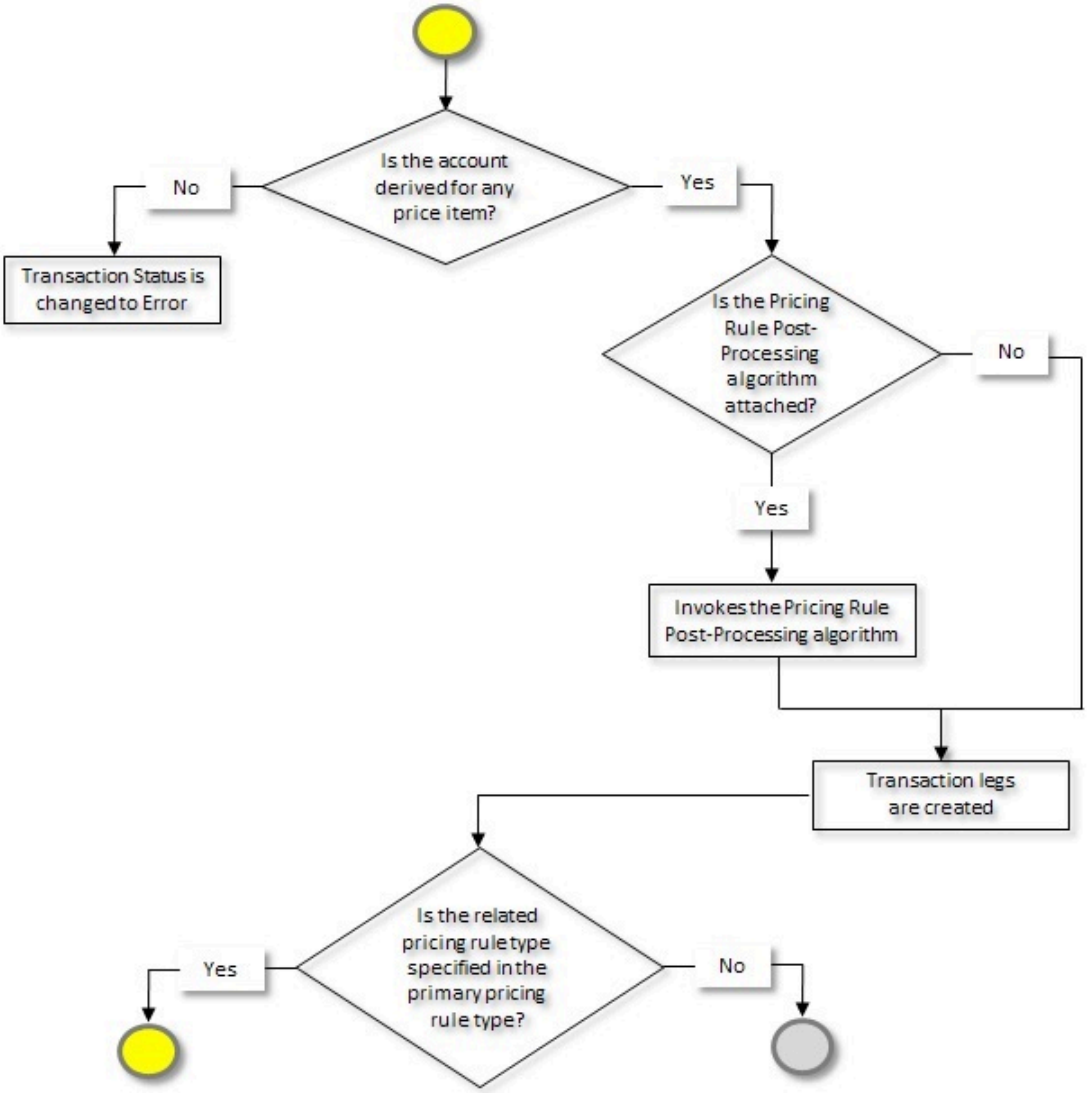
Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Specific Stop-Loss	C1_ACCPRISL	Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories) on page 3244
Aggregate Stop-Loss	C1_ACCPRISL	Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories) on page 3244
Retention Type Claim Based	C1_ACCPRIDRV	Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category) on page 3253

The following figure graphically explains the execution process of the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch:

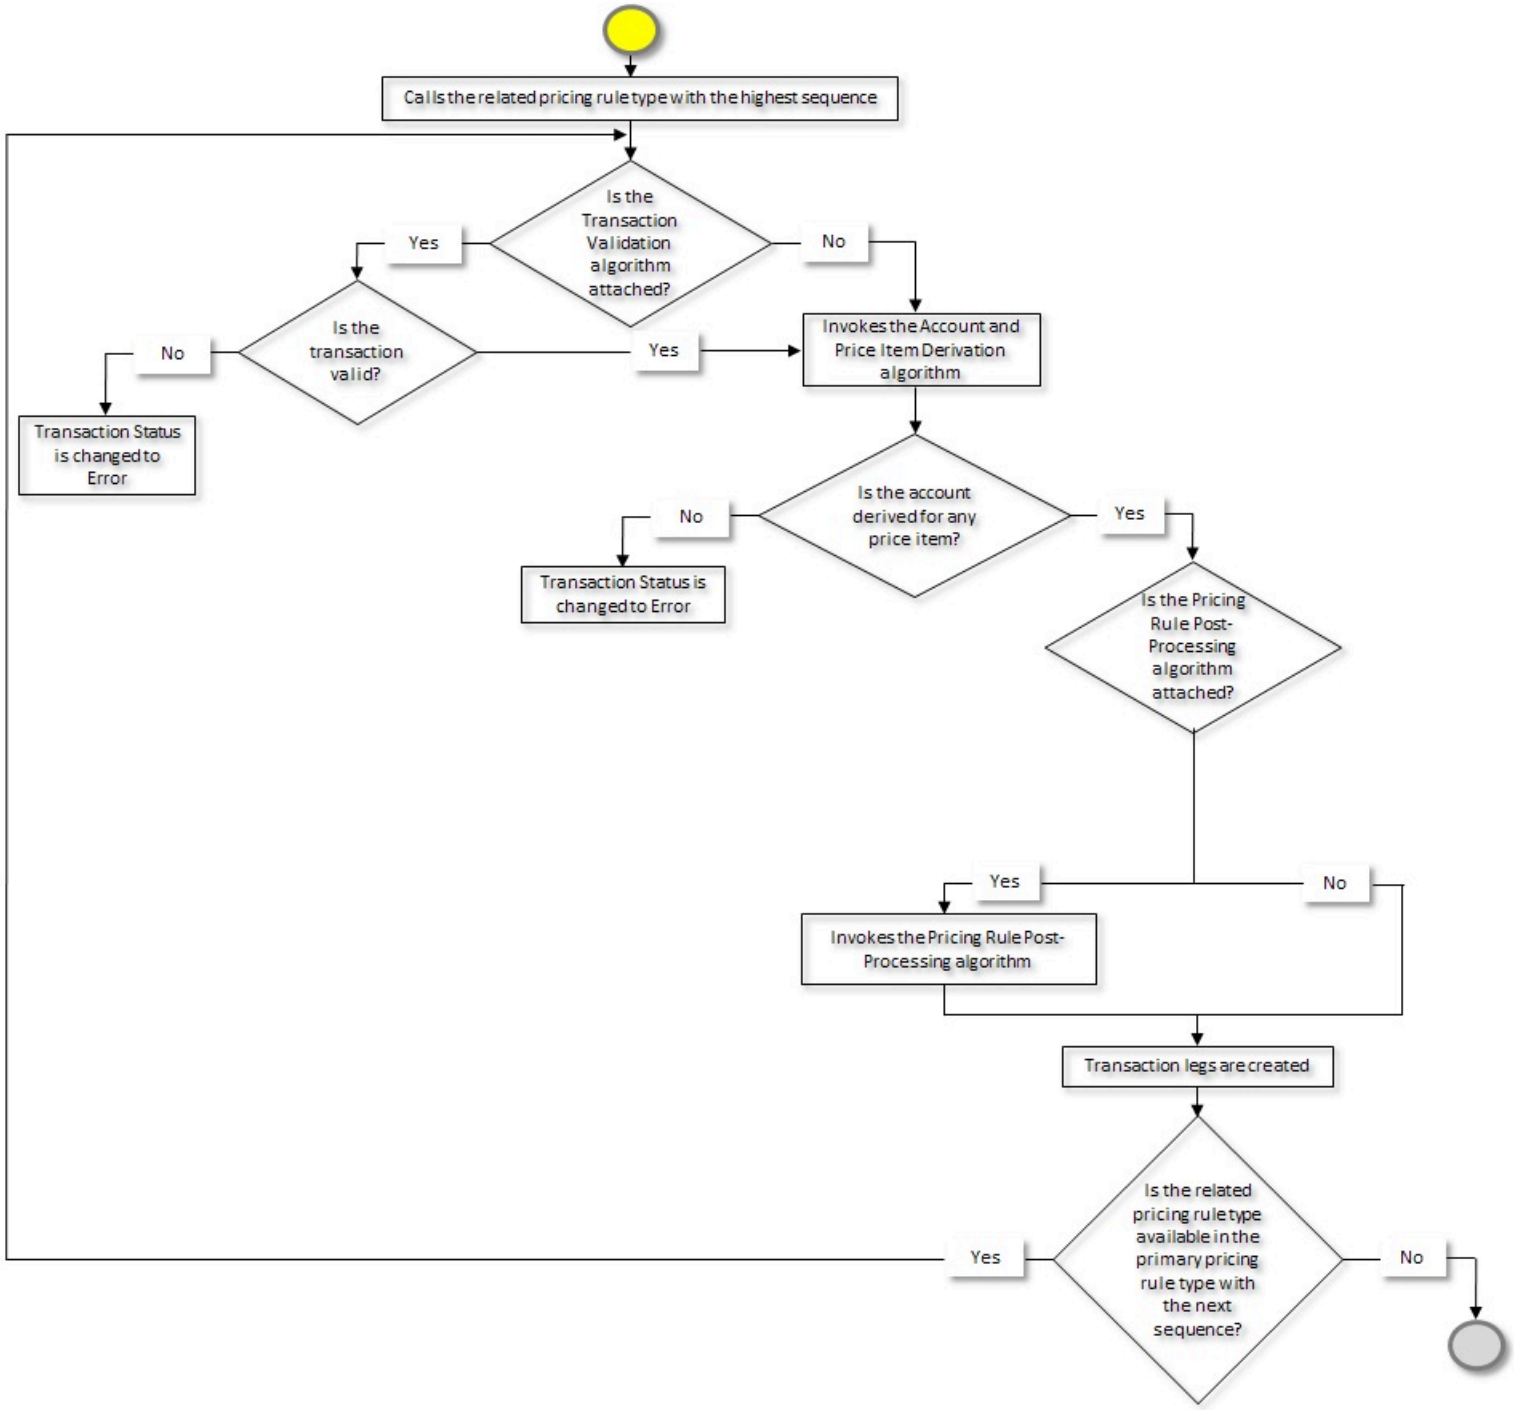
Copyright © 2025, Oracle and/or its affiliates.



Copyright © 2025, Oracle and/or its affiliates.



Copyright © 2025, Oracle and/or its affiliates.



- **Price Item Pricing Verification (C1-TXNVP)** - During this batch execution, the system derives an effective pricing for each transaction leg on the processing date. For more information, refer to the Price Item Pricing Verification on page 1158 section. In addition, the system invokes the algorithms attached to the following algorithm spots of the derived account's division in the specified sequence for the self-funded health insurance business:

  1. **TFM - Contract Derivation** - You can attach an algorithm created using the **SA_DERV_POPC** algorithm type to this algorithm spot. If the account has multiple active contracts of the contract type which is associated with the price item, this algorithm derives the contract which is associated with the policy and maps it to the transaction leg. The manner in which the system derives the active contract for the account differs in the following scenarios:

Copyright © 2025, Oracle and/or its affiliates.

If the effective pricing rule stamped against the transaction leg is defined at ...	Then...
The bill group level	The system first fetches the policy derived for the transaction and then derives the active contract which is associated with the policy.
The parent customer level	The system first fetches the bill group to which the account belongs and then the policy where the bill group is associated with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. Once the policy is derived, the system derives the active contract which is associated with the policy.

2. **TFM - Verify Pricing Post-Processing** - You can attach an algorithm created using the **C1-VRPR_POPC** algorithm type to this algorithm spot. This algorithm removes the price assignment ID and price item parameter group ID from the summary ID column of each transaction leg.

- **Service Quantity Calculation (C1-TXNSQ)** - During this batch execution, the system aggregates the transaction legs, creates a billable charge, and updates the SQI values in the billable charge. For more information, refer to the Aggregation on page 1163 section. In addition, the system invokes the algorithm attached to the following algorithm spot of the derived account's division for the self-funded health insurance business:
  - **TFM - Billable Charge Post Processing** - You can attach an algorithm created using the **C1_BCHG_POPC** algorithm type to this algorithm spot. This algorithm invokes the algorithm which is attached to the **Bill After Date Determination** system event of the respective pricing rule type. For more information, refer to the Bill After Date Determination on page 3276 section.

Stop Loss Calculation

Oracle Revenue Management and Billing enables you to accumulate the specific stop-loss and aggregate stop-loss and create billable charges for them. Once the transaction calculation lines for specific stop-loss and aggregate stop-loss are created using the transaction aggregation process, you need to execute the following batches in the specified sequence:

1. Stamp Accumulate After Date Batch (C1-STAAD)
2. Accumulate Specific Stop Loss (C1-ACSSL)
3. Create Specific Stop-Loss Billable Charge (C1-BCSSL)
4. Accumulate Aggregate Stop Loss (C1-ACASL)
5. Create Aggregate Stop-Loss Billable Charge (C1-BCASL)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Bill Generation

Once the billable charges are created for claim, claim based fees, specific stop-loss credits, aggregate stop-loss credits, enrollment based fees, and ancillary, you need to execute the following charge-based billing batches in the specified sequence to generate bills for the self-funded employer:

1. Pending Bill Generation (C1-PNDBL)
2. Bill Segment Generation (C1-BLGEN)
3. Bill Completion (C1-BLPPR)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Copyright © 2025, Oracle and/or its affiliates.

Bill Group Derivation

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch derives the bill group, parent customer, and policy for the claim, enrollment, and ancillary transactions. This is possible only when an algorithm created using the **C1_TXNBGDRV** algorithm type is attached to the **Bill Group Derivation** system event of the primary pricing rule type. The derived bill group is used for billing the following (if any):

- Claim Charges
- Claim Based Fees
- Specific Stop-Loss (SSL) Credits
- Aggregate Stop-Loss (ASL) Credits
- Retroactive Enrollment Fees
- Non-retroactive Enrollment Fees
- One-time or Recurring Fees
- Ancillary Charges

To derive a bill group, the system first determines the derivation date. The paid date is considered as the derivation date while processing the claim transactions. The coverage end date is considered as the derivation date while processing the retroactive enrollment transactions. And, the coverage start date is considered as the derivation date while processing the non-retroactive enrollment transactions. If the system cannot determine the derivation date, the status of the transaction is changed to **Error**.

Depending on the transaction fields which are mapped to source system, parameter 1, parameter 2, parameter 3, and parameter 4 in the primary pricing rule type, the system derives the data from the transaction. For example, if the source system is mapped to the **External System** field, parameter 1 is mapped to the **Location** field, parameter 2 is mapped to the **Designation** field, parameter 3 is mapped to the **Employee Group** field, and parameter 4 is mapped to the **Nationality** field, the system derives these details from the transaction. Based on the data available in the transaction, the system derives a bill group using the derivation and pricing parameters which are defined for the bill group. Note that the system considers the derivation and pricing parameters which are effective on the derivation date. For example, if the following derivation and pricing parameters are defined for the Bill Group 1 and Bill Group 2:

Bill Group Name	Sort ID	Effective Date	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
Bill Group 1	123	01-01-2018	X	Eastern	Senior Manager	BG1	Indian
Bill Group 1	132	01-04-2018	X	Western	Senior Manager	-	-
Bill Group 1	156	01-07-2018	Y	Eastern	Senior Manager	BG1	Indian
Bill Group 1	163	01-10-2018	Y	Western	Senior Manager	-	-
Bill Group 2	172	01-01-2018	Y	Eastern	-	-	-
Bill Group 2	181	01-04-2018	Y	Western	-	-	-
Bill Group 2	122	01-07-2018	X	Eastern	-	-	-
Bill Group 2	112	01-10-2018	X	Western	-	-	-

Now, if the system receives a claim transaction with the following details:

- External System is set to X
- Location is set to Western

Copyright © 2025, Oracle and/or its affiliates.

- Designation is set to Senior Manager
- Paid Date is set to 12-05-2018

In this example, the derivation and pricing parameters defined for the Bill Group 1 and 132 (sort ID) combination are effective on the paid date, and therefore the system derives Bill Group 1 for billing the claim transaction. Let us take another example where the system receives a retroactive enrollment transaction with the following details:

- External System is set to X
- Location is set to Eastern
- Designation is set to Senior Manager
- Employee Group is set to BG1
- Nationality is set to Indian
- Coverage Start Date is set to 01-01-2018
- Coverage End Date is set to 31-03-2018

In this example, the derivation and pricing parameters defined for the Bill Group 1 and 123 (sort ID) combination are effective on the coverage end date, and therefore the system derives Bill Group 1 for billing the retroactive enrollment transaction.

In the above two examples, the system could find the exact match for the bill group in the system. However, if the exact match is not available, the system finds the bill group using the best fit match. For example, if the system receives a claim transaction with the following details:

- External System is set to Y
- Location is set to Western
- Designation is set to Senior Manager
- Employee Group is set to BG2
- Nationality is set to Indian
- Paid Date is set to 01-06-2018

In this example, the system could not find the effective derivation and pricing parameters with exact match (i.e. Source System = Y, Location = Western, Designation = Senior Manager, Employee Group = BG2, and Nationality = Indian) on the paid date. Therefore, it searches for the best fit match.

While searching for the best fit match, the system first rules out the optional parameter 4 (i.e. Nationality = Indian) and then checks whether the effective derivation and pricing parameters, where Source System = Y, Location = Western, Designation = Senior Manager, and Employee Group = BG2, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the system then rules out the optional parameter 3 (i.e. Employee Group = BG2) and then checks whether the effective derivation and pricing parameters, where Source System = Y, Location = Western, and Designation = Senior Manager, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the system then rules out the optional parameter 2 (i.e. Designation = Senior Manager) and then checks whether the effective derivation and pricing parameters, where Source System = Y and Location = Western, are available on the paid date. If so, it considers the derivation and pricing parameters and accordingly derives the bill group. If not, the status of the transaction is changed to **Error**.

