Chapter 4 - Overview

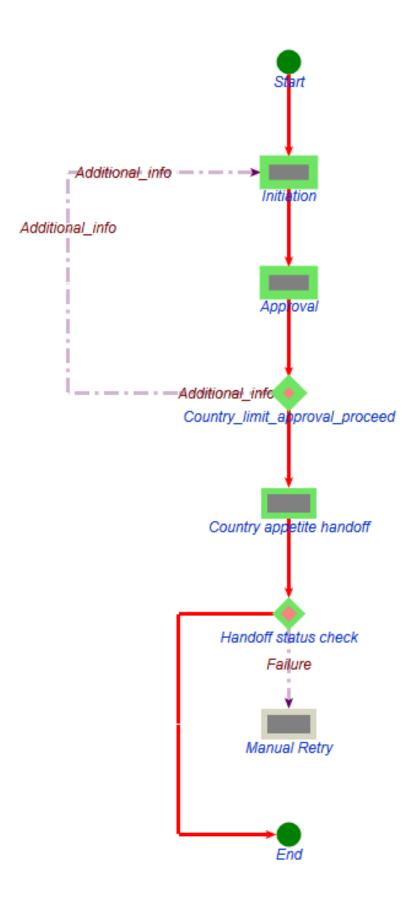

About Country Limit Setting

Multinational banks providing lending services in multiple countries set country limit for all the countries they cater to reduce the concentration risk. If the country limit set for a particular country is reached, the bank will not allow lending in that country irrespective of the borrower's creditworthiness.

In OBCFPM, Country Limit Setting Initiation process is a simple two-stage workflow for setting and approving country limit for the countries. The limit set in this process for a particular country will be used for validating the overall limit set for a sector in that country.

The flow diagram illustrating the Country Limit Setting Initiation process is shown below for reference:
