

Web Service Development  
Oracle FLEXCUBE Investor Servicing  
Release 12.4.0.0.0  
[May] [2017]

---

## Table of Contents

<b>1. PREFACE .....</b>	<b>1-1</b>
1.1 AUDIENCE .....	1-1
1.2 RELATED DOCUMENTS.....	1-1
1.3 CONVENTIONS .....	1-1
1.4 HYPOTHETICAL EXAMPLE USED IN THE DOCUMENT .....	1-2
<b>2. INTRODUCTION .....</b>	<b>2-1</b>
2.1 HOW TO USE THIS GUIDE.....	2-1
<b>3. WEB SERVICE - INTRODUCTION .....</b>	<b>3-1</b>
3.1 COMPONENTS OF WEB SERVICE .....	3-1
3.2 FLEXCUBE SOAP FORMAT.....	3-2
3.3 FLEXCUBE WSDL FORMAT.....	3-5
3.3.1 <i>WSDL parts</i> .....	3-5
3.3.2 <i>FCUBS WSDL example</i> .....	3-6
3.4 FLEXCUBE WEB SERVICE DATA FLOW .....	3-9
<b>4. PRE REQUISITES FOR WEB SERVICE DEVELOPMENT .....</b>	<b>4-1</b>
<b>5. WEB SERVICE DEVELOPMENT .....</b>	<b>5-1</b>
5.1 WEB SERVICE SPECIFICATION.....	5-1
5.2 GENERATE / DEVELOP XSDs.....	5-2
5.2.1 <i>Open Development generated</i> .....	5-2
5.2.2 <i>Hand coded</i> .....	5-2
5.3 GENERATE/DEVELOP WSDL.....	5-6
5.3.1 <i>Generate WSDL using TrAX</i> .....	5-7
5.4 BUILD EAR .....	5-12
5.4.1 <i>Directory Creation</i> .....	5-12
5.4.2 <i>File Copy</i> .....	5-13
5.4.3 <i>Creation of Gateway EJB property file</i> .....	5-13
5.4.4 <i>Creation of Gateway EJB EAR file</i> .....	5-16
5.4.5 <i>Creation of Web Service property file</i> .....	5-20
5.4.6 <i>Creation of Web Service EAR file</i> .....	5-23
5.4.7 <i>Adding New Service to the List</i> .....	5-25
5.5 DEPLOYING OF EAR FILE .....	5-27
5.5.1 <i>Deploying of Gateway EJB EAR file</i> .....	5-27
5.5.2 <i>Deploying of Web Service EAR file</i> .....	5-33
5.6 TESTING THE WEB SERVICE .....	5-36
<b>6. ANNEXURE A – FCMOBILESERVICE – SAMPLE FILES .....</b>	<b>6-1</b>
6.1 XSD FILES .....	6-1
6.1.1 <i>CS-Mobil-Types.xsd</i> .....	6-1
6.1.2 <i>CS-CreateMobil-Req-Full-MSG.xsd</i> .....	6-12
6.1.3 <i>CS-CreateMobil-Req-IO-MSG.xsd</i> .....	6-13
6.1.4 <i>CS-CreateMobil-Res-Full-MSG.xsd</i> .....	6-14
6.1.5 <i>CS-CreateMobil-Res-PK-MSG.xsd</i> .....	6-15
6.2 WSDL FILE .....	6-16
6.2.1 <i>FCMobileService.wsdl</i> .....	6-16
6.3 IMPLEMENTATION JAVA FILES .....	6-19
6.3.1 <i>FCMobileServiceImpl.java</i> .....	6-19
6.4 GATEWAY STATIC DATA FROM OPEN DEVELOPMENT.....	6-29

6.4.1	<i>GWTB_AMEND_FIELDS_JKDMOBIL.INC</i>	6-29
6.4.2	<i>GWTB_AMEND_NODES_JKDMOBIL.INC</i>	6-29
6.4.3	<i>GWTM_AMEND_FIELDS_JKDMOBIL.INC</i>	6-30
6.4.4	<i>GWTM_AMEND_MASTER_JKDMOBIL.INC</i>	6-30
6.4.5	<i>GWTM_AMEND_NODES_JKDMOBIL.INC</i>	6-31

---

# 1. Preface

This document describes the concepts and helps reader to develop Web service for FLEXCUBE IS function IDs. Web Services developed for FLEXCUBE IS are deployed on Gateway framework.

## 1.1 Audience

This Web service Development book is intended for FLEXCUBE Application Developers/Users who perform the following tasks:

- Develop the new web service for existing FLEXCUBE Function IDs
- Modify the existing web service to add/remove fields

## 1.2 Related documents

For more information on FLEXCUBE framework, refer the below documents:

- Development Overview Guide
- Getting Started
- FCUBS-FD05-04-01-TrAX-Reference

To Use this manual, you need conceptual and working knowledge of the below:

Proficiency	Resources
FLEXCUBE IS Development overview	Development Overview Guide
OPEN DEVELOPMENT function ID development getting started	Getting Started
Open Development screen development	Function ID Development

## 1.3 Conventions

The following text conventions are used in this document:

### Convention Meaning

<b>boldface</b>	Boldface type indicates graphical user interface elements (for example, menus and menu items, buttons, tabs, dialog controls), including options that you select.
<i>italic</i>	italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates language and syntax elements, directory

	and File name, URLs, text that appears on the screen, or text that you enter.
	Indicates important information

## **1.4 Hypothetical Example used in the document**

FLEXCUBE IS has the function ID JKDMOBILE. This is a maintenance function ID. This function ID is used map the customer number with mobile number. This document covers the web service development for this function ID.

