	Note: The **Search** (🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field. You can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Default Offset Amount Algorithm	Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request.	Yes
	Note: The **Search** (🔍) icon appears corresponding to the **Default Offset Amount Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Default Offset Amount Algorithm** field. You must specify an algorithm which is created using the **C1-OFST-AMT** algorithm type in the **Default Offset Amount Algorithm** field.	
Defer Processing FT Count	Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).	No
	Note: You cannot specify a negative value in this field. Deferred mode means in the background when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is invoked. You can configure the **Offset Request Periodic Monitor (C1-OFSRQ)** batch such that it is executed at regular intervals. For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If you set the defer processing count to zero (0), the system resets the default value to 50.

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. The **C1-OFSRQ** To Do type is shipped with the product. You can use the **C1-OFSRQ** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request which is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated with the approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The **C1-OFSSB** To Do type is shipped with the product. You can use the **C1-OFSSB** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit an offset request for approval. **Note:** The list includes only those To Do roles which are associated with the submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request. **Note:** If you do not specify any value, by default, it is set to **30**. If you specify a date range that exceeds the maximum search period, the system will not you to search and add bills in the offset request.	No
Transfer Adjustment	Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. **Note:** By default, the **Transfer Adjustment** option is selected. This impacts the system performance when the match type entity is set to **BSEG** and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the **Transfer Adjustment** option is not selected in the respective offset request type.	No
Bill Line Items Level Offset	Used to indicate the following: • Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request • Whether a bill with zero balance having debit and credit line items should be created in an offset request **Note:** If you select the **Bill Line Items Level Offset** option, you need to ensure that **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter in the **C1-OFST-DIST** algorithm (which is attached to the **Creating Adjustment** status in the lifecycle of the **C1-OffsetRequest** business object) is set to **BSEG**.	No

Tip: Alternatively, you can copy an offset request type by clicking the **Duplicate** button in the **Offset Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics from the offset request type, if required.
7. Click **Save**.
   The new offset request type is defined.

Viewing the Offset Request Type Details

Procedure

To view the details of an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
   The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the offset request type *w*hose details you want to view.
   The **Offset Request Type** zone appears.
5. View the details of the offset request type in the **Offset Request Type** zone.

Offset Request (Used for Searching)

The **Offset Request** screen allows you to search for an offset request using various search criteria. It also allows you to define an offset request. It contains the following zone:

- Search Offset Request on page 1690

Through this screen, you can navigate to the following screen:

- Offset Request (Used for Viewing) on page 1697

Search Offset Request

The **Search Offset Request** zone allows you to search for an offset request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an offset request using the offset request details or the bill details. The valid values are: • Request Details • Bill Details **Note:** By default, the **Request Details** option is selected.	Yes
Offset Request ID	Used to search a particular offset request. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Creation From Date	Used to search offset requests which are created from a particular date onwards. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
User ID	Used to search offset requests which are created by a particular user. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Created To	Used to search offset requests which are created till a particular date. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Status	Used to search offset requests which are in a particular status. The valid values are: • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Person ID	Used to search offset requests which include bills of a particular person.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears where you can search for a particular person.	
Offset Request Type	Used to search offset requests which are created using a particular offset request type. **Note:** The list includes only those values which are present in the **C1_OFFSET_REQ-TYPE** table. This field appears when the **Request Details** option is selected from the **Search By** list.	No
Account ID	Used to search offset requests which include bills of a particular account. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears where you can search for a particular account.	No
Bill ID	Used to search offset requests which include a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears where you can search for a particular bill.	No
Bill Date From	Used to search offset requests which include bills created from a particular date onwards. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Alternate Bill ID	Used to search offset requests which include a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill Date To	Used to search offset requests which include bills created till a particular date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for an offset request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the offset request is created.
Offset Request Information	Displays information about the offset request. **Note:** It has a link. On clicking the link, the **Offset Request** screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total amount which is offset through the offset request.
Status	Indicates the status of the offset request. The valid values are: • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset
Created By	Indicates the user who has created the offset request.
Creation Mode	Indicates whether the offset request is created manually or automatically. The valid values are: • Automatic • Manual
Primary Bill	Indicates the bill for which the offset request is created. In addition, a context menu (⌄) icon appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Offset Request

Prerequisites

To search for an offset request, you should have:

- Offset request types defined in the application

Procedure

To search for an offset request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Offset Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Offset Request** sub-menu.
   The **Offset Request** screen appears.
4. Enter the search criteria in the **Search Offset Request** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of offset requests that meet the search criteria appears in the **Search Results** section.

Creating an Offset Request

Prerequisites

To create an offset request, you should have:

- Offset request types defined in the application
- Bills created in the application

Procedure

To create an offset request:

Copyright © 2026, Oracle and/or its affiliates.

1. Do either of the following:

If you want to...	Then...
Create a single offset request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. The **Account Receivable Central** screen appears. **c.** Search for the required bill in the **Search Bill** zone. **d.** In the **Search Results** section, select the check box corresponding to the bill which you want to offset through a single offset request. **e.** Click **Single Offset**.
Create a mass offset request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. The **Account Receivable Central** screen appears. **c.** Search for the required bill in the **Search Bill** zone. **d.** In the **Search Results** section, select the check box corresponding to the bill which you want to offset through a mass offset request. **e.** Click **Mass Offset**.
Create a cross currency offset request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. The **Account Receivable Central** screen appears. **c.** Search for the required bill in the **Search Bill** zone. **d.** In the **Search Results** section, select the check box corresponding to the bill which you want to offset through a cross currency offset request. **e.** Click **Cross Currency Offset**.
Create a single, mass, or cross currency offset request from the Offset Request screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Offset Request**. A sub-menu appears. **c.** Click the **Add** option from the **Offset Request** sub-menu.

The **Add Offset Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to indicate the offset request type using which you want to create the offset request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill	Used to indicate the bill which you want to offset through the offset request. **Note:** The **Search** (🔍) icon appears corresponding to the **Bill** field. On clicking the **Search** icon, the **Bill Search** window appears. On specifying the bill, the information about the bill appears corresponding to the **Bill** field. This field is automatically populated by the bill ID for an offset request created from the **Account Receivable Central** screen.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Offset Request** screen.

2. Enter the required details in the **Add Offset Request** screen.
3. Click **OK**.
   The offset request is created in the **Draft** status. The **Offset Request** screen appears where you can view the details of the offset request. By default, the adjustment type specified in the respective offset request type is used while creating the offset request. You can then change the adjustment type, if required.
4. Add debit and/or credit bills in the offset request.
5. Define characteristics for the offset request, if required.

Viewing the Offset Request Details

Procedure

To view the details of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to view.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the offset request in the **Offset Request** zone.

Offset Request zone	Offset Request on page 1698

Offset Request (Used for Viewing)

The **Offset Request** screen allows you to:

- View the details of the offset request
- Search for a debit or credit bill based on bill, account, or person details
- View the debit and credit bills which are added to the offset request
- View the offset or transfer adjustments which are created through the offset request
- View the financial transactions of an auto maintenance offset request type
- Add a debit or credit bill to the offset request
- Edit the details of the offset request
- Define, edit, or remove the characteristics from the offset request
- Edit the offset amount for each debit and credit bill
- Remove a debit or credit bill from the offset request
- Delete the offset request
- Submit the offset request for approval
- Approve or reject the offset request
- Unapply (i.e. cancel) the offset request
- View the log of the offset request
- Add a log entry for the offset request

It consists of the following tabs:

- Offset Request - Main on page 1697
- Offset Request - Log on page 1708

Offset Request - Main

The **Main** tab displays information about the offset request. It contains the following zones:

- Offset Request on page 1698
- Selected Bills on page 1700

> **Note:** This zone appears when you are viewing the debit and credit bills added to the offset request.

- Search Bill on page 1701
- Offset Request Adjustments on page 1705

> **Note:** This zone appears when you are viewing the offset or transfer adjustments created for the bill through the offset request.

- Auto Maintenance Financial Transactions on page 1706

Copyright © 2026, Oracle and/or its affiliates.

Note: This zone appears when you are viewing the details of an auto maintenance offset request.

Offset Request

The **Offset Request** zone displays the details of the offset request. It contains the following sections:

- **Main** - Displays basic information about the offset request. It contains the following fields:

Field Name	Field Description
Offset Request Information	Displays information about the offset request.
Offset Request Type	Indicates the offset request type using which the offset request is created. **Note:** It has a link. On clicking the link, the **Offset Request Type** screen appears where you can view the details of the respective offset request type.
Status	Indicates the status of the offset request. The valid values are: • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset
Status Reason	Indicates the reason why the offset request is rejected or unapplied (i.e. canceled). **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective status reason. This field appears when the offset request is in the **Rejected**, **Defer Unapplied**, or **Unapplied Offset** status.
Adjustment Type	Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Offset Amount	Displays the total amount which is offset through the offset request.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This field appears when you are viewing the details of an auto maintenance offset request.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Comments	Displays additional details specified while rejecting or unapplying (i.e. canceling) the offset request. **Note:** This field appears when the offset request is in the **Rejected**, **Defer Unapplied**, or **Unapplied Offset** status.

- **Characteristics** - Lists the characteristics defined for the offset request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the offset request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request. **Note:** The **Edit** button appears when the offset request is in the **Draft** status.
Delete	Used to delete the offset request. **Note:** The **Delete** button appears when the offset request is in the **Draft** status.
Submit	Used to submit the offset request. **Note:** The **Submit** button appears when the offset request is in the **Draft** status.
Approve	Used to approve the offset request. **Note:** The **Approve** button appears when: • The offset request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the offset request.
Reject	Used to reject the offset request. **Note:** The **Reject** button appears when: • The offset request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the offset request.
Unapply	Used to unapply (i.e. cancel) the offset request. **Note:** The **Unapply** button appears when the offset request is in the **Processed** status.

- **Record Information** - The **Record Information** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the offset request is created. n addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the offset request status is updated
Create Date/Time	Displays the date and time when the offset request is created.

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the offset request. It contains the following columns:

Column Name	Column Description
Bill Information	Indicates the debit or credit bill which is added to the offset request. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the debit or credit bill is created.
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.
Debit Balance	Displays the sum of unpaid debit line items of a bill.
Credit Balance	Displays the sum of open credit line items of a bill.
Credit Bill	Indicates whether you want to consider a debit bill with a credit line item as a credit bill in the offset request.
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through a hold request.
Offset Amount	Displays the amount which you want to offset from the debit or credit bill.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Remaining Bill Balance	Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount). **Note:** This column does not appear when the offset request is in the **Processed** or **Unapplied Offset** status.
Updated Hold Amount	Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount. **Note:** This column does not appear when the offset request is in the **Processed** or **Unapplied Offset** status.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Bill ID	Displays the bill ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a bill, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

Note: The **Broadcast** (📡) icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

You can filter the list using various search criteria (such as, **Bill Balance**, **Bill ID**, and **Account ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4610.

screen and the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration is set to **N**	that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed debit and credit bills of the main customer which are in USD. **Note:** This zone lists the debit and credit bills in the currency different from the primary bill only when the **Show Cross Currency Bills** option is selected.

It also allows you to filter the bills using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a completed bill using the person, account, or bill details. The valid values are: • Person Details • Account Details • Bill Details **Note:** By default, the **Person Details** option is selected.	Yes
Person ID	Used to search completed bills of a particular person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears.	No
Bill Date From	Used to search completed bills which are created from a particular date onwards. **Note:** By default, it is set to a date which is calculated as follows: `Bill Date To -- Bill Search Period ' (Specified in Offset Request Type)`	Yes
Bills on Hold	Used to indicate whether you want to search completed bills which are partially kept on hold. The valid values are: • No • Yes	No
Bill Date To	Used to search completed bills which are created till a particular date. **Note:** By default, it is set to the current date.	Yes

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td>Bill Balance</td><td>Used to indicate whether you want to search completed bills with a particular balance amount. The valid values are:
Equal to Zero
Greater Than Zero
Less Than Zero
Not Equal to Zero
Note:
If a single or cross currency offset request is created through the Account Receivable Central screen, this field is disabled, and by default, it is set to the following:<table><tr><th>If the primary bill is a...</th><th>Then, it is set to...</th></tr><tr><td>Credit Bill</td><td>Greater Than Zero</td></tr><tr><td>Debit Bill</td><td>Less Than Zero</td></tr></table></td><td>No</td></tr>
<tr><td>Show Cross Currency Bills</td><td>Used to indicate whether you want to search completed bills in the currencies different from the primary bill.
Note:
This option is disabled when a single or cross currency offset request is created through the Account Receivable Central screen.
By default, this option is selected when a cross currency offset request is created through the Account Receivable Central screen.</td><td>No</td></tr>
<tr><td>Account ID</td><td>Used to search completed bills which created for a particular account.
Note:

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Display information about the completed debit or credit bill. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the debit or credit bill is created.
Due Date	Displays the date when the debit or credit bill is due for payment.
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.
Outstanding Amount (Offset Currency)	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset. **Note:** This column appears when the offset request is a cross-currency offset request.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the offset request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the offset request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the offset request.

Offset Request Adjustments

The **Offset Request Adjustments** zone lists the offset or transfer adjustments which are created for the bill through the offset request. It appears when the offset request is in the **Processed** status. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Adjustment Information	Displays information about the offset or transfer adjustment.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
From Bill ID	Indicates the bill from where the amount is offset.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective adjustment.
From Adjustment ID	Indicates the adjustment from where the amount is offset.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
To Bill ID	Indicates the bill against which the amount is offset.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective adjustment.
To Adjustment ID	Indicates the adjustment against which the amount is offset.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Current Amount	Displays the adjustment amount.

Auto Maintenance Financial Transactions

The **Auto Maintenance Financial Transactions** zone lists the financial transactions which are added to the offset request for auto maintenance. It contains the following columns:

Column Name	Column Description
Coverage Start Date	Displays the date of the financial transaction from where the coverage starts.
Coverage End Date	Displays the date of the financial transaction till where the coverage ends.
Financial Transaction ID	Displays the financial transaction ID added to the offset request for auto maintenance.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the respective financial transaction.
Amount	Displays the bill amount added in the offset request for auto maintenance.
Entity Information	Displays additional information about the bill segment. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Bill Segment** screen appears where you can view the details of the respective bill segment on clicking the link.
Adjustment Information	Displays additional information about the adjustment.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Auto Maintenance Amount	Displays the amount automatically offset against the corresponding bill amount.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Auto Maintenance Financial Transactions** zone appears only when you are viewing the details of an auto maintenance offset request.

Adjustment

The **Adjustment** zone lists the advance deposit details of an offset request. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays additional information about the adjustment.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Adjustment Type	Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request.
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Creation Date	Displays the date when the adjustment is created.
Offset Amount	Displays the total amount which is offset through the offset request.
Account Information	Indicates the account for which the adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** ( ) icon corresponding to an adjustment, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

Note: The **Broadcast** () icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

Offset Request - Log

The **Log** tab contains the following zone:

- Offset Request Log on page 1708

Offset Request Log

The **Offset Request Log** zone lists the complete trail of actions performed on the offset request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the offset request.
Details	Displays the details about the action performed on the offset request.
User	Indicates the user who has performed the action on the offset request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the offset request. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the offset request is rejected or unapplied (i.e. canceled).

Note: You can manually add a log entry for the offset request by clicking the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

Adding a Debit or Credit Bill to an Offset Request

Prerequisites

To add a debit or credit bill to an offset request, you should have:

- Completed bills for accounts of the main customer (whose bill is added as the primary bill in the offset request)
- Completed bills for effective child persons of the main customer (whose bill is added as the primary bill in the offset request)
- The **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration set to **Y** or **N** based on the business requirements

Procedure

To add a debit or credit bill to an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to edit.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:**
>
> The **Search Bill** zone appears when the offset request is in the **Draft** status.
>
> The date range specified in the **Bill Date From** and **Bill Date To** fields should not exceed the number of days specified in the **Bill Search Period** field of the respective offset request type.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of completed bills that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to a completed bill that you want to add to the offset request.
7. Click the **Add** button in the **Search Bill** zone.
   A message appears indicating that the bill is added to the offset request.

> **Note:** You can only add a completed bill to an offset request when its outstanding amount is not equal to zero.

8. Click **OK**.
   The completed bill is added to the offset request. You can view the completed bills which are added to the offset request in the **Selected Bills** zone.

> **Note:** The default offset amount is calculated for each bill using the algorithm which is attached in the respective offset request type. For more information on how the default offset amount is calculated, see C1-OFST-AMT on page 1669.

Editing an Offset Request

Prerequisites

To edit an offset request, you should have:

- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit an offset request:

1. Search for the offset request in the **Offset Request** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to edit.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Offset Request** zone.

   The **Offset Request** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the offset request.
   - **Characteristics** - Used to define the characteristics for the offset request.
   - **Offset Details** - Used to edit the offset amount of the bills which are added to the offset request. It also allows you to remove a bill from the offset request.

   Note: You can only remove secondary debit or credit bills from the offset request. And, you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Information	Displays information about the offset request.	Not applicable
Offset Request Type	Indicates the offset request type using which the offset request is created.	Not applicable
Adjustment Type	Used to indicate the adjustment type using which transfer or offset adjustments must be created through the offset request. **Note:** The **Search**(🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field.	Yes
Comments	Used to specify additional information about the offset request.	No

Note: The **Edit** button appears when the offset request is in the **Draft** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the offset request, if required.
7. Edit the offset amount of a debit or credit bill, if required.
8. Remove a debit or credit bill from the offset request, if required.
9. Click **Save**.
   The changes made to the offset request are saved.

Defining a Characteristic for an Offset Request

Prerequisites

To define a characteristic for an offset request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request**)

Procedure

To define a characteristic for an offset request:

1. Ensure that the **Characteristics** section is expanded when you are editing an offset request.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the offset request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the offset request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Offset Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the offset request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the offset request.

2. Enter the required details in the **Characteristics** section.

Copyright © 2026, Oracle and/or its affiliates.

3. If you want to define more than one characteristic for the offset request, click the **Add** (+) icon and then *r*epeat step 2.

> **Note:** However, if you want to remove a characteristic from the offset request, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the offset request.

Editing the Offset Amount of a Debit or Credit Bill

Prerequisites

To edit the offset amount of a debit or credit bill, you should have:

- Required debit or credit bill added in the offset request

Procedure

To edit the offset amount of a debit or credit bill:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.

   The **Offset Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Total Debit Offset Amount	Displays the total offset amount of all debit bills which are included in the offset request.	Not applicable
Total Credit Offset Amount	Displays the total offset amount of all credit bills which are included in the offset request.	Not applicable
Total Offset Amount	Displays the sum of the total debit and credit offset amount.	Not applicable

   In addition, this section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Indicates the debit or credit bill which is added to the offset request.	Not applicable
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.	Not applicable
Due Date	Displays the date when the debit or credit bill is due for payment.	Not applicable
Debit Balance	Displays the sum of the unpaid debit line items of a bill.	Not applicable
Credit Balance	Displays the sum of the open credit line items of a bill	Not applicable
Credit Bill	Used to indicate whether you want to consider a debit bill with a credit line item as a credit bill in the offset request. By default, this option is selected for a bill with the credit or zero balance and it is not editable.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot select this option for a debit bill for which no credit line item exists, and therefore, in such case, this option is disabled.	
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.	Not applicable
Outstanding Amount (Offset Currency)	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset. **Note:** This field appears when the offset request is a cross-currency offset request.	Not applicable
Offset Amount	Used to specify the amount which you want to offset from the debit or credit bill.	Yes
Remaining Bill Balance	Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount).	Not applicable
Updated Hold Amount	Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount.	Not applicable

The **Delete** (🗑) icon appears corresponding to the secondary debit or credit bills in the **Offset Details** section. It allows you to remove the respective bill from the offset request.

2. Modify the offset amount of the required debit or credit bill in the **Offset Details** section.
3. Click **Save**.
   The changes made to the offset request are saved.

Submitting an Offset Request

Prerequisites

To submit an offset request, you should have:

- At least one debit and credit bills added to the offset request
- Offset amount of each bill not equal to zero
- Total debit offset amount equal to total credit offset amount in the offset request
- Negative offset amount for each debit bill and positive offset amount for each credit bill
- Offset amount less than or equal to the current outstanding amount of the bill

Procedure

To submit an offset request:

Copyright © 2026, Oracle and/or its affiliates.

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request which you want to submit.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Offset Request** zone.

   The system behaves in the following manner:

If...	**Then**
The **Approval Required** option is selected in the respective offset request type	A To Do of the **C1-OFSRQ** To Do type is created and sent to the approver. The status of the offset request is then changed to **Approval In Progress**.
The **Approval Required** option is not selected in the respective offset request type and the number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type)	The status of the offset request is changed to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Deferred Processing** status. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to **Frozen**. However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to **Frozen**. Finally, the status of the offset request is changed to **Processed**.
	Note: If a match event exists for the match type entity (i.e. bill, bill segment, or contract), the existing match event is stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. However, if a match event does not exist, a new match event is created and stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. In case of partial offset, the status of the corresponding match event is set to **Open**. However, if the entire match type entity amount is offset, the status of the corresponding match event is set to **Balanced**. For more information on how the offset amount is distributed, see C1-OFST-DIST on page 1659.
The **Approval Required** option is not selected in the respective offset request type and the number of financial transactions created for the bills (which are selected in the offset request) does not exceed the defer processing count (defined in the respective offset request type)	If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to **Frozen**. However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to **Frozen**. Finally, the status of the offset request is changed to **Processed**.

Approving an Offset Request

You can view the number of offset requests which are pending for approval in the **Offset Request** screen. The approver can review, and accordingly approve or reject the offset request based on the observations.

Note: The system will not allow you to approve or reject an offset request submitted by you.

Prerequisites

To approve an offset request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an offset request:

1. Do either of the following:

If you want to...	Then...
Approve an offset request through the Offset Request screen	**a.** Search for the offset request in the **Offset Request** screen. **b.** In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request which you want to review.
Approve an offset request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
	The **To Do Type for User Search** window appears. **c.** Enter **C1-OFSRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the offset request that you want to review.

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is accurate, click the **Approve** button in the **Offset Request** zone.

The system behaves in the following manner:

If...	Then
The number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type)	The status of the offset request is changed to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Deferred Processing** status. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to **Frozen**. However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to **Frozen**. Finally, the status of the offset request is changed to **Processed**.
	Note: If a match event exists for the match type entity (i.e. bill, bill segment, or contract), the existing match event is stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. However, if a match event does not exist, a new match event is created and stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. In case of partial offset, the status of the corresponding match event is set to **Open**. However, if the entire match type entity amount is offset, the status of the corresponding match event is set to **Balanced**. For more information on how the offset amount is distributed, see C1-OFST-DIST on page 1659.
The number of financial transactions created for the bills (which are selected in the offset request) does not exceed the defer processing count (defined in the respective offset request type)	If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to **Frozen**. However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to

Copyright © 2026, Oracle and/or its affiliates.

If...	Then
	Frozen. Finally, the status of the offset request is changed to **Processed**.
	Note: If a match event exists for the match type entity (i.e. bill, bill segment, or contract), the existing match event is stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. However, if a match event does not exist, a new match event is created and stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. In case of partial offset, the status of the corresponding match event is set to **Open**. However, if the entire match type entity amount is offset, the status of the corresponding match event is set to **Balanced**. For more information on how the offset amount is distributed, see C1-OFST-DIST on page 1659.

Note: The **Approve** button appears when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

Rejecting an Offset Request

Prerequisites

To reject an offset request, you should have:

- Reasons defined for the **Rejected** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Note: The system will not allow you to approve or reject an offset request submitted by you.

Procedure

To reject an offset request:

1. Do either of the following:

If you want to...	Then...
Reject an offset request through the Offset Request screen	a. Search for the offset request in the **Offset Request** screen. b. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request which you want to review.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
Reject an offset request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-OFSRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the offset request that you want to review.

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is incorrect, click the **Reject** button in the **Offset Request** zone.

   The **Reject Offset Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the offset request.	Yes
Comments	Used to specify additional information while rejecting the offset request.	No

Note: The **Reject** button appears when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

4. Select the reason for rejecting the offset request from the **Status Reason** list.
5. Click **Save**.
   The status of the offset request is changed to **Rejected**.

Related Topics

For more information on...	See...
How to search for an offset request	Searching for an Offset Request on page 1694
Offset Request screen	Offset Request (Used for Viewing) on page 1697
Offset Request zone	Offset Request on page 1698

Unapplying an Offset Request

There might be situations when an incorrect offset request is processed in the system. In such case, the system provides you with an ability to unapply (i.e. cancel) the offset request. However, note that you can cancel an offset request when the offset request is in the **Processed** status.

Prerequisites

Copyright © 2026, Oracle and/or its affiliates.

To cancel an offset request, you should have:

- Reasons defined for the **Unapplied Offset** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Procedure

To cancel an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request that you want to cancel.
   The **Offset Request** screen appears.
3. Click the **Unapply** button in the **Offset Request** zone.

   The **Unapply Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Unapply Reason	Used to indicate the reason why you want to cancel the offset request.	Yes
Comments	Used to specify additional information while canceling the offset request.	No

Note: The **Unapply** button appears when the offset request is in the **Processed** status.

4. Select the reason for canceling the offset request from the **Unapply Reason** list.
5. Click **Save**.

   The system behaves in the following manner:

If...	Then...
The number of transfer or offset adjustments does not exceed the online record process limit (which is defined in the **C1-DFRUNAPLY** algorithm)	The system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to **Unapplied Offset**.
The number of transfer or offset adjustments exceeds the online record process limit (which is defined in the **C1-DFRUNAPLY** algorithm)	The system changes the status of the offset request to **Defer Unapplied**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Defer Unapplied** status. The system then cancels the frozen transfer or offset adjustments of the offset request and changes the status of the offset request to **Unapplied Offset**.

Viewing the Log of an Offset Request

Procedure

To view the log of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to view.
   The **Offset Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. View the complete trail of actions performed on the offset request in the **Offset Request Log** zone.

Adding a Log Entry for an Offset Request

Procedure

To add a log entry for an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request for which you want to add a log entry.
   The **Offset Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

   The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the offset request.	Not applicable
Log Details	Used to specify additional comments for the offset request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Offset Request Log** zone.

Chapter 25

Funding Request

Topics:

- Prerequisites
- Funding Request (Without Approval) Status Transition
- Funding Request (With Approval) Status Transition
- Algorithms Used in C1-FundingReq
- Funding Request Type
- Funding Request (Used for Searching)
- Funding Request (Used for Viewing)

Oracle Revenue Management and Billing provides the automatic payment facility for an account. The system automatically calculates the automatic payment amount during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. However, there might be situations when you would like to do the following before stamping the automatic payment amount against the bill in the **CI_BILL_ACH** table:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

The system enables you to change the automatic payment amount through the funding process. The funding process supports all three automatic payment creation options (i.e. Create At Bill Completion, Create On Extract Date, and Freeze Payment on Notification).

While creating a funding request, you need to specify a funding request type using which you want to create the funding request. It is the funding request type which helps the system to determine:

- The business object using which the funding request should be created in the system.
- The currency in which the total debit and credit amount should be calculated.
- The account funding currency characteristic type which must be defined on the account. This characteristic indicates that the funding amount of the account's bills should be calculated in the specified currency.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill.

  Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.
- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.

  Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.
- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

- The currency conversion algorithms which must be used while determining the approval hierarchy for the funding request.

Note: The **Funding Request (C1-FundingReq)** business object is shipped with the product.

Once you specify a funding request type, the funding request is created in the **Draft** status. You can then add one or more debit or credit bills in the funding request. Note that you can only add bills of those accounts for which the **Defer Auto Pay** option is selected on the customer class. Once the bills are added, you can submit a funding request. Before you submit a funding request, you can do the following:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

The system calculates the funding amount in the following manner:

Bill Type	Funding Amount for the Bill
Debit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)
Credit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in the funding request)

You can delete, cancel, or submit a funding request which is in the **Draft** status. On canceling a funding request, the status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. On submitting a funding request, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**.

Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

You can optionally configure the approval process for the funding request. If the **Approval Required** option is selected in the funding request type, the status of the funding request is changed to **Approval In Progress** on submitting the funding request. The system calculates the sum of total debit and credit amount

Copyright © 2026, Oracle and/or its affiliates.

in the funding request. Depending on whether the sum total is debit or credit, the system uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount, the system automatically approves the funding request and changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the system creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy.

Once the approver at the first level in the approval hierarchy approves the funding request, the system checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

If an approver rejects a funding request, the status of the funding request is changed to **Rejected**. And, if an approver requests to resubmit a funding request for approval, the status of the funding request is changed to **Draft**. You can then edit the funding request and resubmit it for approval. The system allows the submitter to withdraw the funding request when it is in the **Approval In Progress** status. On withdrawing a funding request, the status of the funding request is changed to **Draft**.

If a funding request is created automatically through a custom batch, the system allows you to manually exclude some bills from the funding request when it is in the **Draft** status. You can exclude a bill from a funding request by changing its status to **Excluded**.

For more information on how to setup the funding request process, see Prerequisites on page 1728.

Copyright © 2026, Oracle and/or its affiliates.

Prerequisites

To setup the funding request process, you need to do the following:

- Define the required funding request types in the system
- Define the required funding adjustment types where the **A/P Request Type Code** field is set to **REFUND**
- Define the required garnishment adjustment types where the **A/P Request Type Code** field is not set to **REFUND**
- Define the required characteristic types where the characteristic entity is set to **Funding Request Type**
- Define the required characteristic types where the characteristic entity is set to **Funding Request**
- Define the required approval profiles with the debit and credit approval hierarchy in the system
- Specify the **C1-FNDAP** To Do type in the approval profile which you want to use in the funding request's approval process
- Specify the **C1-FNDSB** as the submitter To Do type in the funding request types
- Define the status reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen
- Assign the **C1-FNDAP** To Do type to a To Do role whose users must receive a To Do while submitting a funding request for approval
- Assign the **C1-FNDSB** To Do type to a To Do role whose users must receive a To Do when an approver requests to resubmit the funding request for approval
- Select the **Defer Auto Pay** option on the customer class of the accounts for which you want to use the funding process
- Define the values for the **CAN_RSN_CD_FLG** lookup field
- Define the **Funding Currency** characteristic type where the characteristic entity is set to **Account**
- Define a currency conversion algorithm for payments using the **C1_CURALGPY** algorithm type
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** algorithm type
- Attach the currency conversion algorithms to the **Currency Conversion For Adjustments** and **Currency Conversion For Payments** algorithm spots to the required divisions
- Set the batch control type of the **Funding Request Periodic Monitor (C1-FNDRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Funding Request (Without Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is not configured in the funding request type:

C1-FUNDINFO

This algorithm generates the funding request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Funding Request Type Description
2. Funding Request Status Description
3. Funding Request ID

C1-FUNDSUBMT

This algorithm is invoked when you submit a funding request. If the approval process is not configured in the funding request type, it changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. If the approval process is configured in the funding request type, it calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which

Copyright © 2026, Oracle and/or its affiliates.

is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount in the approval hierarchy, the funding request is automatically approved by the system and the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

C1-FUNDAPP

This algorithm is invoked when the status of the funding request is changed to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, a log entry is created for the funding request when the To Do is created.

Note: If a funding request needs approval from the subsequent level in the approval hierarchy, this algorithm creates a To Do and assigns it to the users with the To Do role defined at the subsequent level in the approval hierarchy.

C1-FUNDAPRVD

This algorithm is invoked when you approve a funding request. It checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Copyright © 2026, Oracle and/or its affiliates.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-FNDRESUBM

This algorithm is invoked when the status of the funding request is changed to **Return to Submitter**. It changes the status of the funding request to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. In addition, it creates a To Do using the submitter To Do type which is specified in the funding request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the funding request type.

C1-FUNDVAL

This algorithm is invoked when the status of the funding request is changed to **Create Funding**. It checks whether the funding amount of a debit bill is equal to the bill outstanding amount minus hold and offset amount set on the bill (i.e. Funding Amount = Outstanding Bill Amount - Hold Amount - Offset Amount). Similarly, it checks whether the funding amount of a credit bill is equal to the bill outstanding amount minus hold, offset, and garnishment amount set on the bill (i.e. Funding Amount = Outstanding Bill Amount - Hold Amount - Offset Amount - Garnishment Amount). If so, it executes the next algorithm. However, if the funding amount is incorrect, the status of the record in the funding request is changed to **Error**.

C1-FUNDAPAY

If the funding amount of a bill is in debit, it stamps the funding amount as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

It considers the records in the funding request which are in the **Pending** status. Once the **CI_BILL_ACH** table is updated, the status of the record in the funding request is changed to **Processed**. If any error occurs while updating the **CI_BILL_ACH** table, the status of the record in the funding request is changed to **Error**.

C1-FUNDADJCR

If the funding amount of a bill is in credit, it creates the A/P adjustments using the funding adjustment type. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account.

Copyright © 2026, Oracle and/or its affiliates.

It considers the records in the funding request which are in the **Pending** status. Once the adjustments are created, the status of the record in the funding request is changed to **Processed**. If any error occurs while creating the adjustments, the status of the record in the funding request is changed to **Error**.

Points to Note:

- The system uses the funding and garnishment adjustment types from the funding request.
- The main customer's address is used while creating the A/P adjustment for a credit bill.
- The garnishment adjustments are created against the garnishment contracts of the account. A garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.
- The system allows you to transfer funding amount to multiple garnishment contracts of the account. Accordingly, the number of non A/P adjustments will be created using the garnishment adjustment type.

It contains the following parameters:

- **Adjustment Type** - Used to indicate the adjustment type using which the adjustment should be created against the credit bill for internal offsetting.
- **Match Type Entity Flag** - Used to indicate the match type entity on which a new match event must be created when no payment exists for the credit bill. The valid values are:
  - **BILL** - Used when you want to create the same match event on all financial transactions of a bill.
  - **BSEG** - Used when you want to create a unique match event for each bill line item (such as, bill segment or adjustment).
  - **SA** - Used when you want to create the same match event on the bill line items which are created against the same contract.

C1-FUNDCANCL

This algorithm is invoked when you cancel a funding request. It excludes all debit and credit bills from the funding request and changes the status of each record in the funding request to **Excluded**. In addition, the status of the funding request is changed to **Canceled**.

Funding Request Type

Oracle Revenue Management and Billing allows you to define a funding request type using which you can create a funding request. It is the funding request type which helps the system to determine the following:

- Business object using which the funding request should be created in the system
- Currency in which the funding amount should be calculated
- Default funding adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request

  Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.
- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is moved to the garnishment contract of the account

  Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.
- Whether approval is required for the funding request
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period
- Whether a funding request must be processed in the deferred mode (i.e. in the background) or in the online mode (i.e. real time)

Copyright © 2026, Oracle and/or its affiliates.

The **Funding Request Type** screen allows you to define, edit, delete, and copy a funding request type. It contains the following zones:

- Funding Request Type List on page 1735
- Funding Request Type on page 1735

Funding Request Type List

The **Funding Request Type List** zone lists the funding request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Edit	On clicking the **Edit** (✎) icon, the **Funding Request Type** screen appears where you can edit the details of the funding request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Funding Request Type** screen appears where you can define a new funding request type using an existing funding request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the funding request type.
	Note: You can delete a funding request type only when a funding request is not yet created using the funding request type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in this zone only when the record count exceeds 10.

On clicking the **Broadcast** (📡) icon corresponding to a funding request type, the **Funding Request Type** zone appears with the details of the respective funding request type.

Funding Request Type

The **Funding Request Type** zone displays the details of the funding request type. It contains the following sections:

- **Main** - Displays the basic information about the funding request type. It contains the following fields:

Field Name	Field Description
Funding Request Type	Displays the funding request type.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Description	Displays the description of the funding request type.
Funding Request Business Object	Indicates the business object using which a funding request should be created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the funding request type.
Status	Indicates the status of the funding request type. The valid values are: • Active • Inactive
Funding Amount Currency	Indicates the currency in which the total debit and credit amount should be calculated in the funding request. **Note:** You can view the total funding debit and credit amount in the **Statistics** section of the **Funding Request** zone.
Account Funding Currency Characteristic Type	Indicates the characteristic type that must be defined for the account. **Note:** This characteristic indicates that the account's bill funding amount must be converted in the specified currency.
Default Funding Adjustment Type	Indicates the adjustment type using which the funding adjustments must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Default Garnishment Adjustment Type	Indicates the adjustment type using which the garnishment adjustments must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Threshold Range Algorithm	Indicates the algorithm which calculates the threshold range for a bill. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.
Defer Processing Count	Indicates whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceed the defer processing count. **Note:** If the number of bills in a funding request does not exceed the defer processing count, the system processes the funding request in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while creating a funding request (created using the funding request type) for an entity.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the funding request type. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **Approval Profile** screen appears where you can view the details of the respective approval profile.
Submitter To Do Type	Indicates that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a funding request for approval. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a funding request for approval. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Currency Conversion Adjustment Algorithm	Indicates the currency conversion adjustment algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.
Currency Conversion Payment Algorithm	Indicates the currency conversion payment algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics of the funding request type. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - Enables you to perform various actions on the funding request type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request type.
Delete	Used to delete the funding request type.
	Note: You can delete a funding request type when a funding request is not yet created using the funding request type.
Duplicate	Used to create a new funding request type using an existing funding request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request type is created. In addition, a context menu ( ) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Funding Request Type** zone does not appear in the **Funding Request Type** screen. It appears when you click the **Broadcast** ( ) icon corresponding to the funding request type in the **Funding Request Type List** zone.

Defining a Funding Request Type

Prerequisites

To define a funding request type, you should have:

- Funding request type business objects defined in the application

Copyright © 2026, Oracle and/or its affiliates.

- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To define a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Funding Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type Business Object	Used to indicate the business object using which you want to create the funding request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Funding Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple funding request type business objects defined in the application. If there is only one funding request type business object defined in the application, the **Funding Request Type** screen appears.

4. Select the required funding request type business object from the respective field.
5. Click **OK**.

   The **Funding Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the funding request type.
   - **Characteristics** - Used to define the characteristics for the funding request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a funding request type to **Inactive** when the corresponding funding request is in a status other than **Processed** or **Rejected**.	Yes
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the **Statistics** section of the **Funding Request** zone. **Note:** The list includes only those currencies which are defined in the system. If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	Yes
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Account Funding Currency Characteristic Type** field. On clicking the **Search** icon, the **Characteristic Type Search** window appears. You must specify a characteristic type where the characteristic entity is set to **Account**. The converted amount appears in the **Funding Currency Amount** column of the **Selected Bills** zone in the **Funding Request** screen. If the funding amount is in debit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Default Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Funding Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Default Garnishment Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Threshold Range Algorithm	Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period. **Note:** You must specify an algorithm which is created using the **C1-FDRTTR** algorithm type in the **Threshold Range Algorithm** field. The **Search** (🔍) icon appears corresponding to the **Threshold Range Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	No
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count. **Note:** You cannot specify a negative value in the **Defer Processing Count** field. Deferred mode means in the background when the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is invoked. You can configure the **Funding Request Periodic Monitor (C1-FNDRQ)** batch such that it is executed at regular intervals. For more information about the **Funding Request Periodic Monitor (C1-FNDRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request. **Note:** You must specify the **C1-FNDSB** To Do type in the **Submitter To Do Type** field. The **Search** icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Adjustment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	**Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Payment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.

6. Enter the required details in the **Main** section.
7. Define characteristics for the funding request type, if required.
8. Click **Save**.
   The funding request type is defined.

How to define a characteristic for a funding request type	Defining a Characteristic for a Funding Request Type on page 1744

Defining a Characteristic for a Funding Request Type

Prerequisites

To define a characteristic for a funding request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request Type**)

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To define a characteristic for a funding request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a funding *r*equest type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Funding Request Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the funding request type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the funding request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the funding request type, click the **Add** (+) icon and *t*hen repeat step *2*.

> **Note:** However, if you want to remove a characteristic from the funding request type, click the **Delete** (🗑) icon corresponding to the characteristic.

How to copy a funding request type	Copying a Funding Request Type on page 1752

Editing a Funding Request Type

Prerequisites

To edit a funding request type, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To edit a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
   The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *f*unding request type whose details you want to edit.

   The **Funding Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the funding request type.
   - **Characteristics** - Used to define the characteristics for the funding request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Displays the funding request type.	Not applicable
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a funding request type to **Inactive** when the corresponding funding request is in a status other than **Processed** or **Rejected**.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the **Statistics** section of the **Funding Request** zone. **Note:** The list includes only those currencies which are defined in the system. If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	Yes
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Account Funding Currency Characteristic Type** field. On clicking the **Search** icon, the **Characteristic Type Search** window appears. You must specify a characteristic type where the characteristic entity is set to **Account**. The converted amount appears in the **Funding Currency Amount** column of the **Selected Bills** zone in the **Funding Request** screen. If the funding amount is in debit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Default Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Funding Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Default Garnishment Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Threshold Range Algorithm	Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period. **Note:** You must specify an algorithm which is created using the **C1-FDRTTR** algorithm type in the **Threshold Range Algorithm** field. The **Search** (🔍) icon appears corresponding to the **Threshold Range Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	No
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count. **Note:** You cannot specify a negative value in the **Defer Processing Count** field. Deferred mode means in the background when the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is invoked. You can configure the **Funding Request Periodic Monitor (C1-FNDRQ)** batch such that it is executed at regular intervals. For more information about the **Funding Request Periodic Monitor (C1-FNDRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request. **Note:** You must specify the **C1-FNDSB** To Do type in the **Submitter To Do Type** field. The **Search** icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Adjustment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	**Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Payment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.

Tip: Alternatively, you can edit the details of a funding request type by clicking the **Edit** button in the **Funding Request Type** zone.

5. Modify the details in the **Main** section, if required.
6. Define, edit, or remove characteristics of the funding request type, if required.
7. Click **Save**.
   The changes made to the funding request type are saved.

Deleting a Funding Request Type

Procedure

To delete a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
   The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *f*unding request type that you want to delete.

   A message appears confirming whether you want to delete the funding request type.

   Note: You can delete a funding request type when you have not created a funding request using the funding request type.

   Tip: Alternatively, you can delete a funding request type by clicking the **Delete** button in the **Funding Request Type** zone.
5. Click **OK**.
   The funding request type is deleted.

Copying a Funding Request Type

Instead of creating a funding request type from scratch, you can create a new funding request type using an existing funding request type. This is possible through copying a funding request type. On copying a funding request type, the details including the characteristics are copied to the new funding request type. You can then edit the details, if required.

Prerequisites

To copy a funding request type, you should have:

- Funding request type (whose copy you want to create) defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)

Copyright © 2026, Oracle and/or its affiliates.

- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To copy a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
   The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the funding request type whose copy you want to create.

   The **Funding Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the funding request type.
   - **Characteristics** - Used to define the characteristics for the funding request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a funding request type to **Inactive** when the corresponding funding request is in a status other than **Processed** or **Rejected**.	Yes
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the **Statistics** section of the **Funding Request** zone.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those currencies which are defined in the system. If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Account Funding Currency Characteristic Type** field. On clicking the **Search** icon, the **Characteristic Type Search** window appears. You must specify a characteristic type where the characteristic entity is set to **Account**. The converted amount appears in the **Funding Currency Amount** column of the **Selected Bills** zone in the **Funding Request** screen. If the funding amount is in debit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Default Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Funding Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Default Garnishment Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Threshold Range Algorithm	Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period. **Note:** You must specify an algorithm which is created using the **C1-FDRTTR** algorithm type in the **Threshold Range Algorithm** field. The **Search** (🔍) icon appears corresponding to the **Threshold Range Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	No
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count. **Note:** You cannot specify a negative value in the **Defer Processing Count** field. Deferred mode means in the background when the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is invoked. You can configure the **Funding Request Periodic Monitor (C1-FNDRQ)** batch such that it is executed at regular intervals. For more information about the **Funding Request Periodic Monitor (C1-FNDRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request. **Note:** You must specify the **C1-FNDSB** To Do type in the **Submitter To Do Type** field. The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Adjustment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	**Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Payment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.

Tip: Alternatively, you can copy a funding request type by clicking the **Duplicate** button in the **Funding Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the funding request type, if required.
7. Click **Save**.
   The new funding request type is defined.

Viewing the Funding Request Type Details

Procedure

To view the details of a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
   The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the funding request *t*ype whose details you want to view.
   The **Funding Request Type** zone appears.
5. View the details of the funding request type in the **Funding Request Type** zone.

Funding Request (Used for Searching)

The **Funding Request** screen allows you to search for a funding request using various search criteria. It also allows you to create a funding request. It contains the following zone:

- Search Funding Request on page 1759

Through this screen, you can navigate to the following screen:

- Funding Request (Used for Viewing) on page 1765

Search Funding Request

The **Search Funding Request** zone allows you to search for a funding request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a funding request using the funding request, bill, or person details. The valid values are: • Request Details • Bill Details • Person Details	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the **Request Details** option is selected.	
Creation From	Used to search for funding requests which are created from a particular date onwards. **Note:** This field appears when the **Request Details** or **Person Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Status	Used to search for funding requests with a particular status. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Draft • Processed • Rejected **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Created To	Used to search for funding requests which are created till a particular date. **Note:** This field appears when the **Request Details** or **Person Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
User ID	Used to search for funding requests which are created for a particular user. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** ( ) icon appears corresponding to the **User ID** field. On clicking the **Search** icon, the **User Search** window appears.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to search for funding requests which are created using a particular funding request type. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those funding request types which are already defined in the system.	No
Creation Mode	Used to search for funding requests which are created using a particular mode. The valid values are: • Automatic • Manual **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those creation modes which are already defined in the system.	No
Funding Request ID	Used to search for a particular funding request. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Bill ID	Used to search for funding requests which are created for a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears.	No
Bill Date From	Used to search for funding requests created for bills that are completed on or after the specified date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
Alternate Bill ID	Used to search for a bill using its alternate bill ID.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Bill Details** option is selected from the **Search By** list.	
Bill Date To	Used to search for funding requests created for bills that are completed on or before the specified date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Division	Used to search for funding requests created for the bills of the accounts which belong to a particular division. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. The list includes only those divisions which are already defined in the system.	No
Person ID	Used to search for funding requests which are created for a particular person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list. The **Search** ( ) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears.	No
Person Name	Used to search for funding requests with a particular person name. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Country	Used to search for funding request belonging to persons who reside in a particular country.	No

Note: You must specify at least one search criterion while searching for a funding request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Creation Date Time	Displays the date and time when the funding request is created.
Funding Request Information	Displays information about the funding request. **Note:** It has a link. On clicking the link, the **Funding Request** screen appears where you can view the details of the respective funding request.
Status	Indicates the status of the funding request. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Draft • Processed • Rejected
Total Debit Funding Amount	Displays the total amount of the debit bills which are added in the funding request.
Total Credit Funding Amount	Displays the total amount of the credit bills which are added in the funding request.
Created By	Indicates the user who has created the funding request.
Creation Mode	Indicates the funding requests which are created using a particular mode. The valid values are: • Automatic • Manual

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Funding Request

Prerequisites

To search for a funding request, you should have:

- Funding request types defined in the application

Procedure

To search for a funding request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.

Copyright © 2026, Oracle and/or its affiliates.

2. From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request** sub-menu.
   The **Funding Request** screen appears.
4. Enter the search criteria in the **Search Funding Request** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of funding requests that meet the search criteria appears in the **Search Results** section.

Creating a Funding Request

Prerequisites

To create a funding request, you should have:

- Funding request types defined in the application

Procedure

To create a funding request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Funding Request** sub-menu.

   The **Add Funding Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to indicate the funding request type using which you want to create the funding request.	Yes

> **Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Funding Request** screen.

4. Select the required funding request type from the respective field.
5. Click **OK**.
   The funding request is created in the **Draft** status.

Funding Request (Used for Viewing)

Once you create a funding request, the **Funding Request** screen allows you to:

- Add a debit or credit bill of the accounts in a funding request
- Delete a debit or credit bill of the accounts from a funding request
- Exclude a bill from a funding request
- View the details of the funding request
- Edit the details of the funding request
- Delete the funding request
- Cancel the funding request
- Submit the funding request for processing
- Approve or reject the funding request
- Request to resubmit the funding request for approval
- Withdraw the funding request
- Transfer the funding amount of a credit bill to a garnishment contract the funding request
- View the garnishment details of a credit bill

Copyright © 2026, Oracle and/or its affiliates.

- View the payments created through a funding request
- View the adjustments created through a funding request
- View the log of the funding request
- Add a log entry for the funding request

This screen consists of the following tabs:

- Funding Request - Main on page 1766
- Funding Request - Bills on page 1773
- Funding Request - Log on page 1778

Funding Request - Main

The **Main** tab displays information about the funding request. It contains the following zones:

- Funding Request on page 1766
- Search Bill on page 1769

Note: This zone appears when the status of the funding request is set to **Draft**.

Funding Request

The **Funding Request** zone displays the details of the funding request. It contains the following sections:

- **Main** - Displays the basic information about the funding request. It contains the following fields:

Field Name	Field Description
Funding Request Information	Displays information about the funding request.
Funding Request Type	Indicates the funding request type using which the funding request is created. **Note:** It has a link. On clicking the link, the **Funding Request Type** screen appears where you can view the details of the respective funding request type.
Status	Indicates the status of the funding request. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Draft • Processed • Rejected
Status Reason	Indicates the reason why the funding request is rejected. **Note:** This field appears when the funding request is in the **Rejected** status. It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective status reason.
Funding Adjustment Type	Indicates the funding adjustment type using which the A/P adjustment is created against a credit bill.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Garnishment Adjustment Type	Indicates the garnishment adjustment type using which the garnishment adjustment is created when the amount from the credit bill is transferred to the garnishment contract of the account.
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Comments	Displays additional information about the funding request.
	Note: This field appears when the comments are provided while adding or editing a funding request.
Creation Mode	Indicates the funding requests which are created using a particular mode. The valid values are: • Automatic • Manual

- **Statistics** - Displays statistics related to the records of the funding request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of debit or credit bills which are added in the funding request.
Total Records In Error	Displays the total number of debit or credit bills for which payments or adjustments could not be created in the system.
Total Records Excluded	Displays the total number of debit or credit bills which are excluded from the automatic funding request.
Total Adjustments Created	Displays the total number of adjustments created against the credit bills in the funding request.
Total Payment Incoming Events Created	Displays the total number of payment events created against the debit bills in the funding request.
Total Debit Funding Amount	Displays the sum of funding amounts from all the bills that have a debit balance. The sum total is calculated in the funding amount currency which is specified in the funding request type.
	Note: If the debit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division.
Total Records Processed	Displays the total number of debit or credit bills for which payments or adjustments are successfully created in the system.
Total Credit Funding Amount	Displays the sum of funding amount and garnishment amount of all the bills whose funding amount is in credit. The sum total is calculated in the funding amount currency which is specified in the funding request type.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: If the credit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.

- **Record Actions** - Enables you to perform various actions on the funding request. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request. **Note:** The **Edit** button appears when the funding request is in the **Draft** status.
Delete	Used to delete the funding request. **Note:** The **Delete** button appears when the funding request is in the **Draft** status.
Submit	Used to submit the funding request. **Note:** The **Submit** button appears when the funding request is in the **Draft** status.
Cancel	Used to cancel the funding request. **Note:** The **Cancel** button appears when the funding request is in the **Draft** status.
Approve	Used to approve the funding request. **Note:** The **Approve** button appears when the following conditions are met: • The funding request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the funding request.
Reject	Used to reject the funding request. **Note:** The **Reject** button appears when the following conditions are met: • The funding request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the funding request.
Re Submit	Used to re-submit the funding request. **Note:** The **Re Submit** button appears when the following conditions are met: • The funding request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the funding request.
Withdraw	Used to withdraw the funding request.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Withdraw** button appears when the following conditions are met: • The funding request is in the **Approval In Progress** status. • A user with the submitter To Do role is reviewing the funding request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the funding request status is updated.
Create Date/Time	Displays the date and time when the funding request is created.

- **Characteristics** - Lists the characteristics of the funding request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Search Bill

The **Search Bill** zone allows you to search for bills using various search criteria. It also allows you to add the bills in the funding request. It appears when the following conditions are met:

- The creation mode is set to **Manual**.
- The status of the funding request is set to **Draft**.

It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using the bill, account, or person details. The valid values are: • Bill Details • Account Details • Person Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search for a particular bill. **Note:** The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears. This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Bill Date From	Used to search for bills which are completed on or after the specified date. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when the value is not specified in the **Bill ID** field.
Alternate Bill ID	Used to search for a bill using its alternate bill ID. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Bill Date To	Used to search for bills which are completed on or before the specified date. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when the value is not specified in the **Bill ID** field.
Bill Balance	Used to indicate whether you want to search bills with debit or credit balance. The valid values are: • Credit • Debit **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Bill Due Date From	Used to search for bills which are created from a particular due date onwards.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	
Division	Used to search for bills where billing address belongs to a particular division. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. The list includes only those divisions which are already defined in the system.	No
Bill Due Date To	Used to search for bills which are completed on or before the specified due date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Account ID	Used to search for bills which are created for a particular account. **Note:** The **Search** ( ) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears. This field appears when the **Account Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required when the **Account Details** option is selected from the **Search By** list.
Person ID	Used to search for bills which are created for a particular person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required when the value is not specified in the **Person Name** field.
Person Name	Used to search bills which are created for accounts of a particular person.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Person Details** option is selected from the **Search By** list.	**Note:** This field is required when the value is not specified in the **Person ID** field.
Country	Used to search for bills where billing address belongs to a particular country. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No

Note:

You must specify at least one search criterion while searching for a bill.

The number of days between **Bill From Date** and **Bill To Date** should not exceed 60 days.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Due Date	Displays the due date of the bill.
Outstanding Amount	Displays the unpaid amount of the bill.
Hold Amount	Displays the outstanding bill amount that you want to keep on hold.

Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner:
	• The funding amount for **Debit** bill is calculated using the following formula:
	`Funding Amount = Outstanding Bill Amount -- Hold ' Amount -- Offset Amount`
	• The funding amount for **Credit** bill is calculated using the following formula:
	`Funding Amount = Outstanding Bill Amount -- Hold ' Amount -- Offset Amount -- Garnishment Amount`

Person Name	Indicates the person to whom the bill belongs. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Bill ID	Displays the bill ID.
Defer Auto Pay	Indicates whether the **Defer Auto Pay** option is selected on the customer class of the account for which the bill is created. The valid values are:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	• Y • N

Note: Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the funding request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the bills listed in the respective page to the funding request.

How to add a debit or credit bill in a funding request	Adding a Debit or Credit Bill to a Funding Request on page 1778

Funding Request - Bills

The **Bills** tab lists the bills which are added in the funding request. It contains the following zones:

- Currency Statistics on page 1773
- Selected Bills on page 1774
- Funding Payment Details on page 1777

Note:

This zone appears when the following conditions are met:

- The funding amount of the bill is in debit.
- The status of the funding request is set to **Processed**.

- Funding Adjustments on page 1777

Note:

This zone appears when the following conditions are met:

- The funding amount of the bill is in credit.
- The status of the funding request is set to **Processed**.

Currency Statistics

A funding request might include bills in different currencies. The **Currency Statistics** zone lists the sum total of various amount of bills which are created in the same currency. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Currency Code	Indicates the currency in which the funding amount is calculated. **Note:** Here, the system lists those currencies in which the bills added to the funding request.
Total Outstanding Amount	Displays the sum of the outstanding balances for all the bills that are added in the respective funding request.
Total Hold Amount	Displays the sum of all the outstanding bill amounts that you want to keep on hold.
Total Garnishment Amount	Displays the sum of all garnishment amounts specified for the various credit bills included in respective funding request.
Total Debit Funding Amount	Displays the sum of funding amounts of all the debit bills which is calculated in the specified currency.
Total Credit Funding Amount	Displays the sum of funding amounts of all the credit bills which is calculated in the specified currency.

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added in the funding request. It contains the following columns:

Column Name	Column Description
Bill Date	Displays the date on which the bill is generated.
Person Identifier	Displays the value of the primary person identifier type.
Person Country	Indicates the country where the person resides.
Invoice Account Identifier	Displays the primary identifier of the account for which the bill is created.

Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner:
	• The funding amount for **Debit** bill is calculated using the following formula:
	`Funding Amount = Outstanding Bill Amount -- ' Hold Amount -- Offset Amount`
	• The funding amount for **Credit** bill is calculated using the following formula:
	`Funding Amount = Outstanding Bill Amount -- ' Hold Amount -- Garnishment Amount`
	Note: The funding amount is calculated in the bill's currency.

Currency Code	Indicates the currency in which the funding amount is calculated.
Hold Amount	Displays the outstanding bill amount which is kept on hold through a hold request.
Offset Amount	Displays the bill amount which is offset against another bill through an offset request.
Garnishment Amount	Displays the credit bill amount which is transferred to the garnishment contracts of the account through the funding request.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Original Outstanding Amount	Displays the original outstanding amount when the bill was added in the funding request.
Bill ID	Displays the bill ID. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Open Bills	Indicates whether there are any unpaid bills of the person. The valid values are: • Y • N
Garnishment Contract	Indicates whether the garnishment contract exists for the account. The valid values are: • Y • N **Note:** This column appears when the funding request is in the **Draft** status. The data appears in this column when a credit bill is added to the funding request. It has a link. On clicking the link, the **Edit Garnishment Details** screen appears where you can transfer the funding amount from the credit bill to one or more garnishment contracts of the account.
Garnishment	On clicking the **View** (🔗) icon, the **View Garnishment Details** screen appears where you can view the funding amount transferred to the different garnishment contracts of the account. **Note:** This column does not appear when the funding request is in the **Draft** status. The **View** (🔗) icon appears in this column when the funding request is in the **Processed** status.
Record Status	Indicates the status of the bill record in the funding request. The valid values are: • Excluded • Error • Invalid • Masked • Pending • Processed • Valid **Note:** The list includes only those values which are defined in the **REC_STATUS_FLG** lookup field.
Threshold Range	Indicates the threshold range for a bill which is calculated based on the number of payments made for the bill in the specified period.
Person Name	Displays the name of the person whose bill is added in the funding request.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Bill Information	Displays the information about the bill.
Split Banking	Indicates whether the split automatic payment feature is used for the account. The valid values are: • Y • N
Funding Currency Amount	Displays the funding amount which is converted in the funding currency defined on the account.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Delete	Used to delete a bill from the funding request.
	Note: The **Delete** button appears when the funding request is created manually and is in the **Draft** status.
Edit	Used to exclude a debit or credit bill from the funding request.
	Note: The **Edit** button appears when the funding request is created automatically and it is in the **Draft** status.
Hold	Used to create a hold request for one or more bills. However, you cannot select more than 20 bills. On activating or releasing a hold request, the funding amount is automatically updated in the funding request.
	Note: The **Hold** button appears only when the funding request is in the **Draft** status.
Offset	Used to create an offset request for a bill. On processing or unapplying an offset request, the funding amount is automatically updated in the funding request.
	Note: The **Offset** button appears when the funding request is in the **Draft** status.

A check box appears corresponding to each bill when the funding request is in the **Draft** status. On selecting the check box, you can delete the bill from the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all bills listed in the respective page from the funding request.

On clicking the **Broadcast** (📡) icon corresponding to a debit or credit bill, the **Funding Payment Details** or **Funding Adjustments** zone appears, respectively.

Note: The **Broadcast** icon does not appear when the funding request is in the **Draft** status.

You can filter the list using various search criteria (such as, **Bill ID**, **Alternate Bill ID**, **Record Status**, **Bill Balance**, **Funding Amount From**, **Person ID**, **Funding Amount To**, **Currency**, **Funding Amount Threshold Range**, and **Country**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Funding Payment Details

The **Funding Payment Details** zone lists the payment events which are created for a debit bill through the funding request. It contains the following columns:

Column Name	Column Description
Payment Event	Displays information about the payment event. **Note:** It has a link. On clicking the link, the **Payment Event** screen appears where you can view the details of the respective payment event.
Payment Amount	Displays the amount for which automatic payment is created.

Note:

This zone appears when the funding request is in the **Processed** status and the funding amount of the bill is in debit.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Funding Adjustments

The **Funding Adjustments** zone lists the funding and garnishment adjustments which are created for a credit bill through the funding request. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the funding or garnishment adjustment. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Adjustment Amount	Displays the adjustment amount.

Note:

This zone appears when the funding request is in the **Processed** status and the funding amount of the bill is in credit.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Funding Request - Log

The **Log** tab contains the following zone:

- Funding Request Log on page 1778

Funding Request Log

The **Funding Request Log** zone lists the complete trail of actions performed on the funding request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the funding request.
Details	Displays the details about the action performed on the funding request.
User	Indicates the user who has performed the action on the funding request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the funding request. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the funding request is rejected.

Note: You can manually add a log entry for the funding request by clicking the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

Adding a Debit or Credit Bill to a Funding Request

In a funding request, you can only add the debit or credit bills of the accounts for which the **Defer Auto Pay** option is selected on the respective customer class.

Procedure

To add a debit or credit bill to a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:**
>
> The **Search Bill** zone appears when the funding request is in the **Draft** status.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to a bill that you want to add to the funding request.
7. Click the **Add** button in the **Search Bill** zone.
   A message appears indicating that the bill is added to the funding request.

> **Note:** You can only add a debit or credit bill of an account for which the **Defer Auto Pay** option is selected on the respective customer class.

8. Click **OK**.
   The bill is added to the funding request. The status of the bill record in the funding request is set to **Pending**.

Deleting a Debit or Credit Bill from a Funding Request

Procedure

To delete a debit or credit bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want *t*o delete from the funding request.
5. Click the **Delete** button in the **Selected Bills** zone.
   A message appears confirming whether you want to delete the bill from the funding request.

> **Note:** The **Delete** button appears when the funding request is in the **Draft** status.

6. Click **OK**.
   The debit or credit bill is deleted from the funding request.

Excluding a Bill from a Funding Request

If the funding request is manually created through the user interface, you add or delete bills from the funding request when it is in the **Draft** status. However, if the funding request is automatically created through a custom logic, the system allows you to exclude the required bills from the funding request when it is in the **Draft** status. In such case, the status of the record in the funding request is changed to **Excluded**. The excluded bills can then be included in some other funding request.

Prerequisites

To exclude a bill from a funding request, you should have:

- Values defined for the **CAN_RSN_CD_FLG** lookup field

Procedure

To exclude a bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want *t*o exclude from the funding request.
5. Click the **Edit** button in the **Selected Bills** zone.

   The **Edit Funding Request Details** screen appears. It contains the following field:

Field Name	Field Description
Funding Request Information	Displays the information about the funding request.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Information	Displays the information about the bill.	Not applicable
Garnishment Amount	Displays the funding amount which is transferred to the garnishment contracts of the account.	Not applicable
Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner:	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td><table><tr><th>Bill Type</th><th>Funding Amount for the Bill</th></tr><tr><td>Debit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)</td></tr><tr><td>Credit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)</td></tr></table></td><td></td></tr>
<tr><td>Status</td><td>Used to indicate the status of the record in the funding request. The valid values are:
Excluded
Invalid
Masked
Pending

Editing a Funding Request

Prerequisites

Copyright © 2026, Oracle and/or its affiliates.

To edit a funding request, you should have:

- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Click the **Edit** button in the **Funding Request** zone.

   The **Edit Funding Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the funding request.
   - **Characteristics** - Used to define the characteristics for the funding request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Information	Displays information about the funding request.	Not applicable
Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill. **Note:** The **Search** (🔍) icon appears corresponding to the **Funding Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.	Yes (Conditional) **Note:** This field is required while creating an A/P adjustment against a credit bill.
Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes (Conditional) **Note:** This field is required while creating garnishment adjustments for a credit bill.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Garnishment Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Comments	Used to specify additional information about the funding request.	No

Note: The **Edit** button appears when the funding request is in the **Draft** status.

4. Modify the details of the funding request, if required.
5. Define, edit, or remove characteristics of the funding request, if required.
6. Click **Save**.
   The changes made to the funding request are saved.

How to define a characteristic for a funding request	Defining a Characteristic for a Funding Request on page 1783

Defining a Characteristic for a Funding Request

Prerequisites

To define a characteristic for a funding request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request**)

Procedure

To define a characteristic for a funding request:

1. Ensure that the **Characteristics** section is expanded when you are editing a funding request.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the funding request.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a characteristic for the funding request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Funding Request**.	**Note:** This field is required when you are defining a characteristic for the funding request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the funding request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the funding request, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a characteristic from the funding request, click the **Delete** (🗑) icon corresponding to the characteristic.

How to edit a funding request	Editing a Funding Request on page 1781

Deleting a Funding Request

Procedure

To delete a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request that you want to delete.
   The **Funding Request** screen appears.
3. Click the **Delete** button in the **Funding Request** zone.

Copyright © 2026, Oracle and/or its affiliates.

A message appears confirming whether you want to delete the funding request.

Note: The **Delete** button appears when the funding request is in the **Draft** status.

4. Click **OK**.
   The funding request is deleted.

Cancelling a Funding Request

Prerequisites

To cancel a funding request, you should have:

- Reasons defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Procedure

To cancel a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to cancel.
   The **Funding Request** screen appears.
3. Click the **Cancel** button in the **Funding Request** zone.

   The **Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the funding request. **Note:** The list includes only those reasons which are defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen.	Yes

Note: The **Cancel** button appears when the funding request is in the **Draft** status.

4. Select the cancelation reason from the **Status Reason** list.
5. Click **Save**.
   The status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. The excluded bills can then be included in some other funding request.

Submitting a Funding Request

Prerequisites

To submit a funding request, you should have:

- At least one debit or credit bill in the funding request
- Funding and garnishment adjustment types defined in the funding request
- Funding adjustment type defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment type defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To submit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request that you want to submit.
   The **Funding Request** screen appears.
3. Click the **Submit** button in the **Funding Request** zone.

   The system behaves in the following manner:

<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td>The Approval Required option is selected in the funding request type using which the funding request is created</td><td>It calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. Depending on the sum total amount, the system behaves in the following manner:
<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td>The sum total is less than the minimum threshold amount in the approval hierarchy</td><td>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</td></tr>
<tr><td>The sum total is equal to or greater than the threshold amount specified at the</td><td>The system changes the status of the funding request to Approval In Progress. It creates a To</td></tr>
</table></td></tr>
</table>

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td></td><td>
<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td>first level in the approval hierarchy</td><td>Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.</td></tr>
</table>
</td></tr>
<tr><td>The Approval Required option is not selected in the funding request type using which the funding request is created</td><td>The system changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.

Once the Funding Request Periodic Monitor (C1-FNDRQ) batch is executed, it checks whether there are any funding requests in the Deferred Processing status. If so, it changes the status of the funding request to Create Funding.

Once the status of a funding request is changed to Create Funding, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the CI_BILL_ACH table. Then, on executing the Create Automatic Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.

Note: The funding and garnishment adjustments are created in the Frozen status.</td></tr>
</table>

Note: The **Submit** button appears when the funding request is in the **Draft** status.

Approving a Funding Request

You can view the number of funding requests which are pending for approval in the **Funding Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the funding request based on the observations.

Note: The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To approve a funding request:

1. Do either of the following:

If you want to...	Then...
Approve a funding request through the Funding Request screen	**a.** Search for the funding request in the **Funding Request** screen. **b.** In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request which you want to review.
Approve a funding request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-FNDAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the funding request that you want to review.

   The **Funding Request** screen appears.
2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is accurate, then click the **Approve** button in the **Funding Request** zone.

   The system behaves in the following manner:

If...	Then...
The sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy	The system changes the status of the funding request to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the next level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
The sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy	The system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**. Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill. **Note:** The funding and garnishment adjustments are created in the **Frozen** status.

Note: The **Approve** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

Rejecting a Funding Request

Prerequisites

To reject a funding request, you should have:

- Reasons defined for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Copyright © 2026, Oracle and/or its affiliates.

Note:

While rejecting a funding request, you need to specify the reason why you want to reject the funding request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen.

The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To reject a funding request:

1. Do either of the following:

If you want to...	Then...
Reject a funding request through the Funding Request screen	**a.** Search for the funding request in the **Funding Request** screen. **b.** In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request which you want to review.
Reject a funding request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-FNDAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the funding request that you want to review.

   The **Funding Request** screen appears.
2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incorrect, then click the **Reject** button in the **Funding Request** zone.

   The **Reject Funding Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the funding request. **Note:** The list includes only those reasons which are defined for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen.	Yes
Comments	Used to specify additional information while rejecting the funding request.	No

Note: The **Reject** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Select the rejection reason from the **Status Reason** list.

Copyright © 2026, Oracle and/or its affiliates.

5. Click **Save**.
   The status of the funding request is changed to **Rejected**.

Requesting to Resubmit a Funding Request

Procedure

To request for resubmitting a funding request:

1. Do either of the following:

If you want to...	Then...
Request for resubmitting a funding request through the Funding Request screen	**a.** Search for the funding request in the **Funding Request** screen. **b.** In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request which you want to review.
Request for resubmitting a funding request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-FNDAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the funding request that you want to review.

   The **Funding Request** screen appears.
2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incomplete and you want the submitter to make the required changes and resubmit the funding request for approval, then click the **Re Submit** button in the **Funding Request** zone.

   The **Resubmit Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the funding request before resubmitting it for approval.	Yes

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The **Re Submit** button appears when:
>
> - The funding request is in the **Approval In Progress** status.
> - A user with the approval To Do role is reviewing the funding request.

4. Enter the comments in the respective field and then click **Save**.
   A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the funding request type. In addition, the status of the funding request is changed to **Draft**.

Withdrawing a Funding Request

Prerequisites

To withdraw a funding request, you should have:

- Submitter To Do role (which is specified in the funding request type) associated with the **C1-FNDAP** To Do type

Procedure

To withdraw a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request that you want to withdraw.
   The **Funding Request** screen appears.
3. If you want to make some changes in the funding request which is already sent for approval, click the **Withdraw** button in the **Funding Request** zone.
   The status of the funding request is changed to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. The To Do for approver is automatically closed when the submitter withdraws the funding request. Note that the To Do for approver is automatically closed when the submitter To Do role is associated with the To Do type specified in the approval profile.

> **Note:** The **Withdraw** button appears when:
>
> - The funding request is in the **Approval In Progress** status.
> - A user with the submitter To Do role is viewing the funding request.

Transferring the Funding Amount of a Credit Bill to a Garnishment Contract

Prerequisites

To transfer the funding amount of a credit bill to a garnishment contract, you should have:

- At least one garnishment contract on the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

Procedure

To transfer the funding amount of a credit bill to a garnishment contract:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, click the link on the value **Y** in the **Garnishment Contract** column corresponding *t*o a credit bill whose funding amount you want to transfer to a garnishment contract of the account.

   The **Edit Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Information	Indicates the credit bill whose funding amount you want to transfer to a garnishment contract of the account.

   In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Garnishment Contract	Used to indicate the garnishment contract of the account.	Yes
Garnishment Amount	Used to specify the amount that you want to transfer to the garnishment contract.	Yes

5. Enter the required details in the **Edit Garnishment Details** screen.
6. If you want to transfer the funding amount of the credit bill to more than one garnishment contract of the account, click the **Add** (+) icon and *t*hen repeat step *5*.

   Note: However, if you want to remove a garnishment record from the funding request, click the **Delete** (🗑) icon corresponding to the garnishment record.
7. Click **Save**.
   The changes made to the funding request are saved.

Viewing the Garnishment Details of a Credit Bill

Procedure

To view the garnishment details of a credit bill:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to view.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, click the **Broadcast** icon in the **Garnishment** column corresponding *t*o the credit bill whose garnishment details you want to view.

   The **View Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Info	Indicates the credit bill whose garnishment details you are viewing.

In addition, this screen contains the following columns:

Column Name	Column Description
Garnishment Contract	Indicates the garnishment contract of the account against which amount from the credit bill is transferred.
Garnishment Amount	Displays the amount which is transferred to the garnishment contract.

Note:

The **Garnishment** column does not appear when the funding request is in the **Draft** status.

The **View** (🔗) icon appears in the **Garnishment** column only when the funding request is in the **Processed** status.

Chapter 26

Refund/Write Off Request

Topics:

- Prerequisites
- Setting the C1_REFWO Feature Configuration
- Refund Request (Without Approval) Status Transition
- Refund Request (With Approval) Status Transition
- Write Off Request (Without Approval) Status Transition
- Write Off Request (With Approval) Status Transition
- Account Level Refund/Write Off
- Refund/Write Off Adjustment at Bill Level
- Algorithms Used in C1-RefundReq
- Algorithms Used in C1-WORequest
- Refund/Write Off Request Type
- Refund/Write Off Request (Used for Searching)
- Refund Request (Used for Viewing)
- Write Off Request (Used for Viewing)

Oracle Revenue Management and Billing allows you to refund and write off amount to the account. If the amount received from the payor account is matched against the suspense or excess credit contract, the system facilitates you to refund the amount to the payor. In addition, you can refund the amount of a credit bill line item, such as credit bill segment or adjustment, if required. To refund the amount to the account holder, you need to create refund adjustments through a refund request. While creating a refund request, you need to specify the refund request type using which you want to create the refund request. It is the refund request type which helps the system to determine:

- Whether the refund request must be approved before creating refund adjustments in the system
- Approval profile using which the refund request must be approved
- Whether multi-level or single-level approval is required while creating refund adjustments in the system
- Tolerance limit for refund (i.e. minimum refund amount)
- Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
- Default adjustment type using which refund adjustments must be created

The system allows you to create refund adjustments only using those adjustment types where A/P request type is defined. Once the refund adjustments are created, the A/P Extract process will extract the information and accordingly refund the amount to the payor. During the refund request process, a refund request goes through various statuses in its lifecycle. For more information about the refund request statuses, see Refund Request (Without Approval) Status Transition on page 1803 and Refund Request (With Approval) Status Transition on page 1806.

Note that the lifecycle of a refund request is driven by the business object using which the refund request is created. A refund request business object named **C1-RefundReq** is shipped with the product. The refund request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-RefundReq** business object.

Similarly, the system facilitates you to write off the amount to the account through a write off request. While creating a write off request, you need to specify the write off request type using which you want to create the write off request. It is the write off request type which helps the system to determine:

- Whether the write off request must be approved before creating write off adjustments in the system
- Approval profile using which the write off request must be approved
- Whether multi-level or single-level approval is required while creating write off adjustments in the system
- Default adjustment type using which write off adjustments must be created

The system allows you to create write off adjustments only using those adjustment types where A/P request type is not defined. During the write off request process, a write off request goes through various statuses in its lifecycle. For more information about the write off request statuses, see Write Off Request (Without Approval) Status Transition on page 1808 and Write Off Request (With Approval) Status Transition on page 1810.

Note that the lifecycle of a write off request is driven by the business object using which the write off request is created. A write off request business object named **C1-WORequest** is shipped with the product. The write off request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-WORequest** business object.

For more information on how to setup the refund and write off request processes, see Prerequisites on page 1801.

Copyright © 2026, Oracle and/or its affiliates.

Prerequisites

To setup the refund request process, you need to do the following:

- Define the required adjustment types (for creating refund adjustments) where A/P request type is defined
- Define the required adjustment types (for creating write up adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define voided and rejected status reasons for the **C1-RefundReq** business object
- Assign the **C1-REFRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a refund request for approval
- Define the required approval profiles with the credit hierarchy and **C1-REFRQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen
- Define the required refund request types in the system

To setup the write off request process, you need to do the following:

- Define the required adjustment types (for creating write off adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define cancelled and rejected status reasons for the **C1-WORequest** business object
- Assign the **C1-WOREQ** To Do type to a To Do role whose users must receive To Do generated while submitting a write off request for approval
- Define the required approval profiles with the debit hierarchy and **C1-WOREQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen
- Define the required write off request types in the system

Setting the C1_REFWO Feature Configuration

The **C1_REFWO** feature configuration enables the system to determine the following:

- How the refund/write off adjustment should be created for a refund/write off request when the adjustment level is not specified while defining the refund/write off request.
- Automatic refund/write off preference for the fully-insured group and individual lines of business.

Note: If the system is used for both the fully insured group and individual lines of business, you need to define two separate preferences with the **Automatic Refund/Write-Off** preference category – one for each line of business (i.e., fully insured group business and fully insured individual business).

Procedure

To set the **C1_REFWO** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
   A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
   The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1_REFWO** in the **Feature Name** field.

Copyright © 2026, Oracle and/or its affiliates.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

   The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Default Adjustment Level	Used to control how the refund/write off adjustment should be created for the refund/write off request. The system considers this option type in the following scenarios: • When the value is not specified in the **Adjustment Level** field while defining a refund/write off request. • When the **Adjustment Level For Credit Bill** parameter is not defined in the **C1-IMREFCRET** algorithm attached to the respective account's division. The valid values are: • **ACCT** – Used when you want to create the refund/write off request at the account level. Here, the refund/write off adjustment is created against the netting contract of the account. • **BILL** – Used when you want to create the refund/write off request for a bill. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the financial services domain. • **SEGT** – Used when you want to create the refund/write off request for a bill, bill segment, adjustment, or payment of an account. Here, the refund/write off adjustment is created against the bill segment, adjustment, or payment segment, respectively. If you select this option, the system behaves in the traditional manner.	Yes (Conditional) **Note:** This data is required when you want to do the following: • Create refund/ write off request manually • Enable the automatic refund process for the account
Field Mapping Preference for Individual Membership	Used to indicate the automatic refund/write off preference that you want to use for the fully insured individual business. The	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Option Type	Description	Mandatory (Yes or No)
	system considers the various attributes of the automatic refund/ write off preference for: • Automatic Refund/Write Off Creation on Terminating an Individual Membership • Automatic Refund/Write Off Rollback on Reinstating an Individual Membership	**Note:** This data is required when you want to enable the automatic refund/ write off creation feature for the fully insured individual business.
	Note: You must specify a preference where the preference category is set to **Automatic Refund/ Write-Off**. This option type is only applicable for the health insurance domain and not for the financial services domain.	
Field Mapping Preference for Policy (Small Group)	Used to indicate the automatic refund/write off preference that you want to use for the fully insured group business. The system considers the various attributes of the automatic refund/write off preference for: • Automatic Refund/Write Off Creation on Terminating a Group Policy • Automatic Refund/Write Off Rollback on Reinstating a Group Policy	Yes (Conditional) **Note:** This data is required when you want to enable the automatic refund/ write off creation feature for the fully insured group business.
	Note: You must specify a preference where the preference category is set to **Automatic Refund/ Write-Off**. This option type is only applicable for the health insurance domain and not for the financial services domain.	

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
   The changes made to the feature configuration are saved.

Refund Request (Without Approval) Status Transition

Account Level Refund/Write Off

Oracle Revenue Management and Billing enables you to create a refund/write off request at the account level. A new field named **Adjustment Level** is available while defining a refund/write off request. It allows you to control how the refund/write off adjustment should be created for the refund/write off request. It supports the following values:

- **Account** - Used when you want to create the refund/write off request at the account level. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the health insurance domain.
- **Bill** - Used when you want to create the refund/write off request for a bill. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the financial services domain.
- **Segment** - Used when you want to create the refund/write off request for a bill, bill segment, adjustment, or payment of an account. Here, the refund/write off adjustment is created against the bill segment, adjustment, or payment segment, respectively. If you select this option, the system behaves in the traditional manner.

If you do not specify the value for the **Adjustment Level** field, the system considers the value defined in the **Default Adjustment Level** option type of the **C1_REFWO** feature configuration. If you select the **Account** option from the **Adjustment Level** list, the system checks the account balance while creating the refund/write off request. If the account balance is zero, the system throws an appropriate error message and does not allow you to create the refund/write off request at the account level. However, if the account balance is in credit, the system allows you to create a refund request for the account. Similarly, if the account balance is in debit, the system allows you to create a write off request for the account.

While creating a refund/write off request at the account level, the system, by default, sets the total refund/write off amount to the account balance. You cannot edit the refund/write off amount. Even, the post processing algorithms cannot update the refund/write off amount in the refund/write off request.

Note: The **Bills** and **Payments and Adjustments** tabs do not appear in the **Refund Request** and **Write Off Request** screens when the refund/write off request is created at the account level.

Before creating the refund/write off request at the account level, you need to do the following:

- Attach the **C1-NTACBAL** algorithm to the **Netting Account Balance** system event in the **Algorithms** tab of the **Installation Options - Framework** screen
- Set the netting contract type on the respective refund/write off request type

The system invokes the **C1-NTACBAL** algorithm while processing the refund/write off request where the adjustment level is set to **Account**. The **C1-NTACBAL** algorithm creates transfer adjustments on the netting contract of the account. The transfer adjustment creation process slightly varies depending on the adjustment level that is selected while defining a refund/write off request.

If the adjustment level is set to **Account**, the system checks whether a netting contract created using the netting contract type (specified in the refund/write off request type) exists for the account. If so, the system considers the unmatched financial transactions of the account and then creates a transfer adjustment against each of them on the netting contract. However, if the netting contract does not exist for the account, then the system does the following:

1. Creates a netting contract using the netting contract type specified in the refund/write off request type
2. Considers the unmatched financial transactions of the account and then creates a transfer adjustment against each of them on the netting contract

You can opt to exclude unmatched financial transactions of contracts created using a particular contract type by setting the **Excluded Contract types for netting** option type of the **C1_CMO** feature configuration. You can exclude multiple contract types by defining the **Excluded Contract types for netting** option type multiple times (with unique sequence number) in the feature configuration. This option type is considered only when the adjustment level is set to **Account**.

On submitting or approving a refund/write off request at the account level, the system validates whether the refund/write off amount matches the current account balance. If the refund/write off amount does not match the current account balance, the system does not allow you to process the refund/write off request. However, if the refund/write off amount

Copyright © 2026, Oracle and/or its affiliates.

matches the current account balance, the system creates the transfer adjustments and refund/write off adjustment on the netting contract of the account.

On voiding a refund request where the adjustment level is set to **Account**, the system cancels the transfer adjustments and refund adjustment on the netting contract of the account. And, on canceling a write off request where the adjustment level is set to **Account**, the system cancels the transfer adjustments and write off adjustment on the netting contract of the account.

Refund/Write Off Adjustment at Bill Level

Until now, you were able to create the refund/write off request for a bill or bill line item (i.e. bill segment or adjustment) of an account. On processing the refund/write off request, the system used to create refund/write off adjustment against the bill line item irrespective of whether the refund/write off is done at the bill or bill line item level. There was a requirement wherein the system should allow to create the refund/write off adjustment against the bill and not against the bill line items when the refund/write off is done at the bill level.

Now, Oracle Revenue Management and Billing enables you to create a refund/write off adjustment at the bill level. A new field named **Adjustment Level** is available while defining a refund/write off request. It allows you to control how the refund/write off adjustment should be created for the refund/write off request. It supports the following values:

- **Account** - Used when you want to create the refund/write off request at the account level. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the health insurance domain.
- **Bill** - Used when you want to create the refund/write off request for a bill. Here, the refund/write off adjustment is created against the netting contract of the account. This option is only applicable for the financial services domain.
- **Segment** - Used when you want to create the refund/write off request for a bill, bill segment, adjustment, or payment of an account. Here, the refund/write off adjustment is created against the bill segment, adjustment, or payment segment, respectively. If you select this option, the system behaves in the traditional manner.

By default, the adjustment level is set to **Segment**. If you select the **Bill** option from the **Adjustment Level** list, the system checks the account balance while creating the refund/write off request. If the account balance is zero, the system throws an appropriate error message and does not allow you to create the refund/write off request for the account. However, if the account balance is in credit, the system allows you to create a refund request for the account. Similarly, if the account balance is in debit, the system allows you to create a write off request for the account.

Note: The **Payments and Adjustments** tab does not appear in the **Refund Request** screen when the adjustment level is set to **Bill** in the refund request.

Before creating the refund/write off request where the adjustment level is set to **Bill**, you need to do the following:

- Attach the **C1-NTACBAL** algorithm to the **Netting Account Balance** system event in the **Algorithms** tab of the **Installation Options - Framework** screen
- Set the netting contract type on the respective refund/write off request type

The system invokes the **C1-NTACBAL** algorithm while processing the refund/write off request where the adjustment level is set to **Bill**. The **C1-NTACBAL** algorithm creates transfer adjustments on the netting contract of the account. The transfer adjustment creation process slightly varies depending on the adjustment level that is selected while defining a refund/write off request.

If the adjustment level is set to **Bill**, then the system checks whether a netting contract created using the netting contract type (specified in the refund/write off request type) exists for the account and its contract balance is equal to zero. If both the conditions are met, the system considers the unpaid bill segments and adjustments of the bill and then creates a transfer adjustment against each of them on the netting contract. However, if the netting contract does not exist for the account, then the system does the following:

1. Creates a netting contract using the netting contract type specified in the refund/write off request type
2. Considers the unpaid bill segments and adjustments of the bill and then creates a transfer adjustment against each of them on the netting contract

Copyright © 2026, Oracle and/or its affiliates.

And, if the netting contract exists for the account, but its contract balance is not equal to zero, the system throws an appropriate error message on the user interface.

On voiding a refund request where the adjustment level is set to **Bill**, the system cancels the transfer adjustments and refund adjustment on the netting contract of the account. And, on canceling a write off request where the adjustment level is set to **Bill**, the system cancels the transfer adjustments and write off adjustment on the netting contract of the account.

