1 Overview

Subject Areas Overview

This guide provides a list of all the prebuilt subject areas with the following detail:

- Description of the subject area.
- Business questions that can be answered by data in the subject area, with a link to more detailed information about each business question.
- Job roles and duty roles that can be used to secure access to the subject area, with a link to more detailed information about each job role and duty role.
- Primary navigation to the work area that is represented by the subject area.
- Time reporting considerations in using the subject area, such as whether the subject area reports historical data or only the current data. Historical reporting refers to reporting on historical transactional data in a subject area. With a few exceptions, all dimensional data are current as of the primary transaction dates or system date.
- The lowest grain of transactional data in a subject area. The lowest transactional data grain determines how data are joined in a report.
- Special considerations, tips, and things to look out for in using the subject area to create analyses and reports.

Scheduled ESS Processes

Some subject area dimensions have scheduled processes to refresh the data. If your analytic doesn't have the correct or updated data, you might need to run an ESS scheduled process update. For a list of subject areas that contain dimensions that have ESS scheduled processes, and general detail on scheduling ESS processes see, [Scheduled Processes for Analytics](#)

Choosing the Right Subject Area

You can use the prebuilt subject areas to build your own analytics. or you can build your own subject areas and use them for building or editing analytics. Most importantly, the focus of a subject area is to provide a way for you to gain access to key insights about your organization.

We provide a wide variety of subject areas that give insight on a lot of different business activities. So how do you know which subject area is right for you? It starts with the names of the subject areas. Let's say you're building your own analytic because you want to know something about your pipeline. The area of interest to you in this case would be pipeline, and would make sense to choose a pipeline subject area for starters. Take a look at the subject areas in the guide. You might notice that the Sales — CRM Historical Pipeline has questions like “How are product revenues trending month to month?” Or “What are the higher value deals that have been pushed out?” There are lots of business questions that can guide you to the right subject area and help you get the insights you're looking for.

Now let's assume you know your subject area. But wait, there could be a prebuilt analytic that uses this subject area. You might take a look at the prebuilt analytics spreadsheet. But if none of those prebuilt analytics work for you, go to BI and click New > Analysis and choose the Sales — CRM Historical Pipeline subject area. You can see the available columns of information you can use to build your analytic. You can add any columns and facts you want, and at any time click the “Results” tab and see how it looks. .

Exploring Subject Area Components

This guide doesn't detail the dimensions, columns, and facts that make up a subject area. But no problem. You can explore the components right in your application. Here's how:

1. From the Home page of your application go to Navigator.
2. Go to Tools > Reports and Analytics. This brings you to the Reports and Analytics page where your sales team see analytic detail specific to their role. Let's go BI where we can access all the details and tools related to subject areas.
3. Now let's go to BI. Click Browse Catalog.
4. In BI let's take steps as if we are building a new analytic. Go to New and then Analysis.
5. Choose the subject area you are interested in exploring. Let's pick Sales — CRM Pipeline as an example.
6. Expand some of the folders. The top level folders are called Dimensions. They hold the columns a related to that dimension. You will also see Fact folders. Let's look more closely at the Fact folders.

What are Facts?

Facts are a little tricky. This first thing to understand is that facts and dimensions work together as a pair for reporting. Think of the fact as the verb or the action in an analytic, and the dimensions as the nouns, or a bunch of related nouns —things grouped together in context. You can have a collection of things, but without doing something with them, they are just there to look at. Same with dimensions, sure you can go into the subject area editor, and expand all the folders and look at the columns. You can drag a column onto the editor and view row after row of data. But, if you want to analyze the data, you need a way to measure it. You need to count it, compare it, sum it up, average it over time or perform any other statistical operation.

So keep in mind that all dimensions need a fact, at least one fact. Facts give meaning and purpose to your analysis. Don't build analytics without a fact, especially if you have more than one dimension because this leads to unpredictable results.

2 Subject Areas

Overview

This chapter provides information on the subject areas with data you maintain in Oracle CX Sales and B2B Service. These subject areas, with their corresponding data, are available for you to use when creating and editing analyses and reports. The information for each subject area includes:

- Description of the subject area.
- Business questions that can be answered by data in the subject area, with a link to more detailed information about each business question.
- Job roles and duty roles that can be used to secure access to the subject area, with a link to more detailed information about each job role and duty role.
- Primary navigation to the work area that is represented by the subject area.
- Time reporting considerations in using the subject area, such as whether the subject area reports historical data or only the current data. Historical reporting refers to reporting on historical transactional data in a subject area. With a few exceptions, all dimensional data are current as of the primary transaction dates or system date.
- The lowest grain of transactional data in a subject area. The lowest transactional data grain determines how data are joined in a report.
- Special considerations, tips, and things to look out for in using the subject area to create analyses and reports.

CRM - CRM Activities with Related Activities

Description

This subject area lets you report on the quotes associated with opportunities, the quote line items and the associated products. You can analyze useful metrics like recurring and non-recurring revenue, usage revenue and contract value at both quote and quote line item level, as well as number of quotes and number of quote line items. Products listed on quotes in multiple currencies can be converted to the corporate currency as part of Quote Line reporting due to currency rates stamped on the quote header.

Business Questions

This subject area can answer the following business questions:

- *What are the associated activities related to my upcoming appointment and task?*
- *What are the follow-up tasks I need to do on a particular customer?*

- *What is the association between my appointments or tasks and their related call reports or follow-up activities for an opportunity?*

Running the User Analytics Click Mapping Translation ESS job refreshes the data used in the subject area.

The Click History Aggregation ESS job aggregates and purges the dataset. It needs to be run daily.

CRM - CRM Interaction Activity Real Time

Description

The CRM Interaction Activity Real Time subject area lets you get real-time insights into interactions related to activities. The activities include a range of engagements, including emails, calls, meetings, and other communication events.

Use this subject area to engage with customers more effectively, improve your internal processes, and optimize customer-related activities in real-time.

Business Questions

This subject area can answer the following business questions:

- *Are certain channels more effective in generating positive customer responses?*
- *Are there any bottlenecks or inefficiencies in our activity management processes?*
- *Are there seasonal trends or patterns in customer engagements?*
- *Do specific team members excel in response times or quality of interactions?*
- *How effective are our customer engagement strategies?*
- *How have interactions evolved over a period?*
- *What are the most preferred communication channels for customer interactions?*
- *Which team members or sales representatives are most active in terms of interactions?*

- *Which types of activities and interactions lead to the highest customer engagement?*

Job Roles

Time Reporting

This subject area doesn't support historical reporting.