---

## 2. Introduction

### 2.1 How to use this Guide

The information in this guide includes:

- [Chapter 2, “Introduction”](#)  
This is an introduction section.
- [Chapter 3, “Web Service - Introduction”](#)  
This section discuss the Web service introduction and FLEXCUBE IS web service concepts
- [Chapter 4, “Pre requisites for Web service development”](#)  
This section discuss the pre-request check list for web service development
- [Chapter 5, “Web services Development”](#)  
This section discusses steps for web service development and testing.
- [Chapter 6, “Annexure A – FCMobileService sample files”](#)  
This section discuss the sample files

---

### 3. Web Service - Introduction

Web Services are self-contained, self-describing, modular applications that can be published, located and invoked across the web. A Web Service is an interface that describes a collection of operations that are network accessible through standardized XML messaging. The technology is called “Web service” because it integrates services(applications) using web technologies(the internet and its standards). Web service plays vital role in creating Service Oriented Architecture based software applications.

Web services use the following technologies

- XML  
XML is used to describe the web service specifications
- SOAP  
Simple Object Access Protocol is a network, transport, and programming language, platform independent protocol that allows client to call a remote service. The message format is XML
- WSDL  
Web Service Description Language is an XML based interface and implementation description language. The service provider uses WSDL document in order to specify the operations of web service and parameters and data types of these operations

#### 3.1 Components of web service

Following are the components of FLEXCUBE IS Web service:

- XSD files
  - Message XSDs  
This represents the “Message” portion on WSDL file that used to define the message communicated in web service. A message can have one or more data types.
  - Type XSDs  
This represents the “Types” portion on WSDL file that used to define the data types that are part of messages.
- WSDL file
- Implementation Java files
- Gateway static data

**Example:**

JKDMOBILE function ID – web service development results in following files. Refer the annexure A for these file contents

- XSD files
  - CS-Mobil-Types.xsd
  - CS-CreateMobil-Req-Full-MSG.xsd
  - CS-CreateMobil-Req-IO-MSG.xsd
  - CS-CreateMobil-Res-Full-MSG.xsd
  - CS-CreateMobil-Res-PK-MSG.xsd
- WSDL file
  - FCMobileService.wsdl
- Implementation Java files
  - FCMobileServiceImpl.java
- Gateway static data
  - GWTB\_AMEND\_FIELDS\_JKDMOBIL.INC
  - GWTB\_AMEND\_NODES\_JKDMOBIL.INC
  - GWTM\_AMEND\_FIELDS\_JKDMOBIL.INC
  - GWTM\_AMEND\_MASTER\_JKDMOBIL.INC
  - GWTM\_AMEND\_NODES\_JKDMOBIL.INC

## **3.2 FLEXCUBE SOAP format**

FLEXCUBE IS uses the following SOAP format

<b>SOAP component</b>	<b>FCUBS component</b>	<b>Example</b>
SOAP Envelope	OPERATION.FUNCTIONID_PATTER N_REQ/RESP	CREATEMOBILE_FSFS_R EQ
SOAP Header	<FCUBS_HEADER>	<FCUBS_HEADER>
SOAP Body	<FCUBS_BODY>	<FCUBS_BODY>

**Example:**

```

<CREATEMOBILE_FSFS_REQ xmlns="http://fcubs.ofss.com/service/FCMobileService">

<FCUBS_HEADER>

  <SOURCE>FLEXCUBE </SOURCE>

  <UBSCOMP>FCUBS</UBSCOMP>

  <MSGID></MSGID>

  <CORRELIID></CORRELIID>

  <USERID>PIYUSHB</USERID>

  <BRANCH>000</BRANCH>

  <MODULEID>CS</MODULEID>

  <SERVICE>FCMobileService</SERVICE>

```

```

<OPERATION>CreateMobile</OPERATION>

<SOURCE_OPERATION></SOURCE_OPERATION>

<SOURCE_USERID></SOURCE_USERID>

<!--Optional:-->

<DESTINATION></DESTINATION>

<!--Optional:-->

<MULTITRIPID></MULTITRIPID>

<!--Optional:-->

<FUNCTIONID></FUNCTIONID>

<!--Optional:-->

<ACTION></ACTION>

<!--Optional:-->

<MSGSTAT>SUCCESS</MSGSTAT>

<!--Optional:-->

<ADDL>

    <!--Zero or more repetitions:-->

    <PARAM>

        <NAME>abc</NAME>

        <VALUE>123</VALUE>

    </PARAM>

</ADDL>

</FCUBS_HEADER>

<FCUBS_BODY>

    <Jktm-Junk-Mobile-Full>

        <CUSTOMER_NO>00000001</CUSTOMER_NO>

        <CELL_NO>1234567890</CELL_NO>

        <!--Optional:-->

        <MAKER></MAKER>

        <!--Optional:-->

        <MAKERSTAMP></MAKERSTAMP>

```

```

<!--Optional:-->

<CHECKER></CHECKER>

<!--Optional:-->

<CHECKERSTAMP></CHECKERSTAMP>

<!--Optional:-->

<MODNO></MODNO>

<!--Optional:-->

<TXNSTAT></TXNSTAT>

<!--Optional:-->

<AUTHSTAT></AUTHSTAT>

<!--Zero or more repetitions:-->

<Jktm-Junk-Mobil-Dtl>

    <CUSTOMER_NO>010101</CUSTOMER_NO>

    <!--Optional:-->

    <ACCOUNT_NO></ACCOUNT_NO>

    <!--Optional:-->

    <NAME></NAME>

    <!--Optional:-->

    <TXNDETL></TXNDETL>

    <!--Optional:-->

    <STATUS></STATUS>

    <!--Optional:-->

    <CELL_NO></CELL_NO>

</Jktm-Junk-Mobil-Dtl>

<!--Optional:-->

<Jktm-Junk-Mobile-Dtl2>

    <CUSTOMER_NO></CUSTOMER_NO>

    <!--Optional:-->

    <CUSTOMER_NAME></CUSTOMER_NAME>

    <!--Optional:-->