Algorithms Used in C1-RefundReq

The following table lists the algorithms which are attached to the **C1-RefundReq** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	Refer to C1-REFREQINF on page 1815
Post-Processing	C1-REFWOPOSP	C1-REFWOPOSP	Refer to C1-REFWOPOSP on page 1815

Voided	Enter	C1-REFVOID	C1-REFVOID	Refer to C1-REFVOID on page 1818

C1-REFREQINF

This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:

- Refund or Write Off Request Type Description
- Refund or Write Off Request Status Description
- Refund or Write Off Request ID

C1-REFWOPOSP

This algorithm recalculates and updates the total refund amount in the **Refund Request** zone when you change the refund amount against an entity while editing a refund request.

C1-REFWOPRE

This algorithm is used to avoid the concurrency issue for refund and write off.

C1-REFUNDVAL

This algorithm validates the following for each entity that you have selected in the refund request:

- The mandatory data, such as refund amount and adjustment type, is specified.
- The refund amount is not less than zero.
- The refund amount is not greater than the entity amount.
- The refund amount is not greater than the eligible refund amount.
- The partial refund is not done at the payment event or bill level.

C1-REF-DFT

This algorithm fetches the account's main customer's name and address and displays in the **Refund Request** zone. In addition, when you refund the payments from the **Payment Event Summary** screen, this algorithm does the following:

- The total eligible refund amount is calculated and accordingly displayed in the **Refund Request** screen.
- The default refund adjustment type specified in the refund request type is fetched and displayed against the selected payment event or payments.
- On selecting a payment event for refund, if all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Copyright © 2026, Oracle and/or its affiliates.

C1-REFUNDSUB

This algorithm checks the following:

- Whether the approval is required for the refund request. If the approval is required for a refund request, the status of the refund request is changed to **Approval In Progress**. However, if the approval is not required for a refund request, the status of the refund request is changed to **Creating Adjustment**.
- If the account on which the refund request is created is on an active hold request, then the status of the refund request is changed to **Hold**.
- At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the refund request.
- Whether the approval profile attached to the refund request type has the credit hierarchy and **C1-REFRQ** To Do type is defined.

C1-DEFERREF

This algorithm is invoked when the status of the refund request is changed to **Submitted** or **Approved**. It checks whether the refund request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the refund request does not exceed the online record process limit, the system changes the status of the refund request to **Processing**. However, if the number of valid records in the refund request exceeds the online record process limit, the system changes the status of the refund request to **Deferred Processing**.

This algorithm contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-REFUNDAPP

This algorithm creates the following:

- A To Do using the To Do type specified in the approval profile which is attached to the refund request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not.
- A log entry is added when a To Do is created using the To Do type.

C1-REFAPPRVD

This algorithm creates the following:

- A To Do using the To Do Type specified in the approval profile which is attached to the refund request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not.
- A log entry is added when a To Do is created using the To Do Type.

C1-REFAPPREJ

This algorithm is executed when the refund request is rejected. It contains the following parameter:

- **To Do Type** - A To Do using the To Do type specified in the algorithm is created. The To Do is sent to the request submitter once the request is rejected by the approver.

Copyright © 2026, Oracle and/or its affiliates.

C1-REFCKHLD

This new algorithm is triggered by the monitor batch on the **Deferred Processing** status of the refund request business object. It checks if the account getting processed is on hold for refund process. If yes, then it will move the refund request status to **Hold** or else it will move to **Creating Adjustments** status.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-REFADJCRI

This algorithm does the following:

- Creates the refund adjustments for the refund request. These refund adjustments are created in the **Frozen** status. The adjustment ID is displayed corresponding to the entity in the **Refund Details** zone.
- Stamps the bill ID of credit line item on the adjustment and the corresponding financial transaction.
- If a match event is present for the credit bill line item and for payments which are matched against the excess credit contract, the existing match event is stamped on the refund or write up adjustment and the corresponding financial transaction. However, when a match event is not present for payments which are matched against the suspense contract or if the match event does not exist, a new match event is created and stamped on the refund or write up adjustment and the corresponding financial transaction.
- The details of the refund adjustments are added in the **A/P Check Request (CI_ADJ_APREQ)** table.
- If a write up adjustment is created, the write up adjustment type specified in the refund request type is displayed corresponding to the entity in the **Refund Details** zone.
- If you are doing a partial refund for payment, it will cancel original payment and create two new partial payments.
- Original payment will be cancelled using the cancel reason passed as algorithm soft parameter.
- Match Event Id of cancelled payment will be stamped on refund adjustment and the match event will be balanced.

C1-DEFERVOID

This algorithm is invoked when the status of the refund request is changed from **Processed** to **Deferred Void**. It checks whether the refund request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of distinct adjustments in the refund request does not exceed the online record process limit, the system changes the status of the refund request to **Void**. However, if the number of valid records in the refund request exceeds the online record process limit, the system keeps the status of the refund request as **Deferred Void**.

This algorithm contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of distinct adjustments in a refund write off request you can process in the real time (i.e. immediately).

Copyright © 2026, Oracle and/or its affiliates.

C1-REFVOID

This algorithm is invoked on click of void button for a processed refund request. t cancels all frozen adjustments created for the request. The algorithm looks for the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (**F1_BUS_OBJ_STATUS_RSN_CHAR** table). If it is not found, it will use the status reason as selected by the user.

Algorithms Used in C1-WORequest

The following table lists the algorithms which are attached to the **C1-WORequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	Refer to C1-REFREQINF on page 1815
Post-Processing	C1-WOPOSP	C1-WOPOSP	Refer to C1-WOPOSP on page 1819

C1-REFREQINF

This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:

- Refund or Write Off Request Type Description
- Refund or Write Off Request Status Description
- Refund or Write Off Request ID

C1-WOPOSP

This algorithm validates the following for each entity that you have selected in the write off request:

- The mandatory data, such as write off amount and adjustment type, is specified.
- The write off amount is not less than zero.
- The write off amount is not greater than the entity amount.
- The write off amount is not greater than the eligible write off amount.
- The partial write off is not done at the bill level.
- The A/P Request Type is not defined in the selected adjustment type.

C1-REFWOPRE

This algorithm is used to avoid the concurrency issue for refund and write off.

C1-WOBOVAL

This algorithm performs validations for a write off request when the user clicks the **Edit** or **Save** button. It validates the write off amount to ensure that it is less than or equal to the eligible write off amount.

C1-WODRAFT

This algorithm is invoked when a new write off request is created on click of **Save** button and status is **Draft**.

C1-WOSUBMIT

This algorithm checks the following:

- Whether the approval is required for the write off request. If the approval is required for a write off request, the status of the write off request is changed to **Approval In Progress**. However, if the approval is not required for a write off request, the status of the write off request is changed to **Creating Adjustment**.

Copyright © 2026, Oracle and/or its affiliates.

- At least one debit bill line item (such as debit bill segment or adjustment) is selected in the write off request.
- Whether the approval profile attached to the write off request type has the debit hierarchy and C1-WOREQ To Do type defined.

C1-DEFERWO

This algorithm is invoked when the status of the write off request is changed to **Submitted** or **Approved**. It checks whether the write off request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the write off request does not exceed the online record process limit, the system changes the status of the write off request to **Processing**. However, if the number of valid records in the write off request exceeds the online record process limit, the system changes the status of the write off request to **Deferred Processing**. This algorithm contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-WOAPPROVL

This algorithm creates the following:

- A To Do using the To Do type specified in the approval profile which is attached to the write off request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not.
- A log entry is added when a To Do is created using the To Do type.

C1-WOAPPROVD

This algorithm is triggered when the approver clicks the **Approve** button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the write off request is changed to **Approval In Progress** and the algorithm attached to the **Approval In Progress** status is invoked. If further approval is not required, the status of the write off request is changed to **Creating Adjustment**.

C1-WOAPPREJ

This algorithm is executed when the refund request is rejected. It contains the following parameter:

- **To Do Type** - A To Do using the To Do type specified in the algorithm is created. The To Do is sent to the request submitter once the request is rejected by the approver.

C1-REJREQ

This algorithm will Update refund/Write off instruction with the reason codes for request rejection when approver rejects a request.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.

Copyright © 2026, Oracle and/or its affiliates.

- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-WOADJCRT

This algorithm does the following:

- Creates the write off adjustments for the write off request. These write off adjustments are created in the **Frozen** status. The adjustment ID is displayed corresponding to the entity in the **Write Off Details** zone.
- Stamps the bill ID of debit line item on the adjustment and the corresponding financial transaction.
- If a match event is present for the debit bill line item, the existing match event is stamped on the write off adjustment and the corresponding financial transaction. However, if the match event does not exist, a new match event is created and stamped on the write off adjustment and the corresponding financial transaction.
- If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.

C1-WOCANCEL

This algorithm is invoked on click of the **Cancel** button for a write off request which is in the **Processed** state. It cancels all the frozen adjustments created for the write off request. The algorithm extracts the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (**F1_BUS_OBJ_STATUS_RSN_CHAR** table). If the reason is not found, it will use the status reason selected by the user.

Refund/Write Off Request Type

Oracle Revenue Management and Billing allows you to define:

- **Refund Request Type** - It is used to create a refund request. You can define multiple refund request types in the system. A refund request type helps the system to determine:
  - Whether the refund request must be approved before creating refund adjustments in the system
  - Approval profile using which the refund request must be approved
  - Whether multi-level or single-level approval is required while creating refund adjustments in the system
  - Tolerance limit for refund (i.e. minimum refund amount)
  - Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
  - Default adjustment type using which refund adjustments must be created
- **Write Off Request Type** - It is used to create a write off request. You can define multiple write off request types in the system. A write off request type helps the system to determine:
  - Whether the write off request must be approved before creating write off adjustments in the system
  - Approval profile using which the write off request must be approved
  - Whether multi-level or single-level approval is required while creating write off adjustments in the system
  - Default adjustment type using which write off adjustments must be created

While defining a refund or write off request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the refund or write off request (which is created using the refund or write off request type) is sent for approval before creating the refund or write off adjustments. However, if the **Approval Required** check box is not selected, the refund or write off adjustments are created immediately on submitting a refund or write off request. The approval process is configured through the approval profile.

Copyright © 2026, Oracle and/or its affiliates.

The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy is used for approving write off request and credit approval hierarchy is used for approving refund request. Therefore, while defining an approval profile for refund, you need to define credit hierarchy and set the To Do Type to **C1-REFRQ**. However, while defining an approval profile for write off, you need to define debit hierarchy and set the To Do Type to **C1-WOREQ**.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the refund or write off request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the `Manager` To Do role will approve or reject the refund or write off request, and at the second level, a user with the `Senior Manager` To Do role will approve or reject the refund or write off request. On submitting a refund or write off request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the refund or write off request, the refund or write off adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the refund or write off adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval - First Level (Threshold Amount: 300, To Do Role: `Manager`) and Second Level (Threshold Amount: 500, To Do Role: `Senior Manager`). Now, if the total refund or write off amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total refund or write off amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total refund or write off amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the refund or write off request and create the refund or write off adjustments.

The system supports both single-level and multi-level approval process while approving refund or write off request. If the **Hierarchical Approval** check box is selected while defining a refund or write off request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a refund or write off request type, the approval is required only from the approval level where the total refund or write off amount falls within the threshold limit. Let us understand this with the help of some examples.

Example 1

<table>
<tr><th>Refund Request Type</th><th>Approval Profile</th><th>Approval Hierarchy</th><th>Hierarchical Approval</th></tr>
<tr><td>R1</td><td>Refund Analyst</td><td>Credit Hierarchy<table><tr><th>Threshold Amount</th><th>To Do Role</th></tr><tr><td>$500</td><td>Senior Analyst</td></tr><tr><td>$750</td><td>Manager</td></tr><tr><td>$1500</td><td>Senior Manager</td></tr></table></td><td>Yes</td></tr>
<tr><td>R2</td><td>Refund Analyst</td><td>Credit Hierarchy<table><tr><th>Threshold Amount</th><th>To Do Role</th></tr><tr><td>$500</td><td>Senior Analyst</td></tr><tr><td>$750</td><td>Manager</td></tr><tr><td>$1500</td><td>Senior Manager</td></tr></table></td><td>No</td></tr>
</table>

The following table indicates how the system will behave in different refund scenarios:

Copyright © 2026, Oracle and/or its affiliates.

Refund Request	Refund Request Type	Total Refund Amount ($)	Comments
RR1	R1	200	This refund request is automatically approved by the system because the total refund amount is less than $500.
RR2	R1	750	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role This is because the total refund amount is either equal to $750 or less than $1500 and hierarchical approval is required.
RR3	R1	2000	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role **3.** Users with the `Senior Manager` To Do role This is because the total refund amount is greater than $1500 and hierarchical approval is required.
RR4	R2	200	This refund request is automatically approved by the system because the total refund amount is less than $500.
RR5	R2	750	The To Do is sent for approval to users with the `Manager` To Do role. This is because the total refund amount is either equal to $750 or less than $1500 and hierarchical approval is not required.
RR6	R2	2000	The To Do is sent for approval to users with the `Senior Manager` To Do role. This is because the total refund amount is greater than $1500 and hierarchical approval is not required.

Example 2

Write Off Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval
W1	Write Off Analyst	**Debit Hierarchy** **Threshold Amount** / **To Do Role** $100 / Senior Analyst $200 / Manager $300 / Senior Manager	Yes
W2	Write Off Analyst	**Debit Hierarchy** **Threshold Amount** / **To Do Role** $100 / Senior Analyst $200 / Manager	No

Copyright © 2026, Oracle and/or its affiliates.

Write Off Request Type	Approval Profile	Approval Hierarchy		Hierarchical Approval
		Threshold Amount	**To Do Role**	
		$300	Senior Manager	

The following table indicates how the system will behave in different write off scenarios:

Write Off Request	Write Off Request Type	Total Write Off Amount ($)	Comments
WO1	W1	90	This write off request is automatically approved by the system because the total write off amount is less than $100.
WO2	W1	250	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role This is because the total write off amount is either equal to $200 or less than $300 and hierarchical approval is required.
WO3	W1	500	The To Do is sent for approval to the following users in the specified order: **1.** Users with the `Senior Analyst` To Do role **2.** Users with the `Manager` To Do role **3.** Users with the `Senior Manager` To Do role This is because the total write off amount is greater than $300 and hierarchical approval is required.
WO4	W2	90	This write off request is automatically approved by the system because the total write off amount is less than $100.
WO5	W2	250	The To Do is sent for approval to users with the `Manager` To Do role. This is because the total write off amount is either equal to $200 or less than $300 and hierarchical approval is not required.
WO6	W2	500	The To Do is sent for approval to users with the `Senior Manager` To Do role. This is because the total write off amount is greater than $300 and hierarchical approval is not required.

The **Refund/Write Off Request Type** screen allows you to define, edit, delete, and copy a refund and write off request type. This screen consists of the following zones:

- Refund/Write Off Request Type List on page 1824
- Refund/Write Off Request Type on page 1825

Refund/Write Off Request Type List

The **Refund/Write Off Request Type List** zone lists the refund and write off request types that are already defined in the system. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Description	Displays the description of the refund or write off request type.
Edit	On clicking the **Edit** (✎) icon, the **Refund/Write Off Request Type** screen appears where you can edit the details of the refund and write off request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Refund/Write Off Request Type** screen appears where you can define a refund and write off request type using an existing refund and write off request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the refund or write off request type.
	Note: You can delete a refund or write off request type only when a refund or write off request is not yet created using the refund or write off request type.

On clicking the **Broadcast** (📡) icon corresponding to refund or write off request type, the **Refund/Write Off Request Type** zone appears with the details of the respective refund or write off request type.

Refund/Write Off Request Type

The **Refund/Write Off Request Type** zone displays the details of the refund or write off request type. It contains the following sections:

- **Main** - Displays the basic information about the refund or write off request type. It contains the following fields:

Field Name	Field Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Refund/Write Off Request Business Object	Indicates the business object using which the refund or write off request should be created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the refund or write off request type.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Detailed Description	Displays additional information about the refund or write off request type.
Status	Indicates the status of the refund or write off request type. The valid values are: • Active • Inactive
Action	Indicates the action which is performed on the refund or write off request using the refund or write off request type. The valid values are: • Refund • Write Off
Minimum Refund Amount	Displays the tolerance limit defined for a refund. **Note:** This field appears when the **Refund** option is selected from the **Action** list.
Write Up Adjustment Type	Indicates the adjustment type using which the write up adjustment is created when the total refund amount is less than the minimum refund amount. **Note:** This field appears when the **Refund** option is selected from the **Action** list. It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view details of the respective write off adjustment type.
Approval Required	Indicates whether approval is required while creating the refund or write off adjustments using the refund or write off request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the refund or write off request type. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **Approval Profile** screen appears where you can view details of the respective approval profile.
Hierarchical Approval	Indicates whether single-level or multi-level approval is required while defining a refund or write off request type. **Note:** This field appears when the **Approval Required** option is selected.
Adjustment Type	Indicates the adjustment type using which the refund or write off adjustments must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view details of the respective adjustment type.
Netting Contract Type	Indicates the contract type used for netting transactions while processing the refund or write-offs.

- **Characteristics** - This section lists the characteristics of the refund or write off request type. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund or write off request type.
Delete	Used to delete the refund or write off request type.
	Note: You can delete a refund or write off request type when you have not created a refund or write off request using the refund or write off request type.
Duplicate	Used to create a new refund or write off request type using an existing refund or write off request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund or write off request type is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Refund/Write Off Request Type** zone does not appear in the **Refund/Write Off Request Type** screen. It appears when you click the **Broadcast** (ᯤ) icon corresponding to the refund or write off request type in the **Refund/Write Off Request Type List** zone.

Defining a Refund or Write Off Request Type

Prerequisites

To define a refund or write off request type, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without the A/P request type code defined in the application

Procedure

To define a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Refund/Write Off Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type Business Object	Used to indicate the business object using which you want to create the refund or write off request type. The valid value is: • **Refund/Write Off Request Type (i.e. C1-RefWoReqType)** - Enables you to maintain a refund or write off request type. **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Refund/Write Off Request Type (i.e., C1-RFWORQTY)** maintenance object.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple refund and write off request type business objects defined in the application. If there is only one refund and write off request type business object defined in the application, the **Refund/Write Off Request Type** screen appears.

4. Select the required refund and write off request type business object from the respective field.
5. Click **OK**.

   The **Refund/Write Off Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the refund or write off request type.
   - **Characteristics** - Used to define the characteristics for the refund or write off request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the refund and write off request type business object using which you are defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object using which you want to create the respective refund or write off request. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Refund Request (i.e. C1-RefundReq)** - Enables you to refund the bills and payments using a refund request type. • **Refund Request - Display BO (i.e. C1-RefundReq2** - Enables you to display the details of a refund request type. • **Write Off Request (i.e. C1-WORequest)** - Enables you to write off the bills using a write off request type. • **Write Off Request - Display BO (i.e. C1-WORequest2)** - Enables you to display the details of a write off request type.	
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No
Status	Used to indicate the status of the refund or write off request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a refund or write off request type to **Inactive** if there are refund or write off requests which are created using the refund or write off request type and are currently in the **Draft** or **Approval In Progress** status.	Yes
Action	Used to indicate whether the request type is created for refund or write off. The valid values are: • Refund • Write Off	Yes
Minimum Refund Amount	Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment. **Note:** This field appears when the **Refund** option is selected from the **Action** list.	Yes
Write Up Adjustment Type	Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Write Up Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Write Up Adjustment Type** field. This field appears when the **Refund** option is selected from the **Action** list. You can create the write up adjustments (only using those adjustment types) where the **A/P Request Type Code** option is not set to **Refund**.	
Approval Required	Used to indicate whether approval is required while creating a refund or write off adjustment using the refund or write off request type.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the refund or write off amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while adding or updating a refund or write off adjustment using the refund or write off request type. **Note:** This field appears when the **Approval Required** option is selected.	No
Refund Adjustment Type	Used to indicate the adjustment type using which refund adjustment must be created. By default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Refund Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Refund Adjustment Type** field. This field appears when the **Refund** option is selected from the **Action** list. You can create refund adjustments (only using those adjustment types) where the **A/P Request Type Code** option is set to **Refund**.	
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request. **Note:** The **Search** (🔍) icon appears corresponding to the **Refund Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Refund Adjustment Type** field. This field appears when the **Write Off** option is selected from the **Action** list. You can create write off adjustments (only using those adjustment types) where the **A/P Request Type Code** option is not set to **Refund**.	Yes
Netting Contract Type	Used to indicate the contract type used for netting transactions while processing refunds or write-offs.	No

6. Enter the required details in the **Main** section.
7. Define characteristics for the refund or write off request type, if required.
8. Click **Save**.
   The refund or write off request type is defined.

Defining a Characteristic for a Refund or Write Off Request Type

Prerequisites

To define a characteristic for a refund or write off request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund/Write Off Request Type**)

Procedure

To define a characteristic for a refund or write off request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a refund or *w*rite off request type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Refund/Write Off Request Type**.	**Note:** This field is required when you are defining a characteristic for the refund or write off request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the refund or write off request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the refund or write off request type, click the **Add** (+) *i*con and then repeat step *2*.

Note: However, if you want to remove a characteristic from the refund or write off request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Refund or Write Off Request Type

Prerequisites

To edit a refund or write off request type, you should have:

- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type code defined in the application

Procedure

To edit a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
   The **Refund/Write Off Request Type** screen appears.
4. In the **Refund/Write Off Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the refund or write off request type whose details you want to edit.

   The **Refund/Write Off Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the refund or write off request type.
   - **Characteristics** - Used to define the characteristics for the refund or write off request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Displays the refund or write off request type.	Not applicable
Business Object	Indicates the business object which is used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object using which you want to create the respective refund or write off request. The valid values are: • **Refund Request (i.e. C1-RefundReq)** - Enables you to refund the bills and payments using a refund request type. • **Refund Request - Display BO (i.e. C1-RefundReq2** - Enables you to display the details of a refund request type. • **Write Off Request (i.e. C1-WORequest)** - Enables you to write off the bills using a write off request type. • **Write Off Request - Display BO (i.e. C1-WORequest2)** - Enables you to display the details of a write off request type.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the refund or write off request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a refund or write off request type to **Inactive** if there are refund or write off requests which are created using the refund or write off request type and are currently in the **Draft** or **Approval In Progress** status.	Yes
Action	Indicates whether the request type is created for refund or write off. The valid values are: • Refund • Write Off **Note:** It is a read-only field.	Not applicable
Minimum Refund Amount	Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment. **Note:** This field appears when the **Refund** option is selected from the **Action** list.	Yes
Write Up Adjustment Type	Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount. **Note:** The **Search** (🔍) icon appears corresponding to the **Write Up Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Write Up Adjustment Type** field. This field appears when the **Refund** option is selected from the **Action** list. You can create the write up adjustments (only using those adjustment types) where the **A/P Request Type Code** option is not set to **Refund**.	Yes
Approval Required	Used to indicate whether approval is required while creating a refund or write off adjustment using the refund or write off request type.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the refund or write off amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while adding or updating a refund or write off adjustment using the refund or write off request type. **Note:** This field appears when the **Approval Required** option is selected.	No
Refund Adjustment Type	Used to indicate the adjustment type using which refund adjustment must be created. By default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request. **Note:** The **Search** (🔍) icon appears corresponding to the **Refund Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Refund Adjustment Type** field. This field appears when the **Refund** option is selected from the **Action** list. You can create refund adjustments (only using those adjustment types) where the **A/P Request Type Code** option is set to **Refund**.	Yes
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Refund Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Refund Adjustment Type** field. This field appears when the **Write Off** option is selected from the **Action** list. You can create write off adjustments (only using those adjustment types) where the **A/P Request Type Code** option is not set to **Refund**.	
Netting Contract Type	Used to indicate the contract type used for netting transactions while processing refunds or write-offs.	No

Tip: Alternatively, you can click the **Edit** button in the **Refund/Write Off Request Type** zone to edit the details of the refund or write off request type.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the refund or write off request type, if required.
7. Click **Save**.
   The changes made to the refund or write off request type are saved.

How to define a characteristic for a refund or write off request type	Defining a Characteristic for a Refund or Write Off Request Type on page 1832

Copying a Refund or Write Off Request Type

Instead of creating a refund or write off request type from scratch, you can create a new refund or write off request type using an existing refund or write off request type. This is possible through copying a refund or write off request type. On copying a refund or write off request type, the details including the characteristics are copied to the new refund or write off request type. You can then edit the details, if required.

Prerequisites

To copy a refund or write off request type, you should have:

Copyright © 2026, Oracle and/or its affiliates.

- Refund or Write Off request type (whose copy you want to create) defined in the application
- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type code defined in the application

Procedure

To copy a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
   The **Refund/Write Off Request Type** screen appears.
4. In the **Refund/Write Off Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the refund or write off request type whose copy you want to create.

   The **Refund/Write Off Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details for the refund or write off request type.
   - **Characteristics** - Used to define the characteristics for the refund or write off request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the business object which is used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object using which you want to create the respective refund or write off request. The valid values are: • **Refund Request (i.e. C1-RefundReq)** - Enables you to refund the bills and payments using a refund request type. • **Refund Request - Display BO (i.e. C1-RefundReq2** - Enables you to display the details of a refund request type. • **Write Off Request (i.e. C1-WORequest)** - Enables you to write off the bills using a write off request type. • **Write Off Request - Display BO (i.e. C1-WORequest2)** - Enables you to display the details of a write off request type.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No
Status	Used to indicate the status of the refund or write off request type. The valid values are: • Active • Inactive	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot change the status of a refund or write off request type to **Inactive** if there are refund or write off requests which are created using the refund or write off request type and are currently in the **Draft** or **Approval In Progress** status.	
Action	Used to indicate whether the request type is created for refund or write off. The valid values are: • Refund • Write Off	Yes
Minimum Refund Amount	Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment. **Note:** This field appears when the **Refund** option is selected from the **Action** list.	Yes
Write Up Adjustment Type	Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount. **Note:** The **Search** (🔍) icon appears corresponding to the **Write Up Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Write Up Adjustment Type** field. This field appears when the **Refund** option is selected from the **Action** list. You can create the write up adjustments (only using those adjustment types) where the **A/P Request Type Code** option is not set to **Refund**.	Yes
Approval Required	Used to indicate whether approval is required while creating a refund or write off adjustment using the refund or write off request type.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the refund or write off amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Field Name	Field Description	Mandatory (Yes or No)
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while adding or updating a refund or write off adjustment using the refund or write off request type. **Note:** This field appears when the **Approval Required** option is selected.	No
Refund Adjustment Type	Used to indicate the adjustment type using which refund adjustment must be created. By default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request. **Note:** The **Search** (🔍) icon appears corresponding to the **Refund Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Refund Adjustment Type** field. This field appears when the **Refund** option is selected from the **Action** list. You can create refund adjustments (only using those adjustment types) where the **A/P Request Type Code** option is set to **Refund**.	Yes
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request. **Note:** The **Search** (🔍) icon appears corresponding to the **Refund Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Refund Adjustment Type** field. This field appears when the **Write Off** option is selected from the **Action** list. You can create write off adjustments (only using those adjustment types) where the **A/P Request Type Code** option is not set to **Refund**.	Yes
Netting Contract Type	Used to indicate the contract type used for netting transactions while processing refunds or write-offs.	No

Copyright © 2026, Oracle and/or its affiliates.

> **Tip:** Alternatively, you can click the **Duplicate** button in the **Refund/Write Off Request Type** zone to create a copy of the refund or write off request type.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the refund or write off request type, if required.
7. Click **Save**.
   The new refund or write off request type is defined.

Deleting a Refund or Write Off Request Type

Procedure

To delete a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
   The **Refund/Write Off Request Type** screen appears.
4. In the **Refund/Write Off Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column *c*orresponding to the refund or write off request type that you want to delete.

   A message appears confirming whether you want to delete the refund or write off request type.

> **Note:** You can delete a refund or write off request type when you have not defined a refund or write off request using the refund or write off request type.

> **Tip:** Alternatively, you can click the **Delete** button in the **Refund/Write Off Request Type** zone to delete the refund or write off request type.

5. Click **OK**.
   The refund or write off request type is deleted.

Viewing the Refund or Write Off Request Type Details

Procedure

To view the details of a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.
   The **Refund/Write Off Request Type** screen appears.
4. In the **Refund/Write Off Request Type List** zone, click the **Broadcast** (ᯤ) icon corresponding to the *r*efund or write off request type whose details you want to view.
   The **Refund/Write Off Request Type** zone appears.
5. View the details of the refund or write off request type in the **Refund/Write Off Request Type** zone.

Refund/Write Off Request (Used for Searching)

The **Refund/Write Off Request** screen allows you to search for a refund or write off request using various search criteria. It also allows you to create a refund or write off request. It contains the following zone:

- Search Refund/Write Off Request on page 1841

Through this screen, you can navigate to the following screens:

- Refund Request (Used for Viewing) on page 1854
- Write Off Request (Used for Viewing) on page 1892

Search Refund/Write Off Request

The **Search Refund/Write Off Request** zone allows you to search for a refund and write off request using various search criteria. It contains the following two sections:

Copyright © 2026, Oracle and/or its affiliates.

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a refund or write off request using the request, payment, or bill details. The valid values are: • Request Details • Payment Details • Bill Details **Note:** By default, the **Request Details** option is selected.	Yes
Action	Used to indicate whether you want to search for a refund or write off request. The valid values are: • Refund • Write Off **Note:** This field appears when the **Request Details** or **Bill Details** option is selected from the **Search By** list.	No
Refund/Write Off Request Type	Used to search for refund or write off requests which are created using a particular refund or write off request type. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those refund or write off requests types which are already defined in the system. The values appear in this list when the respective refund or write off type is selected from the **Action** list.	No
Status	Used to search for refund or write off requests with a particular status. The valid values are: • Approval In Progress • Cancelled • Deferred Cancel • Deferred Processing • Deferred Void • Draft • Hold • Processed • Rejected • Voided **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. **Tip:** The **Voided** status is applicable when you want to search a refund request whereas the **Cancelled** status is applicable when you want to search a write off request.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
User ID	Used to search for refund or write off requests which are created by a particular user. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search**( ) icon appears corresponding to this field. On clicking the **Search** icon the **User Search** window appears.	No
Refund/Write Off Request ID	Used to search a particular refund or write off request. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Creation From Date	Used to search for refund or write off requests which are created on or after the specified date. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. Simultaneously, you can also specify the time or select it using the **Time Picker** ( ) icon corresponding to the field. The creation from date cannot be later than the created to date.	No
Account ID	Used to search for refund or write off requests which include the bills of a particular account. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search**( ) icon appears corresponding to this field. On clicking the Search icon the **Account Search** window appears.	No
Created To	Used to search for refund or write off requests which are created till a specified date.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Request Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. Simultaneously, you can also specify the time or select it using the **Time Picker** ( ) icon corresponding to the field. The created to date cannot be earlier than the creation from date.	
Payment Event ID	Used to search for refund requests (through which a payment event is created) for refund purposes. **Note:** This field appears when the **Payment Details** option is selected from the **Search By** list. The **Search** () icon appears corresponding to this field. On clicking the **Search** icon the **Payment Event Search** window appears.	No
Payor Account ID	Used to search for refund requests which are created for a particular payor account. **Note:** This field appears when the **Payment Details** option is selected from the **Search By** list. The **Search** ( ) icon appears corresponding to this field. On clicking the **Search** icon the **Account Search** window appears.	No
Payor Name	Used to search for refund requests which are created for a particular payor. **Note:** This field appears when the **Payment Details** option is selected from the **Search By** list.	No
Payment Date	Used to search for refund requests which include payments made on a particular date. **Note:** This field appears when the **Payment Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
MICR ID	Used to search for refund requests which include payments made with a particular MICR code.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Payment Details** option is selected from the **Search By** list.	
Check Number	Used to search for refund request which include payments made through a particular check number. **Note:** This field appears when the **Payment Details** option is selected from the **Search By** list.	No
Bill ID	Used to search for refund or write off requests which include bill segments or adjustments of a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon the **Bill Search** window appears.	No
Bill Date From	Used to search for refund or write off requests which include bill segments or adjustments which are generated on or after the specified date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field. The bill date from date cannot be later than the bill date to date.	No
Bill Date To	Used to search for refund or write off requests which include bill segments or adjustments which are created till a specified date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field. The bill date to date cannot be earlier than the bill date from date.	No

Note: You must specify at least one search criterion while searching for a refund or write off request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Creation Date Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request. **Note:** It has a link. On clicking the link, the **Refund Request** or **Write Off Request** screen appears where you can view the details of the respective request.
Status	Indicates the status of the refund or write off request. The valid values are: • Approval In Progress • Cancelled • Deferred Cancel • Deferred Processing • Deferred Void • Draft • Hold • Processed • Rejected • Voided
Action	Indicates whether the request is created for refund or write off. The valid values are: • Refund • Write Off **Note:** This column appears when the **Request Details** or **Bill Details** option is selected from the **Search By** list.
Refund/Write Off Amount	Displays the total refund or write off amount. **Note:** This column appears when the **Request Details** or **Bill Details** option is selected from the **Search By** list.
Refund Amount	Displays the total amount available for refund. **Note:** This column appears when the **Payment Details** option is selected from the **Search By** list.
Account Information	Displays additional information about the account for which the refund or write off request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Created By	Indicates the user who has created the refund or write off request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

Searching for a Refund or Write Off Request

Prerequisites

To search for a refund or write off request, you should have:

- Refund or Write Off request types defined in the application

Procedure

To search for a refund or write off request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request** sub-menu.
   The **Refund/Write Off Request** screen appears.
4. Enter the search criteria in the **Search Refund/Write Off Request** zone depending on whether you want to *s*earch for a refund or write off request.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of refund or write off requests that meet the search criteria appears in the **Search Results** section.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application.
- Adjustment types defined in the application where the **A/P Request Type Code** flag is set to **Refund**.

Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the Account Receivable Central screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. **c.** Search for the bill in the **Account Receivable Central** screen. **d.** In the **Search Results** section, select the respective bill and then click the **Refund** button. **Note:** You can select only one bill at a time (where the outstanding balance is non-zero) while creating a refund request from the **Account Receivable Central** screen.
Define a refund request from the Refund Request screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**. A sub-menu appears. **c.** Click the **Add** option from the **Refund/Write Off Request** sub-menu.
Define a refund request from the Payment Event Summary screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Payments** and then click **Payment Event Summary**. **c.** Search for the payment event (whose payments you want to refund) in the **Payment Event Summary** screen. **d.** In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the payment event whose payments you want to view. The **Payments** zone appears. **e.** Select the option corresponding to the payments that you want to refund. **f.** Click the **Refund** button in the **Payments** zone. **Note:** The system allows you to refund only those payments which are in the **Frozen** status and are matched against the suspense or excess credit contract.

The **Select Request Type** screen appears. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Action	Used to indicate the type of request that you want to create. The valid values are: • Refund • Write Off **Note:** If you are creating a refund request (for a bill or payment) through the **Account Receivable Central** or **Payment Event Summary** screen, the system by default sets the action to **Refund** and the field is non-editable. This field is editable only when the refund request is created from the **Refund/Write Off Request** screen.	Not applicable
Refund/Write Off Request Type	Used to indicate the request type using which you want to create the refund request. **Note:** The refund request types appear only when the **Refund** option is selected from the **Action** list. On selecting the respective action from the **Action** list, the **Refund or Write Off Request Type** list is populated.	Yes
Account	Used to indicate the account for which you want to create the refund request. **Note:** If you are creating a refund request (for a bill or payment) via the **Account Receivable Central** or **Payment Event Summary** screen, the system by default sets the action to **Refund** and the field is non-editable. This field is editable if the refund request is created from the **Refund/Write Off Request** screen. The **Search** icon appears corresponding to this field. On clicking the **Search** icon the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Account** field.	Yes
Adjustment Level	Used to indicate the adjustment level for which you want to create the refund request.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you are creating a refund request (for a bill or payment) via the **Account Receivable Central** or **Payment Event Summary** screen, the system by default sets the action to **Refund** and the field is non-editable. By default, this field is disabled.	

Tip: Alternatively, you can access the **Select Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request** screen.

2. Select the required refund request type from the respective field.
3. Click **Save**.
   The refund request is created and the status of the refund request is set to **Draft**. The **Refund/Write Off Request** screen appears with the details of the refund request.

Note: The refund request is created only for those outstanding bills where the outstanding amount is less than zero.

4. Override the address if you want to send the refund amount to a different address other than the address of the account's main customer, if required.
5. Add the payments, payment events, or credit bill line items which you want to refund, if required.
6. Edit the refund amount of the respective entity, if required.
7. Define characteristics for the refund request, if required.

Creating a Write Off Request

Prerequisites

Copyright © 2026, Oracle and/or its affiliates.

To create a write off request, you should have:

- Write off request types defined in the application.
- Adjustment types defined in the application where the **A/P Request Type Code** flag is not set to **Refund**.

Procedure

To create a write off request:

1. Do either of the following:

If you want to...	Then...
Define a write off request from the Account Receivable Central screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. **c.** Search for the bill in the **Account Receivable Central** screen. **d.** In the **Search Results** section, select the respective bill and then click **Write Off** button.
	Note: You can select only one bill at a time (where the outstanding balance is non-zero) while creating a write off request from the **Account Receivable Central** screen.
Define a write off request from the Write Off Request screen	**a.** Click the **Main** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Refund/Write Off Request**. A sub-menu appears. **c.** Click the **Add** option from the **Refund/Write Off Request** sub-menu.

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	Used to indicate the type of request which you want to create. The valid values are: • Refund • Write Off	Yes
	Note: If you are creating a write off request for a bill through the **Account Receivable Central** screen, the system by default sets the action to **Write Off** and the field is non-editable. This field is editable only when the write off request is created from the **Refund/Write Off Request** screen.	
Refund/Write Off Request Type	Used to indicate the request type using which you want to create the write off request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The write off request types appear only when the **Write Off** option is selected from the **Action** list. On selecting the respective action from the **Action** list, the **Refund or Write Off Request Type** list is populated.	
Account	Used to indicate the account for which you want to create the write off request. **Note:** If you are creating a write off request for a bill through the **Account Receivable Central** screen, the system by default sets the action to **Write Off** and the field is non-editable. This field is editable only when the write off request is created from the **Refund/Write Off Request** screen. The **Search** (🔍) icon appears corresponding to the respective field. On clicking the **Search** icon the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Account** field.	Yes
Adjustment Level	Used to indicate the adjustment level for which you want to create the write off request. **Note:** If you are creating a write off request for a bill through the **Account Receivable Central** screen, the system by default sets the action to **Write Off** and the field is non-editable. By default, this field is disabled.	No

Tip: Alternatively, you can access the **Select Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request** screen.

2. Select the required write off request type and account from the respective field.
3. Click **Save**.

   The write off request is defined and the status of the write off request is set to **Draft**. The **Write Off Request** screen appears with the details of the write off request.

Note: The write off request is created only for those outstanding bills where the outstanding amount is greater than zero.

4. Edit or delete the write off details or debit bill line items from the write off request, if required.
5. Edit the adjustment level for the write off request, if required.
6. Define characteristics for the write off request, if required.

Refund Request (Used for Viewing)

Once you create a refund request, the **Refund Request** screen allows you to:

- Edit and delete a refund request
- View the details of a refund request
- Submit a refund request for approval
- Approve or reject a refund request
- View the log of a refund request
- Add a log entry for a refund request
- Void a refund request

This screen consists of the following tabs:

- Refund Request - Main on page 1854
- Refund Request - Bills on page 1860

> **Note:** The **Bills** tab appears only when the refund request is in the **Draft** status.

- Refund Request - Payments and Adjustments on page 1863

> **Note:** The **Payments and Adjustments** tab appears only when the refund request is in the **Draft** status.

- Refund Request - Log on page 1869

Refund Request - Main

The **Main** tab displays information about the refund request. It contains the following zones:

- Refund Request on page 1854
- Refund Details on page 1857

> **Note:** The **Refund Details** zone appears when the refund request is in **Draft** status and the total refund amount is greater than zero.

- Bill Line Items on page 1858

Refund Request

The **Refund Request** zone displays the details of the refund request. This zone contains the following sections:

- **Main** - Displays the basic information about the refund request. It contains the following fields:

Field Name	Field Description
Refund Request Information	Displays information about the refund request.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Refund Request Type	Indicates the refund request type using which the refund request is created. **Note:** It has a link. On clicking the link, the **Refund/Write Off Request Type** screen appears where you can view the details of the respective refund request type.
Status	Indicates the status of the refund request. The valid values are: • Approval In Progress • Cancelled • Deferred Cancel • Deferred Processing • Deferred Void • Draft • Hold • Processed • Rejected • Voided
Status Reason	Indicates the reason why the refund request is rejected or voided. **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the rejected or voided reason. This field appears when the refund request is in either **Rejected** or **Voided** status.
Adjustment Level	Indicates the adjustment level for which you want to create the refund request.
Account Information	Indicates the account for which the refund request is created. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Person Name	Indicates the person for whom the refund request is created.
Override Address	Indicates whether the account's mailing address is overridden.
Address 1	Displays the house number and apartment name.
Address 2	Displays the street name.
Address 3	Indicates the landmark, if available.
Address 4	Displays the village or town name.
City	Displays the city name.
State	Displays the state name.
Country	Displays the country name.
Postal	Displays the postal or zip code.
Comments	Displays additional information about the refund request.
Total Refund Amount	Displays the total refund amount.

- **Characteristics** - Lists the characteristics defined for the refund request. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the refund request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund request. **Note:** The **Edit** button appears when the refund request is in the **Draft** status.
Delete	Used to delete the refund request. **Note:** The **Delete** button appears when the refund request is in the **Draft** status.
Submit	Used to submit the refund request for approval. **Note:** The **Submit** button appears when the refund request is in the **Draft** status.
Approve	Used to approve the refund request. **Note:** The **Approve** button appears when: • The refund request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the refund request.
Reject	Used to reject the refund request. **Note:** The **Reject** button appears when: • The refund request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the refund request.
Void	Used to void the refund request. **Note:** The **Void** button appears when the refund request is in the **Processed** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the refund request status is updated
Create Date/Time	Displays the date and time when the refund request is created.

- **Characteristics** - Lists the characteristics of the refund request. It contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Refund Details

The **Refund Details** zone lists the payment events, payments, and credit bill line items (such as bill segments and adjustments) that you have added to the refund request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a payment, payment event, bill, bill segment, or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Refund Amount	Displays the amount that must be refunded. **Note:** By default, the amount which is eligible for refund appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created or against which the payment is matched. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created. **Note:** By default, the adjustment type specified in the refund request type appears in this column. You can change the adjustment type, if required, by editing the refund request.
Adjustment Information	Displays additional information about the refund adjustment. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment. Data in this column appears only when the refund request is in the **Processed** status. The information string appears when an algorithm of the **C1-ADI-INFO** algorithm type is attached to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill. Data in this column appears only when the refund request is in the **Processed** status and the entity type is **Bill**.
Payment Refunded	Displays the refunded amount. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Payment** screen appears with the details of the respective bill. Data in this column appears only when the refund request is in the **Processed** status and the entity type is either **Payment** or **Payment Event**.

In addition, this section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

A check box appears corresponding to each refund record. To update the details of a refund record, select the check box corresponding to the refund record and then click the **Edit** button. You can also select multiple refund records at the same time. You can select one or more refund records and click either the **Edit** or **Delete** button in this zone to perform the respective action. In addition, you can select the check box corresponding to the column header. This allows you to select all the refund records listed in the respective zone.

To delete a refund request, select the check box corresponding to the refund record and click the **Delete** button. You can also select multiple refund records at the same time.

You can filter the list using the **Entity Type** and **Entity Amount** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment, or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. The system calculates the request amount using the following formula: `Request Amount = Entity Amount-Refund Amount` **Note:** In case the bill segment or adjustment has a debit balance, the eligible amount for refund would be zero.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the write off adjustment. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment. The data appears in this column only when the status of the write off request is **Processed**. The information string appears when an algorithm of the **C1-ADI-INFO** algorithm type is attached to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Copyright © 2026, Oracle and/or its affiliates.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

By default, the **Bill Line Items** zone does not appear in the **Refund Request** screen. It appears only when you click the **Broadcast** (⦾) icon in the **Refund Details** zone corresponding to the entity type where the entity type is set to **Bill**.

A check box appears corresponding to each bill line item. To add a bill line item to the refund request, click the check box corresponding to the bill line item and click the **Add** button. You can also select multiple bill line items at the same time. In addition, you can select the check box corresponding to the column header. This allows you to select all the bill line items listed in the respective zone. For more information, see Adding a Credit Bill Line Item to the Refund Request on page 1875

You can filter the list using the **Entity Type** and **Entity Amount** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (⧩) icon in the upper right corner of this zone.

Refund Request - Bills

The **Bills** tab allows you to search bills with credit line items such as credit bill segments and adjustments that you want to refund. It contains the following zones:

- Search Bills on page 1860
- Bill Line Items on page 1862

Search Bills

The **Search Bills** zone allows you to search for bills using various search criteria. It also lists the completed bills of the account which either have a credit balance or one or more credit line items, such as bill segments and adjustments. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using bill or bill and price item details. The valid values are: • Bill Details • Bill and Price Item Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search a particular bill. **Note:** The **Search** 🔍 icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon the **Bill Search** window appears.	No
Bill Date From	Used to search for bills which are created on or after the specified date.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. The bill date from date cannot be later than the bill date to date.	
Bill Date To	Used to search for bills which are created till a particular date.	No
	Note: You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. The bill date to date cannot be earlier than the bill date from date.	
Price Item	Used to search for bills which are created for a particular price item.	No
	Note: This field appears when you select **Bill and Price Item Details** option from the **Search By** list. You can search for a price item by clicking the **Search** () icon corresponding to the **Price Item** field. On clicking the **Search** icon the **Price Item Search** window appears.	

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, a context menu ( ) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Amount	Displays the total amount of the bill.

In addition to above columns, this screen contains following button:

Button Name	Button Description
Add	Used to add a bill to the refund request.

Copyright © 2026, Oracle and/or its affiliates.

Note:

On clicking the **Broadcast** ( ) icon corresponding to the bill, the **Bill Line Items** zone appears where you can view the details of the respective bill.

A check box appears corresponding to each bill. To add a bill to the refund request, click the check box corresponding to the payment and click the **Add** button. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to select all the bills listed in the respective zone. For more information, see Adding a Credit Bill to the Refund Request on page 1873

If you want to refund a bill with a credit balance (including all the credit line items of the respective bill) you need to select the check box corresponding to the bill and click the **Add** button in the **Search Results** section. The system adds all the credit bill segments and bill adjustments to the **Refund Details** zone in the **Main** tab of the **Refund Request** screen. However, if you select a bill (with a credit balance) which contains one or more debit line items or if you select a bill (with a debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items in the refund request directly by adding the bill. In such case, you need to individually select the credit bill segments and bill adjustments, and add them in the **Refund Details** zone in the **Main** tab of the **Refund Request** screen.

If a debit bill appears in the **Search Results** section which contains one or more debit line items where the eligible amount is zero, the system does not add such a bill to the **Refund Details** zone in the **Main** tab of the **Refund Request** screen.

If a refund request is currently in progress for a credit bill segment or adjustment of a bill, then the bills of the respective account do not appear in the **Search Bills** zone. In addition, a bill with all debit line items do not appear in the **Search Bills** zone.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments, and the adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. In addition, a context menu ( ) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: The content menu appears only when the entity is a bill segment. It has a link. If the entity is a bill segment, the **Bill Segment** screen appears where you can view the details of the respective bill segment. However, if the entity is an adjustment, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Entity Amount	Displays the bill segment or adjustment amount.
Eligible Amount	Displays the bill segment or adjustment amount which is eligible for refund. The system calculates the eligible amount using the following formula: `Eligible Amount = Entity Amount-Amount Refunded`

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Amount Refunded	Displays the amount which is already refunded to the account.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.

Button Name	Button Description
Add	Used to add a bill line item to the refund request.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

A check-box appears corresponding to each bill line item. To add a bill line item to the refund request, click the check box corresponding to the bill line item and click the **Add** button. You can also select multiple bill line items at the same time. In addition, you can select the check box corresponding to the column header. This allows you to select all the bill line items listed in the respective zone. For more information, see Adding a Credit Bill Line Item to the Refund Request on page 1875

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast** (⊙) icon corresponding to the bill in the **Search Bills** zone.

You can filter the list using the **Bill Segment Date From** and **To** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Refund Request - Payments and Adjustments

The **Payments and Adjustments** tab allows you to search for payment events or individual payments that you want to refund using various search criteria. It contains the following zones:

- Search Payment Events and Adjustments on page 1863
- Payments and Adjustments on page 1867

Search Payment Events and Adjustments

The **Search Payment Events and Adjustments** zone allows you to search for payment events and adjustments using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for payment events or adjustments using the payment or adjustment details. The valid values are:	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Payment Details • Adjustment Details **Note:** By default, the **Payment Details** option is selected.	
Payment Event ID	Used to search for payment events which are created using a particular payment event ID. **Note:** This field appears when you select **Payment Details** option from the **Search By** list.	No
Suspense/Excess Credit Contract	Used to search for payment events which include payments that are made against a particular suspense or excess credit contract. **Note:** The suspense and excess credit contracts appear in the **Suspense/Excess Credit Contract** list only when these contracts are associated with the account. This field appears when you select **Payment Details** option from the **Search By** list.	No
Check Number	Used to search for a payment event which includes a payment made through a particular check. **Note:** This field appears when you select **Payment Details** option from the **Search By** list.	No
Payment Date From	Used to search for payment events which include payments created from a particular date onwards. **Note:** This field appears when you select **Payment Details** option from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. The payment date from date cannot be later than the payment date to date.	No
MICR ID	Used to search for payment events which include payments which contain a particular MICR code. **Note:** This field appears when you select **Payment Details** option from the **Search By** list.	No
Payment Date To	Used to search for payment events which include payments created till a particular date.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select **Payment Details** option from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. The payment date to date cannot be earlier than the payment date from date.	
Adjustment ID	Used to search for adjustments with a particular adjustment ID.	No
	Note: This field appears when you select **Adjustment Details** option from the **Search By** list. The **Search** icon appears corresponding to this field. On clicking the **Search** icon the **Adjustment Search** window appears.	
Adjustment Type	Used to search for adjustments which are created using a particular adjustment type.	Yes
	Note: This field appears when you select **Adjustment Details** option from the **Search By** list.	
Account ID	Used to search for adjustments which are created for a particular account ID.	No
	Note: This field appears when you select **Adjustment Details** option from the **Search By** list. The **Search** icon appears corresponding to this field. On clicking the Search icon the **Account Search** window appears.	
Contract ID	Used search for adjustments which are created for an account linked with a particular contract ID.	No
	Note: This field appears when you select **Adjustment Details** option from the **Search By** list. The **Search** icon appears corresponding to this field. On clicking the Search icon the **Contract Search** window appears.	
Creation Date From	Used to search for adjustments which include refund adjustments created from a particular date onwards.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Adjustment Details** option from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. The creation date from date cannot be later than the creation date to date.	
Creation Date To	Used to search adjustment which include refund adjustments created till a particular date. **Note:** This field appears when you select the **Adjustment Details** option from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. The creation date to date cannot be earlier than the creation date from date.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Payment Event	Indicates the payment event whose frozen payments you want to refund. **Note:** It has a link. On clicking the link, the **Payment Event** screen appears where you can view the details of the respective payment event. This column appears when you select the **Payment Details** option from the **Search By** list.
Payment Date	Displays the date when the payment event was created. **Note:** This column appears when you select the **Payment Details** option from the **Search By** list.
Tender Amount	Displays the tender amount associated with the payment event. **Note:** This column appears when you select the **Payment Details** option from the **Search By** list.
Payment Event ID	Displays the event ID associated with each payment event ID. **Note:** This column appears when you select the **Payment Details** option from the **Search By** list.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Adjustment ID	Display the adjustment ID associated with each adjustment transaction. **Note:** This column appears when you select the **Adjustment Details** option from the **Search By** list.
Creation Date	Displays the date when the adjustment is created. **Note:** This column appears when you select the **Adjustment Details** option from the **Search By** list.
Adjustment Information	Displays the additional information about the adjustment. **Note:** This column appears when you select the **Adjustment Details** option from the **Search By** list. It has a link. On clicking the link, the **Adjustment** screen appears with the details of the respective adjustment.
Current Amount	Displays the adjustment amount. **Note:** This column appears when you select the **Adjustment Details** option from the **Search By** list.

Button Name	Button Description
Add	Used to add a payment event to the refund request.

On clicking the **Broadcast** (📡) icon corresponding to the payment event, the **Payments and Adjustment** zone appears where you can view the details of the respective payment event.

Note:

A check box appears corresponding to each payment event. To add the payments of a payment event to the refund request, select the check box corresponding to the payment event and then click the **Add** button. You can also select multiple payment events at the same time. You can select one or more payment events and click the **Add** button in this zone to add selected payment events to the refund request. In addition, you can select the check box corresponding to the column header. This allows you to select all the payment events listed in the respective zone. For more information, see Adding a Payment Event to the Refund Request on page 1870

Once you click the **Add** button, the system checks whether all the payments in the payment event are matched against the same suspense or excess credit contract, then the respective payment event is added in the **Refund Details** zone on the **Main** tab of the **Refund Request** screen. However, if the payments in the payment event are matched against different suspense or excess credit contracts, then all the payments of the payment event are added in the **Refund Details** zone on the **Main** tab of the **Refund Request** screen

If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account do not appear in the **Search Payment Event** zone.

Payments and Adjustments

The **Payments and Adjustments** zone lists only those payments which are created through the payment event and are currently in the **Frozen** status. This zone contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Payment ID	Indicates the payment to which the payment event is associated. **Note:** It has a link. On clicking the link, the **Payment** screen appears where you can view the details of the respective payment.
Payee Account	Indicates the account through which the payment is made. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective payee account.
Payment Amount	Displays the amount which is applied on the suspense or excess credit contracts.
Payment Currency	Indicates the currency in which the payment was made.
Payment Status	Indicates the status of the payment. The valid values are: • Incomplete • Error • Freezable • Frozen • Canceled
Match Type	Indicates the match type using which the payment is matched.
Match Value	Indicates the entity (such as bill, bill segment, or contract) against which the payment is matched.
Amount Refunded	Displays the amount which is already refunded to the payor account.

Button Name	Button Description
Add	Used to add a payment or an adjustment to the refund request.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

A check box appears corresponding to each payment. To add a payment to the refund request, click the check box corresponding to the payment and click the **Add** button. You can also select multiple payments at the same time. You can select one or more payments and click the **Add** button in this zone to add the selected payments to the refund request. In addition, you can select the check box corresponding to the column header. This allows you to select all the payments listed in the respective zone. For more information, see Adding a Payment to the Refund Request on page 1872

By default, the **Payments** zone does not appear in the **Payments** tab. It appears when you click the **Broadcast** (📡) icon corresponding to the payment event in the **Search Payment Events and Adjustments** zone.

You can filter the list using the **Payee Name** and **Payment Amount** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Copyright © 2026, Oracle and/or its affiliates.

Refund Request - Log

The **Log** tab contains the following zone:

- Refund Request Log on page 1869

Refund Request Log

The **Refund Request Log** zone lists the complete trail of actions performed on the refund request. This zone contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the refund request.
Details	Displays the details about the action performed on the refund request.
User	Indicates the user who has performed the action on the refund request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the refund request. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the refund request is rejected.

Note: You can manually add a log entry for the refund request by clicking the **Add Log Entry** link in the upper right corner of the **Refund Request Log** zone.

Defining a Characteristic for a Refund Request

Prerequisites

To define a characteristic for a refund request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund/Write Off Request**)

Procedure

To define a characteristic for a refund request:

1. Ensure that the **Characteristics** section is expanded when you are editing the refund request.

   The **Characteristics** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Refund Write Off Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the refund request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the refund request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the refund request, click the **Add** (+) icon and *t*hen repeat step 2.

Note: However, if you want to remove a characteristic from the refund request, click the **Delete** (🗑) icon corresponding to the characteristic.

How to create a refund request	Creating a Refund Request on page 1848

Adding a Payment Event to the Refund Request

Prerequisites

To add a payment event to the refund request, you should have:

- Payment and payment events created in the application.

Procedure

To add a payment event to the refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The refund request must be in the **Draft** status.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the refund request whose details you want to edit.
   The **Refund Request** screen appears.
3. Ensure that the **Payments and Adjustments** tab is selected.

> **Note:** If the payment events are already listed in the **Search Results** section, you can directly navigate to step 6, else resume as follows:

4. Click the **Expand Filter** button and enter the search criteria in the **Search Payment Events and Adjustments** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of payment events that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the payment event that you want to add in the refund request.

> **Note:** You can also select multiple payment events at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the payment events listed in the **Search Results** section in the refund request.

7. Click the **Add** button in the **Search Payment Events and Adjustments** zone.
   The **Confirm Adjustment Type** window appears. It contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Request Information	Displays information about the refund request	Not applicable
Adjustment Type	Used to indicate the adjustment type using which the refund adjustment should be created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type Search** field.	No

8. Modify the adjustment type, if required.
9. Click **OK**.
   A message appears indicating that the selected payment events are successfully added in the refund request.

Copyright © 2026, Oracle and/or its affiliates.

Note:

To view the payment event details, click the **Broadcast** (ᯤ) icon corresponding to the payment event in the **Search Results** section.

You can add only those payment events (in the refund requests) which are in the **Frozen** status.

If all the payments of a payment event are matched against the same suspense or excess credit contract, the system adds the respective payment event in the refund request. However, if all the payments of a payment event are matched against different suspense or excess credit contracts, the system only adds the payments of the respective payment event in the refund request.

Adding a Payment to the Refund Request

Prerequisites

To add a payment to the refund request, you should have:

- Payments created in the application.

Procedure

To add a payment to the refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.

   Note: The refund request must be in the **Draft** status.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the refund request whose details you want to edit.
   The **Refund Request** screen appears.
3. Ensure that the **Payments and Adjustments** tab is selected.

   Note: If the payment events are already listed in the **Search Results** section, you can directly navigate to step 6, else resume as follows:

4. Click the **Expand Filter** button and enter the search criteria in the **Search Payment Events and Adjustments** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of payment events that meet the search criteria appears in the **Search Results** section.
6. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the payment *e*vent whose payments you want to view.
   The **Payments and Adjustment** zone appears.
7. Select the check box corresponding to the payment that you want to add to the refund request.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You can also select multiple payments at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the payment listed in the respective zone.

8. Click the **Add** button in the **Payments and Adjustment** zone.
   The **Confirm Adjustment Type** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the refund request	Not applicable
Adjustment Type	Used to indicate the adjustment type using which the refund adjustment should be created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type Search** field.	No

9. Click **OK**.
   A message appears indicating that the selected payment events are successfully added to the refund request.

> **Note:** You can add only those payments (to the refund requests) which are in the **Frozen** status.

Adding a Credit Bill to the Refund Request

You can refund the credit bills to an account.

Prerequisites

To add a credit bill to the refund request, you should have:

- Bills that are in the **Complete** status for an account with one or more credit line items.

Procedure

To add a credit bill to the refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.

> **Note:** The refund request must be in the **Draft** status.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the refund request whose details you want to edit.
   The **Refund Request** screen appears.
3. Ensure that the **Bills** tab is selected.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** If the bills are already listed in the **Search Results** section, you can directly begin from step 6, else resume from step 4.

4. Click the **Expand Filter** button and enter the search criteria in the **Search Bills** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.
6. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add the credit bill to the refund request	**a.** In the **Search Bills** zone, select the check box corresponding to the bill that you want to add in the refund request. **Note:** You can also select multiple payment events at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the payment events listed in the **Search Results** section. **b.** Click the **Add** button in the **Search Bills** zone. **Note:** The default adjustment type selected in the refund request type should be an adjustment type where the A/P request type code is defined.
A bill has credit balance and one or more debit line items, and you want to add the bill with credit balance to the refund request	**a.** In the **Search Bills** zone, select the bills that you want to refund. **Note:** You can also select multiple payment events at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the payment events listed in the **Search Results** section. **b.** Click the **Add** button in the **Search Bills** zone. **Note:** The default adjustment type selected in the refund request type should be an adjustment type where the A/P request type code is defined.

The **Confirm Adjustment Type** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the refund request	Not applicable
Adjustment Type	Used to indicate the adjustment type using which the refund adjustment should be created.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type Search** field.	

7. Modify the adjustment type, if required.
8. Click **OK**.
   A message appears indicating that the selected bills are successfully added to the refund request.

Note:

If you select the bill (with credit balance) which contains one or more debit line items or if you select the bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the respective bill. In such case, you need to individually select the credit bill segments and bill adjustments, and add them to the refund request.

The system allows you to add the credit bill segments or bill adjustments in the **Refund Details** zone, irrespective of whether you select the credit bill, or credit bill segments, or bill adjustments.

To view the line items of the bill, click the **Broadcast** (📡) icon corresponding to the respective bill in the **Search Results** section.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Adding a Credit Bill Line Item to the Refund Request

You can refund the credit bill line items such as bill segments and adjustments of the account. While adding a credit bill line item to the refund request, you can either:

- Directly add all the credit line items of a bill to the refund request by adding the bill that contains all the bill segments and respective adjustments which have a credit balance.
- Individually add a credit bill segment or an adjustment of a bill (with one or more credit line items) to the refund request.

Prerequisites

To add a credit bill line item to the refund request, you should have:

- Bills that are in the **Complete** status for an account with one or more credit line items.

Procedure

To add a credit bill line item to the refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.

Note: The refund request must be in the **Draft** status.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the refund request whose details you want to edit.
   The **Refund Request** screen appears.
3. Ensure that the **Bills** tab is selected.

> **Note:** If the bills are already listed in the **Search Results** section, you can directly begin from step 6, else resume from step 4.

4. Click the **Expand Filter** button and enter the search criteria in the **Search Bills** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.
6. Do either of the following:

If...	Then...
A bill has all the credit line items and you want to add a particular credit bill line item to the refund request	**a.** In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the bill whose bill line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or bill adjustment that you want to add in the refund request. **Note:** You can also select multiple credit bill segments or bill adjustments at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the credit bill segments or bill adjustments listed in the **Search Results** section to the refund request. **c.** Click the **Add** button in the **Search Bills** zone.
A bill has a credit balance and contains one or more debit line items	**a.** In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the bill whose bill line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or bill adjustment that you want to add in the refund request. **Note:** You can also select multiple credit bill segments or bill adjustments at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the credit bill segments or bill adjustments listed in the **Search Results** section to the refund request. **c.** Click the **Add** button in the **Search Bills** zone.
A bill has debit balance and contains one or more credit line items	**a.** In the **Search Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the credit bill segment or bill adjustment that you want to add in the refund request.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
	Note: You can also select multiple credit bill segments or bill adjustments at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the credit bill segments or bill adjustments listed in the **Search Results** section to the refund request. **c.** Click the **Add** button in the **Search Bills** zone.

The **Confirm Adjustment Type** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the refund request	Not applicable
Adjustment Type	Used to indicate the adjustment type using which the refund adjustment should be created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type Search** field.	No

7. Modify the adjustment type, if required.
8. Click **OK**.
   A message appears indicating that the selected bill segments or bill adjustments are successfully added to the refund request.

Note:

The credit bill segments or bill adjustments are added in the **Refund Details** zone in the **Main** tab of the **Refund Request** screen.

If a refund request is currently in progress for a credit bill segment or bill adjustment, then bills of the respective account are not listed in the **Search Bills** zone. In addition, a bill with all the debit line items is also not listed in the **Search Bills** zone.

If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and bill adjustments, and then add them to the refund request.

The system adds the credit bill segments or bill adjustments to the **Refund Details** zone, irrespective of whether you select a credit bill, or credit bill segments, or bill adjustments.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Editing a Refund Request

Prerequisites

To edit a refund request, you should have:

- Adjustment types defined in the application where the **A/P Request Type Code** flag is set to **Refund**.

Procedure

To edit a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.
   The **Refund Request** screen appears.
3. Click the **Edit** button in the **Record Actions** section.

   The **Edit Refund Request** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the refund request.
   - **Characteristics** - Used to define the characteristics for the refund request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund Request Information	Displays information about the refund request.	Not applicable
Account Information	Indicates the account for which the refund request is created. **Note:** By default, this field is disabled. The respective account ID appears in this field where additional information about the account appears corresponding to the **Account Information** field.	Not applicable
Person Name	Used to indicate the person for whom the refund request is created. **Note:** The system maintains a log when you edit the person name in a refund request. A log is created in the following format: `Person Name is changed; Old Value: ' <OLD NAME>; New Value: <NEW NAME>`	No
Override Address	Used to indicate whether the account's mailing address must be overridden.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: By default, the address of the account's main customer appears in the following fields, such as, Address Line 1, Address Line 2, Address Line 3, Address Line 4, City, Country, State, and Postal. You can override the address in these fields, if required. The system maintains a log when you edit the address in a refund request. A log is created in the following format: `Address is changed; Old Value: ' <OLD ADDRESS>; New Value: <NEW ' ADDRESS>`	
Enter Address Manually	Used to manually enter or edit the address fields, such as, Address Line 1, Address Line 2, Address Line 3, Address Line 4, City, Country, State, and Postal.	No
Address Line 1	Used to specify the house number and apartment name. **Note:** This field is enabled only when you select the **Override Address** and **Enter Address Manually** options.	No
Address Line 2	Used to specify the street name. **Note:** This field is enabled only when you select the **Override Address** and **Enter Address Manually** options.	No
Address Line 3	Used to specify the landmark, if available. **Note:** This field is enabled only when you select the **Override Address** and **Enter Address Manually** options.	No
Address Line 4	Used to specify the village, town, or city name. **Note:** This field is enabled only when you select the **Override Address** and **Enter Address Manually** options.	No
City	Used to specify the city name.	No
Country	Used to specify the country name.	No
State	Used to specify the state name.	No
Postal	Used to specify the postal or zip code.	No
Comments	Used to specify additional information about the refund request.	No

4. Modify the details of the refund request, if required.
5. Define, edit, or remove characteristics of the refund request, if required.
6. Click **Save**.
   The changes made to the refund request are saved.

Editing the Refund or Bill Line Item Details

Prerequisites

To edit the refund or bill line item details, you should have:

- Adjustment types with A/P request type code defined in the application.

Procedure

To edit the refund or bill line item details:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the refund request whose refund or bill line item details you want to edit.
   The **Refund Request** screen appears. You can edit the refund or bill line items by either of the following ways:

If...	Then
You select the check box corresponding to the respective bill whose details *y*ou want to edit and click the **Edit** button available in the upper left corner of the **Refund Details** zone.	The **Edit Request Details** screen appears.
You click the **Broadcast** (ᯤ) icon corresponding to the respective bill in the **Refund Details** zone.	The **Bill Line Items** zone appears. **a.** Select the check box corresponding to the respective bill line item whose details *y*ou want to edit and click the **Edit** button available in the upper left corner of the **Bill Line Items** zone. The **Edit Request Details** screen appears.
	Note: This zone appears when the entity type is set to **Bill**. You can edit a bill line item from the refund request only when the refund request is in the **Draft** status.

Note: The **Edit Request Details** screen is a common screen used when you are editing the refund or bill line item details of a refund request.

The **Edit Request Details** screen contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the refund request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	Indicates the adjustment type for the refund request type. **Note:** You can search for an adjustment type by clicking the **Search**(🔍) icon corresponding to this field. On clicking the **Search** icon the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type Search** field.	No

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the refund request.

In addition to the above fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are: • Adjustments • Bill • Bill Segment • Payment Event • Payment
Entity ID	Displays the entity ID.
Entity Amount	Displays the bill segment or adjustment amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. The system calculates the request amount using the following formula: `Request Amount = Entity Amount-Refund Amount` **Note:** In case the bill segment or adjustment has a debit balance, the eligible amount for refund would be zero.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: By default, this field displays the adjustment type which is already associated with the respective refund request. You can search for an adjustment type by clicking the **Search**(🔍) icon corresponding to this field. On clicking the **Search** icon the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type Search** field.
Bill ID	Displays the bill ID.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

3. Modify the details of the refund or bill line items.
4. Click **Save**.
   The changes made to the refund or bill line items are saved.

Submitting a Refund Request

Prerequisites

To submit a refund request, you should have:

- Payment events, payments, or credit bill line items added in the refund request

Procedure

To submit a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the refund request that you want to submit.
   The **Refund Request** screen appears.
3. Click the **Submit** button in the **Refund Request** zone.

   The system behaves in the following manner:

If...	Then...
The **Approval Required** and **Hierarchical Approval** check boxes are selected in the refund request type using which the refund request is created	A To Do of the **C1-REFRQ** To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the refund request is changed to **Approval In Progress**.
The **Approval Required** check box is selected, but the **Hierarchical Approval** check box is not selected in the refund request type using which the refund request is created	A To Do of the **C1-REFRQ** To Do type is created and sent to the approver at the hierarchy level where the total refund amount falls within the threshold limit. In addition, the status of the refund request is changed to **Approval In Progress**.
The **Approval Required** check box is not selected in the refund request	The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to **Processed**.

Approving a Refund Request

You can view the number of refund requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the refund request based on the observations.

Note: The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To approve a refund request:

1. Do either of the following:

If you want to...	Then...
Approve a refund request through the Refund/ Write Off Request screen	**a.** Search for the refund request in the **Refund/Write Off Request** screen. **b.** In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the refund request which you want to review.
Approve a refund request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-REFRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
	The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the refund request that you want to review.

The **Refund Request** screen appears.

2. Review the details in the **Refund Request** screen.
3. If the information in the refund request is accurate, click the **Approve** button in the **Refund Request** zone.

The system behaves in the following manner:

If...	Then
The **Hierarchical Approval** check box is selected in the refund request type using which the refund request is created and the total refund amount is greater than the threshold amount specified at the next level in the approval hierarchy	A To Do of the **C1-REFRQ** To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the refund request remains as **Approval In Progress**.
The **Hierarchical Approval** check box is selected in the refund request type using which the refund request is created and the total refund amount is less than the threshold amount specified at the next level in the approval hierarchy	The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to **Processed**.
	Note: The refund adjustments are created in the **Frozen** status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the refund adjustments and on the corresponding financial transactions. If you are doing a partial refund for any entity, the corresponding match event status is set to **Open**. However, if you are refunding the entire eligible amount, the corresponding match event status is set to **Balanced**.
The **Hierarchical Approval** check box is not selected in the refund	The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to **Processed**.

Rejecting a Refund Request

Prerequisites

To reject a refund request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a refund request, you need to specify the reason why you want to reject the refund request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-RefundReq** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a refund request submitted by you.

Procedure

To reject a refund request:

1. Do either of the following:

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
Reject a refund request through the Refund/ Write Off Request screen	**a.** Search for the refund request in the **Refund/Write Off Request** screen. **b.** In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the refund request which you want to review.
Reject a refund request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Enter the **C1-REFRQ** To Do Type in the **To Do Type** field. **d.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **e.** In the **To Do Type for User Search** window, enter the **C1-WOREQ** To Do Type in the **To Do Type** field and click the **Search** button. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the refund request that you want to review.

The **Refund Request** screen appears.

2. Review the details in the **Refund Request** screen.
3. If the information in the refund request is incorrect, click the **Reject** button in the **Refund Request** zone.

   The **Reject Refund Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the refund request.	Yes
Comments	Used to specify additional information while rejecting the refund request.	No

Note: The **Reject** button appears when:

- The refund request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the refund request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the refund request is changed to **Rejected**.

Voiding a Refund Request

There might be situations when incorrect refund request is processed in the system. In such case, the system provides you with an ability to void or cancel the refund request. However, note that you can void a refund request when the refund request is in the **Processed** status.

Prerequisites

To void a refund request, you should have:

- Void reasons defined in the application

Note: While voiding a refund request, you need to specify the reason why you want to void the refund request. You can select the appropriate void reason when you have defined the reasons for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen.

Procedure

To void a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the refund request that you want to void.
   The **Refund Request** screen appears.
3. Click the **Void** button in the **Refund Request** zone.

   The **Void Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to void the refund request.	Yes
Comments	Used to specify additional information while voiding the refund request.	No

   Note: The **Void** button appears when the refund request is in the **Processed** status.
4. Select the void reason from the **Status Reason** list.
5. Click **Save**.
   The status of the refund request is changed to **Voided**.

Note: The **C1-REFVOID** algorithm cancels all the frozen adjustments that are created for the refund request which is in the **Processed** status.

Write Off Request (Used for Viewing)

Once you create a write off request, the **Write Off Request** screen allows you to:

- Edit and delete a write off request
- View the details of a write off request
- Submit a write off request for approval
- Approve or reject a write off request
- View the log of a write off request
- Add a log entry for a write off request
- Cancel a write off request

This screen consists of the following tabs:

- Write Off Request - Main on page 1892
- Write Off Request - Bills on page 1897

> **Note:** The **Bills** tab appears when the write off request is in the **Draft** status.

- Write Off Request - Log on page 1900

Write Off Request - Main

The **Main** tab displays information about the write off request. It contains the following zones:

- Write Off Request on page 1892
- Write Off Details on page 1894
- Bill Line Items on page 1896

Write Off Request

The **Write Off Request** zone displays the details of the write off request. This zone contains the following sections:

- **Main** - This section provides basic information about the write off request. It contains the following fields:

Field Name	Field Description
Write Off Request Information	Displays information about the write off request.
Write Off Request Type	Indicates the write off request type using which the write off request is created. **Note:** It has a link. On clicking the link, the **Refund/Write Off Request Type** screen appears where you can view the details of the write off request type.
Status	Indicates the status of the write off request. The valid values are: • Approval In Progress

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	• Cancelled • Deferred Cancel • Deferred Processing • Deferred Void • Draft • Hold • Processed • Rejected • Voided
Status Reason	Indicates the reason why the write off request is rejected or cancelled.
	Note: This field appears when the write off request is in the **Rejected** or **Canceled** status. It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the rejected or canceled reason.
Account Information	Indicates the account for which the write off request is created.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Comments	Displays additional information about the write off request.
Total Write Off Amount	Displays the total write off amount.
Adjustment Level	Indicates the adjustment level for which you want to create the write off request.

- **Characteristics** - Lists the characteristics defined for the write off request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the write off request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the write off request.
	Note: The **Edit** button appears when the write off request is in the **Draft** status.
Delete	Used to delete the write off request.
	Note: The **Delete** button appears when the write off request is in the **Draft** status.
Submit	Used to submit the write off request for approval.
	Note: The **Submit** button appears when the write off request is in the **Draft** status.
Approve	Used to approve the write off request.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Approve** button appears when: • The write off request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the write off request.
Reject	Used to reject the write off request.
	Note: The **Reject** button appears when: • The write off request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the write off request.
Cancel	Used to cancel the write off request.
	Note: The **Cancel** button appears when the write off request is in the **Processed** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the write off request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the write off request status is updated.
Create Date/Time	Displays the date and time when the write off request is created..

Write Off Details

The **Write Off Details** zone lists the debit bill line items (such as bill segments and adjustments) that you have added to the write off request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Write Off Amount	Displays the amount that must be written off.
	Note: By default, the amount eligible for write off appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created.
	Note: By default, the adjustment type specified in the write off request type appears in this column. You can change the adjustment type, if required, by editing the write off request.
Adjustment Information	Displays additional information about the write off adjustment.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment. The data appears in this column when the status of the write off request is **Processed**. The information string appears when an algorithm of the **C1-ADI-INFO** algorithm type is attached to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
Bill Information	Displays additional information about the bill. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

A check box appears corresponding to each write off record. To update the details of a write off record, select the check box corresponding to the write off record and then click the **Edit** button. You can also select multiple write off records at the same time. You can select one or more write off records and click either the **Edit** or **Delete** button in this zone to perform the respective action. In addition, you can select the check box corresponding to the column header. This allows you to select all the write off records listed in the respective zone.

To delete a write off request, select the check box corresponding to the write off record and click the **Delete** button. You can also select multiple write off records at the same time.

You can filter the list using the **Entity Type** and **Entity Amount** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (⧩) icon in the upper right corner of this zone.

Copyright © 2026, Oracle and/or its affiliates.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments, and adjustments of a bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Write Off Amount	Displays the bill segment or adjustment amount which is eligible for write off. The system calculates the request amount using the following formula: `Request Amount = Entity Amount-Write Off Amount` **Note:** If the bill segment or adjustment has credit balance, the eligible amount for write off would be zero.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, a context menu ( ) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment. The data appears in this column only when the status of the write off request is **Processed**. The information string appears when an algorithm of the **C1-ADI-INFO** algorithm type is attached to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Copyright © 2026, Oracle and/or its affiliates.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

By default, the **Bill Line Items** zone does not appear in the **Write Off Request** screen. It appears only when you click the **Broadcast** (ᯤ) icon in the **Write Off Details** zone corresponding to the entity type where the entity type is set to **Bill**.

A check box appears corresponding to each bill line item. To add a bill line item to the write off request, click the check box corresponding to the bill line item and click the **Add** button. You can also select multiple bill line items at the same time. In addition, you can select the check box corresponding to the column header. This allows you to select all the bill line items listed in the respective zone. For more information, see Adding a Debit Bill to the Write Off Request on page 1902

You can filter the list using the **Entity Type** and **Entity Amount** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Write Off Request - Bills

The **Bills** tab allows you to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:

- Search Bills on page 1897
- Bill Line Items on page 1899

Search Bills

The **Search Bills** zone allows you to search for bills using various search criteria. It also lists the completed bills of the account which either have a debit balance or have one or more debit line items, such as bill segments and adjustments. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using bill or bill and price item details. The valid values are: • Bill Details • Bill and Price Item Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	**Note:** The **Search** icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon the **Bill Search** window appears.	No
Bill Date From	Used to search for bills which are created on or after the specified date. **Note:** You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field. The bill date from date cannot be later than the bill date to date.	No
Bill Date To	Used to search for bills which are created till a particular date.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. The bill date to date cannot be earlier than the bill date from date.	
Price Item	Used to search for bills which are created for a particular price item.	No
	Note: This field appears when you select **Bill and Price Item Details** option from the **Search By** list. You can search for a price item by clicking the **Search** () icon corresponding to the **Price Item** field. On clicking the **Search** icon the **Price Item Search** window appears.	

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, a context menu ( ) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Amount	Displays the total amount of the bill.

In addition to above columns, this screen contains following button:

Button Name	Button Description
Add	Used to add a bill to the write off request.

Copyright © 2026, Oracle and/or its affiliates.

Note:

On clicking the **Broadcast** ( ) icon corresponding to the bill, the **Bill Line Items** zone appears where you can view the details of the respective bill.

A check box appears corresponding to each bill. To add a bill to the write off request, click the check box corresponding to the bill and click the **Add** button. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to select all the bills listed in the respective zone. For more information, see Adding a Debit Bill to the Write Off Request on page 1902.

If you want to write off a bill with debit balance (including all the credit line items of the respective bill) you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All debit bill segments and bill adjustments are added in the **Write Off Details** zone in the **Main** tab of the **Write Off Request** screen. However, if you select a bill (with debit balance) which contains one or more credit line items or if you select a bill (with credit balance) which contains one or more debit line items, the system will not allow you to add the debit line items in the write off request by directly adding the bill. In such case, you need to individually select the debit bill segments and bill adjustments, and add them in the **Write Off Details** zone in the **Main** tab of the **Refund Request** screen.

If a write off request is currently in progress for a debit bill segment or bill adjustment, then bills of the respective account are not listed in the **Search Bills** zone. In addition, a bill with all the credit line items is also not listed in the **Search Bills** zone.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments, and the adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is either a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. In addition, a context menu ( ) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: The content menu appears only when the entity is a bill segment. It has a link. If the entity is a bill segment, the **Bill Segment** screen appears where you can view the details of the respective bill segment. However, if the entity is an adjustment, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Entity Amount	Displays the bill segment or adjustment amount.
Eligible Amount	Displays the bill segment or adjustment amount which is eligible for write off. The system calculates the eligible amount using the following formula: `Eligible Amount = Entity Amount-Amount Written Off`
	Note: If the bill segment or adjustment has credit balance, the eligible amount for write off would be zero.
Amount Written Off	Displays the amount which is already written off to the account.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

A check-box appears corresponding to each bill line item. To add a bill line item to the write off request, click the check box corresponding to the bill line item and click the **Add** button. You can also select multiple bill line items at the same time. In addition, you can select the check box corresponding to the column header. This allows you to select all the bill line items listed in the respective zone. For more information, see Adding a Debit Bill Line Item to the Write Off Request on page 1904

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast** (⊙) icon corresponding to the bill in the **Search Bills** zone.

You can filter the list using the **Bill Segment Date From** and **To** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Write Off Request - Log

The **Log** tab contains the following zone:

- Write Off Request Log on page 1900

Write Off Request Log

The **Write Off Request Log** zone lists the complete trail of actions performed on the write off request. This zone contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the write off request.
Details	Displays the details about the action performed on the write off request.
User	Indicates the user who has performed the action on the write off request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the write off request.
Status Reason	Displays the status reason of action performed on the write off request.

Note: You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

Defining a Characteristic for a Write Off Request

Prerequisites

To define a characteristic for a write off request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund/Write Off Request**)

Procedure

To define a characteristic for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the write off request whose details you want to edit.
   The **Write Off Request** screen appears.
3. Click the **Edit** button in the **Write Off Request** zone.
   The **Edit Write Off Request** screen appears.

> **Note:** The **Edit** button appears only when the write off request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the write off request.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Refund Write Off Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the write off request.

5. Enter the required details in the **Characteristics** section.

> **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

Copyright © 2026, Oracle and/or its affiliates.

6. If you want to define more than one characteristic for the write off request, click the **Add** (+) icon and then *r*epeat step 5.

> **Note:** However, if you want to remove a characteristic from the write off request, click the **Delete** (🗑) icon corresponding to the characteristic.

Adding a Debit Bill to the Write Off Request

Prerequisites

To add a debit bill to the write off request, you should have:

- Bills that are in the **Complete** status for an account with one or more debit line items.

Procedure

To add a debit bill to the write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.

> **Note:** The write off request must be in the **Draft** status.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the write off request whose details you want to edit.
   The **Write off Request** screen appears.
3. Ensure that the **Bills** tab is selected.

> **Note:** If the bills are already listed in the **Search Results** section, you can directly begin from step 6, else resume from step 4.

4. Click the **Expand Filter** button and enter the search criteria in the **Search Bills** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.
6. Do either of the following:

If...	Then...
A bill has all debit line items and you want to add the debit bill to the write off request	**a.** In the **Search Bills** zone, select the check box corresponding to the bill that you want to add in the write off request.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
	Note: You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the bills listed in the **Search Results** section. **b.** Click the **Add** button in the **Search Bills** zone. **Note:** The default adjustment type selected in the write off request type should be an adjustment type where the A/P request type code is not defined.
A bill has debit balance and one or more credit line items, and you want to add the debit bill to the write off request	**a.** In the **Search Bills** zone, select the bills that you want to write off. **Note:** You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the bills listed in the **Search Results** section. **b.** Click the **Add** button in the **Search Bills** zone. **Note:** The default adjustment type selected in the write off request type should be an adjustment type where the A/P request type code is not defined.

The **Confirm Adjustment Type** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the write off request	Not applicable
Adjustment Type	Used to indicate the adjustment type using which the write off adjustment should be created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type Search** field.	No

7. Modify the adjustment type, if required.
8. Click **OK**.
   A message appears indicating that the selected bills are added to the write off request.

Note:

If you select the bill (with credit balance) which contains one or more debit line items or if you select the bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and bill adjustments, and then add them to the write off request.

The system allows you to add the debit bill segments or bill adjustments in the **Write Off Details** zone, irrespective of whether you select the debit bill, or debit bill segments, or bill adjustments.

To view the line items of a bill, click the **Broadcast** (📡) icon corresponding to the respective bill in the **Search Results** section.

The system will not allow you to add the credit line item to the **Write Off Details** zone.

Adding a Debit Bill Line Item to the Write Off Request

You can write off the debit bill line items, such as bill segments and adjustments of the account. While adding a debit bill line item to the write off request, you can either:

- Directly add all debit line items of a bill to the write off request by adding the bill which has all bill segments and adjustments in debit.
- Individually add the debit bill segment or adjustment of the bill (with one or more debit line items) to the write off request.

Prerequisites

To add a debit bill line item to the write off request, you should have:

- Bills that are in the **Complete** status for an account with one or more debit line items

Procedure

To add a debit bill line item to the write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.

   Note: The write off request must be in the **Draft** status.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the write off request whose details you want to edit.
   The **Write off Request** screen appears.
3. Ensure that the **Bills** tab is selected.

   Note: If the bills are already listed in the **Search Results** section, you can directly begin from step 6, else resume from step 4.

