# PeopleSoft HCM 9.2: PeopleSoft Global Payroll for Switzerland

---

October 2025

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

# Preface

---

## Understanding the PeopleSoft Online Help and PeopleBooks

The PeopleSoft Online Help is a website that enables you to view all help content for PeopleSoft applications and PeopleTools. The help provides standard navigation and full-text searching, as well as context-sensitive online help for PeopleSoft users.

### Hosted PeopleSoft Online Help

You can access the hosted PeopleSoft Online Help on the [Oracle Help Center](#). The hosted PeopleSoft Online Help is updated on a regular schedule, ensuring that you have access to the most current documentation. This reduces the need to view separate documentation posts for application maintenance on My Oracle Support. The hosted PeopleSoft Online Help is available in English only.

To configure the context-sensitive help for your PeopleSoft applications to use the Oracle Help Center, see [Configuring Context-Sensitive Help Using the Hosted Online Help Website](#).

### Locally Installed PeopleSoft Online Help

If you're setting up an on-premises PeopleSoft environment, and your organization has firewall restrictions that prevent you from using the hosted PeopleSoft Online Help, you can install the online help locally. Installable PeopleSoft Online Help is made available with selected PeopleSoft Update Images and with PeopleTools releases for on-premises installations, through the [Oracle Software Delivery Cloud](#).

Your installation documentation includes a chapter with instructions for how to install the online help for your business environment, and the documentation zip file may contain a README.txt file with additional installation instructions. See *PeopleSoft 9.2 Application Installation* for your database platform, "Installing PeopleSoft Online Help."

To configure the context-sensitive help for your PeopleSoft applications to use a locally installed online help website, see [Configuring Context-Sensitive Help Using a Locally Installed Online Help Website](#).

### Downloadable PeopleBook PDF Files

You can access downloadable PDF versions of the help content in the traditional PeopleBook format on the [Oracle Help Center](#). The content in the PeopleBook PDFs is the same as the content in the PeopleSoft Online Help, but it has a different structure and it does not include the interactive navigation features that are available in the online help.

### Common Help Documentation

Common help documentation contains information that applies to multiple applications. The two main types of common help are:

- Application Fundamentals

- Using PeopleSoft Applications

Most product families provide a set of application fundamentals help topics that discuss essential information about the setup and design of your system. This information applies to many or all applications in the PeopleSoft product family. Whether you are implementing a single application, some combination of applications within the product family, or the entire product family, you should be familiar with the contents of the appropriate application fundamentals help. They provide the starting points for fundamental implementation tasks.

In addition, the *PeopleTools: Applications User's Guide* introduces you to the various elements of the PeopleSoft Pure Internet Architecture. It also explains how to use the navigational hierarchy, components, and pages to perform basic functions as you navigate through the system. While your application or implementation may differ, the topics in this user's guide provide general information about using PeopleSoft applications.

## Field and Control Definitions

PeopleSoft documentation includes definitions for most fields and controls that appear on application pages. These definitions describe how to use a field or control, where populated values come from, the effects of selecting certain values, and so on. If a field or control is not defined, then it either requires no additional explanation or is documented in a common elements section earlier in the documentation. For example, the Date field rarely requires additional explanation and may not be defined in the documentation for some pages.

## Typographical Conventions

The following table describes the typographical conventions that are used in the online help.

| <b><i>Typographical Convention</i></b> | <b><i>Description</i></b>                                                                                                                                                                                                                   |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Key+Key</b>                         | Indicates a key combination action. For example, a plus sign (+) between keys means that you must hold down the first key while you press the second key. For <b>Alt+W</b> , hold down the <b>Alt</b> key while you press the <b>W</b> key. |
| <b>. . .</b> (ellipses)                | Indicate that the preceding item or series can be repeated any number of times in PeopleCode syntax.                                                                                                                                        |
| <b>{ }</b> (curly braces)              | Indicate a choice between two options in PeopleCode syntax. Options are separated by a pipe ( ).                                                                                                                                            |
| <b>[ ]</b> (square brackets)           | Indicate optional items in PeopleCode syntax.                                                                                                                                                                                               |
| <b>&amp;</b> (ampersand)               | When placed before a parameter in PeopleCode syntax, an ampersand indicates that the parameter is an already instantiated object.<br><br>Ampersands also precede all PeopleCode variables.                                                  |

| <b><i>Typographical Convention</i></b> | <b><i>Description</i></b>                                                                                                                                                                                                          |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ⇒                                      | This continuation character has been inserted at the end of a line of code that has been wrapped at the page margin. The code should be viewed or entered as a single, continuous line of code without the continuation character. |

## ISO Country and Currency Codes

PeopleSoft Online Help topics use International Organization for Standardization (ISO) country and currency codes to identify country-specific information and monetary amounts.

ISO country codes may appear as country identifiers, and ISO currency codes may appear as currency identifiers in your PeopleSoft documentation. Reference to an ISO country code in your documentation does not imply that your application includes every ISO country code. The following example is a country-specific heading: "(FRA) Hiring an Employee."

The PeopleSoft Currency Code table (CURRENCY\_CD\_TBL) contains sample currency code data. The Currency Code table is based on ISO Standard 4217, "Codes for the representation of currencies," and also relies on ISO country codes in the Country table (COUNTRY\_TBL). The navigation to the pages where you maintain currency code and country information depends on which PeopleSoft applications you are using. To access the pages for maintaining the Currency Code and Country tables, consult the online help for your applications for more information.

## Region and Industry Identifiers

Information that applies only to a specific region or industry is preceded by a standard identifier in parentheses. This identifier typically appears at the beginning of a section heading, but it may also appear at the beginning of a note or other text.

Example of a region-specific heading: "(Latin America) Setting Up Depreciation"

### Region Identifiers

Regions are identified by the region name. The following region identifiers may appear in the PeopleSoft Online Help:

- Asia Pacific
- Europe
- Latin America
- North America

### Industry Identifiers

Industries are identified by the industry name or by an abbreviation for that industry. The following industry identifiers may appear in the PeopleSoft Online Help:

- USF (U.S. Federal)

- E&G (Education and Government)

## Translations and Embedded Help

PeopleSoft 9.2 software applications include translated embedded help. With the 9.2 release, PeopleSoft aligns with the other Oracle applications by focusing our translation efforts on embedded help. We are not planning to translate our traditional online help and PeopleBooks documentation. Instead we offer very direct translated help at crucial spots within our application through our embedded help widgets. Additionally, we have a one-to-one mapping of application and help translations, meaning that the software and embedded help translation footprint is identical—something we were never able to accomplish in the past.

---

## Using and Managing the PeopleSoft Online Help

Select About This Help in the left navigation panel on any page in the PeopleSoft Online Help to see information on the following topics:

- Using the PeopleSoft Online Help.
- Managing hosted Online Help.
- Managing locally installed PeopleSoft Online Help.

## Chapter 1

# Getting Started with Global Payroll for Switzerland

---

## Global Payroll for Switzerland Overview

Switzerland payroll is Swissdec certified. This guarantees that this payroll covers all the features described in detail in the Swissdec payroll guidelines (<http://www.swissdec.ch/home.htm>). Switzerland payroll provides further features on top of the Swissdec certified ones. The key Global Payroll for Switzerland features include:

- Tax Statement (Lohnausweis / Certificat de salaire) – Swissdec certified
- Social Insurances – Swissdec certified
- Source Tax – Swissdec certified
- Family Allowances (FAK\_CAF)
- Reports to satisfy requirements of the Swiss Federal Office of Statistic (BFS\_OFS)
- EO functionality
- Payment Transfers
- Self-Service
- BVG\_LPP Interface – beyond Swissdec
- Multi Contract Support
- Audit legal reporting

### **Tax Statement (Lohnausweis / Certificat de salaire) – Swissdec certified**

Pages to capture data required by mandated Swiss tax statement that provides a report process to create the tax statement file in XML format for use with ELM (einheitliches Lohnmeldeverfahren).

### **Social Insurances – Swissdec certified**

- Overrides on person level for the various eligibility status, yearly calculation and AHV\_AVS minimum. Without overrides calculation as of company defaults apply.
- Support for AHV\_AVS, ALV\_AC and UVG\_LAA statutory insurance schemes.
- Support impromptu AHV\_AVS entries and terminations - E(M)A with creation of Proof of registration.

- Support for BVG\_LPP, KTG\_AMC and UVGZ\_LAAC company insurance schemes.
- eGovernment functionality that enables reporting for all social insurances from a single location, simplifying the process.

## Source Tax –Swissdec certified

The payroll supports source tax calculation and reporting for all 26 cantons and supports the monthly reporting via Swissdec distributor.

Source Tax Data page provides:

- The ability to select the tariff from a list of valid values for the corresponding canton.
- The ability to specify a worker's exemption from the tax statement or from the source tax on the source tax page.
- Automatic calculation of tariffs according to civil status, number of children, canton/country of residence.
- Assign fixed rates, fixed deductions and override estimated yearly income.
- The Postal Code table used to validate the municipality code of the employee's home address (resident of Switzerland) or work location (nonresident).
- Maintain all further tax details required since 2014 (child data, spouse data, reason for tariff changes, etc. (see Swissdec guidelines)

Calculation and reporting

Annualized calculation for cantons FR, GE, TI and VD; monthly calculation for all other cantons.

## Family Allowances (FAK\_CAF)

The payroll supports child allowances calculation and reporting for all 26 cantons. Uses a unique layout for monthly and yearly reporting that is accepted by all cantons.

Fields on the Family Allowance page provide:

- The ability to indicate whether a child is living outside of Switzerland in a country that is not part of the EU in order to determine the child allowance.
- The ability to enter the factor of the birth allowance to be applied to each child in the case of multiple births.
- The ability to enter student status with forced entry of expiration date.

FAK\_CAF Calculation and Reporting.

- Calculate GE allowances to add to the source tax base and trigger the remark in tax statement.
- Support the special rules for families with three or more children.
- Support all other canton specific rules.
- Support XML based reporting for Ausgleichskasse Banken (monthly reporting).

- Support XML based reporting for the central register (monthly), eAHV format.
- Support XML based yearly reporting – Swissdec certified.

### **Reports to satisfy requirements of the Swiss Federal Office of Statistic (BFS\_OFS)**

- BESTA Statistic (Beschaeftigungsstatistik) – beyond Swissdec.
- Salary Structure Analysis (Lohnstrukturhebung) – Swissdec certified.

With Swissdec 5.0, user is executing the BFS\_OFS on a monthly control id.

### **EO functionality**

EO includes an interface file to send electronically to the AHV\_AVS provider. EO payments are calculated in the current month, which avoids many retroactive calculations and accommodates the year change. A page is provided that enables correction of calculation data for closed periods.

### **Payment Transfers**

ISO 20022 Credit:

- Type 3 = domestic (EUR/CHF) (incl. Garnishments and ext. Transfers)
- Type 4 = domestic (<> EUR/CHF)
- Type 5 = foreign EUR (=SEPA)
- Type 6 = foreign (<> EUR)

### **Self-Service**

Self-service applications for managing overtime requests that enable you to carry out common tasks through a user-friendly browser page.

### **BVG\_LPP Interface – beyond Swissdec**

Integration to the AG Büro 70 product PEKA® to make it easier for payroll managers to manage pensions. PEKA® supports pension calculations such as employer/employee contributions, payments, and adjustments. PeopleSoft reports pension gross salaries to PEKA®, which calculates the contributions and reports them back so that they can be deducted in payroll.

### **Multi Contract Support**

Global Payroll for Switzerland supports both payroll calculation and legal reporting requirements for employees with multiple contracts by using standard employee record functionality in PeopleSoft Human Resources. No matter how many different contracts an employee has, payroll accumulates earnings and deductions of the various contracts into the only one legal record per employee in the same multi-contract company (as the employee must be presented to the official government bodies as a unified individual); however, an employee can have as many additional records as he or she has jobs.

## Audit legal reporting

Global Payroll for Switzerland supports a tool to audit the XML file sent to the authorities. This compares numbers of various reports, e.g. - AHV\_AVS wage in AHV\_AVS report with the wage in FAK\_CAF report (synchronous) - flow from Gross to net (integrity) - totals with XML details in XML file (extern integrity) In case of discrepancies you can drill down to the employee level to identify the cause of those discrepancies. This guarantees the consistency of data shared with authorities and helps to prepare the Audits done by authorities.

## Global Payroll for Switzerland Business Processes

Global Payroll for Switzerland supports these business processes:

- Family allowance management.
- Familienausgleichskasse (FAK) contribution calculation.
- Absence management.
- Tariff management.
- Maternity leave.
- Payslip processing.
- Overtime self-service.
- Social insurance management.
- Source tax calculations.
- Erwerbsersatzordnung für Dienstleistende in Armee und Zivilschutz (EO) payments.
- Pensionskasse and BVG management.
- Banking.
- Tax statement (Lohnausweis) generation.

This PeopleBook discusses these processes in the business process chapters.

---

## Global Payroll for Switzerland Integrations

Global Payroll for Switzerland integrates with these applications through the core Global Payroll application:

- PeopleSoft HR.

- PeopleSoft Time and Labor.

Integration considerations are discussed in the *PeopleSoft Global Payroll PeopleBook*.

## Common Abbreviations

Within this PeopleBook abbreviations normally appear in the German language. However it is common in Switzerland to use a combination of German and French abbreviations. As such, here is an overview of both:

| <b><i>German Abbreviation</i></b> | <b><i>French Abbreviation</i></b> | <b><i>Description</i></b>                                                             |
|-----------------------------------|-----------------------------------|---------------------------------------------------------------------------------------|
| AHV                               | AVS                               | Old age and bereaved insurance, invalidity insurance, salary compensation regulation. |
| ALV                               | AC                                | Unemployment insurance.                                                               |
| BFS                               | OFS                               | Federal office of social insurance.                                                   |
| BESTA                             | STATEM                            | Quarterly report for statistic office.                                                |
| BU                                | PA                                | Occupational injury insurance.                                                        |
| BVG                               | LPP                               | Pension fund law.                                                                     |
| DTA                               | DTA                               | Data medium exchange with banks.                                                      |
| ELM                               | PUCS                              | Standardized wage reporting procedure.                                                |
| EO                                | IM                                | Salary reimbursement regularity; salary allocation at civil and military service.     |

| <b>German Abbreviation</b> | <b>French Abbreviation</b> | <b>Description</b>                                      |
|----------------------------|----------------------------|---------------------------------------------------------|
| EZAG                       | OPAE                       | Collective order service, out payment via post account. |
| FAK                        | CAF                        | Family allocation fund.                                 |
| GAV                        | CCT                        | Union contract.                                         |
| IV                         | AI                         | Disability insurance.                                   |
| KTG                        | AMC                        | Sickness daily allowance.                               |
| NBU                        | NPA                        | Non-Occupational injury insurance.                      |
| LSE                        | ESS                        | Salary structure analysis.                              |
| OR                         | CO                         | Obligation right.                                       |
| PK                         | LPP                        | Pension fund.                                           |
| QSt                        | IS                         | Source tax.                                             |
| SECO                       | SECO                       | Federal office for economics.                           |
| UV                         | LAA                        | Accident insurance.                                     |
| UVGZ                       | LAAC                       | Additional accident insurance.                          |

### Internal Abbreviations (English only)

Here are a few additional abbreviations, which have an English only translation:

- EE = Employee
- ER = Employer
- MC = Multi Contract

---

## Global Payroll for Switzerland Business Processes

Global Payroll for Switzerland supports the following business processes:

- Family allowance management.

Global Payroll for Switzerland enables you to define and manage data for an employee's dependents and family as well as process available family allowances for each payee.

- Familienausgleichskasse (FAK) contribution calculation.

Global Payroll for Switzerland enables you to manage FAK contribution percentages, calculate deductions, and manage the relationship with the FAK.

- Absence management.

Global Payroll for Switzerland enables you to create the absence rules used by the core Global Payroll system. You can define work schedules and assign a schedule to each payee, define holidays, entitlements, and take elements. You can create entitlement plans and assign them to payees.

- Tariff management.

A tariff is a contract between employees' unions and employers' associations that defines labor agreements on issues such as standard working hours, income, and vacation. Global Payroll for Switzerland delivers tariffs in the system as Translate Table values.

- Maternity leave.

In Global Payroll for Switzerland, you enter maternity leave data on a single page. The page generates absence take elements that work with the core application's absence process to correctly process maternity leave during a payroll run.

The system determines the amount of paid maternity leave to which an employee is entitled based on years of service and the canton of residence. After the birth of the child, it recalculates the entitlement based on the Swiss legal requirement of eight weeks' leave after the child's actual birth.

- Payslip processing.

Global Payroll for Switzerland enables you to generate payslips. You can also print a message on the payslip of an individual payee or on payslips belonging to designated pay groups, locations, or departments.

- Overtime self-service.

Global Payroll for Switzerland includes a self-service application for managing employee overtime requests, which enables you to carry out common tasks through a user-friendly browser page. Overtime self-service options differ for employees, managers, and Human Resources administrators.

- Social insurance management.

Contributory membership in national social insurance funds (such as AHV, IV, and EO) is mandatory for employers. You deduct social insurance contributions for those domestic and foreign employees with mandatory insurance coverage and transfer them to compensation funds in accordance with statutory requirements.

- Source tax calculations.

Switzerland is a confederation of 26 cantons with approximately 3,000 municipalities. Accordingly, it has an extremely complex taxation system, with taxes imposed at federal, cantonal, and communal levels. Tax rates can vary from one canton to another.

- Erwerbsersatzordnung für Dienstleistende in Armee und Zivilschutz (EO) payments.

EO payments refer to the payment of salary during military and civilian service. The EO is an ordinance on military pay supplements and governs the earnings of military and civil defense personnel. According to the EO's provisions, people on active military duty (including members of the Women's Armed Forces and the Red Cross) or in civilian service are entitled to receive earning compensation for every paid or accredited day of service.

- Pensionskasse and BVG management.

Pensionskasse is the pension fund for Swiss employees. Global Payroll for Switzerland handles Pensionskasse with calculation and feedback from the provider. The system also enables you to make BVG calculations either internally or externally by interfacing with Swissdec .

- Banking.

Global Payroll for Switzerland enables you to set up Swiss banking, set up defaults for source banks, set up banking defaults for payees, and run local country bank processing.

- Tax Statement (Lohnauweis) generation.

Global Payroll for Switzerland provides complete tax statement functionality, including expatriate handling and certificate on demand. You can exclude individuals from tax statements, close tax statements, create tax statement overrides, and view individual tax statements online.

---

## Archiving Data for Global Payroll for Switzerland

PeopleSoft Global Payroll for Switzerland generates a large amount of result data which you may need to maintain for auditing or regulatory purposes, and which should periodically be archived. To facilitate this requirement, PeopleSoft PeopleTools delivers an archiving tool called the Data Archive Manager. To aid in archiving your data, PeopleSoft Global Payroll for Switzerland delivers a predefined archive object (GPCH\_RSLT\_ARCHIVE) and an archive template (GPCHRSLT) created using the Data Archive Manager. The archive template uses queries to select and store data by calendar group ID from the calculation, banking, general ledger, and other post processing tables.

---

**Note:** Please use extreme caution when making changes to delivered archive objects, queries, or templates. Any modifications can result in the loss of important data.

---

## Delivered Elements

Global Payroll defines each business process for Switzerland in terms of delivered elements and rules. Some of these elements and rules are specifically designed to meet legal requirements, whereas others support common or customary payroll practices.

This section discusses:

- Delivered element creation.
- Element ownership and maintenance.

## Delivered Element Creation

All of the elements and rules delivered as part of your country extension were created using the core application — the same application that you will use to create additional elements or rules, and to configure some of the elements delivered as part of your Global Payroll system. Because of the tools that you need to redefine or create new payroll elements are fully documented in the core application PeopleBook, this section does not repeat this information here. Instead, this section reviews the relationship between the core application (which contains the tools that you need to define your own elements and rules) and the country extensions (which contain country-specific rules and elements that are predefined in the system).

The core application has the following characteristics:

- It consists of a payroll rules engine—a flexible tool that enables users to define the rules and elements of their payroll system and execute payroll and absence calculations.

Global Payroll does not embed payroll-specific logic or computations in application code. Instead, it specifies all business application logic, such as earnings, deductions, absences, and accumulators, in terms of payroll rules and elements. Global Payroll enables the user to enter and maintain payroll rules through a set of pages and offers a comprehensive set of features that enable users to work in their preferred language or currency.

- It provides a payroll processing framework—a flexible way to define and execute payroll and absence processing flows, such as calendars, run types, pay periods, and process lists.

Country extensions have the following characteristics:

- They are built using the core application.
- They consist of statutory and customary objects (country-specific payroll rules, elements, payroll processes, reports, pages, and self-service applications).

## Element Ownership and Maintenance

The delivered elements and rules of you Global Payroll country extension can be classified based on whether they are owned and maintained by the customer or by the PeopleSoft system. Some elements and rules are maintained exclusively by PeopleSoft and cannot be modified or reconfigured, whereas others can be configured to meet requirements that are unique to your organization.

### Element Ownership in Global Payroll

Global Payroll has the following five categories of element ownership:

| <b><i>Term</i></b>             | <b><i>Definition</i></b>                                             |
|--------------------------------|----------------------------------------------------------------------|
| <b>PS Delivered/Maintained</b> | Elements delivered and maintained on an ongoing basis by PeopleSoft. |

| <b>Term</b>                             | <b>Definition</b>                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PS Delivered/Not Maintained</b>      | Elements delivered by PeopleSoft that the customer must maintain. This category consists primarily of either customary (non-statutory) rules or statutory elements that customers may want to define according to a different interpretation of the rules. Although PeopleSoft may occasionally update elements that are defined as PS Delivered/Not Maintained, you are not required to apply these updates. |
| <b>Customer Maintained</b>              | Elements created and maintained by your organization. PeopleSoft does not deliver rules that are defined as Customer Maintained.                                                                                                                                                                                                                                                                              |
| <b>PS Delivered / Customer Modified</b> | Elements that were originally PS Delivered/Maintained elements, but which the customer has decided to control (this change is irreversible).                                                                                                                                                                                                                                                                  |
| <b>PS Delivered / Maintained/Secure</b> | Delivered elements that the customer can never modify or control.                                                                                                                                                                                                                                                                                                                                             |

## Related Links

“Defining Element Names” (PeopleSoft Global Payroll)

---

## Element Naming Conventions

Understanding the naming convention developed for PeopleSoft-delivered elements can help you determine how an element is used, the element type, and even the functional area it serves. Depending on whether the element is a primary or supporting element, or a component of a primary element, one of the following naming conventions applies:

- Primary and supporting elements.
- Component names (suffixes).

This section also discusses:

- Functional area codes for Switzerland.
- Element type codes (PIN\_TYPE).
- Suffixes for Switzerland.
- Industry and regions feature.

## Primary and Supporting Elements

Global Payroll for Switzerland uses the naming convention CH FF NAME for all elements. This table explains the components of the naming convention:

| <b>Term</b> | <b>Definition</b>               |
|-------------|---------------------------------|
| <b>CH</b>   | Country.                        |
| <b>FF</b>   | Functional area code.           |
| <b>NAME</b> | The description of the element. |

For example, in the CH\_TX\_CANTON, CH represents the country (Switzerland), TX represents the functional area (taxation), and CANTON stands for canton.

## Component Names (Suffixes)

When you create an earning or deduction element in Global Payroll, you must define the components that make up the element, such as base, rate, unit, and percentage. The system automatically generates the components and accumulators for the element based on the calculation rule or accumulator periods. The system also names the components and accumulators by appending a suffix to the element's name.

For example, you define the earning element named EARN1 with the calculation rule  $EARN1 = \text{rate} \times \text{unit}$ . The system automatically creates two additional elements for the components in the calculation rule: a rate element called EARN1\_RATE and a unit element called EARN1\_UNIT.

In Global Payroll for Switzerland, all suffixes fall into one of the following types:

- Separator.
- Earnings/deductions component suffixes.
- Earnings/deductions accumulator suffixes.
- Deduction arrears component suffixes.

## Element Type Codes (PIN\_TYPE)

The following table contains codes for all the element types. Because not all element types are delivered for Switzerland, not all of these codes appear in the names of Swiss elements.

| <b>Element Type Code</b> | <b>Description</b>      |
|--------------------------|-------------------------|
| AE                       | Absence Entitlement.    |
| AT                       | Absence Take.           |
| AC                       | Accumulator.            |
| AR                       | Array.                  |
| AA                       | Auto Assigned.          |
| BR                       | Bracket.                |
| CT                       | Count.                  |
| DT                       | Date.                   |
| DD                       | Deduction.              |
| DR                       | Duration.               |
| ER                       | Earning.                |
| EG                       | Element Group.          |
| EM                       | Error Message.          |
| FC                       | Fictitious Calculation. |
| FM                       | Formula.                |
| GC                       | Generation Control.     |

| <b><i>Element Type Code</i></b> | <b><i>Description</i></b> |
|---------------------------------|---------------------------|
| HC                              | Historical Rule.          |
| PP                              | Previous Period Rule.     |
| PR                              | Process.                  |
| PO                              | Proration Rule.           |
| RC                              | Rate Code.                |
| RR                              | Rounding Rule.            |
| SE                              | Section.                  |
| SY                              | System Element.           |
| VR                              | Variable.                 |

## Abbreviations for Swiss Domains

Global Payroll for Switzerland uses abbreviations of Swissdec terminology (where Swissdec covers) for the managed domains.

| <b><i>Provider Type</i></b> | <b><i>ENG</i></b> | <b><i>FRA</i></b> | <b><i>GER</i></b> | <b><i>ITA</i></b> |
|-----------------------------|-------------------|-------------------|-------------------|-------------------|
| 0                           | Identify          | Identifier        | Identifizieren    | Identifier        |
| 1                           | Others            | Autres            | Andere            | Altri             |
| 2                           | UVG-LAA           | LAA               | UVG               | LAINF             |

## Industry and Regions Feature

Global Payroll for Switzerland does not use the industry and regions feature.

---

## Payment Frequencies

This section discusses:

- Frequencies and payout periods.
- Annual, monthly, and hourly payment rules.

### Frequencies and Payout Periods

The Global Payroll for Switzerland application provides calculation processes for employees that are paid annually, monthly, weekly, daily and hourly. The system, however, only supports payout periods on a monthly and weekly frequency.

The system supports hourly, daily, monthly, and annual payment rules for the monthly pay frequency and weekly payment rules for the weekly pay frequency. By default the status is taken from pay frequency on the Job record.

The statuses include:

- D = Daily

- H = Hourly
- W = Weekly.

You can override these statuses in the customer exit CH\_00\_CHOURLY (called in formula CH\_00\_SYS\_RES).

## Annual, Monthly, and Hourly Payment Rules

Most common payment methods use the hourly and monthly payment rule with a monthly pay frequency. Although the proration rules for child allowances expired in 2009, there is no difference regarding the legal calculations between a monthly and an hourly paid employee.

However, for gross calculations, the automated creation of compensation for vacation and holiday is controlled by the pay frequency status and happens only for employees paid on an hourly basis. Annual payments either get assigned on the job and compensation levels and then automatically the appropriate monthly rate gets calculated and handled in the payroll the same way as a monthly payment. In addition, you can designate the employee as a person who receives yearly payments, where the payout happens only in a few dedicated months. In this case the limits for the social insurance are immediately taken as yearly limits and not accumulated month by month.

See Swissdec, Richtlinien der Lohndatenverarbeitung, chapter 2.12, Modul Unperiodische Zahlungen

## Daily Payment Rules

There is a special treatment for employees paid on a daily basis in these domains:

- Unemployment, accident insurance (limits).
- Source tax (percent per day).
- Additional insurances (upper and lower limits).

These calculations apply for employees being paid on a daily basis based on reported working days:

- Limits for ALV-AC and UVG-LAA

Limit = Reported Working Days \* Daily Rate (this number comes from the Company table).

- Source tax lookup

Lookup = Taxable Amount \* Reported Working Days / Average Working Days (this number comes from the Company table).

- Additional insurances lower and upper limits

Limit = Reported Working Days \* Yearly Rate / 365 (you can customize, if the company reports work days) Roundup to full CHF (for example, 126,000 / 365 = 346).

To enable the daily calculation, you need to maintain these values in the company setup:

## Daily Limit and Average Work Days

An example of how working days and limit per day depend from each other:

Assume working days get reported as calendar days. We expect to see as company values:

- ALV-AC: 345

For 2 weeks of work c.p. 15 days \* 345 = 5475 CHF.

- Source Tax: 30

In the same scenario with assumed earnings of 1700 CHF there is a tax lookup of 3400 CHF in additional insurances: 15 days \* 345 for 126,000 CHF and 15 days \* 685 for an upper limit of 250,000 CHF.

If assumed working days get reported as real working days and the average is 21, then we expect to see these company values:

- ALV-AC: 500

For 2 weeks of work 10 days \* 500 = 5000 CHF.

- Source Tax : 21

In the same scenario with assumed earnings of 1700 CHF there is a tax lookup of 3570 CHF in additional insurances (probably customized to 252 working days). 15 days \* 500 for 126,000 CHF and 15 days \* 992 for an upper limit of 250,000 CHF.

See Rates Page.

## Weekly Payment and Payout Rules

Other than employees that are paid on an hourly, daily, and monthly basis, employees paid on a weekly basis receive their paycheck each week. Nevertheless, at the end the full legal calculation and the legal reporting is based on a monthly view on the result. Therefore, the weeks need to get assigned to a dedicated month. Some months will have 4 weeks and some 5 weeks.

This mapping is managed by setting up the CH\_WK\_MAP\_W bracket (select Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Elements, Supporting Elements, Brackets, Data).

This example illustrates the fields and controls on the Bracket Element: Data page. You can find definitions for the fields and controls later on this page.

## Calculations

For employees that get paid on a weekly basis, these calculations apply:

- Child allowance.  
Employee receives the portion of child allowance according to the hours worked in the week with the weekly payment. In the last week of the month the remainder is paid out.
- Source tax (% per day).  
Each week the lookup gets calculated by dividing the reported weeks by the total weeks of the month. Then the tax for that week is calculated as: Newly Calculated Taxes – Already Paid Taxes = Taxes Owed.
- Unemployment, accident insurance (limits).  
Limits get adjusted to days. Weekly limit = 10,500 CHF divided by 7 = 1,500 CHF.
- Garnishments.  
Garnishments get deducted first until the monthly amount is covered. As such, the employee might not have any payments the first week or first few weeks in the month.

---

## Sarbanes-Oxley Act of 2002 Requirements

This section discusses:

- SOX Overview
- Security
- Audits
- Managing Processes

- Archiving

## SOX Overview

To fulfill the requirements of the Sarbanes-Oxley Act of 2002 (SOX), Global Payroll for Switzerland provides features that support security and audit requirements, makes recommendations to manage your payroll information, and supports processes that archive history according to the needs of the Principles of Orderly Electronic Bookkeeping (POEB).

SOX is a United States federal law enacted on July 30, 2002. The legislation establishes new or enhanced standards for all U.S. public company boards, management, and public accounting firms. It does not apply to privately held companies.

The Act contains 11 titles, or sections, ranging from additional corporate board responsibilities to criminal penalties, and requires the Securities and Exchange Commission (SEC) to implement rulings on requirements to comply with the new law.

## Security

Customer should define at least two roles that allow you to separate the entry and calculation of payments from the process of approving and authorizing final payments. A detailed sample of how these roles might share the activities is provided in the Manage Process section.

As such we recommend that you implement these roles:

- Payroll Administrator:

This role allows administrators to manage all HCM and payroll relevant entries (hire, termination, assign payments). To process the payroll itself you might define a third role or grant those rights to the Payroll Administrator as well.

- Finance Administrator:

This role allows to manage the transfer of payments to GL and to the bank. Thus, payments only make it to the beneficiary after a second person had reviewed those payments.

---

**Note:** A sample of how these roles might share activities is provided in [Guidelines to Fulfill the Needs of Sarbanes-Oxley Act](#). Additionally, you might set up any number of different roles that share security to meet your specific needs. The methodology that we describe in this documentation explains the minimum requirements to meet SOX requirements.

---

## Audit Reports

The PeopleSoft HCM application provides these reports to track and document additional changes:

- Employee Turnover Analysis (PER010).
- Below Minimum Analysis (CMP004).
- Above Maximum Analysis (CMP005).

---

**Note:** You can set up auditing on any field and then decide what changes can be reviewed by a second person at any time. The Database Audit (PER029) report lists the changes kept by auditing.

---

The Global Payroll for Switzerland application provides these reports for auditing support:

- Calculation Reconciliation (GPCHAL02).
- Swiss Audit.
- Banklist (GPCHBK01).
- Summary Statement for Bank File (GPCHBK02).

Additionally, you can perform queries on GL data.

See [Setting Up Swiss Banking](#).

See [Generating Payslips and General Reports](#).

## Managing Processes

Global Payroll for Switzerland Sarbanes-Oxley Act provides a sample methodology to manage a payroll that fulfills the requirements of Sarbanes-Oxley Act. In this section, the *H* role stands for the Payroll Administrator and the *F* role stands for Finance Administrator.

See [Guidelines to Fulfill the Needs of Sarbanes-Oxley Act](#).

## Archiving

All data that determines payroll calculations is frozen in write array tables, which are created during a payroll run. The system keeps these data as well as all results in history. For example, if there is a retroactive change to any date, the original calculated results as well as the input that was valid for those original results is retained and is available for review at any time. Additionally, all year end XML data, which contains all the legal reporting that is sent to Swissdec, is archived and stored each time it is generated, including all re-sends and corrections.

---

## Global Payroll for Switzerland is Swissdec Certified

Global Payroll for Switzerland was certified in:

- April of 2008 under certificate # 1025.08.
- December of 2010 for Swissdec 3.0 under certificate #1061.10.
- January of 2014 for Swissdec 4.0 under certificate #1061.14.

Therefore, we highly recommend that you use the Swissdec payroll guidelines as published on the Swissdec website as additional documentation to become familiar with the payroll.

Also, all earnings and reporting described on the Swissdec website is valid for this payroll, especially for small and mid size customer that might run their payrolls *out of the box* with the elements described in the guidelines and provided by PeopleSoft Global Payroll for Switzerland.

See [Swissdec Website](#).

See [Additional Earnings and Deductions Table](#).

## Viewing Delivered Elements for Switzerland

PeopleSoft delivers a query that you can run to view the names of all delivered elements designed for Switzerland. Instructions for running the query are provided in the *PeopleSoft Global Payroll PeopleBook*.

# Defining Country Data

---

## Defining a Default Retroactive Processing Method

The Default Retro Method and the On Conflict Retro Method for Switzerland are both corrective. These options are set on the Country Setup page. The core retro functionality suits all Swiss requirements.

The override retroactive to forwarding processing method is only used for net payments. The Net Payment accumulator (CH\_00\_54) is forwarded to the Earning element (CH\_00\_54f). The Final Payment element (CH\_00\_72), or CH\_00\_74 if negative, is the sum of CH\_00\_54 and CH\_00\_54f.

Global Payroll for Switzerland does not support retroactive transaction processing for the previous year. Therefore, it is recommended that during implementation that you set the retro limit to the first of January.

Additionally, several reports provide a special presentation of the results of retroactive processing. As there are no retroactive transactions that can be used for previous years, yearly reports do not process retroactive information. These reports always show the most recent results.

As a result, the presentation of retroactive information is limited to monthly and quarterly reporting. This section provides an overview on how the system handles retroactive results in these reports:

Reports with end user options:

- Pay Balance CHE (GPCHTX06)

If Print Detail Report check box is selected, the system displays the retroactive details. The delta amounts are displaced under the month where they occurred and accumulated. They are printed in bold under the current month of the payroll. The delta amounts count only in the totals of the current month to mirror the general ledger view on the numbers. If Print Detail Report check box is deselected, no details about the periods of delta will display, only the (inside the report) forwarded amounts are to the current amounts.

- Pay Element Summary CHE (GPCHAL08)

If the Print Detail Report check box is selected, the system displays the retroactive details separately for each month in which they originated. If the Print Detail Report is deselected, the system accumulates the retroactive transactions for all retro months in one amount.

- Personal Statement (GPCHSI03)

The Original Month, Most Recent Month, and As of Month radio buttons are used to list data as of the selected period in which data was generated. The system saves the personal attributes for each payroll run, in case those items that were changed in the past want to be viewed again. By choosing one of these options, you can track the history of the data change.

Reports with retroactive results in delta and reversal mode:

- Payslip (GPCHAL10)

For elements that only have changes to amounts or base pay, the system displays a new row that includes a leading asterisk (\*). For elements that only have changes to percent or rate, the system reverses the old rows and displays new rows with complete data. Retro rows that have the same percent and rate are accumulated into one row.

- Pay Balance CHE (GPCHTX06)

For elements that only have changes to amounts or base pay, the system displays only the changed row. For elements that have changes to percent or rate, the system reverses the old rows and displays new rows with complete data for the following report:

- Military Service - Monthly (GPCHE01)\*

---

**Note:** \* If a change is for amounts only, the system creates a new row; otherwise the old row is reversed and the system additionally creates a new row.

## Defining Triggers and Segmentation Events

In Global Payroll, the mechanism used to detect online data changes that should result in a system action is called a trigger. Examples of common data changes that might use triggers are the hiring of a new payee, a change in pay rate, and a change in job location. There are three types of triggers: iterative, retroactive, and segmentation.

Before you can use a trigger to process a payee, perform segmentation, or perform retroactive processing, you must set up a trigger definition. The definition indicates that when a particular change to the database occurs, the system should generate the desired trigger. You define trigger event IDs on the Trigger Definition page (Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Triggers, Trigger Definitions) in the Global Payroll core application.

The following table lists records with triggers for Global Payroll for Switzerland.

| <b>Record</b> | <b>Type</b> | <b>Trigger Event ID</b> | <b>Retro Event Definition ID</b> |
|---------------|-------------|-------------------------|----------------------------------|
| ADDRESSES     | Iterative   |                         |                                  |
| COMPENSATION  | Iterative   |                         |                                  |

**Note:** Global Payroll for Switzerland is designed to have a retroactive limit as of January 01 of the current year.

The following table lists segmentation events for Global Payroll for Switzerland:

| <b>Name</b> | <b>Description</b>     | <b>Segment Type</b> |
|-------------|------------------------|---------------------|
| COMPRATE    | Comp Rate Segmentation | Element             |
| JOB         | Job Segmentation       | Period              |

## Adjusting Trigger Effective Dates

When you define retro triggers on the Trigger Definitions-Field Values page, you can enter a positive or negative number in the Offset Days field to increase or decrease the retro trigger effective date in relation to the date of a field value change. For example, if you enter -1 in the Offset Days field for one of the values listed in the Field Values group box, and you retroactively enter that value into the database with an effective date of October 1, 2014, the system automatically adjusts the trigger effective date to

September 30, 2014 (one day earlier). The system then processes pay periods going back to September 2014 rather than October 2014.

Global Payroll for Switzerland uses the offset days feature to define the triggers for retroactive terminations entered in the JOB record using the Action field (Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Triggers, Trigger Definitions, Trigger Definitions. Click the **List Field Values** link on the Trigger Definitions page).

| 140      | TWP <span style="float: right;">Q</span> | JOB <span style="float: right;">Q</span> | -1          | + | - |
| 60       | LOF <span style="float: right;">Q</span> | JOB <span style="float: right;">Q</span> | -1          | + | - |
| 70       | REC <span style="float: right;">Q</span> | JOB <span style="float: right;">Q</span> | 0           | + | - |
| 10       | HIR <span style="float: right;">Q</span> | JOB <span style="float: right;">Q</span> | 0           | + | - |

Note that the offset for termination triggers is -1.