```

```

<CUSTOMER_CATEGORY></CUSTOMER_CATEGORY>
<!--Optional:-->
<ADDRESS></ADDRESS>
<!--Optional:-->
<CITY></CITY>
<!--Optional:-->
<COUNTRY></COUNTRY>
</Jktm-Junk-Mobile-Dtl2>
</Jktm-Junk-Mobile-Full>
</FCUBS_BODY>
</CREATEMOBILE_FSFS_REQ>

```

 In FCUBS BODY, the data blocks are referred as nodes. Example, *Jktm-Junk-Mobile-Full* in above XML represents the data block that sources from *JKT\_M\_JUNK\_MOBILE\_FULL* table. Replace “-”(hyphen) with “\_”(underscore) to get the table name and data block.

### 3.3 FLEXCUBE WSDL format

FLEXCUBE has the concept of Function ID that has multiple actions. This is translated to Web service pattern as below:

FUNCTION ID + ACTIONS = WEB SERVICE + OPERATIONS

**Example**

JKDMOBILE + NEW = FCMobileService + CreateMobile

#### 3.3.1 WSDL parts

### **3.3.2 FCUBS WSDL example**

```
<?xml version= "1.0" encoding="UTF-8"?>

<wsdl:definitions name="FCMobileService"

targetNamespace = "http://types.ws.gw.fcubs.ofss.com"

xmlns:tns = "http://types.ws.gw.fcubs.ofss.com"

xmlns:wsdlsoap = "http://schemas.xmlsoap.org/wsdl/soap/"

xmlns:wsdl = "http://schemas.xmlsoap.org/wsdl/"

xmlns:xs = "http://www.w3.org/2001/XMLSchema"

xmlns="http://schemas.xmlsoap.org/wsdl/"

xmlns:ns="http://fcubs.ofss.com/service/FCMobileService">

</wsdl:definitions>

<wsdl:types>

<xs:schema>

<xs:import namespace="http://fcubs.ofss.com/service/FCMobileService"

schemaLocation="../XSD/CS-CreateMobil-Req-Full-MSG.xsd"/>

</xs:schema>

<xs:schema>

<xs:import namespace="http://fcubs.ofss.com/service/FCMobileService"

schemaLocation="../XSD/CS-CreateMobil-Res-Full-MSG.xsd"/>

</xs:schema>

<xs:schema>

<xs:import namespace="http://fcubs.ofss.com/service/FCMobileService"

schemaLocation="../XSD/CS-CreateMobil-Req-IO-MSG.xsd"/>

</xs:schema>

<xs:schema>

<xs:import namespace="http://fcubs.ofss.com/service/FCMobileService"

schemaLocation="../XSD/CS-CreateMobil-Res-PK-MSG.xsd"/>

</xs:schema>

</wsdl:types>
```

```

<wsdl:message name="CreateMobileFSReq">

    <wsdl:part name="RequestMsg" element="ns:CREATMOBILE_FSFS_REQ"/>

</wsdl:message>

<wsdl:message name="CreateMobileFSRes">

    <wsdl:part name="ResponseMsg" element="ns:CREATMOBILE_FSFS_RES"/>

</wsdl:message>

<wsdl:message name="CreateMobileIOReq">

    <wsdl:part name="RequestMsg" element="ns:CREATMOBILE_IOPK_REQ"/>

</wsdl:message>

<wsdl:message name="CreateMobilePKRes">

    <wsdl:part name="ResponseMsg" element="ns:CREATMOBILE_IOPK_RES"/>

</wsdl:message>

<wsdl:portType name="FCMobileServiceSEI" >

    <wsdl:operation name="CreateMobileIO">

        <wsdl:input message="tns:CreateMobileIOReq"/>

        <wsdl:output message="tns:CreateMobilePKRes"/>

    </wsdl:operation>

    <wsdl:operation name="CreateMobileFS">

        <wsdl:input message="tns:CreateMobileFSReq"/>

        <wsdl:output message="tns:CreateMobileFSRes"/>

    </wsdl:operation>

</wsdl:portType>

```

```

<wsdl:binding name="FCMobileService" type="tns:FCMobileServiceSEI">

    <wsdlsoap:binding style="document"
        transport="http://schemas.xmlsoap.org/soap/http"/>

        <wsdl:operation name="CreateMobileFS">

            <wsdlsoap:operation soapAction="" />

            <wsdl:input>

                <wsdlsoap:body use="literal" />

            </wsdl:input>

            <wsdl:output>

                <wsdlsoap:body use="literal" />

            </wsdl:output>

        </wsdl:operation>

        <wsdl:operation name="CreateMobileIO">

            <wsdlsoap:operation soapAction="" />

            <wsdl:input>

                <wsdlsoap:body use="literal" />

            </wsdl:input>

            <wsdl:output>

                <wsdlsoap:body use="literal" />

            </wsdl:output>

        </wsdl:operation>

    </wsdl:binding>

    <wsdl:service name="FCMobileService">

        <wsdl:port name="FCMobileServiceSEI" binding="tns:FCMobileService">

            <wsdlsoap:address
                location="http://localhost:9080/FCMobileService/services/FCMobileService"/>

        </wsdl:port>

    </wsdl:service></wsdl:definitions>

```

## 3.4 FLEXCUBE Web Service data flow

The below diagram explains the web service message flow in FLEXCUBE IS.

1. Consumer sends web service request as per the WSDL definition implemented.
2. FLEXCUBE IS Gateway(that deploys the FLEXCUBE IS Web service) received the request and forwards the request to FLEXCUBE IS EJB
3. FLEXCUBE EJB forwards the request to Database Message handler using JDBC protocol
4. Message handler identifies the Service and calls corresponding operation handler for processing
5. The response message is sent back to Message handler
6. Message handler forward the response message back to FCUBS EJB
7. FCUBS EJB sends the response back to FLEXCUBE Gateway web service
8. FLEXCUBE Gateway web service responds to the Consumer.

Every FLEXCUBE IS Web service developed; need to be deployed on FLEXCUBE IS Gateway framework. Refer the FLEXCUBE Gateway deployment patterns for more information.

---

## **4. Pre requisites for Web service development**

- Web service development Specification (explained in further sections)
- OPEN DEVELOPMENT tool -to generate the type XSDs and Gateway static data
- Target FLEXCUBE IS environment with Gateway framework implemented.
- TrAX tool ( to generate the WSDL and Java Implementation files)

## 5. Web service Development

The below diagram represents the web service development cycle

### 5.1 Web Service specification

Specification	Example Data
What is the function ID web service required?	JKDMOBILE
What is the action of the function ID web service required?	NEW
What is the Web service name?	FCMobileService
What is the operation name?	CreateMobile
Open Development generated XSD available in the xsd folder, specified at Open Development?(Yes/No) <i>XSD files generated for the screen should be available for maintenance function IDs. For online function IDs, these type XSDs may be hand coded</i>	Yes
Created a Web Service and operation using TrAX tool?	Yes

Specification	Example Data
<i>Specify the name of the service and operation created for a function id, to be used in FLEXCUBE</i>	
<b>WSDL, Config file created using TrAX tool? (Yes/No)</b> <i>WSDL files are needed to create a service, this contains the information for the service being created for a function id (using the XSD's)</i>	Yes
<b>Property and EAR file generated from the installer? (Yes/No)</b> <i>The property and EAR file are created using installer. Location for these files is specified during creation.</i>	Yes

## 5.2 Generate / Develop XSDs

There are two ways to develop XSDs

- Use Open Development Tool
- Manually create XSD and maintain Gateway static data

### 5.2.1 Open Development generated

As a part of Function ID development, Open Development is used to generate the following web service artifacts:

- XSD folder with type XSDs
- INC folder that has following Gateway static data needed at runtime for web service.
  - GWTB\_AMEND\_FIELDS\_\_JKDMOBIL.INC
  - GWTB\_AMEND\_NODES\_\_JKDMOBIL.INC
  - GWTM\_AMEND\_FIELDS\_\_JKDMOBIL.INC
  - GWTM\_AMEND\_MASTER\_\_JKDMOBIL.INC
  - GWTM\_AMEND\_NODES\_\_JKDMOBIL.INC

*Refer Open Development documents for steps to get type XSDs and following INC files to populate Gateway maintenance tables.*

### 5.2.2 Hand coded

If Open Development is not used for XSDs generation, these XSDs need to be created manually using existing samples available.

*Developer expected to have proficiency in understanding complete FLEXCUBE IS web service framework and patterns to hand code the XSDs. Refer Section 6 for sample files. User can also refer existing contract online web service files for reference/samples.*

If Open Development is not used, the Gateway static data need to maintain manually as follows:

1. Make the entry in GWTM\_OPERATIONS\_MASTER for every operation code for a given web service.

**Example:**

<b>SERVICE_NAME</b>	<b>FCUBSCustomerService</b>
OPERATION_CODE	ModifyMobile
SERVICE_DESC	Customer Service
OPERATION_DESCRIPTION	Modification of Mobile Number
MODULE_CODE	ST
REPLY_REQD	N
FC_FUNCTION_ID	STDCIF
FC_ACTION	MODIFY
DEFAULT_FUNCTION	Y
SMS_FUNCTION_ID	STGCIF
SMS_ACTION	UNLOCK
FS_REQ_XSD	ST- ModifyMobile -Req-Full-MSG.xsd
PK_RES_XSD	ST- ModifyMobile -Res-PK-MSG.xsd
FS_RES_XSD	ST- ModifyMobile -Res-Full-MSG.xsd
IO_REQ_XSD	ST- ModifyMobile -Req-IO-MSG.xsd

2. Make the entry in GWTM\_GATEWAY\_FUNCTIONS

<b>SERVICE_NAME</b>	<b>OPERATION_CODE</b>	<b>FUNCTION_ID</b>	<b>ACTION</b>
FCUBSCustomerService	ModifyMobile	STGCIF	UNLOCK

3. Maintain external system details using function id GWDEXSYS

**Example: STMOB**

The screenshot shows the 'External System - Detailed' configuration window for the system 'STMOB'. The window is divided into several sections:

- External System:** Shows 'External System \* STMOB' and a description 'External system for Mobile Update'.
- Correlation Pattern:** Set to 'Request' with 'Message ID' selected.
- Message Exchange Pattern:** Set to 'Input Only' for Request Message and 'Full Screen' for Response Message.
- Queue:** Fields for 'Default Response Queue' and 'Dead Letter Queue' are present, along with checkboxes for 'XSD Validation Required' and 'Register Response Queue Message Id'.
- External System Queues:** A table titled 'External System Queues \*' showing two entries: 'In Queue \*' and 'IN'.
- Fields:** A tabbed section showing fields like 'Input By SAN1', 'Date Time 2007-12-31 18:27:48', 'Modification Number 1', 'Authorized By', 'Date Time', 'Authorized' (checkbox), and 'Open' (checkbox).
- FTP Parameters:** A tabbed section showing fields like 'Input By SAN1', 'Date Time 2007-12-31 18:27:48', 'Modification Number 1', 'Authorized By', 'Date Time', 'Authorized' (checkbox), and 'Open' (checkbox).
- Buttons:** 'Exit' button at the bottom right.