Time dimension is linked to "CRM - CRM Interaction Activity Real Time"."Interaction"."Start Time".

Transactional Grain

This subject area returns the granular data of Activity based Interaction.

Special Considerations

By default, the 'implicit' fact table for this subject area is the Interaction Fact. This means that in the absence of any Activity related metric, a report would return all the data associated at the Interaction level. To report on Interactions for Activities, select an Activity-related metric from the subject area.

CRM - CRM Interaction Aggregate

Description

This subject area can be used by itself or in conjunction with the CRM - CRM Service Request Summary subject area. It is intended to help with speed of reporting while obtaining an aggregated view of interactions by any or all of: month, week, agent, and/or channel. Managers can obtain an insight into the volume of interactions that occur with or without an associated SR, how often these occur, and across what channels. Further enhancements in the subject area provide for additional metrics covering interactions crossing channels and agents, to help managers understand the behavior and performance of agents as interactions get transferred between agents or passed on to other real time channels

Business Questions

This subject area can answer the following business questions:

- *Across what channels do such non-SR interactions most often occur?*

- *How many customer interactions happen without an SR?*
- *How often do communications cross channels to get to resolution?*
- *Is my team following the norm that an SR must be opened (or updated) for every customer communication?*

Job Roles

The following job roles secure access to this subject area:

- *Channel Account Manager*
- *Channel Administrator*
- *Channel Operations Manager*

Transactional Grain

This subject area returns data at the grain of Aggregated interactions at weekly and monthly level.

Special Considerations

Run the following scheduled processes as needed for initial data load and subsequent refreshes:

1. 'Aggregate Service Requests'
2. Execute Full Load of Cross-Channel Interaction Data for Reporting
3. Execute Incremental Load of Cross-Channel Interaction Data for Reporting
4. Reporting Hierarchy Generation

CRM - CRM Interaction Lead Real Time

Description

The CRM Interaction Lead Real Time subject area provides real-time insights into interactions as they relate to various leads. This will help to effectively manage and evaluate communication, correspondence, and engagement.

Use this subject area to monitor lead interactions, help boost lead conversion rates, and streamline lead engagement processes in real-time.

Business Questions

This subject area can answer the following business questions:

- *Are there specific interactions that coincide with higher campaign conversion rates?*

CRM - CRM Service Request Summary

Description

Analyses built using this subject area enable customer service managers to obtain a complete picture of service performance, as it relates to interactions, compliance, and knowledge article usage. The analyses built serve to expand the real-time reporting of service interactions, by providing additional summary metrics and prebuilt reports. Similarly, SR compliance analysis delivers a comprehensive view of SR milestone attainments and compliance. Managers can gain visibility into the diverse factors affecting compliance, identify patterns for a better understanding of this key area of help desk performance, and take corrective action. Managers can also understand agent usages of knowledge articles in SRs and their impact for faster help desk request issue resolutions.

Business Questions

This subject area can answer the following business questions:

CRM/Help Desk - Case Relationships Real Time

Description

Understanding relationships between dependent business objects improves the efficiency of your agents and results in better resolution outcomes. Business driven relationships between SRs, between Cases or between Cases and SRs can be leveraged to make easy updates across service requests. Powerful analytics complement the above functionality. For example, agents and managers would like to know the dependent SRs blocking resolution of a Case that they personally own or their team owns. A new subject area, CRM/Help Desk - Case Management Relationships Real Time, helps you create powerful analyses to understand relationships. This subject area can be purposed to understand relationships either in Service or Help Desk areas by applying the appropriate stripe filters in reporting.

CRM/Help Desk - Omni Channel Queue Resource Availability Real Time

Description

Use this subject area to provide service managers, improved insights into agent presence/availability . For queue focused organizations, there is a need to often know the number of agents online/available/busy to take up incoming requests for specific queues and by a channel like chat. Other metrics in the subject area help managers understand agent presence to improve queue and agent load balancing. Note that a queue attribute (like Queue Name) needs to be included in any report built using this subject area. Failing to do so may result in not showing any data or showing wrong data or a report error. Establish a cross join with the Omnichannel Events subject area using Service Queue as the common dimension to show metrics from that subject area side by side in the same report. This subject area is applicable for both CX Service and Help Desk.

Business Questions

This subject area can answer the following business questions:

- *Are agents making themselves available for certain channels and not for others?*
- *For a given service queue, how many agents are available to take chats?*
- *How are agents handling various work types, for example, are some agents declining incoming billing issues?*
- *What is the current distribution of active and inactive agents across queues?*
- *Who are the agents available to take up requests and what is their current workload (number of chats they are presently handling)?*

CRM/Help Desk - Service Request SmartText Usages Real Time

Description

A SmartText entry is a reusable fragment of text that lets you create a text and reuse the text in service requests and messages. The texts can be admin-defined or user-defined. Admins create most relevant SmartTexts that help users achieve higher efficiency while updating SRs or composing messages.

Analyses built using this subject area help Admins understand usage of specific SmartText fragments to either promote or demote them on the UI. It also provides metrics related to private and public SmartTexts that help Admins make popular private ones as public to benefit the larger user base. The scope of this subject area is limited to:

- a. SmartText usage and not their creation
- b. SmartText usage in SRs and Help Desk Requests and not Chats
- c. SmartText usage on Redwood UI only

Business Questions

This subject area can answer the following business questions:

- *How many Private vs Public Smart Texts are used by Customer Service representatives in Service Requests?*
- *What Smart texts have not been used even once?*
- *What are the top/bottom 10 Smart texts used during the last week/month/quarter?*
- *When was the last, a SmartText was used?*

Help Desk - HR Service Request Action Plan Actions Real Time

Description

Enables help desk managers to obtain a complete picture of action plan enforcement of company policies and procedures. Action plans are a checklist, a series of events, or steps that have to be done before you can close a Help

Desk Request. You can monitor completions and ensure compliance against a predefined set of actions. Pre-defined metrics around open and closed action plans, delayed actions, and aging of action plans help managers gain insights into performance at an aggregate level to address areas of concern. Agents can gain visibility to their own action plan completions and delays. Real-time reporting built using this subject area provides both summary and detail analyses.