The reason for this offset is that the PeopleSoft system considers the effective date of a termination entered in the **Action** field in JOB to be the first day that a payee is no longer working (in other words, the day before the termination is the last day the payee is considered active); however, the effective date of the trigger generated in response to this termination is identical to the termination date. This can create problems when the termination date in the JOB record is equal to the pay period begin date (meaning, the last day worked is the last day of the prior pay period). For example, assume that you enter a termination in JOB on February 1 after processing and closing the January calendar. In this situation, the system generates a trigger with an effective date of February 1, which is within the current period—a period in which the payee is "inactive" and is not picked up for processing. Because there is no trigger in the prior, closed period (January), this period will not be recalculated and any rules set up to generate termination payments will not be processed. To avoid this problem, Global Payroll for Switzerland sets the offset days for the *TER*, *RET*, *LOA*, *LOF*, *TWP*, and *TWB* action values in the JOB record equal to -1.

---

**Important!** If you define additional action values to trigger retroactive termination payments, you should set the offset days to -1.

## Identifying Proration Rules

In addition to the 16 proration rules supplied for all countries, Global Payroll for Switzerland includes one additional rule: pseudo proration. CH\_AB\_PSUEDO uses CH\_AB\_COUNT\_ALL as the numerator, and the variable CH\_AB\_ONE as the denominator.

---

## Identifying Pin Categories

For GP Switzerland 8 active categories are available.

| <b>Category</b> | <b>Description</b>            | <b>Assigned To</b> | <b>Use</b>                                |

## Setting Up Pay Entities and Pay Groups

Before setting up Swiss options, you need to define the pay entity and pay group on the Pay Entities and Pay Groups pages. The simplest setup is to keep company and pay entity as a one-to-one relationship, where the keys are identical. However, the pay entity can also be designated as a legal entity.

A company with the features of the legal entity must exist. If you have several companies combined into one legal entity, then you can associate additional companies with the Bracket element (CH\_00\_BLENTTY) of the legal entity (select Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Elements, Supporting Elements, Brackets).

These companies obtain their payroll features from the leading legal entity. The system only displays these associated companies on selected reports for the purposes of sorting, selecting or for stating the related company.

Since companies and legal entities do not need to have a one-to-one relationship, you may set up the companies and legal entities within your organization using a matrix that could look something like this:

| <b><i>Company</i></b> | <b><i>Legal Entity</i></b> |
|-----------------------|----------------------------|
| 1                     | 1                          |
| 2                     | 1                          |
| 3                     | 1                          |
| 4                     | A                          |
| 5                     | A                          |
| 6                     | 6                          |
| 7                     | B                          |

## Setting Up Pay Entities and Pay Groups

If user runs multiple companies in one Pay Entity he needs to map each company to the Pay Entity (Legal Entity), which processes the payroll for this company. This is done in bracket CH\_00\_BLENTTY. (see PeopleBooks Chapter 3)

Since companies and legal entities do not need to have a one-to-one relationship, you may set up the companies and legal entities within your organization using a matrix that could look something like this:

| Company | Legal Entity |
|---------|--------------|
| 1       | 1            |
| 2       | 1            |
| 3       | 1            |
| 4       | A            |
| 5       | A            |

Element Name: CH\_00\_BLENTTY      Legal Entity Relation

Bracket Data

Effective Date: 01.01.1990      Element Name: CH\_00\_BLENTTY      Status: Active

| Search Key         | Return Column         | Return Column         | Return Column         |
|--------------------|-----------------------|-----------------------|-----------------------|
| Legal Entity Input | Legal Entity Relation | Legal Entity Output 1 | Legal Entity Output 2 |
| 1                  | 1                     | 1                     | 1                     |
| 2                  | 2                     | 1                     | 1                     |
| 3                  | 3                     | 1                     | 3                     |
| 4                  | 4                     | A                     | 4                     |
| 5                  | 5                     | A                     | 5                     |

Beyond this an undocumented feature allows the user to define sender details of company X show for employees of company Y. This mapping is done in column 'Legal Entity Output 2' of the bracket.

| Company | Tax Statement |
|---------|---------------|
| 1       | 1             |
| 2       | 1             |
| 3       | 3             |
| 4       | 4             |
| 5       | 5             |

If Output2 is filled, then payroll populates GPCH\_RP\_TX07.Company with the value given in Output2 instead of the company of employee. For Print AE reads now In GPCH\_AE\_DERIVED.GPCH\_TX07\_XML.FF sender details as of GPCH\_RP\_TX07.Company (=Output2).

## Assigning and Viewing Print Classes

For multiple reports the layout and contents is determined by a print class. You can select a specific print class on the run control page before running a report. Print Classes are defined using the GP Core List Set feature. You can use the delivered list sets or build your own print classes.

See “Understanding Applications and List Sets” (PeopleSoft Global Payroll).

This table displays that delivered list sets that work best with the reports displayed in the right hand column:

| <b>List Set</b> | <b>Report</b>                                                                              |
|-----------------|--------------------------------------------------------------------------------------------|
| CH_GPCHDM12     | Payslip (GPCHAL10)                                                                         |
| CH_GPCHDM21     | Pay Balance (GPCTX06)<br>Pay Element Summary (GPCHAL08)<br>Element Contribution (GPCHAL07) |
| CH_GPCHSI03     | Personal Statement (GCHPSI03)                                                              |

To make changes to the delivered print class, access the Element Group Attributes page (select Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Elements, Define List Set. Then click the Element Group Details icon).

This table describes how to use the fields on the Element Group Attributes page for the CH\_GPCHDM12 and CH\_GPCHDM21 list set:

| <b>Print Class</b> | <b>Notation of Print Class</b>                                                                                                                                                                                                                                                    |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Element Name       | Displays the element for which print properties get setup here.                                                                                                                                                                                                                   |
| Default Sort       | Displays the default as assigned in the element group. This has no impact for the Swiss payroll reports.                                                                                                                                                                          |
| Override           | Override the assignment of earnings and deductions for mobile payslips. If you select Override, the system shows an earning under deductions and a deduction under earnings.<br><br>For more information, see the documentation for the “Payment Summary Page” (PeopleSoft ePay). |
| Print Group        | Assign the group in which the type of salary should be printed on the report.                                                                                                                                                                                                     |
| Print Sequence     | Assign the sequence in which the type of salary should be printed on the report.                                                                                                                                                                                                  |
| Print Calc         | Select this check box if you want the result amount printed.                                                                                                                                                                                                                      |
| Print Base         | Select this check box if you want the base amount printed.                                                                                                                                                                                                                        |
| Print Rate         | Select this check box if you want the rate value printed.                                                                                                                                                                                                                         |

| <b>Print Class</b> | <b>Notation of Print Class</b>                                                                  |
|--------------------|-------------------------------------------------------------------------------------------------|
| Print Units        | Select this check box if you want the unit value printed.                                       |
| Print Percent      | Select this check box if you want the percent value printed.                                    |
| Print Sum Amount   | Select this check box if you want the amount printed in bold and moved one column to the right. |
| Override Value     | If you want to reverse the algebraic sign of the salary type, enter <i>-1</i> .                 |

**Note:** Not all columns are used for every report. For the payslip report the system defines all components in one line. Thus, under element names only earnings and deductions and the selected columns correspond to the required component. For legal reports a dedicated line is required. This means that you will only see one column checked. This selection needs to match the defining component. For example, if the Auto Assignment component base (CH\_AH\_D11\_Base) is selected, then Print Base needs to be selected as well. For the Personal Statement report the system supports only Print Group 1 and Print Group 2. In Print Group 1, assignments appear under the Base Salary chapter. In Print Group 2, assignments appear under the Insurance Deductions chapter.

To use components for legal reports you need to first allow assignment of components in the list set by selecting *GP\_ENT\_EGELN\_VW* in the Entry Prompt ID field on the Entry Type Prompts page (select Set Up HCM, Product Related, Global Payroll & Absence Mgmt, System Settings, Entry Type Prompts).

This table describes how to use the fields on the Element Group Attributes page for the CH\_GPCHSI03 list set:

| <b>Print Class</b> | <b>Notation of Print Class</b>                                                                                                                                                                                                                                                                                             |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Element Name       | Displays the element for which print properties get setup here.                                                                                                                                                                                                                                                            |
| Override           | Not supported.                                                                                                                                                                                                                                                                                                             |
| Print Group        | Assign the group in which the type of salary should be printed on the report. For the Personal Statement report the system supports only Print Group 1 and Print Group 2. In Print Group 1, assignments appear under the Base Salary chapter. In Print Group 2, assignments appear under the Insurance Deductions chapter. |
| Print Sequence     | Assign the sequence in which the type of salary should be printed on the report.                                                                                                                                                                                                                                           |

See “Selecting Entry Types and Displaying Record.Field Combinations” (PeopleSoft Global Payroll).

## Defining Swiss Online Processing Options

To define Swiss online processing options, use the Online Processing Setup CHE (GPCH\_EG\_ONL\_SETUP) component. This topic discusses how to define Swiss Online Processing Options.

### Page Used to Define Swiss Online Processing Options

| <i>Page Name</i>                                 | <i>Definition Name</i> | <i>Usage</i>                                                              |
|--------------------------------------------------|------------------------|---------------------------------------------------------------------------|
| <a href="#">Online Processing Setup CHE Page</a> | GPCH_EG_NM_VAL_PRS     | Define parameter to create, validate and send XML files through dashboard |

### Online Processing Setup CHE Page

Use the Online Processing Setup CHE page (GPCH\_EG\_NM\_VAL\_PRS) to define parameter to create, validate and send XML files through dashboard.

Online Processing Setup CHE

Process Name:  Filter

Details

|    | Process Name | Property Name            | Is Password              | Property Long Value             |   |   |
|----|--------------|--------------------------|--------------------------|---------------------------------|---|---|
| 1  | ELM          | DecSal_Tag_Atr           | <input type="checkbox"/> | xmlns="http://www.swissdec.ch/" | + | - |
| 2  | ELM          | EOFileCounter            | <input type="checkbox"/> | 70000054                        | + | - |
| 3  | ELM          | FakFileCounter           | <input type="checkbox"/> | 70000003                        | + | - |
| 4  | ELM          | LAW_CDS_ZERO             | <input type="checkbox"/> | <GrossIncome>0.00</GrossInc     | + | - |
| 5  | ELM          | LogFile                  | <input type="checkbox"/> | CONSOLE                         | + | - |
| 6  | ELM          | LogLevel                 | <input type="checkbox"/> | 1                               | + | - |
| 7  | ELM          | SalDec_Tag_Atr           | <input type="checkbox"/> | schemaVersion="0.0"             | + | - |
| 8  | ELM          | XML_Version              | <input type="checkbox"/> | <?xml version="1.0"             | + | - |
| 9  | ELMTransmit  | CertificateAlias         | <input type="checkbox"/> | test                            | + | - |
| 10 | ELMTransmit  | CertificateAliasPassword | <input type="checkbox"/> | testZertifikat                  | + | - |
| 11 | ELMTransmit  | Certificate.Location     | <input type="checkbox"/> | transmitter.jks                 | + | - |
| 12 | ELMTransmit  | CertificatePassword      | <input type="checkbox"/> | default                         | + | - |
| 13 | ELMTransmit  | CertificateType          | <input type="checkbox"/> | jks                             | + | - |

**Note:** Before you use the dashboard in Global Payroll for Switzerland, you need to specify the parameters that are explained here.

The Java architecture requires the ELM Transmit process be setup in advance. These properties are delivered with the PeopleSoft application. You can modify the property setup as needed.

Here is a brief description of the properties for the ELMTransmit process:

| <b>Property</b>                   | <b>Description</b>                                                                                                                                                                                                    |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Certificate Alias                 | The alias name for the certificate that is used needs to be specified. The default certificate delivered has the alias of <i>test</i> .                                                                               |
| Certificate Alias Password        | The certificate Alias Password is needed to secure the certificate. The default password delivered is as '' (blank).<br><br>Use the <b>Is Password</b> checkbox to encrypt the password.                              |
| Certificate Location              | This property allows the user to specify the location of the certificate used for signing the XML file. The default value is <i>transmitter.jks</i> , which is the default jks certificate delivered to the customer. |
| Certificate Password              | The password for the certificate that is used needs to be specified. The default certificate is delivered as '' (blank).<br><br>Use the <b>Is Password</b> checkbox to encrypt the password.                          |
| Certificate Type                  | This property specifies the type of the certificate used by the Java process. The default certificate is .jks.                                                                                                        |
| EncryptCertificate Alias          | This is the alias name for the certificate used for encryption. The default certificate delivered has the alias of <i>test</i> .                                                                                      |
| EncryptCertificate Alias Password | The certificate Alias Password for encryption certificate. The default password delivered is as '' (blank).<br><br>Use the <b>Is Password</b> checkbox to encrypt the password.                                       |
| Encrypt Certificate Location      | This property allows the user to specify the location of the certificate used for encrypt the XML file. The default value is <i>transmitter.jks</i> which is the default jks certificate delivered to the customer.   |
| Encrypt Certificate Password      | The password for the certificate that is used needs to be specified. The default certificate is delivered as '' (blank).<br><br>Use the <b>Is Password</b> checkbox to encrypt the password.                          |
| Encrypt Certificate Type          | This property specifies the type of the certificate used by the Java process. The default certificate is of the type jks.                                                                                             |

| <b>Property</b>      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Class Path Directory | This property specifies the path where the additional classes required by the Java process will be unzipped. These additional classes are delivered in the PeopleSoft Application as gpchEGLibs.jar. The default path for the Classpath directory is <PS_SERVDIR>/files/classpath_dir                                                                                                                                                                                                                                                                                                                                                         |
| JVM                  | This property specifies the path of the JVM that needs to be used by the Java process. The JVM path normally points to the People tools JDK. The default value for this is <PS_HOME>/jre/bin/java.exe. For Unix platform the path needs to be modified as <PS_HOME>/jre/bin/java.                                                                                                                                                                                                                                                                                                                                                             |
| Log File             | This property specifies the path for the log files for Java messages to be generated. The default value is <PS_SERVDIR>/files/classpath_dir/elm.log                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| minorSchemaVersion   | <p>The XML preparation in AE GPCH_AE_ELM must be amended to reference the correct Swissdec 5.0 schema version (1.0 or any other applicable version) to ensure the file's acceptance.</p> <p>The process type ELMTransmit5 includes the minorSchemaVersion parameter which helps to specify the right version (like 1.0 or another relevant one) for creating and sending XML files through the dashboard, ensuring that the files are accepted.</p> <p>The Swissdec 5.1 XML files (AHV Reform 2021) requires a minorSchemaVersion parameter of 1.0. The Swissdec 5.3 XML files (Telework) requires a minorSchemaVersion parameter of 3.0.</p> |
| Log Level            | The property specifies the level of logging to be used. The Log levels are: 1- Warnings and Errors, 2- Informational, and 3- Debug. The default Log Level is set to 2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Proxy Host URL       | This property specifies the Internet proxy to be used. The default value is www-proxy.us.oracle.com. You will have to change this property to your Internet proxy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Proxy Port           | This property specifies the Internet Proxy Port to be used . The Default value is 80. The customer will have to change this property to his Internet Proxy Port.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Service URL          | The Swissdec Webservice endpoint to which the XML is delivered (change to https for SSL) The default value is set to: http://tst.itserve.ch/itserve/lohnstandard/piv/receiver/channel001/services/SalaryDeclaration                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Property</b> | <b>Description</b>                                                                                                                                                                                                                                                                                |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| XSD File        | This property specifies the path to the elm.properties file which is delivered as a part of the gpchEGLibs.jar . The elm.properties property file in the classpath that links schema files to namespaces. The default value for this property is <PS_SERVDIR>/files/classpath_dir/elm.properties. |

PeopleSoft provides the data with defaults that point to the Swissdec test receivers. You need to adjust these values, according to their IT environment and then send the data to the Swissdec production receiver.

| <b>Parameter</b>           | <b>Production</b>                                                                          | <b>Test</b>                                                                 |

You can find more information about the meaning of these fields in the Swissdec guidelines and the Swissdec tech doc that describes the full ELM XML.

### Parameters: ISO

The online processing parameters further support management of invalid characters in ISO 20022 GP Switzerland identifies invalid characters against values given in parameter ValidCharacters and replaces characters not included by:

1. If dedicated replace value given in ReplaceInvalidCharacters, by this value
2. Otherwise, if dedicated value for Default given in ReplaceInvalidCharacters, by this Default replacement
3. Otherwise, by Default = '-'

This example illustrates the fields and controls on the Online Processing Setup CHE page-1.

|    |             |                          |                          |                           |   |   |
|----|-------------|--------------------------|--------------------------|---------------------------|---|---|
| 35 | ELMTransmit | xsdFile                  | <input type="checkbox"/> | <PS_CUST_HOME>/files/clas | + | - |
| 36 |             |                          |                          |                           |   |   |
| 37 | ISO         | ReplaceInvalidCharacters | <input type="checkbox"/> | DEFAULT--:                | + | - |
| 38 | ISO         | ValidCharacters          | <input type="checkbox"/> | ABCDEFGHIJKLMNQRST        | + | - |
| 39 | Interop     | FirstOperand             | <input type="checkbox"/> | 999000000000.00           | + | - |

**Note:** Any character not included in the list given for ValidCharacters gets replaced by default with '-' (Hyphen). The list of valid characters is delivered by GP Switzerland and gets updated in case ISO requirements will change. In case client prefers a more dedicated replacement he may provide replacement for any invalid character in parameter ReplaceInvalidCharacters.

### Parameter: SecureDomain

Additional access restrictions for dashboard XML files. This got actually requested for ISO 20022 but supports any dashboard domain.

This example illustrates the Online Setup for Swiss window.

|    |           |              |                          |  |   |   |
|----|-----------|--------------|--------------------------|--|---|---|
| 37 | Security  | SecureDomain | <input type="checkbox"/> |  | + | - |
| 38 | UserAgent | Certificate  | <input type="checkbox"/> |  |   |   |
| 39 | UserAgent | Name         | <input type="checkbox"/> |  |   |   |

**Online Setup for Swiss**

I;<PS\_CUST\_HOME>/files;

We provide now customer control on file management. In Online Processing Setup CHE client can qualify a domain for restricted access.

Process Name(proposed) = SecurityX(where X = 1 character translate for provider type)

Property Name (mandatory) = SecureDomain

Property Long Value = X;yyy where

X =one character translate for provider type and

yyy = target path for save

Once the setup is in place the save will directly go the given target and no longer grant access to the end user.

This example illustrates the Save button.

|    |                       |  |         |      |     |  |      |      |               |      |            |       |        |
|----|-----------------------|--|---------|------|-----|--|------|------|---------------|------|------------|-------|--------|
| 10 | 2017-KW2-100-M-10-001 |  | BNK_BNQ | #KW2 | EIV |  | Open | Open | Validate file | Save | Regenerate | Print | Delete |
|----|-----------------------|--|---------|------|-----|--|------|------|---------------|------|------------|-------|--------|

Click Save

This example illustrates the Confirmation Window.

## Defining Swiss Installation Options

To define Swiss installation options, use the Installation Options CHE (GPCH\_AL\_INSTALL) component.

This topic discusses how to define Swiss installation options.

Before you print reports in Global Payroll for Switzerland, you need to specify default choices for names, addresses, phone, and email. For example, you might want to print a payee's primary name and home address on a payslip.

### Page Used to Define Swiss Install Options

| Page Name                                     | Definition Name | Usage                                                               |
|-----------------------------------------------|-----------------|---------------------------------------------------------------------|
| <a href="#">Installation Options CHE Page</a> | GPCH_AL_INSTALL | Define default name, address, phone, and email types for reporting. |

### Installation Options CHE Page

Use the Installation Options CHE page (GPCH\_AL\_INSTALL) to define default name, address, phone, and email types for reporting.

| Field or Control | Description                                                                                                                                                                                                                           |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Report Security  | Select this option to enforce report security on the Personal Statement (GPCHSI03), Payslip (GPCHAL10), Payroll Register (GPCHTX04) and Pay Balance (GCHTX06) reports. Report security limits the users than can view report results. |

## Upload Files CHE

For GP Switzerland, as there are various external files, a generic tool is provided for uploading:

- Source Tax Rates
- Bank Definitions
- Postal Codes
- Municipality Codes
- ViewGen Printing Tools

This section discusses how to upload and review the various file types.

Access Load Files CHE page (Setup HCM, Product Related, Global Payroll & Absence Mgmt, Framework, Processing, Load Files CHE).

## Setting Up Postal Codes

This section provides an overview of Swiss postal code maintenance and discusses how to update postal codes.

### Understanding Postal and Municipality Code Maintenance

Global Payroll for Switzerland is delivered with Swiss postal codes. The system uses the postal codes to validate and prompt for municipality codes. You can view the contents of the Postal Code table and load updates from the Swiss Post website.

For GP Switzerland users, the menu (Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Framework, Organizational, Postal/Municipality Codes CHE) for updating Postal and Municipality Codes has changed.

With 2025, the Eidgenössische Steuerbehörde ESTV shares the mapping between new postal and municipalities code. GP Switzerland customers are provided features to load the Postal Codes & Municipality Codes csv-file, which is available from [Schweizerische Quellensteuer QST](#):

 [BFS-Gemeindeliste 2025 zur Zuordnung der korrekten Gemeindenummer zur korrekten Postleitzahl \(CSV, 258 kB, 10.02.2025\)](#)

## Upload Data

Load Postal and Municipality Codes CHE

**Load Files CHE**

File Type Postal Codes ▼

[Download Postal Codes and Municipalities](#)

**Options**

Upload Files View Uploaded Files Run Validate Postal Codes

Save Notify

After uploading the file and selecting Run, the following page is displayed.

This example illustrates the fields and controls on the Postal Data page.

**Postal Data** ×

Year

OK Cancel

The user have to fill in just the current year.

Once data got loaded user can review orphan Postal Code and Municipality Code by using the button 'Validate Postal Codes'. This returns a list of active assignments for expired Codes. See HCM 92 PI 25 GP Swiss Report samples.

## Manage Postal Codes and Municipality Codes

The Municipality Codes CHE page now maintains data from POSTAL\_CD\_CHE (formerly GPCH\_TX\_VILLAGE) and is displayed as:

## Municipality Codes CHE page

| Municipality Codes CHE                                |                   |             |             |            |     |

## Maintaining Swiss Payroll Salary Bases

Calculations for salary bases are contained in the standard version of the application. You can, however, add or change salary bases in some cases. Intern bases, which are maintained only by the producer, are not discussed here.

For the recommended accumulators buildup, use the normal types of salary via CH\_00\_0. For all standard accumulators we provide a custom entry, which is already a member of the standard accumulator.

The naming convention for the custom entry is CH\_XX\_CYY, where XX stands for positions 4 to 5 and YY stands for the positions 8. For example, CH\_00\_C0 is the custom entry for CH\_00\_0.

This enables you can add customer earnings to custom accumulators to avoid any overlap with any additional delivery of standard accumulators. For example, if you had a customer earning called Cust\_Salary, which contributes to all legal bases, then you would add this earning to accumulator CH\_00\_C0, which is the custom entry for standard accumulator CH\_00\_0.

Refer to the illustration below for a graphical representation of how accumulators are used in the Global Payroll for Switzerland application:

Illustration showing how accumulators are used in the Global Payroll for Switzerland application

Global Payroll for Switzerland Accumulators provides an overview by functional category of the accumulators that you need to maintain.

The list of accumulators for these functional categories are:

- Subtotals
- Social Insurances
- Source Tax
- Tax Statement 2006 (and later)
- Statistics
- Source Tax Reporting
- Other Reporting Controls

The salary bases delivered in the standard version of the application are sufficient in most cases. You, however, can further define salary bases and their respective accumulators to meet your own needs.

# Setting Up Family Allowances

---

## Understanding Family Allowances

Global Payroll for Switzerland enables you to define and manage data for an employee's dependents and family as well as process available family allowances for each payee.

### Viewing Delivered Elements

The PeopleSoft system delivers a query that you can run to view the names of all delivered elements designed for Switzerland. Instructions for running the query are provided in the *PeopleSoft Global Payroll PeopleBook*.

## Full Time, Part-Time, and Single Parent Part-Time Rule

In granting family allowances, the cantons distinguish between full-time employment, part-time employment, and part-time employment for single-parent families. Different sets of rules are applied accordingly. You can view the appropriate rule for the applicable fields *Full Time Rule*, *Part Time Rule*, and *Single Parent Part Time Rule*.

Fields beneath the Part Time Rule apply to employees who are not specified as single parents. Fields beneath the Single Parent Part Time Rule apply to employees who are specified as single parents. You can identify a person as a single parent on the Family Allowance page.

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                   |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Minimum Hours Limit</b>    | The lower limit or minimum number of hours allowed to qualify for receiving the family allowance.                                                                                                    |
| <b>Maximum Limit/Factor</b>   | For information only. The hourly rate or divisor determines the upper limit.                                                                                                                         |
| <b>Hourly Rate or Divisor</b> | For part-time employees, the allowance is calculated as follows: Allowance * STD HOURS * 4.3333 / Divisor.<br><br>For hourly paid employees, the calculation is: Allowance * ACTUAL HOURS / Divisor. |

## Child Allowance Data Page

Use the Child Allowance Data page (GPCH\_CA\_STAT\_SET02) to set up child allowance data.

| Sister (13)            | Brother (23)         | Sibling      | SB Sibling          |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                 |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Disabled</b>         | Select if the dependent or beneficiary is disabled.                                                                                                                                                                |
| <b>Student</b>          | Select if the dependent or beneficiary is a student.                                                                                                                                                               |
| <b>Diff Allowance</b>   | Difference Allowance (see NonResident).                                                                                                                                                                            |
| <b>Acquired Right</b>   | Child allowance. The acquired right will apply to all families with at least three children under 16 years of age on 31 December 2021, provided the number of children and the type of allowances remain the same. |
| <b>Numerous</b>         | Qualifies a child for numerous allowance (child# >= 3)                                                                                                                                                             |
| <b>Non Resident</b>     | Defines whether Difference Allowance is national or international.                                                                                                                                                 |
| <b>Birthdate</b>        | Displays the birth date of the child. Field is masked if masking for National ID is active.                                                                                                                        |
| <b>Legal End Date</b>   | The date for when benefits are scheduled to end.                                                                                                                                                                   |

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                                                                                                                                        |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reduced Begin Date</b>     | The date for when benefits starts. Only required in case of mid month eligibility which does not go along with the hire date.<br>Child allowance gets prorated in case this date is not the last day of a month. Allowance doesn't get prorated for mid period LOA if the begin date is first day of the processed month. |
| <b>Reduced End Date</b>       | The date for when benefits are scheduled to end in individual cases. This entry is required for students. Child allowance gets prorated in case this date is not the last day of a month.<br>Allowance doesn't get prorated for mid period RFL if the end date is last day of the processed month.                        |
| <b>Adoption Date</b>          | If date is filled and falls into processed month, then payroll generates Earning CH_CA_02 (Adoption allowance). In case adoption gets calculated, there is no creation of birth allowance CH_CA_01                                                                                                                        |
| <b>Birth Allowance Factor</b> | The default value is 1. In the case of multiple births (such as twins) enter a factor for each child, according to the rules of the canton.                                                                                                                                                                               |
| <b>SplitAll 99.999%</b>       | This % is applied to the standard amount. May be used to create birth allowance only (%=0.001) in case of a death borne child.                                                                                                                                                                                            |
| <b>Eligible</b>               | Select if the dependent or beneficiary has a child allowance.<br>Used only for additional children or rows on this page; otherwise, leave this field deselected.                                                                                                                                                          |
| <b>National ID</b>            | Child's National ID                                                                                                                                                                                                                                                                                                       |
| <b>View Central Register</b>  | Link to Central Register for child allowances.                                                                                                                                                                                                                                                                            |

## RaFam

RAFAM (eAHV) -XML creation follows the current online data. Any change in online data is reflected with next XML creation, regardless of whether payroll ran in between or not.

| <b>Field or Control</b> | <b>Description</b>                                 |
|-------------------------|----------------------------------------------------|
| <b>Allowance Type</b>   | This override value is used for eAHV XML creation. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                            |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Begin Date</b>       | This override value is used for eAHV XML creation.                                                                                                                                                                                                                                                            |
| <b>End Date</b>         | This override value is used for eAHV XML creation.                                                                                                                                                                                                                                                            |
| <b>Pay Year</b>         | If this value is filled and is same as the processing year, the system adds this child information to the XML even if there is no calculation for the parent in the reporting year at all (This triggers XML correction for previous year, although the emplid is not calculated in the current year at all). |
| <b>Exclude Value</b>    | XML for child gets excluded from current XML file.                                                                                                                                                                                                                                                            |
| <b>Storno Value</b>     | The current XML gets reported with Storno attribute.                                                                                                                                                                                                                                                          |
| <b>RaFam</b>            | Clicking this button shows the XML data history and (if available) data ready to be sent next.                                                                                                                                                                                                                |

## RaFam Details Page

This page displays the most recent XML data sent to RAFAM ( = completed) and (if already processed) the XML for this child that will get reported with the next sending.

| <b>Field or Control</b>           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last sent to RaFam</b>         | <p>Details the most recent data sent to RaFam</p> <p>It includes Allowance details (Ref#, Storno, Type, DateFrom, DateUntil, Amount, PeriodFrom, Period Until, Amount), Child details (childAHVN13, childSurname, childFirsName, childDateOfBirth, childGender, childFamilyRelation) and Beneficiary details (beneficiaryAHVN13, beneficiarySurname, beneficiaryFirstname, beneficiaryDateOfBirth, beneficiaryGender, beneficiaryStartDateEmployment, beneficiaryEndDateEmployment).</p> |
| <b>Ready for sending to RaFam</b> | Details of most recent XML ready for sending to RaFam for the same allowance details as described above.                                                                                                                                                                                                                                                                                                                                                                                 |

## Chapter 5

# Setting Up FAKs

## Understanding FAKs

An FAK is a family allowance agency that pays monthly contributions towards family allowances, such as child allowances and maternity benefits.

Employers must be affiliated with an FAK unless they have special dispensation. The FAK is generally the same agency that is used to deduct AHV/ALV contributions. Employers are entitled to special dispensation when belonging to an FAK provided that they have a recognized contract of employment.

FAK benefits depend on the canton in which an employer is located. If an employer is affiliated with an FAK, they must transfer a certain percentage of an employee's total contribution to AHV to the FAK.

## FAK Processing Structure

The system processes FAK data in three parts: initialization, calculation, and refund administration.

### Initialization

During the initialization step, the system determines which canton rules to apply for a payee. Section CH\_FK\_INIT performs these actions:

- Reads Canton from the Location table (GP\_LOCATION\_TBL).
- Reads the tax location from the Swiss Location table (PS\_LOCATION\_CHE).
- Reads Canton from the Child Allowance Data table (PS\_GPCH\_CA\_DATA1).
- Decides which Canton value to apply to FAK calculation using the FAK/CA Canton EE override formula (CH\_FK\_FO002).
- Prepares the FAK Canton information using the initiate read of FK\_FAK\_STX for FAK formula (CH\_FK\_AR004\_IN\_FK).

### Calculation

During the calculation step, the system computes the following earning, accumulators, and deductions:

| <i><b>Element</b></i> | <i><b>Element Type</b></i> | <i><b>Description</b></i> | <i><b>Calculation Rule</b></i>                                                            |
|-----------------------|----------------------------|---------------------------|-------------------------------------------------------------------------------------------|
| CH_FK_02              | Accumulator                | FAK Base                  | AHV Wage (CH_AH_D11_BASE) + Customer Entry (CH_FK_C02) + FAK Base Correction (CH_FK_M02). |

| <b>Element</b> | <b>Element Type</b> | <b>Description</b>            | <b>Calculation Rule</b>                                                                        |
|----------------|---------------------|-------------------------------|------------------------------------------------------------------------------------------------|
| CH_FK_M02      | Deduction           | FAK Base Correction           | Base (Payee Level) * Percent (100).                                                            |
| CH_FK_D10      | Deduction           | FAK Contribution EE           | Base (Accumulator CH_FK_02) * Percent (0.3).                                                   |
| CH_FK_D11      | Deduction           | FAK Contribution              | Base (Accumulator CH_FK_02) * Percent (CH_FK_PCT).                                             |
| CH_FK_D00      | Accumulator         | FAK Debt                      | Family Allowance Total (CH_CA_ALL) + Custom Entry (CH_FK_CD00) — FAK Contribution (CH_FK_D11). |
| CH_RP_FKD00    | Earning             | FAK Saldo (copy of CH_FK_D00) | Amount (Accumulator CH_FK_D00).                                                                |
| CH_FK_D12      | Deduction           | FAK Compensation              | Base (Accumulator CH_FK_02) * Percent (0.01).                                                  |
| CH_FK_D13      | Deduction           | FAK Additional VS             | Base (Accumulator CH_FK_02) * Percent (0.015).                                                 |

## Refund Administration

During this step, the system determines calculation amounts. Section CH\_TX\_S4000 performs these actions:

1. Applies additional employer FAK contributions for payees in Neuenburg and Zug by using deduction CH\_FK\_D21.
2. Prepares the source tax canton information using formula CH\_FK\_AR004\_IN\_TX.
3. Places the FAK default data and source tax refund percentages into array CH\_FK\_AR001.
4. Calculates the tax refund for administrators (accumulator CH\_TX\_D11).

## Viewing Delivered Elements

The PeopleSoft system delivers a query that you can run to view the names of all delivered elements designed for Switzerland. Instructions for running the query are provided in the *PeopleSoft Global Payroll PeopleBook*.

Use this page to record FAK and source tax data, which including source tax and FAK numbers, which are allocated to your company by the cantons. These fields enable you to combine the XML for various cantons into one provider – FAK (FAK Provider) - LAW (LAW Provider).

## Source Tax Data

| Field or Control            | Description                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax Nbr</b> (tax number) | <p>Enter the number assigned to your company by your canton's tax office.</p> <p>Tax Nbr is no longer in use and is currently identified through the Customer ID of the company.</p>                                                                                                                                                                                           |
| <b>Tax Method</b>           | Select another canton method, if calculation shall not follow the default method for this canton. More details about methods see 'Managing Source Tax' chapter.                                                                                                                                                                                                                |
| <b>Source Tax Language</b>  | Select a language for the canton source tax report. This option allows you to print the tax report for each canton in a different language. If there is no value in this field all the reports will print in the default language. The available options are: <i>German, French, and Italian.</i>                                                                              |
| <b>FAK Number</b>           | <p>Enter the number that has been assigned to your company by the FAK.</p> <p>For XML Global Payroll for Switzerland uses the FAK Number from the CHE Company.</p> <hr/> <p><b>Note:</b> The system uses the language for the canton. This is important if you run reports for several cantons at once, where the language selection on the run control is not sufficient.</p> |

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                                                                                                                                                                        |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>FAK % Total</b>               | <p>Enter the current contribution rate that employers must make to the FAK for each canton, expressed as a percentage. For cantons with employee portion, this shall include the employee portion.</p> <hr/> <p><b>Note:</b> If there is no value in this field, the system doesn't support payments to the FAK in that canton.</p> <hr/> |
| <b>LAW Provider</b>              | Select the company which generates the taxes.                                                                                                                                                                                                                                                                                             |
| <b>FAK Provider.</b>             | Select the agency that is paying the monthly contributions towards family allowances, such as child allowances and maternity benefits.                                                                                                                                                                                                    |
| <b>FAK % EE</b>                  | Some cantons defines employee portion as well for FAK contribution. For these cantons, enter employee (included in Total).                                                                                                                                                                                                                |
| <b>Tax Month and Tax Quarter</b> | Select to enable monthly and/or quarterly source tax report generation for a canton.                                                                                                                                                                                                                                                      |

**Note:** PeopleSoft doesn't maintain the data on this page, because it contains information about the tax ID and FAK number, which the government assigns to your company.

## Running the FAK Contributions Report

This topic discusses how to run the FAK contributions report.

### Page Used to Run the FAK Contributions Report

| <b>Page Name</b>                                     | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                       |
|------------------------------------------------------|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">Running the FAK Contributions Report</a> | GPCH_RC_AL04           | This report generates using the base elements—housing, maternity, child, and training allowances (for both full-time and part-time employees)—that are predefined in the database. |

## Running the FAK Contributions Report

Use the FAK Contributions Report CHE page to generate a report using the base elements—housing, maternity, child, and training allowances (for both full-time and part-time employees)—that are predefined in the database.

**Note:** The recommended way to manage FAK Contribution Reporting is to report through Swissdec. The classic reporting described here may be still used for internal purpose only.

Navigation:

**Global Payroll & Absence Mgmt > Authority Correspondence > FAK Monthly Contributions CHE > FAK Contributions Report CHE**

FAK Contributions Report CHE page

Run the FAK Contributions Report each month to list employee and employer FAK contributions.

This report is generated using the base elements—housing, maternity, child, and training allowances (for both full-time and part-time employees)—that are predefined in the database.

| <b>Field or Control</b>       | <b>Description</b>                                                   |
|-------------------------------|----------------------------------------------------------------------|
| <b>Apply context language</b> | Print the report in the employee's language                          |
| <b>Canton</b>                 | Select a canton (optional).                                          |
| <b>Revision List</b>          | This version of the list displays all details needed for FAK review. |

| <b><i>Field or Control</i></b> | <b><i>Description</i></b>                                                                                                                                                               |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Delivery List</b>           | This version of the list eliminates some details that don't need to be reported to the Ausgleichskasse, such as employees without children. The AHV-Lohn for employees appears as zero. |

## Chapter 6

# Setting Up Swiss Absence Rules

---

## Understanding Swiss Absence Rules

In Global Payroll for Switzerland, an entitlement plan is a record of all absence entitlements that are required, such as the number of days of vacation and the number of paid sick days.

The number of vacation days to which employees are entitled may be linked to weekly working hours, age, length of service, a specific function, canton of employment, or other factors.

The entitlement plan that you create here can be assigned directly to an employee. If you do not assign a specific plan, the system uses the default entitlement plan from the Tariff Factors component, since every employee is normally assigned to a tariff, tariff area, and employee category. You can make individual assignments and overrides at the employee level using supporting element overrides (SOVRs), by assigning the relevant entitlement plan to the element CH\_AB\_EE\_ENTL\_PLAN.

“Understanding How to View Delivered Elements” (PeopleSoft Global Payroll)

---

## Absence Setup Steps for Switzerland

Before you can enter and process absences, you must complete various setup steps. The general setup steps are described with the Absence Set-Up and Management Tasks in the *PeopleSoft Global Payroll PeopleBook*. Following are the specific steps applicable to Global Payroll for Switzerland.

To prepare Global Payroll for Switzerland for absence processing:

1. Define work schedules and assign a schedule to each payee.

Instructions for creating and assigning work schedules are in the Using Schedules section of the *PeopleSoft Global Payroll PeopleBook*.

2. Define holiday schedules.

Instructions for creating a assigning work schedules are in the Using Schedules section of the *PeopleSoft Global Payroll PeopleBook*.

### 3. Define or modify entitlement and take elements.

Use the predefined absence entitlement and absence take elements delivered with Global Payroll for Switzerland, modify some attributes of these elements, or create your own absence elements. This chapter lists the delivered absence elements and describe the attributes you can change.