4. Maintain external system function using function id GWDEXFUN

The screenshot shows the 'External System Functions - Detailed' configuration window for the function 'STGCF UNLOCK' under the service 'FCUBSCustomerService' with operation code 'ModifyCustomer'. The window includes:

- External System:** 'External System \* STMOB', 'Function \* STGCF', 'Action \* UNLOCK'.
- Description:** 'External system for Mobile Update'.
- Fields:** A tabbed section showing fields like 'Input By SAN1', 'Date Time 2007-12-31 18:47:00', 'Modification Number 1', 'Authorized By', 'Date Time', 'Authorized' (checkbox), and 'Open' (checkbox).
- Buttons:** 'Exit' button at the bottom right.

5. Make the entry in GWTB\_AMEND\_NODES for new operation code

NODE_NAME	STTMS_CUST_PERSONAL
NEW_ALLOWED	N
DELETE_ALLOWED	N

<b>NODE_NAME</b>	<b>STTMS_CUST_PERSONAL</b>
ALL_RECORDS	Y
SERVICE_NAME	FCUBSCustomerService
OPERATION_CODE	ModifyMobile

6. Make the entry in GWTB\_AMEND\_FIELDS for new operation code

<b>NODE_NAME</b>	<b>STTMS_CUST_PERSONAL</b>
FIELD_NAME	MOBILE_NUMBER
SERVICE_NAME	FCUBSCustomerService
OPERATION_CODE	ModifyMobile

7. Make Mobile number fields as Amendable for External system using function id STDAMDMT

The screenshot shows the 'Amendment Maintenance - Detailed' window. At the top, it displays configuration details for an external system:

- External System: STIMOB
- Operation: ModifyMobile
- Service Name: FCUBSCustomerService
- Operation Code: ModifyMobile

Below this, there are two main sections: 'Amend Nodes' and 'Amend Fields'.

**Amend Nodes:** A table listing a single node configuration:
 

NodeName *	New Allowed	Deleted Allowed	All Records
STTMS_CUST_PERSONAL	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

**Amend Fields:** A table listing a single field configuration:
 

Field Name *
MOBILE_NUMBER

At the bottom of the window, there is a 'Fields' section containing audit information and status checkboxes:

Input By ABH1	Date Time 2007-12-31 15:16:09	Modification Number 1	<input checked="" type="checkbox"/> Authorized
Authorized By ABH2	Date Time 2007-12-31 15:17:36		<input checked="" type="checkbox"/> Open

Buttons at the bottom right include 'Exit'.

8. Maintain external Source using function id CODSORCE

**Upload Source Maintenance**

Source Code * STM0B	Description External Source for Mobile
<input type="checkbox"/> Base Data From Flexcube	
<b>Fields</b> Input By ABH2 Date Time 2007-12-31 19:41:11 Modification Number 1 <input checked="" type="checkbox"/> Authorized Authorized By ABH1 Date Time 2008-03-31 19:42:09 <input checked="" type="checkbox"/> Open	

#### 9. Maintain external Source parameters preference using function id CODUPLDM

**Upload Source Preferences Maintenance**

Source Code * STM0B	Module Code * ST
- Error Handling On Override * <input type="button" value="Ignore"/> <input type="button" value="Accept"/> On Exception * <input type="button" value="Reject"/> <input type="button" value="Accept"/>	
- Post Upload Status * <input type="button" value="Authorized"/> <input type="button" value="Rejected"/> Purge Days(Calendar)	
<input type="checkbox"/> Allow Deferred Processing <input type="checkbox"/> Allow EOD with Deferred <input checked="" type="checkbox"/> Allow Delete	
<b>Fields</b> Input By OFSSPAYMAK6 Date Time 2008-03-31 14:59:36 Modification Number 1 <input checked="" type="checkbox"/> Authorized Authorized By OFSSPAYMAK6 Date Time 2007-12-31 15:12:43 <input checked="" type="checkbox"/> Open	

### 5.3 Generate/Develop WSDL

Having type and Message XSDs, WSDL file development can be done in two ways:

- Using TrAX tool

Refer the document FCUBS-FD05-04-01-TrAX-Reference for more information

- Hand coding

Developer expected to have proficiency in understanding complete FLEXCUBE IS web service framework and patterns to hand code the WSDL file. Refer annexure A for sample files. User can also refer existing contract online web service files for reference/samples.

### **5.3.1 Generate WSDL using TrAX**

TrAX tool used for the creation of new module,service,operation and generation of WSDL files, which is used in deployment for WebServices

- Step – 1 - Set Release

- Step 2 - Upload XSD's:

The XSD's generated from the Open Development are uploaded in the TrAX tool so that it can be used to develop a new service.

- Step 3 - Creation of Service

For creation of new services, under Maintenance → Service → New

- Release name will be the release of FLEXCUBE for which the Service is created.
- Module name will contain the module for which the service is enabled.
- Service name is the WSDL name given to the web service created.
- Description has the details for which the service is created.