In this example, the derivation and pricing parameters, where Source System = Y and Location = Western, defined for the Bill Group 2 and 181 (sort ID) combination are considered as the best fit match. Therefore, the system derives Bill Group 2 for billing the claim transaction. Let us take another example where the system receives a non-retroactive enrollment transaction with the following details:

- External System is set to Y
- Location is set to Eastern
- Designation is set to Senior Manager
- Employee Group is set to BG1
- Nationality is set to Indian
- Coverage Start Date is set to 01-01-2018
- Coverage End Date is set to 31-03-2018

Copyright © 2025, Oracle and/or its affiliates.

In this example, the system could not find the effective derivation and pricing parameters with exact match (i.e. Source System = Y, Location = Eastern, Designation = Senior Manager, Employee Group = BG1, and Nationality = Indian) on the coverage start date. Therefore, it searches for the best fit match. The derivation and pricing parameters, where Source System = Y and Location = Eastern, defined for the Bill Group 2 and 172 (sort ID) combination are considered as the best fit match. Therefore, the system derives Bill Group 2 for billing the non-retroactive enrollment transaction.

Once the bill group is derived, the system derives the parent customer of the bill group. Once the parent customer is derived, the system derives the policy for the transaction in the following manner:

If the transaction is a...	**Then...**

Claim Transaction	The system checks whether the paid date of the claim transaction falls within the policy start date and runout end date of any policy where:
	• The bill group is associated with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration.
	• The status of the policy is set to either of the following:
	  • In Force/Active
	  • Runout
	  • Post Runout

Retroactive Enrollment Transaction	The system checks whether the coverage end date falls within the policy start date and policy end date of any policy where: • The bill group is associated with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. • The status of the policy is set to **In Force/Active**.
Non-retroactive Enrollment Transaction	The system checks whether the coverage start date falls within the policy start date and policy end date of any policy where: • The bill group is associated with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration. • The status of the policy is set to **In Force/Active**.

If the system cannot derive the policy for the transaction, the status of the transaction is changed to **Error**.

Account and Price Item Derivation (for the Claim Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

Note: If you have specified the price item parameters (for which the parameter usage is set to **Pricing**) in the pricing rule types where the pricing rule type category is set to **Claim**, the system does not use these price item parameters while searching for an effective pricing rule for the respective price items. However, you can use these price item parameters while defining the accumulation criteria in the related pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss**.

This algorithm fetches the effective pricing rule for each price item specified in the primary pricing rule type on the derivation date. The system considers the paid date as the derivation date while fetching the effective pricing rules for

Copyright © 2025, Oracle and/or its affiliates.

the claim transactions. This algorithm first searches for the effective pricing rule for a price item which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item from the parent customer level.

For example, if the system receives a claim transaction with the following details:

- UDF_DATE_1 is set to 15-01-2018
- Transaction Record Type is set to TR1

The following table illustrates how the pricing rules are defined for the claim transactions at different assignment levels:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
			C1P1	01-01-2018	31-12-2018	Parent Customer
			C2P1	01-01-2018	31-12-2018	Bill Group
			C3P1	01-01-2019	30-06-2019	Bill Group
			C1P2	01-06-2017	31-12-2017	Bill Group
			C2P2	01-01-2018	31-12-2018	Parent Customer
			C3P2	01-01-2019	30-06-2019	Bill Group

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, which are effective on the paid date. Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type.

For example, the following table illustrates the accounts to which the charges of P1 and P2 should be billed based on the given priority:

Price Item	Priority	Invoice Type	Account
	10	Standard	A1
	20	Retention	A2
	10	Retention	A2
	20	Standard	A1

Example 2: Priority Based Account Derivation

In the example 2, while mapping the claim transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Copyright © 2025, Oracle and/or its affiliates.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the claim transaction is mapped to the following price item and account combinations:

Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
P1	PR1	A1	C1	TL1
P2	PR2	A2	C2	TL2
P3	PR3	A3	C3	TL3

Example 3: Transaction Leg Derivation

In the example 3, the system creates three transaction legs - TL1, TL2, and TL3 for the transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. Usually, once a transaction leg is created in the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch, the price item parameters (for which the parameter usage is set to **Pricing**) of the transaction leg are grouped. The system does not support multiple parameter based pricing for the pricing rule types where the pricing rule type category is set to **Claim**. Therefore, when the price item parameters are not specified, the price item parameter group ID is set to 1 corresponding to each transaction leg - TL1, TL2, and TL3.

Note: A price item parameter group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The paid date of the claim transaction falls within the pricing rule's date range.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_DATE_1 is set to 04-06-2018
- Transaction Record Type is set to TR1

For example, the following table illustrates an effective pricing rule which is defined using a claim pricing rule type and where a pricing group is used:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Rule 1	Rule 2
TR1	CLAIM	PP1	PR1	01-01-2018	31-12-2018	PG1	Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent	Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent

Copyright © 2025, Oracle and/or its affiliates.

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 4: Effective Pricing Rule is Defined Using a Pricing Group

In the example 4, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The paid date (i.e. 04-06-2018) of the claim transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Location = Western, Nationality = Indian, Employee Department = HR, and Employee Status = Permanent)

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In the example 4, the price item parameter group is created and it contains the pricing group rule parameter. For example, Group A contains Pricing Group Rule Parameter = Rule 1.

In the example 4, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_DATE_1 is set to 04-06-2018
- Transaction Record Type is set to TR2

For example, the following table illustrates the effective pricing rules which are available during the best fit match:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Rule 1	Rule 2
TR2	CLM	PP1	PR1	01-01-2018	31-12-2018	PG1	Source System = X and Parameter 1 = Western	Source System = X and Parameter 1 = Eastern
		PP2	PR2	01-01-2018	31-12-2018	PG2	Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent	Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent

Copyright © 2025, Oracle and/or its affiliates.

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLM pricing rule type.

Example 5: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 5, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers PR1 as the effective pricing rule for PP1. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match, and therefore fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups - One contains Pricing Group Rule Parameter = Rule 1 and another contains Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the pricing rule type for which the parameter usage is set to **Aggregation**.

Note: We recommend that you should only include the optional aggregation price item parameters in the pricing rule types where the pricing rule type category is set to **Claim**. Otherwise, erroneous results might occur.

If the effective pricing rule is not derived for a price item or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item. Let us understand this with the help of an example:

Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PP1	-	-	-	-
PP2	PR2	-	-	-
PP3	PR3	A3	C3	TL1
PP4	-	-	-	-
PP5	PR5	A2	C1	TL2
PP6	PR6	A1	-	-

Example 6: No. of Transaction Legs Derived

In the example 6, the system could not find the effective pricing rule for PP1 and PP4, the required account for PP2, and the active contract for PP6 on A1. Therefore, in this case, the system creates two transaction legs - TL1 and TL2 for the claim transaction.

If the eligibility rule type is defined of a price item, the system maps the claim transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1

Copyright © 2025, Oracle and/or its affiliates.

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

Example 7: Price Item Eligibility for Transaction Leg Derivation

In the example 7, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the claim transaction. For more information, refer to the Price Item Eligibility on page 3229 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch calls the primary pricing rule type specified in the transaction record type, it calls the related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. Let us understand this with the help of an example.

The following table illustrates how related pricing rule types can be sequenced in a claim pricing rule type:

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type
CLAIM	10	SPECIFIC STOP-LOSS
	20	AGGREGATE STOP-LOSS

Example 1: Related Pricing Rule Type Sequence

In the example 1, the system first calls the related pricing rule type with the highest sequence (i.e. 10) once the CLAIM pricing rule type is called. The system calls the related pricing rule type irrespective of whether the transaction legs are derived using the primary pricing rule type. Once the SPECIFIC STOP-LOSS pricing rule type is called, the system calls the related pricing rule type with the next sequence (i.e. 20). This process continues until all related pricing rule types defined in the primary pricing rule type are called one by one in the specified sequence.

If the eligibility rule type is defined for a related pricing rule type, the system considers the related pricing rule type for deriving the transaction legs when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example.

The following table illustrates a claim pricing rule type where eligibility criteria is considered while deriving transaction legs for the related pricing rule types:

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type	Eligibility Criteria Met
CLAIM	10	SPECIFIC STOP-LOSS	Yes
	20	AGGREGATE STOP-LOSS	No

Copyright © 2025, Oracle and/or its affiliates.

Example 2: Related Pricing Rule Type Eligibility Criteria

In the example 2, the eligibility criteria is defined for the SPECIFIC STOP-LOSS and AGGREGATE STOP-LOSS pricing rule types. However, the eligibility criteria for the AGGREGATE STOP-LOSS pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs.

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the eligible related pricing rule type. This is possible when you attach an algorithm created using the **C1_ACCPRISL** algorithm type to the **Account and Price Item Derivation** system event of the related pricing rule type.

Note: Ideally, the pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** or **Aggregate Stop-Loss** should not have price item parameters for which the parameter usage is set to **Pricing**. This is because the system will not use these price item parameters while searching for an effective pricing rule for the respective price items.

This algorithm fetches an effective pricing rule for each price item specified in the related pricing rule type. It searches for an effective pricing rule for a price item at the bill group level. It derives an effective pricing rule for each price item using the incurred and paid dates specified in the claim transaction. It fetches an effective pricing rule where the following conditions are met:

- The incurred and paid dates of the claim transaction fall within the incurred and paid date ranges defined in the parent accumulation group (which is derived through the parent customer's pricing rule).
- A transaction leg is already created for at least one price item and price item parameters combination which is specified in the accumulation criteria.

For run-in claim transactions, this algorithm fetches an effective pricing rule where the following conditions are met:

- The run-in incurred and paid dates of the claim transaction fall within the run-in incurred and paid date ranges defined in the run-in accumulation group (which is derived through the parent customer's pricing rule).
- The effective pricing rule exists for at least one price item and price item parameters combination which is specified in the accumulation criteria.

For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to BG1
- UDF_DATE_1 is set to 18-02-2018
- UDF_DATE_2 is set to 28-02-2018
- Transaction Record Type is set to TR1

For example, the following table illustrates the pricing structure defined for various related pricing rules:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule (i.e. in Parent Accumulation Group)	Paid Date Range in Associated Parent Customer's Pricing Rule (i.e. in Parent Accumulation Group)	Accumulation Criteria
TR1	CLAIM	SPECIFIC STOP-LOSS	S1	C1S1	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLAIM, Price Item Parameters: Location = Western, Employee Group = BG1
				C2S1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLAIM, Price Item Parameters: Location = Western, Employee Group = BG1
							Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1
			S2	C1S2	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLM, Price Item

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule (i.e. in Parent Accumulation Group)	Paid Date Range in Associated Parent Customer's Pricing Rule (i.e. in Parent Accumulation Group)	Accumulation Criteria
							Parameters: Location = Western, Employee Group = BG1
				C2S2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLM, Price Item Parameters: Location = Western, Employee Group = BG1

Note:

Price Item in Primary Pricing Rule Type: CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Location = UDF_CHAR_1 and Employee Group = UDF_CHAR_2.

Here, the incurred date is mapped to the **UDF_DATE_1** field and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 3: SSL and ASL Effective Pricing Rule Derivation for Claim Transaction

In the example 3, the system fetches the C2S1 and C2S2 pricing rules for S1 and S2, respectively, because of the following reasons:

- Incurred date mentioned in the claim transaction falls within the incurred date range (i.e. 01-01-2018 - 31-12-2018) defined in the parent accumulation group.
- Paid date mentioned in the claim transaction falls within the paid date range (i.e. 01-01-2018 - 28-02-2019) defined in the parent accumulation group.
- A transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the C2S1 and C2S2 pricing rules:
    - Price Item: CLM, Price Item Parameters: Location = Western and Employee Group = BG1

Let us take another example where the system receives a run-in claim transaction with the following details:

- UDF_CHAR_1 is set to Eastern
- UDF_CHAR_3 is set to Active
- UDF_DATE_3 is set to 18-06-2017
- UDF_DATE_4 is set to 01-07-2017
- Transaction Record Type is set to TR2

For example, the following table illustrates the pricing structure defined for various related pricing rules:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Run-in Incurred Date Range in Associated Parent Customer's Pricing Rule (i.e. in Run-in Accumulation Group)	Run-in Paid Date Range in Associated Parent Customer's Pricing Rule (i.e. in Run-in Accumulation Group)	Accumulation Criteria
TR2	CLAIM	AGGREGATE STOP-LOSS	AS1	C1AS1	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
				C2AS1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
							Price Item: CLM, Price Item Parameters: Location = Eastern,

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Run-in Incurred Date Range in Associated Parent Customer's Pricing Rule (i.e. in Run-in Accumulation Group)	Run-in Paid Date Range in Associated Parent Customer's Pricing Rule	Accumulation Criteria
							Employee Status = Active
			AS2	C1AS2	01-01-2017 - 31-12-2017	01-01-2017 - 28-02-2018	Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active
				C2AS2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active

Note:

Price Items in Primary Pricing Rule Type: CLAIM and CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_3.

Here, the run-in incurred date is mapped to the **UDF_DATE_3** field and the run-in paid date is mapped to the **UDF_DATE_4** field in the CLAIM pricing rule type.

Example 4: SSL and ASL Effective Pricing Rule Derivation for Run-in Claim Transaction

In the example 4, the system fetches the C1AS1 and C1AS2 pricing rules for AS1 and AS2, respectively, because of the following reasons:

- Run-in incurred date mentioned in the claim transaction falls within the run-in incurred date range (i.e. 01-01-2017 - 31-12-2017) defined in the run-in accumulation group.
- Run-in paid date mentioned in the claim transaction falls within the run-in paid date range (i.e. 01-01-2017 - 28-02-2018) defined in the run-in accumulation group.
- An effective pricing rule exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the C1AS1 and C1AS2 pricing rules:
  - Price Item: CLAIM, Price Item Parameters: Location = Eastern, Employee Status = Active
  - Price Item: CLM, Price Item Parameters: Location = Eastern, Employee Status = Active

The system then checks whether the ASSL Credit Account (in case of specific stop-loss pricing rule) and ASL Credit Account (in case of aggregate stop-loss pricing rule) is specified in the associated parent customer's pricing rule. If so, the system considers the respective account for billing. Otherwise, the system derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the related pricing rule type.

For example, the following table illustrates the accounts to which the charges of S1 and S2 should be billed based on the given priority:

Related Pricing Rule Type	Price Item	Priority	Invoice Type	Account
SPECIFIC STOP-LOSS	S1	10	Standard	A1
		20	Retention	A2
	S2	10	Retention	A2
		20	Standard	A1

Example 5: Priority Based Account Derivation

Copyright © 2025, Oracle and/or its affiliates.

In the example 5, while mapping the claim transaction to S1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to S2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination.

For example, the following table illustrates how the related transaction legs are created for each price item, price item parameters, and account combination:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR1	CLAIM	SPECIFIC STOP-LOSS	S3	PRS3	A1	C3	TL3
			S4	PRS4	A2	C4	TL4

Example 6: Transaction Leg Derivation

In the example 6, the system creates two transaction legs - TL3 and TL4 for the claim transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. Usually, once a transaction leg is created in the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch, the price item parameters (for which the parameter usage is set to **Pricing**) of the transaction leg are grouped. The system does not support multiple parameter based pricing for the pricing rule types where the pricing rule type category is set to **Specific Stop-Loss** and **Aggregate Stop-Loss**. Therefore, when the price item parameters are not specified, the price item parameter group ID is set to 1 corresponding to each transaction leg - TL3 and TL4.

Note: A price item parameter group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The incurred and paid dates of the claim transaction fall within the incurred and paid date ranges defined in the parent accumulation group (which is derived through the parent customer's pricing rule).
- A transaction leg is already created for at least one price item and price item parameters combination which is specified in the accumulation criteria.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.

Similarly, the system will fetch the pricing rule for a run-in claim transaction when the following conditions are met:

Copyright © 2025, Oracle and/or its affiliates.

- The run-in incurred and paid dates of the claim transaction fall within the run-in incurred and paid date ranges defined in the run-in accumulation group (which is derived through the parent customer's pricing rule).
- The effective pricing rule exists for at least one price item and price item parameters combination which is specified in the accumulation criteria.
- The employee attributes specified in the run-in claim transaction match the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 31-12-2018
- UDF_DATE_2 is set to 28-02-2019
- Transaction Record Type is set to TR1

For example, the following table illustrates an effective related pricing rule which is defined using a specific stop-loss pricing rule type and where a pricing group is used:

Transaction Record Type	**Primary Pricing Rule Type**	**Related Pricing Rule Type**	**Price Item in Related Pricing Rule Type**	**Pricing Rule**	**Incurred Date Range in Associated Parent Customer's Pricing Rule**	**Paid Date Range in Associated Parent Customer's Pricing Rule**	**Pricing Group**	**Pricing Group Rule**	**Accumulation Criteria**
					(i.e. in Parent Accumulation Group)				
TR1	CLAIM	SPECIFIC STOP-LOSS	S1	PR1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1
								Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG2
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1
								Rule 2 (where Source System = X, Parameter 1	Price Item: CLM; Price Item Parameters: Designation =

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule (i.e. in Parent Accumulation Group)	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
								= Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Senior Manager and Employee Group = BG2

Note:

Price Item in Primary Pricing Rule Type: CLM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Designation = UDF_CHAR_6 and Employee Group = UDF_CHAR_7.

Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the incurred date is mapped to the **UDF_DATE_1** field, and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 7: Effective Pricing Rule is Defined Using a Pricing Group

In the example 7, the system considers the PR1 pricing rule for S1 because of the following reasons:

- Incurred date mentioned in the claim transaction falls within the incurred date range (i.e. 01-01-2018 - 31-12-2018) defined in the parent accumulation group.
- Paid date mentioned in the claim transaction falls within the paid date range (i.e. 01-01-2018 - 28-02-2019) defined in the parent accumulation group.
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- A transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the PR1 pricing rule:
    - Price Item: CLM; Price Item Parameters: Designation = Senior Manager and Employee Group = BG1

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In the example 7, the price item parameter group is created and it contains the pricing group rule parameter. For example, Group A contains Pricing Group Rule Parameter = Rule 1.