Business Questions

This subject area can answer the following business questions:

Help Desk - HR Service Request Conversation Messages Real Time

Description

Help Desk agents have internal conversations with other agents and subject matter experts during the course of resolution of an employee issue. Analyses built using this subject area help users understand the extent of collaboration happening by way of such conversations, leading to further analyses such as: Do they exhibit a pattern? Are our agents overly reliant on subject matter experts? If so, is there scope for their own skill upgrade/training? Visibility to message details can help agents follow up on message recipients for pending responses. Analyses of conversation metrics provided out of the box in context of entities such as employee orgs, help desk request categories, business units and products yield powerful insights to help managers during staffing and resource deployments.

Business Questions

This subject area can answer the following business questions:

- *Are internal conversations taking place across high cost channels?*
- *Do internal conversation message volumes and higher turnaround time of requests go together?*
- *Show me a list of open escalated requests with a count of incoming and outbound conversation messages and the last conversation message dates*

Help Desk - HR Service Request Lifecycle

Description

Help Desk Requests go through a life cycle, from the point they are created up until they are resolved, and finally closed. Help Desk personnel are interested in keeping this life cycle short while attempting a timely, quality fix to issues. This subject area helps building analyses that helps keep a close watch on the requests, finding outliers and taking corrective

steps proactively, to avoid customer escalations and potential SLA violations. Useful measures such as actual time spent by an agent on an SR, customer wait times, SR latency times with queues and assignees and number of queue transfers provide the much needed insight into potential issues before they reach crisis proportions. The ability to analyze these measures in relation to key information of a Help Desk Request (Criticality, Category, Channel, Product, and so on), make the analyses even more powerful.

Help Desk - HR Service Request Relationships Real Time

Description

Relationships enhance the efficiency of your agents and improve your help desk request resolution outcomes. This subject area is used to build analysis that helps your help desk agents and managers gain visibility into relationships between HR Help Desk Requests and other similar Requests or with an other supported Business Object such as Case. This analysis helps them understand dependencies blocking speedier resolutions. For example, agents and managers would like to know the dependent HR Help Desk Requests blocking resolution of a critical HR issue.

Business Questions

This subject area can answer the following business questions:

- *Are we seeing an increasing trend of blocking issues limiting speedy resolution of HR Help Desk Requests?*
- *How many Requests are blocked by a specific HR Help Desk Request?*
- *What HR Help Desk Requests escalate the Requests assigned to my team?*
- *What HR Help Desk request, if resolved, will also resolve my dependent requests?*

Help Desk - HR Service Request Summary

Description

Analyses built using this subject area enable HR help desk managers to obtain a complete picture of help desk request performance. SR compliance analysis delivers a comprehensive view of SR milestone attainments and compliance. Help Desk managers can gain visibility into the diverse factors affecting compliance, identify patterns for a better

understanding of this key area of service performance, and take corrective action. Managers can also understand agent usages of knowledge articles in requests and their impact for faster help desk request issue resolutions. Insights into issue resolutions and compliance involving affected parties is an additional area of analysis.

Business Questions

This subject area can answer the following business questions:

- *Are we keeping the number of non-compliant Help Desk Requests in check for those with Affected Parties?*
- *What Request categories have a higher percentage of non-compliant Help Desk Requests open?*
- *What employee organization files the most requests with affected parties? Which one has the most open, the highest resolution times?*
- *What is the impact of linking knowledge articles to Help Desk Requests? Has it led to reduced Request resolution times and reopening?*

Help Desk - HR Service Request Tags Real Time

Description

Tags help in identifying Requests with similar characteristics. A tag based analysis of Requests yields valuable insights into support health across the employee organization. Service quality and performance can be measured for Requests with specific tags to spot exceptions, anomalies, trends and patterns. Once the problem is identified, corrective action can be initiated. As an example, if help desk agents use the tag "harass" to identify requests pertaining to employee harassment issues, analyses can be created to identify where these are more prevalent to spot recurrences, if any.

Business Questions

This subject area can answer the following business questions:

- *Are we seeing an issue regarding compliance rates with certain tags?*
- *Do Requests with specific tags (e.g., tags pertaining to benefits issues) show higher resolution times?*
- *How is tag usage across agents and resource teams? Which teams perform better than others?*
- *How many open Requests are linked to each tag?*

Help Desk - Internal Service Request Conversation Messages Real Time

Description

Help Desk agents have internal conversations with other agents and/or subject matter experts during the course of resolving an employee issue. Analyses built using this subject area help users understand the extent of collaboration happening by way of such conversations, leading to further analyses such as: Do they exhibit a pattern? Are our agents overly reliant on subject matter experts? If so, is there scope for their own skill upgrade/training? Visibility to message details can help agents follow up on message recipients for pending responses. Analyses of conversation metrics provided out of the box in context of entities such as employee orgs, help desk categories, business units, assets and products yield powerful insights to help managers during staffing and resource deployments.

Business Questions

This subject area can answer the following business questions:

- *Are internal conversations taking place across high cost channels?*
- *Do internal conversation message volumes and higher turnaround time of requests go together?*
- *Show me a list of open escalated requests with a count of incoming and outbound conversation messages and the last conversation message dates*
- *Show me all the conversation messages together with the conversation message subject and body and the sender and recipient details for a focused set of requests*
- *What are the most popular channels used for internal conversations?*

Help Desk - Internal Service Request Relationships Real Time

Description

Relationships enhance the efficiency of your agents and improve your help desk request resolution outcomes. This subject area is used to build analysis that helps your help desk agents and managers gain visibility into relationships between Internal Help Desk Requests and other similar Requests or with other supported Business Object such as Case.

This analysis helps them understand dependencies blocking speedier resolutions. For example, agents and managers would like to know the dependent Internal Help Desk Requests blocking resolution of a critical Request.

Business Questions

This subject area can answer the following business questions:

- *Are we seeing an increasing trend of blocking issues limiting speedy resolution of Internal Help Desk Requests?*
- *How many Requests are blocked by this open Internal Help Desk Request?*
- *What Internal Help Desk Requests escalate the Requests assigned to my team?*
- *What Internal Help Desk request, if resolved, will also resolve my dependent requests?*
- *What are the Cases (target) 'blocked by' this particular Request (source)?*

Help Desk - Internal Service Request Resource Real Time

Description

Used to analyze and report on all the resources, and resource roles on an Internal Help Desk Request. Employee dimension in this subject area refers to both primary and non-primary resources, unlike other subject areas where employee refers to only primary resource. This subject area can be combined with any other subject area that has Internal Help Desk Request dimension, when results are required at the level of an Internal Help Desk Request. For cross-subject-area queries, include at least one metric from each subject area.