After successful creation of Service, it displays the message “Service Saved Successfully”.

The new service name can be checked in the list after successful creation.

Sl.	Release Name	Module Name	Service Name	Description
1	DUMMYRELEASE	Core	FCIMobileService	Mobile Service
2	DUMMYRELEASE	Core	FCUBACService	Accounting Service
3	DUMMYRELEASE	All	FCUBASALService	Asset Management Service
4	DUMMYRELEASE	Core	FCUBSAccAddrService	Account Address Service
5	DUMMYRELEASE	Core	FCUBSAccInService	Account Service
6	DUMMYRELEASE	Core	FCUBSAccService	Account Service
7	DUMMYRELEASE	BC	FCUBSSCService	Bills and Collections

- Step 4 -Creation of Operation

To create a new operation, under Maintenance → Operation. Click New.

- Operation name is the name given to the Operation created.
- Description has the details for which the Operation is created.
- FS request XSD is the full request message XSD file generated from Open Development tool for a function id.
- IO request XSD is the Input/output request message XSD file generated from Open Development tool for a function id.
- PK response XSD is the Primary Key response message XSD file generated from Open Development tool for a function id.
- FS response XSD is the full response message XSD file generated from Open Development tool for a function id.
- FC Action refers to the FLEXCUBE action available for the Operation. Here it is New.

- Step 5 - Generation of WSDL files

Select Generate →Config files

- Click on Query, Enter the Module Name and Service name for which the WSDL is to be generated.
- After checking the Release, module and service name, Options are enabled.
- Click on Generate All to get WSDL, IMPL, CONF files. It will ask for the location where all these files will be generated

- Ensure the message “All Files has successfully downloaded”
- Go to the location mentioned and check the WSDL file generation. In this example, the file name is “FCMobileService.wsdl”

## 5.4 Build EAR

This section explains how to build EAR file using XSDs and WSDL created

### 5.4.1 Directory Creation

- Identify & Copy GW\_WS.zip into your local machine. Unzip the file  
*This file contains factory shipped directory structure and pre-configured properties file for Gateway framework.*
- The following folder structure can be seen after unzip.

## **5.4.2 File Copy**

- Copy the WSDL generated into **GW\_WS\CONFIG\WSDL** folder.
- Copy all the relevant XSD's into **GW\_WS\CONFIG\XSD** folder.
- Copy the Java Implementation file into **GW\_WS\src\com\ofss\fcubs\gw\ws** folder

## **5.4.3 Creation of Gateway EJB property file**

This section describes the steps to create Gateway EJB property file.

Skip this section(steps 1 to 4) if Gateway EJB is already deployed in Target FLEXCUBE IS environment.

- Step 1 – Copy installer source to your local windows machine and run the FCUBSInstaller

- Step 2 – Select Oracle FLEXCUBE Gateway

- Step-3 – Select Property File

- Step-4.a – Select Oracle FLEXCUBE Gateway EJB

- Step-4.b – Select New

Specify the location in which new Property file for EJB application will be created.

Click Next

- Step-4.c – provide details

Details of the Property file for EJB.

Path location is mentioned where the specific files will be available. Here it is in local machine.

#### **5.4.4 Creation of Gateway EJB EAR file**

This section describes the steps to create the Gateway EJB EAR file

 Skip this section(steps 5 to 10) if Gateway **EJB** is already deployed in Target FLEXCUBE IS environment.

- Step-5- Click on Continue to generate Gateway EJB EAR file

- Step-6.a –Select Oracle FLEXCUBE Gateway

- Step-6.b –Select Build EAR file

- Step-7 –Select Oracle FLEXCUBE Gateway EJB

- Step-8 Provide Application build details

- Source directory: Source from which it will generate files.
- Destination directory: Location where the files will be generated.
- Application name: Name for the EJB application that is created.
- EAR file path: Location where the EAR file will be generated.
- Property file path: Location of Property file generated for EJB application.

- Step-9 – Select Next

- Step-10 – Ensure message. BUILD SUCCESSFUL

#### **5.4.5 Creation of Web Service property file**

Step-a.1) Select Oracle FLEXCUBE Gateway

Step-a.2) Select Oracle FLEXCUBE Gateway Web Services

Step-b - Select Property file

Step-c - Specify the location for property file generation

#### Step-d - Mention Gateway EJB Name and details

Application sever name needs to be mentioned along with the path where the log and debug file for the WebServices needs to be stored

#### Step-e – select continue to build EAR file for web service

#### **5.4.6 Creation of Web Service EAR file**

Step-f -Select Oracle FLEXCUBE Gateway

Step-g – Select Build EAR file.

Step-h –Select Gateway WebServices

Step-I – Select the Web service name.

#### 5.4.7 Adding New Service to the List

To add a new service to the pick list, change the Services.xml which present in the installer sources. This file can be found at "<Installer Source Area>\InstallOptions\GateWay\Services\Services.xml"

Add your new service to the existing list by using <**Service-Name**> tag.

**Example:**

<SERVICE-NAME

path="/MAIN/CORE/GATEWAY/SERVICES/">FCMobileService</SERVICE-NAME>

```

1 <?xml version="1.0" encoding="UTF-8"?>
2 <SERVICES>
3   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSAccService</SERVICE-NAME>
4   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSCustomerService</SERVICE-NAME>
5   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSMessagingService</SERVICE-NAME>
6   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSMSService</SERVICE-NAME>
7   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSSTService</SERVICE-NAME>
8   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSTDService</SERVICE-NAME>
9   <SERVICE-NAME path="/MAIN/SE/Gateway/Services/">FCUBSSecuritiesService</SERVICE-NAME>
10  <SERVICE-NAME path="/MAIN/AC/Gateway/Services/">FCUBSTxnService</SERVICE-NAME>
11 </SERVICES>

```

Step-j – Provide path details

- Source directory: Source from which it will generate files.