4. Click the **Expand Filter** button and enter the search criteria in the **Search Bills** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.
6. Do any of the following:

If...	Then...
A bill has all debit line items and you want to add a particular debit bill line item to the write off request	**a.** In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the bill whose bill line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the debit bill segment or bill adjustment that you want to write off.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
	Note: You can also select multiple credit bill segments or bill adjustments at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the debit bill segments or bill adjustments listed in the **Search Results** section to the write off request. **c.** Click the **Add** button in the **Search Bills** zone.
A bill has debit balance and one or more credit line items	**a.** In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the bill whose bill line items you want to view. The **Bill Line Items** zone appears. **b.** Select the check box corresponding to the debit bill segment or bill adjustment that you want to write off. **Note:** You can also select multiple credit bill segments or bill adjustments at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the debit bill segments or bill adjustments listed in the **Search Results** section to the write off request. **c.** Click the **Add** button in the **Search Bills** zone.
A bill has credit balance and one or more debit line items	**a.** In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the bill whose bill line items you want to view. Editing a Write Off Request

Prerequisites

To edit a write off request, you should have:

- Adjustment types defined in the application where the **A/P Request Type Code** flag is not set to **Refund**.

Procedure

To edit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.
   The **Write Off Request** screen appears.
3. Click the **Edit** button in the **Write Off Request** zone.

   The **Edit Write Off Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Write Off Request Information	Displays information about the write off request.	Not applicable
Adjustment Level	Used to indicate the adjustment level for which you want to create the write off request. The valid values are: • Account • Bill • Segment	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account for which the write off request is created. **Note:** The details of the account appear corresponding to the **Account Information** field. It is a read-only field.	Not applicable
Comments	Used to specify additional information about the write off request.	No

4. Modify the details of the write off request, if required.
5. Define, edit, or remove characteristics of the write off request, if required.
6. Click **Save**.
   The changes made to the write off request are saved.

Editing the Write Off Details

Prerequisites

To edit the write off details, you should have:

- Adjustment types without A/P request type code defined in the application.

Procedure

To edit the write off details:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the write off request whose write off or bill line item details you want to edit.
   The **Write Off Request** screen appears. You can edit the bill line items of the write off request by using either of the following ways:

If...	Then...
You select the check box corresponding to the respective bill whose details *y*ou want to edit and click the **Edit** button available in the upper left corner of the **Write Off Details** zone.	The **Edit Request Details** screen appears.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
You click the **Broadcast** (📡) icon corresponding to the respective bill in the **Write Off Details** zone.	The **Bill Line Items** zone appears. **a.** Select the check box corresponding to the respective bill line item whose details you want to edit and click the **Edit** button available in the upper left corner of the **Bill Line Items** zone. The **Edit Request Details** screen appears.
	Note: This zone appears when the entity type is set to **Bill**. You can edit a bill line item from the write off request only when the write off request is in the **Draft** status.

Note: The **Edit Request Details** screen is a common screen used when you are editing the write off or bill line item details of a write off request.

The **Edit Request Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the write off request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	Indicates the adjustment type of the write off request type. You can search for an adjustment type by clicking the **Search** (🔍) icon corresponding to the field.	No

Button Name	Button Description
Override	Used to override an adjustment type of the write off request.

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are • Adjustments • Bill • Bill Segment • Payment Event • Payment
Entity ID	Displays the entity ID.
Entity Amount	Displays the entity amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the bill segment or adjustment amount which is eligible for write off. The system calculates the request amount using the following formula: `Request Amount = Entity Amount-Write Off Amount`

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: If the bill segment or adjustment has credit balance, the eligible amount for write off would be zero.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created.
	Note: By default, this field displays the adjustment type which is already associated with the respective write off request. You can search for an adjustment type by clicking the **Search**(🔍) icon corresponding to this field. On clicking the **Search** icon the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type Search** field.
Bill ID	Displays the bill ID.

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the write off request.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list when you define values for the **PAGE_NUMBER** lookup field.

3. Modify the details of the write off or bill line items.
4. Click **Save**.
   The changes made to the write off or bill line items are saved.

Submitting a Write Off Request

Prerequisites

To submit a write off request, you should have:

- Debit bill line items added in the write off request.

Procedure

To submit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the write off request that you want to submit.
   The **Write Off Request** screen appears.
3. Click the **Submit** button in the **Write Off Request** zone.

   The system behaves in the following manner:

If...	Then
The **Approval Required** and **Hierarchical Approval** check boxes are selected in the write off request type using which the write off request is created	A To Do of the **C1-WOREQ** To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the write off request is changed to **Approval In Progress**.
The **Approval Required** check box is selected, but the **Hierarchical Approval** check box is not selected in the write off	A To Do of the **C1-WOREQ** To Do type is created and sent to the approver at the hierarchy level where the total write off amount falls within the threshold limit. In addition, the status of the write off request is changed to **Approval In Progress**.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then
request type using which the write off request is created	
The **Approval Required** check box is not selected in the write off request type using which the write off request is created	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to **Processed**.
	Note: The write off adjustments are created in the **Frozen** status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.
The total write off amount is less than the minimum threshold amount	The write off request is automatically approved by the system and write off adjustments are created using the specified adjustment types. In addition, the status of the write off request is changed to **Processed**.
	Note: The write off adjustments are created in the **Frozen** status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.

Note: The **Submit** button appears when the write off request is in the **Draft** status.

Approving a Write Off Request

You can view the number of write off requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the write off request based on the observations.

Note: The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To approve a write off request:

1. Do either of the following:

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
Approve a write off request through the Refund/Write Off Request screen	**a.** Search for the write off request in the **Refund/Write Off Request** screen. **b.** In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the write off request which you want to review.
Approve a write off request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Enter the **C1-WOREQ** To Do Type in the **To Do Type** field. **d.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **e.** In the **To Do Type for User Search** window, enter the **C1-WOREQ** To Do Type in the **To Do Type** field and click the **Search** button. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all the unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the write off request that you want to review.

The **Write Off Request** screen appears.

2. Review the details in the **Write Off Request** screen.
3. Click the **Approve** button in the **Write Off Request** zone.

The system behaves in the following manner:

If...	Then...
The **Hierarchical Approval** check box is selected in the write off request type using which the write off request is created and the total write off amount is greater than the threshold amount specified at the next level in the approval hierarchy	A To Do of the **C1-WOREQ** To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the write off request remains as **Approval In Progress**.
The **Hierarchical Approval** check box is selected in the write off request type using which the write off request is created and the total write off amount is less than the threshold amount specified at the next level in the approval hierarchy	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to **Processed**. **Note:** The write off adjustments are created in the **Frozen** status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
The **Hierarchical Approval** check box is not selected in the write off request type using which the write off request is created	The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to **Processed**.
	Note: The write off adjustments are created in the **Frozen** status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to **Open**. However, if the entire eligible amount is written off, the corresponding match event status is set to **Balanced**.

Note: The **Approve** button appears when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

Rejecting a Write Off Request

Prerequisites

To reject a write off request, you should have:

- Rejection reasons defined in the application.

Note:

While rejecting a write off request, you need to specify the reason why you want to reject the write off request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-WORequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To reject a write off request:

1. Do either of the following:

If you want to...	Then...
Reject a write off request through the Refund/Write Off Request screen	**a.** Search for the write off request in the **Refund/Write Off Request** screen. **b.** In the **Search Results** section, click the link in the **Refund/Write Off Request** column corresponding to the write off request which you want to review.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
Reject a write off request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Enter the **C1-WOREQ** To Do Type in the **To Do Type** field. **d.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **e.** In the **To Do Type for User Search** window, enter the **C1-WOREQ** To Do Type in the **To Do Type** field and click the **Search** button. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all the unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the write off request that you want to review.

The **Write Off Request** screen appears.

2. Review the details in the **Write Off Request** screen.
3. Click the **Reject** button in the **Write Off Request** zone.

   The **Reject Write Off Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the write off request.	Yes
Comments	Used to specify additional information while rejecting the write off request.	No

Note: The **Reject** button appears when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the write off request is changed to **Rejected**.

Viewing the Log of a Write Off Request

Procedure

To view the log of a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the write off request whose log you want to view.
   The **Write Off Request** screen appears.
3. Click the **Log** tab
4. View the log of the write off request in the **Write Off Request Log** zone.

> **Note:** You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

Adding a Log Entry for a Write Off Request

Procedure

To add a log entry for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the write off request whose log you want to edit.
   The **Write Off Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

   The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the write off request.	Not applicable
Log Details	Used to specify additional comments for the write off request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Write Off Request Log** zone.

Cancelling a Write Off Request

There might be situations when incorrect write off request is processed in the system. In such case, the system provides you with an ability to cancel the write off request. However, note that you can cancel a write off request when the write off request is in the **Processed** status.

Prerequisites

To cancel a write off request, you should have:

- Cancel reasons defined in the application.

Note: While cancelling a write off request, you need to specify the reason why you want to cancel the write off request. You can select the appropriate cancel reason when you have defined the reasons for the **Cancelled** status of the **C1-WORequest** business object in the **Status Reason** screen.

Procedure

To cancel a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request** column *c*orresponding to the write off request that you want to cancel.
   The **Write Off Request** screen appears.
3. Click the **Cancel** button in the **Write Off Request** zone.

   The **Cancel Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the write off request.	Yes
Comments	Used to specify additional information while cancelling the write off request.	No

   Note: The **Cancel** button appears when the write off request is in the **Processed** status.
4. Select the cancel reason from the **Status Reason** list.
5. Click **Save**.
   The status of the write off request is changed to **Cancelled**.

Note: The **C1-WOCANCEL** algorithm cancels all the frozen adjustments created for the write off request which is in the **Processed** state.

Chapter 27

Hold Request

Topics:

- Prerequisites
- Hold Request Lifecycle
- Hold Entities
- Hold Processes
- Hold Mass Accounts Using Selection Criteria
- Hold Mass Persons Using Selection Criteria
- Hold Request (Without Approval) Status Transition
- Hold Request (With Approval) Status Transition
- Setting the C1-HOLDSRCH Feature Configuration
- Setting the SYSDT Feature Configuration
- Algorithms Used in C1-HoldRequest
- Hold Request Type
- Hold Request (Used for Searching)
- Hold Request (Used for Viewing)

Hold is a way to prevent certain types of activities from taking place for a customer over a given period of time. A hold may be enforced due to various reasons, including natural calamities, disaster recovery, disputes, suspicious activity, pending investigations, uncleared checks, legal restrictions, and so on.

Oracle Revenue Management and Billing enables you to hold certain processes at the person, account, or bill level through a hold request. You need to specify a period (i.e., duration) for which the hold request is initiated. Depending on the entity level, you need to add the entities, such as persons, accounts, or bills in the hold request. You need to define a period for which you want to keep the entities on hold. The hold entity period should be within the hold request period. Similarly, depending on the entity level, you need to add the processes, such as bill generation, overdue, auto pay, funding, delinquency, or refund, respectively, that you want to keep on hold for the entity through the hold request. The system will hold the process for the entity when the entity date range falls within the respective process date range. You can create multiple hold requests for the same entity with different hold reasons.

Prerequisites

To setup the hold request feature, you need to do the following:

- Define the required hold request types in the system
- Assign the **C1-HLDAP** To Do type to a To Do role whose users must receive a To Do while submitting a hold activation or release request for approval
- Assign the **C1-HOLSB** To Do type to a To Do role whose users must receive a To Do while requesting to resubmit a hold activation or release request for approval
- Define the required characteristic types where the characteristic entity is set to **Hold Request**
- Define the required characteristic types where the characteristic entity is set to **Hold Request Type**
- Set the **Environment Type** option type of the **SYSDT** feature configuration
- Set the **C1-HOLDSRCH** feature configuration
- Attach the **CI_COPAICP** algorithm to the **Cancel Logic** system event of the respective overdue process templates
- Attach the **CI_OE-NO-DEP** algorithm to the **Cancel Logic** system event of the respective overdue event type
- Define the values for the **HOLD_PROCESS_FLG** and **HOLD_REASON_FLG** lookup fields.
- Define the status reasons for the **Discarded**, **Rejected**, and **Released** statuses of the **C1-HoldRequest** business object in the **Status Reason** screen.
- Set the batch control type of the **Hold Request Periodic Monitor (C1-HLDRQ)**, **Hold Request Monitor (C1-HLMON)**, **Delete Pending Bills and its Bill Segments (C1-DELBI)**, and **Hold Request Entity Derivation Monitor (C1-HLDET)** batches to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

For more information on...	See...
How to setup the **SYSDT** feature configuration	Setting the SYSDT Feature Configuration on page 1964
How to setup the **C1-HOLDSRCH** feature configuration	Setting the C1-HOLDSRCH Feature Configuration on page 1962

Hold Request Lifecycle

While creating a hold request, you need to specify the hold request type using which you want to create the hold request. It is the hold request type which helps the system to determine the following:

- The hold request business object using which a hold request should be created through the hold request type.
- The processes which can be kept on hold for different entities through the respective hold requests.
- Whether approval process is required while activating and/or releasing the respective hold requests.
- Whether partial hold is allowed when a bill is kept on hold through the respective hold requests.

Note: You cannot create a past dated hold request, but you can surely create a future dated hold request.

Once a hold request is created, you can add more processes and entities before activating the hold request. You can then click the **Submit** button to activate the hold request. On activating a hold request, the system checks whether the number

Copyright © 2026, Oracle and/or its affiliates.

of entities added in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the status of the hold request is changed to **Active** and the respective processes are kept on hold for the selected entities. However, if the number of entities added in the hold request exceeds the defer processing count, the system changes the status of the hold request to **Deferred Processing**. On executing the **C1-HLDRQ** batch, the status of the hold request is changed to **Active**.

You can optionally configure the approval process, if required, while activating the hold request. If the activation approval process is configured in the respective hold request type, the status of the hold request is changed to **Activation Approval In Progress**. The approver can review, and accordingly approve or reject the hold activation request based on the observations. In addition, the approver can request the submitter to resubmit the hold activation request for approval after making the necessary changes to it. On approving the hold activation request, the status of the hold request is changed to **Active** and the respective processes are kept on hold for the selected entities.

Note that all the selected processes of the entities may not be kept on hold on activating a hold request. Only when the entity date falls within the process date range and the process start date is earlier than the system date or batch business date, the system keeps the process of the respective entity on hold. You need to then execute the **C1-HLMON** batch at regular intervals. It will hold a process of an entity when the following conditions are met:

- Entity date falls within the process date range
- Process start date is earlier than the batch business date

The system enables you to manually release a hold request from the user interface. On manually releasing a hold request from the user interface, the system sets the hold request, hold entities, and hold processes end dates to the system date. In addition, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities. You can optionally configure the approval process, if required, while releasing the hold request. If the release approval process is configured in the respective hold request type, the status of the hold request is changed to **Release Approval in Progress**. The approver can review, and accordingly approve the hold release request based on the observations. In addition, the approver can request the submitter to resubmit the hold release request for approval after making the necessary changes to it. On approving the hold release request, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities.

The system also automatically releases a hold request. On executing the **C1-HLMON** batch, it checks whether any active hold request's end date is earlier than the batch business date. If so, the status of the hold request is changed to **Released** and the respective processes kept on hold are released for the selected entities. In addition, the release status reason is stamped corresponding to the hold request. The hold request, hold entity, and the hold process end dates are updated to the batch business date. Note that the entity and process end dates are updated only when their start date is not a future date.

A hold request goes through various statuses in its lifecycle. Note that lifecycle of a hold request is driven by the business object using which the hold request is created. A hold request business object named **C1-HoldRequest** is shipped with the product. The hold request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-HoldRequest** business object.

For more information on how to setup the hold request feature, see Prerequisites on page 1920.

Hold Entities

Through a hold request, you can keep various entities, such as persons, accounts, or bills on hold. To keep the persons, accounts, or bills on hold, you need to set the entity level in the hold request to **Person**, **Account**, or **Bill**, respectively. The system enables you to keep the following processes on hold for the respective entity through a hold request:

Entity	**Valid Hold Processes**
Person	Bill Generation, Delinquency, and Funding
	Note: If you keep the bill generation process on hold for a person, then the system will hold the bill generation process for all its immediate accounts. If you keep the delinquency process on hold for a person, then the system will hold the delinquency process for the person and its immediate accounts. If you keep the funding process on hold for a person, then the system will hold the funding process for all its bills irrespective of the bill status. In addition, the hold will be on the complete outstanding bill amount and not on the partial bill amount.
Account	Auto Pay, Bill Generation, Delinquency, Funding, Overdue, and Refund
	Note: You cannot select both the **Overdue** and **Delinquency** processes at the same time in the hold request. The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain. If you keep the funding process on hold for an account, then the system will hold the funding process for all its bills irrespective of the bill status. In addition, the hold will be on the complete outstanding bill amount and not on the partial bill amount. If the auto pay process of an account is on hold, you cannot include any debit bill of the account in any funding request. On activating a hold request for an account, the system creates an alert for the account on the dashboard. On clicking the dashboard alert, the **Alerts** tab of the **Account** screen appears. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.
Bill	Funding
	Note: If the entity level is set to **Bill**, you can hold the funding process of only completed bills through the hold request. If you select the **Allow Partial Hold for Bill** option in the respective hold request type, you can hold the funding of partial outstanding amount of the bill through the hold request. If you want to hold the auto pay process for a bill, you need to use the **Stop Autopay** feature.

Copyright © 2026, Oracle and/or its affiliates.

While creating a hold request where the entity level is set to **Person**, you can select the **Hierarchy** option corresponding to each person included in the hold request. If the **Hierarchy** option is selected, the system keeps the respective processes on hold for all the accounts in the person's hierarchy. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. However, if the **Hierarchy** option is not selected, the system keeps the respective processes on hold only for the persons' immediate accounts.

You can create multiple hold requests for the same entity with different hold reasons. If a bill is on hold through multiple hold requests with different hold reasons, then the maximum hold amount across the hold requests will be considered for the bill. Let us understand this with the help of an example.

Hold Request	Bill	Bill Outstanding Amount	Hold Amount
HR1	B1	100$	50$
HR2	B2	100$	60$
HR3	B3	-100$	-30$
HR4	B4	-100$	-50$

In this case, the hold amount for B1 would be 60$ and the hold amount for B2 would be 50$.

Hold Processes

Through a hold request, you can keep the following processes on hold:

- **Auto Pay** – You can hold the auto pay process of an account. The system allows you to select the **Auto Pay** option in a hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see Hold Auto Pay on page 1924.
- **Bill Generation** – You can hold the bill generation process of a person or an account. The system allows you to select the **Bill Generation** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**. For more information, see Hold Bill Generation on page 1928.
- **Delinquency** – You can hold the delinquency process of a person or an account. The system allows you to select the **Delinquency** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**. For more information, see Hold Delinquency on page 1932.

  Note: The **Delinquency** process is tested and certified only for the health insurance domain and not for the financial services domain.
- **Funding** – You can hold the funding process of a person, account, or a bill. The system allows you to select the **Funding** option in the hold request when the entity level is set to **Person**, **Account**, or **Bill**. For more information, see Hold Funding on page 1937.
- **Overdue** – You can hold the overdue process of an account. The system allows you to select the **Overdue** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see Hold Overdue Process on page 1938.
- **Refund** – You can hold the refund process of an account. The system allows you to select the **Refund** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**. For more information, see Hold Refund on page 1942.

Hold Auto Pay

Oracle Revenue Management and Billing enables you to hold the auto pay process for an account through a hold request. If the auto pay process is kept on hold for an account, the system does not allow you to create automatic payments for the debit bills of the account.

Copyright © 2026, Oracle and/or its affiliates.

Note: The system allows you to select the **Auto Pay** option in a hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

While adding the auto pay process in a hold request, you need to specify the date range for which you want to hold the auto pay process for the accounts. The system enables you to hold the auto pay process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the auto pay process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the auto pay process for the account (the valid values are **Y** or **N**)
- Hold auto pay start date (required if the hold auto pay is set to **Y**)
- Hold auto pay end date

You can also create, update, or release a hold request through an inbound web service. For more information, see Hold Request Creation, Modification, Release, and View Through Inbound Web Service on page 4043.

Auto Pay Hold Activation

On activating a hold request for an account, the system sets the defer auto pay date corresponding to the accounts whose date range falls within the auto pay process date range of the hold request. The defer auto pay date is set to the hold entity end date or auto pay process end date whichever is earlier. This means that the system will allow to create automatic payments for the accounts only after the respective defer auto pay date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the defer auto pay date is derived for an account that is kept on hold through a hold request.

Scenario		**Start Date**	**End Date**	**Defer Auto Pay Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Auto Pay Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Auto Pay Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	30-Jan-2025	

Copyright © 2026, Oracle and/or its affiliates.

Scenario		**Start Date**	**End Date**	**Defer Auto Pay Date**
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Auto Pay Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the defer auto pay date for the Account 1 is set to 15-Jan-2025 and the defer auto pay date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the auto pay process end date. However, in the scenario 2, the defer auto pay date for the Account 1 is set to 20-Jan-2025. This is because the auto pay process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the defer auto pay date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the defer auto pay date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the defer auto pay date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the defer auto pay date of the Account 3 is updated to 25-Jan-2025

In the scenario 4, the defer auto pay date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the defer auto pay date to the auto pay process end date when the entity end date is not specified in the hold request. In the scenario 5, the defer auto pay date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the defer auto pay date to hold request end date when both the entity end date and auto pay process end date are not specified in the hold request. In the scenario 6, the defer auto pay date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the defer auto pay date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the auto pay process or hold entity is later than the hold request start date, the defer auto pay date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the auto pay process or hold entity start date). For example,

Scenario		**Start Date**	**End Date**	**Defer Auto Pay Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Auto Pay Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

Copyright © 2026, Oracle and/or its affiliates.

In the scenario 1, the defer auto pay date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the defer auto pay date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the defer auto pay date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note: The defer auto pay date then appears corresponding to the account in the Hold Entities zone of the Hold Request screen. In addition, it appears in the Defer Auto Pay Date field on the Auto Pay tab of the Account screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the defer auto pay date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the defer auto pay date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

Auto Pay Hold Release

On releasing a hold request for an account, the system sets the defer auto pay date to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table. Let us understand how the defer auto pay date is updated for an account when the hold is manually or automatically released.

Scenario		**Start Date**	**End Date**	**Manual Release**	**Automatic Release**	**Release Date**	**Defer Auto Pay Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Auto Pay Process	01-Jan-2025	20-Jan-2025				
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Auto Pay Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Auto Pay Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-

Copyright © 2026, Oracle and/or its affiliates.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Defer Auto Pay Date
	Auto Pay Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the defer auto pay date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the defer auto pay date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the defer auto pay date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The defer auto pay date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the defer auto pay date to the system date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the defer auto pay date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

Hold Bill Generation

Oracle Revenue Management and Billing enables you to hold the bill generation process of a person or an account through a hold request. If the bill generation process is kept on hold for an account, the system does not allow you to create any bills for the account from the user interface or through a batch process. If the bill generation process is kept on hold for a person, the system does not allow you to create bills for any of its accounts from the user interface or through a batch process.

Note:

The system allows you to select the **Bill Generation** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**.

While adding the bill generation process in a hold request, you need to specify the date range for which you want to hold the bill generation process for the persons or accounts. The system enables you to hold the bill generation process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the bill generation process for a person or an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the bill generation process for the person or account (the valid values are **Y** or **N**)
- Hold bill generation start date (required if the hold bill generation is set to **Y**)
- Hold bill generation end date

You can also create, update, or release a hold request through an inbound web service. For more information, see Hold Request Creation, Modification, Release, and View Through Inbound Web Service on page 4043.

Bill Generation Hold Activation

On activating a hold request for an account, the system sets the bill after date corresponding to the accounts whose date range falls within the bill generation process date range of the hold request. The bill after date is set to the hold entity end date or bill generation process end date whichever is earlier. This means that the system will allow to create bills for the accounts only after the respective bill after date.

Copyright © 2026, Oracle and/or its affiliates.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date. In addition, if there are pending bills for an account which is kept on hold through a hold request, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table. You need to then execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Let us understand how the bill after date is derived for an account that is kept on hold through a hold request.

The following table illustrates how the bill after date is derived for an account that is kept on hold through a hold request:

Scenario		**Start Date**	**End Date**	**Bill After Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	20-Jan-2025	
	Auto Pay Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Bill Generation Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Bill Generation Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025

Copyright © 2026, Oracle and/or its affiliates.

Scenario		**Start Date**	**End Date**	**Bill After Date**
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Bill Generation Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the bill after date for the Account 1 is set to 15-Jan-2025 and the bill after date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the bill generation process end date. However, in the scenario 2, the bill after date for the Account 1 is set to 20-Jan-2025. This is because the bill generation process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the bill after date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the bill after date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the bill after date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the bill after date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the bill after date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the bill after date to the bill generation process end date when the entity end date is not specified in the hold request. In the scenario 5, the bill after date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the bill after date to hold request end date when both the entity end date and bill generation process end date are not specified in the hold request. In the scenario 6, the bill after date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the bill after date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the bill generation process or hold entity is later than the hold request start date, then bill after date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the bill generation process or hold entity start date). For example,

Scenario		**Start Date**	**End Date**	**Bill After Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Mar-2025	-
	Bill Generation Process	15-Mar-2025	31-Mar-2025	
	Auto Pay Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the bill after date for the Account 1 can be derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the bill after date for the Account 2 will be derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the bill after date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The bill after date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

On activating a hold request for a person, the system sets the bill after date to the entity end date or process end date whichever is earlier either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. The way in which the bill after date is derived for the person's accounts is same as that of an individual account kept on hold through a hold request.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date. In addition, if there are pending bills for a person which is kept on hold through a hold request, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table. You need to then execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note: The bill after date then appears in the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the bill after date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the bill after date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed. Note that when the entity level is set to **Person**, the system always sets the bill after date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

Bill Generation Hold Release

On releasing a hold request for an account, the system clears the bill after date for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.

Let us understand how the bill after date is updated for an account when the hold is manually or automatically released.

Scenario		**Start Date**	**End Date**	**Manual Release**	**Automatic Release**	**Release Date**	**Bill After Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				-
	Account 2	01-Jan-2025	20-Jan-2025				-
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Bill Generation Process	01-Jan-2025	20-Jan-2025				
	Auto Pay Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				-
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Bill Generation Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Bill Generation Process	05-Jan-2025	20-Jan-2025				

Copyright © 2026, Oracle and/or its affiliates.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Bill After Date
	Account 3	05-Jan-2025	20-Jan-2025				-
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	
	Bill Generation Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				-

In the scenario 1, the bill after date for the Account 1 and Account 2 is cleared when the hold request is manually released on 10-Jan-2025. In the scenario 2, the bill after date for the Account 1 is cleared when the hold request is automatically released through the **C1-HLMON** batch on 20-Jan-2025.

In the scenario 3, the bill after date for the Account 3 is not cleared when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The bill after date for the Account 3 is cleared when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it is cleared from the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

On releasing a hold request for a person, the system clears the bill after date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. The way in which the bill after date is updated for the person's accounts is same as that of an individual account whose hold is released either manually or automatically.

Note: The bill after date is cleared from the **Bill On or After Date** field on the **Main** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately clears the bill after date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system clears the bill after date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. Note that when the entity level is set to **Person**, the system always clears the bill after date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

Hold Delinquency

Oracle Revenue Management and Billing enables you to hold the delinquency process for a person or an account through a hold request. If the delinquency process is kept on hold for an account, the system does not allow you to continue the delinquency process (if any) created for the account. Similarly, if the delinquency process is kept on hold for a person, the system does not allow you to continue the delinquency process (if any) created for the person and its accounts.

Note:

The system allows you to select the **Delinquency** option in the hold request only when the entity level is set to **Person** or **Account** and not when the entity level is set to **Bill**.

You cannot select both the **Overdue** and **Delinquency** processes at the same time in the hold request. The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain.

You should not select the **Overdue** process in one hold request and the **Delinquency** process in another hold request for the same account in the same hold period.

While adding the delinquency process in a hold request, you need to specify the date range for which you want to hold the delinquency process for the persons or accounts. The system enables you to hold the delinquency process while creating a hold request from the user interface or through the upload request feature. If you want to create a hold request

Copyright © 2026, Oracle and/or its affiliates.

to hold the delinquency process for a person or an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the delinquency process for the person or account (the valid values are **Y** or **N**)
- Hold delinquency start date (required if the hold delinquency is set to **Y**)
- Hold delinquency end date

You can also create, update, or release a hold request through an inbound web service. For more information, see Hold Request Creation, Modification, Release, and View Through Inbound Web Service on page 4043.

Delinquency Hold Activation

On activating a hold request for an account, the system sets the postpone credit review until date corresponding to the accounts whose date range falls within the delinquency process date range of the hold request. The postpone credit review until date is set to the hold entity end date or delinquency process end date whichever is earlier. If the postpone credit review until date stamped on the delinquent account is later than the system date, the system will then hold the delinquency process, if any, initiated for the account. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the postpone credit review until date is derived for an account that is kept on hold through a hold request.

Scenario		**Start Date**	**End Date**	**Postpone Credit Review Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Delinquency Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Delinquency Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025

Copyright © 2026, Oracle and/or its affiliates.

Scenario		**Start Date**	**End Date**	**Postpone Credit Review Until Date**
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Delinquency Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 is set to 15-Jan-2025 and the postpone credit review until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the delinquency process end date. However, in the scenario 2, the postpone credit review until date for the Account 1 is set to 20-Jan-2025. This is because the delinquency process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the postpone credit review until date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the postpone credit review until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the postpone credit review until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the postpone credit review until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the postpone credit review until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the postpone credit review until date to the delinquency process end date when the entity end date is not specified in the hold request. In the scenario 5, the postpone credit review until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the postpone credit review until date to hold request end date when both the entity end date and delinquency process end date are not specified in the hold request. In the scenario 6, the postpone credit review until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the postpone credit review until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the delinquency process or hold entity is later than the hold request start date, the postpone credit review until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after delinquency process or hold entity start date). For example,

Scenario		**Start Date**	**End Date**	**Postpone Credit Review Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Delinquency Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Delinquency Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

Copyright © 2026, Oracle and/or its affiliates.

In the scenario 1, the postpone credit review until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the postpone credit review until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the postpone credit review until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

On activating a hold request for a person, the system sets postpone credit review until date to the entity end date or process end date whichever is earlier for the respective person and its immediate accounts (where the person is the main customer). If the postpone credit review until date does not exist for the person or if the postpone credit review until date already exists for the person but is earlier than the system date, then the postpone credit review until date is set to the entity end date or process end date whichever is earlier. However, if the postpone credit review until date already exists for the person but is later than the derived hold end date (i.e., entity end date or process end date whichever is earlier), then the postpone credit review until date of the person is not updated.

If the postpone credit review until date does not exist for the person's immediate account or if the postpone credit review until date already exists for the person's immediate account but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the person's immediate account but is later than the derived hold end date, then the postpone credit review until date of the account is not updated.

If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. If the postpone credit review until date does not exist for the person's child person or if the postpone credit review until date already exists for the person's child person but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the person's child person but is later than the derived hold end date, then the postpone credit review until date of the child person is not updated.

Similarly, if the postpone credit review until date does not exist for the child person's account or if the postpone credit review until date already exists for the child person's account but is earlier than the derived hold end date, then the postpone credit review until date is set to the derived hold end date. However, if the postpone credit review until date already exists for the child person's account but is later than the derived hold end date, then the postpone credit review until date of the child person's account is not updated.

If the postpone credit review until date stamped on the delinquent person or account is later than the system date, the system will then hold the delinquency process, if any, initiated for the person or account. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Note:

On executing the **C1-DPMON** batch, the status of the delinquency process is then changed to **On Hold** when the algorithm (i.e., **C1-HLDDELPRC**) attached to the **Hold Delinquency Process Criteria** system event in the respective delinquency process type is triggered.

The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

If the **Delinquency** process is added in the hold request, the system derives the entity level of the hold request. If the entity level is set to **Account**, the system checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, the system determines whether the number of entities in the hold request exceeds the defer processing count (specified in the respective hold request type). If the number of entities in the hold request is less than or equal to the defer processing count, the system sets the status of the hold request to **Active**. In addition, it immediately sets the postpone credit review until date for the respective account. However, if the number

Copyright © 2026, Oracle and/or its affiliates.

of entities in the hold request is greater than the defer processing count, the system sets the status of the hold request to **Deferred Processing**. The system then sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

However, if a group membership is billed to the account, the system does not use the defer processing count. It sets the status of the hold request to **Active**. It then sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. Similarly, if the entity level is set to **Person**, the system does not use the defer processing count. It sets the status of the hold request to **Active**. It then sets the postpone credit review until date for the respective persons and its accounts in the deferred mode when the **C1-HLMON** batch is executed.

Note: You need to execute the **C1-DPMON** batch after executing the **C1-HLDRQ** or **C1-HLMON** batch.

Delinquency Hold Release

On releasing a hold request for an account, the system sets the postpone credit review until date to the system date for the respective account. Let us understand how the postpone credit review until date is updated for an account when the hold is manually or automatically released.

Scenario		**Start Date**	**End Date**	**Manual Release**	**Automatic Release**	**Release Date**	**Postpone Credit Review Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Delinquency Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				-
	Account 2	01-Jan-2025	20-Jan-2025				-
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Delinquency Process	01-Jan-2025	20-Jan-2025				
	Auto Pay Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				-
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Delinquency Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	-
	Delinquency Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Delinquency Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				-

In the scenario 1, the postpone credit review until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the postpone credit review until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch on 20-Jan-2025.

In the scenario 3, the postpone credit review until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The postpone credit review until

Copyright © 2026, Oracle and/or its affiliates.

date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

On releasing a hold request for a person, the system sets the postpone credit review until date to the system date for the respective person and its immediate accounts (where the person is the main customer). If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. The way in which the postpone credit review until date is updated for the person, its immediate accounts, its child persons, and its child persons' accounts is same as that of an individual account whose hold is released either manually or automatically.

Note: The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

The system does not consider the defer processing count while releasing a hold request where the delinquency process is kept on hold for an account or a person. The system sets the postpone credit review until date in the deferred mode when the **C1-HLMON** batch is executed.

Note: You need to execute the **C1-DPMON** batch after executing the **C1-HLMON** batch.

Hold Funding

Oracle Revenue Management and Billing enables you to hold the funding process for a person, account, or a bill through a hold request. If the funding process is kept on hold for a bill, the system does not allow you to add the bill in a funding request. If the funding process is kept on hold for an account, the system does not allow you to add any bills of the account in a funding request. However, if the funding process is kept on hold for a person, the system does not allow you to add any bills of any of its accounts in a funding request.

Note: The system allows you to select the **Funding** option in the hold request when the entity level is set to **Person**, **Account**, or **Bill**.

While adding the funding process in a hold request, you need to specify the date range for which you want to hold the funding process for the persons, accounts, or bills. The system enables you to hold the funding process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the funding process for a person, account, or a bill through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the funding process for the person, account, or bill (the valid values are **Y** or **N**)
- Hold funding start date (required if the hold auto pay is set to **Y**)
- Hold funding end date

You can also create, update, or release a hold request through an inbound web service. For more information, see Hold Request Creation, Modification, Release, and View Through Inbound Web Service on page 4043.

Funding Hold Activation

On activating a hold request for a bill, the system does not allow you to add the bill in a funding request. On activating a hold request for an account, the system does not allow you to add any bills of the account in a funding request. However, on activating a hold request for a person, the system does not allow you to add any bills of any of its accounts in a funding request. In addition, if the **Hierarchy** option is selected, the system does not allow you to add any bills of the accounts in

Copyright © 2026, Oracle and/or its affiliates.

the person's hierarchy in a funding request. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Funding Hold Release

On releasing a hold request for a bill, the system allows you to add the bill in a funding request. On releasing a hold request for an account, the system allows you to add any bills of the account in a funding request. However, on releasing a hold request for a person, the system allows you to add any bills of any of its accounts including its child persons' bills (if the **Hierarchy** option is selected) in a funding request.

Hold Overdue Process

Oracle Revenue Management and Billing enables you to hold the overdue process for an account through a hold request. If the overdue process is kept on hold for an account, the system does not allow you to initiate an overdue process for the account. In addition, if an active overdue process (if any) exists for the account kept on hold, the system cancels the respective overdue process of the account and changes its status to **Inactive**.

Note:

The system allows you to select the **Overdue** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

You cannot select both the **Overdue** and **Delinquency** processes at the same time in the hold request. The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain.

You should not select the **Overdue** process in one hold request and the **Delinquency** process in another hold request for the same account in the same hold period.

The existing active overdue process (if any) is inactivated only when the following conditions are met:

- The **CI_COPAICP** algorithm is attached to the **Cancel Logic** system event of the respective overdue process template.
- The **CI_OE-NO-DEP** algorithm is attached to the **Cancel Logic** system event of the respective overdue event type.

While adding the overdue process in a hold request, you need to specify the date range for which you want to hold the overdue process for the accounts. The system enables you to hold the overdue process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the overdue process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the overdue process for the account (the valid values are **Y** or **N**)
- Hold overdue start date (required if the hold overdue is set to **Y**)
- Hold overdue end date

You can also create, update, or release a hold request through an inbound web service. For more information, see Hold Request Creation, Modification, Release, and View Through Inbound Web Service on page 4043.

Overdue Hold Activation

On activating a hold request for an account, the system sets the postpone credit review until date corresponding to the accounts whose date range falls within the overdue process date range of the hold request. The postpone credit review until date is set to the hold entity end date or overdue process end date whichever is earlier. This means that the system will allow to initiate an overdue process for the account only after the respective postpone credit review until date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the postpone credit review until date is derived for an account that is kept on hold through a hold request.

Copyright © 2026, Oracle and/or its affiliates.

Scenario		**Start Date**	**End Date**	**Postpone Credit Review Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	20-Jan-2025	
	Auto Pay Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Overdue Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Overdue Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Overdue Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 is set to 15-Jan-2025 and the postpone credit review until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the overdue process end date. However, in the scenario 2, the postpone credit review until date for the Account 1 is set to 20-Jan-2025. This is because the overdue process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the postpone credit review until date of the Account 3 is updated every time a new hold request

Copyright © 2026, Oracle and/or its affiliates.

is created for the same account. On 1st Jan, the postpone credit review until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the postpone credit review until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the postpone credit review until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the postpone credit review until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the postpone credit review until date to the overdue process end date when the entity end date is not specified in the hold request. In the scenario 5, the postpone credit review until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the postpone credit review until date to hold request end date when both the entity end date and overdue process end date are not specified in the hold request. In the scenario 6, the postpone credit review until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the postpone credit review until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the overdue process or hold entity is later than the hold request start date, the postpone credit review until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after the overdue process or hold entity start date). For example,

Scenario		**Start Date**	**End Date**	**Postpone Credit Review Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Overdue Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Overdue Process	15-Mar-2025	31-Mar-2025	
	Auto Pay Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the postpone credit review until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the postpone credit review until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the postpone credit review until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the postpone credit review until date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the postpone credit review until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed.

Overdue Hold Release

On releasing a hold request for an account, the system sets the postpone credit review until date to the system date for the respective account. Let us understand how the postpone credit review until date is updated for an account when the hold is manually or automatically released.

Copyright © 2026, Oracle and/or its affiliates.

Scenario		**Start Date**	**End Date**	**Manual Release**	**Automatic Release**	**Release Date**	**Postpone Credit Review Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Overdue Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Overdue Process	01-Jan-2025	20-Jan-2025				
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Overdue Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Overdue Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Overdue Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the postpone credit review until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the postpone credit review until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the postpone credit review until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The postpone credit review until date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

Copyright © 2026, Oracle and/or its affiliates.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the postpone credit review until date to the system date for the respective accounts. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the postpone credit review until date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed.

Hold Refund

Oracle Revenue Management and Billing enables you to hold the refund process for an account through a hold request. If the refund process is kept on hold for an account, the system does not process the refund requests (if any) created for the account. Note that the system does not stop you from creating A/P adjustments for an account from the **Adjustment** screen when the refund process is kept on hold for the account.

Note:

The system allows you to select the **Refund** option in the hold request only when the entity level is set to **Account** and not when the entity level is set to **Person** or **Bill**.

While adding the refund process in a hold request, you need to specify the date range for which you want to hold the refund process for the accounts. The system enables you to hold the refund process by creating a hold request from the user interface or through the upload request feature. If you want to create a hold request to hold the refund process for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the refund process for the account (the valid values are **Y** or **N**)
- Hold refund start date (required if the hold refund is set to **Y**)
- Hold refund end date

You can also create, update, or release a hold request through an inbound web service. For more information, see Hold Request Creation, Modification, Release, and View Through Inbound Web Service on page 4043.

Refund Hold Activation

On activating a hold request for an account, the system sets the hold refund until date corresponding to the accounts whose date range falls within the refund process date range of the hold request. The hold refund until date is set to the hold entity end date or refund process end date whichever is earlier. This means that the system will allow to process the refund request for the accounts only after the respective hold refund until date. Note that if the start date of the hold request, hold entity, or hold process is earlier than the system date, the system sets the respective start date to the system date.

Let us understand how the hold refund until date is derived for an account that is kept on hold through a hold request.

Scenario		**Start Date**	**End Date**	**Hold Refund Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	20-Jan-2025	
	Bill Generation Process	01-Jan-2025	25-Jan-2025	
	Account 1	01-Jan-2025	22-Jan-2025	20-Jan-2025

Copyright © 2026, Oracle and/or its affiliates.

Scenario		**Start Date**	**End Date**	**Hold Refund Until Date**
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 3	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	-
	Refund Process	05-Jan-2025	20-Jan-2025	
	Account 3	05-Jan-2025	20-Jan-2025	20-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	-
	Refund Process	10-Jan-2025	25-Jan-2025	
	Account 3	10-Jan-2025	25-Jan-2025	25-Jan-2025
Scenario 4	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	30-Jan-2025	
	Account 1	01-Jan-2025	-	30-Jan-2025
	Account 2	01-Jan-2025	-	30-Jan-2025
Scenario 5	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	-	
	Account 1	01-Jan-2025	-	31-Jan-2025
	Account 2	01-Jan-2025	-	31-Jan-2025
Scenario 6	Hold Request 1	01-Jan-2025	20-Jan-2025	-
	Refund Process	01-Jan-2025	-	-
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	01-Jan-2025	-	20-Jan-2025

In the scenario 1, the hold refund until date for the Account 1 is set to 15-Jan-2025 and the hold refund until date for the Account 2 is set to 20-Jan-2025. This is because the entity end date is earlier than the refund process end date. However, in the scenario 2, the hold refund until date for the Account 1 is set to 20-Jan-2025. This is because the refund process end date is earlier than the entity end date.

In the scenario 3, three hold requests are created with different hold reasons to keep the Account 3 on hold for different duration. In this case, the hold refund until date of the Account 3 is updated every time a new hold request is created for the same account. On 1st Jan, the hold refund until date of the Account 3 is set to 15-Jan-2025 and then on 5th Jan, the hold refund until date of the Account 3 is updated to 20-Jan-2025, and finally, on 10th Jan, the hold refund until date of the Account 3 is updated to 25-Jan-2025.

In the scenario 4, the hold refund until date for the Account 1 and Account 2 is set to 30-Jan-2025. This is because the system sets the hold refund until date to the refund process end date when the entity end date is not specified in the hold request. In the scenario 5, the hold refund until date for the Account 1 and Account 2 is set to 31-Jan-2025. This is because the system sets the hold refund until date to hold request end date when both the entity end date and refund process end date are not specified in the hold request. In the scenario 6, the hold refund until date for the Account 1 and Account 2 is set to 15-Jan-2025 and 20-Jan-2025, respectively.

In all the above scenarios, the start date of the hold request, hold process, and hold entity is same. Therefore, the hold refund until date is derived for the entities either immediately or in the deferred mode (when the **C1-HLDRQ** batch is executed). However, if the start date of the refund process or hold entity is later than the hold request start date, the hold

Copyright © 2026, Oracle and/or its affiliates.

refund until date is derived for the respective entity in the deferred mode (when the **C1-HLMON** batch is executed on or after refund process or hold entity start date). For example,

Scenario		**Start Date**	**End Date**	**Hold Refund Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	-
	Refund Process	01-Jan-2025	31-Jan-2025	
	Account 1	01-Jan-2025	15-Jan-2025	15-Jan-2025
	Account 2	05-Jan-2025	20-Jan-2025	20-Jan-2025
Scenario 2	Hold Request 1	01-Mar-2025	31-Mar-2025	-
	Refund Process	15-Mar-2025	31-Mar-2025	
	Bill Generation Process	01-Mar-2025	31-Mar-2025	
	Account 1	01-Mar-2025	31-Mar-2025	31-Mar-2025

In the scenario 1, the hold refund until date for the Account 1 is derived on 01-Jan-2025 (in the online mode), or on or after 01-Jan-2025 (in the deferred mode). However, the hold refund until date for the Account 2 is derived on or after 05-Jan-2025 (in the deferred mode). Similarly, in the scenario 2, the hold refund until date for the Account 1 is derived on or after 15-Mar-2025 (in the deferred mode) and not on 01-Mar-2025.

Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.

If the number of accounts in the hold request is less than or equal to the defer processing count (specified in the respective hold request type), the system immediately sets the hold refund until date for the respective accounts. In addition, the system changes the status of the non-final refund request (if any) for the respective accounts to **Hold**. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the hold refund until date for the respective accounts in the deferred mode when the **C1-HLDRQ** batch is executed. In addition, the **C1-HLDRQ** batch changes the status of the non-final refund request (if any) for the respective accounts to **Hold**.

Refund Hold Release

On releasing a hold request for an account, the system sets the hold refund until date to the system date for the respective accounts. Let us understand how the hold refund until date is updated for an account when the hold is manually or automatically released.

Scenario		**Start Date**	**End Date**	**Manual Release**	**Automatic Release**	**Release Date**	**Hold Refund Until Date**
Scenario 1	Hold Request 1	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Refund Process	01-Jan-2025	31-Jan-2025				
	Account 1	01-Jan-2025	15-Jan-2025				10-Jan-2025
	Account 2	01-Jan-2025	20-Jan-2025				10-Jan-2025
Scenario 2	Hold Request 1	01-Jan-2025	31-Jan-2025	No	Yes	20-Jan-2025 (Batch Business Date)	-
	Refund Process	01-Jan-2025	20-Jan-2025				

Copyright © 2026, Oracle and/or its affiliates.

Scenario		Start Date	End Date	Manual Release	Automatic Release	Release Date	Hold Refund Until Date
	Bill Generation Process	01-Jan-2025	25-Jan-2025				
	Account 1	01-Jan-2025	22-Jan-2025				20-Jan-2025
Scenario 3	Hold Request 2	01-Jan-2025	31-Jan-2025	Yes	No	10-Jan-2025 (System Date)	-
	Refund Process	01-Jan-2025	31-Jan-2025				
	Account 3	01-Jan-2025	15-Jan-2025				25-Jan-2025
	Hold Request 3	05-Jan-2025	20-Jan-2025	Yes	No	20-Jan-2025 (System Date)	25-Jan-2025
	Refund Process	05-Jan-2025	20-Jan-2025				
	Account 3	05-Jan-2025	20-Jan-2025				25-Jan-2025
	Hold Request 4	10-Jan-2025	25-Jan-2025	Yes	No	21-Jan-2025 (System Date)	-
	Refund Process	10-Jan-2025	25-Jan-2025				
	Account 3	10-Jan-2025	25-Jan-2025				21-Jan-2025

In the scenario 1, the hold refund until date for the Account 1 and Account 2 is set to the system date when the hold request is manually released on 10-Jan-2025. In the scenario 2, the hold refund until date for the Account 1 is set to the batch business date (i.e., 20-Jan-2025) when the hold request is automatically released through the **C1-HLMON** batch.

In the scenario 3, the hold refund until date for the Account 3 is not set to the system date when the hold request 2 and 3 are manually released on 10-Jan-2025 and 20-Jan-2025, respectively. The hold refund until date for the Account 3 is set to the system date when the hold request 4 is manually released on 21-Jan-2025. This is because no more hold requests exist for the Account 3 in the system.

Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.

If the number of accounts in the hold request is less than the defer processing count (specified in the respective hold request type), the system immediately sets the hold refund until date to the system date for the respective accounts. In addition, the system immediately changes the status of the refund request (if any) for the respective accounts from **Hold** to its previous status. However, if the number of accounts in the hold request is greater than the defer processing count, the system sets the hold refund until date to the system date for the respective accounts in the deferred mode when the **C1-HLMON** batch is executed. In addition, the **C1-HLMON** batch changes the status of the refund request (if any) for the respective accounts from **Hold** to its previous status.

Hold Mass Accounts Using Selection Criteria

Oracle Revenue Management and Billing enables you to add multiple accounts in a hold request by specifying their respective account ID. Alternatively, you can also specify the selection criteria to derive the list of accounts that you want to add in a hold request. The **Use Selection Criteria** option is available when you set the entity level to **Account** while creating a hold request. On selecting the **Use Selection Criteria** option, the **Hold Entities** section is removed from

Copyright © 2026, Oracle and/or its affiliates.

the **Hold Request** screen. Instead, a section named **Account Selection Criteria** appears in the **Hold Request** screen. This section enables you to specify the criteria for deriving accounts using the account, person, policy, or individual membership details. You can specify the criteria for deriving accounts using the policy or individual membership details only when the **Environment Type** option type of the **SYSDT** feature configuration is set to **H**.

On saving a hold request with the account selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **Y**
- Creates the hold request in the **Entity Derivation Pending** status

Note: You cannot edit the account selection criteria when the hold request is in the **Entity Derivation Pending** status.

However, while saving a hold request without the account selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **N**
- Creates the hold request in the **Draft** status

The **C1-HLDET** batch then checks whether there are any hold requests in the **Entity Derivation Pending** status. The system considers those hold requests whose start date is earlier than or equal to batch business date. If there is a hold request in the **Entity Derivation Pending** status, the batch derives the accounts based on the criteria defined for the hold request. The derived accounts are stored as the hold entities for the hold request in the **C1_HOLD_REQ_DTLS** table. The start date of all the hold entities is set to the system date and end date is set to null. Finally, the **massHoldSw** field of the hold request is set to **N** and the status of the hold request is changed from **Entity Derivation Pending** to **Draft**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Once the status of the hold request is changed to **Draft**, you can modify the required details of the hold request expect the filter criteria. You can add more accounts (if required) manually from the user interface. You can also edit or delete the accounts derived through the filter criteria from the hold request. On activating a hold request created using a selection criterion, the start date of the hold request, hold entity, or hold process is not changed when it is earlier than the system date.

How to define an account selection criteria	Defining an Account Selection Criteria for a Hold Request on page 2006

Hold Mass Persons Using Selection Criteria

Oracle Revenue Management and Billing enables you to add multiple persons in a hold request by specifying their respective person ID. Here, you can select the **Hierarchy** option corresponding to the person indicating that you want to hold the processes of the person, its immediate accounts, its child persons, and its child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy.

Alternatively, you can also specify the selection criteria to derive the list of persons that you want to add in a hold request. The **Use Selection Criteria** option is available when you set the entity to **Person** while creating a hold request. On selecting the **Use Selection Criteria** option, the **Hold Entities** section is removed from the **Hold Request** screen. Instead, a section named **Person Selection Criteria** appears in the **Hold Request** screen. This section enables you to specify the criteria for deriving persons using the person details.

On saving a hold request with the person selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **Y**
- Sets the **HIERARCHY_SW** field corresponding to each hold entity of the hold request to **N**
- Creates the hold request in the **Entity Derivation Pending** status

Note: You cannot edit the person selection criteria when the hold request is in the **Entity Derivation Pending** status.

Copyright © 2026, Oracle and/or its affiliates.

However, while saving a hold request without the person selection criteria, the system does the following:

- Sets the **massHoldSw** field of the hold request to **N**
- Sets the **HIERARCHY_SW** field corresponding to each hold entity of the hold request to **Y** or **N** depending on whether the Hierarchy option is selected or not corresponding to the hold entity
- Creates the hold request in the **Draft** status

The **C1-HLDET** batch then checks whether there are any hold requests in the **Entity Derivation Pending** status. The system considers those hold requests whose start date is earlier than or equal to batch business date. If there is a hold request in the **Entity Derivation Pending** status, the batch derives the persons based on the criteria defined for the hold request. The derived persons are stored as the hold entities for the hold request in the **C1_HOLD_REQ_DTLS** table. The start date of all the hold entities is set to the system date and end date is set to null. Finally, the **massHoldSw** field of the hold request is set to**N** and the status of the hold request is changed from **Entity Derivation Pending** to **Draft**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Once the status of the hold request is changed to **Draft**, you can modify the required details of the hold request expect the filter criteria. You can also set the **Hierarchy** option corresponding to the hold entity in the hold request. You can add more persons (if required) manually from the user interface. You can also edit or delete the persons derived through the filter criteria from the hold request. On activating a hold request created using a selection criterion, the start date of the hold request, hold entity, or hold process is not changed when it is earlier than the system date.

Note: If you select the **Hierarchy** option corresponding to the person, the system will hold the processes of the person, its immediate accounts, its child persons, and its child persons' accounts. The system will consider only the child persons and not the grandchild persons from the person's hierarchy. However, if you do not select the **Hierarchy** option corresponding to the person, the system will hold the processes of the person and its immediate accounts.

Setting the C1-HOLDSRCH Feature Configuration

The **C1-HOLDSRCH** feature configuration enables you to set certain feature-specific options which are used while creating or viewing a hold request in the system.

Prerequisites

To set the **C1-HOLDSRCH** feature configuration, you should have:

- Foreign key references defined for different entities, such as person, account, and bill
- Required hold request types defined in the application

Procedure

To set the **C1-HOLDSRCH** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
   A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
   The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **C1-HOLDSRCH** in the **Feature Name** field.

Copyright © 2026, Oracle and/or its affiliates.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

   The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account FK Ref	Used to indicate the foreign key reference for account. The system then generates information string for the account using the specified foreign key reference and accordingly displays it in the **Hold Request** screen. **Note:** You must specify a foreign key reference which is already defined in the system. The **ACCT** foreign key reference for account is shipped with the product. You can also use a custom foreign key reference, if required.	Yes
Bill FK Ref	Used to indicate the foreign key reference for bill. The system then generates information string for the bill using the specified foreign key reference and accordingly displays it in the **Hold Request** screen. **Note:** You must specify a foreign key reference which is already defined in the system. The **C1-BILL** foreign key reference for bill is shipped with the product. You can also use a custom foreign key reference, if required.	Yes
Default Hold Request Type for IWS	Used to indicate the hold request type using which you want to create a hold request through an inbound web service. The system uses the specified hold request type when it is not received in the inbound request. **Note:** You must specify a hold request type which is already defined in the system. Here, you must specify an active hold request type where the approval process is not configured for activation and release.	Yes
Funding Exclusion Reason	Used to indicate the reason why the bill record was excluded from the funding request. The system stamps this reason	Yes

Copyright © 2026, Oracle and/or its affiliates.

Option Type	Description	Mandatory (Yes or No)
	corresponding to the bill record when you create a hold request for a bill via the **Funding Request** screen.	
Person FK Ref	Used to indicate the foreign key reference for person. The system then generates information string for the person using the specified foreign key reference and accordingly displays it in the **Hold Request** screen. **Note:** You must specify a foreign key reference which is already defined in the system. The **PERS** foreign key reference for person is shipped with the product. You can also use a custom foreign key reference, if required.	Yes

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
   The changes made to the feature configuration are saved.

Setting the SYSDT Feature Configuration

The **SYSDT** feature configuration enables you to set certain environment options which will be used across features in the application.

Procedure

To set the **SYSDT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
   A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
   The **Feature Configuration Query** screen appears.
4. In the **Feature Configuration Search** zone, enter **SYSDT** in the **Feature Name** field.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of feature configurations that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the link in the **Description** column corresponding to the feature configuration whose details you want to edit.

   The **Feature Configuration** screen appears. It contains the following option types:

Copyright © 2026, Oracle and/or its affiliates.

Option Type	Description	Mandatory (Yes or No)
Environment Type	Used to indicate whether the environment will be used for the financial services or health insurance domain. The valid values are: • **B** - Used when you want to use the environment for the financial services domain. • **H** - Used when you want to use the environment for the health insurance domain.	Yes
Maximum Attachment Size	Used to specify the maximum size limit for a file that can be uploaded in the system. The size is interpreted in megabytes (MB). For example, if you want to set the maximum size limit of a file to 5 MB, then specify the value as 5 in this option type. **Note:** You must specify a value greater than zero. If you do not specify any value for this option type, the system would not enforce any limit while uploading a file in the system.	No
System Override Date	Used when you want to override the system date. The system will then use the specified date as the system date instead of retrieving the system date from the database. **Note:** You must specify the date in the YYYY-MM-DD format. This option type is valid only when an appropriate system property is set. It provides a way to override the system date for online operations of all the users in the region. See the online help (search for 'System Override Date') for more information about the system property and how to override the system date at the user level rather than at the system level.	No

7. Enter the values for the required option types in the **Feature Configuration** screen.
8. Click the **Save** button in the **Page Title** area.
   The changes made to the feature configuration are saved.

Algorithms Used in C1-HoldRequest

The following table lists the algorithms which are attached to the **C1-HoldRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-HOLD-INF	C1-HOLD-INF	Refer to C1-HOLD-INF on page 1966.
Validation	C1-HLDVALDN	C1-HLDVALDN	Refer to C1-HLDVALDN on page 1967.

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldRequest** business object:

Discarded	-	-	-	-

C1-HOLD-INF

This algorithm generates the hold request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

Copyright © 2026, Oracle and/or its affiliates.

1. Hold Request Type Description
2. Entity Level (i.e., Person, Account, or Bill)
3. Hold Request Status Description
4. Hold Request ID

C1-HLDVALDN

This algorithm validates the following while creating or editing a hold request:

- At least one process is selected for the hold request.

  Note: Entity selection is optional.

- No duplicate entity and process are selected for the hold request.
- The same entity is not kept on hold with the same hold reason in multiple hold requests.
- The hold request end date is specified.
- The process start date is not earlier than the hold request start date.
- The entity start date is not earlier than the hold request start date.
- The process end date is not later than to the hold request end date.
- The entity end date is not later than the hold request end date.
- At least one process start date is earlier than or equal to the entity start date.
- At least one process end date is later than or equal to the entity end date.
- The **Overdue**, **Auto Pay**, and **Refund** processes are not selected when the entity level is set to **Person**.
- The **Bill Generation**, **Overdue**, **Auto Pay**, **Refund**, and **Delinquency** processes are not selected when the entity level is set to **Bill**.
- Both **Overdue** and **Delinquency** processes are not selected at a time in the hold request.

  Note: The **Overdue** process is valid for the financial services and health insurance domains but the **Delinquency** process is valid only for the health insurance domain.

- A bill with non-zero outstanding bill amount is added in the hold request.
- Each entity's start and end dates should fall within at least one process's start and end dates.
- The hold amount is less than or equal to the outstanding amount when the entity level is set to **Bill**.

In addition, this algorithm validates the following when changes are made to an active hold request:

- An existing process or entity is not deleted from the hold request.
- Any process details other than the end date is not modified in the hold request.
- The start date of the hold request, hold entity, or hold process is not modified in the hold request.
- The hold reason in the hold request is not modified.
- The end date of the hold request, hold entity, or hold process is not set to the date which is earlier than the system date.
- A new process is added with the start date later than or equal to the system date.
- A new entity is not added to an active hold request.
- A past end date of an entity or process is not changed in the hold request.

C1-HLDARCTRN

This algorithm is invoked when you create a hold request. If the hold request is created through the **Account Receivable Central** or **Delinquency Central** screen or through an inbound web service, it changes the status of the hold request to **Active**. However, if the hold request is created through the **Hold Request** screen, it changes the status of the hold request to **Draft**.

Copyright © 2026, Oracle and/or its affiliates.

C1-CKMSHLD

This algorithm is invoked when the hold request is created in the **Draft** status. If the **massHoldSw** field is set to **Y** for the hold request, this algorithm changes the status of the hold request from **Draft** to **Entity Derivation Pending**.

Note: The system sets the **massHoldSw** field to **Y** when the **Use Selection Criteria** option is selected while creating a hold request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

  Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-MASSHOLD

This algorithm is invoked when the **C1-HLDET** batch is executed. If the **massHoldSw** field is set to **Y** for the hold request, this algorithm derives the filter criteria specified in the hold request. It then creates a dynamic SQL query to fetch the list of accounts or persons that meets the filter criteria depending on whether the entity level is set to **Account** or **Person**. The derived accounts or persons are then stored as the hold entities for the hold request in the **C1_HOLD_REQ_DTLS** table. This algorithm sets the start date of all the hold entities to the system date and end date to null. Once the hold request is updated, it then sets the **massHoldSw** field of the hold request to **N** and changes the status of the hold request from **Entity Derivation Pending** to **Draft**.

Note:

The system sets the **massHoldSw** field to **Y** when the **Use Selection Criteria** option is selected while creating a hold request.

The filters are stored in the XML format in the **BO_DATA_AREA** column of the **C1_HOLD_REQ** table. If the entity level is set to **Person**, the filter values are stored within the <personFilter> and </personFilter> tags. However, if the entity level is set to **Account**, the filter values are stored within the <acctFilter> and </acctFilter>, <policyFilter> and </policyFilter>, <personFilter> and </personFilter>, or <indMembershipFilter> and </indMembershipFilter> tags, respectively, depending on the search option used in the hold request.

Once the status of the hold request is changed to **Draft**, you can modify the required details of the hold request expect the filter criteria. You can add more accounts (if required) manually from the user interface. You can also edit or delete the accounts derived through the filter criteria from the hold request.

C1-HOLDSUBMT

This algorithm is invoked when you click the **Submit** button. It checks whether the **Activation Approval** option is selected in the respective hold request type. If the **Activation Approval** option is selected in the respective hold request type, it changes the status of the hold request to **Activation Approval In Progress**. However, if the **Activation Approval**

Copyright © 2026, Oracle and/or its affiliates.

option is not selected in the respective hold request type, it checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm changes the status of the hold request to **Active**. Note that the system does not allow you to activate a hold request when the hold request end date is earlier than the system date. However, if the number of entities added in the hold request exceeds the defer processing count, this algorithm changes the status of the hold request to **Deferred Processing**.

In addition, it displays a warning message while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date.

Note that if the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HOLDAPP

This algorithm is invoked when the status of the hold request is changed to **Activation Approval In Progress**. It creates a To Do using the activation approval To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the activation approval To Do role that is specified in the respective hold request type. In addition, it creates a log entry for the hold request when the To Do is created for the approver.

C1-HOLDAPRVD

This algorithm is invoked when you click the **Approve** button. It checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm changes the status of the hold request to **Active**. In addition, it changes the start date of the hold request, hold entities, and the hold processes to the system date. Note that the system does not allow you to activate a hold request when the hold request end date is earlier than the system date. However, if the number of entities added in the hold request exceeds the defer processing count, this algorithm changes the status of the hold request to **Deferred Processing**.

Note that if the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level

Copyright © 2026, Oracle and/or its affiliates.

is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

C1-HLDRESUBM

This algorithm is invoked when you click the **Re Submit** button. It changes the status of the hold request to **Draft**. The submitter can then make the required changes and resubmit the hold activation request for approval.

In addition, it creates a To Do using the submitter To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the submitter To Do role that is specified in the respective hold request type. Note that the To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type. It also creates a log entry for the hold request when the To Do is created for the submitter.

Note:

While requesting a submitter to resubmit a hold activation request, the approver needs to specify the comments so that the submitter can make the required changes in the hold request.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

C1-HOLDACTV

This algorithm is invoked when the status of the hold request is changed to **Active**. It validates the following on activation:

- The entity start date is not earlier than the hold request start date.
- The entity end date is not later than the hold request end date.
- The hold amount is less than or equal to the outstanding amount when the entity level is set to **Bill**.
- A bill with non-zero outstanding bill amount is added in the hold request.
- The entity end date or process end date is not earlier than the system date.

It also does the following (in the online mode):

- If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date.
- If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account. The status of the overdue process is changed to **Inactive**.

In addition, it does the following in the online or deferred (i.e., when the **C1-HLDRQ** or **C1-HLMON** batch is executed) mode depending on the defer processing count:

- If the hold request is created for the **Account** entity, the **Bill Generation** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the bill after date to the hold entity end date or bill generation process end date whichever is earlier. In addition, it creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
- If the hold request is created for the **Account** entity, the **Overdue** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the postpone credit review until date to the hold entity end date or overdue process end date whichever is earlier.
- If the hold request is created for the **Account** entity, the **Delinquency** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the postpone credit review until date to the hold entity end date or delinquency process end date whichever is earlier.
- If the hold request is created for the **Person** entity, the **Delinquency** process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date, it sets the postpone credit review until date to the hold entity end date or delinquency process end date whichever is earlier. If the **Hierarchy** option is selected

Copyright © 2026, Oracle and/or its affiliates.

for the person, this algorithm sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. However, if the **Hierarchy** option is not selected for the person, this algorithm sets the postpone credit review until date for the person and its immediate accounts (where the person is the main customer).

Note: This happens only in the deferred mode when the **C1-HLDRQ** or **C1-HLMON** batch is executed.) For more information, see Hold Delinquency on page 1932.

- If the hold request is created for the **Person** entity, the **Bill Generation** process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date, it sets the bill after date to the hold entity end date or bill generation process end date whichever is earlier. The bill after date is set either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

  Note: This happens only in the deferred mode when the **C1-HLDRQ** or **C1-HLMON** batch is executed.) In addition, it creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
- If the hold request is created for the **Account** entity, the **Auto Pay** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the defer auto pay date to the hold entity end date or auto pay process end date whichever is earlier.
- If the hold request is created for the **Account** entity, the **Auto Pay** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, it updates the automatic payment details of the debit bills (if any) for the respective account in the **CI_BILL_ACH** table.
- If the hold request is created for the **Account** entity, the **Refund** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the hold refund until date to the hold entity end date or refund process end date whichever is earlier. In addition, the status of the non-final refund request (if any) for the respective account is set to **Hold**.

Note:

If the hold entity end date is not specified, the system will consider the respective process end date while deriving the above dates. If both the hold entity end date and respective process end date are not specified, the system will consider the hold request end date while deriving the above dates.

This algorithm does not change the start date of the hold request, hold entity, or hold process when it is a future date.

This algorithm contains the following parameter:

- **Alert Type** – Used to indicate the alert type using which the alerts should be created in the dashboard whenever an account is kept on hold. You can then click on the hyperlink and navigate to the **Alerts** tab of the **Account** screen. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released. This parameter is optional.

  Note: You need to specify the same alert type in both the **C1-HOLDACTV** and **C1-RELENTITY** algorithms.

C1-RELAPP

This algorithm is invoked when the status of the hold request is changed to **Release Approval in Progress**. It creates a To Do using the release approval To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the release approval To Do role that is specified in the respective hold request type. In addition, it creates a log entry for the hold request when the To Do is created for the approver.

Copyright © 2026, Oracle and/or its affiliates.

C1-HRQ-TRANS

This algorithm is invoked when you click the **Approve** button. It changes the status of the hold request to **Released**.

C1-RELRESUBM

This algorithm is invoked when you click the **Re Submit** button. It changes the status of the hold request to **Active**. The submitter can then make the required changes and resubmit the hold release request for approval.

In addition, it creates a To Do using the submitter To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the submitter To Do role that is specified in the respective hold request type. Note that the To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

Note:

While requesting a submitter to resubmit a hold release request, the approver needs to specify the comments so that the submitter can make the required changes in the hold request.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

C1-RELENTITY

This algorithm is invoked when you click the **Release** button. It checks whether the **Release Approval** option is selected in the respective hold request type. If the **Release Approval** option is selected in the respective hold request type, it changes the status of the hold request to **Release Approval in Progress**. However, if the **Release Approval** option is not selected in the respective hold request type, it changes the status of the hold request to **Released**. On releasing a hold request, it checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm does the following (in the online mode):

- If the hold request is created for the **Account** entity, the **Bill Generation** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, the bill after date is cleared for the respective account.
- If the hold request is created for the **Account** entity , the **Auto Pay** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, the defer auto pay until date is set to the system date for the respective account. In addition, it updates the automatic payment details of the debit bills (if any) for the respective account in the **CI_BILL_ACH** table.
- If the hold request is created for the **Account** entity, the **Overdue** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, the postpone credit review until date is set to the system date for the respective account.
- If the hold request is created for the **Account** entity, the **Delinquency** process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date, the postpone credit review until date is set to the system date for the respective account. (**Note**: This happens only in the deferred mode when the **C1-HLMON** batch is executed.)
- If the hold request is created for the **Account** entity, the **Refund** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, the hold refund until date is set to the system date for the respective account. In addition, the status of the refund request (if any) for the respective accounts is changed from **Hold** to its previous status.
- If the hold request is created for the **Person** entity, the **Bill Generation** process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date, the bill after date is cleared either for all the accounts in the person’s hierarchy or only for the persons’ immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from

Copyright © 2026, Oracle and/or its affiliates.

the person's hierarchy and then derives the accounts where the child person is the main customer. (**Note**: This happens only in the deferred mode when the **C1-HLMON** batch is executed.)

- If the hold request is created for the **Person** entity, the **Delinquency** process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date, the postpone credit review until date is set to the system date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. (**Note**: This happens only in the deferred mode when the **C1-HLMON** batch is executed.)

Note:

The above dates are updated to the system date only when the entity end date or respective process end date is not earlier than the system date.

This algorithm is also invoked when the approver approves the hold release request.

However, if the number of entities added in the hold request exceeds the defer processing count, a log entry is created indicating that the hold request is manually released but the above-mentioned release process would be completed when the **C1-HLMON** batch is executed.

This algorithm also updates the alert end date on the respective account to the system date irrespective of whether the number of entities added in the hold request exceeds the defer processing count or not.

This algorithm contains the following parameter:

- **Alert Type** – Used to indicate the alert type. The system then considers the alerts of the respective alert type on the account and updates its end date when the hold request is released. This parameter is optional.

Note: You need to specify the same alert type in both the **C1-HOLDACTV** and **C1-RELENTITY** algorithms.

C1-RLSHOLD

This algorithm is invoked when you click the **Release** button. If the hold entity end date and hold process end date is later than the system date, this algorithm sets the hold entity end date and hold process end date to the system date. In addition, it sets the hold request end date to the system date. Finally, it changes the status of the hold request to **Released**.

Hold Request Type

Oracle Revenue Management and Billing allows you to define a hold request type using which you can create a hold request. It is the hold request type which helps the system to determine the following:

- Business object using which the hold request should be created in the system
- Whether you can partially hold a bill through a hold request
- Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time).
- Whether approval is required while activating or releasing a hold request
- Processes that you can keep on hold for an entity through a hold request

The **Hold Request Type** screen allows you to define, edit, delete, and copy a hold request type. It contains the following zones:

- Hold Request Type List on page 1974
- Hold Request Type on page 1974

Copyright © 2026, Oracle and/or its affiliates.

Hold Request Type List

The **Hold Request Type List** zone lists the hold request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Edit	On clicking the **Edit** (✎) icon, the **Hold Request Type** screen appears where you can edit the details of the hold request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Hold Request Type** screen appears where you can define a new hold request type using an existing hold request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the hold request type.
	Note: You can delete a hold request type only when a hold request is not yet created using the hold request type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a hold request type, the **Hold Request Type** zone appears with the details of the respective hold request type.

Hold Request Type

The **Hold Request Type** zone displays the details of the hold request type. It contains the following sections:

- **Main** - Displays the basic information about the hold request type. It contains the following fields:

Field Name	Field Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Hold Request Business Object	Indicates the business object using which a hold request should be created. In addition, a context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the hold request type.
Status	Indicates the status of the hold request type. The valid values are: • Active • Inactive
Allow Partial Hold for Bill	Indicates whether partial hold is allowed for a bill.
	Note: This field is applicable when you create a hold request (using the hold request type) where the entity level is set to **Bill**.
Defer Processing Count	Displays the count which helps to determine the following: • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the **CI_BILL_ACH** table in the deferred or online mode.
Activation Approval	Indicates whether approval is required while activating a hold request (created using the hold request type) for an entity.
Activation Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval.
	Note: This field appears when the **Activation Approval** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do Type.
Activation Approval To Do Role	Indicates that users with the specified To Do role can only approve a hold activation request which is submitted for approval.
	Note: This field appears when the **Activation Approval** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Release Approval	Indicates whether approval is required while releasing a hold request (created using the hold request type) of an entity.
Release Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Release Approval** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do Type.
Release Approval To Do Role	Indicates that users with the specified To Do role can only approve a hold release request which is submitted for approval.
	Note: This field appears when the **Release Approval** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Submitter To Do Type	Indicates that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.

- **Hold Processes** - Lists the processes that you can keep on hold for an entity while creating a hold request. The valid values are:
  - Auto Pay
  - Bill Generation
  - Delinquency
  - Funding
  - Overdue
  - Refund
- **Record Actions** - Enables you to perform various actions on the hold request type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request type.
Delete	Used to delete the hold request type.
	Note: You can delete a hold request type when a hold request is not yet created using the hold request type.
Duplicate	Used to create a new hold request type using an existing hold request type.

- **Record Information** - This section contains the following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the hold request type is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics of the hold request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Hold Request Type** zone does not appear in the **Hold Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the hold request type in the **Hold Request Type List** zone.

Defining a Hold Request Type

Prerequisites

To define a hold request type, you should have:

- Hold request type business objects defined in the application
- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To define a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Hold Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type Business Object	Used to indicate the business object using which you want to create the hold request type. The valid value is: • **Hold Request Type (i.e., C1-HoldRequestType)** - Enables you to maintain a hold request type. **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Hold Request Type** (i.e., **C1-HOLDRQTY**) maintenance object.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple hold request type business objects defined in the application. If there is only one hold request type business object defined in the application, the **Hold Request Type** screen appears.

4. Select the required hold request type business object from the respective field.
5. Click **OK**.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the hold request type.
- **Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
- **Characteristics** - Used to define the characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the business object using which you are defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: • **Hold Request - Display (i.e., C1-HoldReqDisplay)**- Enables you to display the details of a hold request. • **Hold Request - Maintenance (i.e., C1-HoldRequest)** - Enables you to maintain a hold request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Hold Request** (i.e., **C1-HOLDREQ**) maintenance object.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can resize the text box depending on your requirement by clicking the **Resize Handle** (⟋) icon at the bottom right corner of the text box.	
Status	Used to indicate the status of the hold request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a hold request type to **Inactive** when the corresponding hold request is in a status other than **Discarded**, **Rejected**, or **Released**.	Yes
Allow Partial Hold for Bill	Used to indicate whether partial hold is allowed for a bill. **Note:** This field is applicable when you create a hold request (using the hold request type) where the entity level is set to **Bill**.	Yes
Defer Processing Count	Used to specify the count which helps to determine the following: • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the**CI_BILL_ACH** table in the deferred or online mode. **Note:** You must specify a positive integer value in this field. By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50. The **Deferred** mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is executed. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. For more information about this batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	No
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Activation Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Activation Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Activation Approval To Do Type** field. This field appears when the **Activation Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Activation Approval** option is selected.
Activation Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval. **Note:** The list includes only those To Do roles which are associated with the activation approval To Do type. This field appears when the **Activation Approval** option is selected.	Yes (Conditional) **Note:** This field is required when the **Activation Approval** option is selected.
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No
Release Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Release Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Release Approval To Do Type** field. This field appears when the **Release Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval. **Note:** This field appears when the **Release Approval** option is selected. The list includes only those To Do roles which are associated with the release approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The**C1-HOLSB** To Do type is shipped with the product. You can use the **C1-HOLSB** To Do type or a custom To Do type, if required.	No
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval. **Note:** The list includes only those To Do roles which are associated with the submitter To Do type.	Yes (Conditional) **Note:** This field is required when the submitter To Do type is specified in the respective field.

6. Enter the required details in the **Main** section.
7. Add the processes that you can keep on hold for an entity while creating the corresponding hold request.
8. Define characteristics for the hold request type, if required.
9. Click **Save**.
   The hold request type is defined.

Adding a Hold Process in a Hold Request Type

Prerequisites

To add a hold process in a hold request type, you should have:

- Values defined in the **HOLD_PROCESS_FLG** lookup field

Procedure

To add a hold process in a hold request type:

1. Ensure that the **Hold Processes** section is expanded when you are defining, editing, or copying a hold request type.

   The **Hold Processes** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that you want keep on hold for an entity through a hold request. The valid values are: • **Auto Pay** - Used when you want to hold the automatic payment process of an entity through a hold request. • **Bill Generation** - Used when you want to hold the bill generation process of an entity through a hold request. • **Delinquency** - Used when you want to hold the delinquency process of an entity through a hold request. • **Funding** - Used when you want to hold the funding process of an entity through a hold request. • **Overdue** - Used when you want to hold the overdue process of an entity through a hold request. • **Refund** - Used when you want to hold the refund process of an entity through a hold request.	Yes
	Note: When you create a hold request using a hold request type, the system will derive only those hold processes that are added in the hold request type in the respective list of the **Hold Request** screen. The list includes only those processes which are added in the **HOLD_PROCESS_FLG** lookup field. You must select at least one hold process while defining a hold request type.	

2. Enter the required details in the **Hold Processes** section.
3. If you want to add more than one hold process for the hold request type, click the **Add** (+) icon and then repeat *s*tep 2.

Note: However, if you want to remove a hold process from the hold request type, click the **Delete** (🗑) icon corresponding to the hold process. Note that you cannot remove a process from the hold request type when one or more hold requests with the hold process is in a status other than **Discarded**, **Rejected**, or **Released**.

Defining a Characteristic for a Hold Request Type

Prerequisites

To define a characteristic for a hold request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request Type**)

Procedure

To define a characteristic for a hold request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a hold *r*equest type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Hold Request Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the hold request type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the hold request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the hold request type, click the **Add** (+) icon and then *r*epeat step *2*.

> **Note:** However, if you want to remove a characteristic from the hold request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Hold Request Type

Prerequisites

To edit a hold request type, you should have:

- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To edit a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
   The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the hold *r*equest type whose details you want to edit.

   The **Hold Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the hold request type.
   - **Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
   - **Characteristics** - Used to define the characteristics for the hold request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Displays the hold request type.	Not applicable
Business Object	Indicates the business object which is used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: • **Hold Request - Display (i.e., C1-HoldReqDisplay)**- Enables you to display the details of a hold request. • **Hold Request - Maintenance (i.e., C1-HoldRequest)** - Enables you to maintain a hold request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Hold Request** (i.e., **C1-HOLDREQ**) maintenance object.	
Detailed Description	Used to specify additional information about the hold request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** ( ) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the hold request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a hold request type to **Inactive** when the corresponding hold request is in a status other than **Discarded**, **Rejected**, or **Released**.	Yes
Allow Partial Hold for Bill	Used to indicate whether partial hold is allowed for a bill. **Note:** This field is applicable when you create a hold request (using the hold request type) where the entity level is set to **Bill**.	Yes
Defer Processing Count	Used to specify the count which helps to determine the following: • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the**CI_BILL_ACH** table in the deferred or online mode.	No

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify a positive integer value in this field. By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50. The **Deferred** mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is executed. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. For more information about this batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No
Activation Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Activation Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Activation Approval To Do Type** field. This field appears when the **Activation Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Activation Approval** option is selected.
Activation Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval. **Note:** The list includes only those To Do roles which are associated with the activation approval To Do type. This field appears when the **Activation Approval** option is selected.	Yes (Conditional) **Note:** This field is required when the **Activation Approval** option is selected.
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Release Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Release Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Release Approval To Do Type** field. This field appears when the **Release Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval. **Note:** This field appears when the **Release Approval** option is selected. The list includes only those To Do roles which are associated with the release approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The**C1-HOLSB** To Do type is shipped with the product. You can use the **C1-HOLSB** To Do type or a custom To Do type, if required.	No
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	the approver requests the submitter to resubmit a hold activation or release request for approval. **Note:** The list includes only those To Do roles which are associated with the submitter To Do type.	**Note:** This field is required when the submitter To Do type is specified in the respective field.

Tip: Alternatively, you can click the **Edit** button in the **Hold Request Type** zone to edit the details of the hold request type.

5. Modify the required details in the **Main** section.
6. Add or remove the hold processes from the hold request type, if required.

Note: You cannot remove a process from the hold request type when one or more hold requests with the hold process is in a status other than **Discarded**, **Rejected**, or **Released**.

7. Define, edit, or remove characteristics of the hold request type, if required.
8. Click **Save**.
   The changes made to the hold request type are saved.

Copying a Hold Request Type

Instead of creating a hold request type from scratch, you can create a new hold request type using an existing hold request type. This is possible through copying a hold request type. On copying a hold request type, the details including the hold processes and characteristics are copied to the new hold request type. You can then edit the details, if required.

Prerequisites

To copy a hold request type, you should have:

- Hold request type (whose copy you want to create) defined in the application
- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To copy a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
   A sub-menu appears.

Copyright © 2026, Oracle and/or its affiliates.

3. Click the **Search** option from the **Hold Request Type** sub-menu.
   The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the hold request type whose copy you want to create.

   The **Hold Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the hold request type.
   - **Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
   - **Characteristics** - Used to define the characteristics for the hold request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the business object using which you are defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: • **Hold Request - Display (i.e., C1-HoldReqDisplay)**- Enables you to display the details of a hold request. • **Hold Request - Maintenance (i.e., C1-HoldRequest)** - Enables you to maintain a hold request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Hold Request** (i.e., **C1-HOLDREQ**) maintenance object.	Yes
Detailed Description	Used to specify additional information about the hold request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the hold request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a hold request type to **Inactive** when the corresponding hold request is in a status other than **Discarded**, **Rejected**, or **Released**.	Yes
Allow Partial Hold for Bill	Used to indicate whether partial hold is allowed for a bill.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is applicable when you create a hold request (using the hold request type) where the entity level is set to **Bill**.	
Defer Processing Count	Used to specify the count which helps to determine the following: • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the**CI_BILL_ACH** table in the deferred or online mode. **Note:** You must specify a positive integer value in this field. By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50. The **Deferred** mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is executed. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. For more information about this batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	No
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No
Activation Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Activation Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Activation Approval To Do Type** field. This field appears when the **Activation Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	**Note:** This field is required when the **Activation Approval** option is selected.
Activation Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval. **Note:** The list includes only those To Do roles which are associated with the activation approval To Do type. This field appears when the **Activation Approval** option is selected.	Yes (Conditional) **Note:** This field is required when the **Activation Approval** option is selected.
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No
Release Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Release Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Release Approval To Do Type** field. This field appears when the **Release Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Release Approval** option is selected. The list includes only those To Do roles which are associated with the release approval To Do type.	**Note:** This field is required when the **Release Approval** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.	No
	Note: The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The**C1-HOLSB** To Do type is shipped with the product. You can use the **C1-HOLSB** To Do type or a custom To Do type, if required.	
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval.	Yes (Conditional)
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	**Note:** This field is required when the submitter To Do type is specified in the respective field.

Tip: Alternatively, you can click the **Duplicate** button in the **Hold Request Type** zone to create a copy of the hold request type.

5. Enter the required details in the **Main** section.
6. Add or remove the hold processes from the hold request type, if required.
7. Define, edit, or remove characteristics of the hold request type, if required.
8. Click **Save**.
   The new hold request type is defined.

Deleting a Hold Request Type

Procedure

To delete a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
   The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *h*old request type that you want to delete.

   A message appears confirming whether you want to delete the hold request type.

   Note: You can delete a hold request type only when a hold request is not yet created using the hold request type.

   Tip: Alternatively, you can click the **Delete** button in the **Hold Request Type** zone to delete the hold request type.
5. Click **OK**.
   The hold request type is deleted.

Hold Request (Used for Searching)

The **Hold Request** screen allows you to search for a hold request using various search criteria. It also allows you to create a hold request. It contains the following zone:

- Search Hold Request on page 1994

Through this screen, you can navigate to the following screen:

- Hold Request (Used for Viewing) on page 2021

Search Hold Request

The **Search Hold Request** zone allows you to search for a hold request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a hold request using the hold request or bill details. The valid values are: • Request Details • Bill Details **Note:** By default, the **Request Details** option is selected.	Yes
Hold Request Type	Used to search for hold requests which are created using a particular hold request type. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those hold request types which are already defined in the system.	No
Entity	Used to search for hold requests which are created at a particular entity level. The valid values are: • Account • Bill • Person	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **HOLD_ENTITY_LVL_FLG** lookup field.	
Hold Process	Used to search for hold requests which are created to hold a particular process of an entity. The valid values are: • Auto Pay • Bill Generation • Delinquency • Funding • Overdue • Refund **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those values which are added in the **HOLD_PROCESS_FLG** lookup field.	No
User ID	Used to search for hold requests which are created by a particular user. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Hold Reason	Used to search for hold requests which are created due a particular reason. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	No
Start Date	Used to search for hold requests which are created from a particular date onwards. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search for hold requests with a particular status. The valid values are: • Active • Activation Approval In Progress • Deferred Processing • Discarded • Draft • Entity Derivation Pending • Rejected • Released • Release Approval in Progress • Release Request Approved • Return Release Request to Submitter **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
End Date	Used to search for hold requests which are created till a particular date. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Account ID	Used to search for hold requests which are created for a particular account. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** () icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears.	No
Person ID	Used to search for hold requests which are created for a particular person. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** () icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears.	No
Hold Request ID	Used to search for a particular hold request.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Request Details** option is selected from the **Search By** list.	
Bill ID	Used to search for hold requests which are created for a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears.	No
Bill Date From	Used to search for hold requests created for bills that are completed on or after the specified date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when the search criteria is specified in the **To** field.
To	Used to search for hold requests created for bills that are completed on or before the specified date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when the search criteria is specified in the **Bill Date From** field.