Business Questions

This subject area can answer the following business questions:

- *As an agent am I spreading myself too thin by being part of one too many Internal Help Desk Request teams?*
- *By being part of the Internal Help Desk Request team, how many Request resolutions has my resource team been able to influence during the past period?*
- *What is the incidence of participation of my resource team in Internal Help Desk Requests over a period? How many open Requests are they a part of, presently?*

Help Desk - Internal Service Request Summary

Description

Analyses built using this subject area enable internal help desk managers to obtain a complete picture of help desk request performance. SR compliance analysis delivers a comprehensive view of SR milestone attainments and compliance. Help Desk managers can gain visibility into the diverse factors affecting compliance, identify patterns for a better understanding of this key area of service performance, and take corrective action. Managers can also understand agent usages of knowledge articles in requests and their impact for faster help desk request issue resolutions.

Business Questions

This subject area can answer the following business questions:

- *What Request categories have a higher percentage of non-compliant Help Desk Requests open?*
- *What is the impact of linking knowledge articles to Help Desk Requests? Has it led to reduced Request resolution times and reopening?*
- *What is the incidence of agents linking knowledge articles to Help Desk Requests?*

Help Desk - Internal Service Request Tags Real Time

Description

Tags help in identifying Requests with similar characteristics. A tag based analysis of Requests yields valuable insights into support health across the employee organization. Service quality and performance can be measured for Requests with specific tags to spot exceptions, anomalies, trends and patterns. Once the problem is identified, corrective action can be initiated. As an example, if help desk agents use the tag "network" to identify requests pertaining to network issues, analyses can be created to identify the originating areas for speedier triaging and responses.

Business Questions

This subject area can answer the following business questions:

- *Are we seeing an issue regarding compliance rates with certain tags?*
- *Do Requests with specific tags (e.g., tags pertaining to heating/ air conditioning issues) show higher resolution times?*
- *How is tag usage across agents and resource teams? Which teams perform better than others?*
- *How many open Requests are linked to each tag?*
- *What characteristics do groupings of Requests based on specific tags (e.g., tag = 'network') exhibit?*

Help Desk - Internal Service Requests Lifecycle

Description

Help Desk Requests go through a life cycle, from the point they are created up until they are resolved, and finally closed. Help Desk personnel are interested in keeping this life cycle short while attempting a timely, quality fix to issues. This subject area helps building analyses that helps keep a close watch on the requests, finding outliers and taking corrective steps proactively, to avoid customer escalations and potential SLA violations. Useful measures such as actual time spent by an agent on an SR, customer wait times, SR latency times with queues and assignees and number of queue transfers provide the much needed insight into potential issues before they reach crisis proportions. The ability to analyze these measures in relation to key information of a Help Desk Request (Criticality, Category, Channel, Product, and so on), make the analyses even more powerful.

Business Questions

This subject area can answer the following business questions:

- *Did the Help Desk request get assigned to the wrong queue/team?*
- *Did the Help Desk request have more than one issue that needed to be resolved (perhaps serially or requiring parallel efforts by multiple resources)?*
- *Do some Help Desk request categories imply higher difficulties (going by the actual time agents spend on such Help Desk requests)?*
- *How long did it take to assign the Help Desk request to the correct queue?*
- *How long was an Help Desk request unassigned and how long did it sit in each queue?*

- *Was an Help Desk request sitting in a queue longer than the average time for all other SRs?*
- *Was the Help Desk request queue modified or the Help Desk request resource owner modified at any point?*
- *Was the assigned agent overloaded with other work (based on the average number of Help desk Requests assigned to the agent)?*
- *Was the assigned agent overloaded with other work?*
- *Was there a lot of time spent waiting on customers to respond to more information, documents, and so on?*

Help Desk - Internal Service Requests Real Time

Description

Use this subject area to build compelling analyses for your HR help desk managers and agents to review critical HR service requests, their severities and statuses. Uncover bottlenecks to speedy resolution of service requests by alerting to long wait times or agent/queue assignment delays. Monitor help desk service performance levels to ensure they align with organizational goals. Build reports that measure and analyze service request throughput such as submissions, updates, resolutions, transfers and reopens. Help your business gain the needed insight to better manage and course correct exceptions before they snowball into issues.

Business Questions

This subject area can answer the following business questions:

- *How are SR transfers contributing to overall latency/resolution delays?*
- *How are we doing on Internal SR resolution times between current and past months? What are the reasons for any degradations?*
- *How many Internal SRs are unassigned for more than a day? Who are the impacted customers? How of many of these are critical?*
- *How many Internal SRs have been waiting on my agents action for more than 24 hours? Which of these are critical or escalated?*
- *What are the Internal SRs waiting on my customers?*
- *What are the open critical Internal SRs that my team is working on currently? How many of these are escalated?*
- *What are the popular reasons for SRs to be transferred? Is there a pattern?*
- *What is the prevalence of SR transfers for an agent/manager/group/product/location?*
- *What is the reopen rate for Internal SRs owned by my team? Who has the highest reopen rate? Is there a training issue?*
- *What is the status of our aging SRs? Are there any outliers that require intervention?*

Incentive Compensation - Participant Interval Goals Real Time

Description

To hide this subject area, set the profile option CN_HIDE_OTBI_SUBJECT_AREAS, Hide Legacy Incentive Compensation Business Intelligence Subject Areas, to Yes.

Compensation managers or analysts use it to review the individualized interval goals by interval, performance measure, and participant.

You can compare total quota to credit attainment by performance measure by creating a cross-subject-area report for this subject area. Add Participant Name as the common dimension from each subject area and hide one of the dimensions. Typically, you use the Earning and Attainment Summary Real Time subject area for this analysis. The Participant Performance Summary Real Time work area alone provides the information you need without creating a cross-subject-area report.

Business Questions

This subject area can answer the following business questions:

- *Do I have to realign quota based on current attainment levels? Answering this question requires a cross-subject-area join.*
- *Is the company on track to attain its goals? Who is lagging and might require coaching? Answering the secondary question requires a cross-subject-area join.*
- *What is the total quota across the organization by performance measure for the interval?*
- *What is the total quota by performance measure for the interval across the organization?*

- *Which analyses reached OTBI max row limit?*
- *Which subject areas have large data volume?*
- *Which subject areas have slow performance?*

Job Roles

The following job roles secure access to this subject area:

- *Application Implementation Consultant*
- *IT Security Manager*

Duty Roles

The following duty roles secure access to this subject area:

- *OTBI Report Performance Transactional Analysis Duty*

Primary Navigation

Not applicable.