- Destination directory: Location where the files will be generated.
- EAR file path: Location where the EAR file will be generated.
- Property file path: Location of Property file that available

Step-k – Ensure build successful and EAR file generated

## **5.5 Deploying of EAR file**

This section explains the steps to deploy the Web service EAR files on Oracle Weblogic Application server 11g

### **5.5.1 Deploying of Gateway EJB EAR file**

This section discusses the deployment steps of Gateway EJB file. Skip this section if the Gateway EJB is already deployed in Target FLEXCUBE environment.

Step-1 – Login to Web logic application server

## Step-2 – Select Deployments and Install

A screenshot of the Oracle WebLogic Server Administration Console showing the "Summary of Deployments" page for the "piyush\_domain". The title bar reads "Summary of Deployments - piyush\_domain - WLS Console - Windows Internet Explorer". The main content area includes a "Change Center" sidebar with options like "View changes and restarts" and a "Domain Structure" tree showing "piyush\_domain" with nodes for Environment, Deployments, Services, Security Realms, Interoperability, and Diagnostics. Below the sidebar is a "How do..." list with items such as "Install an Enterprise application", "Configure an Enterprise application", and "Monitor the modules of an Enterprise application". The main panel displays a "Summary of Deployments" table with columns for Control, Name, State, Health, Type, and Deployment Order. The table is currently empty, showing the message "There are no items to display". Navigation links for "Showing 0 to 0 of 0" and "Previous | Next" are visible at the bottom of the table. The status bar at the bottom of the browser window shows "Local intranet" and "100%".

## Step-3 –Select Upload your file

#### Step-4 – Select the path where Gateway EJB EAR generated

#### Step-5 – Ensure upload success and select Next

### Step-6 – Select Install the deployment as an application

### Step-7 – Select the appropriate Server where application need to be deployed

### Step-8 – Select Next

### Step-9 - Select Finish

### Step-10 – Select Save

### Step-11 – Ensure the GW\_EJB application is Active and health OK

The screenshot shows the Oracle WebLogic Server Administration Console. The main window is titled 'Summary of Deployments - piyush\_domain - WLS Console - Windows Internet Explorer'. The URL is [http://ddc0039:7001/console/console.portal?\\_nfpb=true&\\_pageLabel=AppDeploymentsControlPage](http://ddc0039:7001/console/console.portal?_nfpb=true&_pageLabel=AppDeploymentsControlPage). The left sidebar has a 'Domain Structure' tree with nodes like 'piyush\_domain', 'Environment', 'Deployments' (which is expanded), 'Services', 'Security Realms', 'Interoperability', and 'Diagnostics'. A 'How do I...' section lists tasks such as installing an Enterprise application, configuring it, updating/redeploying, starting/stopping, monitoring modules, deploying EJB modules, and installing a Web application. A 'System Status' section shows 'Health of Running Servers' with 0 Failed, 0 Critical, and 0 Overloaded. The main content area is titled 'Summary of Deployments' under 'Control' tab. It shows a table of deployed applications:

Name	State	Health	Type	Deployment Order
GW_EJB	Active	OK	Enterprise Application	100

## **5.5.2 Deploying of Web Service EAR file**

This section describes the steps to deploy the Web service EAR file.

Step-a – Select upload your file and pick the web service EAR file

The screenshot shows the 'Install Application Assistant' page of the Oracle WebLogic Server Administration Console. The URL is [http://ddc0039:7001/console/console.portal?appApplicationInstallPortlet\\_actionOverride=/com/bea/console/actions/app/install/selectUploadApp](http://ddc0039:7001/console/console.portal?appApplicationInstallPortlet_actionOverride=/com/bea/console/actions/app/install/selectUploadApp). The left sidebar is identical to the previous screenshot. The main content area is titled 'Install Application Assistant' and contains the following steps:

- Upload a Deployment to the admin server**: A note says to click 'Browse' to select an application or module. The 'Deployment Archive' field contains the path `D:\installer113\GW_WS\src\clear\FCMobileService\FCMobileService`.
- Upload a deployment plan (this step is optional)**: A note says a deployment plan is a configuration which can supplement descriptors included in the deployment archive. The 'Deployment Plan Archive' field is empty.

Navigation buttons at the bottom include 'Back', 'Next', 'Finish', and 'Cancel'.

## Step-b – Select Install the deployment as an application

## Step-c – Select the Server appropriately

## Step-d – Select Next

## Step-e – Select Finish

## Step-f – Ensure successful messages shown

Step-g – Save the deployment and ensure it started OK

## 5.6 Testing the Web Service

This section describes the steps to test the web service in Web logic application server.

Step-1 – expand Web service and select Web service that need to be tested

**Summary of Deployments - piyush\_domain - WLS Console - Windows Internet Explorer**

File Edit View Favorites Tools Help

ORACLE WebLogic Server® Administration Console

Change Center  
View changes and restarts  
Configuration editing is enabled. Future changes will automatically be activated as you modify, add or delete items in this domain.