Note: You must specify at least one search criterion while searching for a hold request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the hold request is created.
Hold Request Information	Displays information about the hold request. **Note:** It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request. The valid values are: • Active • Activation Approval In Progress • Deferred Processing

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	• Discarded • Draft • Entity Derivation Pending • Rejected • Released • Release Approval in Progress • Release Request Approved • Return Release Request to Submitter
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.
Hold Processes	Indicates the processes which are kept on hold for the entity through the hold request. If multiple processes are selected in a hold request, the system concatenates and displays the hold processes separated by the **Comma** (,) symbol.
Hold Reason	Indicates the reason why the hold request is created for the entity.
Created By	Indicates the user who has created the hold request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Hold Request

Prerequisites

To search for a hold request, you should have:

- Hold request types defined in the application
- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To search for a hold request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Hold Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Hold Request** sub-menu.
   The **Hold Request** screen appears.
4. Enter the search criteria in the **Search Hold Request** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of hold requests that meet the search criteria appears in the **Search Results** section.

Creating a Hold Request

Prerequisites

To create a hold request, you should have:

- Hold request types defined in the application.
- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To create a hold request:

1. Do either of the following:

If you want to...	Then...
Hold a bill through a hold request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. The **Account Receivable Central** screen appears. **c.** Search for a bill that you want to keep on hold in the **Search Bill** zone. A list of bills that meet the search criteria appears in the search results. **d.** In the **Search Results** section, select the check box corresponding to the required bill that you want keep on hold and then click **Hold**.
	Note: You can select only one bill at a time while creating a hold request from the **Account Receivable Central** screen. You can only select a bill with non-zero outstanding balance.
Hold a bill through a hold request from the Funding Request screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**. The **Funding Request** screen appears.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
	c. Search for the required draft funding request in the **Search Funding Request** zone. A list of funding request that meet the search criteria appears in the search results. **d.** In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit. The **Funding Request** screen appears. **e.** Click the **Bills** tab. **f.** Select the check box corresponding to the bills that you want to keep on hold in the **Selected Bills** zone. **g.** Click the **Hold** button.
	Note: Before clicking the **Hold** button, you must ensure that the **Funding Exclusion Reason** option type is set in the **C1-HOLDSRCH** feature configuration. You can select multiple bills at the same time while creating a hold request from the **Funding Request** screen. You can only select a bill with non-zero outstanding balance.
Hold an account through a hold request from the Delinquency Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**. The **Delinquency Central** screen appears. **c.** Search for the overdue process of an account in the **Search Overdue Process** zone. A list of overdue processes that meet the search criteria appears in the search results. **d.** In the **Search Results** section, select the check box corresponding to the required overdue process of an account whose processes you want to keep on hold and then click **Create Hold Request**.
	Note: You can select only one overdue process at a time while creating a hold request for an account from the **Account Receivable Central** screen.
Create a hold request for a person, account, or bill from the Hold Request screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Hold Request**. A sub-menu appears. **c.** Click the **Add** option from the **Hold Request** sub-menu.

The **Add Hold Request** screen appears. It contains the following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to indicate the hold request type using which you want to create the hold request. **Note:** The list includes only those hold request types which are already defined in the system.	Yes

Tip: Alternatively, you can access the **Add Hold Request** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request** screen.

2. Select the required hold request type from the respective field.
3. Click **OK**.

The **Hold Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the hold request.
- **Hold Entities** - Used to indicate the entity (such as, person, account, or bill depending on the specified entity level) that you want to keep on hold. This section appears only when the **Use Selection Criteria** option is not selected while creating a hold request for an account or a person.
- **Account Selection Criteria** - Used to specify a selection criteria to derive the list of accounts that you want to add in the hold request. This section appears only when the following conditions are met:
  - The **Account** option is selected from the **Entity** list.
  - The **Use Selection Criteria** option is selected.
- **Person Selection Criteria** - Used to specify a selection criteria to derive the list of persons that you want to add in the hold request. This section appears only when the following conditions are met:
  - The **Person** option is selected from the **Entity** list.
  - The **Use Selection Criteria** option is selected.
- **Hold Processes** - Used to indicate one or more processes of the entity that you want to keep on hold for a particular period.
- **Characteristics** - Used to define the characteristics for the hold request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Indicates the hold request type using which you want to create the hold request.	Not applicable
Start Date	Used to specify the date from when the hold request is effective. **Note:** The hold request start date cannot be later than the hold request end date. By default, this field is set to the system date. You can specify a future date, if required. However, when you specify a past date, the system will automatically reset it to the system date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when the hold request is effective. **Note:** The hold request end date cannot be earlier than the hold request start date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	Yes
Entity	Used to indicate the type of entity for which you want to create the hold request. The valid values are: • Account • Bill • Person **Note:** The list includes only those values which are defined in the **HOLD_ENTITY_LVL_FLG** lookup field. If you are creating a hold request for a bill via the **Account Receivable Central** or **Funding Request** screen, the system, by default, sets the entity to **Bill** and the field is non-editable. If you are creating a hold request for an account via the **Delinquency Central** screen, the system, by default, sets the entity to **Account** and the field is non-editable.	Yes
Use Selection Criteria	Used to indicate whether you want to specify a selection criteria to derive the list of accounts or persons that you want to add in the hold request. **Note:** This field appears when the **Account** or **Person** option is selected from the **Entity** list.	No
Comments	Used to specify additional information about the hold request. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** ( ) icon at the bottom right corner of the text box.	No

4. Enter the required details in the **Main** section.

Copyright © 2026, Oracle and/or its affiliates.

5. Add the entities (such as, persons, accounts, or bills) that you want to keep on hold through the hold request.
6. Define the account or person selection criteria to derive the list of accounts or persons, respectively, that you want to add in the hold request.

> **Note:** This step is required only when the **Use Selection Criteria** option is selected while creating a hold request for an account or a person.

7. Add the processes of the entity that you want to keep on hold through the hold request.
8. Define characteristics for the hold request, if required.
9. Click **Save**.
   The hold request is created. The creation mode of the hold request is set to **Manual**.

> **Note:**
>
> If you create a hold request for a bill via the **Account Receivable Central** screen, the system sets the status of the hold request to either **Activation Approval In Progress** or **Active** depending on whether the approval process is configured in the respective hold request type. In addition, the **FROM_ARC_SW** field in the **C1_HOLD_REQ_DTLS** table is set to **Y**.
>
> If you create a hold request for an account via the **Delinquency Central** screen, the system sets the status of the hold request to either **Activation Approval In Progress** or **Active** depending on whether the approval process is configured in the respective hold request type. In addition, the **FROM_ARC_SW** field in the **C1_HOLD_REQ_DTLS** table is set to **Y**.
>
> If you create a hold request for a bill via the **Funding Request** screen, the system sets the status of the hold request to either **Activation Approval In Progress** or **Active** depending on whether the approval process is configured in the respective hold request type. In addition, the **FROM_ARC_SW** field in the **C1_HOLD_REQ_DTLS** table is set to **Y**. The status of the respective bill record in the funding request is set to **Excluded**. Also, the status reason is stamped corresponding to the excluded records. The system derives the status reason for the excluded records from the **Funding Exclusion Reason** option type of the **C1-HOLDSRCH** feature configuration.
>
> If you create a hold request for an account, person, or bill directly from the **Hold Request** screen, the system sets the status of the hold request to **Draft**. Note that if you create a hold request for an account or a person using the account selection criteria or person selection criteria, respectively, the system sets the status of the hold request to **Entity Derivation Pending**. In addition, a log entry is created indicating that the account or person derivation will happen after the Hold Request Entity Derivation Monitor batch is executed. For more information, see Hold Mass Accounts Using Selection Criteria on page 1945 and Hold Mass Persons Using Selection Criteria on page 1946.

Adding an Entity in a Hold Request

Procedure

To add an entity in a hold request:

1. Ensure that the **Hold Entities** section is expanded when you are creating or editing a hold request.

   The **Hold Entities** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Entity ID	Used to indicate the entity (such as, person, account, or bill depending on the specified entity level) that you want to keep on hold. **Note:** The **Search** (🔍) icon appears corresponding to the **Hold Entity ID** field. Depending on the entity level selected, the system behaves in the following manner on clicking the **Search** icon: • If the entity level is set to **Account**, the **Account Search** window appears. • If the entity level is set to **Person**, the **Person Search** window appears. • If the entity level is set to **Bill**, the **Bill Search** window appears. If you are creating a hold request for a bill via the **Account Receivable Central** or **Funding Request** screen, the system, by default, displays the selected bill ID and the field is non-editable. You cannot remove this selected bill from the hold request throughout its lifestyle. If you are creating a hold request for an account via the **Delinquency Central** screen, the system, by default, displays the account ID (of the selected overdue process) and the field is non-editable. You cannot remove this account from the hold request throughout its lifestyle. If the entity level is set to **Bill**, you must specify a bill with non-zero outstanding bill amount and which is in the **Complete** status.	Yes
Start Date	Used to specify the date from when you want to hold the entity.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	
End Date	Used to specify the date till when you want to hold the entity. **Note:** The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Hold Amount	Used to specify the outstanding bill amount that you want to keep on hold. **Note:** This field appears when the **Bill** option is selected from the **Entity** list. This field is editable only when the **Allow Partial Hold for Bill** option is selected in the respective hold request type. By default, the system displays the amount which is outstanding on the bill. If the field is editable, you can change the hold amount, if required. However, ensure that you specify a non-zero value in this field and the specified amount should not exceed the outstanding bill amount.	Yes
Hierarchy	Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer. **Note:** This field appears when the **Person** option is selected from the **Entity** list.	No

Note: The **Hold Entities** section appears only when the **Use Selection Criteria** option is not selected while creating a hold request for an account or a person.

Copyright © 2026, Oracle and/or its affiliates.

2. Enter the required details in the **Hold Entities** section.
3. If you want to add more than one entity in the hold request, click the **Add** (+) icon and then repeat *s*tep 2.

> **Note:** However, if you want to remove an entity from the hold request, click the **Delete** (🗑) icon corresponding to the hold entity.

Defining an Account Selection Criteria for a Hold Request

Prerequisites

To define an account selection criteria for a hold request, you should have:

- Divisions, bill cycles, customer classes, states, health plans, membership identifier types, and policy types defined in the application
- Values defined in the **BILL_ADDR_SRCE_FLG**, **PRODUCT_TYPE_FLG**, **PRODUCT_HC_CAT_FLG**, **PRODUCT_LOB_FLG**, and **PRODUCT_LOB_CAT_FLG** lookup fields
- Required characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Health Plan**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Product**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Person**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define an account selection criteria for a hold request:

1. Ensure that the **Account Selection Criteria** section is expanded when you are creating or editing a hold request.

   The **Account Selection Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account using the account, individual membership, person, or policy details. The valid values are: • Account Details • Individual Membership Details • Person Details • Policy Details **Note:** The **Individual Membership Details** and **Policy Details** options appear in the **Search By** list only when the **Environment Type** option type of the **SYSDT** feature configuration is set to **H**. For more information, see Setting the SYSDT Feature Configuration on page 1964.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Note:

The **Account Selection Criteria** section appears only when the following conditions are met in the **Main** section:

- The **Account** option is selected from the **Entity** list.
- The **Use Selection Criteria** option is selected. Note that this option appears only when the **Account** or **Person** option is selected from the **Entity** list.

2. Select the required option depending on which you want to search for the accounts from the **Search By** list.

   The following fields appear in the **Account Selection Criteria** section:

Field Name	Field Description	Mandatory (Yes or No)
Address Source	Used to search for accounts where a particular address source is used to route the account's bills and/or quotes via the postal service. The valid values are: • Account Override • Bill • Main • Multiple Account Override • Person **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **BILL_ADDR_SRCE_FLG** lookup field.	No
Division	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular division. • **Individual Membership Details** - This field enables you to search for individual membership's member persons' accounts that belong to a particular division. • **Policy Details** - This field enables you to search for policy persons' accounts that belong to a particular division.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Account Details**, **Individual Membership Details**, or **Policy Details** option is selected from the **Search By** list. Note that in case of the latter two options (i.e., **Individual Membership Details** and **Policy Details**), this field appears only when you click the **Advanced Search** link available in the right side of the **Account Selection Criteria** section. The list includes only those divisions which are already defined in the system.	
State	You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a specific state. Note that this field is enabled while searching using the account details only when an option is selected from the **Address Source** list. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular state. • **Person Details** - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in a particular state. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular state. **Note:** The **Search** (🔍) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	No
Bill Cycle	Used to search for accounts with a particular bill cycle. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those bill cycles which are already defined in the system.	No
County	You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a specific	No

Field Name	Field Description	Mandatory (Yes or No)
	county. Note that this field is enabled while searching using the account details only when an option is selected from the **Address Source** list. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular county. • **Person Details** - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in a particular county. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular county. **Note:** You can specify comma-separated values in this field.	
Customer Class	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular customer class. • **Individual Membership Details** - This field enables you to search for individual membership's member persons' accounts that belong to a particular customer class. • **Policy Details** - This field enables you to search for policy persons' accounts that belong to a particular customer class. **Note:** This field appears when the **Account Details**, **Individual Membership Details**, or **Policy Details** option is selected from the **Search By** list. Note that in case of the latter two options (i.e., **Individual Membership Details** and **Policy Details**), this field appears only when you click the **Advanced Search** link available in the right side of the **Account Selection Criteria** section. The list includes only those customer classes which are already defined in the system.	No
Postal	You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a specific postal or zip code. Note that this field is enabled while searching using the account details only when an option is selected from the **Address Source** list.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in an area with a particular postal or zip code. • **Person Details** - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in an area with a particular postal or zip code. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in an area with a particular postal or zip code. **Note:** You can specify comma-separated values in this field.	
Product Type	Used to search for accounts of persons that are linked to individual memberships of a particular health product type. The valid values are: • Exclusive Provider Organization • Health Maintenance Organization • Point-of-Service Plan • Preferred Provider Organization **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_TYPE_FLG** lookup field.	No
Product Category	Used to search for accounts of persons that are linked to individual memberships of a particular health product category. The valid value is: • Medical **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_HC_CAT_FLG** lookup field.	No
Health Plan	Used to search for accounts of persons that are linked to individual memberships of a particular health plan. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. You must specify a health plan which is already defined in the system.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Start Date	You can use this field while searching for an account using the individual membership or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Individual Membership Details** - This field enables you to search for accounts of persons that are linked to individual memberships with a particular start date. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies with a particular start date. **Note:** This field appears when the **Individual Membership Details** or **Policy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
End Date	You can use this field while searching for an account using the individual membership or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Individual Membership Details** - This field enables you to search for accounts of persons that are linked to individual memberships with a particular end date. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies with a particular end date. **Note:** This field appears when the **Individual Membership Details** or **Policy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Membership Identifier Type	Used to search for accounts of persons that are linked to individual memberships using a particular membership identifier type. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those membership identifier types which are already defined in the system.	Yes (Conditional) **Note:** If you specify the membership identifier as a search criteria, you have to select the membership identifier type.
Membership Identifier	Used to search for accounts of persons that are linked to a particular individual membership.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** option is selected from the **Search By** list.	**Note:** If you specify the membership identifier type as a search criteria, you have to enter the membership identifier.
Product LOB	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB. **Note:** This field appears when the **Individual Membership Details** option is selected from the**Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. The list includes only those values which are defined in the **PRODUCT_LOB_FLG** lookup field.	No
Product LOB Category	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB category. The valid values are: • Commercial • Government • State Programs **Note:** This field appears when the **Individual Membership Details** option is selected from the**Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. The list includes only those values which are defined in the **PRODUCT_LOB_CAT_FLG** lookup field.	No
Person ID	Used to search for accounts where a particular person is the main customer. **Note:** The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears. This field appears when the **Person Details** option is selected from the **Search By** list. If you specify the person ID along with any other search criteria, the system gives high precedence to the person ID and ignores the other account selection criteria except **Include Person Hierarchy**.	Yes (Conditional) **Note:** This field is required when the **Include Person Hierarchy** option is selected.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search for accounts where the main customer have a particular name. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Include Person Hierarchy	Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Policy Type	Used to search for accounts of persons that are linked to policies created using a particular policy type. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The list includes only those policy types which are already defined in the system.	No
Policy Plan Number	Used to search for accounts of persons that are linked to policies having a particular policy plan. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Policy Number	Used to search for accounts of persons that are linked to a particular policy. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Source System	Used to search for accounts of persons that are linked to policies originated from a particular external system. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The list includes only those source systems which are already defined in the system.	No
Status	Used to search for accounts of persons that are linked to policies with a particular status. The valid values are: • Activate • In Force/Active	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Cancel • Canceled • Pending Cancelation • Pending • Pending Reinstatement • Pending Termination • Post Run out • Reinstated • Renewed • Run out • Terminated **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	

In addition, the following sub-sections appear in the **Account Selection Criteria** section:

- **Characteristics** - This section appears when the **Account Details**, **Person Details**, or **Policy Details** option is selected from the **Search By** list. Note that in case of the latter option (i.e., **Policy Details**), this section appears only when you click the **Advanced Search** link available in the right side of the **Account Selection Criteria** section. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Membership Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Health Product Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships of a health product with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships of a health product with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Health Plan Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships of a health plan with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships of a health plan with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You can specify multiple characteristics in the account selection criteria by clicking the **Add** (+) icon corresponding to the **Characteristic Type** field. If you specify multiple characteristics in the account selection criteria, the system uses the **AND** operator to derive the list of accounts that have all the specified characteristics. However, note that you cannot specify more than five characteristics in the account selection criteria.

3. Enter the required search criteria in the **Account Selection Criteria** section.

> **Note:**
>
> You must specify at least one search criterion while defining an account selection criteria for a hold request.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Defining a Person Selection Criteria for a Hold Request

Prerequisites

To define a person selection criteria for a hold request, you should have:

- States defined in the application
- Required characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To define a person selection criteria for a hold request:

1. Ensure that the **Person Selection Criteria** section is expanded when you are creating or editing a hold request.

> **Note:**
>
> The **Person Selection Criteria** section appears only when the following conditions are met in the **Main** section:
>
> - The **Person** option is selected from the **Entity** list.
> - The **Use Selection Criteria** option is selected. Note that this option appears only when the **Account** or **Person** option is selected from the **Entity** list.

The **Person Selection Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for a particular person. **Note:** The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears.	No
Person Name	Used to search for persons with a particular name.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
State	Used to search for persons who reside in a particular state. **Note:** The **Search** (🔍) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	No
County	Used to search for persons who reside in a particular county. **Note:** You can specify comma-separated values in this field.	No
Postal	Used to search for persons who reside in an area with a particular postal or zip code. **Note:** You can specify comma-separated values in this field.	No

In addition, the following sub-section appears in the **Person Selection Criteria** section:

- **Characteristics** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for persons with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Person Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for persons with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Note: You can specify multiple characteristics in the person selection criteria by clicking the **Add** (+) icon corresponding to the **Characteristic Type** field. If you specify multiple characteristics in the person selection criteria, the system uses the **AND** operator to derive the list of persons that have all the specified characteristics. However, note that you cannot specify more than five characteristics in the person selection criteria.

2. Enter the required search criteria in the **Person Selection Criteria** section.

Note:

You must specify at least one search criterion while defining a person selection criteria for a hold request.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

How to create a hold request	Creating a Hold Request on page 1999

Adding a Process in a Hold Request

Prerequisites

To add a process in a hold request, you should have:

- Required applicable processes added in the respective hold request type

Procedure

To add a process in a hold request:

1. Ensure that the **Hold Processes** section is expanded when you are creating or editing a hold request.

   The **Hold Processes** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that you want to keep on hold. The system then holds the selected process of those entities whose start and end dates fall with the process's start and end dates. **Note:** The list includes only those processes which are selected in the respective hold request type. Depending on the entity level selected, the system enables you to select the following processes: • If the entity level is set to **Account**, you can select the **Auto Pay**, **Bill Generation**, **Delinquency**, **Funding**, **Overdue**, and/or **Refund** option (if available) from the **Hold Process** list. However, note that you cannot select both the **Overdue** and **Delinquency** processes at a time in the hold request. • If the entity level is set to **Person**, you can select the **Bill Generation**, **Delinquency**, and/or **Funding** option (if available) from the **Hold Process** list. • If the entity level is set to **Bill**, you can only select the **Funding** option from the **Hold Process** list. The **Overdue** process is valid for the financial services and health insurance domains but the **Delinquency** process is valid only for the health insurance domain.	Yes
Start Date	Used to specify the date from when the process of an entity is kept on hold.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The hold process start date must be between the hold request start and end dates. The hold process start date cannot be later than the hold process end date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	
End Date	Used to specify the date till when the process of an entity is kept on hold. **Note:** The hold process end date must be between the hold request start and end dates. The hold process end date cannot be earlier than the hold process start date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No

2. Enter the required details in the **Hold Processes** section.

> **Note:** You must specify at least one process while creating a hold request.

3. If you want to add more than one process in the hold request, click the **Add** (+) icon and then repeat *s*tep 2.

> **Note:** However, if you want to remove a process from the hold request, click the **Delete** ( ) icon corresponding to the hold process.

Defining a Characteristic for a Hold Request

Prerequisites

To define a characteristic for a hold request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request**)

Procedure

To define a characteristic for a hold request:

1. Ensure that the **Characteristics** section is expanded when you are creating or editing a hold request.

   The **Characteristics** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hold request. **Note:** You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the hold request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Hold Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the hold request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** If you select a predefined characteristic type, the **Search** ( ) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the hold request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the hold request, click the **Add** (+) icon and then repeat *s*tep 2.

Note: However, if you want to remove a characteristic from the hold request, click the **Delete** ( ) icon corresponding to the characteristic.

Viewing the Hold Request Details

Procedure

To view the details of a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to view.

   The **Hold Request** screen appears. It contains following tabs:

   - Hold Request - Main on page 2021
   - Hold Request - Log on page 2040

Copyright © 2026, Oracle and/or its affiliates.

3. Ensure that the **Main** tab is selected.
4. View the details of the hold request in the **Hold Request** zone.
5. View the entities (such as persons, accounts, or bills) whose processes are kept on hold through the hold request in the **Hold Entities** zone.

Hold Entities zone	Hold Entities on page 2025

Hold Request (Used for Viewing)

Once you create a hold request, the **Hold Request** screen allows you to:

- View the details of the hold request
- Add entities in the hold request
- Add processes in the hold request
- Edit the details of the hold request
- Edit the entity details of the hold request
- Edit the end dates of all the entities at once in the hold request (mass edit)
- Delete an entity from the hold request
- Delete the hold request
- Discard the hold request (i.e., future dated hold request)
- Submit the hold activation request for approval
- Approve or reject the hold activation request
- Request to resubmit the hold activation request for approval
- Release the hold request
- Approve the hold release request
- Request to resubmit the hold release request for approval
- View the log of the hold request
- Add a log entry for the hold request

This screen consists of the following tabs:

- Hold Request - Main on page 2021
- Hold Request - Log on page 2040

Hold Request - Main

The **Main** tab displays information about the hold request. It contains the following zones:

- Hold Request on page 2022
- Hold Entities on page 2025
- Search Account on page 2027

Copyright © 2026, Oracle and/or its affiliates.

Note:

This zone appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Account**
- The status of the hold request is set to **Draft**.

- Search Bill on page 2036

Note:

This zone appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Bill**
- The status of the hold request is set to **Draft**.

- Search Person on page 2038

Note:

This zone appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Person**
- The status of the hold request is set to **Draft**.

Hold Request

The **Hold Request** zone displays the details of the hold request. It contains the following sections:

- **Main** - Displays the basic information about the hold request. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Hold Request Type	Indicates the hold request type using which the hold request is created.
	Note: It has a link. On clicking the link, the **Hold Request Type** screen appears where you can view the details of the respective hold request type.
Status	Indicates the status of the hold request. The valid values are: • Active • Activation Approval In Progress • Deferred Processing • Discarded • Draft • Entity Derivation Pending • Rejected • Released • Release Approval in Progress • Release Request Approved • Return Release Request to Submitter
Status Reason	Indicates the reason why the hold request is rejected or released.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the hold request is in **Rejected** or **Released** status. It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective status reason.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.
Hold Reason	Indicates the reason why the entity is kept on hold.
Entity	Indicates the type of entity for which the hold request is created. The valid values are: • Account • Bill • Person
Comments	Displays additional information about the hold request.
	Note: This field appears when the comments are provided while adding or editing a hold request.

- **Hold Processes** - Lists the processes which are kept on hold for an entity through the hold request. It contains the following columns:

Column Name	Column Description
Hold Process	Indicates the process which is kept on hold. The valid values are: • Auto Pay • Bill Generation • Delinquency • Funding • Overdue • Refund
Start Date	Displays the date from when the process of an entity is kept on hold.
End Date	Displays the date till when the process of an entity is kept on hold.

- **Characteristics** - Lists the characteristics of the hold request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - Enables you to perform various actions on the hold request. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.
Delete	Used to delete the hold request.
	Note: The **Delete** button appears when the hold request is in the **Draft** status.
Submit	Used to submit the hold request.
	Note: The **Submit** button appears when the hold request is in the **Draft** status.
Re Submit	Used to re-submit the hold activation or release request.
	Note: The **Re Submit** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** or **Release Approval in Progress** status. • A user with the approval To Do role is reviewing the hold request.
Approve	Used to approve the hold activation or release request.
	Note: The **Approve** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** or **Release Approval in Progress** status. • A user with the approval To Do role is reviewing the hold request.
Reject	Used to reject the hold activation request.
	Note: The **Reject** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** status. • A user with the approval To Do role is reviewing the hold request.
Release	Used to release the hold request.
	Note: The **Release** button appears when the hold request is in the **Active** status.
Discard	Used to discard the future dated hold request.
	Note: The **Discard** button appears when the following conditions are met: • The hold request is future dated (i.e. when the hold request start date is later than the system date). • The hold request is in the **Active** status.

- **Record Information** - This section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the hold request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the hold request status is updated.
Create Date/Time	Displays the date and time when the hold request is created.

Hold Entities

The **Hold Entities** zone lists the entities which are added in the hold request. It contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This column appears when the entity level in the hold request is set to **Person**.
Account Information	Displays information about the account. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This column appears when the entity level in the hold request is set to **Account**.
Bill Information	Displays information about the bill. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill. This column appears when the entity level in the hold request is set to **Bill**.
Entity ID	Indicates the entity which is kept on hold through the hold request.
Start Date	Displays the date from when the entity is on hold.
End Date	Displays the date till when the entity is on hold.
	Note: Once the hold request is either manually or automatically released, the system updates the hold entity end date to the system date.
Hold Amount	Displays the bill amount which is kept on hold through the hold request.
	Note: This column appears when the entity level in the hold request is set to **Bill**.
Bill After Date	Displays the date after which bills can be generated for the account.
	Note: This column appears when the entity level in the hold request is set to **Account**. Once the hold request is either manually or automatically released, the bill after date is cleared (i.e., set to NULL) for the respective account.
Postpone Credit Review Until	Displays the date after which overdue debt can be monitored for the entity either through the **Overdue** or **Delinquency Management** process.
	Note: This column appears when the entity level in the hold request is set to **Account** or **Person**.
Defer Auto Pay Date	Displays the date till when you want to hold the automatic payment process for the account.
	Note: This column appears when the entity level in the hold request is set to **Account**.
Hierarchy	Indicates whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold through the hold request. The valid values are: • Y

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	• N
	Note: This column appears when the entity level in the hold request is set to **Person**. The system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
Hold Refund Until	Displays the date after which the refund request can be processed for the account.
	Note: This column appears when the entity level in the hold request is set to **Account**. The system does not stop you from creating A/P adjustments for an account from the **Adjustment** screen when the refund process is kept on hold for the account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold entity.
Delete	Used to delete the hold entity from the hold request.

Note:

The **Edit** and **Delete** buttons appear only when the hold request is in the **Draft** or **Active** status.

A check box appears corresponding to each hold entity. To update the details of a hold entity, select the check box corresponding to the hold entity and then click the **Edit** button. You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to update the details of all the hold entities listed in the respective page. For more information, see Editing the Entity Details of a Hold Request on page 2045.

You can also mass update the end date of the hold entities in a hold request at once by clicking the **Edit All** link available in the upper right corner of this zone. The link appears only when the hold request is in the **Draft** or **Active** status. For more information, see Updating the End Date of All the Hold Entities (Mass Edit) on page 2047.

To delete a hold entity, select the check box corresponding to the hold entity and click the **Delete** button. You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the hold entities listed in the respective page. For more information, see Deleting an Entity from a Hold Request on page 2049.

You can filter the list using the **Entity ID** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Search Account

The **Search Account** zone allows you to search for accounts using various search criteria. It also allows you to add the accounts in the hold request. It appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Account**
- The status of the hold request is set to **Draft**.

It contains the following two sections:

Copyright © 2026, Oracle and/or its affiliates.

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account using the account, policy, or individual membership details. The valid values are: • Account Details • Policy Details • Individual Membership Details **Note:** By default, the **Account Details** option is selected. The **Individual Membership Details** and **Policy Details** options appear in the **Search By** list only when the **Environment Type** option type of the **SYSDT** feature configuration is set to **H**. For more information, see Setting the SYSDT Feature Configuration on page 1964.	Yes
Account ID	Used to search for a particular account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears. On selecting the account, the respective information string appears corresponding to the **Account ID** field. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.	No
Division	You can use this field while searching for an account using the account or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular division. • **Individual Membership Details** - This field enables you to search for individual membership's member persons' accounts that belong to a particular division. **Note:** This field appears when the **Account Details** or**Individual Membership Details** option is selected from the **Search By** list. The list includes only those divisions which are already defined in the system.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Address Source	Used to search for accounts where a particular address source is used to route the account's bills and/or quotes via the postal service. The valid values are: • Account Override • Bill • Main • Multiple Account Override • Person **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **BILL_ADDR_SRCE_FLG** lookup field.	Yes (Conditional) **Note:** This field is required when the search criteria is specified in the **State**, **County**, or **Postal** field.
Bill Cycle	Used to search for accounts with a particular bill cycle. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those bill cycles which are already defined in the system.	No
State	You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a particular state. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular state. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular state. **Note:** The **Search** (🔍) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	No
Customer Class	You can use this field while searching for an account using the account or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular customer class.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Individual Membership Details** - This field enables you to search for individual membership's member persons' accounts that belong to a particular customer class. **Note:** This field appears when the **Account Details** or **Individual Membership Details** option is selected from the **Search By** list. The list includes only those customer classes which are already defined in the system.	
County	You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a particular county. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular county. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular county. **Note:** You can specify comma-separated values in this field.	No
Postal	You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a specific postal or zip code. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in an area with a particular postal or zip code. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in an area with a particular postal or zip code. **Note:** You can specify comma-separated values in this field.	No
Price Item	Used to search for accounts for which charges of a particular price item are created.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Policy Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears.	
Policy Plan Number	Used to search for accounts of persons that are linked to policies having a particular policy plan. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Policy Type	Used to search for accounts of persons that are linked to policies created using a particular policy type. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The list includes only those policy types which are already defined in the system.	Yes (Conditional) **Note:** This field is required if you are searching for accounts using the state, county, postal, start date, or end date as a search criteria.
Source System	Used to search for accounts of persons that are linked to policies originated from a particular external system. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The list includes only those source systems which are already defined in the system.	Yes (Conditional) **Note:** This field is required if you are searching for accounts using the state, county, postal, start date, or end date as a search criteria.
Policy Number	Used to search for accounts of persons that are linked to a particular policy. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Start Date	You can use this field while searching for an account using the policy or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies with a particular start date. • **Individual Membership Details** - This field enables you to search for accounts of persons that are linked to individual memberships with a particular start date.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** or **Policy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	
End Date	You can use this field while searching for an account using the policy or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies with a particular end date. • **Individual Membership Details** - This field enables you to search for accounts of persons that are linked to individual memberships with a particular end date. **Note:** This field appears when the **Individual Membership Details** or **Policy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Status	Used to search for accounts of persons that are linked to policies with a particular status. The valid values are: • In Force/Active • Cancel • Canceled • Pending Cancelation • Pending • Pending Reinstatement • Pending Termination • Post Run out • Reinstated • Run out • Terminated **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Health Plan	Used to search for accounts of persons that are linked to individual memberships of a particular health plan.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** option is selected from the **Search By** list. You must specify a health plan which is already defined in the system.	
Membership Identifier Type	Used to search for accounts of persons that are linked to individual memberships using a particular membership identifier type. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those membership identifier types which are already defined in the system.	Yes (Conditional) **Note:** If you specify the membership identifier as a search criteria, you have to select the membership identifier type.
Membership Identifier	Used to search for accounts of persons that are linked to a particular individual membership. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the membership identifier type as a search criteria, you have to enter the membership identifier.
Product Type	Used to search for accounts of persons that are linked to individual memberships of a particular health product type. The valid values are: • Exclusive Provider Organization • Health Maintenance Organization • Point-of-Service Plan • Preferred Provider Organization **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_TYPE_FLG** lookup field.	No
Product Category	Used to search for accounts of persons that are linked to individual memberships of a particular health product category. The valid value is: • Medical	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_HC_CAT_FLG** lookup field.	
Product LOB	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB. **Note:** This field appears when the **Individual Membership Details** option is selected from the**Search By** list. The list includes only those values which are defined in the **PRODUCT_LOB_FLG** lookup field.	No
Product LOB Category	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB category. The valid values are: • Commercial • Government • State Programs **Note:** This field appears when the **Individual Membership Details** option is selected from the**Search By** list. The list includes only those values which are defined in the **PRODUCT_LOB_CAT_FLG** lookup field.	No
Characteristic Type	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to **Account**. • **Individual Membership Details** - This field enables you to search for member persons' accounts of the individual memberships with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to **Membership**. • **Policy Details** - This field enables you to search for policy persons' accounts of the policies with a particular type of characteristic. Here, the system lists those characteristic types where the characteristic entity is set to **Policy**.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts with a particular characteristic. • **Individual Membership Details** - This field enables you to search for member persons' accounts of the individual memberships with a particular characteristic. • **Policy Details** - This field enables you to search for policy persons' accounts of the policies with a particular characteristic. **Note:** This field appears when you select an option from the **Characteristic Type** list.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Note: You must specify at least one search criterion while searching for an account.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays additional information about the account. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Country	Displays the country in which the account's main customer resides.
State	Displays the state where the county is located.
County	Displays the county name.
Postal	Displays the postal or zip code of the address.
Customer Class	Indicates the customer class to which the account belongs.
Division	Indicates the division to which the account belongs.
Account ID	Displays the account ID.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add an account to the hold request.

A check box appears corresponding to each account. On selecting the check box, you can add the account to the hold request. You can also select multiple accounts at the same time. In addition, you can select the check box

Copyright © 2026, Oracle and/or its affiliates.

corresponding to the column header. This allows you to add all the accounts listed in the respective page to the hold request.

Note: The **Export** option is available in the **Explorer Zone** menu. On clicking the **Export** option, you can extract the search results in the CSV format. Two additional columns named **Account Identifier Type** and **Account Identifier** appear in the CSV file apart from the columns listed above in the **Search Results** section.

Search Bill

The **Search Bill** zone allows you to search for bills using various search criteria. It also allows you to add the bills in the hold request. It appears when the following conditions are met:

- The **Entity** field in the hold request is set to **Bill**
- The status of the hold request is set to **Draft**.

It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using the bill details. The valid value is: • Bill Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search for a particular bill. **Note:** The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears. On selecting the bill, the respective information string appears corresponding to the **Bill ID** field. It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.	No
Alternate Bill ID	Used to search for a bill using its alternate bill ID.	No
Address Source	Used to search for bills which are routed using a particular address source. The valid values are: • Account Override • Bill • Main • Multiple Account Override • Person	Yes (Conditional) **Note:** This field is required if you are searching for bills using the state, country, or postal as a search criteria.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the **BILL_ADDR_SRCE_FLG** lookup field.	
Bill Date From	Used to search for bills which are completed on or after the specified date. **Note:** By default, the current date appears in this field. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required if you have specified the value in the **To** field.
State	Used to search for bills where billing address belongs to a particular state. **Note:** The **Search** ( ) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	No
To	Used to search for bills which are completed on or before the specified date. **Note:** By default, the current date appears in this field. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes (Conditional) **Note:** This field is required if you have specified the value in the **Bill Date From** field.
County	Used to search for bills where billing address belongs to a particular county.	No
Show All Bills	Used to indicate whether you want to search for all the bills or only the non-zero bills. **Note:** By default, this option is not selected and as a result, only the non-zero bills that meet the search criteria appears in the search results. However, if you select the **Show All Bills** option, the system lists all the bills including zero amount bills that meet the search criteria in the **Search Results** section.	No
Postal	Used to search for bills where billing address belongs to a particular postal or zip code.	No

Note:

You must specify at least one search criterion while searching for a bill.

The number of days between Bill From Date and Bill To Date should not exceed 60 days.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Account Information	Indicates the account for which the bill is created. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Country	Displays the country to which the bill is routed via the postal service.
State	Displays the state where the county is located.
County	Displays the county name.
Postal	Displays the postal or zip code of the address.
Entity ID	Displays the bill ID.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the hold request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the hold request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the bills listed in the respective page to the hold request.

Add	Used to add a person to the hold request.

A check box appears corresponding to each person. On selecting the check box, you can add the person to the hold request. You can also select multiple persons at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the persons listed in the respective page to the hold request.

Note: The **Export** option is available in the **Explorer Zone** menu. On clicking the **Export** option, you can extract the search results in the CSV format. One additional column named **Person Name** appears in the CSV file apart from the columns listed above in the **Search Results** section.

How to add a person in a hold request	Adding a Person in a Hold Request on page 2041

Hold Request - Log

The **Log** tab contains the following zone:

- Hold Request Log on page 2040

Hold Request Log

The **Hold Request Log** zone lists the complete trail of actions performed on the hold request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the hold request.
Details	Displays the details about the action performed on the hold request.
User	Indicates the user who has performed the action on the hold request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the hold request. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the hold request is rejected or released.

Note: You can manually add a log entry for the hold request by clicking the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

Adding a Person in a Hold Request

Prerequisites

To add a person in a hold request, you should have:

- States defined in the application

Procedure

To add a person in a hold request:

1. Search for the draft hold request in the **Hold Request** screen where you want to add another person.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Expand the **Search Person** zone.
4. Enter the search criteria in the **Search Person** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of persons that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the person that you want to add in the hold request.

> **Note:** You can also select multiple persons at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the persons listed in the respective page to the hold request.

7. Click the **Add** button in the **Search Person** zone.
   A message appears indicating that the selected person is successfully added in the hold request. Note that the person is added in the **Hold Entities** zone.

> **Note:** You cannot add a person in a hold request when it is created through the **Upload Request** feature.

Adding an Account in a Hold Request

Prerequisites

To add an account in a hold request, you should have:

- Divisions, bill cycles, customer classes, states, health plans, membership identifier types, and policy types defined in the application

Copyright © 2026, Oracle and/or its affiliates.

- Values defined in the **BILL_ADDR_SRCE_FLG**, **PRODUCT_TYPE_FLG**, **PRODUCT_HC_CAT_FLG**, **PRODUCT_LOB_FLG**, and **PRODUCT_LOB_CAT_FLG** lookup fields
- Required characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To add an account in a hold request:

1. Search for the draft hold request in the **Hold Request** screen where you want to add another account.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Expand the **Search Account** zone.
4. Enter the search criteria in the **Search Account** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of accounts that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the account that you want to add in the hold request.

   Note: You can also select multiple accounts at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the accounts listed in the respective page to the hold request.
7. Click the **Add** button in the **Search Account** zone.
   A message appears indicating that the selected account is successfully added in the hold request. Note that the account is added in the **Hold Entities** zone.

   Note: You cannot add an account in a hold request when it is created through the **Upload Request** feature.

Adding a Bill in a Hold Request

Prerequisites

To add a bill in a hold request, you should have:

- States defined in the application
- Values defined in the **BILL_ADDR_SRCE_FLG** lookup field

Copyright © 2026, Oracle and/or its affiliates.

Procedure

To add a bill in a hold request:

1. Search for the draft hold request in the **Hold Request** screen where you want to add another bill.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Expand the **Search Bill** zone.
4. Enter the search criteria in the **Search Bill** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to the bill that you want to add in the hold request.

> **Note:** You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the bills listed in the respective page to the hold request.

7. Click the **Add** button in the **Search Bill** zone.
   A message appears indicating that the selected bill is successfully added in the hold request. Note that the bill is added in the **Hold Entities** zone.

> **Note:**
>
> You cannot add a bill in the hold request if its outstanding amount is zero.
>
> You cannot add a bill in a hold request when it is created through the **Upload Request** feature.

Editing a Hold Request

Prerequisites

To edit a hold request, you should have:

- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To edit a hold request:

1. Search for the hold request in the **Hold Request** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Hold Request** zone.

   The **Hold Request** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the hold request.
   - **Hold Processes** - Used to indicate one or more processes of the entity that you want to keep on hold for a particular period.
   - **Characteristics** - Used to define the characteristics for the hold request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Hold Request Type	Indicates the hold request type using which the hold request is created.	Not applicable
Start Date	Displays the date from when the hold request is effective.	Not applicable
End Date	Used to specify the date till when the hold request is effective. **Note:** The hold request end date cannot be earlier than the hold request start date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. You must specify a date which is equal to or later than the system date.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field. You cannot change the hold reason when the hold request is in the **Active** status.	Yes
Entity	Indicates the type of entity for which the hold request is created. The valid values are: • Account • Bill • Person	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify additional information about the hold request. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** ( ) icon at the bottom right corner of the text box.	No

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

5. Modify the required details in the **Main** section.
6. Add or remove the hold processes from the hold request, if required.

Note:

You cannot delete a process or modify the details of a process except the end date when the hold request is in the **Active** status. Note that you cannot specify a date which is earlier than the system date.

A new process is added with the start date later than or equal to the system date.

You cannot change the past end date of an entity or process in the hold request.

You cannot add or remove a hold process from the hold request when it is created through the **Upload Request** feature.

7. Define, edit, or remove characteristics of the hold request, if required.
8. Click **Save**.
   The changes made to the hold request are saved.

Editing the Entity Details of a Hold Request

Procedure

To edit the entity details of a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Select the check box corresponding to the hold entity that you want to edit in the **Hold Entities** zone.

Copyright © 2026, Oracle and/or its affiliates.

Note: You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to update the details of all the hold entities listed in the respective page.

4. Click **Edit**.

The **Edit Hold Request Entities** screen appears. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.

In addition, this screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Entity ID	Displays the entity ID.	Not applicable
Entity Information	Displays the information about the entity.	Not applicable
Start Date	Used to specify the date from when you want to hold the entity. **Note:** This field is editable only when the hold request is in the **Draft** status. The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes
End Date	Used to specify the date till when you want to hold the entity. **Note:** The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date or system date. You cannot update a past dated end date of a hold entity. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Hold Amount	Used to specify the outstanding bill amount that you want to keep on hold.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: This column appears when the **Bill** option is selected from the **Entity** list. This field is editable only when the **Allow Partial Hold for Bill** option is selected in the respective hold request type. You must specify a non-zero value in this field and the specified amount should not exceed the outstanding bill amount.	
Hierarchy	Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.	No
	Note: This column appears when the **Person** option is selected from the **Entity** list. This column is editable only when the hold request is in the **Draft** status.	

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

5. Modify the details of the hold entities, if required.
6. Click **Save**.
   The changes made to the hold request are saved.

Note: After updating the end date of a hold entity, you need to execute the **Hold Request Monitor** (**C1-HLMON**) batch. On executing the batch, the system will accordingly update the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.

Related Topics

For more information on...	See...
How to search for a hold request	Searching for a Hold Request on page 1998
Hold Request screen	Hold Request (Used for Viewing) on page 2021
Hold Entities zone	Hold Entities on page 2025

Updating the End Date of All the Hold Entities (Mass Edit)

Procedure

To update the end date of all the hold entities at once in a hold request:

1. Search for the hold request in the **Hold Request** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Click the **Edit All** link available in the upper right corner of the **Hold Entities** zone.

   The **Hold Request Information** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Displays the date from when the hold request is effective.	Not applicable
End Date	Displays the date till when the hold request is effective.	Not applicable
Hold Entity End Date	Used to specify the date till when you want to hold all the entities in the hold request. **Note:** The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date or system date. You cannot update a past dated end date of a hold entity. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes

Note: The **Edit All** link appears when the hold request is in the **Draft** or **Active** status.

4. Enter the required date in the **Hold Entity End Date** field.
5. Click **Save**.

   The end date of the hold entities, hold processes, and the hold request is set to the specified date. For example, a hold request exists with the following hold processes and hold entities:

	Original Start Date	Original End Date
Hold Request	01-01-2021	12-31-2021
Hold Process: Billing	01-01-2021	12-31-2021
Hold Process: Auto Pay	01-01-2021	06-30-2021
Account 1	01-01-2021	12-31-2021
Account 2	01-20-2021	03-31-2021
Account 3	04-04-2021	10-30-2021

Now, if you want to mass update the hold entity end date to 09-30-2021 on 04-01-2021, the system updates the hold entity, hold process, and hold request end dates as shown in the following table:

	Original Start Date	Original End Date
Hold Request	01-01-2021	09-30-2021
Hold Process: Billing	01-01-2021	09-30-2021
Hold Process: Auto Pay	01-01-2021	06-30-2021

Copyright © 2026, Oracle and/or its affiliates.

	Original Start Date	**Original End Date**
Account 1	01-01-2021	09-30-2021
Account 2	01-20-2021	03-31-2021
Account 3	04-04-2021	09-30-2021

While updating the end date of a hold entity, the system checks whether the existing hold entity end date is earlier than the new hold entity end date. If the existing hold entity end date is earlier than the new hold entity end date, the system does not consider and update the end date of such hold entities. However, if the existing hold entity end date is later than the new hold entity end date, the system considers and updates the end date of such hold entities. Similarly, the system checks whether the existing hold process end date is earlier than the new hold entity end date. If the existing hold process end date is earlier than the new hold entity end date, the system does not consider and update the end date of such hold processes. However, if the existing hold process end date is later than the new hold entity end date, the system considers and updates the end date of such hold processes. Finally, the hold request end date is also set to the new hold entity end date.

A log is also created for the hold request indicating that mass update is done for the end date of the entities.

Note:

If the start date of any hold entity is later than the new hold entity end date, the system throws an appropriate error message and does not update the end date of the respective hold entity.

After updating the end date of a hold entity, you need to execute the **Hold Request Monitor** (**C1-HLMON**) batch. On executing the batch, the system will accordingly update the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.

Deleting an Entity from a Hold Request

Procedure

To delete an entity from a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Select the check box corresponding to the hold entity that you want to delete in the **Hold Entities** zone.

   Note: You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the hold entities listed in the respective page.
4. Click **Delete**.
   A message appears confirming whether you want to delete the hold entity.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The **Delete** button appears when the hold request is in the **Draft** or **Active** status. However, the system enables you to delete an entity from the hold request only when it is in the **Draft** status. Also, the entity (i.e., bill or account) added from the **Account Receivable Central**, **Funding Request**, or **Delinquency Central** screen, respectively, cannot be deleted from the hold request even when it is in the **Draft** status.

5. Click **OK**.
   The hold entities are deleted from the hold request.

> **Note:** You cannot remove an entity from a hold request when it is created through the **Upload Request** feature.

Discarding a Hold Request

Prerequisites

To discard a hold request, you should have:

- Reasons defined for the **Discarded** status of the **C1-HoldRequest** business object in the **Status Reason** screen

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To discard a hold request:

1. Search for a future dated active hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to discard.
   The **Hold Request** screen appears.
3. Click the **Discard** button in the **Hold Request** zone.

   The **Discard Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discard Reason	Used to indicate the reason why you want to discard the hold request. **Note:** The list includes only those reasons which are defined for the **Discarded** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while discarding the hold request.	No

Note:

The **Discard** button appears when the following conditions are met:

- The hold request is future dated (i.e. when the hold request start date is later than the system date).
- The hold request is in the **Active** status.

4. Select the reason for discarding the hold request from the **Discard Reason** list.
5. Enter the comments (if any) while discarding the hold request in the respective field.
6. Click **Save**.
   The status of the hold request is changed to **Discarded**. Note that the hold request end date, hold entity end date, and the hold process end date are not changed to the date when the hold request is discarded.

Hold Request screen	Hold Request (Used for Viewing) on page 2021
Hold Request zone	Hold Request on page 2022

Submitting a Hold Activation Request

Prerequisites

To submit a hold activation request, you should have:

- At least one entity (such as, person, account, or bill depending on the specified entity level) added to the hold request

Procedure

To submit a hold activation request:

1. Search for the hold request in the **Hold Request** screen.

Copyright © 2026, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to submit.
   The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Hold Request** zone.

   The system behaves in the following manner:

If...	**Then...**
The **Activation Approval** option is selected in the respective hold request type	The status of the hold request is changed to **Activation Approval In Progress**. A To Do is created using the To Do type (i.e., **C1-HLDAP**) specified in the **Activation Approval To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Activation Approval To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the approver.
The **Activation Approval** option is not selected in the respective hold request type and the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count (defined in the respective hold request type)	The status of the hold request is changed to **Deferred Processing**. **Note:** You need to execute the **Hold Request Periodic Monitor** (**C1-HLDRQ**) batch. It considers the hold requests which are in the **Deferred Processing** status and then changes its status to **Active**. Once the hold request is activated, you need to execute the following batches: • **C1-DELBI** - If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. • **C1-HLMON** - On executing the **C1-HLMON** batch, the system will set the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.
The **Activation Approval** option is not selected in the respective hold request type and the number of entities added (either manually or via filter criteria) in the hold request does not exceed the defer processing count (defined in the respective hold request type)	The status of the hold request is changed to **Active**. In addition, the system does the following (in the online mode): • If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date. • If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account. The status of the overdue process is changed to **Inactive**. • An alert is created in the dashboard whenever an account is kept on hold through a hold request. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
	Note: A warning message appears while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date. The system does not allow you to activate a hold request when the hold request end date is earlier than the system date. If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note:

If the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

The **Submit** button appears when the hold request is in the **Draft** status.

On activating a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If…	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the bill after date for the respective account. In addition, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
	Note: The bill after date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the delinquency process is on hold, and the entity start date in	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.

Copyright © 2026, Oracle and/or its affiliates.

If…	Then...
the hold request is earlier than or equal to the system date	**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the defer auto pay date for the respective account.
	Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.
The hold request is created for an account, the refund process is on hold, and the entity start date in the hold request is earlier than or equal to the system date	The entity end date or process end date whichever is earlier is set as the hold refund until date for the respective account. In addition, the status of the non-final refund request (if any) for the respective account is set to **Hold**.
	Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than the system date	The automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table.
The hold request is created for a person, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the bill after date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. In addition, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
	Note: In this scenario, the bill after date is always set in the deferred mode when the **C1-HLMON** batch is executed. The bill after date then appears in the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for a person, the delinquency process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective person and its immediate accounts (where the person is the main customer). If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Copyright © 2026, Oracle and/or its affiliates.

If…	Then...
	Note: In this scenario, the postpone credit review until date is always set in the deferred mode when the **C1-HLMON** batch is executed. The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

Note:

If the hold entity end date is not specified, the system will consider the respective process end date while deriving the above dates. If both the hold entity end date and respective process end date are not specified, the system will consider the hold request end date while deriving the above dates.

The system does not change the start date of the hold request, hold entity, or hold process when it is a future date.

However, if the number of entities added in the hold request exceeds the defer processing count, the system behavior mentioned in the above table would be completed when the **C1-HLMON** batch is executed.

Approving a Hold Activation Request

You can view the number of hold requests for which activation is pending for approval from the **Hold Request** screen. The approver can review, and accordingly approve or reject the hold activation request based on the observations. In addition, the approver can request the submitter to resubmit the hold activation request for approval after making the necessary changes in it.

Note: The system will not allow you to approve, reject, or request to resubmit a hold activation request submitted by you.

To approve a hold activation request, you should have:

- Required activation approval To Do role assigned in the system

Procedure

To approve a hold activation request:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	**a.** Search for the hold request with the **Approval In Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
	b. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.
Review a hold activation request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is accurate, click the **Approve** button in the **Hold Request** zone.

   The system behaves in the following manner:

If...	Then...
The number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count (defined in the respective hold request type)	The status of the hold request is changed to **Deferred Processing**.
	Note: You need to execute the **Hold Request Periodic Monitor** (**C1-HLDRQ**) batch. It considers the hold requests which are in the **Deferred Processing** status and then changes its status to **Active**. Once the hold request is activated, you need to execute the following batches: • **C1-DELBI** - If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. • **C1-HLMON** - On executing the **C1-HLMON** batch, the system will set the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.
The number of entities added (either manually or via filter criteria) in the hold request does not exceed the defer processing count (defined in the respective hold request type)	The status of the hold request is changed to **Active**. In addition, the system does the following (in the online mode): • If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date. • If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account. The status of the overdue process is changed to **Inactive**.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
	• An alert is created in the dashboard whenever an account is kept on hold through a hold request. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. The alert appears until the hold request for the account is released.
	Note: A warning message appears while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date. The system does not allow you to activate a hold request when the hold request end date is earlier than the system date. If the bill generation process is kept on hold for an account or person through a hold request, you need to execute the **C1-DELBI** batch which will delete the pending bills of the respective entities along with their bill segments. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note:

If the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

The **Approve** button appears when the hold request is in the **Activation Approval In Progress** status and when a user with the activation approval To Do role is reviewing the hold request.

On approving a hold activation request, the system does the following in the online or deferred (i.e., when the **C1-HLMON** batch is executed) mode depending on the defer processing count:

If…	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the bill after date for the respective account. In addition, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
	Note: The bill after date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the delinquency process is	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective account.

Copyright © 2026, Oracle and/or its affiliates.

If…	Then...
on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the defer auto pay date for the respective account.
	Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.
The hold request is created for an account, the refund process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the hold refund until date for the respective account. In addition, the status of the non-final refund request (if any) for the respective account is set to **Hold**.
	Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than the batch business date	The automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table.
The hold request is created for a person, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the bill after date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. In addition, the system creates an entry for the hold request in the **CI_BILL_DEL_REQUEST** table.
	Note: In this scenario, the bill after date is always set in the deferred mode when the **C1-HLMON** batch is executed. The bill after date then appears in the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for a person, the delinquency process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set as the postpone credit review until date for the respective person and its immediate accounts (where the person is the main customer). If the **Hierarchy** option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Rejecting a Hold Activation Request

Prerequisites

To reject a hold activation request, you should have:

- Required activation approval To Do role assigned in the system
- Reasons defined for the **Rejected** status of the **C1-HoldRequest** business object in the **Status Reason** screen.

Note: The system will not allow you to approve, reject, or request to resubmit a hold activation request submitted by you.

Procedure

To reject a hold activation request:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	**a.** Search for the hold request with the **Activation Approval In Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
Review a hold activation request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is incorrect, click the **Reject** button in the **Hold Request** zone.

   The **Reject Hold Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the hold activation request. **Note:** The list includes only those reasons which are defined for the **Rejected** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while rejecting the hold activation request. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⤡) icon at the bottom right corner of the text box.	No

Note: The **Reject** button appears when the following conditions are met:

- The hold request is in the **Activation Approval In Progress** status.
- A user with the activation approval To Do role is reviewing the hold request.

4. Select the reason for rejecting the hold activation request from the **Status Reason** list.
5. Enter the comments (if any) while rejecting the hold activation request in the respective field.
6. Click **Save**.
   The status of the hold request is changed to **Rejected**.

Requesting to Resubmit a Hold Activation Request for Approval

While reviewing a hold activation request, the approver can also request the submitter to resubmit the hold activation request for approval after making the necessary changes to it.

Prerequisites

To request to resubmit a hold activation request for approval, you should have:

- Required activation approval To Do role assigned in the system
- Submitter To Do type and submitter To Do role defined in the respective hold request type

Procedure

To request to resubmit a hold activation request for approval:

1. Do either of the following:

If you want to...	Then...
Review a hold activation request through the Hold Request screen	**a.** Search for the hold request with the **Activation Approval In Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.
Review a hold activation request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

   The **Hold Request** screen appears.
2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is incomplete and you want the submitter to make the required changes and resubmit the hold activation request for approval, click the **Re Submit** button in the **Hold Request** zone.

   The **Resubmit Hold Request** window appears. It contains following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes that the submitter should make in the hold request before resubmitting the activation request for approval. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⁄) icon at the bottom right corner of the text box.	Yes

Note: The **Re Submit** button appears when the following conditions are met:

- The hold request is in the **Activation Approval In Progress** status.
- A user with the activation approval To Do role is reviewing the hold request.

4. Enter the comments in the respective field.
5. Click **Save**.
   The status of the hold request is changed to **Draft**. A To Do is created using the To Do type (i.e., **C1-HOLSB**) specified in the **Submitter To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Submitter To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the submitter.

Note:

The To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

Related Topics

Releasing a Hold Request

Prerequisites

To release a hold request, you should have:

- Reasons defined for the **Released** status of the **C1-HoldRequest** business object in the **Status Reason** screen

Procedure

To release a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to release.
   The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.

Copyright © 2026, Oracle and/or its affiliates.

4. Click the **Release** button in the **Hold Request** zone.

   The **Release Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Release Reason	Used to indicate the reason why you want to release the hold request. **Note:** The list includes only those reasons which are defined for the **Released** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while releasing the hold request. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No

Note: The **Release** button appears when the hold request is in the **Active** status.

5. Select the reason for releasing the hold request from the **Release Reason** list.
6. Enter the comments (if any) while releasing the hold request in the respective field.
7. Click **Save**.

   The system behaves in the following manner:

If...	Then...
The **Release Approval** option is selected in the respective hold request type	The status of the hold request is changed to **Release Approval in Progress**. A To Do is created using the To Do type (i.e., **C1-HLDAP**) specified in the **Release Approval To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Release Approval To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the approver.
The **Release Approval** option is not selected in the respective hold request type	The status of the hold request is changed to **Released**. If the hold entity end date and hold process end date is earlier than the system date, the system sets the hold entity end date and hold process end date to the system date. It also sets the hold request end date to the system date. In addition, the alert end date on the respective account is set to the system date.

On releasing a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If…	Then…
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The defer auto pay until date is set to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table. **Note:** The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.

Copyright © 2026, Oracle and/or its affiliates.

If…	Then…
The hold request is created for an account, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The bill after date is cleared for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.
	Note: The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it is cleared from the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The postpone credit review until date is set to the system date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The postpone credit review until date is set to the system date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the refund process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The hold refund until date is set to the system date for the respective account. In addition, the status of the refund request (if any) for the respective accounts is changed from **Hold** to its previous status.
	Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.
The hold request is created for a person, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The bill after date is cleared either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
	Note: In this scenario, the bill after date is always cleared in the deferred mode when the **C1-HLMON** batch is executed. The bill after date is cleared from the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for a person, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The postpone credit review until date is set to the system date for the respective person and its immediate accounts (where the person is the main customer). If the Hierarchy option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.

Copyright © 2026, Oracle and/or its affiliates.

If…	Then…
	Note: In this scenario, the postpone credit review until date is always set in the deferred mode when the **C1-HLMON** batch is executed. The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

Note: The above dates are updated to the system date only when the entity end date or respective process end date is not earlier than the system date.

However, if the number of entities added in the hold request exceeds the defer processing count, a log entry is created indicating that the hold request is manually released but the release process (i.e. system behavior mentioned in the above table) would be completed when the **C1-HLMON** batch is executed.

Approving a Hold Release Request

You can view the number of hold requests for which release is pending for approval from the **Hold Request** screen. The approver can review, and accordingly approve the hold release request based on the observations. In addition, the approver can request the submitter to resubmit the hold release request for approval after making the necessary changes in it.

Note: The system will not allow you to approve or request to resubmit a hold release request submitted by you.

To approve a hold release request, you should have:

- Release approval To Do role assigned in the system

Procedure

To approve a hold release request:

1. Do either of the following:

If you want to...	Then...
Review a hold release request through the Hold Request screen	**a.** Search for the hold request with the **Release Approval in Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
Review a hold release request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is accurate, click the **Approve** button in the **Hold Request** zone.

The status of the hold request is changed to **Released**. If the hold entity end date and hold process end date is earlier than the system date, the system sets the hold entity end date and hold process end date to the system date. It also sets the hold request end date to the system date. In addition, the alert end date on the respective account is set to the system date.

Note: The **Approve** button appears when the hold request is in the **Release Approval in Progress** status and when a user with the release approval To Do role is reviewing the hold request.

On releasing a hold request, the system checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, the system does the following (in the online mode):

If…	Then…
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The defer auto pay until date is set to the system date for the respective account. In addition, the automatic payment details of the debit bills (if any) for the respective account are updated in the **CI_BILL_ACH** table.
	Note: The defer auto pay date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Defer Auto Pay Date** field on the **Auto Pay** tab of the **Account** screen.
The hold request is created for an account, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The bill after date is cleared for the respective account. This will enable the business to bill the account immediately on the same day when the hold is released.
	Note: The bill after date is cleared corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it is cleared from the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity end date in the	The postpone credit review until date is set to the system date for the respective account.

Copyright © 2026, Oracle and/or its affiliates.

If…	Then…
hold request is earlier than or equal to the system date	**Note:** The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The postpone credit review until date is set to the system date for the respective account.
	Note: The postpone credit review until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen. In addition, it appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.
The hold request is created for an account, the refund process is on hold, and the entity end date in the hold request is earlier than or equal to the system date	The hold refund until date is set to the system date for the respective account. In addition, the status of the refund request (if any) for the respective accounts is changed from **Hold** to its previous status.
	Note: The hold refund until date then appears corresponding to the account in the **Hold Entities** zone of the **Hold Request** screen.
The hold request is created for a person, the bill generation process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The bill after date is cleared either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
	Note: In this scenario, the bill after date is always cleared in the deferred mode when the **C1-HLMON** batch is executed. The bill after date is cleared from the **Bill On** or **After Date** field on the **Main** tab of the **Account** screen.
The hold request is created for a person, the delinquency process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The postpone credit review until date is set to the system date for the respective person and its immediate accounts (where the person is the main customer). If the Hierarchy option is selected for the person, the system sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
	Note: In this scenario, the postpone credit review until date is always set in the deferred mode when the **C1-HLMON** batch is executed. The postpone credit review until date then appears corresponding to the person in the **Hold Entities** zone of the **Hold Request** screen. In addition, the postpone credit review until date of the account appears in the **Postpone Credit Review Until** field on the **C & C** tab of the **Account** screen.

Copyright © 2026, Oracle and/or its affiliates.

Note: The above dates are updated to the system date only when the entity end date or respective process end date is not earlier than the system date.

However, if the number of entities added in the hold request exceeds the defer processing count, a log entry is created indicating that the hold request is manually released but the release process (i.e. system behavior mentioned in the above table) would be completed when the **C1-HLMON** batch is executed.

Requesting to Resubmit a Hold Release Request for Approval

While reviewing a hold release request, the approver can also request the submitter to resubmit the hold release request for approval after making the necessary changes to it.

Prerequisites

To request to resubmit a hold release request for approval, you should have:

- Release approval To Do role assigned in the system
- Submitter To Do type and submitter To Do role defined in the respective hold request type

Procedure

To request to resubmit a hold release request for approval:

1. Do either of the following:

If you want to...	Then...
Review a hold release request through the Hold Request screen	**a.** Search for the hold request with the **Release Approval In Progress** status in the **Hold Request** screen. A list of hold requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.
Review a hold release request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter **C1-HLDAP** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
	g. Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the details in the **Hold Request** screen.
3. If the information in the hold request is incomplete and you want the submitter to make the required changes and resubmit the hold release request for approval, click the **Re Submit** button in the **Hold Request** zone.

   The **Resubmit Hold Request** window appears. It contains following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes that the submitter should make in the hold request before resubmitting the release request for approval. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⁄) icon at the bottom right corner of the text box.	Yes

Note: The **Re Submit** button appears when the following conditions are met:

- The hold request is in the **Release Approval In Progress** status.
- A user with the release To Do role is reviewing the hold request.

4. Enter the comments in the respective field.
5. Click **Save**.
   The status of the hold request is changed to **Active**. A To Do is created using the To Do type (i.e., **C1-HOLSB**) specified in the **Submitter To Do Type** field of the respective hold request type and then assigned to the users with the role specified in the **Submitter To Do Role** field of the respective hold request type. In addition, a log entry is created for the hold request when the To Do is created for the submitter.

Note:

The To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

Adding a Log Entry for a Hold Request

Procedure

To add a log entry for a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request for which you want to add a log entry.
   The **Hold Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

   The **Add Hold Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Log Details	Used to specify additional comments for the hold request.	Yes
	Note: You can resize the text box depending on your requirement by clicking the **Resize Handle** (⟋) icon at the bottom right corner of the text box.	

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Hold Request Log** zone.

Chapter 28

Delinquency Central

Topics:

- Prerequisites
- Delinquency Central (Used for Viewing)
- Overdue Process Information for Account: {Account ID}

Oracle Revenue Management and Billing provides a complete overview of the overdue bills belonging to the delinquent accounts of a particular person using the **Delinquency Central**. User can review the overdue bills and perform following actions from the delinquency central:

- Initiate customer contact
- Initiate hold on overdue process
- Create payment arrangement for an account
- Create promise to pay for person's account

The Delinquency Central assists you in identifying all the overdue processes, overdue bills & delinquent accounts using an overdue monitoring process.

For more information on how to setup the delinquency central, see Prerequisites on page 2074.

Prerequisites

To setup delinquency central, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to overdue event.
- Define the overdue event type and overdue process template in the system.
- Promise To Pay type defined in the application.
- Customer contact type defined in the application.
- Hold request type defined in the application.

Delinquency Central (Used for Viewing)

The **Delinquency Central** screen allows you to:

- Search for an overdue process
- View the details of an overdue process
- View the details of an overdue event
- Create customer contact
- Create a hold request for an overdue process
- Create a payment arrangement for an account
- Create a promise to pay for a person's account
- Create a payment agreement request for an account

This screen consists of the following zones:

- Search Overdue Process on page 2074
- Overdue Events on page 2079

Search Overdue Process

The **Search Overdue Process** zone allows you to search for overdue processes using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for overdue processes using person, account, bill or overdue process. The valid values are: • Person • Account • Bill • Overdue Process **Note:** By default, the **Person** option is selected.	No
Person ID	Used to search for overdue processes which belong to a particular person.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Person** option from the **Search By** list.	
Person Identifier Type	Used to search for overdue processes with a particular person identifier type. **Note:** This field appears when you select the **Person** option from the **Search By** list.	Yes (Conditional) **Note:** If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search for overdue processes with a specific value of the person identifier type. **Note:** This field appears when you select the **Person** option from the **Search By** list.	Yes
Account ID	Used to search for overdue processes created for a particular account. **Note:** This field appears when you select the **Account** option from the **Search By** list.	No
Account Identifier Type	Used to search for overdue processes with a particular account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.	Yes (Conditional) **Note:** If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search for overdue processes with a particular account identifier. **Note:** This field appears when you select the **Account** option from the **Search By** list.	Yes
Bill ID	Used to search for overdue processes with a particular bill. **Note:** This field appears when you select the **Bill** option from the **Search By** list.	No
Alternate Bill ID	Used to search for overdue processes using an alternate bill ID. **Note:** This field appears when you select the **Bill** option from the **Search By** list.	No
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and its value. **Note:** This field appears when you select the **Bill** option from the **Search By** list.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Overdue Process Template	Used to search for overdue processes with a particular overdue process template. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Start Date	Used to search for overdue processes with a particular start date. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	Yes
End Date	Used to search overdue process with a particular end date. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	Yes
Status	Used to search for overdue processes with a particular status. The valid values are: • Active • Inactive **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
On Hold	Used to search for overdue processes that are on hold. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Overdue Amount From	Used to search for overdue processes with a particular lower limit of the overdue amount. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
To	Used to search for overdue processes with a particular higher limit of the overdue amount. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and value. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No

- In addition to above search parameters, the screen consists of following fields in the **Person Details** or **Account Details** section:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Main Customer	Displays the name of the main customer to whom the account belongs. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Person Name	Displays the name of the person to whom the account belongs. **Note:** This field appears when you select the **Person** option from the **Search By** list.
Person Identifier Type	Displays the person identifier type. **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Person Identifier	Displays the value of the person identifier type. **Note:** This field appears when you select the **Person** or **Account**option from the **Search By** list.
Account Identifier Type	Displays the account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Account Identifier	Displays the value of the account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Overdue	Displays whether the person account(s)/bill(s) are overdue. The valid values are: • Yes • No **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Active Overdue processes	Displays the number of overdue processes linked to the person's account that are in active status. **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Hold(s) on Account(s)	Displays the number of hold requests on the particular account.
Number of Overdue Bills	Displays the total number of bills that are overdue. **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Total Overdue Amount	Displays the total overdue amount for an account.
Last Payment Date	Displays date of the last payment made by the person.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Last Payment Amount	Displays the amount last paid by the person.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number Of Payment Arrangements	Displays the number of payment arrangements for the person's account.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Total Number of Overdue Process on Hold	Displays the total number of overdue process that are on hold.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Promise To Pay	Displays the number of promise to pay belonging to the person.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Broken Promise To Pay	Displays the total number of promise to pay that are broken.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Overdue Process	Display additional information about the overdue process.
	Note: It has a link. On clicking the link, the **Overdue Process** screen appears where you can view the details of the overdue process.
Overdue Process Template	Displays the template that was used to create overdue process's events.
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears with the details of the account.
Person Information	Display additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears with the details of the person.
Overdue Amount	Displays the overdue amount under that overdue process.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
On Hold	Displays whether the overdue process is on hold.
Overdue Process Details	On clicking the **View** (🔗) icon, the **Overdue Process Details** screen appears where you can view details of the overdue process.

On clicking the **Broadcast** (📡) icon corresponding to the overdue process, the **Overdue Events** zone appears with the details of the respective overdue process.

Searching for an Overdue Process

Prerequisites

To search for an overdue process, you should have:

- Overdue process defined in the application.

Procedure

To search for an overdue process:

1. Click the **Menu** link in the **Application** toolbar

Copyright © 2026, Oracle and/or its affiliates.

2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
   The **Delinquency Central** screen appears.
3. Enter the search criteria in the **Search Overdue Process** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of overdue processes that meet the search criteria appear in the **Search Results** section.

- Creating a Payment Arrangement for an Overdue Process on page 2087
- Defining a Promise To Pay for an Overdue Process on page 2087

Person Information

The **Person Information** zone displays details of the person whose account is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Person Name	Displays the name of the person whose account is linked to the overdue process.
Phone Number	Displays the phone number of the person.
Address	Displays the address of the person.

Copyright © 2026, Oracle and/or its affiliates.

Account Information

The **Account Information** zone displays the details of the account that is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Last Payment Date	Displays the date of the last payment made from the account that is linked with the overdue process.
Last Payment Amount	Displays the amount last paid from the account.

Customer Contact Details

The **Customer Contact Details** zone displays the contact details of the customer whose account is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Contact Date/Time	Displays the date and time when the customer was contacted.
Customer Contact Information	Displays additional information about the customer contact. **Note:** It has a link. On clicking the link, the **Customer Contact** screen appears where you can view the details of the respective customer contact.
Preferred Contact Method	Displays the preferred method of contacting the customer.
Comments	Displays the comments that are placed against each customer.

Promise To Pay

The **Promise To Pay** zone displays promise to pay created for an account which is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Promise To Pay Information	Displays additional information of promise to pay. **Note:** It has a link. On clicking the link, the **Promise To Pay** screen appears where you can view the details of promise to pay.
Scheduled Amount	Displays the amount to be paid on the **Scheduled Date**.
Scheduled Date	Displays the date when the payment is expected as per promise to pay.
Status	Displays the status of promise to pay.
Created By	Displays the user ID who has created the promise to pay.

Copyright © 2026, Oracle and/or its affiliates.

Hold Details

The **Hold Details** zone displays the details of the person whose account is linked to the overdue process. This zone contains the following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request. **Note:** It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the hold request.
Status	Displays the status of the hold request.
Entity	Displays the hold request entity.
Entity Information	Displays the information about the entity on hold. **Note:** It has a link. On clicking the link, the **Account**, **Bill** or **Person** screen appears, where you can view details of the respective account, bill or person.
Start Date	Displays the date when the hold request is created.
End Date	Displays the end date of the hold request.

Overdue Bills

The **Overdue Bills** zone displays details of the overdue bills. This zone contains following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Due Date	Displays the due date of the bill.
Overdue Amount	Displays the amount that is overdue in the bill.
Days Past Due	Displays the number of days past after the bill date.

Payment Arrangement

The **Payment Arrangement** zone displays the details of the payment arrangement that is created for an account linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Contract Information	Displays the payment arrangement contract information . In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Payoff Balance	Displays the total amount that is paid against the payment arrangement contract.
Arrange Amount	Displays the amount that is paid in installments as per the payment arrangement contract.
Number of Installments	Displays the number of installments used to calculate the **Arrange Amount**.

Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following fields:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the name of the person for whom the bill is generated.	No
Person ID	Used to specify the person ID.	No
Bills of Persons in Hierarchy	Used to indicate whether you want to search for a bills generated against a person's hierarchy.	No
Bill Cycle	Used to indicate bills where a particular bill cycle is defined.	No
Bill Currency	Used to indicate the bill currency.	No
Billing Method	Used to indicate the billing method. The valid values are: • Ad-Hoc Billing • Regular Billing	No
Bill ID	Used to specify the bill ID.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Account ID	Used to indicate the account against which the bill is generated.	No
On or After Bill Date	Used to specify the date when the bill was completed.	No
Account Identifier Type	Used to search for bills where the account against which it is generated, a particular account identifier type is defined.	No
Account Identifier	Used to search for a bill generated against an account with a particular account identifier.	No

Note: You must specify at least one search criterion while searching for the bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Person Name	Displays the name of the person against whom the bill is generated.
Bill ID	Displays the bill ID.
Bill Status	Displays the status of the bill. The valid values are: • Pending • Complete
Bill Date	Displays the date when the bill was completed.
Due Date	Displays the due date of the bill.
Current Charges	Displays the bill amount.
Bill Information	Displays additional information about the bill.

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
   The **Delinquency Central** screen appears.
3. Select the **Bill** option from the **Search By** list.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of bills that meet the search criteria appear in the **Search Results** section.

Adding the Customer Contact Details

Procedure

To add customer contact details:

1. Search for an overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section , select the check box corresponding to the overdue process linked to the account *f*or which you want to add the customer contact.
3. Click **Contact Customer**.

Copyright © 2026, Oracle and/or its affiliates.

The **Customer Contact** screen appears.

4. Enter the required details.
   The fields **Person ID**, **Contact Date/Time** and **User ID** are auto-populated.
5. Click **Save**.
   The customer is contacted based on the value set for **Preferred Contact Method** field on the **Customer Contact** screen.

Creating a Hold Request for an Overdue Process

Procedure

To create a hold request for an overdue process:

1. Search for an overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a hold request for an overdue process.
3. Click **Create Hold Request** button.
   The **Add Hold Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory
Hold Request Type	Used to indicate the hold request type that is used for creating a hold request.	Yes

4. Select the required hold request type from the **Hold Request Type** field.
5. Click **OK**.
   The **Hold Request** screen appears.
6. Enter the required details for an overdue process.
7. Click **Save**.
   A hold request is defined for an overdue process where the status of the hold request is set as **Draft**.

> **Note:**
>
> The **Hold Request** screen appears where you can view the details of the hold request.

Creating a Payment Arrangement for an Overdue Process

Procedure

To create a payment arrangement for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a payment arrangement for an overdue process.
3. Click the **Create Payment Arrangement** button.
   The **Payment Arrangement** screen appears. It contains the following tabs:
   - **Main**
   - **History**
4. Enter the required details in the **Payment Arrangement** screen.
5. Click the **Save** button in the **Page Title** area of the **Payment Arrangement** screen.
   A payment arrangement is created with the respective payment arrangement contract.

> **Note:** The **Payment Arrangement** screen appears with the details of the payment arrangement.

Defining a Promise To Pay for an Overdue Process

Procedure

To create a promise to pay for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to define a promise to pay for an overdue process.
3. Click the **Create Promise To Pay** button.
   A message appears confirming that the promise to pay will be created for the account for which the overdue process is initiated.
4. Click **OK**.
   The **Promise To Pay** screen appears.
5. Enter the required details in the **Promise To Pay** screen.
6. Click the **Save** button in the **Page Title** area of the **Promise To Pay** screen.
   A promise to pay is created with the scheduled payment details.

Chapter 29

Upload Request

Topics:

- Upload Request (Without Approval) Status Transition
- Upload Request (With Approval) Status Transition
- Mass Accounts' Bill Cycle Update
- Mass Contract Rider Update
- Mass Hold Request Creation
- Mass Refund Request Creation
- Mass Write Off Request Creation
- Mass Policy Reinstatement
- Mass Bill Group Sort Record Creation
- Mass Bill Group Derivation and Pricing Parameters Record Creation
- Mass Billable Charge Creation (Fully Insured Group and Individual)
- Mass Payment Tender Cancellation
- Mass Bill Cycle Rule Characteristic Creation or Modification
- Upload Request Type
- Upload Request (Used for Searching)
- Upload Request (Used for Viewing)

Oracle Revenue Management and Billing provides a generic upload feature that allows you to upload data to create or update multiple entities through an upload request. At present, the system supports only Comma-Separated Values (CSV) format and therefore you can upload the data only using the CSV file. Note that, at a time, a CSV file can have data to create or update a particular type of entities in the system. In other words, you cannot upload data for multiple types of entities (such as, hold request and billable charge) through a single CSV file.

Through an upload request, you can not only create or update the business object based entities but can also create or update the service-driven entities. If the lifecycle is defined for the entity business object, the status of entity is updated accordingly when the upload request is processed. If the approval process is configured for the upload request business object, the system will submit the upload request for approval before creating or updating the entities in the system. Similarly, if the approval process is configured for the entity business object, the system will submit the entity for approval once it is created using the uploaded data.

At present, the system allows you to upload data for creating the following entities - Billable Charges (for both the financial services and health insurance domains), Hold Requests, Refund Requests, Write Off Requests, Bill Group Sort Records, and Bill Group Derivation and Pricing Parameters Records. It also allows you to upload data for updating the following entities:

- Contract rider details of a contract
- Bill cycle of an account
- Bill cycle rule characteristic of an account

Note: The above mentioned entities, such as Bill Group Sort Record, Bill Group Derivation and Pricing Parameters Record, and Contract Rider are applicable only for the health insurance business.

In addition, you can reinstate multiple fully insured group policies and cancel payment tenders through the **Upload Request** feature.

While uploading a CSV file, you need to specify distinct upload request type using which you want to create the upload request. For more information, see Upload Request Type. An upload request goes through various statuses in its lifecycle. Note that lifecycle of an upload request is driven by the business object using which the upload request is created. We have shipped the following upload request business objects:

- Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)
- Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest)
- Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)
- Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)

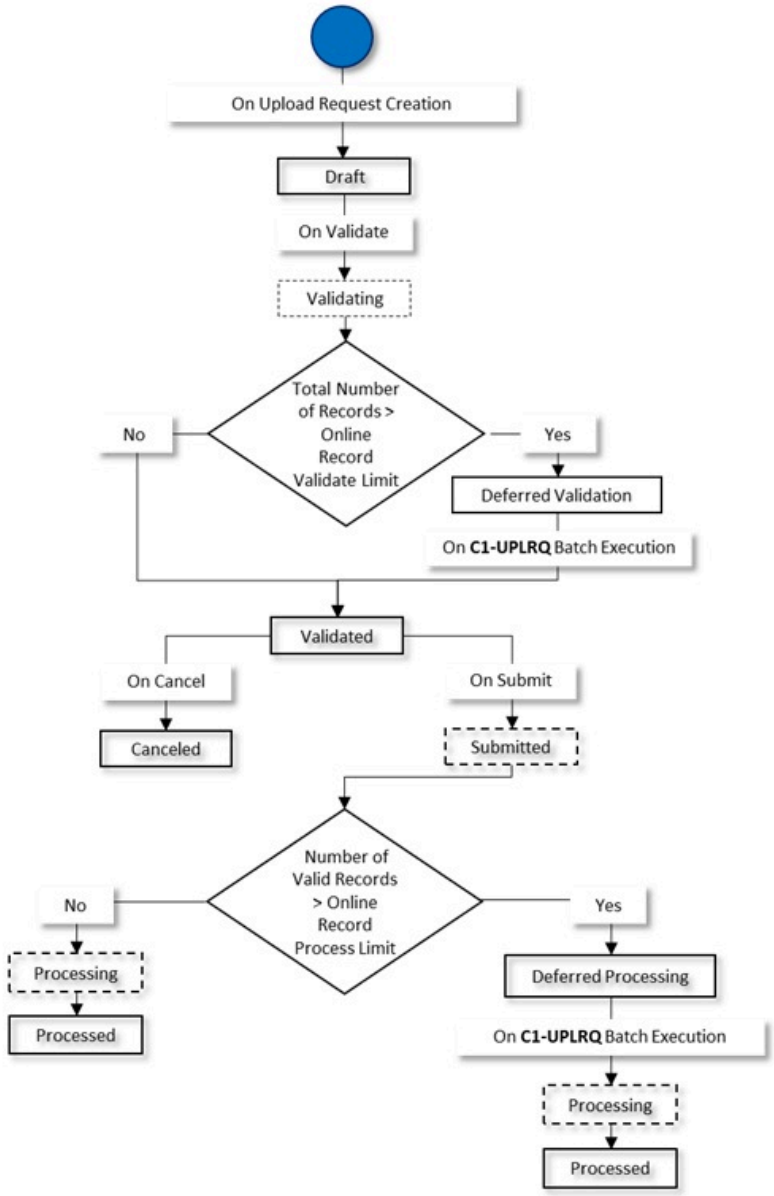
- Contract Rider Upload (i.e., C1-ContractRiderUpdateUplReq)
- Hold Request Upload (i.e., C1-HoldUploadRequest)
- Refund Request Upload (i.e., C1-RefundUploadRequest)
- Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)
- Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)
- Write Off Request Upload (i.e., C1-WriteOffUploadRequest)
- Bill Cycle Rule Characteristic Upload (i.e., C1-BillCycleRuleCharUpdUplReq)

Each upload request feature explained in this document is articulated based on the lifecycle and logic defined in the respective business object.

Copyright © 2026, Oracle and/or its affiliates.

Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval process is not configured in the upload request type:



Copyright © 2026, Oracle and/or its affiliates.

Note:

The **Deferred Validation** mechanism is only supported in those upload requests which are created using the following business objects:

- C1-HoldUploadRequest
- C1-RefundUploadRequest
- C1-WriteOffUploadRequest
- C1-BillLevelUploadRequest
- C1-BillableChargeUploadFI
- C1-TndrCnclUploadRequest

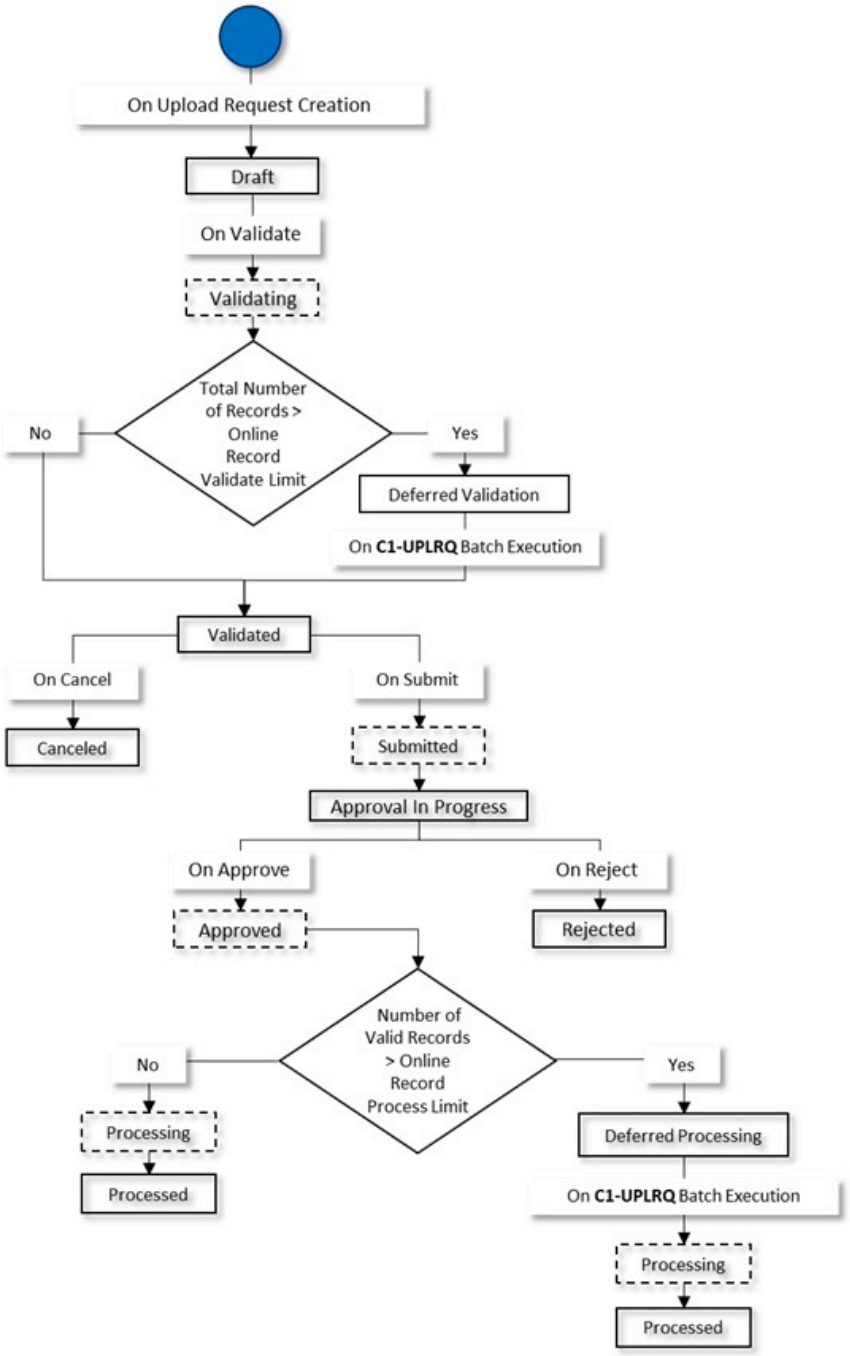
Therefore, these upload requests would transition from the **Draft** status to the **Validating** status and then to either the **Validated** or **Deferred Validation** status in its lifecycle. However, the upload requests created using the following business objects will directly move from the **Draft** status to the **Validated** status:

- C1-BillCycleUpdateUplReq
- C1-BillGrpSortUploadRequest
- C1-ContractRiderUpdateUplReq
- C1-ReinstatementUploadRequest
- C1-BillCycleRuleCharUpdUplReq

Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval process is configured in the upload request type:

Copyright © 2026, Oracle and/or its affiliates.