In the example 7, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 06-06-2018
- UDF_DATE_2 is set to 27-06-2018
- Transaction Record Type is set to TR2

For example, the following table illustrates the effective related pricing rules which are available during the best fit match:

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule (i.e. in Parent Accumulation Group)	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
TR2	CLAIM	SPECIFIC STOP-LOSS	S1	PR1	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1
								Rule 1 (where Source System = X and Parameter 1 = Western)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2
			S2	PR2	01-01-2018 - 31-12-2018	01-01-2018 - 28-02-2019	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2
								Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG2
								Rule 2 (where Source System = X,	Price Item: CLAIM; Price Item Parameters:

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Incurred Date Range in Associated Parent Customer's Pricing Rule (i.e. in Parent Accumulation Group)	Paid Date Range in Associated Parent Customer's Pricing Rule	Pricing Group	Pricing Group Rule	Accumulation Criteria
								Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1

Note:

Price Item in Primary Pricing Rule Type: CLAIM; Price Item Parameters in Primary Pricing Rule Type where the Eligible for Stop-Loss option is selected: Designation = UDF_CHAR_6 and Employee Group = UDF_CHAR_7.

Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the incurred date is mapped to the **UDF_DATE_1** field, and the paid date is mapped to the **UDF_DATE_2** field in the CLAIM pricing rule type.

Example 8: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 8, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for S1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 8, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for S1. In addition, a transaction leg already exists for the following price item and price item parameters combination which is specified in the accumulation criteria of the PR1 pricing rule:

- Price Item: CLAIM; Price Item Parameters: Designation = Senior Manager; Employee Group = BG1

Therefore, the system fetches PR1 as the effective pricing rule for S1. In addition, the system fetches PR2 as the effective pricing rule for S2. The system creates two price item parameter groups - One contains Pricing Group Rule Parameter = Rule 1 and another contains Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item.

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

Related Pricing Rule Type	Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
AGGREGATE STOP-LOSS	AS11	-	-	-	-
	AS12	PR12	A1	C1	TL11

Copyright © 2025, Oracle and/or its affiliates.

Related Pricing Rule Type	Price Item	Effective Pricing Rule	Account	Active Contract	Transaction Leg
	AS13	PR13	-	-	-
	AS14	PR14	A2	-	-
	AS15	PR15	-	-	-
	AS16	-	-	-	-
	AS17	PR17	A2	C2	TL12

Example 9: No. of Transaction Legs Derived

In the example 9, the system could not find the effective pricing rule for AS11 and AS16, the required account for AS13 and AS15, and the active contract for AS14 on A2. Therefore, in this case, the system creates two transaction legs - TL11 and TL12 for the transaction.

If the eligibility rule type is defined for a price item, the system maps the transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing.

For example, the following table illustrates the related pricing rule types where eligibility criteria is considered while deriving transaction legs for the price items:

Sequence	Related Pricing Rule Type	Rule Type Eligibility Criteria Met	Price Item	Price Item Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
10	SPECIFIC STOP-LOSS	Yes	SS1	Yes	PR1	A1	C1	TL1
			SS2	-	PR2	A2	C2	TL2
			SS3	No	-	-	-	-
20	AGGREGATE STOP-LOSS	No	AS4	-	-	-	-	-
			AS5	-	-	-	-	-
			AS6	-	-	-	-	-

Example 10: Price Item Eligibility for Transaction Leg Derivation

In the example 10, the eligibility criteria is defined for the SPECIFIC STOP-LOSS and AGGREGATE STOP-LOSS pricing rule types. However, the eligibility criteria for the AGGREGATE STOP-LOSS pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs. The eligibility criteria for SS1 was satisfied, but the eligibility criteria for SS3 was not satisfied. Therefore, in this case, the system creates two transaction legs (i.e. TL1 and TL2) for the claim transaction. For more information about the related pricing rule type eligibility and price item eligibility features, refer to the Related Pricing Rule Type Eligibility on page 3228 and Price Item Eligibility on page 3229 sections, respectively.

Once a transaction leg is created, the effective pricing rule's start date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch calls the primary pricing rule type specified in the transaction record type, it calls the related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. Let us understand this with the help of an example.

The following table illustrates how related pricing rule types can be sequenced in a claim pricing rule type:

Copyright © 2025, Oracle and/or its affiliates.

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type
CLAIM	10	RETENTION TYPE CLAIM BASED
	20	SPECIFIC STOP-LOSS
	30	AGGREGATE STOP-LOSS

Example 1: Related Pricing Rule Type Sequence

In the example 1, the system first calls the related pricing rule type with the highest sequence (i.e. 10) once the CLAIM pricing rule type is called. The system calls the related pricing rule type irrespective of whether the transaction legs are derived using the primary pricing rule type. Once the RETENTION TYPE CLAIM BASED pricing rule type is called, the system calls the related pricing rule type with the next sequence (i.e. 20). This process continues until all related pricing rule types defined in the primary pricing rule type are called one by one in the specified sequence.

If the eligibility rule type is defined for a related pricing rule type, the system considers the related pricing rule type for deriving the transaction legs when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the related pricing rule type for deriving the transaction legs. Let us understand this with the help of an example.

The following table illustrates a claim pricing rule type where eligibility criteria is considered while deriving transaction legs for the related pricing rule types:

Primary Pricing Rule Type	Sequence	Related Pricing Rule Type	Eligibility Criteria Met
CLAIM	10	RETENTION TYPE CLAIM BASED	Yes
	20	CLAIM BASED FEES	-
	30	CLAIM FEE CHARGES	No

Example 2: Related Pricing Rule Type Eligibility Criteria

In the example 2, the eligibility criteria is defined for the RETENTION TYPE CLAIM BASED and CLAIM FEE CHARGES pricing rule types. However, the eligibility criteria for the CLAIM FEE CHARGES pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs.

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps a claim transaction to one or more price item and price item parameters which are defined in the eligible related pricing rule type. This is possible when you attach an algorithm created using the **C1_ACCPRIDRV** algorithm type to the **Account and Price Item Derivation** system event of the related pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the related pricing rule type on the derivation date. The system considers the paid date as the derivation date. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives a claim transaction with the following details:

- UDF_DATE_1 is set to 15-01-2018
- Transaction Record Type is set to TR1

The following table illustrates how the related pricing rules are defined for the claim transactions at different assignment levels:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
TR1	CLAIM	RETENTION TYPE CLAIM BASED	P3	C1P3	01-01-2018	31-12-2018	Parent Customer
				C2P3	01-01-2018	31-12-2018	Bill Group

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
			P4	C1P4	01-01-2018	31-12-2018	Parent Customer
				C2P4	01-01-2019	30-06-2019	Bill Group

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 3: Effective Pricing Rule Derivation

In the example 3, the system fetches C2P3 and C1P4 pricing rules for P3 and P4 respectively, which are effective on the paid date. Note that the effective pricing rule for P3 is derived at the bill group level, whereas the effective pricing rule for P4 is derived from the parent customer level.

While fetching the effective pricing rule, the system first searches for the exact match for the price item parameters at both the levels. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_DATE_1 is set to 20-03-2018
- Transaction Record Type is set to TR4

The following table illustrates an example where the system fetches the effective related pricing rules for a claim transaction at different assignment levels using the exact match option:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR4	CLAIM	CLAIM BASED CHARGES	P1	Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_2	C1P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	$10	Parent Customer
								Location = Eastern and Employee Status = Active	$12	
								Location = Eastern and Employee Status = Retired	$11	
								Location = Western and Employee Status = Retired	$9	
					C2P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	$8	Bill Group
								Location = Eastern and Employee Status = Active	$9	
								Location = Eastern and Employee Status = Retired	$10	
								Location = Western and Employee Status = Retired	$9	

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 4: Exact Match for Price Item Parameters

In the example 4, the system fetches the C2P1 pricing rule for P1 because of the following reasons:

- The paid date (i.e. 20-03-2018) of the claim transaction falls within the date range (i.e. 01-01-2018 to 31-12-2018) of the C2P1 pricing rule which is defined at the bill group level.
- It contains the exact match for the price item parameters which are received in the transaction.

Copyright © 2025, Oracle and/or its affiliates.

If the system cannot find the exact match for the price item parameters at both the levels, it searches for the best fit match for the price item parameters first at the bill group level and then at the parent customer level. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_CHAR_4 is set to Indian
- UDF_DATE_1 is set to 07-06-2018
- Transaction Record Type is set to TR5

For example, the following table illustrates the effective related pricing rules which are available during the best fit match:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR5	CLAIM	RETENTION CLAIM BASED FEES	P3	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	C1P3	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	$10	Bill Group
								Location = Eastern and Employee Status = Active	$12	
								Location = Eastern and Employee Status = Retired	$11	
								Location = Western and Employee Status = Retired	$9	

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 5: Best Fit Match for Price Item Parameters

Note: The **Location** and **Employee Status** parameters are mandatory for P3. However, the **Employee Department** and **Nationality** parameters are optional with the priority set to 1 and 2, respectively.

In the example 5, the system could not find the exact match for the price item parameters (i.e. Location = Western, Employee Status = Active, Employee Department = HR, and Nationality = Indian) in the effective pricing rule for P3. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Nationality = Indian) and checks whether pricing is defined for the price item parameters (i.e. Location = Western, Employee Status = Active, and Employee Department = HR) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the system rules out the optional parameter with the next lowest priority (i.e. Employee Department = HR) and checks whether pricing is defined for the price item parameters (i.e. Location = Western and Employee Status = Active) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers pricing defined for the price item parameters (i.e. Location = Western and Employee Status = Active) as the best fit match, and therefore fetches C1P3 as the effective pricing rule for P3. While fetching the effective pricing rule, the system considers only those price item parameters specified in the related pricing rule type for which the parameter usage is set to **Pricing**.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the related pricing rule type.

For example, the following table illustrates the accounts to which the charges of P3 and P4 should be billed based on the given priority:

Copyright © 2025, Oracle and/or its affiliates.

Related Pricing Rule Type	Price Item	Priority	Invoice Type	Account
RETENTION TYPE CLAIM BASED	P3	10	Standard	A1
	P4	10	Retention	A2
		20	Standard	A1

Example 6: Priority Based Account Derivation

In the example 6, while mapping the claim transaction to P3, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P4, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the status of the transaction is changed to **Error**.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives a claim transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_DATE_1 is set to 03-01-2018
- Transaction Record Type is set to TR5

For example, the following table illustrates how the related transaction legs are created for each price item, price item parameters, and account combination:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR5	CLAIM	CLAIM BASED FEES	P1	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	PR1	Location = Western and Employee Status = Active	A1	C1	TL1
			P2		PR2	Location = Western and Employee Status = Active	A2	C2	TL2
			P3		PR3	Location = Western and Employee Status = Active	A3	C3	TL3

Note: Here, the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 7: Transaction Leg Derivation

In the example 7, the system maps the claim transaction to the following price item, price item parameters, and account combinations:

Copyright © 2025, Oracle and/or its affiliates.

- Price Item: P1; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A1
- Price Item: P2; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A2
- Price Item: P3; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A3

Note: The nationality information of an employee is not received in the **UDF_CHAR_4** field, and therefore the claim transaction is not mapped to the **Nationality** price item parameter.

In the example 7, the system creates three transaction legs - TL1, TL2, and TL3 for the claim transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 7, the system creates one price item parameter group which contains the following price item parameters:

- Location = Western
- Employee Status = Active
- Employee Department = HR

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the related pricing rule type for which the parameter usage is set to **Pricing**.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for a claim transaction when the following conditions are met:

- The paid date of the claim transaction falls within the pricing rule's date range.
- The employee attributes specified in the claim transaction match the criteria defined in any one of the pricing group rule.
- The employee attributes specified in the claim transaction match the price item parameters defined within the satisfied rule.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 s set to BG1
- UDF_DATE_1 03-01-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates an effective related pricing rule which is defined using a retention type claim based pricing rule type and where a pricing group is used:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
TR6	CLAIM	CLAIM BASED FEES	PP1	Designation = UDF_CHAR_6; Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	$10

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
									Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	$12
									Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	$8
									Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	$9

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 8: Effective Pricing Rule is Defined Using a Pricing Group

In the example 8, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The paid date (i.e. 03-01-2018) of the claim transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the claim transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- The employee attributes specified in the claim transaction match the price item parameters defined within the Rule 1.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1.

In the example 8, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A claim transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent

Copyright © 2025, Oracle and/or its affiliates.

- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 31-05-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates the effective related pricing rules which are available during the best fit match:

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
TR6	CLAIM	CLAIM BASED FEES	PP1	Designation = UDF_CHAR_6, Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG1	$20
									Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG2	$21
									Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG1	$18
									Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG2	$19
			PP2		PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	$5
									Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	$5
									Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	$6

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Related Pricing Rule Type	Price Item in Related Pricing Rule Type	Price Item Parameters in Related Pricing Rule Type	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
									Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	$9

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, and the paid date is mapped to the **UDF_DATE_1** field in the CLAIM pricing rule type.

Example 9: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 9, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 9, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the employee attributes in the claim transaction satisfy the price item parameters (i.e. Designation = Senior Manager and Employee Group = BG1) defined within the Rule 1. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups - One contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1 and another contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item.

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

Related Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
RETENTION TYPE CLAIM BASED	PP11	Designation = UDF_CHAR_6, Employee Status = UDF_CHAR_7	-	-	-	-
	PP12		PR12	A1	C1	TL11
	PP13		PR13	-	-	-
	PP14		PR14	A2	-	-
	PP15		PR15	-	-	-
	PP16		-	-	-	-
	PP17		PR17	A2	C2	TL12

Copyright © 2025, Oracle and/or its affiliates.

Example 10: No. of Transaction Legs Derived

In the example 10, the system could not find the effective pricing rule for PP11 and PP16, the required account for PP13 and PP15, and the active contract for PP14 on A2. Therefore, in this case, the system creates two transaction legs - TL11 and TL12 for the transaction.

If the eligibility rule type is defined for a price item, the system maps the transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing.

For example, the following table illustrates a claim pricing rule type where eligibility criteria is considered while deriving transaction legs for the related pricing rule types:

Sequence	Related Pricing Rule Type	Rule Type Eligibility Criteria Met	Price Item	Price Item Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
10	RETENTION TYPE CLAIM BASED	Yes	PE1	Yes	PR1	A1	C1	TL1
			PE2	-	PR2	A2	-	-
			PE3	No	-	-	-	-
20	CLAIM BASED FEES	-	PE4	-	PR3	A1	C2	TL2
			PE5	Yes	PR4	-	-	-
			PE6	No	-	-	-	-
30	CLAIM FEE CHARGES	No	PE7	-	-	-	-	-
			PE8	-	-	-	-	-
			PE9	-	-	-	-	-

Example 11: Price Item Eligibility for Transaction Leg Derivation

In the example 11, the eligibility criteria is defined for the RETENTION TYPE CLAIM BASED and CLAIM FEE CHARGES pricing rule types. However, the eligibility criteria for the CLAIM FEE CHARGES pricing rule type was not satisfied, and therefore it is not used for deriving the transaction legs. The eligibility criteria for PE1 and PE5 was satisfied, but the eligibility criteria for PE3 and PE6 was not satisfied. Further, the system could not find the required account for PE5 and the active contract for PE2 on A2. Therefore, in this case, the system creates two transaction legs (i.e. TL1 and TL2) for the claim transaction. For more information about the related pricing rule type eligibility and price item eligibility features, refer to the Related Pricing Rule Type Eligibility on page 3228 and Price Item Eligibility on page 3229 sections, respectively.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps the retroactive and non-retroactive enrollment transactions to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible only when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the primary pricing rule type on the derivation date. The system considers the coverage end date and coverage start date as the derivation date while fetching the effective pricing rules for the retroactive and non-retroactive enrollment transactions, respectively. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives a non-retroactive enrollment transaction with the following details:

- UDF_DATE_1 is set to 01-02-2018

Copyright © 2025, Oracle and/or its affiliates.

- UDF_DATE_2 is set to 28-02-2018
- Transaction Record Type is set to TR3

The following table illustrates how the pricing rules are defined for the enrollment transactions at different assignment levels:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Pricing Rule	Pricing Start Date	Pricing End Date	Assignment Level
TR3	RETENTION TYPE ENROLLMENT BASED	P1	C1P1	01-01-2018	31-12-2018	Parent Customer
			C2P1	01-01-2018	31-12-2018	Bill Group
			C3P1	01-01-2019	30-06-2019	Bill Group
		P2	C1P2	01-06-2017	31-12-2017	Bill Group
			C2P2	01-01-2018	31-12-2018	Parent Customer
			C3P2	01-01-2019	30-06-2019	Bill Group

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the RETENTION TYPE ENROLLMENT BASED pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, which are effective on the coverage start date. Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

While fetching the effective pricing rule, the system first searches for exact match for the price item parameters at both the levels. For example, if the system receives a retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR4

The following table illustrates the effective pricing rules which are available at different assignment levels for an enrollment transaction during the exact match:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR4	ENROLLMENT BASED FEES	P1	Location = UDF_CHAR_1 and Employee Status = UDF_CHAR_2	C1P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	$10	Parent Customer
							Location = Eastern and Employee Status = Active	$12	
							Location = Eastern and Employee Status = Retired	$11	
							Location = Western and Employee Status = Retired	$9	
				C2P1	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	$8	Bill Group
							Location = Eastern and Employee Status = Active	$9	
							Location = Eastern and Employee Status = Retired	$10	
							Location = Western and Employee Status = Retired	$9	

Copyright © 2025, Oracle and/or its affiliates.

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 2: Exact Match for Price Item Parameters

In the example 2, the system fetches the C2P1 pricing rule for P1 because of the following reasons:

- The coverage end date (i.e. 31-03-2018) of the retroactive enrollment transaction falls within the date range (i.e. 01-01-2018 to 31-12-2018) of the C2P1 pricing rule which is defined at the bill group level.
- It contains the exact match for the price item parameters which are received in the transaction.

If the system cannot find the exact match for the price item parameters at both the levels, the system searches for the best fit match for the price item parameters first at the bill group level and then at the parent customer level. For example, if the system receives a retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_CHAR_4 is set to Indian
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR5

For example, the following table illustrates the effective pricing rules which are available during the best fit match:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Price Item Parameters in Pricing Rule	Fees	Assignment Level
TR5	ENROLLMENT BASED CHARGES	P3	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	C1P3	01-01-2018	31-12-2018	Location = Western and Employee Status = Active	$10	Bill Group
							Location = Eastern and Employee Status = Active	$12	
							Location = Eastern and Employee Status = Retired	$11	
							Location = Western and Employee Status = Retired	$9	

Note:

Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED CHARGES pricing rule type.

Here, the **Location** and **Employee Status** parameters are mandatory for P3. However, the **Employee Department** and **Nationality** parameters are optional with the priority set to 1 and 2, respectively.