### 4. Create entitlement plans.

Entitlement plans provide a convenient way to define the amount of paid time off to which payees are entitled for vacation, sickness, accidents, or other reasons that you define. You can base entitlement on weekly work days, age, length of service, or other factors. When you run the absence process, the system retrieves the entitlement plan associated with the payee to determine the entitlement that is appropriate for the absence that is being processed.

### 5. Assign entitlement plans to payees.

After you define your entitlement plans, associate them with pay entity, pay group, or payees using supporting element overrides.

### 6. Assign absence elements to payees and process lists.

As with all primary elements, you must assign absence entitlement and take elements to payees and include them in the process lists that you use when you run the absence processes. (This step is not necessary for per-absence entitlement elements.)

The system delivers predefined sections and process lists for absence processing. Use these, modify them, or create your own.

---

## Delivered Absence Rules

The following table lists the absence take elements that included with Global Payroll for Switzerland and identifies the units in which the absence take is calculated (hours or days).

The Earning Units Paid and Earning Units Unpaid columns identify the formulas that populate the units paid and units unpaid values used by the earning calculation. The columns show only the suffix of the formula name. The full name of each formula is CH\_AB\_COUNT followed by the unique suffix.

If a count formula appears in the Earning Units Unpaid column, but not in the Earning Units Paid column, the absence is always unpaid. If a formula appears in both columns, the absence is unpaid only when the entitlement balance is zero or less.

The Priority column shows the relative priority of the absence when a payee has more than one absence event for the same date. Lower number outrank higher numbers.

| <b>Absence Reason</b>                 | <b>Take Element</b> | <b>Units</b> | <b>Earning Units Paid</b> | <b>Earning Units Unpaid</b> | <b>Priority</b> |
|---------------------------------------|---------------------|--------------|---------------------------|-----------------------------|-----------------|
| Full Day Vacation.                    | CH_AB_U010          | D1           | D1B                       | D1U                         | 300             |

## Delivered Entitlement Elements

Global Payroll for Switzerland delivers three entitlements:

- CH\_AB\_VACA: vacation.
- CH\_AB\_SICK: sick entitlement.
- CH\_AB\_VACA\_A: additional vacation entitlement.

Entitlements for vacations and additional vacations are frequency-based; entitlement for sickness is defined per absence.

## Modification of Take Elements

You can elements delivered with Global Payroll for Switzerland and most of the count formulas and earning elements that these take elements use with the exception of the PeopleSoft-maintained elements described below.

### Changing Count Formulas

The take elements delivered with Global Payroll for Switzerland use predefined formulas to calculate the day count and to calculate the number of units the system uses to generate positive input for earnings. You can select a different formula for the day count or for the calculation of positive input.

The suffix for each absence count formula is unique and can provide information about the count formula; for example, it can tell you how the formula interprets absences that are less than one day as explained in the following table:

| <b>Suffix Description</b>                                   | <b>Meaning</b>                                                                                                                                                                                                                                                                                                       |
|-------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| B or U included in suffix<br><br>B = paid<br><br>U = unpaid | These count formulas can be used only when an entitlement element is associated with the take element (for example, work accidents).<br><br>If the entitlement balance covers only part of a day's absence, the system generates the correct number of units for paid earnings and unpaid earnings for the same day. |

| <b><i>Suffix Description</i></b> | <b><i>Meaning</i></b>                                                                                                                         |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| BAL                              | Use these formulas as day count formulas. The formula CH_AB_COUNT_HOLRED is used by these count formulas to reduce units for public holidays. |

The table below lists the count formulas included in the system. An *X* in the Day Count column indicates that the formula is an appropriate selection for the Day Count field on a take element's Day Formula page. An *X* in the Earning Units column indicates that the formula is appropriate for the Element Name — Unit field in the Units tab of the Day Formula page. Use the Formula View page to view a formula.

| <b><i>Description</i></b>                                                                                                                                                 | <b><i>Day Count</i></b> | <b><i>Earning Unit</i></b> | <b><i>Formula Name</i></b> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|----------------------------|----------------------------|
| <i>Count workdays:</i> Count scheduled days including holidays.                                                                                                           | X                       | X                          | CH_AB_COUNT_D1             |
| <i>Count workdays paid:</i> Counts scheduled days including holidays. Can be used if earning code is for a paid absence. Considers system element PIN DAY COUNT PD.       |                         | X                          | CH_AB_COUNT_D1B            |
| <i>Balance count schedule days:</i> Counts scheduled days including holidays, then uses the formula CH_AB_COUNT_HOLRED to reduce units for public holidays.               | X                       |                            | CH_AB_COUNT_D1BAL          |
| <i>Count workdays unpaid:</i> Counts scheduled days including holidays. Can be used if earning code is for an unpaid absence. Considers system element PIN DAY COUNT UNP. |                         | X                          | CH_AB_COUNT_D1U            |
| <i>Count work days without public holiday:</i> Counts scheduled days excluding holidays. (Counts holiday if Holiday Type = space.)                                        | X                       | X                          | CH_AB_COUNT_D2             |

| <b>Description</b>                                                                                                                                                                                                                     | <b>Day Count</b> | <b>Earning Unit</b> | <b>Formula Name</b> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|---------------------|---------------------|
| <i>Count work days without public holiday paid:</i> Counts scheduled days excluding holidays. (Counts holiday if Holiday Type = space.) Can be used if earning code is for a paid absence. Considers system element PIN DAY COUNT UNP. |                  | X                   | CH_AB_COUNT_D2B     |
| <i>Count work days without public holiday unpaid:</i> Scheduled days without holidays. (Counts holiday if Holiday Type = space.) Can be used if earning code is for an unpaid absence. Considers system element PIN DAY COUNT UNP.     |                  | X                   | CH_AB_COUNT_D2U     |
| <i>Calendar days.</i>                                                                                                                                                                                                                  | X                | X                   | CH_AB_COUNT_D3      |
| <i>Calendar days + reduction of holiday:</i> Calendar days reduced by the units for public holiday with formula CH_AB_COUNT_HOLRED.                                                                                                    | X                |                     | CH_AB_COUNT_D3BAL   |
| <i>Scheduled hours:</i> Scheduled hours with holiday (ignores holiday type).                                                                                                                                                           | X                | X                   | CH_AB_COUNT_H1      |
| <i>Scheduled hours + reduction of holiday:</i> Scheduled hours with holiday (ignores holiday type) reduced by the units for public holiday with formula CH_AB_COUNT_HOLRED.                                                            | X                |                     | CH_AB_COUNT_H1BAL   |
| <i>Scheduled hours paid:</i> Scheduled hours with holiday (ignores holiday type). Can be used if earning code is for a paid absence.                                                                                                   |                  | X                   | CH_AB_COUNT_H1B     |

| <b>Description</b>                                                                                                                                                               | <b>Day Count</b> | <b>Earning Unit</b> | <b>Formula Name</b> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|---------------------|---------------------|
| <i>Scheduled hours unpaid:</i><br>Scheduled hours with holiday (ignores holiday type). Can be used if earning code is for a unpaid absence.                                      |                  | X                   | CH_AB_COUNT_H1U     |
| <i>Scheduled hours without public holiday:</i> Scheduled hours without holiday (counts if holiday type = space).                                                                 | X                | X                   | CH_AB_COUNT_H2      |
| <i>Scheduled hours without public holiday paid:</i><br>Scheduled hours without holiday (counts if holiday type = space). Can be used if earning code is for a paid absence.      |                  | X                   | CH_AB_COUNT_H2B     |
| <i>Scheduled hours without public holiday unpaid:</i><br>Scheduled hours without holiday (counts if holiday type = space). Can be used if earning code is for an unpaid absence. |                  | X                   | CH_AB_COUNT_H2U     |

Two conditions can cause a formula to count an absence as a half day: Select the Half Day check box when you enter the absence on the Absence Entry page or enter a number of hours that is less than the payee's scheduled hours.

### Example of Count Formula CH\_AB\_COUNT\_H1B (Scheduled Hours Paid)

The scheduled hours paid formula works as follows:

```

IF SCHED HRS > 0
  THEN
    IF PARTIAL HOURS > 0
      THEN
        PARTIAL HOURS * (DAY COUNT PD / DAY COUNT) to formula
      ELSE
        SCHED HRS * (DAY COUNT PD / DAY COUNT) to formula
      ENDIF
    ENDIF
  ENDIF

```

## Entitlement Calculation for Paid Vacation

You can use formula CH\_AB\_VAC\_ENTCALC1 to calculate entitlement paid vacation. The formula calculates entitlement monthly and prorates entitlement when a payee works less than a full month. It automatically increases entitlement for new hires and grants entitlement annually for existing employees.

The formula does the following:

1. Calculates entitlement for the current month, taking calendar segmentation into account. It prorates entitlement based on calendar days and stores the result in the month-to-date accumulator CH\_AB\_VAC\_ENTMONTH.
2. Calculates entitlement for the remaining months of the calendar year and stores the result in the variable element CH\_AB\_TEMP2.
3. For the last slice or segment in the calendar, the formula does the following:
  - Calculates the new annual entitlement by taking the entitlement for the current month (CH\_AB\_VAC\_ENTMONTH) and adding to it the entitlement for the previous month (stored in the year-to-date accumulator CH\_AB\_VAC\_MONSUM) and entitlement for the remaining months of the year, until year-end or the payee's termination date (CH\_AB\_TEMP2).
  - Determines whether the calculated annual entitlement represents a new entitlement (January or a new hire) or an adjustment to the previous month's calculation.

## Setting Up Absence Entitlement Plans

To set up absence entitlement plans, use the Absence Entitlement Plans CHE (GPCH\_AB\_ENTITLEMNT) component.

This topic discusses how to set up absence entitlement details.

An entitlement plan specifies the number of paid absence units to which payees are entitled for variety of absence reasons, such as vacation time, sickness, and accidents. For each entitlement reason, you can enter the number of entitlement units that should be granted based on the number of workdays per week, the payee's age, years of service, and/or job function. Absence entitlement plans provide a convenient method of grouping a set of entitlement rules into a single plan.

### Assigning Entitlement Plans to Tariffs

The absence entitlement plan is automatically set to the Tariff Table. The default plan will set vacation entitlement to 22 (as calculated by the formula CH\_AB\_VAC\_ENTFORM).

Individual assignments and overrides at the employee level are possible with supporting element overrides by assigning the relevant entitlement plan to the element CH\_AB\_EE\_ENTL\_PLAN.

See [Understanding Swiss Tariffs](#).

## Assigning Entitlement Plans to Payees

Assign an entitlement plan on the pay entity, pay group, or payee level using the Supporting Overrides page.

You can assign an entitlement plan directly to a payee by using the variable CH\_AB\_EE\_ENTL\_PLAN on the Supporting Element Overrides page. Otherwise, the system will use the default entitlement plan from the tariff factor table.

---

**Note:** When you assign an entitlement plan to a payee, you must still associate the individual entitlement elements that are within the plan to payees. The entitlement plan simply specifies the number of entitlement units to which the payee is entitled. It does not specify that the payee is eligible to receive the entitlement.

---

To override a payee's default entitlement plan:

1. Access the Payee Supporting Element Overrides page for the payee.
2. On the Elements/Dates tab, enter the following values. In the Element Type field, select *Variable*. In the Element Name field, select CH\_AB\_EE\_ENTL\_PLAN.
3. On the Values tab, enter the name of the entitlement plan that you want to assign to the payee.

## Adjusting a Payee's Number of Workdays per Week

The system refers to the payee's number of workdays per week to retrieve the correct row from the entitlement plan table.

The number of workdays per week comes from the Tariff Factor Table. You can use the variable element CH\_AB\_EE\_DAYS\_WEEK to override this number for individual payees. Use the Supporting Element Overrides page to enter the override amount for the variable.

## Pages Used to Set Up Absence Entitlement Plans

| <b>Page Name</b>                         | <b>Definition Name</b> | <b>Usage</b>                                                                                                          |
|------------------------------------------|------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <a href="#">Entitlement Plan Page</a>    | GPCH_AB_ENTITLEMNT     | Assign a description to the absence entitlement plan.                                                                 |
| <a href="#">Entitlement Details Page</a> | GPCH_AB_ENTITLEDE      | Specify the number of vacation days to be awarded to employees based on age, length of service, or other entitlement. |

## Entitlement Plan Page

Use the Entitlement Plan page (GPCH\_AB\_ENTITLEMNT) to assign a description to the absence entitlement plan.

|-------------------------------|----------------------------------------------------------------------------|
| <b>Entitlement</b>            | Enter the number of days to which the employee is entitled.                |
| <b>Additional Entitlement</b> | Enter details of any other entitlement for which the employee is eligible. |

## Performing Background Processing

At the beginning of the Absence process, the system retrieves the following information:

- Tariff, tariff area, and employment category for the payee.
- Entitlement plan and workdays associated with the Tariff table.
- Entitlement plan and workdays for payees, if different from the Tariff table.
- Disability data.
- Entitlement from entitlement plan.

### Absence Process List and Sections

Use the absence process list (CH AB ABSENCE) delivered with Global Payroll for Switzerland, modify this process list, or build your own.

The sections within CH AB ABSENCE are as follows:

- CH\_AB\_INIT: Initializes sections. Executes multiple counts in preparation for absence calculations. For example, the system counts scheduled days, scheduled hours, and public holidays (days and hours).
- CH\_AB\_ENTITLEMENT: Calculates entitlement.
- CH\_AB\_TAKE: Calculates take.
- CH\_AB\_TERM\_SECT: Calculates vacation payoff for terminated payees.
- CH\_AB\_GEN\_PI: Generates positive input for earnings and deductions.

---

## Setting Up Scale Codes

This topic discusses how to view and set up canton scale codes.

The Scale Codes component contains the Canton Scale Codes CHE and Salary Continuance pages. The Canton Scale Codes CHE page lists all the cantons that belong to a selected scale. The Salary Continuance page shows the pay continuance, in weeks, that is assigned to a scale depending on the employee's length of service.

When it is necessary to calculate a salary continuance due to accident, sickness, military/civilian service, or maternity, consider the following:

- If salary continuance isn't provided for in a general work agreement or cross-company regulation, under certain circumstances the employee may be entitled to salary continuance for at least three weeks, possibly longer, depending on length of service.
- When determining the duration of the salary continuance, individual cantons apply the Basel, the Bern, or the Zurich scale. The scales have been developed on the basis of case histories and legal decisions. Employee and employer are free to agree on the scale to be applied. If no individual agreement is reached, the scales assigned to the respective cantons as reflected in the Canton Scale Code CHE page are applied.

## Pages Used to Set Up Scale Codes

| <i><b>Page Name</b></i>            | <i><b>Definition Name</b></i> | <i><b>Usage</b></i>                                                                                         |

# Setting Up Tariffs

---

## Understanding Swiss Tariffs

A tariff is a contract between employees' unions and employers' associations that defines labor agreements on issues such as standard working hours, income, and vacation. Global Payroll for Switzerland delivers tariffs in the system as Translate Table values.

You can apply additional labor agreement terms, such as salary plans or employee reviews, based on the tariff area, which is usually defined by region or location.

## Viewing Delivered Elements

The PeopleSoft system delivers a query that you can run to view the names of all delivered elements designed for Switzerland. Instructions for running the query are provided in the *PeopleSoft Global Payroll PeopleBook*.

## Chapter 8

# Setting Up Maternity Leave

---

## Understanding Swiss Maternity Leave

In Global Payroll for Switzerland, you enter maternity leave data on a single page. The page generates absence take elements that work with the core application's absence process to correctly process maternity leave during a payroll run.

The system determines the amount of paid maternity leave to which an employee is entitled based on years of service and the canton of residence. After the birth of the child, it recalculates the entitlement based on the Swiss legal requirement of eight weeks' leave after the child's actual birth. To accomplish this, the PeopleSoft system uses the maternity code list set (CH\_MATERNITY) to process maternity absence.

See “Understanding Applications and List Sets” (PeopleSoft Global Payroll).

### Maternity Leave Setup

To set up maternity leave:

1. View or set up absence take elements on the Absence Take page in the Global Payroll core application.
2. View or set up maternity absence entry elements on the self-service Absence Entry Elements page.
3. (Geneva Canton) Set up maternity insurance percentages on the Maternity Insurance Code CHE page.

### Maternity Leave Processing

To process maternity leave:

1. Enter the expected date of birth and last work day on the Maternity Leave page to generate the appropriate absence take elements in the core application.
2. Enter the child's actual date of birth on the Maternity Leave page to generate additional absence take elements if this birth date affects maternity leave entitlement in the core application.

Global Payroll for Switzerland processes maternity leave during regular payroll runs.

### Maternity Insurance

All employees and employers must participate in the maternity insurance program and pay contributions.

| <b>Service Years</b>                 | These are the employee's years of service.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Salary Continuance in Weeks</b>   | For Geneva this value is 16 weeks. For all other cantons the value is 14 weeks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>EE Percent</b> (employee percent) | This is the employee paid portion of the premium.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Maternity Minimum</b>             | <p>This field is valid for the Geneva canton only.</p> <p>Enter the minimum guaranteed maternity payment for this canton.</p> <hr/> <p><b>Note:</b> Currently, for Geneva, the minimum guaranteed maternity payment is 54 CHF per day.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Maternity Maximum</b>             | <p>Enter the maximum guaranteed maternity payment for this canton.</p> <hr/> <p><b>Note:</b> Currently, for Geneva, the maximum guaranteed maternity payment is 237.40 CHF per day whereas for other cantons the maximum per day is 172.00 CHF.</p> <hr/>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Maternity Refund</b>              | <p>Specify the percentage of the gross used to calculate maternity payments within the minimum and maximum limits for all of the cantons.</p> <p>For example, assume that the following is true:</p> <ul style="list-style-type: none"> <li>• The maternity refund percentage is 80%.</li> <li>• The minimum and maximum maternity refund for Geneva are 54 CHF and 237.40 CHF respectively.</li> <li>• The maximum maternity refund for other cantons is 172 CHF.</li> </ul> <p>If we assume that a woman's regular earnings are 50 CHF per day, the maternity refund would be 54 CHF in Geneva, as <math>80\% \times 50 \text{ CHF} (= 40)</math> is below the 54 CHF minimum for Geneva. In other cantons, however, the refund would be 40 CHF. And if we assume that the woman's regular earnings are 300 CHF per day, the maternity refund in Geneva would be 237.40 CHF, as <math>80\% \times 300 \text{ CHF} (= 240)</math> is greater than the 237.40 CHF maximum for Geneva. In other cantons, however, the maternity refund would be 172 CHF, as <math>80\% \times 300 \text{ CHF} (= 240)</math> exceeds the 172 CHF maximum for other cantons.</p> |

# Setting Up Reports

## Setting Up Payslips

This topic provides an overview on payslip customizations.

### Understanding Payslip Customizations

Global Payroll for Switzerland enables you to generate and adapt payslips to meet your needs. You can also print a message on the payslip of an individual payee or on payslips belonging to designated pay groups, locations, or departments.

To support your archiving and specific layout and printing needs the design of the standard payslip separates the storing of data and from data presentation. In a first step you can create an XML file and store it in the GPCH\_RP\_AL10ONL record. Then you can view or print this file in your browser using the standard XSL style sheet (GPCH\_STYLE\_KW1).

Here is a graphical representation of process for customizing payslips:

Graphic showing process for customizing payslips

You can decide to customize the existing style sheet, create another style sheet, or choose a completely different presentation procedure. The standard, however, is to create PDF files out of XML. If you want to customize this setup, you can change the SQR or use any other tool or procedure. To define the path

to your logo for the Online Payslip, use the URL Maintenance page (select People Tools, Utilities, Administration, URLs).

GP Switzerland URL for Payslip Logo is GPCH\_ONLINE\_PAYSLIP.

In addition, you can use payslips to:

- Freeze XML after final print.
- Print or view various selections (pay entity, pay group, location, department, employee ID)
- Create messages on various organization levels.
- Sort reports by various criteria (company, pay group, location, department, employee ID, name, and canton).
- Create interfaces only.
- Recreate reports only for new calculations (for example, time stamp compares).
- Print payslips for selected subsets.

Please refer to your PeopleTools documentation for procedures on how to customize style sheets and printing procedures.

## Pages Used to Set Up Payslips

| <b>Page Name</b>                                          | <b>Definition Name</b> | <b>Usage</b>                                                                    |
|-----------------------------------------------------------|------------------------|---------------------------------------------------------------------------------|
| <u>Payslip Page</u>                                       | GPCH_SI_COMPANY6       | Enter the payslip style that you want to use to pay workers.                    |
| <u>Messages CHE Page</u><br>Add Payslip Messages CHE Page | GPCH_AL_01_MSG         | Include messages on payslips for payees being paid for a specific pay end date. |

## Payslip Page

Use the Payslip page (GPCH\_SI\_COMPANY6) to enter the payslip style that you want to use to pay workers.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Social Security / Insurance > Company SI Contributions CHE > Payslip**

## Payslip page

Company KW2 Muster AG

**Payslip Details** Find | View All First 1 of 1 Last

Effective Date 01/01/2008

Payslip Style GPCH\_STYLE\_KW1

PeopleSoft enables you to print payslips for monthly salaries and bonuses. Because the format of payslips varies greatly from one organization to another, we provide one format as an example. We also provide a template that enables you to customize the format to accommodate the payslip style your organization uses. You can also print a message on the payslip to an individual payee or groups of payees.

See [Setting Up Payslips](#).

## Messages CHE Page

Use the Messages CHE page (GPCH\_AL\_01\_MSG) to include messages on payslips for payees being paid for a specific pay end date.

Navigation:

- **Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Payslips > Messages CHE > Messages CHE**
- **Global Payroll & Absence Mgmt > Payslips > Add Payslip Messages CHE > Add Payslip Messages CHE**

Department

Empl ID

Description Merry Christmas and Happy New Year

You may designate that a message should appear on the payslips for all payees belonging to a pay entity, or for only those payees belonging to the pay entity that are also members of a specific pay group, location, or department. You may also designate that a message appears for only a specific payee.

**Note:** *Current Pay End Date* and *Description* are required fields. Additionally, you can select one of the following four fields: *Pay Group*, *Location*, *Department*, or *EmplID*.

| <b>Field or Control</b>                                          | <b>Description</b>                                                                                                                  |
|------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current Pay End Date</b>                                      | Select the pay end date for which you want the message to appear on the payslip.                                                    |
| <b>Pay Entity</b>                                                | Select the pay entity for the organization issuing the payslip.                                                                     |
| <b>Pay Group, Location, Department, and EmplID</b> (employee ID) | If you want to include only those payees belonging to a certain pay group, location, department, or employee ID, then enter the ID. |
| <b>Description</b>                                               | Enter the message to appear on the payslip.                                                                                         |

### Example 1

Suppose that you want to issue the message "Have a nice holiday," on the payslips of all payees belonging to a particular pay group. First, you select the appropriate current pay end date. Next, you select the pay entity issuing the payslip. Then you enter the ID for the appropriate pay group. Finally, you enter the message in the Description field.

When the payslips are generated, all payslips generated for payees belonging to the designated pay group display "Have a nice holiday."

### Example 2

Suppose that you want to issue the message "We don't have your current address on file," on the payslip of a specific payee. First, you select the appropriate current pay end date. Next, you select the pay entity issuing the payslip. Then you enter the employee ID for the payee. Finally, you enter the message in the Description field.

When the payslips are generated, the payslip for the designated payee displays "We don't have your current address on file."

## Setting Up BESTA Reports

Global Payroll for Switzerland supports the quarterly printing of BESTA reports for the statistics office. To run the BESTA report you need to:

1. Create the BFS\_OFS provider (select Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Social Security/Insurance, Providers CHE).

2. Fill in the Swiss company location table with the BUR (Betriebs-und Unternehmensregisternummer; the location ID assigned by the statistics office) and building numbers (select Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Social Security / Insurance, Company Location CHE, Company Location CHE).
3. Define active employees and apprentices using the Bracket Data page (Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Elements, Supporting Elements, Data).

---

**Note:** The BESTA report considers employees designated as apprentice on the Bracket Data page where the values for *APPRENTICE* match the grade of the employee and the values for *INCLUDE* match the employee status.

## Setting Up the Salary Structure Analysis (LSE) Report

This topic provides an overview on XML file preparation.

### Understanding XML File Preparation

Global Payroll for Switzerland supports the creation of the salary structure report as an XML file through the dashboard. These reports are required biannually.

To prepare the XML file, you need to setup the cross references that match the various personal attributes with the official values. On the company level the contract type, BUR number and UID need to be provided.

Accumulators for the various required amounts need to be setup As with all other dashboard processing you may also needs to setup the BFS\_OFS provider type, which can be the same as the one you set up for BESTA.

With Swissdec 5.0 user is executing the BFS\_OFS on a monthly control id.

## Sender Details Page

Use the Sender Details page (GPCH\_SI\_COMPANY7) to override sender information (optional).

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Social Security/ Insurance > Company SI Contributions CHE > Sender Details**

If you enter a description in the **Description** field on the Sender Details page for the Tax Statement 2006 (GPCHTX07) report, the system overrides the default information from the HCM Company table and the Swiss Domain Set for the sender data in the lower right hand corner of the tax statement.

This tables displays the line number, default field from the Company table or the Swiss Domain Set, and the field that are overridden on the tax statement.

| <b>Line</b> | <b>Default</b>        | <b>Sender Override Fields</b> |
|-------------|-----------------------|-------------------------------|
| 1           | Company_Tbl.Descr     | Description                   |
| 2           | Company_Tbl.Address1  | Address Line 1                |
| 3           | Company_Tbl.Address2  | Address Line 2                |
| 4           | GPCH_EG_STD.Signature | Signature                     |
| 5           | GPCH_EG_STD.Phone     | Telephone                     |

The default city and date come from the HCM Company table and Swiss Domain Set for the Field I in the lower left hand corner of the tax statement as shown in this table:

| <b>Field I</b> | <b>Default</b>                   | <b>Override</b> | <b>Override in Run Control</b>       |
|----------------|----------------------------------|-----------------|--------------------------------------|
| Ort            | Company_Tbl.City                 | City            | n/a                                  |
| Datum          | CurrDate as of save of dashboard | City            | Append to City (internal print only) |

**Note:** The Sender Detail override applies when the **Description** field is populated. In this case all fields get overridden, including those that did not get filled in. For printing the system populates the proposed date using the date entered in the **Issue Date** field on the run control page.

## Accumulator Name Page

Use the Accumulator Name page (GP\_ACCUMULATOR) to map customer earnings to standard accumulators.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Elements > Supporting Elements > Accumulators > Accumulator Name**

The Accumulators page maps customer earnings to standard accumulators. This table lists the accumulators for the LAW 2006 Tax Statement report for the Global Payroll for Switzerland application:

| <i><b>Accumulator</b></i> | <i><b>Description</b></i>       | <i><b>Custom Entry</b></i> | <i><b>Comment</b></i>                                                                                                                                                                      |

For each of the five forms delivered with the application, click the **Delete** button, then click **Add** to upload the corresponding form from your environment. By default you'll find these forms inside your SQR directory.

**Note:** Never use the -/+ to change lines, then you'll lose the setup and need to reload tables GPCH\_FM\_FORMOPT and GPCH\_FM\_FLD and do not introduce new Effdt for new forms.

This table lists the forms the are delivered with the Global Payroll for Switzerland application for the LAW 2006 Tax Statement:

## Setting Up Source Tax Reports

This topic discusses how to set up source tax reports.

Global Payroll for Switzerland supports the legal source tax reporting requirements for all cantons. You need to manage the following setup to adjust the reporting to the local requirements.

## Pages Used to Set Up Source Tax Reports

| <b>Page Name</b>                                  | <b>Definition Name</b> | <b>Usage</b>                                                                                                                     |
|---------------------------------------------------|------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">Providers Page</a>                    | GPCH_SI_PROVDR         | Define provider for the GE and VD cantons only. See also <a href="#">Generating and Managing Dashboard XML</a> .                 |
| <a href="#">FAK/Source Tax (System) CHE Page</a>  | GPCH_TX_FAK            | Review values entered in the <b>Withholding Tax on Commission</b> field.                                                         |
| <a href="#">FAK/Source Tax (Company) CHE Page</a> | GPCH_TX_FAK_STAX       | Define <b>Tax Nbr</b> , <b>Use Premium separate</b> , and <b>Source Tax Language</b> fields for monthly and quarterly reporting. |
| <a href="#">Accumulator Name Page</a>             | GP_ACCUMULATOR         | Review accumulators and add customer earnings and deductions to the accumulators.                                                |

## Providers Page

Use the Providers page (GPCH\_SI\_PROVDR) to define provider for the GE and VD cantons only. See also [Generating and Managing Dashboard XML](#).

| 5 BL    | Basle-Country          | 1639     |            |                      |                     |            |             |              |              |          |              |

| Field or Control            | Description                                                                                                                                                                                                                                                                                                                          |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax Nbr</b> (tax number) | Tax Nbr is deprecated and has to be defined via Customer ID of the company.                                                                                                                                                                                                                                                          |
| <b>Tax Method</b>           | Override tax method (e.g. for VS company may use VD method).                                                                                                                                                                                                                                                                         |
| <b>Use Premium separate</b> | Reports earnings/deductions assigned to accumulator CH_TX_06 in separate column.                                                                                                                                                                                                                                                     |
| <b>Source Tax Language</b>  | Select the language that you want to use for the canton. If the language on the run control page is blank, you need to select languages for specific cantons on this page, especially if you run one report that contains several cantons with different languages. Supported languages include English, French, German and Italian. |

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                                                                                         |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tax Month</b> and Tax Quarter | When running the report for several cantons in monthly or quarterly mode, the system includes only those cantons that qualify for monthly or quarterly mode. You can, however, select both modes, then the system will include the canton in both reports. |

## Yearly Source Tax Report (GPCHTX01) – Cross Border Mode

| <b>Accumulator</b> | <b>Description</b>          | <b>Custom Entry</b> | <b>Comment</b>                                                                                                                               |
|--------------------|-----------------------------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| CH_TX_GG1B         | Tax Gross Cross Boarder FRA | CH_TX_CGG1B         | Only used when employees do not contribute through CH_00_0 or if the reported gross needs to be reversed as they contribute through CH_00_0. |

Defines the reported gross. This accumulator is calculated in payroll and stored in the GPCH\_RP\_0001 table. This is where the system gets the value from for the report.

## Yearly Source Tax Report (GPCHTX01) – Geneva

| <b>Accumulator</b> | <b>Description</b>           | <b>Custom Entry</b> | <b>Comment</b> |
|--------------------|------------------------------|---------------------|----------------|
| CH_TX_GE31_YTD     | GE days worked               | CH_TX_CGE31         |                |
| CH_TX_GE34_YTD     | GE indemnities depart        | CH_TX_CGE38         |                |
| CH_TX_GE37         | AQ GE prestations en capital | CH_TX_CGE37         |                |
| CH_TX_GE38         | AQ GE indemnities pour frais | CH_TX_CGE38         |                |

| <b><i>Accumulator</i></b> | <b><i>Description</i></b>     | <b><i>Custom Entry</i></b> | <b><i>Comment</i></b> |
|---------------------------|-------------------------------|----------------------------|-----------------------|
| CH_TX_GE39                | Unpaid days attestation quit. | CH_TX_CGE39                |                       |

These accumulators are calculated only within the report and saved into the XML file. Values are not stored in the GP\_RSLT\_ACUM table or in a write array.

### Yearly Source Tax Report (GPCHTX01) – Ticinio

| <b><i>Accumulator</i></b> | <b><i>Description</i></b> | <b><i>Custom Entry</i></b> | <b><i>Comment</i></b> |
|---------------------------|---------------------------|----------------------------|-----------------------|
| CH_TX_TI22                | Source Tax TI unpaid days | CH_TX_TI22                 |                       |

This accumulator is calculated within the payroll and stored in the GPCH\_RP\_0001 table. This is where the system gets the value from for the report.

### Monthly/Quarterly Source Tax Report (GPCHTX02) – AI, AR, VD, ZH

| <b><i>Accumulator</i></b> | <b><i>Description</i></b>     | <b><i>Custom Entry</i></b> | <b><i>Comment</i></b>                                    |
|---------------------------|-------------------------------|----------------------------|----------------------------------------------------------|
| CH_TX_06                  | QS Additional Premium (s. 2i) | CH_TX_C06                  | Used with cantons other than AI, AR, GL, SG, VD, and ZH. |
| CH_TX_06AI                | Source Tax Premium AI         | CH_TX_C06AI                |                                                          |
| CH_TX_06AR                | Source Tax Premium AR         | CH_TX_C06AR                | Also used for GL and SG.                                 |
| CH_TX_06VD                | Source Tax Premium VD         | CH_TX_C06VD                |                                                          |
| CH_TX_06ZH                | Source Tax Premium ZH         | CH_TX_C06ZH                |                                                          |

These accumulators are used to show bonus payments separately if the Use Premium flag for the canton is selected. The system calculates accumulators within the payroll. The value shown in the report is stored in the GPCH\_RP\_0001 table. This is where the system gets the value from for the report.

## Setting Up FAK\_CAF Reports

This topic discusses how to set up FAK\_CAF reports.

Global Payroll for Switzerland supports the legal FAK\_CAF reporting requirements for all cantons. You may need to manage the following setup pages to adjust the reporting to your local requirements.

## Pages Used to Set Up FAK\_CAF Reports

| <i>Page Name</i>                         | <i>Definition Name</i> | <i>Usage</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>FAK Nbr</b>                              | Enter the FAK_CAF account as assigned to your company by the FAK_CAF administration.                                                                                             |
| <b>FAK% Total</b>                           | If the FAK Default Pct is deselected on the Rates page, the system uses the contribution percentages entered here.                                                               |
| <b>FAK Language</b>                         | If you run one report for several canton with different languages, select the language for the canton. The system supports these languages: English, French, German and Italian. |
| <b>FAK Provider</b>                         | Assign FAK_CAF provider for cantons, where you want to create AK Banken and AK Versicherungen XML. This is the provider that gets mapped in Company Provider mapping.            |
| <b>FAK Month, FAK Quarter, and FAK Year</b> | Not currently supported.                                                                                                                                                         |

## Viewing Accumulators

Use the Accumulators page (GP\_PIN) to this page is used for informational purposes only.

The standard setup should cover all your requirements.

Navigation:

### Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Elements, Supporting Elements, Accumulators

Here are the accumulators the system uses for the Tax Statement (LAW\_CDS):

| <b>Line 1</b>                              | <b>Line 3</b>               |
|--------------------------------------------|-----------------------------|
| + CH_CA_ALL<br>- CH_CA_BIR<br>- CH_CA_BKOR | + CH_CA_BIR<br>+ CH_CA_BKOR |

Here is a graphical representation of how information flows from the payslip to the FAK\_CAF report:

Graphical representation of how information flows from the payslip to the FAK\_CAF report

**Note:** Since child allowance reporting is controlled by existing accumulators, we do not expect that you will have to make changes to child allowance accumulators.

Use the steps below to generate the FAK\_CAF interface files by dashboard (AKB and eAHV):

| <b>Step</b> | <b>Action</b>                                                                                                                                                                                | <b>Navigation</b>                                                                                                                                                                                                                                                           |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1           | Create a new provider for FAK_CAF                                                                                                                                                            | <b>Set Up HCM &gt; Product Related &gt; Global Payroll &amp; Absence Mgmt &gt; Social Security/ Insurance &gt; Providers CHE</b>                                                                                                                                            |
| 2           | Add the new provider you created in step 1 to a company.                                                                                                                                     | <b>Set Up HCM &gt; Product Related &gt; Global Payroll &amp; Absence Mgmt &gt; Social Security/ Insurance &gt; Company SI Contributions CHE</b>                                                                                                                             |

## Setting Up Pay Balances

This section provides an overview on pay balance adjustments.

### Pages Used to Set Up Pay Balances

| <b>Page Name</b>                      | <b>Definition Name</b> | <b>Usage</b>                                    |
|---------------------------------------|------------------------|-------------------------------------------------|
| <a href="#">Define List Set Page</a>  | GP_ELN_SET             | Define print classes.                           |
| <a href="#">Accumulator Name Page</a> | GP_ACCUMULATOR         | Map customer earnings to standard accumulators. |

### Understanding Pay Balance Adjustments

To adjust pay balances to your needs you can choose a specific print class and define earnings and deductions that should display even if the result is zero. You can also define what earnings and deductions should appear with 4 decimals instead of the normal 2 decimal setup.

### Define List Set Page

Use the Define List Set page (GP\_ELN\_SET) to assign and view print classes.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Elements > Define List Set > Define List Set**

This table displays that delivered list set that work best with the reports displayed in the right hand column:

| <b>List Set</b> | <b>Report</b>                                                                               |
|-----------------|---------------------------------------------------------------------------------------------|
| CH_GPCHDM21     | Pay Balance (GPCHTX06)<br>Pay Element Summary (GPCHAL08)<br>Element Contribution (GPCHAL07) |

## Accumulator Name Page

Use the Accumulator Name page (GP\_ACCUMULATOR) to review accumulators and assign customer earnings and deductions.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Elements > Supporting Elements > Accumulators > Accumulator Name**

---

**Note:** The CH\_RP\_ZERO accumulator is only supported for elements that get stored if the value is equal to zero.

---

This table lists the accumulators that affect pay balances on reports for the Global Payroll for Switzerland application:

| <b>Accumulator</b> | <b>Description</b>                   | <b>Custom Entry</b> | <b>Comment</b>                                                |
|--------------------|--------------------------------------|---------------------|---------------------------------------------------------------|
| CH_RP_2DEC         | Shows if value has 3 decimals.       | CH_RP_DEC2          | Stores earnings and deductions that have 4 decimals.          |
| CH_RP_ZERO         | Shows if value is equal to zero (0). | CH_RP_ZERO          | Stores earnings and deductions that have a value of zero (0). |

## Setting Up the Dashboard

This topic provides an overview of the dashboard setup.

### Understanding Dashboard Setup

Global Payroll for Switzerland supports the XML generation as certified by Swissdec. In addition, you can create XML files for:

- Year end source tax for the Geneva canton.
- Quarterly source tax reporting for the Vaud canton(Passerelle).
- FAK\_CAF reporting, monthly as defined by Ausgleichskasse Banken AKB and Ausgleichskasse Versicherungen.
- Year to date as defined by eAHV.

All required processes can run in one job. You can manage all these activities through the dashboard:

- Run processes.
- Review files via XML publisher.
- Review files via ViewGen (for Swissdec domains)
- Send files to the Swissdec distributor.
- Manage files via robust file management. See also [Robust File Management](#).
- Archive files.

To prepare the dashboard processing, you need to prepare the system by following the instructions in this section.

See *PeopleTools: BI Publisher for PeopleSoft PeopleBook*

### Pages Used to Set Up the Dashboard

The system builds the domain package that you can run using the dashboard in one process. Depending on your requirements, you can combine all Swissdec domains or create several packages. For Source Tax and FAK\_CAF AKB and FAK\_CAF eAHV (all monthly and not Swissdec domains) you need dedicated domains.

Use the ELM Domain Setup CHE page to enter a set of values that you use on the Dashboard page to run the various legally required reports for the Swiss eGovernment.