  Diagnostics

How do I...  
• Install an Enterprise application  
• Configure an Enterprise application  
• Update (redploy) an Enterprise application  
• Start and stop a deployed Enterprise application  
• Monitor the modules of an Enterprise application  
• Deploy EJB modules  
• Install a Web application

System Status  
Health of Running Servers  
  Failed (0)  
  Critical (0)

Summary of Deployments  
Control Monitoring

This page displays a list of Java EE applications and stand-alone application modules that have been installed to this domain. Installed applications and modules can be started, stopped, updated (redploy), or deleted from the domain by first selecting the application name and using the controls on this page.

To install a new application or module for deployment to targets in this domain, click the Install button.

Customize this table

Name	State	Health	Type	Deployment Order
FCMobileService	Active	OK	Enterprise Application	100
Modules				
FCMobileService			Web Application	
EJBs				
None to display				
Web Services				
FCMobileService			Web Service	
GW_EJB	Active	OK	Enterprise Application	100

## Step-2 – Select Testing

**Settings for FCMobileService - piyush\_domain - WLS Console - Windows Internet Explorer**

File Edit View Favorites Tools Help

ORACLE WebLogic Server® Administration Console

Change Center  
View changes and restarts  
Configuration editing is enabled. Future changes will automatically be activated as you modify, add or delete items in this domain.

How do I...  
• Install a Web service  
• Start and stop a Web service  
• Attach a WS-Policy file to a Web service  
• Configure Web services  
• View the SOAP message handlers of a Web service  
• View the WSDL of a Web service  
• Test a Web service  
• Monitor Web services

System Status  
Health of Running Servers  
  Failed (0)  
  Critical (0)

Settings for FCMobileService  
Overview Configuration Security Testing Monitoring

Use this page to test that your Web service is deployed and that it is working as expected. In the table, expand the name of the Web service to see a list of its test points. Click ?WSDL to view its dynamic WSDL in a separate browser window. Click Test Client to invoke a new browser window where you can test each operation individually by entering parameter values, executing the operation, and viewing the results.

Deployment Tests

Name	Test Point	Comments
FCMobileService		Test points for this WebService module.

## Step-3 – Select Test Client

The screenshot shows the Oracle WebLogic Server Administration Console. The URL is [http://dbd0009:7001/console/console.portal?\\_pageLabel=WebServiceModuleTesting&\\_nfp=true&WebServiceTestingPortlet=&parentNode=ROOTCHILDNODE1](http://dbd0009:7001/console/console.portal?_pageLabel=WebServiceModuleTesting&_nfp=true&WebServiceTestingPortlet=&parentNode=ROOTCHILDNODE1). The 'Testing' tab is selected. The 'Deployment Tests' section lists three entries:

Name	Test Point	Comments
FCMobileService		Test points for this WebService module.
?WSDL	?WSDL	WSDL page on server Managed_Server
?Test client	Test client	Test client on server Managed_Server

Step-4 – Populate the request XML message with business data and select Operation. Check the response XML thrown.

The screenshot shows the WebLogic Test Client interface. The URL is [http://10.104.46.62:7001/wls\\_utc/?wsdlUrl=http%3A%2F%2F10.104.46.62%3A7002%2FFCMobileService%2FFCMobileService%3FWSDL](http://10.104.46.62:7001/wls_utc/?wsdlUrl=http%3A%2F%2F10.104.46.62%3A7002%2FFCMobileService%2FFCMobileService%3FWSDL). The 'Operations' section shows two operations:

- CreateMobileFS**: The XML message is displayed in the message log:
 

```
<env:Envelope xmlns:env="http://schemas.xmlsoap.org/soap/envelope">
<soap:Body>
  <CORRELID>string</CORRELID>
  <USERID>string</USERID>
  <BRANCH>string</BRANCH>
  <SOURCE>string</SOURCE>
  <SOURCE_OPERATION>string</SOURCE_OPERATION>
  <OPERATION>string</OPERATION>
  <SOURCE_OPERATION>string</SOURCE_OPERATION>
  <SOURCE_USERID>string</SOURCE_USERID>
</soap:Body>
</env:Envelope>
```
- CreateMobileIO**: The XML message is displayed in the message log:
 

```
<env:Envelope xmlns:env="http://schemas.xmlsoap.org/soap/envelope">
<soap:Body>
  <CREATEMOBILE_IOPK_REQ xmlns="http://fcubs.ofss.com/service/FCMobileService">
    <CUBS_HEADER>
      <SOURCE>string</SOURCE>
      <UBSCOMP>FCUBS</UBSCOMP>
      <MSGID>string</MSGID>
      <CORRELID>string</CORRELID>
      <USERID>string</USERID>
    </CUBS_HEADER>
  </CREATEMOBILE_IOPK_REQ>
</soap:Body>
</env:Envelope>
```

Also Copy & paste the WSDL Url onto a browser to check whether the Web service is running.

WSDL Url: [http://<IP address>:<Port>/<Service\\_Name>/<Service\\_Name>?WSDL](http://<IP address>:<Port>/<Service_Name>/<Service_Name>?WSDL)

**Example:** <http://10.184.46.62:7002/FCMobileService/FCMobileService?WSDL>

On pasting the WSDL URL, the WSDL should be displayed in the browser, which confirms the status of Web service to be running.

The screenshot shows the WSDL XML code for the FCMobileService. The XML is well-formatted with color-coded syntax highlighting. It includes definitions for types, messages, operations, and port types, all based on the FCMobileService schema located at <http://10.184.46.62:7002/FCMobileService/FCMobileService?WSDL>. The XML defines several message types like CreateMobileFS, CreateMobileIResponse, and CreateMobileIO, along with their corresponding request and response parts. It also defines operations for these messages and port types for each operation. The entire WSDL document is contained within a single large XML tag.