Example 3: Best Fit Match for Price Item Parameters

In the example 3, the system could not find the exact match for the price item parameters (i.e. Location = Western, Employee Status = Active, Employee Department = HR, and Nationality = Indian) in the effective pricing rule for P3. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Nationality = Indian) and checks whether pricing is defined for the price item parameters (i.e. Location = Western, Employee Status = Active, and Employee Department = HR) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the system rules out the optional parameter with the next lowest priority (i.e. Employee Department = HR) and checks whether pricing is defined for the price item parameters (i.e. Location = Western and Employee Status = Active) in the effective pricing rule. If so, it considers C1P3 as the effective pricing rule for P3. If not, the status of the transaction is changed to **Error**.

In the example 3, the system considers pricing defined for the price item parameters (i.e. Location = Western and Employee Status = Active) as the best fit match, and therefore fetches C1P3 as the effective pricing rule for P3. While

Copyright © 2025, Oracle and/or its affiliates.

fetching the effective pricing rule, the system considers only those price item parameters specified in the primary pricing rule type for which the parameter usage is set to **Pricing**. For retroactive enrollment transactions, the system considers only those effective pricing rules where the **Exempt Retro Transactions** option is not selected.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type.

For example, the following table illustrates the accounts to which the charges of P1 and P2 should be billed based on the given priority:

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

Example 4: Priority Based Account Derivation

In the example 4, while mapping the enrollment transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the enrollment transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives a non-retroactive enrollment transaction with the following details:

- UDF_CHAR_1 is set to Western
- UDF_CHAR_2 is set to Active
- UDF_CHAR_3 is set to HR
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR5

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
TR5	ENROLLMENT BASED FEES	P1	Location = UDF_CHAR_1, Employee Status = UDF_CHAR_2, Employee Department = UDF_CHAR_3, and Nationality = UDF_CHAR_4	PR1	Location = Western and Employee Status = Active	A1	C1	TL1
		P2		PR2	Location = Western and Employee Status = Active	A2	C2	TL2

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Best Fit Match for Price Item Parameters in Effective Pricing Rule	Account	Active Contract	Transaction Leg
		P3		PR3	Location = Western and Employee Status = Active	A3	C3	TL3

Note: Here, the coverage start date is mapped to the **UDF_DATE_1** field and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 5: Transaction Leg Derivation

In the example 5, the system maps the non-retroactive enrollment transaction to the following price item, price item parameters, and account combinations:

- Price Item: P1; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A1
- Price Item: P2; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A2
- Price Item: P3; Price Item Parameter: Location = Western, Employee Status = Active, and Employee Department = HR; and Account: A3

Note: The nationality information of an employee is not received in the **UDF_CHAR_4** field, and therefore the non-retroactive enrollment transaction is not mapped to the **Nationality** price item parameter.

In the example 5, the system creates three transaction legs - TL1, TL2, and TL3 for the non-retroactive enrollment transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 5, the system creates one price item parameter group which contains the following price item parameters:

- Location = Western
- Employee Status = Active
- Employee Department = HR

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the pricing rule type for which the parameter usage is set to **Pricing**.

The following table describes how the system fetches a pricing rule when a pricing group is used while defining the pricing rule for a bill group:

If the transaction is a...	Then the system fetches the pricing rule when the following conditions are met...
Retroactive enrollment transaction	• The coverage end date of the retroactive enrollment transaction falls within the pricing rule's date range. • The exact or best fit match is available for the price item parameters in the effective pricing rule. • The retroactive enrollment transaction satisfies the criteria defined in any one of the pricing group rule.
Non-retroactive enrollment transaction	• The coverage start date of the non-retroactive enrollment transaction falls within the pricing rule's date range. • The exact or best fit match is available for the price item parameters in the effective pricing rule.

Copyright © 2025, Oracle and/or its affiliates.

If the transaction is a...	Then the system fetches the pricing rule when the following conditions are met...
	• The non-retroactive enrollment transaction satisfies the criteria defined in any one of the pricing group rule.

Let us understand this with the help of an example. A retroactive enrollment transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 01-03-2018
- UDF_DATE_2 is set to 31-03-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates an effective pricing rule which is defined using a retention type enrollment based pricing rule type and where a pricing group is used:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters	Fees
TR6	ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6; Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	$10
								Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	$12
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG1	$8
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager and Employee Group = BG2	$9

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the coverage start date is mapped to the **UDF_DATE_1** field, and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 6: Effective Pricing Rule is Defined Using a Pricing Group

Copyright © 2025, Oracle and/or its affiliates.

In the example 6, the system considers the PR1 pricing rule for PP1 because of the following reasons:

- The coverage end date (i.e. 31-03-2018) of the retroactive enrollment transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the retroactive enrollment transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)
- The employee attributes specified in the retroactive enrollment transaction match the price item parameters defined within the Rule 1.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1.

In the example 6, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. A non-retroactive enrollment transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to Senior Manager
- UDF_CHAR_7 is set to BG1
- UDF_DATE_1 is set to 01-05-2018
- UDF_DATE_2 is set to 31-05-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates the effective pricing rules which are available during the best fit match:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
TR6	ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6, Employee Group = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG1	$20
								Rule 1 (where Source System = X and Parameter 1 = Western)	Designation = Senior Manager; Employee Group = BG2	$21
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG1	$18
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Designation = Senior Manager; Employee Group = BG2	$19
		PP2		PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and	Designation = Senior Manager; Employee Group = BG2	$5

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Price Item Parameters in Pricing Rule	Fees
								Parameter 4 = Permanent)		
								Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	$5
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG2	$6
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Designation = Senior Manager; Employee Group = BG1	$9

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the coverage start date is mapped to the **UDF_DATE_1** field, and the coverage end date is mapped to the **UDF_DATE_2** field in the ENROLLMENT BASED FEES pricing rule type.

Example 7: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 7, the system could not find exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 7, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the employee attributes in the non-retroactive enrollment transaction satisfy the price item parameters (i.e. Designation = Senior Manager and Employee Group = BG1) defined within Rule 1. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups - One contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 1 and another contains Designation = Senior Manager, Employee Group = BG1, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the aggregation parameter group. An aggregation parameter group contains all price item parameters included in the pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item.

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

Copyright © 2025, Oracle and/or its affiliates.

Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
ENROLLMENT BASED FEES	PP1	Designation = UDF_CHAR_6, Employee Status = UDF_CHAR_7	-	-	-	-
	PP2		PR2	-	-	-
	PP3		PR3	A3	C3	TL1
	PP4		-	-	-	-
	PP5		PR5	A2	C1	TL2
	PP6		PR6	A1	-	-

Example 8: No. of Transaction Legs Derived

In the example 8, the system could not find the effective pricing rule for PP1 and PP4, the required account for PP2, and the active contract for PP6 on A1. Therefore, in this case, the system creates two transaction legs - TL1 and TL2 for the enrollment transaction.

If the eligibility rule type is defined of a price item, the system maps the enrollment transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

Example 9: Price Item Eligibility for Transaction Leg Derivation

In the example 9, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the enrollment transaction. For more information, refer to the Price Item Eligibility on page 3229 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category)

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch maps an ancillary transaction to one or more price item and price item parameters which are defined in the respective primary pricing rule type. This is possible when an algorithm created using the **C1_ACCPRIDRV** algorithm type is attached to the **Account and Price Item Derivation** system event of the primary pricing rule type.

This algorithm fetches the effective pricing rule for each price item and price item parameters combination specified in the primary pricing rule type on the derivation date. The system considers the paid date as the derivation date. This algorithm first searches for the effective pricing rule for a price item and price item parameters combination which is defined for the policy at the bill group level. If the system does not find any effective pricing rule for a price item and

Copyright © 2025, Oracle and/or its affiliates.

price item parameters combination which is defined for the policy at the bill group level, it inherits the effective pricing rule for a price item and price item parameters combination from the parent customer level.

For example, if the system receives an ancillary transaction with the following details:

- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 15-03-2018
- Transaction Record Type is set to TR1

The following table illustrates how the pricing rules are defined for the ancillary transactions at different assignment levels:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Arrangement	Assignment Level
TR1	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	C1P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Parent Customer
				C2P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Bill Group
				C3P1	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Bill Group
		P2		C1P2	01-06-2017	31-12-2017	Pass Through without Markup or Markdown	Bill Group
				C2P2	01-01-2018	31-12-2018	Pass Through without Markup or Markdown	Parent Customer
				C3P2	01-01-2019	30-06-2019	Pass Through without Markup or Markdown	Bill Group

Note:

Here, the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type. This means that the system will consider only effective pricing rules where the pricing arrangement is set to **Pass Through without Markup or Markdown** when the ancillary transaction is received where **UDF_CHAR_7** is set to **PASS**.

Here, the paid date is mapped to the **UDF_DATE_1** field in the ANCILLARY pricing rule type.

Example 1: Effective Pricing Rule Derivation

In the example 1, the system fetches C2P1 and C2P2 pricing rules for P1 and P2, respectively, because of the following reasons:

- The paid date (i.e. 15-03-2018) of the ancillary transaction falls within the C2P1 and C2P2 pricing rules' date range (i.e. 01-01-2018 to 31-12-2018).
- The pricing arrangement is set to **Pass Through without Markup or Markdown** in the C2P1 and C2P2 pricing rules.

Note that the effective pricing rule for P1 is derived at the bill group level, whereas the effective pricing rule for P2 is derived from the parent customer level.

Note: The price item parameters (i.e. BCHGLINETYPE and PRICINGARRANGEMENT) must be defined in the **Billable Charge Line Type Parameter** and **Pricing Arrangement Parameter** option types of the **C1-ASOBLLNG** feature configuration, respectively. Otherwise, erroneous results might occur.

The system then derives the account with a particular invoice type (to which a price item must be billed) based on the priority which is defined for the respective price item in the pricing rule type.

For example, the following table illustrates the accounts to which the charges of P1 and P2 should be billed based on the given priority:

Copyright © 2025, Oracle and/or its affiliates.

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

Example 2: Priority Based Account Derivation

In the example 2, while mapping the claim transaction to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, while mapping the claim transaction to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

Note: The characteristic type which indicates the type of account (for example, **C1INVTYP**) must be specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. Otherwise, erroneous results might occur.

Once the account is derived, the system then checks whether the account has one active contract of the contract type which is associated with the price item. If so, it fetches the contract for further processing. Once the effective pricing rule, account, and active contract are derived, the transaction is mapped to the respective price item, price item parameters, and account. A transaction leg is created for each price item, price item parameters, and account combination. For example, if the system receives an ancillary transaction with the following details:

- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 15-03-2018
- Transaction Record Type is set to TR1

For example, the following table illustrates how the ancillary transaction legs are created for each price item, price item parameters, and account combination:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Pricing Arrangement	Account	Active Contract	Transaction Leg
TR1	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	Pass Through without Markup or Markdown	A1	C1	TL1
		P2		PR2	Pass Through without Markup or Markdown	A2	C2	TL2
		P3		PR3	Pass Through without Markup or Markdown	A3	C3	TL3

Note: Here, the paid date is mapped to the **UDF_DATE_1** field and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type.

Example 3: Transaction Leg Derivation

In the example 3, the system maps the ancillary transaction to the following price item, price item parameters, and account combinations:

Copyright © 2025, Oracle and/or its affiliates.

- Price Item: P1; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A1
- Price Item: P2; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A2
- Price Item: P3; Price Item Parameter: BCHGLINETYPE = BC1 and PRICINGARRANGEMENT = Pass Through without Markup or Markdown; and Account: A3

In the example 3, the system creates three transaction legs - TL1, TL2, and TL3 for the ancillary transaction. Once a transaction leg is created, the respective effective pricing rule is stamped against the transaction leg. In addition, the price item parameters of the transaction leg are grouped. In the example 3, the system creates one price item parameter group which contains the following price item parameters:

- BCHGLINETYPE = BC1
- PRICINGARRANGEMENT = PASS

A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

Note: The price item parameter group contains only those price item parameters included in the primary pricing rule type for which the parameter usage is set to **Pricing**.

If a pricing group is used while defining a pricing rule for a bill group, the system fetches the pricing rule for an ancillary transaction when the following conditions are met:

- The paid date of the ancillary transaction falls within the pricing rule's date range.
- The employee attributes specified in the ancillary transaction match the criteria defined in any one of the pricing group rule.
- The pricing arrangement specified in the ancillary transaction matches the pricing arrangement specified in the pricing rule.

Let us understand this with the help of an example. An ancillary transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 26-01-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates an effective pricing rule which is defined using an ancillary pricing rule type and where a pricing group is used:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
TR6	ANCILLARY	P1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X, Parameter 1 = Eastern, and Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

Copyright © 2025, Oracle and/or its affiliates.

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the paid date is mapped to the **UDF_DATE_1** field, and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type.

Example 4: Effective Pricing Rule is Defined Using a Pricing Group

In the example 4, the system considers the PR1 pricing rule for P1 because of the following reasons:

- The paid date (i.e. 26-01-2018) of the ancillary transaction falls within the PR1 pricing rule's date range (i.e. 01-01-2018 to 31-12-2018).
- The employee attributes specified in the ancillary transaction match the criteria defined in the Rule 1 (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent).
- The pricing arrangement is set to **Pass Through without Markup or Markdown** within Rule 1 of the PR1 pricing rule.

The system then stores the pricing group rule which is satisfied against a parameter which is defined in the **Pricing Group Rule Parameter** option type of the **C1-ASOBLLNG** feature configuration. In such case, the price item parameter group contains the price item parameters and the pricing group rule parameter. For example, Group A contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 1.

In the example 4, the system could find the exact match for pricing parameters defined in the pricing group rule. However, if the exact match is not available, the system finds the effective pricing rule using the best fit match for the pricing parameters defined in the pricing group rule. Note that the system searches for the exact match in the effective pricing rules at both the bill group and parent customer levels. If the exact match is not available at both the levels, the system finds the effective pricing rule using the best fit match for the pricing parameters (defined in the pricing group rule) first at the bill group level and then at the parent customer level.

Let us understand this with the help of an example. An ancillary transaction is received with the following details:

- UDF_CHAR_1 is set to X
- UDF_CHAR_2 is set to Western
- UDF_CHAR_3 is set to Indian
- UDF_CHAR_4 is set to HR
- UDF_CHAR_5 is set to Permanent
- UDF_CHAR_6 is set to BC1
- UDF_CHAR_7 is set to PASS
- UDF_DATE_1 is set to 31-05-2018
- Transaction Record Type is set to TR6

For example, the following table illustrates the effective pricing rules which are available during the best fit match:

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
TR6	ANCILLARY	PP1	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	PR1	01-01-2018	31-12-2018	PG1	Rule 1 (where Source System = X and Parameter 1= Western)	Pass Through without Markup or Markdown
								Rule 1 (where Source System = X and Parameter 1 = Western)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X and Parameter 1 = Eastern)	Pass Through without Markup or Markdown

Copyright © 2025, Oracle and/or its affiliates.

Transaction Record Type	Primary Pricing Rule Type	Price Item	Price Item Parameters	Pricing Rule	Pricing Start Date	Pricing End Date	Pricing Group	Pricing Group Rule	Pricing Arrangement
		PP2		PR2	01-01-2018	31-12-2018	PG2	Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 1 (where Source System = X, Parameter 1 = Eastern, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown
								Rule 2 (where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent)	Pass Through without Markup or Markdown

Note: Here, the source system is mapped to the **UDF_CHAR_1** field, the parameter 1 is mapped to the **UDF_CHAR_2** field, the parameter 2 is mapped to the **UDF_CHAR_3** field, the parameter 3 is mapped to the **UDF_CHAR_4** field, the parameter 4 is mapped to the **UDF_CHAR_5** field, the paid date is mapped to the **UDF_DATE_1** field, and the **Pass Through without Markup or Markdown** pricing arrangement identifier is set to **PASS** in the ANCILLARY pricing rule type.

Example 5: Effective Pricing Rule Derivation Using Best Fit Match for Pricing Parameters

In the example 5, the system could not find the exact match for the pricing parameters (i.e. Source System = X, Parameter 1 = Western, Parameter 2 = Indian, Parameter 3 = HR, and Parameter 4 = Permanent) in the effective pricing rule for PP1. Therefore, the system searches for the best fit match. While searching for the best fit match, the system rules out the optional parameter 4 (i.e. Parameter 4 = Permanent) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, Parameter 2 = Indian, and Parameter 3 = HR exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 3 (i.e. Parameter 3 = HR) and then checks whether the pricing group rule where Source System = X, Parameter 1 = Western, and Parameter 2 = Indian exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the system then rules out the optional parameter 2 (i.e. Parameter 2 = Indian) and then checks whether the pricing group rule where Source System = X and Parameter 1 = Western exists in the effective pricing rule. If so, it considers the pricing group rule for further processing. If not, the status of the transaction is changed to **Error**.

In the example 5, the system considers Rule 1 where Source System = X and Parameter 1 = Western as the best fit match in the PR1 pricing rule for PP1. In addition, the pricing arrangement is set to **Pass Through without Markup or Markdown** within Rule 1 of the PR1 pricing rule. Therefore, the system fetches PR1 as the effective pricing rule for PP1. In addition, the system fetches PR2 as the effective pricing rule for PP2. The system creates two price item parameter groups - One contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 1 and another contains BCHGLINETYPE = BC1, PRICINGARRANGEMENT = PASS, and Pricing Group Rule Parameter = Rule 2. Once the price item parameter group is created, the system creates the

Copyright © 2025, Oracle and/or its affiliates.

aggregation parameter group. An aggregation parameter group contains all price item parameters included in the related pricing rule type for which the parameter usage is set to **Aggregation**.

If the effective pricing rule is not derived for a price item and price item parameters combination or if the account or active contract for the account is not derived, the system does not create a transaction leg for the respective price item.

For example, the following table illustrates that transaction legs are created only when effective pricing rule and account with an active contract are derived for a price item and price item parameters combination:

Primary Pricing Rule Type	Price Item	Price Item Parameters	Effective Pricing Rule	Account	Active Contract	Transaction Leg
ANCILLARY	PP11	BCHGLINETYPE = UDF_CHAR_6 and PRICINGARRANGEMENT = UDF_CHAR_7	-	-	-	-
	PP12		PR12	A1	C1	TL11
	PP13		PR13	-	-	-
	PP14		PR14	A2	-	-
	PP15		PR15	-	-	-
	PP16		-	-	-	-
	PP17		PR17	A2	C2	TL12

Example 6: No. of Transaction Legs Derived

In the example 6, the system could not find the effective pricing rule for PP11 and PP16, the required account for PP13 and PP15, and the active contract for PP14 on A2. Therefore, in this case, the system creates two transaction legs - TL11 and TL12 for the transaction.