You can save these values and reuse them whenever you have to run government required reports.

| Field or Control        | Description                                                                                                                                                              |

# Managing Overtime Requests

## Understanding the Overtime Request Process

Global Payroll for Switzerland includes transactions that manage overtime requests. Overtime self-service options differ for employees, managers, and Human Resources administrators.

| <b>Role</b>                   | <b>Overtime Self-Service Options</b>                                                                                                                                                                                                                                                                                                                                                                                                                                           |

Overtime requests generated by the overtime self-service application are ultimately translated into positive input and inserted into the Global Payroll positive input tables. This happens in a two-step process.

1. The overtime self-service application manages the overtime requests.
2. A background process (the Generate Overtime run control page) generates the positive input, which inserts the overtime positive input data into the appropriate tables.

---

**Note:** Managers and Human Resources administrators can only access the overtime request data belonging to their direct and indirect reports. The relationship between a manager or Human Resources administrator and reports can be defined in multiple ways. To set up access to direct and indirect reports, select **Set Up HCM > Common Definitions > Self Service > Direct Reports Setup**. Human Resources administrators can only access overtime requests awaiting their approval.

---

## Prerequisites

Before you can manage overtime requests using the self-service application, you must set up certain list-display criteria, overtime entry elements, and default information.

To set up for self-service overtime requests:

1. Enter the criteria that define the display of overtime requests on the Overtime Duration CHE page.
2. Enter the overtime element and default information on the Overtime Elements CHE page.

## Common Elements Used in This Chapter

| <i><b>Field or Control</b></i> | <i><b>Description</b></i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Creating Overtime Requests (Employee)

This section discusses how to create overtime requests.

- View the approval status on your latest overtime requests.
- Submit an overtime request following your company rules.
- Create an overtime request without submitting it.
- Submit an overtime request again, following your company's rules, when this overtime request is sent back with the reason: rework required.
- Edit an overtime request that was saved for later.

- Cancel a submitted or approved request.

Employees can only access their own overtime request data.

To view, add, edit, or cancel an overtime request, employees must perform the following steps:

1. Access the Request Overtime page.

If you have multiple jobs, the Select Job Title page appears. Select the job for which you want to request overtime. The Request Overtime - Latest Overtime Requests page appears. (If you only have one job, the Request Overtime - Latest Overtime Requests page appears.) Use this page to view existing requests, add a new overtime request, edit an existing request (if you are the originator of the request and the status is *Saved* or *Rework required*), or cancel a request (if you are the originator of the request and the status is not *Processed* or *Processed with Change*).

2. Click the **Show more overtime requests** link if you don't see an existing overtime request on the Request Overtime - Latest Overtime Requests page.

The extended list View Overtime Request Status - Overtime Requests page appears. You can view, add, edit, or cancel a request on this page just as you would on the Request Overtime - Latest Overtime Requests page.

3. Click the **Add** or **Edit** button to add or edit an existing request.

The Request Overtime - Overtime Request Details (add) page appears. Enter the details of your overtime request on this page. If you cancel an overtime request, the Cancel Confirmation page appears.

4. Click the corresponding date link in the **Request Date** column on either the Request Overtime - Latest Overtime Requests page or the View Overtime Request Status - Overtime Requests page to access the Request Overtime - Overtime Request Detail (view) page where you can view overtime request information and details about the approval status.

## Viewing Overtime Requests (Employee)

This section discusses how to view the overtime request status.

This transaction enables employees to view their latest overtime requests and approval status. Employees can only access their overtime request data.

To view the latest overtime requests, an employee performs these steps:

1. Access the Overtime Request Status page.

If you have multiple jobs, the Select Job Title page appears. Select the job for which you want to request overtime. The Request Overtime - Latest Overtime Requests page appears. If you only have one job, the Request Overtime - Latest Overtime Requests page is the first page to appear.

2. View your latest existing requests on the Request Overtime - Latest Overtime Requests page.
3. Click the **Show more overtime requests** link to display the extended list View Overtime Request Status - Overtime Requests page when an existing overtime request does not appear on the Request Overtime - Latest Overtime Requests page.
4. Click the corresponding date link in the **Request Date** column on either the Request Overtime - Latest Overtime Requests page or the View Overtime Request Status - Overtime Requests page to access the Request Overtime - Overtime Request Detail page. You can view the overtime request information and details about the approval status in display-only mode.

## Creating Overtime Requests (Manager)

This section discusses how to create overtime requests.

This transaction enables you to:

- View the latest overtime requests of one of your direct or indirect reports along with their approval status.
- Submit an overtime request for one of your direct or indirect reports according to your company's rules.
- Create an overtime request for one of your direct or indirect reports without submitting it.
- Submit an overtime request for one of your direct or indirect reports again, according to your company's rules, when the overtime request was created but sent back to you with the reason: rework required.
- Edit an overtime request for one of your direct or indirect reports that you created.
- Cancel a submitted or approved request for one of your direct or indirect reports that you created.

To view, add, edit, or cancel an employee's overtime request, managers perform these steps:

1. Access the Request Employee Overtime (Select Employee) page.
2. Select the employee on the Select Employee page.

The Request Overtime - Latest Overtime Requests page appears for the selected employee.

3. Click the **Show more overtime requests** link when an existing overtime request does not appear on the Request Overtime - Latest Overtime Requests page.

The extended list View Overtime Request Status - Overtime Requests page for the selected employee appears. You can view, add, edit, or cancel a request on the on this page just as you would on the Request Overtime - Latest Overtime Requests page.

4. Click the **Add** or **Edit** button to add a new request or edit an existing request.

The Request Overtime - Overtime Request Details (add) page appears. Enter the details of the employee overtime request on this page. If you cancel an overtime request, the Cancel Confirmation page appears.

5. Click the corresponding date link in the Request Date column on either the Request Overtime - Latest Overtime Requests page or the View Overtime Request Status - Overtime Requests page to view the details of an existing overtime request.

The Request Overtime - Overtime Request Detail page appears where you can view the overtime request information and details about approval status.

## Viewing Overtime Requests (Manager)

This section discusses how to view overtime requests.

This transaction enables you to view the latest overtime requests of your direct or indirect reports along with their approval status.

This transaction is display-only. You cannot add, modify, or cancel any overtime requests of your direct and indirect reports.

To view the status of an employee's overtime request, managers follow these steps:

1. Access the Overtime Request Status (Select Employee) page.
2. Select the employee on the Select Employee page.

The Request Overtime - Latest Overtime Requests page appears for the selected employee.

3. Click the **Show more overtime requests** link when an existing overtime request does not appear on the Request Overtime - Latest Overtime Requests page.

The extended list View Overtime Request Status - Overtime Requests page for the selected employee appears.

4. Click the corresponding date link in the **Request Date** column on either the Request Overtime - Latest Overtime Requests page or the View Overtime Request Status - Overtime Requests page to view the details of an existing overtime request.

The Approve Employee Details - Overtime Request Detail page appears where you can view the overtime request information and details about approval status in display-only mode.

## Approving Employee Overtime (Manager and Human Resources Administrator)

This section discusses how to approve employee overtime.

This transaction enables you to:

- Approve or deny an overtime request.
- Send back an overtime request with the reason: rework required.

To approve or deny employee overtime, managers and Human Resources administrators follow these steps:

1. Access the Approve Employee Overtime - Select a Transaction page.
2. Select the overtime request to search for approval.

The Approve Employee Overtime - Overtime Request Details (approve) page appears for that request.

---

**Note:** You can also view a history of overtime requests for the employee prior to approving the request.

---

3. Approve, deny, or send back the overtime request for rework.

The Request Overtime - Submit Confirmation page appears.

## Managing Employee Overtime (Human Resources Administrator)

This section discusses how to manage employee overtime.

This transaction enables you to:

- View a list of overtime requests for your reports.
- Enter an overtime request for your reports.
- Cancel an overtime request that you have previously entered for one of your reports.
- Modify overtime requests that are already approved.

To manage employee overtime requests, Human Resources administrators follow these steps:

1. Access the Employee Overtime (Select Employee) page.
2. Select the employee on the Select Employee page.

The Request Overtime - Latest Overtime Requests page appears for the selected employee.

3. Click the **Show more overtime requests** link when an existing overtime request does not appear on the Request Overtime - Latest Overtime Requests page, and you want to display the extended list View Overtime Request Status - Overtime Requests page for the selected employee.

You can view, add, edit, or cancel a request on the View Overtime Request Status - Overtime Requests page just as you would on the Request Overtime - Latest Overtime Requests page.

If you add a new overtime request, the Request Overtime - Overtime Request Details (add) page appears.

If you edit an existing overtime request, the Request Overtime - Overtime Request Details (add) page appears. Select Change Existing Data to make changes.

If you cancel an overtime request, the Cancel Confirmation page appears.

4. Click the corresponding date link in the **Request Date** column on either the Request Overtime - Latest Overtime Requests page or the View Overtime Request Status - Overtime Requests page to view the details of an existing overtime request.

The Overtime Request Detail page appears where you can view the overtime request information and details about approval status.

## Generating Overtime Requests

To generate overtime requests, use the Overtime Duration CHE (GPCH\_OT\_SETUP) and Overtime Elements CHE (GPCH\_OT\_ENTRY) components.

The overtime self-service application runs separately from the core Global Payroll process. In order to generate the overtime data that will then be used during regular payroll processing, run the Generate Overtime process that creates positive input data in the core Global Payroll tables.

Global Payroll for Switzerland uses many of the pages required to manage the overtime process multiple times at various stages. In addition, different roles (employee, manager, and Human Resources administrator) access these pages. Each page is documented once and variations of the page are indicated.

This topic discusses how to generate overtime requests.

## Pages Used to Generate Overtime Requests

| <b>Page Name</b>                                                                                                            | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                      |
|-----------------------------------------------------------------------------------------------------------------------------|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Overtime Elements CHE Page

Use the Overtime Elements CHE page (GPCH\_OT\_ENTRY) to set up overtime entry elements.

Navigation:

**Set Up HCM > Product Related > ePay > Overtime Elements CHE > Overtime Elements CHE**

Overtime Elements CHE page

The screenshot displays the 'Overtime Elements CHE' page. At the top, it shows 'Type of Overtime OT2'. Below this is a section titled 'Overtime Entry Information' with a search bar and navigation controls (Find | View All, First, 1 of 1, Last). The form contains several fields:
 

- \*Effective Date:** 01/01/1998 with a calendar icon.
- \*Status:** Active with a dropdown arrow.
- \*Description:** Overtime 150 %
- Short Description:** Overtime 150 %
- Element Name:** CH\_ER\_13624 with a magnifying glass icon.
- Element Name:** (empty field) with a magnifying glass icon.
- Hours/Amount:** A section with three radio buttons: Hours, Amount, and Both. The 'Both' option is selected.
- Overtime Default Hours:** (empty field)
- Amount:** (empty field)
- Currency Code:** CHF with a magnifying glass icon.

When employees request overtime, they can only select overtime types that are defined on this page.

## Comment

| <i>Field or Control</i>           | <i>Description</i>                                                                                                                                                                                  |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Submit</b>                     | Click to submit the overtime request. When the request is submitted, the system triggers the workflow for approval processing and transfers you to the Request Overtime - Submit Confirmation page. |
| <b>Save for Later</b>             | Click to save the overtime request without submitting it and transfer to the Save Confirmation page.                                                                                                |
| <b>Return to list of requests</b> | Click to cancel the transaction without saving it and return to the previous page.                                                                                                                  |

## For Employees

An overtime request by an employee requires approval from both a manager and a Human Resources administrator. A worklist or email is sent to the appropriate people.

## For Human Resources Administrators

If you add an overtime request, it is automatically approved.

If you are editing an existing overtime request, select **Change Existing Data** to modify the overtime request; enter a reason in the **Comment** field.

If you modify an existing overtime request, the status becomes *Approved with Change*.

## Request Overtime - Submit Confirmation Page

Use the Request Overtime - Submit Confirmation page (GPCH\_OT\_SUB\_CONF) to view details of a submitted overtime request.

Navigation:

Click the **Submit** button after entering an overtime on the Request Overtime - Overtime Request Details (add) page or any button on the Request Overtime - Overtime Request Details (approve) page.

# Managing Social Insurance for Switzerland

## Understanding Swiss Social Insurance

Before setting up and processing social insurance contributions, you should understand the terms and procedures Global Payroll for Switzerland uses for social insurance.

### Common Social Insurance Terms

Here's a list of common abbreviations used on the social insurance components in Global Payroll for Switzerland.

| <b>Abbreviation</b> | <b>German</b>                                                      | <b>English</b>                                 |
|---------------------|--------------------------------------------------------------------|------------------------------------------------|
| AHV                 | Alters- und Hinterlassenenversicherung.                            | Retirement and survivors' pension insurance.   |
| ALV                 | Arbeitslosenversicherung.                                          | Unemployment insurance.                        |
| ALVZ (ALV2)         | Zusätzliche Arbeitslosenversicherung                               | Additional Unemployment insurance.             |
| BU                  | Berufsunfall-Versicherung.                                         | Work-related accident/injury insurance.        |
| EE                  | Arbeitnehmer.                                                      | Employee.                                      |
| EO                  | Erwerbsersatzordnung für Dienstleistende in Armee und Zivilschutz. | Military and civil service pay supplements.    |
| ER                  | Arbeitgeber.                                                       | Employer.                                      |
| FAK                 | Familienausgleichskasse.                                           | Employer contribution to fund family benefits. |
| IV                  | Invalidenversicherung.                                             | Disability insurance.                          |
| NBU                 | Nichtberufsunfall-Versicherung.                                    | Non work-related accident/injury insurance.    |
| PK                  | Pensionskasse.                                                     | Pension fund.                                  |

| <b>Abbreviation</b> | <b>German</b>                              | <b>English</b>                                                                      |
|---------------------|--------------------------------------------|-------------------------------------------------------------------------------------|
| SUVA                | Schweizerische Unfallversicherungsanstalt. | Swiss Accident Insurance Institute (the largest insurance provider in Switzerland). |
| UV                  | Unfallversicherung.                        | Accident insurance.                                                                 |

## Social Insurance Overview

Contributory membership in national social insurance funds (such as AHV, IV, and EO) is mandatory for employers. You deduct social insurance contributions for those domestic and foreign employees with mandatory insurance coverage and transfer them to compensation funds in accordance with statutory requirements.

You specify the applicable prorated percentage rates for both the employer and the employee. When a new employee is hired, record his or her Social Insurance number.

At the end of prescribed pay periods, calculate the contribution amount, if the insurance provider hasn't already calculated it. Then transfer the amount to the respective provider.

The same procedure applies to unemployment insurance (ALV). For both types of insurance, deduct the employees' insurance percentage rate from their pay.

At the end of the year, total the paid earnings and then submit a complete list of employees with mandatory insurance coverage to the insurance providers. This list must include every employee's AHV number, total gross earnings, and the length of employment with the company.

If your company has a statutory requirement to make payments to a family allowance agency (FAK), transfer, depending on the canton, family allowances to employees along with their pay. Transfer the agreed percentage of the earnings subject to AHV to the FAK.

Deduct pension contributions in accordance with federal statutes governing pension funds (BVG) and, in some cases, transfer these contributions to a supplementary pension fund.

In accordance with federal statutes governing accident insurance (UVG), you must insure your employees against accidents with the SUVA or another accident insurance provider. Calculate the mandatory insurance contributions and transfer them to the insurance provider. If your company pays all or part of an employee's non-employer liability insurance premiums (NBU premiums), calculate no employee deductions, or only prorated deductions, depending on the program.

When you perform the respective calculations for these procedures, you create the prescribed reports and route them to the employee or to the responsible authorities.

You can enter tax and social insurance data after the following information is set up:

- System tables and social insurance tables.
- FAK data and percentages.
- Source Tax tables and data.

- Child Allowance table.
- Municipality table.
- Insurance providers.
- Scale codes for continued payments.

## Default Hierarchy for Social Insurance

This section explains the override options for social insurance. Global Payroll for Switzerland enables you to view the percentage and/or status of AHV/ALV, UV, PK, and FAK at three levels:

- First level—the social insurance system. The PeopleSoft system delivers a social insurance setup, which you can't edit because it's statutory.
- Second level—the company. You must set this level when you implement Global Payroll for Switzerland. It's an editable field that you can override.
- Third level—the employee. This is also editable.

You can override some values, such as eligibility status, at company or employee level. The following table displays whether information is available at each level.

---

**Note:** An *X* indicates that information is available at that level, and a dash (--) means that information is not available.

---

| <i>Level</i>        | <i>AHV / ALV Status</i> | <i>Percentage of AHV / ALV</i> | <i>Status / Percentage of UV</i> | <i>Limits</i> | <i>PK</i> | <i>FAK</i> |
|---------------------|-------------------------|--------------------------------|----------------------------------|---------------|-----------|------------|

| <b>Statutory Limit ALV1</b>                                    | Displays the statutory limit of insurance for ALV.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Statutory Limit ALV2</b>                                    | Displays the statutory limit of insurance for ALVZ.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>ALV Status</b>                                              | To set the default value for a company here, you should override it at the company level.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Asylum Contribution</b>                                     | Displays the deduction for the asylum fund. Asylum contributions are basically source taxes for asylum seekers, expressed as a percentage of gross earnings. This deduction must be made every month and deposited in an account as ordered by the Federal Ministry for Refugees. GP Switzerland provides the deduction <b>CH_AS_D10</b> which can be keyed in Earnings-/Deduction- assignments a/o Positive Input. The deduction is of type Base * %, where Base = AHV_AVS salary = CH_AH_D11_Base and % = CH_AS_PCT as maintained in this page. |
| <b>Minimum Work Hours per Week</b>                             | Displays the lowest number of working hours per week for liability insurance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Statutory Limit UV (statutory limit accident insurance)</b> | Displays the maximum monthly gross salary that can be insured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Defining Insurance Providers

To define insurance providers, use the Providers CHE (GPCH\_SI\_PROVDR) component.

Define the names of insurance providers and their associated provider codes on the Insurance Providers component, which consists of two pages: Insurance Providers and Contributions Rates. This topic discusses how to define insurance providers.

### Pages Used to Define Insurance Providers

| <i>Page Name</i>               | <i>Definition Name</i> | <i>Usage</i>                                  |
|--------------------------------|------------------------|-----------------------------------------------|
| <u>Providers Page</u>          | GPCH_SI_PROVDR         | Enter names and codes of insurance providers. |
| <u>Contribution Rates Page</u> | GPCH_SI_UV_PCT         | Enter accident insurance data.                |

### Providers Page

Use the Providers page (GPCH\_SI\_PROVDR) to enter names and codes of insurance providers.

| <b>Field or Control</b>                                                                             | <b>Description</b>                                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>UID_BFS</b>                                                                                      |                                                                                                                                                                                                                                        |
| <b>Sign file</b>                                                                                    | If you select the Sign file check box, the XML for this provider is electronically signed by certificate. This is only valid for Swissdec providers, where the Swissdec certificate can be applied.                                    |
| <b>Encrypt File</b>                                                                                 | For source tax (GE, VD) and FAK monthly (AKB) and FAK YearToDate (eAHV) you must NOT select this check box. Selecting this check box triggers the encryption of the XML. For Swissdec 4.0, encryption is mandatory.                    |
| <b>Profiling</b>                                                                                    | This field is relevant in the monthly statistics report. Select this checkbox if a corresponding agreement has been made in advance between the Statistik / Bundesamt für Statistik (BFS) and the company in the context of profiling. |
| <b>Transmission Mode</b>                                                                            | Select either <i>EIV</i> or <i>PIV</i> as the transmission mode.                                                                                                                                                                       |
| <b>Use Distributor to</b>                                                                           | If you send the XML through Swissdec and not directly to the provider, you need to select this check box; otherwise the distributor will reject the file.                                                                              |
| <b>Phone Information, Email Information, URL Information, Insurance Status, and Insurance Plans</b> | Use these groups boxes to add information about the insurance provider. Email and URL address information are for information purposes only, not for transmission.                                                                     |

## Contribution Rates Page

Use the Contribution Rates page (GPCH\_SI\_UV\_PCT) to enter accident insurance data.

|-----------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Employer Contribution BU %</b> (employer contribution percentage for BU) | Enter the employer's contribution for employer liability insurance (BU).                                                                                                                                                                                                                                 |
| <b>Total Contribution NBU %</b> (total contribution percentage for NBU)     | Enter the total contributions for accident insurance not covered by employer liability (NBU) as a percentage.                                                                                                                                                                                            |
| <b>Employee Contribution NBU</b>                                            | If the contribution is shared between employer and employee, enter the percent the employer would get paid by the employee. For example, if both pay half for Risk Group A with Total 1.46 %, you would enter 0.73 for Employee. In the screen described above, the employee pays the full contribution. |

## Defining Company Social Insurance Contributions

This topic provides an overview on Company SI Contributions and Legal Daily Payment Calculations.

### Pages Used to Define Company Social Insurance Contributions

| Page Name                  | Definition Name  | Usage                                                                                                     |
|----------------------------|------------------|-----------------------------------------------------------------------------------------------------------|
| <a href="#">Rates Page</a> | GPCH_SI_COMPANY1 | Set up social insurance data for old age and survivors' insurance (AHV) and unemployment insurance (ALV). |

| <b>Page Name</b>                         | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                                                               |

| <u>LAW 2006 Page</u>                     | GPCH_SI_COMPANY4       | Set up tax data for social insurance programs that are being provided by the organization since the year 2006.<br><br>Before 2006 the system provided a different tax statement.                                                                                                           |
| <u>LAW Messages Page</u>                 | GPCH_SI_COMPANY5       | Set up message information that will appear on the tax reports for workers from individual cantons or all cantons.                                                                                                                                                                         |
| <u>Payslip Page</u>                      | GPCH_SI_COMPANY6       | Enter the payslip style that you want to use to pay workers.                                                                                                                                                                                                                               |
| <u>Sender Details Page</u>               | GPCH_SI_COMPANY7       | Enter details regarding the organization sending report information to different legal entities in different countries.<br>You can use this page to enter different information according to the language that is being used by the organization to which you are sending the information. |
| <u>Maintain Social Ins Data CHE Page</u> | GPCH_SI_DATA           | Display and change social insurance data for individual employees. You can view and change retirement and survivors' pension insurance data (AHV) and unemployment insurance data (ALV).                                                                                                   |

## Understanding Company SI Contributions

Use the Company SI Contributions CHE (GPCH\_SI\_COMPANY) component to define company social insurance contributions and data specific to your company. This component enables you to manage AHV and ALV data as well as accident insurance and daily accident benefits insurance.

---

**Note:** You must maintain both Company SI 1 and Company SI 2 tables.

---

## Implementing Legal Daily Payment Calculations

PeopleSoft supports daily payments for unemployment insurance, accident insurance, child allowance, and source tax. To accommodate these payments, PeopleSoft added the **Daily Limit** and **Avg Work Days** fields to the Rates page within the Swiss Company SI Contribution component.

In addition to entering the appropriate information in the **Daily Limit** and **Avg Work Days** fields, you must change an employee's compensation frequency to *(D)* Daily on the Compensation page (select Workforce Administration, Job Information, Job Data, Compensation).

## Rates Page

Use the Rates page (GPCH\_SI\_COMPANY1) to set up social insurance data for old age and survivors' insurance (AHV) and unemployment insurance (ALV).

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Social Security / Insurance > Company Social Insurance CHE > Rates**

Rates page

The screenshot shows the 'Company Social Insurance Contributions' page in PeopleSoft. The page is titled 'Company Social Insurance CHE' and has a navigation bar with tabs: Rates, Provider, PK Data, LAW 2006, LAW Messages, Payslip, and Sender Details. The 'Rates' tab is selected. The page displays a form for setting up social insurance data for 'Agency1 for Phased Retirement'.

|-------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Trading Register ID</b>                            | ID assigned by trading Register.                                                                                                                                                                                                                         |
| <b>UniqueCompanyID</b> (UnternehmensIdentifikation)   | The unique company ID assigned by the statistics office                                                                                                                                                                                                  |
| <b>BUR</b> (Betriebs- und Unternehmensregisternummer) | The location ID assigned by the statistics office. Here the BUR is just for information. For Swissdec reporting, the BUR from Company Location CHE is used instead.                                                                                      |
| <b>Free Transportation F</b>                          | In the tax statement form there is an <b>F</b> check box. This indicates if the person benefits for free transportation. On this page the system displays the default.                                                                                   |
| <b>Canteen G</b>                                      | In the tax statement form there is a <b>G</b> check box. This indicates if the person receives canteen benefits, with a portion paid by the employer, or if the person receives a tax free meal allowance. On this page the system displays the default. |
| <b>Expenses 13.1.1</b>                                | The system displays the default, whether that field on tax statement applies or not.                                                                                                                                                                     |
| <b>Eff. expenses expat 13.1.2</b>                     | The system displays the default, whether that field on tax statement applies or not.                                                                                                                                                                     |

## LAW Messages Page

Use the LAW Messages page (GPCH\_SI\_COMPANY5) to set up message information that will appear on the tax reports for workers from individual cantons or all cantons.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Social Security / Insurance > Company Social Insurance CHE > LAW Messages**

LAW Messages page

The screenshot shows the 'LAW Messages' page for company KW2, Muster AG. The 'Effective Date' is 01/01/2008. The page displays a list of messages with the following columns: Message Number, Message Text, Canton, All Cantons, From Dt, Amount 1, and Company. The list contains four messages:

| Message Number | Message Text                   | Canton | All Cantons              | From Dt    | Amount 1 | Company |
|----------------|--------------------------------|--------|--------------------------|------------|----------|---------|
| 1              | Expense regulations by canton  | LU     | <input type="checkbox"/> | 04/15/2005 |          |         |
| 2              | Conditions of Rz 52 covered    |        | <input type="checkbox"/> |            |          |         |
| 3              | Share granted by other company |        | <input type="checkbox"/> |            |          |         |
| 4              | Child Allowance per AHV-AVS    |        | <input type="checkbox"/> |            |          |         |

**Note:** Use this page to define messages that are valid for the company in general or for specific cantons of the company. During message generation the system applies additional logic to decide whether this is a valid message for the dedicated employee. The system, however, only considers messages and cantons as declared here.

See [Setting Up Tax Statements](#).

| Field or Control                              | Description                                                                                                                                                              |
|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Message Number</b> and <b>Message Text</b> | Select the message that you want to appear on the tax reports for an individual canton or all cantons. The text of the message appears in the <b>Message Text</b> field. |
| <b>Canton</b>                                 | Select a canton. The system prints the message you selected on the tax reports for the particular canton indicated in the field.                                         |
| <b>All Cantons</b>                            | Select this check box if you want the system to print the message you selected on the tax reports for the all cantons.                                                   |
| <b>From Dt</b> (from date)                    | Select the date from which you want the message to appear.                                                                                                               |

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Amount 1 and Company</b> | <p>Some messages are reported with a fixed amount (for example, reallocation cost of CHF 2000.00). If the message in question is declared as <i>generate always</i>, then the amount from this page is reported. More see as well in chapter 19 Generating and reviewing</p> <p>See <a href="#">Creating, Viewing, and Updating Online Tax Statements</a>.</p> |

## Payslip Page

Use the Payslip page (GPCH\_SI\_COMPANY6) to enter the payslip style that you want to use to pay workers.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Social Security / Insurance > Company Social Insurance CHE > Payslip**

Payslip page

PeopleSoft enables you to print payslips for monthly salaries and bonuses. Because the format of payslips varies greatly from one organization to another, we provide one format as an example. We also provide a template that enables you to customize the format to accommodate the payslip style your organization uses. You can also print a message on the payslip to an individual payee or groups of payees.

See [Assigning and Viewing Print Classes](#).

## Sender Details Page

Use the Sender Details page (GPCH\_SI\_COMPANY7) to enter details regarding the organization sending report information to different legal entities in different countries.

You can use this page to enter different information according to the language that is being used by the organization to which you are sending the information.

| <b>Apply Waiver of Exemption</b> | The employee must inform their employer by the first salary payment of the year or the first salary payment after reaching the reference age that they do not wish to make use of the exemption amount. If no notification is given, the exemption amount will be deducted automatically. The employee's choice applies for the entire year and is automatically carried over to the following year, unless the employer is notified otherwise before the first salary payment of the following year. |

## Managing Additional Insurance

To manage additional insurance, use the Addtl Insurance Provider CHE (GPCH\_SI\_ADDITIONAL\_GBL) component.

This topic discusses how to manage additional insurance.

**Note:** Some companies may provide employees with additional insurance packages, depending on their position in the company or their salary grade. For example, some employees may be eligible for additional health insurance in addition to the mandatory insurance packages that are available. Global Payroll for Switzerland enables you to create voluntary combinations of insurance packages. These are presented to employees, who choose one from the selections. You can use Global Payroll's functionality as a basis for additional calculations and other features that you add when you install Global Payroll for Switzerland. You create the insurance packages on the Addtl Insurance Provider CHE page, and assign them to an employee on the Additional Insurance Data page.

## Pages Used to Manage Additional Insurance

Reporting on Social Insurance

This topic discusses how to view and run social insurance reports.

The Element Contribution report defines all contributions and deductions, and the SI Company Setup report lists all employee contributions for AHV, ALV, ALVZ, and UV and other company setting.

Pages Used to Report on Social Insurance

| Page Name                                          | Definition Name | Usage                                                                                                                                                                                                                                                                                                 |

## Element Contribution List CHE Page

Use the Element Contribution List CHE page (GPCH\_RC\_AL07) to create a report that documents the calculation process by defining all contributions and deductions.

A plus sign (+) in the report indicates that the amount is added. A minus sign (-) indicates that the amount is deducted. When there is no symbol, the value is not included in the calculation.

You can run the report in 2 modes:

- Overview

Based on the print class and accumulators that you select on the run control page, the Overview mode displays a list of elements vertically and the list of accumulators horizontally.

- Detail

If running in Detail mode, the system displays one page for each earning and deduction that was selected. The report provides information about the fixed set of accumulators (CH\_AH\_02, ~UV\_02, ~BV\_02, ~TX\_02, ~NE\_02, ~00\_80, ~00\_50, ~00\_52, ~00\_54, ~NE\_02 ) 1), accumulators that were specified on the run control page, and accumulators identified by the entries in the Category field (LAW or LA6 / BS for release 8.9 and up)

| <b>Field or Control</b>      | <b>Description</b>                                                                                                                                                                                                                       |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>From Date and To Date</b> | Lists all contribution changes between the dates specified.                                                                                                                                                                              |
| <b>Print Detail Report</b>   | Select this check if you want to enter specific pay entity, print class and language information. If you select this check box, the system displays the <b>Pay Entity</b> , <b>Details</b> and <b>Language</b> group boxes to the right. |
| <b>Print Class</b>           | Select a print class. The PeopleSoft system delivers two standard print classes, but you can create your own. The print class determines the set of selected contributing elements.                                                      |

| <b>Field or Control</b>             | <b>Description</b>                                                    |
|-------------------------------------|-----------------------------------------------------------------------|
| <b>Only Elements in Print Class</b> | Select to report only elements specified in the selected print class. |
| <b>Non Elements in Print Class</b>  | Select to report on all existing elements.                            |

### Assignment per column

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                           |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Element Name</b>     | Select accumulators whose contributing components should be reported. The element name determines the set of elements contributed to and is mandatory.                                       |
| <b>Override</b>         | Select to optionally override the description of the selected element. You can display up to ten columns in your report and can configure the level of detail that you want to display.      |
| <b>Sequence</b>         | Enter a mandatory sequence number for the selected element's column. If you want to have the AHV/ALV contributions as the second column in your report, for example, enter sequence number2. |

### Assignment per line

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                        |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Category</b>         | Select the categories that you want the system to display on the report.                                                                                                  |
| <b>Override</b>         | Select to optionally override the description of the selected category.                                                                                                   |
| <b>Sequence</b>         | Enter a mandatory sequence number for the selected category. If you want to have the LAW category as the second line in your report, for example, enter sequence number2. |

**Sort Criteria**

The run control for the payroll register is a two-page component, consisting of the Report Options page and the Pay Element View page. In addition to gross pay, the columns of the report might provide information about base amounts (calculation bases) for UV pay, UV base, AHV gross, AHV base, amount not subject to AHV, ALV pay and ALVZ pay, as well as the resulting payment. You define the required information on the Payroll Register Element View page.

| <b>Field or Control</b> | <b>Description</b>                                                       |

This report:

- Summarizes employee contributions, which are grouped and sorted according to the specified calendar month.
- Summarizes employee data for the employer on the final page.
- Can be printed in two versions, one that shows all retro pay in detail and one that shows only accumulated amounts, including retro.

| <b>Field or Control</b>        | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Print Yearly Report</b>     | If you select this check box, the system displays the <b>Pay Year</b> field. Use this to create the report for the selected year. If you deselect this check box, the system displays the <b>From Date</b> and <b>To Date</b> fields. Use these fields to run reports for a quarter or fiscal year if the dates are different from the calendar year. The from date and to date can span a maximum of 12 months, but it can also report across years (for example, from 06/01/2008 to 05/31/2009). |
| <b>Print Pay Entity Report</b> | Select to print only those pages that display the annual and monthly totals for a pay entity, and not all of the retro pay data for all employees that the report lists.                                                                                                                                                                                                                                                                                                                           |
| <b>Print Detail Report</b>     | Select to print a detailed presentation of the retro results.                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Print Class</b>      | <p>Select the print class you require. The PeopleSoft system delivers two standard print classes, although you can create your own.</p> <p>Print classes for this report must not assign more than one component per selected element. Otherwise the report will have duplicates and fail. To show amounts and units of an earning, do the following on the Print Classes page: Enter the earning and select the <b>Print Sum Amounts</b> check box for that earning and then enter the Auto Assign element (xx_unit) and select the <b>Print Units</b> check box.</p> |

## Personal Statement CHE Page

Use the Personal Statement CHE page (GPCH\_RC\_SI03) to list the employee ID and all its payroll relevant attributes.

| <b>Field or Control</b>                                   | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Apply Context Language</b>                             | The statement is printed in the language of the employee.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Original Month, Most Recent Month, and As Of Month</b> | <p>Select one of these radio buttons to indicate the month you want the system to use to run the report. If you select <b>As of Month</b>, the system displays a second date field that you can use to indicate the required calculation month.</p> <p>The system displays data as of the selected generation period. The personal attributes get saved for each payroll run in case there were changes in the past. By selecting one of these options, you can track the history of data changes.</p> <p>For example: The date is October 2008 and you want to see data from June. There was a retro calculation in July and September for the person you selected. Their work location in June was BE originally. In July it was changed to ZH in retro with a June date. In October it was changed again in retro mode to TG. If you select June as the original month, you will see BE. If you select the most recent month, you will see TG. If you select July, August, or September as the As of Month you will see ZH.</p> |
| <b>Current Pay End Date</b>                               | Period for the which data get retrieved                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Print Class</b>                                        | Selects the earnings and deductions that display under insurance payments and base salary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## Chapter 12

# Managing Source Tax

---

## Understanding Source Tax

Switzerland is a confederation of 26 cantons with approximately 3,000 municipalities. Accordingly, it has an extremely complex taxation system, with taxes imposed at federal, cantonal, and communal levels. Tax rates can vary from one canton to another.

Source tax applies to specific categories of foreign employees. It is calculated according to the canton in which a worker is employed, and employers take source tax deductions directly from the earnings of these foreign nationals residing in Switzerland. Employers must withhold the tax due and pay this source tax to the cantonal tax administration. Source tax, levied at the source, pays off federal, cantonal, and communal tax liabilities.

## Calculating Source Tax

Data inputs for the source tax calculation are generally the same for all Swiss cantons. The employee's work location is read from the job records, and other source tax information is read from the employee Tax Data page along with stored tax rates for each canton, which together provide the raw data to be used in the calculation.

Not all cantons use the same mode for the regular calculation method to arrive at the source tax. For example, the regular calculation mode in cantons GE, FR, TI, and VD differs from the mode that applies in the 22 other cantons. User can decide (after agreed by canton) to apply one of the 4 different canton methods as well for any other canton. For example, in some cases the canton VD method is also used for other cantons. Then the user just needs to maintain the tax method override in FAK/Source Tax (Company) CHE page. In addition, the different selections on the employee Tax Data page determine what method applies to different employees (all methods are applicable to all cantons).

---

**Note:** The different calculation modes for the regular method are described in greater detail later in this chapter.

---

---

**Note:** There is special tax treatment for French Cross-Border workers in the following eight cantons: BE, BL, BS, JU, NE, SO, VD, and VS. Working in one of these 8 cantons, having a home address country equal to *France*, and having no assignment for source tax qualifies employees for this type of taxation. Cross-border employees are reported with their taxable gross on the Cross-Border Report for France. The employer then provides the list of employees to the tax administration which reports the gross to the location of residence. Thus the employees have their Swiss earnings taxed in France.

---

---

**Note:** With Swissdec 4.0, French Cross-Border workers for these 8 Cantons get reported as well in the standard source tax XML with TAG 'specialAgreement'.

---

## Calculation Methods

This section discusses:

- Primary tax calculation methods.
- Exceptions to the regular method.

### Primary Calculation Methods (determined by selection on employee's Tax Data page )

There are four primary methods used to calculate an employee's monthly source tax deduction, which are managed on the Tax Data page. These methods are summarized as follows:

| <b>Method Name</b> | <b>Description</b>                                                                                                                                                                                                                   |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Regular            | <p>A rate is selected from the tax table of the employee's tariff based on the applicable calculation mode.</p> <p>The system uses this rate to calculate the tax based on the employee's actual earnings.</p>                       |
| Fixed Percentage   | <p>A rate is entered in the employee's Tax Data page.</p> <p>The system uses this rate to calculate the tax based on the employee's actual earnings.</p>                                                                             |
| Fixed Deduction    | <p>An amount is entered in the employee's Tax Data page. This amount is withheld monthly as the source tax deduction.</p>                                                                                                            |
| Fixed Base         | <p>An amount is entered in the employee's Tax Data page. Depending on the tax tariff, this amount determines the source tax rate.</p> <p>The system uses this rate to calculate the tax based on the employee's actual earnings.</p> |

### Calculation Modes for Regular and Fixed Base Methods (determined by assigned canton)

Within the regular source tax calculation method there are exceptions for cantons GE, FR, TI, and VD. Instead of calculating the tax on a monthly earning base, these cantons calculate source tax as explained in the following table (by maintaining tax method override in FAK/Source Tax (Company) CHE page, user can decide to apply these methods as well to any other canton):

| <b>Canton</b> | <b>Mode</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GE            | <p>An annual adjustment is made in the December payroll for employees who meet the following conditions: full-time (FTE = 100%) for the entire year, employed in GE the entire year, with the same tariff for the full year. For other employees the tax is calculated using the monthly mode as is done in the 22 other cantons.</p>                                                                                                                                                                                                                                                                                                                                                                                 |
| FR            | <p>Each month the rate is calculated on the estimated yearly income, which is equal to: (actual regular earnings / actual months * 12) + actual bonus payments. Depending on the tax tariff, this amount determines the source tax rate. With this rate the tax is calculated using the employee's actual earnings (see CH_TX_07_YTD) within the tariff(s). Then the amount of tax paid is subtracted and the remaining amount is the source tax for the month.</p>                                                                                                                                                                                                                                                   |
| TI            | <p>Each month the rate is calculated on the monthly salary.</p> <p>In case of the following events, a tax adjustment is made: December payroll or termination, or departure from the TI canton.</p> <p>For the TI canton, the rate is calculated on the estimated yearly income, which is equal to: (actual regular earnings / actual months * 12) + actual bonus payments. Depending on the tax tariff, this amount determines the source tax rate. With this rate the tax is calculated using the employee's prorata actual annual earnings within the tariff(s) (by days within the tariff—see CH_TX_08_YTD). Then the amount of tax paid is subtracted and the remaining amount is the source tax adjustment.</p> |

| <b>Canton</b> | <b>Mode</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| VD            | <p>Each month the rate is calculated on the estimated yearly income, which is equal to: (actual regular earnings / actual months * 12) + actual bonus payments. Depending on the tax tariff, this amount determines the source tax rate. With this rate the tax is calculated using the employee's actual earnings (see CH_TX_07_YTD) within the tariff(s). Then the amount of tax paid is subtracted and the remaining amount is the source tax for the month.</p> <p>Besides the regular tariffs, in Canton Vaud there is a special source tax tariff for artists. You may have employees that should be taxed by this special tariff. After you implement the changes regarding the source tax tariff for artists, assign earnings specific to artists (standard earning 1012). Then check to see if the tax is calculating correctly and being reported on the Earnings and Deductions page (select Global Payroll &amp; Absence Mgmt, Absence and Payroll Processing, Review Absence/Payroll Info, Results by Calendar, Earnings and Deductions).</p> <ul style="list-style-type: none"> <li>• Earnings = 1012 (Premium Artists and Sportsmen).</li> <li>• Deduction = CH_TX_D10 (Artists and Sportsmen).</li> </ul> <p>Tax deductions:</p> <ul style="list-style-type: none"> <li>• 10% for daily profits until 200 CHF.</li> <li>• 15% for daily profits until 1000 CHF.</li> <li>• 20% for daily profits until 3000 CHF.</li> <li>• 25% for daily profits higher than 3001 CHF.</li> </ul> <p>Users can view and print the official forms by clicking the View button from the Source Tax Month run control page (the system calls BI Publisher when you click the View button).</p> |

## Overview on Generating a Source Tax XML for Swissdec

In addition to supporting the generation of PDF files to report source tax calculations (which we no longer ‘actively’ support, Global Payroll for Switzerland supports primarily the generation of a Swissdec ELM file to be sent to the authorities via SOAP messaging. The resulting XML file can be validated, viewed and transmitted to the authorities using the Dashboard architecture (see Swissdec WebService Call – Page Process files).