Copyright © 2026, Oracle and/or its affiliates.

Note:

The **Deferred Validation** mechanism is only supported in those upload requests which are created using the following business objects:

- C1-HoldUploadRequest
- C1-RefundUploadRequest
- C1-WriteOffUploadRequest
- C1-BillLevelUploadRequest
- C1-BillableChargeUploadFI
- C1-TndrCnclUploadRequest

Therefore, these upload requests would transition from the **Draft** status to the **Validating** status and then to either the **Validated** or **Deferred Validation** status in its lifecycle. However, the upload requests created using the following business objects will directly move from the **Draft** status to the **Validated** status:

- C1-BillCycleUpdateUplReq
- C1-BillGrpSortUploadRequest
- C1-ContractRiderUpdateUplReq
- C1-ReinstatementUploadRequest
- C1-BillCycleRuleCharUpdUplReq

Mass Accounts' Bill Cycle Update

Oracle Revenue Management and Billing provides the ability to update the bill cycle of multiple accounts at once through the **Upload Request** feature. The **C1-BillCycleUpdateUplReq** business object enables you to create an upload request for mass accounts' bill cycle update.

You need to create an upload request type for the **C1-BillCycleUpdateUplReq** business object. You can then upload a mass accounts' bill cycle update file in the CSV format using the respective upload request type. The mass accounts' bill cycle update file should contain records with the following information – account identifier details or account ID and bill cycle. For more information, see Mass Accounts' Bill Cycle Update CSV Format.

On uploading a mass accounts' bill cycle update file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Bill cycle is specified in the record.

If the account ID is not specified in the record, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Note:

If the bill cycle is missing in any record of the file, the system will not allow you to create an upload request.

The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

On clicking the **Validate** button, the system validates the following:

- The account ID given in the record is valid.
- The bill cycle given in the record is valid.
- The given bill cycle is associated to the division of the account.
- The two or more records with the same account ID do not exist in the upload request.

Copyright © 2026, Oracle and/or its affiliates.

Note:

If the account ID is invalid, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**.

However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record, the system updates the bill cycle of the respective account.

Once the account is successfully updated, the status of the record is changed to **Processed**. However, if any error occurs while updating the account, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The system updates the account using the entity business object specified in the respective upload request type.

This feature is tested and certified for both the financial services and health insurance domains.

Prerequisites

To setup the mass accounts' bill cycle update feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-BillCycleUpdateUplReq**.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive a To Do while submitting an accounts' bill cycle update upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for account (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillCycleUpdateUplReq** business object in the **Status Reason** screen.
- Define the required account identifier types and bill cycles in the system.

Copyright © 2026, Oracle and/or its affiliates.

- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BCU-DERIV	C1-BCU-DERIV	Refer to C1-BCU-DERIV on page 2097.

C1-BCU-DERIV

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

It validates the following:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Bill cycle is specified in the record.

If the account ID is not specified in the record, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-BCU-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The account ID given in the record is valid.

  Note: If the account ID is invalid, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.
- The bill cycle given in the record is valid.
- The given bill cycle is associated to the division of the account.
- The two or more records with the same account ID do not exist in the upload request.

  Note: If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status

Copyright © 2026, Oracle and/or its affiliates.

of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BCU-PROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record, this algorithm updates the bill cycle of the account.

> **Note:** The system updates the account using the entity business object specified in the respective upload request type.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Copyright © 2026, Oracle and/or its affiliates.

Mass Accounts' Bill Cycle Update CSV Format

The following table lists and describes the columns that should be available in the CSV file while updating bill cycle of multiple accounts at once through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Account Identifier Type	Used to specify the account identifier type. **Note:** You must specify an account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the account ID is not specified in the record.
2	Account Identifier	Used to specify the account identifier. **Note:** The system derives the account using the given account identifier type and account identifier combination when the account ID is either not specified or is invalid in the record.	Yes (Conditional) **Note:** This data is required when the account ID is not specified in the record.
3	Account ID	Used to indicate the account whose bill cycle you want to update.	Yes (Conditional) **Note:** This data is required when the account identifier type and account identifier are not specified in the record.
4	Bill Cycle	Used to specify the bill cycle. **Note:** You must specify a bill cycle which is already defined in the system. In addition, you must ensure that the specified bill cycle is already associated with the division of the account.	Yes

Note:

The CSV file should contain the columns in the above mentioned sequence.

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Sample Mass Accounts' Bill Cycle Update CSV File

```
Account Identifier Type,Account Identifier,Account ID,Bill Cycle
,,6566765667,BC01

Mass Contract Rider Update

Oracle Revenue Management and Billing provides the ability to update the contract rider information of multiple contracts at once through the **Upload Request** feature. The **C1-ContractRiderUpdateUplReq** business object enables you to create an upload request for mass contract rider update.

You need to create an upload request type for the **C1-ContractRiderUpdateUplReq** business object. You can then upload a mass contract rider update file in the CSV format using the respective upload request type. The mass contract rider update file should contain records with the following information – Contract ID or account details and contract type, start end, end date, and bill factor. Note that you can only specify a bill factor where the **Contract Rider Applicability** option is selected. For more information, see Mass Contract Rider Update CSV Format.

On uploading a mass contract rider update file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the contract ID or account details and contract type are specified in the record.
- Either the account ID or account identifier type and account identifier is specified in the record.
- Start date and bill factor are specified in the record.

If the account ID is not specified in the record, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Note:

If the start date and bill factor are missing in any record of the file, the system will not allow you to create an upload request.

The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

On clicking the **Validate** button, the system validates the following:

- The account ID given in the record is valid.
- The contract ID given in the record is valid.
- The contract type given in the record is valid.
- The bill factor given in the record is valid.
- If both the account ID and contract ID are given in the record, the contract belongs to the account.
- The contract type is defined for the division to which the account belongs.
- The **Contract Rider Applicability** flag of the bill factor is set to **Y**.
- The two or more records with the same contract ID or account ID and contract type combination do not exist in the upload request.

Note:

If the account ID is invalid, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Copyright © 2026, Oracle and/or its affiliates.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record, the system checks whether the contract ID is specified in the record. If so, it updates the contract rider information of the respective contract. However, if the contract ID is not specified in the record, the system derives the active contracts of the account which are created using the given contract type. For each such derived contract, the system updates the contract rider information. However, if there are no active contracts of the respective contract type for the account, the status of the record is changed to **Error**.

Once the contract is successfully updated, the status of the record is changed to **Processed**. However, if any error occurs while updating the contract, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The system updates the contract using the entity business object specified in the respective upload request type.

You can then view the contract rider information of the contract in the **Rate Info** tab of the **Contract** screen.

This feature is tested and certified for the health insurance domain.

Prerequisites

To setup the mass contract rider update feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-ContractRiderUpdateUplReq**.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive a To Do while submitting a contract rider update upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for contract (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-ContractRiderUpdateUplReq** business object in the **Status Reason** screen.
- Define the required account identifier types, contract types, and bill factors in the system.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
    - Time Interval
    - Timer Active
    - User ID
    - Batch Language
    - Email Address

Copyright © 2026, Oracle and/or its affiliates.

For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CR-DERIV	C1-CR-DERIV	Refer to C1-CR-DERIV on page 2102.
Validated	Enter	C1-CR-VALID	C1-CR-VALID	Refer to C1-CR-VALID on page 2103.

C1-CR-DERIV

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

It validates the following:

- Either the contract ID or account details and contract type are specified in the record.
- Either the account ID or account identifier type and account identifier is specified in the record.
- Start date and bill factor are specified in the record.

If the account ID is not specified in the record, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and

Copyright © 2026, Oracle and/or its affiliates.

account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-CR-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The account ID given in the record is valid.

  Note: If the account ID is invalid, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.
- The contract ID given in the record is valid.
- The contract type given in the record is valid.
- The bill factor given in the record is valid.
- If both the account ID and contract ID are given in the record, the contract belongs to the account.
- The contract type is defined for the division to which the account belongs.
- The **Contract Rider Applicability** flag of the bill factor is set to **Y**.
- The two or more records with the same contract ID or account ID and contract type combination do not exist in the upload request.

  Note: If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

Copyright © 2026, Oracle and/or its affiliates.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-CR-PROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record, this algorithm checks whether the contract ID is specified in the record. If so, it updates the contract rider information of the respective contract. However, if the contract ID is not specified in the record, this algorithm derives the active contracts of the account which are created using the given contract type. For each such derived contract, this algorithm updates the contract rider information. However, if there are no active contracts of the respective contract type for the account, the status of the record is changed to **Error**.

> **Note:** The system updates the contract using the entity business object specified in the respective upload request type.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Copyright © 2026, Oracle and/or its affiliates.

Mass Contract Rider Update CSV Format

The following table lists and describes the columns that should be available in the CSV file while updating contract rider information of multiple contracts at once through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Account Identifier Type	Used to specify the account identifier type. **Note:** You must specify an account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified in the record.
2	Account Identifier	Used to specify the account identifier. **Note:** The system derives the account using the given account identifier type and account identifier combination when the account ID is either not specified or is invalid in the record.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified in the record.
3	Account ID	Used to indicate the account whose contract you want to update.	Yes (Conditional) **Note:** This data is required when the following conditions are met: • Account identifier type and account identifier are not specified in the record. • Contract ID is not specified in the record.
4	Contract Type	Used to indicate the type of contracts whose details you want to update. **Note:** If the contract ID is not specified in the record, the system derives the active contracts of the account which are created using the specified contract type, and then updates the contract rider information of the respective contracts. You must specify a contract type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the contract ID is not specified in the record.
5	Contract ID	Used to indicate the contract whose contract rider details you want to update.	No
6	Start Date	Used to specify the date from when the bill factor is effective for the contract.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify the date in the **YYYY-MM-DD** format. The start date cannot be later than the end date.	
7	End Date	Used to specify the date till when the bill factor is effective for the contract. **Note:** You must specify the date in the **YYYY-MM-DD** format. The end date cannot be earlier than the start date.	No
8	Bill Factor	Used to specify the bill factor. **Note:** You must specify a valid bill factor where the **Contract Rider Applicability** flag is set to **Y**.	Yes

Note:

The CSV file should contain the columns in the above mentioned sequence.

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Sample Mass Contract Rider Update CSV File

```
Account Identifier Type,Account Identifier,Account ID,Contract Type,Contract ID,Start Date,End Date,Bill Factor
,,2304864786,CT01,,2025-01-01,2025-12-31,BF01
,,2304864768,,CC01,2025-01-01,2025-06-31,BF02
```

Mass Hold Request Creation

Oracle Revenue Management and Billing provides the ability to create multiple hold requests at once through the **Upload Request** feature. The system allows you to hold certain processes at the person, account, or bill level through a hold request. You need to specify a period (i.e., duration) for which the hold request is initiated. Depending on the entity level, you need to add the entities, such as persons, accounts, or bills in the hold request. You need to define a period for which you want to keep the entities on hold. The hold entity period should be within the hold request period. Similarly, depending on the entity level, you need to add the processes, such as bill generation, overdue, auto pay, funding, delinquency, or refund, respectively, that you want to keep on hold for the entity through the hold request. The system will hold the process for the entity when the entity date range falls within the respective process date range. You can create multiple hold requests for the same entity with different hold reasons. The **C1-HoldUploadRequest** business object enables you to create an upload request for mass hold request creation.

You need to create an upload request type for the **C1-HoldUploadRequest** business object. You can then upload a mass hold request creation file in the CSV format using the respective upload request type. The mass hold request creation

Copyright © 2026, Oracle and/or its affiliates.

file should contain records with the following information – hold request type, hold request start date, hold request end date, hold reason, hold entity, hold entity start date, hold entity end date, hold processes, hold process start date, hold process end date, and hold characteristics. For more information, see Mass Hold Request Creation CSV Format.

Note:

You can specify maximum 5 characteristics in the record.

You cannot put partial hold on a bill through an upload request. The entire outstanding amount of the bill will be kept on hold.

On uploading a mass hold request creation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Hold request type, hold request start date, hold request end date, hold reason, and hold entity are specified in the record.
- If the hold entity is **ACCT**, either the account ID or account identifier type and account identifier is specified in the record.
- If the hold entity is **PERS**, either the person ID or person identifier type and person identifier is specified in the record.
- If the hold entity is **BILL**, the bill ID is specified in the record.

If the hold entity is **ACCT** and the entity ID is not specified in the record, the system derives the account ID using the respective account identifier type and account identifier combination. Similarly, if the hold entity is **PERS** and the entity ID is not specified in the record, the system derives the person ID using the respective person identifier type and person identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Note:

If the mandatory data is missing in any record of the file, the system will not allow you to create an upload request.

The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

On clicking the **Validate** button, the system checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, the system validates the following in the real time:

- The hold request type given in the record is valid and active in the system.
- The hold reason is a valid and active value of the **HOLD_REASON_FLG** lookup field.
- The hold entity is a valid and active value of the **HOLD_ENTITY_LVL_FLG** lookup field.
- The account ID given in the record is valid when the hold entity is **ACCT**.
- The person ID given in the record is valid when the hold entity is **PERS**.
- The bill ID given in the record is valid when the hold entity is **BILL**, and the outstanding amount of the bill is not equal to zero.
- The process's start and end dates are within the hold request start and end dates.
- The entity's start and end dates are within the hold request start and end dates.
- The entity's start and end dates should fall within at least one process's start and end dates.
- At least one process is kept on hold for the entity in the record.
- The value of each hold process in the record is set to either **Y** or **N**.
- The hold request start and end dates are set to either the system date or a future date.
- The start dates are not later than the end dates and the end dates are not earlier than the start dates.
- The same entity is not already kept on hold with the same hold reason through an existing draft or active hold request.
- The **Overdue**, **Auto Pay**, and **Refund** processes are not set to **Y** when the hold entity is set to **PERS**.

Copyright © 2026, Oracle and/or its affiliates.

- The **Bill Generation**, **Overdue**, **Auto Pay**, **Refund**, and **Delinquency** processes are not set to **Y** when the hold entity is set to **BILL**.
- Both the **Overdue** and **Delinquency** processes are not set to **Y** at the same time in the record.

Note: The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain.

- The characteristic type given in the record is valid and its characteristic entity is set to **Hold Request**.
- The adhoc characteristic values are validated as per the validations defined in the respective algorithm.
- The predefined characteristic value is already defined for the characteristic type.
- The foreign key reference characteristic value is valid.
- The two or more records with the same entity ID do not exist in the upload request.

Note:

If the account ID is invalid, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**.

If the person ID is invalid, the system derives the person ID using the respective person identifier type and person identifier combination. If the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the system changes the status of the upload request to **Deferred Validation**. The system then validates the records and changes the status of the upload request from **Deferred Validation** to **Validated** when the **C1-UPLRQ** batch is executed.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the hold request type, hold request start date, hold request end date, hold reason, hold entity, hold entity start date, hold entity end date, comments, hold process details, and hold characteristic details, the system creates a hold request for the entity (i.e., person, account, or bill). However, if there are multiple entity IDs with the same combination, the system adds all the entities in the same hold request.

Copyright © 2026, Oracle and/or its affiliates.

Note: If the **Include Hierarchy** flag is set to **Y** in the record where the entity level is set to **Person**, the system includes all the accounts of the person's hierarchy in the hold request. Note that the system considers only the child persons and not the grandchild persons from the person's hierarchy and then derives the accounts where the child person is the main customer. However, if the **Include Hierarchy** flag is set to **N** in the record where the entity level is set to **Person**, the system includes only the persons' immediate accounts in the hold request.

If the **Activation Approval** option is selected in the respective hold request type, the status of the hold request is set to **Activation Approval In Progress**. However, if the **Activation Approval** option is not selected in the respective hold request type, the system checks the number of entities added in the hold request. If the number of entities added in the hold request does not exceed the defer processing count (specified in the hold request type), the status of the hold request is set to **Active**. However, if the number of entities added in the hold request exceeds the defer processing count, the status of the hold request is set to **Deferred Processing**.

Once the hold request is successfully created, the status of the record is changed to **Processed**. However, if any error occurs while creating the hold request, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The system creates the hold request using the entity business object specified in the respective upload request type.

This feature is tested and certified for both the financial services and health insurance domains.

You cannot add entities and processes in the hold request from the user interface when it is created through the **Upload Request** feature.

While creating a hold request through the **Upload Request** feature, the system sets the creation mode of the hold request to **Automatic**.

The approver does not have the option to request the submitter to resubmit the hold activation request when the hold request is created through the **Upload Request** feature. Therefore, if an approver finds some invalid data in the hold request (created via an upload request), the approver must reject such hold request.

Prerequisites

To setup the mass hold request creation feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-HoldUploadRequest**.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive a To Do while submitting a hold request creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for hold request (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-HoldUploadRequest** business object in the **Status Reason** screen.
- Define the required hold request types in the system.
- Define the required person or account identifier types in the system.
- Ensure that the entities (i.e., person, account, or bill) that you want to keep on hold through a hold request should exist in the system.
- Define the required values for the **HOLD_REASON_FLG**, **HOLD_ENTITY_LVL_FLG**, and **HOLD_PROCESS_FLG** lookup fields.
- Define the required characteristic types where the characteristic entity is set to **Hold Request**.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active

Copyright © 2026, Oracle and/or its affiliates.

- User ID
- Batch Language
- Email Address

For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-HoldUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLD-DERIV	C1-HLD-DERIV	Refer to C1-HLD-DERIV on page 2111.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer to C1-DEFERVALD on page 2111.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 289.
Validated	Enter	C1-HLD-VALID	C1-HLD-VALID	Refer to C1-HLD-VALID on page 2111.

C1-HLD-DERIV

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

It validates the following:

- Hold request type, hold request start date, hold request end date, hold reason, and hold entity are specified in the record.
- If the hold entity is **ACCT**, either the account ID or account identifier type and account identifier is specified in the record.
- If the hold entity is **PERS**, either the person ID or person identifier type and person identifier is specified in the record.
- If the hold entity is **BILL**, the bill ID is specified in the record.

If the hold entity is **ACCT** and the entity ID is not specified in the record, this algorithm derives the account ID using the respective account identifier type and account identifier combination. Similarly, if the hold entity is **PERS** and the entity ID is not specified in the record, it derives the person ID using the respective person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validate** button. It checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, it changes the status of the upload request to **Validated**. However, if the total number of records in the upload request exceeds the online record validate limit, it changes the status of the upload request to **Deferred Validation**.

It contains the following parameter:

- **Online Record Validate Limit** - Used to indicate the maximum number of records you can validate in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HLD-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The hold request type given in the record is valid and active in the system.
- The hold reason is a valid and active value of the **HOLD_REASON_FLG** lookup field.

Copyright © 2026, Oracle and/or its affiliates.

- The hold entity is a valid and active value of the **HOLD_ENTITY_LVL_FLG** lookup field.
- The account ID given in the record is valid when the hold entity is **ACCT**.

> **Note:** If the account ID is invalid, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

- The person ID given in the record is valid when the hold entity is **PERS**.

> **Note:** If the person ID is invalid, it derives the person ID using the respective person identifier type and person identifier combination. Once the person ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

- The bill ID given in the record is valid when the hold entity is **BILL**, and the outstanding amount of the bill is not equal to zero.
- The process's start and end dates are within the hold request start and end dates.
- The entity's start and end dates are within the hold request start and end dates.
- The entity's start and end dates should fall within at least one process's start and end dates.
- At least one process is kept on hold for the entity in the record.
- The value of each hold process in the record is set to either **Y** or **N**.
- The hold request start and end dates are set to either the system date or a future date.
- The start dates are not later than the end dates and the end dates are not earlier than the start dates.
- The same entity is not already kept on hold with the same hold reason through an existing draft or active hold request.
- The **Overdue**, **Auto Pay**, and **Refund** processes are not set to **Y** when the hold entity is set to **PERS**.
- The **Bill Generation**, **Overdue**, **Auto Pay**, **Refund**, and **Delinquency** processes are not set to **Y** when the hold entity is set to **BILL**.
- Both the **Overdue** and **Delinquency** processes are not set to **Y** at the same time in the record.

> **Note:** The **Overdue** process is valid for the financial services and health insurance domains, but the **Delinquency** process is valid only for the health insurance domain.

- The characteristic type given in the record is valid and its characteristic entity is set to **Hold Request**.
- The adhoc characteristic values are validated as per the validations defined in the respective algorithm.
- The predefined characteristic value is already defined for the characteristic type.
- The foreign key reference characteristic value is valid.
- The two or more records with the same entity ID do not exist in the upload request.

> **Note:** If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

> **Note:** If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

Copyright © 2026, Oracle and/or its affiliates.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-HLD-PROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the hold request type, hold request start date, hold request end date, hold reason, hold entity, hold entity start date, hold entity end date, comments, hold process details, and hold characteristic details, it creates one hold request using the entity business object specified in the upload request type. However, if there are multiple entity IDs with the same combination, it adds all the entities in the same hold request.

> **Note:** The system creates the hold request using the entity business object specified in the respective upload request type.

If the **Activation Approval** option is selected in the respective hold request type, the status of the hold request is set to **Activation Approval In Progress**. However, if the **Activation Approval** option is not selected in the respective hold request type, the system checks the number of entities added in the hold request. If the number of entities added in the hold request does not exceed the defer processing count, the status of the hold request is set to **Active**. However, if the number of entities added in the hold request exceeds the defer processing count, the status of the hold request is set to **Deferred Processing**.

Copyright © 2026, Oracle and/or its affiliates.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Hold Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating mass hold requests through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Hold Request Type	Used to specify the hold request type using which you want to create the hold request. **Note:** You must specify a hold request type which is already defined in the system. It should be in the **Active** status.	Yes
2	Start Date	Used to specify the date from when the hold request is effective. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold request start date should be set to the system date or a future date. It cannot be a past date. The hold request start date cannot be later than the hold request end date.	Yes
3	End Date	Used to specify the date till when the hold request is effective. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold request end date should be set to the system date or a future date. It cannot be a past date. The hold request end date cannot be earlier than the hold request start date.	Yes
4	Hold Reason	Used to indicate the reason why you want to hold the entity. **Note:** You must specify a value which is already defined in the **HOLD_REASON_FLG** lookup field. It should be in the **Active** status.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
5	Hold Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: • ACCT • BILL • PERS **Note:** You must specify a value which is already defined in the **HOLD_ENTITY_LVL_FLG** lookup field. It should be in the **Active** status.	Yes
6	Account Identifier Type	Used to specify the account identifier type. **Note:** You must specify an account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the hold entity is set to **ACCT** and the hold entity ID is not specified in the record.
7	Account Identifier	Used to specify the account identifier. The system will derive the account using the given account identifier type and account identifier combination and then create a hold request for the respective account.	Yes (Conditional) **Note:** This data is required when the hold entity is set to **ACCT** and the hold entity ID is not specified in the record.
8	Person Identifier Type	Used to specify the person identifier type. **Note:** You must specify a person identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the hold entity is set to **PERS** and the hold entity ID is not specified in the record.
9	Person Identifier	Used to specify the person identifier. The system will derive the person using the given person identifier type and person identifier combination and then create a hold request for the respective person.	Yes (Conditional) **Note:** This data is required when the hold entity is set to **PERS** and the hold entity ID is not specified in the record.
10	Hold Entity ID	Used to indicate the entity (such as, person, account, or bill) that you want to keep on hold.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: If the hold entity is set to **ACCT**, you must specify the account ID in this column. If the hold entity is set to **PERS**, you must specify the person ID in this column. And, if the hold entity is set to **BILL**, you must specify the bill ID in this column. If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination. Similarly, if you do not specify the person ID, the system derives the person ID using the person identifier type and person identifier combination.	**Note:** This data is required when the hold entity is set to **BILL**.
11	Comments	Used to specify additional information about the hold request.	No
12	Hold Entity Start Date	Used to specify the date from when you want to hold the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date.	Yes
13	Hold Entity End Date	Used to specify the date till when you want to hold the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date.	No
14	Include Hierarchy	Used to indicate whether all the accounts in the person’s hierarchy or only the persons’ immediate accounts should be kept on hold. The valid values are: • **Y** - Used when you want to keep all the accounts in the person’s hierarchy on hold through the hold request.	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		• **N** - Used when you want to keep only the persons' immediate accounts on hold through the hold request. **Note:** The system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer. This column is applicable only when the hold entity is set to **PERS**. If you do not specify the value, by default, it is set to **N**.	
15	Hold Funding	Used to indicate whether you want to hold the funding process for the entity. The valid values are: • Y • N **Note:** You can hold the funding process when the hold entity is set to **ACCT**, **PERS**, or **BILL**. If you do not specify the value, by default, it is set to **N**.	No
16	Hold Funding Start Date	Used to specify the date from when you want to hold the funding process for the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold funding start date must be between the hold request start and end dates. The hold funding start date cannot be later than the hold funding end date.	Yes (Conditional) **Note:** This data is required when the hold funding is set to **Y** in the record.
17	Hold Funding End Date	Used to specify the date till when you want to hold the funding process for the entity.	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify the date in the **YYYY-MM-DD** format. The hold funding end date must be between the hold request start and end dates. The hold funding end date cannot be earlier than the hold funding start date.	
18	Hold Overdue	Used to indicate whether you want to hold the overdue process for the entity. The valid values are: • Y • N **Note:** You can hold the overdue process when the hold entity is set to **ACCT**. Note that you cannot set both hold overdue and hold delinquency to **Y** for an account in the same duration. The **Overdue** process is valid for the financial services and health insurance domains but the **Delinquency** process is valid only for the health insurance domain. If you do not specify the value, by default, it is set to **N**.	No
19	Hold Overdue Start Date	Used to specify the date from when you want to hold the overdue process for the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold overdue start date must be between the hold request start and end dates. The hold overdue start date cannot be later than the hold overdue end date.	Yes (Conditional) **Note:** This data is required when the hold overdue is set to **Y** in the record.
20	Hold Overdue End Date	Used to specify the date till when you want to hold the overdue process for the entity.	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify the date in the **YYYY-MM-DD** format. The hold overdue end date must be between the hold request start and end dates. The hold overdue end date cannot be earlier than the hold overdue start date.	
21	Hold Bill Generation	Used to indicate whether you want to hold the bill generation process for the entity. The valid values are: • Y • N **Note:** You can hold the bill generation process when the hold entity is set to **ACCT** or **PERS**. If you do not specify the value, by default, it is set to **N**.	No
22	Hold Bill Generation Start Date	Used to specify the date from when you want to hold the bill generation process for the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold bill generation start date must be between the hold request start and end dates. The hold bill generation start date cannot be later than the hold bill generation end date.	Yes (Conditional) **Note:** This data is required when the hold bill generation is set to **Y** in the record.
23	Hold Bill Generation End Date	Used to specify the date till when you want to hold the bill generation process for the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold bill generation end date must be between the hold request start and end dates. The hold bill generation end date cannot be earlier than the hold bill generation start date.	No
24	Hold Auto Pay	Used to indicate whether you want to hold the automatic payment process for the entity. The valid values are:	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		• Y • N **Note:** You can hold the automatic payment process when the hold entity is set to **ACCT**. If you do not specify the value, by default, it is set to **N**.	
25	Hold Auto Pay Start Date	Used to specify the date from when you want to hold the automatic payment process for the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold auto pay start date must be between the hold request start and end dates. The hold auto pay start date cannot be later than the hold auto pay end date.	Yes (Conditional) **Note:** This data is required when the hold auto pay is set to **Y** in the record.
26	Hold Auto Pay End Date	Used to specify the date till when you want to hold the automatic payment process for the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold auto pay end date must be between the hold request start and end dates. The hold auto pay end date cannot be earlier than the hold auto pay start date.	No
27	Hold Refund	Used to indicate whether you want to hold the refund process for the entity. The valid values are: • Y • N **Note:** You can hold the refund process when the hold entity is set to **ACCT**. If you do not specify the value, by default, it is set to **N**.	No
28	Hold Refund Start Date	Used to specify the date from when you want to hold the refund process for the entity.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify the date in the **YYYY-MM-DD** format. The hold refund start date must be between the hold request start and end dates. The hold refund start date cannot be later than the hold refund end date.	**Note:** This data is required when the hold refund is set to **Y** in the record.
29	Hold Refund End Date	Used to specify the date till when you want to hold the refund process for the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold refund end date must be between the hold request start and end dates. The hold refund end date cannot be earlier than the hold refund start date.	No
30	Hold Delinquency	Used to indicate whether you want to hold the delinquency process for the entity. The valid values are: • Y • N **Note:** You can hold the delinquency process when the hold entity is set to **PERS** or **ACCT**. Note that you cannot set both hold overdue and hold delinquency to **Y** for an account in the same duration. The **Overdue** process is valid for the financial services and health insurance domains but the **Delinquency** process is valid only for the health insurance domain. If you do not specify the value, by default, it is set to **N**.	No
31	Hold Delinquency Start Date	Used to specify the date from when you want to hold the delinquency process for the entity.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify the date in the **YYYY-MM-DD** format. The hold delinquency start date must be between the hold request start and end dates. The hold delinquency start date cannot be later than the hold delinquency end date.	**Note:** This data is required when the hold delinquency is set to **Y** in the record.
32	Hold Delinquency End Date	Used to specify the date till when you want to hold the delinquency process for the entity. **Note:** You must specify the date in the **YYYY-MM-DD** format. The hold delinquency end date must be between the hold request start and end dates. The hold delinquency end date cannot be earlier than the hold delinquency start date.	No
33	Effective Date1, Effective Date2, ..., Effective Date5	Used to specify the date from when the characteristic is effective for the hold request. **Note:** You must specify the date in the **YYYY-MM-DD** format.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.
34	Char Type1, Char Type2, ..., Char Type5	Used to specify the characteristic type. **Note:** You must specify a characteristic type where the characteristic entity is set to **Hold Request**. You can specify maximum 5 characteristics in the record.	No
35	Char Val1, Char Val2, ..., Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The CSV file should contain the columns in the above mentioned sequence. You can add five sets of characteristics — each set containing Effective Date, Char Type, and Char Val followed by the subsequent set (i.e., Effective Date1, Char Type1, Char Val1, Effective Date2, Char Type2, Char Val2, Effective Date3, Char Type3, Char Val3, Effective Date4, Char Type4, Char Val4, Effective Date5, Char Type5, Char Val5).

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Mass Refund Request Creation

Oracle Revenue Management and Billing provides the ability to create multiple refund requests at once through the **Upload Request** feature. The system allows you to refund a credit bill, a credit bill line item (i.e., a bill segment or an adjustment), a specific payment, all the payments of a payment event, and/or a credit adjustment of an account through a refund request. The **C1-RefundUploadRequest** business object enables you to create an upload request for mass refund request creation.

Note: At present, you can only create new refund requests and not update existing refund requests through the **Upload Request** feature.

You need to create an upload request type for the **C1-RefundUploadRequest** business object. You can then upload a mass refund request creation file in the CSV format using the respective upload request type. The mass refund request creation file should contain records with the following information – refund request type, account details, entity type, entity ID, refund adjustment type, refund amount, comments, and refund characteristics. For more information, see Mass Refund Request Creation CSV Format.

Note: You can specify maximum 5 characteristics in the record.

On uploading a mass refund request creation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Refund request type, entity type, entity ID and refund amount are specified in the record.
- If the entity type is **Adjustment**, then the adjustment ID given in the record is valid.

Copyright © 2026, Oracle and/or its affiliates.

- If the entity type is **Bill**, then the bill ID given in the record is valid.
- If the entity type is **Bill Segment**, then the bill segment ID given in the record is valid.
- If the entity type is **Payment Event**, then the payment event ID given in the record is valid.
- If the entity type is **Payment**, then the payment ID given in the record is valid.

Based on the entity type and entity ID, the system derives the original amount and currency of the respective entity. If the adjustment type is not specified in the record, the system derives the adjustment type from the respective refund request type. Similarly, if the account ID is not specified in the record, the system derives the account ID using the respective account identifier type and account identifier combination.

If the system could not derive the adjustment type, or account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Note:

If the mandatory data is missing in any record of the file, the system will not allow you to create an upload request.

The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

On clicking the **Validate** button, the system checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, the system validates the following in the real time:

- The account ID given in the record is valid.
- The entity type is a valid and active value of the **REF_WO_ENTITY_FLG** lookup field.
- The entity type given in the record for the entity ID is correct.
- The entity (i.e., adjustment, bill, bill segment, payment event, or payment) exists for the respective account in the system.
- The payment ID given in the record is in the **Frozen** status and is matched against the suspense or excess credit contract.
- The bill ID given in the record is in the **Complete** status.
- The bill segment ID given in the record is in the **Frozen** status.
- The adjustment ID given in the record is in the **Freezable** or **Frozen** status.
- The refund request type given in the record is valid and in the **Active** status. Its action flag is set to **Refund**.
- The refund amount is greater than zero.
- The refund amount is not greater than the eligible refund amount and the eligible refund amount is not equal to zero.
- The adjustment type given in the record is valid and its **A/P Request Type Code** flag is set to **Refund**.
- One record with a bill (for example, B01) and another record with the bill segment (for example, BS01) or adjustment (for example, AD01) of the same bill (i.e., B01) are not present in the upload request.
- One record with a payment event (for example, PE01) and another record with the payment (for example, PY01) of the same payment event (i.e., PE01) are not present in the upload request.
- The amount matches the decimal positions of the respective currency.
- The entity is not already included in any refund request that is in the non-final status.
- The characteristic type given in the record is valid and its characteristic entity is set to **Refund/Write Off Request**.
- The adhoc characteristic values are validated as per the validations defined in the respective algorithm.
- The predefined characteristic value is already defined for the characteristic type.
- The foreign key reference characteristic value is valid.
- The two or more records with the same entity type and entity ID combination do not exist in the upload request.

Copyright © 2026, Oracle and/or its affiliates.

Note:

If the account ID is invalid, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the system changes the status of the upload request to **Deferred Validation**. The system then validates the records and changes the status of the upload request from **Deferred Validation** to **Validated** when the **C1-UPLRQ** batch is executed.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the refund request type and account ID, the system creates a refund request for the account. However, if there are multiple entity IDs with the same combination, it adds all the entities in the same refund request.

If the **Approval Required** option is selected in the respective refund request type, the status of the refund request is set to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective refund request type, the system checks the number of entities added in the refund request. If the number of entities added in the refund request does not exceed the online record process limit, the system creates the refund adjustments using the refund adjustment type and then changes the status of the refund request to **Processed**. However, if the number of entities added in the refund request exceeds the online record process limit, the status of the refund request is set to **Deferred Processing**.

Once the refund request is successfully created, the status of the record is changed to **Processed**. However, if any error occurs while creating the refund request, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The system creates the refund request using the entity business object specified in the respective upload request type.

This feature is tested and certified for both the financial services and health insurance domains.

Prerequisites

To setup the mass refund request creation feature, you need to do the following:

Copyright © 2026, Oracle and/or its affiliates.

- Define the required upload request type where the upload request business object is set to **C1-RefundUploadRequest**.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive a To Do while submitting a refund request creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for refund request (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-RefundUploadRequest** business object in the **Status Reason** screen.
- Define the required refund request types where the **Action** flag is set to **Refund**.
- Define the required account identifier types in the system.
- Define the required adjustment types where the **A/P Request Type Code** flag is set to **Refund**.
- Define the required characteristic types where the characteristic entity is set to **Refund/Write Off Request**.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-RefundUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-RF-DERIV	C1-RF-DERIV	Refer to C1-RF-DERIV on page 2127.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer to C1-DEFERVALD on page 2111.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 289.
Validated	Enter	C1-RF-VALID	C1-RF-VALID	Refer to C1-RF-VALID on page 2128.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer to C1-UPLSUBENT on page 2097.
	Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer to C1-DEFERUPLD on page 2097.
	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 289.
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	Refer to C1-UPLAPPENT on page 2098.
	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	Refer to C1-UPLAPPEXT on page 2098.

Processed	-	-	-	-

C1-RF-DERIV

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

It validates the following:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Refund request type, entity type, entity ID and refund amount are specified in the record.
- If the entity type is **Adjustment**, then the adjustment ID given in the record is valid.
- If the entity type is **Bill**, then the bill ID given in the record is valid.
- If the entity type is **Bill Segment**, then the bill segment ID given in the record is valid.
- If the entity type is **Payment Event**, then the payment event ID given in the record is valid.
- If the entity type is **Payment**, then the payment ID given in the record is valid.

Based on the entity type and entity ID, this algorithm derives the original amount and currency of the respective entity from the system. If the adjustment type is not specified in the record, this algorithm derives the adjustment type from the respective refund request type. Similarly, if the account ID is not specified in the record, it derives the account ID using the respective account identifier type and account identifier combination.

Once the adjustment type and/or account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the adjustment type, or account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validate** button. It checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, it changes the status of the upload request to **Validated**. However, if the total number of records in the upload request exceeds the online record validate limit, it changes the status of the upload request to **Deferred Validation**.

It contains the following parameter:

Copyright © 2026, Oracle and/or its affiliates.

- **Online Record Validate Limit** - Used to indicate the maximum number of records you can validate in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-RF-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The account ID given in the record is valid.

> **Note:** If the account ID is invalid, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

- The entity type is a valid and active value of the **REF_WO_ENTITY_FLG** lookup field.
- The entity type given in the record for the entity ID is correct.
- The entity (i.e., adjustment, bill, bill segment, payment event, or payment) exists for the respective account in the system.
- The payment ID given in the record is in the **Frozen** status and is matched against the suspense or excess credit contract.
- The bill ID given in the record is in the **Complete** status.
- The bill segment ID given in the record is in the **Frozen** status.
- The adjustment ID given in the record is in the **Freezable** or **Frozen** status.
- The refund request type given in the record is valid and in the **Active** status. Its action flag is set to **Refund**.
- The refund amount is greater than zero.
- The refund amount is not greater than the eligible refund amount and the eligible refund amount is not equal to zero.
- The adjustment type given in the record is valid and its **A/P Request Type Code** flag is set to **Refund**.
- One record with a bill (for example, B01) and another record with the bill segment (for example, BS01) or adjustment (for example, AD01) of the same bill (i.e., B01) are not present in the upload request.
- One record with a payment event (for example, PE01) and another record with the payment (for example, PY01) of the same payment event (i.e., PE01) are not present in the upload request.
- The amount matches the decimal positions of the respective currency.
- The entity is not already included in any refund request that is in the non-final status.
- The characteristic type given in the record is valid and its characteristic entity is set to **Refund/Write Off Request**.
- The adhoc characteristic values are validated as per the validations defined in the respective algorithm.
- The predefined characteristic value is already defined for the characteristic type.
- The foreign key reference characteristic value is valid.
- The two or more records with the same entity type and entity ID combination do not exist in the upload request.

> **Note:** If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

Copyright © 2026, Oracle and/or its affiliates.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

Copyright © 2026, Oracle and/or its affiliates.

C1-RF-PROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the refund request type and account ID, this algorithm creates a refund request for the account. However, if there are multiple entity IDs with the same combination, it adds all the entities in the same refund request.

Note: The system creates the refund request using the entity business object specified in the respective upload request type.

If the **Approval Required** option is selected in the respective refund request type, the status of the refund request is set to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective refund request type, the system checks the number of entities added in the refund request. If the number of entities added in the refund request does not exceed the online record process limit, the system creates the refund adjustments using the refund adjustment type and then changes the status of the refund request to **Processed**. However, if the number of entities added in the refund request exceeds the online record process limit, the status of the refund request is set to **Deferred Processing**.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Refund Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating multiple refund requests at once through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Refund Request Type	Used to specify the refund request type using which you want to create the refund request. **Note:** You must specify a refund request type which is already defined in the system. It should be in the **Active** status.	Yes
2	Account Identifier Type	Used to specify the account identifier type. **Note:** You must specify an account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the account ID is not specified in the record.
3	Account Identifier	Used to specify the account identifier. **Note:** The system derives the account using the given account identifier type and account identifier combination when the account ID is either not specified or is invalid in the record.	Yes (Conditional) **Note:** This data is required when the account ID is not specified in the record.
4	Account ID	Used to indicate the account for which you want to create the refund request.	Yes (Conditional) **Note:** This data is required when the account identifier type and account identifier are not specified in the record.

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
5	Entity Type	Used to specify the entity type. The valid values are: • **Adjustment** - Used when you want to refund a credit adjustment of an account through a refund request. • **Bill** - Used when you want to refund a credit bill of an account through a refund request. • **Bill Segment** - Used when you want to refund a credit bill segment of an account through a refund request. • **Payment Event** - Used when you want to refund all the payments of a payment event created for a payor account through a refund request. • **Payment** - Used when you want to refund a specific payment of an account through a refund request. **Note:** You must specify a value which is already defined in the **REF_WO_ENTITY_FLG** lookup field. It should be in the **Active** status.	Yes
6	Entity ID	Used to specify the entity ID. **Note:** Here, you can specify the adjustment ID, bill ID, bill segment ID, payment event ID, or payment ID depending on the specified entity type. The specified payment should be in the **Frozen** status and matched against the suspense or excess credit contract. The specified bill should be in the **Complete** status. The specified bill segment should be in the **Frozen** status. The specified adjustment should be in the **Freezable** or **Frozen** status.	Yes
7	Adjustment Type	Used to specify the adjustment type using which you want to create the refund adjustment for the entity.	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify an adjustment type which is already defined in the system. Its **A/P Request Type Code** flag should be set to **Refund**. If you do not specify the adjustment type, the system considers the refund adjustment type specified in the respective refund request type.	
8	Refund Amount	Used to specify the amount that you want to refund. **Note:** You must specify a number greater than zero but less than or equal to the eligible refund amount. You must specify a number with decimal positions less than or equal to the decimal positions defined for the respective currency.	Yes
9	Comments	Used to specify additional information about the refund request.	No
10	Effective Date1, Effective Date2, ..., Effective Date5	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.
11	Char Type1, Char Type2, ..., Char Type5	Used to specify the characteristic type. **Note:** You must specify a characteristic type where the characteristic entity is set to **Refund/ Write Off Request**. You can specify maximum 5 characteristics in the record.	No
12	Char Val1, Char Val2, ..., Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The CSV file should contain the columns in the above mentioned sequence. You can add five sets of characteristics — each set containing Effective Date, Char Type, and Char Val followed by the subsequent set (i.e., Effective Date1, Char Type1, Char Val1, Effective Date2, Char Type2, Char Val2, Effective Date3, Char Type3, Char Val3, Effective Date4, Char Type4, Char Val4, Effective Date5, Char Type5, Char Val5).

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

```

Mass Write Off Request Creation

Oracle Revenue Management and Billing provides the ability to create multiple write off requests at once through the **Upload Request** feature. The system allows you to write off a debit bill or a debit bill line item (i.e., a bill segment or an adjustment) of an account through a write off request. The **C1-WriteOffUploadRequest** business object enables you to create an upload request for mass write off request creation.

Note: At present, you can only create new write off requests and not update existing write off requests through the **Upload Request** feature.

You need to create an upload request type for the **C1-WriteOffUploadRequest** business object. You can then upload a mass write off request creation file in the CSV format using the respective upload request type. The mass write off request creation file should contain records with the following information – write off request type, account details, entity type, entity ID, write off adjustment type, write off amount, comments, and write off characteristics. For more information, see Mass Write Off Request Creation CSV Format.

Note: You can specify maximum 5 characteristics in the record.

On uploading a mass write off request creation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Write off request type, entity type, entity ID and write off amount are specified in the record.
- If the entity type is **Bill**, then the bill ID given in the record is valid.
- If the entity type is **Bill Segment**, then the bill segment ID given in the record is valid.
- If the entity type is **Adjustment**, then the adjustment ID given in the record is valid.

Based on the entity type and entity ID, the system derives the original amount and currency of the respective entity. If the adjustment type is not specified in the record, the system derives the adjustment type from the respective write off request type. Similarly, if the account ID is not specified in the record, the system derives the account ID using the respective account identifier type and account identifier combination.

If the system could not derive the adjustment type, or account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Copyright © 2026, Oracle and/or its affiliates.

Note:

If the mandatory data is missing in any record of the file, the system will not allow you to create an upload request.

The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

On clicking the **Validate** button, the system checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, the system validates the following in the real time:

- The account ID given in the record is valid.
- The entity type is a valid and active value of the **REF_WO_ENTITY_FLG** lookup field.
- The entity type given in the record for the entity ID is correct.
- The entity (i.e., bill, bill segment, or adjustment) exists for the respective account in the system.
- The bill ID given in the record is in the **Complete** status.
- The bill segment ID or adjustment ID given in the record is in the **Frozen** status.
- The given adjustment is present on any bill of the respective account.
- The write off request type given in the record is valid and in the **Active** status. Its action flag is set to **Write Off** .
- The write off amount is less than zero.
- The write off amount is not greater than the eligible write off amount and the eligible write off amount is not equal to zero.
- The adjustment type given in the record is valid and its **A/P Request Type Code** flag is set to **Refund**.
- One record with a bill (for example, B01) and another record with the bill segment (for example, BS01) or adjustment (for example, AD01) of the same bill (i.e., B01) are not present in the upload request.
- The amount matches the decimal positions of the respective currency.
- The entity is not already included in any write off request that is in the non-final status.
- The characteristic type given in the record is valid and its characteristic entity is set to **Refund/Write Off Request**.
- The adhoc characteristic values are validated as per the validations defined in the respective algorithm.
- The predefined characteristic value is already defined for the characteristic type.
- The foreign key reference characteristic value is valid.
- The two or more records with the same entity type and entity ID combination do not exist in the upload request.

Note:

If the account ID is invalid, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the system changes the status of the upload request to **Deferred Validation**. The system then validates the records and changes the status of the upload request from **Deferred Validation** to **Validated** when the **C1-UPLRQ** batch is executed.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Copyright © 2026, Oracle and/or its affiliates.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the write off request type and account ID, the system creates a write off request for the account. However, if there are multiple entity IDs with the same combination, it adds all the entities in the same write off request.

If the **Approval Required** option is selected in the respective write off request type, the status of the write off request is set to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective write off request type, the system checks the number of entities added in the write off request. If the number of entities added in the write off request does not exceed the online record process limit, the system creates the write off adjustments using the write off adjustment type and then changes the status of the write off request to **Processed**. However, if the number of entities added in the write off request exceeds the online record process limit, the status of the write off request is set to **Deferred Processing**.

Once the write off request is successfully created, the status of the record is changed to **Processed**. However, if any error occurs while creating the write off request, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The system creates the write off request using the entity business object specified in the respective upload request type.

This feature is tested and certified for both the financial services and health insurance domains.

Prerequisites

To setup the mass write off request creation feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-WriteOffUploadRequest**.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive a To Do while submitting a write off request creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for write off request (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-WriteOffUploadRequest** business object in the **Status Reason** screen.
- Define the required write off request types where the **Action** flag is set to **Write Off**.
- Define the required account identifier types in the system.
- Define the required adjustment types where the **A/P Request Type Code** flag is not set to **Refund**.
- Define the required characteristic types where the characteristic entity is set to **Refund/Write Off Request**.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
    - Time Interval
    - Timer Active
    - User ID
    - Batch Language
    - Email Address

Copyright © 2026, Oracle and/or its affiliates.

For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-WriteOffUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-WriteOffUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-WO-DERIV	C1-WO-DERIV	Refer to C1-WO-DERIV on page 2136.

C1-WO-DERIV

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

Copyright © 2026, Oracle and/or its affiliates.

It validates the following:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Write off request type, entity type, entity ID and write off amount are specified in the record.
- If the entity type is **Bill**, then the bill ID given in the record is valid.
- If the entity type is **Bill Segment**, then the bill segment ID given in the record is valid.
- If the entity type is **Adjustment**, then the adjustment ID given in the record is valid.

Based on the entity type and entity ID, this algorithm derives the original amount and currency of the respective entity from the system. If the adjustment type is not specified in the record, this algorithm derives the adjustment type from the respective write off request type. Similarly, if the account ID is not specified in the record, it derives the account ID using the respective account identifier type and account identifier combination.

Once the adjustment type and/or account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the adjustment type, or account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validate** button. It checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, it changes the status of the upload request to **Validated**. However, if the total number of records in the upload request exceeds the online record validate limit, it changes the status of the upload request to **Deferred Validation**.

It contains the following parameter:

- **Online Record Validate Limit** - Used to indicate the maximum number of records you can validate in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-WO-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The account ID given in the record is valid.

  Note: If the account ID is invalid, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

- The entity type is a valid and active value of the **REF_WO_ENTITY_FLG** lookup field.

Copyright © 2026, Oracle and/or its affiliates.

- The entity type given in the record for the entity ID is correct.
- The entity (i.e., bill, bill segment, or adjustment) exists for the respective account in the system.
- The bill ID given in the record is in the **Complete** status.
- The bill segment ID or adjustment ID given in the record is in the **Frozen** status.
- The given adjustment is present on any bill of the respective account.
- The write off request type given in the record is valid and in the **Active** status. Its action flag is set to **Write Off** .
- The write off amount is less than zero.
- The write off amount is not greater than the eligible write off amount and the eligible write off amount is not equal to zero.
- The adjustment type given in the record is valid and its **A/P Request Type Code** flag is set to **Refund**.
- One record with a bill (for example, B01) and another record with the bill segment (for example, BS01) or adjustment (for example, AD01) of the same bill (i.e., B01) are not present in the upload request.
- The amount matches the decimal positions of the respective currency.
- The entity is not already included in any write off request that is in the non-final status.
- The characteristic type given in the record is valid and its characteristic entity is set to **Refund/Write Off Request**.
- The adhoc characteristic values are validated as per the validations defined in the respective algorithm.
- The predefined characteristic value is already defined for the characteristic type.
- The foreign key reference characteristic value is valid.
- The two or more records with the same entity type and entity ID combination do not exist in the upload request.

Note: If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is

Copyright © 2026, Oracle and/or its affiliates.

assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-WO-PROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the write off request type and account ID, this algorithm creates a write off request for the account. However, if there are multiple entity IDs with the same combination, it adds all the entities in the same write off request.

Note: The system creates the write off request using the entity business object specified in the respective upload request type.

If the **Approval Required** option is selected in the respective write off request type, the status of the write off request is set to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective write off request type, the system checks the number of entities added in the write off request. If the number of entities added in the write off request does not exceed the online record process limit, the system creates the write off adjustments using the write off adjustment type and then changes the status of the write off request to **Processed**. However, if the number of entities added in the write off request exceeds the online record process limit, the status of the write off request is set to **Deferred Processing**.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Write Off Request Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating multiple write off requests at once through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Write Off Request Type	Used to specify the write off request type using which you want to create the write off request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify a write off request type which is already defined in the system. It should be in the **Active** status.	
2	Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: You must specify an account identifier type which is already defined in the system.	**Note:** This data is required when the account ID is not specified in the record.
3	Account Identifier	Used to specify the account identifier.	Yes (Conditional)
		Note: The system derives the account using the given account identifier type and account identifier combination when the account ID is either not specified or is invalid in the record.	**Note:** This data is required when the account ID is not specified in the record.
4	Account ID	Used to indicate the account for which you want to create the write off request.	Yes (Conditional)
			Note: This data is required when the account identifier type and account identifier are not specified in the record.
5	Entity Type	Used to specify the entity type. The valid values are: • **Bill** - Used when you want to write off a debit bill of an account through a write off request. • **Bill Segment** - Used when you want to write off a debit bill segment of a bill through a write off request. • **Adjustment** - Used when you want to write off a debit adjustment of a bill through a write off request.	Yes
		Note: You must specify a value which is already defined in the **REF_WO_ENTITY_FLG** lookup field. It should be in the **Active** status.	
6	Entity ID	Used to specify the entity ID.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: Here, you can specify the bill ID, bill segment ID, or adjustment ID depending on the specified entity type. The specified bill should be in the **Complete** status. The specified bill segment should be in the **Frozen** status. The specified adjustment should be in the **Frozen** status.	
7	Adjustment Type	Used to specify the adjustment type using which you want to create the write off adjustment for the entity. **Note:** You must specify an adjustment type which is already defined in the system. Its **A/P Request Type Code** flag should not be set to **Refund**. If you do not specify the adjustment type, the system considers the write off adjustment type specified in the respective write off request type.	No
8	Write Off Amount	Used to specify the amount that you want to write off. **Note:** You must specify a number greater than zero but less than or equal to the eligible write off amount. You must specify a number with decimal positions less than or equal to the decimal positions defined for the respective currency.	Yes
9	Comments	Used to specify additional information about the write off request.	No
10	Effective Date1, Effective Date2, ..., Effective Date5	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
11	Char Type1, Char Type2, ..., Char Type5	Used to specify the characteristic type. **Note:** You must specify a characteristic type where the characteristic entity is set to **Refund/ Write Off Request**. You can specify maximum 5 characteristics in the record.	No
12	Char Val1, Char Val2, ..., Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.

Note:

The CSV file should contain the columns in the above mentioned sequence. You can add five sets of characteristics — each set containing Effective Date, Char Type, and Char Val followed by the subsequent set (i.e., Effective Date1, Char Type1, Char Val1, Effective Date2, Char Type2, Char Val2, Effective Date3, Char Type3, Char Val3, Effective Date4, Char Type4, Char Val4, Effective Date5, Char Type5, Char Val5).

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Sample Mass Write Off Request Creation CSV File

```
Write Off Request Type,Account Identifier Type,Account Identifier,Account ID,Entity Type,Entity ID,Adjustment Type,Write Off Amount,Comments,Effective
Date1,Char Type1,Char Val1,Effective Date2,Char Type2,Char Val2,Effective Date3,Char Type3,Char Val3,Effective Date4,Char Type4,Char Val4,Effective

```

Mass Policy Reinstatement

Oracle Revenue Management and Billing provides the ability to reinstate multiple fully insured group policies at once through the **Upload Request** feature. The **C1-ReinstatementUploadRequest** business object enables you to create an upload request for mass policy reinstatement.

You need to create an upload request type for the **C1-ReinstatementUploadRequest** business object. You can then upload a mass policy reinstatement file in the CSV format using the respective upload request type. The mass policy reinstatement file should contain records with the following information – policy ID or source system and policy number, and reinstatement reason. For more information, see Mass Policy Reinstatement CSV Format.

On uploading a mass policy reinstatement file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the policy ID or source system and policy number is specified in the record.
- Reinstatement reason is specified in the record.

If the policy ID is not specified in the record, the system derives the policy ID using the respective source system and policy number combination. If the system could not derive the policy ID using the source system and policy number

Copyright © 2026, Oracle and/or its affiliates.

combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Note:

If the reinstatement reason is missing in any record of the file, the system will not allow you to create an upload request.

The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

On clicking the **Validate** button, the system validates the following:

- The policy ID given in the record is valid.
- The reinstatement reason is valid for the status specified in the **Policy Reinstatement Status for Reason Verification** parameter of the **C1-REN-VALID** algorithm.
- The two or more records with the same policy ID do not exist in the upload request.

Note:

If the policy ID is invalid, the system derives the policy ID using the respective source system and policy number combination. If the system could not derive the policy ID using the source system and policy number combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record, the system reinstates the respective fully insured group policy and changes its status to **Pending Reinstatement**.

Once the policy status is successfully updated, the status of the record is changed to **Processed**. However, if any error occurs while updating the policy status, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The system updates the policy using the entity business object specified in the respective upload request type.

This feature is tested and certified for the health insurance domain.

Copyright © 2026, Oracle and/or its affiliates.

Prerequisites

To setup the mass policy reinstatement feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-ReinstatementUploadRequest**.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive a To Do while submitting a policy reinstatement upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for policy (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-ReinstatementUploadRequest** business object in the **Status Reason** screen.
- Define the required source systems in the **Source System (C1-SourceSystemLookup)** extendable lookup.
- Define the status reasons for the **Reinstated** status of the **C1-POLICY** business object in the **Status Reason** screen.
- Define the parameters in the **C1-REN-VALID** and **C1-REN-PROC** algorithms attached to the lifecycle of the **C1-ReinstatementUploadRequest** business object.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-ReinstatementUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-ReinstatementUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CRTUPLDTL	C1-CRTUPLDTL	Refer to C1-CRTUPLDTL on page 2145.
	Enter	C1-REN-DERIV	C1-REN-DERIV	Refer to C1-REN-DERIV on page 2145.

C1-CRTUPLDTL

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

C1-REN-DERIV

This algorithm validates the following:

- Either the policy ID or source system and policy number is specified in the record.
- Reinstatement reason is specified in the record.

If the policy ID is not specified in the record, it derives the policy ID using the respective source system and policy number combination. Once the policy ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the policy ID using the source system and policy number combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-REN-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The policy ID given in the record is valid.

  Note: If the policy ID is invalid, it derives the policy ID using the respective source system and policy number combination. Once the policy ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the policy ID using the source system and policy number combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.
- The reinstatement reason is valid for the status specified in the **Policy Reinstatement Status for Reason Verification** parameter.
- The two or more records with the same policy ID do not exist in the upload request.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

> **Note:** If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

This algorithm contains the following parameters:

- **Policy Status after Processing Reinstatement Upload Request** - Used to specify the status to which you want to transition the policy when the policy reinstatement upload request is processed.

  > **Note:** Here, you must specify the **PENDREINSTAT** status defined in the lifecycle of the **C1-POLICY** business object. The system will then transition the respective fully insured group policy to the **Pending Reinstatement** status when the policy reinstatement upload request is processed.

- **Policy Reinstatement Status for Reason Verification** - Used to specify the status against which you want to validate the given reinstatement reason.

  > **Note:** Here, you must specify the **REINSTATE** status defined in the lifecycle of the **C1-POLICY** business object. The system will then validate whether the given reason is already defined for the **Reinstated** status of the **C1-POLICY** business object.

Both the above parameters are mandatory.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Copyright © 2026, Oracle and/or its affiliates.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-REN-PROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record, this algorithm reinstates the respective fully insured group policy and changes its status to **Pending Reinstatement**.

Note: The system updates the policy using the entity business object specified in the respective upload request type.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

This algorithm contains the following parameter:

- **Policy Status after Processing Reinstatement Upload Request** - Used to specify the status to which you want to transition the policy when the policy reinstatement upload request is processed.

Note: Here, you must specify the **PENDREINSTAT** status defined in the lifecycle of the **C1-POLICY** business object. The system will then transition the respective fully insured group policy to the **Pending Reinstatement** status when the policy reinstatement upload request is processed.

The above parameter is mandatory.

Mass Policy Reinstatement CSV Format

The following table lists and describes the columns that should be available in the CSV file while reinstating multiple fully insured group policies at once through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Policy ID	Used to indicate the fully insured group policy that you want to reinstate. **Note:** If you do not specify the policy ID, the system derives the policy ID using the source system and policy number combination.	No
2	Source System	Used to indicate the external system from where the policy is originated. **Note:** You must specify a source system which is already defined in the **Source System (C1-SourceSystemLookup)** extendable lookup.	Yes (Conditional) **Note:** This data is required when the policy ID is not specified in the record.
3	Policy Number	Used to indicate the policy number.	Yes (Conditional) **Note:** This data is required when the policy ID is not specified in the record.
4	Reinstatement Reason	Used to indicate the reason why you want to reinstate the policy. **Note:** You must specify a reason which is defined for the status specified in the **Policy Reinstatement Status for Reason Verification** parameter of the **C1-REN-VALID** algorithm.	Yes

Note:

The CSV file should contain the columns in the above mentioned sequence.

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Mass Bill Group Sort Record Creation

Oracle Revenue Management and Billing provides the ability to add sort records for multiple bill groups at once through the **Upload Request** feature. The system allows you to create sort records for multiple bill groups of a single parent customer at a time through an upload request. The specified bill groups (i.e., child persons whose person type is set to **Bill Group**) should be related to the parent customer using the relationship type that is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. The **C1-BillGrpSortUploadRequest** business object enables you to create an upload request for mass bill group sort record creation.

You need to create an upload request type for the **C1-BillGrpSortUploadRequest** business object. You can then upload a mass bill group sort record creation file in the CSV format using the respective upload request type. The mass bill group sort record creation file should contain records with the following information – bill group ID or bill group identifier type and bill group identifier, sort ID, description, start date, and end date. For more information, see Mass Bill Group Sort Record Creation CSV Format.

While uploading a mass bill group sort record creation file, you need to specify the parent customer whose bill groups' sort records you want to create. On uploading a mass bill group sort record creation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the bill group (i.e., person) ID or bill group (i.e., person) identifier type and bill group (i.e., person) identifier is specified in the record.
- Sort ID, description, start date, and end date are specified in the record.

If the bill group ID is not specified in the record, the system derives the bill group ID using the respective bill group identifier type and bill group identifier combination. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Note:

If the mandatory data is missing in any record of the file, the system will not allow you to create an upload request.

The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

On clicking the **Validate** button, the system validates the following:

- The bill group (i.e., person) ID given in the record is valid.
- The parent customer's person type is set to **Parent Customer** in the system.
- The end date is not earlier than the start date and the start date is not later than the end date.
- The bill group identifier type is available when the bill group identifier is specified in the record and vice versa.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type that is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the C1_BILL_LVL table.
- The two or more records with the same bill group ID and sort ID combination do not exist in the upload request.

Copyright © 2026, Oracle and/or its affiliates.

Note:

If the bill group ID is invalid, the system derives the bill group ID using the respective bill group identifier type and bill group identifier combination. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record, the system creates a unique sort ID for the given bill group in the given date range.

Once the sort record is successfully created, the status of the record is changed to **Processed**. However, if any error occurs while creating the sort record, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The system creates the bill group sort records using the entity business object specified in the respective upload request type.

This feature is tested and certified for the health insurance domain.

Prerequisites

To setup the mass bill group sort record creation feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-BillGrpSortUploadRequest**.
- Create a To Do type named **C1-BGSRT** with the following specifications:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Copyright © 2026, Oracle and/or its affiliates.

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive a To Do while submitting a bill group sort record creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for bill group (i.e., person (if not available)) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillGrpSortUploadRequest** business object in the **Status Reason** screen.
- Define the required person identifier types in the system.
- Set the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

C1-BLSRTUPLD

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

C1-BLSRTDERV

This algorithm validates the following:

- Either the bill group (i.e., person) ID or bill group (i.e., person) identifier type and bill group (i.e., person) identifier is specified in the record.
- Sort ID, description, start date, and end date are specified in the record.

If the bill group ID is not specified in the record, it derives the bill group ID using the respective bill group identifier type and bill group identifier combination. Once the bill group ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-BLSRTVALD

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The bill group (i.e., person) ID given in the record is valid.

Copyright © 2026, Oracle and/or its affiliates.

Note: If the bill group ID is invalid, it derives the bill group ID using the respective bill group (i.e., person) identifier type and bill group (i.e., person) identifier combination. Once the bill group ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

- The parent customer's person type is set to **Parent Customer** in the system.
- The end date is not earlier than the start date and the start date is not later than the end date.
- The bill group identifier type is available when the bill group identifier is specified in the record and vice versa.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type that is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the C1_BILL_LVL table.
- The two or more records with the same bill group ID and sort ID combination do not exist in the upload request.

Note: If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Copyright © 2026, Oracle and/or its affiliates.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BLSRTPROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the bill group (person) ID and sort ID, this algorithm creates a unique sort ID for the given bill group in the given date range.

Note: The system creates the bill group sort records using the entity business object specified in the respective upload request type.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Bill Group Sort Record Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while adding sort records for multiple bill groups at once through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Bill Group ID	Used to indicate the bill group (i.e., person) for whom you want to create the sort ID.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify an effective child person of the parent customer for whom you are creating the mass bill group sort record creation upload request. In addition, note that you must specify a child person whose person type is set to **Bill Group** and who is related to the parent customer using the relationship type that is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.	**Note:** This data is required when the bill group (i.e., person) identifier type and bill group (i.e., person) identifier are not specified in the record.
2	Sort ID	Used to specify the sort ID.	Yes
3	Description	Used to specify the description for the sort record.	Yes
4	Start Date	Used to specify the date from when the sort record is effective for the bill group. **Note:** You must specify the date in the **YYYY-MM-DD** format. The start date cannot be later than the end date.	Yes
5	End Date	Used to specify the date till when the sort record is effective for the bill group. **Note:** You must specify the date in the **YYYY-MM-DD** format. The end date cannot be earlier than the start date.	Yes
6	Bill Group Identifier Type	Used to specify the person identifier type. **Note:** You must specify a person identifier type which is already defined in the system. You must specify the primary person identifier details of the respective person.	Yes (Conditional) **Note:** This data is required when the bill group ID is not specified in the record.
7	Bill Group Identifier	Used to specify the person identifier. **Note:** The system derives the person using the given person identifier type and person identifier combination when the person ID is either not specified or is invalid in the record.	Yes (Conditional) **Note:** This data is required when the bill group ID is not specified in the record.

Note:

The CSV file should contain the columns in the above mentioned sequence.

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Mass Bill Group Derivation and Pricing Parameters Record Creation

Oracle Revenue Management and Billing provides the ability to add bill group derivation and pricing parameters records for multiple bill groups at once through the **Upload Request** feature. The system allows you to create bill group derivation and pricing parameters records for multiple bill groups of a single parent customer at a time through an upload request. The specified bill groups (i.e., child persons whose person type is set to **Bill Group**) should be related to the parent customer using the relationship type that is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. The **C1-BillLevelUploadRequest** business object enables you to create an upload request for mass bill group derivation and pricing parameters record creation.

You need to create an upload request type for the **C1-BillLevelUploadRequest** business object. You can then upload a mass bill group derivation and pricing parameters record creation file in the CSV format using the respective upload request type. The mass bill group derivation and pricing parameters record creation file should contain records with the following information – bill group ID or bill group identifier type and bill group identifier, sort ID, source system, bill level 1 (i.e., parameter 1), bill level 2 (i.e., parameter 2), bill level 3 (i.e., parameter 3), bill level 4 (i.e., parameter 4), and effective date. For more information, see Mass Bill Group Derivation and Pricing Parameters Record Creation CSV Format.

While uploading a mass bill group derivation and pricing parameters record creation file, you need to specify the parent customer whose bill groups' derivation and pricing parameters records you want to create. On uploading a mass bill group derivation and pricing parameters record creation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the bill group (i.e., person) ID or bill group (i.e., person) identifier type and bill group (i.e., person) identifier is specified in the record.
- Sort ID, source system, bill level 1 (i.e., parameter 1), and effective date are specified in the record.

If the bill group ID is not specified in the record, the system derives the bill group ID using the respective bill group identifier type and bill group identifier combination. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Note:

If the mandatory data is missing in any record of the file, the system will not allow you to create an upload request.

The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

Copyright © 2026, Oracle and/or its affiliates.

On clicking the **Validate** button, the system checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, the system validates the following in the real time:

- The bill group (i.e., person) ID given in the record is valid.
- The parent customer's person type is set to **Parent Customer** in the system.
- The bill group identifier type is available when the bill group identifier is specified in the record and vice versa.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type that is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- The source system exists in the extendable lookup that is specified in the **Source System Extendable Lookup** parameter of the **C1-BLVLVALID** algorithm.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the bill group sort record.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist for the bill group in the C1_BILL_LVL table.
- The two or more records with the same source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination do not exist for the same bill group in the upload request.

Note:

If the bill group ID is invalid, the system derives the bill group ID using the respective bill group identifier type and bill group identifier combination. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the system changes the status of the upload request to **Deferred Validation**. The system then validates the records and changes the status of the upload request from **Deferred Validation** to **Validated** when the **C1-UPLRQ** batch is executed.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, this algorithm creates one bill group derivation and pricing parameters record for the bill group ID and sort ID combination. The status of the bill group derivation and pricing parameters record is set to **Active**.

Copyright © 2026, Oracle and/or its affiliates.

Note: If the sort ID is not specified in the record and if the **Add Bill Group Sort** parameter of the **C1-BLVLVALID** algorithm is set to **Y**, then the system will first create the bill group sort record where the sort ID is set to the bill group ID and then create the derivation and pricing parameters for the bill group ID and sort ID combination. However, if the sort ID is not specified in the record and if the **Add Bill Group Sort** parameter of the **C1-BLVLVALID** algorithm is set to **N**, then the system will throw an appropriate error message.

Once the bill group derivation and pricing parameters record is successfully created, the status of the record is changed to **Processed**. However, if any error occurs while creating the bill group derivation and pricing parameters record, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The system creates the bill group derivation and pricing parameters records using the entity business object specified in the respective upload request type.

This feature is tested and certified for the health insurance domain.

Prerequisites

To setup the mass bill group derivation and pricing parameters record creation feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-BillLevelUploadRequest**.
- Create a To Do type named **C1-BGDVP** with the following specifications:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive a To Do while submitting a bill group derivation and pricing parameters record creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for bill group (i.e., person (if not available)) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillLevelUploadRequest** business object in the **Status Reason** screen.
- Define the required person identifier types in the system.
- Define the required source systems in the **Source System (C1-SourceSystemLookup)** extendable lookup.
- Define the parameters in the **C1-BLVLVALID** algorithm attached to the lifecycle of the **C1-BillLevelUploadRequest** business object.
- Set the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- Define the required bill group sort records in the system.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID

Copyright © 2026, Oracle and/or its affiliates.

- Batch Language
- Email Address

For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

C1-BLVUPLDTL

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

C1-BLVLDERIV

This algorithm validates the following:

- Either the bill group (i.e., person) ID or bill group (i.e., person) identifier type and bill group (i.e., person) identifier is specified in the record.
- Sort ID, source system, bill level 1 (i.e., parameter 1), and effective date are specified in the record.

If the bill group ID is not specified in the record, it derives the bill group ID using the respective bill group identifier type and bill group identifier combination. Once the bill group ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validate** button. It checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, it changes the status of the upload request to **Validated**. However, if the total number of records in the upload request exceeds the online record validate limit, it changes the status of the upload request to **Deferred Validation**.

It contains the following parameter:

- **Online Record Validate Limit** - Used to indicate the maximum number of records you can validate in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Copyright © 2026, Oracle and/or its affiliates.

C1-BLVLVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The bill group (i.e., person) ID given in the record is valid.

  Note: If the bill group ID is invalid, it derives the bill group ID using the respective bill group (i.e., person) identifier type and bill group (i.e., person) identifier combination. Once the bill group ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.
- The parent customer's person type is set to **Parent Customer** in the system.
- The bill group identifier type is available when the bill group identifier is specified in the record and vice versa.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type that is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- The source system exists in the extendable lookup that is specified in the **Source System Extendable Lookup** parameter.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the bill group sort record.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist for the bill group in the C1_BILL_LVL table.
- The two or more records with the same source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination do not exist for the same bill group in the upload request.

  Note: If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

This algorithm contains the following parameters:

- **Source System Extendable Lookup** - Used to specify the source system extendable lookup business object. The system then validates whether the source system specified in the record is already defined using the specified extendable lookup business object. This parameter is mandatory.

  Note: The **C1-SourceSystemLookup** extendable lookup business object is shipped with the product.
- **Add Bill Group Sort** - Used to indicate whether the bill group sort record should be automatically created if the sort ID is not specified in the record. The valid values are:
  - **Y** - Used when you want to automatically create the bill group sort record if the sort ID is not specified in the record. In such case, the system will first create the bill group sort record where the sort ID is set to the bill group ID and then create the derivation and pricing parameters for the bill group ID and sort ID combination.
  - **N** - Used when you want the system to behave in the traditional manner (i.e., throw an error when the sort ID is not specified in the record).

  This parameter is optional.

Copyright © 2026, Oracle and/or its affiliates.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BLVLVLPRO

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, this algorithm creates one bill group derivation and pricing parameters record for the bill group ID and sort ID combination. The status of the bill group derivation and pricing parameters record is set to **Active**.

Copyright © 2026, Oracle and/or its affiliates.

Note: The system creates the bill group derivation and pricing parameters records using the entity business object specified in the respective upload request type.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Bill Group Derivation and Pricing Parameters Record Creation CSV Format

The following table lists and describes the columns that should be available in the CSV file while adding derivation and pricing parameters records for multiple bill groups at once through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Source System	Used to indicate the source system from where the policy is originated. **Note:** You must specify a source system which is already defined in the extendable lookup that is specified in the **Source System Extendable Lookup** parameter of the **C1-BLVLVALID** algorithm.	Yes
2	Bill Group ID	Used to indicate the bill group (i.e., person) for whom you want to define the derivation and pricing parameters. **Note:** You must specify an effective child person of the parent customer for whom you are creating the mass bill group derivation and pricing parameters record creation upload request. In addition, note that you must specify a child person whose person type is set to **Bill Group** and who is related to the parent customer using the relationship type that is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.	Yes (Conditional) **Note:** This data is required when the bill group (i.e., person) identifier type and bill group (i.e., person) identifier are not specified in the record.
3	Sort ID	Used to specify the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: If the sort ID is not specified in the record and if the **Add Bill Group Sort** parameter of the **C1-BLVLVALID** algorithm is set to **Y**, then the system will first create the bill group sort record where the sort ID is set to the bill group ID and then create the derivation and pricing parameters for the bill group ID and sort ID combination. However, if the sort ID is not specified in the record and if the **Add Bill Group Sort** parameter of the **C1-BLVLVALID** algorithm is set to **N**, then the system will throw an appropriate error message. For more information, see C1-BLVLVALID on page 2161.	
4	Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination. **Note:** You must specify the date in the **YYYY-MM-DD** format. The effective date must be within the date range of the bill group sort record.	Yes
5	Bill Level 1 (i.e., Parameter 1)	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the column value.	Yes
6	Bill Level 2 (i.e., Parameter 2)	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the column value.	No
7	Bill Level 3 (i.e., Parameter 3)	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the column value.	No
8	Bill Level 4 (i.e., Parameter 4)	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the column value.	No
9	Bill Group Identifier Type	Used to specify the person identifier type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify a person identifier type which is already defined in the system. You must specify the primary person identifier details of the respective person.	**Note:** This data is required when the bill group ID is not specified in the record.
10	Bill Group Identifier	Used to specify the person identifier.	Yes (Conditional)
		Note: The system derives the person using the given person identifier type and person identifier combination when the person ID is either not specified or is invalid in the record.	**Note:** This data is required when the bill group ID is not specified in the record.

Note:

The CSV file should contain the columns in the above mentioned sequence.

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Mass Billable Charge Creation (Fully Insured Group and Individual)

Oracle Revenue Management and Billing provides the ability to create multiple billable charges for the health insurance business at once through the **Upload Request** feature. You can create regular pass-through and SQI based billable charges through an upload request. To create a pass-through billable charge, you need to specify at least one pass-through charge line details. Similarly, to create an SQI based billable charge, you need to specify at least one SQI based charge details. The regular billable charges are then considered during regular billing cycle.

You can also create non-recurring (i.e., one-time) and recurring billable charges through an upload request. Note that you can only specify a bill period for a recurring billable charge. Therefore, by default, the recurring flag of the record is set to **BP** when the bill period is specified in the record. You can create these billable charges at the group membership or individual membership level or at the policy plan level. If the group membership details could not be derived from the record, the system enables you to create a billable charge at the policy plan level. The system derives the appropriate contract against which the billable charge should be created at the membership or policy plan level.

Note: At present, you can only create new billable charges and not update existing billable charges through the **Upload Request** feature.

The **C1-BillableChargeUploadFI** business object enables you to create an upload request for mass billable charge creation. You need to create an upload request type for the **C1-BillableChargeUploadFI** business object. You can then upload a mass billable charge creation file in the CSV format using the respective upload request type. The mass

Copyright © 2026, Oracle and/or its affiliates.

billable charge creation file should contain records with the following information – Contract or account details, start date, end date, description on bill, recurring details, pass-through charge line details or SQI based charge details, pricing information, and characteristic details. If the contract ID is not specified, the record should contain the following additional information:

- Subscriber Identifier Type, Subscriber Identifier, Membership Type, External Membership ID
- Source System, Policy Number, and Plan Number (only in case of the fully insured group business)
- Health Plan Code (only in case of the fully insured individual business)

For more information, see Mass Billable Charge Creation CSV Format (Fully Insured Group) and Mass Billable Charge Creation CSV Format (Fully Insured Individual).

Note:

You must specify either pass-through charge lines or SQI details in the record.

You can specify maximum 5 pass-through charge lines or SQIs in the record.

You can specify maximum 15 price item parameters in the record.

You can specify maximum 20 characteristics in the record.

On uploading a mass billable charge creation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Start and end dates are specified in the record.
- Price item is specified in the record.
- Either the contract ID or source system, policy number, and plan number is specified in the record for the fully insured group business.
- Either the contract ID or health plan code is specified in the record for the fully insured individual business.

If the account ID is not specified in the record, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**.

If the **Plan Based Contract Creation Eligibility** option type of the **C1-ASOBLLNG** feature configuration is not set to **Yes** and if the contract ID is not specified in the record, the system derives an active contract of the account for the coverage period using the contract type specified in the price item. However, if the **Plan Based Contract Creation Eligibility** option type of the **C1-ASOBLLNG** feature configuration is set to **Yes** and if the contract ID is not specified in the record, the system derives policy plan or health plan specific contract of the account for the coverage period depending on the information given in the record. Before deriving the contract for the fully insured group business, the system derives the policy plan ID using the source system, policy number, and plan number combination.

The system then derives the active contract for the policy plan using the contract type (associated with the price item), policy plan ID, and coverage period combination. However, in case of the fully insured individual business, the system derives the active contract for the health plan using the contract type (associated with the price item), health plan code, and coverage period combination. If the system could not derive the policy plan ID or contract ID, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

The system then checks whether the characteristic type specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration is available in the record. If so, the system derives the membership ID from the specified characteristic in the record. However, if the required characteristic is not available in the record, this algorithm tries to derive the group or individual membership using either of the following combinations:

- Subscriber Identifier Type and Subscriber Identifier
- External Membership ID
- Membership Type, External Membership ID, Subscriber Identifier Type and Subscriber Identifier

Note: The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

Copyright © 2026, Oracle and/or its affiliates.

On clicking the **Validate** button, the system checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, the system validates the following in the real time:

- The account ID given in the record is valid.
- The contract ID given in the record is valid.
- The source system, policy number, and plan number given in the record are valid.
- The health plan code given in the record is valid.
- The membership ID or policy plan ID given in the record is valid.
- The policy plan number is unique for the given source system and policy number combination within the given date range.
- The external membership ID for the membership is unique across the system.
- The contract type specified in the price item belongs to the division of the account.
- The billable charge's start date is equal to or later than the contract start date and earlier than or equal to the contract end date.
- The billable charge's start date is equal to or earlier than the billable charge's end date.
- The billable charge's end date is equal to or later than the billable charge's start date.
- At least one pass-through charge line or SQ based charge details is specified in the record.
- The **Description on Bill**, **Amount**, and **Currency** are specified when the record contains pass-through charge line details.
- The **SQI** and **SQI Value** are specified when the record contains SQ based charge details.
- The distribution code is required when the **Memo Only** flag of the respective pass-through charge line is set to **N**.
- The distribution code is not specified when the **Memo Only** flag of the respective pass-through charge line is set to **Y**.
- The distribution code given in the record is valid.
- The currency code given in the record is valid.
- The amount matches the decimal positions of the respective currency.
- The SQI given in the record is valid.
- The same SQI is not repeated multiple times in the record.
- The contract ID given in the record is valid and is not in the **Canceled** status.
- If both the account ID and contract ID are given in the record, the contract belongs to the account.
- The charge type given in the record is valid.
- The price item given in the record is valid.
- The **Price Item Usage** flag of the price item is set to **Pricing and Billing**.
- The contract type considered for billing should match the contract type specified in the price item.
- If the **Use Calendar Billing** field in the contract type is not set to **Allow Advanced Billing**, then bill after date is not earlier than the contract start date.
- The bill period given in the record is valid.
- If the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **TRUE**, then only the price item is given in the record.
- The price item parameters are not specified when the price item is not given in the record.
- The same price item parameter is not repeated multiple times in the record.
- The characteristic type given in the record is valid and its characteristic entity is set to **Billable Charge**.
- The adhoc characteristic values are validated as per the validations defined in the respective algorithm.
- The predefined characteristic value is already defined for the characteristic type.
- The foreign key reference characteristic value is valid.
- The mandatory parameter of the price item is included in the record when the billable charge start and end dates fall within the price item parameter date range.

  Note: If the billable charge start and end dates do not fall within the price item parameter date range, the billable charge can be created without the mandatory price item parameter.
- The adhoc, predefined, and reference price item parameter values are valid.
- The source entity of the price item parameter is set to **Transaction**.

Copyright © 2026, Oracle and/or its affiliates.

- Both the price item parameter and its value are given in the record.
- The price item parameter should be valid for the price item in the given date range.

Note:

If the account ID is invalid, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the system changes the status of the upload request to **Deferred Validation**. The system then validates the records and changes the status of the upload request from **Deferred Validation** to **Validated** when the **C1-UPLRQ** batch is executed.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record, the system checks whether the membership ID is available in the record. If so, the system creates a billable charge against the contract at the respective group or individual membership level. It then stamps the membership ID as a characteristic on the billable charge. While stamping the characteristic, the system considers the characteristic type specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration.

However, if the membership ID is not available in the record, the system checks whether the characteristic type specified in the **Plan Id Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is available in the record. If so, the system creates a billable charge against the contract at the respective policy plan level. It then stamps the policy plan ID as a characteristic on the billable charge. While stamping the characteristic, it considers the characteristic type specified in the **Plan Id Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration.

If the characteristic type specified in the **Plan Id Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is not available in the record but if the contract ID is available in the record, the system creates a billable charge against the contract.

Finally, the status of the billable charge is set to **Billable**. Once the billable charge is successfully created, the status of the record is changed to **Processed**. However, if any error occurs while creating the billable charge, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The system creates the billable charge using the entity business object specified in the respective upload request type.

The adhoc billable charge creation is not supported through the **C1-BillableChargeUploadFI** business object.

You can only create billable charges and not cancel any billable charges through the **Upload Request** feature.

This feature is only tested and certified for the fully insured group and individual lines of health insurance business.

You can view the billable charges created at the membership level in the **Billable Charges** zone of the **Charges** tab on the **Membership** screen. Note that the billable charges created via an upload request will not have any billable charge timelines and pricing calculation details.

You can view the billable charges created at the policy plan level in the **Billable Charges** zone of the **Charges** tab on the **Policy Plan** screen.

Prerequisites

To setup the mass billable charge creation feature for the health insurance business, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-BillableChargeUploadFI**.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive a To Do while submitting a billable charge creation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the required foreign key reference for billable charge (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillableChargeUploadFI** business object in the **Status Reason** screen.
- Define the required account identifier types, membership identifier types, charge types, bill periods, currencies, distribution codes, price items, and SQIs in the system.
- Define the required pricing parameters where the source entity is set to **Transaction**.
- Associate the required pricing parameters with the price items in the system.
- Define the pricing for the required price item and price item parameters combinations in the system.
- Define the required exchange rates in the system.
- Set the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **TRUE**.
- Set the **Plan Based Contract Creation Eligibility**, **Membership ID Characteristic for Billable Charge**, and **Plan Id Characteristic Type** option types of the **C1-ASOBLLNG** feature configuration.
- Define the required source systems in the **Source System (C1-SourceSystemLookup)** extendable lookup (only in case of the fully insured group line of business).
- Define the required membership types in the **MEMBERSHIP_TYPE_FLG** lookup field.
- Define the required health plans in the system (only in case of the fully insured individual line of business).
- Define the required characteristic types where the characteristic entity is set to **Billable Charge**.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

Status	System Event	Algorithm	Algorithm Type	Description
Processed	-	-	-	-

C1-CRTUPLDTL

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

C1-BC-FIDER

This algorithm validates the following:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Start and end dates are specified in the record.
- Price item is specified in the record.
- Either the contract ID or source system, policy number, and plan number is specified in the record for the fully insured group business.
- Either the contract ID or health plan code is specified in the record for the fully insured individual business.