If the eligibility rule type is defined of a price item, the system maps the ancillary transaction to the price item when the eligibility rule is satisfied. If the eligibility rule is not satisfied, the system does not consider the price item for billing. For example,

Price Item	Eligibility Criteria Met	Effective Pricing Rule	Account	Active Contract	Transaction Leg
PE1	Yes	PR1	A1	C1	TL1
PE2	-	PR2	-	-	-
PE3	No	-	-	-	-
PE4	Yes	-	-	-	-
PE5	Yes	PR3	A2	-	-
PE6	Yes	PR4	-	-	-

Example 7: Price Item Eligibility for Transaction Leg Derivation

In the example 7, the eligibility criteria was defined for PE1, PE3, PE4, PE5, and PE6. The eligibility criteria was satisfied for PE1, PE4, PE5, and PE6, but not for PE3. Further, the system could not find the effective pricing rule for PE4, the required account for PE2 and PE6, and the active contract for PE5 on A2. Therefore, in this case, the system creates one transaction leg (i.e. TL1) for the ancillary transaction. For more information, refer to the Price Item Eligibility on page 3229 section.

Once a transaction leg is created, the derivation date is set as the processing date corresponding to the transaction leg.

Bill After Date Determination

Once the billable charges are created for claim, claim based fees, enrollment based fees, and ancillary, the system enables you to automatically stamp the bill after date in these billable charges. The system can automatically stamp the bill after date in these billable charges when an algorithm created using the **C1_BAFTDRV** algorithm type is attached to the

Copyright © 2025, Oracle and/or its affiliates.

Bill After Date Determination system event of the respective pricing rule type. This algorithm sets the bill after date to the end date of the aggregation schedule period in which the transaction date falls. Note that the system considers the aggregation schedule specified in the rate option which is defined for the respective price item. Let us understand this with the help of an example. If the claim transaction with the transaction date set to 25-06-2018 is mapped to the following price item and account combinations:

The following table illustrates the schedule periods defined in an aggregation schedule which is specified in the rate option of a price item:

Pricing Rule Type	Price Item	Rate Option	Aggregate Transaction	Aggregation Schedule	Schedule Period	Account	Billable Charge
CLAIM	P1	R01	Yes	Monthly	01-01-2018 - 31-01-2018	A1	BC1
					01-02-2018 - 28-02-2018		
					01-03-2018 - 31-03-2018		
					01-04-2018 - 30-04-2018		
					01-05-2018 - 31-05-2018		
					01-06-2018 - 30-06-2018		
					01-07-2018 - 31-07-2018		
					01-08-2018 - 31-08-2018		
	P2	R01			01-09-2018 - 30-09-2018	A2	BC2
					01-10-2018 - 31-10-2018		
					01-11-2018 - 30-11-2018		
					01-12-2018 - 31-12-2018		
	P3	R02	Yes	Yearly	01-01-2018 - 31-12-2018	A3	BC3

Example 1: Bill After Date Determination Using the Aggregation Schedule

In the example 1, the system stamps 30-06-2018 as the bill after date in the BC1 and BC2 billable charges. This is because the transaction date (i.e. 25-06-2018) falls in the 01-06-2018 - 30-06-2018 period of the R01 aggregation schedule.

However, the system stamps 31-12-2018 as the bill after date in the BC3 billable charge. This is because the transaction date (i.e. 25-06-2018) falls in the 01-01-2018 - 31-12-2018 period of the R02 aggregation schedule.

Note: The bill after date for the specific stop-loss and aggregate stop-loss billable charges is calculated using the settlement frequency in the **Create Specific Stop-Loss Billable Charge (C1-BCSSL)** and **Create Aggregate Stop-Loss Billable Charge (C1-BCASL)** batches, respectively.

Advance Billing for Claim Fund Charge

Until now, the system enabled you to configure the pricing for level funding and generate the claim fund charges for a self-funded employer using either of the following approach:

- Flat level funding
- Enrollment based level funding

Copyright © 2025, Oracle and/or its affiliates.

Now, the system enables you to bill the claim fund charges to a self-funded employer in advance. In case of enrollment based level funding, the system can receive the enrollment transactions for the month of January in the month of December. Once the January enrollment transactions are received in December, the system can create claim fund charges based on the January enrollment in the month of December and accordingly bill the self-funded employer. However, the claim fund charges which are billed in the month of December will be adjusted against the claim, ancillary, or other charges which are eligible for level funding only in the month of January.

To enable this feature, you need to do the following:

- **Set the Advance Level Funding Eligibility Option** - A new field named **Advance Level Funding Eligibility** is available while defining a self-funded policy. You can set the value of the **Advance Level Funding Eligibility** field to either **Yes** or **No**. You can define the **Advance Level Funding Eligibility** field only through a health care inbound message and not from the user interface. When you create a self-funded policy from the user interface, the **Advance Level Funding Eligibility** field is non-editable. By default, the value is set to **No**. You can then change the value through a health care inbound message.
- **Set the Advance Billing Option** - A new field named **Advance Billing** is available while defining a retention type enrollment based pricing rule. You can set the value of the **Advance Billing** field to either **Yes** or **No**.
- **Create a Prospective Bill Period** - You need to create a prospective bill period wherein the bill date falls in a month prior to the month of bill segment end date. For example, if the bill segment end date is 01-31-2021, then you can set the bill date to 12-31-2020. You must use the prospective bill period in the recurring flat fee pricing rule using which you want to create the flat claim fund charge which should be billed in advance.

If the **Advance Level Funding Eligibility** field is set to **Y** through a health care inbound message, the system activates the self-funded policy even if the policy start date is later than the inbound processing date. Accordingly, a log is maintained for the self-funded policy.

On renewing a self-funded policy, the system provides the ability to copy the advance level funding eligibility value of the base policy to the renewed policy. A new field named **Copy Advance Level Funding Eligibility** is available while renewing a self-funded policy. If you select the **Copy Advance Level Funding Eligibility** option, the value is copied from the base policy to the renewed policy. If the **Advance Level Funding Eligibility** field is set to **Y** in the base policy, the system activates the renewed self-funded policy on the policy renewal even if the renewed policy's start date is later than the system date.

To implement this business requirement, the following changes are made in the system:

- While accumulating the charges which are eligible for level funding, the system behaves in the following manner:
  - In case of advance flat level funding, the system considers only those claim fund bill segments where the end date is earlier than or equal to the accumulation run date and then adjusts the accumulation amount against those claim fund charges which were billed in the previous bill period.
  - In case of advance enrollment based level funding, the system considers the enrollment transactions based on their coverage end date. Only those enrollment transactions where coverage end date is earlier than or equal to the accumulation run date are accumulated and then adjusted against the claim fund charges which were billed earlier.
- If the **Advance Level Funding Eligibility** field is set to **Y** for a self-funded policy and the inbound processing date is earlier than the policy start date, the system sets the contract start date to the first day of the month in which the inbound message is processed. Otherwise, the contract start date is set to policy start date.
- The system determines the bill after date depending on the value set for the **Advance Billing** field in the retention type enrollment based pricing rule. If the **Advance Billing** field is set to **Yes**, then the bill after date is set to accounting date - 1. Here, the accounting date is fetched from the schedule of the account's bill cycle where the transaction date falls. However, if the **Advance Billing** field is set to **No**, then the bill after date is set to accounting date - 1. Here, the accounting date is fetched from the schedule of the account's bill cycle where the transaction's coverage end date falls.

SSL Accumulation across Bill Groups

Specific Stop-Loss (SSL) protects the self-funded employers against the excess claims from a single individual who is a member in the self-funded policy. Oracle Revenue Management and Billing enables the customers to configure the SSL pricing rules wherein the SSL Limit and SSL Payout Limit are defined. For the excess claims from a member,

Copyright © 2025, Oracle and/or its affiliates.

arising on top of the SSL Limit defined for the bill group, the insurer will provide the SSL credits (capped with the SSL Payout Limit) to the self-funded employer.

There can be scenarios in which a member moves from one bill group to another. For example, an employee changes the department or work location. ORMB provides the ability to continue the accumulation of the transaction amount across the bill groups, if both bill groups have the same SSL limit and their accounts have same bill cycle. If the SSL Limits of the bill groups are different or if the bill groups' accounts have different bill cycles, the accumulation is calculated individually for each bill group based on the respective SSL Limit.

To enable the SSL Accumulation across Bill Groups feature, you need to set the **SSL Member Movement Configuration** option type in the **C1-ASOBLLNG** feature configuration to either of the following:

- INDIVIDUAL
- PROPORTIONATE
- CURRENTBG

If you do not set the value for the **SSL Member Movement Configuration** option type in the **C1-ASOBLLNG** feature configuration, by default, it is set to **INDIVIDUAL**.

While accumulating the SSL charges for a member, the system checks whether the member is associated with more than one bill group. If so, the system derives the value from the **SSL Member Movement Configuration** option type of the **C1-ASOBLLNG** feature configuration to determine the manner in which the SSL credits should be given to the bill groups. If the value of the **SSL Member Movement Configuration** option type is set to **PROPORTIONATE**, the system does weighted distribution of the total SSL credits across the associated bill groups based on the cumulative aggregation amount of each bill group. If the value of the **SSL Member Movement Configuration** option type is set to **CURRENTBG**, the system gives the remaining SSL credits to the present bill group irrespective of the bill group for which the transaction is received. If the value of the **SSL Member Movement Configuration** option type is set to **INDIVIDUAL**, the system accumulates the charges which are eligible for SSL and calculates the SSL credits individually for each bill group based on the respective SSL Limit.

Note: In case of a member who has opted for lasering, the system considers the lasered amount instead of the SSL limit during SSL credit calculation.

Trigger Repricing on Deleting Derivation and Pricing Parameters of a Bill Group

Until now, you were able to delete the derivation and pricing parameters of a bill group from the user interface. But repricing was not triggered on the deletion. Now, on deleting a derivation and pricing parameters combination of a bill group, the system changes the status of the derivation and pricing parameters combination to **Inactive**. In addition, if the audit event process is configured for the **C1-BillLevel** business object, the system creates an audit event with the audit action set to **Change Row**.

On executing the **C1-CBIPR** batch, the system creates a repricing entity detail record for the audit event in the **CI_REPRC_ENTITY_DTL** table. While repricing, you need to execute the following batches in the specified sequence:

1. C1-FIBLR
2. C1-FIMRE
3. C1-CBIPR
4. C1-FIMRC
5. C1-REPC1
6. C1-REPC2
7. C1-REPC3
8. C1-FIBCR

Once the repricing entity detail record is created for the audit event, you need to execute the **C1-FIMRC** batch. It will delete the inactivated derivation and pricing parameters combination (that was earlier deleted from the user interface)

Copyright © 2025, Oracle and/or its affiliates.

from the system. If the deleted derivation and pricing parameters combination was referred for billing any memberships in the system, you need to ensure that those memberships are appropriately billed to a new bill group and do not remain unbilled in the system.

Note: The **C1-CBIPR** and **C1-FIMRC** batches and **C1-REAUDEVNT** algorithm are enhanced to implement this feature.

Chapter 39

Fully-Insured Pricing

Topics:

- Algorithms for Pricing Rule Types
- Age Based Pricing
- Tier Based Pricing
- Pass-Through Billable Charge
- Additional Fee Pricing for COBRA Membership
- Membership Benefit Pricing
- Medicare Part A, Part B, and Part D Pricing
- Discount Charge Pricing for Retiree Membership
- Pricing Rule Inactivation

A new pricing model is introduced for the fully-insured group and individual businesses. In this pricing model, you can define pricing rules using the pricing rule types. At present, you can define the following pricing rule types for the fully-insured group and individual businesses:

- Age Based
- Tier Based

Note: You cannot define pricing rules using the pass-through billable charge pricing rule types. However, you can directly create SQI based billable charges using a pass-through billable charge pricing rule type. For more information, refer to Pass-Through

- Additional Fee
- Membership Benefit
- Discount Charge

Parent Topic: Fully-Insured Pricing on page 3281

C1_ACCPRIMEM

This algorithm should be configured on Fully-Insured Pricing Rule Types.

Copyright © 2025, Oracle and/or its affiliates.

- **For Group** - Based on Price Items and parameters configured on the Pricing Rule Type , available pricing rules for the policy are searched at parent person, policy, plan, state level. If processing Benefit record for benefit sub type has Value Type = 'Flat' and Price = 'N', Get the respective price items from the Benefit Pricing Rule Type based on the eligibility rule evaluation and derive the account of the bill group derived based on Invoice Type provided on Pricing Rule Type Price Item. Account of the bill group is searched with active contract of contract type corresponding to the price item and invoice type characteristic on the account matching the invoice type with priority as mentioned on the Pricing Rule Type for the Price Item.
- **For Individual** - Based on Price Items and parameters configured on the Pricing Rule Type , available pricing rules are searched at health plan level. If processing Benefit record for benefit sub type has Value Type = 'Flat' and Price = 'N', Get the respective price items from the Benefit Pricing Rule Type based on the eligibility rule evaluation and derive the account of the financial responsible person derived based on Invoice Type provided on Pricing Rule Type Price Item. Account of the financial responsible person is searched with active contract of contract type corresponding to the price item and invoice type characteristic on the account matching the invoice type with priority as mentioned on the Pricing Rule Type for the Price Item.
- **For Group and Individual** - If processing Benefit Sub Type is also having Reconciliation Required = Y, then for additional entry, get Reconciliation account id from Benefit Sub Type admin configuration.

  1. Price Item will be used which is provided on Benefit Sub Type in Reconciliation Price Item Code field.
  2. If not provided use then derived price item based on eligibility rule as per existing logic.

C1-BILLPDRV

This algorithm should be attached to the **Account and Price Item Derivation Post-Processing** system event of the pricing rule type. If the billing preference characteristic is defined for the account, this algorithm checks whether the value specified for the billing preference characteristic type is already defined in the system. If so, this algorithm derives the bill period from the **Bill Period** attribute of the billing preference. It then sets the **RECURRING_FLG** column to **BP** (i.e., Bill Period) and **RECURRING_VAL** column to the bill period derived from the billing preference corresponding to the record in the **CI_REPRC_REQ_DTL** table.

Note:

The system considers the characteristic type which is specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration.

This algorithm is applicable for both fully insured group and fully insured individual lines of business.

Related Topics

For more information on...	See...
Tightly Coupled Bill Cycle and Bill Period through Billing Preference	Tightly Coupled Bill Cycle and Bill Period through Billing Preference on page 3404
How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4313

C1-BILLRPCR

This algorithm should be attached to the **Account and Price Item Derivation Post-Processing** system event of the pricing rule type. It creates a timeline for each month of the membership coverage period based on the repricing effective date in the **CI_REPRC_REQ_DTL** table. It refers the derived bill period while creating the timelines for the repricing record.

Before executing the **C1-BILLRPCR** algorithm, the system should execute the **C1-BILLPDRV** algorithm to derive the bill period for the account. Therefore, you should ensure that the **C1-BILLPDRV** algorithm should have higher precedence (i.e., sequence) than the **C1-BILLRPCR** algorithm in the respective pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

Note: This algorithm is applicable for both fully insured group and fully insured individual lines of business.

Related Topics

For more information on...	See...
Bill Period Timeline	Bill Period Timeline on page 3406

C1_MEMBGDRV

This algorithm is responsible:

For Group

1. **Deriving Bill Group** - The algorithm soft parameter for bill levels signifies the bill level characteristic type that should be defined on the membership. The algorithm soft parameter for source system signifies the source system characteristic type that should be defined either on the membership or on policy plan or on policy. The source system characteristic value is determined in following sequence, a) Membership b) Policy plan c) Policy Based on the characteristic values on the membership for bill level 1 to bill level 4 and characteristic value of source system, the bill group and parent customer corresponding to the membership is derived
2. **Deriving Policy** - Policy is derived from the plan to which the membership is linked.

For Individual - For membership of type Individual, Health plan will be populated for membership. When membership status is Pending effectuation or Active, this algorithm derives the Financial Responsible person as bill group person.

C1_AGEPREM

This Algorithm should be configured on Pricing Rule Types for Age based.

Premium is calculated for all the eligible members under the membership. It builds the membership timeline considering the membership dates, member person dates and the effective dates for the repricing request raised for the membership. For each valid timeline, it computes the membership premium for each eligible member based on the base fee and modifiers applicable as per the pricing rule definition.

C1_AGEBDELG

This algorithm returns a list of eligible members for a membership for age based pricing rule type. It uses the relation matrix to identify the main subscriber , spouse and children, after which the main subscriber and spouse are added to the eligible list while the eligible children to be added are identified based on max age of dependent, max number of dependents and order priority i.e. whether to consider the eldest or the youngest children if the max number of dependents exceeds. And if one of the dependent is a new born and the gift days is applicable then after retrieving the no of gift days, the start date is pushed back by the no of gift days.

- **For Group Membership** - The required values will be be fetched from the Characteristics attached on the Pricing Rule Type.
- **For Individual Membership**
  1. The required values like MAX_NUM_OF_DEP, MAX_AGE_LIMIT_OF_DEP, DEP_ORDER_PRIORITY_FLG etc. will be fetched from C1_BUS_RULE_PRC table for that business rule id.
  2. The new born related values like GIFT_DAYS_APPL_SW, GIFT_DAYS will be fetched from C1_BUS_RULE_NEW_BORN table for that business rule id.

C1-FICRETBC

This creates SQI based charges for fully insured services.

Copyright © 2025, Oracle and/or its affiliates.

This algorithm is invoked to create charges for both pre-calculated(i.e through inbound) and calculated ones(i.e those calculated based on pricing rules present at plan level). It allows creation of new billable charges(BC) , cancellation of existing charges and modification of end_date of existing charges. If there does exists any BC in billable status for date range under process with same start_date, priceItem, Amount and Membership, only end date of that BC is modified. BC for particular membership and priceItem are deemed to be cancelled if they fall in proposed date range and either have different amount or different start_date. Billable Charges created or updated for calculated charges are updated accordingly in entity 'PriceCalculationDetail' (Table: CI_PRCE_CALC) table and hence allowing those entries to be marked as completed. Pricing Rule Type corresponding to priceItem during inbound billable charge data processing is fetched from entity 'PricingRuleTypePriceitem' (Table: C1_PRC_RULE_TYPE_PRICEITEM) on first found basis.

Inbound billable charge data are processed as per latest billable charge data.