See [Generating and Managing Dashboard XML](#).

Use these steps to generate the source tax interface files:

| Step | Action                                                                                                                                                           | Navigation path                                                                                                                                 |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | Create a new provider for each canto for reporting source tax.<br><br>!! Naming convention is #XX, where XX stands for the standard 2 digit Canton abbreviation. | <b>Set Up HCM &gt; Product Related &gt; Global Payroll &amp; Absence Mgmt &gt; Social Security/ Insurance &gt; Providers CHE</b>                |
| 2    | Add the new provider(s) you created in step 1 to a company and check for each canton box and map to the canton = XX.                                             | <b>Set Up HCM &gt; Product Related &gt; Global Payroll &amp; Absence Mgmt &gt; Social Security/ Insurance &gt; Company SI Contributions CHE</b> |
| 3    | Create a new domain for the source tax with mode = ‘Swissdec’.                                                                                                   | <b>Set Up HCM &gt; Product Related &gt; Global Payroll &amp; Absence Mgmt &gt; Social Security/ Insurance &gt; ELM Domain Setup CHE</b>         |
| 4    | Assign the source tax to employees.                                                                                                                              | <b>Global Payroll &amp; Absence Mgmt &gt; Payee Data &gt; Taxes &gt; Maintain Source Tax Data CHE</b>                                           |

| <b>Step</b> | <b>Action</b>                                                                                            | <b>Navigation path</b>                                                                                                                                           |
|-------------|----------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5           | Run the payroll for the company.                                                                         | <b>Global Payroll &amp; Absence Mgmt &gt; Absence and Payroll Processing &gt; Calculate Absence and Payroll</b>                                                  |
| 6           | For a Swissdec source tax domain, the monthly mode and the first month of the selected year are default. | <b>Global Payroll &amp; Absence Mgmt &gt; Year End Processing &gt; Year End Process CHE &gt; Prepare Files</b>                                                   |
| 7           | Click Run. Then check the Process Monitor to make sure the process runs to success.                      | <b>Global Payroll &amp; Absence Mgmt &gt; Year End Processing &gt; Year End Process CHE &gt; Prepare Files</b>                                                   |
| 8           | Validate the created file.                                                                               | <b>Global Payroll &amp; Absence Mgmt &gt; Year End Processing &gt; Year End Process CHE &gt; Process Files</b>                                                   |
| 9           | Review validation results.                                                                               | <b>Global Payroll &amp; Absence Mgmt &gt; Year End Processing &gt; Year End Process CHE &gt; Review Files</b>                                                    |
| 10          | Send the file using send&Request button.                                                                 | <b>Global Payroll &amp; Absence Mgmt &gt; Year End Processing &gt; Year End Process CHE &gt; Process Files</b><br><br>See <a href="#">Robust File Management</a> |
| 11          | Run GetStatus using send&Request button.                                                                 | <b>Global Payroll &amp; Absence Mgmt &gt; Year End Processing &gt; Year End Process CHE &gt; Process Files</b>                                                   |

## Generating Source Tax Reports

This topic discusses how to generate source tax reports.

## Pages Used to Run Source Tax Data Reports

| <b>Page Name</b> | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                                                                          |
|------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  | GPCH_RC_AL07           | Create a report that documents the calculation process by defining all contributions and deductions. A plus sign (+) in the report indicates that the amount is added. A minus sign (-) indicates that the amount is deducted. When there is no symbol, the value is not included in the calculation. |
|                  | GPCH_QST_EMA_Proposed  | View Source Tax EMA proposals                                                                                                                                                                                                                                                                         |

| <b>Page Name</b>                        | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                        |
|-----------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                         | ViewGen                | View Authority Response                                                                                                                                                                                                             |
| <u>Source Tax Year Report CHE Page</u>  | GPCH_RC_TX01           | Run the Source Tax Year report (GPCHTX01), which displays net salary as well as employee source tax contributions. For the cantons of Geneva and Waadt, the report prints on an official form and is normally required once a year. |
| <u>Source Tax Month Report CHE Page</u> | GPCH_RC_TX02           | Run the Source Tax Month report.                                                                                                                                                                                                    |

## Element Contribution List CHE Page

Use the Element Contribution List CHE page (GPCH\_RC\_AL07) to create a report that documents the calculation process by defining all contributions and deductions.

A plus sign (+) in the report indicates that the amount is added. A minus sign (-) indicates that the amount is deducted. When there is no symbol, the value is not included in the calculation.

Navigation:

**Global Payroll & Absence Mgmt > Absence and Payroll Processing > Reports > Element Contribution List CHE > Element Contribution List CHE**

This example illustrates the fields and controls on the Element Contribution List CHE page. You can find definitions for the fields and controls later on this page.

## Source Tax Year Report CHE Page

**Important!** The following report got replaced by the Swissdec XML and may be now used only for internal purpose. Oracle will no longer support changes to this report.

Use the Source Tax Year Report CHE page (GPCH\_RC\_TX01) to run the Source Tax Year report (GPCHTX01), which displays net salary as well as employee source tax contributions.

Both reports got replaced by the Swissdec XML and may be now used only for internal purpose. Oracle will no longer support changes to these reports.

| Field or Control            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Cross Border France</b>  | Select to include French border workers in the report.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Print Village Total</b>  | Select this check box if you want to print totals for the tax administration refund and the consolidated tax debt for each village; otherwise that total will only show per canton. This is required for cantons where you send the tax report directly to the village rather than to the canton office.                                                                                                                                                                        |
| <b>Canton</b>               | <p>Select a canton to run the report for that canton only. If there is a required report for that canton, it will also be created.</p> <p>For example, if you choose the canton of Geneva, the system creates the Attestation Quittance report in French. And if you choose the canton of Tessin, the system creates the Attestato-Ricevuta report in Italian.</p> <p>If you do not select a canton, the report is printed for all cantons along with the required reports.</p> |
| <b>Issued Date</b>          | Date that shows as issue date on the statements per person (FR, TI) and the XML (GE, VD).                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Formalix Output Path</b> | Not supported as of 2009.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quarterly Report, Quarter and Current Pay End Period | <p>If you select the <b>Quarterly Report</b> check box, the system displays the <b>Quarter</b> field. You can then select the quarter for which you want to include data on the report.</p> <p>If you want to run monthly source tax reporting, do not select the <b>Quarterly Report</b> check box. The system displays the <b>Current Pay End Period</b> field. The system then requires that you enter a current pay end date.</p> <p><b>Note:</b> If you don't select a canton, the system creates a monthly report for all cantons, which have the <b>FAK Month</b> check box selected on the Canton (FAK/Source Tax) page. To access this page, select Setup HCM, Product Related, Global Payroll &amp; Absence Management, Taxes, FAK/Source Tax (Company) CHE.</p> <p>If you select a canton, the system generates a monthly report regardless of the settings on the Canton (FAK/Source Tax) page.</p> |

| <b>Field or Control</b>    | <b>Description</b>                                                                                                                                                                                                                                                                                      |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Print Village Total</b> | Select this check box if you want to print totals for the tax administration refund and the consolidated tax debt for each village; otherwise that total will only show per canton. This is required for cantons where you send the tax report directly to the village rather than to the canton office |
| <b>Print Earlier Xml</b>   | Select this check box to launch an BI Publisher report for a special source tax type. Currently, this feature is only used with Source Tax for artists.                                                                                                                                                 |
| <b>Canton</b>              | Select a canton to run the report for that canton only. The system creates Canton-specific appendixes for yearly tax reporting only.                                                                                                                                                                    |
| <b>Domain ID</b>           | Select a domain ID when you are launching a BI Publisher report for a special source tax type. This ID is needed to merge the domain setup into BI Publisher. Currently, this feature is only used with Source Tax for artists.                                                                         |
| <b>View</b>                | Click this button to view and print the official report for the quarter after you run the process. This will show the most recent XML, means in case of manual override the values of the override. Currently, this feature is only used with Source Tax for artists.                                   |

---

## Viewing and Maintaining Source Tax Data

To view and maintain source tax data, use the FAK/SourceTax (Company) CHE (GPCH\_TX\_FAK\_STAX) component.

This topic discusses how to view and maintain source tax data.

There are four steps to viewing and maintaining source tax data in Global Payroll for Switzerland.

1. Upload and view / update municipality code information for each canton.
2. Upload and view source tax data for each canton, to determine source tax rates that apply to foreign nationals in the individual Swiss canton.
3. Enter source tax data for foreign residents in Switzerland.
4. Update and view source tax percentage data, including withholding commission percentages.

## Pages Used to View and Maintain Source Tax Data

| <i><b>Page Name</b></i>                  | <i><b>Definition Name</b></i> | <i><b>Usage</b></i>                                                                                                                                                     |
|------------------------------------------|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Select All

Source tax rates are maintained by Oracle. However, you can load these rates directly into your application. As the cantons sometimes publish the new rates later than you might want them, you can use this feature to retrieve the rates in time for your current payroll.

To manage the upload you need to download the files from the internet and unzip them into a directory where the application has access to the files (usually a directory on the same machine as the application server).

See [Swiss Federal Tax Administration Website](#).

| Field or Control                   | Description                                                                                                            |
|------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Year                               | Enter the year for which you need to upload the rates                                                                  |
| Refresh Nbr Rows for this year     | Click to display the number of rows that already exist in the database under the <b>Nbr Rows</b> column in the grid.   |
| Insert into Source Tax Rates Table | Select if you want to update the final data; otherwise the process will only populate temp tables to allow a test run. |

| <b>Field or Control</b>  | <b>Description</b>                                                                                     |
|--------------------------|--------------------------------------------------------------------------------------------------------|
| <b>Prefix</b>            | This is always <i>TARxx</i> , where <i>xx</i> is the current year.                                     |
| <b>File extension</b>    | Always enter <i>TXT</i> as the file extension.                                                         |
| <b>Directory</b>         | The directory from where you load the data.                                                            |
| <b>Replace filename?</b> | Click to populate filename entries in the <b>Filename</b> column in the grid.                          |
| <b>Select</b>            | Select the cantons that you need to upload.                                                            |
| <b>Canton</b>            | Displays a list of all 26 cantons with 2 character abbreviations.                                      |
| <b>Description</b>       | Displays the names of the 26 cantons.                                                                  |
| <b>Filename</b>          | The entries in this column are automatically created based on your previous entries.                   |
| <b>Nbr of Rows</b>       | Displays the number of existing rows, if you clicked the <b>Refresh Nbr Rows for this year</b> button. |

## Municipality Codes CHE Page

Use the Municipality Codes CHE page (GPCH\_TX\_VILLAGE) to view and update municipality codes and their descriptions for a selected canton.

Municipality Codes get loaded along with Postal Code, but you can modify the data if necessary.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Taxes > Municipality Codes CHE > Municipality Codes CHE**

---

**Warning!** Postal Code load fills Municipality Codes. When modifying this data if necessary, you should carefully consider the impact of these changes.

---

## Source Tax CHE Page

Use the Source Tax CHE page (GPCH\_TX\_SETUP) to view source tax details such as source tax tariffs and basis, amounts and percentages.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Taxes > Source Tax CHE > Source Tax CHE**

| <b>Residence or Work Location</b>         | If the address of the employee is in Switzerland, the system displays the <b>Residence</b> field label. If the address of the employee is not in Switzerland, the system changes the field label to <b>Work Location</b> and displays the corresponding Postal, City and Canton.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Municipality Code</b>                  | Select the code of the municipality in which the employee lives. Prompt values are the municipality codes that correspond to the canton.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Withholding Tax Tariff and Default</b> | <p>Select a tariff from the list of valid tariffs for the canton. This tariff is used to calculate the source tax under the regular or standard method.</p> <p>The system defaults source tax tariff codes based on civil status, number of children, and work permission. This information is usually available in HCM. PeopleSoft, however, provides a default tariff code and an override option in its Global Payroll for Switzerland application.</p> <p>For example if the default list shows the tariff code B0Y and B0N in the Default field, and both codes are also available in the prompt list, the system displays B0Y in the edit box.</p> <hr/> <p><b>Note:</b> If the tax tariff code is not present in the prompt list when you click the <b>Lookup</b> button, the system displays an error message and the page cannot be saved. If you enter a tariff code that is not in the default list but is present in the prompt list, the system also displays a warning message. You can, however, save the page because the tariff code is present in the prompt list.</p> <hr/> |
| <b>Override Tax Amount</b>                | Use this field to override the selected tariff and apply the source tax using a <i>fixed deduction</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Estimated Yearly Income</b>            | Enter an amount to override the annual income used in the regular source tax calculation. This amount is used to calculate the source tax under the <i>fixed base</i> method.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Tax Calculation Method</b>             | <p>Select the required source tax calculation method.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> <li>• ZH [Monthly]</li> <li>• VD [Annual]</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Override</b>                           | Select to override the canton. The <b>Canton</b> field becomes available, in which you can select a canton.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>FTE</b>                                | Displays the data stored in Job Data records.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Telework Percent (%)</b>          | <p>Enter the percentage of telework (Remote work in the country of residence France).</p> <p>The term teleworking also includes:</p> <ul style="list-style-type: none"> <li>• Temporary assignments (including business trips) in France</li> <li>• Temporary assignments (including business trips) to third countries</li> <li>• Non-return days (Switzerland)</li> </ul> <p>Hence, Telework Percent (%) = Business Trip in France + Business Trip 3rd Countries + Non-return days (Switzerland)</p> <p>This percentage is the basis for Switzerland's compensation payment to France and is the subject of the notification to France within the framework of the automatic exchange of information.</p> <p>This percentage is the basis for Switzerland's compensation payment to France and is the subject of the notification to France within the framework of the automatic exchange of information.</p> <p>For French cross-border commuters, the limit of 40% telework based on total working hours per calendar year applies (96 out of 240 days, at 100% employment).</p> <p>Within this limit, wages are only taxable in the country of residence (France). There will be no compensation payment to the employee's country of residence.</p> <p>However, the teleworking rate is subject to the automatic exchange of information with France.</p> <hr/> <p><b>Note:</b> If teleworking exceeds the limit of 40% of working hours per calendar year, the employee is no longer a cross-border commuter. Consequently, the employee will be subject to normal tax rules and will no longer be subject to SFN taxation. The employer must distribute wages according to the established rules.</p> <hr/> |

---

**Note:** The fields Business Trip in France, Business Trip 3rd Countries and Non-return days (Switzerland) are not part of the annual cross-border commuter declaration to the KSTV. In order for the legal requirements to be adhered to, these elements must still be maintained and controlled by the company. Since the legal texts deal with annual limit values, companies must issue their employees a certificate stating the status of these four guideline values in the event of employees leaving the company during the year. In order for the legal requirements to be adhered to, these elements must still be maintained and controlled by the company. Since the legal texts deal with annual limit values, companies must issue their employees a certificate stating the status of these four guideline values in the event of employees leaving the company during the year.

---

If it is determined at the end of the year that an employee (using the tariff code SFN ) has exceeded the 40% limit, the employee immediately loses his status as a cross-border worker (SFN) in accordance with the agreement of April 11, 1983 retroactively for the current year. The withholding tax must be calculated and deducted retroactively for the entire year. This provision would apply to all employers for whom the employee worked in the year in question. It has to be handled completely by the employer.

# Defining EO Payments for Switzerland

---

## Understanding EO Payments

EO payments refer to the payment of salary during military and civilian service. The EO is an ordinance on military pay supplements and governs the earnings of military and civil defense personnel. According to the EO's provisions, people on active military duty (including members of the Women's Armed Forces and the Red Cross) or in civilian service are entitled to receive earning compensation for every paid or accredited day of service.

If this compensation is equal to 80 percent of an employee's salary, the employer does not need to make any additional payments. However, if this EO compensation replaces less than 80 percent of the effective earning, the employer is obliged to make up the difference to 80 percent of the salary for a limited period. This time period is defined according to the Basel, Bern, and Zurich scales.

When the limited period has expired, the employer is exonerated of further salary payments, and the employee may then only claim EO compensation. General work contracts or individual agreements may help to secure more favorable compensation for the employee.

| EO Pay Card Page                  | GPCH_RC_EO01                  | <p>Lists each employee's insurance number, full name, and employee ID in ascending order. The report also displays the employee's military service type, the duration of this service, yearly salary, how many children the employee has, and the total amount of EO compensation that the employee has received.</p> <p>The page creates a printed report and an interface file that can be sent electronically to the AHV provider.</p> |

## Understanding EO Payments and Corrections

EO payments are calculated in the current month. The system uses the annual salary and the number of children as of the first day of the military service period for the whole duration of the service, even if the service spans multiple months.

There is a separate page for entering standard EO data and correction (retroactive) EO data. The correction page has fields for manually overriding annual salary and the number of children. The same 3 dates are used in both the standard and the correction EO page.

### Define EO Payment CHE Page

Use the Define EO Payment CHE page (GPCH\_EO\_CALC) to record an employee's military and civilian service data.

You use this data to put forward your claims from the EO compensation office.

# Managing BVG Deductions

---

## Understanding BVG Calculations

Global Payroll for Switzerland provides you with two ways of calculating BVG deductions, externally and internally. Both methods require you to maintain PK data within the payroll system.

### External Calculations

The Global Payroll for Switzerland BVG calculation feature enables you to interface using swiss dec BVG Interface. = external calculation. To prepare exchange with the Pension fund (PEKA) user needs to run the required payrolls and dashboard for domain BVG\_LPP.

For more details how to run dashboard: [Generating and Managing Dashboard XML](#)

### Internal Calculations

To calculate BVG deductions internally, you must complete these steps:

1. Indicate that the BVG deductions will be calculated internally by selecting *Calculate* or *Eligible* in the **PK Status** field on both the PK Data page and the Pension Fund Data CHE page.
2. Set up your specific rules, valid rates and provider in brackets CH\_PI\_BR001 and CH\_PI\_BR002.
3. Run a payroll.

Included in the delivered payroll process is section CH\_PI\_S1000, which will calculate the BVG deductions.

---

**Note:** The system will only calculated BVG deductions for employees included in this pay run.

---

## Viewing Delivered Elements

The PeopleSoft system delivers a query that you can run to view the names of all delivered elements designed for Switzerland. Instructions for running the query are provided in the *PeopleSoft Global Payroll PeopleBook*.

| <u>PK Data Page</u>               | GPCH_SI_COMPANY4       | Select the PK calculation method for the company. Set up age requirements.                                                                                                          |
| <u>Pension Fund Data CHE Page</u> | GPCH_PK_DATA           | Select the PK calculation method for an employee. Maintain employee pension fund data.                                                                                              |
| <u>BVG Limits CHE Page</u>        | GPCH_PK_LIMIT          | Define BVG limits.                                                                                                                                                                  |
| Bracket Data Page                 | GP_BRACKET_DATA        | Maintain the PK provider contribution amounts in bracket CH_PI_BR001.<br><br>Maintain the relationship between pension provider and Global Payroll elements in bracket CH_PK_BR005. |

## PK Data Management

Whether interfacing with PEKA or calculating BVG deductions internally, you must maintain the PK within your payroll system. You'll need to check the information set up in the system to determine which employees are eligible for BVG deductions, and if those deductions will be calculated outside of the global payroll system.

To do this you will:

1. Use the Provider CHE page to set up PK insurance plans, and PK insurance status.
2. Use the PK Data page to make the company eligible for external BVG calculations or internal calculations, select the company's PK providers, and establish age limits and download file options.
3. Use the Pension Fund Data CHE page to make an employee eligible for external BVG calculations or internal calculations, and to select the employee's PK provider, insurance plan, and insurance status.

---

**Note:** To be eligible for external BVG calculations, the PK status for the company and the employee must be set to *eligible*.

---

If you will be calculating BVG deductions internally, you must also:

- Set up deduction limits on the BVG Limits CHE page.

- Maintain the PK provider contribution amounts in bracket CH\_PI\_BR001 using the Bracket Data page.

If you will be calculating BVG deductions externally (Swissdec), you must also map the pension provider and Global Payroll elements using the Convert PK code to PS code bracket (CH\_PK\_BR005).

## Providers Page

Use the Providers page (GPCH\_SI\_PROVDR) to set up insurance plans and insurance status for a provider.

# Managing Maternity Leave

---

## Understanding Maternity Leave

In Global Payroll for Switzerland you enter maternity leave data on a single page. The page generates absence take elements that work with the core application's absence process to correctly process maternity leave during a payroll run.

The system determines the amount of paid maternity leave to which an employee is entitled based on years of service and the canton of residence. After the birth of child, it recalculates entitlement based on the Swiss legal requirement of eight weeks' leave after the child's actual birth. To accomplish this, the PeopleSoft system uses the maternity code list set (CH\_MATERNITY) to process maternity absence.

## Tracking Maternity Leave

This topic discusses how to enter maternity leave data and provides a maternity leave example.

Global Payroll for Switzerland enables you to enter all maternity data on one page and then stores this data on the GP\_ABS\_EVENT table that the core application uses to process payroll.

## Page Used to Track Maternity Leave

| <i><b>Page Name</b></i>         | <i><b>Definition Name</b></i> | <i><b>Usage</b></i>                    |

| <i><b>Field or Control</b></i> | <i><b>Description</b></i>                                      |
|--------------------------------|----------------------------------------------------------------|
| <b>Last Work Day</b>           | Enter the last day the employee worked before maternity leave. |
| <b>Day of Birth</b>            | Enter the child's actual date of birth.                        |

## Maternity Paid

The system automatically calculates this data based on your entry in the **Last Work Day** field.

| <b><i>Field or Control</i></b> | <b><i>Description</i></b>                                                                                                                                                                                            |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>From</b>                    | Displays the date following the last worked day.                                                                                                                                                                     |
| <b>To</b>                      | Displays the last day eligible for paid maternity leave. This is based on canton rules and years of service derived from the Scale Codes and Job Data – Employment Information (Company Seniority Date field) pages. |
| <b>Absence Take</b>            | Displays the core application absence take element you linked to the absence type CH_MT_LFZ (paid maternity) on the self-service Absence Entries page.                                                               |

## Maternity Insurance

The system automatically calculates this data based on your entry in the Date of Birth field. This group box only appears for employees working in Geneva.

| <b>Field or Control</b> | <b>Description</b>                                                                                           |
|-------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>From</b>             | Child's birthdate.                                                                                           |
| <b>To</b>               | End of the maximum period established in the setup table. For example, 16 weeks after the child's birthdate. |
| <b>Absence Take</b>     | Displays the core application take element you linked to the absence type CH_MT_VERS.                        |

## Maternity Unpaid

The system automatically calculates this data based on your entry in the **Date of Birth** field. If eight weeks after the date of birth is before the **Maternity Paid To** date, no unpaid maternity is necessary.

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                       |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>From</b>             | Displays the date following the <b>Maternity Paid To</b> date.                                                                                           |
| <b>To</b>               | Displays the date eight weeks from the child's date of birth.                                                                                            |
| <b>Absence Take</b>     | Displays the core application absence take element you linked to the absence type CH_MT_UNB (unpaid maternity) on the self-service Absence Entries page. |

## Letter Details

Provides optional fields for generating maternity leave letters.

## Maternity Leave Example

Beate Ulrich has four years of service with her company and resides in Zurich; she is therefore entitled to ten weeks paid maternity leave. Her expected date of birth is 10 October 2001 and her last worked day is 26 September 2001. The system generates the following:

| <b>Field or Control</b>      | <b>Description</b> |
|------------------------------|--------------------|
| <b>Maternity Paid From</b>   | 27 September 2001. |
| <b>Maternity Paid To</b>     | 5 December 2001.   |
| <b>Maternity Unpaid From</b> | None.              |

| <b>Field or Control</b>    | <b>Description</b> |
|----------------------------|--------------------|
| <b>Maternity Unpaid To</b> | None.              |

The child's actual birth date is 15 October 2001. This entry generates a second absence take and the following unpaid dates:

| <b>Field or Control</b>      | <b>Description</b> |
|------------------------------|--------------------|
| <b>Maternity Unpaid From</b> | 6 December 2001.   |
| <b>Maternity Unpaid To</b>   | 9 December 2001.   |

---

## Viewing Delivered Maternity Leave Elements

This section contains information on the rules that Global Payroll for Switzerland provides to process maternity leave, including:

- Maternity deductions.
- Maternity earnings.
- Maternity process lists.

### Maternity Deductions

The following is a list of maternity deductions delivered with Global Payroll for Switzerland.

| <b>Deduction</b>                                | <b>Description</b>                            |
|-------------------------------------------------|-----------------------------------------------|
| Absence Code CH_AB_U500<br>Deduction CH_AB_1000 | Maternity Paid.                               |
| Absence Code CH_AB_U090<br>Deduction CH_AB_2000 | Unpaid Vacation.                              |
| CH_MI_D10                                       | Employee contribution to maternity insurance. |
| CH_MI_D11                                       | Total contribution to maternity insurance.    |

## Maternity Earnings

The following is a list of maternity earnings delivered with Global Payroll for Switzerland.

| <b>Earning</b>              | <b>Description</b>                                                                                                                                                                                     |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CH_MI_02                    | Maternity base.<br><br>Technically, this is not an earning, but the calculation base for generating the maternity earning.                                                                             |
| CH_MI_B02                   | Manual correction for maternity base CH_MI_02.                                                                                                                                                         |
| CH_ER_48000                 | Calculated based on CH_AB_U500, payment according to official scale.                                                                                                                                   |
| CH_ER_48010                 | Calculated based on CH_AB_U510, payment according to additional maternity insurance.                                                                                                                   |
| CH_ER_48020 and CH_ER_48030 | Generated for the period of CH_AB_U510 that is not overlapping with the standard scale pay. These earnings are generated so that your organization can decide to pay or not pay salary in this period. |

## Maternity Process Lists

The following is a list of maternity process lists delivered with Global Payroll for Switzerland.

| <b>Process List</b>                                             | <b>Description</b>                                    |
|-----------------------------------------------------------------|-------------------------------------------------------|
| CH_AB_ABSENCE<br>Section CH_AB_TAKE<br>CH_AB_U090<br>CH_AB_U500 | Absence Process List.<br><br>Absence Take.            |
| CH_AL_CH01<br>Section CH_ER_S2000<br>CH_AB_1000<br>CH_AB_2000   | Calc Process List.<br><br>Earnings from Absence Time. |

The maternity calculation is done in section CH\_MI\_S1000. This section is used by two process lists, one for absences and one for payroll. The absence process list uses the maternity section to calculate the take. The payroll process lists uses the maternity section to calculate the payment.

The PeopleSoft system delivers a query that you can run to view the names of all delivered elements designed for Switzerland. Instructions for running the query are provided in the *PeopleSoft Global Payroll PeopleBook*.

# Managing Banking

---

## Setting Up Swiss Banking

The banking feature in Global Payroll for Switzerland uses pages in PeopleSoft HCM, the Global Payroll core application, and Global Payroll for Switzerland.

To define banking for Switzerland:

1. Upload your banks through Load files CHE for Swiss banks. Foreign country banks you define on the Bank Table page, which you can access from the Global Payroll core application.

---

**Note:** The pages for defining banks are common to all PeopleSoft HCM applications and are documented in the *PeopleSoft HCM Application Fundamentals PeopleBook*.

---

2. Define the organization level for your source bank on the Source Bank Link page in the Pay Entity component of the Global Payroll core application.
3. You do the necessary dashboard setup and may apply additional logic to assign source banks, if the GP Core way to assign these does not cover the needs of your organization. Specify additional information that gets transferred along with the payment itself (TAG <UStrg>)
4. Define bank account information for payees on the Bank Account Information page in the Global Payroll core application.
5. Run the Payment Prep process CHE on the Banking Run Control page in the Global Payroll core
6. Create payment files (ISO 20022) and reports in Global Payroll for Switzerland.

---

**Note:** For GP Switzerland Bank transfer of all types IBAN is mandatory.

---

This example illustrates the overview of Swiss Payment Transfer.

## Downloading Bank Definitions

This topic provides an overview of bank definitions and discusses how to Load Files.

### Pages Used to Download Bank Definitions

| <i>Page Name</i>           | <i>Definition Name</i> | <i>Usage</i>    |
|----------------------------|------------------------|-----------------|
| <u>Load Files CHE Page</u> | GPCH_LOAD_FILES        | Load bank file. |

### Understanding Bank Definitions

Updated bank and branch information is available on the Swiss Interbank Clearing (SIC) website. To add this information to your system, you must do the following:

Use Load files CHE Page to load the swiss banks: You manually download the file from the SIC website and attach it to your network. Specify the network path on the Load files CHE page.

### Load Files CHE Page

Use the Load Files CHE page (GPCH\_LOAD\_FILES) to load the bank definition file from the SIC website.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Framework > Processing > Load Files CHE**

Load Files CHE page

Select the file to upload from the local directory where you saved the file downloaded manually from the SIC Website (The link Download Banks points to this site).

## Upload File Attachment - Load Files CHE

Once the file got uploaded click the Run button to load data into BANK\_EC\_TBL.

Afterwards, you may check whether there are any employees with Bank Accounts, which are no longer valid. Click Validate Bank Accounts button, select the Year where you just uploaded the bank data and review the list..

## Bank Data

Review the result

## Bank Data validation Report

|   | A                                  | B       | C              |
|---|------------------------------------|---------|----------------|
| 1 | <i>Bank Data Validation Report</i> |         |                |
| 2 |                                    |         |                |
| 3 | Employee ID                        | Bank ID | Account Number |
|   |                                    |         | Pay Group      |

## Setting Up Defaults for Source Banks

This topic discusses how to set up source bank defaults at the pay entity level.

### Page Used to Set Up Defaults for Source Banks

| <i>Page Name</i>                     | <i>Definition Name</i> | <i>Usage</i>                                                                  |
|--------------------------------------|------------------------|-------------------------------------------------------------------------------|
| Pay Entities - Source Bank Link Page | GP_PE_SBANK_LNK        | Enter information about source bank and payment type at the pay entity level. |

### Pay Entities - Source Bank Link Page

Use the Pay Entities - Source Bank Link page (GP\_PE\_SBANK\_LNK).

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence  
Mgmt > Framework > Organizational > Pay Entities > Source Bank Link**

Source Bank Link page

The screenshot shows the 'Pay Entities - Source Bank Link' page. At the top, there are tabs: 'Pay Entity Address', 'Processing Details', 'Retro Limits', 'Supporting Element Overrides', and 'Source Bank Link'. The 'Source Bank Link' tab is selected. Below the tabs, there are fields for 'Pay Entity' (GWS), 'Muster AG', and '\*Organization Link Option' (Company). Below this is a 'Definition' section with an 'Effective Date' of 02/05/2013 and a 'Load All Organization Units' button. The main section is the 'Organization Link List', which has a table with columns: '\*Organization Unit', 'Description', '\*Source Bank ID', and 'Name'. The table contains one row: GW4, GP Swiss Test 4, KW01, UBS.

**Note:** The pay entity automatically populates from the core application. On this page, enter information about the source bank ID and the payment type.

| <i>Field or Control</i>              | <i>Description</i>                                                                                                              |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Load All Organizational Units</b> | Select this option to load all valid entries for the link options. These valid entries must be active as of the effective date. |
| <b>Source Bank ID</b>                | Select the source bank ID that you require. Source banks are the money sources from which payroll disbursements are drawn.      |

## Defining Further information in Global payroll for Switzerland

Global Payroll Switzerland has long experience in preparation and communication of XML files for legal authorities. Thus GP Switzerland uses the existing framework (Swiss XML dashboard) to create Swiss ISO 20022 XML. User can map deductions for Transfer types 8 and 9. Further user can add more information to the transfer ( transfer purpose) on company and transfer level.

## Understanding ISO 20022 in XML dashboard

GP Switzerland dashboard manages all XML based reporting with the same framework. The following graphics shows how ISO 20022 is embedded in the framework. User just needs to understand that he will run the monthly process for a domain of type banking (BNK\_BNQ)

ISO 20022 in XML Dashboard

Follow the steps below for setting up dashboard framework for Swiss payment transfer.

| Step | Action                                                  | Navigation                                                                                                   |

## Defining Additional Information for Payment Types

For GP Switzerland ISO 20022 payment transfers, you can provide additional information on TAG <UStrg> for:

- Type 1 (salary) – on company level or using prepared hard coded purpose
- Type 8 (garnishment) – on E-/D- assignment level
- Type 9 (external. transfer) - along with recipient information

## Pages Used to Define Additional Information for Payment Types

| <i>Page Name</i>                                     | <i>Definition Name</i> | <i>Usage</i>                                                                                                    |
|------------------------------------------------------|------------------------|-----------------------------------------------------------------------------------------------------------------|
| <a href="#">Sender Details Page</a>                  | GPCH_COMPANY7          | Define additional Info for TAG <UStrg> per company for Type 1.                                                  |
| <a href="#">E-/D-Assignments – category GR1 Page</a> | GP_ED_PYE_DTL_SEC      | Define garnishment with additional Swiss configured fields. (contents gets transferred to TAG <UStrg> – Type 8) |
| <a href="#">Add Deduction Recipients Page</a>        | GP_RCP_PYE             | Define recipient for Type 8 and Type 9. For Type 9, purpose 1 and 2 get transferred to TAG <UStrg>.             |

**Note:** For Type 1, user can either go with prepared, hard coded value or define individual language sensitive message in Swiss company setup. Hard coded value is available in GPCH\_BK\_XFER\_EE. Alternately, user can provide additional information by setup.

### Additional Information for Type 1

For Type 1, user can either go with prepared, hard coded value or define individual language sensitive message in Swiss company Setup.

Hard coded value is available in GPCH\_BK\_XFER\_EE..

## Understanding Custom Exit to Assign Source Banks

Custom exit formula is useful in cases, if GP standard methods for assignment of different source banks may not sufficient for separation of source banks.

The custom exit formula for Swiss bank is defined by using Formula Name page.

### Formula Name Page

Use Formula Name page to define Custom Exit Formula.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Elements, Supporting Elements > Formulas**

This example illustrates the fields and controls on the Formula Name page.

**Note:** PeopleSoft delivers the custom exit empty.

## Proposal for Customer Formula

```

0 >> FM[CH_BK_CFO001]
IF ... = ... Then
'XXX' >>
>> VR[CH_BK_POST_RECEIVE]
End If

```

---

**Note:** In case an employee has multiple accounts, all accounts need to be transferred from the same source banks.

---

## Application Engine GPCH\_BK\_TRN.GPCHBK12.Step01

```

UPDATE PS_GPCH_BK_XFER_EE
  SET SRC_BANK_ID = ( SELECT R.CHAR_PIN_VAL
    FROM PS_GP_RSLT_PIN R
    , PS_GP_PIN P
  WHERE P.PIN_NM = 'CH_BK_POST_RECEIVE'
    AND P.PIN_NUM = R.PIN_NUM
    AND PS_GPCH_BK_XFER_EE.CAL_RUN_ID = R.CAL_RUN_ID
    AND PS_GPCH_BK_XFER_EE.CAL_ID = R.CAL_ID
    AND PS_GPCH_BK_XFER_EE.GP_PAYGROUP = R.GP_PAYGROUP
    AND PS_GPCH_BK_XFER_EE.EMPLID = R.EMPLID
    AND PS_GPCH_BK_XFER_EE.EMPL_RCD = R.EMPL_RCD)
WHERE PS_GPCH_BK_XFER_EE.CAL_RUN_ID = %Bind(CAL_RUN_ID)
  AND PS_GPCH_BK_XFER_EE.PAY_ENTITY = %Bind(PAY_ENTITY)
  AND PS_GPCH_BK_XFER_EE.EMPLID BETWEEN %Bind(EMPLID_FROM) AND %Bind(EMPLID_TO)
  AND ( EXISTS (
  SELECT 'X'
    FROM PS_GP_RSLT_PIN R
    , PS_GP_PIN P
  WHERE P.PIN_NM = 'CH_BK_POST_RECEIVE'
    AND P.PIN_NUM = R.PIN_NUM
    AND PS_GPCH_BK_XFER_EE.CAL_RUN_ID = R.CAL_RUN_ID
    AND PS_GPCH_BK_XFER_EE.CAL_ID = R.CAL_ID
    AND PS_GPCH_BK_XFER_EE.GP_PAYGROUP = R.GP_PAYGROUP
    AND PS_GPCH_BK_XFER_EE.EMPLID = R.EMPLID
    AND PS_GPCH_BK_XFER_EE.EMPL_RCD = R.EMPL_RCD)

```

## Defining Payment Transfer Information for Payees

IBAN is mandatory for all GP Switzerland payment transfers.

Transfer credentials are assigned for the following payment types:

- Type 1 in GP Core Bank accounts and Net Pay Election page.
- Type 8 in Swiss configured E/D-assignments for garnishments/recipients.
- Type 9 in GP Core E/D-assignments / Recipients.