Time Reporting

This subject area supports six months of usage historical data.

Time dimension is linked to "OTBI Performance Real Time"."Time"."Report Start Date".

Transactional Grain

This subject area returns data at the grain of a query execution and database physical SQL.

Special Considerations

This subject area contains six months of query execution data. Each OTBI query execution can generate multiple database SQL statements. Usage data volume grows over time, so use proper filters to narrow reporting data load. Because this subject area has no data security, you're advised to secure user access to it.

OTBI Usage Real Time

Description

Analyze six months of subject area and analysis usage trends and patterns with a simpler and lighter-weight selection of OTBI usage metrics, including for example user, report and subject area usage patterns. Historical data older than six months is purged each week.

Business Questions

This subject area can answer the following business questions:

- *How many OTBI SOAP web services have been run in the past month?*
- *How many ad-hoc OTBI analyses have been run in the past month?*
- *How many custom OTBI analyses have been run in the past month?*
- *How many predefined OTBI analyses have been run in the past month?*
- *How many users run OTBI analyses?*

- *What are the top N most frequently-run OTBI analyses?*
- *What is the execution history of dashboard X in the past month?*
- *What is the weekly OTBI analysis usage trend?*
- *Which analyses have low usage in the past month?*
- *Who are the top N OTBI users?*

Job Roles

The following job roles secure access to this subject area:

- *Application Implementation Consultant*
- *IT Security Manager*

Duty Roles

The following duty roles secure access to this subject area:

- *OTBI Report Usage Transactional Analysis Duty*

Primary Navigation

Not applicable.

Time Reporting

This subject area supports six months of usage historical data.

Time dimension is linked to "OTBI Performance Real Time"."Time"."Report Start Date".

Transactional Grain

This subject area returns data at the grain of a query execution.

Special Considerations

This subject area contains six months of usage history. It doesn't contain database SQL execution details so it has less data volume.

- e) Sales Account Fact: Provides information at the grain of Sales Account
- f) Sales Cycle Fact: Provides information at the grain of Customer-Opportunity
- g) Win Loss Fact: Provides information at the grain of Customer-Opportunity

Special Considerations

By default, the implicit fact table for this subject area is the Pipeline fact. This means that in the absence of any metric, a report would include only such customer and other data that are associated with opportunity transactions.

If you add the Fact from this subject area called # of sales accounts the query will return all sales accounts with every party status. To build a report to show only active sales accounts, an explicit filter needs to be added to the report to define Party Status = 'A' for active.

Sales - CRM Historical Pipeline

Description

This subject area enables you to track and report on historical pipeline revenue numbers and opportunity transitions in the context of key business objects such as Customer/Account, Opportunity, Sales Resource, Product, and Territory.

Although this subject area is similar to the Sales - CRM Pipeline Subject Area, the Pipeline subject area is used for current state analysis of revenues, whereas the Historical Pipeline subject area is used for analyzing historical trends in pipeline revenue.

Both summary and detail historical pipeline revenue metrics are supported. Historical pipeline analysis is always with respect to Pipeline Snapshot Date/Period/Quarter/Year. Note that Enterprise Calendar is only supported for Snapshot time.

The dimension entities for snapshot for historical analysis are Opportunity (via Historical Opportunity) and Revenue (via Historical Revenue).

Except as just noted, all dimensions - such as Product, Territory, Sales Resource, and so on, represent current state. Any historical pipeline metrics analyzed in this context show current data for the dimensions.

For example, a report showing sales resource hierarchy and 'open opportunity line revenue' across a range of past snapshot dates, would show historical revenue numbers against present hierarchy.

Business Questions

This subject area can answer the following business questions:

- *Are too many deals being pushed out to the subsequent fiscal quarters?*
- *How are product revenues trending month over month?*

- *How do opportunities evolve over weeks/months in relation to sales stage, revenue amount, products, and territories?*
- *What are the higher value deals that have been moved out?*
- *What are the historical monthly trend of closed revenue by current territories?*
- *What are the opportunities that have undergone revenue changes - either upward or downward? Which team members own these opportunities?*

Special Considerations

In order to use this subject area, it is advised to run Generate Sales Historical Snapshots ESS schedule process.

Although this process runs automatically, before you run a report that uses this subject area you might want to run this ESS job before

you report on snapshots to ensure you have the most recent snapshot data capture. The dimension entities that are snapshot for historical analysis are Opportunity (via Historical Opportunity) and Revenue

(via Historical Revenue). There are both Opportunity/Historical Opportunity and Revenue/Historical Revenue. By default, the implicit fact table

for this subject area is the Pipeline fact. This means that in the absence of any metric, a report would return data at the Opportunity level.

When the ESS job is run, the

snapshot data is captured by the parameters in the profile option MOO_MANAGE_SALES_HISTORICAL_SNAPSHOT_CONFIGURATION. The retention values set for this profile are C=120,D=120,W=58,M=14,Q=5. A snapshot

qualifies as a weekly snapshot if it collected in the last day of

the week. A snapshot collected on the last day of the month qualifies as a monthly snapshot if it is collected on the last day of the month. And finally, a snapshot collected on the last days of the fiscal quarter qualifies as a quarterly snapshot. If you run reports that use this

subject area with time periods that fall on random days, that is, days that don't fall on end of week, end of month, or end of quarter then it is considered a daily snapshot. By default the daily snapshot retention period is configured in the profile MOO_MANAGE_SALES_HISTORICAL_SNAPSHOT_CONFIGURATION

to retain data for 120 days. If you are running daily snapshots and you want an extended daily time period you should change the profile

daily (D) values.

Sales - CRM Object Activity

Description

This subject area provides data for reporting on object activity, specifically object creation and updates.

Use this subject area to report on object activity by channel, object activity performed by users, object activity by channel, and time periods with no object activity.

As of 21A, this subject area now reports on the number of reads for the Mobile and Microsoft 365 channels. These metrics give you a broader understanding of how much sales teams interact with these channels.

Gain vital insights on user adoption by reporting on which types of records are read, such as account, activity, or opportunity, via the Mobile and Microsoft 365 channels. Seeing which types of records are read on these channels gives you critical insights into user behavior in the field.