During online invocation from inbound message processing main program, it assumes following: i.BillableChargeLineCharacteristics are not available. j. Each of the BillableChargeLines have same currency code. In case of existing billable charge modification or cancellation, corresponding bill segments(In Case of BC end_date updation, only those bill segments whose date range surpasses billable charge end_date and in case of BC cancellation, all bill segments are covered) are cancelled or deleted based on bill segment status. Billable charge are stamped with priceItem , SQI (fetched from Feature config) and pass through lines in MEMO ONLY state along with other info. Aggregated amount are stamped as service quantity.

Parameter: I. Bill To Type Flg - This is used during insertion of Contract ID in MEMBERSHIP_SA table.

Pre-Requisite: I. Values for option types 'CTME' (Characteristic Type For Membership Id) and 'PRSQ' (Proration SQI) in Feature Configuration 'C1-ASOBLLNG' is required. II. For inbound billable charge data - price Item, Pricing Rule Type of type 'Pass-Through Billable Charge' should be present on Plan.

C1-AGEPRFC

For Group Membership - This algorithm will calculate proration factor and amount for Age based pricing rule based on the configurations done on policy plan.

For Individual Membership - The proration factor and amount will be calculated by considering Proration Type as Daily.

C1-SKPMNTHPC

This algorithm will be used for an fully-insured group account which is configured for skip months using Field Mapping Admin configuration.

The premium amount will get distributed for each month based on the number of skip months configured. When a month is a skip month, the distributed amount for that month is zero. The calculated premium of skip month is divided amongst the remaining non-skip months and the distributed amount for non-skip month is calculated.

C1-DERSUBTR

This algorithm stamps the eligible subscription tier on the membership. It uses the Subscription Tier Structure Attribute defined in the Policy Plan in Group or Health Plan in Individual membership to identify the details to be stamped based on the relation: self, spouse, children and/or dependents identified from the Member Person Relationship. It would derive subscription tier for membership based on bill period configured on the account.

C1_TIERPREM

This Algorithm is to be configured on Pricing Rule Types for Tier based. It builds the membership timeline considering the membership dates and the effective dates for the repricing request raised for the membership. For each valid timeline, it computes the membership premium based on the applicable base fee as per the pricing rule definition.

Copyright © 2025, Oracle and/or its affiliates.

C1-TIERPRFC

For Group Membership - This algorithm will calculate proration factor and amount for Tier based pricing rule based on the configurations done on policy plan.

For Individual Membership - The proration factor and amount will be calculated by considering Proration Type as Daily.

C1-FIBCBP

This algorithm takes hard parameters as Account Id and Derivation Date and soft parameters as Char Type to fetch Bill Period for recurring Billable Charge.

Invoice Day Characteristic Type - This characteristic Type is expected to be present to get number of invoice days which in turn find corresponding bill period through LookUp C1_INVOICE_DAY_BILL_PERIOD_FLG.

C1_MEDIPREM

This algorithm is to be configured on Pricing Rule Type for Benefits. It builds the membership timeline considering the membership dates and the effective dates for the repricing request raised for the membership. For each valid timeline, it computes the membership premium based on the applicable base fee as per the Benefit Sub Type admin setup.

The following negotiation logic will be applied to calculate premium amount for Group and individual membership:

1. If the processing is for benefit sub type having Value Type = Flat and Price = N , get the respective effective pre-calculated amounts from the Benefit table.
2. If 'Negate' = Y for this benefit sub type and 'RECON_SW' = N then multiply the amount by -1.
3. If 'Negate' = Y for this benefit sub type and 'RECON_SW' = Y then DO NOT multiply.
4. If 'Negate' = N for this benefit sub type and 'RECON_SW' = N then DO NOT multiply by -1.
5. If 'Negate' = N for this benefit sub type and 'RECON_SW' = Y then multiply the amount by -1.

C1-PRLBCVLD

This algorithm will validate the calculated charge with received pre calculated charge. It will compare the benefit records of the membership with Billable charges created for the membership and validate charge mount with received amount(Here threshold is used for calculation)

If any mismatch found then TO DO is created using provided To Do Type and To Do Role. In invoke() method of this algorithm we will perform following logic:

1. Fetch the benefit records of the Membership using benefit sub type which is having Price = Y and Validate = Y.
2. Fetch billable charges created for the membership.
3. Then compare record by executing below logic:

    a. If mismatch is there for the amount and start date and end date then create a To Do using provided To Do Type and To Do Role with message 'Received Pre Calculated charges for Membership Id % not matches with calculated charges for Price Item % and benefit id % then add the To Do Id on Membership Log.

    b. If start date and end date are matched then:

    - Calculated charge range is receivedMinAmount = Received charge - Threshold amount
    - receivedMaxAmount = Received charge + Threshold Amount

    Check the billable charge Amount outside of receivedMinAmount and receivedMaxAmount then create a To Do using provided To Do Type and To Do Role with message 'Received Pre Calculated charges for Membership Id % not matches with calculated charges for Price Item % and benefit id % then add the To Do Id on Membership Log.

Age Based Pricing

In the Fully-Insured Pricing, the base rate for premium and fees depend upon the age, member attributes (such as employee type, employee status, etc.) and modifiers (such as tobacco usage, gender, alcohol usage, etc.). Oracle Revenue Management and Billing enables you to offer an age based pricing to a fully-insured group and individual customers. In the Age Based pricing, the premium is calculated for each eligible member based on age, member attributes and modifiers, and then aggregated to derive the total premium for the membership. An age based pricing can be defined using the age based pricing rule. You can define an age based pricing rule for a price item on the policy plan. If the age based pricing rule is defined for a price item on a policy plan, all memberships which belong to the policy plan will inherit the age based pricing from the policy plan. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level.

You can define an age based pricing rule using an age based pricing rule type. It is the age based pricing rule type which helps the system to determine:

- **C1-PricingRuleAgeBased** Business object using which the age based pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the account and price item for a membership.

  Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.
- Algorithm which should be triggered for deriving the bill period for a membership.

  Note: You must create an algorithm using the **C1-BILLPDRV** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.
- Algorithm which should be triggered for creating the bill period timeline (based on the derived bill period) for a membership.

  Note: You must create an algorithm using the **C1-BILLRPCR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.
- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

  Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.
- Algorithm which should be triggered for calculating the age based premium for a membership.

  Note: You must create an algorithm using the **C1_AGEPREM** algorithm type and attach it to the **Premium Calculation** system event.
- Algorithm which should be triggered for identifying eligible member persons for premium calculation.

  Note: You must create an algorithm using the **C1_AGEBDELG** algorithm type and attach it to the **Pricing Rule Pre-Processing** system event.
- Algorithm which should be triggered for calculating the premium for each eligible member person.

  Note: You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Billable Charge Creation Post Processing** system event.
- Algorithm which should be triggered for deriving the bill period for the account.

  Note: You must create an algorithm using the **C1-AGEPRFC** algorithm type and attach it to the **Pricing Rule Proration Amount Calculation** system event.
- Algorithm which should be triggered to configure skip months for an account.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** You must create an algorithm using the **C1-SKPMNTHPC** algorithm type and attach it to the **Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)** system event.

- Price items for which you can define age based pricing rules using the age based pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the C1-Membership and C1-PERSON business objects using which the audit event should be created whenever a membership or member person is added, updated, or removed from the policy plan.
- Elements of the C1-Membership and C1-PERSON business objects for which audit event should be created.

> **Note:** You must ensure that either the **Update All** option is selected or the elements listed in the age based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

- Members, such as main subscriber, spouse, or children in a membership are eligible for premium calculation.
- Following are the additional dependents attributes which can affect the premium calculation if they are considered as part of pricing rules. These additional attributes are defined as characteristics for the policy plan. You must specify the following characteristic types in the age based pricing rule type:
  - **Maximum Number of Dependents** - This characteristic type stores the maximum number of children which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person**, **Membership**, **Policy Plan**, **Policy**, and **State**.
  - **Maximum Age Limit for Maximum Dependent Count** - This characteristic type stores the maximum age limit for children which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person**, **Membership**, **Policy Plan**, **Policy**, and **State**.
  - **Maximum Number of Dependents Order Priority** - This characteristic type indicates whether the youngest or eldest children should be considered during premium calculation. Each plan may set a limit to consider the number of dependents, either the eldest or youngest one for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person**, **Membership**, **Policy Plan**, **Policy**, and **State**.
  - **Age Calculation Date Basis** - This characteristic type indicates whether the member person's age should be calculated using the member person's enrollment date or policy's start or renewal date. You must specify a characteristic type where the characteristic entity is set to **Member Person**, **Membership**, **Policy Plan**, **Policy**, and **State**.
  - **Newborn Gift Days** - This characteristic type stores the number of days you want to offer as gift days from the new born child's enrollment date. You must specify a characteristic type where the characteristic entity is set to **Member Person**, **Membership**, **Policy Plan**, **Policy**, and **State**.
  - **Newborn Gift Days Applicability** - This characteristic type indicates whether the gift days should be offered in case of a new born. You must specify a characteristic type where the characteristic entity is set to **Member Person**, **Membership**, **Policy Plan**, **Policy**, and **State**.
  - **Young Adult Max Age Limit** - This characteristic type stores the maximum age limit for young adults which are eligible for premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person**, **Membership**, **Policy Plan**, **Policy**, and **State**.
  - **Young Adult Inclusion Applicability** - This characteristic type indicates whether the young adults should be considered during the premium calculation. You must specify a characteristic type where the characteristic entity is set to **Member Person**, **Membership**, **Policy Plan**, **Policy**, and **State**.

Once an age based pricing rule type is defined, you can define age based pricing rules using the age based pricing rule type. Note that, at present, you can define age based pricing rules only through a health care inbound message and not from the user interface. However, you can view the age based pricing rules defined for a policy plan from the **Customer 360° Information** screen. While creating an age based pricing rule through a health care inbound message, you need to specify the following information:

- Entity type (i.e. Policy Plan) and entity ID (i.e. policy plan ID) for which you want to define the age based pricing rule
- Start and end dates of the age based pricing rule
- Age based pricing rule type using which you want to create the age based pricing rule

Copyright © 2025, Oracle and/or its affiliates.

- Price Item for which you want to define age based pricing
- Rate option using which the price assignment should be created for the age based pricing rule

> **Note:** If the rate option is not given in the pricing rule data, by default, it is set to a value specified in the **Default Rate Option - Flat** or **Default Rate Option - Percentage** option type of the **C1-ASOBLLNG** feature configuration depending on whether the modifier method is set to **FLAT**, **EXPT** or **INPT**.

- Whether you want to increase or decrease the premium of an eligible member by a flat amount or in percentage based on some modifier attributes (such as tobacco usage, alcohol usage, and so on).
- Age limit and employee attributes for which the base fee is applicable

> **Note:**
>
> The system defines the lower age limit and upper age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration.
>
> The employee attributes can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the age based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

- Modifiers based on which you want to charge additional or offer discount to an eligible member

> **Note:** The modifiers can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the age based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

Once the age based pricing rule is defined for a policy plan, the system creates a price item pricing and price list and then assigns the price item pricing to the price list.

Defining an Age Based Pricing Rule Type

Prerequisites

To define an age based pricing rule type, you should have:

- Age based pricing rule type business object defined in the application.
- Age based pricing rule business object defined in the application.
- Pricing rule type category for the age based defined in the application.

Procedure

To define an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create an age based pricing rule type. **Note:** You can create an age based pricing rule type using the **Age Based Pricing Rule Type** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Age Based Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

   The **Age Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about an age based pricing rule type.
   - **Related Pricing Rule Type** - Used to define the pricing rule types which are related to the age based pricing rule type.

     Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.
   - **Algorithms** - Used to associate the algorithms with an age based pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the age based pricing rules using the age based pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
   - **Characteristics** - Used to define the characteristics for an age based pricing rule type.
   - **Event Management** - Used to configure the audit in an age based pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

- **Age Based Specific Additional Data** - Used to define the age based specific additional data in an age based pricing rule type.
- **Attribute Characteristic Mapping** - Used to map a characteristic attribute in an age based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify an age based pricing rule type.	Yes
Description	Used to specify the description for an age based pricing rule type.	Yes
Detailed Description	Used to specify additional information about an age based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create an age based pricing rule type. The valid value is: • Age Based Pricing Rule	Yes
Business Object	Indicates the business object using which you are defining an age based pricing rule type.	Not applicable
Status	Used to indicate the status of an age based pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Skip Non-Members	Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during age based premium calculation.	No
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: • Age Based	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the age based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

8. Associate the required algorithms with the age based pricing rule type.
9. Add the required price items in an age based pricing rule type.
10. Add the price item parameters in an age based pricing rule type, if required.
11. Define characteristics for an age based pricing rule type, if required.
12. Configure the audit in an age based pricing rule type.
13. Define an age based specific additional data in an age based pricing rule type.
14. Map a characteristic attribute in an age based pricing rule type
15. Click **Save**.
    The age based pricing rule type is defined.

Adding the Related Pricing Rule Types in an Age Based Pricing Rule Type

Prerequisites

To add related pricing rule types in an age based pricing rule type, you should have:

- Additional fee pricing rule type defined in the application.
- Eligibility rule type defined in the application.

Procedure

To add related pricing rule types in an age based pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing an age based pricing rule type.

   Note: This section appears when the **Primary** option is selected in the **Main** section.

   The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) **Note:** This field is required when you are defining a pricing rule type for the related pricing rule type.
Pricing Rule Type	Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: On clicking the **Search** (🔍) icon that appears corresponding to the **Pricing Rule Type** field, the **Pricing Rule Type Search** window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field.	**Note:** This field is required when the corresponding **Sequence** and **Eligibility Rule Type** field is specified for the related pricing rule type.
Eligibility Rule Type	Used to indicate the rule type eligibility for the related pricing rule type. **Note:** The **Eligibility Rule Type** list includes only those rule-types where the rule type eligibility is **Related Pricing Rule Type Eligibility**.	No

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related pricing rule type from the age based pricing rule type, click the **Delete** (🗑) icon corresponding to the related pricing rule type.

4. Click **Save**.
   The related pricing rule types are added for the age based pricing rule type.

Associating an Algorithm with an Age Based Pricing Rule Type

Prerequisites

To associate algorithm with an age based pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-BILLPDRV** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_AGEPREM** algorithm type.
- An algorithm defined using the **C1_AGEBDELG** algorithm type.

Copyright © 2025, Oracle and/or its affiliates.

- An algorithm defined using the **C1-FICRETBC** algorithm type.
- An algorithm defined using the **C1-AGEPRFC** algorithm type.
- An algorithm defined using the **C1-SKPMNTHPC** algorithm type.

Procedure

To associate algorithms with an age based pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the age based pricing rule type.

   The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: • **Account and Price Item Derivation** - Used to derive the account and price item for a membership. • **Account and Price Item Derivation Post-Processing** - Used to derive the bill period for the account. • **Account and Price Item Derivation Post-Processing** - Used to create the bill period timeline for the account. • **Bill Group Derivation** - Used to derive the bill group, parent customer, and policy for a membership. • **Premium Calculation** - Used to calculate the premium for each eligible member person. • **Pricing Rule Pre-Processing** - Used to identify the eligible member persons for premium calculation. • **Billable Charge Creation Post Processing** - Used to create new billable charges for both pre-calculated and post-calculated charges. • **Pricing Rule Proration Amount Calculation** - Used to calculate proration factor and amount for age based pricing rule based on the policy plan configurations. • **Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)** - Used to distribute the total premium in the non-skip months of the coverage period.	Yes **Note:** This field is required when you are associating an algorithm with the age based pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the age based pricing rule type.
Algorithm	Used to specify the algorithm.	Yes (Conditional)

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: Once you select the system event, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	**Note:** This field is required when you are associating an algorithm with the age based pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and Price Item Derivation for Membership
Account and Price Item Derivation Post-Processing	C1-BILLPDRV	C1-BILLPDRV	Bill Period Derivation
Account and Price Item Derivation Post-Processing	C1-BILLRPCR	C1-BILLRPCR	Bill Period Time Line Creation
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Premium Calculation	C1_AGEPREM	C1_AGEPREM	Age Based Premium Calculation
Pricing Rule Pre-Processing	C1_AGEBDELG	C1_AGEBDELG	Get Eligible Member Details from Membership
Billable Charge Creation Post Processing	C1-FICRETBC	C1-FICRETBC	Fully Insured Pass through Billable Charge Creation
Pricing Rule Proration Amount Calculation	C1-AGEPRFC	C1-AGEPRFC	Calculate Proration Factor for Age Based Pricing Rule
Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)	C1-SKPMNTHPC	C1-SKPMNTHPC	Skip Month Premium Calculation

3. If you want to associate more than one algorithm with the age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from the age based pricing rule type, click the **Delete** (🗑) icon corresponding to the algorithm.

4. Click **Save**.
   The algorithms are associated with the age based pricing rule type.

Adding a Price Item in an Age Based Pricing Rule Type

Prerequisites

To add a price item in an age based pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in an age based pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing an age based pricing rule type.

   The **Price Items** section contains the following fields in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td rowspan="3">Price Item</td><td>Used to indicate the price item that you want to include in the age based pricing rule type.</td><td>Yes (Conditional)</td></tr>
<tr><td>Note:
The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.
On specifying the price item, the description of the price item appears corresponding to the Price Item field.</td><td>Note: This field is required when you are adding a rate option and bill to account in an age based pricing rule type.</td></tr>
<tr><td></td><td></td></tr>
<tr><td>Rate Option</td><td>Used to indicate one or more rate options which are valid for a price item.
On clicking the Add (➕) icon, the following field appears in a grid:
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Rate Option</td><td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td><td>Yes</td></tr>
</table>
Note:
If you want to define more than one rate option to the price item in an age based pricing rule type, click the Add (+) icon.
However, if you want to remove a price item from an age based pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</td><td>Not applicable</td></tr>
<tr><td>Bill To Account</td><td>Used to indicate a order in which the account should be considered while deriving a transaction leg.</td><td>Not applicable</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>On clicking the Add (+) icon, the following fields appear in a grid:
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes</td></tr>
<tr><td>Invoice Type</td><td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 13 section.

Note: The Search (search) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</td><td>Yes</td></tr>
</table>
Note:
If you want to define more than one invoice type to the price item in an age based pricing rule type, click the Add (+) icon.
However, if you want to remove a invoice type from the price item in an age based pricing rule type, click the Delete (delete) icon corresponding to the Priority field.</td><td></td></tr>
<tr><td>Eligibility Rule Type</td><td>Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.</td><td>No</td></tr>
</table>

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from an age based pricing rule type, click the **Delete** (delete) icon corresponding to the **Price Item** field.