## Pages Used to Define Payment Transfer Information for Payees

| <i><b>Page Name</b></i>     | <i><b>Definition Name</b></i> | <i><b>Usage</b></i>                      |
|-----------------------------|-------------------------------|------------------------------------------|
| Type 1 — Bank Accounts Page | PYE_BANKACCT                  | Define bank account for salary – Type 1. |

| <b>Page Name</b>                                                                        | <b>Definition Name</b> | <b>Usage</b>                                                                                |
|-----------------------------------------------------------------------------------------|------------------------|---------------------------------------------------------------------------------------------|
| <u>Specify Net Pay Elections Page</u>                                                   | GP_NET_DIST            | Define net pay election for Type 1.                                                         |
| <u>Type 8 – Garnishments Swiss configured E/D-assignments Page &amp; Recipient Page</u> | GP_ED_PYE_DTL_SEC      | Define garnishment with additional Swiss configured fields (contents gets transferred).     |
| Recipient page                                                                          | GP_RCP_PYE             | Define recipient – Type 8 and 9 For type 9, purpose 1 and 2 get transferred to TAG <UStrg>. |

## Type 1 — Bank Accounts Page

Use Maintain Bank Accounts page (PYE\_BANKACCT) to assign accounts for the employee.

## Type 9 – External Standard E/D - Assignments Page and Recipient Page

Use Swiss configured E/D-assignments for garnishments/recipients.

Navigation:

**Global Payroll & Absence Mgmt > Payee Data > Assign Earnings and Deductions > Element Assignment by Payee > Deduction Recipients link**

This example illustrates the fields and controls on the Add Deduction Recipients page.

**Note:** create deduction recipient with ID > 0.

| Field or Control                    | Description                                          |
|-------------------------------------|------------------------------------------------------|
| Recipient ID                        | Enter recipient ID.                                  |
| Recipient Name and Deposit Schedule | These features are not supported for GP Switzerland. |
| Purpose 1 and Purpose 2             | Transferred to TAG Ustrd                             |

For type 9 GP Switzerland puts

- recipient credentials in <CdtTrfTxInf> (instead of Employees bank account data )
- fills Purpose 1 and Purpose 2 in <Ustrd>

This example illustrates the fields and controls on the Element Assignment by Payee / Element Detail page.

Invalid ISO 20022 characters

Use the Online Processing Setup CHE parameters of type ISO to manage invalid characters, which may come in through Address, Account Name a/o external transfer attributes. See Chapter 3 Defining Country Data / Define Swiss Online Processing Option.

Restricted Access to XML files

Use the Online Processing Setup CHE parameters of type Security to manage restricted access to XML files. See Chapter 3 Defining Country Data / Define Swiss Online Processing Option.

Running the Payment Prep Process CHE

This topic discusses how to run local country and international bank processing. To generate banking data for Switzerland, start by running the Payment Prep Process on the Run Payment Prep Process CHE page. This process creates a flattened table (GPCH\_BK\_XFER\_EE) with data needed to produce payment files and payment reports including the Bank List CHE.

## Pages Used to Create ISO 20022 XML (Domestic and International)

| <b>Pay Entity</b>           | Target Pay Entity ( = Company) - This field is mandatory. |
| <b>Pay Group</b>            | Target Pay Group. This field is optional.                 |
| <b>Source Bank ID</b>       | Target Source Bank. This field is optional.               |

## Creating Payment Files (ISO 20022) and Reports in Global Payroll for Switzerland

Within the Swiss payroll application, employee payment information gets transferred – beginning 01/2018 (Post Finance) and 07/2018 (other receiving banks) - using the Swiss derivative of ISO 20022. ISO 20022 replaces former DTA (data exchange by file) and the EPO (electronic payment order) format.

GP Switzerland supports the following payment types:

- Type 3 = domestic (EUR/CHF) (incl. Garnishments and ext. Transfers)
- Type 4 = domestic (<> EUR/CHF)
- Type 5 = foreign EUR (=SEPA)
- Type 6 = foreign (<> EUR)

Global Payroll Switzerland has long experience in preparation and communication of XML files for legal authorities. Thus GP Switzerland uses the existing framework (Swiss XML dashboard) to create Swiss ISO 20022 XML.

The required setup for dashboard is (almost) the same as for any other XML created by dashboard. For the setup, follow the steps below.

**Note:** This step is run once the CHE banking process runs successfully.

| <b>Step</b> | <b>Action</b>                                                                                              | <b>Navigation Path</b>                                                                                                                                     |
|-------------|------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1           | Prepare Dashboard for Swissdec standard domain.                                                            | <b>Global Payroll &amp; Absence Mgmt,</b><br>> <b>Authority Correspondence,</b><br>> <b>Month,</b> > <b>Prepare Files</b>                                  |
| 2           | Click Run. Then check the Process Monitor to make sure the process runs to success.                        | <b>Global Payroll &amp; Absence Mgmt,</b><br>> <b>Authority Correspondence,</b><br>> <b>Month,</b> > <b>Prepare Files</b>                                  |
| 3           | Validate the created file.                                                                                 | <b>Global Payroll &amp; Absence Mgmt,</b><br>> <b>Authority Correspondence,</b><br>> <b>Month,</b> > <b>Prepare Files</b>                                  |

| <b>Delete</b>           | Delete the row for this month.                                                                                                       |

## Reporting

A BI PUBLISHER report (GPCH\_ISO20022) is delivered to print payment information. The data source of this report is the ISO 20022 XML.

### BI Publisher ViewGen Parameters

The screenshot shows the 'BI Publisher/ViewGen Parameters' dialog box. It contains several sections: 'Additional Parameters' with a text field and character count; 'Sort Criteria' with three dropdown menus; 'Request For' with radio buttons for 'Summary' (selected) and 'Detail'; 'Language Code' set to 'English'; 'Output Format' set to 'PDF'; 'Sub Selection' set to 'By Empid'; and an 'Employee ID' search section with a text field and 'View All' button. A red rectangle highlights the 'Request For' section.

This example illustrates the fields and controls on the BI PUBLISHER report (GPCH\_ISO20022) for mode Summar ( = used for approval = 1 page) .

## Related Links

[Understanding ELM and eGovernment for Global Payroll for Switzerland](#)

## Running International Bank Processing (SEPA – via FG)

The SEPA solution delivered for Switzerland is based on Global Payroll Core SEPA solution, but includes some additional setup in the Banking Preparation Definition and a specific BI PUBLISHER report. This solution manages only pure SEPA payments in Euros (those defined as type 5 payments in the ISO 20022 Payments ) and on top of the local ISO 20022 solution it processes the feedback as of PAIN.002. Especially international clients or clients using PeopleSoft Finance may consider to use the GP based solution via Financial Gateway.

| <a href="#">Banking Preparation Definition Page</a> | GP_SQL_SETUP     | The Banking Preparation Definition Setup for Switzerland has two sequences to generate different SQL statements for each recipients.                         |

## Banking Country Setup Page

The Banking Country Setup (GP\_APP\_PKG\_SETUP) for Switzerland is managed using the CORE\_BANK Application Package and the Application Class SQL delivered in Global Payroll Core.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Banking > Banking Country Setup**

This example illustrates the fields and controls on the Banking Country Setup page.

The screenshot shows the 'Banking Country Setup' page. At the top, it displays 'Country CHE Switzerland' and a '\*Status' dropdown menu set to 'Active'. Below this, there are two main sections: 'PS Delivered/Maintained' and 'Customer Maintained'. Each section contains three input fields: 'Root Package ID', 'Qualified Package/Class Path', and 'Application Class ID'. In the 'PS Delivered/Maintained' section, the 'Root Package ID' is filled with 'CORE\_BANK' and the 'Application Class ID' is filled with 'SQL'. The 'Customer Maintained' section has empty input fields for all three fields. Each input field has a magnifying glass icon to its right, indicating a search function.

## Banking Preparation Definition Page

The Banking Preparation Definition Setup (GP\_SQL\_SETUP) for Switzerland has two sequences to generate different SQL statements for each of the following types of Recipients:

- Employees using SEPA payment
- Individual Recipients using SEPA payment

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Banking > Banking Preparation Definition**

This example illustrates the fields and controls on the Banking Preparation Definition page.

## Reporting

A new BI PUBLISHER report (GPCH\_FG\_DTL) is delivered to print payment information. The data source of this report is the GP\_FG\_RPT\_QRY Query, which is a Query from Global Payroll Core. This report can be run from the new Payment File Generation Page.

This example illustrates the fields and controls on the New Banking Report for Switzerland report.

# Managing Off-Cycle Payments for Switzerland

---

## Understanding Off-Cycle Processing

This section discusses:

- The off-cycle process.
- Types of off-cycle transactions.

## The Off-Cycle Process

Off-cycle processing refers to processing payments and making corrections to payroll results outside of the normal payroll schedule. Off-cycle transactions are usually made to correct prior payments, enter manual payments, or to make early termination payments that can't wait until the next scheduled payroll.

## Types of Off-Cycle Transactions

The four types of off-cycle transactions are:

### 1. Manual payments.

Manual payments enable you to enter payments that you have calculated and paid outside the payroll system. Examples include paying a new hire with a manual check, because their pay details were not entered in time for the normal pay run.

### 2. Corrections.

Corrections enable you to correct results of any finalized payroll. Examples include reversing a sick leave payment when workers compensation should have been paid.

### 3. Unscheduled payments.

Unscheduled payments enable you to enter one-time payments that fall outside the normal payroll process. Examples include one time bonuses or expense reimbursement.

### 4. Advances.

Advances enable you to pay payees before their normally scheduled pay run. Examples include salary due on termination.

### 5. 13th month payments

It is standard for 13th month wages to be paid out in situations where there is a termination or in the December payroll.

---

## Recording Manual Payments in Switzerland

This section provides an overview of recording manual payments and provides examples of how to use the manual payment functionality with the Swiss delivered rules.

### Manual Payments

When entering manual payments for Swiss payees, it is recommended that all calculations be mutually calculated outside the system and then entered. The following areas need to be considered when entering manual payments:

- Selecting *Period (Calendar) Paid* and *Payment Date* on the Period Calendar tab of the Manual Payments page.

The selection of the period paid and the payment date need to be considered carefully. When selecting the period paid, it is recommended that you select the previous finalized calendar or the current open calendar. The selection of the payment date directly affects how elements are accumulated. For example, if you have an accumulator that accrues based on period end date, the payment date may not update the accumulator balances at the right time.

- Selecting processing controls on the Manual Payments page.

The *Period Begin Date* and *Period End Date* should default after selecting the *Period (Calendar) Paid*. It is recommended that these dates not be changes as the delivered Swiss rules have been designed to calculate using whole periods, and may not automatically segment if a partial period is entered.

The run type defaults from the *Period (Calendar) Paid* and it is recommended that the defaults be used. To ensure that the payee's manual payment is processed by the system, the *Allow Duplicates* check box must be selected on the run type; otherwise, the payee may not be processed again if the system detects that they have already been processed in the period.

*Stop Regular Resolution* enables you to stop the resolution of all elements on the process list except that elements entered into the manual payment. If you decide to allow regular resolution, an analysis would need to be performed to understand the impact on your supporting elements.

If using the Limited Element Set, you need to ensure that all elements calculate independently of pre- or post-processing formulas, as these do not resolve during off-cycle processing.

---

**Note:** Manual payments are used to record monetary values only, absence accumulators will not be updated using this method.

---

---

## Entering Corrections for Switzerland

This section provides an overview of corrections and provides examples of how to make corrections using Swiss delivered rules.

### Corrections

The Corrections page of the Off-Cycle Requests component (GP\_OFFCYCLE\_SETUP) is used when you need to change finalized results, usually due to a user error. This method uses period-to-date logic built into the Swiss delivered statutory rules.

The following areas need to be considered when entering corrections:

- All earnings and deductions need to have period-to-date logic applied.
- This method is used to correct pay accumulators only. Absence accumulators will not be corrected.

---

## Making Unscheduled Payments for Switzerland

The Unscheduled Payments page of the Off-Cycle Requests component (GP\_OFFCYCLE\_SETUP) is used to make one-time payments that are processed outside of the on-cycle payroll. Examples include bonuses and expense reimbursements. This method uses period-to-date logic build into Swiss delivered statutory rules when calculating.

The following areas need to be considered when entering unscheduled payments:

- All earnings and deductions need to have period-to-date logic applied.
- When selecting the period paid, it is recommended that you select the previous finalized calendar or the current open calendar.
- This method is used to record monetary values only. Absence accumulators will not be updated.

---

## Advancing Payrolls for Switzerland

The Advance Payrolls page of the Off-Cycle Requests component (GP\_OFFCYCLE\_SETUP) is used when you would like to pay an employee before their normal on-cycle pay run. For example, an employee is terminating employment with your organization and the termination payments need to be paid immediately and not in the next on-cycle pay run. The following is recommended when making advance payments:

- Always select the next open calendar, as skipping calendars may update accumulators incorrectly.
- Absence accumulators will calculate automatically for the calendar group selected.

# Managing Multiple Contracts

---

## Understanding Multiple Contracts

This section discusses:

- Multiple contract support.
- Creation and identification of employee records.

## Multiple Contract Support

PeopleSoft Global Payroll for Switzerland supports both payroll calculation and legal reporting requirements for employees with multiple contracts by using standard employee record functionality in PeopleSoft HCM. In PeopleSoft HCM, each job held by an employee is represented by a separate record in the Job Data table and is identified by a distinct employee record number. Global Payroll for Switzerland makes use of this functionality to define and track data for multi-contract employees by creating one record in the Job Data table with a unique employee record number for the *legal* definition of the employee, and multiple additional records with their own record numbers to drive separate payroll calculations for each concurrent job or contract. No matter how many different contracts an employee has, there can be only one *legal* record per employee in the same multi-contract company (as the employee must be presented to the official government bodies as a unified individual); however, an employee can have as many additional records as he or she has jobs. In other words, in a multi-contract company, each record in the Job Data table is identified as:

- Job data for a single contract (if only one contract exists within the company for the employee).

*or*

- Job data to define the employee as a legal entity (also known as *receiving* contract data).

*and*

- Job data for each concurrent contract (also known as *sending* contract data).

To summarize, in a multi-contract company, the possible scenarios are:

- One single contract record in Job Data.

*or*

- One legal or *receiving* contract record + n *sending* contract records.

---

**Note:** In a non multi-contract company, each job represents a single contract. The same is true in a multi-contract company for employees with only one job or contract.

---

## Creation and Identification of Employee Records

When you hire an employee into a job in a multi-contract company, you do not need to add a job data row for the receiving contract; you only need to enter job data for the sending contracts, and the system automatically creates the corresponding legal record. In addition, the system automatically identifies which record (job data row) for an employee is the legal or receiving record, and which records are sending records used to drive internal payroll calculations.

The system identifies the different records as follows: when you enable multi-contract functionality for a company on the MC Company Setup CHE page, the system assigns the first available legal record number to that company starting with the number 999. For any employee with multiple contracts in the company, this number becomes the default number of the legal or receiving record in the Job Data table. You can view this record and any other job records for the employee on the Review Multiple Contracts CHE page. This page identifies the function or role of each record (*sending*, *receiving*, or *single* contract) and displays the record number for receiving contracts assigned to company employees.

This can be illustrated as follows:

1. When you select **Enable Multi Contract** on the MC Company Setup CHE page, the system generates a legal record number for all employees with multiple contracts in the company. This number (998 in the example below) is displayed in the **Legal Rcd#** field:

MC Company Setup CHE page

The screenshot shows the 'MC Company Setup CHE' page. At the top, it displays 'Company KW1' and 'Business Institute Switzerland'. Below this is a 'Company Details' section with a 'Find | View All' link and pagination controls showing 'First 1 of 1 Last'. The 'Effective Date' is set to '02/06/2013'. A checkbox labeled 'Enable Multi Contract' is checked.

2. After assigning multiple contracts to an employee, you can view the legal record generated by the system as well as the job record (single or sending) for each concurrent job on the Review Multiple Contracts CHE page:

Create New Contract

The **Empl Red#** field in the **Legal Contract** group box displays the legal record number generated for all employees of the company for which you have enabled multiple contracts.

In addition, the numbers of single and sending records appear in the **Empl Red#** field in the **Contract** group box, and detailed information about each record appears on the **Action and Status**, **Job Information**, and **Compensation** tabs at the bottom of the page.

## Assignment of Accident Insurance Providers for Employees with Multiple Contracts

In cases where employees have multiple contracts, you may want to assign various accident insurance providers per contract (for example SUVA and HELSANA). In a normal situation you would assign the legal attributes of the insurer (source tax code, children, social insurance, and garnishments) on the legal level. In this situation, however, you would assign accident insurance on the job level (employee record).

If you assign various accident insurance providers for an employee with multiple contracts at the company level, payee level, and payee override level (accident insurance), the providers at the payee override level are considered the highest override level for SI data calculation. The system considers the payee level the next highest level for overriding SI data. The company level is considered the lowest.

The system uses the information in the Global Payroll Results Calendar component (GP\_RSLT\_CAL\_RUN) to select the SI rates from the accident insurance page. This system of overriding insurance data supports organizations that have employees with multiple employment contracts and insurance providers.

## Steps for Setting Up and Entering Multiple Contracts for an Employee

To set up multiple contracts for an employee, complete these steps:

1. Select the **Enable Multi Contract** check box on the MC Company Setup CHE page for the company into which you are hiring the employee.
2. Hire the employee in the company for which you have enabled multiple contracts (step 1) and add a job assignment using the Add a Person (PERSONAL\_DATA) and Job Data (JOB\_DATA) components.

We discuss these components in the *PeopleSoft HR PeopleBook: Administer Workforce*.

See “(Classic) Adding a Person” (PeopleSoft Human Resources Administer Workforce), “Understanding Job Data” (PeopleSoft Human Resources Administer Workforce).

3. Add a concurrent assignment for the employee. To do this, click the **Create New Contract** button on the Review Multiple Contracts CHE page. This takes you to the New Employment Instance (JOB\_DATA\_EMP) component, where you can enter information for the new assignment.

When you enter an additional job record for a multi-contract employee and save your work, the system automatically creates the corresponding legal record.

---

**Note:** In addition to using the Review Multiple Contracts CHE page to add concurrent assignments, you can use it to view existing records for a multi-contract employee and to update, maintain, or terminate job records (see step 4).

---

4. To update and maintain job records or to terminate a contract, access the Review Multiple Contracts CHE page and click the **Edit** button. This takes you to the Job Data (JOB\_DATA) component, where you can view, enter, and modify an employee's job information.

---

**Note:** When you terminate the legal job record for a multi-contract employee, the system automatically terminates all of the associated sending records so that you do not need to terminate each one manually.

---

See [Use Cases](#).

5. After adding job records, terminating records, or modifying existing job data, access the Review MC Exceptions CHE page, which displays any contract changes that the system was unable to process or resolve. If there are unresolved changes, you will need to enter them into the system manually.

For example, if you add an additional job for a multiple contract employee and this job is the second sending contract, the system creates—via a component interface—a new job with the legal (receiving) record number for the company. If the component interface fails to create the legal record, this information will appear on the Review MC Exceptions CHE component, and you can access the Add Additional Assignment (JOB\_DATA\_CONCUR) component and manually create a job record with the legal record number for the employee's company.

## Use Cases

This section presents several use cases to illustrate how the system updates job data records for multiple contract employees in different situations, including termination.

### Example 1: Hiring When an Employee Has Multi-Contract Management in One Company and Non Multi-Contract Management in Another

In this scenario, the employee has multiple contracts enabled in company KW1 and multiple contracts disabled in company KW2.

Assume that the legal record number for the employee's company—as displayed on the MC Company Setup CHE page—is 998.

Assume that you complete the following actions:

1. Hire the employee in company KW1 (employee record number = 0).
2. Add an additional job in company KW2 (employee record number = 1).

After completing these steps, there are two rows of data in Job Data:

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b> |
|-------------------------------|-----------------------|--------------------|
| 0                             | KW1                   | Single Contract    |
| 1                             | KW2                   | Single Contract    |

Now, assume that you add an additional job for the employee in company KW1 (employee record number = 2). After completing this step, there are four job data records in the system:

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b> |
|-------------------------------|-----------------------|--------------------|
| 0                             | KW1                   | Sending            |
| 1                             | KW2                   | Single Contract    |
| 2                             | KW1                   | Sending            |
| 998                           | KW1                   | Legal              |

Now, suppose that you add another job for the employee in company KW2 (employee record number = 3). Because this company is not enabled for multiple contracts, the system inserts the new job as an additional single contract:

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b> |
|-------------------------------|-----------------------|--------------------|
| 0                             | KW1                   | Sending            |
| 1                             | KW2                   | Single Contract    |

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b>     |
|-------------------------------|-----------------------|------------------------|
| 2                             | KW1                   | Sending                |
| 3                             | KW2                   | <i>Single Contract</i> |
| 998                           | KW1                   | Legal                  |

Finally, suppose that you add one more job in company KW1 (employee record number = 4). Because a legal (receiving) record already exists for the employee in company KW1, the system inserts only the new job (there can be only one legal definition of the employee per company):

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b> |
|-------------------------------|-----------------------|--------------------|
| 0                             | KW1                   | Sending            |
| 1                             | KW2                   | Single Contract    |
| 2                             | KW1                   | Sending            |
| 3                             | KW2                   | Single Contract    |
| 4                             | <i>KW1</i>            | <i>Sending</i>     |
| 998                           | KW1                   | Legal              |

## Example 2: Terminating One Multi-Contract Job

In this scenario, assume that you begin with the six employee records that are in the system at the end of the previous example. In addition, assume that you terminate the employee record with record number = 0.

After terminating record 0, there are 5 active records in the system:

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b> | <b><i>Status</i></b> |
|-------------------------------|-----------------------|--------------------|----------------------|
| 0                             | <i>KW1</i>            | <i>Sending</i>     | <i>Terminated</i>    |
| 1                             | KW2                   | Single Contract    |                      |
| 2                             | KW1                   | Sending            |                      |

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b> | <b><i>Status</i></b> |
|-------------------------------|-----------------------|--------------------|----------------------|
| 3                             | KW2                   | Single Contract    |                      |
| 4                             | KW1                   | Sending            |                      |
| 998                           | KW1                   | Legal              |                      |

### Example 3: Terminating All Multiple Contracts at One Time

In this scenario, assume that you begin with the following records in the Job Data table for companies KW1 and KW2:

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b> |
|-------------------------------|-----------------------|--------------------|
| 0                             | KW1                   | Sending            |
| 1                             | KW2                   | Single Contract    |
| 2                             | KW1                   | Sending            |
| 3                             | KW2                   | Single Contract    |
| 4                             | KW1                   | Sending            |
| 998                           | KW1                   | Legal              |

If you want to terminate—in one step—all of the multiple contracts in company KW1, all you need to do is terminate the legal (receiving) record (record number = 998). The system then automatically terminates all of the sending records associated with that legal record:

| <b><i>Employee Record</i></b> | <b><i>Company</i></b> | <b><i>Role</i></b> | <b><i>Status</i></b> |
|-------------------------------|-----------------------|--------------------|----------------------|
| 0                             | KW1                   | Sending            | <i>Terminated</i>    |
| 1                             | KW2                   | Single Contract    |                      |
| 2                             | KW1                   | Sending            | <i>Terminated</i>    |
| 3                             | KW2                   | Single Contract    |                      |

| <b>Employee Record</b> | <b>Company</b> | <b>Role</b> | <b>Status</b> |
|------------------------|----------------|-------------|---------------|
| 4                      | KW1            | Sending     | Terminated    |
| 998                    | KW1            | Legal       | Terminated    |

---

**Note:** After making changes to job data records such as the ones described in this section, access the Review MC Exceptions component to determine if the system has correctly updated the records.

---

## Prerequisites

PeopleSoft Global Payroll for Switzerland uses routings and handlers in the WORKFORCE\_SYNC and GPCH\_MC\_SYNC service operations to automatically create legal (receiving) job records for multi-contract employees and to terminate these records when concurrent contracts are removed. The same routings and handlers synchronize the data between sending contracts and legal contracts in case of hires, company changes, or termination of multiple contracts.

To enable these operations, set up PeopleSoft Integration Broker and activate messaging using the following objects:

- Node: PSFT\_HR.
- Messages: WORKFORCE\_SYNC and GPCH\_MC\_SYNC.
- Queues: PERSON\_DATA and GPCH\_MC.
- Services: WORKFORCE\_SYNC and GPCH\_MC\_SYNC.
- Service Operations: WORKFORCE\_SYNC and GPCH\_MC\_SYNC.
- Service Operation Handlers: GPCH\_Sync\_Legal\_Job for service operation WORKFORCE\_SYNC and Sync\_GP\_NET\_DIST for service operation GPCH\_MC\_SYNC.
- Service Operation Routings: all with Directions = Local and Sender.
- Node and Receiver Node = PSFT\_HR for the above service operations.

---

**Note:** PeopleSoft provides detailed information on how to configure Integration Broker and set up routings and handlers in the *PeopleTools: Integration Broker PeopleBook*.

---

## Setting Up and Entering Multiple Contracts for an Employee

To set up and enter multiple contracts for an employee, use the MC Company Setup CHE (GPCH\_MC\_COMPANY), Review Multiple Contracts CHE (GPCH\_MC\_JOB\_DATA), and Review MC Exceptions CHE (GPCH\_MC\_EXCEPTIONS) components.

This topic discusses how to set up and enter multiple contracts for an employee.

## Pages Used to Set Up and Enter Multiple Contracts for an Employee

| <b>Page Name</b>                                 | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

This page provides access the New Employment Instance (JOB\_DATA\_EMP) and Job Data (JOB\_DATA) components, enabling you to modify existing job information, create new job records, or terminate job records from a single location. The data displayed on the page is drawn from the Job Data table and can be refreshed after you make changes to an employee's work location, payroll information, salary and compensation data, or other job information, so that you can maintain accurate records and manage your employees based on current job data.

|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pay Group</b>         | <p>Displays the pay group associated with the employee's job record in the Job Data table.</p> <hr/> <p><b>Important!</b> The multiple contract functionality discussed in this chapter assumes that the <i>Pay Groups</i> and <i>Calendars</i> are the same across all job records (contracts) for the same employee, whether they are sending records or legal records.</p> |
| <b>Short Description</b> | Displays the short description of the pay group associated with the employee's job record in the Job Data table.                                                                                                                                                                                                                                                              |
| <b>Frequency</b>         | Displays the frequency of the components of pay associated with the employee's job record in the Job Data table.                                                                                                                                                                                                                                                              |
| <b>Compensation Rate</b> | Displays the compensation rate associated with the employee's job record in the Job Data table.                                                                                                                                                                                                                                                                               |
| <b>Description</b>       | Displays the currency associated with the compensation rate.                                                                                                                                                                                                                                                                                                                  |

## Edit

Click the **Edit** button to access the Job Data (JOB\_DATA) component where you can modify the information in an employee's job record or terminate jobs.

## Exceptions

Click the **Exceptions** button to access the Review MC Exceptions CHE (GPCH\_MC\_EXCEPTIONS) component, where you can review contract changes that the system is unable to resolve or process.

## Create New Contract

Click the **Create New Contract** button to access the New Employment Instance (JOB\_DATA\_EMP) component, where you can add a concurrent assignment for the payee.

---

**Note:** When you create a new employment instance that results in multiple contracts for an employee, the system automatically creates a job record with the legal record number for the employee's company.

---

## Refresh

Click the **Refresh** button to populate the Review Multiple Contracts CHE page with current job data from the Job Data table.

## Review MC Exceptions CHE Page

Use the Review MC Exceptions CHE page (GPCH\_MC\_EXCEPT) to review contract changes that the system is unable to resolve or process.

You may need to enter these changes manually.

Navigation:

**Global Payroll & Absence Mgmt > Payee Data > Review MC Exceptions CHE > Review MC Exceptions CHE**

The system generates error and warning messages in response to contract data changes that it cannot process or resolve. Use this page to view these error and warning messages. You may need to correct these errors manually.

---

## Setting Up and Running the General Ledger (GL) Process for Multi-Contract Employees

To set up and run the General Ledger process for Switzerland, use the GL Migrating MC Elements CHE (GPCH\_GL\_MIGR), Accumulators (GP\_ACCUMULATOR), and Send Costs to GL CHE (GPCH\_GL\_PREPARE) components.

This topic provides an overview of the General Ledger process for Switzerland.

## Pages Used to Set Up and Run the General Ledger (GL) Process for Multi-Contract Employees

| <b>Page Name</b>                                                     | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                                                            |

|----------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Send Costs to GL CHE Page</u> | GP_GL_PREPARE          | <p>Send costs to PeopleSoft General Ledger.</p> <p>When you run the General Ledger process from this page, the system transfers accumulator results to the target record and company stored in the variables specified on the segment accumulator Level page and then sends the results to PeopleSoft General Ledger.</p> <p>If you are using the multiple contracts functionality for Switzerland, follow all General Ledger setup steps described in the Global Payroll core application PeopleBook, with one exception: do not use the standard Send Costs to GL page to transfer cost data to General Ledger. Use the General Ledger Run Control page for Switzerland to do this instead. If you are not using this functionality, follow all General Ledger processing steps described in the core application PeopleBook.</p> |

## Understanding the General Ledger Process for Switzerland

The standard General Ledger process for Global Payroll uses segment accumulator results to calculate and distribute costs. However, in the case of multiple contracts, each sending record generates accumulator results for one contract only, and consequently provides incomplete cost data, whereas the single *receiving* record sums up all of the data for the employee (each sending contract calculates the gross for one contract, whereas the legal contract calculates all legal earnings and deductions on accumulated salaries). For legal and reporting reasons, it is precisely this record that is of interest to General Ledger. However, because General Ledger is not set up to process segment accumulator results for the legal record, Global Payroll for Switzerland delivers a General Ledger process (GPCH\_GL\_RC) that you can run to *transfer* the segment accumulators from the last record calculated—the legal or receiving record, which has the highest number and is therefore processed after the others—to a target record and company specified in the User Key fields of the same segment accumulators. The General Ledger process can then pick up the accumulator results from the record and company identified in the User Key fields and use them for cost distribution.

Before running this process, you must access the GL Migrating MC Elements CHE page and list the segment accumulators to migrate from the legal record to the target record and company specified in the segment accumulators' User Key fields.

The steps for setting up and running the General Ledger process can be summarized as follows:

1. Select the segment accumulators to transfer to the target record where they can be picked up and processed by General Ledger.

To do this, use the GL Migrating MC Elements CHE page.

2. Specify the variables storing the record number and company to which you want to transfer segment accumulator results in the accumulators' User Key fields.

Do this on the Level page of the Accumulators (GP\_ACCUMULATOR) component in the core application.

3. Send the accumulator results to PeopleSoft General Ledger.

Do this on the General Ledger Run Control page.

---

**Important!** For a segment accumulator to be migrated across record number results, it must have both the target record number and company indicated in its USER\_KEY fields and it must be listed in an effective dated migration list for the processed pay entity.

---

## General Ledger Migrating Multiple Contracts Elements CHE Page

Use the GL Migrating MC Elements CHE (General Ledger Migrating Multiple Contracts Elements CHE) page (GPCH\_GL\_MIGR\_LST) to select segment accumulators to transfer to a target record where they can be picked up by the GL process.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Integration > GL Multi Contract Elements CHE > GL Migrating MC Elements CHE**

| Entry Type       | Select Seg. Accm (segment accumulator). |

| <b>Field or Control</b> | <b>Description</b>                                                                                                  |
|-------------------------|---------------------------------------------------------------------------------------------------------------------|
| <b>Element Name</b>     | List the segment accumulators to transfer from the legal (receiving) record to the target record for GL processing. |

## Level Page

Use the Level page (GP\_ACCUMULATOR\_1) to specify the variables storing the record number and company to which you want to transfer segment accumulator results.

We discuss this page in the PeopleSoft Global Payroll PeopleBook.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Elements > Supporting Elements > Accumulators > Level**

Level page

In the **User Key Type** fields, select *Variable*, and then enter the variable element CH\_MC\_RCVR\_CMPNY (MC Receiver Company) in combination with the variable CH\_MC\_RCVR\_RCD (MC Receiver) in the **Key Element** fields. These variables are set up to hold the company and the number of the target record to which you are transferring the segment accumulator results.

---

**Note:** We discuss this page in detail in the *PeopleSoft Global Payroll PeopleBook*.

---

See “Defining Accumulators” (PeopleSoft Global Payroll).

## Send Costs to GL CHE Page

Use the Send Costs to GL CHE page (GP\_GL\_PREPARE) to send costs to PeopleSoft General Ledger.

When you run the General Ledger process from this page, the system transfers accumulator results to the target record and company stored in the variables specified on the segment accumulator Level page and then sends the results to PeopleSoft General Ledger.

See “Running the General Ledger Process and Sending Data” (PeopleSoft Global Payroll).

## Managing Swiss Legal Attribute Records

This section discusses:

- Handling of Legal Attributes in Non-MC and MC Environments
- Legal Attributes with New Levels

### Handling of Legal Attributes in Non-MC and MC Environments

PeopleSoft Global Payroll for Switzerland supports handling of employees for payroll calculations in two modes — Non-MC Environments and MC Environments.

*In Non-MC Environments:*

- Individual employee records are considered as a single legal entity
- Reference record and employee record have an one-to-one relationship
- Swiss attributes are assigned to a dedicated employee record
- Independent Payroll is generated for this legal entity per employee record

*In MC Environments:*

- There can be multiple employment records for a single employee / legal entity spanning several companies, and canton of work locations
- Unlimited number of employee records can be added
- Multiple employment records are mapped to a single reference record
- Reference Record and employee records have a one-to-many relationship
- The reference record acts as the unified single legal entity
- Swiss attributes are assigned to this unified single legal entity
- Payroll and ceilings are applied to the single legal entity
- Reference records are identified by the system and this controls prompting and defaults

**Legal Attributes with New Levels**

# Processing Swissdec by Dashboard

---

## Understanding ELM and eGovernment for Global Payroll for Switzerland

This section discusses:

- eGovernment Overview
- eGovernment Reporting
- Additional XML Reporting
- Managing Governmental Data

### eGovernment Overview

Swiss eGovernment, or ELM (einheitliches Lohnmeldeverfahren), is the secure electronic transmission of salary declaration for social insurance, taxation and statistical reporting.

Increasing demand for electronically submitted data is currently spreading across Europe. Approximately 300,000 companies operating in Switzerland report information relating to social insurance registration, taxation, and statistical data to government agencies and insurance providers. An estimated 90 percent of all salary-related information is already in electronic form. In Switzerland SUVA, Swissdec, and other Swiss social insurance and software providers have been working together to define an XML-based electronic submission standard under the umbrella project initiative called Lohnstandard-CH.

### eGovernment Reporting

Delivered eGovernment functionality enables you to run year end and monthly legal reporting using a single dashboard, simplifying the process. Governmental data is taken from the existing set of legal reports and stored in separate XML records.

eGovernment creates the ELM records using the following reports:

- GPCHSI07 - UV Yearly.
- GPCHSI08 - AHV Year and NON AHV/ALV.
- GPCHSI8X – AHV E(M)A
- GPCH\_AE\_TX07 - Tax Statement.
- GPCHAL5X - FAK Yearly.
- GPCH\_AE\_INS - BVG Pension, KTG Health, and UVGZ Additional Accident insurance.

- GPCHST2X – BFS Salary Statistics for Swissdec 4.0
- GPCHTX2X – Source Tax.
- GPCHST5X - Statistics report for Swissdec 5.0

## Additional XML Reporting

Besides the year end and monthly processes that create the XML according to the ELM Swissdec format, we included these XML reports that can also be processed using the dashboard:

- GPCHTX01 - Source Tax Year for GE.
- GPCHAL4X – FAK\_CAF monthly for Ausgleichskasse Banken and Ausgleichskasse Versicherungen (Pool Inside).
- GPCHAL5X – FAK\_CAF YearToDate as of eAHV format (e.g. Pools Globaz and IGAKIS).
- GPCHEOX1 – EO\_APG Military service for Ausgleichskasse Banken and Ausgleichskasse Versicherungen (Pool Inside).
- GPCHAL8X – XML Audit
- GPCHB2X – Bank Transfer format ISO 20022

## Managing Governmental Data

By selectively processing eGovernment reports you can breakup data reporting and submission in discrete parts as necessary. For example, consider an organization with four entities of varying sizes: one large and three smaller entities. You may choose to process data from the large entity separately from the other three, which may then be processed together as a group. The data for all four entities may then be sent to the government in two transmissions.

## Managing Governmental Data

With Swissdec 4.0, ELM Year End processes (AHV\_AVIS, BFS\_OFS, FAK\_CAF, UVG\_LAA, UVGZ\_LAAC, KTG\_AMC, LAW\_CDS, BVG\_LPP) can be run as single domain or combined.

With Swissdec 5.0, user is executing the BFS\_OFS on a monthly control id.

Yearly process for Source Tax GE (ISEL) and all monthly processes (incl. source tax Swissdec) need to run in a single domain. The dashboard includes a group of pages called Prepare Files and Process Files. This is where you can select a previously defined domain set to run the defined reports all at the same time for domains defined in the selected domain set and only for providers within the domains, which are mapped on the company level.

## Generating and Managing Dashboard XML

This topic provides an overview on dashboard processing.

## Pages Used to Generate and Manage Dashboard XML

| <b>Page Name</b>                                     | <b>Definition Name</b> | <b>Usage</b>                                                                                                                                                    |
|------------------------------------------------------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">Prepare Files Page</a>                   | GPCH_EG_RSTATUS        | Run a set of reports based on a previously defined domain. The system generate XML only for providers within the domain, which are mapped on the company level. |
| <a href="#">Process Files Page</a>                   | GPCH_EG_FSTATUS        | View the files that were processed in the run. From this page you can also validate, save, or ping the receiver's WebServer and send the file.                  |
| <a href="#">Transmit Options Page</a>                | GPCH_EG_SEND_OPTN      | Select the options that you want to use to transmit or save the file.                                                                                           |
| <a href="#">Ping/Interop Details Page</a>            | GPCH_EG_PING_INTER     | Send an XML message to the distributor.                                                                                                                         |
| <a href="#">BI PUBLISHER/ViewGen Parameters Page</a> | GPCH_EG_BI_PUBLISHER   | Select the parameters that you want to use to run the report. You can also select the criteria by which you want the system to sort the information.            |
| File Management Options Page                         | GPCH_FILE_PROCESS      | Upload, Save, Delete and View Files. Optional as well further Process and Print by BI Publisher.<br><br>See also <a href="#">Robust File Management</a> .       |

## Understanding Dashboard Processing

From a central dashboard, eGovernment allows you to control the year end and monthly reporting process. Using the dashboard you can Create and manage the XML, which is finally sent to the authorities.

Here is a graphical representation of how the system processes information from the dashboard:

GP Switzerland dashboard manages all XML based reporting with one framework. The following graphics provides an overviewon for all monthly and yearly XML created by dashboard. User starts Job GPCH\_AE\_XML which launches - depending on navigation ( monthly or yearly ) – in the backend jobs GPCH\_MON/GPCHMON5 or GPCH\_ELM/GPCHELM5.

This example illustrates XML based reporting CHEXML Based Reporting CHE.

Graphical representation of how the system processes information from the dashboard

## Prepare Files Page

Use the Prepare Files page (GPCH\_EG\_RSTATUS) to run a set of reports based on a previously defined domain.