Business Questions

This subject area can answer the following business questions:

- *How is the object activity split across channels (web/mobile/email)?*
- *How many records were created or updated by a user in a month?*
- *What is the count of records created or updated by object type?*
- *Which times are objects not being created or updated?*

Primary Navigation

Navigators > Manage Users

Time Reporting

This subject area reports historical data.

Time dimension is linked to Time dimension is linked to Object activity date.

Transactional Grain

This subject area returns data at the grain of Object Activity Date, Object, Channel, or User.

Special Considerations

1. Considering the sensitivity of the data, access to this subject area is restricted to the BI duty role "BI User System SA Access".
2. This subject area captures user activity data only when ESS job Refresh BI Reports Audit Data for User Adoption Reporting is run.
3. Data retention period is configurable when submitting ESS jobs. Default data retention is 13 months.
4. Object creates (inserts) are available by channel (web/mobile/email).
5. Object updates are available for the mobile and email channels. Object updates for the web channel is not yet offered.
6. Proxy is not supported for this subject area.
7. This subject area supports negative reporting at the resource and time level. This allows reporting on which users are not using the system and when the system is not being used.
8. This subject area shows activities for all Time Periods, based on the Employee dimension, to support reporting on Time periods with or without activity. For this reason, if a custom report is built which includes a Time Period at either Year or Month, the report must be filtered by a specific time period. Without such a filter the report will show results for the complete 100 years in the Time dimension.
9. For mail (Microsoft 365) and mobile applications, if reports are run on a given day, data from that day will not show until a period of 24 hours has passed. Running the scheduled process 'Refresh BI Reports Audit Data for User Adoption Reporting' will not change this behavior.
10. For best performance it is recommended to:
 - a. Add a time filter for a specific year or month. Time filters should not be longer than one year.
 - b. Add a Resource filter, such as Region.
 - c. Try to break larger reports into smaller reports.
 - d. Filter # of Active Days fact > 0 to report on days with activity, unless negative reporting is the requirement.

Sales - CRM Opportunities and Products Real Time

Description

This subject area provides information on all the Opportunities created in the system.

Sales - CRM Resource System Usage

Description

This subject area provides data for reporting on CRM resource activity (a resource is a person or user).

Use this subject area to report on resource activity by channel, resource activity in time periods, and time periods with no resource activity.

As of 21 A, the Sales - CRM Object Activity and Sales - CRM Resource System Usage subject areas now support the latest CX Sales Mobile application in the mobile channel. The mobile channel now provides reporting for all versions of the CX Sales Mobile application.

With support for User Adoption reporting available in all versions of the CX Sales Mobile application, your organization's user adoption metrics will be accurate as your organization transitions to the latest CX Sales Mobile application.

For mail (Microsoft 365) and mobile applications, if reports are run on a given day, data from that day will not show until a period of 24 hours has passed. Running the scheduled process 'Refresh BI Reports Audit Data for User

Adoption Reporting' will not change this behavior.

Business Questions

This subject area can answer the following business questions:

- *How is the resource activity split across channels (web/mobile/email)?*
- *How many days was a resource active by channel?*
- *Resources of which job title are most active in the system?*
- *Which department has the highest number of active resources?*
- *Which region has the highest number of inactive resources?*
- *Who are the resources who have not logged in the system in the last week?*
- *Who are the top 10 active and bottom 10 inactive employees from a user adoption perspective?*
- *Who are the top 10 active resources of the system?*

Primary Navigation

Navigator > Manage Users

Time Reporting

This subject area supports the reporting of CRM user activity in the system over a period of time.

Time dimension is linked to CRM user login date

This subject area has no anchoring date.

Transactional Grain

This subject area returns data at the grain of Login Date, Channel, or User.

Special Considerations

1. Considering the sensitivity of the data, access to this subject area is restricted to the BI duty role BI User System SA Access.
2. The system tracks User activity data only when the profile option FND_TRACK_USER_ACTIVITY is enabled and ESS job Refresh BI Reports Audit Data for User Adoption Reporting is run.
3. To report by resource hierarchy, see the following post in Cloud Customer Connect, "System Usage By Resource Hierarchy", <https://cloudcustomerconnect.oracle.com/posts/177c03f749>
4. Supports negative reporting at the resource and time level. This allows reporting on which resources are not using the system and when the system is not being used.
5. This subject area shows activities for all Time Periods, based on the Employee dimension, to support reporting on Time periods with or without activities. For this reason, if a custom report is built which includes a Time Period at either Year or Month, the report must be filtered by a specific time period. Without such a filter, the report will show results for the complete 100 years in the Time dimension.
6. For the best performance, it is recommended to:
 - a. Add a time Filter for a specific year or month. Time filters should not be longer than one year.
 - b. Add a Resource filter, such as Region.
 - c. Try to break larger reports into smaller reports.
 - d. Filter # of Active Days fact > 0 to report on days with activity, unless negative reporting is the requirement.
7. For mail (Microsoft 365) and mobile applications, if reports are run on a given day, data from that day will not show until a period of 24 hours has passed. Running the scheduled process 'Refresh BI Reports Audit Data for User Adoption Reporting' will not change this behavior.

Special Considerations

This subject area can't be used to create a cross-subject area analysis. Don't mix data from different folders within this subject area either. For example, keep data from the Data Security Policy Audit folder separate from the Instance Set Audit folder. If you need to combine data from different folders, use a union operation or create a report instead of an analysis.

Security - Roles and Privileges Real Time

Description

Provides real-time information about the security setup in the application. This subject area is independent of the pillar and can be used to report on roles and details across pillars like HCM, ERP, SCM and so on.

Use this subject area to report on role categories, roles, functional security policies, data security policies, and the users assigned to the roles.

You can report on the correlation between the objects like the roles that are directly assigned to another role, the roles that are inherited by the virtue of the directly assigned roles, or the functional and data security policies that are directly assigned to the roles.

For a given user, all the roles that have been assigned can also be reported.