4. Click **Save**.
   The price items are added for an age based pricing rule type.

Adding a Price Item Parameter in an Age Based Pricing Rule Type

Prerequisites

To add a price item parameter in an age based pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in an age based pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining *or* editing an age based pricing rule type.

   The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining an age based pricing for the price item.	Yes (Conditional)
	Note: The **Search** (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	**Note:** This field is required when you are adding a price item parameter in an age based pricing rule type.

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a price item parameter from an age based pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.
   The price item parameter is added for an age based pricing rule type.

Defining a Characteristic for an Age Based Pricing Rule Type

Prerequisites

To define a characteristic for an age based pricing rule type, you should have:

Copyright © 2025, Oracle and/or its affiliates.

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for an age based pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining *or* editing an age based pricing rule type.

   The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for an age based pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for an age based pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from an age based pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for an age based pricing rule type.

Adding Elements for Audit in an Age Based Pricing Rule Type

Prerequisites

To add elements for audit in an age based pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit Event Type defined in the application.

Copyright © 2025, Oracle and/or its affiliates.

Procedure

To add elements for audit in an age based pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining *o*r editing an age based pricing rule type.

   The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in an age based pricing rule type. **Note:** The **Search** (🔍) icon appears corresponding to the **Audit Event Type** field. On clicking the **Search** (🔍) icon corresponding to the **Audit Event Type** field, the **Audit Event Type Search** window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the **Audit Event Type** field.	Yes
Element Type	Used to indicate the type of audit element for an age based pricing rule type. The valid values are: • Business Object Status • Characteristic • Field	Not applicable
Element Name	Used to specify the element name for an age based pricing rule type. **Note:** The **Search** (🔍) icon appears corresponding to the **Element Name** field. On clicking the **Search** (🔍) icon corresponding to the **Element Name** field, the **Audit Event Type Element Name Search** window appears.	Yes
Element Value	Used to specify the value for an element name.	Not applicable

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one element for audit in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove an element for audit from an age based pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.
   The elements for audit are added for an age based pricing rule type.

Defining an Age Based Specific Additional Data in an Age Based Pricing Rule Type

Procedure

To define an age based specific additional data in an age based pricing rule type:

1. Ensure that the **Age Based Specific Additional Data** section is expanded when you are defining or editing an age based pricing rule type.

   The **Age Based Specific Additional Data** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Relation	Used to indicate the relation of the member in an age based pricing rule type. The valid values are: • Children • Main Subscriber • Spouse	No
Relationship Type	Used to indicate the type of relationship for an age based pricing rule type.	No

2. Enter the required details in the **Age Based Specific Additional Data** section.
3. If you want to add more than one age based specific data in an age based pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove an age based specific data from an age based pricing rule type, click the **Delete** (🗑) icon corresponding to the **Relation** field.

4. Click **Save**.
   The age based specific additional data is defined for the age based pricing rule type.

Mapping Characteristic Attributes in an Age Based Pricing Rule Type

Prerequisites

To map the characteristic attributes in an age based pricing rule type:

- Characteristic type defined in the application

Procedure

Copyright © 2025, Oracle and/or its affiliates.

To map the characteristic attributes in an age based pricing rule type:

1. Ensure that the **Attribute Characteristic Mapping** section is expanded when you are defining an age based pricing rule type.

   The **Attribute Characteristic Mapping** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Maximum Number of Dependents	Used to indicate the maximum number of children which are eligible for premium calculation.	No
Maximum Age Limit for Maximum Dependent Count	Used to indicate the maximum age limit for children which are eligible for premium calculation.	No
Maximum Number of Dependents Order Priority	Used to indicate whether you want to consider the youngest or eldest children during premium calculation. The valid values are: • **YOUNGEST** • **ELDEST**	No
Age Calculation Based On	Used to indicate whether the member person's age should be calculated using the member person's enrollment date or policy's renewal date.	No
Age Recalculation Based On	Used to indicate whether the member person's age should be re-calculated when you add a membership to a policy plan or a member person to a membership.	No
Newborn Gift Days	Used to indicate the number of days you want to offer as gift days from the new born child's enrollment date. As a result, no premium will be calculated for this period.	No
Newborn Gift Days Applicability	Used to indicate whether you want to offer gift days in case of a new born. The valid values are: • **Y** • **N**	No
Young Adult Maximum Age Limit	Used to indicate the maximum age limit for young adults who are eligible for premium calculation.	No
Young Adult Inclusion Applicability	Used to indicate whether you want to consider the young adults during the premium calculation.	No

   Note:

   The **Search** (🔍) icon appears corresponding to each field. On clicking the **Search** icon, the **Characteristic Type Search** window appears.

   On specifying the characteristic type, the description of the characteristic type appears corresponding to the respective field.

2. Enter the required details in the **Attributes Characteristic Mapping** section.
3. Click **Save**.
   The characteristic types are mapped to the appropriate fields in the age based pricing rule type.

Editing an Age Based Pricing Rule Type

Prerequisites

To edit an age based pricing rule type, you should have:

- Age based pricing rule type business object defined in the application.
- Age based pricing rule business object defined in the application.

Procedure

To edit an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the age based pricing rule type whose details you want to edit.

   The **Age Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about an age based pricing rule type.
   - **Related Pricing Rule Type** - Used to specify the pricing rule types which are related to the age based pricing rule type.

     Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.
   - **Algorithms** - Used to associate the algorithms with an age based pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the age based pricing rules using the age based pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
   - **Characteristics** - Used to define the characteristics for an age based pricing rule type.
   - **Event Management** - Used to configure the audit in an age based pricing rule type.
   - **Age Based-Specific Additional Data** - Used to define an age based specific additional data in an age based pricing rule type.
   - **Attributes Characteristic Mapping** - Used to map a characteristic attribute in an age based pricing rule type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the age based pricing rule type.	Not applicable
Description	Used to specify the description for an age based pricing rule type.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about an age based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create an age based pricing rule type. The valid value is: • Age Based Pricing Rule	Yes
Business Object	Indicates the business object using which you are defining an age based pricing rule type.	Not applicable
Status	Used to indicate the status of an age based pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** The checkbox appears selected, if you have already selected the **Primary** option while defining an age based pricing rule type.	No
Skip Non-Members	Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during the age based premium calculation. **Note:** The checkbox appears selected, if you have already selected the **Non-Covered Subscriber Eligible** option while defining an age based pricing rule type.	No
Pricing Rule Type Category	Indicates the pricing rule type category for an age based pricing rule type. The valid values is: • Age Based **Note:** It is a read-only field.	No

Tip: Alternatively, you can edit the details of an age based pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the details in the **Main** section.
6. Add, edit, or remove the related pricing rule types in the age based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

7. Associate the required algorithms in an age based pricing rule type.
8. Add, edit, or remove the required price items in an age based pricing rule type.
9. Add, edit, or remove the price item parameters in an age based pricing rule type, if required.
10. Add, edit, or remove characteristics for an age based pricing rule type, if required.
11. Add, edit, or remove the configuration details of the audit in an age based pricing rule type.
12. Add, edit, or remove the age based specific additional data in an age based pricing rule type.
13. Add, edit, or remove a characteristic attribute in an age based pricing rule type

Copyright © 2025, Oracle and/or its affiliates.

14. Click **Save**.
    The changes made to the age based pricing rule type are saved.

Deleting an Age Based Pricing Rule Type

Procedure

To delete an age based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the age based pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the age based pricing rule type.

   Note: You can delete an age based pricing rule type when it is not yet used in the system.

   Tip: Alternatively, you can delete an age based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.
5. Click **OK**.
   The age based pricing rule type is deleted.

Tier Based Pricing

The standard tier based pricing structure contains different tiers, such as Employee Only (E), Employee + Spouse (ES), Family (F), Employee + Children (EC). A main subscriber can subscribe his/her dependents to a policy plan and may fall in one of the tier. The fee for a price item can vary based on the membership tier level and employee attributes (such as employee type, employee status, etc.). Oracle Revenue Management and Billing enables you to offer a tier based pricing to a fully-insured group customer. In the Tier Based pricing, the premium for the membership is derived based on tier level and employee attributes.

A tier based pricing can be defined using the tier based pricing rule. You can define a tier based pricing rule for a price item on the policy plan. If the tier based pricing rule is defined for a price item on a policy plan, all memberships which belong to the policy plan will inherit the tier based pricing from the policy plan. If the system does not find any effective pricing rule for a price item on the policy plan, it inherits the effective pricing rule for the price item from the parent customer level.

You can define a tier based pricing rule using a tier based pricing rule type. It is the tier based pricing rule type which helps the system to determine:

- Business object using which the tier based pricing rule should be created in the system.
- Algorithm which should be triggered for deriving the account and price item for a membership.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:** You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.

- Algorithm which should be triggered for deriving the bill period for a membership.

> **Note:** You must create an algorithm using the **C1-BILLPDRV** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for creating the bill period timeline (based on the derived bill period) for a membership.

> **Note:** You must create an algorithm using the **C1-BILLRPCR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for deriving the subscription tier for membership, based on the bill period configured on the account..

> **Note:** You must create an algorithm using the **C1-DERSUBTR** algorithm type and attach it to the **Account and Price Item Derivation Post-Processing** system event.

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

> **Note:** You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.

- Algorithm which should be triggered for calculating the premium for membership.

> **Note:** You must create an algorithm using the **C1_TIERPREM** algorithm type and attach it to the **Pricing Rule Premium Calculation** system event.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

> **Note:** You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Algorithm which should be triggered for calculating the proration factor and amount for fully insured tier based pricing rule based on the policy plan configurations.

> **Note:** You must create an algorithm using the **C1-TIERPRFC** algorithm type and attach it to the **Pricing Rule Proration Amount Calculation** system event.

- Algorithm which should be triggered for distributing the total premium in the non-skip months of the coverage period.

> **Note:** You must create an algorithm using the **C1-SKPMNTHPC** algorithm type and attach it to the **Skip Month Premium Calculation (in case you want to use the 9/10 Billing feature)** system event.

- Price items for which you can define tier based pricing rules using the tier based pricing rule type.
- Rate options that you can use while defining the pricing for the respective price item.
- Type of account to which the respective price item should be billed based on the specified priority.
- Rule type which indicates the rules that should be executed to determine whether the price item is eligible for billing.
- Audit event types of the C1-Membership business object using which the audit event should be created whenever a membership is added, updated, or removed from the policy plan.
- Elements of the C1-Membership business object for which audit event should be created.

> **Note:** You must ensure that either the **Update All** option is selected or the elements listed in the tier based pricing rule type are already present in the respective audit event type. Otherwise, erroneous results might occur.

Once a tier based pricing rule type is defined, you can define tier based pricing rules using the tier based pricing rule type. Note that, at present, you can define tier based pricing rules only through a health care inbound message and not from the user interface. However, you can view the tier based pricing rules defined for a policy plan from the **Customer**

Copyright © 2025, Oracle and/or its affiliates.

360° Information screen. While creating a tier based pricing rule through a health care inbound message, you need to specify the following information:

- Entity type (i.e. Policy Plan) and entity ID (i.e. policy plan ID) for which you want to define the tier based pricing rule
- Start and end dates of the tier based pricing rule
- Tier based pricing rule type using which you want to create the tier based pricing rule
- Price Item for which you want to define tier based pricing
- Rate option using which the price assignment should be created for the tier based pricing rule

> **Note:** If the rate option is not given in the pricing rule data, by default, it is set to a value specified in the **Default Rate Option - Flat** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **FLAT** or **NULL**.

- Tier level and employee attributes for which the fee is applicable

> **Note:** The tier level and employee attributes can be defined as the parameters in the system. These parameters can then be used to define eligibility criteria in the tier based pricing. Here, you can use only those parameters where the parameter usage is set to **Pricing Eligibility**.

Once the tier based pricing rule is defined for a policy plan, the system creates a price item pricing and price list and then assigns the price item pricing to the price list.

Defining a Tier Based Pricing Rule Type

Prerequisites

To define a tier based pricing rule type, you should have:

- Tier based pricing rule type business object defined in the application.
- Tier based pricing rule business object defined in the application.

Copyright © 2025, Oracle and/or its affiliates.

- Pricing rule type category for the tier based defined in the application.

Procedure

To define a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a tier based pricing rule type. **Note:** You can create a tier based pricing rule type using the **Tier Based Pricing Rule Type (C1-PricingRuleTierBased)** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Tier Based Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

   The **Tier Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about a tier based pricing rule type.
   - **Related Pricing Rule Type** - Used to define the pricing rule types which are related to the tier based pricing rule type.

     Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.
   - **Algorithms** - Used to associate the algorithms with a tier based pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the tier pricing rules using the tier based pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
   - **Characteristics** - Used to define the characteristics for a tier based pricing rule type.
   - **Event Management** - Used to configure the audit in a tier based pricing rule type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the tier based pricing rule type.	Yes
Description	Used to specify the description for the tier based pricing rule type.	Yes
Detailed Description	Used to specify additional information about the tier based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the tier based pricing rule type. The valid value is: • Tier Based Pricing Rule	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object using which you are defining the tier based pricing rule type.	Not applicable
Status	Used to indicate the status of a tier based pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary.	No
Skip Non-Members	Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during tier based premium calculation.	No
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: • Tier Based	Yes

6. Enter the required details in the **Main** section.
7. Add the related pricing rule types in the tier based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

8. Associate the required algorithms with the tier based pricing rule type:
9. Add the required price items in the tier based pricing rule type.
10. Add the price item parameters in the tier based pricing rule type, if required.
11. Define characteristics for the tier based pricing rule type, if required.
12. Configure the audit in the tier based pricing rule type.
13. Click **Save**.
    The tier based pricing rule type is defined.

Adding the Related Pricing Rule Types in a Tier Based Pricing Rule Type

Prerequisites

To add related pricing rule types in a tier based pricing rule type, you should have:

- Additional fee pricing rule type defined in the application.
- Eligibility rule type defined in the application.

Procedure

To add related pricing rule types in a tier based pricing rule type:

1. Ensure that the **Related Pricing Rule Types** section is expanded when you are defining or editing a tier based pricing rule type.

   Note: This section appears when the **Primary** option is selected in the **Main** section.

   The **Related Pricing Rule Types** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the order in which the related pricing rule type should be invoked.	Yes (Conditional) **Note:** This field is required when you are defining a pricing rule type for the related pricing rule type.
Pricing Rule Type	Used to specify the pricing rule type which should be executed to determine whether the related pricing rule type is eligible for deriving the transaction legs. **Note:** On clicking the **Search** (🔍) icon that appears corresponding to the **Pricing Rule Type** field, the **Pricing Rule Type Search** window appears. On specifying the related pricing rule type, the description of the pricing rule type appears corresponding to the **Pricing Rule Type** field.	Yes (Conditional) **Note:** This field is required when the corresponding **Sequence** and **Eligibility Rule Type** field is specified for the related pricing rule type.
Eligibility Rule Type	Used to indicate the rule type eligibility for the related pricing rule type. **Note:** The **Eligibility Rule Type** list includes only those rule-types where the rule type eligibility is **Related Pricing Rule Type Eligibility**.	No

2. Enter the required details in the **Related Pricing Rule Types** section.
3. If you want to define more than one related pricing rule type for the tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a related pricing rule type from the tier based pricing rule type, click the **Delete** (🗑) icon corresponding to the related pricing rule type.

4. Click **Save**.

Copyright © 2025, Oracle and/or its affiliates.

The related pricing rule types are added for the tier based pricing rule type.

Associating an Algorithm with a Tier Based Pricing Rule Type

Prerequisites

To associate an algorithm with a tier based pricing rule type, you should have:

- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-BILLPDRV** algorithm type.
- An algorithm defined using the **C1-BILLRPCR** algorithm type.
- An algorithm defined using the **C1-DERSUBTR** algorithm type.
- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_TIERPREM** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.
- An algorithm defined using the **C1-TIERPRFC** algorithm type.
- An algorithm defined using the **C1-SKPMNTHPC** algorithm type.

Procedure

To associate an algorithm with a tier based pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining *or* editing the tier based pricing rule type.

   The **Algorithms** section contains the following columns in a grid:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: • **Account and Price Item Derivation** - Used to derive the account and price item for a membership. • **Account and Price Item Derivation Post-Processing** - Used to derive the bill period for the account. • **Account and Price Item Derivation Post-Processing** - Used to create the bill period timeline for the account. • **Account and Price Item Derivation Post-Processing** - Used to derive subscription tier for membership, based on the bill period configured on the account. • **Bill Group Derivation** - Used to derive the bill group, parent customer, and policy for a membership.	Yes **Note:** This field is required when you are associating an algorithm with the tier based pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	• **Premium Calculation** - Used to calculate the premium for each eligible member person. • **Billable Charge Creation Post Processing** - Used to create new billable charges for both pre-calculated and post-calculated charges. • **Pricing Rule Proration Amount Calculation** - Used to calculate proration factor and amount for tier based pricing rule based on the policy plan configurations. • **Skip Month Premium Calculation** - Used to distribute the total premium in the non-skip months of the coverage period.	
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with the tier based pricing rule type.
Algorithm	Used to specify the algorithm.	Yes (Conditional)
	Note: Once you select the system event, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	**Note:** This field is required when you are associating an algorithm with the tier based pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Account and Price Item Derivation Post-Processing	C1-BILLPDRV	C1-BILLPDRV	Bill Period Derivation
Account and Price Item Derivation Post-Processing	C1-BILLRPCR	C1-BILLRPCR	Bill Period Time Line Creation
Account and Price Item Derivation Post-Processing	C1-DERSUBTR	C1-DERSUBTR	Derive Subscription Tier for Membership
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Premium Calculation	C1_TIERPREM	C1_TIERPREM	Tier Based Premium Calculation
Billable Charge Creation Post Processing	C1-FICRETBC	C1-FICRETBC	Fully Insured Charge Creation for Memberships
Pricing Rule Proration Amount Calculation	C1-TIERPRFC	C1-TIERPRFC	Calculate Proration Factor for Tier Based Pricing Rule

Copyright © 2025, Oracle and/or its affiliates.

System Event	Algorithm	Algorithm Type	Description
Skip Month Premium Calculation	C1-SKPMNTHPC	C1-SKPMNTHPC	Skip Month Premium Calculation

3. If you want to associate more than one algorithm with the tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to disassociate an algorithm from the tier based pricing rule type, click the **Delete** ( ) icon corresponding to the algorithm.

4. Click **Save**.
   The algorithms are associated with the tier based pricing rule type.

Adding a Price Item in a Tier Based Pricing Rule Type

Prerequisites

To add a price item in a tier based pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a tier based pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a tier based pricing rule type.