If the account ID is not specified in the record, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

If the **Plan Based Contract Creation Eligibility** option type of the **C1-ASOBLLNG** feature configuration is not set to **Yes** and if the contract ID is not specified in the record, the system derives an active contract of the account for the coverage period using the contract type specified in the price item. However, if the **Plan Based Contract Creation Eligibility** option type of the **C1-ASOBLLNG** feature configuration is set to **Yes** and if the contract ID is not specified in the record, the system derives policy plan or health plan specific contract of the account for the coverage period depending on the information given in the record. Before deriving the contract for the fully insured group business, the system derives the policy plan ID using the source system, policy number, and plan number combination. Once the policy plan is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table.

This algorithm then derives the active contract for the policy plan using the contract type (associated with the price item), policy plan ID, and coverage period combination. However, in case of the fully insured individual business, the system derives the active contract for the health plan using the contract type (associated with the price item), health plan code, and coverage period combination. Once the contract ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the policy plan ID or contract ID, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also checks whether the characteristic type specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration is available in the record. If so, the system derives the membership ID from the specified characteristic in the record. However, if the required characteristic is not available in the record, this algorithm tries to derive the group or individual membership using either of the following combinations:

- Subscriber Identifier Type and Subscriber Identifier
- External Membership ID
- Membership Type, External Membership ID, Subscriber Identifier Type and Subscriber Identifier

Once the membership ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table.

This algorithm sets the recurring flag to **BP** and the adhoc bill flag to **N** for each record in the upload request. It also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

Copyright © 2026, Oracle and/or its affiliates.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validate** button. It checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, it changes the status of the upload request to **Validated**. However, if the total number of records in the upload request exceeds the online record validate limit, it changes the status of the upload request to **Deferred Validation**.

It contains the following parameter:

- **Online Record Validate Limit** - Used to indicate the maximum number of records you can validate in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-BCFI-VAL

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The account ID given in the record is valid.

  Note: If the account ID is invalid, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.
- The contract ID given in the record is valid.
- The source system, policy number, and plan number given in the record are valid.
- The health plan code given in the record is valid.
- The membership ID or policy plan ID given in the record is valid.
- The policy plan number is unique for the given source system and policy number combination within the given date range.
- The external membership ID for the membership is unique across the system.
- The contract type specified in the price item belongs to the division of the account.
- The billable charge's start date is equal to or later than the contract start date and earlier than or equal to the contract end date.
- The billable charge's start date is equal to or earlier than the billable charge's end date.
- The billable charge's end date is equal to or later than the billable charge's start date.
- At least one pass-through charge line or SQ based charge details is specified in the record.
- The **Description on Bill**, **Amount**, and **Currency** are specified when the record contains pass-through charge line details.
- The **SQI** and **SQI Value** are specified when the record contains SQ based charge details.
- The distribution code is required when the **Memo Only** flag of the respective pass-through charge line is set to **N**.
- The distribution code is not specified when the **Memo Only** flag of the respective pass-through charge line is set to **Y**.
- The distribution code given in the record is valid.
- The currency code given in the record is valid.

Copyright © 2026, Oracle and/or its affiliates.

- The amount matches the decimal positions of the respective currency.
- The SQI given in the record is valid.
- The same SQI is not repeated multiple times in the record.
- The contract ID given in the record is valid and is not in the **Canceled** status.
- If both the account ID and contract ID are given in the record, the contract belongs to the account.
- The charge type given in the record is valid.
- The price item given in the record is valid.
- The **Price Item Usage** flag of the price item is set to **Pricing and Billing**.
- The contract type considered for billing should match the contract type specified in the price item.
- If the **Use Calendar Billing** field in the contract type is not set to **Allow Advanced Billing**, then bill after date is not earlier than the contract start date.
- The bill period given in the record is valid.
- If the **Multi Price Parameter** option type of the **C1_PPARM_FLG** feature configuration is set to **TRUE**, then only the price item is given in the record.
- The price item parameters are not specified when the price item is not given in the record.
- The same price item parameter is not repeated multiple times in the record.
- The characteristic type given in the record is valid and its characteristic entity is set to **Billable Charge**.
- The adhoc characteristic values are validated as per the validations defined in the respective algorithm.
- The predefined characteristic value is already defined for the characteristic type.
- The foreign key reference characteristic value is valid.
- The mandatory parameter of the price item is included in the record when the billable charge start and end dates fall within the price item parameter date range.

  Note: If the billable charge start and end dates do not fall within the price item parameter date range, the billable charge can be created without the mandatory price item parameter.
- The adhoc, predefined, and reference price item parameter values are valid.
- The source entity of the price item parameter is set to **Transaction**.
- Both the price item parameter and its value are given in the record.
- The price item parameter should be valid for the price item in the given date range.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

Copyright © 2026, Oracle and/or its affiliates.

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BC-PROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status.

This algorithm behaves differently when invoked from two different business objects - **C1-BillableChargeUploadRequest** and **C1-BillableChargeUploadFI**. It does the following when invoked from the respective business object:

- **C1-BillableChargeUploadRequest** - For each valid record, this algorithm creates a billable charge against the contract.
- **C1-BillableChargeUploadFI** - For each valid record, this algorithm checks whether the membership ID is available in the record. If so, it creates a billable charge against the contract at the respective group or individual membership level. It then stamps the membership ID as a characteristic on the billable charge. While stamping the characteristic, it considers the characteristic type specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration.

  However, if the membership ID is not available in the record, this algorithm checks whether the characteristic type specified in the **Plan Id Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is available in the record. If so, it creates a billable charge against the contract at the respective policy plan level. It then stamps the policy plan ID as a characteristic on the billable charge. While stamping the characteristic, it considers the characteristic type specified in the **Plan Id Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration.

  If the characteristic type specified in the **Plan Id Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is not available in the record but if the contract ID is available in the record, the system creates a billable charge against the contract.

Copyright © 2026, Oracle and/or its affiliates.

Note: The system creates the billable charge using the entity business object specified in the respective upload request type.

Finally, the status of the billable charge is set to **Billable**. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Billable Charge Creation CSV Format (Fully Insured Group)

The following table lists and describes the columns that should be available in the CSV file while creating multiple billable charges for the fully insured group business at once through an upload request:

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Account Identifier Type	Used to specify the account identifier type. **Note:** You must specify an account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified in the record.
2	Account Identifier	Used to specify the account identifier. **Note:** The system derives the account using the given account identifier type and account identifier combination when the account ID is either not specified or is invalid in the record.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified in the record.
3	Account ID	Used to indicate the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the following conditions are met: • Account identifier type and account identifier are not specified in the record. • Contract ID is not specified in the record.
4	Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify a source system which is already defined in the **Source System (C1-SourceSystemLookup)** extendable lookup. The system derives the policy plan ID using the source system, policy number, and plan number combination when the contract ID is not specified in the record. The policy plan ID is then used to derive the policy plan specific contract of the account.	**Note:** This data is required when the contract ID is not specified in the record.
5	Policy Number	Used to specify the policy number.	Yes (Conditional)
		Note: The system derives the policy plan ID using the source system, policy number, and plan number combination when the contract ID is not specified in the record. The policy plan ID is then used to derive the policy plan specific contract of the account.	**Note:** This data is required when the contract ID is not specified in the record.
6	Plan Number	Used to specify the policy plan number.	Yes (Conditional)
		Note: The system derives the policy plan ID using the source system, policy number, and plan number combination when the contract ID is not specified in the record. The policy plan ID is then used to derive the policy plan specific contract of the account.	**Note:** This data is required when the contract ID is not specified in the record.
7	Contract ID	Used to indicate the contract against which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when you want to create the billable charge against a specific contract of the account.
8	Start Date	Used to specify the start date of billable charge. **Note:** You must specify the date in the **YYYY-MM-DD** format. The start date cannot be later than the end date.	Yes
9	End Date	Used to specify the end date of billable charge. **Note:** You must specify the date in the **YYYY-MM-DD** format. The end date cannot be earlier than the start date.	Yes
10	Charge Type	Used to indicate the type of billable charge.	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify a charge type which is already defined in the system.	
11	Description On Bill	Used to specify the summarized information about the charge that you want to print on the bill.	Yes
12	Bill Period	Used to indicate the bill period using which the system determines the intervals at which the recurring bill segments should be created for the billable charge. **Note:** You must specify a bill period which is already defined in the system. If the bill period is specified in the record, the system, by default, sets the recurring flag to **BP**.	No
13	Bill After	Used to specify the date after which the charge can be billed to the account. **Note:** You must specify the date in the **YYYY-MM-DD** format.	No
14	Description on Bill1, Description on Bill2, ..., Description on Bill5	Used to specify the description for the pass-through charge line. **Note:** You can specify maximum 5 pass-through charge lines in the record.	Yes (Conditional) **Note:** This data is required while creating a pass-through billable charge.
15	Amount1, Amount2, ..., Amount5	Used to specify the charge amount. **Note:** You must specify a number with decimal positions less than or equal to the decimal positions defined for the respective currency.	Yes (Conditional) **Note:** This data is required while creating a pass-through billable charge.
16	Currency1, Currency2, ..., Currency5	Used to specify the currency in which the amount is charged. **Note:** You must specify a currency which is already defined in the system. If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional) **Note:** This data is required while creating a pass-through billable charge.
17	Show On Bill1, Show on Bill2, ..., Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill. The valid values are: • Y • N	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: If you do not specify this column value, by default, it is set to **Y**.	
18	Memo Only1, Memo Only2, ..., Memo Only5	Used to indicate whether the charge should not be included in the bill amount. The valid values are: • Y • N **Note:** If you do not specify this column value, by default, it is set to **N**.	No
19	Appears in Summary1, Appears in Summary2, ..., Appears in Summary5	Used to indicate whether the charge should be included in the summary line. The valid values are: • Y • N **Note:** If you do not specify this column value, by default, it is set to **N**.	No
20	Distribution Code1, Distribution Code2, ..., Distribution Code5	Used to specify the distribution code that indicates the GL account where the pass-through charge should be posted. **Note:** You must specify a distribution code which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the memo only flag of the pass-through charge line is set to **N**.
49	Price Item	Used to indicate the price item for which you want to create the billable charge. **Note:** You must specify a price item which is already defined in the system.	Yes
50	Variance Parameter	Variance parameter (i.e., TOU) based pricing is deprecated and no longer supported in ORMB. Therefore, you should keep this column blank in the CSV file.	Not applicable
51	Price Item Parm Type1, Price Item Parm Type2, ...,	Used to indicate the price item parameter that you want to use along with the price item for determining the price item pricing.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
	Price Item Parm Type15	**Note:** This column value should not contain the **Equal To** (=) or **Tilde** (~) symbol. You must specify the mandatory parameters of the price item when the billable charge start and end dates fall within the respective price item parameter date range. You must specify a parameter which is associated with the price item in the given date range. You can specify maximum 15 price item parameters in the record.	**Note:** This data is required when the price item parameter value is specified in the record.
52	Price Item Parm Value1, Price Item Parm Value2, ..., Price Item Parm Value15	Used to specify the parameter value. **Note:** This column value should not contain the **Equal To** (=) or **Tilde** (~) symbol.	Yes (Conditional) **Note:** This data is required when the price item parameter is specified in the record.
81	SQI1, SQI2, ..., SQI5	Used to indicate the service quantity identifier (SQI) using which you want to calculate the price item charge. **Note:** You must specify an SQI which is already defined in the system. You can specify maximum 5 SQIs in the record.	Yes (Conditional) **Note:** This data is required while creating an SQI based billable charge.
82	SQI Value1, SQI Value2, ..., SQI Value5	Used to specify the service quantity for which you want to create the charge. **Note:** You can specify a number with a maximum precision 36 and maximum scale 18 (i.e., Number(36, 18)).	Yes (Conditional) **Note:** This data is required while creating an SQI based billable charge.
91	Subscriber Identifier Type	Used to specify the membership identifier type. **Note:** You must specify a membership identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the characteristic type specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration is not available in the record.
92	Subscriber Identifier	Used to specify the membership identifier.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: Here, you must specify the main subscriber's identifier. The system then derives the group membership for which the billable charge should be created using either of the following combinations: • Subscriber Identifier Type and Subscriber Identifier • Membership Type, External Membership ID, Subscriber Identifier Type and Subscriber Identifier	**Note:** This data is required when the characteristic type specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration is not available in the record.
93	Membership Type	Used to indicate the type of membership. The valid values are: • **COBR** - Used when the group membership is a COBRA membership. • **MDCR** - Used when the group membership is a Medicare membership. • **RETR** - Used when the group membership is a retiree membership. **Note:** You must specify a membership type which is already defined in the **MEMBERSHIP_TYPE_FLG** lookup field. The membership type is used along with other membership details, such as External Membership ID, Subscriber Identifier Type and Subscriber Identifier to derive the group membership for which the billable charge should be created in the system.	No
94	External Membership ID	Used to specify the external membership ID. **Note:** Here, you need to specify the membership ID which is maintained in the external source system. If the subscriber identifier type, subscriber identifier, and membership type are not specified in the record but only the external membership ID is specified in the record, then you must ensure that the external membership ID is unique for the membership across the system.	No
95	Effective Date1, Effective Date2, ..., Effective Date20	Used to specify the date from when the characteristic is effective for the billable charge. **Note:** You must specify the date in the **YYYY-MM-DD** format.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
96	Char Type1, Char Type2, ..., Char Type20	Used to specify the characteristic type. **Note:** You must specify a characteristic type where the characteristic entity is set to **Billable Charge**.	No
97	Char Val1, Char Val2, ..., Char Val20	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.

Note:

The CSV file should contain the columns in the above mentioned sequence. You can add five pass-through charge lines — each set containing Description on Bill, Amount, Currency, Show on Bill, Memo Only, Appears in Summary, and Distribution Code followed by the subsequent set (i.e., Description on Bill1, Amount1, Currency1, Show on Bill1, Memo Only1, Appears in Summary1, Distribution Code1, Description on Bill2, Amount2, Currency2, Show on Bill2, Memo Only2, Appears in Summary2, Distribution Code2, and so on). Similarly, you can add the following:

- 15 sets of pricing parameters — each set containing Price Item Parameter and Price Item Parameter Value followed by the subsequent set (i.e., Price Item Parameter1, Price Item Parameter Value1, Price Item Parameter2, Price Item Parameter Value2, and so on).
- 5 sets of SQ details — each set containing SQI and SQI Value followed by the subsequent set (i.e., SQI1, SQI Value1, SQI2, SQI Value2, and so on).
- 20 sets of characteristics — each set containing Effective Date, Char Type and Char Value followed by the subsequent set (i.e., Effective Date1, Char Type1, Char Val1, Effective Date2, Char Type2, Char Val2, and so on).

You must specify either pass-through charge lines or SQI details in the record.

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
1	Account Identifier Type	Used to specify the account identifier type. **Note:** You must specify an account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified in the record.
2	Account Identifier	Used to specify the account identifier. **Note:** The system derives the account using the given account identifier type and account identifier combination when the account ID is either not specified or is invalid in the record.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified in the record.
3	Account ID	Used to indicate the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the following conditions are met: • Account identifier type and account identifier are not specified in the record. • Contract ID is not specified in the record.
4	Health Plan Code	Used to specify the health plan code. **Note:** You must specify a health plan code which is already defined in the system. If the contract ID is not specified in the record, the system derives the health plan specific contract of the account.	Yes (Conditional) **Note:** This data is required when the contract ID is not specified in the record.
5	Contract ID	Used to indicate the contract against which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when you want to create the billable charge against a specific contract of the account.
6	Start Date	Used to specify the start date of billable charge.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify the date in the **YYYY-MM-DD** format. The start date cannot be later than the end date.	
7	End Date	Used to specify the end date of billable charge. **Note:** You must specify the date in the **YYYY-MM-DD** format. The end date cannot be earlier than the start date.	Yes
8	Charge Type	Used to indicate the type of billable charge. **Note:** You must specify a charge type which is already defined in the system.	No
9	Description On Bill	Used to specify the summarized information about the charge that you want to print on the bill.	Yes
10	Bill Period	Used to indicate the bill period using which the system determines the intervals at which the recurring bill segments should be created for the billable charge. **Note:** You must specify a bill period which is already defined in the system. If the bill period is specified in the record, the system, by default, sets the recurring flag to **BP**.	No
11	Bill After	Used to specify the date after which the charge can be billed to the account. **Note:** You must specify the date in the **YYYY-MM-DD** format.	No
12	Description on Bill1, Description on Bill2, ..., Description on Bill5	Used to specify the description for the pass-through charge line. **Note:** You can specify maximum 5 pass-through charge lines in the record.	Yes (Conditional) **Note:** This data is required while creating a pass-through billable charge.
13	Amount1, Amount2, ..., Amount5	Used to specify the charge amount.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify a number with decimal positions less than or equal to the decimal positions defined for the respective currency.	**Note:** This data is required while creating a pass-through billable charge.
14	Currency1, Currency2, ..., Currency5	Used to specify the currency in which the amount is charged. **Note:** You must specify a currency which is already defined in the system. If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional) **Note:** This data is required while creating a pass-through billable charge.
15	Show On Bill1, Show on Bill2, ..., Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill. The valid values are: • Y • N **Note:** If you do not specify this column value, by default, it is set to **Y**.	No
16	Memo Only1, Memo Only2, ..., Memo Only5	Used to indicate whether the charge should not be included in the bill amount. The valid values are: • Y • N **Note:** If you do not specify this column value, by default, it is set to **N**.	No
17	Appears in Summary1, Appears in Summary2, ..., Appears in Summary5	Used to indicate whether the charge should be included in the summary line. The valid values are: • Y • N **Note:** If you do not specify this column value, by default, it is set to **N**.	No
18	Distribution Code1, Distribution Code2, ..., Distribution Code5	Used to specify the distribution code that indicates the GL account where the pass-through charge should be posted. **Note:** You must specify a distribution code which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the memo only flag of the pass-through charge line is set to **N**.
47	Price Item	Used to indicate the price item for which you want to create the billable charge.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify a price item which is already defined in the system.	
48	Variance Parameter	Variance parameter (i.e., TOU) based pricing is deprecated and no longer supported in ORMB. Therefore, you should keep this column blank in the CSV file.	Not applicable
49	Price Item Parm Type1, Price Item Parm Type2, ..., Price Item Parm Type15	Used to indicate the price item parameter that you want to use along with the price item for determining the price item pricing. **Note:** This column value should not contain the **Equal To** (=) or **Tilde** (~) symbol. You must specify the mandatory parameters of the price item when the billable charge start and end dates fall within the respective price item parameter date range. You must specify a parameter which is associated with the price item in the given date range. You can specify maximum 15 price item parameters in the record.	Yes (Conditional) **Note:** This data is required when the price item parameter value is specified in the record.
50	Price Item Parm Value1, Price Item Parm Value2, ..., Price Item Parm Value15	Used to specify the parameter value. **Note:** This column value should not contain the **Equal To** (=) or **Tilde** (~) symbol.	Yes (Conditional) **Note:** This data is required when the price item parameter is specified in the record.
79	SQI1, SQI2, ..., SQI5	Used to indicate the service quantity identifier (SQI) using which you want to calculate the price item charge. **Note:** You must specify an SQI which is already defined in the system. You can specify maximum 5 SQIs in the record.	Yes (Conditional) **Note:** This data is required while creating an SQI based billable charge.
80	SQI Value1, SQI Value2, ..., SQI Value5	Used to specify the service quantity for which you want to create the charge. **Note:** You can specify a number with a maximum precision 36 and maximum scale 18 (i.e., Number(36, 18)).	Yes (Conditional) **Note:** This data is required while creating an SQI based billable charge.
89	Subscriber Identifier Type	Used to specify the membership identifier type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: You must specify a membership identifier type which is already defined in the system.	**Note:** This data is required when the characteristic type specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration is not available in the record.
90	Subscriber Identifier	Used to specify the membership identifier.	Yes (Conditional)
		Note: Here, you must specify the main subscriber's identifier. The system then derives the individual membership for which the billable charge should be created using either of the following combinations: • Subscriber Identifier Type and Subscriber Identifier • Membership Type, External Membership ID, Subscriber Identifier Type and Subscriber Identifier	**Note:** This data is required when the characteristic type specified in the **Membership ID Characteristic for Billable Charge** option type of the **C1-ASOBLLNG** feature configuration is not available in the record.
91	Membership Type	Used to indicate the type of membership. The valid values are: • **COBR** - Used when the individual membership is a COBRA membership. • **MDCR** - Used when the individual membership is a Medicare membership. • **RETR** - Used when the individual membership is a retiree membership.	No
		Note: You must specify a membership type which is already defined in the **MEMBERSHIP_TYPE_FLG** lookup field. The membership type is used along with other membership details, such as External Membership ID, Subscriber Identifier Type and Subscriber Identifier to derive the individual membership for which the billable charge should be created in the system.	
92	External Membership ID	Used to specify the external membership ID.	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Description	Mandatory (Yes or No)
		Note: Here, you need to specify the membership ID which is maintained in the external source system. If the subscriber identifier type, subscriber identifier, and membership type are not specified in the record but only the external membership ID is specified in the record, then you must ensure that the external membership ID is unique for the membership across the system.	
93	Effective Date1, Effective Date2, ..., Effective Date20	Used to specify the date from when the characteristic is effective for the billable charge. **Note:** You must specify the date in the **YYYY-MM-DD** format.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.
94	Char Type1, Char Type2, ..., Char Type20	Used to specify the characteristic type. **Note:** You must specify a characteristic type where the characteristic entity is set to **Billable Charge**.	No
95	Char Val1, Char Val2, ..., Char Val20	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.

Note:

The CSV file should contain the columns in the above mentioned sequence. You can add five pass-through charge lines — each set containing Description on Bill, Amount, Currency, Show on Bill, Memo Only, Appears in Summary, and Distribution Code followed by the subsequent set (i.e., Description on Bill1, Amount1, Currency1, Show on Bill1, Memo Only1, Appears in Summary1, Distribution Code1, Description on Bill2, Amount2, Currency2, Show on Bill2, Memo Only2, Appears in Summary2, Distribution Code2, and so on). Similarly, you can add the following:

- 15 sets of pricing parameters — each set containing Price Item Parameter and Price Item Parameter Value followed by the subsequent set (i.e., Price Item Parameter1, Price Item Parameter Value1, Price Item Parameter2, Price Item Parameter Value2, and so on).
- 5 sets of SQ details — each set containing SQI and SQI Value followed by the subsequent set (i.e., SQI1, SQI Value1, SQI2, SQI Value2, and so on).
- 20 sets of characteristics — each set containing Effective Date, Char Type and Char Value followed by the subsequent set (i.e., Effective Date1, Char Type1, Char Val1, Effective Date2, Char Type2, Char Val2, and so on).

You must specify either pass-through charge lines or SQI details in the record.

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

- The derived payment event ID is valid.
- The derived payment event does not have multiple payment tenders associated with it.
- The payment cancel reason given in the record is valid.
- The payment tender is not in the **Canceled** status.
- Any payment of the payment event is not in the **Incomplete**, **Freezable**, **Error**, or **Canceled** status.
- Any payment of the payment event is either not partially or fully refunded to the customer.
- The bank code given in the record is valid.
- The bank account is defined for the respective bank code in the system.
- The bank code is available when the bank account is specified in the record and vice versa.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the system changes the status of the upload request to **Deferred Validation**. The system then validates the records and changes the status of the upload request from **Deferred Validation** to **Validated** when the **C1-UPLRQ** batch is executed.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system fetches a list of records which are in the **Valid** status. For each valid record, the system cancels the payment tender and all the payments of the associated payment event. It changes the status of the payment tender and its associated payments to **Canceled**. While canceling a payment tender, it requires the cancel reason that indicates the reason why the payment tender and its associated payments are canceled. In addition, the system stamps the characteristics given in the record on the respective payment tender after canceling it.

Once the payment tender and its associated payments are successfully canceled, the status of the record is changed to **Processed**. However, if any error occurs while canceling the payment tender and its associated payments, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note: This feature is tested and certified for both the financial services and health insurance domains.

Prerequisites

To setup the mass payment tender cancellation feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-TndrCnclUploadRequest**.
- Assign the **C1-TNDCL** To Do type to a To Do role whose users must receive a To Do while submitting a payment tender cancellation upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.

Copyright © 2026, Oracle and/or its affiliates.

- Define the required foreign key reference for payment event (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-TndrCnclUploadRequest** business object in the **Status Reason** screen.
- Define the required tender types, payment cancel reasons, bank codes, and bank accounts in the system.
- Define the required characteristic types where the characteristic entity is set to **Payment Tender**.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-TndrCnclUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-TndrCnclUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-TND-DERIV	C1-TND-DERIV	Refer to C1-TND-DERIV.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer to C1-DEFERVALD.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 289.
Validated	Enter	C1-TND-VALID	C1-TND-VALID	Refer to C1-TND-VALID.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer to C1-UPLSUBENT.

C1-TND-DERIV

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

It validates the following:

- Either the external reference ID or check number is specified in the record.
- Cancel reason is specified in the record.

It then derives the payment tender using the external reference ID or check number and the payment event associated with the respective payment tender. It also considers additional filters, such as external source ID, tender type, and/or tender amount, if any, given in the record while deriving the payment tender. Note that if both the external reference ID and check number are given in the record, the system considers only external reference ID and not check number while deriving the payment tender.

Once the payment tender and payment event are derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the payment tender and payment event, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validate** button. It checks whether the upload request must be validated in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the total number of records in the upload request does not exceed the online record validate limit, it changes the status of the upload request to **Validated**. However, if the total number of records in the upload request exceeds the online record validate limit, it changes the status of the upload request to **Deferred Validation**.

It contains the following parameter:

- **Online Record Validate Limit** - Used to indicate the maximum number of records you can validate in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-TND-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- The derived payment event ID is valid.
- The derived payment event does not have multiple payment tenders associated with it.
- The payment cancel reason given in the record is valid.
- The payment tender is not in the **Canceled** status.
- Any payment of the payment event is not in the **Incomplete**, **Freezable**, **Error**, or **Canceled** status.

Copyright © 2026, Oracle and/or its affiliates.

- Any payment of the payment event is either not partially or fully refunded to the customer.
- The bank code given in the record is valid.
- The bank account is defined for the respective bank code in the system.
- The bank code is available when the bank account is specified in the record and vice versa.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Copyright © 2026, Oracle and/or its affiliates.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-TND-PROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. For each valid record, this algorithm cancels the payment tender and all the payments of the associated payment event. It changes the status of the payment tender and its associated payments to **Canceled**. While canceling a payment tender, it requires the cancel reason that indicates the reason why the payment tender and its associated payments are canceled. In addition, this algorithm stamps the characteristics given in the record on the respective payment tender after canceling it.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Payment Tender Cancellation CSV Format

The following table lists and describes the columns that should be available in the CSV file while canceling multiple payment tenders at once through an upload request:

Sr. No.	Column Name	Column Description	Mandatory (Yes or No)
1	External Source ID	Used to indicate the external system from where the payment tenders are received.	No
2	External Reference ID	Used to specify the payment external reference ID. It is used to track payment transaction across multiple systems.	Yes (Conditional) **Note:** This data is required when the check number is not specified in the record.
3	Check Number	Used to specify the check number if the payment is received through a check.	Yes (Conditional) **Note:** This data is required when the external reference ID is not specified in the record.
4	Tender Type	Used to indicate the type of tender through which the payment is received. **Note:** You must specify a tender type which is already defined in the system.	No
5	Tender Amount	Used to specify the tender amount. **Note:** You must specify a number which is greater than 0. You must specify a number with decimal positions less than or equal to the decimal positions defined for the respective currency.	No

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Column Description	Mandatory (Yes or No)
6	Cancel Reason	Used to indicate the reason why you want to cancel the payment tender and its associated payments. **Note:** You must specify a payment cancel reason which is already defined in the system.	Yes
7	Bank Code	Used to indicate the bank code where the payment tender source's money will be deposited. It indicates the distribution code used to build the GL details for the payment. **Note:** You must specify a bank code which is already defined in the system. If you specify the bank code, the system will override the bank code of the tender control.	Yes (Conditional) **Note:** This data is required when the bank account is specified in the record.
8	Bank Account	Used to specify the bank account through which payment tender is received. **Note:** You must specify a bank account which is already defined for the given bank code. If you specify the bank account, the system will override the existing bank account of the tender control.	Yes (Conditional) **Note:** This data is required when the bank code is specified in the record.
9	Char Type1, Char Type2, ..., Char Type5	Used to specify the characteristic type. **Note:** You must specify a characteristic type where the characteristic entity is set to **Payment Tender**. You can specify maximum 5 characteristics in the record.	No
10	Char Val1, Char Val2, .., Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified in the record.

Copyright © 2026, Oracle and/or its affiliates.

Note:

The CSV file should contain the columns in the above mentioned sequence. You can add five sets of characteristics — each set containing Char Type and Char Val followed by the subsequent set (i.e., Char Type 1, Char Val1, Char Type 2, Char Val2, Char Type 3, Char Val3, Char Type 4, Char Val4, Char Type 5, Char Val5).

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Mass Bill Cycle Rule Characteristic Creation or Modification

Oracle Revenue Management and Billing enables you to create or update bill cycle rule characteristic of multiple accounts at once through the **Upload Request** feature. The **C1-BillCycleRuleCharUpdUplReq** business object enables you to create an upload request for mass bill cycle rule characteristic creation or modification.

You need to create an upload request type for the **C1-BillCycleRuleCharUpdUplReq** business object. You can then upload a mass bill cycle rule characteristic creation or modification file in the CSV format using the respective upload request type. The mass bill cycle rule characteristic creation or modification file should contain records with the following information – account identifier details or account ID and characteristic value with its effective date. For more information, see Mass Bill Cycle Rule Characteristic Creation or Modification CSV Format.

On uploading a mass bill cycle rule characteristic creation or modification file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. The system validates the following for each record:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Effective date and bill cycle rule code is specified in the record.

If the account ID is not specified in the record, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record is changed to **Invalid**.

Note: The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit.

On clicking the **Validate** button, the system validates the following:

- Whether the account ID given in the record is valid.
- Whether the bill cycle rule code is a valid billing preference.
- Whether the two or more records with the same account ID and effective date combination does not exist in the upload request.

Copyright © 2026, Oracle and/or its affiliates.

Note:

If the account ID is invalid, the system derives the account ID using the respective account identifier type and account identifier combination. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record is changed to **Invalid**.

If duplicate records exist in the upload request, the system validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

If any of above validations fail, the status of the record is changed to **Invalid**. However, if all the above validations are successful, the status of the record is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

On clicking the **Submit** button, the system checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

The approver can either approve or reject the upload request based on the observations. On approving an upload request, the status of the upload request is changed to **Approved**. However, on rejecting an upload request, the status of the upload request is changed to **Rejected**.

Once the status of the upload request is changed to **Submitted** or **Approved**, the system checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. The system then changes the status of the upload request from **Deferred Processing** to **Processing** when the **C1-UPLRQ** batch is executed.

Once the status of the upload request is changed to **Processing**, the system derives the characteristic type specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration. For each valid record, the system checks whether a billing preference characteristic with the derived characteristic type and effective date combination is already defined for the account. If so, the system updates the existing billing preference characteristic value of the account. However, if a billing preference characteristic with the derived characteristic type and effective date combination does not exist for the account, the system creates the billing preference characteristic for the account.

Note:

The system creates or updates the billing preference characteristic of the account using the entity business object specified in the respective upload request type.

The system derives the bill cycle from the **Bill Cycle** attribute of the billing preference when the respective characteristic is effective for the account. The derived bill cycle is then stamped against the account.

Once the billing preference characteristic is successfully created or updated for the account, the status of the data record is changed to **Processed**. However, if any error occurs while creating or updating the billing preference characteristic for the account, the status of the data record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note: This feature is only tested and certified for the fully insured group and individual lines of health insurance business.

Prerequisites

To setup the mass bill cycle rule characteristic creation or modification feature, you need to do the following:

- Define the required upload request type where the upload request business object is set to **C1-BillCycleRuleCharUpdUplReq**.

Copyright © 2026, Oracle and/or its affiliates.

- Assign the **C1-BCRUR** To Do type to a To Do role whose users must receive a To Do while submitting a bill cycle rule characteristic creation or modification upload request for approval.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the foreign key reference for account (if not available) in the system.
- Define the status reasons for the **Canceled** and **Rejected** statuses of the **C1-BillCycleRuleCharUpdUplReq** business object through the **Status Reason** screen.
- Define the required account identifier types in the system.
- Define the required billing preferences through the **Field Mapping** screen.
- Set the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about this batch, see *Oracle Revenue Management and Billing Batch Guide*.

C1-BCRUPRDTL

This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to **Pending**.

It validates the following:

- Either the account ID or account identifier type and account identifier is specified in the record.
- Effective date and bill cycle rule code is specified in the record.

If the account ID is not specified in the record, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. In addition, if any of the above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.

This algorithm also derives the fields which can be used as search filters based on the mapping defined in the respective upload request type.

C1-BCRVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It validates the following:

- Whether the account ID given in the record is valid.

  Note: If the account ID is invalid, it derives the account ID using the respective account identifier type and account identifier combination. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**.
- Whether the bill cycle rule code is a valid billing preference.
- Whether the two or more records with the same account ID and effective date combination does not exist in the upload request.

  Note: If duplicate records exist in the upload request, it validates and changes the status of one record to **Valid** and the status of the remaining records to **Invalid**.

Copyright © 2026, Oracle and/or its affiliates.

If any of above validations fail, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Invalid**. However, if all the above validations are successful, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to **Valid**. Once all the pending records in the upload request are validated, the status of the upload request is changed to **Validated**.

Note: If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for the upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for the upload request, the status of the upload request is changed to **Submitted**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e., immediately) or in the deferred mode (i.e., in the background). If the number of valid records in the upload request does not exceed the online record process limit, it changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, it changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e., immediately). This parameter is mandatory.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm is invoked when the status of the upload request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type that is specified in the respective upload request type. Once a To Do is created, it is assigned to all the users with the approval To Do role that is specified in the respective upload request type. In addition, it creates a log entry for the upload request when the To Do is created for the approver.

C1-UPLAPPEXT

This algorithm is invoked when the user clicks the **Approve** or **Reject** button. It checks whether the approver is associated with the approval To Do role specified in the respective upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the

Copyright © 2026, Oracle and/or its affiliates.

Exclude To Do Entries From Auto Completion (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BCRPROC

This algorithm is invoked when the status of the upload request is changed to **Processing**. It fetches a list of records which are in the **Valid** status. It derives the characteristic type specified in the **Bill Cycle Rule Code** option type of the **C1-ASOBLLNG** feature configuration. For each valid record, the system checks whether a billing preference characteristic with the derived characteristic type and effective date combination is already defined for the account. If so, the system updates the existing billing preference characteristic value of the account. However, if a billing preference characteristic with the derived characteristic type and effective date combination does not exist for the account, the system creates the billing preference characteristic for the account.

> **Note:**
>
> The system creates or updates the billing preference characteristic of the account using the entity business object specified in the respective upload request type.
>
> The system derives the bill cycle from the **Bill Cycle** attribute of the billing preference when the respective characteristic is effective for the account. The derived bill cycle is then stamped against the account.

If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Mass Bill Cycle Rule Characteristic Creation or Modification CSV Format

The following table lists and describes the columns that should be available in the CSV file while creating or updating bill cycle rule characteristic of multiple accounts at once through an upload request:

Sr. No.	Column Name	Column Description	Mandatory (Yes or No)
1	Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: You must specify an account identifier type which is already defined in the system.	**Note:** This data is required when the account ID is not specified in the record.
2	Account Identifier	Used to specify the account identifier.	Yes (Conditional)
		Note: The system derives the account using the given account identifier type and account identifier combination when the account ID is either not specified or is invalid in the record.	**Note:** This data is required when the account ID is not specified in the record.
3	Account ID	Used to indicate the account for which you want to define or update the bill cycle rule characteristic.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Sr. No.	Column Name	Column Description	Mandatory (Yes or No)
			Note: This data is required when the account identifier type and account identifier are not specified in the record.
4	Effective Date	Used to specify the date from when the characteristic is effective for the account. **Note:** You must specify the date in the **YYYY-MM-DD** format.	Yes
5	Bill Cycle Rule Code	Used to specify the bill cycle rule characteristic value. **Note:** You must specify a valid preference where the preference category is set to **Billing**.	Yes

Note:

The CSV file should contain the columns in the above mentioned sequence.

Before uploading the file, ensure that the column headers specified in the CSV file are mapped to the schema of the respective upload request business object through data mapping in the upload request type. Otherwise, erroneous results might occur. For more information, see Mapping Data and Configuring Filters for an Upload Request Type on page 1503.

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a CSV file and thereby create an upload request. Note that you can upload a single CSV file at a time. The system provides the following two business objects to create distinct upload request types:

- **Adjustment Upload Request Type (i.e., C1-AdjRequestType)** - Enables you to maintain an adjustment upload request type. While creating an upload request type using the **C1-AdjRequestType** business object, you need to specify the **Adjustment Upload Request (i.e., C1-ADJUPLD)** business object. It enables you to create an adjustment upload request through which you can create adjustments against the contracts.
- **Upload Request Type (i.e., C1-UplRequestType)** - Enables you to maintain an upload request type. While creating an upload request type using the **C1-UplRequestType** business object, you can specify either of the following business object to create the respective upload request:

Copyright © 2026, Oracle and/or its affiliates.

- **Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)** - Enables you to maintain an accounts' bill cycle update upload request through which you can update the bill cycle of the accounts.
- **Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest)** - Enables you to maintain a bill group derivation and pricing parameters record creation upload request through which you can define the derivation and pricing parameters for the bill groups.
- **Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)** - Enables you to maintain a bill group sort record creation upload request through which you can define sort ID for the bill groups.
- **Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)** - Enables you to maintain a billable charge creation upload request through which you can create the billable charges for the accounts. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business.
- **Contract Rider Upload (i.e., C1-ContractRiderUpdateUplReq)** - Enables you to maintain a contract rider update upload request through which you update the contract rider information of the contracts.
- **Hold Request Upload (i.e., C1-HoldUploadRequest)** - Enables you to maintain a hold request creation upload request through which you can create a hold request for the accounts.
- **Refund Request Upload (i.e., C1-RefundUploadRequest)** - Enables you to maintain a refund request creation upload request through which you can create a refund request for the accounts.
- **Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)** - Enables you to maintain a policy reinstatement upload request through which you can reinstate the fully insured group policies.
- **Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)** - Enables you to maintain a payment tender cancellation upload request through which you can cancel payment tenders.
- **Write Off Request Upload (i.e., C1-WriteOffUploadRequest)** - Enables you to maintain a write off request creation upload request through which you can create a write off request for the accounts.
- **Bill Cycle Rule Characteristic Upload (i.e., C1-BillCycleRuleCharUpdUplReq)** - Enables you to maintain a bill cycle rule characteristic creation or modification upload request through which you can maintain the bill cycle rule characteristic of the accounts.

It is the upload request type which helps the system to determine the following:

- Business object using which the upload request should be created in the system.
- Business object using which you want to create or update the entities through an upload request.
- Whether an adjustment upload request must be processed in the deferred mode (i.e., in the background) or in the online mode (i.e., real time).

> **Note:** You can configure whether the other upload requests must be validated or processed in the deferred or online mode by setting the parameter in the **C1-DEFERVALD** and **C1-DEFERUPLD** algorithm, respectively, attached to the lifecycle of the respective upload request business object.

- Whether approval is required while submitting an upload request for further processing (i.e., before creating or updating the entities in the system).
- Whether you want to display information about the entity once it is created through an upload request using the respective foreign key reference.
- Map the CSV columns with the schema of the upload request business object so that the data is stored in the respective tags.
- Configure the search filters for an upload request type using which you can filter the data records while viewing details of the respective upload request.
- Associate match types using which the system derives the contract and creates an adjustment against the respective contract.

Some of the above functions are common for the upload request types created using the **C1-AdjRequestType** and **C1-UplRequestType** business objects, whereas some are specific to the respective business object. For more information, see Defining an Upload Request Type on page 1474.

The **Upload Request Type** screen allows you to define, edit, delete, and copy an upload request type. It contains the following zones:

- Upload Request Type List on page 1470

Copyright © 2026, Oracle and/or its affiliates.

- Upload Request Type on page 1471

The following table lists the upload request types which are shipped with the product:

Upload Request Type	Description
BILL_CYCLE_UPD_UPL_REQ_TYPE	Bill Cycle Update Upload
SA_RIDER_UPD_UPL_REQ_TYPE	Contract Rider Upload
HOLD_UPL_REQ_TYPE	Hold Request Upload
REFUND_UPL_REQ_TYPE	Refund Request Upload
WO_UPL_REQ_TYPE	Write Off Request Upload
BILL_SRT_UPL_REQ_TYPE	Bill Group Sort Upload Request Type
BILL_LVL_UPL_REQ_TYPE	Bill Group Derivation Upload Request Type
B_UPLOAD_FI	Billable Charge Upload for Fully Insured
TNDR_CNCL_UPL_REQ_TYPE	Tender Cancellation Request Upload

You can use the above shipped upload request types to create the respective upload requests or use a custom upload request type based on the requirements.

Upload Request Type List

The **Upload Request Type List** zone lists the upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the **Edit** (✎) icon, the **Upload Request Type** screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Upload Request Type** screen appears where you can define a new upload request type using an existing upload request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the upload request type. **Note:** You can delete an upload request type only when an upload request is not yet created using the upload request type.
Mapping	On clicking the **Mapping** (🔗) icon, the **Upload Request Mapping** screen appears where you can do the following: • Map the data of the CSV file to the schema of the respective upload request business object. The system will then store the data in the respective tags of the upload request business object schema. • Configure the search filters for the upload request type. The system will then display the search filters (in the specified sequence) in the **Data Records** zone of the **Upload Request** screen while viewing the details of the respective upload requests.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column is applicable only for an upload request type which is created using the **C1-UplRequestType** business object and not for an upload request type which is created using the**C1-AdjRequestType** business object.
Status	Indicates the status of the upload request type. The valid values are: • ACTIVE • INACTIVE

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. It contains the following sections:

- **Main** - Displays the basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object using which an upload request should be created.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: • Active • Inactive
File Size (KB)	Indicates the maximum file size limit (in kilobytes) while uploading files using the upload request type.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the upload request type is created using the **C1-AdjRequestType** business object.
Defer Algorithm	Indicates the algorithm that will be triggered when you click the **Create Adjustment** or **Approve** button.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm. This field appears when the upload request type is created using the **C1-AdjRequestType** business object.
Entity Business Object	Indicates the business object using which you want to create or update the entities through the respective upload request.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object. This field appears when the upload request type is created using the **C1-UplRequestType** business object.
Approval Required	Indicates whether approval is required while creating or updating entities through the respective upload request.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval.
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve an upload request which is submitted for approval.
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
FK Reference Code	Indicates the foreign key reference using which you want to display information about the entity once it is created through an upload request.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Foreign Key Reference** screen appears where you can view the details of the respective foreign key reference. This field appears when the upload request type is created using the **C1-UplRequestType** business object.

- **Adjustment Match Type** - Lists the match types using which you want to create adjustments for the respective adjustment upload requests. This section appears when the upload request type is created using the **C1-AdjRequestType** business object. It contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type for which the algorithm is associated. The valid values are: • Contract • Contract Type
Algorithm	Indicates the algorithm that will be triggered to derive the contract. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics of the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - Enables you to perform various actions on the upload request type. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	Used to delete the upload request type. **Note:** You can delete an upload request type when an upload request is not yet created using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which an upload request type is created. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

If you want to create...	Then, you should have...
An adjustment upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • A defer algorithm created using the **C1-UPLDEFEVL** algorithm type in the application • Required To Do role assigned to the **C1-ADJUP** To Do type in the application • An algorithm created using the **C1-MTCIALG** or **C1-MTCTALG** algorithm type in the application depending on the match type using which you want to create the adjustments
An accounts' bill cycle update upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUUR** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference for the account (for example, C1-ACCT) defined in the application

A bill group derivation and pricing parameters record creation upload request type	• Upload request type business objects defined in the application
	• Upload request business objects defined in the application
	• An approval To Do type named **C1-BGDVP** created with the following specifications:
	  • **Navigation Option** - c1upldrqTabMenu
	  • **Sort Key** - Upload Request ID
	  • **Drill Key Table** - C1_UPLOAD_REQ
	  • **Drill Key Field** - UPLOAD_REQ_ID

Copyright © 2026, Oracle and/or its affiliates.

If you want to create...	Then, you should have...
	• Required To Do role assigned to the **C1-BGDVP** To Do type in the application • Required entity business object (for example, C1-BillLevel) defined in the application • Required foreign key reference for the bill group (i.e., person) defined in the system.

A bill group sort record creation upload request type	• Upload request type business objects defined in the application
	• Upload request business objects defined in the application
	• An approval To Do type named **C1-BGSRT** created with the following specifications:
	  • **Navigation Option** - c1upldrqTabMenu
	  • **Sort Key** - Upload Request ID
	  • **Drill Key Table** - C1_UPLOAD_REQ
	  • **Drill Key Field** - UPLOAD_REQ_ID
	• Required To Do role assigned to the **C1-BGSRT** To Do type in the application
	• Required entity business object (for example, C1-BillingGroupSortId) defined in the application
	• Required foreign key reference for the bill group (i.e., person) defined in the system.

A billable charge creation upload request type (for the fully insured group and individual lines of business)	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUR** To Do type in the application • Required entity business object (for example, C1-BILLCHARGE) defined in the application • Required foreign key reference for the billable charge (for example, C1-BCHIN) defined in the application
A contract rider update upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-CRUUR** To Do type in the application • Required entity business object (for example, C1_SA) defined in the application • Required foreign key reference for the contract defined in the application
A hold request creation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-HLDUR** To Do type in the application • Required entity business object (for example, C1-HoldRequest) defined in the application • Required foreign key reference for the hold request (for example, C1-HLDRE) defined in the application
A refund request creation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application

Copyright © 2026, Oracle and/or its affiliates.

If you want to create...	Then, you should have...
	• Required To Do role assigned to the **C1-REFUR** To Do type in the application • Required entity business object (for example, C1-RefundReq) defined in the application • Required foreign key reference for the refund request (for example, C1-REFWO) defined in the application
A policy reinstatement upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-RPUR** To Do type in the application • Required entity business object (for example, C1-POLICY) defined in the application • Required foreign key reference for the policy (for example, C1-POLCY) defined in the application
A payment tender cancellation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-TNDCL** To Do type in the application • Required foreign key reference for the payment event (for example, C1-PEVT) defined in the application
A write off request creation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-WOUR** To Do type in the application • Required entity business object (for example, C1-WORequest) defined in the application • Required foreign key reference for the write off request (for example, C1-REFWO) defined in the application
A bill cycle rule characteristic creation or modification upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCRUR** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference for the account (for example, C1-ACCT) defined in the application

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object using which you want to create the upload request type. The valid values are: • **Adjustment Upload Request Type (i.e., C1-AdjRequestType)** - Enables you to maintain an adjustment upload request type. • **Upload Request Type (i.e., C1-UplRequestType)** - Enables you to maintain an upload request type. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Upload Request Type** (i.e., **C1-UPLREQTYP**) maintenance object.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the upload request type.
- **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload requests.

  Note: This section appears when you are creating an upload request type using the **C1-AdjRequestType** business object.
- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the business object using which you are defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object using which you want to create the respective upload request. If you are creating an upload request type using the **C1-AdjRequestType** business object, the valid value is: • **Adjustment Upload Request (i.e., C1-ADJUPLD)** - Enables you to maintain an adjustment upload request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	However, if you are creating an upload request type using the **C1-UplRequestType** business object, the valid values are: • **Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)** - Enables you to maintain an accounts' bill cycle update upload request. • **Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest)** - Enables you to maintain a bill group derivation and pricing parameters record creation upload request. • **Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)** - Enables you to maintain a bill group sort record creation upload request. • **Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)** - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business. • **Contract Rider Upload (i.e., C1-ContractRiderUpdateUplReq)** - Enables you to maintain a contract rider update upload request. • **Hold Request Upload (i.e., C1-HoldUploadRequest)** - Enables you to maintain a hold request creation upload request. • **Refund Request Upload (i.e., C1-RefundUploadRequest)** - Enables you to maintain a refund request creation upload request. • **Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)** - Enables you to maintain a policy reinstatement upload request. • **Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)** - Enables you to maintain a payment tender cancellation upload request. • **Write Off Request Upload (i.e., C1-WriteOffUploadRequest)** - Enables you to maintain a write off request creation upload request. • **Bill Cycle Rule Characteristic Upload (i.e., C1-BillCycleRuleCharUpdUplReq)** - Enables you to maintain a bill cycle rule characteristic creation or modification upload request.	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Upload Request (Adjustment Upload)** (i.e., **C1-UPLREQ**) or **Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object depending on the business object used to create the upload request type.	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⁄) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive	Yes
File Size (KB)	Used to indicate the maximum file size limit (in kilobytes) while uploading files using the upload request type. **Note:** You must specify a positive integer value in this field. This field appears when you are creating an upload request type using the **C1-AdjRequestType** business object. By default, the maximum file size limit is set to 700 KB in all the business objects which are created using the **Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object. Therefore, you don't need to explicitly set the maximum file size limit while defining an upload request type using the **C1-UplRequestType** business object.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you click the **Create Adjustment** or **Approve** button.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Defer Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. You need to attach an algorithm created using the **C1-UPLDEFEVL** algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode. The **Deferred** mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is executed. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. This field appears when you are creating an upload request type using the **C1-AdjRequestType** business object.	
Entity Business Object	Used to indicate the business object using which you want to create or update the entities through the respective upload request. You must use the following entity business object for the respective upload request type: • While defining an accounts' bill cycle update upload request type, you must set the entity business object to **C1-AccountBO**. • While defining a bill group derivation and pricing parameters record creation upload request type, you must set the entity business object to **C1-BillLevel**. • While defining a bill group sort record creation upload request type, you must set the entity business object to **C1-BillingGroupSortId**. • While defining a billable charge creation upload request type, you must set the entity business object to **C1-BILLCHARGE**. • While defining a contract rider update upload request type, you must set the entity business object to **C1_SA**.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• While defining a hold request creation upload request type, you must set the entity business object to **C1-HoldRequest**. • While defining a refund request creation upload request type, you must set the entity business object to **C1-RefundReq**. • While defining a policy reinstatement upload request type, you must set the entity business object to **C1-POLICY**. • While defining a write off request creation upload request type, you must set the entity business object to **C1-WORequest**. • While defining a bill cycle rule characteristic creation or modification upload request type, you must set the entity business object to **C1-AccountBO**. **Note:** The **Search** (🔍) icon appears corresponding to the **Entity Business Object** field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when you are creating an upload request type using the **C1-UplRequestType** business object. The **Upload Request** feature enables you to upload business object based entities and non business object based entities in the system. If you want to create business object based entities through the respective upload request, you need to specify the entity business object in the upload request type. However, if you want to create non business object based entities (i.e., entities created via any business service) through the respective upload request, you do not need to specify the entity business object in the upload request type. For example, while defining a payment tender cancellation upload request type, you do not need to specify the entity business object.	
Approval Required	Used to indicate whether approval is required while creating or updating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** option is selected. You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.	**Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval. **Note:** The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
FK Reference Code	Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request. **Note:** If the foreign key reference is specified in the upload request type, the system displays the entity information for the respective upload requests in the **Data Records** zone of the **Upload Request** screen once the entity is created (i.e., once the upload request is processed). However, if the foreign key reference is not specified in the upload request type, the system does not display the entity information for the respective upload requests. The **Search** (🔍) icon appears corresponding to the **FK Reference Code** field. On clicking the **Search** icon, the **Foreign Key Search** window appears. This field appears when you are creating an upload request type using the **C1-UplRequestType** business object.	No

6. Enter the required details in the **Main** section.
7. Associate a match type with the adjustment upload request type.

Copyright © 2026, Oracle and/or its affiliates.

8. Define characteristics for the upload request type, if required.
9. Click **Save**.
   The upload request type is defined.

Upload Request Type screen	Upload Request Type on page 1469
How to associate a match type with an adjustment upload request type	Associating a Match Type with an Adjustment Upload Request Type on page 1483
How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1485

Associating a Match Type with an Adjustment Upload Request Type

Prerequisites

To associate a match type with an adjustment upload request type, you should have:

- Required algorithm defined for the selected match type

Note:

The following algorithms are shipped with the product for the respective match type:

Match Type	Algorithm Type	Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm derives the contract for each adjustment record where the match type is set to **CONT**.
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm derives the contract using the contract type and account details for each adjustment record where the match type is set to **CNTY**. If there are multiple active contracts of the specified contract type on the account, the contract with the latest start date is considered.

Procedure

To associate a match type with an adjustment upload request type:

1. Ensure that the **Adjustment Match Type** section is expanded when you are defining, editing, or copying an adjustment upload *r*equest type.

   The **Adjustment Match Type** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type for which you want to associate the algorithm. The valid values are: • Contract • Contract Type	Yes (Conditional) **Note:** This field is required when you are creating an upload request type using the **C1-AdjRequestType** business object.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to attach an algorithm that will be triggered to derive the contract. The system will then create an adjustment against the respective contract. **Note:** The **Search** (🔍) icon appears corresponding to the **Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. You must specify an algorithm which is already defined in the system.	Yes (Conditional) **Note:** This field is required when you are creating an upload request type using the **C1-AdjRequestType** business object.

Note: This section appears when an upload request type is created using the **C1-AdjRequestType** business object.

2. Enter the required details in the **Adjustment Match Type** section.
3. If you want to define more than one match type for the adjustment upload request type, click the **Add** (+) icon and then *r*epeat step 2.

Note: However, if you want to remove a match type from the adjustment upload request type, click the **Delete** (🗑) icon corresponding to the match type.

Defining a Characteristic for an Upload Request Type

Prerequisites

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request Type**)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload *r*equest type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Upload Request Type**.	**Note:** This field is required when you are defining a characteristic for the upload request type.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then *r*epeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing an Upload Request Type

Prerequisites

To edit an upload request type, you should have:

If you want to create...	Then, you should have...
An adjustment upload request type	• Upload request business objects defined in the application • A defer algorithm created using the **C1-UPLDEFEVL** algorithm type in the application • Required To Do role assigned to the **C1-ADJUP** To Do type in the application • An algorithm created using the **C1-MTCIALG** or **C1-MTCTALG** algorithm type in the application depending on the match type using which you want to create the adjustments
An accounts' bill cycle update upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUUR** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference for the account (for example, C1-ACCT) defined in the application

Copyright © 2026, Oracle and/or its affiliates.

If you want to create...	Then, you should have...

A bill group derivation and pricing parameters record creation upload request type	• Upload request business objects defined in the application
	• An approval To Do type named **C1-BGDVP** created with the following specifications:
	  • **Navigation Option** - c1upldrqTabMenu
	  • **Sort Key** - Upload Request ID
	  • **Drill Key Table** - C1_UPLOAD_REQ
	  • **Drill Key Field** - UPLOAD_REQ_ID
	• Required To Do role assigned to the **C1-BGDVP** To Do type in the application
	• Required entity business object (for example, C1-BillLevel) defined in the application
	• Required foreign key reference for the bill group (i.e., person) defined in the system.

A bill group sort record creation upload request type	• Upload request business objects defined in the application
	• An approval To Do type named **C1-BGSRT** created with the following specifications:
	  • **Navigation Option** - c1upldrqTabMenu
	  • **Sort Key** - Upload Request ID
	  • **Drill Key Table** - C1_UPLOAD_REQ
	  • **Drill Key Field** - UPLOAD_REQ_ID
	• Required To Do role assigned to the **C1-BGSRT** To Do type in the application
	• Required entity business object (for example, C1-BillingGroupSortId) defined in the application
	• Required foreign key reference for the bill group (i.e., person) defined in the system.

A billable charge creation upload request type (for the fully insured group and individual lines of business)	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUR** To Do type in the application • Required entity business object (for example, C1-BILLCHARGE) defined in the application • Required foreign key reference for the billable charge (for example, C1-BCHIN) defined in the application
A contract rider update upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-CRUUR** To Do type in the application • Required entity business object (for example, C1_SA) defined in the application • Required foreign key reference for the contract defined in the application
A hold request creation upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-HLDUR** To Do type in the application • Required entity business object (for example, C1-HoldRequest) defined in the application

Copyright © 2026, Oracle and/or its affiliates.

If you want to create...	Then, you should have...
	• Required foreign key reference for the hold request (for example, C1-HLDRE) defined in the application
A refund request creation upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-REFUR** To Do type in the application • Required entity business object (for example, C1-RefundReq) defined in the application • Required foreign key reference for the refund request (for example, C1-REFWO) defined in the application
A policy reinstatement upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-RPUR** To Do type in the application • Required entity business object (for example, C1-POLICY) defined in the application • Required foreign key reference for the policy (for example, C1-POLCY) defined in the application
A payment tender cancellation upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-TNDCL** To Do type in the application • Required foreign key reference for the payment event (for example, C1-PEVT) defined in the application
A write off request creation upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-WOUR** To Do type in the application • Required entity business object (for example, C1-WORequest) defined in the application • Required foreign key reference for the write off request (for example, C1-REFWO) defined in the application
A bill cycle rule characteristic creation or modification upload request type	• Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCRUR** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference for the account (for example, C1-ACCT) defined in the application

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
   The **Upload Request Type** screen appears.

Copyright © 2026, Oracle and/or its affiliates.

4. In the **Upload Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *u*pload request type whose details you want to edit.

   The **Upload Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the upload request type.
   - **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload requests.

     Note: This section appears when you are creating an upload request type using the **C1-AdjRequestType** business object.

   - **Characteristics** - Used to define the characteristics for the upload request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the business object which is used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object using which you want to create the respective upload request. If you are creating an upload request type using the **C1-AdjRequestType** business object, the valid value is: • **Adjustment Upload Request (i.e., C1-ADJUPLD)** - Enables you to maintain an adjustment upload request. However, if you are creating an upload request type using the **C1-UplRequestType** business object, the valid values are: • **Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)** - Enables you to maintain an accounts' bill cycle update upload request. • **Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest)** - Enables you to maintain a bill group derivation and pricing parameters record creation upload request. • **Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)** - Enables you to maintain a bill group sort record creation upload request. • **Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)** - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business. • **Contract Rider Upload (i.e., C1-ContractRiderUpdateUplReq)** - Enables you to maintain a contract rider update upload request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Hold Request Upload (i.e., C1-HoldUploadRequest)** - Enables you to maintain a hold request creation upload request. • **Refund Request Upload (i.e., C1-RefundUploadRequest)** - Enables you to maintain a refund request creation upload request. • **Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)** - Enables you to maintain a policy reinstatement upload request. • **Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)** - Enables you to maintain a payment tender cancellation upload request. • **Write Off Request Upload (i.e., C1-WriteOffUploadRequest)** - Enables you to maintain a write off request creation upload request. • **Bill Cycle Rule Characteristic Upload (i.e., C1-BillCycleRuleCharUpdUplReq)** - Enables you to maintain a bill cycle rule characteristic creation or modification upload request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Upload Request (Adjustment Upload)** (i.e., **C1-UPLREQ**) or **Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object depending on the business object used to create the upload request type.	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of an upload request type to **Inactive** when the corresponding upload request is in a status other than **Canceled**, **Rejected**, or **Processed**.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
File Size (KB)	Used to indicate the maximum file size limit (in kilobytes) while uploading files using the upload request type. **Note:** You must specify a positive integer value in this field. This field appears when you are creating an upload request type using the **C1-AdjRequestType** business object. By default, the maximum file size limit is set to 700 KB in all the business objects which are created using the **Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object. Therefore, you don't need to explicitly set the maximum file size limit while defining an upload request type using the **C1-UplRequestType** business object.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you click the **Create Adjustment** or **Approve** button. **Note:** The **Search** (🔍) icon appears corresponding to the **Defer Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. You need to attach an algorithm created using the **C1-UPLDEFEVL** algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode. The **Deferred** mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is executed. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. This field appears when you are creating an upload request type using the **C1-AdjRequestType** business object.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate the business object using which you want to create or update the entities through the respective upload request. You must use the following entity business object for the respective upload request type: • While defining an accounts' bill cycle update upload request type, you must set the entity business object to **C1-AccountBO**. • While defining a bill group derivation and pricing parameters record creation upload request type, you must set the entity business object to **C1-BillLevel**. • While defining a bill group sort record creation upload request type, you must set the entity business object to **C1-BillingGroupSortId**. • While defining a billable charge creation upload request type, you must set the entity business object to **C1-BILLCHARGE**. • While defining a contract rider update upload request type, you must set the entity business object to **C1_SA**. • While defining a hold request creation upload request type, you must set the entity business object to **C1-HoldRequest**. • While defining a refund request creation upload request type, you must set the entity business object to **C1-RefundReq**. • While defining a policy reinstatement upload request type, you must set the entity business object to **C1-POLICY**. • While defining a write off request creation upload request type, you must set the entity business object to **C1-WORequest**. • While defining a bill cycle rule characteristic creation or modification upload request type, you must set the entity business object to **C1-AccountBO**.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Entity Business Object** field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when you are creating an upload request type using the **C1-UplRequestType** business object. The **Upload Request** feature enables you to upload business object based entities and non business object based entities in the system. If you want to create business object based entities through the respective upload request, you need to specify the entity business object in the upload request type. However, if you want to create non business object based entities (i.e., entities created via any business service) through the respective upload request, you do not need to specify the entity business object in the upload request type. For example, while defining a payment tender cancellation upload request type, you do not need to specify the entity business object.	
Approval Required	Used to indicate whether approval is required while creating or updating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** option is selected. You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the **Approval Required** option is selected.	**Note:** This field is required when the **Approval Required** option is selected.
FK Reference Code	Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request. **Note:** If the foreign key reference is specified in the upload request type, the system displays the entity information for the respective upload requests in the **Data Records** zone of the **Upload Request** screen once the entity is created (i.e., once the upload request is processed). However, if the foreign key reference is not specified in the upload request type, the system does not display the entity information for the respective upload requests. The **Search** (🔍) icon appears corresponding to the **FK Reference Code** field. On clicking the **Search** icon, the **Foreign Key Search** window appears. This field appears when you are creating an upload request type using the **C1-UplRequestType** business object.	No

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove a match type from the adjustment upload request type, if required.
7. Define, edit, or remove characteristics of the upload request type, if required.
8. Click **Save**.
   The changes made to the upload request type are saved.

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Note: While copying an upload request type, the system does not copy the mapping details from the original upload request type to the new upload request type. You need to manually define the mapping details for the new upload request type.

Prerequisites

To copy an upload request type, you should have:

If you want to copy...	Then, you should have...
An adjustment upload request type	• An adjustment upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • A defer algorithm created using the **C1-UPLDEFEVL** algorithm type in the application • Required To Do role assigned to the **C1-ADJUP** To Do type in the application • An algorithm created using the **C1-MTCIALG** or **C1-MTCTALG** algorithm type in the application depending on the match type using which you want to create the adjustments
An accounts' bill cycle update upload request type	• An accounts' bill cycle update upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUUR** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference for the account (for example, C1-ACCT) defined in the application

A bill group derivation and pricing parameters record creation upload request type	• Upload request type business objects defined in the application
	• Upload request business objects defined in the application
	• An approval To Do type named **C1-BGDVP** created with the following specifications:
	  • **Navigation Option** - c1upldrqTabMenu
	  • **Sort Key** - Upload Request ID
	  • **Drill Key Table** - C1_UPLOAD_REQ
	  • **Drill Key Field** - UPLOAD_REQ_ID
	• Required To Do role assigned to the **C1-BGDVP** To Do type in the application
	• Required entity business object (for example, C1-BillLevel) defined in the application
	• Required foreign key reference for the bill group (i.e., person) defined in the system.

A bill group sort record creation upload request type	• Upload request type business objects defined in the application • Upload request business objects defined in the application

Copyright © 2026, Oracle and/or its affiliates.

If you want to copy...	Then, you should have...

	• An approval To Do type named **C1-BGSRT** created with the following specifications:
	  • **Navigation Option** - c1upldrqTabMenu
	  • **Sort Key** - Upload Request ID
	  • **Drill Key Table** - C1_UPLOAD_REQ
	  • **Drill Key Field** - UPLOAD_REQ_ID
	• Required To Do role assigned to the **C1-BGSRT** To Do type in the application
	• Required entity business object (for example, C1-BillingGroupSortId) defined in the application
	• Required foreign key reference for the bill group (i.e., person) defined in the system.

A billable charge creation upload request type (for the fully insured group and individual lines of business)	• A billable charge creation upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCUR** To Do type in the application • Required entity business object (for example, C1-BILLCHARGE) defined in the application • Required foreign key reference for the billable charge (for example, C1-BCHIN) defined in the application
A contract rider update upload request type	• A contract rider update upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-CRUUR** To Do type in the application • Required entity business object (for example, C1_SA) defined in the application • Required foreign key reference for the contract defined in the application
A hold request creation upload request type	• A hold request creation upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-HLDUR** To Do type in the application • Required entity business object (for example, C1-HoldRequest) defined in the application • Required foreign key reference for the hold request (for example, C1-HLDRE) defined in the application
A refund request creation upload request type	• A refund request creation upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-REFUR** To Do type in the application • Required entity business object (for example, C1-RefundReq) defined in the application • Required foreign key reference for the refund request (for example, C1-REFWO) defined in the application
A policy reinstatement upload request type	• A policy reinstatement upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-RPUR** To Do type in the application

Copyright © 2026, Oracle and/or its affiliates.

If you want to copy...	Then, you should have...
	• Required entity business object (for example, C1-POLICY) defined in the application • Required foreign key reference for the policy (for example, C1-POLCY) defined in the application
A payment tender cancellation upload request type	• A payment tender cancellation upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-TNDCL** To Do type in the application • Required foreign key reference for the payment event (for example, C1-PEVT) defined in the application
A write off request creation upload request type	• A write off request creation upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-WOUR** To Do type in the application • Required entity business object (for example, C1-WORequest) defined in the application • Required foreign key reference for the write off request (for example, C1-REFWO) defined in the application
A bill cycle rule characteristic creation or modification upload request type	• A bill cycle rule characteristic creation or modification upload request type (whose copy you want to create) defined in the application • Upload request business objects defined in the application • Required To Do role assigned to the **C1-BCRUR** To Do type in the application • Required entity business object (for example, C1-AccountBO) defined in the application • Required foreign key reference for the account (for example, C1-ACCT) defined in the application

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
   The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Duplicate**(⧉) icon in the **Duplicate** column *c*orresponding to the upload request type whose copy you want to create.

   The **Upload Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the upload request type.
   - **Adjustment Match Type** - Used to specify the match type using which you want to create adjustments for the respective adjustment upload requests.

     Note: This section appears when you are creating an upload request type using the **C1-AdjRequestType** business object.

   - **Characteristics** - Used to define the characteristics for the upload request type.

   The **Main** section contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the business object using which you are defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object using which you want to create the respective upload request. If you are creating an upload request type using the **C1-AdjRequestType** business object, the valid value is: • **Adjustment Upload Request (i.e., C1-ADJUPLD)** - Enables you to maintain an adjustment upload request. However, if you are creating an upload request type using the **C1-UplRequestType** business object, the valid values are: • **Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)** - Enables you to maintain an accounts' bill cycle update upload request. • **Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest)** - Enables you to maintain a bill group derivation and pricing parameters record creation upload request. • **Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)** - Enables you to maintain a bill group sort record creation upload request. • **Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)** - Enables you to maintain a billable charge creation upload request. Note that this business object is only applicable for the fully insured group and individual lines of health insurance business. • **Contract Rider Upload (i.e., C1-ContractRiderUpdateUplReq)** - Enables you to maintain a contract rider update upload request. • **Hold Request Upload (i.e., C1-HoldUploadRequest)** - Enables you to maintain a hold request creation upload request. • **Refund Request Upload (i.e., C1-RefundUploadRequest)** - Enables you to maintain a refund request creation upload request. • **Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)** - Enables you to maintain a policy reinstatement upload request. • **Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)** - Enables you	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	to maintain a payment tender cancellation upload request. • **Write Off Request Upload (i.e., C1-WriteOffUploadRequest)** - Enables you to maintain a write off request creation upload request. • **Bill Cycle Rule Characteristic Upload (i.e., C1-BillCycleRuleCharUpdUplReq)** - Enables you to maintain a bill cycle rule characteristic creation or modification upload request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Upload Request (Adjustment Upload)** (i.e., **C1-UPLREQ**) or **Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object depending on the business object used to create the upload request type.	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive	Yes
File Size (KB)	Used to indicate the maximum file size limit (in kilobytes) while uploading files using the upload request type.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify a positive integer value in this field. This field appears when you are creating an upload request type using the **C1-AdjRequestType** business object. By default, the maximum file size limit is set to 700 KB in all the business objects which are created using the **Upload Request** (i.e., **C1-UPLOADREQ**) maintenance object. Therefore, you don't need to explicitly set the maximum file size limit while defining an upload request type using the **C1-UplRequestType** business object.	
Defer Algorithm	Used to attach an algorithm that will be triggered when you click the **Create Adjustment** or **Approve** button. **Note:** The **Search** (🔍) icon appears corresponding to the **Defer Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. You need to attach an algorithm created using the **C1-UPLDEFEVL** algorithm type to this field. This algorithm checks whether the number of records in the uploaded file exceeds the specified online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the adjustments in the real time (i.e., immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the adjustments in the deferred mode. The **Deferred** mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is executed. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*. This field appears when you are creating an upload request type using the **C1-AdjRequestType** business object.	Yes
Entity Business Object	Used to indicate the business object using which you want to create or update the entities through the respective upload request. You must use the	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	following entity business object for the respective upload request type: • While defining an accounts' bill cycle update upload request type, you must set the entity business object to **C1-AccountBO**. • While defining a bill group derivation and pricing parameters record creation upload request type, you must set the entity business object to **C1-BillLevel**. • While defining a bill group sort record creation upload request type, you must set the entity business object to **C1-BillingGroupSortId**. • While defining a billable charge creation upload request type, you must set the entity business object to **C1-BILLCHARGE**. • While defining a contract rider update upload request type, you must set the entity business object to **C1_SA**. • While defining a hold request creation upload request type, you must set the entity business object to **C1-HoldRequest**. • While defining a refund request creation upload request type, you must set the entity business object to **C1-RefundReq**. • While defining a policy reinstatement upload request type, you must set the entity business object to **C1-POLICY**. • While defining a write off request creation upload request type, you must set the entity business object to **C1-WORequest**. • While defining a bill cycle rule characteristic creation or modification upload request type, you must set the entity business object to **C1-AccountBO**.	

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Entity Business Object** field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when you are creating an upload request type using the **C1-UplRequestType** business object. The **Upload Request** feature enables you to upload business object based entities and non business object based entities in the system. If you want to create business object based entities through the respective upload request, you need to specify the entity business object in the upload request type. However, if you want to create non business object based entities (i.e., entities created via any business service) through the respective upload request, you do not need to specify the entity business object in the upload request type. For example, while defining a payment tender cancellation upload request type, you do not need to specify the entity business object.	
Approval Required	Used to indicate whether approval is required while creating or updating entities through the respective upload request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an upload request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** option is selected. You can use the respective To Do type mentioned in the prerequisites or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an upload request which is submitted for approval.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those To Do roles which are associated with the approval To Do type. This field appears when the **Approval Required** option is selected.	**Note:** This field is required when the **Approval Required** option is selected.
FK Reference Code	Used to indicate the foreign key reference using which you want to display information about the entity once it is created through an upload request. **Note:** If the foreign key reference is specified in the upload request type, the system displays the entity information for the respective upload requests in the **Data Records** zone of the **Upload Request** screen once the entity is created (i.e., once the upload request is processed). However, if the foreign key reference is not specified in the upload request type, the system does not display the entity information for the respective upload requests. The **Search** (🔍) icon appears corresponding to the **FK Reference Code** field. On clicking the **Search** icon, the **Foreign Key Search** window appears. This field appears when you are creating an upload request type using the **C1-UplRequestType** business object.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove a match type from the adjustment upload request type, if required.
7. Define, edit, or remove characteristics of the upload request type, if required.
8. Click **Save**.
   The new upload request type is defined.

Mapping Data and Configuring Filters for an Upload Request Type

The **Upload Request Mapping** screen enables you to do the following:

- **Map the Data of the CSV File** - To read the data from a Comma-Separated Values (CSV) file, you need to map its columns with the schema of the upload request business object. The system will then store the data in the respective tags of the upload request business object schema. While mapping the columns with the schema, you need to specify the column headers that would appear in the CSV file. The system will then create the XML tags by converting the column header into camelCase after removing the spaces from the column header. For example, if the header in the CSV file is Account Id, then the corresponding XML tag formed by the system is accountId. The system will then store the data from the column in the respective tag of the upload request business object schema.

  Note: You need to map the columns of the CSV file in the sequence as mentioned in the respective CSV format.

- **Configure the Search Filters** - The system enables you to configure maximum 10 search filters for an upload request type. It then displays the search filters (in the specified sequence) in the **Data Records** zone of the **Upload Request** screen while viewing the details of the respective upload requests.

Once an upload request is created using an upload request type, you cannot change the mapping details and search filters of the upload request type. In addition, while copying an upload request type, the system does not copy the mapping details and search filters from the original upload request type to the new upload request type. You need to manually define the mapping details and search filters for the new upload request type.

Note: This screen is applicable only for an upload request type which is created using the **C1-UplRequestType** business object and not for an upload request type which is created using the**C1-AdjRequestType** business object.

Procedure

To map the data and configure search filters for an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
   The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Mapping**(🔗) icon in the **Mapping** column corresponding *t*o the upload request type whose details you want to edit.

   The **Upload Request Mapping** screen appears. It contains the following field:

Field Name	Field Description
Upload Request Type	Displays the description of the upload request type.

   In addition, it contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the column header of a CSV file that you would upload using the upload request type.	Yes
Searchable	Used to indicate whether you want to create a field for the column header and provide the ability to filter the data records using it. The system will then accordingly display the fields and columns in the **Data Records** zone of the **Upload Request** screen.	Yes (Conditional) **Note:** This field is required when you are configuring a search filter for the upload request type.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: You can select this option for maximum 10 column headers in the upload request type.	
Sequence	Used to indicate the order in which you want to display the corresponding fields and columns in the **Data Records** zone of the **Upload Request** screen. **Note:** You must specify a positive integer value in this field.	Yes

5. Enter the required details in **Upload Request Mapping** screen.

Note: If you want to add more than one column header, click the **Add** (+) icon and then specify the details. However, if you want to remove a column header, click the **Delete** (🗑) icon corresponding to the column header.

6. Click **Save**.
   The mapping details are saved for the upload request type.

Deleting an Upload Request Type

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
   The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *u*pload request type that you want to delete.

   A message appears confirming whether you want to delete the upload request type.

   Note: You can delete an upload request type only when an upload request is not yet created using the upload request type.

   Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.
5. Click **OK**.
   The upload request type is deleted.

Upload Request (Used for Searching)

The **Upload Request** screen allows you to search for an upload request using various search criteria. It also allows you to create an upload request. It contains the following zone:

- Search Upload Request on page 2239

Through this screen, you can navigate to the following screen:

- Upload Request (Used for Viewing) on page 2247

Search Upload Request

The **Search Upload Request** zone allows you to search for an upload request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an upload request using the request details. The valid value is: • Request Details **Note:** By default, the **Request Details** option is selected.	Yes
Upload Date From	Used to search for upload requests which are created from a particular date onwards. **Note:** You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Status	Used to search for upload requests with a particular status. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Validated • Validating	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
To	Used to search for upload requests which are created till a particular date. **Note:** You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
User ID	Used to search for upload requests which are created by a particular user.	No
Upload Request Type	Used to search for upload requests which are created using a particular upload request type. **Note:** The list includes only those upload request types which are created using the **C1-UplRequestType** business object and are in the **Active** status.	No
File Name	Used to search for an upload request through which a particular file is uploaded.	No
Upload Request ID	Used to search for a particular upload request.	No

Note: You must specify at least one search criterion while searching for an upload request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request is created.
Upload Request Information	Displays information about the upload request. **Note:** It has a link. On clicking the link, the **Upload Request** screen appears where you can view the details of the respective upload request. This information string is generated through the **C1-UPLRQ-INF** algorithm attached to the **Information** system event of the **C1-UPLOADREQ** maintenance object. It concatenates the following fields — Upload Request Type Description, Upload Request Status Description, Upload Request ID.
Status	Indicates the status of the upload request. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Validated • Validating

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Upload Request Type	Indicates the upload request type using which the upload request is created.
Entity Business Object	Indicates the business object using which the entities should be created or updated through the upload request. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
File Name	Indicates the file uploaded through the upload request.
Total Records	Indicates the total number of records uploaded through the CSV file.
Created By	Indicates the user who has created the upload request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

Searching for an Upload Request

Prerequisites

To search for an upload request, you should have:

- Upload request types created using the **C1-UplRequestType** business object in the **Active** status

Procedure

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.
   The **Upload Request** screen appears.
4. Enter the search criteria in the **Search Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

Copyright © 2026, Oracle and/or its affiliates.

A list of upload requests that meet the search criteria appears in the **Search Results** section.

Viewing the Upload Request Details

Procedure

To view the details of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request whose details you want to view.

   The **Upload Request** screen appears. It contains following tabs:

   - Upload Request - Main on page 2247
   - Upload Request - Log on page 2252
3. Ensure that the **Main** tab is selected.
4. View the details of the upload request in the **Upload Request** zone.
5. View the records uploaded through the CSV file in the **Data Records** zone.

Creating an Upload Request

Prerequisites

To create an upload request, you should have:

If you want to create...	Then, you should have...
An accounts' bill cycle update upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Bill Cycle Update Upload (i.e., C1-BillCycleUpdateUplReq)** and the status is set to **Active** • An accounts' bill cycle update file in the required CSV format

Copyright © 2026, Oracle and/or its affiliates.

If you want to create...	Then, you should have...
A bill group derivation and pricing parameters record creation upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Bill Group Derivation & Pricing Parameter (i.e., C1-BillLevelUploadRequest)** and the status is set to **Active** • A bill group derivation and pricing parameters record creation file in the required CSV format
A bill group sort record creation upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Bill Group Sorting Upload Request (i.e., C1-BillGrpSortUploadRequest)** and the status is set to **Active** • A bill group sort record creation file in the required CSV format
A billable charge creation upload request (for the fully insured group and individual lines of business)	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Billable Charge Upload for Fully Insured (i.e., C1-BillableChargeUploadFI)** and the status is set to **Active** • A billable charge creation file in the required CSV format **Note:** Note that this upload request type would be applicable only for the fully insured group and individual lines of health insurance business.
A contract rider update upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Contract Rider Upload (i.e., C1-ContractRiderUpdateUplReq)** and the status is set to **Active** • A contract rider update file in the required CSV format
A hold request creation upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Hold Request Upload (i.e., C1-HoldUploadRequest)** and the status is set to **Active** • A hold request creation file in the required CSV format
A refund request creation upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Refund Request Upload (i.e., C1-RefundUploadRequest)** and the status is set to **Active** • A refund request creation file in the required CSV format
A policy reinstatement upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Reinstatement Upload Request (i.e., C1-ReinstatementUploadRequest)** and the status is set to **Active** • A policy reinstatement file in the required CSV format
A payment tender cancellation upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Tender Cancelation Upload Request (i.e., C1-TndrCnclUploadRequest)** and the status is set to **Active** • A payment tender cancellation file in the required CSV format

Copyright © 2026, Oracle and/or its affiliates.

If you want to create...	Then, you should have...
A write off request creation upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Write Off Request Upload (i.e., C1-WriteOffUploadRequest)** and the status is set to **Active** • A write off request creation file in the required CSV format
A bill cycle rule characteristic creation or modification upload request	• An upload request type which is created using the **C1-UplRequestType** business object and where the upload request business object is set to **Bill Cycle Rule Characteristic Upload (i.e., C1-BillCycleRuleCharUpdUplReq)** and the status is set to **Active** • A bill cycle rule characteristic creation or modification file in the required CSV format

Procedure

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

   The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request. **Note:** The list includes only those upload request types which are created using the **C1-UplRequestType** business object and are in the **Active** status.	Yes

Tip: Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

4. Select the required upload request type from the respective field.
5. Click **OK**.

   The **Upload Request** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the upload request.
   - **Characteristics** - Used to define the characteristics for the upload request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which you want to create the upload request.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Parent Customer	Used to indicate the person for whom you want to create the bill group sort record creation or bill group derivation and pricing parameters record creation upload request. **Note:** This field appears when you are creating an upload request using an upload request type where the upload request business object is set to **C1-BillGrpSortUploadRequest** or **C1-BillLevelUploadRequest**. The system allows you to create a bill group sort record creation or bill group derivation and pricing parameters record creation upload request for a person whose person type is set to **Parent Customer**. The **Search** (🔍) icon appears corresponding to the **Parent Customer** field. On clicking the **Search** icon, the **Person Search** window appears.	Yes
File Name	Used to specify the Comma Separated Values (CSV) file that you want to upload. **Note:** You can click the **Choose File** button corresponding to the **File Name** field to browse and select the file that you want to upload. Note that you can upload a file from a local machine and not from the server location. The system does not allow you to upload a file which exceeds 700 KB. Therefore, you must ensure that the file size is within the maximum limit. The file name must be unique and should not exceed 60 characters. At least one record should be present in the file along with the column headers.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this option when you want to upload the same file once again. **Note:** You can upload a file once again only when the upload request with the same file is in the **Rejected** or **Canceled** status.	No
Comments	Used to specify additional information about the upload request.	No

6. Enter the required details in the **Main** section.
7. Click the **Choose File** button corresponding to the **File Name** field.
   The **Open** dialog box appears.
8. Browse to the location where the file that you want to upload is available in the system.
9. Click **Open**.
   The file name appears in the **File Name** field.

Copyright © 2026, Oracle and/or its affiliates.

10. Select the **Replace Existing File** option depending on whether you want to upload the same file once again in the system.
11. Define characteristics for the upload request, if required.
12. Click **Save**.
    A message appears indicating the number of records which are successfully uploaded. Then, the **Upload Request** screen appears where you can view the details of the upload request which is created in the **Draft** status. The status of the records is set to **Pending**. Note that if the mandatory data is missing in the record, the status of the record is set to **Invalid**.

How to define a characteristic for an upload request	Defining a Characteristic for an Upload Request on page 2246

Defining a Characteristic for an Upload Request

Prerequisites

To define a characteristic for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

Procedure

To define a characteristic for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
	Note: You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	**Note:** This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Upload Request**.	**Note:** This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the upload request, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a characteristic from the upload request, click the **Delete** (🗑) icon corresponding to the characteristic.

Upload Request (Used for Viewing)

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of the upload request
- Delete the upload request
- View the details of the upload request
- Validate the upload request
- Cancel the upload request
- Submit the upload request
- Approve or reject the upload request
- View the details of a data record
- View the log of the upload request
- Add a log entry for the upload request

This screen consists of the following tabs:

- Upload Request - Main on page 2247
- Upload Request - Log on page 2252

Upload Request - Main

The **Main** tab displays information about the upload request. It contains the following zones:

- Upload Request on page 2248

Copyright © 2026, Oracle and/or its affiliates.

- Data Records on page 2250

Upload Request

The **Upload Request** zone displays the details of the upload request. It contains the following sections:

- **Main** - Displays the basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.
Upload Request Type	Indicates the upload request type using which the upload request is created. **Note:** It has a link. On clicking the link, the **Upload Request Type** screen appears where you can view the details of the respective upload request type.
Status	Indicates the status of the upload request. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Validated • Validating
File Name	Indicates the file uploaded through the upload request.

- **Statistics** - Displays statistics related to the records of the upload request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of records uploaded from the CSV file through the upload request.
Pending Records	Displays the number of records where the mandatory data is available or successfully derived by the system.
Valid Records	Displays the number of records which are successfully validated by the system.
Invalid Records	Displays the number of records which could not be successfully validated by the system.
Error Records	Displays the number of records for which the respective entity could not be created in the system.
Processed Records	Displays the number of records for which the respective entity is successfully created in the system.

