# 1. Application Root Object Conversion

## 1.1 Introduction

This document explains the process involved in object conversion in Approot.

## 1.2 Pre-requisites

The below steps has to be completed in a sequential order before using this utility.

1. CDB is created with 18c database and 'Application Template PDB' is created under this CDB and the FCUBS objects are loaded.
2. Application root creation followed by application seed creation.
3. Application installation version 1.0 has to be done in approot with user being made explicit.

Note:

- Application Root Configuration/Multi-Tenant Deployment is not supported with Autonomous Database.
- Installer validates during the Application Root Configuration - Property file generation/Approot Object Conversion activities.

## 1.3 Application root - PDB model configuration

To build the application for setup using the installer, follow the steps given below.

1. Double-click 'FCUBSInstaller.bat' batch file to launch Oracle FLEXCUBE Universal Installer. The following screen is displayed. Select Utilities option, configuration mode as "Application Root" and click 'Next' button.