   The **Price Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item that you want to include in a tier based pricing rule type. **Note:** The **Search** ( ) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears. On specifying the price item, the description of the price item appears corresponding to the **Price Item** field.	Yes (Conditional) **Note:** This field is required when you are adding a rate option and bill to account in a tier based pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Rate Option</td><td>Used to indicate one or more rate options which are valid for a price item.

On clicking the Add (+) icon, the following field appears in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Rate Option</td><td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td><td>Yes</td></tr>
</table>

Note:

If you want to define more than one rate option to the price item in a fully-insured tier based pricing rule type, click the Add (+) icon.

However, if you want to remove a price item from a fully-insured tier based pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</td><td>Not applicable</td></tr>
<tr><td>Bill To Account</td><td>Used to indicate a order in which the account should be considered while deriving a transaction leg.

On clicking the Add (+) icon, the following fields appear in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes</td></tr>
<tr><td>Invoice Type</td><td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 13 section.

Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</td><td>Yes</td></tr>
</table>

Note:

If you want to define more than one invoice type to the price item in a tier based pricing rule type, click the Add (+) icon.

However, if you want to remove a invoice type from the price item in a tier based pricing rule type, click the Delete (🗑) icon corresponding to the Priority field.</td><td>Not applicable</td></tr>
<tr><td>Eligibility Rule Type</td><td>Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.</td><td>No</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item in a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item from a tier based pricing rule type, click the **Delete** (🗑) icon corresponding to the **Price Item** field.

4. Click **Save**.
   The price items are added for a tier based pricing rule type.

Adding a Price Item Parameter in a Tier Based Pricing Rule Type

Prerequisites

To add a price item parameter in a tier based pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a tier based pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining *or* editing a tier based pricing rule type.

   The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a tier based pricing for the price item. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	Yes (Conditional) **Note:** This field is required when you are adding a price item parameter in a tier based pricing rule type.

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a price item parameter from a tier based pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

Copyright © 2025, Oracle and/or its affiliates.

4. Click **Save**.
   The price item parameter is added for a tier based pricing rule type.

Defining a Characteristic for a Tier Based Pricing Rule Type

Prerequisites

To define a characteristic for a tier based pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a tier based pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining *or* editing a tier based pricing rule type.

   The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for a tier based pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for a tier based pricing rule type.

2. Enter the required details in the **Characteristics** section.

> **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove a characteristic from a tier based pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for a tier based pricing rule type.

Adding Elements for Audit in a Tier Based Pricing Rule Type

Prerequisites

To add elements for audit in a tier based pricing rule type, you should have:

- Business Object **C1-AuditEventType** defined for the pricing rule type.
- Audit Event Type defined in the application.

Procedure

To add elements for audit in a tier based pricing rule type:

1. Ensure that the **Event Management** section is expanded when you are defining *or* editing a tier based pricing rule type.

   The **Event Management** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Audit Event Type	Used to specify the audit event type which you can use while adding elements for audit in tier based pricing rule type. **Note:** The **Search** (🔍) icon appears corresponding to the **Audit Event Type** field. On clicking the **Search** (🔍) icon corresponding to the **Audit Event Type** field, the **Audit Event Type Search** window appears. On specifying the audit event type, the description of the audit event type appears corresponding to the **Audit Event Type** field.	Yes
Element Type	Used to indicate the type of audit element for a tier based pricing rule type. The valid values are: • Business Object Status • Characteristic • Field	Not applicable
Element Name	Used to specify the element name for a tier based pricing rule type. **Note:** The **Search** (🔍) icon appears corresponding to the **Element Name** field. On clicking the **Search** (🔍) icon corresponding to the **Element Name** field, the **Audit Event Type Element Name Search** window appears.	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Element Value	Used to specify the value for an element name.	Not applicable

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one element for audit in a tier based pricing rule type, click the **Add** (+) icon and then repeat step 2.

> **Note:** However, if you want to remove an element for audit from a tier based pricing rule type, click the **Delete** ( ) icon corresponding to the price item parameter.

4. Click **Save**.
   The elements for audit are added for a tier based pricing rule type.

Editing a Tier Based Pricing Rule Type

Prerequisites

To edit a tier based pricing rule type, you should have:

- Tier Based pricing rule type business object defined in the application.
- Tier Based pricing rule business object defined in the application.

Procedure

To edit a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Edit** ( ) icon in the **Edit** column corresponding *t*o the pricing rule type whose details you want to edit.

   The **Tier Based Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about a tier based pricing rule type.
   - **Related Pricing Rule Type** - Used to specify the pricing rule types which are related to the tier based pricing rule type.

     > **Note:** The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

   - **Algorithms** - Used to associate the algorithms with a ier based pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the tier based pricing rules using the tier based pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.

Copyright © 2025, Oracle and/or its affiliates.

- **Characteristics** - Used to define the characteristics for a tier based pricing rule type.
- **Event Management** - Used to configure the audit in a tier based pricing rule type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Displays the tier based pricing rule type.	Not applicable
Description	Used to specify the description for a tier based pricing rule type.	Yes
Detailed Description	Used to specify additional information about a tier based pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create a tier based pricing rule type. The valid value is: • Tier Based Pricing Rule	Yes
Business Object	Indicates the business object using which you are defining a tier based pricing rule type.	Not applicable
Status	Used to indicate the status of a tier based pricing rule type. The valid values are: • Active • Inactive	Yes
Primary	Used to select the checkbox if the pricing rule type is primary. **Note:** The checkbox appears selected, if you have already selected the **Primary** option while defining a tier based pricing rule type.	No
Skip Non-Members	Used to select the checkbox when you want the system to only consider the eligible members and not non-members of the active employee coverage membership during tier based premium calculation. **Note:** The checkbox appears selected, if you have already selected the **Non-Covered Subscriber Eligible** option while defining a tier based pricing rule type.	No
Pricing Rule Type Category	Indicates the pricing rule type category for a tier based pricing rule type. The valid values is: • Tier Based	No

Tip: Alternatively, you can edit the details of a tier based pricing rule type by clicking the **Edit** button in the **Pricing Rule Type** zone.

5. Modify the details in the **Main** section.
6. Add, edit, or remove the related pricing rule types in the tier based pricing rule type, if required.

Note: The **Related Pricing Rule Type** section appears when the **Primary** check-box is selected.

7. Associate the required algorithms in a tier based pricing rule type.
8. Add, edit, or remove the required price items in a tier based pricing rule type.

Copyright © 2025, Oracle and/or its affiliates.

9. Add, edit, or remove the price item parameters in a tier based pricing rule type, if required.
10. Add, edit, or remove characteristics for a tier based pricing rule type, if required.
11. Add, edit, or remove the configuration details of the audit in a tier based pricing rule type.
12. Click **Save**.
    The changes made to the tier based pricing rule type are saved.

Deleting a Tier Based Pricing Rule Type

Procedure

To delete a tier based pricing rule type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Pricing Rule Type** sub-menu.
   The **Pricing Rule Type** screen appears.
4. In the **Pricing Rule Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the tier based pricing rule type that you want to delete.
   A message appears confirming whether you want to delete the tier based pricing rule type.

> **Note:** You can delete a tier based pricing rule type when it is not yet used in the system.

> **Tip:** Alternatively, you can delete a tier based pricing rule type by clicking the **Delete** button in the **Pricing Rule Type** zone.

5. Click **OK**.
   The tier based pricing rule type is deleted.

Pass-Through Billable Charge

At times, the system might receive pre-calculated premium for the membership through a health care inbound message. If the price item, account identifier type, and account identifier are given in the billable charge information of a health care inbound message, the system directly creates an SQI based billable charge when you process the health care inbound message. The pre-calculated premium amount is stored as a pass through line in the SQI based billable charge. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**. If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). It is the pass-through billable charge pricing rule type which helps the system to determine:

- Algorithm which should be triggered for deriving the bill group, parent customer, and policy for a membership.

  Note: You must create an algorithm using the **C1_MEMBGDRV** algorithm type and attach it to the **Bill Group Derivation** system event.
- Algorithm which should be triggered for deriving the account and price item for a membership.

  Note: You must create an algorithm using the **C1_ACCPRIMEM** algorithm type and attach it to the **Account and Price Item Derivation** system event.
- Algorithm which should be triggered for deriving the bill period for the account.

Copyright © 2025, Oracle and/or its affiliates.

> **Note:**
>
> You must create an algorithm using the **C1-FIBCBP** algorithm type and attach it to the **Pricing Rule BC Creation Pre Processing** system event.
>
> If the bill period or frequency is given in the billable charge information of the health care inbound message, the system does not derive the bill period for the account.

- Algorithm which should be triggered for creating the SQI based billable charges for each membership and price item combination.

> **Note:** You must create an algorithm using the **C1-FICRETBC** algorithm type and attach it to the **Pricing Rule Billable Charge Creation** system event.

- Price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type.

> **Note:** You can add multiple price items in a pass-through billable charge pricing rule type. But, you cannot add the same price item in multiple pass-through billable charge pricing rule types.

- Type of account to which the respective price item should be billed based on the specified priority.

Defining a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To define a pass-through billable charge pricing rule type, you should have:

- Pass-through billable charge pricing rule type business object defined in the application.
- Pass-through billable charge pricing rule business object defined in the application.

Procedure

To define a pass-through billable charge pricing rule type:

Copyright © 2025, Oracle and/or its affiliates.

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Pricing Rule Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Pricing Rule Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type Business Object	Used to indicate the business object using which you want to create a pass-through billable charge pricing rule type. **Note:** You can create a pass-through billable charge pricing rule type using the **Pass-Through Billable Charge Pricing Rule Type (C1-FIPassthroughBcRuleType)** business object.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Pricing Rule Type** screen.

4. Select the **Pass-Through Billable Charge Pricing Rule Type** option from the **Pricing Rule Type Business Object** list.
5. Click **OK**.

   The **Pass-Through Billable Charge Pricing Rule Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the pass-through billable charge pricing rule type.
   - **Algorithms** - Used to associate the algorithms with the pass-through billable charge pricing rule type.
   - **Price Items** - Used to add the price items for which you can define the pass-through billable charge pricing rules using the age based pricing rule type.
   - **Price Item Parameters** - Used to add the price item parameters based on which you want to define the price item pricing.
   - **Characteristics** - Used to define the characteristics for the pass-through billable charge pricing rule type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pass-through billable charge pricing rule type.	Yes
Description	Used to specify the description for the pass-through billable charge pricing rule type.	Yes
Detailed Description	Used to specify additional information about the pass-through billable charge pricing rule type.	No
Pricing Rule Business Object	Used to indicate the business object using which you want to create the pass-through billable charge pricing rule type. The valid value is: • Pass-Through Billable Charge Pricing Rule	Yes
Business Object	Indicates the business object using which you are defining the pass-through billable charge pricing rule type.	Not applicable
Status	Used to indicate the status of the pass-through billable charge pricing rule type. The valid values are: • Active	Yes

Copyright © 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Inactive	
Pricing Rule Type Category	Used to indicate the category to which the pricing rule type belongs. The valid value is: • Pass-Through Billable Charge	Yes

6. Enter the required details in the **Main** section.
7. Associate the required algorithms with the pass-through billable charge pricing rule type.
8. Add the required price items in the pass-through billable charge pricing rule type.
9. Add the price item parameters in the pass-through billable charge pricing rule type, if required.
10. Define characteristics for the pass-through billable charge pricing rule type, if required.
11. Click **Save**.
    The pass-through billable charge pricing rule type is defined.

Associating an Algorithm with a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To associate an algorithm with a pass-through billable charge pricing rule type, you should have:

- An algorithm defined using the **C1_MEMBGDRV** algorithm type.
- An algorithm defined using the **C1_ACCPRIMEM** algorithm type.
- An algorithm defined using the **C1-FIBCBP** algorithm type.
- An algorithm defined using the **C1-FICRETBC** algorithm type.

Procedure

To associate an algorithm with a pass-through billable charge pricing rule type:

1. Ensure that the **Algorithms** section is expanded when you are defining or editing the *p*ass-through billable charge pricing rule type.

   The **Algorithms** section contains the following columns in a grid:

Copyright © 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to invoke the algorithm. The valid values are: • **Bill Group Derivation** - Used to derive the bill group, parent customer, and policy for a membership. • **Account and Price Item Derivation** - Used to derive the account and price item for a membership. • **Pricing Rule BC Creation Pre Processing** - Used to derive the bill period for the account. • **Pricing Rule Billable Charge Creation** - Used to derive the price items for which you can create the SQI based billable charges using the pass-through billable charge pricing rule type.	Yes **Note:** This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.
Algorithm	Used to specify the algorithm. **Note:** Once you select the system event, the **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** (🔍) icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Algorithm** field.	Yes (Conditional) **Note:** This field is required when you are associating an algorithm with a pass-through billable charge pricing rule type.

2. Enter the following details in the **Algorithms** section:

System Event	Algorithm	Algorithm Type	Description
Bill Group Derivation	C1_MEMBGDRV	C1_MEMBGDRV	Bill Group Derivation for Membership
Account and Price Item Derivation	C1_ACCPRIMEM	C1_ACCPRIMEM	Account and PriceItem Derivation for Membership
Pricing Rule BC Creation Pre Processing	C1-FIBCBP	C1-FIBCBP	Fetch Bill Period of Billable Charge of Membership
Pricing Rule Billable Charge Creation	C1-FICRETBC	C1-FICRETBC	Fully-Insured Charge creation for Memberships

3. If you want to associate more than one algorithm with a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to disassociate an algorithm from a pass-through billable charge pricing rule type, click the **Delete** (🗑) icon corresponding to the algorithm.

4. Click **Save**.
The algorithms are associated with a pass-through billable charge pricing rule type.

Adding a Price Item in a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To add a price item in a pass-through billable charge pricing rule type, you should have:

- Price item defined in the application
- Rate option defined in the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup
- Values defined for the **Invoice Type (C1INVTYP)** characteristic type
- The **C1INVTYP** characteristic type set in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration
- Rule types defined in the application (where the rule type usage is set to **Price Item Eligibility**)

Procedure

To add a price item in a pass-through billable charge pricing rule type:

1. Ensure that the **Price Items** section is expanded when you are defining or editing a *p*ass-through billable charge pricing rule type.

   The **Price Items** section contains the following fields in a grid:

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td rowspan="3">Price Item</td><td>Used to indicate the price item that you want to include in a pass-through billable charge pricing rule type.</td><td>Yes (Conditional)</td></tr>
<tr><td>Note:
The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.
On specifying the price item, the description of the price item appears corresponding to the Price Item field.</td><td rowspan="2">Note: This field is required when you are adding a rate option and bill to account in a pass-through billable charge pricing rule type.</td></tr>
<tr><td></td></tr>
<tr><td>Rate Option</td><td>Used to indicate one or more rate options which are valid for a price item.
On clicking the Add (➕) icon, the following field appears in a grid:
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Rate Option</td><td>Used to indicate the rate option that you want to use while defining pricing for the price item.</td><td>Yes</td></tr>
</table></td><td>Not applicable</td></tr>
</table>

Copyright © 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:
If you want to define more than one rate option to the price item in a pass-through billable charge pricing rule type, click the Add (+) icon.
However, if you want to remove a price item from a pass-through billable charge pricing rule type, click the Delete (🗑) icon corresponding to the Rate Option field.</td><td></td></tr>
<tr><td>Bill To Account</td><td>Used to indicate a order in which the account should be considered while deriving a transaction leg.
On clicking the Add (📄) icon, the following fields appear in a grid:
<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Priority</td><td>Used to specify the order in which the invoice type is considered for a price item.</td><td>Yes</td></tr>
<tr><td>Invoice Type</td><td>Used to indicate the type which is considered for billing. For more information, refer to the Bill Group's Account on page 13 section.
Note: The Search (🔍) icon appears corresponding to the Invoice Type field. On clicking the Search icon, the Invoice Type Search window appears.</td><td>Yes</td></tr>
</table>
Note:
If you want to define more than one invoice type to the price item in a pass-through billable charge pricing rule type, click the Add (+) icon.
However, if you want to remove a invoice type from the price item in a pass-through billable charge pricing rule type, click the Delete (🗑) icon corresponding to the Priority field.</td><td>Not applicable</td></tr>
<tr><td>Eligibility Rule Type</td><td>Used to indicate the rule type (which indicates the rules) that should be executed to determine whether the price item is eligible for billing.</td><td>No</td></tr>
</table>

2. Enter the required details in the **Price Items** section.
3. If you want to define more than one price item in a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a price item from a pass-through billable charge pricing rule type, click the **Delete** (🗑) icon corresponding to the **Price Item** field.

4. Click **Save**.
   The price items are added for a pass-through billable charge pricing rule type.

Adding a Price Item Parameter in a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To add a price item parameter in a pass-through billable charge pricing rule type, you should have:

- Parameter defined in the application where parameter usage is set to **Price Item**.
- Parameter associated with the price item.

Procedure

To add a price item parameter in a pass-through billable charge pricing rule type:

1. Ensure that the **Price Item Parameters** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

   The **Price Item Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Used to specify the parameter which you can use while defining a pass-through billable charge pricing for the price item.	Yes (Conditional) **Note:** This field is required when you are adding a price item parameter in a pass-through billable charge pricing rule type.
	Note: The **Search** (🔍) icon appears corresponding to the **Price Item Parameter** field. On clicking the **Search** (🔍) icon corresponding to the **Price Item Parameter** field, the **Parameter Search** window appears. On specifying the parameter, the description of the price item parameter appears corresponding to the **Price Item Parameter** field.	

2. Enter the required details in the **Price Item Parameters** section.
3. If you want to add more than one price item parameter in a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a price item parameter from a pass-through billable charge pricing rule type, click the **Delete** (🗑) icon corresponding to the price item parameter.

4. Click **Save**.
   The price item parameter is added for a pass-through billable charge pricing rule type.

Defining a Characteristic for a Pass-Through Billable Charge Pricing Rule Type

Prerequisites

To define a characteristic for a pass-through billable charge pricing rule type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Pricing Rule Type**)

Procedure

To define a characteristic for a pass-through billable charge pricing rule type:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a pass-through billable charge pricing rule type.

   The **Characteristics** section contains the following columns in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Pricing Rule Type**.	**Note:** This field is required when you are defining a characteristic for a pass-through billable charge pricing rule type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for a pass-through billable charge pricing rule type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for a pass-through billable charge pricing rule type, click the **Add** (+) icon and then repeat step 2.

   Note: However, if you want to remove a characteristic from a pass-through billable charge pricing rule type, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for a pass-through billable charge pricing rule type.