- **Record Actions** - Enables you to perform various actions on the upload request. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request. **Note:** The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
Delete	Used to delete the upload request. **Note:** The **Delete** button appears when the upload request is in the **Draft** status.
Validate	Used to validate the upload request. **Note:** The **Validate** button appears when the upload request is in the **Draft** status.
Cancel	Used to cancel the upload request. **Note:** The **Cancel** button appears when the upload request is in the **Validated** status.
Submit	Used to submit the upload request. **Note:** The **Submit** button appears when the upload request is in the **Validated** status.
Approve	Used to approve the upload request. **Note:** The **Approve** button appears when the following conditions are met: • The upload request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the upload request.
Reject	Used to reject the upload request. **Note:** The **Reject** button appears when the following conditions are met: • The upload request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the upload request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the upload request status is updated.
Create Date/Time	Displays the date and time when the upload request is created.

- **Characteristics** - Lists the characteristics of the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

Data Records

The **Data Records** zone lists the records uploaded from the CSV file through the upload request. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2, ..., Search Criteria 10 **Note:** We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	Used to filter the records of the upload request.	No
Record Status	Used to search for data records with a particular status. The valid values are: • Error • Invalid • Pending • Processed • Valid	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the **View** (🔗) icon, the **Data Record Details** window appears where you can view the details of the data record.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Search Result 1, Search Result 2, ..., Search Result 10 **Note:** We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	Displays the data of the record.
Record Status	Indicates the status of the data record. The valid values are: • Error • Invalid • Pending • Processed • Valid
Messages	Indicates the error that occurred while validating or processing the data record. **Note:** The data appears in this column only when the data record is in the **Invalid** or **Error** status.
Entity ID	Indicates the entity that is created for the data record through the upload request. **Note:** This column appears only when the upload request is created using an upload request type where the upload request business object is set to the **C1-BillLevelUploadRequest**, **C1-BillableChargeUploadFI**, **C1-ContractRiderUpdateUplReq**, or **C1-BillGrpSortUploadRequest** business object. The data appears in this column only when the following conditions are met: • The data record is in the **Processed** status. • The FK reference code is specified in the respective upload request type
Entity Information	Indicates the entity that is created for the data record through the upload request. **Note:** This column appears only when the upload request is created using an upload request type where the upload request business object is set to the **C1-HoldUploadRequest**, **C1-RefundUploadRequest**, **C1-WriteOffUploadRequest**, **C1-TndrCnclUploadRequest**,**C1-ReinstatementUploadRequest**,**C1-BillCycleRuleCharUpdUplReq**, or **C1-BillCycleUpdateUplReq** business object. The data appears in this column only when the following conditions are met: • The data record is in the **Processed** status. • The FK reference code is specified in the respective upload request type It has a link. On clicking the link, the respective entity screen appears where you can view the details of the entity.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

Upload Request - Log

The **Log** tab contains the following zone:

- Upload Request Log on page 2252

Upload Request Log

The **Upload Request Log** zone lists the complete trail of actions performed on the upload request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the upload request. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the upload request is rejected or canceled.

> **Note:** You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Editing an Upload Request

Procedure

To edit an upload request:

Copyright © 2026, Oracle and/or its affiliates.

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request whose details you want to edit.
   The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Upload Request** zone.

   The **Upload Request** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the upload request.
   - **Characteristics** - Used to define the characteristics for the upload request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request is created.	Not applicable
Parent Customer	Indicates the person for whom the bill group sort record creation or bill group derivation and pricing parameters record creation upload request is created. **Note:** This field appears when the upload request is created using an upload request type where the upload request business object is set to **C1-BillGrpSortUploadRequest** or **C1-BillLevelUploadRequest**.	Not applicable
File Name	Indicates the file uploaded through the upload request.	Not applicable
Comments	Used to specify additional information about the upload request.	No

Note: The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the upload request, if required.
7. Click **Save**.
   The changes made to the upload request are saved.

Deleting an Upload Request

Copyright © 2026, Oracle and/or its affiliates.

Procedure

To delete an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request that you want to delete.
   The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Upload Request** zone.
   A message appears confirming whether you want to delete the upload request.

   Note: The **Delete** button appears when the upload request is in the **Draft** status.
5. Click **OK**.
   The upload request is deleted.

Validating an Upload Request

Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request that you want to validate.
   The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Validate** button in the **Upload Request** zone.

   If any validation fails, the status of the data record is changed to **Invalid**. However, if all the validations are successful, the status of the data record is changed to **Valid**. Once all the pending data records in the upload request are validated, the status of the upload request is changed to **Validated**.

   Note:

   The **Validate** button appears when the upload request is in the **Draft** status.

   If there are no pending records while validating an upload request, a message appears indicating that there are no records to be validated. In such case, you can only delete an upload request.

Canceling an Upload Request

There might be situations when an incorrect CSV file is uploaded in the system. In such case, the system provides you with the ability to cancel the upload request. However, note that you can cancel an upload request only when it is in the **Validated** status.

Prerequisites

To cancel an upload request, you should have:

- Reasons defined for the **Canceled** status of the **C1-BillableChargeUploadFI**, **C1-BillCycleUpdateUplReq**, **C1-BillGrpSortUploadRequest**, **C1-BillLevelUploadRequest**, **C1-ContractRiderUpdateUplReq**, **C1-HoldUploadRequest**, **C1-RefundUploadRequest**, **C1-ReinstatementUploadRequest**, **C1-TndrCnclUploadRequest**, **C1-BillCycleRuleCharUpdUplReq**, and **C1-WriteOffUploadRequest** business objects in the **Status Reason** screen.

Procedure

To cancel an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.
   The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Cancel** button in the **Upload Request** zone.

   The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request. **Note:** The list includes only those reasons which are defined for the **Canceled** status of the respective business object (i.e., **C1-BillableChargeUploadFI**, **C1-BillCycleUpdateUplReq**, **C1-BillGrpSortUploadRequest**, **C1-BillLevelUploadRequest**, **C1-ContractRiderUpdateUplReq**, **C1-HoldUploadRequest**, **C1-RefundUploadRequest**, **C1-ReinstatementUploadRequest**, **C1-TndrCnclUploadRequest**, **C1-BillCycleRuleCharUpdUplReq**, and **C1-WriteOffUploadRequest**) through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while canceling the upload request.	No

   Note: The **Cancel** button appears when the upload request is in the **Validated** status.

5. Select the reason for canceling the upload request from the **Cancel Reason** list.

Copyright © 2026, Oracle and/or its affiliates.

6. Enter the comments (if any) while canceling the upload request in the respective field.
7. Click **Save**.
   The status of the upload request is changed to **Canceled**.

Submitting an Upload Request

Procedure

To submit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request that you want to submit.
   The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Upload Request** zone.

   The system behaves in the following manner:

If...	Then...
The **Approval Required** option is selected in the respective upload request type	The status of the upload request is changed to **Approval In Progress**. A To Do is created using the To Do type (i.e., **C1-BCUUR**, **C1-BCUR**,**C1-CRUUR**, **C1-HLDUR**, **C1-REFUR**, **C1-RPUR**, **C1-BGSRT**, **C1-BGDVP**, **C1-TNDCL**, **C1-BCRUR**, or **C1-WOUR** depending on the upload request) specified in the **Approval To Do Type** field of the respective upload request type. It is then assigned to the users with the role specified in the **Approval To Do Role** field of the respective upload request type. In addition, a log entry is created for the upload request when the To Do is created for the approver.
The **Approval Required** option is not selected in the respective upload request type and the number of valid records in the upload request does not exceed the online record process limit (defined in the **C1-DEFERUPLD** algorithm)	The following entities are created or updated for the respective upload request: • **Accounts' Bill Cycle Update Upload Request** - On processing this upload request, the bill cycle of the respective accounts is updated. • **Bill Group Derivation and Pricing Parameters Upload Request** - On processing this upload request, the derivation and pricing parameters of the respective bill group and sort ID combination are updated. • **Bill Group Sort Record Creation Upload Request** - On processing this upload request, the sort ID is defined for the respective bill group. • **Billable Charge Creation Upload Request (Health Insurance)** - On processing this upload request, the billable charge is created

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
	against the contract at the group membership or individual membership level or at the policy plan level. • **Contract Rider Update Upload Request** - On processing this upload request, the contract rider information is updated for the respective contract. • **Hold Request Creation Upload Request** - On processing this upload request, the hold request is created for the respective entity. • **Refund Request Creation Upload Request** - On processing this upload request, the refund request is created for the respective account. • **Policy Reinstatement Upload Request** - On processing this upload request, the respective fully insured group policy is reinstated. • **Payment Tender Cancellation Upload Request** - On processing this upload request, the respective payment tenders, payments, and payment events are canceled. • **Write Off Request Creation Upload Request** - On processing this upload request, the write off request is created for the respective account. • **Bill Cycle Rule Characteristic Creation or Modification Upload Request** - On processing this upload request, the bill cycle rule characteristic is created or updated for the respective account. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.
The **Approval Required** option is not selected in the respective upload request type and the number of valid records in the upload request exceeds the online record process limit (defined in the **C1-DEFERUPLD** algorithm)	The status of the upload request is changed to **Deferred Processing**. **Note:** You need to execute the **Upload Request Periodic Monitor** (**C1-UPLRQ**) batch. It considers the upload requests which are in the **Deferred Processing** status and then accordingly creates or updates the entities depending on the upload request (as mentioned above). If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The **Submit** button appears when the upload request is in the **Validated** status.

Approving an Upload Request

You can view the number of upload requests which are pending for approval from the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

Note: The system will not allow you to approve or reject an upload request submitted by you.

To approve an upload request, you should have:

- Required approval To Do role assigned in the system

Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Review an upload request through the Upload Request screen	**a.** Search for the upload request with the **Approval In Progress** status in the **Upload Request** screen. A list of upload requests with the respective status appears in the search results. **b.** In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request which you want to review.
Review an upload request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter the required To Do type in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the upload request that you want to review.

   The **Upload Request** screen appears.
2. Review the details in the **Upload Request** screen.
3. If the information in the upload request is accurate, click the **Approve** button in the **Upload Request** zone.

   The system behaves in the following manner:

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
The number of valid records in the upload request does not exceed the online record process limit (defined in the **C1-DEFERUPLD** algorithm)	The following entities are created or updated for the respective upload request: • **Accounts' Bill Cycle Update Upload Request** - On processing this upload request, the bill cycle of the respective accounts is updated. • **Bill Group Derivation and Pricing Parameters Upload Request** - On processing this upload request, the derivation and pricing parameters of the respective bill group and sort ID combination are updated. • **Bill Group Sort Record Creation Upload Request** - On processing this upload request, the sort ID is defined for the respective bill group. • **Billable Charge Creation Upload Request (Health Insurance)** - On processing this upload request, the billable charge is created against the contract at the group membership or individual membership level or at the policy plan level. • **Contract Rider Update Upload Request** - On processing this upload request, the contract rider information is updated for the respective contract. • **Hold Request Creation Upload Request** - On processing this upload request, the hold request is created for the respective entity. • **Refund Request Creation Upload Request** - On processing this upload request, the refund request is created for the respective account. • **Policy Reinstatement Upload Request** - On processing this upload request, the respective fully insured group policy is reinstated. • **Payment Tender Cancellation Upload Request** - On processing this upload request, the respective payment tenders, payments, and payment events are canceled. • **Write Off Request Creation Upload Request** - On processing this upload request, the write off request is created for the respective account. • **Bill Cycle Rule Characteristic Creation or Modification Upload Request** - On processing this upload request, the bill cycle rule characteristic is created or updated for the respective account. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.
The number of valid records in the upload request exceeds the online record process limit (defined in the **C1-DEFERUPLD** algorithm)	The status of the upload request is changed to **Deferred Processing**.

Copyright © 2026, Oracle and/or its affiliates.

If...	Then...
	Note: You need to execute the **Upload Request Periodic Monitor** (**C1-UPLRQ**) batch. It considers the upload requests which are in the **Deferred Processing** status and then accordingly creates or updates the entities depending on the upload request (as mentioned above). If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Note:

The **Approve** button appears when the following conditions are met:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

Rejecting an Upload Request

Prerequisites

To reject an upload request, you should have:

- Required approval To Do role assigned in the system.
- Reasons defined for the **Rejected** status of the **C1-BillableChargeUploadFI**, **C1-BillCycleUpdateUplReq**, **C1-BillGrpSortUploadRequest**, **C1-BillLevelUploadRequest**, **C1-ContractRiderUpdateUplReq**, **C1-HoldUploadRequest**, **C1-RefundUploadRequest**, **C1-ReinstatementUploadRequest**, **C1-TndrCnclUploadRequest**, **C1-BillCycleRuleCharUpdUplReq**, and **C1-WriteOffUploadRequest** business objects in the **Status Reason** screen.

Note: The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To reject an upload request:

1. Do either of the following:

If you want to...	Then...
Review an upload request through the Upload Request screen	**a.** Search for the upload request with the **Approval In Progress** status in the **Upload Request** screen. A list of upload requests with the respective status appears in the search results.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
	b. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request which you want to review.
Review an upload request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** Click the **Search** (🔍) icon corresponding to the **To Do Type** field. The **To Do Type for User Search** window appears. **d.** Enter the required To Do type in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

2. Review the details in the **Upload Request** screen.
3. If the information in the upload request is incorrect, click the **Reject** button in the **Upload Request** zone.

   The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request. **Note:** The list includes only those reasons which are defined for the **Rejected** status of the respective business object (i.e., **C1-BillableChargeUploadFI**, **C1-BillCycleUpdateUplReq**, **C1-BillGrpSortUploadRequest**, **C1-BillLevelUploadRequest**, **C1-ContractRiderUpdateUplReq**, **C1-HoldUploadRequest**, **C1-RefundUploadRequest**, **C1-ReinstatementUploadRequest**, **C1-TndrCnclUploadRequest**, **C1-BillCycleRuleCharUpdUplReq**, and **C1-WriteOffUploadRequest**) through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while rejecting the upload request.	No

Note:

The **Reject** button appears when the following conditions are met:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

4. Select the reason for rejecting the upload request from the **Status Reason** list.
5. Enter the comments (if any) while rejecting the upload request in the respective field.
6. Click **Save**.

Copyright © 2026, Oracle and/or its affiliates.

The status of the upload request is changed to **Rejected**.

Viewing the Details of a Data Record

Procedure

To view the details of a data record:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request whose details you want to view.
   The **Upload Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Filter the data records (if required) in the **Data Records** zone.
5. In the **Search Results** section, click the **View** (🔗) icon in the **View** column corresponding to the data record *w*hose details you want to view.

   The **Data Record Details** window appears. It contains the following columns:

Column Name	Column Description
Sr. No.	Indicates the order in which the data is received in the record.
CSV Column Header	Displays the column name of the CSV file.
CSV Column Value	Indicates the data received in the respective column.

6. View the details of the data record in the **Data Record Details** window.
7. Click **Close**.

Adding a Log Entry for an Upload Request

Procedure

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *u*pload request for which you want to add a log entry.
   The **Upload Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

   The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable
Log Details	Used to specify additional comments for the upload request. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⟋) icon at the bottom right corner of the text box.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Upload Request Log** zone.

Chapter 30

General Ledger (GL) Accounting Template

Topics:

- GL Accounting Template (Without Approval) Status Transition
- GL Accounting Template (With Approval) Status Transition
- Algorithms Used in C1- GLAT
- Prerequisites
- GL Accounting Template (Used for Searching)
- GL Accounting Template (Used for Viewing)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, …, and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, …, Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do for the approver to review the GL Accounting template. Once the approver approves

a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	**BS**	**AD**	**PS**
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	**Process**	**Sub Process 1**	**Sub Process 2**	**Sub Process 3**
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

Copyright © 2026, Oracle and/or its affiliates.

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	**Use GL Accounting Template (Y or N)**	**Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)**	**Algorithm Behaviour**
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

Copyright © 2026, Oracle and/or its affiliates.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	**Then, the system...**
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... • FT GL for the bill segment calculation line using the distribution code on the respective rate component • FT GL for the pass through line using the distribution code on the respective pass through line • Balancing FT GL using the distribution code on contract type
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	**Then, the system...**
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... • FT GL for bill segment calculation line using the lines in the GL Accounting template. • FT GL for the pass through line using the distribution code on the respective pass through line.

Copyright © 2026, Oracle and/or its affiliates.

If the bill segment is...	Then, the system...
	• Balancing FT GL using the line in the GL Accounting template.
A post processing bill segment	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: • GLAT Description • GLAT Status Description • GLAT ID

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Copyright © 2026, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: • If soft parameter value is set to Y then approval workflow will be triggered.
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the **C1-GLATAAPEN** Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: • If soft parameter value is set to Y then approval workflow will be triggered.
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the **C1-GLATAAPEN** Algorithm. It

Status	System Event	Algorithm	Algorithm Type	Description
				does not allow the submitter to approve or reject the GLAT request.
Deactivation Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- GL Accounting Template (Used for Viewing) on page 2279

This screen consists of the following zones:

- Search GL Accounting Template on page 2274
- GL Accounting Template Lines on page 2275

Copyright © 2026, Oracle and/or its affiliates.

Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: • Draft • Approval In Progress • Deactivation Approval In Progress • Active • Inactive • Rejected	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template. **Note:** It has a link. On clicking the link, the **GL Accounting Template** screen appears where you can view the details of the respective template.
Description	Displays the description of process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

Note: By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the template in the **Search Results** section.

Searching for a GL Accounting Template

Copyright © 2026, Oracle and/or its affiliates.

Procedure

To search for a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
   The **GL Accounting Template** screen appears.
3. Enter the search criteria in the **Search GL Accounting Template** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of templates that meet the search criteria appears in the **Search Results** section.

Creating a GL Accounting Template

Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

Procedure

To create a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
   The **GL Accounting Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

   The **GL Accounting Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments.**
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** -Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

4. Enter the required details

Copyright © 2026, Oracle and/or its affiliates.

> **Note:**
>
> You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.
>
> At least one credit and one debit line is required while defining a template.
>
> System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.
>
> Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.
6. Click **Save**.
   The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

Viewing the GL Accounting Template Details

Procedure

To view the details of a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to view.

   The **GL Accounting Template** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the template. It contains the following zone:
     - **GL Accounting Template** - Displays the details of the template.
   - **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
     - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.
3. View the details of the template in the **GL Accounting Template** zone.

Viewing the GL Accounting Template Lines Details

Procedure

To view the details of a GL Accounting Template Lines:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the template in the **Search *R*esults** section.

   The **GL Accounting Template Lines** zone appears in the **GL Accounting Template** screen.
3. View the details of the template lines in the **GL Accounting Template Lines** zone.

GL Accounting Template (Used for Viewing)

Once you create a template, the **GL Accounting Template** screen allows you to:

- View the details of a template
- Edit the details of a template
- Delete a template
- Submit a template for approval
- Approve or reject a template
- Deactivate a template

This screen consists of the following tabs:

- **Main** - Displays information about the template. It contains the following zone:
  - **GL Accounting Template** - Displays the details of the template.
- **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

GL Accounting Template - Main

The **Main** tab on the **GL Accounting Template** contains the following zone:

GL Accounting Template on page 2279

GL Accounting Template

The **GL Accounting Template** zone displays the details of the template. This zone contains the following sections:

- **Main** - This section provides basic information about the GL Accounting template. It contains the following fields:

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
GL Accounting Template Information	Displays information about the template
Status	Indicates the status of the template.
Process	Displays the process.
Description	Displays the description of the process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- **GL Accounting Template Lines** - Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.
	Note: The **Edit** button appears when the template is in the **Draft** or **Rejected** status.
Delete	Used to delete the template.
	Note: The **Delete** button appears when the template is in the **Draft** or **Rejected** status.
Submit	Used to activate the template.
	Note: The **Submit** button appears when the template is in the **Draft** or **Rejected** status.
Approve	Used to approve the template.
	Note: the **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
Reject	Used to reject the template.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: the **Reject** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
Deactivate	Used to deactivate the active template.
	Note: The **Deactivate** button appears when the template is in the **Active** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

GL Accounting Template Log on page 2281

GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

Editing a GL Accounting Template

Procedure

To edit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template whose details you want to edit.
   The **GL Accounting Template** screen for editing appears.
3. Click the **Edit** button in the **GL Accounting Template** zone.

Note: The **Edit** button appears when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments.**
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** - Used to specify the template lines in a GL accounting template. This section contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

Note:

If you want to specify more than one template lines, click the **Add** (+) icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete** (🗑) icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.
5. Click **Save**.
   The changes made to the GL Accounting template are saved.

Deleting a GL Accounting Template

Procedure

To delete a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template that you want to delete.
   The **GL Accounting Template** screen appears.
3. Click the **Delete** button in the **GL Accounting Template** zone.
   A message appears confirming whether you want to delete the template.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The **Delete** button appears when the template is in the **Draft** or **Rejected** status.

4. Click **OK**.
   The GL Accounting template is deleted.

> **Note:**
>
> You can delete a template when its status is **Draft**.

Submitting a GL Accounting Template

Prerequisites

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

Procedure

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template that you want to submit.
   The **GL Accounting Template** screen appears.
3. Click the **Submit** button in the **GL Accounting Template** zone.
   The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the **C1-GLATSUB** algorithm.	A To Do of the **C1-GLAT** To Do type is created and sent to the approver and the status of the template is changed to **Approval In Progress**.
Approval Required Flag is set to No in the **C1-GLATSUB** algorithm.	The template is created using the specified process and the status of the template is changed to **Active** .

> **Note:**
>
> The **Submit** button appears when the template is in the **Draft** or **Rejected** status.

Approving a GL Accounting Template

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

Note: The system will not allow you to approve or reject a template submitted by you.

Procedure

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the GL Accounting template screen	**a.** Search for the template in the **GL Accounting template** screen. **b.** In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template which you want to review.
Approve a GL Accounting Template from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-GLAT** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the GL Accounting template that you want to review.

   The **GL Accounting Template** screen appears.
2. Review the template details.
3. Click the **Approve** button in the **GL Accounting Template** zone.

   The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to **Active** as specified in the GL Accounting template.

Copyright © 2026, Oracle and/or its affiliates.

Note: The **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

Rejecting a GL Accounting Template

Prerequisites

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

Procedure

To reject a GL Accounting template

1. Do either of the following:

If you want to	Then
Reject a GL Accounting template through the GL Accounting Template screen	**a.** Search for the template in the **GL Accounting Template** screen. **b.** In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template which you want to review.
Reject a GL Accounting template from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-GLAT** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos.

Copyright © 2026, Oracle and/or its affiliates.

If you want to	Then
	f. Click the link in the **Message** column corresponding to the To Do of the template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Reject** button in the **GL Accounting Template** zone.

The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes
Comments	Used to specify additional information while rejecting the template.	No

Note: The **Reject** button appears when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the template is changed to **Rejected**.

Deactivating a GL Accounting Template

Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

Note:

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

Procedure

To deactivate a GL Accounting template:

Copyright © 2026, Oracle and/or its affiliates.

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template that you want to deactivate.
   The **GL Accounting Template** screen appears.
3. Click the **Deactivate** button in the **GL Accounting Template** zone.

   Note: The **Deactivate** button appears when the template is in the **Active** status.

   The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments for the deactivation of template.	No

4. Click **OK**.
   The GL Accounting template status is changed to **Deactivation Approval In Progress** .

Viewing the Log of a GL Accounting Template

Procedure

To view the log of a GL Accounting template:

1. Search for the template in the **GL Accounting template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template whose log you want to view.

   The **GL Accounting Template** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the template. It contains the following zone:
     - **GL Accounting Template** - Displays the details of the template.
   - **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
     - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.
3. Click the **Log** tab.

   The **GL Accounting Template Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Indicates the reason why the template was rejected or voided.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

Chapter 31

Payment Agreement Request

Topics:

- Payment Agreement Request (Without Approval) Status Transition
- Payment Agreement Request (With Approval) Status Transition
- Prerequisites
- Algorithms Used in C1-PaymentAgreementRequest
- Payment Agreement Request Type
- Payment Agreement Request (Used for Searching)
- Payment Agreement Request (Used for Viewing)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount - 100$, Unpaid Amount - 75$)
- B2 (Bill Amount - 250$, Unpaid Amount - 125$)
- B3 (Bill Amount - 150$, Unpaid Amount - 150$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exists in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exists in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

Copyright © 2026, Oracle and/or its affiliates.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see Payment Agreement Request (Without Approval) Status Transition on page 2294 and Payment Agreement Request (With Approval) Status Transition on page 2295. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

Note: The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see Prerequisites on page 2296.

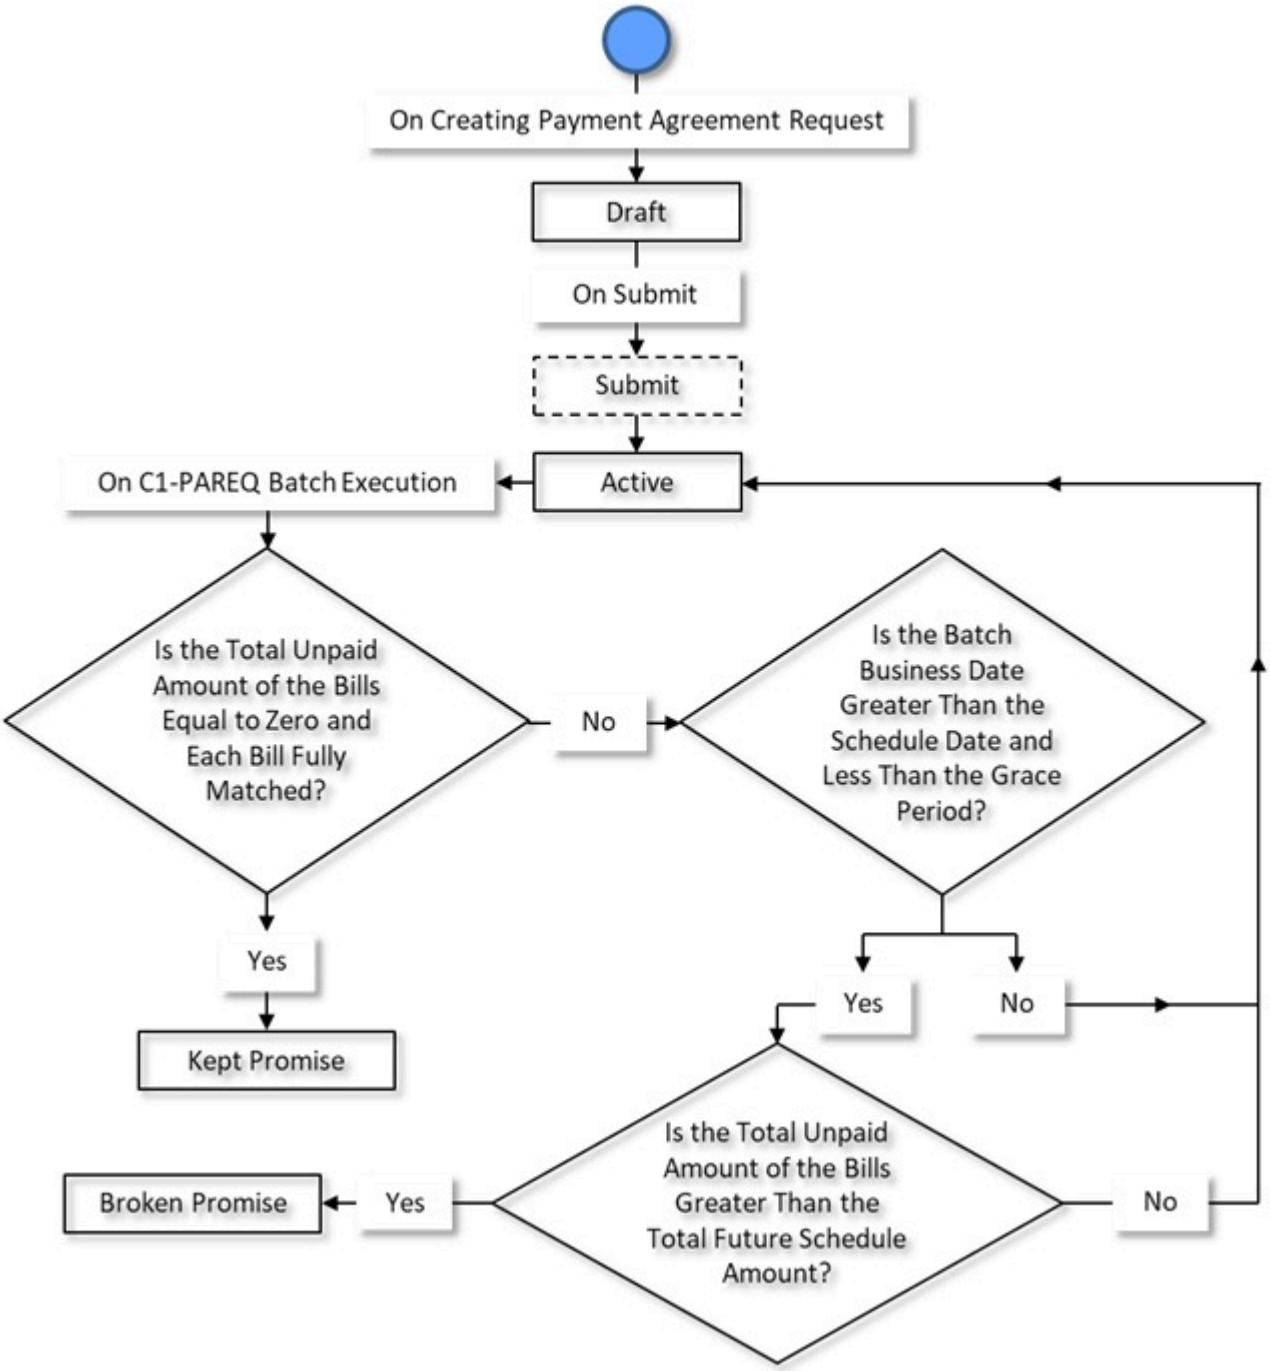
Payment Agreement Request (Without Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:

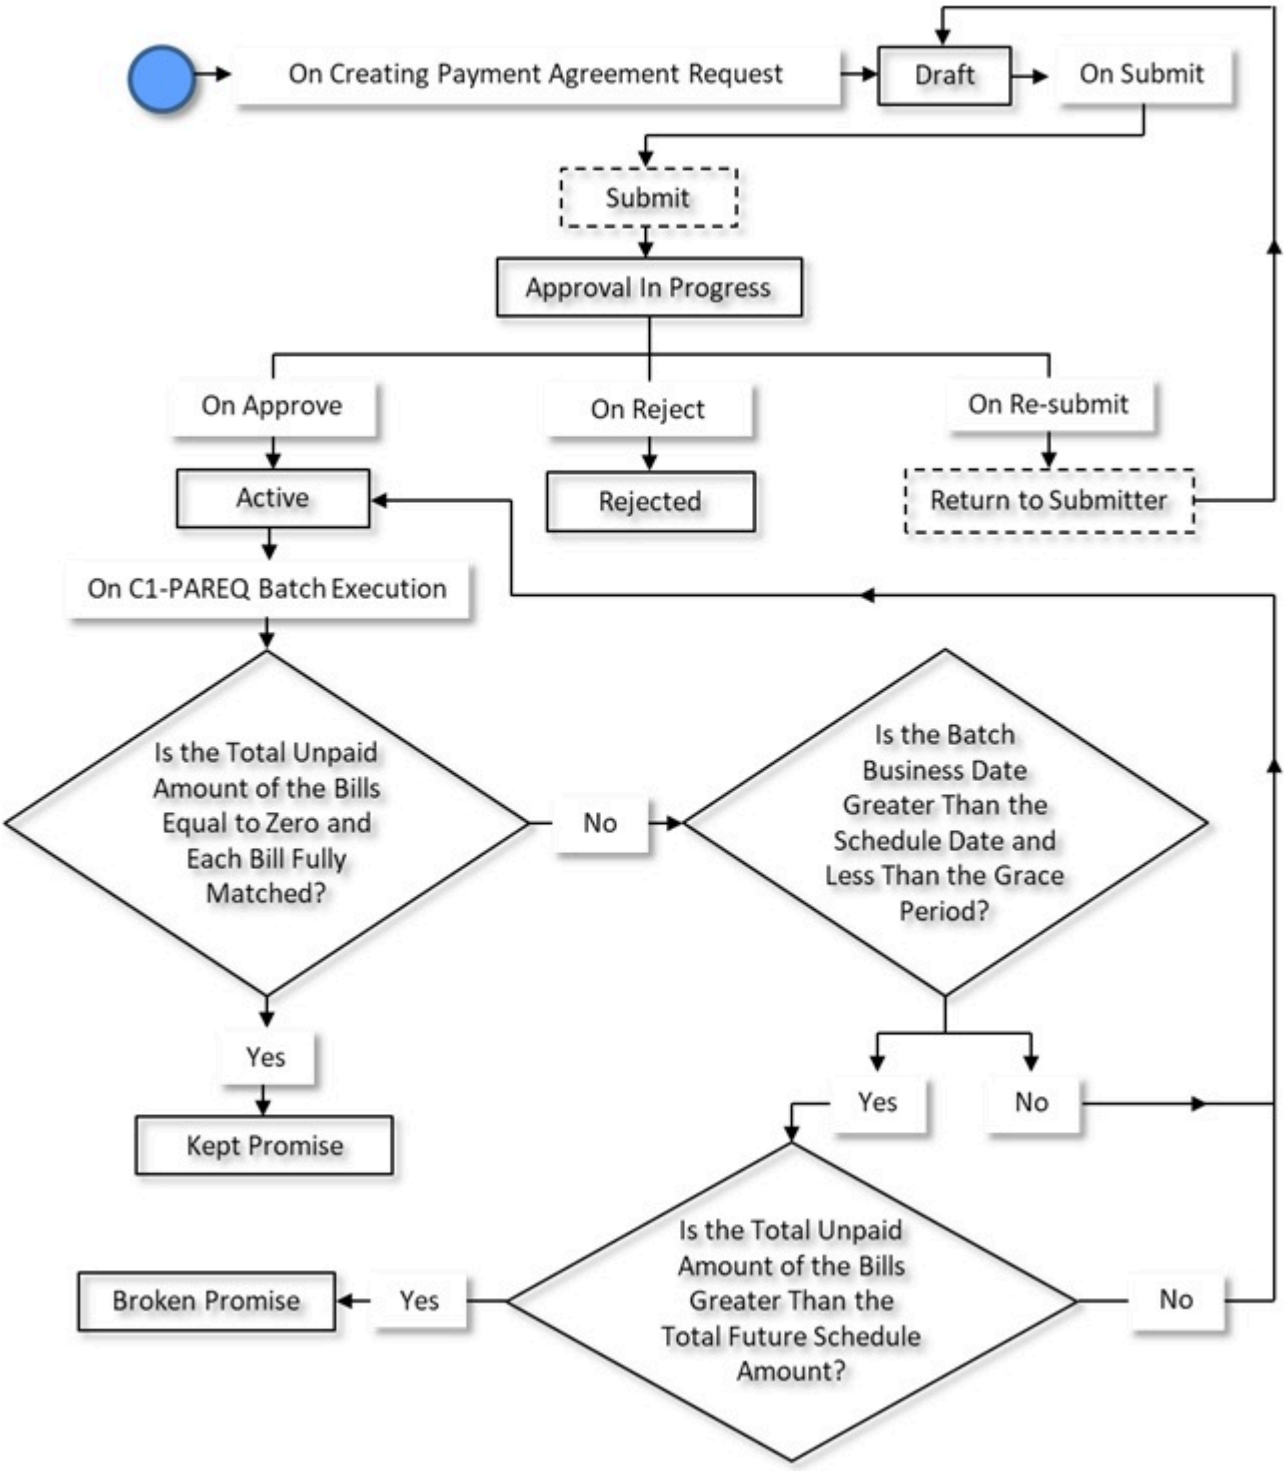


Copyright © 2026, Oracle and/or its affiliates.

Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

Copyright © 2026, Oracle and/or its affiliates.



Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system.

Copyright © 2026, Oracle and/or its affiliates.

- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**.
- Define the required payment methods and third party payors for **Payment Agreement Request**.
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create the payment agreement requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- Configure the automatic process for respective payment methods in the **Pay Method** screen.

Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to C1-PA-INFO on page 2298
Pre-Processing	C1-PA-PRE	C1-PA-PRE	Refer to C1-PA-PRE on page 2298
Validation	C1-PA-VAL	C1-PA-VAL	Refer to C1-PA-VAL on page 2298

C1-PA-INFO

This algorithm generates the payment agreement request information string which appears throughout the application. This algorithm concatenates the following fields:

- Payment Agreement Request Type Description
- Payment Agreement Request Status Description
- Payment Agreement Request ID

C1-PA-PRE

This algorithm is used to avoid the concurrency issue for payment agreement. This algorithm also validate the duplicate bill, schedule, and characteristic on the edit screen.

C1-PA-VAL

This algorithm is used to validate payment agreement request.

C1-PA-DRAFT

This algorithm is invoked when the **Payment Agreement Request** is created in the **DRAFT** status. It validates if the linked delinquency process is valid and not in the **CANCELLED**, **TERMINATED**, and **COMPLETED** status. This algorithm also adds the unpaid bills to the payment agreement request details table.

C1-PA-SUBMIT

This algorithm used to perform following task:

- Used to validate payment agreement request on submitting.
- If request type is **without approval** then PA status will move from **Draft** to **Active** automatically
- If request type is **with approval** then PA will be sent for approval depending on following parameters defined at this algorithm.
  - **Number of days before to consider in calculation** - This parameter is used to search payment agreement specified days back to calculate number of Payment Agreement.
  - **Maximum Payment Agreement allowed without approval** - If this parameter is less than calculated value then it will go without approval, otherwise with approval.
  - **Status** - One status at a time like **Active**. These defined status are used in the calculation of the number of payment agreement

Copyright © 2026, Oracle and/or its affiliates.

C1-PA-APPENT

This algorithm creates **To Do** based on the **Approval To Do Type** configured in payment agreement request type.

C1-PA-APPEXT

This algorithm checks whether an approver is associated with the approval **To Do Role** specified in the payment agreement request type. It does not allow the submitter to approve or reject the payment agreement request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** (**F1-EXLTD**) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-PA-RESUB

This algorithm is invoked on **Re-Submit** button. It moves the status of payment agreement request into **Draft**. A **To Do** will be generated for the user as submitter whose **To Do Type** and **To Do Role** are fetched from payment agreement request type.

C1-ACTENT

This algorithm will validate Payment Agreement Request before activation.

C1-PAUSRNTFY

This algorithm will generate **To Do** whenever payment agreement status will change to **Active**, **Kept Promise**, and **Broken Promise** for configure **To Do Type**.

C1-PASDTODO

This algorithm is invoked by monitor batch. This will send **To Do** notification to the user for configurable number of days(X-days) in advance of the scheduled payment date.

C1-PA-MONTR

This algorithm is invoked from the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch. It changes the status of the payment request from **Active** to **KP** (Kept Promise) or **BP** (Broken Promise) based on payment received.

Copyright © 2026, Oracle and/or its affiliates.

C1-BPADMTR

This algorithm creates a record in CI_ADM_RVW_SCH for a person or account depending on which entity type/entity id payment agreement has been created, and this record gets added when a payment agreement is broken. This is configured on the business object lifecycle for payment agreement request on the **Broken Promise** status.

Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy, and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement request provides flexibility in payment of installment amount and schedule of payment.

The **Payment Agreement Request Type** screen consists of the following zones:

- Payment Agreement Request Type List on page 2300
- Payment Agreement Request Type on page 2301

Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the **Edit** (✎) icon, the **Payment Agreement Request Type** screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Payment Agreement Request Type** screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the payment agreement request type.
	Note: You can delete a payment agreement request type only when a payment agreement request is not yet created using the payment agreement request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

Payment Agreement Request Type

The **Payment Agreement Request Type** zone displays the details of the payment agreement request type. This zone contains the following sections:

- **Main** - Displays the basic information about the payment agreement request type. It contains the following fields:

Field Name	Field Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Payment Agreement Request Business Object	Indicates the business object that will be used to create the payment agreement request. In addition, a context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the payment agreement request type.
Status	Indicates the status of the payment agreement request type. The valid values are: • Active • Inactive
Status Change Notification Type	Indicates the notification type when the status of the payment agreement request type is changed. The valid values are: • Alert • Both • To Do
Approval Required	Indicates whether approval is required while creating the payment agreement request using the payment agreement request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when the payment agreement request is submitted for approval.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve a payment agreement request which is submitted for approval.
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Submitter To Do Type	Indicates that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a payment agreement request for approval.
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a payment agreement request for approval.
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Allow Partial Amount	Indicates whether partial amount is allowed while creating the payment agreement request using the payment agreement request type.

- **Characteristics** - Lists the characteristics of the payment agreement request type. It contains the following columns:

Column Name	Column Description	Mandatory (Yes Or No)
Characteristic Type	Indicates the characteristic type.	No
Characteristic Value	Displays the value of the characteristic type.	No

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment agreement request type.
Delete	Used to delete the payment agreement request type.

Copyright © 2026, Oracle and/or its affiliates.

Button Name	Button Description
	Note: You can delete a payment agreement request type when you have not created a payment agreement request using the payment agreement request type.
Duplicate	Used to create a new payment agreement request type using an existing payment agreement request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment agreement request type is created.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Payment Agreement Request Type** zone does not appear in the **Payment Agreement Request Type** screen. It appears when you click the **Broadcast** ( ) icon corresponding to a payment agreement request type in the **Payment Agreement Request Type List** zone.

Defining a Payment Agreement Request Type

Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request type business objects defined in the application.
- Payment agreement request business objects defined in the application.
- Payment agreement request information algorithm defined using the **C1-PA-INFO** algorithm type.
- Required To Do role assigned to the **C1-PAREQ** To Do type in the application.

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object using which you want to create the payment agreement request type. The valid value is: • **Payment Agreement Request Type (i.e. C1-PARequestType)** - Enables you to maintain a payment agreement request type.	Yes
	Note: The above business object is shipped with the product. The list includes those business objects which are created using the **Payment Agreement Request Type (i.e., C1-PARQTY)** maintenance object.	

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

   The **Payment Agreement Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment agreement request type.
   - **Characteristics** - Used to define the characteristics for the payment agreement request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object using which you want to create the respective payment agreement request. The valid values are: • **Payment Agreement Request - Display (i.e., C1-PARequestType)** - Enables you to display the details of a payment agreement request.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Payment Agreement Request - Maintenance (i.e., C1-PARQTY)** - Enables you to maintain a payment agreement request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Payment Agreement Request (i.e., C1-PAREQ)** maintenance object.	
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a payment agreement request type to **Inactive** when the corresponding payment agreement request is in a status other than **Draft**, **Approval In Progress**, and **Active**.	Yes
Status Change Notification Type	Used to indicate the type of notification that you want to generate when the status of the payment agreement request type is changed. The valid values are: • Alert • To Do • Both **Note:** The list includes only those values which are defined in the **PA_STS_CHNG_NOT_TYPE** lookup field.	No
Approval Required	Used to indicate whether approval is required while creating a payment agreement request using the payment agreement request type.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a payment agreement request is submitted for approval.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** check box is selected. The **C1-PAREQ** To Do type is shipped with the product. You can use the **C1-PAREQ** To Do type or a custom To Do type, if required.	**Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a payment agreement request which is submitted for approval. **Note:** This field appears when the **Approval Required** check box is selected. The list will include only those To Do roles which are associated with the To Do type specified in the **Approval To Do Type** field.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver resubmits a payment agreement request for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver resubmits a payment agreement request for approval.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Approval Required** check box is selected. The list will include only those To Do roles which are associated with the To Do type specified in the **Submitter To Do Type** field.	**Note:** This field is required when the **Approval Required** option is selected.
Allow Partial Amount	Used to indicate whether partial amount is allowed while creating the payment agreement request using the payment agreement request type.	No

6. Enter the required details in the **Main** section.
7. Define characteristics for the payment agreement request type, if required.
8. Click **Save**.
   The new payment agreement request type is defined.

Defining a Characteristic for a Payment Agreement Request Type

Prerequisites

To define a characteristic for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Agreement Request Type**).

Procedure

To define a characteristic for a payment agreement request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment agreement request type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	**Note:** This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the payment agreement request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the payment agreement request type, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment agreement request type, click the ***D*elete** (🗑) icon corresponding to the characteristic.

Editing a Payment Agreement Request Type

Prerequisites

To edit a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application.
- Payment agreement request information algorithm defined using the **C1-PA-INFO** algorithm type.
- Required To Do role assigned to the **C1-PAREQ** To Do type in the application.

Procedure

To edit a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.

Copyright © 2026, Oracle and/or its affiliates.

A sub-menu appears.

3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
   The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column *c*orresponding to the payment agreement request type whose details you want to edit.

   The **Payment Agreement Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment agreement request type.
   - **Characteristics** - Used to define the characteristics for the payment agreement request type.

   The **Main** section contains the following fields:

Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request

Copyright © 2026, Oracle and/or its affiliates.

type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application
- Payment agreement request information algorithm defined using the **C1-PA-INFO** algorithm type.
- Required To Do role assigned to the **C1-PAREQ** To Do type in the application.

Procedure

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
   The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column corresponding to the payment agreement request type whose copy you want to create.

   The **Payment Agreement Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment agreement request type.
   - **Characteristics** - Used to define the characteristics for the payment agreement request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object using which you want to create the respective payment agreement request. The valid values are: • **Payment Agreement Request - Display (i.e., C1-PARequestType)** - Enables you to display the details of a payment agreement request. • **Payment Agreement Request - Maintenance (i.e., C1-PARQTY)** - Enables you to maintain a payment agreement request.	Yes
	Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Payment Agreement Request (i.e., C1-PAREQ)** maintenance object.

Payment Agreement Request (Used for Searching)

The **Payment Agreement Request** screen allows you to search for a payment agreement request through various search criteria. It also allows you to create a hold request. It contains the following zone:

- Search Payment Agreement Request on page 2316

Through this screen, you can navigate to the following screen:

- Payment Agreement Request (Used for Viewing) on page 2327

Search Payment Agreement Request

The **Search Payment Agreement Request** zone allows you to search for a payment agreement request using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment agreement request using request or bill details. The valid values are: • Request Details • Bill Details **Note:** By default, the **Request Details** option is selected.	Yes
Payment Agreement Request ID	Used to search a particular payment agreement request.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Request Details** option from the **Search By** list.	
Payment Agreement Request Type	Used to search payment agreement requests which are created using a particular payment agreement request type. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Status	Used to search payment agreement requests with a particular status. The valid values are: • Active • Approval In Progress • Broken Promise • Draft • Kept Promise • Rejected **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Entity Type	Used to search for payment agreement requests which are created for a particular entity type. The valid values are: • Account • Person **Note:** This field appears when you select the **Request Details** option from the **Search By** list. The list includes only those values which are defined in the **PA_ENTITY_TYPE_FLG** lookup field. By default, the **Account** option is selected.	No
Created From	Used to search for payment agreement requests which are created on or after the specified date. **Note:** This field appears when you select the **Request Details** option from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. Simultaneously, you can also specify the time or select it using the **Time Picker** ( ) icon corresponding to the field. The creation from date cannot be later than the created to date.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Entity ID	Used to search for payment agreement requests which are created for a particular entity. **Note:** This field appears when you select the **Request Details** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Entity ID** field. On clicking the **Search** icon, the **Account Search** window appears.	
Created To	Used to search for payment agreement requests which are created till a particular date. **Note:** This field appears when you select the **Request Details** option from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field. Simultaneously, you can also specify the time or select it using the **Time Picker** (🕒) icon corresponding to the field. The creation to date cannot be earlier than the created from date.	No
Delinquency Process ID	Used to search for payment agreement requests which are created for a particular delinquency process. **Note:** This field appears when you select the **Request Details** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Delinquency Process ID** field. On clicking the **Search** icon, the **Delinquency Process Search** window appears.	No
Bill ID	Used to search for payment agreement requests which are created for a particular bill ID. **Note:** You can search for a bill by clicking the **Search** (🔍) icon corresponding to the field. This field appears when you select the **Bill Details** option from the **Search By** list.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Bill Details** option from the **Search By** list.	
Alternate Bill ID	Used to search a particular bill using the alternate bill ID. **Note:** This field appears when you select the **Bill Details** option from the **Search By** list.	No
Bill Date To	Used to search bills which are created till a particular date. **Note:** This field appears when you select the **Bill Details** option from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for a payment agreement request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the payment agreement request is created.
Payment Agreement Request Information	Displays information about the payment agreement request. **Note:** It has a link. On clicking the link, the **Payment Agreement Request** screen appears where you can view the details of the respective payment agreement request.
Schedule Amount	Displays the amount which is scheduled for payment. **Note:** This column appears only when you select the **Bill Details** option from the **Search By** list.
Status	Indicates the status of the payment agreement request. The valid values are: • Active • Approval In Progress • Broken Promise • Draft • Kept Promise • Rejected
Last Updated Date Time	Displays the most recent date and time when the payment agreement request is updated.
Total Unpaid Amount	Displays the remaining balance of all the debit bills which are not been fully paid or matched against the corresponding credit bills. **Note:** This column appears only when you select the **Request Details** option from the **Search By** list.
Entity Type	Indicates the entity type for which the payment agreement request is created.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Entity Information	Displays information about the account or person. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. If you have created a payment agreement request for an account entity, the system displays the link of the **Account** screen else the system displays the link of the **Person** screen where you can view the details of the respective entity.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that navigation links appear in the **Search Results** section only when the records in the search results exceed 20.

Bill Details

The **Bill Details** zone lists the details of the unpaid debit bills. This zone contains the following columns:

Column Name	Column Description
Bill Information	Indicates the bill against which the payment agreement request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Bill Amount	Displays the initial amount of a bill before any subsequent bill revisions are applied.
Unpaid Amount	Displays the outstanding amount owed on a bill.
Due Date	Displays the date when the payment must be made for the billed amount.

By default, the **Bill Details** zone does not appear in the **Payment Agreement Request** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment agreement request in the **Search Payment Agreement Request** zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4610.

Searching for a Payment Agreement Request

Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application.

Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Payment Agreement Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.
   The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

Creating a Payment Agreement Request

Prerequisites

To create a payment agreement request, you should have:

- Payment agreement request types defined in the application.

Procedure

To create a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.

Copyright © 2026, Oracle and/or its affiliates.

2. From the **Main** menu, select **Delinquency Management** and then click **Payment Agreement Request**. A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request** sub-menu.

   The **Add Payment Agreement Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to indicate the payment agreement request type using which you want to create the payment agreement request.	Yes
Entity Type	Used to indicate the entity type for payment agreement request. The valid values are: • Account • Person **Note:** The list includes only those values which are defined in the **PA_ENTITY_TYPE_FLG** lookup field. By default, the **Account** option is selected.	Yes
Entity ID	Used to indicate the account for which you want to create the payment agreement request. **Note:** The **Search** (🔍) icon appears corresponding to the **Entity ID** field. On clicking the **Search** icon, the **Account Search** window appears. On specifying the account, the description of the account appears corresponding to the **Account** field.	Yes
Linked to Delinquency Process	Used to indicate whether the payment agreement request should be linked with the delinquency process.	No
Delinquency Process ID	Used to indicate the delinquency process which should be linked with the payment agreement request. **Note:** This field appears only when the **Linked to Delinquency Process** option is selected. The **Search** (🔍) icon appears corresponding to the **Delinquency Process ID** field. On clicking the **Search** icon, the **Delinquency Process Search** window appears. On specifying the delinquency process ID, the description of the delinquency process ID appears corresponding to the **Delinquency Process ID** field.	Yes (Conditional) **Note:** This field is required when the **Linked to Delinquency Process** option is selected.

Tip: Alternatively, you can access the **Add Payment Agreement Request** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request** screen.

4. Enter the required fields.

Copyright © 2026, Oracle and/or its affiliates.

5. Click **OK**.
   The payment agreement request is created and the status of the payment agreement request is set to **Draft**. The **Payment Agreement Request** screen appears with the details of the payment agreement request.

> **Note:**
>
> You cannot create a payment agreement request for a delinquency process when the same delinquency process is associated with another payment agreement request.
>
> You can associate a delinquency process with a payment agreement request only when the delinquency process is not in any of the following statuses:
>
> - **Canceled**
> - **Terminated**
> - **Completed**

Defining a Characteristic for a Payment Agreement Request

Prerequisites

To define a characteristic for a payment agreement request:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Agreement Request**).

Procedure

To define a characteristic for a payment agreement request:

1. Ensure that the **Characteristics** section is expanded when you are editing, submitting, approving, rejecting or *r*esubmitting a payment agreement.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the characteristic is effective for the payment agreement request.	Yes (Conditional)
	Note: You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	**Note:** This field is required when you are defining a characteristic for the payment agreement request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **payment agreement request**.	**Note:** This field is required when you are defining a characteristic for the payment agreement request.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the payment agreement request.

2. Enter the required details.
3. If you want to define more than one characteristic for the payment agreement request, click the **Add** (+) icon *a*nd then repeat step 2.

Note: However, if you want to remove a characteristic from the payment agreement request, click the **Delete** (🗑) icon corresponding to the characteristic.

Defining a Payment Schedule for a Payment Agreement Request

Prerequisites

To define a payment schedule for a payment agreement request, you should have:

- The auto pay process defined for the respective account in the application.

Procedure

To define a payment schedule for a payment agreement request:

1. Ensure that the **Payment Schedule** section is expanded when you *a*re editing, submitting, approving, rejecting, or resubmitting a payment agreement request.

   The **Payment Schedule** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Date	Used to specify the date on which the payment is scheduled.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field. The schedule date must be later than the system date.	**Note:** This field is required when you specify the amount in the **Schedule Amount** field. The schedule date must be later than the system date.
Schedule Amount	Used to specify the amount of the unpaid bills which is scheduled to be paid in installments.	Yes (Conditional) **Note:** This field is required when you specify the date in the **Schedule Date** field.
Auto Pay ID	Used to indicate the auto pay ID of the payor.	Yes (Conditional)
	Note: This field is enabled when you select an option from the **Pay Method** list in the **Main** section of the **Payment Agreement Request** screen for which the automatic payment process is applicable. You must set the **Grace Days** option to zero in the **Pay Method** screen against a respective payment method for which you want the automatic payment process to take place. The **Search** ( ) icon appears corresponding to this field. On clicking the **Search** icon, the **Auto Pay ID Search** window appears.	**Note:** This field is required when you select an option from the **Pay Method** list in the **Main** section of the **Payment Agreement Request** screen.

2. Enter the required details.
3. If you want to define more than one payment schedule for the payment agreement request, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a payment schedule from the payment agreement *r*equest, click the **Delete** ( ) icon corresponding to the payment schedule.

Payment Agreement Request (Used for Viewing)

The **Payment Agreement Request** screen allows you to:

- View the details of a payment agreement request
- View the details of a bill added in a payment agreement request
- View the details of a payment schedule
- Edit a payment agreement request
- Delete a payment agreement request
- Delete a bill from a payment agreement request
- Submit a payment agreement request for approval
- Approve or reject a payment agreement request
- Resubmit a payment agreement request
- Filter an overdue bill of an account
- Add an overdue bill in a payment agreement request
- View the log of a payment agreement request
- Add a log entry for a payment agreement request

It consists of the following tabs:

- Payment Agreement Request - Main on page 2327
- Payment Agreement Request - Bills on page 2331
- Payment Agreement Request - Log on page 2332

Payment Agreement Request - Main

The **Main** tab displays information about the payment agreement request. It contains the following zones:

- Payment Agreement Request on page 2327
- Bill Details on page 2330
- Payment Schedule on page 2330

Payment Agreement Request

The **Payment Agreement Request** zone displays the details of the payment agreement request. It contains the following sections:

- **Main** - Displays basic information about the payment agreement request. It contains the following fields:

Field Name	Field Description
Payment Agreement Request Information	Displays information about the payment agreement request.
Payment Agreement Request Type	Indicates the payment agreement request type using which the payment agreement request is created.
	Note: It has a link. On clicking the link, the **Payment Agreement Request Type** screen appears where you can view the details of the payment agreement request type.
Entity Information	Displays information about the account or person.

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Entity Type	Indicates the entity type for which the payment agreement request is created. The valid values are: • Account • Person
Status	Indicates the status of the payment agreement request. The valid values are: • Active • Approval In Progress • Broken Promise • Draft • Kept Promise • Rejected
Third Party Payor	Indicates an external party who is responsible for paying the amount on behalf of the payor account.
Description	Indicates the description of the third party payor.
Payor Account ID	Displays the payment agreement requests which are created for a particular payor account. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective payor account.
Pay Method	Displays the method using which the payment is made.
Total Unpaid Amount	Displays the remaining balance of all the debit bills which are not been fully paid or matched by the corresponding credit bills.
Total Future Schedule Amount	Displays the total remaining balance which is scheduled for payment.
Total Payment Agreement Amount	Displays the total amount of the payment which is made against the payment agreement.

- **Record Actions** - Enables you to perform various actions on the payment agreement request. It contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the payment agreement request. **Note:** The **Edit** button appears when the payment agreement request is in the **Active** or **Draft** status.
Delete	Used to delete the payment agreement request. **Note:** The **Delete** button appears when the payment agreement request is in the **Draft** status.
Submit	Used to submit the payment agreement request for approval.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The **Submit** button appears when the payment agreement request is in the **Draft** status.
Approve	Used to approve the payment agreement request.
	Note: The **Approve** button appears when: • The payment agreement request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the payment agreement request.
Reject	Used to reject the payment agreement request.
	Note: The **Reject** button appears when: • The payment agreement request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the payment agreement request.
Resubmit	Used to request the user for resubmitting the payment agreement request for approval.
	Note: The **Resubmit** button appears when: • The payment agreement request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the payment agreement request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment agreement request is created.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the payment agreement request status is updated.
Create Date/Time	Displays the date and time when the payment agreement request is created.

- **Characteristics** - This section lists the characteristics of the payment agreement request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the payment agreement request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Copyright © 2026, Oracle and/or its affiliates.

Bill Details

The **Bill Details** zone displays the bills that are added in the payment agreement request. This zone contains the following columns:

Column Name	Column Description
Bill Information	Displays information about the bill. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Original Bill Amount	Displays the initial amount of a bill before any revisions or adjustments are applied.
Due Date	Displays the date when the payment must be made for the billed amount.
Current Bill Balance	Displays the outstanding amount owed on a bill.
Overdue Process Information	Displays information about the overdue process. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Overdue Process** screen appears where you can view the details of the respective overdue process.

Note:

The **Delete** button appears only when the payment agreement request is in the **Draft** status.

To delete a bill, select the check box corresponding to the bill and click the **Delete** button. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the bills listed in the respective page.

Pagination is used to display limited number of records in the **Bill Details** zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Bill Details** zone only when the records exceed 20.

Bills which are added in the payment agreement request must have the same currency.

Payment Schedule

The **Payment Schedule** zone displays the payments scheduled for the bills which are added in the payment agreement request. It contains the following columns:

Column Name	Column Description
Schedule Date	Displays the date on which the payment is made for the outstanding bill.
Schedule Amount	Displays the amount of the bill which is scheduled for payment in installments.
Auto Pay ID	Indicates the automatic payment ID of the payor.
Payment Event	Indicates the payment event whose frozen payment you want to transfer. **Note:** It has a link. On clicking the link, the **Payment Event** screen appears where you can view the details of the respective payment event.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** Pagination is used to display limited number of records in the **Payment Schedule** zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Payment Schedule** zone only when the records exceed 20.

Payment Agreement Request - Bills

The **Bills** tab contains the following zone:

- Search Bills on page 2331

> **Note:** The **Bills** tab appears only when the payment agreement request is in the **Draft** status.

Search Bills

The **Search Bills** zone allows you to search for overdue bills (of an account) using various search criteria. It also allows you to add the overdue bills in the payment agreement request. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for overdue bills using the bill details. The valid value is: • Bill Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search for a particular bill. **Note:** The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears.	No
Bill Date From	Used to search the overdue bills which are created from a particular date onwards.	No
Bill Date To	Used to search the overdue bills which are created till a particular date.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, a context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Unpaid Amount	Displays the remaining balance of the respective debit bill which is not been fully paid or matched by the corresponding credit bill.

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Person Name	Displays the name of the person to whom the account belongs.
Account	Displays information about the account. In addition, a context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Overdue Process Information	Displays information about the overdue process. In addition, a context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Overdue Process** screen appears where you can view the details of the respective overdue process.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the payment agreement request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the payment agreement request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all the bills listed in the respective page to the payment agreement request.

Note: Pagination is used to display limited number of records in the **Bill Details** zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages. Note that the navigation links appear in the **Bill Details** zone only when the records exceed 20.

Payment Agreement Request - Log

The **Log** tab contains the following zone:

- Payment Agreement Request Log on page 2332

Payment Agreement Request Log

The **Payment Agreement Request Log** zone on the **Payment Agreement Request** screen lists the complete trail of actions performed on the payment agreement request. This zone contains the following columns:

Copyright © 2026, Oracle and/or its affiliates.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment agreement request.
Details	Displays the details about the action performed on the payment agreement request.
User	Indicates the user who has performed the action on the payment agreement request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment agreement request.
Status Reason	Displays the status reason of action performed on the payment agreement request.
Old Payment Schedule	Displays the details of old payment schedule.

Note: You can manually add a log entry for the payment agreement request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

The **Add Payment Agreement Request Log** window appears. Enter **Log Details** and click **Save**. The payment agreement request log is added.

Editing a Payment Agreement Request

Procedure

To edit a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to edit.
   The **Payment Agreement Request** screen appears.
3. Click the **Edit** button in the **Payment Agreement Request** zone.

   The **Payment Agreement Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment agreement request.
   - **Bill Details** - Used to specify the bill details in the payment agreement request.
   - **Payment Schedule** - Used to specify the payment schedule details in the payment agreement request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable

Copyright © 2026, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Indicates the payment agreement request type using which the payment agreement request is created.	Not applicable
Entity Information	Used to indicate the entity for which the payment agreement request is created.	Not applicable
Entity Type	Used to indicate the entity type for which the payment agreement request is created. The valid values are: • Account • Person	No
Third Party Payor	Used to indicate the external party who is responsible for paying the amount on behalf of the payor account. **Note:** The **Third Party Payor** list is enabled only when the option corresponding to the **Third Party Payor** list is selected. By default, the **Third Party Payor** list is disabled.	Yes (Conditional) **Note:** This field is required when you specify a value for the **Auto pay ID** field in the **Payment Schedule** section.
Payor Account ID	Displays the third party payor's account ID. **Note:** By default, this field is disabled. On clicking the option corresponding to the **Third Party Payor** list, the payor account ID is set to blank. On specifying the respective third party payor, the payor account ID of third party payor appears in the **Payor Account ID** field.	Not applicable
Pay Method	Used to indicate the method using which the payment is made. **Note:** The valid values differ with respect to the description added for respective pay method in the **Pay Method** screen.	Yes
Comments	Used to specify additional details about the payment agreement request.	No
Total Unpaid Amount	Displays the sum of unpaid amount of the bills.	Not applicable
Total Future Schedule Amount	Displays the sum of future schedule amount.	Not applicable

4. Add or modify the details of the payment agreement request, if required.
5. Define, edit, or remove characteristics of the payment agreement request, if required.
6. Define or remove a bill from the payment agreement request, if required.
7. Click **Save**.
   The changes made to the payment agreement request are saved.

Copyright © 2026, Oracle and/or its affiliates.

Note: You cannot edit a payment agreement request if the current date is later than the date derived by adding the latest schedule date to the grace days specified in the **Pay Method** screen.

Deleting a Payment Agreement Request

Procedure

To delete a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to delete.
   The **Payment Agreement Request** screen appears.
3. Ensure that **Main** tab is selected.
4. Click the **Delete** button in the **Payment Agreement Request** zone.
   A message appears confirming whether you want to delete the payment agreement request.

Note: The **Delete** button appears when the payment agreement request is in the **Draft** status.

5. Click **OK**.
   The payment agreement request is deleted.

Adding an Additional Overdue Bill of an Account in a Payment Agreement Request

Procedure

To add an additional overdue bill of an account in a payment agreement request:

1. Ensure that the **Bill Details** section is expanded when you are editing a payment agreement request which is in the **Active** status.

   The **Bill Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to indicate the bill which is added in the payment agreement request. **Note:** The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears. On specifying the value for a bill, the description of the bill appears corresponding to the **Bill ID** field. You cannot add a bill in the payment agreement request which does not belong to the respective account.	Yes

2. If you want to define more than one bill for the payment agreement request, click the **Add** (+) icon *a*nd then repeat step 2.

Note: However, if you want to remove a bill from the payment agreement request, click the **Delete** (🗑) icon corresponding to the bill.

Submitting a Payment Agreement Request

Prerequisites

To submit a payment agreement request, you should have:

- At least one overdue bill added to the payment agreement request which is in the **Complete** status.
- Payment schedule defined for the payment agreement request.

Procedure

Copyright © 2026, Oracle and/or its affiliates.

To submit a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to submit.
   The **Payment Agreement Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Payment Agreement Request** zone.
   The system behaves in the following manner:

If...	Then
The **Approval Required** check box is selected in the respective payment agreement request type.	The status of the payment agreement request is changed to **Approval In Progress**. A To Do is created using the To Do type (i.e. **C1-PAREQ**) specified in the **Approval To Do Type** field of the respective payment agreement request and then assigned to the users with the role specified in the **Approval To Do Role** field of the respective payment agreement request. In addition, a log entry is created for the payment agreement request when the To Do is created for the approver.
The **Approval Required** check box is not selected in the respective payment agreement request type.	The status of the payment agreement request is changed to **Active**.

Note: The **Submit** button appears when the payment agreement request is in the **Draft** status.

Removing an Overdue Bill from a Payment Agreement Request

Prerequisites

To remove an overdue bill from a payment agreement request, you should have:

- At least one overdue bill added to the payment agreement request

Procedure

To remove an overdue bill from a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to view.
   The **Payment Agreement Request** screen appears.
3. Select the check box corresponding to the overdue bill that you want to delete in the **Bill Details** zone.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** You can also select multiple overdue bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the overdue bills listed in the respective page.

4. Click **Delete**.
   A message appears indicating that the selected overdue bill has been successfully removed from the payment agreement request. The removed overdue bill appears in the **Search Bills** zone of the **Bills** tab.
5. Click **OK**.
   The **Delete** button appears when the payment agreement request is in the **Draft** status.

Approving a Payment Agreement Request

You can view the number of payment agreement requests which are pending for approval in the **Payment Agreement Request** screen. The approver can review, and accordingly approve or reject the payment agreement request based on the observations.

> **Note:** The system will not allow you to approve or reject a payment agreement request submitted by you.

Procedure

To approve a payment agreement request:

1. Do either of the following:

If you want to...	Then...
Approve a payment agreement request through the Payment Agreement Request screen	**a.** Search for the payment agreement request in the **Payment Agreement Request** screen. **b.** In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request which you want to review.
Approve a payment agreement request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** In the **To Do List** screen, click the **Search** (🔍) icon corresponding to the **To Do Type** field. On clicking the **Search** icon, the **To Do Type for User Search** window appears. **d.** Enter the **C1-PAREQ** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears.

Copyright © 2026, Oracle and/or its affiliates.

If you want to...	Then...
	f. Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the payment agreement request that you want to review.

The **Payment Agreement Request** screen appears.

2. Review the payment agreement request details.
3. Click the **Approve** button in the **Payment Agreement Request** zone.
The status of the payment agreement request is changed to **Active**.

Note:

The **Approve** button appears when:

- The payment agreement request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment agreement request.

You cannot approve a payment agreement request for a delinquency process when the delinquency process is either in the **Canceled**, **Completed**, or **Terminated** status.

Rejecting a Payment Agreement Request

Prerequisites

To reject a payment agreement request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a payment agreement request, you need to specify the reason why you want to reject the payment agreement request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentAgreementRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment agreement request submitted by you.

Procedure

To reject a payment agreement request:

1. Do either of the following:

Copyright © 2026, Oracle and/or its affiliates.

If you want to	Then
Reject a payment agreement request through the Payment Agreement Request screen	**a.** Search for the payment agreement request in the **Payment Agreement Request** screen. **b.** In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment request which you want to review.
Reject a payment agreement request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do List** screen appears. **c.** In the **To Do List** screen, click the **Search** (🔍) icon corresponding to the **To Do Type** field. On clicking the **Search** icon, the **To Do Type for User Search** window appears. **d.** Enter the **C1-PAREQ** in the **To Do Type** field. **e.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **f.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **g.** Click the link in the **Message** column corresponding to the To Do of the payment agreement request that you want to review.

The **Payment Agreement Request** screen appears.

2. Review the payment agreement request details.
3. Click the **Reject** button in the **Payment Agreement Request** zone.

   The **Reject Payment Agreement Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment agreement request. **Note:** If you are rejecting the payment agreement request, this list includes only those reasons which are defined for the **Rejected** status of the **C1-PaymentAgreementRequest** business object through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while rejecting the payment agreement request.	No

Note: The **Reject** button appears when:

- The payment agreement request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment agreement request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the payment agreement request is changed to **Rejected**.

Resubmitting a Payment Agreement Request

Prerequisites

To resubmit a payment agreement request, you should have:

- At least one overdue bill added to the payment agreement request
- Payment schedule defined for the payment agreement request

Procedure

To resubmit a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to resubmit.
   The **Payment Agreement Request** screen appears.
3. Click the **Resubmit** button in the **Payment Agreement Request** zone.

   The **Resubmit Payment Agreement Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes that the submitter should make in the payment agreement request before resubmitting the payment agreement request for approval. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	Yes

Note: The **Re Submit** button appears when the following conditions are met:

- The payment agreement request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment agreement request.

4. Enter the comments in the respective field.
5. Click **Save**.
   The status of the payment agreement request is changed to **Draft**. A To Do is created of the To Do type (i.e. **C1-PAREQ**) specified in the **Submitter To Do Type** field of the respective payment agreement request type and then assigned to the users with the role specified in the **Submitter To Do Role** field of the respective payment agreement request type. In addition, a log entry is created for the payment agreement request when the To Do is created for the submitter.

Copyright © 2026, Oracle and/or its affiliates.

> **Note:** The To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective payment agreement request type.

Activating a Payment Agreement Request

Prerequisites

To activate a payment agreement request, you should have:

- At least one overdue bill added to the payment agreement request.
- Payment schedule defined for the payment agreement request.

Procedure

To activate a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.

> **Note:** The payment agreement request must be in the **Broken Promise** status.

2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to activate.
   The **Payment Agreement Request** screen appears.
3. Click the **Activate** button in the **Payment Agreement Request** zone.
   The status of the payment agreement request is changed to **Active**.

Filtering an Overdue Bill of an Account

Prerequisites

To filter an overdue bill of an account, you should have:

- Overdue bill available for the respective account.

Procedure

To filter an overdue bill of an account:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.

   Note: The payment request must be in the **Draft** status.

2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment request which you want to review.
   The **Payment Agreement Request** screen appears.
3. Ensure that the **Bills** tab is selected.
   The **Search Bills** zone appears.

   Note: If there is any overdue bill existing for an account, then that bill appears in the **Search Results** section of the **Search Bills** zone.

4. Click the **Expand Filter** button to view the filter area.

   Note: You can filter the list using the **Bill ID**, **Bill Date From**, and **Bill Date To** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

5. Enter the search criteria in the **Search Bills** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.
   A filtered list of overdue bills that meet the search criteria appear in the **Search Results** section.

   Note:

Adding an Overdue Bill in a Payment Agreement Request

Prerequisites

To add an overdue bill in a payment agreement request, you should have:

- Overdue bills that are in the **Complete** status for an account where the outstanding amount is greater than zero.

Procedure

To add an overdue bill in a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.

   Note: The payment request must be in the **Draft** status.

2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose details you want to view.
   The **Payment Agreement Request** screen appears.
3. Ensure that the **Bills** tab is selected.
   The **Search Bills** zone appears.

   Note: If an overdue bill for an account is already listed in the **Search Results** section, you can directly proceed to step 6, else you can resume from step 4.

4. Click the **Expand Filter** button and enter the search criteria in the **Search Bills** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of overdue bills that meet the search criteria appears in the **Search Results** section.
6. In the **Search Bills** zone, select the check box corresponding to the overdue bill that you want to add in a payment agreement request.

   Note: You can add more than one overdue bill to the payment agreement request at the same time.

7. Click the **Add** button in the **Search Bills** zone.
   A message appears indicating that selected bills have been successfully added to the payment agreement request.
8. Click **OK**.
   The respective overdue bill appears in the **Bill Details** section of the **Payment Agreement Request** zone.

   Note:

   You cannot add a bill in the payment agreement request if its outstanding balance is less than or equal to zero.

   You cannot add a bill to the payment agreement request when the bill is a part of another payment agreement request and is not in the **Complete** status.

Oracle Revenue Management and Billing enables you to create the following inbound messages through the respective inbound web services:

Inbound Message	Inbound Web Service
Health Care Inbound Message on page 2348	C1-HCInboundMessage on page 2772

Once an inbound message is created, you can submit the inbound message for validation and processing from the user interface or through a batch process. The following table lists the batches which validate and process the respective inbound message at regular intervals:

Inbound Message	Batch Control Name
Health Care Inbound Message	Health Care Inbound Message Periodic Monitor (C1-HCINB)

For more information about the batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

Health Care Inbound Message

On calling the **C1-HCInboundMessage** web service, you can create a health care inbound message using a health care inbound message type. You can create a health care inbound message type using the **Health Care Inbound Message Type (C1-HCInboundMsgType)** business object. The health care inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the health care inbound message should be created in the system. You must specify the **Health Care Inbound Message (C1-HCInboundMessage)** business object in the health care inbound message type.
- **Customer Registration Type** - The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. The customer registration type helps the system to determine:
  - **Customer Registration Business Object** - The business object using which the customer registration object should be created in the system. You must specify the **Customer Registration - Health Care (C1-CustomerRegistrationHC)** business object in the customer registration type.
  - **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Person BO (C1_PERSON_BO)** business object in the customer registration type.
  - **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Account BO (C1-AccountBO)** business object in the customer registration type.
  - **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the customer registration type.
  - **Membership Business Object** - The business object using which the membership should be created in the system. You must specify the **Membership (C1-Membership)** business object in the customer registration type.
  - **Address Business Object** - The business object using which the effective dated address should be created in the system. You must specify the **Address (C1-Address)** business object in the customer registration type.

  While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.

The following table lists the various activities that you can perform for the respective combination through the **C1-HCInboundMessage** web service:

Person Type	Policy Category	Enables you to:
Parent Customer	Self-Funded	• Create or edit a parent customer • Create or edit a bill group of the parent customer • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of a bill group • Create or edit the policies of a bill group
	Fully-Insured Group	• Create or edit a parent customer • Create or edit a bill group of the parent customer • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the parent customer and bill group • Create or edit the policies of the parent customer and bill group

Copyright © 2026, Oracle and/or its affiliates.

Person Type	Policy Category	Enables you to:
		• Create or edit the plans of the policies • Associate one or more pricing rule types with a policy plan • Create or edit the pricing rules of the policy plans • Terminate, reinstate, or renew policies of the parent customer and bill group
Bill Group	Self-Funded	• Create or edit a bill group • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the bill group • Create or edit the policies of the bill group
	Fully-Insured Group	• Create or edit a bill group • Create the derivation and pricing parameters for the bill group • Create or edit the accounts of the bill group • Create or edit the policies of the bill group • Create or edit the plans of the policies • Associate one or more pricing rule types with a policy plan • Create or edit the pricing rules of the policy plans • Terminate, reinstate, or renew policies of the bill group
Any Other Person Type	-	• Create or edit a person • Credit or edit the accounts of the person • Create or edit the memberships of the policy plans • Add or remove members from a membership • Create or edit the one-time or recurring pass-through billable charges for a membership • Create or edit the benefits charges for a membership

The following table describes how the system behaves when the respective entity information is given in a health care inbound message:

Entity	System Behavior
Person	The system uses the **C1-PERSTYPE** feature configuration to decide whether the person type specified in the health care inbound message represents **Parent Customer** or **Bill Group**. If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. Note that the memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.

Copyright © 2026, Oracle and/or its affiliates.

Entity	System Behavior
	If the related person information is given for a bill group and the person type of the related person is **Parent Customer**, then the bill group is related to the parent customer using the person relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. If the derivation and pricing parameters are specified for a bill group, the system automatically creates one sort record for the bill group. Here, the sort ID is set to the bill group ID. The start and end dates of the sort record are set to the bill group and parent customer's relationship start and end dates. Once the sort record is created, the system creates the derivation and pricing parameters for the bill group and sort ID combination. **Note:** The system supports the **Add** and **Update** operations for all entities except the derivation and pricing parameters for the bill group. Through the health care inbound message, each time, the system creates a new derivation and pricing parameters record for the bill group and does not update the existing derivation and pricing parameters record of the bill group.
Account	While creating an account, the system defines the **Invoice Type** characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration.
Policy	If the fully-insured group policy information is given for a bill group, the system does the following: • Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration However, if the fully-insured group policy information is given for a parent customer, the system does the following: • Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration If the self-funded policy information is given for a bill group, the system does the following: • Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration • Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration On renewing a fully-insured group policy, the system removes the end date from the policy and stamps the renewal date against the policy. **Note:** You can renew a policy where the policy category is set to **Self-Funded** from the user interface and not through a health care inbound message. However, you can renew a policy where the policy category is set to **Fully-Insured Group** through a health care inbound message and not from the user interface.

Copyright © 2026, Oracle and/or its affiliates.

Entity	System Behavior
	On terminating a fully-insured group policy, the system updates the end date of the following entities with the termination date: • Policy • Policy Person • Policy Plan • Membership • Membership Person • Pricing Rule However, before updating the end dates, the system stores the original end date in the **ORG_END_DT** column of the respective table for all the above entities. The status of the policy is changed to the status which is specified in the **Policy Termination Status** option type of the **C1-ASOBLLNG** feature configuration. On reinstating a fully-insured group policy, the system updates the end date of the above entities with the original end date. In addition, the status of the policy is changed to the status which is specified in the **Policy Reinstatement Status** option type of the **C1-ASOBLLNG** feature configuration.
	Note: The **Policy** entity is applicable only for **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.
Policy Plan	While creating a policy plan, the system requires either the price item or at least one pricing rule type. The system allows you to associate only those pricing rule types where the category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**.
	Note: The **Policy Plan** entity is applicable only for **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.
Pricing Rule Type	The system does not allow you to create or update a pricing rule type through a health care inbound message.
	Note: The **Pricing Rule Type** entity is applicable for **Self-Funded Group Health Insurance**, **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.
Pricing Rule	The system allows you to define and edit the age-based and tier-based pricing rules of the policy plan. Note that the system supports the **Replace** operation and not the **Update** operation when you are editing these pricing rules through a health care inbound message.

Copyright © 2026, Oracle and/or its affiliates.

Entity	System Behavior
	Note: You can define and edit the age-based and tier-based pricing rules through a health care inbound message and not from the user interface. You can create the following pricing rules from the user interface and not through a health care inbound message: • Claim • Specific Stop-Loss • Aggregate Stop-Loss • Retention Type Claim Based • Retention Type Enrollment Based • One-Time Flat Fees • Recurring Flat Fees • Ancillary • Discount Arrangement • Level Funded
	Note: The **Pricing Rule** entity is applicable for **Self-Funded Group Health Insurance**, **Fully-Insured Group Health Insurance**, and **Individual Health Insurance** businesses.
Pass-Through Billable Charge	If the price item, account identifier type, and account identifier are given in the billable charge information, the system directly creates an SQI based billable charge when you process the health care inbound message. But, if only the price item is given in the billable charge information, the system checks whether the price item is included in any pricing rule type where the pricing rule type category is set to **Pass-Through Billable Charge**. If so, the system checks whether the pass-through billable charge pricing rule type is associated with the policy plan to which the membership belongs (for which the billable charge information is received). If so, the system creates an SQI based billable charge using the respective pass-through billable charge pricing rule type.
	Note: The **Pass-Through Billable Charge** entity is applicable only for **Fully-Insured Group Health Insurance** and **Individual Health Insurance** business.

The following table recommends the sequence in which the respective entities should be created for the different line of business through a separate healthcare inbound message.

Line of Business	Sequence	Entity
Fully-Insured Group Health Insurance	1	Parent Customer (along with policy details)
	2	Bill Groups (along with policy details)
	3	Pricing Rules
	4	Member Persons (along with policy details)
Individual Health Insurance	1	Member Person (along with health product, health plan, and pricing rule details)
Self-Funded Group Health Insurance	1	Parent Customer (along with policy details)
	2	Bill Groups (along with policy details)

Copyright © 2026, Oracle and/or its affiliates.

Line of Business	Sequence	Entity
	3	Pricing Rules
	4	Member Persons (along with policy details)

The following table lists the details which you need to provide either in full or partial while editing the entity information through a health care inbound message.

Entity	Information	Tag Name	In case of edit, you need to provide details in...
Person	Person Name	<personName>	All the tags within the <personName> tag
	Identifiers	<identifiers>	All the tags within the <identifiers> tag
	Address	<address>	The following tags within the <address> tag: • <addressEffDate> • <addressType>
	Phones	<phones>	All the tags within the <phones> tag
	Related Persons	<relatedPersons>	All the tags within the <relatedPersons> tag
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: • <characteristicType> • <effectiveDate>
	Bill Level Parameters	<billLevelParameters>	The following tag within the <billLevelParameters> tag: • <sequence>
Account	Identifiers	<identifiers>	All the tags within the <identifiers> tag
	Account Person	<accountPerson>	All the tags within the <accountPerson> tag
	Account Autopay	<autoPayDetails>	All the tags within the <autoPayDetails> tag
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: • <characteristicType • <effectiveDate>
Policy	Policy Person	<policyPersons>	All the tags within the <policyPersons> tag
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: • <characteristicType • <effectiveDate>
	Plan	<pricingRuleTypeList>	All the tags with the <pricingRuleTypeList> tag.

Copyright © 2026, Oracle and/or its affiliates.

Entity	Information	Tag Name	In case of edit, you need to provide details in...
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: • <characteristicType> • <effectiveDate>
	Pricing Rule	<pricingRuleData>	All the tags within the <pricingRuleData> tag.
Membership	Membership Person	<memberData>	The following tags within the <memberData> tag:: • <sequence> • <membershipIdentifierType> • <policyNumber> • <sourceSystem> • <planNumber> • <healthPlanCode>
	Characteristics	<characteristics>	The following tags within the <characteristics> tag: • <characteristicType> • <effectiveDate>
	Membership Person Characteristics	<membershipPersonCharacteristic>	The following tags within the <membershipPersonCharacteristic> tag: • <characteristicType> • <effectiveDate>

The following table lists the details which you need to provide while carrying out a specific action for an entity through a health care inbound message.

Entity	Action	You need to provide the details in the following tags...
Fully-Insured Group Policy	Policy Renewal	<policyData> <policyType></policyType> <policyNumber></policyNumber> <sourceSystem></sourceSystem> <renewalDate></renewalDate> <endDate></endDate> </policyData>
	Policy Reinstatement	<policyData> <policyNumber></policyNumber> <sourceSystem></sourceSystem> <reinstateInformation> <reinstatementDate></ reinstatementDate> <reinstateReason></reinstateReason> </reinstateInformation>

Copyright © 2026, Oracle and/or its affiliates.

Entity	Action	You need to provide the details in the following tags...
		</policyData>
	Policy Termination	<policyData> <policyNumber></policyNumber> <sourceSystem></sourceSystem> <terminationInformation> <terminateDate></terminateDate> <terminationReason></terminationReason> </terminationInformation> <policyData>
Individual Membership	Manual Renewal (only renews the membership)	<memberData> <sequence></sequence> <startDate></startDate> <endDate></endDate> <autoRenew></autoRenew> <membershipRenewalDate></membershipRenewalDate> <membershipPersonStatus></membershipPersonStatus> <membershipPersonstatusReason></membershipPersonstatusReason> </memberData>
	Manual Renewal (of a dependent person)	<memberData> <sequence></sequence> <endDate></endDate> <membershipPersonStatus></membershipPersonStatus> <membershipPersonstatusReason></membershipPersonstatusReason> </memberData>
	Termination	<memberData> <sequence></sequence> <endDate></endDate> <membershipPersonStatus></membershipPersonStatus> <membershipPersonstatusReason></membershipPersonstatusReason> </memberData>

On calling the **C1-HCInboundMessage** web service, a health care inbound message is created in the **Pending** status. When the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch is executed, the system checks whether there are any health care inbound messages in the **Pending** status. If there is a health care inbound message in the **Pending** status, the system validates the inbound message. If the health care inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the health care inbound messages for validation and processing from the user interface. On submitting a health care inbound message, the system validates the health care inbound message. If a health care inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Copyright © 2026, Oracle and/or its affiliates.

If the person type is **Parent Customer**, the customer registration object is created in the **Complete** status. However, if the person type is **Bill Group**, the customer registration object is created in the **Bill Group Approved** status. The policies are created in the **In Force/Active** status and the pricing rules are created in the **Active** status. Finally, the status of the health care inbound message is changed to **Processed**.

Note: The above status transition is mentioned for a customer registration object based on the assumption that the data sent through the health care inbound message will be pre-approved and does not require any approval in the system.