Business Questions

This subject area can answer the following business questions:

- *Can I view and edit a particular page? If yes, which functional security policy do I need to provide to a user who needs similar access?*
- *Can I view and edit the manage employment screen, if yes, which functional security policy do I need to provide to the user?*
- *I have not added the Compensation analyst role to user, however the user seem to have this job role, can I trace how has this been inherited by the user?*
- *I haven't added a specific role to a user, but the user seem to have this job role. Can I trace how has this been inherited by the user?*
- *Which data security policy would provide access to the data I need to see?*
- *Which data security policy would provide access to the talent profile data ?*
- *Why am I not able to view certain subject areas with my login credentials?*
- *Why am I not able to view succession management subject areas with my login?*

Service - CRM Service Queue Resources Real Time

Description

Use this subject area to understand resource staffing of queues such as whether they are properly balanced and with the proper resources. When used in conjunction with "Service - CRM Service Requests Real Time," one can perform analyses with respect to specific SRs and related attributes such as category and product. Managers understand whether team resources are optimally deployed across service queues to maximize productivity. Visibility into team members deployed as resources in various queues and the associated open SRs aids in making informed load balancing decisions.

Business Questions

This subject area can answer the following business questions:

- *Are my team resources optimally deployed across service queues to maximize productivity?*
- *Can the variation in SR resolution times between team members be attributable to sub-optimal queue assignments?*
- *Is there scope for a better resource load balance keeping in consideration the SR throughput across queues?*

Service - CRM Service Request Action Plan Actions Real Time

Description

Enables an analysis that helps customer service managers to obtain a complete picture of action plan enforcement of company policies and procedures. Agents can monitor their own performance regarding action plan completions and delays. Action plan information captures compliance against a predefined set of actions, and analytics highlights metrics around open and closed action plans, delayed actions, and aging of action plans. Real-time reporting built using this subject area provides both summary and detail metrics.

Business Questions

This subject area can answer the following business questions:

Service - CRM Service Request Conversation Messages Real Time

Description

Customer Service agents use internal conversations to communicate with other agents and subject matter experts. Analyses built using this subject area help users understand the extent of collaboration through such conversations, and lead to further analyses such as: Do they exhibit a pattern? Are agents overly reliant on subject matter experts? If so, is there scope for their own skill upgrade/training?

Visibility into message details helps agents follow up with message recipients. Analyses of conversation metrics provided out-of-the-box in context of entities such as service orgs, service request categories, business units, and products yield powerful insights that help managers during staffing and resource deployments.

Business Questions

This subject area can answer the following business questions:

- *Are internal conversations taking place across high cost channels?*
- *Do internal conversation message volumes and higher turnaround time of requests go together?*
- *Show me a list of open escalated requests with a count of incoming and outbound conversation messages and the last conversation message dates*

Service - CRM Service Request Lifecycle

Description

SRs go through a life cycle, from the point they are created up until they are resolved, and finally closed. Service personnel are interested in keeping this life cycle short while attempting a timely, quality fix to issues. This subject area helps building analyses that helps keep a close watch on the SRs, finding outliers and taking corrective steps proactively to avoid customer escalations and potential SLA violations. Useful measures such as actual time spent by an agent on an SR, customer wait times, SR duration with specific queues and assignees and number of queue transfers provide the much needed insight into potential issues before they reach crisis proportions. The ability to analyze these measures in relation to key information of an SR (Criticality, Category, Channel etc.) together with surrounding entities such as Agent, Account, Channel and Product make the analyses even more powerful.

Business Questions

This subject area can answer the following business questions:

- *Did the SR get assigned to the wrong queue/team?*
- *Did the SR have more than one issue that needed to be resolved (perhaps serially or requiring parallel efforts by multiple resources)?*
- *Do some SR categories imply higher difficulties (going by the actual time agents spend on such SRs)*
- *How long did it take to assign the SR to the correct queue?*
- *How long was an SR unassigned and how long did it sit in each queue?*
- *Was an SR sitting in a queue longer than the average time for all other SRs?*
- *Was the SR queue modified or SR resource owner modified at any point?*
- *Was the assigned agent overloaded with other work (based on the average number of SRs assigned to the agent)?*
- *Was the assigned agent overloaded with other work?*
- *Was there a lot of time spent waiting on customers to respond to more information, documents and so on?*

Service - CRM Service Request Messages Real Time

Description

Enables analysis of SR messages for service managers to understand message traffic patterns, channel usages, message processing statuses, message types, message origins and assignments, and such other aspects of messaging. Tracking of specific message types that have a bearing on customer satisfaction such as customer entry and response message types to ensure timely response or updates is another key value that can be derived from the analyses created.

Business Questions

This subject area can answer the following business questions:

- *Are there too many stale messages, that is, messages that have not been updated in a long time tied to critical/escalated issues?*
- *Are we responding to customer messages in a timely manner?*
- *Do we see a pattern in the average number of messages per closed SR going up in recent months? What factors are contributing to this surge, if any?*

Service - CRM Service Request Milestones Real Time

Description

Provides the ability to report on the performance of each service agent, and the means to resolve SRs and meet stated targets. A milestone is a specific target set for the resolution of the SR. The information provided in this subject area allows service managers to identify efficient agents, coach, and measure under-performance within the team. It also allows agents to effectively monitor personal performance to meet the milestone targets. Like most others, this is a real-time subject area, allowing up to the moment reporting on SR performance to milestone targets.

Business Questions

This subject area can answer the following business questions:

- *Are our processes inefficient or preventing agents from meeting milestones?*
- *Are there currently service requests that have missed the target milestone and require escalation?*
- *How does my team perform in meeting first response milestones versus resolution milestones?*

- *How often am I meeting milestone targets for my SRs? Which milestones do I miss most often?*
- *Is a particular target too aggressive? Who is best at achieving targets for a given category of service request?*
- *Where is my team missing SLAs? Is it in certain geographic locations, service categories, or product lines?*

Service - CRM Service Request Relationships Real Time

Description

Relationships enhance the efficiency of your agents and improve your help desk request resolution outcomes. Visibility into relationships between SRs or between Cases and SRs provide a quick understanding of dependencies to identify those blocking speedier resolutions. Another benefit is the ability to make quick updates to related service requests or cases. Powerful pre-built analytics complement the above functionality. For example, agents and managers would like to know the dependent SRs blocking resolution of a critical SR.

Business Questions

This subject area can answer the following business questions:

- *How are my agents faring in Avg resolution times for parent SRs (i.e., those with at least one child SR)?*

- *How many child SRs have not had any updates for more than 3 days? Display the list with key info'*
- *Out of the those child SRs, which are the ones open for the longest period (top 5)? Who are the owners of those?*
- *Show me all the open Related SRs with key details such as Title/Owner/Last Update Date/Category/Queue for SRs owned by my team and open for more than 7 days*

Service - CRM Service Request Resource Real Time

Description

Used to analyze and report on all the resources, and resource roles on an SR. Employee dimension in this subject area refers to both primary and non-primary resources, unlike other subject areas where employee refers to only primary resource. This subject area can be combined with any other subject area that has SR dimension, when results are required at the level of an SR. For cross-subject-area queries, include at least one metric from each subject area.