The system generates XML only for providers within the domain, which are mapped on the company level.

| Field or Control              | Description                                                                                                                                                                                                                                              |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Apply context language</b> | Print the report in the employee's language.                                                                                                                                                                                                             |
| <b>Pay Year</b>               | Enter the year for which you want to run the reports.                                                                                                                                                                                                    |
| <b>Company</b>                | Select the company for which you want to run the reports.                                                                                                                                                                                                |
| <b>BVG Valid asOfDate</b>     | The system populates this field with the first day of the pay year +1 that you entered. It is used for the control of individual BVG_LPP processing.                                                                                                     |
| <b>Domain ID</b>              | <p>Select the domain ID that you set up on the ELM Domain Setup CHE page. The system populates the values that you entered on the ELM Domain Setup CHE page in the fields below.</p> <p><b>Note:</b> Prompt will only show domains of type 'Yearly'.</p> |

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ISO2022 V2019</b>        | <p>If the ISO2022 V2019 checkbox is selected and the system date is prior to November 22, 2025, clicking the Run or Save button will trigger a warning message to alert the user that the XML structure is only valid starting from that date. Once the transition period ends, this checkbox will be automatically checked.</p> <p>This checkbox is only available for provider type I.</p>                                                                               |
| <b>Delete</b>               | <p>To delete this information, click the Delete button, then save and then enter domain ID again (same or other).</p> <hr/> <p><b>Note:</b> Delete will clean up all entries, whether the data was already sent to the authorities or not. By default, the delete button is not active. If inactive, delete button is hidden (till Image 17 just grey ). You can activate it by setting the PowerUser parameter to 'Y' in the <b>Online Processing CHE page</b>.</p> <hr/> |
| <b>Print Class</b>          | Only submitted for Monthly audit (see Chapter 31).                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Dashboard Parameters</b> | These fields describe the various parameters used to create the current file. This information is entered on the ELM Domain Setup CHE page and is populated when you select the domain ID (this entry is mandatory for GE ISEL).                                                                                                                                                                                                                                           |
| <b>Run</b>                  | Dashboard processing follows the logic of payroll processing (starting with Image 17). It allows to run again as long as the file was not sent. Thus send will play the same role as finalize does in payroll processing. The Run button is greyed out if the file is sent (that is a Declaration ID has been filled in the second folder).                                                                                                                                |

### Report Sub Selection (when the Navigation selected is Yearly)

Using the fields in this group box selects only a subset of information, which means the entities need to be included in the processed domain.

| <b>Field or Control</b> | <b>Description</b>                                                                                                           |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>Provider Type</b>    | Select the type of provider for whom you want to create the XML Mandatory for ISO20022, if more than 1 homebank per company. |
| <b>Provider Code</b>    | Select the provider for whom you want to create the XML. Mandatory for ISO20022, if more than 1 homebank per company.        |

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                            |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>EmplID</b> (employee ID) | Select the ID(s) of the employee(s) for whom you want to create the XML                                                                                                                                                                                                                       |
| <b>Company</b>              | Select the Company (only for GE ISEL XML, see Yearly).                                                                                                                                                                                                                                        |
| <b>Group List ID</b>        | <p>Select a group for which you want to create XML. You create group lists on the Group List page (select Set Up HCM, Product Related, Global Payroll &amp; Absence Mgmt, Payee Groups, Group Lists, Group List).</p> <p>See also “Creating Group Lists” (PeopleSoft Absence Management).</p> |
| <b>Select Processes</b>     |                                                                                                                                                                                                                                                                                               |
| <b>Type</b>                 | <p>Domains selected for this domain</p> <p>Always included: Identify and Write File</p> <p>Others depend on set definition</p>                                                                                                                                                                |
| <b>Report Status</b>        | The system displays the status of the report after the job has been run to completion.                                                                                                                                                                                                        |
| <b>Report Period</b>        | For Navigation Yearly it's always blank (display only)                                                                                                                                                                                                                                        |

**Note:** Once a user saves the page, the system creates a table suite for the dashboard. Setup information, like company address, domain attributes, and so on, have already been saved in XML format. When starting the job the process invokes all included legal processes, but only executes processes that are included in that domain set. The last step is an Application Engine process (GPCH\_AE\_ELM), which creates the final XML file. The system stores XML snippets for each person on the employee ID and domain level (GPCH\_EG\_PERSON). The system also stores provider totals as well as ready to go XML snippets on the provider and year level. All further viewing and reporting inside the dashboard uses the XML file as a source.

### Report Sub Selection (when the Navigation selected is Monthly)

There are subtle differences to the field when the Navigation is Monthly. The field descriptions for the Report Sub section when the Navigation is Monthly is given below:

| <b>Field or Control</b>     | <b>Description</b>                                                                                                                                                                                                                                                                            |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Provider Type</b>        | Select the type of provider for whom you want to create the XML Mandatory for ISO20022, if more than 1 homebank per company.                                                                                                                                                                  |
| <b>Provider Code</b>        | Select the provider for whom you want to create the XML. Mandatory for ISO20022, if more than 1 homebank per company.                                                                                                                                                                         |
| <b>EmplID (employee ID)</b> | Select the ID(s) of the employee(s) for whom you want to create the XML                                                                                                                                                                                                                       |
| <b>Company</b>              | Select the Company (only for GE ISEL XML, see Yearly).                                                                                                                                                                                                                                        |
| <b>Group List ID</b>        | <p>Select a group for which you want to create XML. You create group lists on the Group List page (select Set Up HCM, Product Related, Global Payroll &amp; Absence Mgmt, Payee Groups, Group Lists, Group List).</p> <p>See also “Creating Group Lists” (PeopleSoft Absence Management).</p> |
| <b>Select Processes</b>     |                                                                                                                                                                                                                                                                                               |
| <b>Type</b>                 | <p>Domains selected for this domain</p> <p>Always included: Identify and Write File</p> <p>Others depend on set definition</p>                                                                                                                                                                |
| <b>Report Status</b>        | The system displays the status of the report after the job has been run to completion.                                                                                                                                                                                                        |
| <b>Report Period</b>        | For Navigation Yearly it's always blank (display only)                                                                                                                                                                                                                                        |
| <b>Current Pay End Date</b> | Defaults to the most recent open month end in the current year. Users can edit this field.                                                                                                                                                                                                    |
| <b>New Period Run</b>       | This field is available, if the current period got finalized. Click to open the next period in this year. Validates for ISO20022 for existing Payment Prep and for others against Payr Run for this months                                                                                    |

**Note:** Once a user saves the page, the system creates a table suite for the dashboard. Setup information, like company address, domain attributes, and so on, have already been saved in XML format. When starting the job the process invokes all included legal processes, but only executes processes that are included in that domain set. The last step is an Application Engine process (GPCH\_AE\_ELM), which creates the final XML file. The system stores XML snippets for each person on the employee ID and domain level (GPCH\_EG\_PERSON). The system also stores provider totals as well as ready to go XML snippets on the provider and year level. All further viewing and reporting inside the dashboard uses the XML file as a source.

## Process Files Page

Use the Process Files page (GPCH\_EG\_FSTATUS) to view the files that were processed in the run.

From this page you can also validate, save, or ping the receiver's WebServer and send the file.

**Global Payroll & Absence Mgmt > Authority Correspondence > XML based reporting CHE > Monthly XML CHE > Process Files**

Process Files page

The screenshot shows the 'Process Files' page in a dashboard. At the top, there are tabs for 'Prepare Files' and 'Process Files'. Below the tabs, there are fields for 'Run Control ID' (FMB\_GWA\_2013\_1), 'Language' (English), 'Report Manager', 'Process Monitor', and a 'Run' button. There is also a 'Delete' button. Below these fields, there are search and filter options for 'Pay Year' (2013), 'Company' (GWA), 'Domain ID' (1), and 'Print Class'. There is also a 'Dashboard Parameters' section. The main part of the page is a table titled 'Provider Results' with columns: File ID, Declaration ID, Type, Provider Code, Process Type, Provider Total, Internal, External, Validate file, Save, Ping, Send & Require, Regenerate, Print, and Delete. The table lists 10 rows of data for various providers. The first row is highlighted in yellow. At the bottom of the page, there are navigation links: 'Save', 'Return to Search', 'Previous in List', 'Next in List', 'Notify', and 'Add'.

|    | File ID             | Declaration ID | Type      | Provider Code | Process Type | Provider Total | Internal | External | Validate file | Save | Ping   | Send & Require | Regenerate | Print | Delete |
|----|---------------------|----------------|-----------|---------------|--------------|----------------|----------|----------|---------------|------|--------|----------------|------------|-------|--------|
| 1  | 2013-GWA-1-Y-01-001 |                | KTG-AMC   | #KTG          | PIV          |                | Open     | Open     | Validate file | Save | [Ping] | Send & Require | Regenerate | Print | Delete |

| <b>Log File</b>              | Link to internal log – only available after validation.                                                                                                                                                                             |
| <b>Ping/Interop Response</b> | Link to Ping/Inter Response – only available after Ping/ Interop.                                                                                                                                                                   |
| +/-                          | Explode or collapse receiver list for this file.                                                                                                                                                                                    |
| <b>File ID</b>               | File ID created as combination of Year-Company-DomainSet-PeriodOption-Period-SerialNumber. In the XML we additionally append the time stamp to File ID.                                                                             |
| <b>Declaration ID</b>        | The Swissdec distributor returns the Declaration ID. Once the file is sent, the Declaration ID will be shown here.                                                                                                                  |
| <b>Type</b>                  | Lists the domain type of receivers addressed by this domain set.                                                                                                                                                                    |
| <b>Provider Code</b>         | Lists the receivers addressed by this domain set.                                                                                                                                                                                   |
| <b>Process Type</b>          | Shows the assigned Process type (EIV or PIV). For Swissdec, PIV is mandatory (will set distributor to true).                                                                                                                        |
| <b>Provider Total</b>        | Currently not supported.                                                                                                                                                                                                            |
| <b>Internal</b>              | Displays status of the Internal processing (status of creation and validation).                                                                                                                                                     |
| <b>External</b>              | Displays status of the external processing (status of send & response).                                                                                                                                                             |
| <b>Validate File</b>         | Click to identify any validation errors (against the related XSD provided by authorities). The system displays a message that tells you if the XML file validates (JAVA validation on XSD) and lists all validation errors, if any. |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Save</b>             | <p>The Save button will guide you to the Transmit Options page in Saving mode.</p> <p>The sub page File Management option gives you the options to save the data in test mode, as a signed file and or as encrypted file.</p> <p>For ISO 20022 Transmit Options page is skipped and it directly navigates to File management options.</p> <p>For all domains (but requested for ISO 20022): For restricted access to XML see Parameter “Security” in Online Processing Options CHE.</p> <hr/> <p><b>Note:</b> By default, Test option is inactive and Encrypt is active. Sign option follows the setup default. To override this option, set the PowerUser parameter to ‘Y’ in the Online Processing Setup CHE page.</p> <hr/> |
| <b>Ping</b>             | <p>Click the Ping button to confirm that connection to the Swissdec distributor is active and Interop button to perform an operability check. The system displays the Ping / Interop details page where you can choose either <b>Ping</b> or <b>Interoperability</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Send&amp;Request</b> | <p>If you selected the PIV (Prozess Integriertes Verfahren) transmission method on the Providers page (Set Up HCM, Product Related, Global Payroll &amp; Absence Mgmt, Social Security / Insurance, Providers CHE, Providers), the system displays the Send&amp;Request button.</p> <p>The Send&amp;Request button will guide you to the Transmit Options page in Transmission mode.</p> <p>The sub page gives you the options to send the data in test mode, as a signed file and or as an encrypted file.</p>                                                                                                                                                                                                                |
| <b>Regenerate</b>       | <p>If the files were sent already with success, click the Complete Flag in the ‘Review files’ folder. This will grey out the Send button and activate the Regenerate button. Click this button to regenerate the file. This creates new generations of the files, appending the ID numbers with sequence numbers (_n) to identify the generation. You can now send the files again. Internally, the files will have new request IDs and the request IDs that preceded them. Using this information, the receiver can identify the files as replacements for the files that were sent previously. Per Definition this feature is only available for PIV mode.</p>                                                               |

| <b>Field or Control</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Print</b>            | Click to view the file you generated. In this page, you can compare 2 XML files using XSLT processing. The system displays the information in a separate browser window using the BI Publisher or Swissdec ViewGen. ViewGen is available for all Swissdec domains (except BVG_LPP). BI Publisher provides output for internal usage for all domains. |
| <b>Delete</b>           | Will delete this file, but not the other files for this domain set.                                                                                                                                                                                                                                                                                  |

## Transmit Options Page

Use the Transmit Options page (GPCH\_EG\_SEND\_OPTN) to select the options that you want to use to transmit or save the file.

To view the internal and external log files and response from the receiver's Web Service.

To compare or import data included in responses from the receiver's WebService.

Process flow DeclareSalary - GetStatus - GetResult

Navigation:

Click the **Send & Require** or the **Save** button on the Process Files page.

|-------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sign File</b>                                      | By default the system makes this check box unavailable for use. If the <i>PowerUser</i> parameter is set to <i>Yes</i> in the online properties, the system enables this check box. Deselect this check box to create an unsigned file. For Swissdec, it's mandatory to sign. For non Swissdec XML, uncheck the sign.         |
| <b>Compress File</b>                                  | Currently, this feature is not supported.                                                                                                                                                                                                                                                                                     |
| <b>Encrypt File</b>                                   | Select this check box encrypt the file. Selecting this option will cause the encrypt mode to be different from the standard setting for the provider.                                                                                                                                                                         |
| <b>Test Mode</b>                                      | By default the system makes this check box unavailable for the user. If the <i>PowerUser</i> parameter is set to <i>Yes</i> in the online properties, the system enables this check box. Selecting this check box creates the XML with a Test Tag that informs the receiver that this file is only sent for testing purposes. |
| <b>Request For</b>                                    |                                                                                                                                                                                                                                                                                                                               |

| Field or Control        | Description                                                                                                                                    |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Ping</b>             | Select this option to send a standard XML message to the distributor. If the connection is set up properly, you will receive the same message. |
| <b>Interoperability</b> | Select this option to send various test strings to the distributor so they can evaluate the response.                                          |

## BI PUBLISHER/ViewGen Parameters Page

Use the BI PUBLISHER/ViewGen Parameters page (GPCH\_EG\_BI\_PUBLISHER) to select the parameters that you want to use to run the report.

You can also select the criteria by which you want the system to sort the information.

ViewGen is a reporting Tool provided by Swissdec, which supports PDF creation, validation and some conversion on XML. This tool is embedded in GPCH dashboard and the recommended way to create legal reports the Swissdec certified domains. User needs to get hold of the Swissdec ViewGen zip and upload the same in Load Files CHE.

| Field or Control    | Description                                                                                                                                                                                           |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ViewGen</b>      | <p>Select if you want to create output by ViewGen.</p> <p>Following ViewGen parameters are only active, if ViewGen is checked.</p>                                                                    |
| <b>Run in Batch</b> | <p>Check in case creation of output will exceed time limit for online transactions (standard setting = 5 minutes). When run in batch mode a message will inform the user, that run got scheduled.</p> |

| <b>Field or Control</b>       | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Plugin Override</b>        | ViewGen supports more than 10 different plugins (see ViewGenReadMe.txt). The system fills the plugin by default. User can override the Plugin (e.g. for AHV Free Report, Validation only or to anonymize the XML)                                                                                                                                                                                                                                                                                                                       |
| <b>Additional Parameters</b>  | <p>Enter additional parameters.</p> <p>The following parameters get filled by default language: -l DE FR IT (default as of processing language) canton (for Source Tax only): -c XX (default as of processed canton)</p> <p>Beyond most used parameters are for ViewGen reports are:</p> <p>specimen: -w Creates wartermarked report</p> <p>Additionally for Tax Statement:</p> <p>Position of Address: -i LEFT RIGHT (default is RIGHT)</p> <p>Third language English instead of Italian: -n</p> <p>(full list see ViewGen Readme)</p> |
| <b>Payee List ID</b>          | <p>Select a Payee List to create an output for a subset of the generated XML.</p> <hr/> <p><b>Note:</b> Print by Payee List will restrict the XML itself to the selection. Thus user may take a backup of the full XML and restore the same after selective print.</p> <hr/>                                                                                                                                                                                                                                                            |
| <b>Sort Criteria</b>          | <p>ViewGen supports sort for Emplid, First Name, Language, Last Name and Residence Canton for 1 to 3 sort levels.</p> <hr/> <p><b>Note:</b> Print by Payee List will restrict the XML itself to the selection. Thus user may take a backup of the full XML and restore the same after selective print.</p> <hr/>                                                                                                                                                                                                                        |
| <b>BI Publisher</b>           | Select if you want to create output by BI Publisher.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Language Code</b>          | Select the language that you want to use for the reports. Supported languages are English, French, German, and Italian.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Output Format</b>          | Select either <i>PDF</i> or <i>XLS</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Sub Selection</b>          | Select the sub selection mode that you want the system to use; either <i>By Emplid</i> or <i>By Group List</i> .                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Empl ID and Group List</b> | Depending on the option you selected in the Sub Section field, the system displays one or both group boxes.                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Field or Control</b>          | <b>Description</b>                                                                                                                                                                               |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sort Criteria</b>             | Select the preferred method in which you want the system to sort the data. Sort options include: <i>AHV-Nbr</i> , <i>Birthdate</i> , <i>Empl ID</i> , <i>Last Name</i> , and <i>First Name</i> . |
| <b>AHV Report and ALV Report</b> | These options are only available for the AHV_AVS report. Here you can choose, whether you want to the AHV_AVS yearly report or the AHV_AVS exempted report.                                      |
| <b>XSLT Processing</b>           |                                                                                                                                                                                                  |
| <b>XML Files</b>                 | Select XML files you want to compare. Standard supports comparison of FAK_CAF YearToDate files.                                                                                                  |
| <b>XSLT Name</b>                 | Select HTML object, which contains the XSLT to process the files assigned under the XML files. Standard provides the XSLT GPCH_XSLT_Compare.                                                     |
| <b>XSLT Result</b>               | Link to File management Option Page to manage the result created by XSLT processing. See also <a href="#">Robust File Management</a> .                                                           |

Use these steps to generate the Swissdec standard domain XML (AHV\_AVS, FAK\_CAF, UVG\_LAA, UVGZ\_LAAC, KTG\_AMC, BFS\_OFS, LAW\_CDS, Source Tax):

**Note:** With Swissdec 5.0, user is executing the BFS\_OFS on a monthly control id.

| <b>Step</b> | <b>Action</b>                                                                                                                                                                           | <b>Navigation Path</b>                                                                                                                          |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 1           | Create a new provider for each Swissdec standard domain.<br><br>Provider for Source Tax need to named like this #XX.<br><br>Where XX is the 2 character Canton Code, e.g. #BE, #ZH etc. | <b>Set Up HCM &gt; Product Related &gt; Global Payroll &amp; Absence Mgmt &gt; Social Security/ Insurance &gt; Providers CHE</b>                |
| 2           | Add the new provider you created in step 1 to a company.                                                                                                                                | <b>Set Up HCM &gt; Product Related &gt; Global Payroll &amp; Absence Mgmt &gt; Social Security/ Insurance &gt; Company SI Contributions CHE</b> |
| 3           | Create a new domain for Swissdec standard domain (1 for all or tailored to your company needs).                                                                                         | <b>Set Up HCM &gt; Product Related &gt; Global Payroll &amp; Absence Mgmt &gt; Social Security/Insurance &gt; ELM Domain Setup CHE</b>          |
| 4           | Assign Swissdec standard domain attributes to employees.                                                                                                                                | <b>Global Payroll &amp; Absence Mgmt &gt; Payee Data &gt; Taxes &gt; Maintain Source Tax Data CHE</b>                                           |

## Prepare FAK\_CAF Setup for Verbandsausgleichskassen

In case a company reports to a “Verbandsausgleichskasse”, it reports all cantons to this institution. We support XML creation for multiple cantons with the same customer account. See Swissdec guidelines chapter 3.17.4. We use the XML creation with the ‘normal’ setup (= 1 Provider for each canton). Now we identify the Mode ‘Verbandsausgleichskasse’ by the existence of the Canton-/Provider Mapping in Canton. The following setup triggers the creation of XML for Verbandsausgleichskassen.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Taxes > FAK/SourceTax(Company) CHE > FAK/SourceTax(Company) CHE**

FAK/SourceTax (Company) CHE page

| Field or Control | Description                                                                         |
|------------------|-------------------------------------------------------------------------------------|
| FAK Provider     | Dummy Provider for ‘Verbandsausgleichskasse’ – not mapped in Company-Provider page. |

## Preparing XML File for FAK\_CAF Monthly Processing (AK Banken and AK Versicherung)

Use the Prepare Files page (GPCH\_EG\_RSTATUS) for preparing XML file for FAK\_CAF Monthly Processing (AK Banken and AK Versicherung).

Processed cantons get identified by the existence of the Canton-/Provider Mapping similar to the creation of XML for Verbandsausgleichskassen.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Taxes > FAK/SourceTax(Company) CHE > FAK/SourceTax(Company) CHE**

This example illustrates the fields and controls on the FAK/SourceTax (Company) CHE Page. You can find definitions for the fields and controls later on this page.

Update/Display

XML for Ausgleichskasse Banken and AK Versicherungen needs to be created in a single domain. In this domain, FAK\_CAF mode AKB was selected. This mode does not provide a certificate, therefore you need to deselect the **Sign** check box on the provider level. You need to create the file in EIV mode, as there is no integrated sending. Therefore, you must save the file to a directory of your choice and upload the file from there to the website provided by Ausgleichskasse Banken or Ausgleichskasse Versicherungenthe.

**Note:** Once you save the page, the system makes the period display only. If you run the process for a specific month, you can either rerun the process for the month or run the process for the next month. For both scenarios you need to select the **New Month Run** check box. The system provides a new field that you can use to enter a new date. If you select a new month, the system keeps the old data and switches to the next month. If you select the same date again, the system asks you to delete the current period before you continue. Once you run the process for a particular month, you can view history for the months from the Process Files page. Children without National ID are included in the resulting XML the TAG SV-AS-Number is filled like this “000.CHILD:KWG109” where KWG109 is the EMPLID.

| 2 FAK-CAF    | Success       | Monthly       | 01/31/2017           |
| 3 Write File | Success       |               |                      |

XML for eAHV needs to be created in a single domain. In this domain FAK\_CAF mode eAHV is elected. It cannot run in a package with other processes. This mode does not provide a certificate, therefore you need to deselect the Sign check box on the provider level. You need to create the file in EIV mode, as there is no integrated sending. Therefore, you must save the file to a directory of your choice and upload the file from there to the website provided by the proposed receiver.

Further we need this provider as the only FAK\_CAF provider in Company mapping with attribute 'All cantons'.

Once complete is executed the New Period flag will be active and time stamp of completion is filled under ‘Declaration ID’. The system provides a new field that you can use to enter a new date. If you select a new month, the system keeps the old data and switches to the next month. If you select the same date again, the system asks you to delete the current period before you can continue. Once you run the process for a particular month, you can view history for the month from the Process Files page. Children without National ID are not included in the resulting XML and user finds a notification for such cases in the log file.

## Preparing Source Tax XML Geneva (yearly = ISEL) — only supported until 31.12.2014

Use the Prepare Files page (GPCH\_EG\_RSTATUS) for preparing Source Tax XML Geneva.

Navigation:

**Global Payroll & Absence Mgmt > Authority Correspondence > XML based reporting  
CHE > Year End XML CHE > Prepare Files**

Access the Prepare Files page (Global Payroll & Absence Mgmt, Authority Correspondence, XML based reporting CHE, Year End XML CHE, Process Files).

Prepare Files page

## Creating Yearly XML (GE Only)

| Field or Control                       | Description                                                                                     |
|----------------------------------------|-------------------------------------------------------------------------------------------------|
| <b>Provider Type and Provider Code</b> | Select provider type QST-IS and the provider #GE to create the XML. These fields are mandatory. |
| <b>Report Period</b>                   | Defaults to Yearly (display only)                                                               |

**Note:** The source tax XML needs to be created in a single domain. It cannot run in a package with other processes. The GE tax administrations does not provide a certificate, therefore you need to deselect the **Sign** check box on the provider level. You also need to create the file in EIV mode, as there is no integrated sending. Therefore, you must save the file to a directory of your choice and upload the file from there to the website provided by the Geneva (ISEL) tax administration.

## Preparing XML ISO 20022

| <u>View Online Payslip CHE Page</u>                   | GPCH_RP_INQ_PYSLIP     | View the Swiss version of the online payslip.                                                                                                                                                                                                                                                                                                    |
| “Self Service Payslip Options Page” (PeopleSoft ePay) | GP_SS_PSLP_OPTIONS     | Enable online payslip printing using the View Payslip self-service transaction, and enable mobile payslip access.                                                                                                                                                                                                                                |
| “Define List Set Page” (PeopleSoft Global Payroll)    | GP_ELN_SET             | Define elements and components, and sort order.<br><br>For more information, see <a href="#">Assigning and Viewing Print Classes</a> .                                                                                                                                                                                                           |
| <u>BESTA Employment Statistic CHE Page</u>            | GPCH_RC_ST01           | Run the BESTA Employment Statistics report (GPCHST01.SQR). The Federal Office for Statistics requires all enterprises that employ people in Switzerland to indicate quarterly the employment numbers and a business outlook. This report satisfies that requirement. The SQR generates both a printed report and a file for electronic transfer. |
| <u>Reconciliation Report CHE Page</u>                 | GPCH_RC_AL02           | Reconciliate values from Payroll, Bank Transfer and GL Interface                                                                                                                                                                                                                                                                                 |

| <b>Page Name</b>                      | <b>Definition Name</b> | <b>Usage</b>                                                                                                           |
|---------------------------------------|------------------------|------------------------------------------------------------------------------------------------------------------------|
| <u>Pay Element Summary Month Page</u> | GPCH_RC_AL08           | Records the payroll process by defining all earnings and deductions for a specific month and the current year to date. |

## Understanding Payslips

Global Payroll for Switzerland enables you to generate and adapt payslips to meet your needs. You can also send a message (printed on the payslip) to an individual payee or to payees belonging to designated pay groups, locations, or departments.

The system generates an additional row per earning marked with an asterisk for the total of the retro results. Employee and pay summary data for the given month are printed in the header. This includes date of birth, starting date with the organization, location, department, religion, bank account details, currency in which the earnings are to be paid, and holiday entitlement for the remainder of the year. The run control for the payslip is a two-page component consisting of the Payslip Options page and the Payslip Element View page.

Global Payroll for Switzerland enables you to generate and adapt payslips to meet your needs. To support archiving and specific layout and printing needs, the design of the standard payslip supports the separation of data storage and data presentation.

In the first step the system creates an XML file and stores it in the GPCH\_RP\_AL10ONL record. A user can then view the XML file in their browser using the standard Stylesheet (XSL) GPCH\_STYLE\_KW1. Users can also create a PDF file from the XML and then print it.

## Payslip Options Page

Use the Payslip Options page (GPCH\_RC\_AL01\_1) to run the Payslip report for Global Payroll Switzerland.

Navigation:

**Global Payroll & Absence Mgmt > Payslips > Create/Print Payslips CHE > Payslip Options**

## Payslip Options page

**Note:** Define the elements that you want to display in multiple currencies on your payslip. You may want to see the values of some elements (gross and net, for example) in a different currency. This is especially useful for organizations in countries participating in the EMU—you can display key amounts in both the local currency and the Euro.

| Field or Control              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Language</b>               | Payslip supports these languages: English, French, German, and Italian. For languages that are not supported, the system automatically uses the base language.                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Apply Context Language</b> | The payslip is printed in the language of the employee.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Multiple Payslips</b>      | <p>Select to print payslips for more than one month in a single request.</p> <p>When you select this option, all fields on the page except <b>Print Class</b>, <b>Pay Entity</b>, <b>From Date</b>, <b>Current Pay End Date</b> and <b>EmplID</b> are hidden. Enter the from date and the current pay end date and select the employees for whom you want to print the payslips.</p> <p><b>Note:</b> When you select this option you cannot create new payslips. You can only print payslips that have been previously generated.</p> |

| <b>Field or Control</b>                                      | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Print Class</b>                                           | Select a print class. The system includes two standard print classes, although you can create your own.                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Currency Code</b>                                         | Select the currency in which to print the payslip. The system performs a currency conversion in case the processing currency isn't the specified currency.                                                                                                                                                                                                                                                                                                                                                   |
| <b>Sort Criteria</b>                                         | Select sort criteria. Values include <i>Canton</i> , <i>Company</i> , <i>Deptid</i> (department ID), <i>Empid</i> (employee ID), <i>Location</i> , <i>Name</i> , and <i>PayGroup</i> .                                                                                                                                                                                                                                                                                                                       |
| <b>Print Only, Interface Only, and Print &amp; Interface</b> | The <b>Print Only</b> option always uses the interface record as its source. Select the <b>Print Only</b> option if the report has already been run with either the <b>Interface Only</b> or the <b>Interface &amp; Print</b> option selected. The <b>Print Option</b> creates PDF output. The <b>Interface Only</b> option creates only an interface record that stores the data as XML.                                                                                                                    |
| <b>Regenerate Interface</b>                                  | Select to regenerate the interface.<br><br>When you run the payslip with the <b>Interface Option</b> selected, the process compares timestamps of the payroll (GP_PYE_SEG_STAT) and the Interface record. If the timestamps are identical, the system does not generate a new version. If you need a new version due to a change on the setup for earning description or message generation, you can force the regeneration, even if no payroll happened in between (as long as the period isn't finalized). |
| <b>Final</b>                                                 | Select to finalize the pay period. Once the period is finalized, you cannot change it any longer. The payslip is frozen.                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Print Vacation Details</b>                                | Select to print vacation details in the upper right corner of the payslip.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Print Time Stamp</b>                                      | Select to print the timestamp of the generation in the footer of the payslip.                                                                                                                                                                                                                                                                                                                                                                                                                                |

To create the Swiss version of the online payslip follow these steps:

1. Click Run.

The system displays the Process Scheduler Request page.

2. Select the **Payslip Delta** check box.
3. Click OK.

**Note:** Selecting the Online Payslip CHE job check box on the Process Scheduler Request page creates the same PDF as PDF Delta SQR. The system, however, uses a GP Core process to create the online payslip and the mobile payslip (if both were enabled during ePay setup) and then makes it available for self service and mobile access.

This is an example of how to set up the Self Service Payslip Options for Global Payroll for Switzerland

**Self Service Payslip Options**

Country CHE Switzerland

Default URL Identifier  Payslip Binary Attachments

**Default Payslip Print Options**

☐ Suppress Payslip Printing

☐ Disable Mobile Payslip Alert

**ePay Availability Options**

☒ Enabled in Self Service

Days after Payment Date

**ePay Mobile Settings**

☒ Enable Mobile Payslip

**View Options**

Number Of Payslips Displayed

Months Of Retrievable History

☒ Display Net Pay Distribution

☒ Display Absence Balances

☒ Display Payroll Balances

☒ Display PDF Payslip

**Data Extraction Options**

\* Data Extraction Type

Application Engine Name

\*ePay List Set Country

ePay List Set

[Review List Set](#) [Absence Balance Configuration](#)

In this option, global payroll core will refer the staging tables for mobile pay to provide the mobile payslip view.

| <b>Include Banking Compare</b>          | Select if you want to include the banking amounts.                                                                                                                                                                                                                                                                           |
| <b>Include GL Compare</b>               | Select if you want the GL amounts included. If you select this check box, select either <i>Compare by Account</i> or <i>Compare by PIN</i> .                                                                                                                                                                                 |
| <b>Map PIN Num and Map Account</b>      | <p>Depending on the mode you selected in the <b>Include GL Compare</b> field, the system displays either the <b>Map PIN Num</b> group box or the <b>Map Account</b> group box.</p> <p>Enter the PIN or the account that you want to use for the report. You can add multiple PINs or accounts by adding additional rows.</p> |
| <b>Reverse Sign</b>                     | Select to compare amounts that need to be reversed. This process depends on the way the targeted interface handles credits and debits.                                                                                                                                                                                       |

## Pay Element Summary Month Page

Use the Pay El. Sum. Month (pay element summary month) page (GPCH\_RC\_AL08) to records the payroll process by defining all earnings and deductions for a specific month and the current year to date.

Navigation:

**Global Payroll & Absence Mgmt > Absence and Payroll Processing > Reports > Pay Element Summary CHE > Pay El. Sum. Month**

## Pay El. Sum. Month (pay element summary month) page

**Note:** To provide more detailed information about the reporting unit, select the Address tab. If any address is displayed on this page, the system displays it in the header of the report.

| <b>Field or Control</b>     | <b>Description</b>                                                                         |
|-----------------------------|--------------------------------------------------------------------------------------------|
| <b>Print Class</b>          | Select the print class that you want to use for your report                                |
| <b>Current Pay End Date</b> | Select the date to which you want to run the report within the year.                       |
| <b>Pay Entity</b>           | Select the pay entity that you want to use for the report.                                 |
| <b>Set ID</b>               | if you want to select a department or location, you must first select a set ID.            |
| <b>Department</b>           | Select a department.<br>If you use this field, you must also select a set ID.              |
| <b>Print Detail Report</b>  | Select this check box if you want the retro value displayed per retro month on the report. |
| <b>Company</b>              | If you use pay entity as a legal entity, select the subset for the company                 |

## Creating General Ledger Reports

This topic discusses how to create general ledger reports.

## Pages Used to Create General Ledger Reports

| <i>Page Name</i>                           | <i>Definition Name</i> | <i>Usage</i>                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>Create Accounting Voucher CHE Page</u>  | GPCH_RC_GL01           | Lists General Ledger results by ChartField. You must run the pay run and GL processes from the Global Payroll core application before printing this report.                                                                                                                                                                                               |
| <u>Create Reconciliation List CHE Page</u> | GPCH_RC_GL02           | Summarizes and groups General Ledger results per account.                                                                                                                                                                                                                                                                                                 |
| <u>Overpayment List CHE Page</u>           | GPCH_RC_AL06           | Create a report that lists the overpayments that an employer has made to an employee. The term overpayments refers to payments made in addition to normal salary. The Overpayment List report displays employee ID, name, month and year that the overpayment was made, the amount, and the total overpayments. You must first have defined a pay entity. |
| <u>Query Viewer Page</u>                   | QUERY_VIEWER_SRCH      | Query GL Interface data as of Global Payroll General Ledger data (GP_GL_DATA).                                                                                                                                                                                                                                                                            |

## Create Accounting Voucher CHE Page

Use the Create Accounting Voucher CHE page (GPCH\_RC\_GL01) to lists General Ledger results by ChartField.

You must run the pay run and GL processes from the Global Payroll core application before printing this report.

## Overpayment List CHE Page

Use the Overpayment List CHE page (GPCH\_RC\_AL06) to create a report that lists the overpayments that an employer has made to an employee.

The term overpayments refers to payments made in addition to normal salary. The Overpayment List report displays employee ID, name, month and year that the overpayment was made, the amount, and the total overpayments. You must first have defined a pay entity.

Navigation:

**Global Payroll & Absence Mgmt > Absence and Payroll Processing > Reports > Overpayment List CHE > Overpayment List CHE**

## Overpayment List CHE page

| Overpayment List CHE |                     |                |                 |
|----------------------|---------------------|----------------|-----------------|

| <b>Pay Year</b>               | Enter the pay year.                                                                                                                                                                                                                                                                                                                                    |
| <b>From Date and To Date</b>  | Enter the date range for which you want to create a tax statement.                                                                                                                                                                                                                                                                                     |
| <b>Pay Entity</b>             | Select the pay entity for which you want to create a tax statement.                                                                                                                                                                                                                                                                                    |
| <b>Domain ID</b>              | Select the domain ID for which the XML was created.                                                                                                                                                                                                                                                                                                    |
| <b>SetID</b>                  | Select a set ID if you only want to print statements for a certain department.                                                                                                                                                                                                                                                                         |

| <b>Field or Control</b>             | <b>Description</b>                                                                                                                                                                                                                                           |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Department</b>                   | Select a department if you only want to print statements for a certain department. In this case you need to also select a set ID.                                                                                                                            |
| <b>Issued Date</b>                  | If you want to override the creation date in the Form field <i>I</i> Ort Datum, enter a date in this field. To do this should have already selected overrides in Sender Details on the company level. If you don't want to override, leave this field blank. |
| <b>Run Type</b>                     | Select <i>Print</i> (recommended). The <i>Interface</i> run type is used for testing purposes and the creation of special tax statement scenarios.                                                                                                           |
| <b>Split</b>                        | This option is not supported for the <i>Print</i> run type. Depending on the expat status, the tax statement can be split by expat status periods. This option is used primarily for testing purposes and the creation of special tax statement scenarios.   |
| <b>Include Pending Calculations</b> | This option is not supported for the <i>Print</i> run type. In Interface mode selecting this option would include pending calculations, not finalized periods. This option is primarily available to support testing.                                        |
| <b>Sort Criteria</b>                | Select the fields that you want the system to use to sort the data.                                                                                                                                                                                          |
| <b>Company, Canton, and Empl ID</b> | Select the company, canton, and employee IDs for the statement that you want to print.                                                                                                                                                                       |

Selecting the Print run type creates a PDF file using the current official form. The system retrieves data from the XML as created through the dashboard. A barcode is enabled. In case the text in lines 2.3, 4, 7, 13.1.2, 13.2.3, 14 or 15 exceeds the size of the form, the system creates an additional page, which displays unlimited text. The second page is confirmed by the tax administration as well.

**Note:** Use this run control only for the Print run type. The creation of Interface files must be done through the dashboard before you use the Print run control. You can also create the PDF using the Swissdec tool called *Viewgen* and ignore this mass print. You can select subsets here. To print and view single employee IDs, use the online view and update feature.

To update the tax statement online:

1. Access the Override Tax Statement CHE page.

2. Select the **Add a new row (+)** button.

The page should now have an additional row.

3. Click View and save the PDF file.

4. Click Edit.

The system displays the Tax Statement Lump page (GPCH\_IF\_TX07\_1). Use this page to change the Form ID that the system is using to create the PDF.

5. Click OK.

6. Click Edit.

The PDF file displays as a form.

7. Update any values that you want to change.

8. Click Save.

## Chapter 21

# Performing Gross Calculations

## Channels for Gross Input

This section discusses:

- Pages used to setup and use gross calculations.
- Types of earnings and proposed entry points.

## Pages Used to Setup and Use Gross Calculations

Use these pages to setup gross calculations and use standard gross calculations.

| <b>Page Name</b>             | <b>Object Name</b> | <b>Navigation</b>                                                                                                             | <b>Usage</b>                                         |

## 13th Month Payments

This section discusses:

- Earnings codes.
- Eligibility, pay out events, and calculation.

### Earnings Codes

13th month payments can be configured yearly or half-yearly. In cases where there is a termination or mid-year hire, the system automatically prorates the earnings amount. The calculation is based on an accumulator. In addition, the system provides a monthly earnings code, which can be used to charge the arrears to your general ledger.

Here are the two new earnings codes:

| <b>Earnings</b>    | <b>Code</b> | <b>Description</b>      |
|--------------------|-------------|-------------------------|
| 13th month arrears | 1200A       | Used for general ledger |
| 13th month salary  | 1200B       | Money to the employee   |

## Eligibility, Pay Out Events, and Calculation

The calculation of 13th month payment might be very specific for each branch and company within your organization. Therefore this feature is designed to be very flexible. It enables you to add your own logic in the customer exists that are provided. You can benefit from the framework and add your own logic without increasing the maintenance effort.

### Eligibility

The system defines the eligibility to earn 13th month base pay per month in formula CH\_ER\_FOGCMTH. It is standard that all active employees are eligible for 13th month wages. To adjust eligibility, you can modify the custom exit formula CH\_ER\_CFOGCMTH.