If any error occurs while validating or processing a health care inbound message, the status of the health care inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected health care inbound message. The system can reprocess a health care inbound message when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the health care inbound message from **Rejected** to **Pending**. The **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch will then reconsider and reprocess the health care inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected health care inbound messages. However, it will attempt to retry when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a health care inbound message depends on the value defined in the **Maximum Retry** parameter.

At present, if a customer registration object is created through a health care inbound message, you cannot edit the customer registration object from the user interface. You can only edit such customer registration objects through a health care inbound message.

How to setup the **C1-ASOBLLNG** feature configuration	Setting the C1-ASOBLLNG Feature Configuration on page 4617
How to setup the **C1-PERSTYPE** feature configuration	Setting the C1_PERSTYPE Feature Configuration on page 4659

Prerequisites

To use the health care inbound message feature, you need to do the following:

- Define the required customer registration types in the system.

  Note: The health care inbound message creates the person, account, policy, and policy plan through a customer registration object. The system creates the customer registration object using the customer registration type specified in the health care inbound message type. While creating a health care inbound message type for the fully-insured group health insurance business, you must use a customer registration type where the **Approval Required**, **Final Approval Required**, and **Manual Billing Hierarchy and Pricing** options are not selected. However, while creating a health care inbound message type for the self-funded health insurance business, you must use a customer registration type where the **Final Approval Required** and **Manual Billing Hierarchy and Pricing** options are selected, but the **Approval Required** option is not selected.
- Define the required health care inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-HCINVAL**, **C1-HCINPROC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** and **C1-ExtLookRetTypeRateOpt** extendable lookups.
- Define the values for the **HOUSE_TYPE**, **PER_OR_BUS_FLG**, **NAME_TYPE_FLG**, **ADDRESS_TYPE_FLG**, **BILL_ADDR_SRCE_FLG**, **BILL_FORMAT_FLG**, and **RUNOUT_ADM_OPT_FLG** lookup fields.

Copyright © 2026, Oracle and/or its affiliates.

- Set the values for the following option types in the **C1-ASOBLLNG** feature configuration:
  - Person Relationship Type
  - Bill Group Policy Person Role
  - Parent Customer Policy Person Role
  - Invoice Type Characteristic Type
  - Policy Termination Status
  - Policy Reinstatement Status
  - Default Rate Option - Flat
  - Default Rate Option - Percentage
  - Age Based Parameter
  - Membership Inactive Status
  - Member Person Inactive Status
- Set the values for the following option types in the **C1-PERSTYPE** feature configuration:
  - Bill Group Person Type
  - Parent Person Type
- Define the required person identifier types, account identifier types, person relationship types, characteristic types, phone types, customer classes, bill cycles, collection classes, divisions, bill route types, charge types, currencies, bill periods, invoice frequencies, distribution codes, auto pay route types, auto pay sources, account relationship types, policy types, policy person roles and contract relationship types in the application.
- Define the values for the **C1_INVOICE_DAY_BILL_PERIOD_FLG** lookup field.

  Note: Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.
- Define the required predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination.
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement.
- Define the bill cancel reasons which you want to use when the premium bill segment is canceled during the policy or membership termination.
- Define the required exchange rates in the system.
- Define the required access groups in the system.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.

Automatic Hold Request Creation Via Inbound Message

Oracle Revenue Management and Billing provides the ability to automatically create a hold request whenever the status of an inbound message is changed to **Rejected**. Note that an automatic hold request is created only when the **Create Automatic Hold Request** attribute of the hold request preference is set to **Yes**. The system considers the hold request preference which is specified in the **Hold Request Field Mapping** option type of the **C1-HOLDSRCH** feature configuration.

To enable the automatic hold request creation via inbound message feature, you need to attach an algorithm created using the **C1-HCINBHOLD** algorithm type to the **Enter** system event of the **Rejected** status in the **C1-InboundMessage** business object.

Once the status of an inbound message is changed to **Rejected**, the system automatically holds only the bill generation process of an account by creating a hold request. If an account is updated through an inbound message, the system creates a hold request with the entity level set to **Account** and includes the respective account in the hold request. If an existing person with one or more accounts is updated through an inbound message, the system creates a hold request with the entity level set to **Account** and includes all the existing accounts of the person in the hold request. Note that the automatic hold request creation via inbound message is not valid when a request to add a person or account is received through an inbound message.

While creating an automatic hold request, the system uses the following attributes of the hold request preference:

- Default Automatic Hold Reason
- Default Automatic End Date
- Default Automatic Hold Request Type Code

The system sets the hold request start date to the system date. The hold request is created in the **Active** status. The hold process in the hold request is set to **Bill Generation** and the hold process and hold entity start and end dates are set to the hold request start and end dates, respectively. The bill after date is set for the accounts on the **C1-HLMON** batch execution.

If the member data is received along with the person data in an inbound message, the system determines whether the person belongs to a group or individual membership. If the person belongs to an individual membership, the system determines the account to which the individual membership is billed using the **Account Identifier Type** and **Account Identifier Value** characteristics which are defined on the individual membership. While fetching the characteristics, the system considers the characteristic types which are specified in the **Account Identifier Type Char Type** and **Account Identifier Value Char Type** option types of the **C1-ASOBLLNG** feature configuration. However, if the person belongs to a group membership, the system determines the account to which the group membership is billed using the following attributes of the hold request preference:

- Characteristic Type for Bill Level 1
- Characteristic Type for Bill Level 2
- Characteristic Type for Bill Level 3
- Characteristic Type for Bill Level 4

Once the billing account is derived for the membership, the system creates an automatic hold request for the respective account.

Note:

You can manually release an automatic hold request from the user interface or through an inbound message.

The approval process for hold request is not supported in this feature. Therefore, we recommend you to use a hold request type where the **Activation Approval** option is not selected.

This feature is tested and certified for both the fully insured group and fully insured individual lines of business.

Copyright © 2026, Oracle and/or its affiliates.

Manual Hold Request Creation Via Inbound Message

Oracle Revenue Management and Billing provides the ability to create a hold request through an inbound message. A new set of tags are introduced in the health care inbound message schema. An inbound message enables you to hold only the bill generation process of an account by creating a hold request. You can provide the bill hold information either at the person or account level. If you provide the bill hold information at the account level, the system creates a hold request with the entity level set to **Account** and includes the respective account in the hold request. However, if you provide the bill hold information at the person level, the system creates a hold request with the entity level set to **Account** and includes all the accounts of the person in the hold request.

To create a hold request via an inbound message, you must set the **action** tag to **H** within the **billHold** tag. You can also send information, such as hold reason, start date, end date, and hold request type along with the **action** tag in the inbound message. If you send all these details in the inbound message, the system creates a hold request using the given information. However, if you do not send all these details in the inbound message, the system first derives the hold request preference from the **Hold Request Field Mapping** option type of the **C1-HOLDSRCH** feature configuration. Then, the system creates a hold request using the following attributes of the hold request preference:

- Default Manual Hold Reason
- Default Manual End Date
- Default Manual Hold Request Type Code

The system sets the hold request start date to the system date. The hold request is created in the **Active** status. The hold process in the hold request is set to **Bill Generation** and the hold process and hold entity start and end dates are set to the hold request start and end dates, respectively. The bill after date is set for the accounts on the **C1-HLMON** batch execution.

You can also release a hold request through an inbound message. To release a hold request via an inbound message, you must set the **action** tag to **R** within the **billHold** tag. You can also send information, such as hold reason, start date, end date, and hold request type along with the **action** tag in the inbound message. If you send all these details in the inbound message, the system derives an active hold request with the given hold reason, start date, end date, and hold request type combination. However, if you do not send all these details in the inbound message, the system first derives the hold request preference from the **Hold Request Field Mapping** option type of the **C1-HOLDSRCH** feature configuration. Then, the system derives an active hold request using the following attributes of the hold request preference:

- Default Manual Hold Reason
- Default Manual End Date
- Default Manual Hold Request Type Code

If a hold request exists with the respective account or with the accounts of the person, the system changes the status of the hold request to **Released**. While releasing a hold request, the system derives the reason from the **Default Manual Release Reason** attribute of the hold request preference. The bill after date is updated for the accounts on the **C1-HLMON** batch execution.

The system also enables you to discard a hold request through an inbound message. The system changes the status of the hold request to **Discarded** when the **action** tag is set to **R** within the **billHold** tag and the hold request start date is a future date. While discarding a hold request, the system derives the reason from the **Default Manual Discard Reason** attribute of the hold request preference.

Note:

The approval process for hold request is not supported in this feature. Therefore, we recommend you to use a hold request type where the **Activation Approval** or **Release Approval** option is not selected.

This feature is tested and certified for both the fully insured group and fully insured individual lines of business.

C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HCINVAL

Health Care Inbound Message - Validation

This algorithm is invoked when you execute the **Health Care Inbound Message Periodic Monitor (C1-HCINB)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the health care inbound message which is in the **Pending** status. It checks the following:

- Whether the details of the parent customer are given in the bill group information.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Copyright © 2026, Oracle and/or its affiliates.

C1-HCINPROC

This algorithm is invoked once a health care inbound message is successfully validated. It processes the health care inbound message and creates or updates the parent customers, bill groups (including derivation and pricing parameters for the bill group), accounts, self-funded or fully-insured group policies, policy plans, memberships, member persons, pass-through billable charges, and pricing rules. In addition, it allows you to terminate, reinstate, and renew a fully-insured group policy.

If the person type specified in the health care inbound message matches the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person, account, policy, policy plan, and address through a customer registration object. The memberships, pass-through billable charges, and pricing rules are created directly and not via customer registration object. However, if the person type specified in the health care inbound message does not match the person type specified in the **Bill Group Person Type** or **Parent Person Type** option type of the **C1-PERSTYPE** feature configuration, the system creates or updates the person and its other entities directly and not through a customer registration object. In this case, the system only refers the customer registration type for the business objects using which the person, account, policy plan, membership, and address should be created or updated in the system.

If the processing fails due to any reason, the status of the health care inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

Note: At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

Note: This algorithm is invoked when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** - Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** - This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

Copyright © 2026, Oracle and/or its affiliates.

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

Health Care Inbound Message XML Format

Note: We recommend you to refer the Health Care Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-HCInboundMessage** inbound web service, you need to ensure that the health care inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
schema	Used to specify the tags of a health care inbound message.	Yes
bo	Used to indicate the business object using which the health care inbound message should be created in the system. The valid value is: • C1-HCInboundMessage	Yes
messageType	You can use this tag within the following tags: • **schema** - Here, the **messageType** tag indicates the health care inbound message type using which the health care inbound message should be created in the system. **Note:** The system refers the value from within the **headerData** tag. • **headerData** - Here, the **messageType** tag is used to specify the health care inbound message type using which the health care inbound message should be created in the system. **Note:** You must specify a valid health care inbound message type which is in the **Active** status.	Yes
sourceSystem	You can use this tag within the following tags: • **schema** - Here, the **sourceSystem** tag indicates the external system from where the health care inbound message is received. **Note:** The system refers the value from within the **headerData** tag. • **headerData** - Here, the **sourceSystem** tag is used to indicate the external system from where the health care inbound message is received.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **billLevelParameters** - Here, the **sourceSystem** tag is used to indicate the source system using which you want to define the derivation and pricing parameters for the bill group. • **memberData** - Here, the **sourceSystem** tag is used to indicate the source system using which you want to derive the policy where the policy plan is defined. • **policyData** - Here, the **sourceSystem** tag is used to indicate the source system from where the policy is originated. **Note:** You must specify a source system which is already defined in the **C1-SourceSystemLookup** extendable lookup. It must be in the **Active** status. This tag is applicable only for the **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.	
externalTransactionId	You can use this tag within the following tags: • **schema** - Here, the **externalTransactionId** tag indicates the transaction in the external source system which resulted in the health care inbound message. **Note:** The system refers the value from within the **headerData** tag. • **headerData** - Here, the **externalTransactionId** tag is used to indicate the transaction in the external source system which resulted in the health care inbound message.	No
externalBatchId	You can use this tag within the following tags: • **schema** - Here, the **externalBatchId** tag indicates the external batch job or batch run number through which the health care inbound message is created. **Note:** The system refers the value from within the **headerData** tag. • **headerData** - Here, the **externalBatchId** tag is used to indicate the external batch job or batch run number through which the health care inbound message is created.	Yes
externalSourceId	You can use this tag within the following tags: • **schema** - Here, the **externalSourceId** tag displays the external source system ID. **Note:** The system refers the value from within the **headerData** tag. • **headerData** - Here, the **externalSourceId** tag is used to specify the external source system ID.	Yes
characteristics	You can use this tag within the following tags:	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **schema** - Here, the **characteristics** tag is used to specify a list of characteristics for the health care inbound message. • **personData** - Here, the **characteristics** tag is used to specify a list of characteristics for the person. • **relatedPersons** - Here, the **characteristics** tag is used to specify a list of characteristics for the person to person relationship. • **memberData** - Here, the **characteristics** tag is used to specify a list of characteristics for the membership. • **billableChargeData** - Here, the **characteristics** tag is used to specify a list of characteristics for the billable charge. • **accountData** - Here, the **characteristics** tag is used to specify a list of characteristics for the account. • **policyData** - Here, the **characteristics** tag is used to specify a list of characteristics for the policy. • **planData** - Here, the **characteristics** tag is used to specify a list of characteristics for the policy plan. • **pricingRuleData** - Here, the **characteristics** tag is used to specify a list of characteristics for the pricing rule. • **benefitData** - Here, the **characteristics** tag is used to specify a list of characteristics for the membership benefit.	
inboundMessageCharacteristic	Used to specify a characteristic for the health care inbound message.	No
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing an adhoc characteristic of the health care inbound message.

characteristicType	You can use this tag within the following tags:
	• **inboundMessageCharacteristic** - The **characteristicType** tag is used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to **Inbound Message**.
	• **characteristicsList** - The **characteristicType** tag is used to specify the characteristic type. If you are defining a characteristic for a:
	  • **Person** - You must specify a characteristic type where the characteristic entity is set to **Person**.
	  • **Related Person** - You must specify a characteristic type where the characteristic entity is set to **Person to Person**.
	  • **Membership** - You must specify a characteristic type where the characteristic entity is set to **Membership**.
	  • **Membership Person** - You must specify a characteristic type where the characteristic entity is set to **Membership Person**.
		Yes (Conditional)
		Note: This data is required while defining or editing a characteristic of the respective entity.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **Membership Benefit** - You must specify a characteristic type where the characteristic entity is set to **Benefit**. • **Billable Charge** - You must specify a characteristic type where the characteristic entity is set to **Billable Charge**. • **Account** - You must specify a characteristic type where the characteristic entity is set to **Account**. • **Policy** - You must specify a characteristic type where the characteristic entity is set to **Policy**. • **Policy Plan** - You must specify a characteristic type where the characteristic entity is set to **Policy Plan**. • **Pricing Rule** - You must specify a characteristic type where the characteristic entity is set to **Pricing Rule**. • **Pricing Rule** - You must specify a characteristic type where the characteristic entity is set to **Pricing Rule**.	
effectiveDate	You can use this tag within the following tags: • **inboundMessageCharacteristic** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the health care inbound message. • **characteristicsList** - Here, the **effectiveDate** tag is used to specify the date from when the characteristic is effective for the respective entity (i.e. person, person to person relationship, membership, member person, billable charge, account, policy, policy plan, pricing rule, or membership benefit). • **billLevelParameters** - Here, the **effectiveDate** tag is used to specify the date from when the derivation and pricing parameters are effective for the bill group. • **policyPlanProrationRuleList** - Here, the **effectiveDate** tag is used to specify the proration rules defined for the policy plan. **Note:** You must specify the date in the `YYYY-MM-DD` format.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity or while defining the derivation and pricing parameters for the bill group.
characteristicValue	You can use this tag within the following tags: • **inboundMessageCharacteristic** - Here, the **characteristicValue** tag is used to specify the value for the predefined characteristic type. • **characteristicsList** - Here, the **characteristicsList** tag is used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.
customerStructureMessage	Used to specify the details of the customer including the header information for the health care inbound message.	Yes
characteristicValueForeignKey1	Used to specify the first value for the foreign key characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing a foreign key characteristic of the health care inbound message.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
characteristicValueFK2	Used to specify the second value for the foreign key characteristic type.	No
characteristicValueFK3	Used to specify the third value for the foreign key characteristic type.	No
characteristicValueFK4	Used to specify the fourth value for the foreign key characteristic type.	No
characteristicValueFK5	Used to specify the fifth value for the foreign key characteristic type.	No
headerData	Used to specify the header information for the health care inbound message.	Yes
personData	Used to specify the details of the parent customer, bill group, or member person.	Yes (Conditional) **Note:** This data is required while defining or editing a person.
accessGroup	You can use this tag within the following tags: • **personData** - Here, the **accessGroup** tag is used to indicate the user group that can access the person data. • **accountData** - Here, the **accessGroup** tag is used to indicate the user group that can access the account data. • **customerStructureData** - Here, the **accessGroup** tag is used to indicate the user group that can access the customer data. **Note:** If you do not specify a value, by default it is set to system default.	No
sequence	You can use this tag within the following tags: • **personData** - Here, the **sequence** tag is used to indicate the order in which the person should be created in the system. • **personName** - Here, the **sequence** tag is used to indicate the order in which the person name should be displayed in the user interface. • **billLevelParameters** - Here, the **sequence** tag is used to indicate the order in which the derivation and pricing parameters should be created for the bill group. • **billableChargeData** - Here, the **sequence** tag is used to indicate the order in which the billable charge should be created for the membership. • **baseRate** - Here, the **sequence** tag is used to indicate the order in which the billable charge should be created for the membership. • **pricingParameter** - Here, the **sequence** tag is used to indicate the order in which the pricing eligibility criteria should be created using the parameter information. • **modifierInformation** - Here, the **sequence** tag is used to indicate the order in which the pricing eligibility criteria should be created using the modifier information.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **benefitDataList** - Here, the **sequence** tag is used to indicate the order in which the benefit charge should be created for the membership. • **accountData** - Here, the **sequence** tag is used to indicate the order in which the account should be created in the system. • **memberData** - Here, the **sequence** tag is used to indicate the order in which the membership benefit should be created in the system.	
personType	Used to indicate the type of person. The valid values are: • **B** - Indicates that the person is a business owner. • **BG** - Indicates that the person is a bill group. • **G** - Indicates that the person is a group owner. • **K** - Indicates that the person is a broker. • **P** - Indicates that the person is an individual. • **PG** - Indicates that the person is a parent customer. **Note:** You must specify a value which is already defined in the **PER_OR_BUS_FLG** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while defining or editing a person.
personName	Used to specify a list of names for the person.	Yes (Conditional) **Note:** This data is required while defining a person.
entityName	Used to specify the name of the person.	Yes (Conditional) **Note:** This data is required while defining a person.
nameType	Used to indicate the type of name. The valid values are: • **AL** - Indicates that the type of name is Alias. • **ALT** - Indicates that the type of name is Alternate Representation. • **DBA** - Indicates that the type of name is Doing Business As. • **FORM** - Indicates that the type of name is Former. • **LGAL** - Indicates that the type of name is Legal. • **PRIM** - Indicates that the type of name is Primary. **Note:** You must specify a value which is already defined in the **NAME_TYPE_FLG** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while defining a person.
identifiers	You can use this tag within the following tags: • **personData** - Here, the **identifiers** tag is used to specify the identification details for the person. • **accountData** - Here, the **identifiers** tag is used to specify the identification details for the account.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify one primary identifier for a person and account.	
idType	You can use this tag within the following tags: • **identifiers** - Here, the **idType** tag is used to specify the person or account identifier type. • **relatedPersons** - Here, the **idType** tag is used to specify the person identifier type. • **mainSubscriber** - Here, the **idType** tag is used to specify the person identifier type. • **accountPerson** - Here, the **idType** tag is used to specify the person identifier type. • **policyPersons** - Here, the **idType** tag is used to specify the person identifier type. **Note:** You must specify a person or account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required in the following scenarios: • While defining or editing the identification details of a person and account. • While defining or editing a person to person relationship. • While defining or editing the membership information of a person. • While linking an account to another person. • While associating a person with a policy.
idValue	You can use this tag within the following tags: • **identifiers** - Here, the **idValue** tag is used to specify the person or account identifier. • **relatedPersons** - Here, the **idValue** tag is used to indicate the person with whom you want to establish the person to person relationship. • **mainSubscriber** - Here, the **idValue** tag is used to indicate the person who is the main subscriber of the membership. • **accountPerson** - Here, the **idValue** tag is used to indicate the person to whom you want to link the account. • **policyPersons** - Here, the **idValue** tag is used to indicate the person to whom you want to associate the policy.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.
isPrimary	Used to indicate whether the person or account identifier is a primary identifier. The valid values are: • Y • N	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not specify the value, by default, it is set to **N**. You must specify a value which is already defined in the **F1_YESNO_FLG** lookup field. It must be in the **Active** status.	
division	You can use this tag within the following tags: • **personData** - Here, the **division** tag is used to indicate the division to which the person belongs. • **accountData** - Here, the **division** tag is used to indicate the division to which the account belongs. • **statementConstructDetails** - Here, the **division** tag is used indicate the division to which the statement construct belongs. **Note:** You must specify a division which is already defined in the system.	No
birthDate	Used to specify the date when the person was born. **Note:** You must specify the date in the `YYYY-MM-DD` format.	No
sinceDate	Used to specify the date when the person's record is created in the system. This is purely informational. **Note:** You must specify the date in the `YYYY-MM-DD` format.	No
address	You can use this tag within the following tags: • **personData** - Here, the **address** tag is used to specify the address of the person. • **accountData** - Here, the **address** tag is used to specify the address of the account.	Yes (Conditional) **Note:** This data is required while defining or editing the address of the respective entity.
addressEffDate	Used to specify the date from when the address is effective. **Note:** You must specify the date in the `YYYY-MM-DD` format. If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the health care inbound message.	Yes (Conditional) **Note:** This data is required while editing the address of a person or account.
addressType	Used to indicate the type of address. The valid values are: • **MAIN** - Indicates that the address is the person's mailing address. You can use this address type while specifying the address for the person and account. • **SEAS** - Indicates that the address is the person's seasonal address. You can use this address type while specifying the address for the person.	Yes (Conditional) **Note:** This data is required while editing the address of a person or account.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **OVRD** - Indicates that the address is the account's override address. You can use this address type while specifying the address for the account. **Note:** If you do not specify the address type, by default, it is set to **MAIN**. You must specify an address type which is already defined in the **ADDRESS_TYPE_FLG** lookup field. It must be in the **Active** status.	
mailingName	Used to specify the name using which the person should be addressed in the mail communication. The system also uses the mailing name in the bills, letters, quotes, and statements.	No
address1	You can use this tag within the following tags: • **address** - Here, the **address1** tag is used to specify the first line of the address. It may contain details, such as the house number. • **personAddressOverride** - Here, the **address1** tag is used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional) **Note:** This data is required while defining and editing the address of a person and account.
address2	You can use this tag within the following tags: • **address** - Here, the **address2** tag is used to specify the second line of the address. It may contain details, such as the apartment name. • **personAddressOverride** - Here, the **address2** tag is used to second line of the address. It may contain details, such as the apartment name.	No
address3	You can use this tag within the following tags: • **address** - Here, the **address3** tag is used to specify the third line of the address. It may contain details, such as the street name. • **personAddressOverride** - Here, the **address3** tag is used to specify the third line of the address. It may contain details, such as the street name.	No
address4	You can use this tag within the following tags: • **address** - Here, the **address4** tag is used to specify the fourth line of the address. It may contain the landmark details. • **personAddressOverride** - Here, the **address4** tag is used to specify the fourth line of the address. It may contain the landmark details.	No
city	You can use this tag within the following tags: • **address** - Here, the **city** tag is used to specify the city name. • **personAddressOverride** - Here, the **city** tag is used to specify the city name.	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
state	You can use this tag within the following tags: • **address** - Here, the **state** tag is used to indicate the state where the city is located. • **personAddressOverride** - Here, the **state** tag is used to indicate the state where the city is located.	No
zip	Used to specify the zip code of the address.	No
addressStatus	Used to indicate the status of the address. The valid values are: • C1AC • C1IN You can use this tag within the following tags: • **address** - Here, the **addressStatus** tag is used to indicate the status of the address. • **personAddressOverride** - Here, the **addressStatus** tag is used to indicate the status of the address. **Note:** • You must specify a value which is already defined in the **ADDR_STATUS_FLG** lookup field. It must be in the **Active** status. • While creating an address for an entity, the status of the address should always be set to **C1AC** (i.e. Active). The **addressStatus** tag is not mandatory. Therefore, if you do not specify the value for the **addressStatus** tag while creating an address, the system, by default, sets it to **C1AC** (i.e. Active). • For more information on how to update the address status, see Maintaining Address Status through Inbound Web Service	No
country	You can use this tag within the following tags: • **address** - Here, the **country** tag is used to indicate the country where the person or account is located. • **personAddressOverride** - Here, the **country** tag is used to indicate the country where the person is located.	Yes (Conditional) **Note:** This data is required while defining or editing the address of a person or account.
houseType	Used to indicate the type of the house. The valid values are: • **AB** - Indicates that the type of house is a House Boat Reference. • **WW** - Indicates that the type of house is a House Trailer Reference. You can use this tag within the following tags: • **address** - Here, the **houseType** tag is used to indicate the type of the house. • **personAddressOverride** - Here, the **houseType** tag is used to indicate the type of the house.	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a house type which is already defined in the **HOUSE_TYPE** lookup field. It must be in the **Active** status.	
streetNumber1	You can use this tag within the following tags: • **address** - Here, the **streetNumber1** tag is used to specify the numeric information, if any, related to the address. • **personAddressOverride** - Here, the **streetNumber1** tag is used to specify the numeric information, if any, related to the address.	No
streetNumber2	You can use this tag within the following tags: • **address** - Here, the **streetNumber2** tag is used to specify the numeric information, if any, related to the address. • **personAddressOverride** - Here, the **streetNumber2** tag is used to specify the numeric information, if any, related to the address.	No

inCityLimit	You can use this tag within the following tags:
	• **address** - Here, the **inCityLimit** tag is used to indicate whether the address is within the city limit. The valid values are:
	  • Y
	  • N
	• **personAddressOverride** - Here, the **inCityLimit** tag is used to indicate whether the address is within the city limit. The valid values are:
	  • Y
	  • N
		No

taxVendorGeographicalCode	You can use this tag within the following tags: • **address** - Here, the **taxVendorGeographicalCode** tag is used to specify the geographic code of the address. • **personAddressOverride** - Here, the **taxVendorGeographicalCode** tag is used to specify the geographic code of the address.	No
county	You can use this tag within the following tags: • **address** - Here, the **county** tag is used to specify the county name. • **personAddressOverride** - Here, the **county** tag is used to specify the county name.	No
email	Used to specify the e-mail ID of the person.	No
overrideMailingName1	Used to specify the name using which you want to override the person's mailing name.	No
overrideMailingName2	Used to specify the name using which you want to override the person's override mailing name 1.	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
overrideMailingName3	Used to specify the name using which you want to override the person's override mailing name 2.	No
phones	Used to specify the phone details of the person.	Yes (Conditional) **Note:** This data is required while defining or editing the phone details of a person.
phoneType	Used to indicate the type of phone. **Note:** You must specify a phone type which is already defined in the system.	Yes (Conditional) **Note:** This data is required while defining or editing the phone details of a person.
phoneValue	Used to specify the phone number of the person.	Yes (Conditional) **Note:** This data is required while defining or editing the phone details of a person.
extension	Used to specify the extension value of the phone number.	Yes (Conditional) **Note:** This field is required when you are adding the phone details of a person.
relatedPersons	Used to list other persons with whom you want to establish the person's relationship.	Yes (Conditional) **Note:** This data is required while defining or editing a person to person relationship.
personRelationshipType	Used to indicate how the other person is related to the person. **Note:** You must specify a person relationship type which is already defined in the system. If you have specified a parent customer as the related person for a bill group, the system, by default, uses the person relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It does not considers the value specified in this tag.	Yes (Conditional) **Note:** This data is required while creating relationship between a bill group and person whose the person type is not **Parent Customer**.
startDate	You can use this tag within the following tags:	Yes (Conditional)

<tr><th>Tag Name</th><th>Tag Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>

relatedPersons - Here, the startDate tag is used to specify the date from when the other person is related to the person.
memberData - Here, the startDate tag is used to specify the date from when the membership is effective.
billableChargeData - Here, the startDate tag is used to specify the start date of the billable charge.
autoPayDetails - Here, the startDate tag is used to specify the date from when the auto pay instruction is effective.
policyData - Here, the startDate tag is used to specify the date from when the policy is effective.
policyPersons - Here, the startDate tag is used to specify the date from when the person is associated with the policy.
planData - Here, the startDate tag is used to specify the date from when the policy plan is effective.
pricingRuleData - Here, the startDate tag is used to specify the date from when the pricing rule is effective.
benefitDataList - Here, the startDate tag is used to specify the date from when the benefit is availed for the membership.

Note:
The start date of the membership benefit cannot be earlier than the membership start date or later than the membership end date.
The membership benefit start date cannot be later than the membership benefit end date.

statementConstructDetails - Here, the startDate tag is used to specify the date from when the statement construct is effective.

Note: You must specify the date in the <code>YYYY-MM-DD</code> format.
</td><td>
Note: This data is required in the following scenarios:

While defining the respective information.
While editing the membership information of a person.
While editing an auto pay instruction of an account.
While editing a pricing rule.

</td></tr>
<tr><td>endDate</td><td>
You can use this tag within the following tags:

relatedPersons - Here, the endDate tag is used to specify the date till when the other person is related to the person.
memberData - Here, the endDate tag is used to specify the date till when the membership is effective.
billableChargeData - Here, the endDate tag is used to specify the end date of the billable charge.
autoPayDetails - Here, the endDate tag is used to specify the date till when the auto pay instruction is effective.
policyData - Here, the endDate tag is used to specify the date till when the policy is effective.
policyPersons - Here, the endDate tag is used to specify the date till when the person is associated with the policy.
planData - Here, the endDate tag is used to specify the date till when the policy plan is effective.
pricingRuleData - Here, the endDate tag is used to specify the date till when the pricing rule is effective.
benefitDataList - Here, the endDate tag is used to specify the date till when the benefit is availed for the membership.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: The end date of the membership benefit cannot be earlier than the membership start date or later than the membership end date. The membership benefit end date cannot be earlier than the membership benefit start date. • **statementConstructDetails** - Here, the **endDate** tag is used to specify the date till when the statement construct is effective. **Note:** You must specify the date in the `YYYY-MM-DD` format.	
financialRelationshipSw	Used to indicate whether the other person is financially responsible for the person. The valid values are: • True • False **Note:** If you do not specify the value, by default, it is set to **False**.	No
parentOrChild	Used to indicate whether the other person is parent or child. The valid values are: • **C** • **P** **Note:** You must specify a value which is already defined in the **PARENT_OR_CHILD_FLG** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while creating a person to person relationship.
characteristicsList	You can use this tag within the following tags: • **characteristics** - Here, the **characteristicsList** tag is used to specify a characteristic for the respective entity (i.e. person, person to person relationship, membership, billable charge, account, policy, policy plan, pricing rule, or benefit). • **membershipPersonCharacteristic** - Here, the **characteristicsList** tag is used to specify a characteristic for the member person. • **benefitData** - Here, the **characteristicsList** tag is used to specify a characteristic for the membership benefit. • **personStatementConstructs** - Here, the **characteristicsList** tag is used to specify a characteristic for the person.	Yes (Conditional) **Note:** This data is required while defining or editing a characteristic of the respective entity.
billLevelParameters	Used to specify the derivation and pricing parameters for the bill group.	No
billLevelInfo1	Used to specify the employee attribute based on which you want to derive the bill group.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must not specify the ampersand (&) character in the value.	**Note:** This data is required while defining the derivation and pricing parameters for a bill group.
billLevelInfo2	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the value.	No
billLevelInfo3	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the value.	No
billLevelInfo4	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the value.	No
memberData	Used to specify basic information about the membership. **Note:** This tag is applicable only for the **Self-Funded Group Health Insurance**, **Fully-Insured Group Health Insurance**, and **Individual Health Insurance** businesses.	Yes (Conditional) **Note:** This data is required while defining or editing the membership details of a person.
memberId	Used to specify the external membership ID. **Note:** Here, you need to specify a membership ID which is maintained in the external source system.	No
memberRelationship	Used to indicate how the main subscriber is related to the membership.	Yes (Conditional) **Note:** This data is required while defining or editing the membership details of a person.
membershipPersonStatus	Used to indicate the status of the person in the membership. The valid values are: • **ACTV** • **CNCL** • **INAC** • **PNEF**	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **MEMBER_PER_STATUS_FLG** lookup field. It must be in the **Active** status.	
membershipPersonstatusReason	Used to indicate the reason why you want to change the status of the member person. The valid values are: • **ZZAB** • **ZZBN** • **ZZBR** • **ZZBS** • **ZZCN** • **ZZEL** • **ZZNW** • **ZZRE** • **ZZSP** • **ZZTM**	Yes
	Note: You must specify a value which is already defined in the **MEMB_PERS_STAT_RSN_FLG** lookup field. It must be in the **Active** status.	
autoRenew	Used to indicate whether the individual membership should be automatically renewed.	No
	Note: This tag is applicable only for the **Individual Health Insurance** business.	
associatedMemberIdentifierType	Used to indicate the associated membership identifier type.	Yes (Conditional)
	Note: This tag is applicable only for the **Individual Health Insurance** business.	**Note:** This field is required when the associated membership identifier is specified.
associatedMemberIdentifier	Used to specify the value for associated membership identifier type.	Yes (Conditional)
	Note: This tag is applicable only for the **Individual Health Insurance** business.	**Note:** This field is required when the associated membership identifier type is specified.
exchangeFlag	Used to indicate whether the individual membership is purchased from the exchange. The valid values are: • **OFF**	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **ON** **Note:** This tag is applicable only for the **Individual Health Insurance** business. You must specify a value which is already defined in the **EXCHANGE_FLG** lookup field. It must be in the **Active** status.	**Note:** This field is required when you have purchased the individual membership from an exchange.
exchangeId	Used to specify the exchange from where the individual membership is purchased. **Note:** This tag is applicable only for the **Individual Health Insurance** business.	Yes (Conditional) **Note:** This field is required when you have purchased the individual membership from an exchange.
binderLiabilityAmount	Used to specify the binder liability amount. **Note:** This tag is applicable only for the **Individual Health Insurance** business.	Yes (Conditional) **Note:** This field is required when the **Consider Binder Liability Amount** attribute is set to **Y** in the binder payment preference.
binderPayApplicability	Used to indicate that the system should monitor whether the binder payment is received before activating the individual membership. The valid values are: • Y • N **Note:** This tag is applicable only for the **Individual Health Insurance** business.	Yes
binderPayGraceDays	Used to specify the days which are used to calculate the grace date for the individual membership. **Note:** This tag is applicable only for the **Individual Health Insurance** business.	No
binderPayThreshold	Used to specify the threshold percentage using which the threshold amount should be calculated. **Note:** This tag is applicable only for the **Individual Health Insurance** business.	No
holdBilling	Used to indicate whether you want to hold the bill generation process for the individual membership until the binder payment is received. The valid values are: • Y	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• N **Note:** This tag is applicable only for the **Individual Health Insurance** business.	
membershipRenewalDate	Used to indicate the date when the individual membership should be renewed. **Note:** Renewal date is required for manual renewal of the individual membership. In case of automatic renewal, the membership renewal date is calculated by the system. This tag is applicable only for the **Individual Health Insurance** business.	Yes (Conditional) **Note:** This field is required when you manually want to renew the individual membership.
contractPeriod	Used to indicate the period (in months) for which the individual membership should be automatically renewed. **Note:** This tag is applicable only for the **Individual Health Insurance** business.	Yes (Conditional) **Note:** This field is required if you have entered the membership renewal date.
membershipIdentifier	Used to specify one or more identifiers for the individual membership. **Note:** This tag and all the tags within this parent tag are applicable only for the **Individual Health Insurance** business.	Yes (Conditional) **Note:** This data is required while defining or editing the individual membership details of a person.
membershipIdentifierType	Used to indicate the membership identifier type.	Yes (Conditional) **Note:** This field is required when the membership identifier is specified.
membershipIdentifierValue	Used to specify the value for the membership identifier type.	Yes (Conditional) **Note:** This field is required when the membership identifier type is specified.
isMemberSw	Used to indicate whether the person is a member or a non-member in the membership. The valid values are: • **N** • **Y**	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **F1_YESNO_FLG** lookup field. It must be in the **Active** status.	
isFinanciallyResponsible	Used to indicate whether the person is financially responsible for the membership. The valid values are: • **N** • **Y** **Note:** You must specify a value which is already defined in the **F1_YESNO_FLG** lookup field. It must be in the **Active** status.	No

membershipType	You can use this tag within the following tags:
	• **memberData** - Here, the **membershipType** tag is used to indicate the type of membership. The valid values are:
	  • **COBR**
	  • **MDCR**
	  • **RETR**
	  Note:
	  If you want to define an active employee coverage membership, you must leave this field blank.
	  You must specify a value which is already defined in the **MEMBERSHIP_TYPE_FLG** lookup field. It must be in the **Active** status.
	• **mainSubscriber** - Here, the **membershipType** tag is used to specify the policy number.
	• **policyPlanProrationRuleList** - Here, the **membershipType** tag is used to specify the proration rules defined for the policy plan.
		No

externalMedicareBeneficiaryId	Used to indicate the beneficiary (i.e. member person) who has received the Medicare membership benefits. **Note:** This tag is applicable only for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	No
mainSubscriber	Used to indicate whether the person is the main subscriber of the membership. The valid values are: • Yes • No **Note:** This tag and all the tags within this parent tag are only applicable for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	Yes
policyNumber	You can use this tag within the following tags: • **memberData** - Here, the **policyNumber** tag is used to specify the policy number.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **policyData** - Here, the **policyNumber** tag is used to specify the policy number. **Note:** This tag is applicable only for the **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.	**Note:** This data is required while defining or editing the respective information.
planNumber	You can use this tag within the following tags: • **memberData** - Here, the **planNumber** tag is used to indicate the fully-insured group policy plan for which the membership is created. • **planData** - Here, the **planNumber** tag is used to specify the plan number. **Note:** This tag is applicable only for the **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.
healthPlanCode	Used to indicate the health plan for which the main subscriber has enrolled. **Note:** This tag is applicable only for the **Individual Health Insurance** business.	Yes
membershipRateGuarantee	Used to specify information about the rate guarantee. **Note:** This tag and all the tags within this parent tag are applicable only for the **Individual Health Insurance** business.	No
membershipRateGuaranteeList	Used to specify rate guarantee details for each individual membership.	No
rateGuaranteeStartDate	Used to specify the date from when the rate guarantee is available for the individual membership.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.
rateGuaranteeEndDate	Used to specify the date till when the rate guarantee is available for the individual membership.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.
rateGuaranteeStatus	Used to indicate the status of the rate guarantee period. The valid values are: • ACTV • INAC	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **RATE_GRNT_STATUS_FLG** lookup field. It must be in the **Active** status.	
membershipPersonCharacteristics	Used to specify a list of characteristics for the member person.	No
benefitData	Used to specify information about the membership benefit.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are applicable only for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	**Note:** This data is required while defining or editing a membership benefit.
benefitDataList	Used to specify the details of a membership benefit.	Yes (Conditional)
		Note: This data is required while defining or editing a membership benefit.
benefitStatus	Used to indicate the status of the membership benefit. The valid values are: • ACTIVE • DISCARD	Yes (Conditional)
		Note: This data is required while defining or editing a benefit.
	Note: While defining a membership benefit, by default, the status is set to **Active**. On editing a membership benefit, the system inactivates the old record and creates a new record in the system. The status of the old benefit record is set to **Inactive** and the status of the new benefit record is set to **Active**. You can discard an active or inactive membership benefit whenever required.	
benefitSourceFlag	Used to indicate the source (i.e. health insurance exchange) from where the benefit is received for the membership. The valid values are: • **CMS** • **ST**	No
	Note: You must specify a value which is already defined in the **BENEFIT_SRC_FLG** lookup field. It must be in the **Active** status.	
benefitSubTypeFlag	Used to indicate whether the membership benefit is a Medicare Part A, Part B, or Part D benefit, Medicare Part D LIS, Medicare Part D LEP, APTC benefit, or any other membership benefit.	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You can only specify a benefit sub type which is already defined in the system.	
planBenefitPackageId	Used to indicate the Medicare plan benefit package (i.e. 800 series plan) which is applicable for the membership benefit. **Note:** You can only specify a Medicare plan benefit package which is already defined in the system.	Yes (Conditional) **Note:** This data is required while creating the Medicare Part A, Part B, or Part D membership benefit.
benefitAmount	Used to specify the pass-through amount for the availed membership benefit.	Yes (Conditional) **Note:** This data is required while creating the Medicare Part D LIS, Medicare Part D LEP, APTC, or other membership benefits.
billableChargeData	Used to specify the details for a billable charge. Ideally, this piece of information should be specified in the main subscriber details and not in the member person details. **Note:** This tag and all the tags within this parent tag are applicable only for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	Yes (Conditional) **Note:** This data is required while defining or editing a billable charge of a membership.
accountIdType	Used to specify the account identifier type. **Note:** You must specify an account identifier type which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the **accountIdValue** tag contains the account identifier.
accountIdValue	Used to indicate the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **accountIdType** tag contains the account identifier type.
chargeType	Used to indicate the type of billable charge that you want to create. **Note:** You must specify a charge type which is already defined in the system.	No
priceItemCode	You can use this tag within the following tags:	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **billableChargeData** - Here, the **priceItemCode** tag is used to indicate the price item for which you want to create the billable charge. • **planData** - Here, the **priceItemCode** tag is used to indicate the price item which you want to associate with the policy plan.	**Note:** This data is required while defining or editing a billable charge of a membership.
description	You can use this tag within the following tags: • **billableChargeData** - Here, the **description** tag is used to specify the description for the billable charge. • **policyData** - Here, the **description** tag is used to specify the description for the policy.	Yes (Conditional) **Note:** This data is required while defining the respective information.
recurringMethod	Used to indicate whether recurring bill segments must be created for the billable charge at the specified intervals. The valid values are: • **BP** - Used when you want to create recurring bill segments at the intervals defined in the bill period. • **FR** - Used when you want to create recurring bill segments at the set invoice frequency. **Note:** You must specify a value which is already defined in the **RECURRING_FLG** lookup field. It must be in the **Active** status.	No
billPeriod	Used to indicate the bill period using which you want to determine the intervals at which the recurring bill segments must be created. **Note:** You must specify a bill period which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the **recurringMethod** tag contains **BP**.
frequency	Used to indicate the invoice frequency at which the recurring bill segments must be created. **Note:** You must specify an invoice frequency which is already defined in the system.	Yes (Conditional) **Note:** This data is required when the **recurringMethod** tag contains **FR**.
billAfterDt	Used to specify the date after which the bill must be generated for the billable charge. **Note:** You must specify the date in the `YYYY-MM-DD` format.	No
billableChargeLines	Used to specify the details for a pass through line in the billable charge.	Yes
descriptionOnBill	Used to specify the information about the pass through line that should appear on the bill.	Yes
currencyCode	Used to indicate the currency in which you want to charge the amount.	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a currency which is already defined in the system. If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	
chargeAmount	Used to specify the charge amount.	Yes
showOnBillSw	Used to indicate whether the charge should appear on the person's printed bill. The valid values are: • True • False **Note:** If you do not specify the value, by default, it is set to **True**.	No
appearInSummarySw	Used to indicate whether the charge should be included in the summary line. The valid values are: • true • false **Note:** If you do not specify the value, by default, it is set to **false**.	No
distributionCode	Used to specify the distribution code which indicates the GL account associated with the charge. **Note:** You must specify a distribution code which is already defined in the system.	No
accountData	Used to specify the account details of a person.	Yes (Conditional) **Note:** This data is required while defining or editing an account.
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account. **Note:** The value is stored in the characteristic type which is specified in the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration. You must specify a value which is already defined in the predefined characteristic type.	Yes (Conditional) **Note:** This data is required while defining or editing an account.
customerClass	Used to indicate the customer class to which the account belongs. **Note:** You must specify a customer class which is already defined in the system.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while defining an account.
billCycle	Used to indicate the bill cycle for the account. **Note:** You must specify a bill cycle which is already defined in the system.	No
billLeadDays	Used to indicate whether you want to bill the account in advance. Here, you need to specify the number of days which is used to derive the cut-off date for advance billing. If you do not want to bill the account in advance, you must specify the value as zero(0). **Note:** If you do not specify the value, by default, it is set to zero(0).	No
currency	Used to indicate the currency in which you want to bill the account. **Note:** You must specify a currency which is already defined in the system.	Yes (Conditional) **Note:** This data is required while defining an account.
dragDays	You can use this tag within the following tags: • **personData** - Here, the **dragDays** tag is used to specify additional grace days (if any) offered at the person level. These drag days are considered while calculating the grace end date when the trigger date calculation mode (in the respective delinquency process type) is set to **Latest Bill Due Date with Grace Period**. **Note:** For example, if the latest bill due date is 05-Jan-2024, grace period is set to 5 days (in the respective delinquency process type), and drag days is to 10 days (for the respective person), then the grace end date for the person is set to 20-Jan-2024. • **accountData** - Here, the **dragDays** tag is used to specify additional grace days (if any) offered at the account level. These drag days are considered while calculating the grace end date when the trigger date calculation mode (in the respective delinquency process type) is set to **Latest Bill Due Date with Grace Period**. **Note:** For example, if the latest bill due date is 05-Jan-2024, grace period is set to 5 days (in the respective delinquency process type), and drag days is to 10 days (for the respective account), then the grace end date for the account is set to 20-Jan-2024.	Yes (Conditional) **Note:** This data is required while defining an account.
setUpDate	Used to specify the date when the account was first created. This is purely informational.	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify the date in the `YYYY-MM-DD` format. If you do not specify the value, by default, it is set to the current date.	
acctUsageFlg	Used to indicate the category to which the account belongs. The valid values are: • **INVC** - Indicates that the account will be used to bill charges of the usage accounts. • **SETL** - Indicates that the account will be used only for settlement purposes. • **USAG** - Indicates that the account will have its own charges. If the usage account is linked to any construct, the usage account's charges are billed through an invoice account. Otherwise, the usage account is billed individually. **Note:** If you do not specify the value, by default, it is set to **USAG**. You must specify a value which is already defined in the **ACCT_USAGE_FLG** lookup field. It must be in the **Active** status.	No
comments	You can use this tag within the following tags: • **accountData** - Here, the **comments** tag is used to specify additional information about the account. • **autoPayDetails** - Here, the **comments** tag is used to specify additional information about the auto pay instruction.	No
deferAutoPayDt	Used to specify the date till when you want to hold the automatic payment process for the account.	No
collectionClass	You can use this tag within the following tags: • **personData** - Here, the **collectionClass** tag is used to control how the person's debt is compared against collection criteria (i.e. tolerance limit) to determine whether a collection process (such as delinquency process) should be initiated for the person. A new collection method named **Self-Control Delinquency** is available while defining a collection class. It is used to create a distinct or separate delinquency process for the persons who belong to the collection class. If you want to evaluate the debt of the person's accounts, its child persons, and the child persons' accounts while monitoring the person's delinquency, you must set the collection method of their respective collection class to **Parental Delinquency**. If you set the collection method of the collection class for any of the person's account, any of its child person, or child persons' accounts to **Self-Control Delinquency**, the system does not consider the debt of the respective entity while monitoring the delinquency of the parent person.	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: If you do not want to initiate delinquency process for a child person or an account, ensure that the person or account belongs to a collection class where the collection method is set to **Not Eligible for Collection**. If the collection class is not defined for a person, the system skips the person while monitoring the delinquency. • **accountData** - Here, the **collectionClass** tag is used to control how the account's debt is compared against collection criteria (i.e. tolerance limit) to determine whether a collection process (such as delinquency process) should be initiated for the account. A new collection method named **Self-Control Delinquency** is available while defining a collection class. It is used to create a distinct or separate delinquency process for the accounts which belong to the collection class. **Note:** If you do not want to initiate delinquency process for an account, ensure that the account belongs to a collection class where the collection method is set to **Not Eligible for Collection**. If the collection class is not specified for an account, the system, by default, sets it to the one specified in the respective customer class when you create the account through a health care inbound message. **Note:** You must specify a collection class which is already defined in the system. This tag is applicable only for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	
postponeCreditReviewUntil	Used when you want to review the account's debt after a particular date. The system will consider the account for monitoring the delinquency only after the specified date. You can specify the postpone credit review until date for an account from the user interface or through a health care inbound message. **Note:** This tag is applicable only for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.
lastCreditReviewDate	Used to indicate the date when the account's debt was last reviewed. The system stamps the last credit review date against an account when a delinquency process is initiated for the account through the **C1-ACDLQ** batch.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: This tag is applicable only for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	
billRouteType	You can use this tag within the following tags: • **accountData** - Here, the **billRouteType** tag is used to indicate how the account's bill must be sent to the main customer. • **accountPersonRouting** - Here, the **billRouteType** tag is used to indicate how the account's bill must be sent to the linked person. **Note:** You must specify a bill route type which is already defined in the system.	Yes (Conditional) **Note:** This data is required while defining or editing the respective information.
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: • **ACCT** • **ACOV** • **BILL** • **MAIN** • **PER** • **TEST** You can use this tag within the following tags: • **accountData** - Here, the **billRouteType** tag is used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. • **accountPersonRouting** - Here, the **billRouteType** tag is used to indicate whether the account's bill must be sent to the linked person's mailing address or to the linked person's account override address. **Note:** You must specify a value which is already defined in the **BILL_ADDR_SRCE_FLG** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while defining the respective information.
skipAutoMaintenanceSw	Used to specify whether auto maintenance should be skipped for an account. **Note:** This tag is applicable only for the **Individual Health Insurance** business.	Yes (Conditional) **Note:** This data is required while defining the respective information.
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while defining or editing an auto pay instruction of an account.
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date. **Note:** The priority cannot be less than or equal to zero.	Yes (Conditional) **Note:** This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional) **Note:** This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: • **C1DD** - Indicates that you want to directly debit the main customer's bank account. • **C1PA** - Indicates that you want to send a payment advice to the main customer. **Note:** You must specify a value which is already defined in the **APAY_METHOD_FLG** lookup field. It must be in the **Active** status.	No
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution. **Note:** You must specify an auto pay route type which is already defined in the system.	Yes (Conditional) **Note:** This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request. **Note:** You must specify an auto pay source which is already defined in the system.	Yes (Conditional) **Note:** This data is required while defining or editing an auto pay instruction of an account.
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while defining or editing an auto pay instruction of an account.
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire. **Note:** You must specify the month in the `MM` format.	Yes (Conditional) **Note:** This data is required when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
expiryYear	Used to specify the year when the tender type of the auto pay source will expire. **Note:** You must specify the year in the `YYYY` format.	Yes (Conditional) **Note:** This data is required when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
name	Used to specify the name of the person as it appears in the financial institution's system.	No
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount. **Note:** The maximum withdrawal amount cannot be less than zero.	No
accountPerson	Used to specify information about the person (other than main customer) to whom you want to link the account.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

<table>
<tr><th>Tag Name</th><th>Tag Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:
The system, by default, adds the person (for whom the account information is given in the health care inbound message) as the main customer of the account. While linking the person as main customer of the account, the system sets the following attributes:
<table><tr><th>Attribute Name</th><th>Attribute Value</th></tr><tr><td>Financially Responsible</td><td>Y</td></tr><tr><td>Account Relationship Type</td><td>Main Customer</td></tr><tr><td>Receive Copy of Bill</td><td>Y</td></tr><tr><td>Bill Format</td><td>Detailed</td></tr><tr><td>Receives Notification</td><td>Y</td></tr><tr><td>Number of Bill Copies</td><td>1</td></tr></table></td><td>Note: This data is required while linking a person to an account.</td></tr>
<tr><td>accountRelationshipType</td><td>Used to indicate how the person is related to the account.
Note: You must specify an account relationship type which is already defined in the system.</td><td>Yes (Conditional)
Note: This data is required while linking a person to an account.</td></tr>
<tr><td>isFinanciallyResponsible</td><td>Used to indicate whether the person is financially responsible for the account. The valid values are:
• True
• False
Note: If you do not specify the value, by default, it is set to False.</td><td>No</td></tr>
<tr><td>personAddressOverride</td><td>Used to specify the account override address for the linked person.</td><td>No</td></tr>
<tr><td>postal</td><td>Used to specify the postal code of the address.</td><td>No</td></tr>
<tr><td>accountPersonRouting</td><td>Used to specify the bill routing information for the linked person.</td><td>Yes (Conditional)
Note: This data is required while defining or editing the bill routing information of a linked person.</td></tr>
<tr><td>shouldReceiveCopyOfBill</td><td>Used to indicate whether the linked person should receive a copy of the account's bill. The valid values are:
• Y
• N
Note: If you do not specify the value, by default, it is set to N.</td><td>No</td></tr>
</table>

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
billFormat	Used to indicate whether the linked person should receive the detailed or summary bill. The valid values are: • D • S	No
	Note: You must specify a value which is already defined in the **BILL_FORMAT_FLG** lookup field. It must be in the **Active** status. If you do not specify the value, by default, it is set to **D** when the linked person should receive a copy of the account's bill. This information is ignored when the **shouldReceiveCopyOfBill** tag contains **N**.	
numberOfBillCopies	Used to indicate the number of copies of the bill which the linked person must receive.	No
	Note: If you do not specify the value, by default, it is set to **1** when the linked person should receive a copy of the account's bill. This information is ignored when the **shouldReceiveCopyOfBill** tag contains **N**.	
receivesNotification	Used to indicate whether the linked person should receive letters (i.e. notifications) initiated by collection, write-off, and overdue events. The valid values are: • Y • N	No
	Note: If you do not specify the value, by default, it is set to **N**. This information is ignored when the **shouldReceiveCopyOfBill** tag contains **N**.	
policyData	Used to specify the details of the policy.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are only applicable for the **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.	**Note:** This data is required while defining or editing a policy.
policyType	Used to indicate the policy type using which you are defining the policy.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a policy type which is already defined in the system. If you want to create a fully-insured group policy, you must specify a policy type where the policy category is set to **Fully-Insured Group**. However, if you want to create a self-funded policy, you must specify a policy type where the policy category is set to **Self-Funded**.	**Note:** This data is required while defining or editing a policy.
advancedLevelFundingEligibility	Used to indicate whether the self-funded policy provides advanced level funding eligibility. The valid values are: • Y • N	Yes (Conditional) **Note:** This data is required while defining or editing a policy.
	Note: You must specify a value which is already defined in the **F1_YESNO_FLG** lookup field. It must be in the **Active** status. At present, if you are defining a self-funded policy the advanced level funded eligibility is set to **No**. This tag and all the tags within this parent tag are only applicable for the **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.	
runOutEndDate	Used to specify the date when the runout period of the self-funded policy ends.	No
	Note: The runout end date cannot be earlier than or equal to the policy end date. This data is required when you are defining a policy using a policy type where the policy category is set to **Self-Funded**. This tag is applicable only for the **Self-Funded Group Health Insurance** business.	
runOutAdminOption	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: • **ENGO** • **ENLA** • **NROA** • **PERC**	No

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **RUNOUT_ADM_OPT_FLG** lookup field. It must be in the **Active** status. At present, this data is used only for the informational purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. This data is required when you are defining a policy using a policy type where the policy category is set to **Self-Funded**. This tag is applicable only for the **Self-Funded Group Health Insurance** business.	
renewalDate	Used to specify the date when you want to renew the fully-insured group policy.	Yes (Conditional) **Note:** This data is required while renewing a fully-insured group policy.
	Note: You can renew a self-funded policy only from the user interface. You must specify the date in the `YYYY-MM-DD` format. This tag is applicable only for the **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.	
advanceDepositApplSW	Used to indicate whether the advance deposit is applicable for the policy. The valid values are: • Y • N	No
	Note: This tag is required only when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI**. However, this tag is not mandatory. If you do not specify the value, the system, by default, sets it to **N**. This tag is applicable only for the fully-insured group business. In other words, this tag is applicable only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 4357.	
advanceDepositAmount	You can use this tag within the following tags: • **personData** - Here, the **advanceDepositAmount** tag is used to specify the advance deposit amount that will be parked at the	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	parent customer level. It is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **PG**. • **policyData** - Here, the **advanceDepositAmount** tag is used to specify the advance deposit amount that will be parked at the policy level. It is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI** and the advance deposit applicability for the policy is set to **Y**. Note that the **advanceDepositAmount** tag is applicable only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. **Note:** You must specify a positive value in this field. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 4357.	**Note:** This data is required when you want to allocate advance deposit for delinquent customers.
advanceDepositGraceDays	You can use this tag within the following tags: • **personData** - Here, the **advanceDepositGraceDays** tag is used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer. While calculating the grace period, the system derives the earliest start date among all the polices where the parent customer is the policy holder and considers it as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e. grace start date + grace days). For example, if a parent customer is the policy holder of two policies - P1 (01-Jan-2022 to 31-Dec-2022) and P2 (01-Jun-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date (as it is the earliest start date) and sets the grace end date to 07-Jan-2022. The advance deposit grace days is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **PG**. • **policyData** - Here, the **advanceDepositGraceDays** tag is used to specify the grace days. The system then uses the grace days to derive the grace period within which the advance deposit should be received from the group customer for the policy. While calculating the grace period, the system considers the policy start date as the grace start date. Once the grace start date is derived, the system calculates the grace end date (i.e. grace start date + grace days). For example, if a parent customer is the policy holder of the P1 policy (01-Jan-2022 to 31-Dec-2022) and advance deposit grace days is set to 6 days, then the system considers 01-Jan-2022 as the grace start date and sets the grace end date to 07-Jan-2022. The advance deposit grace days is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI** and the advance deposit applicability for the policy is set to **Y**. Note that the	Yes (Conditional) **Note:** This data is required when you want to allocate advance deposit for delinquent customers.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	advanceDepositGraceDays tag is applicable only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. **Note:** You must specify an integer value in this field. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 4357.	
advanceDepositLevel	Used to indicate whether you want to park the advance deposit received from the group customer at the parent customer or policy level. The valid values are: • **PG** - Used when you want to park the advance deposit at the parent customer level. • **POLI** - Used when you want to park the advance deposit at the policy level. **Note:** The advance deposit level is only applicable for the person whose person type is set to **Parent Customer**. If you do not specify the advance deposit level, then the parent customer is not eligible for the advance deposit either at the parent customer or policy level. You must specify a value which is already defined in the **ADV_DEP_LVL_FLG** lookup field. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 4357.	Yes (Conditional) **Note:** This data is required when you want to allocate advance deposit for delinquent customers.
advanceDepositAccountIdentifierType	Used to specify the account identifier type. It is required when the advance deposit level of the respective policy holder (i.e., parent customer) is set to **POLI** and the advance deposit applicability for the policy is set to **Y**. Note that the **advanceDepositAccountIdentifierType** tag is applicable only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**. **Note:** You must specify an account identifier type which is already defined in the system. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 4357.	Yes (Conditional) **Note:** This data is required when you want to allocate advance deposit for delinquent customers.
advanceDepositAccountIdentifierValue	Used to specify the account identifier. It is required when the advance deposit level of the respective policy holder	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	(i.e., parent customer) is set to **POLI** and the advance deposit applicability for the policy is set to **Y**. Note that the **advanceDepositAccountIdentifierValue** tag is applicable only when you create a policy using a policy type where the policy category is set to **Fully-Insured Group**.	**Note:** This data is required when you want to allocate advance deposit for delinquent customers.
	Note: You must specify an account with the account relationship type that is specified in the **Advance Deposit Account Relationship Type** attribute of the delinquency process preference. The system considers the delinquency process preference which is specified in the **Delinquency Process Field Mapping** option type of the **DELINPROC** feature configuration. For more information about the feature configuration, see Setting the DELINPROC Feature Configuration on page 4641. This tag is applicable only for the fully-insured group business. For more information about the feature, see Allocate Advance Deposit for Delinquent Customers on page 4357.	
policyPersons	Used to indicate the person that you want to associate with the policy.	Yes
policyPerRole	Used to indicate the role of the person in the policy.	Yes (Conditional)
	Note: You must specify a policy person role which is already defined in the system.	**Note:** This data is required while associating a person with the policy.
terminationInformation	Used to specify the termination details of the fully-insured group policy.	No
	Note: At present, you cannot terminate a self-funded policy either from the user interface or through a health care inbound message. This tag and all the tags within this parent tag are applicable only for **Fully-Insured Group Health Insurance** business.	
terminateDate	Used to specify the date when you want to terminate the fully-insured group policy.	Yes (Conditional)
	Note: You must specify the date in the `YYYY-MM-DD` format. The termination date cannot be earlier than the policy start date. On terminating a policy, the status of the policy is changed to the status which is specified in the **Policy Termination Status** option type of the **C1-ASOBLLNG** feature configuration.	**Note:** This data is required while terminating a fully-insured group policy.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
terminationReason	Used to indicate the reason why you want to terminate the fully-insured group policy. **Note:** You must specify the status reason which is already defined for the status specified in the **Policy Termination Status** option type of the **C1-ASOBLLNG** feature configuration.	Yes (Conditional) **Note:** This data is required while terminating a fully-insured group policy.
reinstateInformation	Used to specify the reinstatement details of the fully-insured group policy. **Note:** At present, you cannot reinstate a self-funded policy either from the user interface or through a health care inbound message. This tag and all the tags within this parent tag are applicable only for **Fully-Insured Group Health Insurance** business.	No
reinstatementDate	Used to specify the date when you want to reinstate the fully-insured group policy. **Note:** You must specify the date in the `YYYY-MM-DD` format. The reinstatement date cannot be earlier than the policy start date. On reinstating a policy, the status of the policy is changed to the status which is specified in the **Policy Reinstatement Status** option type of the **C1-ASOBLLNG** feature configuration.	Yes (Conditional) **Note:** This data is required while reinstating a fully-insured group policy.
reinstateReason	Used to indicate the reason why you want to reinstate the fully-insured group policy. **Note:** You must specify the status reason which is already defined for the status specified in the **Policy Reinstatement Status** option type of the **C1-ASOBLLNG** feature configuration.	Yes (Conditional) **Note:** This data is required while reinstating a fully-insured group policy.
planData	Used to specify the details of the policy plan. **Note:** At present, you can only define a policy plan in a fully-insured group policy. Therefore, the system will ignore this information when given for a self-funded policy. This tag and all the tags within this parent tag are applicable only for the **Self-Funded Group Health Insurance** and **Fully-Insured Group Health Insurance** businesses.	Yes (Conditional) **Note:** This data is required while defining or editing a policy plan.
planName	Used to specify the description of the policy plan.	No
pricingRuleTypeList	Used to associate a pricing rule type with the policy plan.	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while associating a pricing rule type with the policy plan.
pricingRuleType	Used to specify the pricing rule type.	Yes (Conditional)
	Note: At present, you can only associate those pricing rule types where the category is set to **Age Based**, **Tier Based**, or **Pass-Through Billable Charge**. Therefore, the system will ignore the pricing rule types where the category is set to **Claim**, **Specific Stop-Loss**, **Aggregate Stop-Loss**, **Retention Type Claim Based**, **Retention Type Enrollment Based**, **Flat Fees**, **Ancillary**, **Discount Arrangement**, or **Level Funded**.	**Note:** This data is required when a price item is not associated with the policy plan.
primaryPlanSw	Used to indicate whether the plan is a primary plan in the policy. The valid values are: • Y • N	No
	Note: If you do not specify the value, by default, it is set to **N**.	
benefitTypeFlag	Used to indicate the type of benefit availed for the membership. The valid values are: • COMM • MA	Yes
	Note: You must specify a value which is already defined in the **BENEFIT_TYPE_FLG** lookup field. It must be in the **Active** status.	
policyPlanProrationRuleList	Used to specify the proration rules defined for the policy plan.	Yes (Conditional)
	Note: This tag and all the tags within this parent tag are applicable only for **Fully-Insured Group Health Insurance** business.	**Note:** This data is required while defining or editing the proration rules for the policy plan.
prorationEventType	Used to indicate the event when you want to prorate the membership premium. The valid values are: • **ENRL** - Used when you want to prorate the membership premium on enrolling a member person. • **TERM** - Used when you want to prorate the membership premium on terminating a member person. • **NWBR** - Used when you want to prorate the membership premium on enrolling a new born. • **SMET** - Used when you want to prorate the membership premium on enrolling and terminating a member person in the same month.	Yes (Conditional) **Note:** This data is required while defining or editing the proration rules for the policy plan.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **PRORATION_EVT_TYPE_FLG** lookup field. It must be in the **Active** status.	
prorationType	Used to indicate how you want to prorate the membership premium. The valid values are: • **DALY** - Used when you want to prorate the membership premium from the day the proration event has occurred. • **MDMT** - Used when you want to prorate the membership premium based on the proration date. The system calculates the proration date using the following formula: `Bill Period Start Date + Specified ' Number of Days` For example, if the bill period start date is 1st of every month and number of days is 15, then the proration date would be 15th of every month. If a member person is enrolled to the membership on or before the proration date, the system will charge the premium for the member person. However, if a member person is enrolled to the membership after the proration date, the system will not charge the premium for the member person. And, if a member person is terminated from the membership on or after the proration date, the system will charge the premium for the member person. However, if a member person is terminated from the membership before the proration date, the system will not charge the premium for the member person. • **FLMT** - Used when the premium for a member person should be charged when the member person is enrolled or terminated on the coverage start date or coverage end date, respectively. If a member person is enrolled or terminated within the coverage period, the system will not charge the premium for the member person. • **WAVR** - Used when the premium for a member person should be waived off completely for the month when the member person is enrolled or terminated from the membership. • **COVD** - Used when you want to prorate the premium for a member person based on the coverage days. If a member person is covered in the membership for a period less than the specified number of days, the system will not charge the premium for the member person. However, if a member person is covered in the membership for a period equal to or more than the specified number of days, the system will charge the premium for the member person. **Note:** You can use this proration type when the proration event is set to **Same Month Enrollment and Termination**. • **ENRL** - Used when you want to prorate the premium for a member person using the proration type of the enrollment event. **Note:** You can use this proration type when the proration event is set to **Same Month Enrollment and Termination**.	Yes (Conditional) **Note:** This data is required while defining or editing the proration rules for the policy plan.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	• **TERM** - Used when you want to prorate the premium for a member person using the proration type of the termination event. **Note:** You can use this proration type only when the proration event is set to **Same Month Enrollment and Termination**. **Note:** You must specify a value which is already defined in the **PRORATION_TYPE_FLG** lookup field. It must be in the **Active** status.	
numberOfDays	Used to specify the number of days to determine the cutoff date.	Yes (Conditional) **Note:** This data is required when the proration type is set to **Mid-Month** or **Coverage Days**.
pricingRuleData	Used to specify the details of the pricing rule. **Note:** This tag and all the tags within this parent tag are applicable only for the **Fully-Insured Group Health Insurance** business.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule.
entityIdentifiers	Used to specify a list of entities (i.e. policy, source system, and plan) using which you can derive the plan to which you want to associate the pricing rule.	Yes
entityIdentifiersList	Used to specify the details of the entity.	Yes
entityIdentifierType	Used to specify the entity type. The valid values are: • **HLPN** - Used when you want to specify the health plan. • **PER** - Used when you want to specify the person. • **PIDT** - Used when you want to specify the person identifier type. • **PIDV** - Used when you want to specify the person identifier value. • **PLAN** - Used when you want to specify the plan. • **PLCY** - Used when you want to specify the policy. • **SSYS** - Used when you want to specify the source system. • **STAT** - Used when you want to specify the state. **Note:** You must specify a value which is already defined in the **PRC_RULE_ENTITY_TYPE** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule.
entityIdentifierValue	Used to specify the entity identifier (i.e. plan number, policy number, or source system).	Yes (Conditional)

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
		Note: This data is required while defining or editing a pricing rule.
status	Used to indicate the status of the pricing rule. The valid values are: • ACTV • INAC **Note:** If you do not specify the value, by default, it is set to **Active**.	No
pricingRuleType	Used to indicate the pricing rule type using which you want to define the pricing rule. **Note:** You must specify a pricing rule type where the category is set to **Age Based** or **Tier Based**.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule.
priceItemCd	Used to indicate the price item for which you want to define the pricing rule. **Note:** You must specify a price item which is already associated with the respective pricing rule type.	Yes (Conditional) **Note:** This data is required while defining or editing a pricing rule.
rateOption	Used to indicate the rate option using which you want to create price assignment for the pricing rule. **Note:** You must specify a rate option which is already defined in the **C1-ExtLookRetTypeRateOpt** extendable lookup. It must be in the **Active** status. If the rate option is not given for an age-based pricing rule, by default, it is set to: • The value specified in the **Default Rate Option - Flat** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **FLAT** • The value specified in the **Default Rate Option - Percentage** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **EXPT** or **INPT** However, if the rate option is not given for a tier-based pricing rule, by default, it is set to a value specified in the **Default Rate Option - Flat** option type of the **C1-ASOBLLNG** feature configuration when the modifier method is set to **FLAT** or **NULL**.	No
pricingType	Used to indicate the type of pricing defined for the pricing rule. The valid values are: • **FLAT** • **PCNT**	Yes

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **PRC_TYPE_FLG** lookup field. It must be in the **Active** status.	
modifierApplicability	Used to indicate whether you want to increase or decrease the premium of an eligible member based on certain modifiers (i.e. parameters, such as tobacco usage, alcohol usage, and so on). The valid values are: • Y • N **Note:** If you do not specify the value, by default, it is set to **N**.	No
modifierMethod	Used to indicate whether the system should consider the modifier rate as a flat amount or percentage. The valid values are: • **EXPT** - Indicates that the system should consider the modifier rate as exclusive percentage. • **FLAT** - Indicates that the system should consider the modifier rate as a flat amount. • **INPT** - Indicates that the system should consider the modifier rate as inclusive percentage. **Note:** You must specify a value which is already defined in the **HC_MODIFIER_METHOD** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required when the **modifierApplicability** tag contains **Y**.
baseRate	Used to specify the base fees for employees with a particular set of attributes. You can define different base fees for employees with different set of attributes. **Note:** While creating a price assignment for the pricing rule, the system creates one price component for each given set of base rate information.	Yes (Conditional) **Note:** This data is required while defining a pricing rule.
baseFee	Used to specify the base fees for the eligible members.	Yes (Conditional) **Note:** This data is required while defining a pricing rule.
lowerAgeLimit	Used to specify the lower age limit. It is used to define lower age limit pricing eligibility criteria in the price component. **Note:** The system defines the lower age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) **Note:** This data is required while defining an age-based pricing rule.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
upperAgeLimit	Used to specify the upper age limit. It is used to define upper age limit pricing eligibility criteria in the price component. **Note:** The system defines the upper age limit pricing eligibility criteria using the parameter which is specified in the **Age Based Parameter** option type of the **C1-ASOBLLNG** feature configuration. This data is ignored when given in a tier-based pricing rule information.	Yes (Conditional) **Note:** This data is required while defining an age-based pricing rule.
pricingParameter	Used to specify a set of employee attributes based on which the base fees may vary.	Yes (Conditional) **Note:** This data is required while defining a tier-based pricing rule.
parameterCode	You can use this tag within the following tags: • **pricingParameter** - Here, the **parameterCode** tag is used to specify the employee attribute (i.e. parameter, such as employee status, employee location, and so on) using which you want to define the pricing eligibility criteria. • **modifierInformation** - Here, the **parameterCode** tag is used to specify the modifier (i.e. parameter, such as tobacco usage, alcohol usage, and so on) using which you want to define the pricing eligibility criteria. **Note:** You must define the employee attributes and modifiers as parameters in the system. Note that you must set the parameter usage for these parameters to **Pricing Eligibility Criteria**. The system creates an pricing eligibility criteria for each parameter and/or modifier specified in the pricing rule information. You cannot specify any special character except underscore (_) in the parameter name.	Yes (Conditional) **Note:** This data is required while specifying the respective information.
parameterValue	You can use this tag within the following tags: • **pricingParameter** - Here, the **parameterValue** tag is used to specify the value for the parameter (i.e. employee attribute). • **modifierInformation** - Here, the **parameterValue** tag is used to specify the value for the parameter (i.e. modifier). **Note:** You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes (Conditional) **Note:** This data is required while specifying the respective information.

Copyright © 2026, Oracle and/or its affiliates.

Tag Name	Tag Description	Mandatory (Yes or No)
modifierInformation	Used to specify the modifier based on which you want to increase or decrease the base fees. **Note:** While creating a price assignment for the pricing rule, the system creates one price component for each given set of modifier information and then links these modifier price components with the respective base rate price component.	Yes (Conditional) **Note:** This data is required while specifying the modifier information.
rate	Used to specify the flat amount or percentage by which you want to increase or decrease the premium of an eligible member.	Yes (Conditional) **Note:** This data is required while specifying the modifier information.
statementConstructsData	Used to specify the details of the statement construct. **Note:** This tag and all the tags within this parent tag are applicable only for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
personStatementConstructs	Used to specify the details of a person for whom the statement construct is created.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
personIdentifier	Used to specify the person with the statement construct.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
personIdentifierType	Used to specify the person identifier type associated with the statement construct.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
statementConstructIdentifier	Used to specify the statement construct identifier defined for the statement construct.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
statementAddressSource	Used to indicate the source whose address should be used for sending the statements to the person. The valid value is: • **PER**	Yes (Conditional)

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: You must specify a value which is already defined in the **STM_ADDR_SRC_FLG** lookup field. It must be in the **Active** status.	**Note:** This data is required while defining or editing a statement construct.
statementCycle	Used to indicate the statement construct cycle for a person.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
statementRouteType	Used to indicate how to route the statements to the person.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
effectiveStatus	Used to indicate the status of the statement construct. The valid values are: • **A** - Indicates the status of the statement construct is in active state. • **I** - Indicates the status of the statement construct is in inactive state. **Note:** You must specify a value which is already defined in the **EFF_STATUS** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
addressId	Used to specify the address to which the statement should be sent.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
numberOfCopies	Used to specify the number of copies of the statement construct you want the person to receive.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
statementFormat	Used to indicate the format of the statement construct. The valid values are: • **D** - Indicates that the statement construct is in detail format. • **S**Indicates that the statement construct is in summary format. **Note:** You must specify a value which is already defined in the **STM_FORMAT_FLG** lookup field. It must be in the **Active** status.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.

Tag Name	Tag Description	Mandatory (Yes or No)
description	Used to specify the description of the statement construct.	Yes (Conditional) **Note:** This data is required while defining or editing a statement construct.
statementConstructDetails	Used to specify the statement construct details.	Yes (Conditional) **Note:** This data is required while specifying the statement construct information.
serviceAgreement	Used to specify the statement construct contract.	Yes
accountNumber	Used to specify the value for the account identifier type of the payee. **Note:** You must specify the account number which is already defined in the system.	Yes (Conditional) **Note:** This data is required while specifying the statement construct information.
accountNumberTypeCd	Used to specify the account identifier type of the payee.	Yes (Conditional) **Note:** This data is required while specifying the statement construct information.
statementPrintDescription	Used to specify the description of the construct detail associated with the contract.	Yes (Conditional) **Note:** This data is required while specifying the statement construct information.
printOrder	Used to specify the financial transactions associated with the account / contract to appear on the printed statement.	Yes (Conditional) **Note:** This data is required while specifying the statement construct information.
repriceAfterDate	Used to specify whether you want to hold the repricing for the membership until the specified date.	No

Tag Name	Tag Description	Mandatory (Yes or No)
	Note: This tag is applicable only for the **Individual Health Insurance** business.	
paidThroughDate	Used to specify the term end date of the last fully or partially paid term. For more information about the paid through date, refer to Policy on page 312. **Note:** This tag is applicable only for the **Fully-Insured Group Health Insurance** and **Individual Health Insurance** businesses.	No
status	Used to specify status of the policy. The valid values are: • Pending • Activate • In Force/Active • Pending Termination • Terminated • Pending Reinstatement • Reinstated • Renewed • Cancel **Note:** You must specify the status code which is already defined in the lifecycle of the **C1-POLICY** business object.	
statusReason	Used to specify the reason why the status of the policy is changed. **Note:** You must specify a reason which is already defined for the **Cancel** status of the **C1-POLICY** business object.	
memoOnlySponsorCharge	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: • Y • N	
isCMSAccountSw	Used to specify the CMS account that has offered the membership benefit.The valid values are	

The following table lists and describes the tags which are available in the health care inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
c1InboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the health care inbound message.
statusReason	Indicates the reason why the status of the health care inbound message is changed.
person	At present, this tag is not supported in a health care inbound message.
statusDateTime	Displays the date and time when the status of the health care inbound message is changed in the system.

<table>
<tr><th>Tag Name</th><th>Tag Description</th></tr>
<tr><td>creationDateTime</td><td>Displays the date and time when the health care inbound message is created in the system.</td></tr>
<tr><td>searchCharacteristicValue</td><td>At present, this tag is not supported in a health care inbound message.</td></tr>
<tr><td>version</td><td>This tag appears within the following parent tags:
<table>
<tr><th>Parent Tag</th><th>Then the purpose of the version tag is...</th></tr>
<tr><td>schema</td><td>Displays the version of the health care inbound message.</td></tr>
<tr><td>inboundMessageCharacteristic</td><td>Displays the version of the characteristic defined for the health care inbound message.</td></tr>
</table></td></tr>
<tr><td>toDoRetry</td><td>Displays the information about the retry option used for the health care inbound message.

Note: This information appears at the bottom of the inbound message in the Inbound Message Content zone once the health care inbound message is validated and processed either through the user interface or batch process.</td></tr>
<tr><td>retryDateTime</td><td>Displays the date and time when the retry option is used to change the status of the health care inbound message from Rejected to Pending.</td></tr>
<tr><td>numberOfRetries</td><td>Indicates the number of times the retry option is used for the health care inbound message.</td></tr>
<tr><td>currentErrorState</td><td>Indicates the status to which the health care inbound message is transitioned when its validation or processing fails. The valid value is:
• REJECTED</td></tr>
<tr><td>isRetried</td><td>Indicates whether the retry option is used to change the status of the health care inbound message. The valid values are:
• true
• false</td></tr>
</table>

Sample Health Care Inbound Message for Fully-Insured Group Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a fully-insured group health insurance business
- Create policies where the policy category is set to **Fully-Insured Group**
- Create various medical and dental plans for active and retired employees in the fully-insured group policies
- Associate a pricing rule type with the policy plans

The following table provides sample data for a fully-insured group customer that you can process through a health care inbound message:

Person Name	Person Type	Account	Policy	Policy Plan	Pricing Rule Type
Antartica Petroleum Corp	Parent Customer	-	Active Employee Medical Health Insurance Policy	HMO Medical Bronze 60 AE	AGE_BASED
				HMO Medical Silver 70 AE	AGE_BASED
				HMO Medical Gold 80 AE	AGE_BASED
				HMO Medical Platinum 90 AE	AGE_BASED
				PPO Medical Bronze 60 AE	AGE_BASED
				PPO Medical Silver 70 AE	AGE_BASED
				PPO Medical Gold 80 AE	AGE_BASED
				PPO Medical Platinum 90 AE	AGE_BASED
			Active Employee Dental Health Insurance Policy	DD BASIC PLAN AE	TIER_BASED
				DD STANDARD PLAN AE	TIER_BASED
			Retiree Employee Health Insurance Policy	HMO Medical Bronze 60 RE	AGE_BASED

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Self-Funded Customer Setup

Using the below example, you can do the following:

- Create the parent customer and bill groups for a self-funded health insurance business
- Create the accounts for the bill groups
- Create the policies for the bill groups where the policy category is set to **Self-Funded**

The following table provides sample data for a self-funded customer that you can process through a health care inbound message:

Person Name	**Person Type**	**Policy**	**Account**
US Energy Corp	Parent Customer	-	-
US Energy ACTIVE	Bill Group	Active Employee Health Insurance Policy	Standard
			Retention
US Energy COBRA	Bill Group	Active COBRA Employe Health Insurance Policy	Standard
		Retiree COBRA Employee Health Insurance Policy	Retention
US Energy RETIREE	Bill Group	Retiree Employee Health Insurance Policy	Standard
			Retention

In addition, the following table provides sample derivation and pricing parameters for multiple bill groups:

Copyright © 2026, Oracle and/or its affiliates.

Bill Group	Source System	Parameter 1	Parameter 2	Parameter 3	Parameter 4
US Energy ACTIVE	SMALLPRIME	ACTIVE	SEATTLE	-	-
	SMALLPRIME	ACTIVE	LOS ANGELES	-	-
US Energy COBRA	SMALLPRIME	COBRA	DALLAS	-	-
	SMALLPRIME	COBRA	SAN JOSE	-	-
US Energy RETIREE	SMALLPRIME	RETIRED	CHARLOTTE	-	-
	SMALLPRIME	RETIRED	DETROIT	-	-

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Pricing Rules

Using the below example, you can create the following:

- Tier-based pricing rule for the **DD_BASIC** policy plan -
  The following table provides sample data for a tier-based pricing rule of the policy plan:

Policy Plan	Pricing Rule Type	Base Rate	Parameter	Parameter Value
DD_BASIC	TIER_BASED	20	EMPBAND	IC1
			SUBSCRIPTIONTIER	E
			GENDER	MALE
		40	EMPBAND	IC2
			SUBSCRIPTIONTIER	ES
			GENDER	FEMALE
		60	EMPBAND	IC3
			SUBSCRIPTIONTIER	ES
			GENDER	FEMALE
		80	EMPBAND	IC4
			SUBSCRIPTIONTIER	E
			GENDER	MALE

- Age-based pricing rule for the **PPO_MED_BRONZE_RETIRED** policy plan -
  The following table provides sample data for an age-based pricing rule of the policy plan:

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
PPO_MED_	AGE_	200	0	19	GENDER	FEMALE	TOBUSE	Y	20
BRONZE_	BASED	200	0	19	GENDER	MALE	TOBUSE	Y	20

Copyright © 2026, Oracle and/or its affiliates.

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Parameter	Parameter Value	Modifier	Modifier Value	Modifier Rate
RETIRED		300	20	39	GENDER	FEMALE	TOBUSE	Y	30
		300	20	39	GENDER	MALE	TOBUSE	Y	30
		450	40	59	GENDER	FEMALE	TOBUSE	Y	40
		450	40	59	GENDER	MALE	TOBUSE	Y	40
		550	60	130	GENDER	FEMALE	TOBUSE	Y	50
		550	60	130	GENDER	MALE	TOBUSE	Y	50

- Additional fee pricing rule for the **COBRA_DENTAL** policy plan -
  The following table provides sample data for an additional fee pricing rule of the policy plan:

Policy Plan	Pricing Rule Type	Base Rate	Modifier	Modifier Value	Modifier Rate
COBRA_DENTAL	CAPITATION_FEES	100	IC_BAND	IC1	10
		200	M1_BAND	M1	20
		300	M2_BAND	M2	30
		400	M3_BAND	M3	40

- Rate Guarantee pricing rule for the **RATE_LOCK_MED** policy plan -
  The following table provides sample data for a rate guarantee pricing rule of the policy plan:

Policy Plan	Pricing Rule Type	Base Rate	Lower Age Limit	Upper Age Limit	Start Date	End Date	Rate Guarantee
RATE_ LOCK_ MED	AGE_BASED	200	20	39	01-01-2021	31-03-2021	Y
	TIER_BASED	400	40	59	01-02-2021	31-07-2021	Y
	TIER_BASED	600	60	79	01-02-2021	31-10-2021	Y
	AGE_BASED	800	80	99	01-01-2021	30-11-2021	Y

- Discount charge pricing rule for the **DISC_CHG_MED** policy plan -
  The following table provides sample data for a discount charge pricing rule of the policy plan:

Bill Group	Policy Plan	Pricing Rule Type	Base Fee	Modifier	Modifier Value	Modifier Rate
United Antarctica Group	DISC_ CHG_ MED	DISCOUNT_ CHARGE	50	VP_BAND	VP1	10
			70	M_BAND	M1	20
			90	IC_BAND	IC1	30

Note: We have given the above sample to illustrate how the tags should be nested while sending an inbound message from the external system. However, you should not seamlessly use this sample in your environment because the required pre-requisite data may not be available in your environment. In such case, the system will give erroneous results.

Sample Health Care Inbound Message for Group Membership (Without Benefit)

Using the below example, you can do the following:

- Create the persons who are neither parent customer nor bill group
- Create a membership where the person is the main subscriber
- Add persons in a membership

Person Name	Person Type	Policy	Policy Plan	Main Subscriber	Member Relationship Type
G, ALLEN	Person	AP234389	HMO_MED_ SILVER_RETIRED	Yes	SELF
G, JOHN	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SPOUSE
G, HARRY	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, NELSON	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, PARKER	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, RUSSEL	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	SON
G, LINDA	Person	AP234389	HMO_MED_ SILVER_RETIRED	No	DAUGHTER