Business Questions

This subject area can answer the following business questions:

- *As an agent am I spreading myself too thin by being part of one too many SR teams?*
- *By being part of the SR team, how many SR resolutions has my resource team been able to influence during the past period?*

Service - CRM Service Request Tags Real Time

Description

Tags help in identifying SRs with similar characteristics. A tag based analysis of SRs yields valuable insights into support health across the business. Service quality and performance can be measured for SRs with specific tags to spot exceptions, anomalies, trends and patterns. Once the problem is identified, corrective action can be initiated. As an example, if an organization mandates that agents use the tag 'churn' to identify 'at risk' customers, reports and alerts can be created to notify managers when these SR's are reopened or take longer than normal resolution times.

Business Questions

This subject area can answer the following business questions:

- *Are we seeing an issue regarding compliance rates with certain tags?*
- *Do SR's with specific tags (e.g., tags for specific partners) show higher resolution times?*
- *How is tag usage across agents and resource teams? Which teams perform better than others?*
- *How many SRs for product 'A' have tag 'X' or 'Y'? How many have the 'Potential Churn' tag?*
- *How many open SRs are linked to each tag?*
- *What characteristics do groupings of SR's based on specific tags (e.g., tag = 'outage') exhibit?*

Service - CRM Service Requests Real Time

Description

Use this subject area to build compelling analyses for your service managers and agents to review critical service requests, their severities and statuses. Uncover bottlenecks to speedy resolution of service requests by alerting to long wait times or agent/queue assignment delays. Monitor service performance levels to ensure they align with organizational goals. Build reports that measure and analyze service request throughput such as submissions, updates, resolutions, transfers and reopens. Help your business gain the needed insight to better manage and course correct exceptions before they snowball into issues. For your asset based service requests, you can have visibility into service performance such as incidence and type of issues, the assets in question and efficiencies of resolution at specific sites associated with the service profiles.

Business Questions

This subject area can answer the following business questions:

- *How are SR transfers contributing to overall latency/resolution delays?*

- *How are we doing on SR resolution times between current and past months? What is the reason for degradation, if any?*
- *How does the aging profile of SRs look like? Are there any outliers calling for intervention?*
- *How many SRs are unassigned for more than a day? Who are the impacted customers? How of many of these are raised as critical?*
- *How many SRs have been waiting on my agents for more than 24 hours? Which of these are critical or escalated?*
- *What are the SRs that are waiting on my customers?*
- *What are the open critical SRs that my team is working on currently? How many of these are escalated?*
- *What are the popular reasons for SRs to be transferred? Is there a pattern?*
- *What is the prevalence of SR transfers for an agent/manager/group/product/location?*
- *What is the reopen rate for SRs owned by my team? Who has the most reopen rate? Is there a training issue?*
- *Who are my agents that have the most pending SRs?*

Service - CRM Survey Requests Real Time

Description

Use this subject area to obtain insight into survey request activity in the context of a Service Request. Build ad hoc summary reports for a comparison of survey requests sent and SRs resolved over a chosen periodicity such as monthly or quarterly. Analyze survey response percentages against requests sent in relation to service categories, accounts, account regions, products, teams and other key business contexts. Examine request/response performance for survey templates used, to determine if any template changes are necessary.

Note: The subject area can be used for both service and employee help desk survey reporting

Business Questions

This subject area can answer the following business questions:

- *Are survey request frequencies meeting our norms?*
- *Are survey requests being sent per plan across teams, service categories, products, account regions?*
- *Do we need to adjust our survey template to improve response rates?*

- *Does seasonality impact response rates?*
- *Does the survey request activity show a declining trend?*
- *How does response differ for various service teams? Do some teams obtain better response rates?*
- *How is survey request trending compared to SR resolutions during the same period?*

Service - CRM Survey Responses Real Time

Description

Once a service request is closed, a survey is sent out to the SR's primary customer contact to respond with their feedback on various aspects of the service experience such as issue resolution, timeliness and agent knowledge and responsiveness. This subject area makes it possible to build insightful reports that help obtain a summarized view of survey responses for the specific questions in a survey. The aggregated response measures serve as a barometer for Service Managers and Executives to gauge how well the team and service organization have been successful in meeting their customer expectations. A comparison of survey response measures across customer regions, products, teams, service categories and other service organizational entities helps in identifying areas for improvements.

Note: The subject area can be used for both service and employee help desk survey reporting

Business Questions

This duty role secures access to data that can answer the following business questions:

- *Across what channels do such non-SR interactions most often occur?*
- *Against how many Opportunities, were the Quotes submitted in this month?*
- *Are agents making themselves available for certain channels and not for others?*
- *Are agents prematurely updating SRs as Resolved to make their numbers look better?*
- *Are certain channels more effective in generating positive customer responses?*
- *Are internal conversations taking place across high cost channels?*
- *Are my team resources optimally deployed across service queues to maximize productivity?*
- *Are our processes inefficient or preventing agents from meeting milestones?*
- *Are revenues getting closed in line with their forecast figures? To what extent do they deviate?*
- *Are satisfaction levels showing a declining trend over time? What specific account regions contribute to this?*
- *Are survey request frequencies meeting our norms?*
- *Are survey requests being sent per plan across teams, service categories, products, account regions?*
- *Are the Approved Claims fully allocated or are the Channel partners not spending to approval?*
- *Are the Leads associated with certain products?*
- *Are the Leads supporting products that appeal to certain customers by size of company?*
- *Are the MDF claims paid promptly? How many days on average between a claim request vs claim approval?*
- *Are the Sales reps paying enough attention to the territories that they are a part of? What are their customer activity levels?*
- *Are the sales reps moving their opportunities fast enough?*
- *Are there action plans tracking late to an overall target completion date?*
- *Are there any bottlenecks or inefficiencies in our activity management processes?*

- *Are there any opportunities to cross-sell/up-sell to help me meet/exceed my quota?*
- *Are there any up sell/cross sell opportunities?*
- *Are there any workload balancing issues on my team? Are a few members performing most of the activities?*
- *Are there areas where team members require additional training for more effective interactions?*
- *Are there currently service requests that have missed the target milestone and require escalation?*