### Pay Out Events

The system defines the pay out event in formula CH\_ER\_FOGCPAY. It is standard for 13th month wages to be paid out in situations where there is a termination or in the December payroll. To adjust eligibility, you can modify the custom exit formula CH\_ER\_CFOGCPAY.

### Calculation

The CH\_ER\_13B accumulator defines the earnings that contribute to the 13th month base pay. You can, however, add an employee's earnings to this accumulator. The 13th month wage amount is subject to social contributions and the source tax.

---

## Hourly Payments

This section discusses:

- Overview of earnings for overtime payments.
- Earnings that use the rate from compensation for code C13600.
- Earnings that use the rate from the job hourly rate.
- Earnings that use rate in the customer maintained overtime table.
- Earnings automatically derived for hourly payments
- Other hourly payments.

## Overview of Earnings for Overtime Payments

We recommend that customers use the earnings that are described in this section for overtime payments. Swiss payroll provides samples that take the rate from the compensation, job or overtime setup. Furthermore, these earnings were setup to automatically create the mandatory additional earnings that compensate hourly workers for holidays and vacation. To adjust these earnings to the your needs, update the table with overtime pay rates and the two brackets that provide the percentage for holiday and vacation compensation.

Hourly payments chart for overtime pay rates, holiday compensation, and vacation compensation

## Earnings that Use the Rate from Compensation for Code C13600

This section discusses:

- CH\_ER\_13600 – Hourly payment 1.
- CH\_ER\_13610 – Hourly payment 2.
- CH\_ER\_13601 – Hourly payment previous year

### CH\_ER\_13600 – Hourly Payment 1

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_13600 earnings:

| <b>Earning</b>             | <b>Rate Type</b> | <b>Value</b>                 | <b>Unit Type</b>                | <b>Value</b> |
|----------------------------|------------------|------------------------------|---------------------------------|--------------|
| CH_ER_13600 Rate *<br>Unit | Rate Code        | CH_ER_C13600 = HR:<br>C13600 | Earning/Deduction<br>assignment | Manual entry |

#### 1. Calculation

CH\_ER\_13600 is the standard earning to calculate hourly payments. The rate can be selected as Net-Rate or Gross-Rate. According to the options that you select, the percentages in the setup table need to be maintained as a rate that includes payment for vacation and holidays. Earnings CH\_ER\_14010 and CH\_ER\_14020 are calculated automatically. You can then add them to the salary or just generate them for informational purposes.

## 2. Source of value

Hours come from units that are entered manually. The rate comes from rate code C13600 as provided in compensation on the employee level. You can override this rate manually.

## 3. Specifics

By virtue of a court act from 2004, a person that is paid on an hourly basis can claim payments for vacation and holidays. By contract it is mandatory that these payments are specified. In case it's not obvious from the contract, the employee can claim these payments on top of the hourly rate. Therefore, it is necessary to display the components that are dedicated to this task. In the delivered DEMO version, the earnings and percentages are shown as net payments, which means they are added to the regular salary (accumulator CH\_00\_0).

### CH\_ER\_13610 – Hourly Payment 2

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_13610 earning:

| <b>Earning</b>             | <b>Rate Type</b> | <b>Value</b>                 | <b>Unit Type</b> | <b>Value</b> |
|----------------------------|------------------|------------------------------|------------------|--------------|
| CH_ER_13610 Rate *<br>Unit | Rate Code        | CH_ER_C13600 = HR:<br>C13600 | Positive input   | Manual entry |

Similar to CH\_ER\_13600, the CH\_ER\_13610 earning code can be used for exceptions and is managed using positive input. CH\_ER\_13610 may also be used for a regular number of hours for each month and for assignment on earnings and deductions.

### CH\_ER\_13601 – Hourly Payment Previous Year

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_13601 earning:

| <b>Earning</b>             | <b>Rate Type</b> | <b>Value</b>                 | <b>Unit Type</b> | <b>Value</b> |
|----------------------------|------------------|------------------------------|------------------|--------------|
| CH_ER_13601 Rate *<br>Unit | Rate Code        | CH_ER_C13600 = HR:<br>C13600 | Positive input   | Manual entry |

## 1. Calculation

The standard earning to calculate hourly payments for the previous year. The rate can be selected as Net-Rate or Gross-Rate. According to the options you select, the percentages in the setup table need to be maintained as a rate that includes payment for vacation and holidays. Earnings CH\_ER\_14011 and CH\_ER\_14021 are calculated automatically. You can then add them to the salary or just generate them for informational purposes.

## 2. Source of value

Hours come from units that are entered manually. The rate comes from rate code C13600 as provided in compensation on the employee level. You can override this rate manually.

## 3. Specifics

See earning CH\_ER\_13600.

## Earnings that use the Rate from the Job Hourly Rate

This section discusses these earnings:

- CH\_ER\_13620 – overtime 100 percent.
- CH\_ER\_13622 – overtime 125 percent.
- CH\_ER\_13624 – overtime 150 percent.

### CH\_ER\_13620 – Overtime 100 Percent

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_13620 earning:

| <i><b>Earning</b></i>      | <i><b>Rate Type</b></i> | <i><b>Value</b></i>            | <i><b>Unit Type</b></i> | <i><b>Value</b></i> |
|----------------------------|-------------------------|--------------------------------|-------------------------|---------------------|
| CH_ER_13620 Rate *<br>Unit | Formal                  | CH_ER_FO100 = SY.<br>Hourly RT | Positive input          | Manual entry        |

The rate uses the Hourly RT Global Payroll system element.

### CH\_ER\_13622 – Overtime 125 Percent

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_13622 earning:

| <i><b>Earning</b></i>      | <i><b>Rate Type</b></i> | <i><b>Value</b></i>            | <i><b>Unit Type</b></i> | <i><b>Value</b></i> |
|----------------------------|-------------------------|--------------------------------|-------------------------|---------------------|
| CH_ER_13622 Rate *<br>Unit | Variable                | CH_ER_FO100 = SY.<br>Hourly RT | Positive input          | Manual entry        |

The rate uses the Hourly RT Global Payroll system element multiplied by 1.25 percent.

### CH\_ER\_13624 – Overtime 150 Percent

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_13624 earning:

| <i><b>Earning</b></i>      | <i><b>Rate Type</b></i> | <i><b>Value</b></i>            | <i><b>Unit Type</b></i> | <i><b>Value</b></i> |
|----------------------------|-------------------------|--------------------------------|-------------------------|---------------------|
| CH_ER_13624 Rate *<br>Unit | Variable                | CH_ER_FO100 = SY.<br>Hourly RT | Positive input          | Manual entry        |

The rate uses the Hourly RT Global Payroll system element multiplied by 1.50 percent.

## Earnings that use Rate in the Customer Maintained Overtime Table

This section discusses these earnings for vacation and holiday compensation:

- CH\_ER\_14010 – hourly vacation compensation.
- CH\_ER\_14011 – hourly vacation compensation (previous year).
- CH\_ER\_14020 – hourly holiday compensation.
- CH\_ER\_14021 – hourly holiday compensation (previous year).

### CH\_ER\_14010 – Hourly Vacation Compensation

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_14010 earning:

| <i><b>Earning</b></i>    | <i><b>Rate Type</b></i> | <i><b>Value</b></i> | <i><b>Unit Type</b></i> | <i><b>Value</b></i> |
|--------------------------|-------------------------|---------------------|-------------------------|---------------------|
| CH_ER_14010 Basis *<br>% | Accumulator             | CH_ER_8010          | Formula                 | As of bracket.      |

#### 1. Calculation

Vacation compensation for hourly paid employees.

#### 2. Source of value

Base is accumulator CH\_ER\_8010, which accumulates hourly earnings. The standard uses CH\_ER\_13600 and CH\_ER\_13610. The percentage uses CH\_ER\_FO010, which provides a value based on age and the value in the standard bracket CH\_ER\_BR001. You can override these earnings and use a real vacation plan, however.

#### 3. Specifics

There is one vacation payment generated based on the sum of hourly earnings within the specified month.

### CH\_ER\_14011 – Hourly Vacation Compensation (Previous Year)

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_14011 earning:

| <i><b>Earning</b></i>    | <i><b>Rate Type</b></i> | <i><b>Value</b></i> | <i><b>Unit Type</b></i> | <i><b>Value</b></i> |
|--------------------------|-------------------------|---------------------|-------------------------|---------------------|
| CH_ER_14011 Basis *<br>% | Accumulator             | CH_ER_8010          | Formula                 | As of bracket.      |

#### 1. Calculation

Vacation compensation for the previous year for hourly paid employees.

#### 2. Source of value

The base uses accumulator CH\_ER\_8011, which accumulates hourly earnings for the previous year. The standard uses CH\_ER\_13601. The percentage uses CH\_ER\_FO011 which provides a value based on the previous year's age and the value in the standard bracket CH\_ER\_BR001. You can override these earnings and use a real vacation plan, however.

### 3. Specifics

There is one vacation payment generated for the previous year based on the sum of hourly earnings for the previous year within the specified month.

---

**Note:** Depending on age (for previous year plus 1 year) the system assigns vacation entitlements of 20, 25 or 30 days. You can override this in the corresponding customer exit. You can also adjust percentages in cases where the compensation is paid additionally or already included in the payment for overtime earnings.

---

To make changes, access the Data page by selecting Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Elements, Supporting Elements, Brackets, Data. Then select the CH\_ER\_BR001 element name (hourly vacation component)

## CH\_ER\_14020 – Hourly Holiday Compensation

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_14020 earning:

| <i><b>Earning</b></i>    | <i><b>Rate Type</b></i> | <i><b>Value</b></i> | <i><b>Unit Type</b></i> | <i><b>Value</b></i> |
|--------------------------|-------------------------|---------------------|-------------------------|---------------------|
| CH_ER_14020 Basis *<br>% | Accumulator             | CH_ER_8010          | Formula                 | As of bracket.      |

### 1. Calculation

Holiday compensation for hourly paid employees.

### 2. Source of value

The base uses accumulator CH\_ER\_8010, which accumulates hourly earnings. The standard uses CH\_ER\_13600 and CH\_ER\_13610. The percentage uses CH\_ER\_FO022, which provides value based on the value in bracket CH\_ER\_BR002. You can override this by using a percentage for the real holiday schedule.

### 3. Specifics

There is one holiday payment generated based on the sum of hourly earnings within the specified month.

## CH\_ER\_14021 – Hourly Holiday Compensation (Previous Year)

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_14021 earning:

| <b>Earning</b>           | <b>Rate Type</b> | <b>Value</b> | <b>Unit Type</b> | <b>Value</b>   |
|--------------------------|------------------|--------------|------------------|----------------|
| CH_ER_14021 Basis *<br>% | Accumulator      | CH_ER_8010   | Formula          | As of bracket. |

### 1. Calculation

Holiday compensation for the previous year for hourly paid employees.

### 2. Source of value

The base uses accumulator CH\_ER\_8011, which accumulates hourly earnings for the previous year. The standard uses CH\_ER\_13601. The percentage uses CH\_ER\_FO022 which provides a value based on the value in bracket CH\_ER\_BR002. You can override this by using a percentage for the real holiday schedule.

### 3. Specifics

There is one holiday payment for the previous year that is generated based on the sum of hourly earnings for the previous year within the specified month

To make changes, access the Data page by selecting Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Elements, Supporting Elements, Brackets, Data. Then select the CH\_ER\_BR002 element name (holiday premium hourly payment).

## Earnings Automatically Derived for Hourly Payments

This section discusses the CH\_ER\_22000 earning which is used for certain overtime payments.

### CH\_ER\_22000 – Overtime 125 % (GAV)

This table shows the earning, rate type, value, unit type, and value used for the CH\_ER\_22000 earning:

| <b>Earning</b>                 | <b>Rate Type</b> | <b>Value</b>                                      | <b>Unit Type</b> | <b>Value</b> |
|--------------------------------|------------------|---------------------------------------------------|------------------|--------------|
| CH_ER_22000 Rate *<br>Unit * % | Variable         | CH_ER_FO030 =<br>Overtime Pay Rate<br>(Annual RT) | Positive input   | Manual entry |

The rate equals the overtime pay rate that appears on the Overtime CHE page, where the bracket entry (Annual Salary) equals the Annual RT Global Payroll system element.

## Other Hourly Payments

There are more earnings provided that you can use to enter hourly payments. These earnings are in the range between 1000 and 9999 and are provided due to the Swissdec certification. Use these earnings to manually input data. They do not create any corresponding compensation, however.

## Swissdec Earnings

All earnings as defined in the Swissdec guidelines are available within Global Payroll for Switzerland. Earnings are maintained according to the guidelines. You can use them for production without making any changes.

See also Beispiel eines Lohnartenstamms.

## Net to Gross (Gross Up)

Global Payroll for Switzerland supports gross up calculations. It is not an iterative approach. It follows the formulas as provided by the former SUVA (document 1922.d).

Here are the pages you would access to make adjustments for gross up calculations:

### Pages Used to make adjustments for gross up calculations

| <i>Page Name</i>                      | <i>Object Name</i> | <i>Usage</i>                                |
|---------------------------------------|--------------------|---------------------------------------------|
| <u>Payee Social Ins Data CHE Page</u> | GPCH_SI_DATA       | Set AHV and ALV status to 2.                |
| <u>Accumulator - Member Page</u>      | GP_ACCUMULATOR_3   | Assign net earnings to accumulator CH_NE_02 |

### Payee Social Ins Data CHE Page

Gross up for all earnings is triggered by assigning AHV and ALV a status of 2 – employer pays all on employees social insurance data. Then all contribution for AHV, ALV and UVG are grossed up. Gross up happens by default and the gross up amount is shown in generated earnings CH\_NE\_XXX.

Use the Maintain Social Ins Data CHE page (GPCH\_SI\_DATA) to Set AHV and ALV status to 2.

See the example here:

\*AHV Status 2 Employer Tot Contrib AHV 10.1000 %

\*ALV Status 2 Employer Total Cont ALV1 3.0000 %

☐ Apply Yearly Limits Total Cont ALV2 2.0000 %

☐ Apply AHV\_AVS Minimum

## Accumulator - Member Page

Gross up for dedicated earnings is managed by assigning earnings to the CH\_NE\_02 accumulator. For testing you might just use the sample earnings CH\_ER\_15000 and CH\_ER\_14500. Based on the Swissdec certification of this module we provide the standard Gratuity earnings (1201) as a gross up earning. A limitation of using this earning is that it does not include source tax in the gross up.

Use the Accumulator - Member page (GP\_ACCUMULATOR\_3) to assign net earnings to accumulator CH\_NE\_02.

See example here:

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Elements > Supporting Elements > Accumulators > Members**

# Employee Report Center

---

## Understanding Employee Report Center

This section provides an overview of the Employee Report Center and discusses:

- Unemployment Reports
- Future Options

---

**Note:** Currently, the employee report center lists only the Unemployment Report.

---

More reports will be added for single employees. Future options consists of reports such as:

- Any Swissdec domain XML
- Pay Slip
- Pay Balance
- Tax Statement

## Employee Report Center CHE Page

Use the Employee Report Center CHE Page (GPCH\_UNEMP\_DB) to access employee reports.

Navigation:

**Global Payroll & Absence Mgmt > Payee Data > Employee Report Center CHE**

## Telework Reports

This topic discusses how to set up and generate Telework Reports.

### Page Used to Set Up and Generate Unemployment Reports

| <i><b>Page Name</b></i>         | <i><b>Object Name</b></i> | <i><b>Usage</b></i>        |
|---------------------------------|---------------------------|----------------------------|
| <u>Telework Report CHE Page</u> | GPCH_UNEMP_REP            | Generate telework reports. |

### Telework Report CHE Page

Use the Telework Report CHE Page (GPCH\_UNEMP\_REP) to generate telework reports.

Navigation:

**Global Payroll & Absence Mgmt > Payee Data > Employee Report Center CHE > Telework Report**

## Telework Report CHE page

The screenshot shows a dialog box titled "Telework Report CHE" with a close button (X) in the top right corner. A "Help" link is located in the top right area. The main section is titled "Report Parameters" and contains a form with the following fields:

- \*Empl ID: A text input field with a magnifying glass icon.
- Effective Date: A date input field showing "08/09/2024" with a calendar icon.
- Language Code: A dropdown menu currently set to "English".
- Report Format: A dropdown menu currently set to "PDF".

Below the form is a "Generate Report" button. At the bottom left are "OK" and "Cancel" buttons. A mouse cursor is visible in the bottom right corner of the dialog box.

The Telework CHE report is generated in the specified format. You have to manually enter additional data into blank fields.

---

**Note:** In order to enter / update additional data into the system generated report, the proposed format is RTF.

---

# Understanding Error Messages

---

## Delivered Error Messages for Switzerland

To assist you in calculating payrolls successfully, Global Payroll for Switzerland delivers predefined error messages that notify you of error conditions and data problems without interrupting the calculation process.

This section discusses:

- General error messages.
- Messages generated with the AHV report.
- Messages generated with other reports.

---

**Note:** All delivered messages are in message set 17055.

---

### General Error Messages

This table lists general error messages:

| <b><i>Message Number</i></b> | <b><i>Text / Explanation</i></b>                                      | <b><i>Type (Error or Warning)</i></b> | <b><i>Generated In</i></b> | <b><i>Expected Activity</i></b> |
|------------------------------|-----------------------------------------------------------------------|---------------------------------------|----------------------------|---------------------------------|
| 1                            | No data for previous year available                                   | W                                     | No longer active.          | This message is informational.  |
| 100                          | A file has been created for Calendar Group %1.<br>Processed rows: %2. | W                                     | No longer active.          | This message is informational.  |

# Dashboard Reports Versus Classic Reports

## Understanding Dashboard Reports Versus Classic Reports

For legal year end processing, Global Payroll for Switzerland provides a dashboard feature. The Swiss dashboard page combines the former legal reports and reports for new features like BVG\_LPP, UVGZ\_LAAC and KTG\_AMC.

You can still run some of those reports using run control pages, however, these reports are no longer updated when changes occur for legal reasons. Therefore, it is our strong recommendation that you run those reports using the dashboard and use Swissdec ViewGen where applicable to create the reports.

To provide you with additional information for the transition phase where both options are still available, refer to the Comparison Table.

## Comparison Table

This table displays the reports that are supported by the dashboard and run control pages that were used exclusively in past releases:

Source for all BI- and ViewGen-Dashboard-Reports is the XML, that we finally will send to the authorities. For such cases, where ViewGen-Report exists, only the ViewGen report is Swissdec certified and it's the strong recommendation to use the ViewGen Version only. Classic Reports retrieve the results direct from the database instead. In most cases we use classic reports to create the Input for final XML, which then get build by last AE step – GPCH\_AE\_ELM.

# Global Payroll for Switzerland Sarbanes-Oxley Act

---

## Guidelines to Fulfill the Needs of Sarbanes-Oxley Act

In the tables listed in this section the *H* role stands for the Payroll Administrator and the *F* role stands for Finance Administrator.

### 1. Prepare

This table lists the preparations that you should take to fulfill the needs of the Sarbanes-Oxley act:

| <b>Role</b> | <b>Month:</b>                                                                                                                                                                                                    | <b>Done</b> | <b>Date</b> | <b>Remarks</b>                                       |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------|------------------------------------------------------|
| H           | Prepare – Functional: <ul style="list-style-type: none"><li>• Retroactive calculations.</li><li>• Special cases (including positive input).</li><li>• 13th month.</li><li>• New earnings / deductions.</li></ul> |             |             | All special cases should be listed with employee ID. |

| <b>Role</b> | <b>Month:</b>                                                                                                                                                                                                                                                                                               | <b>Done</b> | <b>Date</b> | <b>Remarks</b> |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------|----------------|
| H           | Prepare – Define Spot Check: <ul style="list-style-type: none"> <li>• Employee IDs always in spot check.</li> <li>• Employee IDs with changes.</li> <li>• Special cases for this month.</li> <li>• Source tax.</li> <li>• Bank transfer.</li> <li>• Random selection of additional employee IDs.</li> </ul> |             |             |                |
| H           | Additional Manual Activities: <ul style="list-style-type: none"> <li>• Remarks on payslip.</li> <li>• Other.</li> </ul>                                                                                                                                                                                     |             |             |                |

## 2. Payroll

This table lists the payroll related activities that you should take to fulfill the needs of the Sarbanes-Oxley act:

| <b>Role</b> | <b>Activity</b> | <b>Run #</b> | <b>Approval</b> | <b>Full Check</b>                                               | <b>Spot Check</b> | <b>Navigation</b>                                                                            |
|-------------|-----------------|--------------|-----------------|-----------------------------------------------------------------|-------------------|----------------------------------------------------------------------------------------------|
| H           | Payroll         | 3376         | FMB             | Number of employees in log file (Anzahl berechnete Mitarbeiter) | See Payslip       | Global Payroll & Absence Mgmt, Absence and Payroll Processing, Calculate Absence and Payroll |

| <b>Role</b> | <b>Activity</b>                     | <b>Run #</b> | <b>Approval</b> | <b>Full Check</b>                                                            | <b>Spot Check</b>            | <b>Navigation</b>                                                                                          |
|-------------|-------------------------------------|--------------|-----------------|------------------------------------------------------------------------------|------------------------------|------------------------------------------------------------------------------------------------------------|
| H           | Online payroll, errors and warnings |              |                 | Correct errors.<br><br>Correct and accept warnings.                          |                              | Global Payroll & Absence Mgmt, Absence and Payroll Processing, Review Absence/Payroll Info, Payee Messages |
| H           | Payslip                             | 3377         | FMB             | Number of current payslips.<br><br>Number with retroactive transactions.     | As defined under step 1.     | Global Payroll & Absence Mgmt, Payslips, Create/Print Payslips CHE                                         |
| H           | Pay balance                         | 3378         | FMB             | Number of current calculations.<br><br>Number with retroactive transactions. | As defined under step 1.     | Global Payroll & Absence Mgmt, Absence and Payroll Processing, Reports, Pay Balance CHE, Pay Balance CHE   |
| H           | Element summary                     | 3379         | FMB             | All earnings and deductions.                                                 | Compare with previous month. | Global Payroll & Absence Mgmt, Absence and Payroll Processing, Reports, Pay Element Summary CHE            |

**Note:** Repeat as often as needed.

### 3. Prepare Finance Approval

This table lists the activities that you should take to prepare for approval from finance to fulfill the needs of the Sarbanes-Oxley act:

| <b>Role</b> | <b>Activity</b>                                    | <b>Run #</b> | <b>Approval</b> | <b>Full Check</b>                                                     | <b>Spot Check</b>            | <b>Navigation</b>                                                                                      |
|-------------|----------------------------------------------------|--------------|-----------------|-----------------------------------------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------------|
| H           | Prepare GL                                         |              |                 | Log file                                                              |                              | Global Payroll & Absence Mgmt, Time and Labor / GL Costs, Send Costs to GL                             |
| H           | Prepare Bank                                       |              |                 | Log file                                                              |                              | Global Payroll & Absence Mgmt, Payment Processing, Run Payment Prep Process CHE                        |
| H           | Bank List                                          |              |                 | Amount = element summary.<br><br>Number of payments = reconciliation. | As defined under step 1.     | Included in Prepare Bank PDF.                                                                          |
| H           | Calculation Reconciliation (including Bank and GL) |              |                 | Gross and net payment.<br><br>Number of payments.<br><br>GL amounts.  | Compare with previous month. | Global Payroll & Absence Mgmt, Absence and Payroll Processing, Reports, Calc Reconciliation Report CHE |

| F           | Bank list                                                      |              |                 | Compare total with general ledger and reconciliation calculation.                           | Bank transfer for selected employees. | PDF                                                                                               |
| F           | Source tax                                                     |              |                 | Compare total with general ledger amount.                                                   | Source tax for selected employees.    | PDF                                                                                               |

## 5. Finalize Payroll

This table lists the activities that you should take to finalize your payroll to fulfill the needs of the Sarbanes-Oxley act:

| <b>Role</b> | <b>Activity</b>  | <b>Run #</b> | <b>Approval</b> | <b>Full Check</b> | <b>Spot Check</b> | <b>Navigation</b>                                                                            |
|-------------|------------------|--------------|-----------------|-------------------|-------------------|----------------------------------------------------------------------------------------------|
| H           | Finalize Payroll |              |                 | Log file          |                   | Global Payroll & Absence Mgmt, Absence and Payroll Processing, Calculate Absence and Payroll |

**Note:** From this point on changes can only come from retroactive transactions that are processed during the next month.

## 6. Interfacing to Third Parties

This table lists the activities that you should take to interface with third parties and general ledger to fulfill the needs of the Sarbanes-Oxley act:

| <b>Role</b> | <b>Activity</b>       | <b>Run #</b> | <b>Approval</b> | <b>Full Check</b>                                             | <b>Spot Check</b>                                                                                                          | <b>Navigation</b>                                                                                 |
|-------------|-----------------------|--------------|-----------------|---------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| F           | Define bank contents. |              |                 | Setup for various transfer types.                             | Although it is defined as the current pay end date, is the effective date valid? If so, you only need to set this up once. | Set Up HCM, Product Related, Global Payroll & Absence Mgmt, Banking, Payment Transfer Content CHE |
| F           | Create DTA.           |              |                 | Compare DTA amount and number of payments with the bank list. |                                                                                                                            | Global Payroll & Absence Mgmt, Payment Processing, Create Bank File CHE                           |
| F           | Create EPO.           |              |                 | Compare EPO amount and number of payments with the bank list. |                                                                                                                            | Global Payroll & Absence Mgmt, Payment Processing, Create Bank File CHE                           |

| <b>Role</b>                             | <b>Activity</b>                     | <b>Run #</b> | <b>Approval</b> | <b>Full Check</b>                                                              | <b>Spot Check</b>                          | <b>Navigation</b>                                                                              |

# Additional Certified Earnings and Deductions

## Understanding Additional Certified Earnings and Deductions

This section lists additional earnings and deductions where the code and name were not changed to the Swissdec naming conventions. They were used, however, for Swissdec certification. These earnings and deductions are categorized as certified earnings and underlie enterprise maintenance the same way the full Swissdec earnings set does.

## Additional Earnings and Deductions Table

This table lists the additional earnings and deductions that underlie enterprise maintenance:

| <i><b>Enterprise Earning / Deduction</b></i> | <i><b>Description</b></i> | <i><b>Swissdec Earning / Deduction</b></i> |
|----------------------------------------------|---------------------------|--------------------------------------------|
| CH_00_54F                                    | Forward CH_00_54          | n/a                                        |
| CH_00_70                                     | Transfer amount           | 6600                                       |
| CH_00_72                                     | Transfer amount           | 6600                                       |
| CH_00_74                                     | Negative net              | 6600                                       |

# Global Payroll for Switzerland Accumulators

---

## Understanding Global Payroll for Switzerland Accumulators

This section provides an overview of Global Payroll for Switzerland accumulators, which you may periodically need to maintain.

The various accumulators are:

- Subtotals
- Others
- Social Insurances
- Source Tax
- 2006 Tax Statement (and later)
- Statistics - LSE
- French Cross-Border Reporting Tax
- Geneva (GE) Source Tax Reporting
- Ticino (TI) Source Tax Reporting
- Source Tax Reporting (Various Cantons)
- Unemployment Reporting
- Reporting (Others)

---

## Subtotals

This table lists the accumulators, description, custom entries, and any relevant comments associated with the sub total categories:

| <b><i>Accumulator</i></b> | <b><i>Description</i></b>   | <b><i>Custom Entry</i></b> | <b><i>Comments</i></b>                                                                                                                                                               |
|---------------------------|-----------------------------|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CH_00_0                   | Taxable<br>(AHV,ALV,UV,Tax) | CH_00_C0                   | Regular earnings that are taxable and paid to the employee. The earnings automatically contribute to AHV, ALV, UV and taxes.                                                         |
| CH_00_04                  | Legal Deductions            | CH_00_C04                  | Subtotal for legal social insurance deductions.                                                                                                                                      |
| CH_00_50                  | Gross                       | CH_00_C50                  | Gross payments, especially those that do not contribute through CH_00_0.                                                                                                             |
| CH_00_52                  | Legal Net                   | CH_00_C52                  | Subtotal for legal net pay, especially before the UVGZ and KTG source tax deductions. Net payments that contribute to legal net (only those that do not contribute through CH_00_0). |
| CH_00_54                  | Cash                        | CH_00_C54                  | Final payout coming from current month. For example CH_00_52 – Source Tax (UVGZ and KTG etc.).                                                                                       |
| CH_00_80 ER               | Cost Taxes                  | CH_00_C80                  | Subtotal for employer cost.                                                                                                                                                          |

## Others

This table lists the accumulators, description, custom entries, and any relevant comments associated with other categories:

# Using Customer Exits

---

## Understanding Customer Exits

The Global Payroll for Switzerland application offers multiple customer exits that allow you to adjust the logic of the application without losing the benefit of existing functionality. Besides the customer exits for accumulators, the Global Payroll for Switzerland application offers exits within formulas. These empty formulas are positioned in the standard formula at a point, where they allow you to adjust values or exit the full logic. Those formulas are normally not changed by when we update the application.

## Formula Table for Overriding Exits

This table lists the formulas, exits and examples of customer overrides:

| <b>Formula</b>    | <b>Description</b>       | <b>Exit</b>   | <b>Examples of customer overrides</b>                                                        |
|-------------------|--------------------------|---------------|----------------------------------------------------------------------------------------------|
| CH_00_SYS_RES     | Resolve system elements. | CH_00_CHOURLY | Override pay frequency.<br>Default is D = Daily; H = Hourly; W = Weekly                      |
| CH_EP_CHK_1002_FF | Check 1002 ff.           | CH_BK_CFO001  | Bank ID for post finance.<br>Default is 9000.                                                |
| CH_CA_FO002       | Allowance amount.        | CH_CA_CFO002  | Customer logic for child allowance, that is covered as an exception by the FAK_CAF provider. |
| CH_CA_FO003       | CA row processing.       | CH_CA_CFO003  | Full override of child allowance calculation.                                                |
| CH_CA_FO003       | CA row processing.       | CH_CA_CFO003B | Override for canton GE, if covered by the FAK_CAF provider as an exception.                  |

| <b>Formula</b> | <b>Description</b>                    | <b>Exit</b>     | <b>Examples of customer overrides</b>                                                                                  |
|----------------|---------------------------------------|-----------------|------------------------------------------------------------------------------------------------------------------------|
| CH_CA_FO003    | CA row processing.                    | CH_CA_CFO003C   | Adjustments to child allowance, if covered by the FAK_CAF provider as an exception.                                    |
| CH_EO_FO100    | EO select method for base.            | CH_EO_CFO100    | Customer can switch from monthly average to 12 month average as required by law.                                       |
| CH_ER_FOGCMTH  | 13th month arrears eligibility.       | CH_ER_CFOGCMTH  | Adjust eligibility for 13th month. Default is Empl_Status = A.                                                         |
| CH_ER_FOGCPAY  | 13th month pay eligibility frequency. | CH_ER_CFOGCPAY  | Adjust pay out events. Default is Termination or December.                                                             |
| CH_ER_FO012    | Hourly in hundred base.               | CH_ER_CFO012    | Override vacation entitlement. Default is bracket CH_ER_BR001.                                                         |
| CH_ER_FO022    | Holiday premium hourly payment.       | CH_ER_CFO022    | Override holiday entitlement. Default is bracket CH_ER_BR002.                                                          |
| CH_ER_FO1000   | Active employee.                      | CH_ER_CFO1000   | Define active employees. Default is Empl_Status = A.                                                                   |
| CH_ER_FO1301   | 13th month pre-processing             | CH_ER_CFO1301   | Override if multiple pay out periods are for 13th month.                                                               |
| CH_ER_FO1331   | 13th month post processing.           | CH_ER_CFO1331   | Override if multiple pay out periods are for 13th month.                                                               |
| CH_MC_FOINPUT  | Generate MC input.                    | CH_MC_CFOINPUT  | Adjust input logic for multiple contracts. For example, in case of additional MC companies or additional MC channels.  |
| CH_MC_FOOUTPUT | MC prepare output.                    | CH_MC_CFOOUTPUT | Adjust output logic for multiple contracts. For example, in case of additional MC companies or additional MC channels. |

| <b>Formula</b>   | <b>Description</b>                            | <b>Exit</b>       | <b>Examples of customer overrides</b>                                                                                                                  |
|------------------|-----------------------------------------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| CH_MT_FO001      | Maternity - Geneva 80 percent refund.         | CH_MT_CFO001      | Adjustments to maternity payments, if covered by the maternity insurance as an exception.                                                              |
| CH_PI_FO001      | PK eligibility.                               | CH_PI_CFO001      | Complete override of pension fund eligibility.                                                                                                         |
| CH_PI_FO002      | PK calculate contribution.                    | CH_PI_CFO002      | Complete override of pension fund amounts.                                                                                                             |
| CH_PI_FO010      | PK contribution hourly.                       | CH_PI_CFO010      | Adjust pension fund eligibility.                                                                                                                       |
| CH_PI_FO012      | PK calculation contribution monthly.          | CH_PI_CFO012      | Adjust pension fund amounts.                                                                                                                           |
| CH_RP_FO001      | Variables for reporting.                      | CH_RP_CFO001      | Create additional print only elements                                                                                                                  |
| CH_SI_AR210_PROC | Positive set of additional insurances detail. | CH_SI_CAR210_PROC | Adjust logic for additional insurances.                                                                                                                |
| CH_SI_EE_OVRD    | SI employee override.                         | CH_SI_CEE_OVRD    | Adjust logic for employee's accident insurance.                                                                                                        |
| CH_SI_FO200      | Additional insurance process.                 | CH_SI_CFO200      | Adjust logic for additional insurances.                                                                                                                |
| CH_TX_FO050      | Yearly (period) tax adjustment.               | CH_TX_CFO050      | Adjust logic for source tax lookup. For example, to handle negative gross according to the companies agreements.                                       |
| CH_TX_FO060      | Cross border.                                 | CH_TX_CFO060      | Adjust logic to identify Source Tax Cross border. Default is employee with address outside Switzerland if not already identified by source tax tariff. |
| CH_TX_FO110      | Tax calculation lookup.                       | CH_TX_CFO110      | Adjust logic for source tax lookup.                                                                                                                    |

| <b>Formula</b> | <b>Description</b>       | <b>Exit</b>  | <b>Examples of customer overrides</b>                                         |
|----------------|--------------------------|--------------|-------------------------------------------------------------------------------|
| CH_TX_WAF07    | Prepare WA for LAW 2006. | CH_LW_CFO001 | Override status of pensioner for tax statement. Default is A = Tax Statement. |
| CH_TX_WAF07    | Prepare WA for LAW 2006. | CH_TX_CWAF07 | Update for all attributes, before write array gets saved.                     |
| CH_UV_FO010    | UV Calculation percent.  | CH_UV_CFO010 | Adjust logic for employee's accident insurance.                               |
| CH_ZV_FO001    | Additional insurances.   | CH_ZV_CFO001 | Adjust logic for additional insurances.                                       |

## Understanding Custom Exit to Assign Source Banks

Custom exit formula is useful in cases, if GP standard methods for assignment of different source banks may not sufficient for separation of source banks.

The custom exit formula for Swiss bank is defined by using Formula Name page.

### Formula Name Page

Use Formula Name page to define Custom Exit Formula.

Navigation:

**Set Up HCM > Product Related > Global Payroll & Absence Mgmt > Elements, Supporting Elements > Formulas**

This example illustrates the fields and controls on the Formula Name page.

| Formula Name                                                         |                                                  | Field-by-Field Definition                              | Text Definition |
|----------------------------------------------------------------------|--------------------------------------------------|--------------------------------------------------------|-----------------|

**Note:** PeopleSoft delivers the custom exit empty.

## Proposal for Customer Formula

```
0 >> FM[CH_BK_CFO001]
IF ... = ... Then
'XXX' >>
>> VR[CH_BK_POST_RECEIVE]
End If
```

**Note:** In case an employee has multiple accounts, all accounts need to be transferred from the same source banks.

## Application Engine GPCH\_BK\_TRN.GPCHBK12.Step01

```
UPDATE PS_GPCH_BK_XFER_EE

```

# Robust File Management

---

## Robust File Management

In Global Payroll for Switzerland environment, all files are stored as attachments. In most cases, a link first navigates to a standard sub-page, which allows required action on any XML file. For all files, actions such as **Upload**, **Save**, **Delete** and **View Files** are active.

File Management Options page

The screenshot shows a dialog box titled "File Management Options". Inside, it displays "File ELM\_2011\_KW2\_1\_Y\_01\_001.xml". Below this, there is a section labeled "Options" containing a row of buttons: "Upload Files", "Save", "Delete", "View Files", "Run", "Validate file", "Send", and "Printview". At the bottom of the dialog, there are "OK" and "Cancel" buttons.

For some files, further options are available. They are:

- Run
- Validate
- Send
- Printview

The following graphic gives an overview of files and supported actions:

## Files and Supported Actions

# Year End Audit

## Year End Audit

PeopleSoft provides a flexible framework to audit all Swissdec XML in 3 ‘dimensions’:

- Synchronous Audit (Earnings/Deductions with corresponding TAGs).
- Integrity
  - Internal (Earnings/Deductions Top to Down)
  - External (XML details with XML Totals)

To enable a XML evaluation with XML adequate tools (XSLT), the dashboard processing is enhanced to create former GPCHAL08 output as XML file with results per emplid.

Create Setup XML

Oracle provides 1 Audit Set with all 44 Audit modules as system data.

Finally, the Audit Set gets mapped to a set of internal and external XML and the user launches the audit process.

# Global Payroll for Switzerland Reports

---

## Global Payroll for Switzerland Reports: A to Z

These tables list all Global Payroll for Switzerland reports, sorted by report ID. If you need more information on a report, refer to the report details at the end of this chapter. These reports are divided into two categories:

- Swissdec-certified reports.
- Additional reports.

For more information about running these reports, refer to:

- The corresponding topic in this product documentation.
- *PeopleTools: Process Scheduler*.
- *PeopleTools: BI Publisher for PeopleSoft*.
- *PeopleTools: SQL Language Reference for PeopleSoft*.

For samples of these reports, see the [Report Samples](#) that are published with this online documentation.

---

**Note:** The Swissdec, founded by the largest Swiss insurance provider, SUVA (Schweizerische Unfallversicherungsanstalt), and other providers and governmental bodies, has certified the reports listed in the Swissdec-Certified Reports section. Global payroll for Switzerland offers additional, non-Swissdec certified reports. These reports are compliant with auditors' requirements for reports from employers at the end of the month or year, as necessary. They contain detailed information about employer and employee data, contributions, and so on.

# Managing payments for Previous Year Terminated Employees

## Understanding Payments for Previous Year Terminated Employees

In case of termination, GP Switzerland creates a set of CP (Custom Period) accumulators to support payments after termination in future year(s).

| <i><b>PIN_NM</b></i> | <i><b>Description</b></i>      | <i><b>BGN_DT</b></i> |

---

## Understanding Accumulator Adjustments in Case of Late Termination

Global Payroll for Switzerland does not have retro calculation for previous year(s). Thus in case of „late termination of an employee ( i.e Termination was on or before 31.12.YYYY and is keyed in after last month of year is already finalized) we miss the automated creation of the CP-accumulator set. If there is a **payment next year(s)** for such an inactive employee, the payroll does not have sufficient information to calculate legal deduction correct in all scenarios. To fix this situation, user needs to fill the missing set of CP-Accumulators.. under ../ Adjust Balances / Accumulators
